The Manager (Listing)
BSE Limited
Phiroze Jeejeebhoy Towers
Dalal Street, Fort
Mumbai 400001

Dear Sir/Madam,

Scrip No. 534618

Sub.: Transcript of Investors/Analyst Earnings Conference Call held on June 2, 2023

Ref.: Disclosure under Regulation 30 of SEBI (Listing Obligation and Disclosure Requirement) Regulations, 2015

Further to our communication dated May 31, 2023 and June 5, 2023, please find enclosed the transcript of the Earning Conference Call held on Friday, June 2, 2023 at 11:00 AM to discuss the audited financial results for the quarter and financial year ended March 31, 2023.

This intimation is also available on the website of the Company at www.waareertl.com .

We request you to take the same on your record.

Yours faithfully,
For Waaree Renewable Technologies Limited
(Formerly known as Sangam Renewables Limited)

Heema Shah
Company Secretary and Compliance Officer
ACS 52919
Email Id: info@waareertl.com .

"Waaree Renewable Technologies Limited
Q4 FY'23 Earnings Conference Call"
June 02, 2023

MANAGEMENT : MR. HITESH MEHTA – EXECUTIVE DIRECTOR AND CHIEF FINANCIAL OFFICER
M R. SUNIL RATHI – NON-EXECUTIVE DIRECTOR

M R. ABHISHEK PAREEK – GROUP FINANCE
CONTROLLER
M R. ROHIT WADE – GENERAL MANAGER, INVESTOR
RELATIONS

MODERATOR : MR. AMAR YARDI – ORIENT CAPITAL

Moderator: Ladies and gentlemen, good day and welcome to the Q4 and FY ‘23 Earnings Conference Call of Waaree Renewable Technologies Limited. As a reminder, all participant lines will be in listen-only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star, then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Amar Yardi from Orient Capital. Thank you, and over to you.
Amar Yardi: Thank you. Good morning, ladies, and gentlemen. I welcome you all for the Q4 and FY ‘23 Earnings Conference Call of Waaree Renewable Technologies Limited. To discuss this quarter and full year business performance, we have from the management Mr. Hitesh Mehta, Executive Director and Chief Financial Officer, Mr. Abhishek Pareek, Group Financial Controller, Mr. Rohit Wade, General Manager, Investor Relations, and other management team as well on the call.
Before we proceed with this call, I would like to mention that some of the statements made in today's call may be forward-looking in nature and may involve risk and uncertainties. For more details, kindly refer to the investor presentation and other filings that can be found on the company's website.
Without further ado, I would like to hand over the call to management for the opening comments, and then we will open the floor for Q&A. Thank you, and over to you, Hitesh, sir.
Hitesh Mehta: Thank you. Hi, good morning, everyone. Myself, Hitesh Mehta. I would like to welcome you all for the first earnings call of Waaree Renewable Technologies Limited to discuss the Q4 and FY ‘23 financial performance. I would like to extend my gratitude to everybody who have taken time to attend this call and have constantly been a part of our journey. Also, I am pleased to welcome everyone who is looking at our company for the first time. I have along with me Mr. Abhishek Pareek, who is our Group Financial Controller, Mr. Rohit Wade, a General Manager, Investor Relationship, and Mr. Sunil Rathi, he's a Non-Executive Director on the company.
Before I start the business update, I would like to take this opportunity to formally introduce the company to all the participants.
The company was incorporated initially as Sangam Advisor. And then we have changed the name to Sangam Renewable Limited in May 2018. Later, we changed this name to Waaree Renewable Technologies Limited in July ‘21. Waaree RTL, Waaree Renewable Technology, is a subsidiary company of the Waaree Energies, which is the holding company of Waaree Group. And this is mainly into the business of the EPC. We are technically advanced end-to-end EPC solution providers that finance, construct, own, and operate solar projects.
The company operating across the geography strategically targets the long-term investment within the commercial and the industrial customer segment. The main purpose of the company is to tap the growing renewable energy market. Starting with our order book position, we have an executed order book of 817 megawatts in the quarter as of today. To achieve these stated net

zero carbon emission goals, it is crucial to embrace green hydrogen on a global scale. The national green hydrogen mission, which has been approved by the union cabinet, is a significant step in this direction. With an allocation of approximately INR20,000 crores, the mission aims to produce 5 million tons of green hydrogen every year by 2030. We have won a contract to set up a 1-megawatt green hydrogen plant, which aligns with our plans to explore new opportunity in the green hydrogen project.
We have an unexecuted order book of 817 megawatts as of today. We hope to continue this

momentum in the FY ‘24. And we have a big pipeline of approximately 3 gigawatts over the next 12 months period. In terms of the outlook, we are witnessing encouraging trends driven by the continued decline in the solar model price and a favorable regulatory environment. The Indian market is positioned favorably with a noticeable surge in ordering momentum.

One significant development is the government recent decision to exempt the ongoing solar project from the mandatory requirement of procuring the module solely from the approved list of the module manufacturers, which is the ALMM, for a period of one year. This decision is expected to elevate the constraint associated with the local model availability and boost the on-ground project execution.

It is worth noting that India's ambitious target of reducing the carbon intensity by over 45% and achieve 50% renewable electricity by 2030 necessitates an accelerated pace of project execution, making this even more crucial.

Now I would like to take you through the consolidated financial highlights for the quarter and the FY '23. In quarter FY '23, in quarter 4 of FY '23, we have recorded a revenue of INR61.5 crores. And for the full year FY '23, we reported a revenue of INR351 crores, as compared to INR161.5 crores in FY '22, representing in year-on-year a growth of 117%. For the full year EBITDA was INR83.7 crores, as compared to INR23.5 crores in FY '22. And the EBITDA margin was at 24%, as compared to 15% in FY '22. We feel that we will continue this momentum in FY '24. In Q4 of FY '23, our net profit after tax was INR12 crores, as compared to INR6.8 crores in Q4 of FY '22, representing a growth of 81%. This full year FY '23, profit after tax was INR55.3 crores.

Now we open the floor for the questions and answers.

Moderator: Thank you very much. We have our first question from the line of Apoorva Bahadur from Goldman Sachs. Please go ahead.

Apoorva Bahadur: So, I just wanted to know your thoughts on this government policy of delaying the implementation of ALMM, given that you are on both sides of the equation, right? So, you are the largest module manufacturer as well. Also, there were discussions around a possibility of new slowdown or possible reduction in the BCD for modules. So how do you see this playing out, and what do you think will be more beneficial, right, to take advantage of the declining polysilicon prices or to go ahead full steam with domestic self-sufficiency, even at a higher cost?

Hitesh Mehta: Thank you. Thank you very much for this. I think on the second part of your question, the MNRE has already clarified that there is no intention for the reduction of the duty from 40% to 20%,

which there was a rumor going on for the last two, three days. But since we received the clarification from the MNRE, I think now it has been settled down.

On the first part of your question, on the ALMM side, I think the intention of the government is basically their target for the 2030, which they intend to achieve a 500 gigawatt by 2030. That is what the target for the government for the renewable energy, which includes the wind as well as the solar. And I think the government has given the relaxation for the one year for this particular, which will enhance definitely the more and more people will now go for the execution of their orders, which is pending.

Apoorva Bahadur: Sir, also on the second phase of the PLI bit, we saw that there was a reduction in the comparative intensity versus the first phase. What could this be attributed to?

Hitesh Mehta: So, I think there was a sufficient participation from the people also. It's not that there is a reduction. We find the number of the applicants where the has been reduced. But overall, if you see, there is a lot of interest from the people, even in the second PLI.

Apoorva Bahadur: Okay, understood. Sir, and lastl

y, if I may ask on this, the corporate and industrial market, how large of an opportunity do you see this to be? What could be the annual offtake over here?

Hitesh Mehta: I'll ask my colleague, Abhishek, to reply on this.

Abhishek Pareek: Hi, Abhishek, this side. So, I believe you're looking forward to have an understanding or market outlook on the C&I sector. That's been on the discussions quite a lot. So, we've seen a huge uptick in the demand side of the C&I sector, given the fact that the government has been pushing very hard every now and then for corporates to adopt and accelerate their move towards the carbon net zero and the ESG goals.

So, looking at that, we believe this market can be a gigawatt plus of installations within the C&I itself. And the overall installations, last year, were close to 14 gigawatts. We are really expecting this number also to go beyond 20 gigawatts, taking together the C&I sector as well as the utility scale of market.

Apoorva Bahadur: Okay, understood. Mr. Mehta one last question if I may and this is on the polysilicon capacity in the country, so while the both the faces had certain players bidding for end-to-end integrated capacity development, I don't believe any of the orders have been placed for setting up polysilicon capacity. Why do you think that? I mean, what's different with polysilicon? Is it too complicated a process? Or is it something that domestic players don't really want to venture

into?
Hitesh Mehta: So, I think it's not about the complexity. I think people in the country who have a good amount of the knowledge on the polysilicon side also. And I think the people who apply for the PLI, they will definitely go for this, maybe in the next six months to a year time. So, people are working on the activities for the polysilicon projects. And they'll be with their plans probably in the next six months to a year time.

Moderator: Thank you. We have our next question from the line of Deepak Poddar from Sapphire Capital. Please go ahead.
Deepak Poddar: So just I wanted to understand, first up, I mean, in terms of per megawatt, the order book that we have, so what is generally the per megawatt cost that is involved? And from that cost, what is our revenue share that we generally supply?
Hitesh Mehta: So, it depends upon the requirement of the customer, I think. So, there are some orders where you require to do the complete EPC, including the module. And there are some orders where the module will be supplied by the customer. And we will do the balance of the engineering. In that case, to decide on the per megawatt price is a bit difficult. Hence, we generally announce for the whatever the megawatt of the order what we receive.
Deepak Poddar: Okay, understood. But generally, there is some range that we can talk about, maybe INR1 crores to INR3 crores or in that range is what generally?
Hitesh Mehta: Depending, surely, on the pricing going on at present. So, depending mainly on the module price and the commodity price, it is ranging. The per megawatt price will be ranging anywhere between INR3.5 crores to INR4 crores.
Deepak Poddar: INR3.5 crores to INR4 crores rupees per megawatt?
Hitesh Mehta: Yes.
Deepak Poddar: Okay, but then, I mean, last year we did about 300 megawatts of EPC, right? And in that EPC project, and our revenue was close to about INR350 crores. So that per megawatt comes to about INR1.25 crores.
Hitesh Mehta: I mean, maybe around 85%, 90% of the project was not including the module. Hence, the revenue you find is around the INR350 crores.
Deepak Poddar: Okay, and then the order book that we have, so can you provide some more details of the 817 megawatts or how much percentage would be pure play EPC and how much percentage would include the modules or the component as well?
Hitesh Mehta: So, I don't have the figure right

now available with me. But surely, we can provide you the details.
Deepak Poddar: Okay, Okay. A rough percentage also? I mean, some understanding if we can. I'm not the exact figure I was looking at. Maybe about 40%, 50% is EPC or more of that?
Hitesh Mehta: Maybe about 60%, 70%, I think, will be without module.
Deepak Poddar: Without module. Okay, fair enough. I understood. And then what sort of execution we are looking at in FY ‘24 out of these 817 megawatts that we have?
Hitesh Mehta: So hopefully, all the projects to be executed as per the contract in next 12 to 15 months’ time. So, we'll try to do it in the 12 months’ time.

Deepak Poddar: So, these 800 megawatts we might be looking to execute over the next 12 months, right?
Hitesh Mehta: Yes, maybe 12 to 15 months. That is what the contract is.
Deepak Poddar: Understood. And when we take this order, so what is the benchmark or threshold margins that we kind of look into or whenever we bid, this is the bare minimum margins that we kind of look for while bidding?
Hitesh Mehta: So basically, you know about the competition, which is good there in the market. But we always try to take the maximum out of it. So, it's not something which is pre-decided that we'll earn the x margin on the particular order.
Deepak Poddar: Correct. yes, so even if I see the last 3, 4 quarters of margins have been quite volatile, right? It has been as low as 10% to as high as 48%, 50%. So, to have an understanding, what should be a, I mean, a sustainable margin?
Hitesh Mehta: That is mainly on account of the basically. Yes, that is mainly on account of the, I think the change in the commodity price also and change in the module price also. And there is a, you see the volatility in the margin.
Deepak Poddar: But what should be, I mean, sustainable basis, what should one can ideally look at? I mean, some

range, a sustainable range for us.
Hitesh Mehta: I think anything between the 15% to 25%, you can say will be just a sustainable margin.
Moderator: Thank you. We have our next question from the line of Vikram from Niveshaay Investment Advisors. Please go ahead. Sir, please use your handset.
Vikram: Thank you for the opportunity. Sir, I want to, if I calculate EBITDA per megawatt for the last year, this is around 27 lakhs per megawatt. So, I think in terms of megawatt, what can be sustainable per megawatt EBITDA for our business?
Hitesh Mehta: See, we were doing this business for the last one and a half years, or two years maximum. And we are profitable, and we will try to maintain momentum going forward also.
Vikram: So, okay. So, sir, there is any difference in per megawatt EBITDA for large products, large projects like 200 megawatts plus and small projects like 5, 7 megawatt projects? And, sir, what can be risk included in this? Suppose we have seen in this Sterling Wilson; they had huge losses in past due to commodity price fluctuation. The same kind of risk we have, or we don't have. How are we going to do this?
Hitesh Mehta: Yes, I'll ask Abhishek to reply for this. Abhishek?
Abhishek Pareek: Thank you. So, on your first question, on the difference of typically the margins between order sizing between 5, 7, 10 megawatts and orders of 150 to 200 on megawatt kind of size. So largely, when you are supplying to a small setup, say in our sector, when the overall turnaround of a project is between one to two months, definitely the exposure to the commodity price and other risk is much limited.

And being a retail supplier, that leaves some more edge for a little bit higher margin. And on larger projects, when we bid, it's more of a kind of supply chain that enables the profitability of any project of a large-scale size, which is between 12 months to 15 months. And then the rule of commodity.
So, if

I were to conclude it, we can always say that the smaller projects may have more certainty and margin on the profit and the margins because of less exposure to the time and commodity risk compared to larger risk. So that's an answer to your first question.
The second question on the risk side, the kind of some competitors you named right here. So instead of committing anything onto that, we would restrict ourselves in saying that we are in our kind of business that we have been akin to, and we have been doing in the past. We are very cautious while bidding also.
And we are very selective in the kind of customers and the kind of projects and risk that we take. So, this is our appetite of a business. We really will try to limit our risk exposures. And we're not very keen to take on very, very high risky projects.
Vikram: Okay, so in with modular products, we have limited risk, right?
Hitesh Mehta: Sorry?
Vikram: In with modular products, we have limited risk? So, when customers supply module to us?
Hitesh Mehta: So, in that case, basically, the risk of module price stays with the customers and all kind of risk gets limited to the BOS supply only, Balance of Supply only, other than module. So yes, commodity risk reduces to some extent. And then, certainly, your profit also goes up.
Vikram: And then, what is the last question? What is the breakup of private and government orders? And I think we have maximum order books from private players. So why we don't take government orders, any specific reason??
Hitesh Mehta: As such, no, we are bidding for the orders. But then, generally, we do more on the private side than on the government side. So as of today, you can say around 85% of the projects are from the private side. And maybe around 15% of the projects are from the government. But we always take care while bidding that in case if the payment terms is on the negative side, then generally we don't go for that particular project. So, we always go for the positive cash flow. That is what the principle of the company is.
Moderator: Thank you. We have a next question from the line of Ankur Kumar from Alpha Capital. Please go ahead.
Ankur Kumar: Hello. Thanks for taking my question. And congrats for a good year. So, my first question is on the margin volatility. So, we do not book our raw material in advance. So hence, margin is volatile. Should I conclude that? Because last year, their quarters have been quite volatile in terms of margins?

Hitesh Mehta: So, it's not only because of the pricing of the commodity also, but it is because the nature of the EPC contract is so it's not that you can book everything in the same quarter, which is having the higher margin. So, depending upon the work, what we commit, the margin we will book. So, depending on you, we'll find some volatility on a quarter-to-quarter basis, depending upon the different execution of the contract, what we do.
Ankur Kumar: Got it. And so, in terms of seasonality, how should we think about it? I mean, which quarters are tend to be good, better quarters and which are tend to be worse quarters?
Hitesh Mehta: I think other than the rainy seasons, where there will be some slowdown on the work, the rest of the quarter will be similar.
Ankur Kumar: Got it. And sorry, in terms of fixed asset, we see there is a massive jump. So, can you please comment on that? Is there is a big capital work in progress?
Hitesh Mehta: So, we are doing some IPP projects also now. Hence, there is a particular work in progress, which is there. And even there is a higher amount of the fixed assets which you are seeing.
Ankur Kumar: Got it. And sir, last question. You said our margin for the order book of 817MW we can assume 15% to 25% margin on that order book.
Hitesh Mehta: So that's the range what we follow. That is what I'm saying.
Moderator: Thank you. We have our n

ext question from the line of Sandeep Agarwal from Naredi Investment. Please go ahead.
Sandeep Agarwal: My question is regarding the unexecuted order book. So, what is the revenue term we will expect in 10 to 15 months?
Hitesh Mehta: So, we need to work on this because there will be, as I said, that around 60% to 70% of the product is order is without module and the rest is with module. We'll give the exact numbers on the order book. But the only...
Sandeep Agarwal: Yes, any range between INR1,000 crores to INR1,200 crores or something?
Hitesh Mehta: So, I have given you on the percentage wise around 60% to 70% is without module and the rest is with module.
Sandeep Agarwal: Okay. So, my next question is regarding the competitive intensity in the sector. You have to compete with very good large players. So, what is your plan and how to target the market? And in this specific market segment, you?
Hitesh Mehta: I think what we feel is the market is sufficiently available for all the people who are there in the competitions. So, we don't feel heat of the competition, basically. And generally, we are looking at the segment, which is the rooftop market, C&A segment, residential segment. And we are also looking at the utility scale project also in India as well as the outside India.
Sandeep Agarwal: Okay. So, what is your capex plan for the financial year 2024-25?

Hitesh Mehta: So, we are not much investing, basically, on the IPP business. But surely, we are doing some of the projects where we see there is a good margin available and a good IRR available.
Sandeep Agarwal: So, you have any amount, specific amount?
Hitesh Mehta: So, I think, as such, whatever the project is having, I think what you see in the capital work in progress. Other than this, we are not intending to do much of the project on our balance sheet.
Sandeep Agarwal: Okay. So, my last question is regarding the bidding pipeline and expected order we get in the financial year 2024?
Hitesh Mehta: So, the bidding pipeline, as I said, is around 3 gigawatts.
Sandeep Agarwal: Okay. So, what is the success rate as for the past experience?
Hitesh Mehta: We expect probably a minimum of 35% to 40% conversion out of this.
Moderator: Thank you. We have our next question from the line of Rishikesh Oza from Robo Capital. Please go ahead.
Rishikesh Oza: Hi, sir. Thank you for the opportunity. So, when we say our order book is around 800 megawatt and around 12 to 15 months of execution, where 70% of order book is without module. So, if you make a broad calculation with the per range for both the without module and with module, so fair to say that we can do approximately INR900 crores to INR1,000 crores of revenues for FY ‘24?
Hitesh Mehta: I have not worked out the actual number, but maybe on the basis of what I have said, what you have calculated should be right. So, I'm not confirming this, but as I said that with the module, the cost is anywhere between INR3.5 crores to INR4 crores. And without module, the cost will be anywhere between INR1.25 crores to INR1.50 crores.
Rishikesh Oza: Okay, got it. Thank you very much, sir.
Hitesh Mehta: All that depends upon the location and the scope of the project also.
Moderator: Thank you. We have a next question from the line of Ravi Naredi from Naredi Investments. Please go ahead.
Ravi Naredi: Sir, in other financial liability of INR29.56 crores you've shown as 31st March ‘23 versus INR1

crores in 31st March ‘22. So, what is the difference of that amount?
Hitesh Mehta: Which you are saying?
Ravi Naredi: Other financial liabilities or balance sheet?
Hitesh Mehta: Which is INR20 crores, right?
Ravi Naredi: INR29 crores -- 21.6. INR29 crores?

Hitesh Mehta: Yes, one minute. INR 29,56,507. And earlier year it was INR102.32 cro

res. This is the balance
sheet item. You see in the balance sheet. Consolidate balance sheet.
Management: So, this is mainly on account of the outstanding relating to the capital goods, which is the amount to be payable?
Ravi Naredi: Capital goods, you paid advance payment?
Hitesh Mehta: No, this is not the advance payment. This is the amount to be paid.
Ravi Naredi: Advance payment if you give, then it will come in assets, right?
Hitesh Mehta: Yes, yes. I'm saying this is payable. This is not paid.
Ravi Naredi: Payable, Okay.
Hitesh Mehta: Yes, yes, yes.
Ravi Naredi: And second, you opted for one megawatt green hydrogen plant. How much it cost and what is this? Can you say a few words on this matter?
Hitesh Mehta: So, I think this is the first project which has been awarded to, I think, any of the players in India as of today. So, this is a receipt…
Ravi Naredi: I don't -- to hear a few words from you.
Hitesh Mehta: Maharashtra only, and we are working on the other things now on the cost side and the margin side. So, we'll come back with you on this particular. So as of today, I don't have any reply on the cost side for this particular project.
Moderator: Thank you. You may join back the queue for follow-up questions. We have our next question from the line of Kanv Garg from Garg Advisors. Please go ahead.
Kanv Garg: Hi, sir. Congratulations on a good set of numbers. Sir, I was looking at the order book that you have, and I think we have orders ranging from 6.5 to 222 megawatts. So, do we have any preference of what type of the minimum size that we bid for?
Hitesh Mehta: I'll ask Abhishek to reply you.
Abhishek Pareek: So basically, if you see the order book range, it ranges right from 5-odd megawatts goes up beyond 200 megawatts. So, the message is clear. We are really do all sort of customers that we have been catering to, and we continue to do that. So, you may continue to have a few large orders and few main sectors, C&I, or specific customers. But the common, in all these orders would be, you know, the niche segment that we cater to wherein the project should be cash positive. So that's what's up.
** Note: During the call, Other current liabilities figure was inadvertently said as INR. 29,56,507 in FY23 & INR 102.32 Crores in FY22, please note that Other current liabilities should be read as Rs.29.56 crore for FY23 and 1.02 crore for FY22 as a factual figure, as reported in the financial results and other disclosures.

Kanv Garg: Okay. Thank you, sir. So, my second question is, I was listening to one of the competitors' call, that is Adani Green. So, they have clearly said that they won't be competitively bidding for large projects, right? So, does it reduce competitive intensity for us?
Yes. So, my second question was, I was listening to one of your last competitor conference calls, that is Adani Green. So, they have clearly said that they won't be bidding aggressively for EPC projects, right? And they are the largest players, right? They were just trying to understand, have you seen any reduction in competitive intensity in larger projects?
Hitesh Mehta: So not really. I cannot comment on any of the other players. But I think there is a sufficient market which is available for everyone.
Kanv Garg: Okay. So, you mean to say that there is no change in competitive intensity, and we have a large landscape available?
Hitesh Mehta: Yes.
Moderator: Thank you. We have our next question from the line of Mayur Liman from Profitmart Securities. Please go ahead. Since there is no response, we'll move on to the next question from the line of Girish Gupta, a CA. Please go ahead.
Girish Gupta: I have many questions, but you have given the answer of the question. I have only two questions.

Whether there is any reverse merger plan with the parent company in your mind, or you will give

a separate IP of the Waaree Engineers? And the second one is whether you have any plan to list on the NSE?
Hitesh Mehta: So, we cannot comment on the first question of your list. It will depend upon definitely the consultant and whatever they advise will be received from all the experts. And on the second question, yes, we intend to list on the NSE as the earliest, depending upon their regulations.
Girish Gupta: Okay, sir. Can you give a little bit of a highlight on the hydrocarbon project, which you have one megawatt, which you have been in the tender? Can you highlight something on this? Because this is a very big opportunity, I think, in the years to come.
Hitesh Mehta: So, I think this is the first project that has been awarded in India. And so, as such, we are working on this. We don't have any further details available on this. So, we'll come back to you once we finish our work on this.
Moderator: Thank you. We have our next question from the line of Karan Sanwal from Niveshaay. Please go ahead.
Karan Sanwal: I wanted to understand that going forward, would we be able to execute around 2, 3 gigawatts of orders in a year? Like right now, we are having an order book of 800. And you are telling that we will be able to execute those orders in around 12 to 15 months. So, in future, would we be able to execute more orders by 2, 3 gigawatts?

Hitesh Mehta: So, we have a team available. And we are, I think, competent enough to whatever the execution is there, whether it's just 2 gigawatt or 3 gigawatt or even more than that. So, this should not be a problem. So, depending upon whatever the contract we have with the customer, we'll be able to execute the orders.
Karan Sanwal: Great. That helps. Thank you so much for that. And I wanted to understand that what would be the execution time for the green hydrogen project that we have?
Hitesh Mehta: So maybe Abhishek will reply to this.
Abhishek Pareek: Yes, so currently, we have around 18 to 24 odd months kind of a time to execute the entire project. So, the team are deployed. We are working on it. But we have a good amount of time to complete the project.
Karan Sanwal: Okay. And one last question. So, I wanted to understand what would be the margin differential of projects like you mentioned, that there's a project with module and there's a project without module. So, is there any margin differential that you could highlight so it would give us more clarity on the order book that we have?
Hitesh Mehta: So, this is a bit dicey. Why? Because when you do a project with a module, you also run through the additional risk of commodity module, which is around 2x of the other part of the project. So that way, yes, you are exposed to a larger risk. But then there's an opportunity to earn a little extra pie than the previous projects. So difficult to give exact number on the difference of margin. But certainly, there's an opportunity and upside to have some additional margin if you have modules as well in the books.
Moderator: Thank you. We have our next question from the line of Amit Chordia from World Foods LLP. Please go ahead.
Amit Chordia: Hi, I wanted to ask you, what would be some of the challenges when we are scaling up so fast and this being kind of a service industry? Could you highlight some of these challenges?
Hitesh Mehta: So, challenges will be there on the part of the executions. And we need to work hard on the execution side. And we need to require the more and more skilled manpower for the execution. So, I think that is the main challenge. Other than this, we don't see any challenges for this.
Amit Chordia: All right. And your presentation also talks about some new technology for battery storage, a 600-kilowatt project that you did. Could you explain some of what this project is about?
Hitesh Mehta: Just a moment. Yes, hello. So, the battery ba

sically is not covered in this company. So, I think this is to be handled by the different company only. So, we don't have any more details available for this particular project as of today.
Moderator: Are you through with your question, Mr. Chordia?
Amit Chordia: Yes, I'll come back. I'll join the Q&A.

Moderator: Thank you. We have our next question from the line of Nitin from Kifs Trade Capital. Please go

ahead.
Nitin: Thanks for taking my question. Are there planning of a parent company to go public? And what is the time frame?
Hitesh Mehta: If you're told if you're planning. Basically, this call is for renewable technology. We'll have a separate call for the Waaree Energies also. And we'll reply to all the questions relating to the Waaree Energies in that call.
Nitin: I was just intending to know, plan to go on. Yes or no, that's all.
Hitesh Mehta: Surely, we'll go with the public.
Moderator: Thank you. We have our next question from the line of Mayur Liman from Profitmart Securities. Please go ahead.
Mayur Liman: Good morning, all. Thank you for the opportunity and the congratulation on a good set of numbers. I just want to ask or need a guidance from the, we see the opportunity in the green hydrogen business. And what kind of step or resources is made for the entering into the green hydrogen business? And what kind of initiatives we are taking towards in this segment?
Hitesh Mehta: Yes, Abhishek will reply for this question.
Abhishek Pareek: So basically, green hydrogen is something that has taken place recently. And there's an ample of opportunity for all to launch from their side. So, we have already taken up a big one-megawatt project on the green hydrogen side. And we are looking forward for a successful accomplishment. And this is going to be a pilot project also from our side.
So, we find this opportunity to be very, very large in terms of the plans that we have. The government has also laid down our intent of producing 5 million tons of green hydrogen by 2030. And that leaves a point that there's a huge opportunity. I think all we need to do is scale up and acquire the required skillset to scale onto this business.
And we strive to do that. Hence, we have taken up this pilot project also. So very, very large pie. There are a lot many people, entities who are intending to go ahead. Whomever can scale up early and fast could be one of the early in the line.
Mayur Liman: Okay, sir. And my next question on the lithium side. Do we make the lithium batteries or any kind of battery product which use the lithium in the product?
Hitesh Mehta: So, we do make. Surely, we are into the lithium batteries. But again, not in this company. That we do through the other company.
Mayur Liman: Okay, sir. And my last question is, how do you see the financial year 2024? What is your expectation from the next financial year? And what is the outlook for the next financial year?

Hitesh Mehta: So, as I said, we have a pipeline of around 3 gigawatts. We intend to convert probably around 35%, 40% of this. And we have an unexecuted order of around 817 megawatt, which we intend to finish in next 20 to 15 months' time. So probably, we'll do 100% better than what we have done in the FY '23.
Moderator: Thank you. We have our next question from the line of Ankur Kumar from Alpha Capital. Please go ahead.
Ankur Kumar: Yes, just wanted to check where the government is considering this import duty cut on solar panels. How is that going to impact us?
Hitesh Mehta: I think there's already a clarification from the MNRE side on this. They are not intent to close this particular duty.
Ankur Kumar: Okay, so there won't be any impact. There's no more duty.
Hitesh Mehta: Yes, yes.
Moderator: Thank you. Ladies and gentlemen, due to constraint of

time, that was the last question for today.
I now hand over the call to Mr. Amar Yardi for closing comments. Over to you.
Amar Yardi: Thank you, participants, for having us today. It has been a pleasure. If there are any further questions or queries that we have not been able to answer, please feel free to reach out to the Orient Capital team. Thank you and have a great day.
Moderator: Thank you. On behalf of Waaree Renewable Technologies Limited, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Call: Aug 2023

Execution with Pace & Comfort

Waaree Renewable Technologies Limited
(Erstwhile "Sangam Renewables Limited") (A subsidiary of Waaree Energies Limited)

Dear Sir/Madam,

Script No. 534618

Sub: Transcript of Investors/Analyst Earnings Conference Call held on July 28, 2023

Ref.: Disclosure under Regulation 30 of SEBI (Listing Obligation and Disclosure Requirement) Regulations, 2015

Further to our communication dated July 24, 2023 and July 28, 2023, please find enclosed the transcript of the Earning Conference Call held on Friday, July 28, 2023 at 11:00 AM to discuss the unaudited financial results for the quarter ended June 30, 2023.

This intimation is also available on the website of the Company at www.waareertl.com .

We request you to take the same on your record.

Thanking You,

Yours faithfully,
For Waaree Renewable Technologies Limited

Heema Shah
Company Secretary and Compliance Officer

"Waaree Renewable Technologies Limited
Q1 FY'2 4 Earnings Conference Call "
July 28, 202 3

Disclaimer: E&OE - This transcript is edited for factual errors. In case of discrepancy, the audio recordings uploaded on the stock exchange on 28th July 2023 will prevail.

MANAGEMENT : MR. PUJAN DOSHI - MANAGING DIRECTOR
MR. HITESH MEHTA – EXECUTIVE DIRECTOR AND
CHIEF FINANCIAL OFFICER
MR. VIREN DOSHI – EXECUTIVE DIRECTOR
MR. ABHISHEK PAREEK – GROUP FINANC E
CONTROLLER
MR. ROHIT WADE – GENERAL MANAGER , INVESTOR
RELATIONS

MODERATOR : MR. AMAR YARDI – ORIENT CAPITAL

Moderator : Ladies and gentlemen, good day and welcome to the Q1 FY24 earnings conference call of Waaree Renewable Technologies Limited. As a reminder, all participant lines will be in the listen -only mode. And there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded. I now hand the conference over to Mr. Amar Yard i from Orient Capital. Thank you, and over to you, Mr. Yardi.
Amar Yardi : Thank you. Good morning, ladies and gentlemen. I welcome you all for the Q1 FY24 earnings conference call of Waree Renewable Technologies Limited. To discuss this quarter and full year business performance, we have from the management, Mr. P ujan Doshi, Managing Director, Mr. Hitesh Mehta, Executive Director and Chief Financial Officer, Mr. Abhishek Par eek, Group Finance Controller, Mr. Rohit Wade, General Manager, Investor Relations and other management team as well on the call. Before we proceed with this call, I would like to mention that some of the statements made in today's call may be forward -looking in nature and may involve risk and uncertainties.
For more details kindly refe r to the investor presentation and other findings that can be found on the company's website. Without further ado I would like to hand over the call to management for the opening comment and then we will open the floor for Q&A. Thank you and over to you Hitesh sir.
Hitesh Mehta : Thank you, thank you very much. Hi, good morning everyone. I would like to welcome you all for the Q1 FY24 Earnings Conference call of Wa aree Renewable Technolog ies Limited to discuss the financial performance. I wish to express my heartfelt gratitude to all those who have dedicated their time to join the call and have consistently been a part of our journey. I have been along with our MD Mr. P ujan Doshi, our Executive Director Mr. Viren Doshi, Mr. Abhishek Pareek , our Group Financia l Controller and Mr. Rohit Wade, General Manager in vestor relationship and the other members of the management team as well on the call.
Before I start with this business update, I would like to briefly introduce the company to all the participants who are looking at the company for the first time. Waaree Renewable Technolog ies Limited is a subsidiary of the Waaree Energies Limited and is mainly into the business of the EPC, O&M and the IPP business. We are technically advanced End -to-end EPC solution provi des that finance constructs, owns, operates solar projects. The company operating across the geography strategically targets long -term investment within the commercial and industrial customer segment.
The main purpose of the company is to tap the growing renewable energy market. Starting with our order book position, we have an unexecuted order book of 856 + megawatt. We have successfully executed 96 +megawatt in the Q1 of FY24. In this quarter, we have received some major orders of 100 megawatt in Jamnagar, Gujarat and 36 megawatt in Amre li, Gujarat respectively.
Now moving to the industry outlook, as of March 31st, 2023, the Indian renewable energy sector has achieved a remarkable milestone, signifying a commendable journey towards the

sustaina bility and the clean energy. With the impressive installed capacity of approximately 125 gigawatt, India has made a significant stride in embracing renewable energy sources. The forefront of the green revolution is solar power, leading the way with an impr essive capacity of 67 GW, closely followed by wind energy with 43 GW. This remarkable progress has boosted renewable energy contribution to the countr y's energy mix which has gr

own from 15% at the
end of FY16 to an imp ressive 30% by the end of FY23.
The Go vernment of India has played an important role in driving this growth by setting up ambitious targets to achieve 500 GW of non -fossil fuel based capacity by 2030. Segment -wise, the government aims to reach 280 GW for solar and 140 GW for wind. This strong commitment along with the effective policy formulations and implementation has been a major catalyst in propelling the renewable energy sector forward. To bolster the self -reliance in solar module sourcing, the Indian government has introduced a production link i ncentive which is a PLI scheme.
This scheme is designed to encourage the private investment throughout the module supply chain in encompassing Polysilicon, wafer , Cell and modules. While we celebrate this achievement, it is important to highlight some challenges in sectors. As of March, 2023, India 's module and cell manufacturing capacity stood at 38 GW and 6 GW respectively. However, the recently released ALMM list in dicates an approved module capacity of 22 GW, a figure lower than the operating capacity due to outdated facilities.
In conclusion, India's renewable energy sector contributes to showcase remarkable progress thanks to the unwavering commitment and strategi c initiative taken by the government. We are excited about the opportunities ahead as we work towards achieving the ambitious target set for the future. We remain dedicated to driving the sustainable growth in the renewable energy landscape and creating lo ng-term value for our stakeholders.
Now I would like to take you through the consolidated financial highlights for this quarter and FY23. In Q1 of FY24, we have recorded a revenue of Rs.129 crores as compared to Rs.95 crores in Q1 of FY23, representing a y ear-on-year growth of 36%. At the EBITDA level margin for the Q1 FY24 was 12.4 % as compared to 13.7 % in the Q1 FY23. We are confident of sustaining the margin and the endeavour to improve upon the same.
In Q1 2024 our profit before tax was INR15.2 crores a s compared to INR11.9 crores in Q1 of FY ‘23. In Q1 of FY ‘24 our net profit after tax is INR11.1 crores as compared to INR9.9 crores in Q1 of FY ‘23 which is representing 12% of the growth. We have an unexecuted order book of 856 megawatt. We have success fully executed 96 megawatt in Q1 of FY ‘24.
Thank you. Thank you for joining us today and we look forward to your questions now. Thank you.
Moderator : Thank you very much, sir. We will now begin the question -and-answer session. We have the first question f rom the line of Vikram Sharma from Niveshaay Investment Advisors. Please go ahead.

Vikram Sharma : Hello. Hi, sir. Thanks for the opportunity. So my question was, so the EBITDA per megawatt if I calculate for FY ‘23 was around INR25 lakhs and if I check for the current quarter then it reduced to around INR15 lakh, INR16 lakhs EBITDA per megawatt. And so can you highlight the major reasons behind decrease and what should be the sustainable margin on a full year basis?
I think in last call, we guided EBITDA margin range in the 15% to 25%. But in recent interview, we highlighted approx 12% to 15%. So what kind of margins we should expect going forward?
Hitesh Mehta : So thank you, Vikram. Thank you for your questions. And as you know we are basically into the EPC business where there are four phases of the activities. The first phase is the engineering and the drawing, the second phase is the sourcing of the materials, the third phase is the construction activity and the last is the commissioning of the project.
Generally in the Q1 of the year, the project starts and basically it's more on the side of the engineering and the drawing side where the revenue what you book is also less and the margin is also less as compared to what you booked in the Phase 2 and Phase 3 o

f the project. So I think
going forward you will see a better margin also and the overall margin what we expect will be in the same range what we have said which is in the range of 12% to 15%.
Vikram Sharma : Okay and sir recently like in last quarter the module prices has corrected a lot in last month. So how you are seeing traction like prices are lower you are seeing traction for higher and higher EPC execution higher EPC contracts?
Hitesh Mehta : No, I am not clear about your question. Could you rep eat please?
Vikram Sharma : Yes, so I was saying module prices has corrected a lot in last quarter. So if we check the I -need module prices, they corrected up to 30% -40% in the last quarter. So this correction, are we seeing a higher number of EPC projects enquiry due to this?
Hitesh Mehta : Maybe I will ask Abhishek to reply on this.
Abhishek Pareek : Hi Vikram. Yes, what happened basically, this industry has seen price rationalizations in last 10 -12 years, prices have rationalized especially for the modules, right? Prices have rationalized as high as 85% to 90%. While in last 2 years, prices were still range bound and in last quarter we

have seen, you know, prices started again falling. So that was something which was anyways predicted, and the industry was r eady for that.
So since module comprises of the major component of our EPC contract of solar power plant, definitely this gives a reason for the community and for the industry to take quick decisions when the module prices are being rationalized and do th e EPC in that point in time. So yes, the trajectory is right. If prices are at the bottom rock, you can definitely find more inquiries and more tenders floating in the market and hence a larger market could come across in the next few quarters.

Vikram Shar ma: Okay. And sir, last question on the O&M business side. So generally what is range revenue per megawatt for O&M business and all orders we are like all orders we are executing are we also handling O&M for those?
Hitesh Mehta : So we have a good portfolio for the O&M also. And we have approximately 490 megawatt projects where we are doing the O&M activity. And the price is generally ranging between INR3 lakhs to INR4 lakhs rupees per megawatt.
Vikram Sharma : And what is our cost in INR3 lakhs, INR4 lakhs price?
Hitesh Mehta : So we generally incur a cost of around 60% to 70% in this.
Moderator : Thank you. We take the next question from the line of Umang Shah from Edelweiss. Please go ahead.
Umang Shah : Hi sir, good morning. Good morning. Sir, so actually I had a broader question. If we look at the government incentives or the government idea of 2030, do you think that we are still currently in the pace to reach that 500 gigawatt renewable energy. And we, I mean, from wafer to everything we were trying to push through. Currently, where do you think that our company could lead towards? So I have a broader understanding, but if you could answer this fundamental question first?
Hitesh Mehta : So as I said in my previous about the company, that I said that the overall target for the government is 500 gigawatt by 2030. Of the around 280 gigawatt will be from the solar. If you see as of today, we have around 65 gigawatt to 70 gigawatt which is implemented in Indi a and we expect the balance to be implemented in next seven years of the time. We expect from 2024 - 25 onwards it will be minimum 40 gigawatt of the installation every year and we see a great opportunity in the coming years even for the companies for this.
Umang Shah : Okay, so are we saying that our capex in -- either in parent company or in renewables would be a continuous process for coming three - four years because we are going backwards we are now manufacturing cells and wafer, ingot so, we would be goin g backwards. So what would be the overa

ll capex still for coming at least four, five years, if you guide that also?
Hitesh Mehta : So if I'm talking about the Waaree Renewable Technology, we don't require much of the capex in this because here we are much i nto the E PC business and the O&M business. We don't do much of the IPP business in this company. And if you're talking about the parent company, which is into the manufacturing of the module, that depending upon the demand supply, we will incur the additio nal capex.
Umang Shah : Okay. And so just related to parent, are we, I mean, we earlier were planning for an independent listing for the parent company but I think that is either in talks or on course. But are we looking to go ahead with that and also there are few unlisted companies which are there, which we have taken over, for example Indo Solar. So what are the status on that, if you could also, I know it's not the right platform, but if you could answer those, it would be very helpful.

Hitesh Mehta : You rightly said, this is not the right platform. We can discuss this one -to-one also. But in any case, we are going with the public issue in the near time for the parent company.
Umang Shah : Okay, all right, great. Thank you so much, sir.
Hitesh Mehta : Thank you.
Moderator : Thank you. The next question is from the line of Dhananjai Bagrodia from ASK Investment Managers. Please go ahead.
Dhananjai Bagrodia : Hi, sir. I just wanted to understand more regarding competitive intensity. How are we seeing that in ter ms of peers and maybe even, let's say, companies doing their own in -house. How are we seeing that coming along?
Hitesh Mehta : I'll ask Abhishek to reply on this.
Abhishek Pareek : So, Dhananjai, if my understanding is correct, you want to understand the com petitive landscape

and the advantage that the company have because of the presence of the parent in the manufacturing domain as well?
Dhananjai Bagrodia : Yes.
Abhishek Pareek : Yes, so see, certainly as a group we have our strength in both manufacturing as well as EPC business and O&M business and that really helps us to take very prudent decision in buying at the right time. Being a listed company Waaree Renewable Technologies and the EPC company and into this space for quite some time. The team is very, ve ry large team and which has got good experience in taking the right buying decision. And since majority of the cost component comes from the procurement in this business, the strength of the group in the overall supply chain really supports the subsidiary as well.
Although, while dealing between the companies, listed company as well as the parent company which is in manufacturing of modules, you always have to take care of the arms and pricing and that's where the independence of this company comes through. But yes, the overall experience of the group really help the subsidiary company to take very prudent decision in buying the materials, especially the modules and help the company with that.
Dhananjai Bagrodia : What is their strength? You are saying that t heir strength is that they are able to manufacture according to raw materials at the right time or could you elaborate a little bit on that?
Abhishek Pareek : So when I say the right time, it's not for the manufacturing company because manufacturing company has to keep on supplying irrespective of the pricing going up and down. It's for the EPC company, wherein the procurement forms a major component of the cost of the project. Hence the timing matters for an EPC company because we are not taking up very ris ky propositions wherein we take and then we hunt for the procurement. Largely we intend to continue a business of back -to-back buying.
So today if you are taking a project, we would ensure that we cover up our position with the back-to-back purchases of th e key raw materials, and henc

e play a very safer side of the game.

So that way the judgment of taking quick decisions on the procurement is something that as a strength comes from the parent company. Because we know where the market is going up, having a l egacy of 15 + years in this industry now.
Dhananjai Bagrodia : Okay, and what about the competitive landscape in terms of our competitors? Has there been more aggression to get orders or is there a number of players reducing? Anything on that?
Abhishek Paree k: So, if you see last few years, especially two to three years, there has been a lot of consolidation and there has been a lot of change in the competitive landscape. So there used to be more than 300, 400 mid -side and small -side EPC players in this indus try. While in last two years, we have seen only few players have remained who are very sensitive to the risk that they were t aking, a very calculative risk.
So many players have gone out of the business in last one or two years, industry has seen turmoil. So we believe that this may still continue if the players in this industry are taking uncalculated risk, we may still see some accidents in the near future. But here the competitive landscape still continues. And we believe that as a strength, we will cont inue to play our own game.
Dhananjai Bagrodia : So then, sir, just to understand, if the number of players is reduced, has our bargaining power or our receivables, any of that improved?
Abhishek Pareek : So number of players have reduced, but what has happened along with time that majority of the developers are now also establishing their own in -house EPC projects as well. So though number of players in the market have reduced, but the in -house capacities of large developers is also increasing at the sa me time, wherein they are not giving end -to-end turnkey projects to the EPC players, they are giving a portion of it. So in a way, that's still the competition line, but it's now an outside competition, as well as the inside own capacities of the large dev elopers to do the EPC projects.
Dhananjai Bagrodia : Okay, so then our addressable market would have shrunk assuming that incrementally a lot of the new capex in this segment is coming by let's say the three large players and they seem to be having the in -house EPC players, would our addressable be significantly reducing them?
Hitesh Mehta : And so see market up sizing is too large. If we see last two years market size is increasing year on year. 7 gigawatt to 15 gigawatts installations and going ahead, we ar e looking at 40 gigawatts, 50 gigawatts annual installations. So though, there are a few large players but then still the market is very large for the existing players to take their share.
Dhananjai Bagrodia : Okay, fine, sure. Perfect. Thank you.
Moderator : Thank you. The next question is from the line of Kanv Garg from Garg Advisors. Please go ahead.
Kanv Garg : Hello. Hi, Good morning, sir. Thank you for the opportunity. So I have two, three questions. So first question is, so let's say when we bid for any kind of a project, you have already explained

that, we procure modules from the parent on an arm's length ba sis. But let's say, do we also

install the substations? If we install the substations, how do we procure those substations from? We are reading somewhere that there is a shortage of transformers there in the market.
Hitesh Mehta : So may I request Pujan Dos hi to reply you on this question? Pujan?
Pujan Doshi : Hi, good morning everyone. So, when we take the decision to procure and what happens is that, each project size is different, each project engineering is done differently and hence the selection of tran sformers are done differently. It is true however that there is a shortfall in terms of capacity of manufacturi

ng the transformer. However, given our relations with our existing suppliers and we have been operating long enough to have a good relations with those suppliers, we are able to take a long lead time and deliver those transformers for our customers. So I hope that answers your question.
Kanv Garg : This a follow -up on this? Who would be our top two - three suppliers?
Pujan Doshi : It would not be prud ent to declare our suppliers in this forum publicly, but we do procure it from India's top five to top 10 players.
Kanv Garg : Okay. Thank you, sir. So my second question is, so recently there was a 2 gigawatt of orders which were declared by a SECI. Just t rying to understand, do those companies who won these projects, they subcontract the work to us, or there is no opportunity for us to get the orders from them?
Hitesh Mehta : So there will be an opportunity for all these projects going forward. And we are i n touch with all the developers. And we are discussing with all of them.
Kanv Garg : Okay, sir my last question is, if I look at your numbers, right? I think there's a decrease in the power sale from last year. In last year, June quarter, we did INR316 lakh s. And in this year, we did INR2 crores, INR2.2 crores, right? So just trying to understand, in last one year, we must have added some capacity, right? So why there is such a percentage from this 50% or what, 30% fall in the revenue from power sales?
Hites h Mehta : So, largely if you look at the power sales, it's firstly cyclic in nature and then in that case and there are one or two smaller projects, which have hived off in the last one and a half odd years. So when it seems our module is build a project, operate d for some time and then transfer it off. So we'll keep on seeing the some fluctuation in the overall power generation revenue, but then it's the strategy that we build, we will operate it for some time and then we'll sell the project. So when you se ll the project, the revenue won't come in the -- hence forth in the coming quarter. And hence you will see an overall fluctuation in the power generation revenue.
Kanv Garg : So sir, when we sell the project, does it come into exceptional items of profit, when we sell the project? Where can we see that line item?
Hitesh Mehta : Profit will come in the main business because it's one of the key earning business of the company. If you look at the operating revenues, the power generation revenue is still a part of my total operating income only. And hence any revenue from the sales of those projects also form part of my operating revenue.

Kanv Garg : Okay. Thank you, sir. Thanks a lot. Good luck for the future.
Hitesh Mehta : Thank you.
Moderator : Thank you. We hav e the next question from the line of Tushar Sarda from Athena Investments. Please go ahead.
Tushar Sarda : Yes. Thank you for the opportunity. I want to know, what is the market size for the type of business that you do? I understand the total size is 500 g igawatt for government planning over the next few years. But what is your addressable market out of that? And the second question is, who are your main competitors?
Hitesh Mehta : So thank you. Thank you for the same. But as you say that there is a 500 giga watt of the market for the renewable by 2030. Of this, 280 gigawatt will be from the solar. And we see that, probably around 40 to 50 gigawatt from 2024 - 25 onwards every year. Of this you can say the market size, which is available for the player, EPC pla yer would be in the range of anywhere around 50% of this particular size because 50% they do this on their own. So I think around anywhere around 20 -25 gigawatts will be available for us, for all the players as a EPC every year.
And as far as the name of t he competitor goes, there are many players who are there in this field and some of them have closed their

business also because of the again, it's the competition with
the people, who do the quality work and then the small people who just play on the cost side and on the margin side. They don't care about the quality. So I think, if you see, there are very limited players as far as the top Tier 1 or top 5 players it goes, which is Sterling Wilson or Waaree or Mahindra Susten or Vikram.
Tushar Sarda : And com ing back to this market size, you do EPC for behind the meter or also for the rest, which are going to supply to the grid?
Hitesh Mehta : So we do the complete, we do both the things, we even supply to the grid also.
Tushar Sarda : And modules you acquire from your parent company or the customer decide, where to acquire from? Is it your decision or customer decision?
Hitesh Mehta : So it depends upon the customer choice. So if a customer requires this from the parent company, then we purchase this from the p arent company. Or else, even they chose this from the outside party also. So it depends upon customer choice.
Tushar Sarda : And what is your IPP capacity?
Hitesh Mehta : My IPP capacity is not much. It's hardly around 20 megawatts, not more than that.
Tushar Sarda : And any plans to add to that?
Hitesh Mehta : So we are adding a small project, again, not on a big way on this. So we are adding a project of 10 megawatt something like this.
Tushar Sarda : Okay, Thank you for answering my questions and wish you all the best. Thank you.

Hitesh Mehta : Thank you.
Moderator : Thank you. We take the next question from the line of Naveen Garg from Growup Investments. Please go ahead.
Naveen Garg : Hello, good morning sir.
Hitesh Mehta : Good morning.
Naveen Garg : Sir, I have a question, do you have an any plan of listing Waaree renewable in the NSE?
Hitesh Mehta : We have to list in NSE but there are some regulation, which needs to be followed. Once we complete those formalilties, then we will list on the NSE. Okay, it’s under procedure.
Naveen Garg : Can we expect the listing in 2023 ?
Hitesh Mehta : It all depends upon the regulation fulfilment of the NSE.
Naveen Garg : It's under consideration matter. ? Okay, thank you, sir. Thank you.
Hitesh Mehta : Yes Yes.
Naveen Garg : Okay, thank you, sir. Thank you.
Moderator : Thank you. We take the next question from the line of Dhananja i Bagrodia from ASK Investment Managers. Please go ahead.
Dhananjai Bagrodia : Sir, just another question, how much of our, let's say, sales happen with the parent company? Let's say a client asks for both together, and how much is it without that?
Hitesh Mehta : So your question is, how much we buy from the parent company, right?
Dhanan jai Bagrodia : No, when a client approaches you all, or is it, like, how is the sales channel? Is it the client approaches the parent company and we get an offer with it together or is it separate?
Hitesh Mehta : No, it's separate. Generally, it's like compa ny directly approach the customers and in case if the customer requires the module, in that case, we approach to the parent company and we get this purchase from the parent company.
Dhananjai Bagrodia : But any idea, how much percentage of yours would come with the parent, like how much of your projects are with the parent company?
Hitesh Mehta : So it's ranging around 10% to 15%, that is what I can say. Not much of the, yes, not much.
Dhananjai Bagrodia : Okay, fine, sure. Thank you.
Moderator : Thank you. The next question is from the line of Kishan Toshnival from Polar Ventures LLP. Please go ahead.

Kishan Toshnival : Hi. Congratulations, first of all, on a good set of numbers. My, I have two, three questions. Basically, what is the ratio of gove rnment and private business tha

t you have out of this whole
EPC business that you have? What is the ratio of government or private?
Hitesh Mehta : So again, most of the projects is from the private only. So you can say around 90% of the projects is fro m the private and hardly 10% will be from the government.
Kishan Toshnival : Okay. Also, you have three companies as far as I know, two are listed and the parent which will get listed in sometimes. How does Waaree Renewable Technology benefit with this? And also, what is the synergy between the three companies, which will help Waaree Renewal Energy or if

I am a shareholder of Waaree Renewal Energy, what will be the benefit that Waaree Renewa ble Energy is having, when there are three companies that are there and why not there is a single company that does all the work?
Hitesh Mehta : So all the three companies are into the different solar activities basically. So Waaree Energy as you know is mainly into the manufacturing side. Waaree Renewable Technologies is m ainly into the EPC, OEM and the IPP business side. And the third listed company is into the battery storage side. So these three are the different activities and as and when required, we Waaree Renewable technology for change the storage from the other lis ted company and the modules from the parent company.
Kishan Toshnival : In addition to this from the parent company that is going to, that will list in the future, I don't know, when it will get listed, do we have the technological advancement also, technology transfer also to this company as and when we need because that company is making multipurpose cells and all the grids and all are made by that company, the parent company. So this company also gets technology transfer also or is it only a clean EPC company, which has got nothing to do with its parent. It's a separate company and a parent is a separate company and we do not get any technology transfer from there?
Hitesh Mehta : So you rightly said, both the companies are the separate company only. The parent company is focusing on the manufacturing side, this company is focusing on the EPC side and the O&M side and the IPP side and as and when we, this company requires the module, they source this from the parent company.
Kishan Toshnival : Okay, th ank you.
Hitesh Mehta : Thank you.
Moderator : Thank you. We have the next question from the line of Dhruv Bhatia from AUM Fund. Please go ahead.
Dhruv Bhatia : Hello. Sir, I want to understand is, what is the sustainable margin run rate that we can do in ou r business?
Hitesh Mehta : So as I explained to you earlier also that we are into the EPC business, where we have four different stages. And depending upon the booking of which stage you are into, so it cannot be

the same margin in every quarter, but if you see on the yearly basis, probably will be anywhere around 12% to 15%, that is what we can think about.
Dhruv Bhatia : 12% to 15% is a sustainable thing on a full year basis, correct?
Hitesh Mehta : Yes.
Dhruv Bhatia : And sir, last year, last quarter you had said in the call that, around we would execute around 800 megawatts of orders in the current year. So are we on track for the same?
Hitesh Mehta : So in the last, I think, call what I said is we'll, the company will execute around 817 megawatts of the o rder in 12 months to 15 months. And as of today, we have a pending order of 856 megawatts and we will try to finish this order probably in 9 months to 12 months period.
Dhruv Bhatia : Okay. And sir on the booking enquiry or you know new pipeline of orders sir, how do you see the whole environment?
Hitesh Mehta : So the traction is very good in fact in the industries and we have around a pipeline of 3 gigawatt.
Dhruv Bhatia : Okay. I guess the pipeline was the same last quarter also, so is there anything me aningful development f

rom the same or how is the order finalized or when will these order get finalized in our books?
Hitesh Mehta : So generally it takes a period of anywhere between 6 months to 9 months to get it finalized.
Dhruv Bhatia : Okay. Thank you sir.
Hitesh Mehta : Thank you.
Moderator : Thank you. The next question is from the line of V P Rajesh from Banyan Capital Advisors. Please go ahead.
Vp Rajesh : Thanks for the opportunity. So just one question on your O&M margin, what kind of EBITDA margins are you doing there?
Hitesh Mehta : What kind of margin you mean to say?
Vp Rajesh : Yes. EBITDA margin are you making in your O&M business?
Hitesh Mehta : So probably EBITDA will be in the range of around 30% -35%.
Vp Rajesh : 30%- 35% EBITDA margin. And as your competitor was talking about, at least in this quarter, around 13% EBITDA margin on the O&M side. So you think they can move up to this kind of number or are you doing something different, which leads to such a high number for you?
Hitesh Mehta : So it is difficult to comment on the others but a margin of anywhere around the 35% should be fine.

Vp Rajesh : Okay, understood. And then you talked about your third group company, which is into batteries, storage batteries. So what is the business that is ove rlapping with the battery company? Meaning, as you explained, that only 15% of the business is being touched by your parent company when you are supplying to the customer. So, what is that kind of number, where you are supplying batteries to your customers as part of the project?
Hitesh Mehta : So, again, I mean, not much of the orders we received along with the battery storage in this company for the EPC business.
Vp Rajesh : Okay. So, in a way, these three companies are completely separate from each other and you are just saying that maybe in 10% to 15% of this company, the EPC company, you are buying the panels from your parent company, right?
Hitesh Mehta : Correct, you are saying.
Vp Rajesh : Okay. And then just lastly the profits are you bearing the cos t of the panels or are you passing it to the customers? I mean, who's responsible for the change in the cost of the panels, that's really what I'm trying to understand?
Hitesh Mehta : So again, it's differ from order -to-order basis and customer -to-customer basis. So, it's too difficult to comment on a generalized statement on this particular.
Vp Rajesh : Okay, so let's say your order book is INR100, how many of, what percentage of that INR100 will be, where you are bearing the cost and what percentage you wi ll not be bearing the cost?
Hitesh Mehta : See, it’s generally around 50%, 60% will be for the module price and the rest will be for the other materials.
Vp Rajesh : No, I was asking in your contract, if there is a fluctuation in the module prices, are you passing that through to your customer or you have to be judicious about booking etc . so that you don't get impacted by the fluctuation in the module prices, that's what I was trying to ask that question?
Hitesh Mehta : Yes, generally, generally our policies that we do back to back only. So, whenever we receive the order from the customer along with the module, we generally place the order with the parent company for the same. So, we don't face any challenge on the increase in the cost or the reduction or hav e any change in the price also.
Vp Rajesh : Okay, okay. And that's true for third parties also, right, like in case the modules are being brought from a third party, you will do a similar arrangement with those also?
Hitesh Mehta : Right, right. You are rig ht.
Vp Rajesh : Okay. Thank you so much. That's all.
Hitesh Mehta : Thank you.
Moderator : Thank you. We have the next question from the line of Samart K from KR BS Broking. Please go ahead.

Samart K : Good morning, sir. Thanks for the opportunity. First o f all, congratulations for a good set of numbers.
Hitesh Mehta : Thank you.
Samart K : I have a question regarding our green hydrogen project. So, what is the current status for our green hydrogen project, I mean, what cost we have incurred till now, and w hat are the revenue estimates for it because recently, Indian company has raised just USD 4 billion for hydrogen and ammonia. So, what are the plans for going aggressive, or what are the company's plans?
Hitesh Mehta : Yes, I'll ask Pujan Doshi to reply on this. Pujan, please.
Pujan Doshi : The company has won 1 -megawatt hydrogen project on a built -on operate basis. And as you know, this sector is quite new for the entire country and everybody is sort of getting their hands on it. We have taken this project as a learning experience. To answer your questions, we have done only a level of basic engineering. We have received LOA from the customer, but we are yet to receive the final agreements from the customer. I hope that answers your question.
Samart K : Yes, my second question is regarding ho w do we plan to grow our IPP portfolio? What are the road ahead for this?
Hitesh Mehta : So, on the IPP side, we are looking at the various opportunity. So, as of today, the company is not investing much on the IPP side. As I said that, we have around 20 -megawatt of the portfolio and additionally 10 -megawatt, 12 -megawatt, which is under construction. And we continue with the such type of the module where we built, operate and receive. Till we get some good player whose intent to invest in the IPP side and w ho can come along with us and we can build a larger portfolio.
Samart K : Correct. And I just want to understand a few days back we have our parent company has done some MoU with our European some companies to storage the thermal power. Do we get benefit

of it or it is for the parent company only?
Hitesh Mehta : Again, I think it's for the parent company and it's very in the initial stage where we sign the MoU and not even agreement. So, it's a very difficult to comment at this time.
Samart K : All right, s o my question is about the RTL only, so are we going to get some benefit out of that order or something if we execute it?
Hitesh Mehta : See, it depends upon the future how we tie up for everything and we'll be coming on this at the appropriate time.
Sama rt K: All right, all right. My last question is about the last concall. In last concall, you've guided that we have already applied for a tender of around 4 -gigawatt projects, right? Can you show some light on it, what are the stage are we standing on?
Hitesh Mehta : I think in the last call we said on the basis of the pipeline of the 3 -gigawatt and we are continue seeing that it is a pipeline of the 3 -gigawatt and not the tender basically.

Samart K : All right. Okay. All right, sure. Thank you, all the bes t.
Hitesh Mehta : Thank you.
Moderator : Thank you. We have the next question from the line of Rahil Shah from Crown Capital. Please go ahead.
Rahil Shah : Hello, sir. Good morning. Yes, everything is covered. Just on the revenue front, you said margins will sustain, so what about revenue, sir? Will this run rate continue on quarter -on-quarter will this get better? How are you -- what are your expectations, sir and how will you end the year?
Hitesh Mehta : So, definitely, we cannot give any forward -looking statement. But last year, we did around 300 -megawatt of the projects and this year as I said that we have a backlog of around 856 -megwatt of the orders and we intend to finish this in next 9 months to 12 m onths period.
Rahil Shah : Okay no problem. Thank you.
Moderator : Thank you. The next question is from the line of Darshit Shah from Nirvana Capital. Please go ahead.
Darshit Sha

h : Hi, sir. Good morning. Sir, you said that around 10%to 15% of our orders are with the solar module. Sir, in terms of value per megawatt, what would be those with the module and without the module, if you can broadly say the range?
Hitesh Mehta : So, when the order is without the module, it is ranging between INR1.25 crores to I NR1.5 crores depending on the scope of the contract.
Darshit Shah : Okay. And with the module would be hovering around INR3.5 crores?
Hitesh Mehta : Will be around INR3.5 crores to INR4 crores depending upon the price of the module because again there is a f luctuation going on in the price of the module.
Darshit Shah : Sure. And sir in terms of the module prices which has now come to almost an all -time low and globally also we see the prices falling quite steeply. So, how is the demand supply scenario in India ? We have an import duty, custom duty as well on solar modules and the ALMM also being extended till one year. So, is there a capacity constraint here in India, I mean, just if you can help me with the demand supply scenario on solar modules?
Hitesh Mehta : Abhishek will reply you on this, Abhishek?
Abhishek Pareek : Hello. So, actually we have seen in last two years, there have been a lot many efforts starting from the policy framework, which has supported the domestic manufacturing capacities in the countr y. Two years back, the total capacities were not even 15 -gigawatt. While today, as we speak, the capacities have crossed 35 -gigawatt of manufacturing of solar panels as of now. In fact, ALMM also mentions that 22 + gigawatt is already there enlisted as ALM M which is available for the domestic sales.

So, there is a plenty of supply which is coming up and if you look at the PLI scheme also the participation is beyond 50 -+gigawatt of module manufacturing lines to be set up in next 24 odd months. So, looking f orward, we foresee by next two years the total capacity is ranging between 60-gigawatt to 80 -gigawatt of solar panels and the total demand as Mr. Mehta has also mentioned in the earlier discussion that we are looking at 40 gigawatt, 50 + gigawatt of domest ic demand starting from next two years. So, basically we don't foresee any large different, large mismatch between the demand and supply going ahead.
Darshit Shah : And how would be the pricing in terms of kind of modules from China with the duty on and currently the Indian demand comes up? So, what's the current difference between the pricing from China and India if you can tell me?

Hitesh Mehta : So, if you look at the large utility scale projects, you can't afford to have any price differential between China and India. When I say price difference, it's the landed cost of panels in India. So, that's post the duty. So, if Chinese panel cost is around, let's say, 18 cents to 19 cent s, which is currently prevaling pricing, the landed cost in India would be around 24 cents, 25 cents and that's a price which domestic manufacturers will have to match up to take an order at the utility scale. So, while during our sales thing there is no such difference which we can aff ord between our pricing of panels and pricing of the imported panels.
Darshit Shah : Okay, so in terms of our parent company it is with this price, are we able to kind of make decent margins on this business?
Hitesh Mehta : Yes certainly. So, last few years we have seen margins increasing year -on-year and this year also, margins have increased, and top line has also increased. So, that way, we can foresee that to continue.
Darshit Shah : Thank you so much.
Moderator : Thank you. We have the next question from the line of Jay Naik, an Individual Investor. Please go ahead.
Jay Naik : Thank you for the opportunity. Hello, Hitesh sir, and congratulations for the good set of numbers. I've got a couple of questions sir, one on our inter

national foray for EPC and O&M services, so if you can throw some light on it?
Hitesh Mehta : So, as you know the company has done the EPC project in the foreign also. We have done one project in the Vietnam of 50 -megawatt in 2021, and we are looking for more projects in the coming year s.
Jay Naik : Okay, thank you sir and sir on O&M side while you have given enough details on the margins and revenue, I just wanted to know that we have got some 150 employees working for O&M basis of the presentation you have given. So, I just wanted to k now the strategy of our company on expanding O&M business, which is a high margin and there's a huge potential for growth?
Hitesh Mehta : No, surely we are looking at more and more orders to come under this O&M also. So, as I said, we have around 490 -megawa tt portfolio under the O&M. And the total number of the people,

when you are saying that, we have around 150 people in the company, and not in the O&M department.
Jay Naik : Okay got it. And sir one last question do we – are we looking at getting into wind power EPC and do you see any synergies between solar EPC and wind power EPC?
Hitesh Mehta : So, we are discussing with now with the customer for the hybrid solution wherein we will provide the solar and the wind together.
Jay Naik : Okay sir, thank you so much for everything. Thank you so much sir.
Hitesh Mehta : Thank you, thank you.
Moderator : Thank you. We take the next question from the line of Gunit Singh from CCIPL. Please go ahead.
Gunit Singh : Hi sir, I just want to understand the outlook for FY'24 in terms of top line and bottom line, and how much of the order book is executionable within the next 9 months?
Hitesh Mehta : So, I think we replied on this question earlier also, where we have said that we have order book of 856 -megawatt and we intend to finish this by next 9 months to 12 months period.
Gunit Singh : All right. So, in Q1 we did around 100 -megawatts, right 90 -megawatt to 100 -megawatts?
Hitesh Mehta : Yes, 96-megawatt.
Gunit Singh : 96-megawatt. So, around 9 times to 10 times, so that is the outlook for the next 9 months. Got it. Thank you. That's all from my side.
Hitesh Mehta : Sorry?
Gunit Singh : That's all from my side. I think I got the answer over this.
Hitesh Mehta : Thank you.
Mod erator : Thank you. Ladies and gentlemen, in the interest of time, that was the last question for today. I would now like to hand the conference over to Mr. Amar Yardi for closing comments. Over to you.
Amar Yardi : Thank you participants for having us today . It has been a pleasure. If there are any further questions or queries that we have not been able to answer, please feel free to reach out to Orient Capital team. Thank you and have a great day.
Moderator : Thank you.
Hitesh Mehta : Thank you everyone. Th ank you Orient.

Moderator : Thank you. Ladies and gentlemen, on behalf of Waaree Renewable Technologies Limited, that concludes this conference. We thank you for joining us and you may now di sconnect your lines.
Thank you.

Call: Nov 2023

Execution with Pace & Comfort

Waaree Renewable Technologies Limited
(Erstwhile "Sangam Renewables Limited") (A subsidiary of Waaree Energies Limited)

Dear Sir/Madam,

Script No. 534618

Sub: Transcript of Investors/Analyst Earnings Conference Call held on November 06, 2023

Ref.: Disclosure under Regulation 30 of SEBI (Listing Obligation and Disclosure Requirement) Regulations, 2015

Further to our communication dated November 01, 2023 and November 06, 2023, please find enclosed the transcript of the Earning Conference Call held on Monday , November 06, 2023 at 11:00 AM to discuss the unaudited financial results for the quarter and half year ended September 30, 2023.

This intimation is also available on the website of the Company at www.waareertl.com .

We request you to take the same on your record.

Thanking You,

Yours faithfully,
For Waaree Renewable Technologies Limited

Heema Shah
Company Secretary and Compliance Officer

"Waaree Renewable Technologies Limited
Q2 FY'2 4 Earnings Conference Call "
November 06, 202 3

MANAGEMENT : MR. DILIP PANJWANI – CHIEF FINANCIAL OFFICER –
WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. ABHISHEK PAREEK – GROUP FINANC IAL

CONTROLLER – WAAREE RENEWABLE
TECHNOLOGIES LIMITED
MR. ROHIT WADE – GENERAL MANAGER , INVESTOR
RELATIONS – WAAREE RENEWABLE TECHNOLOGIES
LIMITED

MODERATOR : MR. NIKUNJ JAIN – ORIENT CAPITAL

Disclaimer: E&OE - This transcript is edited for factual errors. In case of discrepancy, the audio recordings uploaded on the stock exchange on 6th November 2023 will prevail.

Moderator: Ladies and gentlemen, good day and welcome to the Q2 FY24 Earnings Conference Call of Waaree Renewable Technologies Limited. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance d uring the conference call, please signal an operator by pressing star, then zero on your touch -tone phone. Please note that this conference is being recorded.
I now hand over the conference over to Mr. Nikunj Jain from Orient Capital. Thank you and over to you, Mr. Nikunj.
Nikunj Jain: Thank you, Malcolm. Good morning, ladies and gentlemen. I welcome you for the Q2 and H1 FY24 Earnings Conference Call of Waaree Renewable Technologies Limited.
To discuss this quarter's business performance, we have from the management, Mr. Dilip Panjwani, Chief Financial Officer, Mr. Abhishek Pareek, Group Finance Controller, and Mr. Rohit Wade, GM, Investor Relations. Before we proceed with the call, I would l ike to mention that some of the statements made in today's call may be forward -looking in nature and may involve risk and uncertainties. For more details, kindly refer to the investor presentation and other filings that can be found on the company's websit e.
Without further ado, I would like to hand over the call to management for their opening comments and then we will open the floor for Q&A. Thank you and over to you, sir.
Dilip Panjwani: Thank you, Mr. Nikunj. Good morning to all of you. I am Dilip Panjwani and would like to extend a warm welcome to all of you to the Earnings Conference Call of Waaree Renewable Technologies Limited, discuss the second quarter of FY24 and first half of FY2 4 financial performance.
We begin with a festive note and we extend warm wishes for the festivities and wish to express our heartfelt gratitude to all those who have dedicated their time to join the call and have consistently been part of our journey. We have along with us Mr. Ab hishek Pareek, who is our Group Financial Controller, and Mr. Rohit Wade, General Manager, Investor Relations, and other members of the management team as well on the call. We begin the session with a brief outlook on the sector.
India's energy demand is projected to outpace that of any other nation in the coming years, owing to its vast size and immense potential for expansion and progress. Over the next five years, the installed capacity of solar and wind is anticipated to doubl e to a substantial 218 GW. The industry is also set to witness a substantial increase in energy storage capacity ranging from 7 to 11 GW in the next five fiscal years as a result of government initiatives to bolster grid stability and accommodate the risin g capacity of renewable energy sources.
Also, the sector requires investments of around INR6.4 lakh crores over the next five years. By 2030, an estimated 50% of total electricity will be produced from renewable sources, thanks to adoption of more efficient batteries for energy storage. While I ndia's solar energy is now

showing encouraging signs of growth, it must overcome the challenge of competition from imports.
The domestic industry needs to rise to the challenge which can cause harm to local production. This impacts local industry as they cannot meet domestic demand on account of price competition when cheaper imports make their way, but local production cannot meet high demand. This was one of the reasons that government suspended ALMM mandate until March

2024.
However, a new challenge and opportunity has descended on the sector. While at present the prices of solar modules are hit by historic loss mainly due to spike in production of polysilicon and oversupply in European market, this pr

esents an opportunity to renewable sector and is good news for India since it helps India's efforts to create solar power capacity at rapid pace. But it will also further hit locally made equipment since ultra -low imports can make domestic challenge withstand longer time.
Nevertheless, we continue to leverage our expertise to boost operational efficiency and provide unparalleled services, all with the goal of delivering more value to our customers. Additionally, the company remains focused on newer innovations both in hydr ogen and storage segment going forward. In conclusion, the Indian renewable energy sector is making impressive strides, supported by government's steadfast dedication and well -thought -out strategies.
As we move forward, we look forward to the exciting prospects on the horizon while we strive to meet our ambitious future objectives. Now, I would like to take you through our business performance for this quarter and first half of FY24. Starting with our order book position, we have an unexecuted order book of 897 MW .
We have successfully executed orders of 264 MWpin first half of FY24. Revenue from O&M stood at INR5.15 crores in the first half of FY24. In this quarter, we have received two rooftop solar projects, three ground -mounted solar projects, respectively.
Revenue for Q2 FY24 stood at INR150.06 crores, representing a growth of around 24.47% Y-O-Y, as compared to INR120.56 crores in Q2 FY23. EBITDA for Q2 FY24 stood at INR28.09 crores, representing a growth of 122.83% Y-O-Y, as compared to INR12.61 crores in Q2 FY 23. PAT for Q2 FY 24 stood at INR18.29 crores, representing a growth of 124.18% Y-O-Y, as compared to INR8.16 crores.
The first half of FY 24 performance was revenue stood at INR279 crores as against revenue of INR215.59 crores in competitive period during first half of FY 23, representing a growth of 29.41% Y-O-Y. EBITDA for first half of FY 24 grew by 71.78% Y-O-Y from INR25.66 crores in first half of FY 23 to INR44.08 crores. PAT for the first half of FY 24 grew by 62.58% Y-O-Y from INR18.08 crores in first half of FY 23 to INR29.4 crores.
We have also released our press release in detail. Investors may go through it in detail. With that, let me end by wishing you all a very happy, healthy and prosperous season greetings and Diwali in advance. Thank you for joining us today and we look forwa rd to any of your questions.
Thank you. Over to Mr. Nikunj.

Moderator: Thank you very much. We will now begin the question -and-answer session. The first question is from the line of Nisarg Vora, who is an individual investor. Please go ahead, sir.
Nisarg Vora: Hello sir. Good morning. Thank you for this opportunity. I had a couple of questions. First one being that when we are bidding for an order, around what margins are we looking for when we bid for an order? What is the threshold of margins that we target th at we should get?
And the second part is how many megawatts can we expect us to approximately complete for this financial year?
Dilip Panjwani: Okay. Well, Mr. Nisarg, you have said two questions on the margin front and on the megawatt that we expect to complete this second half balance. On the margin front, we always target a global margin of -- EBITDA margin of around 15% to 25% of the range, but it's more likely between 1 5% and 20% of the range that we target. Individual project cannot be revealed, but that's the threshold that the company would like to operate in.
And as regards the megawatt s, we have already articulated that we have got an unexecuted order position of 897 megawatts, and a substantial portion of it is likely to be completed in the second half.
Nisarg Vora: Okay, got it. So we can at least expect us to complete more 600 megawatts in the remaining part of the year at least?
Dilip Panjwani: I would not put a har

d number because it depends on certain factors, which can sometimes be beyond our control. But the company does expect to complete a substantial portion from it.
Nisarg Vora: Got it, sir. Thank you. I'll get back into the questions queue.
Moderator: Thank you. The next question is from the line of Rajiv Jain, who's an investor. Please go ahead.
Rajiv Jain: So could you provide the breakup of how much the unexecuted order book is from government and from the private?
Dilip Panjwani: Yes. A substantial order book right now is from private sector. And we are bidding now in government projects as well. But a strong breakup in terms of numbers is what we cannot reveal

right now. But what we can say is a substantial segment comes from C&I segment as we speak.
Rajiv Jain: Also, sir, going ahead, sir, what would be our main focus in terms of order? Would we be focusing on government orders or private orders?
Dilip Panjwani: It will remain -- again, it will remain both focused on C&I and government both. Government orders are large in size, and therefore we cannot ignore the segment. And we are bidding as we speak. So we will have a mix of both order books going forward.
Rajiv Jain : Okay, sir. Thank you, sir. I'll join in the questions queue for follow -up. Thank you, sir.
Moderator: Thank you. The next question is from the line of Utsav Shah, who's an investor. Please go ahead.

Utsav Shah: Hi, sir. Good afternoon. So I had a question on the most of the modules you purchase, I understand, might be from the parent company Waaree Energies. So in the light of modules price falling, is the buying price fixed when we buy from them? Or is there a price variation clause? Could you please throw more light on it? I had one more…
Dilip Panjwani : It is not necessary that we buy from our parent Waaree Energies. It depends on client's specification. And that price is, for both the EPC segment and for the purchase segment is logged in at the time of EPC itself. So to put a factor that, we always buy from Waaree Energies, is not the fact.
Client decides which modules they want to buy, they want to procure, and the standards are decided by the client. And when they are decided, the price and its variation is fixed at that point in time. So it shouldn't impact the EPC contract going forward. That's how it works in our segment.
Utsav Shah: So just to get more clarity, would it be at the time of EPC contract signing, would it be the price would be fixed for the entire contract duration? Or there might be…
.
Utsav Shah: Okay. Thank you. Sir, what I was asking is, at the time of EPC contract signing, is there a price variation clause attached to it? The reason for asking this is because the prices have fallen dramatically for modules. So do we get any benefit from it? Or how would it impact us?
Dilip Panjwani : So, Mr. Utsav, as we stated that it is the discretion of the client. So in cases where clients decides to purchase modules directly and supply to us, that question doesn't arise, in terms of price fluctuation. And where we undertake to procure modules, we go back and log the prices of modules when we undertake the EPC contract. So on the both sides, it gets logged. So the price variation doesn't impact us. It's the balance of materials where, we can have that kind of a question. But that's n ot a large portion. And the price fluctuation there isn't very significant.
Utsav Shah: Understood. Thank you so much. That's it from my end.
Moderator: Thank you. The next question is from the line of Shikha Mehta from White Whale Partners. Please go ahead.
Shikha Mehta: Hello, sir. I just had two questions. One is currently from our order book. How much of a percentage is with the module?
Shikha Mehta: Sure. So I'd like to understand from your current order book, what is the breakup between orders
with the module and without the module?
Dilip Panjwani : Yes. So the bulk of our order book, approximately in the region of 70% is without module. The balance is only with module.
Shikha Mehta: Understood. And what is our current bidding pipeline? And how much conversion do we normally expect?

Dilip Panjwani : I couldn't follow your second part. You said the bidding pipeline, right?
Shikha Mehta: Bidding pipeline and conversion, what we can expect?
Dilip Panjwani : Conversion is very difficult to put until we sign an order. But the current pipeline is pretty strong at 3.5 gigawatts, right now.
Shikha Mehta: Okay. And normally our rate is 35% to 40%, right, for conversion?
Dilip Panjwani : I, again reiterate, it would be a very forward -looking statement to put a number as to one to conversion. But until now, you have seen our growth, how much we have come along the way since the last couple of years in the EPC segment. So the sector is exciting, you know, and the way we perform with our clients, we've got a good, satisfied order book. That's wh at I can present as of now. But to put a number would be, you know, a very hard guess for us.
Moderator: Thank you. The next question is from the line of Nisarg Vora, who's an investor. Please go ahead.

Nisarg Vora: Hello, sir. I had a question on the competitive scenario in this particular industry right now. And like, what are we doing different from our competition? Like, apart from the price, whenever a customer is providing an order to Waaree Renewable Technolog ies, is there any other thing that he or she will look out for?
Dilip Panjwani: You know, there are a few factors that go into, you know, competitive scenario remains, you know, up and down that keeps happening in industry. You know, we have witnessed some of the players exiting, you know, in the last year and, you know, some new players coming up that keeps happening in industry. But, you know, there are a few things that we take care of.
One is our financial discipline that we extremely are conscious of. What we present to our clients is the ecosystem, you know, our time tested ecosystem from modules to execution, erection and installation that we have showcased to our clients. These are s ome of the, you know, important points that, you know, we ensure that the client gets its best value.
Like, you know, we have our own module manufacturing, we are presenting battery segment in some way, we are presenting most of the value chain segment in this space. So, that's a differentiating factor when we speak to clients.
Nisarg Vora: Got it. And so, the second question is that, like, based on the project execution phases that we have, would it be, is it usually better to expect higher revenue and higher margins in the second half of the year?
Dilip Panjwani: Generally, it is observed, yes, you know, because a substantial portion comes in second half. But depending upon, you know, how conversions happen for the balance outer pipeline, it could change in future. As of now, yes, you know, you're right, generally a more favored execution happens in second half.

Moderator: Thank you. Before we take the next question, a reminder to all the participants that you may press star and one to ask a question. The next question is from the line of Karan Sanwal, who's from Niveshaay. Please go ahead.
Karan Sanwal: Okay. So, congratulations on good set of numbers. Wanted to gain some clarity on if our realization for with and without modules have changed in the recent past, because previously I've been guided that per megawatt revenue without module is around, you k now, INR1.25 crores to INR1.5 crores and with module it's around 3.5 to 4. The reason for asking this question is the sales per module, sales

per megawatt has continued to decline because in FY '23 it was around 1.19 and in the recent quarter it fell below 1. So, if you could guide regarding the same?
Dilip Panjwani: What is your question? Can you repeat it? You said that, you know, there is a number to reach with module and without module, but what is the exact question in that?
Karan Sanwal: So, my question was our sales per megawatt continues to decline. If you compare a site last year execution and this quarter, these are the two quarters execution. So, my question was like what sustainable range we could expect our sales per megawatt can be in the future?
Dilip Panjwani: So, you know, we stand by the number that we have articulated between, you know, INR1.2 crores to INR1.5 crores , you know, without module. With module fluctuation will impact the overall pricing of the EPC project, you know, down from INR4 crores to wherever that price of the module stands at the point of entering into EPC contract. Now, what happens is, you know, when you do EPC contracts, you are at various stages of execution.
Depending upon what stage you have completed, you know, your per megawatt sales will reflect. But overall, you know, that number of INR 1.2 Crores to INR 1.5 Crores remains, that doesn't go away.
Karan Sanwal: Okay. And also I wanted to understand our O&M portfolio, like how much, you know, what our strategy is to increase that O&M portfolio and what margin could we expect from the thing?
Dilip Panjwani: So, O&M is very high annuity, tail end that comes for us. Right now, we are executing about under 500 MWp of O&M revenues. So, for the half year, we have booked INR5.15 crores of revenues with very high margin in that business.
Also, coming back to your first question, when I said that we stand by the number of INR1.2 crores to INR1.5 crores and depends on various stages of EPC contract, what you have executed. Once you take full year view for this, you will get that realized number at your end.
Karan Sanwal: Thank you.
Moderator: Thank you. The next question is from the line of Vikram from Niveshaay Investment Advisors. Please go ahead, sir.
Vikram: Hi, sir. Thank you for the opportunity. I wanted to ask a question regarding our, what is our revenue recognition policy? How do we record revenue in P&L statement? Is this based on

milestone achievement or completion of the project? For instance, if we executed 264 megawatt in first half, is the entire revenue recognized in H1 or also in last year H2?
Dilip Panjwani: So, Mr. Vikram, right now, accounting standards do not permit generally completion method. So, you have to go proportionate method based on milestone. So, we also follow and we have put that in our annual report in notes to accounts also. We follow proport ionate completion method.
Vikram: Okay. So, if I see the first half execution of 260 megawatt, then the projects are executed over the last one year or something like that?
Dilip Panjwani: Right.
Vikram: And, sir, my second question is, what is the O&M revenue expected this year and our pending order book is with O&M contracts or without O&M contracts?
Dilip Panjwani: So, it depends on specific EPC, some vendors, some clients do outsource O&M to us and some do not outsource. So, in the previous question, I have said that we are a little under 500 MWp in our O&M. We have recorded INR5.15 crores of revenues. This contract remains for this full year. So, you can expect it to double for the whole year. So, about INR10 crores, INR10.5 crores should be the O&M revenues for the entire year based on just extra polating INR5.15 crores.
Vikram: Okay. And what will be proportion of pending order book with O&M out of 800 megawatt?
Dilip Panjwani: That, you know, we need to get back to you on the specific

number, but currently, the signed
portion is 500 MWp , which is what I said.
Vikram: Okay, sir. Okay. Thank you.
Moderator: Thank you. The next question is from the line of Jay Na ik, who is an investor. Go ahead.
Jay Na ik: Thank you for the opportunity, sir. I wanted to understand your strategies on IPP side because there seems to be some kind of disconnect where management said in previous calls that we are not eagerly looking at IPP, but a couple of posts on social media s hows that we are looking for 200 acres of land in Tamil Nadu and I believe we are in process of acquiring some similar amount of land in Gujarat also. So, can you please outline your IPP strategy focus that company has on IPP business? And what is -- I believe our current IPP portfolio is around 40 megawatts and what is the peak volume, peak revenues that we can expect from it?
Dilip Panjwani: First, I would like to correct on the strategy portion. We have said that we have an IPP portfolio, but IPP portfolio is a very cash intensive business as well. Our focus has not shifted and there is a significant opportunity from C&I segment in IPP opport unity, which we -- as the opportunity comes, which we will monetize definitely. And as we speak also, we are talking to a few clients from where we get the sense that this opportunity is significantly higher. So, as we go, we will execute m ore IPPs and 40 megawatts is what we are showcasing that our strength in IPP business. So, once you showcase your strength, you can chase further opportunities. So, that's our strategy that as the opportunity is long, we will execute IPP business going for ward.

That depends on how we get, whether we get remunerative deals or we don't get. We will only chase remunerative deals because that's a very long tail business of annuity as well. There are 15 years PPAs in that segment. So, we need to be a little careful wh ile executing those projects. So, you may have heard that from that caution perspective, but the company strategy remains to remain focused on IPP as well.
But on your second question of what will be the peak revenues, to put a number will be difficult for anybody, because as the government's intention itself is to go 280 gigawatts in solar alone by 2030. How much of that portion comes from this segment? It's difficult to put a number to that.
Jay Na ik: Okay. Got it, sir. Sir, again on the strategic question, probably we have been talking about our international forays for quite a while, actually, around a year or so. And even on the O&M side for the last two quarters, three quarters, we have been actively focusing on that segment. But w e are yet to see anything on the ground. Can you please give us an update on future plans of companies in foraying into EPC and O&M business, in India and abroad market?
Dilip Panjwani: So, foreign foray, we have executed contracts abroad, but we have no significant presence outside as of now. The domestic demand itself is significantly higher for us to fulfil. So, we will remain domestic focus for some more time until, opportunities from foreign present in a more profitable way. So, that remains the strategy. But the pipeline in domestic itself also, as I said, is 3 gigawatt and 3.5 gigawatt. So, unless that tail increases from abroad, it is difficult to put a time frame a s to when we will go out, all out in foreign countries and execute those projects.
And as far as O&M is concerned, we have articulated that, when we execute EPC projects, it comes as a natural benefit to us. So, once it keeps increasing, we will keep you updating. As of

now, as we speak, I told you that, we have got 500 MWp of O&M that we are executing. And further we expect, around 300 MWp -- little under 300 MWp to come back to O&M from the existing contracts as well.
Jay Na ik: Sir, I understan

d that actually the orders that we have got at the outset of this year are with O&M.
So, that would fall in place. But we have also talked about third -party O&M projects that we are looking at. We have also talked about inorganic growth in O&M, acquiring technology competencies in O&M. So, if you have got any updates on that, sir?
Dilip Panjwani: Right now, nothing has come before the Board. And if there are updates, we will definitely keep market updated on this new thing that comes in.
Jay Na ik: Okay, sir, last question. Sir, on -- we have talked about a hybrid project solar and wind in past conference calls. If you have got any updates or we have put together a strategy in place for capitalizing on that opportunity?
And the second question is, are we expecting any EPC order from the Waaree Energies Limited, who is a parent for us? Because they have talked about some 700 megawatt solar project in Odisha as part of their integrated program?
Dilip Panjwani: So, I will -- let Mr. Abhishek handle this question for you.

Abhishek Pareek: So, on the hybrid strategy, as you rightly mentioned that nowadays there are a lot many projects which the government and in fact, private players are coming up with the solar with storage and solar with wind. So, our focus will continue to be on solar and we are actively participating and also following up the tenders with the solar -plus storage. So, yes, this is going to be a part of the active strategy.
In terms of the order from the parent company, Waaree Energies, so far, the plant at the new capex is still underway and yet to be decided. So, difficult to comment that that order will pass through to these subsidiary company because it generally cannot h appen. There has to be a proper process and this is the bidding only a company can win an order. So, difficult to comment on that. But yes, this is in pipeline.
Jay Na ik: Okay. Thank you so much, sir, and all the very best for the future.
Dilip Panjwani: Thank you.
Moderator: Thank you. The next question is from the line of Karthi from Suyash Advisors. Please go ahead.
Karthi: Yes, good morning. I just wanted a couple of industry level clarifications. One is, have you seen an increase in imports of modules in the last few months? And have you seen it in your client order book as well?
Abhishek Pareek: Yes, so, if you look at the statistics of last half year, the imports have substantially increased and hence, there's a continuous request from the manufacturing industry to the government that there has to be support from government to flourish the domestic manufacturers. So, yes, it has increased, but majority of our orders are without modules. And since in our case, clients are deciding on majority of the orders, it generally doesn't affect us directly.
Karthi: I realize that, but the context of the question was, has there been a delay or deferral in execution because your clients may have changed their sourcing plans? Does that happen often? Can you clarify that?
Abhishek Pareek: So, generally, so when you see the price fall to the levels like current, even the division making happens very fast. So, now we have seen in the current quarter that clients have come up and the bidding pipeline has also increased. So, question of further delay doesn't look currently.
Karthi: Okay. So, you think a large part of the 800 -odd megawatts that you have to execute can be done in a half year, six month timeframe, or are there limits to what you can execute in a particular timeframe? Can you give some clarity on that?
Abhishek Pareek: I think Mr. Panjwani has already clarified that a substantial portion of it should get completed in the second half. But putting a hard code number to this may be difficult.
Karthi: No, I was asking you more in terms of, you could refer to it in terms

of capacity, as in what is
the maximum number of sites or megawatts that you can execute in a particular timeframe. That is really where I'm coming from? The numbers don't matter. The ex act numbers don't matter.

Dilip Panjwani: You know, exactly. This is what we said, in whichever way you put that to, it boils down to the number and it's not the modules that impact an EPC, there are other variable factors. So putting

all those factors, we do expect a substantial portion and we re peat that. We expect to complete in the second half of this year, as we speak. But to put a number to it and in whichever way, it will be extremely difficult.
Karthi: Fair. And in terms of balance of plant, how is the supply chain like? Are there any challenges in sourcing?
Dilip Panjwani: So far, there are no significant challenges in balance of supplies.
Karthi: Right. And entirely domestically sourced, right?
Dilip Panjwani: Not entirely, but majority of them, yes. It depends on client specifications as well. If the client insists that he would want something of a particular make or specification, we have to go by that.
Karthi: Right. A minor clarification, you refer to 260 -odd megawatts of execution in the first half. And you say you do percentage of completion method as revenue recognition. So if I have to, as an outsider, reconcile these two things, how to think about that?
Dilip Panjwani: I actually didn't follow your question, you know.
Karthi: So you said you executed 260 -odd megawatts in the first half, right? Something to that effect, right? And you said in terms of revenue recognition, you follow effectively a percentage completion method. It is not like at the end of the day, right? So how d oes one, when I look at your 850 megawatts pending order book, how to understand this? Is this a project where there has been no activity or partial activity? How should one think about that?
Dilip Panjwani: Well, there are partial activities, if that's the question. So if you want to correlate it, it would be not one -to-one correlation on, 260, etc . Since these are milestone driven at the end of the day. So there is always a partial completion in every project.
Karthi: Right. Okay, sure. Sure. Thanks very much for answering my question and very best wishes.
Dilip Panjwani: Thank you so much.
Moderator: Thank you. The next question is from the line of Sarang Joglekar from Vimana Capital. Please go ahead.
Sarang Joglekar: Yes, hi, thank you. I wanted to understand how diversified the customer base is, like how much of the order book is accounted for by, say, Top 5, Top 10 clients?
Dilip Panjwani: So, this business is, as you know, a lot of investments goes into it, so there is a concentration, on the Top 5, Top 10, wherever you want to put it. So these, the Top 10 people would account for bulk of the contract.
Sarang Joglekar: Okay, okay.

Abhishek Pareek: But to add on to that you would also see that though the Top 5 customers or Top 10 customers in particular quarter or half year could be significantly high in terms of the share of the revenue, but they keep changing because a project generally takes three months to six months for completion. And as and whe n the project gets completed, another 5, 10 large customers will come in the pipeline.
Sarang Joglekar: Okay. Understood. Yes, just one more question. Can you give any sort of breakup on the size of the projects in the order book and that the one that is executed in the first half, like maybe below 30 and above 30, any such kind of breakup if you can give?
Dilip Panjwani: We undertake projects of all sizes. So it would be difficult to put a number of project to each this thing.
Sarang Joglekar: Perfect. Okay. No issue. Thanks.
Moderator:

Thank you. The next question is from the line of Vikram from Niveshaay Investment Advisors. Please go ahead.
Vikram: Hi, sir. Just a follow -up question. Is any portion of 3 gigawatt -plus our bid pipeline from outside India or is there a plan to do so in future?
Dilip Panjwani: So most of the 3 gigawatt which you see, all of them are from India as of now.
Vikram: And any plan to bid outside India in future?
Dilip Panjwani: Yes, we do have. And of course, we can't reveal too much. But as we speak, we have some projects that we are discussing with overseas also, but not materialized one as of now.
Vikram: Okay, sir. Thank you.
Moderator: Thank you. The next question is from the line of Nisarg Bora, who's an investor. Please go ahead.
Nisarg Bora: Sir, I was looking for some clarity. So generally in the previous conference calls, we have generally guided that the order book that we have, we are planning to usually execute it in 12 months to 15 months. But this time you say that like the entire order book we plan to complete major part of it in the next six months, is that correct?
Dilip Panjwani: So, most of the projects are in the region of six months to nine months also, depending upon the size, unless the size is very significant, it happens in six months to nine months also. So I don't know where this number of all the projects coming from 12 m onths to 15 months kicks in, that's

why and projects do keeps getting churned, one project goes, another project comes, so.
Nisarg Bora: Right. And sir, one last question from my side would be that we have scaled up fantastically from, 125 megawatt to 300 megawatt to 800 megawatt yearly with a larger base. Like, do we find significant opportunities to continue scaling at this level or will we see some slowdown at a percentage level as we have reached like 800 megawatt?

Dilip Panjwani: No, we as a company definitely believe that the sector is at an inflection growth point aided by government policies and climate change efforts from the private sector. Both put together is presenting this opportunity, never seen in the past. We keep talki ng about this government commitment by 2030 on the solar side, renewable side, hybrid side. So unless something drastically happens and government efforts goes down, we see a good growth opportunity in this sector. Generally speaking.
Nisarg Bora: Right. And like with respect to our company, do we expect like the same exponential performance, same exponential levels of order books?
Dilip Panjwani: We are working hard, but no one can assure. We can only say that we can commit to that we will work hard for investors.
Nisarg Bora: Got it. Thank you, sir. Yes.
Moderator: Thank you. Ladies and gentlemen, in the interest of time, that was the last question. I would now like to hand over the conference over to Mr. Nikunj Jain for closing comments. Please go ahead.
Nikunj Jain: Yes. I would like to thank the management for taking out the time for this conference today. And also thanks to all the participants. If you have any queries, please feel free to contact us. We are Orient Capital Investor Relations Advisors to Waaree Renewabl e Technologies Limited. Thank you.
Moderator: On behalf of Waaree Renewable Technologies Limited, that concludes this conference. Thank you for joining us. And you may now disconnect your lines.
Dilip Panjwani: Thank you, everybody.

Call: Feb 2024

Execution with Pace & Comfort

“Waaree Renewable Technologies Limited
Q3 and 9M FY’24 Earnings Conference Call”
January 31, 2024

MANAGEMENT : M R. DILIP PANJWANI -- CHIEF FINANCIAL OFFICER –
WAAREE RENEWABLE TECHNOLOGIES LIMITED
M R. ROHIT WADE – GENERAL MANAGER , INVESTOR
RELATIONS – WAAREE RENEWABLE TECHNOLOGIES
LIMITED

MODERATOR : M R. AMAR YARDI – ORIENT CAPITAL

Moderator: Ladies and gentlemen, good day and welcome to the Q3 and 9M FY '24 Earnings Conference Call of Waaree Renewable Technologies Limited. As a reminder, a ll participant lines will be in listen-only mode, and there will be an opportunity for you to a sk questions after the presentation concludes. Should you need assistance during the conference cal l, please press star and one and signal the operator. Please note that this conference is being recorded.
I now hand the conference over t o Mr. Amar Yardi from Orient Ca pital. Thank you and over to you sir
Amar Yardi: Thank you Manuja. Good morning, ladies and gentlemen. I welcom e you all to the Earnings Conference Call of Waaree Renewable Technologies Limited to dis cuss the Q3 FY24 business performance. Today on the call we have from the management Mr. Dilip Panjwani, Chief Financial Officer and Mr. Rohit Wade, General Manager, Investor Relations.
Before we proceed with the call, I would like to mention that s ome of the statements made in today's call may be forward-looking in nature and may involve r isk and uncertainties. For more details, kindly refer to the inve stor presentation and other fi lings that can be found on the company's website.
Without further ado, I would like to hand over the call to the management for the opening comments and then we will open the floor for Q&A. Thank you and over to you, Dilip, sir.
Dilip Panjwani: Thank you, Amar. Good evening, everyone. I would like to welcom e you all to the earnings conference call of Waaree Renewable Technologies Limited to dis cuss the third quarter and nine-month-ended FY24 financial performance. I hope you all hav e got an opportunity to go through our financial results and investor presentation which h as been uploaded on the stock exchange, as well as on the company's website.
I wish to express my heartfelt gr atitude to all those who dedic ated their time to join the call and have consistently been part of our journey. I have along with m e Mr. Rohit Wade, General Manager, Investor Relations on the call.
Let me begin by giving you a brief outlook on the Indian econom y and the solar sector. In the midst of the global economic uncertainties, the Indian economy emerges as a beacon of resilience. The second quarter GDP growth has surpassed expecta tions and as noted by Reserve Bank of India, the fundamentals of the Indian economy remain ro bust.
Banks and corporates exhibit stronger balance sheets, fiscal co nsolidation progress as planned. GST collections remain buoyant and there is substantial forex c ushion against external shocks. These factors not only underscore the stability of the Indian e conomy, but also reinforce its role as key driver of global growth.
In terms of Indian solar sector, the country possesses substant ial solar energy potential with around 5,000 trillion kilowatt hour of energy incident over its geographical area annually. Harnessing solar photovoltaic electricity has proven successful , enabling extensive scalability across the country. India aims to decrease the carbon intensity of its economy by less than 45%

by the end of the decade. Attain 50% cumulative electric power installed from renewables by 2030 and reach net zero carbon emissions by 2070.
The adoption of low carbon technol ogies has the potential to ge nerate a market worth of 80 billion in US by 2030 -- in India by 2030. The country also aim s to generate 5 million tons of green hydrogen by 2030.
According to recent draft floated by Central Electricity Author ity, India would need substantial investment of 4.75 trillion by 2027 towards investment in renew ables. The share of solar power would rise to 206 gigawatt in the period. Over time, India's so lar power sector has become a significant player in grid connected

power generation capacity, aligning with government's goal
for substantial growth and reinforcing energy security.
Integral to India's national action plan on climate change is t he National Solar Mission, a pivotal solar focused program driven by Indian government in collaborat ion with states. This plan is designed to foster environmentally sustainable development and tackle energy security challenges and it underscores India's commitment and emphasis o n integrating renewable energy for future growth.
In terms of module prices, over the past year, module prices ha ve experienced a notable reduction and the introduction of new production capacities in China has created substantial supply pressure; leading industry analysts to predict a prolong ed period of subdued module prices.

At present, the conditions are fav orable for new projects to st art, thanks to lower cost of producing electricity. This is expected to bring more opportuni ties for companies like ours. Our business development teams are working very hard and remain foc used to deliver the strong growth trajectory we are targeting in this year and we are well placed and optimistic about reaching the goals set earlier in the year.
In conclusion, the upward progress of Indian renewable energy s ector, buoyed by the government's commitment and strategic initiatives, sets a promi sing trajectory for the future. We continue to leverage our expertise in the sector and are eagerl y anticipating the unfolding of exciting opportunities on the horizon. We are committed to deli vering unique services with the primary focus on maximizing value for our customers and stakeho lders.
Our dedication to contribute meaningfully to the sustainable gr owth and success of the renewable energy landscape, ref lects our dedication to staying at the forefront of innovative and sustainable solutions.
Now I would like to take you through our business performance f or this quarter and nine-month ended FY24. I am pleased to report that our company has had a s trong Q3 and nine-month FY2024. We have an un-executed order book of 749 plus megawatt peak and we have successfully executed orders of 473 plus megawatt peak in nine- month period for FY24.
Revenue from operations and management – O&M stood at INR7.19 c rores in nine-month FY24. Revenues from power stood at INR10.89 crores during the n ine-month FY24. In this

quarter, we have received orders for one rooftop solar project and one ground-mounted solar project, respectively which we h ave already announced on the st ock exchanges.
Third quarter performance, revenue for third quarter FY24 stood at INR324.19 crores representing a growth of around 338.78% year-on-year as compare d to INR73.88 crores in quarter three FY23.
EBITDA for third quarter FY24 stood at INR87.81 crores represen ting a growth of 145.3% year-on-year as compared to INR35.80 crores in quarter three FY23. P rofit after tax for quarter three FY24 stood at INR64.46 crores representing a growth of 158.09% year-on-year as compared to INR24.98 crores in t hird quarter FY23.
Nine-month FY24 performance, revenue for nine-month FY24 stood at INR 603.19 crores as against revenue of INR289.47 crores in comparative period durin g nine-month FY23 representing growth of 108.38% year-on-year. EBITDA for nine-mo nth FY24 grew by 114.6% year-on-year from INR 61.46 cror es in nine-month FY23 to INR 13 1.89 crores. PAT for nine-month FY24 grew by 117.98% year-on-year from INR 43.06 crores i n nine-month FY23 to INR 93.86 crores. That's it from our end. Thank you for joining us today and we look forward to your interaction.
Moderator: Thank you very much. We will now begin the question and answer session. The first question is from the line of Vikram from Niv eshaay Investment Advisors. Ple ase go ahead.
Vikram: Hello. Hi, sir. Congratulations for a good set of numb

ers in th e current quarter. So I have a first
question regarding the sustainable EBITDA margins. Previously w e have said that sustainable EBITDA margin would be in the range of 12% to 15%. But recently during an interview, our CFO guided that EBITDA margin would be in the range of 15% to 2 0%. So if you could highlight the reason for the same. Is it due to module price co rrection?
Dilip Panjwani: Y o u k n o w , i n a l l o u r c o m m u n i c a t i o n s , w e h a v e m a i n t a i n e d t h a t o u r sustainable EBITDA
margins should be in t he range of 15% to 20%. In our previous e arnings call and in our other communications, which we have met with other analysts, etc., we have always said that we see our margins to be in the range of 15% to 20%. And we have state d various other things as well, you know, in relation to how 15% to 20% margin emerges.
So I don't know where do we get this 10% to 12% number. But, y ou know, we continue to maintain that it should be in the range of 15% to 20%.
Vikram: I think we have mentioned in last con call only. Okay. And the n what is current bidding pipeline and expected conversion rates?
Dilip Panjwani: So, you know, as I mentioned in my opening remarks that we have an unexecuted order book of 749 megawatt. Our bidding pipeline today is at 9 gigawatt, is w hat we are discussing with our potential customers. And it is increasing by the day as we spea k. But as of today, you know, January 31, when we speak, you know, it is 9 gigawatt.
Vikram: But what is our pas t conversion rate?

Dilip Panjwani: See the conversion, you know, these orders are quite big, you k now, one order itself, you know, takes you to a bigger number. So whatever percentage we mention ed, you know, would be not that relevant. But if you want to take a thumb rule, normally i n our trade, the conversion rate is between 30% to 40%, anywhere between 30% to 40%.
Vikram: 30% to 40%. And lastly, like, can we draw from one gigawatt pl us execution this year? What kind of growth we are expecting next financial year?
Dilip Panjwani: See, you know, we never give guidance on how much growth we wil l do. I can talk about sector and how we are participating in this sector growth. So, as I to ld you, you know, in our opening remarks also by 2027 itself, solar would be about 206 gigawatt up from, you know, 65 to 70 gigawatt, which is today, roughly around 65 gigawatt is what so lar is today.
And, you know, by 2027, which is like four years down the line itself, we are going to see a growth of 206 gigawatt. And, you know, one thing I can definite ly tell is we are getting ourselves to be a big contributor to t his growth in the sector.
Vikram: Okay, sir. Okay, sir. Thank you.
Moderator: Thank you very much. The next question is from the line of Vive k Gautam from GS Investments. Please go ahead.
Vivek Gautam: Yes, sir. Congratulations. A very good number, sir. Basically, sir, I have started tracking the company recently only. So, you might find my questions to be a bit beginner's type. Sir, one query and concern which we have is this China plus one, that is the big threat.
And is it being helped by anti-dumping duty imposed by governm ent and or if whatever, what is the route to Thailand, Vietnam, and other countries? And the re was also news on general group, ESW group, preventing its plan of going into solar modul e due to Chinese competition. So, how are we placed and how are we coping with it?
That is the first question. And second is, sir, about the oil imports from Middle East all over which India is suffering. And can it be substituted by solar en ergy, for example, solar pumps playing a critical role in it?
And how viable is it, sir, and by what percentage? And third q uestion is on the battery storage plan in the non-peak hours. So, solar is there in the day and e vening and the

night. What are our
plans? And Waaree Energy's IPO also, if you can tell something, sir. Thank you.
Dilip Panjwani: Vivek, you know, we are happy to address all your questions. Ho wever, a couple of caution things that I would want to note. This is a conference call for Waaree Renewable Technologies. And some of your questions relates to Waaree Energy, you know, which Waaree Energy is already under DRHP. Plus, we are not authorized to speak on beh alf of Waaree Energy. So, we will have to carve out that ques tion for you and you may addres s your question to investor relations at Waaree Energy. They might, you know, assist you in your questions. Okay, sir.
China Plus One and anti-dumping duty.

China Plus One is always good for India. But we are still seei ng imports from China in our EPC projects. Plus, we are seeing both Indian product offtake also. So, I mean, government is, you know, considering ALM M. But that relates again to manufacturin g sector and not for us. As an EPC player, we are agnostic to whether you are using an importe d material or whether you are using a domestic material.
So, we do not get impacted on China or China Plus One as an EP C player. As regards to your second question on oil imports. You know, when you say energy b asket, energy basket comprises of many things. Solar is only one component. There is wind energy component. There is oil usage.
Then there is a gas component. Solar alone can never replace e ntire oil put together. What we have mentioned is the share of solar is going to be very signif icant. By 2030, the expectation of solar segment to India's energy basket is going to be to the or der of expected order, you know, which is in various papers, citation is 280 gigawatt. That's th e number that I can put across to you from a solar perspective. On a battery side, a lot of discu ssion papers from the government has started.
And as seen in developed economies, you know, the way battery segment has taken off and is taking off both. India will also, you know, have to consider an d is considering in if you see the various Central Electricity Authority discussion papers, etc. B ut there is another company of our Waaree group, which is Waaree T echnologies Limited, which is in that segment.
Their plans, they will be authorized to talk. You can again se nd their queries, you know. As an EPC player, we have already spoken about this, that be it solar , be it battery, be it pump storage, Waaree Renewable will participate in all those projects and we will execute them.

But as we speak today, most of our order book comes from solar energy only, solar segment only. I hope I have addressed your question.
Vivek Gautam: Yes, sir. I will get in touch with your IR also. And any antit hesis point that if you'd like to highlight, sir?
Dilip Panjwani: No, nothing antithesis, you know, it's all, you know, I mean, t he sector is at such a good growth point that there is no antithesis, you know, it's just you have to seize the moment and every company has to work in getting th e business on its right side.
Vivek Gautam: The opportunity size remains huge and really I think our compan y is doing very well in it. Keep up the good work, sir. And all the best, sir.
Dilip Panjwani: Thank you, Vivek.
Moderator: Thank you very much. The next question is from the line of Shub ham Upadhyay from the Microcaps Minute. Please go ahead.

Shubham Upadhyay: Hello. Yes. Good evening, everyone. And congratulations on a go od set of numbers. So my question is a little bit specific regarding the green hydrogen plant. So what is exactly the timeline on this particular plant?
Dilip Panjwani: So Shubham, this is a contract we have got on a pilot basis fro m a PSU. And they are yet to give land for the same. Unless we hear from

them on that, it's very difficult. But this was a showcasing thing one by one project for us. And we take it with pride that we want to execute even in, as I mentioned previously to the second question of Vivek, that we w ant to be in energy space. And any hydrogen project that comes up in future also, we will build, where energy transition to creating hydrogen, green hydrogen will come in. So as of now to put up timelines will be very difficult until we get the timelines from on land from the PSU that from whom we have got this order.
Shubham Upadhyay: Okay, okay, thank you. That answers the question. And the proje ct which is under planning and execution as per your Investor presentation is around 750 megaw atts. So what part of this megawatts will be executed in this quarter and next quarter?
Dilip Panjwani: So this -- to put to exactly this quarter and next quarter will be difficult, but we are planning to be in the range of about 900 megawatt 900 to 950 megawatt this year completely, out of which we have executed about 473 megawatt we have executed.
Shubham Upadhyay: Okay, that's my question. Thank you. I will re-join the queue.
Moderator: Thank you very much. The next question is from the line of Roha n Parikh from Ohm Stock Brokers. Please go ahead.
Rohan Parikh: Hello, everyone. First of all, congratulations for a good set o f numbers. My question stands that there were some plans of doing some backward integration in the company. So is that plan being executed or what's the plan for backward integration, sir?
Dilip Panjwani: I can you rephrase that question, backward integration in EPC w ould be in what sense?
Rohan Parikh: So there were some plans of backward integration for the busine ss, which you had mentioned in a couple of quarters ago. So is that plan being executed or no?
Dilip Panjwani: Okay, I think now I get your point. I think you must be talking about Waaree Energies again, because they are in backward integration mode.
Rohan Parikh: Okay, okay. It's not anything to do with Waaree Renewable.
Dilip Panjwani: No, Waaree Renewable is an EPC co mpany and Waaree Energies is a manufacturing company. That's why I also requested that you might be referring to some o t h e r b u s i n e s s p a r t o f t h e company. But if you are reiterating that it is backward integra tion, then it must be Waaree Energies.
Rohan Parikh: Okay, okay. That's it. Thank you.

Moderator: Thank you very much. The next question is from the line of Aman Saifee from Iwealth Management. Please go ahead.
Aman Saifee: Hello, sir. Am I audible?
Dilip Panjwani: Yes, you are audible, sir.
Aman Saifee: So firstly, sir, congrats on a superb set of numbers. I just wa nted to understand that previously we had mentioned that we are venturing into power generation bu siness in a big way with some potential partner. So what is the progress there and what is th e capital investment we'll be doing there and how will we fund that?
Dilip Panjwani: Okay, see we already have 44 megawatt of power assets with us. And we have already also

announced that we have done for nine month period, about INR10. 89 crores of revenue generated from these power assets. We have plans and it all dep ends on -- from the pipeline, how many people would want us to set up their power plants and run also.

It depends on that from the 9 gigawatt pipeline, which I menti oned. So to put a specific timeline, it will be extremely difficult because these are long gestation projects to discuss today and to signing itself takes nine months it's a lead time. As far as in vestment is concerned, a typical investment in solar alone is today in the range of INR3.5 to IN R3.75 crores per megawatt.

So if I say about a 1,000 megawatt just for hypothetical mathem atical calculations as a round figure, that would translate to INR3,750 crores. Typically the rati

o for equity and debt is 25-75.

So somewhere around INR700 to INR800 crores of equity will also need to be pumped in. So this will be well considered things in the future when we take up these projects on funding, on capital investment and all those things.

Plus it has to be remunerative and EPS accretive for us.

Aman Saifee: Understood, sir. Got it. And sir what is the extent of our work ing capital needs? Could you provide the details regarding the payment terms in place? And a dditionally, do we have the policy of securing upfront payment from our customers?

Dilip Panjwani: So, most of our projects in Waaree Renewable, as we have mentio ned in the past, come from utility IPP projects and C&I segment, where the payment terms a re normally favourable to us because we have to give Bank Guarantees we need to have workin g capital in the nature of non-fund based facilities only.

So we give advanced bank guarantees and we mobilize 10% of the money. And from that 10%, we start circulating our capital for supply of materials as wel l. And once the mate rial is supplied, usually the payment gets between 15 to 20 days, we get the paym ent. We also get a credit period through LC issuances.

So technically in those projects, on a practical basis, the cap ital requirement is very less, only to the extent of margins that we give to banks. These things get t ilted a little bit in favour of PSU or government contracts, where there is a working capital requi rement to a certain extent. But

there also if it is PSUs like, which are in power sector, they are normally fast in payment, but there's still, some 10% to 15% of the capital gets held up. But normally, that held up doesn't mean, you don't get money in the end.

You get money, but there's a working capital cycle there. Since , as I mentioned, most of the projects of Waaree Renewable are in private utility segment, IP P segment, our working capital requirement is very less, I mean, very negligible.

Moderator: Thank you very much. The next question is from the line of Rudr esh Kalyani, from Kalyani Private Business. Please go ahead.

Rudresh Kalyani: Sir, am I audible?

Moderator: Yes, yes, sir.

Rudresh Kalyani: Okay, so congrats on the good number. So I had a few questions. So when can we see something on the, if we -- Maverick Services Private limited?

Dilip Panjwani: You know, Maverick is a collaboration agreement, the Maverick g uys have to come back and set up their manufacturing here and have to start, discussing w ith clients. So it could take anywhere between, quarter and couple of quarters, for client ac ceptance and all those to happen.

So which we are planning in this first quarter to invite them, to adhere to the terms of the collaboration agreemen t and start setting up the unit for showc asing it to our clients.

There's a new concept that has come up. It cut shorts the deliv ery timelines and execution timelines for our solar ground-mounted projects. So, there's a rough timeline that we are saving for the Maverick collaboration agreement to fructify.

Rudresh Kalyani: And my next question is, do we ha ve any plans to monetize the c arbon credits, which we have saved with our plans?

Dilip Panjwani: To the extent available to us, we definitely would do that. But in EPC segment, there would be hardly any carbon credits. Carbon credits would accrue to solar IPP guys.

Rudresh Kalyani: Okay. And yesterday, L&T won a big order in the Middle East. Do we see any of that trickling into our company?

Dilip Panjwani: Can you repeat that? I missed your specific question.

Rudresh Kalyani: Yesterday, Larsen and Tubro won a big order in Middle East in t he EPC segment. So do we see any of that order trickling to us?

Dilip Panjwani: No, I don't think, we have any right now set up with ou

r collab oration with L&T. And we are not present in Middle East as well as of now. So I don't see an y, fallout of L&T coming to us.

Rudresh Kalyani: Okay. And we talk a lot about the analytics on the solar panels . Can you talk a little bit about that?

Dilip Panjwani: I mean, I don't know what is this analytics on which, you want a specific question or anything. You know, what do you want me to talk about analytics on solar panels?
Rudresh Kalyani: In one of the slides, you have mentioned that we do some analyt ics on the solar panels. So is that whatever the panels which are underperforming, we do some analy tics on that so that we can bring up the producing capacity o f that panels or something lik e that? Do we do?
Dilip Panjwani: Understood. So, you know, in operations and management, what O& M business that we do, we gather a lot of data on generation. You know, each panel is sup posed to perform in a particular way, so you have to monitor that. So, as a part of our services , we do capture the data on the generation capacity during various periods of time based on ill umination.
And wherever we find efficiencies or inefficiencies, you know, we discuss with clients and do, you know, change them or improve their performance. It impacts how, you know, solar panels are cleaned also. It is about that, it's basically a technical aspect of solar pane l maintenance under our O&M.
Rudresh Kalyani: Okay. Is that a manual pro cess or the automated one?
Dilip Panjwani: It is automated back end only, b ut based on how much current ge ts generated.
Rudresh Kalyani: Okay. And my final question is, what would be our sustainable g rowth rate? Let's say for five years down the line or 10 years down the line?
Dilip Panjwani: Five years down the line and 10 years down the line to predict is extremely difficult, but the government's plan, I can say, goes up to 2070. Even if you go u p to 2030, by which they want to establish 280 gigawatt of sol ar capacity in India, that itse lf is huge. Then there are global opportunities as well, which you yourself mentioned that L&T ha s got order in Middle East.
We also read it in media. We don't have any specific informatio n other than what is in public media. But the sector, specially , going net zero carbon itself presents a significant opportunity in renewable space. What I spoke to you is only about solar. Th en there is wind. Then there is green hydrogen. Then there is battery storage on a greener side . All that is happening in renewable energy sector. To say that, sustainable beyond 10 yea rs is extremely difficult.
But for a good foreseeable period of time, this sector is going to be a talking sector as an inflection growth.
Rudresh Kalyani: Thank you. All the best.
Dilip Panjwani: Thank you.
Moderator: Thank you very much. The next question is from the line of Vats al Kothari from AlfAccurate Advisors. Please go ahead.
Vatsal Kothari: Hello, sir. Congratulations on a good set of numbers. My questi on is based on the order book split. If I'm not wrong, last quarter, I recall that you had sa id that you had a very large order from the private sector. How would the un-executed order book split be looking like right now in

terms of the private sector and the government sector? And it w ould be great if you could also give some color on how that makes a change going forward given the favourable government policies? Thank you.
Dilip Panjwani: So out of the 750 odd megawatt that we are mentioning, a bulk i s still from utility IPP. But from the pipeline, definitely movement is happening towards PSU. Fro m under 10%, we should be definitely, significantly movement towards PSUs.
You know, that's a big segment that is coming up and no one can ignore that segment.

So as we speak, you know, we have bid in a couple of days, you know, wit h the PSU. And, you know, every couple of weeks, there's going to be a bid from PSU segme nt. So there could be a shift from utility IPP, our private sector to government-slash-PSU se gment as well.
Vatsal Kothari: Understood. Thank you.
Moderator: Thank you very much. The next question is from the line of Dalp at Mehta from Citi Advisors. Please go ahead.
Dalpat Mehta: Yes. Good afternoon, sir. So as you said in the previous answe r of previous question, that this year till now, we have completed 473 megawatts for nine months. Do we have the figures for each quarter, quarter one, two, and three?
Dilip Panjwani: Yes, we do publish those numbers for each quarter as well.
Dalpat Mehta: Okay. Because as you said, the total yearly target is roughly 9 00 megawatts, and 273 is done in

the nine months. So am I right on track to presume that the nex t quarter will be around 427 megawatts?
Dilip Panjwani: So, we normally don't give guidance, I repeat. We said that, ex pectedly, we should be in the range of between 375 to 400, 420 is what these our range should be for the next quarter. But it could very well change as well, because these are, EPC contract s, and many things may not be in your control. There are varia bles to these assumptions as we ll.
Dalpat Mehta: Fully agreed, but this is just our estimation?
Dilip Panjwani: Yes, Yes.
Dalpat Mehta: That or what the company intends to complete, execute the order for the full year?
Dilip Panjwani: Yes, correct.
Dalpat Mehta: Okay. And second thing, sir, for quarter one, the EBITDA margin was 12.4%. For second quarter, it was 18.7%. And for third, it is 27% plus. So is the margins have peaked out or still we expect the margins will be still growing on?
Dilip Panjwani: See, in the first question itself, we spoke about sustainable m argin. We continue to maintain that our margins in EPC segment ought to be in the range of 15% to 2 0%. So there are always factors in EPC contract, because these are long duration contracts. The y don't get over in one quarter.

They spill over to three to four quarters, sometimes five to si x quarters also. If you look at the contract in its entirety from st art to end, your margins always will hover between 15% to 20%.
Dalpat Mehta: Okay. And the last one is, as the Prime Minister announced this Suryodaya scheme, so how the company want to explore the opportunity in that scheme? Is ther e any strategy set by the company or how do we want to go ahead with this scheme?
Dilip Panjwani: See, we are treading the scheme as of now, number one. And numb er two, we do kilowatt, do this rooftop projects also. But those are very far and few, we normally deal in big megawatt, most of our, if you contract as you see execution, it's, 50 meg awatt, 100 megawatt, we are not taking even 290 megawatt also we have done. So our focus has al w a y s b e e n o n t h o s e b i g megawatt orders. This is a very scattered one. So the company h as to, sit and think of how to do this. Low kilowatt, remunerative, not remunerative for EPC. But there could be other areas of, supply chain with the company can benefit. But that we are not yet formed upon on that plan yet.
Dalpat Mehta: Okay. Yes. Thank you, sir.
Moderator: Thank you very much. The next question is from the line of Rish ikesh from Robo Capital. Please go ahead.
Rishikesh: Yes. Hi. Thank you for the opportunity. Firstly, sir, if you c ould just indicate how much percentage of the order book is with the modules and how much t hat we need to fulfil without a module?
Dilip Panjwani: Look, we have always maintained that, to give specific details is very difficult, but general observation in trend analysis is that about 25% to 30% of the o rders comes with modules. The rest of the 75% of the order book always is 70% to

75% is witho ut modules. But in particular quarter, sometimes it can be, a high percentage maybe with modu les. In particular quarters, two, three quarters, it may be also go without module. If you get 10 contracts, roughly our observation is 2.5 to 3 contracts we get with modules. Otherwise, generally it is without modules.
And even if it comes with modules, sometimes we only manage th e supply chain and they place the order directly. The company Waaree Renewable doesn’t get in volved in risk and reward of that module. So that is how, the EPC contracts normally work.
Rishikesh: Okay. And also if you could share the bid pipeline that you hav e currently and what conversion rate are we expecting?
Dilip Panjwani: So the bid pipeline as of today is 9 gigawatt for us. And conve rsion cycle is roughly, in this sector, even one order could change the face of the balance sh eet. So normally the conversion rate is in the range of 30% to 35%, in this segment, 40% also s ometimes. So between 30% to 40% is what we take as a benchmark for conversion.
Rishikesh: Okay. So 9 gigawatt would be a huge bid pipeline. How do you se e your execution going ahead? Currently this year we are executing less than 900, 950 megawat t. How do you see this scaling for the next two to three years?

Dilip Panjwani: So, the projects which are ahead of 100 megawatts, they normall y take longer than three to four quarters. So if it is, much more higher than that, like 300 meg awatt, 400 megawatt, then it can

stretch up to 18 months also, which is like six quarters. But s maller projects, which are 50
megawatt, 100 megawatt, we can execute very quickly and we can finish also.
And it depends on land availability. If the customer comes wit h land, then it can be done in four
quarters itself, in one year its elf. If land is to our account, we have to go and buy the land and it
takes about, six quarters or seven quarters, which I told you. So it depends on all permutations
c o m b i n a t i o n s o f w h a t k i n d o f o r d e r y o u a r e g e t t i n g . P S U o r d e r s normally come with land
sometimes. So if it comes with land PSU order, you can execute it in three to four quarters itself.
Rishikesh: Okay, got it. Thank you very much.
Moderator: Thank you very much. The next question is from the line of Guni t Singh from CCIPL. Please go
ahead.
Gunit Singh: Hi, sir. Thank you for this opportunity. So I'm new to the comp any. I would just briefly like to
ask a bit about the company. So do you consider yourself as an EPC company or a solar panel
manufacturing company? Because on the website, it says that you have a capacity of 12
gigawatts of solar panel manufacturing. So, I mean, what do you consider yourself?
And you mentioned that you do projects apart from solar as well . S o a n d I a l s o w a n t t o
understand if, I mean, all the manufacturing of solar panels th at you do, is it for captive
consumption or do you supply it to someone outside as well?
Dilip Panjwani: So, Gunit, first of all, Waaree group is a large group. So Waar ee has a manufacturing facility
and that name of the company is Waaree Energies Limited. Waaree Renewable Technologies is
a pure EPC player as of now. So we don't classify ourself as ma nufacturing. We classify ourself
as pure EPC player. Module is only one part of it and we procur e it from anywhere, including
Waaree Energies Limited. So there's nothing captive as such for us.
And like in my previous question, I also mentioned that it is c lient's prerogative to choose
module. If they choose Waaree module, they can go and procure d irectly also. And we only
handle the logistics part of it. If they want us to be a pass-t hrough with us as well, we do both,
which is a turnkey project. So it all depends on client's requi rement rather than our requirement.
Gunit Singh: All right, sir.

Got it. So what percentage of our revenue comes from solar and what is from non-
solar?
Dilip Panjwani: All of the revenues is from solar projects only right now. Howe ver, we are planning to do all
kinds of projects in renewable space. But as we speak today, it 's a pure solar play.
Gunit Singh: All right, sir. Got it. And do we see any seasonality in the bu siness? So, I just want to understand
that the Q3 numbers that we have of INR320 crores top line and around INR60 crores bottom
line, can we consider this to be the run rate going forward con sidering the kind of order book
that we have and the execution timeline?

Dilip Panjwani: We have communicated very well that we don't give guidance as s uch. My order book,
unexecuted order book is, as of today, little under 750 megawat t. My pipeline is 9 gigawatt. And
the sector I said is looking for by 2027, it's looking for 206 gigawatt from solar and 280 gigawatt
by 2030. And we will definitely be participating in every spher e of that activity. So that's what
I can speak as of now.
But as far as seasonality is co ncerned, seasona lity -- normally , there's no seasonality as such in
our projects. But we have observed that our first half is alway s it is on the lower side and second
half is better side. Maybe due to the way you undertake contrac ts and all those things. But unlike
other businesses like FMCG or some other businesses, there's no seasonality as such in this
business. It depends on how cor porates take decision in capital investments.
Gunit Singh: All right, sir. Got it. And my last question would be just one follow up from one of the previous
participants. So did you mention that in Q4, we are targeting a bout 325 to 400 megawatts of
execution this year?
Dilip Panjwani: That's the internal -- I would think that we must execute so mu ch of the projects, depending upon
how our order book is now stacked up. That's what we context.
Gunit Singh: All right, sir. Thanks a lot. That's all from my side.
Moderator: Thank you very much. The next question is from the line of Sara ng Joglekar from Vimana
Capital. Please go ahead.
Sarang Joglekar: Hello. Can you hear me?
Dilip Panjwani: Yes.
Sarang Joglekar: Thank you. So my question is about the unexecuted order book. Y ou have mentioned in the
presentation that you have 750 megawatt unexecuted order book. So just to understand that,
none of the revenue pertaining to that order book is realized y et, or it doesn't work in progress,
then how do we look at it?
Dilip Panjwani: See, it's always in EPC contracts, you can never say that when you have completed 200
megawatt, one client has got over. These are continuing contrac ts. Money gets realized over a

period of time and some money always remains unrealized as well .
So it's always a mix of both. Unexecuted order book means the e xtent of so much megawatts, my so much order book value is still pending, which I must comp lete the work, invoice and get the money in. That's the indication.
Sarang Joglekar: Okay. So basically, when let's say you have 100 megawatt contra ct, and once the entire contract is executed completely, then it moves out of your order book. I s that right?
Dilip Panjwani: That's right. So when we say 750 megawatt, it's still partial o nly. So I must do work for the balance portion. Because the accounting in our books is always proportionate with the percentage completion method. So under percentage completion me thod, suppose out of 100 megawatt, I have completed 30%. So I will book INR30 crores.

Sarang Joglekar: Okay. But in terms of megawatt, it will still be seen as 100 me gawatts.
Dilip Panjwani: No, it will still be 30 megawatt who is completed. I'm sorry, I used the word INR30 crores. I should have used the word 30 megawatt.
Sarang Joglekar: Okay. Got it

. Also, when you do execute certain EPC contracts, for the operations and maintenance contract also do you only as company bag it or ther e is no such mandate?
Dilip Panjwani: There is no such mandate. But we try to -- because it's a good tail business for us, we always try to get it. But there's no such compulsion.
Sarang Joglekar: Right. And what is the success ra tio in getting that business o nce the contract is done?
Dilip Panjwani: Big utility scale providers generally don't tend to give. But f or smaller contracts, which are like 200 megawatt, 300 megawatt, they normally give O&M to us. The b ig guys try to do on their own.
Sarang Joglekar: Okay. And last one question. So you said you have 9 gigawatt in pipeline. So that is what you have bid for, right?
Dilip Panjwani: Right.
Sarang Joglekar: Yes. So, I just want to understand in this sector of solar or r enewable of EPC specifically, what sets a company apart? Why would one win a contract over others?
Dilip Panjwani: See, there are -- since these are big capital investment projec ts, the PSUs and the government sector, it's very easy. L1 qualified. You would bid for it. The financial strength, the technical strength, that's quite easy. But in utility segment and C&I seg ment, they look for two things very importantly, Your vinta ge and experience, a design plays a very important part in it, optimization and all those things.
So your experience in this segment as to how complex, like we h ave done even floating solar projects also we have done. We have been in this business for m ore than 10. We have been doing this EPC since 2010, in fact. So that is one thing. Second thin g is, manpower. It's a very niche area. You can't say that I have engineers. You have to say that I have engineers who are qualified in renewable space.
Sarang Joglekar: Okay. Got it. So if I can quickly squeeze one last question in about return ratios. So what do you think would be a sustainable return on capital going forward?
Dilip Panjwani: See, that's very difficult to predict. But as I told you that i t's not a very capital-intensive business, EPC business.
Sarang Joglekar: Y e s .
Dilip Panjwani: So what is happening today, must continue unless, you see somet hing else coming up.
Sarang Joglekar: Okay. Got it. That's it from my side. Thank you.

Moderator: Thank you very much. The next question is from the line of Anir udh Singhi. From Dalal & Broacha Portfolio Managers. Please go ahead.
Anirudh Singhi: Hi, thank you for taking my question. Congratulations on a goo d set of numbers. So my question was regarding our EBITDA margin. We're saying we can do 15% to 20%. But this is sort of unheard of in the solar EPC space. You know, our competitors, o ur peers, they're struggling to do 9% to 10% margin. So how is it that we are doing much better margin than them? And how are we competing with them when it comes to bidding?
Dilip Panjwani: You know, on a lighter note, I should get away from this questi on, actually, Anirudh. But let me attend to the answer to this. You know, we have mentioned this previously as well, in government and other ways, there's a tender bidding, there tend s to be a competitive intensity, and margins tend to shrink and our share in that segment is ver y negligible.
However, when you move towards, I answered this as to why we sh ould get contracts, that is

there, when private sector, when you go to utility IPP and othe r segments, people choose you not because of competitive intensity, people choose you because you are set apart from others, in terms of your capability and vintage heritage experience, wh atever inverted commas you want to put.
Then you have some leverage and they don't mind you making mone y so long as you deliver world class facilities to them, a nd that's what, we are known a nd we have been getting our good ci

tations from our customers as well. So that could be one reas on, we are a little different from others who are doing, maybe, the doing but we continue to maint ain that, 15 to 20 is reasonable for us.
Anirudh Singhi: Okay. And we should be able to do this, even if we get more PSU orders?
Dilip Panjwani: No, if there are PSU orders, it could, lead to, but then the vo lume will substantially increase. So even if, it's like a platform, what happens in a platform is th at, once you get big orders, from PSUs, let's say you get 500 megawatts, 700 megawatts, if you ge t two, three orders, you are already 2.5 gigawatt and your economies of scale on the operati ng side will also play out, though your margins will come out, but you don't need additional capit al to deliver them at the end of the day.
Anirudh Singhi: Right. And my second question was regarding orders with modules . So when we take these orders, does the module price al so reflect in our revenues?
Dilip Panjwani: Yes, if it's a pass-through with us, then it reflects in our re venues.
Anirudh Singhi: And then the margins of that would be considerably lower, righ t? Because...
Dilip Panjwani: Yes, margins on modules will shrink your overall margins.
Anirudh Singhi: So could you just give me an Imagine if you have an order with modules and without modules, what could the margins be?

Dilip Panjwani: We go for always blended margins. You know, we don't differenti ate for external people, what is my margin, margin with module, without module. So when I say 15%, it includes all my risk and rewards.
Anirudh Singhi: Okay. And just to get it clear, if you just do purely PCB, abou t INR1.2 crores and with module, about INR3.5 crores, INR4 crores, right?
Dilip Panjwani: That includes land and approvals as well, not INR3.5 crores.
Anirudh Singhi: Okay. And EPC with modules, what would be the revenue that we w ould realize?
Dilip Panjwani: So that should be in the range of INR2.5 crores to INR2.7 crore s, depending upon what kind of module is that, what kind of technology is that?
Anirudh Singhi: Okay. And we don't make any trading margin of that, right? It's a clear pass-through.
Dilip Panjwani: Not necessarily. We do make some m argin, but it's not a large m argin like EPC services.
Anirudh Singhi: So if I look at a nine-month number, if I divide the revenue by 473 megawatts, it comes to INR1.27 crores. Like we didn't have any big module contract in the nine months?
Dilip Panjwani: Yes. We did have in the nine-month period, we did have certain customers where module is part of that contract.
Anirudh Singhi: Yes. And despite that, the average revenue is only INR1.27 cror es megawatt, right?
Dilip Panjwani: Yes. So there could be some contracts where you would have deli vered some lesser services and could be 90 lakhs per megawatt also. But normally we tend to be lieve that we should be in the range of INR1.1 crores to INR1.2 crores per mega watt overall.
Anirudh Singhi: Okay. All right. Thank you.
Dilip Panjwani: It all depends on scope of the services that the client is will ing to outsource.
Anirudh Singhi: All right. Thank you.
Moderator: Thank you very much. In the interest of time, that was the last question. I would now like to hand the conference over to Mr. Amar Yardi for closing comments .
Amar Yardi: Thank you, Manuja. I would like to thank the management for tak ing out the time for this conference call today and also thanks to all the participants. If you have any further queries, please feel free to contact us. We are Orient Capital, Investor Relations Advisors to Waaree Renewable Technologies Limited. Thank you and have a great day.
Moderator: On behalf of Waaree Renewable Technologies Limited, that conclu des this conference. Thank you for joining us and you may now disconnect your lines.

Call: May 2024

Execution with Pace & Comfort

Sub: Transcript of Investors/Analyst Earnings Conference Call held on May 21 ,2024

Ref.: Disclosure under Regulation 30 of SEBI (Listing Obligation and Disclosure Requirement) Regulations, 2015.

Further to our communication dated May 15, 2024, and May 21, 2024, please find enclosed the transcript of the Earning Conference Call held on Tuesday, May 21, 2024 at 12:00 noon to discuss the audited financial results for the quarter and year ended March 31,2024

This intimation is also available on the website of the Company at www.waareertl.com .

We request you to take the same on your record.

Thanking You,

Yours faithfully,

For Waaree Renewable Technologies Limited

"Waaree Renewable Technologies Limited
Q4 FY'2 4 Earnings Conference Call "
May 21, 202 4

MANAGEMENT : MR. DILIP PANJWANI – CHIEF FINANCIAL OFFICER –
WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. MANMOHAN SHARMA –ASSISTANT VICE
PRESIDENT , FINANC E & ACCOUNT – WAAREE
RENEWABLE TECHNOLOGIES LIMITED

MR. ROHIT WADE – GENERAL MANAGER , INVESTOR RELATIONS – WAAREE RENEWABLE TECHNOLOGIES LIMITED

MODERATOR : MR. VIRAL SANKLECHA – ORIENT CAPITAL

Moderator: Ladies and gentlemen, good day and welcome to Q4 and FY24 Earnings Conference Call of Waaree Renewable Technologies L imited. As a reminder, all participants' lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touch -tone phone.

Please note that this conference is being recorded . I now hand the conference over to Mr. Viral Sanklecha from Orient Capital. Thank you and over to you, sir.

Viral Sanklecha: Thank you, Neha. Good afternoon, ladies and gentlemen. I welcome you all to the earnings conference call of Waaree Renewable Techn ologies Limited to discuss the Q4 and FY24 business performance. Today on the call, we have from the management Mr. Dilip Panjwani, Chief Financial Officer, Mr. Manmohan Sharma, AVP Financial Account and Mr. Rohit Wade , General Manager, Investor Relations. Before we proceed with the call, I would like to mention that some of the statements made in today's call may be forward -looking in nature and may involve risk and uncertainties.

For more details, kindly refer to the investor presentation and the other f ilings that can be found on the company's website. Without further ado, I would like to hand over the call to the management for the opening comments and then we will open the floor for Q&A. Thank you and over to you, Dilip, sir.

Dilip Panjwani: Thank you, Viral. Good afternoon, everyone. I would like to welcome you all to the earnings conference call of Waaree Renewable Technologies Limited to discuss the fourth quarter and FY24 business performance. I hope you all have got an opportunity to go through our financial results and investor presentation which has been uploaded on the stock exchange as well as on the company's website. I wish to express my heartfelt gratitude to all those who dedicated their time to join the call and have consistently been part of our journey.

I have along with me Mr. Manmohan Sharma, AVP Financial Accounts and Mr. Rohit Wade , General Manager, Investor Relations and other members of the management team as well on the call. Let me begin by giving you a brief outlook on Indian eco nomy and the solar sector. Amid global economic uncertainties, the Indian economy stands out as a symbol of resilience.

The Indian economy is projected to grow by 7.5% in 2024 according to the World Bank and it is expected to surpass Japan as the fourth l argest economy by FY2025. This growth is backed by efforts to reduce fiscal deficit and government debt supported by strong output growth and government initiatives. India is on track to be the fastest growing major economy in 2024 thanks to increased inte rest from multinational companies eyeing India as viable manufacturing hub amidst global supply chain changes.

As a significant player in global power production and consumption, India is swiftly transitioning to a sustainable energy model to meet its growing power demands. The country recognizes the need to adopt renewable energy solutions amid climate change and rising energy expenses. The government's substantial investment and favourable policies are driving a shift towards solar power adoption specially as renewable energy costs decrease.

These government initiatives are pivotal in promoting the growth of renewable energy in India's dynamic energy sector. Through a range of strategic measures such as financial incentives, subsidies and regulatory frameworks, the government is fostering the widespread use of solar and other renewables. These actions not only attract investments but also encourage innovation, creating a conducive environment for sustainable progress in

the energy sector.

The country has made significant strides in renewable energy with a record addition of 18.48 gigawatt in the fiscal year 20 23-2024, marking a remarkable increase of over 21% from the previous year's 15.27 gigawatt as reported by the Ministry of New and Renewable Energy. In FY24, tenders for utility -scale energy projects exceeded the government's 50 gigawatt target, reaching a remarkable 69 gigawatt . This surge was driven by significant market growth

opportunities, strong central government backing through targets and regulations and improved operating margins.
The increasing significance of SECI and other agencies involved in renewable energy tendering underlines the strength of India's renewable energy tendering ecosystem. Regarding energy storage, the country's energy storage capacity is poised to grow significantly, targeting 12 gigawatt by FY24 and 70 gigawatt by FY30. This aligns with the new renewable purchase obligations and energy storage obligation norms to support the country's renewable energy goals.
As of March 31, 2024, India's installed renewable energy capacity stands at 143.64 gigawatt . This means India must add approximately 310 gigawatt within the next six years, averaging at 50 gigawatt annually. The Ministry of New and Renewable Energy is actively targeting the bidding of around 50 gigawatt of renewable energy projects each year to meet this ambitious target.
Notably, solar installations accounted for 16 gigawatt of total renewable energy capacity addition in 2023 -2024. And solar energy remains at the forefront with a total installed capacity of approximately 82 gigawatt , leading India's renewable energy land scape. In conclusion, India's journey towards sustainable energy future, particularly in solar and renewable energy, promises continued growth.
The alignment of technological progress, favourable policies and increased environmental consciousness is set t o draw more investments into this sector. The government's ambitious targets for expanding renewable energy capacity demonstrate a strong dedication to achieving sustainable and reliable energy landscape for the country. Now I would like to take you throug h our business performance for this quarter and financial performance for the year ended FY24.
I'm pleased to report that performance has been strong in FY24. We have an unexecuted order book of 2.3 GW peak and we have successfully executed 700 plus megaw att peak in FY24. Revenue from O&M stood at INR10.42 crores in FY24. In this quarter we have secured significant order wins, totalling 1.8 gigawatt peak for ground -mounted solar power projects, reflecting our strong momentum in renewable energy sector. Fou rth quarter performance.
Revenue for Q4 FY24 stood at INR273.25 crores, representing a growth of 344% year -on-year as compared to INR61.49 crores in Q4 FY23. EBITDA for Q4 FY24 stood at INR75.3 crores as compared to INR22.29 crores in Q4 FY23, representing a growth of 237% year -on-year. Profit

after tax for Q4 FY24 stood at INR54.18 crores as compared to INR12.28 crores in Q4 FY23, representing a growth of 341% year -on-year. FY24 performance for full year.
Revenue for full year FY24 stood at INR876.44 crores, representing a growth of 149% year -on-year as compared to INR350 crores in FY23. EBITDA for FY24 stood at INR207 crores as compared to INR83.75 crores in FY23, representing a growth of 147% year -on-year. PA T for FY24 stood at INR148 crores a s compared to INR55.33 crores in FY23, representing a growth of 167% year -on-year. That's it from my end. Thank you for joining us today all and we look forward to your questions. Over to you.
Moderator: Thank you very much. We will now begin the question and answer session. The first question is from the line of Agastya Dave from CAO Capital. Please go ahead

.
Agastya Dave: Good morning, sir. Sir, I just had a couple of questions. One, if I look at your current order book, which is very impressive, based o n your presentation, you are saying upwards of 2,000 megawatts which need to be executed over the next 18 months. So that is multiple times what you've done cumulatively, right? Now, when your order book is such a large number, suppose tomorrow you get ano ther 500 megawatt order for a project which is like fully funded, there are no problems from the developer side. In such a situation, sir, when would that project be executed? When would the execution start? Do you have enough execution capacity to actuall y cater to still more orders over and above your existing order book?
Dilip Panjwani : Okay. That's it? Or do you have any other questions?
Agastya Dave: I have one more question, sir.
Dilip Panjwani : Yes. Tell me.
Agastya Dave: In Q4, sir, this is again something that I've noticed with solo EPC players. Is Q4 a slightly lighter quarter compared to Q3?
Dilip Panjwani: Okay, Agastya, I would like to first attend your second question on Q4. Essentially, there's nothing called lighte r or heavier or seasonal in our business. EPC business is actually a long -term business and not a quarterly business. What happens is that there's a lot of preparatory work that goes for a long period of time, and then suddenly you could witness one or two quarters which are very big, heavy quarter s.
This has been happening in EPC for quite a long time, and we are not immune to the same. So what happened is that one probably 100 megawatt we couldn't fin ish invoicing to a customer,

etc, and you could observe that that could have led to a fourth quarter not bei ng up to a promising mark or et c. But that doesn't take away our execution capabilit y or our strength on any front.
We have time and again mentioned this in most of our calls and presentations that EPC i s a long - haul business, and a lot of supply chain marshalling one has to do, and exactly predicting how much you will do becomes a little bit difficult. Coming to your first question, and this has also come up in our previous earning call, and I would like to reiterate once again that our capacity is enough to execu te more than even 2.3 gigawatts.

And we keep improving our capacity also. Unlike manufacturing where machinery is determ ines your capacity level, this is a platform business, and a little bit add itional resources are required where the company has the capability to marshal them over once an order is received. So , 500 megawatt or further 1 gigawatt is indifferent to us as of now. But yes, capacity sometimes gets determined by your manpower to deliv er the same.
Like s ome of the services remain common in the business like design, etc. From that perspective, you can deliver much more higher projects. You get limited by sometimes supply chain or sometimes project site personnel, which we need to marshal. So, if I get , on your question, if I get 500 megawatts, I would definit ely like to take that up and execute. And when I will execute, that depends on how the client constructs a c ontract and when does he wants.
And it is a mutual agreement between both the parties, depending upon how the outlook is coming up and how his payme nt terms are, depending on that. But definitely, as a company, we are open to this 500 megawatt as an example, which you have mentioned.
Agastya Dave: Right. Excellent, sir. So one small follow -up. So, as of now, if you get a n order book, a fresh order tod ay of let's say 500 megawatts, how long does it take to actually execute that order, given that you have such a huge pile of orders already lying on your table?
Dilip Panjwani: This actually needs to be a little bit done a hair split. It depends on, number one, complexity of the EPC contract, whethe

r it's a turnkey balance of systems or the scope. That's number one.
And number two is the size of the project. So , if it's turnkey, land, module, balance of system, design, everything is our part. It could take a little longer. It depends on where to go and scout land.
Agastya Dave: Can you quantify it, a time range? Will you be able to finish it in one year or six months or more than one year?
Dilip Panjwani: Exactly, Agastya. I'm coming to that. So , I just started with a qualifying remark of the business complexity as to how long does it take. And then the size, I said, the smaller the size, the faster to execute. So , normally we classify 100 megawatt size orders and above 100 megawatt and then above 500 megawatt. Obviously, above 500 megawatt normally takes about 18 months, is what normally it takes. But normally, generally, we have observed that it is between 9 and 18 months, depending upon the complexity, which I mentioned in my prev ious conversat ion.
Agastya Dave: Got it. 9 and 18 months. Okay, great. So , I have one more question, but I'll go back in the queue. Thank you very much, sir.
Dilip Panjwani: Thank you.
Moderator: Thank you. The next question is from the line of Aman from Augmenta Asset Managers LLP . Please go ahead.
Aman: Hi, sir. Thanks for the opportunity. So , actually, sir, can you break down your order book? So currently, as we can see, we have an unexecuted order book of around 2.3 gigawatts. If we say

precisely. So , per m egawatt, we are realizing what? INR 1.3, INR1.4 crores of revenue? A m I understanding it correctly?
Dilip Panjwani: Okay. So Aman , you know, the, per unit value for us always remains in the range of 1.2 to 1.3. But just to give a perspective, as I was talking to Aga stya when I mentioned complexity, scope, etc. The turnkey contracts are between INR3.25 to INR3.5 crores per megawatt. And then balance of system could be anywhere between, you know, INR80 lakhs to INR1.5 crores also.
For us, the average is INR 1.1 crores to INR1.2 crore s. If you want that breakdown as a company, that's our average.
Aman: Okay. And sir currently, apart from this unexecuted order book, so any other pipeline that we are envisaging? Like, for example, we would have some bid pipeline also that w e will be bidding. This is the confirmed order book. But can you give us some things about the bid pipeline?
Dilip Panjwani: So Aman, as we speak, we are chasing 13 gigawatt of order book position. I would just want to

reiterate that , what we mentioned in our previous earning s call. The ecosystem has been extremely good for us. And some of the statistics that have come out are very well, almost 16 gigawatt of tenders or orders have gotten out in the market in the last one quarter where they will come in the market in any way for execution.
Either the companies will do themselves or outsource it to companies like us. And for us, as of today we are talking to like, you know, 26 -27 customers with 13 gigawatt of pipeline. That is up from 10 gigawatt that we were speaking in last earnings call. So , that's the number that you probably are looking at.
Aman: Okay. And typically, what sense of conversion we can sense over here? Like, for example, if the bid pipeline, if the market is of like, let's say, 13 gigawatt or the bid pipeline. So can we say that our conversion would be about 20 %, 30% out of this?
Dilip Panjwani: Generally, our strike rate has been between, you know, 25 % to 30 %. So, if you look at 2.3 gigawatt and we were talking 10 gigawatt, then, you know, and if you look at it, it's a strike rate of roughly 23 %, 24%. Actually, it was 25 %. And that we have consistently observed in our company's case that we kind of go on to strike 25 % to 30 % of our pipeline as a conversion to order.
Aman: Okay. So, sir, this unexecuted order boo

k of, if you look about the value, it comes at around
INR2800 crores . So, this is executable over the next, wh at, 18 months?
Dilip Panjwani: 12 to 18 months.
Aman: Okay. Understood. And sir also, again, if I come to the bi d pipeline thing, also, if I again come to the bid pipeline thing, so can you give a sense of the orders that which we are getting from , like, are these the likes of N TPC or is there individual power producers or what is the customer profile that we are ta rgeting?
Dilip Panjwani: See, in pipeline mostly utility scale guys who have already got an order of PPA or they are setting up in some form, they come under the 13 gigawatt. The tenders whenever they are

published then they enter the pipeline segment. So the PSUs should be over and above that and whenever we bid for that.
Aman: This 13 gigawatt doesn't include PSUs?
Dilip Panjwani: As of now not, but if and when the tender is published and we buy the bid document to bid for that then that will enter the pi peline segment.
Aman: And sir out of this unexecuted order book what is the percentage of PSUs in this?
Dilip Panjwani: Right now in terms of volume they are like 15% around and in terms of value they are around 35% odd .
Aman: Okay. And sir, any reason that you are not targeting PSUs or PSUs because of scale are not preferring us? What is the thing over here?
Dilip Panjwani: There is no hard and fast that there is a particu lar reason we were not chasing. W e have been equally chasing PSUs and utility scale IPP from other segments and C &I segment. It's just that the strike was much more easier and faster. Going forward, if you look at India's target towards renewable energy segments specially the solar becoming the dominant play, we are inclined to chasing both utility scale IPP and the PSU segment as well. And if you look at the order book in the last quarter fourth quarter the biggest order has been actually from PSU.
Aman: The 980 megawatt ?
Dilip Panjwani: No, the 450 megawatt DC from NEE PCO.
Aman: Okay. Understood, sir. Thank you so much, sir.
Moderator: Thank you. The next question is from the line of Rudresh Kalyani from Kalyani Pr ivate Business . Please go ahead.
Rudresh Kalyani: Okay. Congrats on the good quarter. So, I had a question that see loo ks like we executed somewhere around 230 megawatt power in this quarter, but number doesn't reflect that . So, can you throw light on that?
Dilip Panjwani: What makes this calculation that it doesn't reflect the 230 megawatt? Can you say that because…
Rudresh Kalyani : No previous quarter we executed somewhere around 21 0 megawatt power if I am not wrong, so this quarter we executed around 230 as per the presentation which you shared w ith us. So, going by that, I am -- since on a quarterly basis -- on a s equential basis we increased the megawatt power which we have executed, but the revenue number which you are talking about that's not reflecting?
Dilip Panjwani: See, Rudresh, as I told you EPC is a mix of milestones, the kind of scope etc. So, it depends on what exactly we went and executed for which customer. So, it becomes quite hair splitting to speak about each customer on the call, but definitely we executed the 230 megawatt and that's

out over INR270 crores odd revenues that we have booked reflects the kind of scope of work that we have completed for our customers.
Rudresh Kalyani : Okay. And just a while back you told that you didn't invoice for INR100 CR. What was the reason for that?
Dilip Panjwani: I didn't say. I said it fell short by that kind o f an amount and there's no reason as such. As I told you there's a lot of preparatory work that goes into an EPC play probably that we felt if we would have probably done that we would

have done much more better is what I mentioned actually.
Rudresh Kalyan i: And see, our receivable has sho rt up by somewhere on 6x. So, can you throw light on that? Are we facing any difficulty with working capital?
Dilip Panjwani: No, there is no difficulty in working capital. It also reflects our revenue growth that we have been mentioning. Plus in receivable there's always a com ponent of retention money also. So, whenever retention money gets released, our working capital will also get released.
Rudresh Kalyani : Okay. See, since I asked this because our revenue has gone by 3x, but receivables have gone by 6x. So, there was a mismatch between them. So, I asked that?
Dilip Panjwani: So, there could be a portion of not due also in that. That not due portion comes from retention money, Rudresh.
Rudresh Kalyani : And one more thin g is O&M h as come down by somewhere 400 megawatt if I'm not wrong. So, what was the reason for that?
Dilip Panjwani: So, some of the contracts could have got ended a nd however in our new order that we have announced there is about 900 megawatt t o 1 gigawat t portion of O&M t hat will start as and when we complete the EPC portion.
Rudresh Kalyani : Okay . I will join back in the queue.
Moderator: Thank you. The next question is from the line of Vivek Gautam from GS Investments . Please go ahead.
Vivek Gautam: Yes, I just wanted to know what is the execution plan for 2024 -25 and what is the status of the global expansion a nd any word as you can say on the 5B Maverick deployment also o rder books also, sir?
Dilip Panjwani: So, order book Vivek as we mentioned it is 2.3 gigawatt. What was your first question Vivek you said?
Vivek Gautam: The execution plan for 2024 -25, sir.
Dilip Panjwani: So, execution plan as I mentioned in my opening question itself was that we plan to kind of execute be tween 1.8 to 2 gigawatt which should be seeing us through like another doubling of our revenues over the next year around 2 ,800 or 2 ,500 onwards, but we don't enter into guidance.

This is just a plan that we have deal with our customers that we need to exe cute into our entire EPC cycle.
Vivek Gautam: And, sir, what about the strategy for the solar rooftop opportunity? How are we placed and is it a very big opportunity for us also or the competition is very tough over here?
Dilip Panjwani: So, solar rooftop is a very significant opportunity and we are putting in place some of the structures that are required because these are below 5 megawatt kind of projects, but the market for them is also pretty good in that segment.
Vivek Gautam: What's the scope for the integrated place of module plus EPC plus storage and opportunity size for the company for next 1 year and next 5 years, sir?
Dilip Panjwani: So, if you look at some of the policy initiatives that the government has come out the storage is now forming a significant portion of the round -the-clock projects. So, that offers a good opportunity going forward as and when government comes out with firm initiatives instead of just policy papers. So, right now, the government is talking of 47 gigawatt of storage s pace over next few years. So, as and when, you know, government comes up, storage will become a significant opportunity for EPC players and that would be integrated with renewable play as well.
Vivek Gautam: And, sir, this green hydrogen, other new segment and 5G maverick deployment?
Dilip Panjwani: So, we haven't done any big progress on 5G maverick, but hydrogen, it's still in some of the research phases, but as and when the opportunity is becoming quite bigger. The government has declared, 5 million metr ic tons of hydrogen over next few years. So, as and when that opportunity comes, the green hydrogen always should have a component of renewable energy to produce.
That's h

ow green hydrogen gets defined. Apart from green hydrogen, green ammonia, whatever that happens, it will also present a significant opportunity. Besides that, the government has dedicated 37.5 gigawatt of solar park, which will go in, producing this green hydrogen. So, that opportunity is also, a big opportunity in government's policy ini tiatives.
Moderator: Thank you. The next question is from the line of Jaideep , an Individual Investor. Please go ahead. Mr. Jaideep , your line has been unmuted. Please go ahead with your question. Hello, Mr. Jaideep . Can you hear us?
Jaideep: Congratulatio ns on good set of numbers, sir. S ir, does the company, have any like pre -decided targets or do we have like, what FY '27, what our target should be owing to India's projections?
Dilip Panjwani: So, you mean to say the long -term plan of FY '27, Jaideep?
Jaideep: Yes.
Dilip Panjwani: You know, Jaideep , we don't give guidance for next 12 months. And, you know, but I can speak it in a different manner. The ecosystem that has evolved, not evolving anymore, it has evolved in renewable energy space is revolutionar y right now. It's doing extremely well. I spoke some

of the numbers of this year itself, which is like, out of renewable, 82 gigawatt is solar now. 143 is total renewable energy landscape in India.
Government's target is 500 gigawatt by 2030. If India has to do 2030, more than 50 gigawatt must be the annual deployment. And if you look at the tendering space, last year itself was 69 gigawatt. Last quarter, one quarter was like 8.5 gigawatt of solar energy kind of contracts that were ro lled out, last one quarter. So, you know, it's going to be a very big opportunity for EPC players. And we are definitely going to participate Waaree Renewable . We are positioning ourselves to gear up to accept the opportunity that's coming in our way.
Jaideep: Thank you, sir. Sir, with regard to the mix of raw material, how are we procuring this raw material from, I mean, what is our dependency on these energies?
Dilip Panjwani: So, you know, we are not into manufacturing that we are in any way impacted by raw material purchase, Ja ideep. And as regards purchase dependency on Waaree Energies . I told you, it depends on the type of the contract that we get. If we get this module, we tend to buy at arm's length from Waaree Energies. But if the contract is withou t modules and balance of system, then there are no dependencies at all.
Jaideep: Okay. And do you have any plans to merge the three companies in the near future, sir? Or do you want to leave as is? Could you throw some light on that?
Dilip Panjwani: As of now, the Board is not seized of any proposal of merger of any kind. Leave alone the proposal of merger of Waaree Energies or Waaree Renewable, etc.. The only merger that we concluded was, which we have informed Stock Exchange, was our merger of three subsi diaries, unlisted subsidiaries of Waaree Renewable itself. So, I don't think, you know, the board has any proposal in front of them on this count.
Moderator: Thank you. The next question is from the line of Sashi Kant from Brighter Mind. Please go ahead.
Sashi Kant: Yes, good afternoon. Congra ts for the good set of numbers. Sir, I have three questions. Our unexecuted book is 2.3 gigawatts. So, we have a time line of around 12 to 18 months. So, can it stretch further in our sense, right? So, can it stretch f urther in our sense?
Dilip Panjwani: See, it can stretch, it cannot stretch. You know, no one can assure that whether it will happen or not. But what we mention normally is the contractual deliverance that the company must meet. And the company is geared t o meet 12 to 18 months of work of the 2.3 gigawatts that we have spoken.
Sashi Kant: Okay. Sir, I have another question. What is the sustainable margin we are seeing for these

contracts as we have done in last year and last financial year? Is that the same level or will it increase or something like that?
Dilip Panjwani: See, margins should be in double digits only that we speak normally. Around 50% is what we have delivered in the past. On account of volume growth, there could be some bit couple of

percent age points here and there. But the volume is absolutely much higher than what we have delivered in the past. So, one should look at it in that context.
Sashi Kant: Sir, since we need a lot of manpower to add, to execute these books in coming 12 to 18 month s. So, what kind of manpower we need to add or what cost it can escalate into?
Dilip Panjwani: You know, cost as a percentage will remain the same in terms of labour cost. The manpower talent is two types basically. One is engineers who work as project heads, project managers and

in design team who have worked on renewable energy projects. Then the one is on the ground which we mentioned that will go and actually put up these systems there.
Sashi Kant: Okay. Sir, can you elaborate something on your green hydrogen aspirations and all?
Dilip Panjwani: So the green hydrogen was a pilot with the PSU, but we haven't received anything further update from our PSU in terms of further progress on that. But as a company, as we keep mentioning that the group is alre ady present in hydrogen and as and when opportunity arises, we are here to deliver the EPC element of hydrogen.
Sashi Kant: Thank you, sir. T hat's all from my side. Thanks a lot.
Moderator: Thank you. The next question is from the line of Ishita Lodha from Svan Investments . Please go ahead.
Ishita Lodha: Congratulations for a great set of numbers.
Dilip Panjwani: Ishita, can you be a bit louder?
Ishita Lodha: Yes. Sir, the company was planning to be in the range of 900 to 950 megawatts of execution in FY'24, but we are able to execute 704 megawatts. So, any specific reason for this?
Dilip Panjwani: See Ishita, as I told in my previous conversation also, we give a range and in that range, it's always kind of differs a couple of months here and there. Like even we are talking 2.3 gigawatt. We are not saying 2.3 gigawatt is to be delivered in next 12 months. It is 12 to 18 months kind of a range for that kind of delivery of projects. So, and we don't give guidance as well these are always the internal targets of the company. And also I mentioned in my first question when I covered with Agastya, that there's a lot of preparatory homework that goes into EPC and EPC is not a short haul business, it's a long haul business.
So, one cannot attribute that the company didn't deliver or the company didn't perform. It's how the sense of the project goes into that and with each customer how, what are the challenges that have been observed, how we are dealt with that customer. And any updates, we always keep disclosing to s tock exchanges. I hope that clarifies your doubt on whether we have delivered and performed or not.
Ishita Lodha: Yes, understood. Another question. So, you said that maintainable EBITDA margins are almost double digits from 15% to 20%. But I know that com petitors in EPC business have a single digit EBITDA margin. So, how is the company able to generate a higher margin?

Dilip Panjwani: That you should be actually giving us a free ropeway to get away actually you are actually putting us in a spot as to how d o we deliver that margin higher than competitors.
Ishita Lodha: Another question that I have is the receivables were almost 40% of revenue in FY '24. I understand that it includes retention money. But can you quantify the amount of retention money?
Dilip Pa njwani: I will park this question and I will get back to you because the data

point question. Give me
some time maybe while we are in the session, I will revert back to you.
Ishita Lodha: Okay. Also, if you can give us a sustainable, how much do you expect the receivables to be as a percentage of sales in FY '25?
Dilip Panjwani: Come back again. What is it that you want?
Ishita Lodha: The receivables expected as a percentage of sales in FY '25.
Dilip Panjwani: So normally we have explained our working capital cycle is that once you give bank guarantees, you get advanced mobilization money. And then there is a progressive milestone that we achieve and then we invoice the customer. And typically in 30 to 40 days, we do get paid our mon ey. But in the end, then ag ain, there is a retention of 5 % to 10% depending upon customer and depending upon the type of contract that we have entered and that retention could range between 6 to 12 months as well. So specific as a percentage, it becomes extremely difficult to quanti fy in each year. But that's how our working capital cycle will function, Ishita.
Ishita Lodha: Okay. Thank you. Also, another question that I have is, in our current order book of 2.3 gigawatts, how much of these orders include modules as well?
Dilip Panjw ani: So, we don't give that split of how much it gives, but we can give you a sense that, you know, typically, we have observed that it is a 70 to 30 split, 70 % in favour of without module and 30% in favour of with modules.
Moderator: Thank you. The next question is from the line of Karan Sanwal from Niveshaay Investment Advisors . Please go ahead.
Karan Sanwal: Also, I wanted to understand, like, what would be the approximate, the operational O&M component in the existing order book? Wh at potential do we have in the existing order book for the O&M component?
Dilip Panjwani: So, I have told already this, I have addressed this question. We have about 900 megawatts of potential in our existing contracts, but as and when that EPC portion is over.
Karan Sanwal: Okay. And also, we have, you know, created some solar generating assets as an IPP. So, I wanted

to understand, what would be their potential for the fullyear basis?
Dilip Panjwani : So, we have got 39 megawatts of assets in our portfolio.
Karan Sanwal: What would be the revenue that we would be generating from that?

Dilip Panjwani : About, so about INR18 crores.
Karan Sanwal: Okay, understood. And also, looking at the size of the order book that we have, are we exploring any subcontracting opportunity to complete those contracts or would we do it internally only?
Dilip Panjwani : So, subcontract opportunity internally means?
Karan Sanwal: Say for example, we have an order book of 2.3 gigawatts. So, would it be prudent to, you know, subcontract those orders to someone else or would we do it internally only?
Dilip Panjwani: No, the plan is to execute with Waaree Renewable only. There is no plan to subcontract.
Karan Sanwal: Yes, understood. And also, the order book, the amount of PSUvolume and value -wise that you have given, was it a part of FY '24, 15% volume and 35% value?
Dilip Panjwani: No, that is going to be part of this 2.3 gigawatts.
Karan Sanwal: Okay, the unexecuted order book.
Dilip Panjwani: Yes.
Karan Sanwal: Understood. Thank you so much. That would be it from us. All the very best.
Moderator: Thank you. The next question is from the line of Rahul Kothari from Gri t Equities. Please go ahead. We have lost the connection. The next question is from the line of Div yam Gupta. Please go ahead. We have lost the connection. The next follow -up question is from the line of Rudresh Kalyani from Kalyani Private Business . Please go ahead.
Rudresh Kalyani: Thanks for the follow -up. So, we have been growing on 10% year -on-year. So, do we foresee any headwinds for this growth?
Dilip Panjwani: As of n

ow, as I said, is the government commitment and energy sector is where it's a regulated sector. So, energy demand is growing, government is committed. So, unless government initiativ es come down or they falter on their commitments, you know, we don't see any headwinds as such. But the tailwinds are all in the favour of the sector.
Rudresh Kalyani: And one more thing is, we are more, don't you think we are more dependent on the solar, any de-risk with respect to it?
Dilip Panjwani: See, the company is in solar business. So, I mean, what is de -risking? We are in the business of solar. We have declared our intent to be in solar business.
Rudresh Kalyani: Okay. And I have a couple of ques tions on the balance sheet, on the P&L as well. So, other expenses as well as finance costs have upped compared to the previous year. So, previous year as well as previous quarter. So, what is the reason for that?

Dilip Panjwani: See, this is a very data s pecific question. The revenue has also increased. But if you have any such data question, you can write to our investor relations and we'll be happy to reply to you on the same.
Rudresh Kalyani: Okay . And the last question is, cash in any form has increase d exponentially. So, are we looking for any acquisition? That's why we have cash for that or how is it?
Dilip Panjwani: See, right now we are focused on increasing our order book size and expanding the business , that's where our focus is right now. We do n ot have any focus as of now for acquisition.
Rudresh Kalyani: Okay . Thank you. That's it from my side. All the best.
Dilip Panjwani: Thank you.
Moderator: Thank you. The next question is from the line of Atul Kumar Chaubey from Abbott. Please go ahead.
Atul Kumar Chaubey : Thank you so much for the opportunity. My question is that you already have answered it. The question was about the receivable part. It has gone exponentially if you compare quarter -on-quarter or even year -on-year. So, you have already answered it. Thank you.
Dilip Panjwani: Thank you.
Moderator: Thank you. Ladies and gentlemen, we will take this as the last question. I would now like to hand the conference over to Mr. Viral Sanklecha for closing comments.
Viral Sanklecha : Thank you, Neha. I would like to thank the management for taking out the time for this conference call today and also thanks to all the participants. If you have any further queries, please feel free to contact us. We are Orient Capital Investor Relations Advisors to Waaree Renewable Technologies Limited. Thank you and have a great day.
Moderator: Thank you. On behalf of Waaree Renewable Technologies Limited, that concludes this

conference. Thank you for joining us and you may now disconnect your lines. Thank you.

Call: Aug 2024

Sub.: Transcript of Investors/Analyst Earnings Conference Call held on August 06, 2024.

Dear Sir/Madam

Further to our communication dated August 01, 2024, and August 06, 2024, please find enclosed the transcript of the Earning Conference Call held on Tuesday, August 06, 2024, at 11:30 a.m. to discuss the Un-audited Financial Results for the quarter ended June 30, 2024.

This intimation is also available on the website of the Company at www.waareertl.com .

We request you to take the same on your record.

Thanking you,

Yours faithfully,

For Waaree Renewable Technologies Limited

"Waaree Renewable Technologies Limited
Q1 FY'2 5 Earnings Conference Call "
August 06 , 202 4

MANAGEMENT : MR. DILIP PANJWANI – CHIEF FINANCIAL OFFICER –
WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. MANMOHAN SHARMA – ASSISTANT VICE
PRESIDENT , FINANCIAL CONTROLLER – WAAREE
RENEWABLE TECHNOLOGIES LIMITED
MR. ROHIT WADE – GENERAL MANAGER , INVESTOR
RELATIONS – WAAREE RENEWABLE TECHNOLOGIES
LIMITED

MODERATOR : MR. VIRAL SANKLECHA – ORIENT CAPITAL

Moderator : Ladies and gentlemen, good day and welcome to the Q1 F Y'25 Earnings Conference Call of Waaree Renewable Technologies Limited . As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Viral Sanklecha from Orient Capital. Thank you and over to you, Mr. Viral.

Viral Sanklecha: Thank you. Good morning, ladies and gentlemen. I welcome you all to the earnings conference call of Waaree Renewable Technologies Limited . to discuss the Q1 F Y25 business performance. Today on the call, we have from the management, Mr. Dilip Panjwani, Chief Financial Officer, Mr. Manmohan Sharma, AVP Financial Controller, and Mr. Rohit Wade, General Manager, Investor Relations. Before we proceed with the call, I would like to mention that some of the statements made in today's call may be f orward -looking in nature and may involve risk and uncertainties.

For more details, kindly refer to the investor presentation and the other filings that can be found on the company's website. Without further ado, I would like to hand over the call to the management for their opening remarks and then we will open the floo r for Q&A. Thank you and over to you, Mr. Dilip.

Dilip Panjwani: Thank you, Viral. Good morning, everyone. I would like to welcome you all to the earnings conference call of Waaree Renewable Technologies Ltd. to discuss business performance of first quarter for F Y25. I hope you all have got an opportunity to go through our financial results and investor presentation, which has been uploaded on the stock exchange as well as on the company's website. I wish to express my heartfelt gratitude to all those who dedicated their time to joining the call and have consistently bee n part of our journey. I have along with me Mr. Manmohan Sharma, Financial Controller, and Mr. Rohit Wade, General Manager, Investor Relations and other members of the management team as well on the call.

Let me begin by giving you a brief outlook on the Indian economy and solar sector. The IMF has raised India's growth forecast for F Y24-25 period to a little higher than 7% up from earlier 6.8% prediction in April 2024. India is on track to be the fastest growing major economy thanks to increased interest from multinational companies eyeing India as a viable manufacturing hub amidst glo bal supply chain challenges. In the financial year 2023 -24, India achieved a notable milestone in renewable energy by addin g 21.2 GW, a significant increase from previous year's 18.8 GW as reported by Ministry of Renewable Energy. During this period, tenders for utility scale projects exceeded the government's 50 GW target, reaching 72 GW, fuelled by strong market opportunities, substa ntial central government support through targets and regulations, and improved operating margins.

In the fiscal year 2023 -24, solar installations contributed significantly, adding 17.3 GW to India's total renewable energy capacity. Solar energy continues to lead the country's renewable energy

sector with a total installed capacity of 85 GW. This underscores India's commitment to advancing its renewable energy landscape.

Overall, India's progress towards a sustainable energy future, particularly in solar and other renewable sources, is set to continue its robust growth trajectory. As a key player in global energy production and consumption, India is swiftly advancing towar ds a sustainable energy framework to meet its growing power demands. Between April and June 20

24, India added
around 3.6 GW of new solar PV capacity out of a total 4.4 GW capacity addition.
Solar energy representing 82.44% of this renewable capacity highlights India's commitment to solar power. By June 2024, solar energy accounted for 57.7% of total installed power capacity, reflecting a notable increase from previous fiscal year, reaching 85 .47 GW. This trajectory solidifies India's role as a major force in the global renewable energy sector, especially in solar power.
In response to the urgent need for renewable energy amid climate change and rising energy costs, the country is heavily investing in enacting supportive policies to boost solar power adoption as renewable energy costs continue to fall. The Union Budget 202 4 underscores the government's strategic emphasis on enhancing energy security, advancing clean energy, and meeting net zero emission goals. It has allocated 19,100 crores to the Ministry of Renewable Energy, marking a significant increase in funding for solar power and other initiatives aimed at fostering sustainable energy development in India.
Government measures, including financial incentives and supportive regulations, are key to accelerating renewable energy growth in India. By encouraging solar and other renewables, these actions attract investment, drive innovation, and promote sustainable progress in the energy sector. India is poised to achieve the 100 GW milestone in solar voltaic energy, positioning itself as a potential global leader in this sector.
This progress is driven by technological innovation s, supportive policies, and rising environmental awareness, all of which are expected to attract additional investment. The government's commitment to expanding renewable energy capacity highlights its dedication to fostering a sustainable and reliable ener gy future. The growing importance of Solar Energy Corporation of India and other agencies in renewable energy tendering underscores the robustness of India's renewable energy procurement system.
In the realm of energy storage, the country aims to expand its storage capacity to 15 GW by FY24 and 85 GW by FY30, aligning with new renewable purchase obligations and energy storage norms to support its renewable energy goals. Now let me present our busi ness performance for the quarter ended June 30, 2024. I am pleased to report that performance remains strong during first quarter of FY2024.
We have an unexecuted order book of 2,191 MW and we have successfully executed 217 MW during first quarter of FY2025. We have secured order wins totalling 58.19 MW peak for solar power projects reflecting our strong momentum in the renewable energy sector. Revenue for the first quarter FY25 stood at INR 236.35 crores, representing a growth of 83.31% year -on-year as

compared to 128 .94 crores in first quarter of FY24. EBITDA for the first quarter of FY25 stood at INR41.08 crores as compared to INR13.40 crores in first quarter of FY2024, representing a growth of 206.6% year -on-year. Profit after tax during first quarter FY25 stood at INR 28.16 crores as compared to INR9.13 crores in first quarter of 2024, representing a growth of 208.51% year-on-year. That's it from my end. Thank you for joining us today and we look forward to your questions. Over to you Viral.
Moderator: The first question is from the line of Jatin Khandelwal from Khandelwal Securities. Please go ahead.
Jatin Khandelwal: Hi, sir. Thanks for the opportunity. I just wanted to get some more clarity on your other verticals under Waaree Group. So, Battery Energy Storage System s, would it come under Waaree Renewables, Waaree Tech or Waaree Energy? That's the only question that I have.
Dilip Panjwani: Jatin, thank you so much. We have time and again to our stakeholders always mentioned that Waaree Renewables Technology is the EPC company and as we

have EPC, we have got two
segments which are prominent for us, which is EPC and O&M operations. We have a small portfolio of IPP as well, but our focus is always on EPC and IPP.
The rest of the product lines that you are mentioning will fall under the other group companies. Specifically, you may have to reach out to investor relations to know which vertical will fall under which company. But as far as Waaree Renewables Technology is concerned, we remain committed to EPC and O&M as of now.
Jatin Khandelwal: Got it. I'll reach out to investor relations for more info. Thank you.
Moderator: Thank you. The next question is from the line of Amit Agecha from HG Hawa & Co. Please go ahead.
Amit Agecha: Thank you. My question was regarding any companies that are getting any export orders?
Dilip Panjwani: Look, for us, the domestic market is quite compelling, but that doesn't mean we have ruled out export markets. But our focus right now, there's so much of opportunity that's happening in India.

And we want to capture a slice of that first before we venture out. At an opportune time, we will inform all our stakeholders on our export -driven markets. So right now, we are focusing on domestic markets.
Amit Agecha: Understood. The second question was like, is there a company that has any 1GW projects?
Dilip Panjwani: So we have one project which is 20 megawatt lesser than 1 gigawatt. But we do have in our portfolio significant fine projects.
Amit Agecha: Thank you for answering.
Moderator: Thank you. The next question is from the line of Sarang Joglekar from Vimana Capital . Please go ahead.

Sarang Joglekar: Hello, thank you for the opportunity. I just wanted to understand about margin stability. So on an annualized basis, it's pretty stable at 24%. But if you look at quarter wise, it's quite volatile . We just wanted to understand why is that and going forward, how it would be.
Dilip Panjwani: Thanks, Sarang. We have time and again mentioned that we should be in some 15 kind of a range and we will always remain in double digits. Last year, we were able to register a significant margin especially in the last quarter as well. They are driven by certain specific projects, etc. But the most stable margins is in the 15% kind of a range. Though this quarter also we have not beaten and we have been at higher than 17%. But for our model ling purposes, we always take 15% as stable margins.
Sarang Joglekar: Yes, I said on a EBITDA level 15%. Is that what you're saying?
Dilip Panjwani: Yes
Sarang Joglekar: Yes, I said on the industry scenario, just wanted to understand out of the 280 gigawatt target, almost 80 is done, 200 is left and that includes self -EPC, private, commercial and industrial. So how much is the addressable market that you see for the third -party EPC players like yourself?
Dilip Panjwani: Look, the government's policy is to have a vision of grid -driven 500 gigawatt of renewable capacity out of which 280 gigawatt is solar. So what you have mentioned is correct. India achieved 80 gigawatt of solar capacity and that's by 2030. But whether it includes C&I or not, those are not kind of specified, they are grid -connected. But there's a lot of interest from corporate sector and there's a lot of new demand that will come up from green hydrogen and those areas. So 200 definitely from policy perspective, that's a left business by 2030. But there's always a higher business that will come up from old projects coming up for renewal, C&I, those who will do it for captive, maybe behind the meter, then there will be off -grid projects as well. That will definitely be higher than 200 gigawatts . But it's difficult to specify what will be the exact addressable market for EPC players because there's no science behind how many people are outsourcing and how many people a

re actually outsourcing this and insourcing within themselves.
But there's a significant portion of these projects which are now coming up for outsourced players like ours. That's where even our pipeline is also increasing because of the interest of a lot of players to outsource. Because they want to speed en up the projects, so they believe that outsourcing kind of helps them. If you look at some of the CARE and CRISIL studies , it's in lakhs of crores, the EPC market.
Sarang Joglekar: Right, got it. Thanks. Also, one more thing, can you give a bifurcation of your order book based on how much of it is with module and how much is balance of system?
Dilip Panjwani: Well, I can give you a sense, we don't reveal the exact number, but we normally tend to be in the range of 30 % to 35 % with module and 65 % to 70 % without module, which we call as balance of systems as our projects. And that's been our trend, historically. But now we are also seeing projects coming up with modules also, but that range still remains the same.

Sarang Joglekar: Okay. And for those orders with module, do you procure from your parent or from others? How does that work?
Dilip Panjwani: So normally, if there is no insistence from the customer to buy from a particular geography or particular vendor, we do tend to buy from parent at an arm's length. It's a bit competitive at the end of the day. If our parent is able to match the market pric e, we tend to buy from the parent. But we have seen some of the cases where customers have insisted that, you know, they will buy directly. But in the cross -selling opportunity, we do get these contracts from our parents as well. So, there was a customer, I can't name it, but he bought our modules from parent, but he gave EPC to us at the end of the day. So those things keep happening. So, whether we buy from parent or not, that's not a significant event for us because they happen at arm's length only.
Sarang Joglekar: I have one last question. Some time back, there was some news about some deal with 5B

Maverick, right? So, can you throw some light on it?
Dilip Panjwani: Yes. So, you know, 5B Maverick has completed its test production, etc. In coming couple of months, we might see some of the deployments in terms of 5B Maverick in Waaree Renewable.
So, we have a tie up with them. They have taken a little longer to, test them. The good part about 5B Maverick is that it's easily deployable and it cuts the time to put modules on the ground mounted kind of structures. So they are, you know, ready to fabricate pre -fabricated building blocks for 5B Maverick. We will see them in a co uple of months.
Sarang Joglekar: Okay. And any, I mean, estimate on how much that impacts or enhances our margins?
Dilip Panjwani: See, it's a new product. It's very difficult to put any impact on margins, etc. It's the customer's adoption that's more important. And we do expect that given the value addition that, 5B Maverick will bring in in terms of speed to deployment, cutting short the time for going for the project to live. Today it takes about 12 months, 18 months. How much time it is cutting short, it depen ds on all those things, you know, how much is the customer adoption.
Moderator: Thank you. The next question is from the line of Gautam Trivedi from Nepean Capital LLP. Please go ahead.
Gautam Trivedi: Hi, congratulations on a great set of results. The question I had was with respect to your EBITDA margin. And obviously there was another question also on a similar thing, but I've been looking at, competitors or people in this industry, your peers, their margins are much, much lower at about 9, 9.5% and wanted to understand how is it that you are able to get some good margins?
Dilip Panjwani: Gautam, we keep constantly getting a question on why our margins are, and, we are being constant

ly producing those kinds of margins. There are two sets of things that we need to look at. We have been very long in this business and we are done cautiously, w e don't tend to go below a particular internal benchmark margin in all our projects.
We don't get into projects for the sake of just bringing in revenues. That's one of the reasons.
And second reason, of course, is that we have developed a strong ecosystem of vendors. The

third, of course, you should leave some secretes it to us, as businessmen, that we want to produce value for our stakeholders.
Gautam Trivedi: Yes, absolutely , The other question is how big of a pie do you see annually for the next, say, five years in total number of gigawatt addition in India?
Dilip Panjwani: It's a good question that you have come up with and I would like to now address you how the company is looking at this sector. We are not looking at this sector as solar sector. Solar, we have already addressed that 200 gigawatt that's leftover that the go vernment as a policy framework, they are trying to address.
We are now even bidding for BESS project, battery energy storage system project also. The tendering has come up, recently. And similarly, you know, we are looking at storage systems, pump storage . We are looking at hybrid projects. We are looking at RTC. You put any number, it will be an underestimate, you know.
So, there are enough research reports which say that give and take what will be the number, if you take even BESS projects , which is battery energy storage system, there are two numbers, one is 42 gigawatt and another is roughly around 72 gigawatt by 2030. So, even if you take the lower number at 42 gigawatt, the spend that is likely to happen is INR1 4 lakh crores in that sector alone. Okay. Then there are RTCs and, you know, green hydrogen, green ammonia. So, we are seeing a decade of inflation growth in t his sector, you know. So, for me to put a number and restrict myself will be, not putting a vision for my stakeholders, you know.
We are equipping ourselves that we should be able to take all these, marquee projects in our segment.
Gautam Trivedi: (21:06) Okay Understood
Moderator: Thank you. The next question is from the line of Shashi Kant from Brighter Mind Equity Advisors. Please go ahead
Shashi Kant Sir, congrats on your good set of numbers compared to last year, same period. But if I take about the quarterly numbers, there is a decline in per megawatt realization. Can you shed some light on that?
Dilip Panjwani: Look, this question was attended in the past also in a different way. There was a question on, you know, how much is the module component, etc. We, our average realization per megawatt is between 1 to 1.2 crores. So, when we speak average, it could be some times lower than 1 crore , it could be sometimes higher than 1 crore . But that is the range that we operate in, you know, and it depends on whether it is a turnkey contract or whether it is a balance of system. So, in a particular quarter, if my per megawatt value is higher and the subsequent quantity is lower, it actually does not impact us because we always look at full year.
These projects are 12 to 18 months project and we see how much the client has given as a valid business to us. And that remains consistent for us. We speak this on two lengths, one on the

volume segment, which you are putting a question, and even on the ma rgins also. Our margins

could be, you know, up in one quarter and in next quarter, they could be down, revenue could be up and down but it is full year that is important for EPC players. That is more important for us.
Shashi Kant: Sir, second question is, how many employees we have added in this quarter?
Dilip Panjwani: So, we are right now up to

around 240.
Shashi Kant : 240, on total or what is the incremental addition during this quarter?
Dilip Panjwani: We are not taking in count in this, but project specific, we keep on adding, outsourced people as well. So, these are our Permanent employees. We measure this in terms of, how much business we can do. So, right now, we are geared up to do a significant higher level of business. If you look at our employee cost base, it has gone up from 4 crores to almost like 6 crores. We keep adding people and manpower to equip ourselves to do much higher level of busi ness.

Shashi Kant: Sir, as we have mentioned that our unexecuted book is around 2191 megawatts. So, in this quarter, we have executed 217 megawatts. So, as we know, H2 is a big period for EPC companies. So, what is the estimated, executed project that we expect to get executed in H2?
Dilip Panjwani: We don't get into guidance, but I can give a perspective. At the beginning of the year, we were at 2.3 gigawatts and from 1st of July, you know, you can take that as a benchmark or you take from 1st April. If you take from 1st July, we are supposed to comple te these projects in 9 to 12 months, the balance left over. And if you take from 1st April also, this 2.3 gigawatt was supposed to be completed between April to next June. That's what was in the outlook. If you take from today onwards, it 's roughly translated to 75% of the leftover business. So, if you take 2.1 gigawatt and if you take 75%, we should be somewhere around 1.8 gigawatt roughly.
Shashi Kant: Sir, one last question. What is the bid pipeline currently? Are we bidding for, new areas like battery storage system and all, as you have mentioned?
Dilip Panjwani: I have already attended that question in a larger perspective when Gautam was talking to us. On the market sizing, yes, we are looking for renewable energy projects is the right terminology rather than solar as a fact for us. We are already doing that.
Shashi Kant: So, basically, our current bid pipeline, if I ask for the year that we are bidding?
Dilip Panjwani: Current bid pipeline is, today as we speak, is 15.5 gigawatt.
Shashi Kant: Okay , Thanks a lot, sir. That's all from my side.
Moderator: Thank you. The next question is from the line of Karan Sanwal from Niveshaay Investment Advisory (26:01) . Please go ahead.

Karan Sanwal : Yes. So, I was considering that we have such a huge order book position. So, are you exploring any opportunity to subcontract some of the orders or we would be continuing expanding our team in -house to complete the order book?
Dilip Panjwani: Look, we don't outsource much part of our business. But, some portion, like civil, etc., where we feel that it's a small piece of a business that we are not competent in, we do outsource that. But largely, we try to do it in -house, ourselves.
And as far as picking on more work is concerned, I've already attended that, looking at our, expansion in employee base and we being a platform . Today if I have to take up, three, four more bigger projects like this, it's not a challenge for us. The kind of capacity that we have is very huge, you know, to undertake E PC projects.
Karan Sanwal : Correct, that's helpful. And also, wanted to ask, like, are we exclusive partner to 5B or they are, free to tie up with other EPC players as well?
Dilip Panjwani: No, 5B is exclusive with us.
Karan Sanwal : For the Indian market, right?
Dilip Panjwani: Yes, but we also export, in that space. We can develop market for them in exports also. But domestically, they will do business to us only.
Karan Sanwal : And so, can we expect this, the current run rate of PowerSale revenue that we are recording for the rest of the year? Or, what could be the, good number to look at for the full year basis?
Dilip Panj

wani: PowerSales, it's a very annuity kind of stuff, I hope we continue at the same run rate for the rest of the year. Give and take, 3%-4% depending upon weather fluctuations and the degradation in modules that happens naturally.
Karan Sanwal : Okay. And are we need to look out to sell this project or we will keep it in -house only?

Dilip Panjwani: As of now, we are keeping it in -house and we will inform stakeholders, whenever we have an intent to monetize these assets.
Karan Sanwal : Okay. And one last question, like, so what would be the proportion of this retention money that we, you know, keep in the form of performance bank guarantees in the contract? Have any bank guarantees been, you know, triggered in the years of operation that we have?
Dilip Panjwani: So, the retention money is roughly, depends on contract to contract, largely in the range of 5%, but they can stretch up to 10% also. And as far as your second question is concerned, have any bank guarantees been triggered as of now? No, we haven't been triggered by any BGs invocation with us as of now.
Karan Sanwal : Okay, that's helpful. Oh, sorry, I had one question if I can. So, this is, you talked about hybrid projects, solar and wind together. So, I was asking, are we in advance talks with any customers or is it still in discussion, like, do we want to take these hybrid projects or not?

Dilip Panjwani: See, we constantly continue to engage with our customers, that's why we mentioned that we are actively looking at these kinds of projects. Now, whether it's an advanced talk or early talks is difficult to spell out, when a business translates into actual order. So, we are definitely in talks. It's difficult to specify whether it's an advanced talk because there's no metric to measure the difference between advanced and early talks.
Karan Sanwal : Right, that's helpful. Thank you so much and all the very best.
Moderator: Thank you, The next question is from the line of Abhigyan Gura from Aaryaman Consultants . Please go ahead.
Abhigyan Gura: Good morning, sir. Thank you very much and congratulations for the wonderful results. Just one question, the operating profit margin is being shown as 17% for the current quarter, which is around 10 -11% down for the last two quarters. May I know the reasons specific for this downfall of 10 -11% in OPM percentage?
Dilip Panjwani: So, if you look back into our history with engaging stakeholders, we have always maintained that we should be in the range of 15%. So, I think, it's a factor of that. And I also mentioned that you have to look at margins in annual, quarter volatility is ve ry difficult to explain because these projects are 12 -month, 18 -month projects.
So, in a project, sometimes you have a higher margin and if that occurs in a particular quarter, the volatility will continue . We would not like to specify, which project kind of what happened, etc. Our continued model remains on double digit 15% level of margins. That's a better way to look at our business.
Abhigyan Gura: Okay. Thank you, sir. In another words, can I look into it that what were the reasons for high percentage in December and March quarters, which rallied up to 27 % and 28%?
Dilip Panjwani: So, whether the margin is inverted or whether the margin is on the higher side, the answer remains the same. So, whenever it is higher also, I cannot specify, I would not like to get into one single project or something like that. I said that, we continue to remain guided by our model that we should be in the range of sub -15 and that we maintainable margin, as to the business , that is coming up.
Abhigyan Gura: Right, sir. Second question, sir, regarding the employee cost, it has seen a kind of a 1% increase in the employee cost. Is it up to the higher senior management position or middle and lower managem

ent has been increased in the organization?
Dilip Panjwani: It is a mix of both. So, it is a robustness in back offices and robustness in front office as well. So, front office when we mean it is on the project level, you know, higher project managers, senior people joining the company, it is a mix of both, but mor e higher numbers is towards the project side.
Abhigyan Gura: Thank you, sir.

Moderator: Thank you. The next question is from the line of Sarang Joglekar from Vimana Capital. Please go ahead. You may go ahead with your question.
Sarang Joglekar: Yes. So, your investors presentation mentions that you had also one of green hydrogen project, one megawatt. So, is that entire green hydrogen project or just the solar power plant part of it? So, if you could throw some light on that.
Dilip Panjwani: See, it is a pilot project given by a government agency and it has not made significant progress because they are yet to give us land and facilitate other things. So, as and when we have an update, we will tell you. But to answer the question, the project includes setting up the hydrogen plant as well as solar. It is just not solar.
Sarang Joglekar: Okay. Got it. And one more, the IPP plant that you have 40 megawatt almost. So, how much is

the revenue generated from that?
Dilip Panjwani: I will give you the data point. IPP. So, we have generated seven and half crores , little less than 7.5 crores for our IPP plants revenues in first quarter.
Sarang Joglekar : Okay. Got it. Thank you.
Moderator: Thank you. The next question is from the line of Sahil Vohra from M&S Associates. Please go ahead.
Sahil Vohra: Thank you for the opportunity. I wanted to understand what were the primary drivers behind the 83 odd percent YoY revenue growth?
Dilip Panjwani: So, if you look at our history, from the first year of our results, 125 crores to 325, 325 to 876 crores. And now we are expecting to end the year at 1.8 gigawatt roughly or 2 gigawatt kind of business for the whole year. Whether you look at it in crores o r whether you look at it in megawatt, it is between 2 to 3x. So, 2.5 to 2 to 2.5x is what we have been growing. And that is the kind of market landscape also available in India right now in the renewable energy space. So, this is a reflecti on of that growth that is coming in.
When we started the year, we had projects which were like 2.3 gigawatt in hand, which was also again, you know, 2 to 2.5x in volume higher than the last year. That is the reason we have delivered 83 % higher turnover.
Sahil Vohra: Okay, understood. Thank you for the detailed answer. And also, if you could provide the breakdown of performance across the different business segments, and how are they contributing to the revenue growth, that would be really helpful.
Dilip Panjwani: See, right now, the focus is on EPC segment. So, if you look at, majority, almost like, 90 % of the business comes from EPC. But the tail business, which is O&M, is kind of 500 megawatt for us, but the projects that we complete, by the end of the year, which will be like beginning of the next year, we will have almost like 2 gigawatt of O&M also available with us.

So, which is again, 3.3 to 3.5x higher than what we have today. So, we have delivered kind of 2 and half crores kind of revenues. So, for the full year, if you go, it will be 10 crores, but the next year it will be like, 2 to 2.5x . Hopefully, it means operation online .
Sahil Vohra: Understood, understood. Thank you, and all the best for the upcoming year. Thank you.
Moderator: Thank you. The next question is from the line of Hetanshi Agarwal from SKB Capital. Please go ahead.
Hetanshi Agarwal: Hi, thank you for the opportunity. So, my question is, what are your capital expend

iture plans
for the upcoming year?
Dilip Panjwani: The good part of our business is that we don't need any significant capital expenditure. We are like a platform. If you want to give me today, like I have got 2 gigawatt, if you want to give me 3x business, I can deliver 3x business without adding any additio nal capital expenditure. We may need some bit of capital, little bit here and there for our working capital limits, but that we manage from our bank guarantees and letters of credits. So, for me to go up even, you know, 2 years from here , I don't need significant amount of capital expenditure to be spent.
Hetanshi Agarwal: Okay, okay, that's great. And so, my second question is, can you provide insight into your innovation pipeline and upcoming product launches?
Dilip Panjwani: We are not doing any product launches. We cater to EPC business where, customers want to install renewable energy projects, be it in solar space, hybrid space, RTC space, energy storage systems on both sides, you know, BESS and pump storage. We are in that segment right now. So, there's no innovative product launches that we get into. We cater to renewable energy space in India, which is growing at a next beat. Government's target is to put up 500 gigawatt of plants. That's enough of big mar ket for us.
Hetanshi Agarwal: Okay, okay. So, my follow -up to this is, how do you see your business strategy and operations getting impacted by the current market trend?
Dilip Panjwani: Current market trend, if you can highlight what is the risk concern, I can address it. But I have been mentioning throughout my call that the government is committed to renewable energy space, which has been spelled out many a times. In fact, the latest th at the government has come up was they wanted to do at least 50 gigawatt of renewable energy projects in India going forward.
And if you look at the last year's trajectory, they have come out with roughly 69 to 70 gigawatt of renewable energy tenders, and the installations in solar have crossed 85 gigawatt. So, if you can tell me, what would get impacted in the current market tre nd, then let me know, I can address it.
Hetanshi Agarwal: Okay, okay. So, that's enough. So, that's all from my side. Thank you.
Moderator: Thank you. The last question is from the line of Jay Shah from AIB Securities. Please go ahead.

Jay Shah : Yes. So, my first question is, what are the key risks that you foresee in the upcoming quarter? And how do you plan to like mitigate them?
Dilip Panjwani: See, in upcoming quarter, it's too short and, we have already surpassed one month in that . Except for monsoon rains, we don't see any significant risk in the upcoming quarter that we need to address. The macroeconomic environment still remains intact. India increased spending on renewable energy projects. So long as government policy remains effective, and they continue to remain on their commitment of 50 gigawatt of annual renewable energy, we expect even that to surpass, but it remains at 50 gigawatt. So, there's plenty of room for growth, both this quarter and subsequent quarters as well.
Jay Shah : Okay, thank you for that detailed answer. My next question is, are there any plans for geographic expansion, either within India or like internationally?
Dilip Panjwani: So, as far as India is concerned, we undertake projects pan India. There's no question of, you know, any expanding new territory. We try to do projects in every nook and corner, though we are dominant in a few states, as projects are available.
As far as international market is concerned, I have addressed it in the beginning that, the domestic market is a very compelling opportunity for players like us. We will address the international market space, as and when there's an update. We are on lookout, and we remain on lookout, but the plan,

etc., as and when we venture out, we will definitely inform our stakeholders.
Jay Shah : Okay. One last question from my side would be, how has the customer base evolved, and what are the steps that the company is taking to expand it further?
Dilip Panjwani: So, customer base involvement has happened, you know, we used to significantly undertake projects from utility scale IPPs. Now, there's a government business which is increasing. So, that's an evolution that has happened, because government is spending a lot on renewable energy space through NTPC, SEKI, SJVN, NHPC, etc. So, that's the evolution that has happened in this sector.
Jay Shah : Okay. Thank you. That was it from my side.
Moderator: Thank you. The last question is from the line of Shubham Shetty from Jefferies India. Please go ahead.
Shubham Shetty: Hi, I just have a question on module pricing. Like, does the lowering of the prices impact your margin? If yes, then how do you procure your modules? And what contract do you have? Is that the long -term contract or how do you procure that?
Dilip Panjwani: See, you know, we don't get into, first of all, long -term contracts on module because we, unless there's a firm order, we don't get into procurement. So, as soon as we get an order and our margins are visible there, we immediately lock in prices for module s. And it's back to back.

So, that doesn't impact us on either side, either on the positive side or on the negative side. We want to protect our margins and therefore we don't get into any speculative arrangement because modules remain the significant part of the procurement if the project is along with modules. So, I hope that makes you understand that, the margins are actually not impacted through module procurement and it's because it's back to back and locked in , we don't get into those things.
Shubham Shetty: Understood. And this last question, I just want to get your view on the landscape of the module prices that's happening. Is it at the bottom end of the curve or is it still?
Dilip Panjwani: If I could predict, I would have already bet, I would have put my bet on those prices and made money. I don't think anybody can guess those prices of any commodity, significant commodity play. Prices have been coming down. But there has been, you know, a pause in how much they are coming down now. But for me to predict where they are headed, extremely difficult. They are a function of many factors.
Shubham Shetty: Do we see stability in, at least in India market? I mean, the modules which are procured on BCRs?
Dilip Panjwani: Look, you know, India market is also impacted with Chinese production capacity at the end of the day. The one good thing that has happened in India now is, there's an ALMM in place now. So, whenever there's a government involvement in terms of grid or mone y, you need to put only approved list of module manufacturers. But some part of raw material gets imported in India as well. So, it's very difficult to say, even in Indian market, where they are headed.
Shubham Shetty: Sure, sure. That sounds obvious. Sure. Thanks a lot.
Moderator: Thank you very much. I would now like to hand the conference over to Mr. Viral Sanklecha for closing comments.
Viral Sanklecha: Thank you. I would like to thank the management for taking out the time for this conference call today and also thanks to all the participants. If you have any queries, please feel free to contact

us. We are Orient Capital, Investor Relations Advisors to Waaree Renewable Technologies Limited. Thank you and have a great day.

Moderator: Thank you. On behalf of Waaree Renewable Technologies Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Call: Nov 2024

Execution with Pace & Comfort

Sub.: Transcript of Investors/Analyst Earnings Conference Call held on November 07, 2024.

Dear Sir/Madam

Further to our communication dated November 04, 2024, and November 07, 2024, please find enclosed the transcript of the Earning Conference Call held on Thursday, November 07, 2024, at 11:30 a.m. to discuss the Un-audited Financial Results for the quarter and half year ended September 30, 2024.

This intimation is also available on the website of the Company at www.waareertl.com .

We request you to take the same on your record.

Thanking you,

Yours faithfully,

For Waaree Renewable Technologies Limited

Heema Shah
Company Secretary

“ Waaree Renewable Technologies Limited Q2 FY '25
Earnings Conference Call”
November 07, 2024

MANAGEMENT : MR. DILIP PANJWANI – CHIEF FINANCIAL OFFICER - WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. MANMOHAN SHARMA – ASSISTANT VICE PRESIDENT , FINANCIAL CONTROLLER - WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. ROHIT WADE – GENERAL MANAGER, INVESTOR RELATIONS - WAAREE RENEWABLE TECHNOLOGIES LIMITED
MODERATOR : MR. VIRAL SANKLECHA – ORIENT CAPITAL LIMITED

Moderator: Ladies and gentlemen, good day and welcome to the Q2 and H1 FY '25 Earnings Conference Call of Waaree Renewable Technologies Limited.
As a reminder, all participants' lines will be in the listen-only mode. And there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing “*”, then “0” on your touch tone phone. Please note that this conference call is being recorded.
I now hand the conference over to Mr. Viral Sanklecha from Orient Capital. Thank you and over to you, sir.
Viral Sanklecha: Thank you, Siddhanth. Thank you. Good morning, ladies and gentlemen. I welcome you all to the earnings conference call of Waaree Renewable Technologies Limited to discuss the Q2 and H1 FY '25 business performance.
Today on the call we have from the Management Mr. Dilip Panjwani – Chief Financial Officer; Mr. Manmohan Sharma – AVP (Financial Controller); and Mr. Rohit Wade – General Manager, Investor Relations.
Before we proceed with this call, I would like to mention that some of the statements made in today's call may be forward-looking in nature and may involve risks and uncertainties. For more details kindly refer to the investor presentation and other filings that can be found on the company's website.
Without further ado, I would like to hand over the call to the management for their opening remarks, and then we will open the floor for Q&A. Thank you and over to you, Dilip sir.
Dilip Panjwani: Thank you, Viral. Good morning, everyone. I would like to welcome you all to the earnings conference call of Waaree Renewable Technologies Limited to discuss business performance of 2nd Quarter and first half year ended for financial year 2025. I hope you all have got an opportunity to go through our financial results and investor presentation, which has been uploaded on the Stock Exchange as well as on the company's website. I wish to express my heartfelt gratitude to all those who dedicated their time to joining the call and have consistently been part of our journey.
I have, along with me, Mr. Manmohan Sharma – Financial Controller; and Mr. Rohit Wade – General Manager, Investor Relations, and other members of the management team as well on the call.
It's an exciting time for India, which is now the fifth largest economy in the world, as recognized by International Monetary Fund in its 2024 World Economic Outlook. The IMF had reaffirmed India's growth forecast for 2024 at 7% in July. The improved prospects for private consumption, particularly in rural areas, were key factor in this forecast. The IMF expects a slight moderation of growth to 6.5% next year.

Our energy sector is an inspiring example of this momentum, driven by a strong commitment to sustainable and self-reliant growth. In line with the government's focus on energy transition, the renewable energy sector has seen unprecedented support and development. As of August 2024,

India's installed generation capacity has reached an impressive 451 gigawatts, with renewable energy installations, including large hydro projects, contributing a significant 44% of this overall capacity. This achievement underlines our shift towards clean energy with solar power playing a central role.
Over the past decade, renewable energy installations in India have increased fivefold reaching nearly 200 gigawatts as of August 2024, compared to around 63 gigawatts in March 2012. This remarkable expansion has been supported by forward-thinking policies, both at central and state levels, which have incentivized and driven renewable energy adoptions across the country. Solar capacity alone has grown substantially, now contributing approximately 89 gigawatts to our grid a

s of March 2024. Looking forward, the momentum is only expected to accelerate by fiscal year 2029.
Renewable energy capacity, excluding large hydro, is projected to exceed 320 gigawatts, facilitated by a range of supportive government initiatives. The roadmap includes attractive tariffs, innovative tenders and development of solar parks and green energy corridors, all of which are essential for building interconnected resilient energy infrastructure. By 2029, renewable energy is expected to account for about 50% of India's total installed capacity, estimated to reach 660 gigawatts to 670 gigawatts.
Our company is at the forefront of this transformative shift. We are leveraging our expertise to contribute to this growing green energy landscape aligned with India's self-reliant vision from advancing solar installations to exploring new innovative projects we are dedicated to strengthening India's clean energy sector and reducing our carbon footprint. As we move forward, our commitment to driving a sustainable and prosperous energy future for India remains unwavering.
Now, I would like to take you through our business performance for this quarter and first half of financial year 2024-'25. Starting with our order book position, we have an unexecuted order book of 1.7 gigawatts peak. We have successfully executed EPC orders of 705 megawatt peak in the first half of FY '25. In this quarter, we are delighted to report the highest ever quarterly revenues of Rs. 524.47 crores, representing a growth of nearly 3.5x year-on-year as compared to Rs. 150 crores in 2nd Quarter of FY '24.
EBITDA for 2nd Quarter FY '25 stood at Rs. 71.57 crores, representing a growth of 133.27% year-on-year as compared to Rs. 30.68 crores in 2nd Quarter of FY '24. PAT for 2nd Quarter FY '24-'25 stood at Rs. 53.52 crores, representing a growth of 160% year-on-year as compared to Rs. 20.54 crores. The first half of FY '25 revenues stood at Rs. 760.82 crores as against revenue of Rs. 279 crores in comparative period during the first half of FY '24, representing a growth of 172.7% year-on-year. EBITDA for first half of FY '25 grew by 155% year-on-year from Rs. 44 crores in first half of FY '24 to Rs. 112.65 crores. PAT for the first half of FY '25 grew by

175.29% year-on-year from Rs. 29.67 crores in the first half of financial year '24 to Rs. 81.68 crores.
Thank you all for joining us today, and we look forward to any of your questions. Thank you. Over to the moderator.
Moderator: Thank you very much, sir. We will now begin the question-and-answer session. Our first question is from the line of Sagar Tanna from Alchemy Ventures. Please go ahead.
Sagar Tanna: Congratulations on a great set of numbers. I may have missed out the opening comments, can you tell us what is the current order book?
Dilip Panjwani: The current order book is 1.7 gigawatts peak unexecuted, that is lying as of 30th September, 2024.
Sagar Tanna: And in terms of crores of rupees, how much would this amount to?
Dilip Panjwani: This would roughly now translate to around Rs. 2,700-odd crores, between Rs. 2,500 crores to Rs. 2.700-odd crores.
Sagar Tanna: And what is the pipeline, sir, in the second half? Because a lot of bidding happens in the second half, how do you see the second half in terms of the pipeline?
Dilip Panjwani: See, it is not driven by any seasonality that we picture out between first half and second-half, because these tenders are coming out from mostly PSU segments. But as you rightly said that the pace is increasing now, and our pipeline which you asked is now 17.8 gigawatts .
Sagar Tanna: And do you see any constraints in terms of taking further orders?
Dilip Panjwani: Constraints in terms of what you are foreseeing so that we can adequately address the same.
Sagar Tanna: Sir, constraints could be anything; material, resources, manp

ower, do you see any constraints of bidding for further orders?

Dilip Panjwani: So, Sagar, we look at this business in two ways. we always articulate that we have built a very robust platform which can scale up very quickly. And we have adequate manpower to scale up very good pace from here. In terms of limitations, in terms of supply chain, etc., which you are referring to in the second part of your question, we are until now not foreseeing any significant bottlenecks towards that end as of now. So, going forward, whenever something happens, we will keep you posted. But both in terms of platform scalability, we are very excited. We want to reiterate that we are positioned to accelerate energy transition in India right now.
Moderator: Thank you. Our next question is from the line of Akshay from CD Integrated Services Limited. Please go ahead.

Akshay: Sir, congratulations on the great set of numbers. I mainly have two questions, sir. And the first question is, despite the highest ever quarterly revenue at Rs. 524 crores, our EBITDA margins have reduced to the five quarters' low. So, can you give us some colors on that as to how EBITDA margin can step-up over the next four to five quarters?
Dilip Panjwani: What is your second question?
Akshay: Sir, how EBITDA margin trajectory we can expect over the next four to five quarters, because despite the Rs. 524 crores revenue highest --
Dilip Panjwani: Next question, Akshay.
Akshay: So, next question is on our EPC cost. So, in our financial statement we have the line item of EPC cost. So, what percentage of the EPC cost is from the outsourcing? I mean to say that what is sourcing from our company itself and what is the outsourcing of the materials, like we also have the manufacturing plans of solar cells and solar panels and all these things. So, these are the two questions, sir.
Dilip Panjwani: Akshay, commonly most of them may have this question, so I would like to address the EBITDA margin aspect in the first place. We have consistently reported a very higher level of EBITDA margins in the past, but we have consistently maintained that our EBITDA margins at a sustainable level should be double-digit, almost near to 15% levels. That's what we have consistently maintained. So, we are in line with our thought process.
I can estimate until our present order book where we will maintain these kinds of EBITDA levels, the new order book as and when it comes, we will keep stakeholders' posted. So, as you said that this 1.7 gigawatts is right now good for next 9 to 12 months, so you can predict that for this order book the EBITDA margins will be maintained. But when the mix changes in the new order book, we will keep these stakeholders posted. So, that's the take on EBITDA margins as of now.
We are still happy with this EBITDA margins, reason being the volume has significantly increased. And being a platform, we are not seeing any other metrics go up in terms of capital requirement or anything else. So, consistently EBITDA is going up and PAT is going up on the financial parameter side. So, I hope that addresses your EBITDA question.
Coming back to outsourcing front, Waaree Renewable Technologies anywhere does not manufacture anything. We outsource in terms of equipment everything from outside. But in terms of EPC execution, we do it in-house. Little bit of civil work here and there, I cannot quantify in terms of percentage, but that could be a very low percentage of work that we outsource to outside parties.
In terms of equipment, of course, our group company does manufacture modules. But if the client insists as a pass-through through our balance sheet on the module side, on an arms length basis, at a completely unrelated party, because it's a related party, absolutely at an arms length

basis we buy from Waaree Energies. So, the rest of the equipment, which is like high-lead equipments like transformers or inverters, cables, etc., are anyway procured from outside as of now.
Akshay: And sir, last one short question is, how do we see our order book for the next one to two years? Like at the end of the first quarter we had 2.2 gigawatts around the order book and currently we have 1.7 gigawatts. So, how it can shape over the next one to two years?
Dilip Panjwani: See, since about three quarters to four quarters we have been consistently mentioning this. This sector offers significant opportunities. And where does these opportunities arise from is government's commitment to energy transition to renewable energy space. And there the government has certain targets. One of the targets, of course very well-known is 500 gigawatts

of renewable energy by 2030. Besides that, government also has up to 2070 they have a vision that they want to go net neutrality in terms of renewable energy. By 2030 or by 2029 itself government wants more than 50% of energy to be driven by renewable space, where we are present.

And apart from that, since last year the government has committed that they will increase the business of renewable energy in terms of procurement of power up to almost 40 gigawatts to 50 gigawatts per annum. So, that's our quick and easily addressable market. Then there is some other market like Kusum Yojana and rooftop projects that are going to come up. So, we are very excited and that's how we have been consistently engaging with our customers. Our now, as I said, pipeline has increased to 17.8 gigawatts, so we are very hopeful that this sector offers significant opportunities over next couple of years, which was your question.

Moderator: Thank you. Our next question is from the line of Alisha Mahawla from Envision Capital. Please go ahead.

Alisha Mahawla: Sir, I just wanted to know what the previous participant was asking. Our earlier aspiration was to execute 1.5 gigawatts to 2 gigawatts for this year, and we should probably be in the range of doing that. With the order book of 1.7 gigawatts that we are currently sitting at, and 17.8 gigawatts of pipeline, how much are we expecting this pipeline to come for bidding in H2? Otherwise, the growth for next year on the current base may sort of be flat. So, any thoughts or color on that?

Dilip Panjwani: Yeah, sure. Alisha, when we started this current financial year, we started with roughly 2.3 gigawatts to 2.4 gigawatts, and we are now down to. But how did we arrive at 2.3 gigawatts, 2.4 gigawatts is also in March we secured very big orders. And that's how the nature of this industry is that there is a time gap to fruition of the business, and that's roughly six to eight months. And we are in active discussion with our clients and we are hopeful of converting them due to orders as well. And the market is quite big, 17 gigawatts alone we are chasing, the whole market is more than that, double than that in fact.

Because when I said in the previous question that the government is incentivizing up to 40 gigawatts to 50 gigawatts of renewable space, that is only in the renewable space. But add to

that the new tenders that are coming in the market are more towards RTC, hybrid, plus battery-energy storage systems, pump storage systems, floating solar is yet to come up in a big way, and rooftop market is yet to get explored. That is roughly around 30 gigawatts to 40 gigawatts by some estimates. So, the outlook is definitely brighter.

And the 17 gigawatts, which was your question, I said it takes time, six to eight months, these are big orders. But we have also organized internally in terms of lower megawatts orders into the separate vertical. So, our focus is going to increase towards that as well going forward.

Alisha Mahawla: So, h

ow much of this 17 gigawatts will be up for bidding in H2? Or all of this we can hope will be bided in H2 and then we will have some hit rate in this?

Dilip Panjwani: See, there is always a hit rate, definitely. Our hit rate in the past has been around 25%-odd, but depending upon which is numerator, and which is denominator, 25%, 30% has been our hit rate.
The entire one is for the second half anyway, but you things keep changing or new order keeps getting added, lapse orders keep getting go out, but the entire one is for second half itself.

Alisha Mahawla: And this current unexecuted order book of 1.7 gigawatts, will we be able to execute a large part of this in H2?

Dilip Panjwani: Yes. Since it is 9 to 12 months, you can apply some proportion, six months or less. So, you can do 6 divided 12, but we are hopeful of around 1.2 gigawatts to 1.3 gigawatts.

Alisha Mahawla: To be executed in H2?

Dilip Panjwani: Yes.

Alisha Mahawla: And are we seeing any slowdown, because you said that the sector largely depends on government initiative, while they have a long-term commitment to it. In the last few quarters, have we seen any slowdown in orders or are we expecting that this year could maybe be flattish and again a pick up from next year? Any on-ground color that we can give?

Dilip Panjwani: We haven't observed any significant slowdown in this sector in terms of investments from the government or from other parties as well.

Alisha Mahawla: And any comment on the competitive intensity, because we have heard a lot of smaller players have also entered this space. So, is that impacting our order wins or profitability in orders that we are winning?

Dilip Panjwani: See, competition in a sector which has significant tail, will always emerge, which is good for industry because it brings out efficiencies and productivity is in place. But there are certain barriers as well. You want to bid, you need to qualify. The newer players will always find it difficult to qualify in that space. The second is, project from getting gigawatts scale, we are changing now gigawatts scale projects. So, when a customer wants to outsource his EPC, he will also see the experience and the deliverability of that particular product to himself. Because these are not small projects, these are almost like Rs. 3 crores to Rs. 3.5 crores per megawatts projects

now. When you go to 1 gigawatts that will turn out to be almost like Rs. 3,500 crores to Rs. 4,000 crores for them as an investment. And plus, these are now coming with complexity of battery storage, because these are RTC and these are hybrid projects as well. So, competition is good, this will keep us on good footing and improve efficiencies, but we are not too much worried about competition as of now.

Alisha Mahawla: And how much of our order book is utility versus IPP?

Dilip Panjwani: Bulk of it is utility.

Alisha Mahawla: And just one last question, are we already getting orders of witnessing any uptake on the rooftop solar?

Dilip Panjwani: Yes, we are witnessing rooftop solar as well.

Alisha Mahawla: Is that part of the order book already?

Dilip Panjwani: Part of the order book as well.

Moderator: Thank you. Our next question is from the line of Shivani from Monarch Networth Capital. Please go ahead.

Shivani: Congratulations on good sets of numbers. This question is in continuation to the earlier question. So, I wanted to understand more from the industry perspective, are we on the track of 40 gigawatts, 50 gigawatts addition for FY '25? Because as per market sentiments, I have read that it will be anywhere in between 25 gigawatts in terms of capacity addition, so could you throw some light on that?

Dilip Panjwani: See, this always remains a matter of debate. When we were proposing that the government will add 20 gigawatts to 30 gigawatts, the actual executions were 10

gigawatts. Then suddenly government commitment opened up and government said we will be in the range of 40 gigawatts to 50 gigawatts. And if you look at the tender data, that has actually kept up the pace. So, 5 gigawatts here and there will not matter much, but actually tenders are coming up in a significant way. So, we have not until now witnessed that 40 gigawatts to 50 gigawatts is going down to 20 gigawatts or something like that. But 20 gigawatts is also itself a big market. But definitely I want to reiterate, having said that, that we are witnessing trajectory towards 40 gigawatts levels.

Shivani: My next question is on order mix; how much is from PSU CNI and residential? And what's the margin across these orders?

Dilip Panjwani: See, at a broader level I can guide you that our current order book is between 15% to 20% in PSU side, and the rest is towards either utility scale or rooftop or other projects. But we do not have a detailed breakup as you are asking. I hope that answers the PSU and the balance split.

Shivani: And also, could you comment on the mix between BOS and turnkey orders, and what is the margin profile for both of these orders?

Dilip Panjwani: See, as far as the bulk of our orders are concerned, they are balance of systems only. The turnkey orders are few, clients prefer to go on module on their own. Once the module is out, it is mostly the balance of system orders. And margin profile in fact is better in balance of system, but we always go by a mix of margin, and we track up to EBITDA level which we have already discussed in the first part of the session.

Shivani: And my last question is, are there any plans for international EPC, like any update on that?

Dilip Panjwani: In our presentation we have already articulated that aspirationally we want to do international also. That's a large market for us, especially Middle East and on the African side. But we have not yet forayed in as such with a firm commitment of capital as yet. But whenever an opportunity arises, rest assured, we will keep these stakeholders updated. Aspirationally and directionally we are headed towards that. But as of now our 100% of order is from domestic sources.

Moderator: Thank you. Our next question is from the line of Prince Choudhary from PINC Wealth. Please go ahead.

Prince Choudhary: I have couple of questions, first from the industry point of view. I want to understand, since the raw material cost is around 70%, 74%, so I want to understand how is the domestic supply chain? Is there any issue related to that?

Dilip Panjwani: See, the domestic supply is currently geared towards meeting the supplies. Since 1st April ALMM has started and modules get covered under that, the rest of the equipments are not covered under ALMM or any domestic content requirement. The rest balance of the supplies are also procured domestically and we have historically procured from domestic sources only. And we have addressed this in the past also in the first session of the call that we have not visited any supply chain issues or any meeting difficulties towards other part of the equipment. So, on the both front, module supply front and on the other supplies, as of now we are not witnessing any significant things in terms of import versus domestic or something, but domestic is geared towards supplying all the requirements.

Prince Choudhary: Sir, you mean to say, the domestic supplies will be catered to all the industry participants, is my understanding correct?

Dilip Panjwani: Yes.

Prince Choudhary: And if you can explain about the bidding process, like how long it takes to bid, and then when we are getting the orders?

Dilip Panjwani: See, bidding of tender, from the date of publishing to date of signing of the LOIs, it takes roughly about four to five months.

Prince Choudhary: And since you have the order of 1.7 gi

gawatts for 9 to 12 months, how you are going to finance the project, whether it is internal accruals or debt or anything?

Dilip Panjwani: We need to decipher the business model where Waaree Renewables is placed. We are not spending anything on these projects, it is the clients who are spending. I just need to sufficiently be capitalized to the extent of my working capital requirement, because it is a cycle. As soon as I procure materials, the client pays Waaree Renewables. And my investment is not there in the project, it is the clients' investment. So, I do not have to be bothered about, I just need to be taking care of my working account requirements, if required.

Moderator: Thank you. Our next question is from the line of Sarang Joglekar from Vimana Capital. Please go ahead.

Sarang Joglekar: So, just building upon the previous question, how much advance do you receive on the EPC orders? And is there any difference between PSUs and private sector?

Dilip Panjwani: Well, there is definitely difference between, your second question, there is definitely difference between PSU and private segment. PSU's mandatory requirement is contract performance bank guarantees, which sometimes is there in private sector contracts and sometimes it's not there. From a percentage perspective, advanced ranges hover between 5% to 15%, but thumb rule is 10%. And performance bank guarantees we have observed has been around 10% to 15%, thumb rule again 10%. But it has been coming down also in certain projects.

Sarang Joglekar: Also on market side, so green hydrogen is one more growth driver for solar EPC, right? So, just wanted to understand how big of an opportunity that is and have the orders demand from that market started to come in?

Dilip Panjwani: Hydrogen is a great opportunity that we are looking at because we have group capabilities in terms of hydrogen. But from a demand perspective, we are expecting it to scale up. But as of now a significant demand on that front has not been scaled up in terms of orders.

Moderator: Thank you. Our next question is from the line of Rohan Vora from Envision Capital. Please go ahead.

Rohan Vora: Sir, just slightly a medium to long term question. So, you earlier mentioned that the current margin guidance is for the order book that we have in hand. And then as and when we win new orders, you will guide us on how the margin would move. What is your view on that? How do you see the margins moving in the upcoming pipeline? Has competitive intensity impacted the margins? And just some color on that. Thank you.

Dilip Panjwani: See, I have already addressed that part as well, but I will reiterate. If you look at, historically, we have been at more than 20% or around 20% margin level. Give and take, in certain quarters we were at 20%, certain quarters we were at 18%, last year we were at 23%. So, at that time itself we foresaw what is coming and we have been guiding that sustainable and going forward margin that must be seen is at 15% odd levels, but still double digit. And our target internally is also to keep moving in that direction. We have been very conscious of what kind of projects we undertake. We do not want to undertake projects for the sake of taking up the projects, and that's how historically the company has operated. So, we foresee that we will still be in double digit

margins going forward. That's how we want to undertake projects. But as and when competitive intensity further increases or puts pressure on the margins, we will keep you posted. But I can

only tell you how internally the working of the company has been throughout.
Moderator: And sir, just a bit of color on the gigawatts scale projects that we are building, and we are working on. So, how is the atmosphere around that, if you can gi

ve some color on that?
Dilip Panjwani: So, traditionally, our company works from 1 megawatts level till any size. But the gigawatts level more we are pronouncing because that's how the projects are coming into the market space now, and clients are willing to trust us for gigawatts scale. That's an endorsement for the company. And in our pipeline also we are seeing that there are quite significant big level projects, 500 megawatts, 1 gigawatts, or higher than 1 gigawatts as well. So, that's what we articulated, that's how we are discussing with clients now.
Rohan Vora: And the competitive intensity in that gigawatts scale, how is that?
Dilip Panjwani: There are fewer players, but there are players. There are three to four players in that segment, four to five players, but there are players in that segment.
Moderator: Thank you. Our next question is from the line of Khadija Mantri from Capri Global Capital. Please go ahead.
Khadija Mantri: Sir, my question was regarding the increase in trade receivables, so from March 2024 to September '24, so is it some project specific receivables that we are expecting, and then they may come down at the end of the financial year?
Dilip Panjwani: See, the trade receivables are as of that date, yes, true. But the quality of trade receivables is that there is a certain portion which is not even due. Then there are defect liability period margins that we have to keep with client in the nature of 5% to 10%, that must be around Rs. 80 crores to Rs. 85 crores in that receivables. So, if you account all those, the trade receivables are not at that great percentage. And in fact, they have significant chunk maybe in the region of Rs. 150 crores we have already collected in the month of October itself.
Khadija Mantri: And what is the typical working capital cycle?
Dilip Panjwani: Working of the cycle is actually within 21 days we get payment. Technically, our working capital cycle is, actually we have a negative working capital. It means we do not need capital to do this business. How, I will explain you. When we give these BGs we get 10% money in advance, and certain payments in the range of 40% to 50% is covered by MDCs or delivery at site, like almost up to 70%, between these two components, delivery at site and Material Dispatch Certificate. So, once the material is dispatched, we get payments, or the delivery at site material we get payment. And that payment becomes due between 21 to 30 days. And we pay to our creditors around 40 to 45 days. So, that gets covered. Then the service payments and design payments add to all those things. And as soon as you submit designs, various engineering designs, be it civil design, you get paid. That is balance around 20% of the payment. Then balance last 5% to 10%

gets blocked in your defect liability or workmanship kind of margins that you have to keep with clients for between 9 to 18 months, depending upon the type of client etc. So, what we get held up is only that last portion. But while doing business, our investment is not very significant. If it is there, it is for very minimal period.
Khadija Mantri: And also in the current order book, is it possible for you to share the O&M part or it is not very significant?
Dilip Panjwani: So, O&M is at 587 megawatts. Also, what happens is that when we undertake EPC clients, they give us, majority of them, not all of them, give us between three to five years of O&M. So, mostly once the projects gets completed next year we will see an uptick in O&M as well. And the company also keeps actively bidding for O&M customers outside. So, we are hopeful that this should also see a 2x to 3x growth next year onwards.
Khadija Mantri: And also one question, in the press release it was mentioned that EPC work invoiced to clients, so which is not a part of revenue, so how much time

does it take once you invoice the work to
clients and the revenue pick, what is the gap typically?
Dilip Panjwani: See, this we have added for stakeholder transparency that this is a constant thing that's happening. The accounting standard says that you have to book revenues on percentage completion method. So, whatever has been booked as revenue is the work that is completed, whatever we have been invoiced to the customers, we would have in fact received money also against that. So, whatever is invoiced to clients, once we spend that money or we complete the work, this would get booked as revenue as well. But that generally happens in a space of 30 to 45 days timeframe. And in fact, if you notice, on the invoicing front we have already crossed last year's revenues.
Khadija Mantri: Right, I noticed that. So, I just wanted to know what is the gap between the invoice period and then the same turning into revenue, you said it's 30 to 45 days?

Dilip Panjwani: Yeah.
Moderator: Thank you. Our next question is from the line of Vishal Choudhary from A-Z Trading Ventures. Please go ahead.
Vishal Choudhary: First of all, sir, congratulations on a good set of numbers. So, my many questions are already covered, but can you just let us know, in last two concalls as well you guys told that you are having a very large pipeline, somewhere around 17 gigawatts or 18 gigawatts, something like that. So, like we saw that in the last two quarters, Waaree was not able to win good, big order, so is it because that bidding did not happen or like results were not favorable?
Dilip Panjwani: Look, though I have addressed this, again I would like to reiterate, in a different manner I have already addressed this. Waaree believes in profitable contracts, we do not believe in the business for the sake of taking. That's one. Second thing, I also did mention that the cycle of conversion in this business for tenders is almost five to six months, and for non-tenders also the cycle is six

to seven, eight months, I referred that. So, it takes time to convert them to order. But when the order comes, the work immediately starts and we start booking revenue. So, that's the reason that we have not been able to announce any significant new order. But we are hopeful that our pipeline is pretty strong. The tailwinds are also equally strong in this sector. As I mentioned that new avenues are opening up on the battery side, storage side, solar side, so those are the things that are keeping us enthusiastic in this business.
Vishal Choudhary: So, is there any particular band of projects in terms of capacity you are chasing? We can see that there are some smaller companies which are also listed, they are winning a lot of like 10 megawatts, 20 megawatts which typically takes less than six months to execute. Or there are some bigger companies as well which deals in you can say gigawatts only. So, is there any particular band of project that you are particularly bidding for or do you have a preference?
Dilip Panjwani: So, technically, typically we do not go below 600-kilowatt level. I actually mentioned our focus is 1 megawatts onwards. I also mentioned that we have internally reorganized a division which will focus between 1 megawatts to 50 megawatts that we have recently organized, so it will take a little bit of quarters or a couple of quarters' time to see fruition. But if you look at our order announcements, the smaller projects we have already announced, in the past 130 megawatts order we have announced in July also. So, those are also coming in. And our focus on rooftop is also increasing now because rooftop also presents a significant 30 gigawatts to 40 gigawatts opportunity over the next three to five years.
Vishal Choudhary: Sir, can you give some may be closer to farm number, like what out of this 1.7 gigawatts you can cover in the next

five months? Like the earlier range you gave was very, very big, right, it is nine to 12 months, earlier also it was nine to 12 months, but it did not materialize in the last two, three quarters. So, like can we expect --
Dilip Panjwani: 9 to 12 months when we refer, it is the execution period of the existing orders. So, as and when order keeps getting added, that period keeps increasing. So, there's no delta between what we have mentioned in the past and now.
Vishal Choudhary: That's fine, sir. But if you will add the new order wins, minus the executed, so that number is somehow you can say not matched. So, that is why I am asking, like in the next five months is there any range, closer range, not very bigger one, like previously you told that maybe 700 megawatts, 800 megawatts to 1.2 gigawatts. So, can you maybe just give me some range?
Dilip Panjwani: Your question relates to pending execution that is pending for 1.7 gigawatts?
Vishal Choudhary: Yeah, pending in the current financial year.
Dilip Panjwani: Yeah. So, we did mention 1.2 around gigawatts is what we should be executing in the next six months.
Moderator: Thank you. Our next question is from the line of Sahil Gaura from M&S Associates. Please go ahead.

Sahil Gaura: Firstly, congratulations for the good set of numbers. I just had a couple of questions. Sir, can you tell me what are the potential short term and long-term implications of Mr. Trump returning to the Presidency on the business?
Dilip Panjwani: Look, as far as US elections is concerned, I do not think Waaree Renewable per se will have any significant impact. The reason being, in the previous session of our Q&A, we had said that we are a more domestically focused company right now and it's more driven by Indian investments right now. Our focus internationally also, when I mentioned that aspirationally we would like to

reach out, if at all, it is Middle East and Africa, we have not said US as such. So, whether any party wins in US, as far as impact on Waaree Renewable is concerned, we are not witnessing any impact on Waaree Renewable Technologies.

Sahil Gaura: And my next question is, could you break down the order book across the three business segments, EPC, O&M and power production? And also, if you could provide details on the portion attributed to private players versus government contracts.

Dilip Panjwani: So, private versus government, I have already addressed, it is between 80:20 kind of, 80% private and 20% government, 15% to 20% rather is government rest is all private. And second is, your order book we have said that 1.7 gigawatts is an unexecuted portion, that is a mix of everything. And then on O&M we have got 587-odd megawatts of assets portfolio under our management. IPP we have got 40 megawatts which gives us annual revenues of around Rs. 16.5 crores to Rs. 17 crores, that's the portfolio of the company as of now.

Moderator: Thank you. Ladies and gentlemen, that was our last question for the day. And I would now like to hand the conference over to Mr. Viral Sanklecha for closing comments.

Viral Sanklecha: Thank you. I would like to thank the management for taking out the time for this conference call today, and also thanks to all the participants. If you have any queries, please feel free to contact us, we are Orient Capital, investor relations advisors to Waaree Renewable Technologies Limited. Thank you and have a great day.

Dilip Panjwani: Thank you.

Moderator: On behalf of Waaree Renewable Technologies Limited, that concludes this conference. Thank you for joining us. And you may now disconnect your lines.

Call: Jan 2025

Execution with Pace & Comfort

Waaree Renewable Technologies Limited

Sub.: Transcript of Investors/Analyst Earnings Conference Call held on January 17, 2025.

Dear Sir/Madam

Further to our communication dated January 14, 2025, and January 17, 2025, please find enclosed the transcript of the Earning Conference Call held on Friday, January 17, 2025, at 04:00 p.m. to discuss the Un-audited Financial Results for the quarter and nine months ended December 31, 2024.

This intimation is also available on the website of the Company at www.waareertl.com.

We request you to take the same on your record.

Thanking you,

Yours faithfully,

For Waaree Renewable Technologies Limited

Heema Shah
Company Secretary

"Waaree Renewable Technologies Limited
Q3 FY'2 5 Earnings Conference Call "
January17 , 202 5

MANAGEMENT : MR. DILIP PANJWANI – CHIEF FINANCIAL OFFICER –

WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. MANMOHAN SHARMA –VICE PRESIDENT ,
FINANCE AND ACCOUNTS – WAAREE RENEWABLE
TECHNOLOGIES LIMITED
MR. ROHIT WADE – GENERAL MANAGER , INVESTOR
RELATIONS – WAAREE RENEWABLE TECHNOLOGIES
LIMITED

MODERATOR : MS. NIDHI VIJAYWARGIA – ORIENT CAPITAL

Moderator : Ladies and gentlemen, good day, and welcome to the Waaree Renewable Technologies Limited Q3 FY'25 Earnings Conference Call hosted by Orient Capital. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing st ar then zero on your touchtone phone . Please note that this conference is being recorded. I now hand the conference over to Ms. Nidhi Vijayw argia. Thank you, and over to you, ma'am.
Nidhi Vijaywargia: Thank you, Ailrick Good evening, ladies and gentlemen. I welcome you all to the earnings conference call of Waaree Renewable Technologies Limited to discuss the Q3 and 9 months FY'25 business performance. Today on the call, we have from management, Mr. Dilip Panjwani , CFO; Mr. Manmohan Sharma, VP, Finance and Accounts; and Mr. Rohit Wade, General Manager, Investor Relations.
Before we proceed with this call, I would like to mention that some of the statements made in today's call may be forward -looking in nature and may involve risks and uncertainties. For more details, kindly refer to the investor presentation and other filings that can be found on the company's website.
Without further ado, I would like to hand over the call to the management for their opening remarks, and then we will open the floor for Q&A. Thank you, and over to you, Dilip sir.
Dilip Panjwani: Thank you, Nidhi. Good evening, everyone. I would like to extend a warm welcome to all of you for joining the earnings conference call of Waaree Renewable Technologies Limited, where we will be discussing our business performance for the 3rd quarter and 9 months of the financial year 2025. I trust that you have had the opportunity to review our financial results and investor presentation, which has been made available on the stock

exchange and our company's website.
I also want to express my sincere gratitude to all those who have dedicated their time to join this call and who continue to support our journey.
We have along with us Mr. Manmohan Sharma, VP, Finance and Accounts; Mr. Rohit Wade, Gene ral Manager, Investor Relations and other key members of our management team. The current quarter has been remarkable in many aspects for renewable energy sector. The unwavering commitment of government to propel energy transition is witnessing new heights. This quarter has witnessed remarkable growth in India's solar sector, showcasing the impressive strides made by the country's renewable energy in 2024. India's total installed power capacity now stands at 482 gigawatts.
The total renewable energy capacity has now reached at 209.44 gigawatts with the solar sector accounting almost half of it at 97.86 gigawatts. These achievements have set new records and further strengthened India's position as a global leader in clean energy. The country added 24.5 gigawatts of new solar capacity in 2024, a significant surge led by utility scale solar projects, which contributed 18.5 gigawatts, almost 3 times the capacity added in 2023.
Rajasthan, Gujarat and Tamil Nadu played a pivotal role together contributing 71% of these utility scale additions. Additionally, roofto p solar saw 53% increase with 4. 59 gigawatt added ,

supported by initiatives like PM Surya Ghar Muft Bijli Yojana; off -grid solar contributed by an additional 1.48 gigawatt, experiencing a remarkable 197% growth reaching at 4.23 gigawatt in December 2024.

The overall growth reflects India's strong commitment to achieving its clean energy targets and is aligned with the country's broader climate goals. In total, renewable energy capacity grew 15.84% year -on-year with solar and wind energy leading the charge. This positions India as a global leader in renewable energy and reinforces our optimism for the sector's continued expansion.

Turning now to our financial performance for the third quarter and first nine months of financial year 2025. We are pleased to report that our un -executed order book stood at 3.4 gigawatt peak in the first nine months of financial year 2025. We successfully executed EPC orders totaling 319 megawatt peak for the Q3 FY'25. Our revenue grew by 85.87%, am ounting to INR1,121.17 crores in nine months of FY25.

Our EBITDA for 9 months FY 2025 stood at INR184.57 crores, representing a year -on-year growth of 39.95% compared to INR131.89 crores in the same period last year. Similarly, PAT for nine months FY 2025 has reached INR135.16 crores, reflecting year -on-year growth of 43.94%. For third quarter FY 2025, our revenue stood at INR360.35 crores compared to INR324.19 crores in the same period last year.

EBITDA for the third quarter FY '25 stood at INR 71.92 crores and our PAT stood at INR 53.48 crores. We are extremely pleased with the progress we have made and remain confident in our ability to continue this strong growth trajectory in the upcoming quarters. Our commitment to sustainable and clean energy solutions remain unwavering, and we are excited about opportunities that lie ahead. Thank you once again for your continued support. We now open the floor for any questions you may have.

Moderator : The first question is from the line of Rohan from Eleverse Capital .

Rohan : Just wanted to understand what has been our per megawatt revenue for this quarter and nine months as a whole? And it looks like the margin have come under pressure Y -o-Y this quarter. So your comments on that ?

Dilip Panjwani: Normally, we operate under INR1 crore to INR1.1 crore per megawatt, and that's in line. We have given our billing data also in our notes to accounts, roughly around 319 megawatts o

f

business that we have done for a turnover of about INR360 crores in Q3 FY25. Of course, INR360 crores includes our business for O&M and IPP also. However, the turnover for EPC was INR353 crores.

Rohan : Okay. And any comments on the margin?

Dilip Panjwani: Yes, sure. We have already guided in since 3 -odd quarters, we have been guiding that our margins must be in the range of 15%. However, we are pleased that they have turned out to be 19.96% this quarter. And for nine months ended, they are nearer to our internal calculations, which we keep saying that we should be under 15%. So 16.50% is for nine months. So this goes WAAREE/RTL

with our commentary in the last few quarters that we have delivered to our stakeholders in our -
- most of our communications. So that's where our margins stand at.

Rohan : So what are the time lines that you look at to complete the pending order book. You have been guiding that around 12 to 18 months, but a fair sense as we are entering the last quarter, pending order book that you aim to complete within that?

Dilip Panjwani: So Rohan, all EPC companies will continue to guide according to their , and it will always be a moving goal post because new orders keep s entering . So what we have communicated 9 to 15 months is the correct version. If you have to complete and take no new orders, then what the timeline I've indicated is the correct timeline. But EPC companies, there's always a trajectory of new orders coming in and that keeps extending the time.

Rohan : Just this quarter, if we were to look at, it's around 300 -odd megawatts. So if we just annualize it, it comes to around 1.2 gigawatts , and accordingly, if we were to see around 3 gigawatts of order and henc e, my question was on that line.

Dilip Panjwani: Well, we can't extrapolate based on that because these are whole solar -generating systems, first of all. And second thing is I have already completed 1 gigawatt in first 9 months itself. So I can't extrapolate my 319 megawatts that I have delivered in this quarter. If you look at my past quarter, we have delivered 500 megawatts of business in the last quarter, a little less than 500 megawatts maybe, but that's what we delivered. 488 megawatts was the precise number that we delivered in our p revious quarter.

So 3.4 gigawatt is what represents for 15 months because one of the biggest orders that we have won in this quarter for 2 gigawatt has come in now in the month of November itself, for which we are starting the work now.

Moderator : The next question is from the line of Deepesh Agarwal , ICICI Prudential AMC.
Deepesh Agarwal: Just a couple of questions. So in the previous call we had highlighted that we have the increased competition in the space. So has our competition resulted in any loss of pricing power that we had?
Dilip Panjwani: It's very difficult to say if you have lost pricing power. If you look at our growth trajectory, we have been growing. Our order book position is growing, our 9 months turnover if you see because we keep guiding that you should look at EPC companies for 12 months, that is also up by 87%. But I want to admit that there is competitive intensity, is good for productivity of companies. But as such for pricing power, we don't undertake projects which are not profitable to us.
Deepesh Agarwal: And secondly, you also highlighted that you will be looking to foray into data centers. So is this like a niche idea or something under exploration? Or what is the status of this?
Dilip Panjwani: So as a group, we had been working on this idea because of synergies. Right now, the Board has approved amending the object clause because we do want to foray into data center business. There are synergies. Data centers, you build EPC solar -generating power projects, now w

build data centers also, another EPC model. And also coupled with data centers have a lot of energy consu mption. Roughly some estimates, the energy consumption in data center varies between 50% to 75%, depending upon how the data center is used, whether it is for e -commerce or whether it is for corporates. So there are definitely synergies and we have been studying this. And that's why we've decided that it's time now for us to diversify into data center EPC as well.
Deepesh Agarwal: All right. My last question was how are we looking in terms of the cash position? And would we be looking forward to raise any debt for further execution of projects?
Dilip Panjwani: I lost your last line. What did you say? Can you repeat that?
Deepesh Agarwal: So I wanted to know our current cash position and are we like considering any plans to raise debt in order to fund our future projects?
Dilip Panjwani: So, our cash position is quite comfortable. We are around INR 200 crores - INR220 crores of cash. Our debt position is currently only one loan that is running is around INR28 crores outstanding right now for us. We are not looking to raise any funded debt, but we are always scouting for non-fund-based limits because we need to give bank guarantees, et c, to our customers. So that's what we keep shopping for. But shopping for debt is not on the cards as of now, unless we do some capex , which we may like to monetize in some form.
Moderator: The next question is from the line of Shiwani from Monarch Networth Capital. Please go ahead.
Shiwani: Hi thank you for the opportunity. My first question is a follow -on question of the previous candidate. It is around the non -fund limit that you mentioned. Could you throw some light on the current non -fund limit available and how much we are able to churn it?
Dilip Panjwani: So we have right now limits of almost INR1,400 crores. What I would also like to additionally highlight is that there is now insurance companies who have also entered this segment who are providing equivalent products as banks. We have shopped with them around until now INR300 crores of insurance products also, which are equivalent of banking products . But our banking fund limits are right now at INR1,400 -odd crores with usage of around 75% to 80%.
Shiwani: Okay. Sure. Could you repeat the point on the insurance limits?
Dilip Panjwani: I've already said they compete with banking products in non -fund-based limit space. What else , if you have any specific question, I can address it.
Shiwani: Sure, sure. No, that is helpful. Secondly, on -- in general, EPC company, they have a stronger H2 compared to H1. And I also see the margin improving in this quarter. So is it because we have already recognized the cost in the previous quarter and hence, we are seeing the improved margins? And how to think about it going forward?
Dilip Panjwani: Shiwani, these are 2 different things. One is we are not permitted to do pre -book cost and not pre-book revenues because that's against the accounting principle. So cost will match with revenues as a principle. The second half as far as margins is concerned, I've already addressed

it that we better surprise ourselves rather than be not cautious. So we have always maintained that we should be under 15%. We are better than 15% is good for us.
Shiwani: Sure. And sir, how do we think about the coming order books like future order books? Are we

seeing more traction from the PSU 's or in private players? Just I am understanding on how are we, how do you think about it directionally?
Dilip Panjwani: So directionally, government business is going to be strong go

ing forward, which we have always guided. But historically, if you witnes s Waaree Renewables book, it is more finding favor with utility scale IPP players, which are on the private side. And even the current order book is geared towards that. Our pipeline is also geared towards more towards larger private players as of now.
Shiwani: Thank you. That was helpful. I'll be in the queue if there's any follow -up questions.
Moderator: The next question is from the line of Eshwar Arumugam from ithought PMS.
Eshwar Arumugam: Just like to follow up on the last analyst who asked the question. So I wanted to understand the main difference or how you go about bidding in a PSU order and private order. Is there any difference because PSU generally bid L1, L2. So private player also do you bid like in the same or do you get the order through your contracts?
Dilip Panjwani: So private players largely are bilateral. And as you rightly said, PSUs are more L1, L2. So that's the basic difference.
Eshwar Arumugam: Okay. So would you be going for more PSU orders in the future? Or would you like to continue with them?
Dilip Panjwani: We are already addressing that market segment very aggressively. But our bias is still towards utility scale IPP players on account of quick order wins and those aspects.
Eshwar Arumugam: Okay. And would you estimate that would there be any difference between the margins in PSU order and the public sector order?
Dilip Panjwani: No, both are almost similar.
Eshwar Arumugam: I understand PSU would be a little bit more competitive, right? So would there be any difference with margins you are going for more PSU earns?
Dilip Panjwani: PSUs are not competitive as such the competitive intensity in bidding for PSU projects is higher. Bilateral people normally go for understanding who can serve them best, who brings on board better technology and all those aspects. Like in every project, there is some bit of nuances towards design, et cetera, which are bilaterally utility scale players try to address. And that's why you find a little bit of margin bias as well as order winning bias towards utility scale provide us better.
Moderator : The next question is from Anushka Vora from Vimana Capital.

Anushka Vora : My first question is more on a macro level. So how do you see the demand shaping up in the sector? And are we facing , are you seeing any delays in project execution from the client side and just a macro view of that?
Dilip Panjwani: In the initial commentary itself when we started, there is a set of numbers that I read out. And if you look at a year back when we were talking, there was a lot of skepticism whether the government will deliver this kind of projects, et cetera. From the start of the year itself when there was an 18 gigawatt tender issuance in 1 quarter itself to 24.5 gigawatt of solar in stallations, we come a long way.
When I started my journey in Waaree, we were , India was at like in the month of August, India was at like 70 gigawatt of solar. Today, the installed capacity in solar is 97 gigawatt. So the country definitely is cruising nicely towards its goal of 500 gigawatt ultimately of renewable energy. So at a macro level, until now, we are witnessing commitment of the government, a lot of capital coming in, in this sector and a lot of things happening on the stora ge side that we are witnessing.
On the client side, projection delays, I can't comment something specific because we are always on time, and we have been delivering whatever is our commitment with customers. But from a customer side, we have not experienced any significant delays as such. So it's difficult to put anything on that side. But macro level, as I already addressed. You have any other point on that, Anushka,

happy to address.
Anushka Vora : No, no. This was it. And even for just how is your FY'25 shaping up? Any guidance that you can give for top line?
Dilip Panjwani: So as a policy, we don't give guidance, but we have already delivered about INR1,120 crores of -- INR1,121 crores of revenues. We expect next quarter, I mean this quarter to be of January to March, we should be doing 500 to 600 megawatt of execution , that's what we expect.
Anushka Vora : Okay. And just one last question. How are you seeing the margins shaping up?
Dilip Panjwani: I've already addressed that in my third question or I think second question. We should be in the

range of 15% is what I have mentioned.
Moderator : The next question is from the line of Naman Jain from Kotak Institutional Equities.
Naman Jain: So a couple of questions. While we did impressive execution in Q2 FY'25, there have been some execution delay. So if you can just as to why we sort of didn't do as much in Q3 despite it being a relatively more suitable season for EPC. And secondly, margin -wise, we have always outperformed the industry. And you have historically guided a 15 -odd percent, but we have consistently delivered. So when we break it down, the significant difference comes from gross margin, which is -- so if you can try to explain as to why we have such as in first, higher margins? And second, why is there such variability across quarters?
Dilip Panjwani: So, Naman, I don't think we have ever read out that we have delayed any projects. We have starting point -- from a volume perspective, this quarter, we invoiced a little less, but that's in WAAREE/RTL

consensus with customers as well based on how they perceive execution, how we perceive execution. More than perceived how we contract out execution as well, not only perception. So that explains my invoicing for the qua rter and how we have performed.
Given that, I also say that the next quarter, we see somewhere around 500 to 600 megawatt of invoicing and that's again in line with our discussions with customers. Also, we cannot lose sight of the biggest order that I said in terms of size, complexity. It's India's largest order, 2 gigawatt for any company. It's a balance of system order, and it's a very big order for us.
So we have been consistently performing and both on the order secured front and on what we call invoicing front, we have performed as to what we are supposed to perform with our customers. However, coming back to margin, what you analyzed is correct at gross margin level, but I addressed it in an indirect method to some other question where I said that we don't undertake contracts which are not profitable to us.
So maybe when you are analyzing if the other companies where you are analyzing if they have orders, some orders which are profitable, some orders which they have undertaken only for revenue sake, maybe I'm not saying we have somebody has done that, that could skew margins against them, which we normally try to avoid. And we consistently follow our risk policy of not taking projects which are not accretive in margins to us. So that probably explains why we bid. But we continue to maintain based on our contra cts with customers that we should be at 15% level.
Naman Jain: Understood. And the large order is very important for you and a huge win for the Indian solar sector in general to get a 2 -gigawatt order. What is the expected execution time line, if you can share for this order?
Dilip Panjwani: About roughly about 8 or 9 months.
Naman Jain: Okay. 8 or 9 months. Got it. And one last question. Going forward, I understand that we aim for a certain margin in each of our EPC projects, right? So is it safe to assume that we'll be -- we'll try to maintain the 15% margin in the medium term at the very least?

Dilip Panjwani: Certainly, in the medium term, we will try to maintain that 15% margin level.
Moderator : The next question is from the line of Samarth Khandelwal from ICICI Securities.
Samarth Khandelwal: Firstly, sir, congratulations on a very good set of numbers and the impact with margins . Secondly, sir, my question is -- it is a two-part question. One is related to your existing business. I wanted to understand what's the difference between basically only a BOS order versus a complete EPC or der in the solar power project.
And sir, second question is with respect to data center. I just wanted to understand that until now, you have not -- and how are you going to -- are there any prequalification spaces which -- because datacenter is a very sensitive kind of setup. And it is a completely different versus setting up open space solar panels. How are we going to address that? WAAREE/RTL

Dilip Panjwani: So coming back to your first question of balance of system versus EPC order. So there are 2 types of orders in industry. One is called turnkey solutions in which entire responsibility of setting up technology is upon us. And in case of balance of system, only certain scope is given to us, like they may exclude land, they may exclude modules, while they may include inverters, they may include cables and installation and commissioning is certainly part of balance of system. So that's the basic difference depending upon scope.
So if there is a requirement of INR4 crores per megawatt, balance of system may account for

only INR1.5 crores, INR1.2 crores, depending upon scope. Sometimes it goes down even to INR70 lakh to INR80 lakh per megawatt also. So that's the basic difference. What was your second question, if you can repeat?

Samarth Khandelwal: The second question is regarding data centers. You mentioned that you would be exploring data center EPC orders as a new business segment. So like how would you be -- what size of orders would you be aiming for? Who would be the players? Would it be the existing ones, STT, Tata Communications or which type of data centers, hyperscale or edge? Like is there have been -- these questions have been thought of or -- if you could just share some light.

Dilip Panjwani: As I told you, we have had put our minds before we went to the Board. And those are the questions that will be addressed as we go into the market and solicit the business. But I can assure you one thing that like we addressed all segments of renewable segment, power segment, RTC, hybrid. In data center, we will not exclude ourselves from a particular set of type of data center. Once you bid, you will bid for all types of business because you will build those capabilities before bidding. And definitely, there will be prerequisites. One will not get business without prerequisites. So we will be going with all the prerequisites that are required to set up a data center.

Moderator: The next question is from the line of Isha Shah from Nirzar Enterprise.

Isha Shah : I have a couple of questions. So my first question is, sir, if you could talk about the opportunity size in the government PSU business, P&I, rooftop and IPP in gigawatt terms? And following to this question is, like what is our EPC and O&M opportunity in this?

Dilip Panjwani: To differentiate between government and private is quite difficult. However, almost like 60% to 70% of the business comes from utility scale IPP. India is going for 40 to 50 gigawatt of renewable energy per annum. So you can say about 30% -odd percent, 30%,35% comes from government sites, which is like NTPC, S CCI and other PSUs have also started now entering like IOC, BPCL tenders. Those are the segments of the market that comes to us. And what was your second question?

Isha Shah : Sir, what is o

ur EPC and O&M opportunity in this?

Dilip Panjwani: Yes. So EPC opportunity is what I told you is entirely our opportunity. However, if you look at our presentation, we have already said that we are now sitting on 24 gigawatt pipeline. So that's the opportunity we are sitting as of today. But the entire market of 40 gigawatts that in the solar side that comes up along with battery and these our opportunity right now. WAAREE/RTL

As regards to O&M, we are sitting on right now 587 megawatts of O&M. And we have certain projects going live in March, which will get converted into O&M for us about 2x to 3x size of our current base from April onwards. So that's our O&M. However, the entire 92 gigawatt, somebody is doing O&M. So that's an opportunity for O&M as well.

Isha Shah : Okay. Sir, if I may ask other question, then sir, like if you've seen there are a lot of companies that are raising money and there are many new entrants. So what's the competition intensity over here?

Dilip Panjwani: So competition intensity, as market grows, competition keeps growing, which I said in my previous communication also, sometimes it is good for the industry because you get the best productivity out. But as Waaree, we are very cautious on our margins and our profitability. We don't get into unnecessary competitive intensity to just bring business on board .

Isha Shah : Okay. And sir, are there any technology challenges that we are facing or any kind of shortage of the components other than module that we are facing?

Dilip Panjwani: Not in solar renewable energy as of now.

Isha Shah : Not in this. Okay. And sir, my last question would be, are we planning to enter into solar parks?

Dilip Panjwani: See, we are opportunistic in renewable energy in every sphere. Tomorrow, if there is an opportunity and we find it profitable to set up a solar park, we will definitely do that. Solar park essentially requires land, connectivity where the government sanctions it. So once we have that -- in fact, we have two subsidiaries we have set up for same opportunity. Tomorrow, if you have an opportunity, we'll use those subsidiaries to obtain connectivity and land for the same, which we already communi cated in our previous communication also.

Isha Shah : Okay. So is the land available with us or that also will be something if there's an opportu nity, then we would look for it?

Dilip Panjwani: No, there is no land bank as of now. We have gotten this that tomorrow, there should there be an opportunity, we should be prepared to seize the opportunity.

Isha Shah : Okay. Understood. And sir, what are our export opportunit ies?

Dilip Panjwani: See, the market is quite big in Middle East and U.S. , but w e are right now focused because the domestic opportunity is also equally big.

Isha Shah : Okay. So we are focusing more on the domestic opportunity?
Dilip Panjwani: Right.
Isha Shah : And sir, in the PPT, you also mentioned about floating solar. So what would be the cost of that?
Dilip anjwani: See, we can't individually present what is the cost of something floating solar because that's something proprietary and confidential to us. We reflect that as showcasing our capability that we can undertake all sorts of complex size and variation in EPC space.

Isha Shah : Okay. But sir, if we talk about margins over here, but also knowing that Waaree only enters into projects that are like that gives them a good margin, so we can assume that the margins will be in line with other kind of category of solar or EPC, whatever we are doing.
Dilip Panjwani: I've already addressed the same thing if you were there on the call in the begi

nning, at 15% level
is what we consistently maintain...
Isha Shah : Correct, correct.
Dilip Panjwani: In line with our contracts with customers.
Isha Shah : I just wanted to understand if it's solar, floating solar, then it would be on the similar lines. So I just wanted to understand that.
Dilip Panjwani: Yes. Floating solar also will be on the similar lines. See, margin is a blended one. It's a combination of all types of projects, whether it's a turnkey project, whether it's a floating project, whether it's a rooftop project, it's a blended one.
Isha Shah : Okay. Understood. And sir, you also mentioned about green hydrogen. So are we like planning to get into that? Or what is that about?
Dilip Panjwani: So Waaree Group already has a presence in hydrogen. They have been awarded 350 megawatt of electrolyzer. But as and when huge case opportunity comes up, which is likely to come up, we will definitely be bidding for EPC part of the hydrogen play as well.
Isha Shah : EPC part of hydrogen -- okay, green hydrogen?
Dilip Panjwani: Yes.
Isha Shah : Okay. Sir, like just to understand what would be the EPC part over here for green hydrogen because since there would be electrolyzer and everything, like just to understand.
Isha Shah : That's a very technical question. What we mean commercially is that in a green hydrogen, you have to produce hydrogen by green methods, which is either solar or some renewable energy or maybe RTC along with wind, et cetera. What we will be undertaking is that setting up the plant in entirety, which can ultimately produce hydrogen through renewable energy sources is what we will be undertaking. And that's how we are in discussion with our clients wherever there is a use case, large -scale deploymen t of hydrogen is required.
Moderator: The next question is from the line of Namril Shah from ValueQuest.
Namril Shah: So I have two questions. This is -- one of them is with respect to the order that we have received from Jindal Renewables of 2 gigawatts. Typically, the realizations are INR1 crore to INR1.1 crore per megawatt, as you highlighted. However, looking at the Jindal Renewables order, the average realization comes to around INR60 lakhs per megawatt. Is it that the scope of the order is lesser vis-à-vis other BOS orders? That is my first question.

The other question is in terms of the unexecuted order book, can you throw some light on where are we in terms of the stage of completion for at least the top 3 orders, namely Greenko, NEEPCO and Acciona Energ y?
Dilip Panjwani: Second question will be difficult to speak in terms of confidentiality perspective, but I can give you a generic view. But let me address the first question first. As far as the question on per megawatt per lakh rupees is concerned, I have already addressed that the projects and turnkey projects versus balance of system can range from INR70 -odd lakhs to INR4 crores. So it's the blended approach that we take and our blended scope is still at INR1 crore to INR1.1 crore for the unexecuted order book portion included for Jindal. So that's where we stand at.
And there are always more nuances to projects where scope is later increased by the customer also, that has happened with us in some of the customers. But you are reading may be right, we may arrive at an accurate value, but I want to address again that the project scope can differ from INR70 -odd lakhs to INR1.1 crores as well. As far as the second is concerned on the top 3, we are on track is what I can mention and very much with all the customers. I can' t comment on

individual customer level in view of confidentiality.
Namril Shah: Just one follow -up question. In terms of the 1 gigawatt of execution that we have done in 9 months of FY'25, have we finished any of tho

se orders or all of the orders are in execution phase?
And one more question on the Jindal order. What has been excluded out of the scope of the order vis-a-vis the other BOS orders?
Dilip Panjwani: So as far as completion of projects is concerned, we have completed quite a bit of projects, which were running in the past. So some of the projects have got completed in the 1 gigawatt included that we have completed in the 9 months this current year. As far as Jindal exclusions are concerned, again, there is client confidentiality, but predominantly, it doesn't include module and land.
Moderator: The next question is from the line of Harshil Shethia from Renaissance Investments.
Harshil Shethia: All my questions have been answered.
Moderator: The next question is from the line of Shaan Patel from CD Integrated Services Limited.
Shaan Patel : I have two questions. My first question is that the revenue this quarter -- Waaree had a revenue of INR360 crores, taking the three quarter total to around INR1,000 crores and with a very marginal revenue growth this quarter. However, the employee costs remain high at INR7 crores, similar to last quarter when the revenue was INR500 crores. So does this imply that projects for INR200 crores are pending completion and recognition? And if so, can we expect the next quarter revenue to be around INR 700 crores to meet the guidance of INR1,300 crores to INR1,500 crores for that?
Dilip Panjwani: So I can take the latter part of the question very easily. I've already said that we should be aiming for 500 to 600 megawatts of business in this quarter, in this fourth quarter. So whatever that revenue translates based on the volume of the work, we could be around about -- again, if you

take INR1 crore, then it should be around INR500 crores to INR 600 crores. However, employee cost will not function that INR200 crores was short or something like that.
When you are putting people on site, whether you complete a project or not, you have to pay for the people's cost out there. That's what the platform business is and that leverage of people's cost in platform works both ways. However, traditionally, it has worked in our favor in terms of higher revenues. So maybe we will make up in the next quarter, but it's definitely not a function of that we have missed out some INR200 crores or something .
Shaan Patel : Okay. Perfect. And apart from that, so Waaree has an unexecuted order book of 3.4 gigawatts approx. What is the minimum capacity it can execute in a year like 2 gigawatts, 3 gigawatts? Or is there any specific capacity constraint? A nd additionally, for the next year, how much of their order book can realistically be completed?
DilipPanjwani: So it depends always on your manpower. In the current circumstances, we should be able to deliver between 3 to 3.5 gigawatt of business annually.
Shaan Patel : Okay. 3.5 annually, okay.
Dilip Panjwani: Or somewhere of around, we should be able to execute.
Shaan Patel : Okay. Got it. And this year, the last quarter, you gave a guidance of 1.5 to 2 gigawatts, like INR1,500 crores to INR2,000 crores that is in like the half 2. So I think this quarter, it is very difficult to complete that, right?
Dilip Panjwani: It appears so based on that numbers. But traditionally, we don't give guidance. What we are giving is what is the volume of work we are internally putting a goalpost of completion.
Moderator: Thank you. Ladies and gentlemen, due to time constraints, that was the last question for today. On behalf of Orient Capital, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Call: Apr 2025

Sub.: Transcript of Investors/Analyst Earnings Conference Call held on April 17, 2025.

Dear Sir/Madam

Further to our communication dated April 10, 2025, and April 17, 2025, please find enclosed the transcript of the Earning Conference Call held on Thursday, April 17, 2025, at 03:00 p.m. to discuss the Audited Financial Results for the quarter and financial year ended March 31, 2025.

This intimation shall also be available on the website of the Company at www.waareertl.com.

We request you to take the same on your record.

Thanking you,

Yours faithfully,

For Waaree Renewable Technologies Limited

"Waaree Renewable Technologies Limited
Q4 & FY25 Earnings Conference Call "
April 17 , 202 5

MANAGEMENT : MR. HITESH MEHTA – EXECUTIVE DIRECTOR –
WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. MANMOHAN SHARMA – CHIEF FINANCIAL
OFFICER – WAAREE RENEWABLE TECHNOLOGIES
LIMITED
MR. ABHISHEK PAREEK – GROUP HEAD FINANCE –
WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. ROHIT WADE – GENERAL MANAGER – INVESTOR
RELATIONS – WAAREE RENEWABLE TECHNOLOGIES

LIMITED

MODERATOR : MS. NIDHI VIJAYWARGIA – MUFG INTIME INDIA
PRIVATE LIMITED

Moderator: Ladies and gentlemen, good day and welcome to the Waaree Renewable Technologies Limited Q4 and FY '25 Earnings Conference Call organized by MUFG Intime India Private Limited. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing st ar then zero on your touchtone phone. Please note that th is conference is been recorded.

I now hand the conference over to Ms. Nidhi Vijaywargia from MUFG Intime India Private Limited. Thank you, and over to you, ma'am.

Nidhi Vijaywargia: Thank you, Alaric . Good evening, ladies and gentlemen. I welcome you all to the earnings conference call of Waaree Renewable Technologies Limited to discuss the Q4 and FY '25 business performance. Today on the call, we have from management, Mr. Hitesh Mehta, Executive Director; Mr. Manmohan Sharma, CFO; Mr. Abhishek Pareek, Group Head Finance; and Mr. Rohit Wade, General Manager, Investor Relations.

Before we proceed with this call, I would like to mention that some of the statements made in today's call may be forward -looking in nature and may involve risks and uncertainties. For more details, kindly refer to the investor presentation and other filin gs that can be found on the company's website.

Without further ado, I would like to hand over the call to the management for their opening remarks and then we will open the floor for Q&A. Thank you, and over to you, Manmohan sir.

Manmohan Sharma: Thank you, Nidhi. Good afternoon to all of you. I would like to

extend a warm welcome to all
of you for joining the earnings conference call of Waaree Renewable Technologies Limited, where we'll be discussing our business performance for Q4 and FY2025. I h ope you all have got the opportunity to go through our financial results and investor presentation, which has been uploaded on the stock exchange as well as on the company's website.

I also want to express my sincere gratitude to all those who have dedicated their time to join this call and have consistently been part of our journey. I have along with me, Mr. Hitesh Mehta, Executive Director; Mr. Abhishek Pareek, Group Head, Finance; Mr. Rohit Wade, General Manager, Investor Relations and other key members of our management team. We are pleased to announce a revenu e of INR1,597.75 crores for FY 2025 compared to INR876.5 crores in FY2024, reflecting impressive growth of 82.29%, significa ntly surpassing the growth rate of India's solar sector during the same period.

This achievement underscores our strong position within the industry and highlights the progress we have made in the renewable energy space. This growth aligns with the broader energy landscape in India where the total installed power generation capacity r eached 483.26 GW this year. The renewable energy sector, in particular, has made remarkable strides with India's total renewable capacity rising to 220.10 GW in FY2025, up from 198.75 GW in the previous fiscal. Solar energy alone now contributes 105.65 GW. This growth reinforces India's leadership in clean energy and its dedication to a sustainable future. Solar energy, as always, remains the backbone of India's clean energy strategy, accounting for a major portion of the new capacity

additions. India solar power sector particularly has witnessed a major boost with an addition of

23.83 GW in FY 2025, a significant increase over the 15.03 GW added in the previous year. This growth is due to rapid expansion with contributions from 81.01 GW of ground -mounted installations, 17.02 GW from rooftop solar and other solar segments contributing to 7.61 GW. The diversity in these additions reflects growing adoption of solar energy across utility scale and distributed categories. The Government of India has played an important role in driving this growth by setting up ambitious target to achieve 500 GW of renewable energy capacity by 2030. Segment wise, the government aim to reach 288 GW from solar and balance from other renewable sources. Achieving this ambitious target will require a rapid pace of growth with annual capacity additions expected to reach 40 to 50 GW in the coming years. On the ground, the government's PM -KUSUM scheme has made significant strides with 4.4 lakh solar pump installed in FY 2025. It is a 4.2 -fold increase over the previous year.

The PM Surya Ghar Muft Bijli Yojana which promotes rooftop solar installation has also seen tremendous growth with over 11 lakh households benefiting from it as of 31st March 2025. These schemes not only contribute to India's renewable energy capacity but also ensures that clean energy reaches the grass root level, benefiting millions of people across the country. Now turning to our financial and operational performance for the Q4 and year ended FY2025.

As on date, we are proud to announce that our unexecuted order book stood at 3.2 GWp. Over the course of the year, we successfully executed 1,524 MWp of EPC orders, which around 500 MWp executed in Q4. Our EBITDA for FY2025 stood at INR310.90 crores, representing a year -on-year growth of 50.06% as against INR207.18 crores in the same period of last year. Our PAT for FY2025 reached INR228.92 crores, making a year -on-year increase of 57.64% as against INR145.22 crores in FY2024.

The improvement in profitability is the result of our focus on oper

ational efficiency and cost management as well as our ability to scale our business efficiently. For Q4, we reported revenue of INR476.58 crores, reflecting a growth of 74.37% compared to the same period last year. Our EBITDA for Q4 stood at INR126.33 crores and PAT of INR93.77 crores, both showing significan t increase as compared to Q4 FY 2024.

We are proud of the progress made over the past year with our financial performance, reflecting the continued growth of the renewable energy sector and our ability to manage large projects while maintaining profitability. As we look ahead, we remain confid ent about the long -term growth of India's renewable energy market, driven by supportive policies, advancing technologies and the increasing use of solutions like BESS, hybrid projects and data centres . This progress marks the beginning of a transformative phase for the sector. Thank you once again for your continued support. We now open the floor for any questions you may have.

Moderator: Thank you, sir. We will now begin with the question and answer session. The first question comes from the line of Yashodhan Nerurkar from Ionic Wealth . Please go ahead.

Yashodhan Nerurkar : Hi, thanks for the opportunity. S o I just wanted to understand your working capital cycle. If you could just break down right from the time you get a contract, say, 100 MW, how are the advances

collected a nd how is it getting deployed back into the business? So could you just explain the whole working capital cycle and the cash management around it?

Manmohan Sharma: Thanks, Yashodhan. The working capital cycle like you said mentioned for 100 MW or maybe large scale of p roject will differ from project -to-project and typically, we receive around 5% to 15% as advance and balance -- balance 65% to 70% within 45 to 60 days from the date of supply or dispatch of the material and balance another 25% to 35% we receive once we complete the majority of the work and maybe 5% would be as a retention money, which is likely to be coming back to us maybe within 3 to 5 months after the project is executed.

Yashodhan Nerurkar : So is it fair to say that nearly 50% to 60% of -- if the project is around 100 MW based on what you ha ve said before around you make INR1.1 crores for every MW of project that you have done. So is it fair to say out of 100 MW, if the project duration is, say, 3 months to 4 months, you would probably receive 50% to 70% of the project revenues, say, in 2 months, within 2 months?

Manmohan Sharma: Yes. Revenue is a little bit different than the collection of cash because we are getting payments based on our milestone and billing. So it is two different things little bit.

Yashodhan Nerurkar : No. So what I wanted to understand is once you get a contract, say, 100 MW, obviously, you said that you get cash in advance that is 10%, 15%. Post that, once you dispatch the material at the site, then you get some more payments for the particular project. Is my understanding correct?

Manmohan Sharma: Yes. So you say within 60 to 90 days, we realize our full payment based on the size of the project, what we are executing. Maybe the larger size of project, the duration may be more in terms of our execution process. And within 3 to 4 months, we are getting the entire including retention

money from the customers.
Abhishek Pareek : So Yashodhan, to further complement this and for your understanding, you can assume around 10% to 15% payment on the date of signing of contract, number one. Number two, 65% to 70% payments against the supplies that we do. Generally, we receive letter of c redit from our customers through banks, which means all our supplies are always secured because principally, Waaree Group does not give credit in general at all.
So that keeps our cash flows very healthy

. We dispatch the good by that time, we would have received, let's say, 10% advance, 65% to 70% against dispatch; almost 75% payment is received by the time we dispatch the product from the site. And the last so 25% payment is a milestone - based payments.
Yashodhan Nerurkar : Okay, got it. So the reason why I ask is from '22 to '25 as in FY '22 to '25, your sales have gone up by almost 10x, but the cash from operations that has gone up by, say, around 5x. So the mismatch, I just wanted to understand where is the balance cash going around ?
Abhishek Pareek: So if you look at the kind of contract that we have taken over past. So we have started from our C&I sector small projects today, we are talking about the GW single location contract, 2 GW worth of contract. The longevity of this contract which is from somewhere between 9 months to

12 months of time. Hence, the capital deployment during this period, which typically is the retention money 10%, 15% which comes at the rear end of the project comes off lately.
So hence, the cash flow from operation profile little changes with the change of profile of our customers and effectively, you can assume that we will receive 75% to 80% payment by the time we dispatched the goods and rest 20%, 25% payment is received by the time we complete the project.
Yashodhan Nerurkar : Okay. So just one suggestion from my side. So going forward, can you just put out any new agreements or contracts that you're winning? Can you just put out a small press release as to what are the contracts or what is the agreement like what is the tenure of the project or some details about the project? I mean that would be very helpful ?
Manmohan Sharma: We'll look into it because these are the details which is related to the company specific. So whatever possible, we will be able to share .
Yashodhan Nerurkar : So just a brief question as to.
Abhishek Pareek : Yes. As a matter of fact of our disclosure policy is that for every contract, we do relevant disclosures as require d under the LODR regulation and we believe we can continue to do so.
Yashodhan Nerurkar : Okay. And just one last question on your dividend policy. So do you have plans to increase the dividend payouts going forward?
Abhishek Pareek: As and when the Board approves it, I think we should get back to you which is our Board approvals.
Yashodhan Nerurkar: Okay. Thank you. That’s it from my side.
Moderator: Thank you. T he next question comes from the line of Raman KV from Sequent Investments. Please go ahead.
Raman KV: Sir, I have two questions. One is with respect to the order book, the INR50 crores order book. Can you give a timeline lik e what is the execution period a nd with respect to this order book itself, is this order book - does this order book have anything like a par t of solar plus energy storage a nd if so, what percentage?
Manmohan Sharma: So the order book as of now we have is 2.2 GW and which is likely to be executed in the next 12 to 15 months.
Raman KV: 3.2 GW?
Manmohan Sharma: 3.2 GW
Raman KV: Sir, but in the presentation, you have written that the order book is 26.5 GW.

Abhishek Pareek: So to clarify that, the 26.5 GW of our total order book is the order book at the Group level. So the slide that you're referring refers to the group order book. At the EPC company level, the order book is 3.2 GW to be very precise. I hope that clarifies.
Raman KV: And what will be the -- in terms of rupee?
Abhishek Pareek: So we take a thumb rule of somewhere between INR1.1 crores to INR1.2 crores in the contract where there is no solar modules. In the contract where there is a solar module, the price increases by anothe

r INR1.5 crores to INR1.6 crores. But as a thumb rule, yo u will take INR1.2 crores for conversion purposes for illustration purpose.
Raman KV: And this will be executed over?
Manmohan Sharma: 9 to 12 months, yes.
Raman KV: Sir, this is only the EPC, right, or does this has any BESS orders or …?
Manmohan Sharma: We have one order of 40 MW hours of BESS project.
Raman KV: Okay. Sir , and I just wanted to know your FY '26 guidance.
Manmohan Sharma: Okay. So we normally don't give any future guidance as a policy matter.
Moderator: The next question comes from the line of Rakesh Banerjee from RA K Capital.
Rakesh Banerjee : My question is like nowadays, we see that many of the small players are trying to get into this solar EPC space. And I wanted to have some colour from you regarding the competitiveness in the industry. And the narratives in the economy is that there are certain margin pressure and off late the flow is not also commensurate in terms of the kind of execution we have shown in the past.
So I want some colour from you on the growing competitiveness in the industry and the normal margin that is possible from this business and secondly, I mean, another part that is very important is that we are already having -- let's say, you are saying that we are having around 3.2 GW of capacity -- I mean, order book, and we are going to execute that in the next 9 to 12 months. What about the new orders, like new orders flow has been really, really new. So I wanted some colour on that as well.
Manmohan Sharma: As you are aware that like in the last quarter also, we have received order of around 500 MW during the last quarter as well. And with respect to margin and competition, which you have mentioned that competition is healthy for the industry. And we are also -- the margin is also maintained going forward also.
Rakesh Banerjee: Okay. So we can assume that the 18%, 19% margin that we have clocked this time?
Manmohan Sharma: No. The margin, we are not giving any kind of guidance as far as the margins are concerned, but it should be in the range of 14% to 15% going forward.

Rakesh Banerjee: Alright , thank you and within this order book of 3.2 GW like do we have any IPP project or everything is CPP?
Manmohan Sharma: No, no. We don't have that.
Rakesh Banerjee: We don't have any IPP projects in this, right?
Abhishek Pareek: This order book of 3.2 GW only represent the EPC order. Hope that clarifies.
Rakesh Banerjee: Understand , and lastly, to execute this 3.2 GW of order book, what would be the kind of working capital requirement and how prepared we are, whether we have to raise any capital, whether we have to borrow, what is the plan of the company to fund that working capital?
Manmohan Sharma: As far as working capital are concerned , we are not have any immediate plan to any kind of fundraising fund -based capital. But we are always depend on the non -fund-based working capital limits. So that will be going forward also will remain that only.
Rakesh Banerjee: Okay. And as you have alluded that to achieve the 500 GW in the next 5 years, we need to perhaps execute 50 GW, 60 GW. But there has been hiccups in the tender -based ordering system.
So like how the current situation is looking from your end? How do you see that demand panning up? I mean whether it is really doable by the government that they can execute -- I mean, as a whole, we can execute around 50 GW per year. And if it really happens, what sort of market share perhaps Waaree can take within that 50 GW capacity?
Abhishek Pareek: So first of all, very -- thanks for asking this very relevant question, Rakeshji. To give some colour on the 500 GW worth of target that India looks at from renewable space, roughly 280 GW should come from solar. As we speak, we have al

ready done around 110 GW out of that.
So we have a clear runway of around 170 GW to 180 GW worth of solar over the next 5 -odd years.
So mathematically, we have runway of 40 GW to 50 GW installations minimum level each passing year. As we say that we have an order pipeline or bidding pipeline of 30 GW, it means we are tracking almost every large order in this country. And we believe that we should continue to do so because we foresee the large -scale EPC play requires two critical items. Number one is talent, right, which is the kind of people that we h ave over the last more than a decade in this business. We have created a large talent group pipeline.
Number two, the credentials to be able to bid for a large projects. So the ability to be a part of any large projects that India as a country has, Waaree Renewable is well placed to be part of all those projects and we are happy to share with you that we are very closely tracking the entire 30 GW worth of pipeline. As far as market share is concerned, difficult to quote you a number, but we can definitely give you confidence that we are fully behind the pipeline, the entire team, including the BD team as w ell as the execution team.

Rakesh Banerjee: Okay. And sir, one more thing, like in the last financial year in FY '24 -'25, what is the total order that has been tendered? And what is the total order inflow to Waaree Renewable Technologies?
If we get these two numbers, perhaps we can get some sort of market share that what percentage WAAREE/RTL

of the orders we have won, right? So if you can give some colour on that in the last financial year, what was those figures?
Abhishek Pareek: So to give you that number and broad understanding, we started the year with an unexecuted order book of around 2.3 GW, all right. End of the year today, we stand at 3.2 GW worth of order book. So there is an incremental 1 GW worth of order book that we have achieved, number one. Number two, we've also executed 1.5 GW worth of contract throughout this year. So that means we have been able to get around 2.5 GW plus worth of orders throughout this year.
If you look at the government data, we have seen a tendering of orders between 30 to 35 -odd GW for the ground -mount projects this year. So from that perspective, I think you can estimate the kind of market share that we had. But what's more relevant for us is that we keep on building our capabilities to share or to track a larger set of orders in this country, right .
We were tracking solar power projects . Now we are also tracking very actively the FDRE contract. We are tracking very actively the RTC project that enhances the customer base for us.
And hence, the ability to have a larger share cannot be denied.
Rakesh Banerjee: All right. And the last question, if I squeeze. Like you have mentioned that as a Group, as a Waaree Group, we have around 26 GW of order book. And now my question is being one of the company in the same group, how come our share is only 3.2 GW? Like do we have any advantage that as a group, we are enjoying around 26 GW total order book in other companies.
But are we not be able to win those orders, which are being given to the other companies for production of other units ?
Abhishek Pareek: I think I'll clarify here. That 26.5 GW of order book that you see in our presentation is the total order book at the Group level, which includes order book of panels and order book of EPC. Out of that, the EPC order book is 3.2 GW, which is the relevant order book in market for Waaree Renewable Technologies , being an EPC company.
Rakesh Banerjee: No, what I'm asking is for any group companies, if there is a subsidiary company …
Moderator: I'm sorry to interrupt here, Rakesh. If you have any further questions, please rejoin the queue so that the management can addr

ess as many participants as possible. Participants, please restrict yourself to two questions , if you have any more questions please rejoin the queue. Thank You.
The next question comes from the line of Kartik Sharma from Anand Rathi Institutional Equities.
Sweta Jain: This is Sweta Jain from Anand Rathi. My question is in line with what the previous gentleman was asking in terms of the 3.2 GW of order book. It's more to have a brief idea on the breakup of this EPC segment. How much of this order book would be towards orders where we would be procuring the land and dealing with the government agencies for clearances and all? And how much would be just pure, pure EPC where we are not dealing with the land part of it?
Abhishek Pareek : So to answer this, Sweta, we would put it this way. So as we track all type of tenders, be it the PSU tenders or be it the private tender, it depends on the tender requirements, whether it is with land or connectivity. Generally, in the PSU tenders, we hav e seen the requirement of land or connectivity comes along with it. WAAREE/RTL

So in our case also, broadly, if you have to understand, you can assume around 15%, 20% worth of order comes with the requirement of land and connectivity. Rest, almost each and every customer has the infrastructure ready in place while we give an EPC orde r.
Sweta Jain: Understood. Sir, a follow -up question on this. Would the financial metrics in terms of operating margins and maybe ROCE differ in both the sets of orders?
Abhishek Pareek : So if you look at our 2, 3 years of numbers, I think you are seeing that because you are a capital - light company, we are an EPC company, we generally work with the discharging of our own capital. So for us, the key operating metrics remains our operating m argins, OPM or EBITDA margins, which in our case, we've always guided that 15% is a very healthy number for any EPC company to operate at.
Fortunately, our teams have been over -performing, and we've been able to generate even more than that every passing quarter. But from a perfect team of a standard number, you can assume for a 15% number as a very comfortable number and a very critical oper ating parameter for an EPC company at this size and scale.

Sweta Jain: Correct. So let's assume if we secure more of PSU orders where the land and the connectivity becomes critical and that forms a larger chunk of the order book, would you say that this 15% margins could actually inch up to 18%, 20%?
Abhishek Pareek : I really can't directly comment on that, Sweta, but generally, whenever the scope of work increases, definitely, there is a larger scope of margins out there because we are supplying some additional component.
Moderator: The next question comes from the line of Ishita Lodha from SVAN Investments.
Ishita Lodha: My question is with respect to the progress on the 2 GW order that we had received from Jindal Renewables. How much of that was executed in FY '25?
Manmohan Sharma: Yes. This order is -- we have started executing this order and partially it has been executed during FY '25.
Ishita Lodha: So it will be completed in FY '26?
Manmohan Sharma: No – yes, it will be completed in FY '26.
Moderator: The next question comes from the line of Nirav Vasa from ASK Investment Managers.
Nirav Vasa: Sir, I wanted to understand, how well is the transmission network scaling up in India to integrate this much amount of renewable power? Or in other words, I wanted to understand, based on the existing transmission capacity and the way the additions are hap pening, how much MW of renewable power capacity can be integrated in the system on a per annum basis?
Abhi shek Pareek: So thanks for asking this relevant question, Niravji. So transmission has been always a key infrastructure that you need when we look a

t the mode of renewable energy and renewable

power. And we have seen a lot of investments both from government and private side to build the transmission infrastructure to scale up renewables.
If you see the numbers, like last year, we -- as a country, we have done somewhere around 28…GW of the Ground -Mount projects. And the government's target is to annually do at least somewhere between 40 GW to 45 GW to reach our 500 GW worth of renewables target.
So we are seeing equal investments which is required to ensure that the pipeline and the expectations of government comes on line. However, we have also seen the support from new technologies, especially the battery energy storage, which has come up a big way.
So how this helps us is -- so wherever a project, which is a standalone solar power project, if you add a battery energy storage to that, you reduce a lot of infrastructure requirement of transmission or in other words, you can use the ideal capacity of e xisting transmission lines. So that way, with the combined support of battery energy backed projects, RTC projects and FDRE projects, we believe that we should be able to achieve what government is targeting towards solar, particularly 280 GW worth of inst allation by 2030. So we don't really foresee a challenge in achieving that as a country.
Nirav Vasa: So what you are trying to say is there are no major bottlenecks with regards to availability of transmission capacity?
Abhishek Pareek: So what I'm trying to say is transmission has always been a key infrastructure and it had some bottlenecks in the past. But we have seen an equal support in terms of investments by the government and by the private player. Even if you look at the order book of existing companies who are working on transmission and distribution infra structure, you will see a kind of numbers that justifies the installations and the expectation of installations going higher from here.
But I'm also trying to say is with battery energy storage system, the ability to install more solar power, becomes much easier. In a way, battery energy system can also be some sort of replacement of a transmission infrastructure in other way.
Nirav Vasa: Got it. My second and the final question would be pertaining to our offerings. Sir, as I understand, to make the maximum ROE -- maximum return on investment in any integrated or I would say, renewable park, it needs integrated, both wind and solar. So -- and our presence is currently more only in the solar part. Do we intend to get into the integrated part of the renewable power?
Abhishek Pareek : So as a group, we have always been very conscious and been looking at the energy transition our entire portfolio. And as EPC company, we have never shied away from enhancing our portfolio from solar -- only solar project to now FDRE and RTC projects, which includes the project with requirement of battery energy storage.
So we are building our capabilities. We are building our infrastructure to ensure that we should be able to continue our share in the market, be it a project with an FDRE or be it a project with RTC requirement wherein wind is an essential part of the proj ect.

Moderator: The next question comes from the line of Maitri Shah from Sapphire Capital.
Maitri Shah: Firstly, congratulations on the great results. I just have two questions. So in the Press Release, you mentioned expanding into data centres . Could you please elaborate on that?
Abhishek Pareek : So data centers, we have, in fact, done some announcement some time back that we are starting and trying to look into building our capabilities towards the data centre projects. Right now, we are bidding for

those projects and we are building our EPC capabilities, because it goes well with our size of a company when we are able to do a GW worth of project.
And while a lot of new technologies like Artificial Intelligence need, we are hungry of power and energy. So if you compare a typical Google data centre versus an AI data centre , the power requirement is at least 10x higher in AI -driven infrastructure. Hence, this becomes of eminent importan ce for us as a group that we keep on hunting on opportunities in data centre , and we are definitely building our capabilities and hunting for the pipeline of data centres as well.
Maitri Shah: And so we currently don't have any orders for it, but are we expecting any orders to come in from FY '26?
Abhishek Pareek : Yes. We are focusing on building capabilities, which we are doing, and we are also tracking all the projects which are coming up for data centres .
Maitri Shah: And what is the realization for the fourth quarter? So we executed around 500 MW, I think, so for the EPC. So around what kind of realization did we get per MW?
Manmohan Sharma: It is in the range of about INR1 crores per MW.
Maitri Shah: INR1 crores per MW. And it will remain around that range for the upcoming FY26 as well?
Manmohan Sharma : So it depends upon project to project and which type of projects which we are undertaking with the turnkey projects or pure EPC project. So it will differ from project to project. But broader range, as we are mentioning that it should be in the range of 80 lakhs MW to 1.2 Crore per MW
Moderator: The next question comes from the line of Jain am Vora from Saltoro Investment Advisors. Please go ahead.
Jainam Vora : Congratulations on a great set of results. My question was along the lines of -- as we want to maintain 15% EBITDA margins, which is understandable, but our aspiration would be for more. So I wanted to get an idea as to right now, large -scale projects like Jindal INR 60 lakh per MW basically translates into that. So typically, are large -scale projects essentially low margin? And what are we doing because like solar rooftop, if I look at that, that's also another segment where we have done only about 58 MW. So what is the kind of strategy behind the kind of mix and the kind of project that we are chasing? And how do we ensure that -- while our goal is for 15%, how do we continue to over -deliver on that? If you could give some perspective on that, that would be great.

Manmohan Sharma: See, whatever type of project, which we are undertaking other turnkey project, pure EPC project, we -- and the project which you have mentioned also, we try to maintain the margin in the same range. It could be in the range of what we are projecting and mentioned to you. So whether it is a pure EPC project or maybe some turnkey projects where supply is also includes . So we try to maintain same kind of margin, all the projects.
Jainam Vora : So you're saying across the projects regardless of the scale, whether it is sub 500 MW or whether it is over a GW, you will continue to have similar margins. Is that?
Manmohan Sharma: It is difficult to tell you project by project, what kind of project, 2 GW project margin, 10 GW is 1 GW margin project. So -- but more or less, we have given you the number.
: Abhishek Pareek Yes, Jain am, but to make it a little simpler for you, you can understand it this way. Any large -scale project, we have been able to maintain margin in the range of 14%, 15% and even more than that. That is in case of a small rooftop C&I kind of project, you can esti mate around 200 bps to 300 bps better margins because of sheer smaller size and the cash spending that we're able to do in those projects. So we are focusing on a healthy mix of both utility as well as C&I projects.
Jaina

m Vora : Got it. So within that rooftop solar is one big thing in opening remarks also, I think CFO had mentioned about that. So I wanted to understand what is our vision and strategy behind that? And what are we planning to do, if you could elaborate on this? That group a lso has 400 franchisees retail network. So I think that could also probably add more fire to our sales. Just if you could provide some perspective ?
Abhishek Pareek So particularly about Waaree Renewable Technologies, we do broadly two type of project business segment. One is utility scale of projects, large -scale projects. The typical cycle is

beyond 100 MW. Another is the small -scale projects, which even include a rooftop project of maybe 2 MW to 5 MW or maybe ground -mount project between 10 MW to 100 MW as another segment.

We are building our capabilities on utility scale, we have proven on ground that we as a company can get 2 GW worth of single location project as well, which probably no one might have done until this date in India . On the small project side, on the rooftop side, we have a special business unit within Waaree Renewable Technologies, which is building capabilities to do more of C&I projects. And we believe that we should be able to replicate what we have been doing in utility scale in rooftop segment as well .

While you touched upon on the retailers on the retail model that we have , wherein we have 400 -plus franchisee stores. So basically, these are the extended arm of our holding company, which do distribution of the project, which do distribution of products as well as do small -scale projects between 1 kilowatt to somewhere around 1 MW and 2 MW, which typically Waaree Renewable Technologies does not focus upon.

So that way, the franchisee projects are like typical residential or small -scale SME, MSME projects, while WRTL looks at order between 2 MW, 5 MW up to 2 GW. Hope that gives a clarification.

Jainam Vora : Got it. Got it. And one last question. How are we planning to leverage our ...

Moderator: Sorry to interrupt. Those were your two questions. I would request you to rejoin the queue. The next question comes from the line of Naman Maheshwari from Brescon. Please go ahead.

Naman Maheshwari: So the first one is on the BESS opportunity. What I understand is that where a typical solar, the cost per MW is roughly INR5 crores. When we do a BESS the cost per MW comes to roughly INR10 crores, solar plus BESS project. So is that correct? And if yes, how much is the proportion of EPC increase that would be there for us also in that case?

Abhishek Pareek : So Naman, as you see, like we always say that this market is an evolving market. And every year, we see a new record pricing be it energy storage or be it EPC. So the current normalized number for any typical standalone solar power project at large scale r anges somewhere from INR3 crores to INR3.5 crores all inclusive without a BESS storage.

So that INR3 crores includes the cost of balance as well. And now we come to BESS storage. So until last year, the price of 1 MW worth of solar pack was -- storage pack was coming around $200 per MW hour.

This year, we have already seen price coming down to as low as $60 to $70 per MW hour, which is a different level of price action. We never thought this can actually come up. So that way, the current normalized price with BESS ranges somewhere from INR6 crores to INR8 crores, but it all depends on end consumers' requirement of peak po wer number of hours.

If customer require, let's say, 2 hour of peak power, the requirement of BESS shall be considered accordingly. And if the requirement is, let's say, round -the-clock power, the requirement of BESS energy storage will be far different and hence the price of project as well. So it depends on the c

ustomer want us to do and the kind of power supply that they want from us.

Naman Maheshwari: Okay. Okay. So the one that we had, the 40 -MW BESS project, that's the round -the-clock power or that's a proportion?

Abhishek Pareek So that's a standalone BESS EPC project where we have to retrofit in an ongoing power project, which is generating power already. You have to just go and attach storage system and integrate storage systems to that and do a loan for that .

Naman Maheshwari: Okay. And there also, the EPC would be about INR1 crore, INR1.5 crores only per MW ballpark, plus/minus, correct?

Abhishek Pareek : So it all depends on price of storage because the price of storage is very volatile. But broadly, you can estimate this given the current prices.

Naman Maheshwari: Okay. And just last one is. There is another competitor in your field, which is at the receiving end of a lot of regulatory mishap. So does this order go into retendering and open up a bigger pie of bid pipeline for us or will we exclude in bidding for tho se orders?

Abhishek Pareek : So we refrain from commenting on anything that's happening in market. But all we focus is on the existing pipeline that is visible to us.

Moderator: The next question comes from the line of Karan Sanwal from Niveshaay. Please go ahead.

Karan Sanwal: I wanted to understand like what was the contribution of this utility projects in the full year

FY'24 versus FY'25 revenue and also in our order book, if you could give at least a brief bifurcation?

Manmohan Sharma : We don't give this kind of bifurcation detail as far as the customer base are concerned, maybe utility scale or IPP project. It is dependent upon the customer how they choose and what they do with the electricity this plant for the solar plant they are bui lding. It may be for the captive metric for IPP or maybe. So we don't maintain this kind of numbers.

Karan Sanwal: No, I'm asking about what would be our proportion of C&I versus utility, a broad number? Is it 15%, 20% or is it more for us?

Abhishek Pareek : So to give you some rough estimate, generally, the large -scale projects take obviously the bigger pie of the entire revenue. So maybe in terms of number of projects, the number of C&I projects is much larger than the number of utility projects. While when it comes to revenue and the outcome of that, the revenue of utility project is much higher than the retail projects.

Karan Sanwal: Okay. And also, one last question. We have been hearing a lot of articles about unsigned PPAs and grid stability and previous participants also touched upon it. So do we foresee any challenges due to the unsigned PPAs in our utility projects or is it not m uch of a challenge currently?

Abhishek Pareek : So in our case, typically, the EPC project, which we track is generally awarded at a stage when the financing of the project is either secured and along with the PPA as well as the land and connectivity. Post that, the EPC play comes in wherein we chip in as the market player. So for us, it does not directly impact us because in our case, we always hold a decent order book, which gives a visibility of next 12 to 15 months; visibility wherein our customers have secured their reasonable fina ncing as well as the land and connectivity, as well as PPA in most of the cases. So as an EPC player, we generally does not have this as a concern until we take connectivity in our scope.

Karan Sanwal: Which would be a very less proportion of the overall business, right?

Abhishek Pareek : Yes.

Karan Sanwal: Great, thank you so much.

Moderator: Thank you. The next question comes from the line of Samarth Khandelwal from ICICI Securities. Please go ahead.

Samarth Khandelwal: Congratulations on a steady execution. I just wanted to clarify one part. Sir,

you mentioned that the cost of setting up a battery energy storage project per MW would be around earlier, which was about INR10 crores, now it would be around INR6 crores to INR7 crores. Could you clarify because the number that I got from someone else was significantly lower than that?

Abhishek Pareek : No. So I think we'll clarify it. So what we said was the cost of energy storage system around a year back was ranging from $200 to $220 per MW hour. Now the price has come down to almost

as low as $60 to $70 per MW hour. As far as EPC is concerned, because majority of cost attributes to the system itself, the energy storage system itself and the component of EPC is following that.

The INR6 crores to INR10 crores is including the solar power plant. So when we look at, let's say, INR6 crores to INR7 crores with bess, with solar, it may have somewhere between 2 to 3 hours worth of power uplift requirement or peak power guarantees with the battery energy system.

Samarth Khandelwal: Okay sir, understood. Thank you for clarifying.

Moderator: The next question comes from the line of Anushka Vora from Vimana Capital. Anushka, you are breaking up. We cannot hear you.

Anushka Vora: Okay. So there is around INR101 crores of capex that has been accounted for. So would this be related to the IPP assets or what has this been used for?

Manmohan Sharma: Yes. This is for the IPP assets, which the WRT L is creating that IP assets.

Anushka Vora: Sorry, this is for the IPP assets, right?

Manmohan Sharma: Yes.

Anushka Vora: Okay. And from the 30 GW of pipeline that we have, what is the hit rate that you would be expecting?

Abhishek Pareek : So difficult to give you a number, Anushka. But to give you a sense, like last year, as I said, we were standing at order book of around 2.3 GW, where in the pipeline that we were chasing was somewhere between 15 GW to 18 GW. Now we are chasing a pipeline of around 30 GW and standing at around 3.2 GW worth of confirmed order book.

Anushka Vora: Okay, got it. Thank you so much and all the best

Moderator: Ladies and gentlemen, due to time constraints, that would be the last question for today. Thank you for joining us. On behalf of Waaree Renewable Technologies Limited, that concludes this conference. You may now disconnect your lines.

Sub.: Transcript of Investors/Analyst Earnings Conference Call held on July 18, 2025.

Dear Sir/Madam

Further to our communication dated July 15, 2025, and July 18, 2025, please find enclosed the transcript of the Earning Conference Call held on Friday, July 18, 2025, at 02:30 p.m. to discuss the Un-audited Financial Results for the quarter ended June 30, 2025.

This intimation shall also be available on the website of the Company at www.waareertl.com.

We request you to take the same on your record.

Thanking you,

Yours faithfully,

For Waaree Renewable Technologies Limited

Heema Shah
Company Secretary

"Waaree Renewable Technologies Limited
Q1 & FY'26 Earnings Conference Call"
July 18, 2025

MANAGEMENT : MR. HITESH MEHTA – EXECUTIVE DIRECTOR – WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. MANMOHAN SHARMA – CHIEF FINANCIAL OFFICER – WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. ABHISHEK PAREEK – GROUP HEAD FINANCE – WAAREE RENEWABLE TECHNOLOGIES LIMITED

MR. NEERAJ VINAYAK – VICE PRESIDENT – INVESTOR RELATIONS – WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. ROHIT WADE – GENERAL MANAGER – INVESTOR RELATIONS – WAAREE RENEWABLE TECHNOLOGIES LIMITED

MODERATOR : MS. NIDHI VIJAYWARGIA – MUFG INTIME INDIA PRIVATE LIMITED

Moderator: Ladies and gentlemen, good day, and welcome to Waaree Renewable Technologies Limited Q1 and FY'26 Earnings Conference Call organized by MUFG Intime India Private Limited. As a reminder, all participant lines will be in the listen -only mode and there will b e an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is been recorded.

I now hand the conference over to Ms. Nidhi Vijaywargia from MUFG Intime India Private Limited. Thank you, and over to you.

Nidhi Vijaywargia: Thank you, Bhavya. Good afternoon, ladies and gentlemen. I welcome you all to the Earnings Conference Call of Waaree Renewable Technologies Limited to discuss the Q1 FY'26 business performance. Today on the call, we have from management Mr. Hitesh Mehta, E xecutive Director; Mr. Manmohan Sharma, CFO; Mr. Abhishek Pareek, Group Head Finance; Mr. Neeraj Vinayak, Vice President, Investor Relations; and Mr. Rohit Wade, General Manager, Investor Relations.

Before we proceed with this call, I would like to mention that some of the statements made in today's call may be forward -looking in nature and may involve risks and uncertainties. For more details, kindly refer to the investor presentation and other fili ngs that can be found on the company's website.

Without further ado, I would like to hand over the call to management for their opening remarks, and then we open the floor for Q&A. Thank you, and over to you, Manmohan si

r.

Manmohan Sharma: Thank you, Nidhi. Good afternoon to all of you. I would like to extend a warm welcome to all of you for joining the earnings conference call of Waaree Renewable Technologies Limited, where we'll be discussing our business performance for Q1 FY 2026. I hope you all have got the opportunity to go through our financial results and investor presentation, which has been uploaded on the stock exchange as well as on the company's website.

I also want to express my sincere gratitude to all those who have dedicated their time to join this call and have consistently been part of our journey. I have along with me Mr. Hitesh Mehta, Executive Director; Mr. Abhishek Pareek, Group Head Finance; Mr . Neeraj Vinayak, Vice President, Investor Relations; Mr. Rohit Wade, General Manager, Investor Relations, and other key members of our management team.

Let me begin by thanking all our stakeholders for their continued trust and support. Your confidence in our vision and execution has been instrumental in our journey so far. We are pleased to report a strong start for FY 2026. In Q1 itself, we have record ed a revenue of INR603.19 crores, marking a growth of 155.20% over the same quarter last year. Our EBITDA stood at INR117.54 crores, reflecting a year -on-year growth of 186.14%, while PAT comes in at INR86.39 crores, up 206.77% from Q1 FY 2025. These resu lts reflect the strength of our business model, operational discipline and execution capabilities.

Our unexecuted order books remain robust at 3.15 GWp , which provides strong visibility of execution in the coming quarters. During Q1, we successfully executed 699 MWp of EPC

projects. This further strengthens our position in India's renewable energy journey.
This performance comes at a time when the renewable energy sector in India is undergoing a remarkable transformation. As of 30th June 2025, India's total installed renewable energy capacity has reached 234 GW, with solar energy contributing 116.25 GW. This includes 89.29 GW from ground -mounted projects, 18.84 GW from rooftop solar, 3.06 GW from hybrid projects , and 5.05 GW from off -grid solar.
India's clean energy transition has now reached a major milestone. The country has achieved 50% of its total installed power capacity from non -fossil fuel sources, 5 years ahead of its 2030 target. As of June 2025, India's total installed power capacity stands at 484.8 GW, with 242.8 GW sourced from non-fossil fuels. This achievement reinforces India's global leadership in renewable energy and strengthens the foundation for its ambitious goal of 500 GW of renewable energy -based electricity generation by 2030.
In the first half of current year 2025 alone, solar installation rose by 51.6% year -on-year growth. Utility scale solar led the way with 14.3 GW added, while rooftop solar saw a 76% jump, adding 3.2 GW. These numbers reflect the accelerating pace of adoption and the growing diversity of solar applications.
Looking ahead, the government aims to further accelerate this momentum. As per the National Electricity Plan , energy storage requirements are projected to rise sharply, reaching 82.37 GWh by FY 2027, comprising 47.65 GWh from pumped storage projects, and 34.72 GWh from battery energy storage systems. This requirement is expected to rise to 411.4 GWh by 2032, and further to 2,380 GWh by 2047, guided by the increasing share of renewables and India's net -zero emissions target for 2070.
Moreover, government schemes like PM Surya Ghar Muft Bijli Yojana with an outlay of INR75,000 crores and the extended PM Kusum Schemes are further accelerating adoption at the grassroot level. Rooftop solar alone is expected to add around 27 to 29 GWh by 2030, creating significant opportunity for EPC players like us.
In addition, under the

Solar Parks Scheme, 55 solar parks with a cumulative capacity of 39.95 GW have been approved across 13 states. Of these, 18 solar projects totalling to 10.85 GW have been fully developed, and 6 parks with 4.77 GW are partially developed so far. Solar project of 12.2 GW have been commissioned across 24 states, further boosting infrastructure readiness for large -scale solar development where the EPC players like us have good amount of opportunity to scale up our operations.
At Waaree Renewable Technologies, we are well positioned to capitalize on this momentum. Our integrated capability, strong execution track record and customer -centric approach continue to differentiate us in a competitive market. We are also actively expl oring EPC opportunity in hybrid projects, battery energy storage system and green hydrogen, which we believe will be key growth drivers in the coming years. WAAREE/RTL

Q1 FY 2026 has set a strong foundation for the year ahead. We remain confident in our ability to deliver sustainable growth, create long -term value for our stakeholders , and contribute meaningfully to India's clean energy future.
Thank you once again for your continued support. We now open the floor for any questions you may have.
Moderator: Thank you very much. We will now begin the question -and-answer session. The first question is from the line of Prathamesh Dhiwar from Tiger Assets.
Prathamesh Dhiwar: So, I have a few questions regarding the BESS segment. First is sir, what kind of capex are we going to do in BESS segment?
Manmohan Sharma: Okay. So, as you are aware that we are the EPC player and we do execute solar EPC projects, and BESS is one of the components which we are doing the EPC project for them. So as far as the capex was concerned for this particular BESS, we are not going to do any kind of capex for this. Yes , However, we are there in the EPC, which we will do for BESS as well.
Prathamesh Dhiwar: So not even, sir, assembly plant or something like this?
Manmohan Sharma: Whatever work related to EPC of this BESS, we will do.
Abhishek Pareek : To further clarify your question, we have a BESS manufacturing and BESS cell manufacturing plan in place under the holding company. And the manufacturing is expected to happen in a separate SPV.
Prathamesh Dhiwar: Got it. And sir, what sort of revenue can we generate like per MWh in this segment?
Abhishek Pareek : So, it depends -- by the way, it depends on client, the scope of work, the location and the uptime required under BESS projects. However, that is not very relevant to the current con call.
Prathamesh Dhiwar: Okay. Sir, just last question. I want to know more about the industry. So, on an annual basis, how much order outflows are there in this segment?

Manmohan Sharma: So as of now, as far as our EPC company is concerned, we are chasing 25 GW worth of order pipeline, which we will try to convert them to the maximum possible into our confirm order.
Prathamesh Dhiwar: So, these are annual orders, sir?
Manmohan Sharma: No. As of now, our order book is 3.15 GW. What I mentioned is the order pipeline.
Moderator: And the second question is from the line of Narendran from 361 Wealth Management.
Narendran: I was just wondering what Waaree Renewables' broader goals is regarding the battery storage division. Is there going to be any major capex in this play, in this industry? Or has there been any major pipeline of orders that's been coming into India or any i nterest that's been shown?

Abhishek Pareek : Sure. So, thanks, Narendra, for this question. So, if you look at the BESS segment, look at the recent policy guidelines by government as well, last quarter, government has com

e up with the regulations to ensure that every solar project do have an integration with minimum uptime from BESS solutions.
And we see this as a very large opportunity. To be precise here, for EPC company like Waaree RTL, this predominantly enhances our wallet share with the customers. So , when we do an EPC with our clients as what we are doing versus an EPC along with a BESS solution at the site, the revenue and the wallet share enhances from the same set of customers.
Narendran: Understood. So , has there been any BESS projects that's been coming in? Or has there been any interest shown towards Waaree?
Manmohan Sharma: Yes. Currently, we have 40 MWh worth of order in our current order book, sir.
Narendran: Understood. This is BESS?
Manmohan Sharma: Yes.
Narendran: Understood. Has there been any more interest shown? Has there been -- how critical would you say this is to the longterm growth of the BESS segment compared to solar?
Abhishek Pareek : BESS certainly is a segment which is upcoming, and which is yet to see the benefit of BESS in the overall scheme of things. But naturally, BESS is in a natural integration with our set of business. As we go ahead, as the requirement of storage at the location of power generation enhances, this certain ly could become a very large revenue garner for any company that works in this space. So, we really foresee a huge value from the BESS systems happening more in India.
Moderator: The next question is from the line of Deepesh from ICICI Prudential AMC.
Deepesh: So, my first question was firstly around the fall in average revenue that we have seen. So , for FY25, we stood somewhere around INR1.04 crores per MW. And this quarter, we have just fell to INR86 lakhs per MW. So, what could have been the reasons behind that?
Manmohan Sharma: So, our revenue per megawatt cannot be measured the way we are -- we have explained because we have order of variety kind of order. We have turnkey order s, we have only BOS order s. So, it will vary from quarter -to-quarter. As of now, we have 3.15 GW. We always stay and remain in the range of INR1.1 crores to INR1.25 crores per MW.
Deepesh: Also, there has been like almost of a 140% increase in the cost of EPC contract that is substantially higher than the revenue growth. So , anything specific that why the costs were so high this quarter?
Manmohan Sharma: The increase in cost is also in line with the increase in revenue. If you see that our revenue have also increased by 155% on a year -on-year basis. So similarly, the cost will also -- component also will also increase.

Deepesh: No. Actually, I mentioned the 140% growth from the previous quarter, quarter -on-quarter, not year-on-year?
Manmohan Sharma: So definitely, you will see that the revenue has also increased to the extent of 26% from the previous quarter.
Deepesh: All right. How is the bidding pipeline looking for BESS as well as in the data center segment? Since we announced that we'll be foraying into data centers, I don't think we have seen any substantial order wins there?
Manmohan Sharma: As of now, we don't have any substantial order in data center EPC , and BESS, which we have already mentioned to you. But definitely, we are looking all the opportunities which are available for EPC work in data center going forward.
Deepesh: My final question is regards to what kind of operating margins are we looking for the current financial year?

Abhishek Pareek : So just to clarify here, we have been maintaining over the last quarter -on-quarter and over calls also that the range of margin that we expect in this business ranges from 14% to 16% of range, and we have been maintaining this for quite some time. This see ms to be a very comfortable range for our size of business and the kind of engineering a

nd procurement that we do. We see this as a sustainable number for this financial year.

Moderator: The next question is from the line of Isha Murti from MI Capital.

Isha Murti: Like in addition to the previously asked question related to BESS, what is your strategy for scaling in the BESS and PSP segments with rising energy storage demand?

Manmohan Sharma: So, as we grow that whatever opportunity we've mentioned to the previous participant that any opportunity which are coming up for the BESS where the power -- the solar power is supported by BESS, we will be doing the EPC work for all of these BESS projects as well.

Abhishek Pareek : And Isha, to add on to this, if you even look at the bidding pipelines and the bidding in the past, if you compare last 2 to 3 quarters of orders that have come up in the market, more than 50% of these orders have been either through RTC or through FDRE co ntract, wherein BESS component is eminent .

So, we see the trend to be very clear and very loud that the time to come is in a project of solar along with a BESS only. So certainly, BESS is going to be one of the critical element of entire solar renewable business.

Isha Murti: Okay. Like also, secondly, I wanted to ask that you are at what stage in exploring green hydrogen opportunities? And are there any pilot projects or collaborations underway?

Abhishek Pareek : So, we have announced in the past that we have had 1 MW worth of green hydrogen development project as a piloted project. And we are seeking the timelines wherein we should be able to do it. We are yet to close on the execution of it, certainly, but we are still looking out for more such opportunities. WAAREE/RTL

Moderator: The next question is from the line of Samarth Khandelwal from ICICI Securities.

Samarth Khandelwal: Sir, I just wanted to understand in the quarter, we have received around 560 MW of orders. So , how do you see the order pipeline?

Moderator: Sorry for interrupting. Samarth, your voice is not clear. Can you please use your h eadset?

Samarth Khandelwal: Yes. My first question is on the order book. We have received approximately 560 MW of orders in Q1. So , for the rest of the year, how do you see the order book given that we have just 12 to 15 months of order book remaining?

Manmohan Sharma: See, during the -- as of June, we have 3.15 GW worth of order book. I'll give you the order book -- order we have won during this quarter is 566 MW and worth of INR720 crores, which we have won during this quarter. And we expect that similar kind of a execution is also 699 MW. So, whatever execution we have done for the current quarter, approximately to that extent, we have already received new fresh order. And with the government initiative installing 500 GW of energy over the next 5 years, the order inflow should be good.

Samarth Khandelwal: Sir, my second question is on the BESS. How -- what would be the cost per MW of -- or EPC cost per MW hour of our BESS project?

Abhishek Pareek : So interestingly, if you look at the trend of cost of BESS systems in place over the last 1.5 years, we have seen the rationalization of cost between $250 to $300 cost of a BESS system to today around $80 to $120 per MW kind of cost that we see. So , we have seen the cost structures continuously coming down for BESS systems.

And we believe that there is still some scope for this to further rationalize as we scale up in the business. But certainly, this is one of the most critical element of solar power along with the BESS now going ahead. And we are very watchful and we are ev en bidding in the projects which has got best element into it.

Samarth Khandelwal: Okay. Understood. Sir, we are seeing -- witnessing that there are delays in execution of projects. So, do we see any challenges with respect to our projects tha

t we have on hand regarding execution during this year?

Manmohan Sharma: So as of now, we don't see any kind of significant delay. And whatever -- this has been aligned with our existing customers. So , whatever is -- with the knowledge of the customer that whatever the progress of the projects, we are conveying them properly in a structured manner.

Moderator: So, the next question is from the line of Vishal Chaudhary.

Vishal Chaudhary: So first of all, congratulations on the good set of numbers, and it was really remarkable how you guys are progressing. So that is one thing. So , can you tell us that out of the remaining order book, how much you are planning or how much we can anticipate to be completed in FY'26, basically in the next 3 quarters? WAAREE/RTL

Manmohan Sharma: So, Vishal, thanks for your compliment. The existing order which we are seeing, that is to be executed over next 12 to 15 months . It will be difficult for us to break order and arrive at some number. So , whatever we have mentioned that 3.15 GW is to be executed over the next 12 to 15 months.
Abhishek Pareek : To give you some understanding on this question, what you can do, you can refer our investor presentation wherein we have mentioned the quantum of execution done over quarter 1. So last financial year FY'25, we have done execution of 1.5 GW worth of orders over 12 months.
This year, first quarter itself, we have achieved 699 MW, roughly 700 MW worth of execution done in first half, which is slightly close to 50% of last full year revenue. I think that should give you some sort of sense that kind of scale that we are seeing this year.
Vishal Chaudhary: Yes. That I have seen and I have analysed it closely. Thing is that how is the pipeline for the order pipeline, you can say that for which you are bidding, how do you see that? Is it slowing down on part of maybe other organization or government? Or is it maintaining the same pace?
And the last question would be around BESS. As you rightly mentioned that the prices of BESS is falling drastically, so how you are going to mitigate the risk of basically bidding at a higher price and over -- basically later on finding that, okay, then h ow -- like order cancellation or something in that case that prices are going to come down, there is lot of fluctuations, yes.
Manmohan Sharma: The order pipeline as of now is 25 GW, which is comprised of -- from the government as well as private utility scale and IPP projects. And we don't see any kind of slowdown as far as this order pipeline is concerned. If you see that in the last quarter itself, the entire India has already installed 10 GW of solar projects.
So -- and it will continue to do the same. And if you see the overall energy installation, RE energy installation in the country is 50% has already been installed. So , there will not be any chance of any slowdown as far as this sector is concerned.
Vishal Chaudhary: With respect to BESS?
Abhishek Pareek : Yes. And again, on the pipeline, so what my colleague just mentioned on the pipeline, certainly, it is robust and it is flourishing. In fact, we are also looking at additional avenues wherein we are looking at larger market size and pipeline. We're already eyeing global EPC markets.
Last quarter itself, we have announced an order from a firm, yes. And also, we are looking at Middle East market as a potential market for us in terms of EPC opportunities. So , we are trying to also expand our pipeline apart from the domestic pipeline. So that's answer to your question number one.
Your question two on the BESS price and protection of price on our margins. So , in past also, we have mentioned that we generally don't get into the business of commodity price risk, wherein either we do back -to-back hedging with our vendors on

the day of taking an order or
we go with a variable price component with our clients. WAAREE/RTL

So, whether the price of BESS further comes down, it remains stable or maybe by a few bps, even if it goes up either of the way, our margins should remain protected. As far as we are following our internal guidelines of hedging against every order that we tak e, we really don't see any issue from this sort of price fluctuation.
Moderator: So, the next question is from the line of Akshay Sathije from Alpha Invesco.
Akshay Sathije: So, I actually wanted to understand, sir, what is your EPC cost in terms of solar and what it would be for BESS? I understand excluding all the module price, it's just the erection cost that is incurred for executing of solar and BESS as of now.
Abhishek Pareek : So however, it depends on the scope of the project and the sizing of the BESS power plant under the EPC contract. So , the kind of trend that we have seen is if -- let's say, if an EPC with a module, let's just take an assumption if EPC with a module, the price could anyways range between maybe INR3 crores to INR4.5 crores per MW.
If you're also planning to add BESS to it, depending on the number of hours of uptime of BESS storage systems, it may further go up from somewhere around INR1.5 crores to INR2.5 -odd crores per MW depending on the number of uptime of BESS that you want. So , it all depends on the scope of the work, but this is the broad range that you can take a look at.
Akshay Sathije: Okay. I just wanted to also understand the primary cost of the solar installation, it's down only by because of the module cost. Or is there any difference in the execution cost just like in the industry?

Manmohan Sharma: As far as this -- our EPC business is concerned, we are getting orders for the turnkey or maybe pure BOS systems. So , our cost component depends whether it's a turnkey order where modules are also required or otherwise pure BOS system where module is procured by our customers.
So, depend upon the orders, the course will vary.
Akshay Sathije: Okay. So , I just wanted to understand, would the margins be better if the order is with the entire turnkey, so it's right from the module to erection? If you could just segregate the both for us?
Manmohan Sharma: No. It is more or less will remain in the same range because whether it is turnkey contract or whether it's core BOS contract, whatever fits into our risk reward metrics, we confirm the order.
Akshay Sathije: Okay. Got it. So INR3 crores to INR5 crores per MW for solar EPC and additional INR1.5 crores to INR2.5 crores for BESS?
Manmohan Sharma: That depends upon which module, etc, the customer wanted to procure. EPC orders also have various components, maybe EPC where you have land component also, where you have connectivity also required from us. So , depend upon the scope of the work, which is awarded to Waaree Renewable Technologies, the price will vary.
Moderator: So, the next question is from the line of Maitri Shah from Sapphire Capital.
Maitri Shah: Firstly, congratulations on the result. I just wanted one clarity on the margins. So , you said you will stick to about 14% to 16%. Are these PAT margins or the operation margins?

Manmohan Sharma: This is EBITDA margin, which we talked about.
Maitri Shah: Because last year, we had about 17% PAT margins…
Manmohan Sharma: Yes. So as compared to last quarter, we have improved -- last quarter of last financial year I'm saying, 17.38% we have improved to 19.49%.
Maitri Shah: Okay. So , you're talking about the EBITDA margins of 14% to 16%?
Manmohan Sharma: Yes.
Maitri Shah: But now guiding it so low and we can achieve about 17 -odd percen

t of PAT margins in FY ' '26?
Manmohan Sharma: So, this is the -- what we're mentioning is the sustainable margin as far as whatever the order book as of now we have. But definitely, the play will come from the operational efficiency, timely execution of the order, cost initiative, busting tight financial control. All these are the parameter, whereby we see savings going forward.
Maitri Shah: So, any reason why we are guiding a lower margin than what we are already achieving?
Manmohan Sharma: No. Nothing so specific, but we wanted to be realistic.
Maitri Shah: Okay. And any idea on the BESS, the tenders were float right now, what is like the quantity of tenders that are at float right now and how much can we capture the market in that?
Manmohan Sharma: So, it depends upon the size of the project where our customer wanted to install solar project on a quick basis. So purely whatever the requirement of the customer depends upon the requirement and whatever battery specification that is being provided by us. We are -our job is to execute those projects, whether it's a BESS, whether it's a solar. So , these are -- our execution will play in this.
Maitri Shah: Yes. Have we already participated in a few tenders or we're still in the preparation stage?
Manmohan Sharma: We are bidding actually. We are actively bidding because the government is also very active to have more renewable energy in the country. So , they are also slotting various tenders with the RTC. So , we are actively bidding all these tenders.
Maitri Shah: And can you quantify the number of bids that we have for BESS in the quarter?
Manmohan Sharma: Yes. All these are the specific information, which is not readily available in this conference call. But we -- what we can mention is we are actively bidding in all kind of bidding which are coming from the...
Maitri Shah: By when do we get orders from the BESS segment, if I could ask that?
Manmohan Sharma: Definitely, the order flow will be like this. I suppose it takes -- once the tender floats, it take, 2 months to just submit the bid. Once we are L1, etcetera, then the competitive bidding will start

-- reverse bidding will start. So normally, from a tender when the start date to like awarding of tender, it may take 6 to 8 months' time.
Maitri Shah: So, can we expect any orders in like 4Q FY '26 or maybe the first quarter of FY '27?
Manmohan Sharma: It's a very future question, we don't know actually at this stage.
Maitri Shah: And these projects that we are bidding for, are these BOP projects or we are going to be supplying batteries as well?
Manmohan Sharma: So that, again, as I said, it depend what is the customer required, what is the scope which is

offered to us and where we are bidding. It's totally depend actually, very dynamic market this is.

Moderator: So, the next question is from the line of Mamta Agrawal from ABS Investment.

Mamta Agrawal: Sir, my question is, how is Waaree positioning itself to the benefit from schemes like PM Surya Ghar Muft Bijli Yojana and PM Kusum. Like are there any active bids or partnerships?

Manmohan Sharma: Yes. So , from these two schemes, which you have mentioned, actually, so there will be a lot of solar installation under these two schemes where government is also supporting these schemes. Waaree Renewable, as an EPC player, will have more opportunity to have our EPC work if these kinds of schemes are there in the country. But our main business is coming from the utility scale and C&I customers.

Mamta Agrawal: Okay. Sir, a second question. With the multiple new entrants in the market and consolidation in the EPC segment, so what are our unique strengths in execution, technology or service that position us as a preferred EPC partner for like large customers?

Manmohan Sharma: So, if you see that we are in this business from quite many years, and our proven execution capability to execute large size of projects. Presently, the company is executing 2 GW of the project at single location. Moreover, we are executing another project of 1 GW. So, there is the execution capability, timely delivering these projects is the key where the customer will prefer us.

Moderator: The next question is from the line of Akshay Sathije from Alpha Invesco.

Akshay Sathije: Sir, one last question was after we do the EPC, the modules and all our supply, say, some of the modules don't function as they were supposed to. So where does the warranty stand? Is it with the parent? Or is it going to hit us? Also similarly, what could happen in the BESS systems?

Manmohan Sharma: So as far as we are concerned, we are purely EPC player. Whenever that is required that module is to be supplied from -- along with our EPC order, definitely, we need to -- we will procure the model. And we also have back -to-back contact with the supplier, the way the customer is looking at the module supply. So , if it is required to be guaranteed to some extent, definitely, those modules will be procured in the same fashion.

Akshay Sathije: Okay. So , I just wanted to understand if the modules don't function properly, so is it going to be on us or we're going to take it back to the...

Manmohan Sharma: As I mentioned, it will be a back -to-back from where -- who is supplying the module, we'll have that kind of arrangement with them.

Moderator: So, the next question is from the line of Ankita Agrawal, an Individual Investor.

Ankita Agrawal: Sir, congratulations for good set of numbers. So , my question is regarding the recent expansion of schemes like PM Surya Ghar Muft Bijli Yojana and also solar park approvals create new business opportunities. So , I want to know how is Waaree RTL positioned to maximize gains from such policies? And also, are there operational or compliance challenges to note?

Manmohan Sharma: So, as I mentioned earlier that the PM Surya Ghar Muft Bijli Yojana and this pump storage. So , these are the two components which will be there, and we can also extend our EPC base to them. What was your second question?

Ankita Agrawal: Sir, second question was regarding solar park approvals, which will create new business opportunities…

Manmohan Sharma: So as far as this our Waaree Renewable Technologies is there, we are also like exploring to have some kind of ready availability of land and key infrastructures. So , we are also actively looking in various states wherever there is an opportunity to have land and key infrastructure, so that this can be offered as a complete package along with our EPC to our customers.

Ankita Agrawal: Okay. So , any kind of time line or scale of those engagements?

Manmohan Sharma: So, this is an ongoing process actually. This is not -- this doesn't have any kind of fixed time line. This is an ongoing process, which we are doing.

Ankita Agrawal: So, we are not involved in any of the 55 approved solar parks?

Manmohan Sharma: No, no. We are not there. But what we mentioned is that these are the opportunities which -- where the EPC player like us will benefit out of it.

Moderator: So, the next question is from the line of Pawan Kumar from Shade Capital.

Pawan Kumar: My first question, where we are -- right now in our 2 GW EPC project, what are the timeline of completion?

Manmohan Sharma: So, we are progressing this -- it took off in the last quarter itself. So , it will take time for us to complete this project. There is a time line given by the customer to execute this project. So , over this current financial year, we'll have maximum execution as far as this project is concerned.

Pawan Kumar: Okay, sir. And sir, secondly, sir, can you give some sense of like EPC project bidding, any sort of size or are we bidding for the bigger size? Some color on that?

Manmohan Sharma: No. What I understood, we are there in all form of our EPC, whether it is any 50 MW, 100 MW up to the -- we have scaled up to 2 GW. So whatever project is coming, we are taking those projects. WAAREE/RTL
Execution with Pace & Comfort

Pawan Kumar: So, are we bidding for higher sizes? Or is it same for the last -- what is the trend going on for the last...
Manmohan Sharma: No, no. Nothing specific about the size because the size can vary. We are there to execute all kind of projects actually. It's the turnkey, with supply of module, etc, we are there to execute.
Pawan Kumar: Okay. And sir, lastly, sir, where we are in our data center? As you have mentioned that you are looking for opportunity there in that space also. So , where we are right now in that? Are we exploring or are we really going for next stage, like bidding those projects?
Manmohan Sharma : There is a great amount of opportunity as far as the data center EPC work is concerned, because this AI, etc, consume more data. So , we'll have possibility of engaging EPC work of these data centers, whereby there is an opportunity also to be green data center as well. So , we are actively looking all the opportunities which are there for EPC work in data center.
Pawan Kumar: So, can we have some orders coming up maybe in this financial year from the data center or maybe some other opportunities like?
Manmohan Sharma: Anything of -- it is difficult to comment actually. At this stage, we will not be able to comment whether this year it will come. But definitely, we are chasing actively. Any orders which are likely to come or will come, definitely, we'll announce it on th e exchanges.
Pawan Kumar: And sir, lastly sir, what sort of margin we look for like the new line of businesses, be it data center, be it green hydrogen or be it BESS? What sort of margin we are targeting in these new initiatives?
Manmohan Sharma: So, this is like not very active field as of now where margin can be determined with respect to BESS or data center EPC, etc. It will evolve gradually.
Moderator: Ladies and gentlemen, due to time constraint, this was the last question. And on behalf of Waaree Renewable Technologies Limited, that concludes this conference. Thank you for joining us, and you may now disconnect your lines. WAAREE/RTL

Sub.: Transcript of Investors/Analyst Earnings Conference Call held on October 13, 2025.

Dear Sir/Madam

Further to our communication dated October 07, 2025, and October 13, 2025, please find enclosed the transcript of the Earning Conference Call held on Monday, October 13, 2025, at 04:30 p.m. to discuss the Un-audited Financial Results for the quarter and half year ended September 30, 2025.

This intimation shall also be available on the website of the Company at www.waareertl.com.

We request you to take the same on your record.

Thanking you,

Yours faithfully,

For Waaree Renewable Technologies Limited

"Waaree Renewable Technologies Limited Q2 & H1
FY 2026 Earnings Conference Call"

October 13, 2025

MANAGEMENT : MR. MANMOHAN SHARMA – CHIEF FINANCIAL
OFFICER, WAAREE RENEWABLE TECHNOLOGIES
LIMITED
MR. ABHISHEK PAREEK – GROUP HEAD, FINANCE,
WAAREE RENEWABLE TECHNOLOGIES LIMITED
MR. NEERAJ VINAYAK – VICE PRESIDENT , INVESTOR
RELATIONS , WAAREE RENEWABLE TECHNOLOGIES
LIMITED
MR. ROHIT WADE – GENERAL MANAGER, INVESTOR
RELATIONS , WAAREE RENEWABLE TECHNOLOGIES
LIMITED
MODERATOR : MR. PRATHAMESH PARAB – MUFG INTIME INDIA
LIMITED

Moderator: Ladies and gentlemen, good day and welcome to the Waaree Renewable Technologies Limited conference call, hosted by MUFG Intime India Private Limited.
As a reminder, all participant lines will be in the listen-only mode. And there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*" then "0" on your touchtone phone.
I now hand the conference over to Mr. Prathamesh Parab from MUFG Intime India Limited.
Thank you and over to you Mr. Prathamesh.
Prathamesh Parab: Thank you, Iqra. Good afternoon, ladies and gentlemen. I welcome you all to the Q2 and H1 FY '26 Earnings Conference Call of Waaree Renewable Technologies Limited.
Today on the call we have from the Management; Mr. Manmohan Sharma – CFO; Mr. Abhishek Pareek – Group Head (Finance); Mr. Neeraj Vinayak – Vice President (Investor Relations); and Mr. Rohit Wade – General Manager (Investor Relations).
Before we proceed with this call, I would like to mention that some of the statements made in today's call may be forward-looking in nature and may involve risks and uncertainties. For more details, kindly refer to the investor presentation and other filings that can be found on the Company's website.
Without further ado, I would like to hand over the call to Mr. Manmohan Sharma for his opening remarks, and then we open the floor for Q&A. Thank you and over to you, sir.
Manmohan Sharma: Thank you, Prathamesh. Good afternoon, everyone. I would like to extend a warm welcome to all participants for joining the earnings conference Call of Waaree Renewable Techn

ologies
Limited for discussing our business performance for Q2 and H1 FY '2026.
I hope you all had an opportunity to review our Financial Results and Investor Presentations which have been made available on Stock Exchange and are uploaded on the Company's website.
I would like to commence by showing my sincere gratitude to all our stakeholders for their unwavering trust and support. Your continued confidence in our vision and execution has played an important role in shaping our journey so far. Today, on the call, I have along with me the key members of our Management Team.
Starting with our Financial Results, we are pleased to report the highest ever quarterly revenue and PAT in Q2 FY '2026. Our revenue from operations stood at Rs. 774.78 crores, a growth of 47.73% over the same period of last year. EBITDA comes in at Rs. 157.94 crores, up 120.69% year-on-year. EBITDA margin for the quarter stood at 20.39% versus 13.65% for the same period last year. PAT reached to Rs. 116.34 crores, marking a 117.40% increase against Q2 FY '2025.
For the first half of FY '2026, we recorded total revenue from operations of Rs. 1,377.97 crores, up 81.12% compared to H1 FY '2025. EBITDA for the first six months stood at Rs. 275.48 crores, reflecting a growth of 144.56% year-on-year basis. And the PAT comes in at Rs. 202.73 crores, up 148.21% year-on-year basis. These results underscore our consistent performance and strong operating leverage for the current financial year.
Our unexecuted order book remained healthy at 3.48 GWp, giving us solid visibility for the

upcoming quarters. During H1, we executed 1,621 MWp of EPC projects, which even exceeds our full-year execution of FY ‘2025, reinforcing our execution capability and enabling us to sustain our leadership in India's EPC space.
Let me now turn to the broader industry developments that are shaping our operating environment:
India's renewable energy momentum continues to accelerate with non-fossil fuel capacity now exceeding 250 GW, a significant milestone that puts the country more than halfway to target its 2030 target of 500 GW. As of September 2025, India's cumulative solar capacity stands at 127.33 GW, with ground-mounted projects contributing 97.15 GW, rooftop solar at 21.52 GW, hybrid installation at 3.26 GW, and off-grid system at 5.40 GW.
Importantly, rooftop and open-access systems now account for over 20% of installed capacity driven by flagship programs like PM Surya Ghar Muft Bijli Yojana and PM Kusum Yojana, which target 34.8 GW by March 2026. Looking at the policy updates, the recent GST reduction on solar modules from 12% to 5% is expected to result in decreased capital expenditure, making it a good investment opportunity, further reinforcing solar energy as the lowest cost of energy.
Policy tailwinds and reductions in GST on solar modules coupled with the ambitious national target of 500 GW by 2030 are expected to boost a strong pipeline of utility-scale and C&I customers. This will further drive the EPC demand. With a growing solar installed base and projects executed by us, O&M segment is emerging as a major growth opportunity for the Company, with increased requirement of storage and growing popularity of hybrid projects, the demand for efficient, reliable, and technology-driven O&M services will further increase.
With Waaree Renewable Technology, we continue to leverage our integrated expertise and execution strength to stay ahead in a dynamic market. With a strong order book, expanding footprint and supportive policy environment, we are well positioned to drive growth across emerging segments. As we look ahead, we believe that the competitive advantage will depend majorly on three critical pillars; operational efficiency, superior quality, and the ability to deliver integrated and end-to-end faciliti

es.
In this evolving landscape, we find ourselves not just compatible but also positioned in the market to take all kinds of opportunities in the EPC segment. We are excited about the opportunities ahead and we remain committed to driving sustainable growth in the renewable energy landscape and creating long-term value for our stakeholders.
Thank you for your continued support. We may now open the floor for questions.
Moderator: Ladies and gentlemen, we will wait for a moment while the question queue assembles. The first question is from the line of Aritra Banerjee from Nomura. Please go ahead.
Aritra Banerjee: So, congratulations on a fantastic quarter, sir. Sir, my first question is regarding your margin outlook. So, we have seen a very strong uptick in margins and our margins are very healthy currently. So, going forward, do we see these levels of margins sustainable? Or what would you term as a stable rate of margin going forward?
Manmohan Sharma: So, we have already addressed this margin point in various communications. The margin where we are comfortable is around 15%. But with the operational efficiency, tight budgeting control, monitoring all projects in real-time basis, we are able to get this kind of margin. So, with the available order book, whatever we have, we expect that margin will remain in the range of more than 15%.
Aritra Banerjee: Right. So, this you are talking about FY ‘26, like more than 15% margin?
Manmohan Sharma: Yes, yes, for the entire financial year, whatever we have done so far, plus for the balance year, we expect that it should be around 15%.
Aritra Banerjee: Got it. Sir, my second question is regarding the ALMM List 2. So, as we all know, there has been a bit of an extension provided to the developers with the implementation of ALMM List 2. Sir, do you foresee any delay or booking of orders basis that? Because I heard there were some delays in PPA signing going on since the extension has been provided. So, do you see any headwind coming from that extension?
Manmohan Sharma: So, as far as a Company, we are concerned. For the H1 itself, we have booked order worth of 1.8 GWp. So, we started last quarter with 3.15 GWp. After execution of around 900 MWp, our order position is 3.48 GWp as of now. So, looking at the entire market of the solar with the government’s ambitious plan to have 500 GW by 2030, definitely we are in a good shape and in the right space. So, they are more and more likely to flow in this.
Abhishek Pareek: Also, to add up, Aritra, to your question, if you look at ALM 2, the list which has recently come out and government reaffirmed the timelines with some window being allowed to the developer community from December last year to September this year. But in our case, since most of the contracts are signed off and majority of cases PPAs were already in place, so we are not affected due to the change given the fact this window has come up. We are not much affected with this

change.
Aritra Banerjee: Got it, sir. And sir, my final question would be regarding the order book position. Could you give a color regarding the split of order book on a domestic and an overseas basis? And the reason I am asking this question is, because regarding the geopolitical tensions and the trade
uncertainties going at the overseas level, so do you see any kind of headwinds arising for our business going forward?
Manmohan Sharma: So, as of now, we have the domestic EPC, all the orders which are executed as of now 3.48 GWp which are there in our hand is all domestic orders. Of course, we are looking at any kind of opportunity which may come up in the future for the international space also, we are actively looking. But as of now, to answer your

question, as of now whatever orders are there, we are of domestic.
Aritra Banerjee: Sure, sir. Understood. Thanks for answering the questions. If I have further questions, I will join back with you. Thank you and all the best for the coming quarters.
Moderator: Thank you. The next question is from the line of Anupam Goswami from SUD Life. Please go ahead.
Anupam Goswami: Hi, good afternoon, sir. Sir, my first question is on, if you can give us a slight margin idea on rooftop as well as our domestic EPC. And now that you are mentioning about 15% margins, going a little forward let's say FY ‘27, given the scenario, what sort of margin can we command, we have seen margins at a quite lower level, if we increase the scale up, are we going to reduce our margins due to the competition or so?
Manmohan Sharma: No, as of now, the first question of yours, like majority of the revenue is coming from the ground mounted because the ground mounted project has large capacity, they can be scaled up to 1 GWp or 2 GWp kind of project. So, that is one part. Secondly, the maximum margin is coming from this operational efficiency. So, as we scale up our operations, there are a lot of things which comes as a driver for our growth and improving our margins. So, whatever the base margin, if we get 15% which we are putting, but the improvement is always there. So, with the scale, timely execution with the budget tightly controlled, etc., these all sector comes in. Therefore, you are seeing the margin of 20% in this quarter, EBITDA margin.
Anupam Goswami: But sir, you mentioned 15%, so are we going to have a lower margin in the second half due to more of EPC orders?
Manmohan Sharma: It is nothing like that, we are not giving that. Over a period of time it will get reduced, etc. But the order book which is there in our hand, all kind of like fixed price contracts. While we are executing the order, we have already seen and prepared the budget for all kinds of projects. So, as of now, we are not giving full year guidance that it should be in the same range like that, but we are comfortable with the 15% margin what we are stating.
Anupam Goswami: Okay. So, the current order book also has sort of 15% sort of margin, should we take that?
Manmohan Sharma: Yes. Overall, we can see that.
Abhishek Pareek: So, Anupam, the difference here is, when we take up a project or whenever we sign up for a contract with a customer, we start with a mandate of at least 15% margin internally. That's what we started and we are very confident of these numbers but during the execution of project, there's a timeline and since we have got one of the largest team, both on design as well as procurement side, well poised to further support on the margin process and that generally happens in the execution of the project, which we call as execution, I would say, capabilities of our project teams. And that's how you see a margin ranging 16% to 19%, 20%. So, bare minimum that we look at is around 15% when we started the project, but our endeavor is always to take it up to a range of 19%-20%.
Anupam Goswami: Okay. And sir, if there are order book breakups, if you can give on the rooftop domestic EPC or C&I, some sort of light if you can give.
Manmohan Sharma: Yes, mostly all order are domestic, number one. And majority of them are ground mounted projects.
Anupam Goswami: Are these more into our group connections that we get where we supply modules ourselves? Are we getting business from there mostly?
Manmohan Sharma: No, it is not that way, but definitely the overall group has the capability in the production line, etc. But we are getting from the other customers also, whatever the modules are there, we are installing them as well.
Anupam Goswami: Okay. Thank you so much. I will get back in the queue.
Moderator: Thank you. T

he next question is from the line of Rehan Saiyyed from Trinetra Asset Managers.
Please go ahead.
Rehan Saiyyed: Good evening to our team, and thank you for giving me the opportunity. So, sir, I want just a little clarification on how are the newly approved IPP projects in Maharashtra and Rajasthan expected to impact topline profitability from Q3 onwards in FY ’26, will you just put some light on that? This is my first question.
Manmohan Sharma: Yes. So, we have three revenue streams that is one EPC, other one is O&M and third one is IPP. So, as of now also we have revenue from all the three streams, compared to my EPC it is less. But this revenue, IPP is giving revenue for another 20, 25 years. So, in line with our existing project of 54 MWp which we have as of now, we wanted to have some more IPP projects. So, therefore, during this board meeting, the board has approved additional 14 MWp in Maharashtra plus 37 MWp in Rajasthan. So, this is in line with our existing, we wanted to add some more assets into it.
Rehan Saiyyed: Okay. So, sir, my second question is around the revenue mix diversification that you right now have EPC and IPP covering towards 70:30 mix. So, what you are targeting for next two to three years, like what will be the mix for this EPC and IPP?
Manmohan Sharma: Can you repeat, actually your voice was not clear?
Rehan Saiyyed: So, sir, I am asking what are the mediums and roadmaps for revenue diversification? Do you see EPC and IPP covering towards 70:30 mix over the next two to three years?
Abhishek Pareek: So, primarily, the core business of Waaree Renewable Technologies is the EPC stream and this depends and continues to be. However, we are also trying to enhance our ground force on the O&M business, which you certainly see even in the numbers also that year-on-year our O&M portfolio is increasing. At the same point in time, we also have some few assets on the IPP front, but largely these assets are smaller and within the C&I range only. So, you may see continue to see a few projects, but the main business of Waaree Renewable Technologies goes into EPC and O&M.
Manmohan Sharma: And to add further like whatever the projects which we are exhibiting, we try to get O&M offers. So, in this quarter we have completed one of the projects of 412 MWp, so that is likely to this O&M, it will add to our O&M going forward. So, that is what we are doing.
Rehan Saiyyed: Okay. Thank you. And one of our last question is that, I want just more clarification on, lastly, any update on collaboration with Waaree Energies for module sourcing? Are you lacking in fixed supply pricing or following spot procurement on these?
Abhishek Pareek: So, as you are aware that Waaree Energies is one of the largest module suppliers. So, definitely when we procure solar panels for our projects also, we do take quotations even from Waaree Energies. But at the end of the day, being our Company, our own policy is always to work on arms-length basis and have minimum comparable quotations whenever we procure. So, there is a strategic advantage, but then the procurement is always sacrosanct.
Manmohan Sharma: But if this procurement of module etc. comes when we are getting turnkey kind of order, but the majority of the orders which we are carrying as of now is like pure EPC. So, relatively, my stance is like execution EPC whether it's module supplied by Waaree or maybe some other supplier, but our stance is to do the EPC work. So, whenever there is opportunity of turnkey orders which are relatively small in my entire EPC, we are executing the EPC orders only.
Rehan Saiyyed: Thank you, sir. Thank you for clarification. I will jump back into the queue.
Moderator: Thank you. The next question is from the line of Sagar from Alchemie Capital. Please go ahead.
Sagar T

anna: Thank you, sir, for your insights and your opening remarks. You mentioned 3.48 GWp as the order book, can you quantify in rupee terms how much is it?
Manmohan Sharma: So, we are not exactly giving any kind of rupee term what is my order book, but definitely to give you a sense that we are executing various orders. So, some of them are not pure EPC orders where our scope is limited to certain extent. And where some of the orders are mixed where we need to supply the module as well. So, it is ranging between maybe Rs. 1 crore to Rs. 3 crore,
depend upon the scope of the work which is awarded to me. And definitely depend upon the exact work that is given to me.
Sagar Tanna: Can you give a split, sir, what percentage would be pure EPC and what percentage would be turnkey?
Manmohan Sharma: So, just to give you a sense, it ranges between let us say Rs. 0.8 crore or maybe Rs. 1 crore per MW to Rs. 1.25 crore, Rs. 1.3 crore like that.
Sagar Tanna: And sir, what is the order pipeline going forward? What quantum of orders do you foresee in the rest of the financial year in terms of bids, etc., coming up?

Manmohan Sharma: See, like if you see that overall government tenders are on a continuous basis 6 GW to 7 GW. Plus, the private players C&I and the IPP customers is also around 20 GWp. So, total pipeline which we follow is around 27 GWp. And as I mentioned in my previous question that we only won order worth of 1.8 GWp during this H1. So, we continue that the order flow will continue over a period of next few years, in fact, because country wanted to set up this green energy. So, if you see that from the last six months itself the country had added 21 GW and the remaining six months is still there. So, every year 40 GW to 50 GW is to be added in terms of renewable energy. Solar is going to play a major role. And as an EPC player, we have a big opportunity to take any revenue out of it.

Sagar Tanna: Got it. Thank you so much and all the best, sir.

Moderator: Thank you. The next question is from the line of Ishita Lodha from SVAN Investments. Please go ahead.

Ishita Lodha: Hi, sir. Thank you for the opportunity. My question is with respect to Slide #28 of the presentation. So, in cash flow statement, we have seen a good growth in our execution. But at the same time, when I am looking at cash flow from operating activities, it has remained flat at Rs. 84 crores. So, why is this? And how do you see this improving over the next half of the financial year?

Manmohan Sharma: Definitely, with the more and more orders which are going to execute in the next H2, this position is going to improve going forward.

Ishita Lodha: And what is the status of the execution of the general order?

Manmohan Sharma: Specifically, we cannot talk about any specific order in this conference call. But to tell you, whatever orders we have taken we are executing and in a timely manner. So, along with that, this is one of the orders which we are executing as of now.

Ishita Lodha: Okay. Sir, our quarterly execution run rate would be in an upward trajectory going forward?

Manmohan Sharma: Yes, definitely. If I give you a sense actually, for the last financial year, we have done around 1.5 GWp worth of order we have executed, in the H1 itself we have done 1.6 GWp. So, the way my revenue has gone up from last March '25, we were Rs. 1,597 crores, now we are Rs. 1,377 crores. So, you can just see the way we are executing the order. And with the available order book, you can see this growth.

Ishita Lodha: Okay. And in your press release that had come in last three months, in one of the orders, you also got orders for the transmission and substation 400 kV. So, I just wanted to ask, what is our qualificati

on in transmission substation EPC? Can we execute projects of 765 kV? And are we also looking for standalone transmission substation orders or only with combination with solar? And in this case, how do we source the bought-out components, which is the towers, conductors, etc.?

Manmohan Sharma: So, as a part of creation of overall solar generating facility, now also we are doing, connecting this power, whatever is generated from the solar generating unit to the nearest substation or maybe to the grid? So, as a part of this process, we have expertise of doing so as of now also. We are looking more and more orders if we can get this kind of building of a transmission line or substations. So, this is one of the order which we have received for doing this work also. And as we are doing the EPC work and connecting to any substation or the grid, our capability is there to execute this kind of orders going forward.

Ishita Lodha: Okay. And is it possible to share what percentage of your order book is from third party clients?

Manmohan Sharma: Majority is from third party clients.

Ishita Lodha: Okay. Thank you. That's it from my side and all the best.

Moderator: Thank you. The next question is from the line of Raman KV from Sequent Investments. Please go ahead.

Raman KV: Hello, sir. Sir, I have a few questions, one is with respect to the realization per megawatt. So, you said it's anywhere between Rs. 1 crore to Rs. 1.2 crores per megawatt, if I am not wrong. But if I am tracking the data with respect to the presentation given, we executed around 1.6 GWp of order book during H1 and we clocked Rs. 1,380 crores of revenue. So, that brings the realization down to Rs. 85 lakhs per megawatt. So, can you just give us a broader picture? Is there any decrease in the realization per megawatt? Or is the bills with respect to the entire project is yet to be received by the Company?

Manmohan Sharma: So, as I replied in my earlier question that the order which I am getting is purely, some of them are purely EPC order, some of them are limited or some restricted to the scope, and some of the order which I am executing on a turnkey basis where module is also under my scope. So, it is difficult to calculate the way you are doing it, because in one particular quarter or maybe one period of time various orders are going on. So, it's a mixture because this revenue is coming from all the type of order and the way you are just seeing this, it may be difficult to calculate.

Raman KV: So, you are basically saying it's because of part EPC, part turnkey project?
Manmohan Sharma: Yes.
Raman KV: In the EPC project, we do not supply the modules, right?
Manmohan Sharma: Yes. Because the supply is in the scope of the customer or developer who wanted to have this power project. So, they will supply me the module, my job is to execute the EPC order.
Raman KV: And sir, I just want to understand when it comes to the margin. So, because we are not supplying the module, so EPC business tend to have lower margins when compared to turnkey projects, right?
Manmohan Sharma: No, it is nothing like that with module or without module margin. What we are doing is like we have some base calculation at what risk and reward we are getting to have our business. So, we are not going any kind of like below to the threshold limit to have the order in our kitty. So, accordingly, after analyzing the every order which suits our risk-reward metric, then only we go ahead with booking the order.
Raman KV: And sir, my second question is with respect to the order itself. So, while researching about this entire industry, I heard that usually orders in northeast, eastern states are better margin business when compared to rest of India. Is it true?
Manmohan Sharma: We have not seen any kind of such differentiation because we are executing pr

ojects in various
states, Rajasthan, Gujarat, MP, Andhra and Maharashtra and all, various states we are doing execution of the order. But the differentiation which you are mentioning, we have not seen, we have not noticed.
Raman KV: Sir, my final question is with respect to the IPP side. So, my understanding is currently you have three revenue streams, one is the EPC, then IPP and then O&M. And IPP is I think you record it under your other operating income. So, we have approved three projects, two of them are 14 MW and one of them is 38 MW, so what is the CAPEX outline for these? And how much incremental revenue can we get from these three combined projects?
Manmohan Sharma: So, just to correct one thing that we are recording IPP revenue under revenue from operations only. The revenue from operations includes by EPC and O&M income, and then IPP income. So, these are the three revenue streams recorded in there. And what we are showing is other income is like definitely on the bank FDs and whatever spare money we do have, we invest and get those returns.
Moderator: Thank you. The next question is from the line of Vivek Gupta from Star Investment. Please go ahead.

Vivek Gupta: Yes. Sir, my first question is, like speaking about the battery energy storage system, like what's the CAPEX looking like for that particular segment? And also more importantly, can you break down the anticipated revenue versus cost per megawatt hours for us?
Manmohan Sharma: So, as of now, with respect to our total order book, we have 40 MWh of BESS order. So, we are not doing CAPEX, at least in this Company, for the batteries. So, whatever the orders which I wanted to have from in this EPC companies, the execution of EPC, the project is supported by BESS.
Vivek Gupta: So, I just want to know your view on the industry outlook for BESS right now and what kind of bidding pipeline are you seeing in terms of order size?
Manmohan Sharma: So, going forward, this may be the BESS, it should be the one of the area where we have an opportunity to do the EPC business. Because whatever solar power you are generating during the day time, if you wanted to have it in the night time or maybe next hour, you need to have a storage system. So, along with the existing solar, we see very good opportunities that the country will have the BESS as a storage system. So, we have opportunity, as a Company we have opportunity of doing the EPC business of this BESS.
Vivek Gupta: Okay. Like, have you put in any bids for BESS projects yet? If so, like, can you give us a ballpark on the size and your internal view on the success rate?
Manmohan Sharma: So, there are a lot of tenders or a lot of inquiries are starting along with the BESS. So, we are actively participating in all kinds of possible bids. And once something comes concrete, definitely we will announce through exchanges to all our stakeholders.
Vivek Gupta: Okay. Thank you.
Moderator: Thank you. The next question is from the line of Sarang Joglekar from Vimana Capital. Please go ahead.
Sarang Joglekar: So, now that ALMM List 2 is kicking in from next year, do you think there will be challenge procuring modules and will it delay the projects from there on? Also, do you expect that

implementation to be further delayed?
Manmohan Sharma: No. As far as we as EPC companies are concerned, so most of our orders are pure EPC where the module is in scope of the developer or the project owner. So, in our case, when all kinds of ground clearances, because this requires a lot of money to put in by the investor or the developer. So, once all kinds of clearances are there in place, then only they will give us the order for EPC. And once the EPC order is given, we are there to execute actually. So, all this delay, whatever you are mentioning or thinking, maybe it's the scope of th

e owner before awarding EPC.
Sarang Joglekar: Right. But if there is a challenge procuring that, they will eventually delay the EPC work as well, right? That's why I am asking.
Manmohan Sharma: No. We are thinking differently actually. Once you have all the land connectivity, etc., and you are lined up from where you are going to likely to have modules, then only mostly the people think of awarding EPC contract. So, once the contract is awarded and the timeline scope is defined, we will execute actually.
Sarang Joglekar: Understood. And currently, do you have any contracts which have that mandate of ALMM List 2 compliance?
Manmohan Sharma: So, as I mentioned, that is in scope of the developer or owner. So, once the contract is awarded to me, it is there. They need to see whatever they wanted to see with respect to ALMM. Once this contract is awarded to me, I will do in a speedy way to complete this project.
Sarang Joglekar: Understood. And the other question, is it expected to be delayed further, the implementation?
Manmohan Sharma: As an EPC Company it is difficult to comment on this particular thing, whatever is happening. But what I wanted to convey actually, because more and more solar projects are coming up in a big way, we wanted to achieve 500 GW by 2030. I think all these are the hurdles which will be sorted out very soon.
Sarang Joglekar: Okay. I understood. That's it from my side. Thank you.
Moderator: Thank you. The next question is from the line of Anand B from Seema Wealth Private Limited. Please go ahead.
Anand B: Yes. Regarding your BESS orders, can you give estimate like how many orders can we look forward to in the next couple of years or this year in particular?
Manmohan Sharma: So, it is difficult to estimate that how much order can inflow from the BESS project. But certainly, for the grid stability one should be installing this BESS also, because for the grid requirement also the BESS is very much necessary.
Anand B: Okay. At least in this angle can you see like the BESS orders and the revenue that you receive from BESS orders can, that share of revenue can increase as the years go on?
Manmohan Sharma: It is difficult to predict anything that how much this EPC along with BESS will come going forward. But what my view is that it is to be supported by the BESS. So, sooner or later it will come.
Anand B: Okay. Thank you.
Moderator: Thank you. The next question is from the line of Raman KV from Sequent Investment. Please go ahead.
Raman KV: Thank you for the follow-up. I just have two questions. One, do we have any revenue from the parent Company like the listed entity, Waaree Energies?
Manmohan Sharma: Yes. We are executing some of the projects which is there from Waaree. But if you see my overall execution during this H1, is not that very significant portion actually.
Raman KV: So, on a rough ballpark figure, how much will be the revenue from the parent Company?
Manmohan Sharma: We have not analyzed actually for this call. But definitely, we are executing one of the project which is being awarded by the Company. And there is further order which we have received in this H2, is one of the order which recently we have announced in the exchange.
Raman KV: And sir, we have a current order book of 3.48 GWp which is unexecuted, what's the timeline of these or for this order to be executed?
Manmohan Sharma: So, these 3.48 GWp order book which is there as of now is likely to be executed over next 12 to 15 months.
Raman KV: Okay. Thank you, sir.
Moderator: Thank you. The next question is from the line of Surendra Singh, an individual investor. Please go ahead.
Surendra Singh: Sir, congratulations on the strong set of numbers. This is in context of

current demand
environment and my question is, are you facing any pricing pressure while picking up new orders?

Manmohan Sharma: No. This competition will always be there. But definitely we are seeing a lot of order inflow, so while demand is definitely there. As far as competition comes in, competition is good always for the industry. But just to tell you, whenever we are taking any kind of order, we are just looking at the budgetary, whatever budget, etc., and what is the profit or margin is there. So, after evaluating everything, if this order suits us, our risk-reward metric, then only we do otherwise we do not execute the order.

Surendra Singh: Okay. Thanks. Which means you are choosing the orders, you are not taking any and every order. My next question is that, your order book of 3.48 GWp, does it have some very, very large orders which would make us dependent on very few large customers?

Manmohan Sharma: This order book, it's a continuous process, actually. The 3.4 GWp, when I closed my last quarter it was 3.1 GWp. So, it's a continuous process. We had announced earlier 2 GWp order at single location, earlier we announced 1 GWp order at single location. So, definitely, we have the ability to execute from 100 MWp to maybe 2 GWp size of order. So, it's a continuous process, actually. Whatever orders we are executing, we are rebooking also.

Surendra Singh: Okay. Thank you. That's all.

Moderator: Thank you. The next question is from the line of Amit Singh from VVID. Please go ahead.

Amit Singh: Yes. So, first of all, congratulations to the team for such great numbers. My few question is related to the cooling business, recently you acquired a new Company. And another is related to the data center. So, I would like to know that what is the way ahead, how much revenue you see, and the margins related to data center and the cooling business? And also about what value this cooling business will bring to Waaree Renewable Technologies? As of now, you have the three verticals, and how this fits in?

Manmohan Sharma: Okay. So, to answer your first question, this cooling business, the Company which we have identified and acquired around 3% stake, so this Company provides cooling as a solution. So, like for the large offices and factories they are providing the cooling actually. So, we find synergy in our business, because as a Company we have opportunity to do solar installation. Wherever they are approaching for the cooling we as a Company can also have an opportunity to do EPC business, this module installation also. That is one.

With respect to data center which I mentioned that we are actively looking at data center. We have about six months back we have amended and closed. And we are actively looking any kind of opportunity which is coming in the form of EPC for the data center.

Amit Singh: So, as of now, you do not have any business or you're not bidding anything, you are just looking to bid. How is it getting converted?

Manmohan Sharma: Yes, there is no formal bidding happening as of now for the data center, it's a bilateral discussion. So, we have hired senior level personnel for all to take care or to see the possibility of having data center as EPC in our business. So, as we progress, let us see and we will update you going forward as well.

Amit Singh: Okay. And my last question would be with respect to your bidding pipeline, what is the conversion that you are seeing right now? What is your conversion rate? Because you are bidding for 27 GWp, because in 16 months the kind of execution that your Company is doing is awesome. So, going forward, how do we see that how much orders are going to come?

Manmohan Sharma: So, as you rightly said, we are actively looking of chasing this 27 GWp of orders. But it is difficult to give you any kind of number that how much will be

the conversion rate. But if you
see that from last quarter or maybe a few quarters that we keep on executing as much as possible. We have done 1.6 GWp for H1 as compared to 1.5 GWp of last year. And in the order flows also you have seen that we have received 1.8 GWp of orders. So, we are changing this entire order book, we try to get maximum out of it.

Amit Singh: Okay. Thank you.

Moderator: Thank you. The next question is from the line of Kumar Divyanshu, an individual investor. Please go ahead.

Kumar Divyanshu: Thank you, sir. Congratulations for the very good number. Just I am having one question that could you please tell me what is the current order book overall till the second quarter of FY‘26?

Manmohan Sharma: Yes. So, as I mentioned in earlier conversation, we have 3.48 GWp worth of order book, which is to be executed over next 12 to 15 months.

Kumar Divyanshu: Okay. Thank you. And what about the data center, could you please comment on that if there is any order or bid in the pipeline or not, or whether you are going to communicate to any of the companies or firm, whatever it is?

Manmohan Sharma: So, as of now, we have nothing in our order pipeline, which I mentioned to you with respect to data center. But as I mentioned that we are actively looking at any kind of opportunity as an EPC player coming up in the data center. So, once something materializes, definitely we will communicate through exchange with you, sir.

Kumar Divyanshu: Okay, sir. And the third question, the last question is, is there any foreign investment coming to your Company likewise? Or DIA is actively interested to invest in your Company or whether the promoter is going to increase the stake?

Manmohan Sharma: There is nothing like whatever you are mentioning. We are very asset-light Company actually, we do not have any kind of major term loan, etc. We have Rs. 20 crores of term loan, which is for the IPP business. So, as of now, there is no such plan whatever you have mentioned. But definitely, if something comes up, we will definitely communicate through exchange.

Kumar Divyanshu: Okay. Thank you. Thank you so much.

Moderator: Thank you. The next question is from the line of Anushka Vora from Vimana Capital. Please go ahead.

Anushka Vora: Yes. Hi, thank you for the opportunity. My question is regarding, so last year there was certain evacuation and connectivity issues with respect to solar projects. So, this year have these problems kind of continued or has it become better and is that affecting execution for companies?

Manmohan Sharma: See, whenever you are undertaking any kind of projects, some issue or problem or hurdles may be there. But with respect to our Company, whatever orders we have got as of now, our job is to do EPC work. And we do not find anything related to that. Even if it is there, then also it is in the scope of the customer.

Anushka Vora: Okay. And what is the CAPEX that you have planned for the IPP project?

Manmohan Sharma: So, in the recent board meeting, the board has approved 14 MWp, two projects in Maharashtra and 37 MWp, one project in Rajasthan. So, that is going to be executed in H2 or maybe a little later than that.

Anushka Vora: Okay. Thank you so much, sir. Thank you.

Moderator: Thank you. The next question is from the line of Vaibhav Lohia from CFM. Please go ahead.

Vaibhav Lohia: Hi, thanks for the opportunity. Sir, I want to understand what is the sector outlook for solar EPC market after FY '27? Because as of now we are seeing around 40 GW, 50 GW of additions every year. But if we do the math, for the next five years it will be around 250 GW. But the whole renewable energy target for 2030 is 500 GW, so do you see any softness after FY '27?

Manmohan Sharma: I do not think so. I was thinking the other way around, actually, because there is a lot of opportunity beyond 500 GW also in the country. A lot many sites, a lot many locations are available for the installation of solar projects. So, therefore, you are seeing these kind of numbers. In H1 itself we have crossed 21 GW in this financial year. So, with this pace, I think we will go beyond whatever target is given and may reach a little earlier than what we thought.

Vaibhav Lohia: So, I can assume the growth will be better going forward and it would not decline after FY '27, right?

Manmohan Sharma: Yes, definitely, because there is a lot of potential in the country to have solar projects.

Vaibhav Lohia: Okay, understood. And sir, last question from my end, what is the total addressable market for the data center business for Waaree Group?

Manmohan Sharma: We are exploring all kinds of possibilities with respect to the data center, as I mentioned earlier. But let us see, if something coming up, we will definitely communicate to you, sir.

Vaibhav Lohia: Sir, can you just quantify the numbers for the total addressable market, it will be very helpful for us to understand that.

Manmohan Sharma: No, if you see that a lot many people are using AI and this product, so they are likely to consume more and more data. And for the data center, there is a lot of opportunities, it will be there.

Abhishek Pareek: So, to add up to this, like right now we are in the trajectory of around 250 MW to 300 MW worth of data centers that we have in the country. And if you sum up all the ongoing projects for which bid is happening, we expect over the next four or five years at least 1 GW worth of more data centers to come up in the markets. So, certainly a very large market than what we see today.

Vaibhav Lohia: Okay, understood. Thank you.

Moderator: Thank you. That was the last question for today. On behalf of Waaree Renewable Technologies Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Call: Jan 2026

Sub.: Transcript of Investors/Analyst Earnings Conference Call held on January 16, 2026.

Dear Sir/Madam

Further to our communication dated January 12, 2026, and January 16, 2026, please find enclosed the transcript of the Earning Conference Call held on Friday, January 16, 2026, at 12:00 p.m. to discuss the Un-audited Financial Results for the quarter and nine months ended December 31, 2025.

This intimation shall also be available on the website of the Company at www.waareertl.com.

We request you to take the same on your record.

Thanking you,

Yours faithfully,

For Waaree Renewable Technologies Limited

Heema Shah

“Waaree Renewable Technologies Limited
Q3 and 9M FY'26 Earnings Conference Call”
January 16, 2026

MANAGEMENT : MR. HITESH MEHTA – WHOLE-TIME DIRECTOR –
WAAREE RENEWABLE TECHNOLOGIES LIMITED
M R. MANMOHAN SHARMA – CHIEF FINANCIAL
OFFICER – WAAREE RENEWABLE TECHNOLOGIES
LIMITED
M R. ABHISHEK PAREEK – GROUP HEAD, FINANCE –
WAAREE RENEWABLE TECHNOLOGIES LIMITED

M R. NEERAJ VINAYAK – VICE PRESIDENT , INVESTOR RELATIONS – WAAREE RENEWABLE TECHNOLOGIES LIMITED
M R. ROHIT WADE – GENERAL MANAGER, INVESTOR RELATIONS – WAAREE RENEWABLE TECHNOLOGIES LIMITED

MODERATOR : MS. MAMTA NEHRA – MUFG INTIME INDIA PRIVATE LIMITED

Moderator: Ladies and gentlemen, good day, and welcome to the Q3 and 9M FY'26 Earnings Conference Call of Waaree Renewable Technologies Limited hosted by MUFG Intime India Private Limited. As a reminder, all participant lines will be in the listen-only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touch-tone phone. Please note that this conference is being recorded.
I now hand the conference over to Ms. Mamta Nehra from MUFG Intime India Private Limited. Thank you, and over to you.
Mamta Nehra: Thank you. Good afternoon, ladies and gentlemen. I welcome you all to the Q3 and 9 months FY'26 Earnings Conference Call of Waaree Renewable Technologies Limited. Today, on the call, we have from the management, Mr. Hitesh Mehta, Whole-Time Director; Mr. Manmohan Sharma, CFO; Mr. Abhishek Pareek, Group Head, Finance; Mr. Neeraj Vinayak, Vice President, Investor Relations and Mr. Rohit Wade, General Manager, Investor Relations.
Before we proceed with this call, I would like to mention that some of the statements made in today's call may be forward-looking in nature and may involve risks and uncertainties. For more details, kindly refer to the investor presentation and other filings that can be found on the company's website.
Without further ado, I would like to hand over the call to Mr. Manmohan Sharma for his opening remarks, and then we will open the floor for Q&A. Thank you, and

over to you, sir.
Manmohan Sharma: Thank you, Mamta. Good afternoon, everyone, and I would like to extend a warm welcome to all participants for joining the earnings conference call of Waaree Renewable Technologies Limited for discussing our business performance for Q3 and 9 months of FY 2026. I hope you all had an opportunity to review our financial results and investor presentation, which has been made available on the stock exchange and are uploaded on company's website.
I would like to commence by showing my sincere gratitude to all our stakeholders for their unwavering trust and support. Your continued confidence in our vision and execution has played an important role in shaping our journey so far. Today on the call, I have along with me the key members of our management team.
Starting with our financial results for the quarter, our revenue from operations stood at INR851.06 crores, a growth of 136.18% over the same period of last year. EBITDA comes at INR158.80 crores, up 120.79% year-on-year basis. EBITDA margin for the quarter stood at 18.66%, PAT reached to INR120.19 crores, marking a 124.74% increase against Q3 FY 2025.
For the nine months of FY 2026, we recorded total revenue from operations of INR2,229.03 crores, up 98.81% over the same period of last year. EBITDA for first nine months stood at INR434.28 crores, reflecting a growth of 135.29% year-on-year basis. And the PAT comes in at INR322.93 crores, up 138.92% year-on-year basis.
These results reflect our consistent performance and strong operating leverage for the current financial year. Operationally, our order book remains healthy, providing clear visibility for the WAAREE/RTL

upcoming quarters with unexecuted order book of 2.92 gigawatt peak. During this nine month of FY 2026, we executed 2,230 megawatt peak of EPC project, reinforcing our execution capability and enabling us to sustain our leadership in India's solar EPC space. Further, our O&M portfolio is also growing and stood at approximately 1,180 megawatt peak as of December 2025.

Let me now turn to the broader industry developments that are shaping our operating environment. India's renewable energy transition continued to accelerate with non-fossil fuel capacity now more than 265 gigawatts, marking a significant milestone towards the national target of 500 gigawatts by 2030. This progress highlights not only the scale of opportunity, but also the increasing execution and integration requirements across the renewable value chain.

As of December 2025, India's cumulative solar capacity stands at over 135 gigawatts with an addition of over 30 gigawatts in current financial year. Out of this, utility scale projects contributing 76% of total installation and balance are contributed by rooftop, open access, hybrid and off-grid systems together. These additions are supported by government initiatives such as PM Surya Ghar Muft Bijli Yojana and PM-KUSUM Yojana.

The sector is undergoing a noticeable transition as renewable energy grows, large-scale battery storage is becoming essential to keep the grid stable. Storage solutions are now being included in the renewable tenders to ensure reliable peak power supply, which opens new opportunity for us to expand into BESS EPC.

Alongside this, our growing solar base and executed projects are making the O&M segment a strong growth driver. The rising need for storage and the increasing adoption of hybrid projects will further boost demand for efficient, dependable and technology-led O&M services. At Waaree Renewable Technologies, we are using our integrated expertise and strong execution capabilities to stay ahead in this fast-changing market.

With a solid order book, wider presence and supportive policy, we are well placed to capture growth across new and emerging geographies. Looking for

ward, we believe our edge will rest on three key strengths: operational efficiency, timely delivery and the ability to provide complete end-to-end solutions.

In this evolving environment, we are not just aligned with market needs but are strongly positioned to grab opportunity in EPC and allied segments . We are excited about the road ahead and remain dedicated to driving sustainable growth in renewable energy while creating lasting value for all our stakeholders.

Thank you for your continued support. We may now open the floor for questions.

Moderator: Thank you. We will now begin the question and answer session. The first question is from the line of Deepak Krishnan from Kotak Institutional Equities. Please go ahead.

Deepak Krishnan: I just wanted to check for this quarter, when we look at the execution per megawatt and then we look at the revenues, it seems that the realization per megawatt has gone up to about, say, INR1.3 crores or INR1.4 crores against a run rate of INR86 crores -- INR85 crores. So, is there a healthy mix of projects where we are also supplying the modules in this particular quarter?

If you could quantify of the executed about 610 megawatts, how much of that is related to orders with modules? And of our backlog, what percentage orders will also have module in it so that we can sort of get a good sense of the rough estimated order book value in terms also?

Manmohan Sharma: So, you rightly said that our total order includes turnkey order also. During the quarter, there is an execution of the order, which includes module also. So, this is difficult to give you any number as of now out of this mix, how much is contributed by that supplied module, et cetera. But our order books for the going forward as well as remains along with the modules. So, the present order book is 2.9 gigawatt. That includes some portion of the orders which have module as well.

Deepak Krishnan: But you can't -- okay, sorry, you are giving a particular percentage. Okay. We get that. Maybe were these modules through Waaree Energies or were these through external procured modules, if you could sort of quantify that as well?

Manmohan Sharma: So mostly actually based on the customer requirement at approved list, some -- these modules are from the Waaree only. And based on the customer requirement, if they want a specific other modules also, that can also be included in our turnkey orders.

Deepak Krishnan: Sure, sir. And maybe if I just look at your order book, it's gone from about 3.2 gigawatt to 2.9 gigawatt. This particular quarter, I think the absolute addition has been slightly lower because of the one order where we have adjusted for the revised amount. Is that the right way to look at it?

Manmohan Sharma: That is also partially included in this. But this order book is like not like every quarter, we are getting a good amount of order. Last -- in H1, if you've seen, we have got, I think, around 1.8

gigawatt of orders. So, this pace will continue. Whatever we have executed during the nine months, that amount of order we have already there in our hand.
And we are also following up 29 gigawatt of order pipeline, which includes around 5 to 6 gigawatt of tender and that some of them is with BESS also. So -- and geographically also from the domestic as well as internationally also, we are getting a lot of inquiries for the order. So, we think that this order book will remain healthy going forward as well.
Deepak Krishnan: Sure, sir. And maybe just wanted to check on your other expenses also. Sequentially, we have seen revenues go up, but other expenses go down from INR12 crores to INR6 crores or INR5.6 crores. Anything that we should be sort of aware for what would have sort of triggered that?
Manmohan Sharma: No, no. Actually, in the last quarter, there were certain expens

e related to CSR activities that
was paid and included in the last quarter. So that is the only exception which is there. Otherwise, our -- all expenses remain in the range where we want to be them.
Deepak Krishnan: Sure. And maybe just our thought process on participating for BESS, data centers or essentially getting assets on book, any of the three, if you can sort of quantify from an EPC perspective, what all are we looking to do just beyond solar? WAAREE/RTL

Manmohan Sharma: So, we have, as of now, three revenue stream actually. That is one EPC, then O&M and then our own IPP generation. These are the three existing revenue streams. Going forward, we are actively looking for the BESS as well, BESS or data center EPC. Wherever there is opportunity, we are actively looking for the BESS. And presently, we are executing one of the BESS order during this year.
Deepak Krishnan: And if you could quantify any value of the order or any other data points related to that?
Manmohan Sharma: No, it's around...
Deepak Krishnan: The margin profile is very different from our business. Or is it similar?
Manmohan Sharma: The margin profile will remain the same, whether it is BESS or solar, we do business whenever it suits our risk reward metrics. So that kind of EBITDA we are looking and that should be there in the BESS as well.
Moderator: The next question is from the line of Sahil Sheth from Anand Rathi Institutional Equities.
Sahil Sheth: Congratulations on the good set of numbers. My first question would be there has been contraction in EBITDA margins and even the realization per megawatt of executed project has come down. Are we seeing any pricing pressures? Or what are the reasons attributable to that?
Manmohan Sharma: No. Actually, if you see for the entire 9 months, there is an improvement in the margin. There is an improvement in on year-on-year basis revenue as well. So, we have 98.81% improvement in the revenue. And EBITDA margin as compared Y-o-Y for 9 months as against 16.48% we have done 19.48%.
So, this has significantly improved over a period of 9 months. And for this particular case, it's slightly lower than what is of previous quarter. So, it is all in line with our budget and estimates.
Sahil Sheth: So, in terms of realization, do you expect your per project realization to inch upwards from the current quarter levels?
Manmohan Sharma: Yes, it depends actually how -- what kind of order we are getting going forward. And it is difficult to comment any specific order what is likely to come in the future and what could be the margin profile. But we have always guided that our margin -- EBITDA margin should be over and above 15%, close to that.
Sahil Sheth: Okay. And one more thing. So recently, there was news that China had revoked the rebate on -- the export rebate on the modules and solar cells. Would that have any effect on our margins or projects where we are supplying the modules as a part of the project?
Manmohan Sharma: No, no. Whenever there is an inquiry from the customer, whether it is a pure EPC order or a turnkey order, whatever the costs which are associated for the execution of the entire project, we calculate the cost and convey back to the customer and with our profit margins. So as and when the order is confirmed and firm, we immediately book our raw material component, which are supplied for the execution of solar power. So, we don't see any kind of this kind of situation going forward as well. WAAREE/RTL

Sahil Sheth: Okay. And if I can, what are your views on the 44 gigawatts of projects which are still stranded in the solar space?
Manmohan Sharma: So that is, again, that depend upon the government initiative, I think they should be -- we als

o
expect that those should be completed with the government support.
Moderator: The next question is from the line of Deepak Poddar from Sapphire Capital.
Deepak Poddar: Sir, just wanted to understand something on the industry front. I mean how do you see the supply-demand scenario currently at the solar space? I mean a lot of capacities are getting built up. So, do you see any kind of overcapacity kind of situation in solar? So, I mean, some kind of comment on this would be very helpful.
Manmohan Sharma: Yes, definitely. Because as you -- all of us are aware that the 500 gigawatt renewable target by 2030, we have already crossed 266 gigawatt. And for the current nine months also, we have already installed around 30 gigawatt of order. So, what we were talking about two, three years back, that is this number that -- this could be the number going forward. We have already achieved in nine months itself.
So, looking at the present situation and going forward in this government promotion of this renewable energy, we see that there will be good demand going forward also. And we should be completing this target much earlier than that is also need of the industry actually.
Deepak Poddar: Okay. So, by when you -- I mean, the 500 gigawatt target by 2030, right? So do you expect that this target we can reach -- since we have already reached around 270 gigawatt odd. So, this target can be reached by 2028 or '29 itself?
Manmohan Sharma: Maybe it could be because that is kind of the demand is there because a lot of industries are there, a lot of people need green energy. So, all this factors putting together, it should -- it can be a possibility.
Deepak Poddar: Okay. Understood. And how do you see the -- I mean, what would be the current -- I mean, whole India capacity in the solar space right now?
Manmohan Sharma: Sorry?
Deepak Poddar: The solar industry capacity currently, what would that be? I mean if you have any figure on that.
Manmohan Sharma: So solar in terms of module you're asking or some installation actually?
Deepak Poddar: Installation capacity, I mean, overall.
Manmohan Sharma: Total overall...
Deepak Poddar: Yes. Both module and capacity, I mean, installation.
Manmohan Sharma: So total installed capacity of the solar as of now is around 136 gigawatt actually.

Deepak Poddar: And per annum, what would be India's per annum as such?
Manmohan Sharma: Per annum is same only. Like what we did 30 to 40 gigawatts should be the per annum.
Deepak Poddar: Okay. Understood. Fair point. And in terms of execution, I mean, we have around 3 gigawatts of unexecuted order book, right? So, anything on the execution front? I mean this year and next year, what's our execution target out of this total 3 gigawatt order book.
Moderator: Sorry to interrupt Deepak. Please rejoin the queue for more questions. The next question is from the line of Shrenik Mehta from IndoAlps Wealth.
Shrenik Mehta: I wanted to ask about a little bit of a longer-term vision, say, for next two, three years. You are changing your business model in a significant manner. You're bringing in IPP, you're bringing in many other lines of businesses where possibly the model will be different. It won't be the same asset-light model.
So how do you see the business evolving over the next two, three years? Which business will take up what kind of share? A little bit of color on this will be really helpful.
Manmohan Sharma: So out of the entire revenue, if you see that my revenue is majority was coming is maybe more than 95% is coming out of the EPC. And we have another two interesting revenue stream that is O&M, whatever project we have completed, we are doing O&M also and IPP, this power is produced at our own generation solar. So, this will continue -- actually going forward also, we will be more in the EPC

, maybe this solar EPC plus BESS EPC. And whatever the cash we conserve, that we are adding as the IPP. So, this will give a continuous revenue stream for this company.
Shrenik Mehta: Okay. So whatever cash you're generating, you will pour it into the IPP project so that you can have a longer-term revenue stream coming out of it? So, it will still be a small proportion of your business even 2, 3 years down the line?
Manmohan Sharma: Business will expand, like you have seen from the past few years that our top line has grown very significantly. We have already achieved INR1,597 crores was my revenue for March 2025.
We have already achieved revenue of more than INR2,200 crores. So, this pace will continue.
And over and above what I mentioned is like IPP and this O&M business, that will also going to grow going forward.
Moderator: The next question is from the line of Udit Sehgal from PinPoint X Capital.
Udit Sehgal: Sir, I wanted to know about the pace of tendering activities in the solar EPC space. There has been talk that there is a lack of transmission capacity. So, the tendering activity may go down. I

mean, how do you see the pipeline and how do you see things moving ahead?
Manmohan Sharma: So, with the current order book unexecuted, we have a pipeline -- order pipeline of around 29 gigawatts. And the tendering also is -- at any point of time, the tender business is around 5 to 6 gigawatt. Live tenders are coming up -- is going on. Apart from that, this domestic, there is an inquiry or order pipeline from the international space as well. WAAREE/RTL

Udit Sehgal: Okay. So as such, you don't see any slowdown happening. And how BESS -- about the BESS, sir, what is our target? And like what is the kind of tenders happening. What is the quantum? And what would be the government's target for installation for the coming year?
Manmohan Sharma: So, BESS also is one of the requirement to have a continuous power in the peak time, there is night. And to support the grid stability also, this is one of the requirements. So, we are getting a lot of inquiries for 1 hour or 2-hour BESS supply along with the solar. So, this -- I think this will be a compliance, needed requirement going forward to have the BESS also along with the solar.
Udit Sehgal: And we see, sir, a lot of -- I mean, on the BESS and both on the solar EPC side that the rates keep going down with each and every tender. Are you facing any such compression in margins? Or I mean, is that in line with the fall in cell prices or other raw materials?
Manmohan Sharma: No, this cost optimization or all this will continue because of the competition, it will keep on continuing a regular phenomenon. So -- but as of now, we are not seeing once it is awarded by -- this order is awarded to somebody, then the EPC work will come into the picture. So, once it is firmed as an order, we'll get the EPC work. So, we don't see any kind of pressure on this.
Moderator: The next question is from the line of Sarang Joglekar from Vimana Capital.
Sarang Joglekar: So, on the competitive intensity, the current pipeline that you have, first of all, can you give a split of how much is from the government versus private? And secondly, has the -- because I've been hearing from the competitors that the margin -- I mean there have been a lot of new players coming in participating in the tenders. So, does that threaten your margin -- maintaining the margins in future?
Manmohan Sharma: No. See, as far as my current order book is concerned, we have around megawatt term, it is around less than 10% of the total order book in the value, it could be around 20%, 22%. But this is one question you have asked. And as long as the new player is entering, so there will be always competition in the industry. So, because of our execution capability, timely delivering of

the
project, this will be edge on us to get orders actually.
Sarang Joglekar: Got it. And this split between government versus private in your pipeline, can you give that?
Manmohan Sharma: Yes, it is around -- in capacity-wise, less than 10%. The value term, it could be around 20%, 22%.
Sarang Joglekar: Understood. Got it. On the module prices, I just wanted to understand because I think a good portion of your order book is including module supply, right? So, what are the -- how are the module prices trending both on the DCR as well as non-DCR?
Manmohan Sharma: No. As far as this -- our order book is concerned, actually, whenever we are getting any kind of order with the turnkey where module is also in our scope, based on the prevailing price, we calculate our cost, et cetera. And once the order is firmed, we just place the order so that there should not be any effect of any price variation upward, et cetera, on our financials. So that is what we are doing actually. WAAREE/RTL

Moderator: The next question is from the line of Surya Narayan Nayak from Sunidhi Securities.
Surya Narayan Nayak: One is that you have been telling that when you get the BESS orders, so you are booking the materials with the Chinese vendors probably. So just to understand because here, the order execution takes nearly about close to 18 months to 24 months, whereas when you order the materials from the Chinese vendors, it could be -- you could be factoring the prevailing prices plus some margin you could be accounting for.
So, in case the prices keeps on rising over the period of course of, let's say, 18 months is too big. So -- but I hope that the Chinese vendor would not be able to give you assurance beyond 6 months or so. So then how are you just accounting the price variation clause in the tenders because there is -- I understood from certain clients that certain competitors that there is no price variation clause in the BESS orders. So that is number one question.
Manmohan Sharma: So just to clarify that our -- most of the -- almost all the supplies are domestic only. We are not procuring anything directly from China, what you have said.
Surya Narayan Nayak: I mean BESS cell is not manufactured in India. So obviously, you would be requiring I'm saying

lithium ion cells.
Manmohan Sharma: No, no. Actually, this is not in our scope actually. Whenever we are doing the EPC work of the solar power project. So, either the module is procured through us, or module is supplied by the respective customer for us to execute the project. So, there is no sale kind of effect in our balance sheet.
Surya Narayan Nayak: So, you won't own any risk of rise in the prices because on the raw material front?
Manmohan Sharma: No, no. That is not in our part. Actually, most of the components, which are required for generation, maybe transformer, cable, et cetera, there are domestically available. Apart from that, there is a module, which could be procured by the customer directly or if it is through us, then what I said previously that stands.
Surya Narayan Nayak: Okay. And secondly, Hitherto, you are -- I mean, the industry was seeing that major orders were pure solar without any BESS. Now BESS pairing is the norm. BESS pairing with 1 to 2 hours storage facilities is a norm to avoid the curtailments and all. And so, then what is -- what will be your course of action? Because what I understand is that because of the recent Chinese actions of rolling out their export subsidies on the solar cells -- sorry, on the BESS cell, lithium ion cells, the prices of cells are rising.
Then obviously, it would put some pressure on the module side because ultimately, as a package, model plus BESS, you will have to offer. So, what would be the cost going forward, I mean, the tangent of the progression of the cost with the non-DCR sce

nario and with DCR scenario?
Manmohan Sharma: That's all right. But as far as we, as an EPC player is concerned, is good that we get some of this compulsory 1 hour or 2 hour batteries should be there. So, we also get the EPC work out of that.
As far as all procurements are concerned, either is the scope of the customer and/or it can be

through us. If it is through us, then we'll do our own calculation and convey with our profit margin to the customers. So that is how we operate.
Surya Narayan Nayak: Okay. And sir, going forward, with the 500 gigawatt of progression, what is that 2030, 2032 the government has said, so your component of government is very less. You said around 20%, if I heard right. So, going forward, how much will be the utility solar from the government side or semi-government side, like NTPC or NLC who have lined off? And what will be the private portion you are envisaging?
Manmohan Sharma: So, if you say the government portion also, there are around 5 to 6 gigawatt continuous live projects are there. So, if the tenders which suits our profitability or costing , then only we participate. Otherwise, we'll leave that particular thing. So, this will keep on happening, whether the tenders with the BESS or without BESS, this will be the -- we will going to participate and win if suits our profit and loss.
Surya Narayan Nayak: Because your competitors who are majorly participating in government tenders or, let's say, PSU tenders, their margin is nearly 500 to 600 bps lower?
Manmohan Sharma: So, as I said that we only participate when it suits our risk reward materials. The tender is not suitable as per our guidelines, then we don't participate in that, sir.
Surya Narayan Nayak: So, your threshold margin will be 15% or so minimum?
Manmohan Sharma: We'll try to maintain. That is what we are saying that we'll try to maintain this kind of margin.
Moderator: The next question is from the line of Utsav Adani from Oaklane.
Utsav Adani: Sir, of the 29 gigawatt pipeline that you mentioned, can you help us understand the mix between vanilla solar projects and complex projects? And in case of complex projects, will you be executing wind projects as well or that will be outsourced to a third party?
Manmohan Sharma: No. As of now, we don't have any kind of wind projects that is to be executed. And we have -- like we are pure EPC projects is also there then pure this turnkey contracts are there where module is in scope. Both type of orders are there as of now.
Utsav Adani: Sir, that's part of the current order book. I'm asking for the pipeline, the 29 gigawatt pipeline that you mentioned.
Manmohan Sharma: Yes, pipeline has like -- it includes BESS supplies also, BESS, this module supply also. Various type of inquiries are there actually depend on the private sector, both type of inquiries from government also, they are compulsory adding BESS as well. So, it's a mix actually.
Utsav Adani: Right, right. And sir, some time back, we had created a subsidiary to execute small projects, let's say, sub 100-kilowatt projects for rooftop for households as well as small MSME customers.
And also, on the data center side of the business, do we have any key updates on these businesses?

Manmohan Sharma: Small rooftop size project, we actually we have not added any kind of subsidiary. And as far as data center is also concerned, we are getting inquiry about the data center EPC work. But as and when something gets finalized, definitely, we'll announce through exchange and you will get to know, sir.
Moderator: The next question is from the line of Namril Shah from ValueQuest Investment Advisors.
Namril Shah: My question is with respect to the newer foray into

the IPP business. We've announced 120 megawatts of IPP projects. Just wanted some more economic details on it as to what capex do we think that would go into installation of this IPP project, what would be the budgeted IRRs? What are the budgeted IRRs if we have the PPA in place? And are we well funded outside of the unencumbered cash balances to fund this IPP project? That is my first question?
Manmohan Sharma: So, we have just recently said that 120 megawatt of this project. So that will add in this next financial year. Roughly, you know that this -- all projects are in ranges between INR3.5 crores per megawatt based on the where the project is, et cetera. So -- and as far as the fine details with respect to the -- all fine details which you asked, definitely, we cannot share immediately instantly on the call. But whatever is suiting our requirement and with the available cash flow, if required, we need to raise term loan, et cetera, that we'll see all kind of financing we'll see going forward and update you, sir.
Namril Shah: Sure. Okay. And second question is with respect to the working capital. Currently, if you could just briefly explain what is the working capital cycle we had, I think Q2 was INR600 crores of receivables. Where do we stand on that front, just so that we could understand the working capital cycle better?
Manmohan Sharma: So, working capital also, just to tell you that as of now, we have not availed any kind of fund-based working capital from the banks. So that gives you some sense on this. And we are operating with a non-fund-based limit. So that is the -- like we are not using any kind of fund-based limit that will give you a sense of the operating cycle of this company. So mostly, our receivables are in line with our expectations. We are getting money from our receivables also. And maybe using this credit period, et cetera, we are operating this company.
Namril Shah: Sure. And just one last question.
Moderator: Sorry to interrupt, Mr. Shah. Please rejoin the queue for more questions.
Namril Shah: Sure. Okay.
Moderator: The next question is from the line of Yash Jhurani from Qode Advisors.
Yash Jhurani: So basically, I wanted to know something, sir, could you comment on the order, say, the order or the award velocity, like the time from the L1 to the NTP like in the last 1 quarter? And like is there any slowdown driven by the module price expectations or any policy change or like on ground readiness?

Manmohan Sharma: No, we have not really have this or faced this slowdown. We have not really faced this kind of situation. We have not sensed this kind of slowdown, et cetera. But typically, it takes time from when we start discussion to the like NTP stage. So, it takes definitely 4 to 6 months to get at this stage.
Yash Jhurani: Okay. And also, I wanted to know one more thing. So, within the order book currently, what is the proportion, say, of module included turnkey EPC versus any, say, BOS only or a service-only scope? And like if there is a module that is included, like you said, they are either procured by the customer or they give it directly. So, like what is the share if it is like price or contracted, like if you could give me something of that sort?
Manmohan Sharma: So, my order book includes this module also. So, majority of the order is pure EPC, if I would say in that sense. So, majority of order is pure EPC, but there are certain orders which includes modules also. So, both type of order is there in my book .
Yash Jhurani: Understood. So, any idea if I could say how much of orders...
Moderator: Sorry to interrupt Yash. Please rejoin the queue for more questions.
Yash Jhurani: Okay, sure.
Moderator: The next question is from the line of Raman KV from Sequent Investments.
Raman KV: Sir, I just have two questions. One, I just w

ant to understand the revenue split for the 9 months between EPC, IPP and O&M?
Manmohan Sharma: Okay. So, the revenue is -- if you see my total 9 months is INR2,229 crores, majority of is coming from the EPC, maybe in percentage terms, if you see around 97% to 98% is coming out of these two in this EPC.
Raman KV: So, 97% of your revenue comes from EPC and the remaining 3% comes from O&M and IPP, if

my understanding is correct?
Manmohan Sharma: IPP and O&M, 2% to 3% is coming from that segment.
Raman KV: Sure. I just want to understand if that's the case, usually EPC margins are around 10%, if my understanding is right. So how are we able to do around 19% margin in the -- despite the majority of the revenue is from EPC -- because my understanding is 10% is the margin for EPC of solar projects and 20% or more than 20% margin you get from O&M of this project. So that's -- I just want to understand how are we able to do like 2x the normal industry average margins?
Manmohan Sharma: So, margin -- majority of the margin is coming from the EPC segment only. That is all because of like we are executing large-scale projects in different geography within the time -- completion time, budgetary and monitoring control and financial discipline. These are the few key parameters actually on which we operate. And that is all -- we are actually able to capitalize all these areas and translate into margin improvement.

Raman KV: Understood. So, there is nothing -- apart from that, there is -- it's just a follow-up -- it's just a follow-up?
Manmohan Sharma: Yes, continue, please.
Raman KV: So apart from this execution part of it, we -- there is nothing -- how do I say? There is nothing else which makes the margin uptick so high, if my understanding is right?
Manmohan Sharma: So, all that purely -- is coming from the EPC. And what I mentioned is a small portion that is coming from the IPP and O&M.
Moderator: The next question is from the line of Naman Maheshwari from Brescon.
Naman Maheshwari: Just quickly, good set of numbers as always, but I wanted to understand more on the growth strategy slide that you have put in place, right? In the renewables, you have said in the storage, I wanted to understand further what is the demand pipeline looking like across BESS and BSP where we are planning to expand. Secondly, what is the strategy in bidding for these areas? And what is our edge that remains in these areas? So just three short points
Manmohan Sharma: Yes. So along with my existing -- this EPC revenue, we are into the BESS -- we are exploring all kind of BESS EPC opportunities. Correct. So, like as I mentioned earlier, there is a requirement to add BESS along with the existing solar power plant with 1 hour, 2-hour capacity, et cetera. So that will contribute to expand our operation into BESS EPC space as well. And with the existing order pipeline also, there is a lot of inquiry about including BESS into the solar power projects.
Naman Maheshwari: Sorry, just a small follow-on. So, does that 2.92 gigawatts of order book already includes certain BESS projects in it? And if yes, could you just highlight what percentage of the book would be BESS backed ?
Manmohan Sharma: No. See, this 2.9 gigawatts, which I mentioned is only purely of EPC and there is a small order, which we are executing maybe 45 megawatt hours. So that is also we are executing which of BESS.
Moderator: Thank you. The next question is from the line of Jigar an Individual Investor. Please go ahead.
Jigar: Good afternoon and thank you for the opportunity. Congratulations to the team for the fantastic results and wishing you all the best to continue great execution. My question is that considering more and more projects are now moving towards fixed load dispatches instead of stand-alone solar or may

be wind, is our company at a disadvantage in getting the business growth because we do not have a significant foothold in either BESS or pump storage or green hydrogen. We have not won any significant orders of the large orders which have been given in this hybrid renewable space?
Manmohan Sharma: So, we are actively looking and discussing with our customer for the BESS EPC work. So just with the existing solar power project or maybe upcoming solar power project, the customers

intended to install BESS project -- BESS also. So, we are getting good amount of inquiry so that maybe sooner or later, it will convert into the firm order going forward.
Jigar: But solar EPC, I think we would have been amongst the leaders, but hybrid projects, we are not among the top two, three. So, like...
Manmohan Sharma: We have our execution capability, and the team is there to execute. So that will also be there in next few quarters, maybe a year.
Jigar: Right. And just one small thing. A couple of years back, we announced a tie-up with 5B Maverick and any further development or any kind of market for that?

Manmohan Sharma: No, there is no significant development as of now in that.
Moderator: The next question is from the line of Pawan Kumar from Shade Capital.
Pawan Kumar: Sir, this question is regarding the IPP assets, like you already commissioned around 54 megawatts and looking for to 27 megawatts. Can you give some sense of the timeline of commissioning at what stage these are -- which are to be commissioned?
Manmohan Sharma: So, this -- some of them will get added during March and some of them are planned for the next financial year.
Pawan Kumar: I mean like the current orders we have or like it will be executed within 1 year, right?
Manmohan Sharma: Yes, from 12 to 15 months.
Pawan Kumar: Okay. And sir, any sense of what sort of IRR we are generating, maybe base level IRR, which we are targeting on the...
Manmohan Sharma: Fine detail is not available with me as of now, but we are -- whatever this suiting our -- this revenue stream plus overall the company, we are exiting only those projects.
Moderator: The next question is from the line of Anushka Vora from Vimana Capital.
Anushka Vora: Congratulations on a great set of numbers. So, I have a couple of questions. One is the current order book of 2.9 gigawatts, what is the execution timeline? And the second question is the pipeline that you said of around 29 gigawatts, what would be your hit rate? Generally, what percent of these orders do you expect to win from that?
Manmohan Sharma: So, execution timeline for the existing 2.9 gigawatt is around 12 to 15 months actually. So, this will get executed in the next few quarters. And the pipeline which we are following is around 29 gigawatts. Definitely, we are in discussion with our customers, and we'll try to get some of them into a firm order in next few quarters.
Anushka Vora: Okay. And this 2.9 gigawatt order book that you have, how much of it is private versus PSU?

Manmohan Sharma: Yes. In terms of megawatt size around less than 10% government and value term is around 20%, 22%. So that is what it is as of now.
Moderator: The next question is from the line of Paras Kulkarni from Ignite Capital.
Paras Kulkarni: Yes, I have question regarding the realization on a per megawatt basis. So as of first quarter yes, I guess whether realization per megawatt have increased as compared to 2Q. So, what is primary reason for that and out of the unexecuted order book do we see similar kind of a realization on a per megawatt basis?
Manmohan Sharma: Correct. So, Paras, in our order book actually we have pure EPC orders or maybe orders along with the model that is tur

nkey order. So that keep on adding our order book and that keep on changing over a period of time. And during the quarter, whenever we are coming for the result, certain orders get executed. So, this will remain as it is because some of them are turnkey orders, some of them the pure EPC orders, and the combining coming to you. So, it will keep on changing.
Paras Kulkarni: Okay. Secondly is that the execution has gone down in the third quarter as compared to the second quarter, whereas in second quarter on a Q-o-Q basis how do you look at it and lastly where do we see the order book at the year end?
Manmohan Sharma: So, at the year end, like -- it is difficult to give any right answer at this stage because we keep on getting the order. This also like in 2, 3 days also, we have announced certain orders. So, this order received will keep on coming actually. We will keep on doing that and execution both will be a parallel activity.
Paras Kulkarni: Okay. So, you won't be guiding any sustainable run rate?
Moderator: Sorry to interrupt. Please rejoin the queue for follow-up questions.
Paras Kulkarni: Just one last one. So, you won't be guiding any kind of execution sustainable run rate for the coming quarters?
Manmohan Sharma: Execution?
Paras Kulkarni: Execution run rate. I mean, like I said in 3Q, we have had a lesser execution as compared to the second quarter. So, any sustainable execution?
Manmohan Sharma: Yes, yes. So, there are -- these are the projects are spread over various geographies in various states. So, the execution will keep on happening. And whenever there is order there may be some progress in that particular order in that particular state, et cetera. So, this will be a continuous feature. We'll be executing orders throughout the year.
Moderator: The next question is from the line of Raman KV from Sequent Investments.
Raman KV: Yes. I just have a follow-up. So, during the quarter, I have noticed two things. The execution of order book has slowed down when we compare it to Q2 and also the order inflow has slowed down. Is there a particular reason?

Manmohan Sharma: No, no. Actually, if you see that over a period of 9 months, we have got more or less the same amount of order which we have executed. So, it is not like that there is any kind of slowdown. There may be sometimes you may get some more orders, maybe some quarter you may get less order also. So, if you observe closely that whatever order book we had during the 9 months, whatever execution we had, that amount of order we have already added in our order book.
Raman KV: And with respect to the bid pipeline, how much are you -- will you able to capitalize over the next -- by the end of this financial year? Like I just want to understand going forward, the revenue visibility for the company?
Manmohan Sharma: Yes. So, from the various type of order pipeline around 29 gigawatts, which includes government tenders, private, all kind of order which we are following. So, it's difficult to give any kind of number that will be added in the next quarter or like this. Maybe -- but we are hopeful that out of this entire pipeline we should be getting good amount of order going forward as well to maintain our order book.
Raman KV: And also, with respect to the EP, the revenue split, going forward, can we expect the O&M and IPP share to increase further from current 2%, 3% or...
Manmohan Sharma: See, the 2 segments that is O&M and IPP, they have the fixed contract and fixed amount of this project in both the case. as my EPC turnover goes, this percentage will come down in any case, even though I will increase it further. But in the percentage term, if you see, it may come down also because if my EPC revenue goes up significantly, then this will also grow at a certain pace. So that is difficult to calc

ulate in this fashion.
Moderator: The next question is from the line of Saurabh Banik from Divas Consultants.
Saurabh Banik: So, sir, I just want to ask you one question regarding the EBITDA margins and net profit margin. So, both have contracted in this quarter as well. So, if you just put a light on it, so what do you expect for the next quarter that remains for the financial year? What to be that EBITDA margins and PAT margin?
Manmohan Sharma: So, if you see for the overall period of 9 months, it has improved by almost 300 basis points. So, from 16.46%, now we are 19.48%. For the quarter, there is a slight dip in this margin. But what we are saying that we'll try to maintain EBITDA margin in the range of around 15% going forward as well. So, from this overall 9-month point of view, we have improved significantly in terms of like in absolute number also, we have almost doubled from last 9 months. And in the profitability also, we have done 138.92% over the period of 9 months.
Saurabh Banik: Sir, my another question is on the BESS sector that you are going into. So how for the next few years that you look for this sector and how this will actually impact or effect in our revenue front, if you just put a guideline for next 2 to 3 years?
Manmohan Sharma: So, this BESS is also -- like I mentioned in various previous question that this is also going to grow because you need battery storage for your solar power project. So, this -- like we are getting a lot of inquiry for 1 hour, 2-hour BESS project along with the solar project. So, in all terms, we WAAREE/RTL

are going to get this EPC opportunity also. Maybe there is an opportunity to have a turnkey order of BESS as well in our portfolio.
Moderator: The next question is from the line of Hardik Sharda from Mavira AMC.
Hardik Sharda: I just wanted to understand the rationale behind entering into this segment because since recent developments in North due to the fog, the availability of the sun time has reduced, which could eventually hit the revenues and margins. So, are we well protected? And what is the scope for IPP Waaree RTL?
Manmohan Sharma: The Waaree RTL IPP business, as I mentioned that it will keep on adding this power project based on the requirement and based on the financials of the company. So that will keep on adding. So, what was the earlier question you asked?
Hardik Sharda: No, I just wanted to understand the rationale and the scope of the IPP segment. So, I think you just answered that. So, it will not affect the margins of the business because although it is not contributing too much to the business. But in the future, how is it planned for Waaree?
Manmohan Sharma: No. See, it is -- though it is as far as the total top line is concerned, contribution maybe relatively less in percentage but in absolute term, whatever I am adding to the IPP business, it is getting into more profitable and giving a revenue stream for the company for next 20 years, 25 years. So, these kinds of the things we are doing. Apart from that, there is O&M also. So whatever projects we are completing, we are doing the O&M. So that is also a continuous stream for this company.
Hardik Sharda: Okay, sir. Thank you very much.

Moderator: Thank you. As there are no further questions, I would now like to hand the conference over to Ms. Mamta Nehra for closing comments. Thank you and over to you, ma'am.
Mamta Nehra: Thank you. I would like to thank the management for taking the time out for this conference call today. And also, thanks to all the participants for attending. If you have any queries, feel free to contact us. We are MUFG Intime India Private Limited, Investor Relations Advisor for Waaree Renewable Technologies Limited. Thank you. Thank you so much.
Moderator: Thank you. On behalf of Waaree Renewable Technologies Limited, th

at concludes this
conference. Thank you all for joining us, and you may now disconnect your lines. WAAREE/RTL

Sub.: Transcript of Investors/Analyst Earnings Conference Call held on April 17, 2026.

Dear Sir/Madam

Further to our communication dated April 14, 2026, and April 17, 2026, please find enclosed the transcript of the Earning Conference Call held on Friday, April 17, 2026, at 04:00 p.m. to discuss the Audited Financial Results for the quarter and financial year ended March 31, 2026.

This transcript shall also be available on the website of the Company at www.waareertl.com.

We request you to take the same on your record.

Thanking you,

Yours faithfully,

For Waaree Renewable Technologies Limited

"Waaree Renewable Technologies Limited
Q4 & FY '26 Earnings Conference Call"
April 17, 2026

MANAGEMENT : MR. HITESH MEHTA – WHOLE-TIME DIRECTOR –
WAAREE RENEWABLE TECHNOLOGIES LIMITED
M R. MANMOHAN SHARMA – CHIEF FINANCIAL
OFFICER – WAAREE RENEWABLE TECHNOLOGIES
LIMITED
M R. NEERAJ VINAYAK – VICE PRESIDENT , INVESTOR
RELATIONS – WAAREE RENEWABLE TECHNOLOGIES

LIMITED
M R. ROHIT WADE – GENERAL MANAGER – INVESTOR RELATIONS – WAAREE RENEWABLE TECHNOLOGIES LIMITED

MODERATOR : MR. NIKUNJ JAIN – MUFG INTIME INDIA PRIVATE LIMITED

Moderator: Ladies and gentlemen, good day and welcome to Waaree Renewable Technologies Limited Q4 and FY '26 Earnings Conference Call hosted by MUFG Intime India Private Limited. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Nikunj Jain from MUFG Intime India Private Limited. Thank you and over to you, sir.
Nikunj Jain: Thank you. Good afternoon, ladies and gentlemen. I welcome you all to the Q4 and FY '26 Earnings Conference Call of Waaree Renewable Technologies Limited. Today on the call, we have from the management, Mr. Hitesh Mehta, Whole-Time Director; Mr. Manmohan Sharma, Chief Financial Officer; Mr. Neeraj Vinayak, Vice President, Investor Relations; and Mr. Rohit Wade, General Manager, Investor Relations.
Before we proceed with this call, I would like to mention that some of the statements made in today's call may be forward-looking in nature and may involve risks and uncertainties. For more details, kindly refer to the investor presentation and other filings that can be found on the company's website.
Without further ado, I would like to hand over the call to Mr. Manmohan Sharma for his opening remarks and then we will open the floor for Q&A. Thank you and over to you, sir.
Manmohan Sharma: Thank you, Nikunj. Good afternoon, everyone. And I would like to extend a warm welcome to all participants for joining the earnings conference call of Waaree Renewable Technologies Limited for discussing our business performance for Q4 and FY '2026. I hope you all had an opportunity to review our financial results and investor presentation, which have been made available on the Stock Exchanges and are uploaded on company's website.
I would like to commence by showing my sincere gratitude to all our stakeholders for their unwavering trust and support. Your continued confidence in our vision and execution has played an important role in shaping our journey so far. Today on the call, I have along with me the key members of our management team.
Starting with our financial results for the quarter, our revenue from operations stood at INR 1,102.40 crores, reflecting a growth of 131.31% compared to the same quarter of last year. EBITDA comes at INR 206.82 crores with a margin of 18.76%. PAT for the quarter reached INR155.72 crores, marking a year-on-year increase of 66.08%.
For the financial year 2026, we reported revenue of INR3,331.42 crores, a growth of 108.51% over FY2025. EBITDA stood at INR641.10 crores, up 106.21% year-on-year basis. While PAT reached INR478.65 crores, showing growth of 109.09% on year-on-year basis. These results highlight our strong execution capability and the operating leverage that we continue to build across our business.

From an operational standpoint, FY '2026 was a year marked by scale and steady execution. During FY '2026, we have successfully executed 2,727 megawatt peak of projects, which is highest for any year. This reflects the depth of our execution capability. For the year-end our unexecuted order book stood at 2.83 gigawatt peak, providing us with strong visibility and continuity of business going forward. At the same time, our O&M portfolio stood at 1.18 gigawatt peak, further strengthening our base of recurring revenue and reinforcing our role as a reliable long-term partner for our customers. Overall, this performance demonstrates our ability to grow responsibly while maintaining consistency and reliability across project execution.
Let me now turn

to the broader industry environment where momentum across India's renewable energy sector remains strong. The country's clean energy transition continues to accelerate with total installed renewable capacity now crossing 274 gigawatt and solar alone contributing over 150 gigawatt as of March 2026.

The growth is due to rapid expansion with contribution from ground-mounted solar plants of 114.87 gigawatt, grid-connected solar rooftop of 25.73 gigawatt and other solar segments contributing to 9.66 gigawatt. This shift demonstrates the growing importance of solar within India's energy ecosystem. In FY '2026, over 44 gigawatt of solar capacity was added, representing a substantial increase from 23.83 gigawatt in the previous year. In FY '2026, solar emerged as the leading driver of capacity additions, accounting for approximately 82% of total renewable installations, reinforcing its position as the primary growth driver within the sector.
India's renewable energy growth continues to be supported by stable policy framework such as the National Solar Mission, PM KUSUM and PM Surya Ghar Yojana alongside expanding demand across utility scale, rooftop and decentralized segment, which is improving visibility for EPC players. Additionally, battery energy storage system BESS are now emerging as a key enabler for grid stability with increasing inclusion of renewable tenders opening up new opportunity within the EPC ecosystem.
In this environment, we are well positioned with a strong order book, a healthy O&M portfolio, and expanding into BESS EPC while maintaining our focus on execution discipline and operational efficiency. We are encouraged by the progress made in FY '2026 and are hopeful about the opportunities ahead. Waaree Renewable Technologies is committed to driving sustainable growth and creating lasting value for all stakeholders.
Thank you once again for your continued support. We now open the floor for any questions you may have.
Moderator: Thank you so much, sir. Ladies and gentlemen, we will now begin the question-and-answer session. Our first question comes from the line of Paras Kulkarni from Ignite Capital. Please go ahead. Paras, you may please proceed ahead with your question. As there's no response from Paras, we'll move forward to the next participant. Our next question comes from the line of Sahil Sheth from Anand Rathi Institutional Equities. Please go ahead.
Sahil Sheth: Hi, sir. Congratulations on a great set of numbers. So, my first question is, if you look at the quarterly execution number and revenue numbers, the implied realization is quite high, coming

to approx INR20 million per megawatt. Is this due to any different types of project execution or will this be a one-time event or will it be recurring in nature?
Manmohan Sharma: Thank you. So, this variation which you have noticed depend upon which kind of orders we are executing for a particular quarter. So, as you are aware, we are taking all type of orders, with module, without module, pure EPC orders. So, for the particular quarter, which is this current quarter, some of the orders are executed with module. So therefore, you are getting this kind of amount.
Sahil Sheth: What is the mix between the orders where module procurement was under our scope and orders where it was under the consumer scope?
Manmohan Sharma: So, for this quarter actually, around, if I say any rough idea is around 50% of the execution revenue numbers are coming from with module. So therefore, there is a realization which you have noticed is coming as compared to other quarters.
Sahil Sheth: Okay. And my second question would be there has been a slowdown in tendering activity if you compare FY25 with FY26. what kind of impact could we see on new orders coming in for Waaree Renewable?
Manmohan Sharma: Yeah. So as far as the tender business is concern

ed, we are actively participating or looking all
kind of opportunity in the tender business. A lot of tenders are coming with the BESS as well. So, the tenders are there. But as Waaree, as a company, we are only participating when it is suitable to our margin or suitable to risk reward metrics, which we prefer, that if it is suiting our requirement and the margin, then only we are participating. But as far as this order pipeline is concerned, there is a good amount of pipeline in the tender business as well.
Sahil Sheth: Okay sir. Thank you.
Moderator: Thank you. Our next question comes from the line of Ishita Lodha from SVAN Investments. Please go ahead.
Ishita Lodha: Hi, sir. Thank you for the opportunity. The order book has declined from 3.2 gigawatt to 2.8 gigawatt on a Y-o-Y basis as March versus March. So why has this happened and how do you see the order inflow outlook going forward?
Manmohan Sharma: So, order inflow going forward, if you see that we have existing order book of 2.8 gigawatt. Apart from that, we are also chasing the order pipeline of around 36 gigawatt, which is around 23 gigawatt is from domestic and maybe another 12 gigawatt from the international market. So, this scenario will keep on happening, actually. We are getting to get orders.
And in spite of our execution and achieving revenue number of more than INR3,300 crores, in spite of that, we are able to maintain our order book. So whatever orders we are executing, more or less, we are getting the similar kind of order in the current financial year.

Ishita Lodha: Like previous financial year order inflow was 2.4 gigawatt and this time it was 2.3 gigawatt, slight decrease, 5%. But is this because of competition or like why this happened?

Manmohan Sharma: But as far as the India is concerned, we have done good amount of installation of solar project and...
Ishita Lodha: Execution is strong. I'm talking about order inflows, sir.
Manmohan Sharma: Yeah, order inflows also. As I mentioned that we are discussing bilaterally the order pipeline which I mentioned to you and probably some of them will get converted in coming quarters.
Ishita Lodha: Okay. Thank you, sir.
Moderator: Thank you. Our next question comes from the line of Balasubramanian from Arihant Capital. Please go ahead.
Balasubramanian: Good evening, sir. Thank you so much for the opportunity. Sir, I am trying to understand the margins perspective. Whether the new entrants are bidding aggressively for the project side?
Whether if you look at every Q4, we have a 25% plus kind of margins, but right now we end up nearly 19% to 20% kind of margins.
So, I am trying to understand this is a new normal margin band 18% to 20% for the blended portfolio or we can go back to original level of 25% kind of level in every Q4 levels? If you could help us to understand on the margin's levels. Is it shrinking because of the competitions or is there any technological changes also having impact or is there any fixed price impact also there?
Manmohan Sharma: So as far as this, we have all kind of fixed price contract. That is number one. As far as the margin is concerned, that margin for a particular quarter depend upon which customer's order I am executing in any particular quarter. As far as if you will notice that for the entire financial year, we are able to maintain EBITDA margin more than 19.24%.
So, if you will see on a year-on-year basis also, we have more or less, we have able to achieve similar kind of margin. So maybe in a particular quarter, you may see some slightly different, but overall basis from last FY25 as well as FY26 also, we are more than 19%.
Balasubramanian: Okay, sir. So, these margins will continue in next 2 to 3 years?
Manmohan Sharma: So, as we are mentioning that we are trying to keep up with some operational improvements, timely execution and tight b

udgeting control, we have maintained this kind of margin. But always we are mentioning that the EBITDA margin should remain around 15%, but definitely we are delivering on a continuous basis. That is what it is.
Balasubramanian: Okay, sir. Sir, my second question, on the IPP side. Earlier 120 megawatt IPP had announced with the indicative capex of INR3.5 crores per megawatt, which comes nearly INR420 crores of capex. This will be funded through internal accruals, or we have any debt arrangements.
And secondly, if you could share your view on our IPP asset strategy side. Right now, it's around 54.8 megawatt peak is operational, and we are also setting up additional 227 megawatt peak.
And I'm trying to understand what is the IRR on the IPP side and our regular EPC side?

Manmohan Sharma: Yeah. So as of now we have operational 54 megawatt peak of solar power projects that is IPP. And additionally, we are setting up around more than 200 megawatt IPP projects for our own.
So, these projects are necessary as of now it is funded; is under construction, is funded through internal accruals only. So far, we have not tied up any kind of debt for this. We are funding it internally. So that is number one.
And secondly, as you are aware that the company has three revenue streams, that is EPC plus O&M, and third one is IPP. Our strategy is to have a smaller size of project IPP so that we can have continuous revenue for the next financial year, for the next few years.
Balasubramanian: Thank you, sir.
Moderator: Thank you. Our next question comes from the line of Deepak Poddar from Sapphire Capital. Please go ahead.
Deepak Poddar: Yeah, thank you very much for this opportunity, sir. Sir, just wanted to understand, we have an order book of 2.3 gigawatt. So, is it possible to quantify in terms of rupees crores, how much would that worth be and plus the composition with module, without module, only EPC? So, something on those lines would be very helpful.
Manmohan Sharma: Yes. So normally, we don't quantify this thing because even if I tell for this quarter also, it will vary maybe, in the next month itself it could vary because of getting new orders and execution.
So, it is broadly this range in between INR1 crores to INR1.25 crores or INR1.2 crores megawatt.
Deepak Poddar: Okay, INR1 crores to INR1.25 crores per megawatt?
Manmohan Sharma: Yeah. So, it is again I will say the same thing because it will vary. Suppose next time if I get

some with module order, it will vary. And if I get pure EPC or some scope changes, etcetera, it will vary. So, any calculation by this method may not give the correct result for the future.
Deepak Poddar: And how much the composition would be with module, we will have any rough range on that?
Manmohan Sharma: Maybe actually in this around 20% or something like that with module. So, the composition remains that only. In megawatt term utilization.
Deepak Poddar: 20% with module?
Manmohan Sharma: Yeah, with module and maybe.
Deepak Poddar: Yeah, please continue.
Manmohan Sharma: And remaining like megawatt term it could vary between 10% to 15% or maybe 20%. It depends, Deepak, when you are asking the question.
Deepak Poddar: Okay. And so, this quarter, 50% revenue mix was with module. So that we can see as an aberration, right?
Manmohan Sharma: Correct.

Deepak Poddar: Okay. Understood. And I mean in terms of execution, are we seeing any type of slowdown because of any kind of grid infra problem, any kind of delay in construction, transmission line? So how is the execution traction on the ground?
Manmohan Sharma: So, execution is going well, actually. Whenever somebody or developer wanted to have the solar project installation. So, after getting required connectivity, land, etcetera, then only they mostl

y
provide the EPC orders. So, when it comes to us for execution, by that time all the previous points have been cross-verified, checked, then only the contract is awarded. So from our side, once we receive the order, we start executing and deliver as early as possible or within the required time discussion with the customer.
Deepak Poddar: Okay, understood. And I think this year we had an execution of around 2.7 gigawatt, right? So what sort of execution we are looking for this year now, FY27?
Manmohan Sharma: So it depends actually. As of now what the order book which I have is around 2.8 gigawatt. So that we are going to execute in next quarters which we mentioned 12 to 15 months. And moreover, we are going to receive orders in this current financial year. So both put together will get executed during the year and some of them will go to the next quarters also.
Deepak Poddar: Okay. And this 36 gigawatt pipeline, what is the historical hit ratio we have, I mean in terms of conversion?
Manmohan Sharma: So it's difficult to quantify any kind of hit ratio because these are the bilateral discussion with the customers. The domestic pipeline gets closed with the bilateral discussion with the customers. So we have fair amount of chance that we'll be able to convert some of them into the firm order.
Deepak Poddar: Okay, understood. That's it from my side. Very helpful sir. All the very best. Thank you.
Manmohan Sharma: Thank you.
Moderator: Thank you. Our next question come from the line of Sumit Kishore from Axis Capital. Please go ahead.
Sumit Kishore: Good evening and thanks for the opportunity. My first question is 2.8 gigawatt order book, what would be your geographical exposure to Rajasthan and Gujarat on a ballpark basis? That's my first question?
Manmohan Sharma: So geographically, we are operating in almost seven, eight states. That is Rajasthan, Gujarat, MP, Andhra Pradesh and Maharashtra. So geographically, we are spread into four, five major states where our orders we are executing the projects. Most of them are in Rajasthan.
Sumit Kishore: Sure. So I was asking this question because Rajasthan and Gujarat seem to account for almost 65% of the RE potential. So is your order book also more heavier in these two states? Is that a fair understanding?

Manmohan Sharma: Majority of the that in those areas, but other areas also significantly equally significantly like Maharashtra and MP and Andhra is also contributing a great amount of orders. So all states are contributors, but as of now like Rajasthan is heavy weight on this order book.
Sumit Kishore: Heavy weight, okay. The question is CTUIL in a representation in a CERC order dated 10th April was that almost 60 gigawatt of RE projects in Rajasthan are awaiting clarity of coordinates of the associated power substation for RE evacuation. Could this possibly impact the award of new EPC projects because the developers would await clarity of the associated substation before they acquire land and award EPC contracts. So basically your thoughts on this particular issue in one of the largest states in terms of RE potential?
Manmohan Sharma: So as far as these your thoughts are correct, but if you see that somebody want to install, let's

say 500 megawatt or 1 gigawatt, 2 gigawatt project. So it definitely takes a little time, maybe 12 to 15 months to complete from thinking or maybe design prospect to the completion project, 12 to 15 months.
So by that time this backlog will be there. There is an always risk which is taken by the developer when they know that these are the power evacuation and when they are likely to be in place. So similarly, but as far as we as the EPC player are concerned, we have been awarded when the all studies have must have been done from their side. And once it is awarded and timeline is given, we execute within those timelin

es only.
Sumit Kishore: So basically your 2.8 gigawatt order backlog, the portion of which is in India, none of those projects are impacted because the customer does not have clarity on evacuation as of now. That's a fair understanding?
Manmohan Sharma: Yeah, fair understanding. Because our job is to connect to the nearest maybe substation or the line or the station. When our infra is ready actually. So to that extent we have to work it actually.
Sumit Kishore: Excellent. Thank you so much and wish you all the best.
Manmohan Sharma: Thank you.
Moderator: Thank you. Our next question come from the line of Karan Gupta from ACMIL. Please go ahead.
Karan Gupta: Yeah, hi. So my question is related to the margins side as you have said 15% that you are targeting, but right now you are able to deliver more than 15%, 16%, now it's around 19%. So what makes you coming to the point of 15% as a calculated maybe? So what is the situation right now and what will be in future as we set 15%? So you are expecting that in future maybe 1 or 2 years down the line, there will be more aggressive bidding on the same projects and what right now we are getting benefited from?
Manmohan Sharma: The 15% which we are mentioning, so not a calculator or the – yes so the 15% which we are mentioning is a calculation or a guiding number. This is some threshold which we are maintaining. When we are all so when we are calculating our like when we are offering to the customer at backend we do all budgeting, etcetera, all kind of exercise. And this is the what we have maintain that.

So it is not that it will get neutralized at this kind of percentage. Going forward also like whatever order we have executed, the operational efficiency and discipline execution, timely execution, all this process will play and this will keep on improving, maybe going forward also. It is not like that it will get normalized at some point of level.
Karan Gupta: Okay. Second is on the receivable part. I think the most of the receivables that you can see at the consolidated basis came in the second H2. So what is the timeline of getting this, Are you closing less than 6 months or more than?
Manmohan Sharma: No, mostly our most of our receivables are less than 6 months only. And in many of the contracts, we are secured by way of letter of credits also. So that way we are operating.
Karan Gupta: Okay. Because from 500 to now the double, more than doubled?
Manmohan Sharma: Correct. That's right. Because the last quarter, maybe last month that will get accumulated to this number. But all are like many of them are through LCs and we are getting our payments.
Karan Gupta: Okay, okay. So there is no payment stretch from the government side or any of the companies are setting up this?
Manmohan Sharma: Nothing as of now or significant.
Moderator: Our next question come from the line of Mohit Chandnani from Valuewise Capital.
Mohit Chandnani: I wanted to understand BESS on a standalone basis, what is the cost per megawatt for EPC?
Manmohan Sharma: See, it depend upon the scope of the work which is awarded to us in the form of EPC. Because pure EPC, maybe to supply or maybe depend upon the project because each project has different calculation, like how much already existing project or you have set up there altogether new project. So it's difficult to provide any kind of number unless we have some clarity on the scope of the work with us.
Mohit Chandnani: Okay. So let's assume a 100 megawatt plant with some ideal ratio of BESS. So what is the incremental cost per megawatt?
Manmohan Sharma: For our own this EPC work, maybe around if I guess, it could be around between 0.5 to between 0.5 to 0.75 per megawatt. But again I…
Mohit Chandnani: No sir, please continue.
Manmohan Sharma: So again that again depend upon because every project and site is independent and

where you
want, where you have to connect to the grid or maybe station, that all factors is to be considered while giving any kind of number.
Mohit Chandnani: Okay sir, got it. And what is the breakup of the BESS project in terms of battery cost and other components?

Manmohan Sharma: So actually, as of now we are just thinking as a avenue of like doing BESS as a EPC. But definitely, if somebody wants to install like module which we are doing in our solar projects, if somebody wants module from us, similarly BESS battery also they wanted from us, then definitely we will be able to drive the cost, but these are the specific project related questions.
Mohit Chandnani: Okay. Okay, sir. Understood. And assuming the whole value chain is ordered through you, then what is the per megawatt rough cost?
Manmohan Sharma: That again it's difficult because you are asking project specific questions. So I think it depend upon the size, where you want, what kind of project, it's difficult to answer in this forum.
Moderator: Our next question come from the line of Paras Kulkarni from Ignite Capital.
Paras Kulkarni: So question pertains to your IPP asset. Now if I look at the historical numbers of the company, since it has been a pretty asset light model kind of a thing. So can you please explain the thought process behind opening IPP as a project? And secondly, how do you look at the long-term viability of this and the contribution to revenues going ahead? Do we see that increasing as a major contributor or do we see ourselves as a EPC company going ahead?
Manmohan Sharma: So it will be dominated by the EPC only because we are the EPC company. Apart from that, this IPP whatever asset we have and we are likely to have some more assets that we are building so that it can give regular revenue for this company, maybe another next 20, 25 years. As you rightly said, we are the asset light company and we are not carrying any significant debt in our books as of now for these projects.
Paras Kulkarni: Okay. Okay, understood. So we wouldn't be scaling beyond the planned say 270 megawatt kind of a thing? Is that understanding correct?
Manmohan Sharma: Additionally, which we have announced in various our Board meetings, etcetera. So these are the relatively smaller kind of a project in various sites. So these are the opportunity which we have identified as IPP for this Waaree Renewable company and so that we can have add some more revenue. But in overall revenue stream, the percentage will be very less actually.
Paras Kulkarni: Okay. Okay, understood. And secondly, sir, what I'm understanding is that the industry as a whole is facing problem of acquiring lands for the Waaree Renewable projects for ground mounted solar especially. So how are we as a company dealing with it with respect to our R&D? Are we sort of recommending our customers the rooftop projects or how do we go about it basically?
Manmohan Sharma: So basically, if you see our revenue stream, we are majority with the ground mounted projects only. Rooftop is hardly contributing any revenue in this. So acquisition of land, as you rightly said, it is a challenge. But mostly it is in the scope of developer. So mostly lands are procured and connectivity is seen by the developer and then only the EPC contract is awarded to us.
Paras Kulkarni: Okay. Okay. So you don't see that as a major challenge in growing top line going ahead, right?
Manmohan Sharma: In procurement of land you are asking?

Paras Kulkarni: Yeah. So in case our customers are having a challenge in procurement of land, do you see that as a challenge in incremental order inflows which we would be getting?
Manmohan Sharma: No, no. We are we are getting actually if you see the overall country's potential more 44 gigawatt is alr

eady installed. So definitely the pace will continue and of course, every business has a challenge, so but the project will be installed going forward.
Paras Kulkarni: Okay, understood. And secondly, sir, on the cash flow side, I see a slight bit of drop in OCF generation for full year FY26. Could you kindly sort of give me a kind of an outlook as to what has actually happened and historically speaking, we have had a much better cash conversion as compared to FY26. So how do we go back to what we have done historically or whether we would be continuing with this sort of cash conversion?
Manmohan Sharma: So whatever cash which we are generating from the operations, all cash are mostly conserved and like it is going in the like either development of our own IPP projects or maybe like whenever some margin requirement is there with the banks that we are fulfilling out of it. So our target is to conserve cash, put it back into the project so that there will be a revenue out of it.
Paras Kulkarni: Okay. Okay, understood. And lastly, a bookkeeping question, sir. I see in the non-current assets, a very big increase in other financial assets. Could you please tell me what does that pertain to?
Manmohan Sharma: So in other financial assets, balance with government authorities because certain amount of money like GST receivables, etc., those will remain with the government and some is advanced to supplier will be there.
Paras Kulkarni: Okay. Okay. Pretty helpful, sir. All the best for the future quarters.
Moderator: Thank you. Thank you. Our next question comes from the line of Neerav Dalal from MIB

Securities India. Please go ahead.
Neerav Dalal: Yeah. Hello, sir. Thank you for the opportunity. I had a couple of questions on the IPP. So, what would be our current IPP capacity or current IPP revenue at the moment?
Manmohan Sharma: So, we have current around 54 megawatts of IPP assets which are running and generating revenue. The revenue is around INR26 crores for this financial year.
Neerav Dalal: Okay. Okay. So, there is a CWIP also in the balance sheet. So, that would be for the additional capacity that is going to come up?
Manmohan Sharma: Yeah. So, whatever the previous question they asked, the additional IPP project which we are undertaking, on account of that, this is CWIP, sir. So, probably during this current financial year, they will get commission and…
Neerav Dalal: Okay. Okay. So, what would be the capex for the 227.1 megawatt peak? What would be the capex for that project?

Manmohan Sharma: So, yeah. So, as and when we are incurring the cost, we are capitalizing CWIP as of now is we are seeing in the financials. So, as soon as we incur, it will get capitalized during this current financial year.
Neerav Dalal: Yeah. But what is the broad capex that we are looking at for this? So, it will be good for us to build the balance sheet. So, hence, I wanted that number.
Manmohan Sharma: So, capex is, suppose, I will give you the rough number for any kind of solar capacity which you want to install. If you put anything between it, it comes to INR3 crores to INR3.5 crores per megawatt peak.
Neerav Dalal: Per megawatt. Okay. Okay.
Manmohan Sharma: So, but in our case, whatever the cost, etcetera, minimization, whatever we do, based on that, we will plan it. But this number, this broad number I have given you for the installation of solar.
Neerav Dalal: Correct. Correct. And if I were to look at the broad group, the group is talking about power infrastructure assets of about capex of about INR2,250 crores. So, what are our plans on that or is there any clarity in terms of how our IPP assets are going to increase going ahead or what role are we playing in the group capex?
Manmohan Sharma: Yeah. So, group has its own plan because which has been disclosed by the group in various forms, presentation, etcetera. But

as far as the Waaree Renewable Technologies is concerned,
we have what we mentioned to you is the capex as of now.
Neerav Dalal: Okay. So, our capex is outside of whatever the group has announced in terms of the power infrastructure outlay that we are looking at?
Manmohan Sharma: So, when it gets consolidated, so I will not be able to comment actually what figure you saw and asking me the question. But as far as the variable technology is concerned, these are the likely capex going forward immediately.
Neerav Dalal: Okay. Okay. No. So, where I was going to is that whether in the future, the power assets would be housed under technologies or it would be housed under any other company. So, that is where I was leading to, but fine. At the moment, there is no clarity. There is not much clarity on that, right?
Manmohan Sharma: Correct. So, again, I will mention that whatever the capex which is existing by 54 megawatt plus 227 megawatt which we have mentioned and presented, these are the only capex as far as the Waaree Renewable Technologies is concerned. And group has its own plan, initiative, capex, etcetera that you can see, sir, in our group presentation.
Neerav Dalal: No problem. Thank you. Thank you for the opportunity.
Moderator: Thank you. Our next question comes from the line of Ashray Sheth from Ventura Securities Limited. Please go ahead. Sir, can you be a little bit loud, please? Your voice is low.

Ashray Sheth: Can you hear me now? Yes, sir. So, two questions only. So, on the newer ALCM regulations, working on some numbers, current cost per module per watt comes out to be INR14 and it is expected to rise to INR23 per module per watt. So, do you see any impact on the top line or the margins or they are expected to remain intact? And any update on the enforcement pushback if maybe that's possible from 1st June 2026 to later on date?
Manmohan Sharma: Okay. So, as far as the Waaree Renewable Technologies, the module price is concerned, we are getting order, as I mentioned earlier also, maybe with module or maybe without module also. So, and all this, if somebody wants the complete turnkey project from our side, we provide the pricing considering the current prevailing module price. So, for Waaree Renewable Technologies, there is like nothing, even if it goes up also, it is passed through to the customer.
Ashray Sheth: Do you see any impact on the top line if the cost rise significantly higher from current levels?

Manmohan Sharma: The cost, if rises to the current level also, as I mentioned earlier, if you want a turnkey order from Waaree Renewable Technologies along with the module, I will be able to provide the pricing of current prevailing rate of modules and immediately I will procure it from the supplier. So, as far as Waaree Renewable Technologies is concerned, the pricing of varying this module price will not impact everything.

Ashray Sheth: Fair enough, sir. Thank you.

Moderator: Thank you. Our next question comes from the line of Hiten Boricha from Sequent Investments. Please go ahead.

Hiten Boricha: Good evening and thanks for the opportunity, sir. So, my question is on the execution rate. So, in the first half, our execution was roughly of 700 megawatt to 900 megawatt, which has declined to 600 or less than 500 in Q4. So, what kind of execution rate we are expecting, sir?

And second, if you can also guide on the order inflow, sir, because at the current order book at 2,800 megawatts, considering we will be executing the order in next 12 months. So, what kind of growth we are looking? Just to understand the growth side, sir. And also, if I can throw some color why our execution rate has declined in last four quarters? Thank you.

Manmohan Sharma: Yeah. So, as you are aware that we have all variety of order, maybe turnkey or with or without modules, I have repeatedly mentioned that. So, d

epend upon the order in which quarter I am executing which order. If it is a BOS order, maybe with only megawatt is higher but my scope is less. So, it will give you that kind of number. Maybe earlier quarter, I have said the execution is more.

Now, this quarter execution is because of the variety of order which I am executing. And as a Waaree, as it has a capability to execute any kind of like megawatt, it can be any megawatt because we have capability of executing orders in various states, various sites, only the main power and all the sourcing is needed to scale up the operation further.

And as far as the order inflow is concerned, because if you see from the last one year, whatever the amount of orders we have executed, maybe equivalent or same kind of order we have already

received. So, I think the pace will continue going forward because of the renewable push from the government. And recently, we have seen that everybody wanted to have a green energy. So, it will continue, sir.

Hiten Boricha: The reason I am asking this question about order inflow is we currently have an order book of 2,800 megawatt. Assuming we execute around 3,000 megawatts at INR1.2 crore realization per megawatt, we still won't see much growth this year. So, my question comes on that front, sir.

Manmohan Sharma: Yeah. So, this whatever I, this one, maybe the order per megawatt INR1 crore or INR1.2 crores, it depends again. Again, the next month or next quarter, if I get some orders, the ratio will change further, sir. So, but what you rightly said is 2.8 gigawatt the order. Further, as I mentioned that there is a lot of order pipeline which we are changing in the bilateral discussion. So, maybe in the coming quarter, we are likely to receive some order and throughout the year the scenario will continue. So whatever the existing order plus which the orders which you are going to get in current financial year will get executed sir.

Hiten Boricha: Understood, understood. Okay sir. Thank you.

Moderator: Thank you. Our next question come from the line of Harshit Jain from POJC Capital. Please go ahead.

Harshit Jain: Good evening sir and thank you for the opportunity. Sir, I have three questions. Sir, my first question is that, is company currently earning any revenue from battery energy storage systems and data centers? And what is its future guidance for both these segments?

Manmohan Sharma: Can you repeat sir, your question?

Harshit Jain: Sir, my question is that, is company currently earning any revenue from battery energy storage systems and data centers? And what is its future guidance for both these segments?

Manmohan Sharma: So from the current existing revenue is all from EPC, IPP or O&M. So there is no order or revenue from these two segments which you have mentioned. However, we are executing one of the BESS project, relatively smaller size, but we are executing during this quarter or maybe this financial year. So that order will get executed. But if you see that on the going forward also, to have a grid stability, this BESS is necessary.

So, everybody is like we are getting lot of inquiries for the BESS project along with the solar project. So this revenue stream will open up during the current financial year. That is what we are maybe expectations. And with respect to data center, as of now we are working with the various like maybe inquiries etcetera. But as of now there is no immediately firm order which is available to us which we can mention to you sir.

Harshit Jain: And sir, my second question is that the company has achieved a very good revenue growth. Sir, could you help me understand that this year there is significant increase in trade receivables and inventory in the balance sheet. So sir, can you tell is there any new form of working capital or it will normalize in FY27?

Manmohan Sharma: So which I could understood from the flow of your voice, you are asking about the receivables and inventory. So inventory whatever inventory we are procuring, whatever components we are offering, mostly almost all are for the specific project requirements only. So it may be a point of time whenever we are finalizing our financials you can see. But it will get billed subsequently to the customer based on their project requirement.
Harshit Jain: Okay. Thank you, sir.
Moderator: Thank you. Our next question comes from the line of Avnish Tiwari from Vaikarya Change, LLP. Please go ahead.
Avnish Tiwari: Hello, am I audible?
Manmohan Sharma: Yes, you are.
Avnish Tiwari: Hi, this, what is the impact you have seen this oil and gas situation, any raw material inflation or labor because of LPG cylinders, have they stayed back or gone back to their villages or any other impact in terms of your cost or execution timelines? Have you experienced anything because of the shock?
Manmohan Sharma: So, from the current situation, which is prevailing in the world. So, indirectly, everybody is impacted, actually, in one or the other form. But as far as the company is concerned, we are, we have all domestic orders and all domestic supply chains. So we all are forcing from the domestically only. These are available in India, all the components which are required for the construction of solar power projects. So, that way, directly, we are not having any kind of impact. And there is an opportunity for a company like us because everybody wanted to have solar power, that green energy going forward. That is a lesson maybe from this. So, it will be helpful for the company like us.
Avnish Tiwari: Okay. So, you have not experienced any kind of either any components being delayed or any, any sort of raw material inflation which you have to digest rather than passing it on to the projects?
Manmohan Sharma: So, as I mentioned, all are domestically sourcing. So, therefore, immediately not have any effect.
Avnish Tiwari: And if I look at your order flow every quarter, why has it been so weak when that the outlook is so good in the industry? And if you could also articulate on an incremental basis, are your margins in the new orders you are booking, are they better than your existing order book margin or lesser than your existing order book margins?
Manmohan Sharma: So, this order inflow, what you said is, like, in spite of installation, the order will be there. Because when you, for such a large order, actually, because this developer has to put in money for the other activities also, module or maybe for infrastructure creations. So, when all these are considered, and these are the, nowadays, you are seeing that our order book is with, like, maybe megawatt to gigawatt scale of order which we are executing. So, it takes some time with the customers for the negotiation of the order. So, that is how it is working.

Avnish Tiwari: Okay. So, it's not to do with the more number of players in the competitive way, but aggregate basis on your slide, you say ordering has been overall increasing, but the order flow to you is not increasing. So, is it something to do with the market share we have in the new order booking, or is it just that because of these delays and converting these orders to on the ground execution, they're just taking more time at a scale we are doing it right now?
Manmohan Sharma: So maybe, like, what you said is correct. It can contribute, but it is difficult to quantify how much is on each count.
Avnish Tiwari: And the margin wise, incremental margin...
Moderator: I'm sorry to interrupt you, sir, but please rejoin the queue for more questions. Our next question comes from the line of Yogesh from Care Insurance. Please go ahead.
Yogesh: Hello, sir.

So, you mentioned that orders can be based on with or without modules. When an order includes modules, are we restricted (inaudible) to procure them from the parent company, or is it flexibility to procure from third-party vendors?
Manmohan Sharma: So, mostly, if you see that whatever order we are getting is a pure BOS order. If at all, we are getting these orders with the module, etcetera, so immediately, based on the customer requirement, it could be on arms basisfrom the Waaree also, or it could be from the other source also. It depends, actually, on the customer whom we are interacting and how he wants it to be.
Yogesh: Any percentage breakdown in procurement from parent and other sources?

Manmohan Sharma: Any?
Yogesh: The percentage breakdown from parent company and the other sources.
Manmohan Sharma: So, it's not very clear to me, but can you repeat? Sorry.
Yogesh: So, I just want to ask how much percentage breakdown from modules from the parent and the third-party vendors?
Manmohan Sharma: So, it is difficult to quantify because we don't have any kind of ready number with us how much from the parent and otherwise. But it depends upon the customer requirement and with the bilateral discussions, it could be Waaree or it can be some other also.
Yogesh: Okay. Thank you, sir.
Moderator: Thank you. The next question comes from Sarang Joglekar from Vimana Capital. Please go ahead.
Sarang Joglekar: Hello. Yes. So, I just wanted to understand what has been the pricing of modules with both DCR and non-DCR in this quarter? And do you see and what's the trend do you see going forward?

Manmohan Sharma: No, see we are not directly dealing with the module that you are aware of. And based on the customer requirement only whether they need to install DCR or otherwise other modules because modules in most of the cases directly procured by the developer.
Sarang Joglekar: Yes, but I mean, whenever you get an order, which includes modules, you must be procuring modules as well, right? So, trying to understand what's the pricing for modules currently?
Manmohan Sharma: So, in the recent actually, it depends because the DCR module will always have the higher price. That is what we understand. So, in the recent because it depends upon the customer specific requirements, these modules are procured. But mostly the orders which are getting is the US order also.
Sarang Joglekar: All right, but any range if you can give?
Manmohan Sharma: Difficult to give any kind of range for this.
Sarang Joglekar: All right, got it. Thank you.
Moderator: Thank you. Next question comes from the line of Sahil Kushwah from Master Capital Services Limited. Please go ahead.
Sahil Kushwah: Hi, good evening, sir.
Moderator: Sir, there is a, I'm sorry to interrupt you, but there's a background noise or echo sound is coming, sir. Still we can hear the echo. If you can remove the Bluetooth device, if you're using.
Sahil Kushwah: Yes, so my question is, do we face any kind of regulatory issues while executing the long term projects?
Manmohan Sharma: No, as such, there is no regulatory requirement because the permission which are necessary for the installation of solar projects is already in place. So whatever the required remaining formalities, which I think is not that significant, is a process driven only. So those are maybe in our scope and there's no hurdle for that.
Sahil Kushwah: Okay, that's fine.
Moderator: Thank you. Our next question comes from the line of Arindam Banerjee from MicroSake Wealth Management. Please go ahead.
Arindam Banerjee: Thank you for the opportunity. Sir, I have one question. That is, what is the percentage of revenue from the pure EPC and the turnkey EPC? And also, what is the bifurcation in terms of order? So can you please some light on this? And what is the margin profile in both sides?
Manmo

han Sharma: You are asking this bifurcation with module , without module, is it?
Arindam Banerjee: Actually, I'm asking the margin profile in pure EPC and turnkey EPC.

Manmohan Sharma: Okay. So when we start, like maybe a turnkey project or maybe the pure EPC project, we consider setting a parameter and threshold for the margin percentage. So for us, both type of projects are like we have the same kind of category as far as the modules are concerned. We take the appropriate quotes from the market or and then we calculate our rest of the BOS price. But margin, it cannot be said like this particular segment has a higher margin. It can be a lower margin.
Arindam Banerjee: Okay. Understood, sir. And my next question is, are you executing any EPC project in overseas?
Manmohan Sharma: As of now, we are not executing anything, sir. But we have this pipeline or in pipeline, which we are chasing for the overseas projects also. But as of now, we are not executing any overseas project.
Arindam Banerjee: And my last question, just one question, that is, what is the opportunity under PM's Surya Ghar Muft Bijli Yojana? Have you seen any opportunity under the rooftop solar project?
Manmohan Sharma: So as I mentioned that we are undertaking ground mounted, mostly ground mounted solar

projects, which are related in bigger size. So our company, Waaree Renewable Technologies, is not actively doing this kind of project under PM's Surya Ghar Muft Bijli Yojana.

Arindam Banerjee: Okay. Thank you. That is for my side.

Moderator: Thank you. Ladies and gentlemen, due to the time constraint, that was the last question for today. I would like to hand the conference over to Mr. Nikunj Jain for closing comments. Over to you, sir.

Nikunj Jain: Thank you. I would like to thank the management for taking the time out for this conference call today. And also thanks to all the participants for attending. If you have any queries, feel free to contact us. We are MUFG Intime India Private Limited, Investor Relations Advisor for Waaree Renewable Technologies Limited. Thank you.

Moderator: Thank you. Ladies and gentlemen, on behalf of Waaree Renewable Technologies Limited, that concludes this conference. Thank you for joining us. And you may now disconnect your lines.
