Ladies and gentlemen, good day and welcome to Crizac Limited Q1 FY 26 Result Update
Conference Call, hosted by Equirus Securities Private Limited. As a reminder, all participants'
lines will be in listen-only mode and there will be an opportunity for you to ask questions after
the presentation concludes. Should you need assistance during this conference call, please signal
an operator by pressing star, then zero on your touchtone phone. Please note that this conference
is being recorded.
I now hand the conference over to Mr. Samarth Patel from Equirus Securities Private Limited.
Thank you and over to you, sir.
Hi, good afternoon, everyone and welcome to Crizac's Q1 FY '26 carnings conference call. We
have with us Dr. Vikash Agarwal, Chairman and Managing Director of the company, Mr.
Manish Agarwal, Chief Financial Officer of the company and Mr. Christopher Nagle, Chicf
Executive Officer of Crizac UK.

Vikash sir, if you can start by giving your overview on the 1Q FY '26 performance as well as outlook for FY 126 and beyond and then we will open up for Q&A. Over to you, Vikash sir.
Sure. In the quarter one, company made a revenue of INR209.53 crotes. Our cost of services was 64% of the revenue, which s equivalent to INR134.38 crores compared to INR101 crores last year, quarter-on-quarter basis. Which leads to a bit of INR60.47 crores, which is 28% of our revenue. The path is INR45.81 crores, which is 10% above last year. Last year we did INR41.5 crores, which is INR45.81 crores is equivalent to 21% of PAT.
In terms of operational data, the company had 20% growth on quarter-on-quarter basis compared to last year in the number of applications processed. This quarter we processed 1,10,000 applications compared to 65,000 processed in the fourth quarter of 2024. Overall, we also saw an increase in total number of agents joining our platform and registering at the platform as well These are key metrics which is there for Q1 of FY '26. Samarth, over to you.
Yes, we can open up for the questions now.
Thank you. We wil

l now begin the question-and-answer session. The first question is from the line of Vivaan Saxena, an Individual Investor. Please go ahead.
Okay. So, my question is about Crizac Limited. First of all, I am very excited to see the individual investors. So, my question is from the Al perspectives, what Al techs are you looking to invest in? What kind of Al technologies you guys are looking to invest in the AI field?
Sure. Vivaan, we have a very sophisticated electronic platform. This is the platform that we use. And as Al is becoming more and more mature, we are trying to add the same on our platform, which will be used for interview and application assessment and processing. We haven' used too much of Al as of today.

Mihir Manmohar:

We are developing the tech and everything. And as and when things will become more mature, we'll be using those ones. And the AI will be used to improve the productivity of the employees and helping them in their day-to-day working.
Okay. Okay. Yes, that makes sense. Thank you. Thank you so much.
Thank you. The next question is from the line of Mihir Manmohar from Carnelian Asset Manager. Please go ahead.
Yes, hi. Thanks for giving the opportunity. Am I audible?
Yes, Mihir.
Yes, sure. First of all, congratulations on a great set of numbers. Quite good growth. I mean, 30% revenue, 18% EBITDA. And also on the application side, we see very strong growth in the number of applications being processed. Sir, I wanted to understand the number of enrollments. ‘What was the number of enrollments for 1Q 26 versus 1Q FY '25? Some color around that?
Mihir, we do not disclose the students' numbers because those are sensitive data and have not even been disclosed in SAP. But it is in line with the number of applications processed. So, the ratio means consistency like last quarter.
Okay. So, number of enrollments is also 50% growth?
No. Number of enrollments because applications get submitted 6 to 9 months in advance. So, growth in application may or may not relate exactly to the number of enrollments. Number of enrollment growth would be...
No, it would be more in line of revenue from operation. So, there is a 29% growth in the revenue from operation. That means the number of students enrolled has also grown by 29%.
Okay, perfect, perfect. Understood, sir. Makes sense, great. Second thing was just on US. I mean, now with this Donald Trump especially getting more and more aggressive, especially on the diplomatic side, it seems to be shifting away from. How do we see US business? I mean, what part of strategy, how to understand the build-up of US business specifically with this new diplomatic situation being there?
Christopher, you want to answer this? Since he's not able to connect. Yes, Mihir, I do agree with you. There is a bit of uncertainty with reference to US. It has affected the number of students going from all over the globe to US. We believe this is temporary and things should change.

Keeping in mind, even US universities are dealing with the overall student numbers and they too need intemational students to fund their education and the different departments. So, as of today, our US business is very small. So, once things get stabilized, I think we should reap the benefit of that one.

Rahil:

Understood, sure. Sure. And just on a broad-cut basis, sir, I wanted to understand, I mean, how casy or how comfortable or how difficult is it for us to change a university? Broadly, let's say 3
y

ears back, the university which used to be there in top five and now the universities which are there in top five. Are they similar or are they different? I mean, how easy or difficult is it for us to getrevenue from different universities or get business from different universities?
This depends upon various factors. And the change in the top five or top 10 is not because we have changed the demand for one university over the other. It can be any particular university comes up with a specific scholarship or some kind of a specific deal which helps to push the number higher compared to other peer universities. And that's why there will be a churn in the overall top five.
Understood, sure. And just last question was on the September intake. What kind of growth in number of enrollments should one consider for September intake? And should it be close to what the first quarter growth has been?
It should be in line with, if don't — s of today, I don't see any major impact. So if things remain the same, it should be in line with the current growth rate.
Understood. And September intake accounts for 30%-35% of the business over a full year? September intake would account for a quarter?
No, September intake will not account. But if you see, quarter 3 will be higher because of September intake.
Okay, understood. Yes. Sure, that's it from my side. Thank you very much.
Thank you. The next question is from the line of Rahil from Crown Capital. Please go ahead.
Yes, hi, good evening. Sir, firstly, on the revenue growth front, year-on-year you have posted a healthy 30% growth. And even for your annual growth rate in the past have been pretty strong, 50% plus. So now, given the current business scenario, what kind of a growth CAGR outlook can you share on an overall annual basis for this year and next year? Any visibility of sorts?
Sure. Again, as said, we don't sce anything changing. If things remain the same, we believe similar level of growth as we have seen quarter-on-quarter basis.
So for FY 26 overall, we can expect this 30% and plus?
Wait, I can say yes.
Is that a yes? Yes. Sorty, I couldn't hear you there.
Yes,

August 05, 2025
Yes, okay, okay. And then coming to this margins front, although year-on-year basis in this quarter, they have dropped a bit, but 29% margin seems pretty strong. So are these sustainable or s there a scope for improvement there?
These are sustainable. There's always 1% or 2% of margin up and down kind of thing, but these are sustainable margins.
And let's say if we were looking at any sort of improvement, how will it happen? Any certain criteria the management is looking at to improve these margins?
‘We don't believe there'll be a substantial change in the margin front. So it should remain in line with what it is.
Okay, okay. So 20% give or take 1% is something which you can continue for coming years.
Yes. But again, keep in mind that margins are different quarter-on-quarter basis as well. Quarter 1 margin is normally higher compared to other quarters because quarter 1 has more modern universities where you take it higher.
Okay. Quarter 1 has more margins, but then overall youll be able fo...
Maintain the similar margin as maintained last year.
Maintain as last year, FY '25. But FY 25, I think you posted 25%, so which one...
I think 25% will be more reasonable one.
The 25% number is more reasonable?
Yes.
Okay.
Whenever you're considering margin, you should compare same basis, so year-on-year basis.
Year-on-year basis, okay. Okay. Okay, sir. 1l get back in queue. Thank you.
Thank you.
Thank you. The next question is from the line of Mayank Agarwal from Scientific Investment. Please go abead.
Y

es, hi. Thank you for the opportunity. I have a few questions. The first question is regarding, with over 50% of the revenue coming from our institutions, like from UK, and what safeguards are in place to mitigate client concentrations going forward?
Can you repeat your question once again, please?

Manish Agarwal:
Muhammed Sufyan: Crizac Limited
August 05, 2025
Yes, so with over 50% of the revenue coming from just three institutions, what safeguards are in place to mitigate client concentrations going forward?
Yes. In terms of diversification, we have acquired a company called Raj Consultant last year, and which will be helping us diversify into US market. We are also expanding into other regions like Dubai, Ireland, New Zealand. So those things also should help us diversify and reduce

concentration. Hello? Hello, Mayank?
As there is no response, can We move to the next question?
Yes, please.
Okay. The next question is from the line of Muhammed Sufyan from Dinero CapServ. Please go ahead.
Thank you, sir, for the opportunity. And congratulations for the good set of numbers. So I just want to understand, if I was just looking at the realization, the revenue to the number of applications. So it was in Q1, this FY '26 was around 19,000, compared to Q1 of FY 25 was 24,000, and portfolio FY '25 was around 30,000. So how we should look going ahead? The realization is falling or should be in the vicinity of rise?
Realisation if you are counting from the number of spent application, then?
Yes.
Number of application by revenue will not match, because applications are 6 to 9 months ahead of the intake. But revenue you get...
Sir, you are not audible.
Per unit revenue, because these are the very sensitive data and might affect the business.
Your voice is breaking. Can you repeat once again?
You are calculating the student based on number of student application by the total revenue, of the quarter. Correct?
Yes.
But that is not a right way of calculation, because we process the application 6 to 9 months ahead of the intake.
Okay.
We normally don't prefer giving a realisation per student, because it's a sensitive data, which might affect the business continuity.
Okay. So what metric should we look at then for the growth?

Manish Agarwal:

Muhammed Sufyan:

In terms of key metrics, number of applications processed shows you the future growth, which the company can acquire. Like in FY first quarter of 25, we did 65,000 number of applications. This year, the same period we did 1,10,000 number of applications. This shows that the revenue for Q3 and Q4 will be higher compared to last year.
At the same time, to add to what Manish has said, we have also diversified in our source market and are expanding into multiple geographies. At the same time, we are also diversifying into different destination markets as well. Those should also bring in more applications and help in higher revenue in the future.
Okay. Two questions, sir. One, If we see seasonally, the best quarter will be Q3 or Q47
Q4.
And which will be the main quarter?
The main quarter will be Q4. The main or the biggest quarter will be Q4.
Which will be almost like majority of the revenue comes into that Q42
Almost 40%. It's a thumb rule. Quarter 4 will be roughly 40%. Quarter 3 is usually roughly 30%. Quarter 1is 20% and quarter 2 is 10

%.
Okay. So, Q2 will be the leanest and Q4 will be the strongest one, right?
Yes.
Correct.
Yes. And sir, so,] just need to understand one thing. If an applicant wants to apply directly, why

will they use this Crizac platform? Like, it will be specific university, that's why they might be using it or I can apply directly or something like that.
Candidates are allowed to apply directly to the university. Usually, a candidate would go to a local agent for support, guidance, visa advice, and a lot of other support services they might need. These agents, since they don't charge to a student, there is no reason why a student will not use an agent service. That's why most of the students would go and - prefer to go to a local agent.
Okay. So, that can help grow them to say that agents use our platform so we can benefit from this.
Pardon? So, agents use our platform at the moment.
Okay. And what are the likely peers for you sir? If I understand. One is IDP, right?
Yes, IDP could be a peer, but IDP is more a brick and mortar business. Our peers would be ApplyBoard, Krishna Consultants.

Sir, come again?
Yes, our peers would be ApplyBoard, Krishna Consultants. Couple of examples.
Okay, sir. Thank you, sir. Al the best for the future.
Thank you.
Thank you. The next question is from the line of [Yatharth Manish Hingar 0:20:44] from IGE India. Please go ahead.
Hello, sir. Hi. Congratulations on the results. I just had a couple of questions I wanted to ask. The students and the applications you process, do you conduct any background checks for the same?
Yes, whenever we get an application, we do our due diligence for those applications.
Okay. And how long do you see the background checks?
Pardon?
How long does it take for you to decide a student whether they can come through Crizac and do the applications?
T'm not able to understand your part.
I'was asking you, background checks you mentioned you conduct, how long does it really take for you to do those background checks for one student?
It doesn't take too much. Many of these information are available online where we can verify. For example, somebody who has submitted an ILPS scorecard, we have those credentials from the ILPS provider or PT provider where we can verify their documents. So in most of the cases where we have any doubt, we verify the documents electronically. And these are done almost on an immediate basis.
Okay. And secondly, we have scen Dubai being one of the financing growing markets in education as well. And there are many US opening their branches in Dubai, for example, New York University and NYU. Are there any changes in the application types in the process for the same?
Again, Yatharth, the line is not clear. Can you just repeat once again?
Sorry. I was asking, since many universities are now being open to open branches, for example, New York University, are there any changes in the application process for the same?
I believe you are asking that multiple universities are opening campuses in different jurisdictions. Now the process remains the same and consistent, so it won't make any difference in the application processing method.

Okay.
Sorry to interrupt. Mr. Yatharth, can we -

we have seen there is an audio loss from your line.
May we request you to please check it or bring the device closer to you?
Is this fine? Is it better?
Yes.
Sorry. I have a question. From the revenue you receive from the universities, does the ranking of the universities have a correlation with the revenue you earn from them?
Not really.
Okay. This is the last question. What would you say is the ratio of your applications from undergraduate to postgraduate? How many are undergrad usually and how many are postgrad?
Sure. For UK, it would be 75% postgrad, 25% undergrad.
Okay. Thank you so much, si.
Thank you, Yatharth.
Thank you. The next question is from the line of Niharikaa from Anand Rathi. Please go ahead.
Hello, sir. Firstly, congratulations on a good set of numbers. My question is primarily around the cost of services. I think this quarter we saw a 100 bps rise in the cost of services. So, I just want to ask, like, what is the trend that we can expect going forward? What is going to be the cost of services as a percentage of our total revenue? Will it be lower from here on or will we ‘maintain a broadly 65% to 70% range for the whole year?
Hi, Niharikaa. Currently in first quarter, our cost of services is 64.13% of the revenue. Normally, quarter 1 margins are high, but if you see on an overall year basis, it will be around 70%. And we expect in near future, it remains to be around 70% only.
Okay. Okay, that's helpful. And, sir, secondly, have we seen a change in number of applications per agent increase post the IPO? Has there been some sort of momentum that we're seeing there?
Since the IPO came only last month, there's not a huge difference. It' very difficult to guess the change in number of applications because of that one. Normally, it's the end of the major academic year, which is September.
Okay.
So, by default, there's an increase in application flow. So, for us to make differentiate between the impact of IPO would be difficult to gauge.
Okay, sir. No problem. Thank you, sir. Thank you and all the best.

Thanks, Niharikaa.
Thank you. The next question is from the line of Kunal Shah from Carnelian. Please go ahead.
Hi. This is Kunal Shah from Camelian. Just one question I had. How are we looking at particularly UK applications to kind of go for this year and next 1-year as well, considering there have been a lot of talks that it's becoming difficult or whether the number of students going to UK for study is kind of coming down. So, if you would want to share your thoughts and how are we secing it because our application numbers are kind of increasing. So, if you want to share some thoughts on that, sir.
Sure. Kunal, the number at the - for us has been growing for UK. and we believe it will remain strong Again, number of students going out of India is increasing. If you look at other destinations like US, Canada, their numbers are restricted because of policies. So, inmy opinion, this number growth for UK should remain quite early.
Right. And within that for us we are getting market share and how do you see our further market share basically as a number of students going to UK and within that through us.
Number first, we are seeing a growth and there are multiple factors. One, definitely growth in UK, but at the same time the company is expanding into different jurisdictions as well. So, overall as a result, there is a growth in total numbers.
Got it. And you don' see a challenge for that number basically to come down or any problems for that, right?
No, we don't see any challenges, but if the market remains the same, we believe a 30% growth in our numbers.
Sure, sir. And also you would help u

nderstand the inbound strategy as well, right? We have been
doing a lot of work in increasing various countries when it comes to inbound as well. So, if you would help understand a little bit on that particular piece as well, right?
Sorty, what do you mean by inbound?
The inbound applications that we receive from countries other than India.
Yes. So, there has been growth. What we have seen is compared to last year, it was 35%. We are almost closer to 50% from India and outside India.
Got it. Got it. Okay. Thanks.
Thank you.
Thank you. The next question s from the line of Lima from PDL. Please go aicad.
Thank you. Can you hear me all right?

August 05, 2025
Yes.
Thank you. Thanks for the opportunity. Just three questions from me, please. Firstly, and it's sort of like an extension to the previous question, we've scen this migration white paper in the UK and given it's your largest market, destination market, what's the outlook? I mean, you mentioned that you think 30% is sustainable. Is that because you're getting more market share or if it's because you're expanding your source countries? Thank you. Thats the first question.
Chris, do you want to answer that?
Yes, sure. Hi there. Thank you for the question. In terms of the white paper coming out, I think that this has had basically a positive effect in the market because it's given clear guidance and certainty, which is allowing everyone to move forward with confidence and, therefore, UK market is pretty stable. We've actually, if you look at the latest data, some increases in the student numbers year-on-year. So, yes, we hope to continue expanding market share, particularly outside India. At the same time, UK market has a stable outlook because of the forward guidance from

the government.
Thank you. And then, T guess, even though Indian students, the demand is still there going to study abroad, are you seeing a change in destination preference? Are students going to other countries instead of the traditional, I guess, big four?
Yes, there's definitely growing demand for what you might call new or alternative destinations, such as South Asian students going to Dubai or Chinese students going to Malaysia and Singapore. However, we believe that these new destinations are emerging as a result of increasing global demand for overseas education. So, it's not big for or new destinations. We believe that both can continue growing over the long-term.
Yes, that makes sense. Thank you. Last question. In the prospectus, I think it was mentioned that even though Crizac is currently a B2B business model, over time you'l probably be looking at expanding into B2C via inorganic growth acquisitions. Is that something you're actively looking at or do you think that's going to be somewhere down the road?
It's nothing immediate at the moment. We are working on that one. And as and when we find the right company, we'll look at that to work that part.
And may I ask what kind of matrix or characteristic you'll be looking at -- like to be the right target for you?
Imean, we're still evaluating the options. Its still evolving. Again, as I said, we need to find the right company, the right jurisdictions we want to start that vertical. So nothing is finalized at this stage for us to make a comment on that one. I'll say it a bit early.
Yes, thank you. That makes sense. Thank you very much.
Thank you.

Thank you. The next question is from the line of Omprak

ash from Plutus Capital. Please go
ahead.
Yes, hi. I justhad an academic question. The revenue what you generate, like maybe this INR§50 crores of revenue generated last year and I just want to know, how is this, whom do you bill this? Like this revenue is generated, like just a hypothetical case, an agent uploads the application and you process it and whom do you bill for this revenue?
We pay to the universitics.
So the university will pay you on a per application basis?
Per enrollment basis.
Per enrollment basis?
Yes.
So suppose an agent gives you 100 applications, out of that how many will get enrolled?
Omji, this is again a sensitive data which is not disclosed in our ASP and I think it's a quite sensitive data for our business. These changes from agent to agent and it changes from university to university. So there is no defined matrix as such.
Suppose in UK, suppose there is a Bayes Business School or something in UK. So if someone agent has uploaded an application for the Bayes Business School, on your — you process it, right?
Yes.
And you process it on behalf of the Bayes Business School.
Yes, 5o if you consider...

This is an academic question because I am not able to understand this revenue, so that’s why.
Tunderstand. I mean, it can go from, let's say, 5% to 15%.
5% to 15% of what?
Of applications received.
Okay, so that may get enrolled. Okay.
As we've said, if I receive 100 applications, it can go as well as 5%.

To 15%. The range is that of acceptance. That is the acceptance range. So on that basis, suppose in 100 applications, you process and you get 10 enrolled. So on a per application, the university will pay you.
For the 10 student university will pay us.
University will pay you. The Bayes School will pay you.
Correct, for those 10 students.
And this is what we see that suppose you have done around 2,75.000 when you say it is applications, out of that how nuch is accepted or this is our accepted number? Enrolled number.
These are the applications done by us.
Okay, so a percentage of it would have only got enrolled.
Correct.
So the billing from the university on a basis is, on a hypothetical case, what is the amount you get from an institution per?
Again, commercially sensitive data, we will not be able to disclose that.
But that turns out to be a very large number, right? Ifit is 2,75,000 you would have processed.
T appreciate that. But this is commercially sensitive data for us.
And the cost of services is, what you -- what is that cost of services?
That's what we pay to the agent.
Out of what you receive, as a part you will give it to the agent. So the student approaches the agent and says that you please apply to this university through that agent. The agent will do it through you and what amount you get you will, so that is almost 60% is given back to the, 60% or 70% is given back to the agent.
Correct.
Ts that the right way to understand?
Yes.
Okay. And this differs from universities to universities. So there cannot be a, this cannot be modeled, right, for us, suppose. It's not that simple that you tell me there are 4 lakh applications have come and I can model it based on a, because you would have, if I see on a 2,75,000 and you have done INRS50 crores of revenues, almost 30,000 rupees or whatever, $400 around, or

maybe 300 to 250 pounds per application. So it's not difficul

t for an analyst to model this, right?
What I'm understanding is right?
Yes, right to a good extent.
Okay. So the cost of services is what you pay to the agent, then your cost is only the employee cost and the platform cost, whatever you are incurred, right?
Yes.
So other than that, there is not any major cost for you?
Not any major cost.
Okay, fine. Thank you very much. Thanks for you.
Thank you.
Thank you. The next question is from the line of Himanshu from Stylus Holdings. Please go ahead.
Yes, hi. Firstly, I wanted to understand the timing on how the revenues are recognized versus how the cost of services are recognized. Is there a gap in that?
No. Like once the student enrolled at the university, the university confirms the amount due to us. At that point of time, we recognize the revenue. And at the same point, we recognize the liability as well.
All right. So usually the admission cycle happens from fall, right? So you mentioned that the approvals etcetera happens in the first half and you recognize the revenues in the second half from an Indian financial perspective. Is that the right model?
No. Like, university confirms probably after 1 to 2 months of the enrollment date. At that time, we recognize the revenue. Since the normal admission intakes are in fall and winter, that's why our H2 is higher than H1.
Okay. So roughly, it should be around 60%-70% of the revenues are recognized in the second half and 30%-40% in the first half.
Yes, 30%.
All right. But when you look at the cost of services that you reported in this quarter, which is around 65%, 64%. Now, how does that differ? Because I think on a blended basis, its around 70%, right? So does that differ based on quarters or does it differ based on the universities?
It's depending on the universities. Like, probably in the summer, you only have our modern universities where the take rate is a bit high. That's why your cost of services is a it low. Your profit margin is higher in quarter 1.

Himanshu:

Okay. Understood. Is there any ease of expense currency being recognized in your P&L?
Yes. We have given the ESOP to the employees and around 35 lakhs of rupees. INR35 lakhs has been booked as an expense for ESOP, which will be vested 3 years down the line.
Just INR35 lakhs, is it? Or is it 35 lakhs share?
INR3S lakhs, Rs. 35 lakhs.
Okay. Rs. 35 lakhs. Okay. All right. Okay.

So, that doesn't matter anyways.
Got it. Got it. The other question is around your expansion plans. Because, till now, you have largely been focused on the UK universities, which are primarily finance-focused, rather than the US or Canada-based universities, which have more of an engineering focus. So, I presume that currently, when we think of your agent network of the 10,000-0dd agents that you have today, they will also have more of the, what you call, finance background candidates that they'll be able to serve. So, if you could highlight what are you kind of aspiring towards in terms of agent expansion, or in terms of the universities in Canada or the US that you're trying to sign?
Our agents get students for all the backgrounds, including science, business, healthcare, everything. So,it's not that our particular agents get students who are only interested in business or finance. Even today, if you look at roughly 30% of the students who goes would be for science and engineering backgrounds, rather than all into business or computing or healthcare. So, it's a mixed bag.
Okay. So in terms of the agents themselves, I would like to know, are there agents who are typically from the universities? Like the college teachers etcetera act as agents or there are other institutions as well who become your agents like indi

viduals or institutions.
These are agents who - and counselors who guide the students. So, anybody who has an access to the students, who gives them the guidance can be a part of our platform.
My question was more on the type of agents. Are they individuals who are the college teachers o part-time professors etcetera who typically become your agents or they are like institutions, smaller institutions who conduct the coaching classes, etcetera.
Most of our agents would be small and mid-sized business with multiple people working for them.
Okay. So in terms of the kind of applications, like you said last time — in the last -- first quarter you had around 65,000 versus 110,000 applications like that. Source and process. It is typically — primarily from the small institutions, who are -~ who then cater to them because they embedded in the universities.
Yes, it's a combination of small and mid-sized agents. So I'n paneled in our system.

Himanshu:

Management:
Himanshu:
Management:

And when we say that 65,000 has become 110,000 applications, does that translate to people applying sooner or is it translating to them applying later? I'm just trying to understand how the expansion was given. Was it given by mumber of universities, number of candidates, number of agents, and if you could just bring that down.
It's a combination of both. There is some element of people applying a bit carly, but likely we believe this is more because of the growth which will come in coming days because students tend to apply a bit earlier 3 to 6 months before the intake starts.
And the number of applications is it like other academic candidates have also applied or are there many candidates who applied for the [inaudible 0:44:38] university at the same time?
These are unique applications not the unique students. So there can be one student applying to three different universities. For example, so this 1,10,000 are number of applications on our system and not number of unique students.
What would be the typical range like number of candidates? Are they planning for...
Average between two and three. One student would apply to two or three institutions.
Got it. Got it. Just one last question from my side. So given what we have been hearing on the US aid, which could be kind of impacting or diverting more candidates towards UK universities. If you could just kind of quantify some data points around how it has seemed to have impacted you say in the last 3 months versus earlier.
Seth, do you want to address?
Yes. So, I mean, this is arecent trend. So in terms of hard data there's not a lot of it yet. But what we do have in terms of anecdotal market sentiments and websites that track traffic and interest of students globally. We do believe there's a shifting demand from, say, US to UK and to other

alternative destinations. And we expect that to come out in the data in the future.
The important point to remember is that the tightening of some policy by the current US government has not dampened global demand for international education. So even if a student is no longer going to the US, they're going somewhere else.
Just to follow-up on this point, s this trend kind of similar across countries? You have presence in India as well as Aftica and China. So are you witnessing some -- such a happening only from Indian perspective or even the African or the Chinese natives are also interested probably trying more on the UK based universities rather than the US universities.
Of course, there are always local variations in terms of what the second choice might be. However, it can be said generally that your typical student that is interested in going to US, their second choice will quite often be the UK. Of course, there is regional variation, just partic

ularly
to do with geography. But you can say that it’s a trend not just in India.
All right, great. Thank you so much.

Thank you.
Thank you. The next question s from the line of Samarth Patel from Equirus Securities Private Limited. Please go ahead.
Thank you so uch for providing me the opportunity. My question is, like, how do we plan to build a high-quality agent network in geographies like, let's say, Nigeria, Southeast Asia, China, given the interest from students in outbound education, particularly for UK? And would it be primarily to improve supply options going to only UK or, I mean, this can also help us in terms of expanding to other geographies such as, let's say, US or Australia as well.
Chris?
Yes. So the great thing about our model is that our business development in terms of building agent networks in different geographies, the strategy remains the same across any geography, which s that initially we conduct outreach to agents to have them sign up on the platform. And then once we build traction, word of mouth takes hold, and we have agents signing up in an organic way. And Yes, we build and have built our agent networks in Nigeria and in China using the same business development model.
In terms of whether these agent networks are sending students just for the UK, most agents on the ground service the demand of students on the ground. So they can send to anywhere that Crizac has options. So currently we are sending majority students to UK, but as we build out other destinations, we have an agent network already on board to send to any destination that is popular.
Understood. So that was really helpful, Chris. That' it from my side and thanks for providing this opportunity.
Thank you. The next question is from the line of Ashish Parekh from Emkay Investment Managers Ltd. Please go ahead.
Yes. Thank you. So my question was in terms of an agent, if T am an agent and I want to connect with your platform, so how would I find a platform to get registered on it? Do you have people on ground to find these agents and get them registered on your network? Or is there any ‘mechanism, please can you speak on that?
Yes, we do have people on ground who guide, identify and help those agents to register on platform. But at the same time, many of these platforms, many of these agents come on our platform organically from word of mouth. Okay.
Just to follow up, so can you just provide any, number of people that are actively on ground or any ballpark numbers, please?
We have over 60 plus marketing managers who are involved in marketing process.

August 05, 2025
Okay. Understood. And my second question would be in terms of your top 10 or top 5 agents, so in terms of stickiness. So are they with you since a long time or your churning of the top agents is frequent? Can you throw some light on this?
No, I mean, the churning of agents is not very high. We have agents who have been with us since the inception of our business as well.
Okay. And this last question, so in terms of their revenue share, so if an agent brings in say 10 applications, 20 applications, so is there any dynamic pricing or do the agents get paid on a flat basis?
Typically, agents get paid on a flat basis, but we do have some incentive mechanism for people who bring in a higher number of applications.
Okay. Okay. Thank you.
Thank you.
Thank you. The next question is from the line of Varun Singh from AAA TMS. Please go ahead.
Thank you. Yes. So my first question is

2% of your revenue in this quarter is a loss from forward
contract. So that is a, I mean, that is a meaningful amount. Just wanted to understand, I mean, what exactly s this line item and how should we maybe expect this number in future, I mean, for example, in FY 262
Hi. We always hedge our inward remittance against the forex fluctuation. So this quarter, we had a loss of around INR4.5crores because we have booked the - we have hedged the amount at a lower rate, but the major currency pound and euro has gone up. It might happen, we are seeingas a loss in terms of line item, but this also higher revenue because it proceeds at a higher conversion rate.
No, 0. So I mean, for a medium term point of view, like 1-year, 2-year, how should we expect this hedging cost as an element of our business model? That's a primary question.
Sure. These hedging costs are variable. This year, the pound has moved adeptly compared to a standard movement. That's why you're seeing this as a notional loss. Tomorow, the pound goes down. These losses will disappear. And at the same time, as I said, in case if it doesn't go low, in that case, the money what we receive will be at a higher conversion rate of a pound, which will give a higher revenue to the company. So if you look at net-net, there won't be any impact on the business.
Okay, understood. And my second question is on the linkage between application growth and T 'mean, T understand conversion or enrollment could be any number between 7% to 15%. But still, for example, in FY 24, 50% growth in application converted into just 34% revenue growth. And then in FY '25, only 5% growth in application and that 5% growth resulted in 34% growth in revenue.

August 05, 2025
o there is a huge difference in terms of the conversion itself. I mean, or I don't know what the reasoning behind it is. Just wanted some clarity behind because our current number of 59%, 60% application growth is quite healthy. So if you can explain the FY 25 and 24 linkage of application growth, not tying up squarely with the growth that we have experienced. That's my last question.
In terms of growth of application compared to quarter one of '24 to 25, we had a roughly 70% growth. Last quarter we did 65,000 students. This quarter we did 110. This growth should

translate into a higher number of students going abroad, which means a higher revenue. Based on, again, this is subjected to conversions. But if the conversions remain similar, we believe this would lead to roughly 30% growth in the business on an annual basis.
Actually, my question is on the annual number itself. FY 25 number of applications, just 5% growth and that translated to 34% revenue growth. I think as you pointed out that § to 9 months carly, we start taking applications and maybe that's the cycle which converts. So from that point of view, I mean, what explains this higher enrollment in FY '25 and maybe lower enrollment in FY 247 That was the question.
I'mistill trying to understand your question, sir.
Yes, sure. On slide number four, you have given the rate on number of applications processed by geography. So FY 25, 2.75 lakh is the number of applications processed. That is just 5% growth compared to 2.62 lakh applications that were processed in FY 24.
I understood your point. Yes. Between FY '24 and FY '25, there was a review called MAC review in May 25, I believe. 24, Sorry. That has kind of - there was a debate in UK government, whether they want to continue with the post study work visa or not. That had affected, or that had made the student to wait and understand the impact.
This review came positive and there was no major change in immigration policy during the MAC review. That's why you're seeing a lower number of applications processed

during that period.
But after the MAC review was done, the students who were more serious about applying had applied and those conversions were higher because of those students who were serious about going there.
Okay. So that's the reason that despite only 5% application growth, the conversion rate was significantly higher.
That's correct. Yes.
Okay. All right. And in FY 24, only 34% growth compared to more than 50% application growth. T mean, what explains that part then?
If you're comparing application to revenue growth, because revenues come from academic intake basis, while application growth happens earlier, 6-0 months earlier. So you'll always see that deviation.

Mihir Manohar:
And which should be rectified from the financial year perspective, right? From 12 months point of view.
Correct. If you look at the 12 months point of view, youll see some consistency on that one. At the same time, as the company is growing with a higher volume of applications and students, there will be some delta generated for higher volume in terms of revenue as well as we do get volume this time.
Sure. Thank you very much. Wish you all the best.
Thank you.
Thank you. The next question is from the line of Mihir Manohar from Carnelian Asset Management. Please go ahead.
Yes, thanks for giving the follow. Sir, I wanted to understand the revenue recognition side. When do we recognize the revenue? Is it only when the student gets enrolled in the university? When do we recognize the revenue and when do we recognize the commission expenses?
We recognize the revenue. Hello?
Yes, sir. Yes.
We recognize the revenue once the student is enrolled at the university and the university confirms that the amount is payable to us. At that moment. Now, when it comes to cost of sales, we recognize it immediately once we book the revenue.
Okay. Understood. Sure. The second question was on the split between PG and UG. In

enrollment, what will be the split between PG and UG and in applications, what will be the broader split between PG and UG?
Normally, 75% of applications are postgraduate and 25% are undergraduate.
Okay. And even in enrollment, the split remains the same?
Yes.
Okay. Understood. And just my last question was more on the UK side. When we sce, I mean, over the last 5 years, the number of students enrolled in UK has gone up substantially, especially Rishi Sunak also being there, also helped. Now, I mean, we saw for the skilled worker visa program, the situation is getting more tightened. There is increasing salary threshold limits, as well as the Level 3 qualification went up to Level 6.
And there are talks of this special fee getting introduced. So, I mean, how do we see the overall situation in UK, specifically for the immigration side with reference to student immigration, if that situation gets more tightened, and especially given the fact that the base has gone quite sharply up. So, how do you understand the situation from here on? Hello?

Management:
Management:

Mihir Manohar:
Moderator:
Vikash Agarwal:
Moderator:
Hi. You there?
Yes, sir. Yes, sir. I'm there.
Yes. Continue, T guess. Sory, sorry. Could you just repeat the question? I wasn't able to understand.
Yes, sure. Sure. So, what I'm asking is when we sce over the last 5 years, the number of students enrolled in UK, specifically from India, has gone up from 20,000 to the next 75,000. And also, Rishi Sunak being there, who was Indian origin Prime Minister, got a benefit around there. Will we see any, specifically for skilled workers visa program that is getting a

schooling, actually,
more tightened. If that translates into student worker visa program also, student visa graduate, as well as the graduate, will it not be a challenge for us because given the fact that the base itself has gone up almost 7x in the last 5 years?
T mean, it not our area of expertise to forecast this kind of exact thing in the UK economy. What we can see is robust demand from Indian students to go and study in the UK. And that's what our business is focused on. So, from our perspective, we see that the demand from India is still robust and everyone is connected. The world is connected.
If there were not a return on investment for Indian students going to study in the UK, then everyone would know about it quickly and we would see a change in the demand. So, for us, the most intuitive way of judging and forecasting this is to look at the demand. And demand is still robust, in our view.
Understood. Fair point. I mean, the September intake anyways is 30%. Fair point. That's it from my side. Thank you very much, sir. Thank you very much.
Thank you. Ladies and gentlemen, that was the last question for today. I now hand the conference over to management for closing comments.
Thank you very much, everybody, for taking time to join our Investor Meet. We thank you all for giving us time and thanks for your valuable questions. Have a good day. Bye-bye.
Thank you. On behalf of Equirus Securities Private Limited concludes this conference. Thank you for joining us and you may now disconnect your lines.

MR. MANISH AGARWAL – CHIEF FINANCIAL OFFICER – CRIZAC LIMITED

MODERATOR : MR. GAURAV GUPTA – EQUIRUS SECURITIES PRIVATE LIMITED

Moderator: Ladies and gentlemen, good day and welcome to the Crizac Limited Q2 -FY '26 Earn ings Conference Call hosted by E quirus Securities Private Limited . As a reminder, all participant lines will remain in the listen -only mode, and there will be an opportunity for you to ask questions after the presentation concludes.
Should you need assistance during the conference call, pl ease signal the operator by pressing star, then zero on your touch- tone telephone. Please note that this conference is being recorded.
I will now hand the conference over to Mr. Gaurav Gupta from Equirus Securities Private Limited for opening remarks. Thank you, and over to you, Gaurav.
Gaurav Gupta: Hi, good afternoon everyone, and welcome to Crizac's Q2 -FY '26 Earnings Conference Call. We have with us Dr. Vikas h Agarwal, Chairman and Managing Director of the company, and Mr. Manish Agarwal, Chief Financial Officer of the company. Vikas h Sir, if you can start by giving your overview on the Q2-FY '2 6 performance, as well as outlook for FY '2 6 and beyond, and then we will open up for Q&A. Over to you, Vikas h Sir.
Vikash Agarwal: Sure. Thanks, Gaurav. Our Q2 numbers are in line with our guidance. The revenue from operations has grown to INR 162 crores . Inputting other income, it comes to INR 169 crores . In terms of expenses, it's INR 105 crores . The company had a net profit of INR 64 crores . After deducting all the bits and pieces, the net profit comes to INR 48 crores .
Manish Agarwal: Just a moment.
Vikash Agarwal: In terms of operations, our number of applications has grown year -on-year basis. Same is with reference to agents and overall revenue. In terms of profit margin, we have grown on the same.
As mentioned in the past, Q2 is normally light and composed of roughly 10% -12% of our revenue. Growth has been consistent compared to last quarter at the same time. In September 24, our profit was INR 61 crores . In September 25, it's INR 95 crores . Other financials, I'll ask our CFO Manish to give you the details.
Manish Agarwal: On year -on-year basis, the company has grown by 30%. The revenue is INR 162 crores for Q2 FY '2 6 compared to INR 129 crores for Q2 FY '2 5. Coming to the PAT, our PAT for Q2 FY '2 6 is INR48.33 crores compared to INR 20 crores in Q2 FY '25. So, the company has been growing and this quarter, the results are quite positive.
Moderator: Thank you. The first question co mes from the line of Naitik Moh ata from Sequent Investment.
Naitik Mohata: Hello sir, congratulations on a very good set of numbers. I have actually three questions. First, I would want to know that because of the change in the H -1B visa rules in the US , is there a sentimental change in students going to the US and does it impact our business in a positive or a negative way? That's the first question.
Second question is, the margin guidance of 25%, what we've been maintaining, given this quarter margin being a light quarter, we have don e significantly better margins. So, would you like to change the margin guidance? Third question is, what was the number of universities that we had tie-up with in the last quarter and what is the number in this quarter?

Vikash Agarwal: Sure. Thanks for your questions. With reference to H -1B visa, yes, there is some sentimental impact for US education. But for us, the number or the revenue contribution from US operations is very low. So for us, any kind of negative news for US is positive . Reason being, the students who want to study abroad, instead of choosing US , they are choosing UK as a destinat ion or one of the destinations.
So, you will see better numbers because of H -1B impact. Coming back to profit margin guidance, though this qua rter we have done pretty good, we believe the guidance what we have given shou

ld be equally good and positive in our opinion. In terms of number of universities, it has grown significantly.
Normally, with universities, today we represent more than 250 uni versities as on end of quarter 2, which was I think 170 last year.
Naitik Mohata: Okay. Thank you, sir. I will get back in the queue if I have any other questions.
Vikash Agarwal: Sure. Thank you.
Moderator: Thank you. The next question comes from the line of Nilabja Dey from Ashmo Research. Please go ahead.
Nilabja Dey : Okay, sir. First of all, congratulations on a very good set of numbers. The first question is that in terms of you, in earlier course you mentioned that Q -1 and Q -2 combines around 30% of your total revenue and 70% of the revenue comes from the H -2.

So, should we go ahead with these assumptions in FY '26 given some disruptions in the US front? The UK and Canada obviously have picked up. So just like to know this is one f irst question.
Vikash Agarwal: In terms of our guidance, yes, I believe H -1 constitute roughly 30% and which is in line with what has come out. And we believe the ratio should remain broadly similar for second half.
Nilabja Dey : Okay. And my second question is that you m entioned that last time, I know you have mentioned that you are exploring a lot of, because the student loan services is one of the most growing sectors in Indian perspectives. Okay. I have personally experienced also. So, you mentioned actively exploring. So, is there any, have you taken any step in this direction?
Vikash Agarwal: Yes, we have signed up with more than 7 or 8 NBFC and banks. And we believe the company should go live with loan as a distributor in coming quarter, quarter 3. Okay.
Nilabja Dey : And finally, you mentioned last time that you are trying to expand in the Middle East also. So, is there any progress in this direction? Because a lot of foreign universities have already moved to Middle East.
So, what's your take? Because why I'm asking you, because nowadays there are a lot of issues with immigrants in all the developed countries. And diversification is one of the best way to

move, as we understand from the recent tariff experience. So, what you are doing to diversify specifically from t he UK market? This is my last question.
Vikash Agarwal: We believe exactly the same what you said. And we have tied up with multiple UAE universities in the last six to eight months. The other thing what we have done is we have set up a subsidiary of Criza c in UAE for our expansion into Middle East and Gulf countries. We believe this should help us grow further in that region and help us to diversify into multiple destination market.
Nilabja Dey: Okay. Thank you. All the best.
Moderator: Thank you. The ne xt question comes from the line of Deepak Poddar from Sapphire Capital. Please go ahead.
Deepak Poddar: Thank you very much, sir, for this opportunity. So, first up, I just wanted to understand what would be our geographical composition of student right now? I mean, from which country, how much percentage placement we are doing right now?
Vikash Agarwal: In terms of geographical composition, India would contribute roughly 50% as of today and same goes for rest of the world, w hich is quite diversified
Deepak Poddar: And rest of the world mix would be? I mean, top three, four and…
Vikash Agarwal: Africa would be the biggest one followed by South East Asia and China.
Deepak Poddar: South East Asia and China. So, Africa would be how much?
Vikash Agarwal: Contri buting almost roughly 25%.
Deepak Poddar: Roughly 25% Africa. And South East Asia and China would be what? 5% -10%?
Vikash Agarwal: Remaining 25%.
Deepak Poddar: Come again. Sorry, your voice is…
Vikash Agarwal: Yeah, I mean, we haven't done our exact calcu lation but the balance will be coming from South East Asia and Chi

na.
Deepak Poddar: So, ideally our Canada, US and all would be very small for us or what?
Vikash Agarwal: Those are destination countries and those are very small for us.
Deepak Poddar: Okay, understood. Fair enough. So, if I have to do a rough calculation of what you mentioned, first half would be 30% and second half would be 70%. So, ideally, I mean, we are looking to grow about 45% this year. I mean, that's how you can come to about 30% -70% kind of a ratio?
Vikash Agarwal: No Deepak, we have given a guidance of 25%. We believe because of lot of tailwinds, we should grow a bit higher than that. But we will still keep our guidance conservative saying between 25%-30%.

Deepak Poddar: So, 25- 30% growth we are looking at, right?
Vikash Agarwal: Yes.
Deepak Poddar: I got this. And in terms of, I mean, platform, I mean, generally most of the revenue we are getting would be from the platform only? Would that be a right understanding?
Vikash Agarw al: Yes.
Deepak Poddar: Okay. And what sort of, I mean, opportunity size you see in the tie -up with NBFC? I mean, how

big that revenue stream can scale up for us?
Vikash Agarwal: I mean, it will take time but eventually it will end up between 1 %-2% of our EBITDA.
Deepak Poddar: So, small is what we are looking at. Okay, understood. And just last thing from my side, seasonally how do we look at, I mean, generally you said 2Q is generally light. So, which are your heavy quarters?
Vikash Agarwal: Q3 would be closer to 30%, Q4 will be 40%.
Deepak Poddar: Q3 is 30% and Q4 would be 40% of the total annual revenue mix or what?
Vikash Agarwal: Yes.
Moderator: Thank you. The next question comes from the line of Kaitav Shah from Anand Rat hi. Please go ahead.
Kaitav S hah: Yeah, congratulations, sir. Just one question on the platform. Technology platform, how is that coming around? Can you share more insights about how some of the applications now have become faster? Number one. Number two, on the mix from the universit y or country -wise if you can give us revenue share or an outlook on that ?
Vikash Agarwal: In terms of platform, we have added a lot of capabilities like automation and AI. Last time when we had a meet, we mentioned that we are looking at adding those ones. So, those capabilities are already integrated and this is a continuous process and we are adding more and more AI to our platform to make agents' and students' journey more comfortable, more reliable.
In terms of country mix, from a source country perspe ctive, roughly Indian application would be 50 while rest of the world would be same. In terms of revenue, most of the revenues would be coming from UK, roughly 90% -95% because quarter two, rest of the country don't offer any intake , except one university i n Ireland.
Kaitav Shah: Sure. And sir, over three years period, how shall this number move in terms of moving towards other geographies? Also, given that US I think as an overall destination perhaps now because of the supply being very tight. So, how will that shape up? Does any other geography benefit from that?

Vikash Agarwal: Sure. UK is already benefiting from the headwinds from USA or the negative news. So, we believe UK would continue to grow. Over the next three years, as a company, we believe our New Zealand, Australia, Dubai would grow significantly. At the same time, in three years' time, we believe our India as a destination would expand quite a bit as well.
Kaitav Shah: Got it. Thank you so much.
Moderator: Thank you. The next question comes fro m the line of Ashish Pareek from Emkay Investement Managers Limited . Please go ahead.
Ashish Pareek: Thank you, sir. So, my first question would be, as you mentioned that any negative news on the US is actually positive for the business. But I just wanted to understand, so, US is such a huge market and we are not present over there. So, that would have been interesting which would be a growth driver actually for us.
And, we are present in UK for suc h a long time, I think since the inception of business. So, how much penetration do you think is still there in the UK side and where we are looking at the US business and right now, due to that macro headwind, we are not looking into it. So, your thoughts on that.
And secondly, on your, this thing saying that H2 is 70% of your business, but with the student loan business going up in the Q3 and Q4. So, is that factoring in the 70% or that is an incremental thing that can be seen?
Vikash Agarwal: Yeah, I mean, coming to your question step by step, USA, our concentration is very low, lower than 1%. So, the impact has not been with the company. It takes between one and three years time for a company to penetrate into any new destination country. So, yes, penet ration for US is slow because of the headwinds and negative news. But since our base is very low, we are not much affected for that one.
The numbers which has gone down for US is getting compensated with UK. In terms of growth left for UK, at the moment, globally, our percentage share for UK would be closer to 3%. This can grow significantly, much higher. For example, in India, our percentage share is closer to 10%.
So, we believe as we have expanded into multiple new countries from a sou rce perspective, our percentage of UK market will keep on growing for next few years. At the same time, we are expanding into other destinations as well. As mentioned earlier, we have expanded into Middle East, multiple universities.
We are looking at exp anding into Southeast Asian countries like Singapore and Malaysia. And at the same time, we have started our expansion into Australia and New Zealand. So, this should be our growth driver till US numbers comes into picture.

Ashish, you are still there?

Ashish Pareek: Yes, sir. And my second question on the student loan business being included or not in the 70% mix?
Vikash Agarwal: No, income from student loan will not be included because it will start in the coming quarter. And those things will take a lot of time for it to become mature .
Ashish Pareek: Okay, understood. Thank you.
Moderator: Thank you. The next question comes from the line of Devendra Patel, who is an individual investor. Please go ahead.
Devendra Patel: First of all, I didn't get the chanc e to congratulate you at the last con call. So, Dr. Vikash, Mr. Christopher and Mr. Manish, congratulations for coming up with the IPO with the company which was established in 2014 and with the market cap of INR5,000 crores. It's a commendable achievement for the entrepreneur.
So, sir, I wanted to know, like, what is your USP and what you are seeing for the Crizac to grow, say, in next three or five years? That is my first question, sir.
Vikash Agarwal: Sure. Thank you, Devendra, for wishes. With reference to ASP, our service, our portfolio of universities, our distribution network across the globe are very unique. And it provides universities with very diversified student numbers, which most of the unive rsities want. In terms of growth, at the moment, UK is our biggest destination market. We want to expand into multiple different destination markets. We want to expand into more and more source markets as well. Both these things would give a lot of growth in terms of both the revenue for the company.
Devendra Patel: Thank you, sir. And my second question is in the same line, like Christopher is there in the UK. And I believe 95% of your destination revenues came from the UK. So it is also a problem, because if something happens to t he UK, then it's a big problem. So my question is that, that since you are the profitable company, and why you are n

ot able to replicate the same success in the other country, like, say, in Australia, New Zealand, or the USA?
And my second question is that, like, again, you are the profitable company, so you can able to spend. But why, till date, why didn't you not expand into the student loan or accommodation or any other nearby area? Because this is very important, because Criza c is the only few companies who are successful in the education, in the foreign education, particularly ? So this is my two questions to you.
Vikash Agarwal: Sure, thanks, Devendra. In terms of our UK constitution, it has gone down from 95% to less than 90% as of now. And we expect this to go down further and further. We are expanding to other countries as well. For example, over the last 2 years, we became quite big for Ireland. And that constitute roughly 7% of our revenues in last year.
We are looking at expanding into other geographies as well. US was one of our first plans. But now we are looking at expanding into Middle East, Australia, and New Zealand. We believe

over the next 1 or 2 years, our numbers should go up quite big in both of multiple of the se geogr aphies, which I have mentioned.
And that should bring down the concentration further down and bring risk lower. Coming to loan and accommodation, yes, those two are attractive. This quarter, we started the accommodation as a service, and it's already live on our platform. We have started getting attraction. Loan, as mentioned earlier, we will be starting in the coming quarter.
And that will again go live in our platform very soon. Both these businesses take time. And we were just trying to set up a right kind of tie -up with multiple banks and NBFC. At the same time, multiple home accommodation providers as well. Now both the things are in place and this service should go live. It will take some time for this to become decently big to contribute revenue and profitability to our business. But this is live now.
Devendra Patel: Sure, thank you so much. That is what I want to know. Thank you so much and congratulations to Crizac and all the team for the successful IPO and great results in this quarter. Thank you so much.
Vikash Agarwal: Thank s Devendra.
Moderator: Thank you. The next question comes from the line of Naman Golchha from Nirmal Bang Securities . Please go ahead.

Naman Golchha: Thank you for the opportunity, sir. So I have two questions. First, is it possible for you to provide us with the data of how many agents are actually with us and how much are active? And second question is regarding the recent FTA speech that Mr. Starmer gave that in the future the UK universities will be set up in India . So what is our outlook on that and will that lead to our concentration risk to reduce? And increase in India? Thank you.
Vikash Agarwal: Thanks, Naman. In terms of our active agents, it's roughly 4600 as of today. With reference to FTA, it is a very positive news for India -UK corridor. And we believe that should help companies to grow in this sector. With reference to setting up of universities in India, we believe it will take some time for it to mature. But this will help our vision of making India as a destination country.
Since we already have a very strong distribution network outside India, we should be able to recruit good number of students both from India and outside India to recruit for these campuses.
Having said that, 10 or 20 campuses would not be able to absorb all the number of students who studies abroad. So there will still be a big number of students going abroad and that will not impact our business or growth in any way.
Naman Golchha: And sir, with another question. Just a theme, whethe r we are seeing on the ground whether students are preferring to go to UK currently or there's still a dilemma between going to US and UK at the ground level

right now?

Vikash Agarwal: At the ground level, what we are seeing is a lot of students who wanted to go to US are changing and picking UK as a destination. Normally if you do a market survey, you will find US has always been the first choice of students, especially for STEM courses followed by UK. So UK is gaining a lot of attraction because of all th e disturbance which are happening in USA. Plus as you rightly said, with FTA and lot of positive news coming from UK, that is also adding up to the positivity sentiment of the student.
Naman Golchha: Okay sir, thank you so much.
Vikash Agarwal: Thanks Na man.
Moderator: Thank you. The next question comes from the line of Rajakumar Vaidyanathan from RK Invest . Please go ahead.
Rajakumar Vaidyanathan: Yes, congratulations on a good set of numbers. First thing, if I see your numbers in the presentation Slide 5 , 6 and 7, the numbers are not in sync. So I just want t o know which is the right slide?
Manish Agarwal: There was some mistake in the slide. They are uploading the revised slide in the next half an hour.
Rajakumar Vaidyanathan: Okay, the Slide 5 is correct …
Manish Agarwal: The revenue is correct. The totaling is wrong. So it is showing an incorrect path. But they will revise in the next 15 -30 minutes.
Rajakumar Vaidyanathan: Okay, thank you. Not a problem. Sir, the question is your EBITDA margin has gone up from 25% to 39%. And given this is a lean quarter, I just want to know what is driving this improvement in margin?
Vikash Agarwal: There are two components which has helped in this quarter. One, if you remember last quarter we had roughly INR 4 crores of losses because of forex . Now that we do our hedging and the pound has cooled down, so we have gained roughly INR 4 crores as a forex . So all the losses have been recovered.
Secondly, in this quarter we get a lot of annual bonus from universities. Since the academic intake is usually from September to July, we have received some bonuses which has shown a higher path.
Rajakumar Vaidyanathan: Okay, so what is your sustainable margin? I understand that in H1 you are doing 30% of top line and H2 is going to be 70%. So what is your sustainable EBITDA margin?
Manish Agarwal: Sustainable EBITDA margin will be around 24%, 25%.
Rajakumar V : So similar to what you reported for FY '25?
Manish Agarwal: Yes.

Rajakumar V : Okay, sir if you can just tell me what is the exact one of f the forex is foreclosed. So what is the bonus amount if you can quantify that?
Vikash Agarwal: I mean we haven't broken down into bonus because these are given per student basis by multiple universities based on the number of students. So you will see as a final figure, the final total

revenue is INR 162 crores .
Rajakumar V : Okay, now this bonus you would have given last year in the similar quarter as well o r is it something unique for this quarter?
Vikash Agarwal: Bonus is not paid as -- it gets included as a part of fees on the last quarter. So we don't keep separate bonus numbers.
Rajakumar V : Okay, sorry to labor on that point. So my question is even in the previous Q2, that is previous year, FY '2 5 you would have received bonus. So the question is what is driving the improvement, significant improvement in your margin?
Vikash Agarwal: Yes because we have done a higher number this year. So it's a combinat ion of both bonuses and the forex . Forex amount of INR4 crores is quite big as well.
Manage ment: It's contribute 10%.
Rajakumar V : Okay, so if I back this out, then your margin will be 25. Is that fair to say?
Vikash Agarwal: Kind of, yes.
Rajakumar V : Okay, great job. Thank you so much. Thanks for the clarification.
Vikash Agarwal: Thank you.
Moderator: Thank you. The next question comes from the line of Utkarsh Somaiy

a from Eiko Quantum
Solutions Private Limited . Please go ahead.
Utkarsh Somaiya: Thank you for the opportunity. I had two questions. One being your cash flow from operations is negative. So can you please hel p us understand why is that so?
Management: Sure.
Utkarsh Somaiya: Because I see two line items, big line items that are affecting your cash flow. One is trade payables, which is a negative INR95 crore s figure. And the second is other financial liabilities, which is a negative INR 56 crore s figure. So please explain this. And number two, I just wanted you to throw some light on your business model, since I'm new to the company. So I believe you're a platform compa ny.
And as I observed from 2021, your revenues have gone from INR 100 crores to almost INR 800. But your margin has remained flat, which is unlike a platform business. Usually we see significant operating leverage as revenue scales up. So can you exp lain th at a bit also?

Manish Agarwal: Hi, Utkarsh. Although we are a platform business, bu t you cannot compare us with Zomato or something where with increase in top line, your profit also increases substantially. Our major expenses is cost of services, which we pay to our channel partners, which is more or less constant. So with increase in top line, our cost of services increase proportionately. So that's why, although we are a platform business, but our margins are more or less constant, because our line expen ses are constant and they move in the same direction as the revenue.
Now coming to your first question, why the cash flow is negative? This quarter, the amount of money which were expected to receive from the university, that gets a bit delayed. As a resul t, we have not paid to our channel partners. So the trade table is negative.
Utkarsh Somaiya: So you have delayed payment. Ideally, that should improve your cash flow, right?
Vikash Agarwal: Technically, once we receive the payment, then only we make the p ayment. So unless we receive the payment, we don't pay the payment. So you'll see, if there is a line item of trade receivable in same proportion, you'll see a trade table as well.
Utkarsh Somaiya: And how does the payment cycle usually work with the unive rsities and the agents? Can you explain the cycle of when a student gets admission and how you get paid?
Vikash Agarwal: Once the student has received the visa and gets enrolled at the university, after that the university gives them roughly 30 days of cooling time. Post that, we would send the confirmation to the university of the list of students. They will reconfirm that yes, all these students have registered and the commission is payable.
That's the time we would recognize the revenue. At the same tim e, that is the time when within 15 to 30 days, the university would make the payment to us and we would make the payment to the agent immediately once we receive the payment from the university.
Moderator: Thank you. We take the next question from the line of Ganesh from Dhana Laxmi. Please go ahead.
Ganesh: Thank you so much for giving me the opportunity. Sir, I would just like to know the distribution of say a student from India going into the UK. Typicall y, what percentage of students go via agents and what percentage go directly, meaning approach the university directly?
Vikash Agarwal: Hi, Ganesh. Thank you for this one. Though there is no fixed data, but based on the survey done with the university, rou ghly 60% to 70% of the students go via agents while 30% to 35% go via direct online application.
Ganesh: If we see our basic business model, that would be to connect the students to the universities. So

one is the student acquisition strategy via agents. D o we have any exclusivity with agents or with the universities is my second question?

Vikash Agarwal: We connect agents to the university. No, we don't have any exclusivity with eith er the university or the agent, b ut these agents typically work with one or two platforms and once they are comfortable with any of those ones, they stick to those ones. So even though we don't have an exclusive arrangement with any of these agents, what we have seen in a practical form is these agents have been working with us for many number of years.

Moderator: Thank you. We take the next question from the line of Azharuddin Jariwala from Sameeksha Capital . Please go ahead.

Azharuddin Jariwala: Yes, so thank you for giving me the opportunity and congratulations on a very good set of numbers. Most of my questions were already answered. So can you just throw some light that you are expanding to the multiple newer geographies like Duba i, New Zealand, Ireland and etcetera?

So like most of the universities are offering the scholars hip and multiple schemes to the newcomers. So how are you seeing this trend at your particular platform and the application traction to these newer geographies and the particular universities from the different areas?

Vikash Agarwal: Thanks, Azharuddin. With reference to our expansion to different areas, yes, universities do give scholarships and we help students to get those scholarships. Expanding into different regions is actually helping students to have multiple choice of destination country and they c an plan their study abroad without gettin g affected for any disturbances.

For example, US announced some curves. So that would have disturbed the foreign dream of students going to USA. But now with expansion of multiple geographies for us, we can offer alternate options to the same student and that is helping the students in a better way.

Azharuddin Jariwala: Okay, thank you. And the next question is like you already mentioned that 10 campuses are entering in India and setting up their campuses. So I don' t know about the on ground, but actually are you seeing any onset of any university entering into India and setting up their own campuses?

Vikash Agarwal: Yes, there are multiple universities. Roughly 9 universities signed up when UK Prime Minister was in India. So they are opening campus in various geographies. For example, Delhi, Gift City, Mumbai, Bangalore and it will take days. One or two which has gone live. For example, Southampton in Delhi has gone live and this Septe mber will be their first intake, but for others it will take one or two years for it to become live.

Moderator: Thank you. We take the next question from the line of Axay Shah from Toro Wealth Managers.

Axay Shah: Yes. Thank you for the opportunity. Sir, we are hearing about that UK is also tightening the immigration rules for the students. So how we -- how are you seeing it on ground?

Vikash Agarwal: Hi, Axay. UK is tightening immigration rules more for work than for students with reference to increasing maintenance or other recommendat ions from white paper that has been announced almost six months, seven months earlier and it is already baked into the growth.

Axay Shah: Okay. So the students who are going there is also expecting to work post -study there. So it is impacting them also ind irectly. I want to understand it in greater detail.

Vikash Agarwal: I understand. What they have done is, for example, for ILR, like leave to remain in the UK, they have increased from five years to 10 years. Usually a student does not take a view of 10 ye ars plus three years of post -study. So 12 years, 13 years at the time of applying or making an application.

So it is not really impacting the number of students going abroad for studies. But you are right, UK is trying to make immigration a bit difficult f or people who are trying to abuse it and not making it difficult for genuine students or peopl

e who want to go for a genuine work.

Moderator: We take the next question from the line of Rishabh Mehra from Demeter Advisors.

Rishabh Mehra: Hi. Am I audible? Hello. Am I audible?

Vikash Agarwal: Yes, Rishabh. Yes.

Moderator: Yes, Rishabh.

Rishabh Mehra: Hi. Hi. I just have one query around your growth. In your RHP, one of the line items you had

was to grow and deepen your agent network in China. I see that your agent network has grown
from around 11,500 to some 13,500 total agents. Just wanted to clarify, is there a bias towards
China? And just understand where are you all, how is there a lot of focus on this plan to increase student flow from China?
Vikash Agar wal: Yes. We are growing in China. In fact, Christopher currently, who is our CFO, CEO of the
company in UK, is in China at the moment. So both in terms of number of agents and the number
of students going to UK has grown for China and we still are quite bullish for China. But China
is an as -developed market. In fact, the most developed market, better developed than India from
education, consultancy point of view. They have big companies, similar size as that of Kaiser.
So the growth pathway would be slow. But it is in line with our projected growth.
Rishabh Mehra: Got it, got it. Cool. And that's it from my end.
Moderator: The next question comes from the line of Naitik from NV Alpha Fund.
Naitik: Hi, sir. Thanks for taking my question. So my first question is, if you could give us the
conversion rate on the one application that we have processed. And second, adding to the same
is, where is this growth that we are seeing coming from? If you could give us which regions are
relatively doing better and leading to, say, 25% of growth that is important. So that would be
helpful.
Vikash Agarwal: Sure. Naitik, with reference to conversion, standard conversion is between 8% and 10%. Again, it depends
upon where the application source is. If it is, let's say, China, t he conversion can be
25%, 30%. While if it is, let's say, Africa, the conversion rate is typically 5%, 6%. What was the
second question?

Naitik: Second question is, some color. Second question I asked is some color on, where is this growth
coming from?
Vikash Agarwal: Yes.
Naitik: I mean which zones are…
Vikash Agarwal: The main growth is coming from Africa at the moment, where the percentage growth is a bit
higher compared to any other geographies.
Naitik: Got it. So my second question is, if I look at your depreciation amount, I mean, there's a
significant reduction if I compare it year -over -year. So just wanted to understand that. I mean,
why is that so? I mean, INR10 crores, INR11 crores is reduced to INR5 crores, INR6 crores, roughly?
Manish Agarwal: Yes, Naitik, as the company is more into platform -based, we follow WDV method of
depreciation. So every year, the asset value goes down, and accordingly, the depreciation is
reduced. In our case, we use a 40% depreciation rate. So if you take on a WDV method, it will
keep on going down. Next quarter and next year, you will find it goes further down.
Moderator: We take the next question from the line of Chinmay Nema from Prescient Capital.
Chinmay Nema: Good evening, sir. Hope I'm audible.
Vikash Agarwal: Yes, Chinmay.
Chinmay Nema: Yes. Sir, today, first question is, can you throw some light on how you go about partnering with
universities? I mean, how do you select them? And typically, how much time does the tech
integration take at your end?
Vikash Agarwal: Chinmay, partnering with universities can take as low as a single meeting to as high as multiyears. In some
cases, we have seen trying to become a partner from last six years, seven
years. So it depends upon institution-to -institution. Destination which ar e less popular, for
example, Middle East, it becomes easy to partner with them, because they want t

o expand into
India and there is not huge demand of agents who want t o send students to Middle East.
While institutions which are very well-established with their agency network, it is very difficult
to get a partnership. But in general, these are multiyear negotiations and interaction with these universities.
Chinmay Nema: Got it. And how much time does it take for the tech integration and setting up your onboarding
pipeline for a specific university?
Vikash Agarwal: Sure. Once the university confirms that they are happy to onboard, tech integration and others does not take
much time. Usually, it is done within a month.

Chinmay Nema: Okay. Okay. My next quest ion is that, I basically wanted to get some better clarity on the value
proposition of going for a student to go from an apply using an agent and then to a platform of
peers. Is it that it is better to apply in bulk to multiple universities or does it help in better research

or what is it because I believe students who are applying online, they will be capable of
researching the programs themselves and finding a suitable program. So what is it that you help
them with?
Vikash Agarwal: We are a platform which connects agents, so we don't interact with students. Students would go
to local consultant and decide which university to go for. They will do all the research together
and finalize. Once they have finalized, they submit the application to our platform. So we process
the applications which are submitted to our platform and not make any additional recommendations or changes.
Moderator: Thank you. We take the next question from the line of Utkarsh Kedia from BFS. Please go ahead.
Utkarsh Kedia : Good evening sir. I actually recently started tracking this company and the top line growth really grabbed my
attention. So can you please throw some light like what are the main growth drivers?
Vikash Agarwal: Hi Utkarsh . Thank you. The main growth driv er is expanding in to multiple geographies and
destination market which is helping us increase our number of students thereby increasing our top line.
Utkarsh Kedia: And c an you also te ll me about the threats from any competitors like universities are build ing
something in house to grab?
Vikash Agarwal: There will always be a competition so there are multiple companies, but the sector is very big
and there is a room for everybody to grow. So we are growing. The sector itself is growing almost quite heavily p lus at the
moment our growth is only from India and some of the places
outside India. The overall growth still remains very high.
Moderator: Thank you. We take the next questi on from the line of Dharmil Shah from
Dalmus Capital
Management . Please go ahead.
Dharmil Shah: Hi. Thank you for taking my question. My first question would be on the UK market where the
bulk of our revenues are coming from. UK as you mentioned is tightening rules for immigrat ion.
Do you think in the next 2 years to 3 years the number s could actu ally come down in absolute
way b ecause we have seen this play out in Canada and ANZ as well. So do you think there is a
risk of immigrants and international students going down in UK?
Vikash Agarwal: Sure. Thanks Dharmil . UK is trying to tighte n its immigration for non-genuine students. So, for
example, they have increased the language requirement for students who wants to apply for job
in UK. So they have made it 6.5. They have increased the maintenance requirement so that the
student who goes and study there they have sufficient money and are not only dependent upon
part time job which can affect their outcome of studies.

So what they are trying to do is, they are trying to make UK as a destination where right kind of
students go and study and not people who want to use study as a route for immigrat

ing into UK.
So they are looking for genuine students and not students who are abusing immigration
requirement as a student. So for students still UK welcomes people. It's only for non -genuine
students they are trying to create more barriers.
Dharmil Shah : Okay understood. So the language – the more stringent genuine languages, but does not affect
significa nt things for students at least?
Vikash Agarwal: Yes. Though there is always some risk an d that's one of the reason why we are diversifying into
multiple destinations in case any of those risks comes in.
Moderator: Thank you. We take the next question from the line of Naitik Mohata from Sequent Investment.
Please go ahead.
Naitik Mohata: Hello .
Moderator: Hi Naitik.
Naitik Mohata: Sir I wanted to know slightly going back in the past in FY '2 3 and 24 our growth was a little flat.
It was you know INR 473 crore s revenue going to INR 530 crores revenue. Is there any specific
reason what had happened in those years? That is my first question.
Vikash Agarwal: Hi Naitik. The INR 535 crore s you are mentioning is not full year. It was I think for two quarter
or three quarter. The final figure was 635 which is in line with our standard growth.
Naitik Mohata: Okay. A nd then my second question would be from what I understand the main cost in our cost
structure is the commission that we pay to the counselors who have helped us get the students
admission. So the other bigger cost head is employee cost. So I just wanted to understand that
how do you see the employee cost going ahead in the next 2 years, 3 years in absolute terms?
Will it grow, w ill it remain stagnant or you know something of that sort?
Vikash Agarwal: It will grow, but the percentage growth will b e less than the top 10 growth plus with
improvement in more and more tech the ratio of growth will be much lower.
Naitik Mohata: Okay. So like first half we did employee cost of INR 12.5 crores and last full year the employee
cost was INR 19 crores. So any number that we can assume for you know full year FY '2 6 or full
year FY '2 7?

Vikash Agarwal: I mean roughly the employee cost should be between 2% and 3% . Plus tech cost added together would be roughly 4% altogether.
Moderator: Thank you. We take the next question from the line of Rajakumar Vaidyanathan from RK Invest. Please go ahead.
Rajakumar Vaidyanathan : Yes. Thanks for the follow up sir. Sir my question is on the margin 25% that you mentioned, the EBITDA margin guidance. So I just wa nt to know since your top line is growing by you know

30%, there is no commensurate growth in EBITDA margin due to the fact that your costs are mostly variable and there is no operating leverage that kicks in. Is that a fair understanding?
Manish Agarwal: Hi Raj. We have given a projection of around 25% growth and our costs are also increasing in the same line. So you will find the EBITDA margin to be more or less constant around 24% - 25%. Obviously if the top line grows it will also go but as a conservative figure we keep a ballpark figure of 24% -25% EBITDA as of now.
Rajakumar Vaidyanathan : Yes. Thanks for that sir. So my question is generally your costs are completely variable or it is completely in sync with your revenue or there are any fixed costs in this?
Manish Agarwal: Like our cost of sales which is a major component is variable but rest all employee, tax and other costs are fixed.
Moderator: Thank you. We take the next question from the line of Dhiraj from Roha Asset Managers . Please go ahead.
Dhiraj : Yes, just again reiterating the cash flow statement, we see two line items. One is other financial liabilities and one is other liability, which are INR 56.8 crores and INR41.7 crores, almost close to about, you know, INR 100-odd crores. What are tho se outflows?
Manish Agarwal: Hi Dh iraj. I don't have the detai

ls handy. Can I get back to you on this?
Dhiraj : Yes. These are consolidated numbers and the stand -alone also reflects the different numbers in consolidated. So what is the difference between th e two if you can just help us understand?
Manish Agarwal: Sure. We will get back to you on this.
Moderator: Thank you. We take the next question from the line of Naitik from NV Alpha Fund. Please go ahead.
Naitik : Hi sir. One of my questions was similar to what last participant had asked. We are trying to understand the cash flow statement a little better. The other current liabilities have actually decreased and that is setting up almost INR 90 crores of cash flow. So my question was on the same lines ?
Manish Agarwal: Sorry Naitik . I don't have the cash flow handy with me. Along with Dhiraj I will also get back to you.
Naitik: Sure. And sir one more question. If I see your other financial assets that has gone up by a significant amount. So is it fixed de posit or cash itself or what is it if I look at your other financial assets?
Manish Agarwal: It's fixed deposit.
Natik: Okay. So it's cash. Got it, sir.

Moderator: Thank you. We take the next question from the line of Anand Parekar , who is an Individual Investor. Please go ahead.
Anand Parekar : Thank you for the opportunity. I have a question. I think it was answered partially. So as we know that more universities are now setting up campuses. So I heard you saying that we'll reroute the students who are fro m other countries coming into India. So do you foresee that currently whatever amount you get per student from those universities would that differ in terms of percentage? What is your outlook on that?
Vikash Agarwal: Anand, it will be quite early to make a comment but I believe there will be some differences. But again in terms of volume you can bring in a much higher volume to India. But yes you are right on assumption there will be a difference in percentage commission.
Moderator: Ladies and gentlemen as there are no further questions from the participants I now hand the conference over to the management for their closing comments.
Vikash Agarwal: Thank you very much everybody for participating. As mentioned earlier this quarter we had grown better than e xpected roughly 30% compared to our growth forecast of 25%. The company is growing at a reasonable pace and we believe whatever forecast we have given the company

should do better than that in coming quarters. Thank you once again for joining this Investor Call.

Moderator: Thank you. On behalf of Equirus Securities Private Limited that concludes this conference call. Thank you for joining us and you may now disconnect your lines.

Vikash Agarwal: Thank you.

Call: Jan 2026

"Crizac Limited
3Q FY '26 Results Update Call"
January 28, 2026

MANAGEMENT : DR. VIKASH AGARWAL – CHAIRMAN AND MANAGING DIRECTOR – CRIZAC LIMITED
M R. MANISH AGARWAL – CHIEF FINANCIAL OFFICER – CRIZAC LIMITED
M R. CHRISTOPHER NAGLE – CHIEF EXECUTIVE OFFICER – CRIZAC UK

Moderator: Ladies and gentlemen, good day and welcome to Crizac Limited, 3Q FY '26 Results Update. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask a question after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Gaurav Gupta. Thank you and over to you, sir.

Gaurav Gupta: Good afternoon everyone and welcome to Crizac's Q3 FY '26 Earnings Conference Call. We have with us Dr. Vikash Agarwal, Chairman and Managing Director of the company, Mr. Manish Agarwal, the Chief Financial Officer of the company and Mr. Christopher Nagle, Chief Executive Officer of Crizac UK. Christopher, sir, if you can start by giving your overview on 3Q FY '26 performance as well as outlook for FY '26 and beyond and then we'll open up for Q&A. Over to you, Christopher, sir.

Christopher Nagle: Thank you, Gaurav and good evening to everybody. Greetings from London. I'm Christopher Nagel, CEO of Crizac UK and delighted to be speaking with you today. So over the past year, we witnessed what was a transformative moment for Crizac with our IPO in July 2025 and this was a validation of not just our business model but also everything that we've been building since our founding in 2011.

Today, I'm pleased to report that the momentum we've generated has carried through this quarter with significant results that underscore the global demand for quality student recruitment solutions. For context, Crizac operates at the intersection of an expanding global education market and persistent inefficiencies in international student recruitment.

We serve 350 students. We have more than 14,000 registered agents on our platform and we've processed more than 10 million student applications across more than 80 countries. Our scale is not just an accident. It reflects the genuine problem that we're solving for universities and education agents around the world.

In Q3, we delivered revenue growth of 28% year-on-year which means that we reached INR278.6 crores in revenue. This performance reflects both organic momentum but also strategic investments we've made in emerging markets across Latin America and other continents.

Our EBITDA margin of 23.19% demonstrates the operating leverage inherent in our asset light and tech-led model. This really is crucial. We're scaling up application volumes without proportional increases in fixed costs or headcounts which is precisely the dynamic that drives our sustainable margin expansion over time.

Something that particularly excites us is the diversification of our sourcing base. India remains our dominant market with about 50% of application volumes but we are seeing accelerating growth from Asia excluding India and extremely robust expansion in Africa.

This geographic diversification reduces our dependency on any single market and positions us for resilience and global growth. Our recent acquisition of Studies Planet Limited and the launch of our accommodation facility platform represents strategic expansions into adjacent services within the international student journey.

We're not simply connecting students with universities, we're really building an ecosystem that supports students throughout their entire overseas education experience. These moves enhance our value proposition to both institutions and to our agents and they create additional revenue streams with the same high operating leverage.

It's worth emphasizing as well the continued strength of our balance sheet. Crizac is still entirely debt-free and fully self-funded. Every ounce of growth that we've achieved over 15 years has come from inter

nal cash generation. This capital discipline has been and is foundational to our success and it provides us with significant strategic flexibility to pursue growth opportunities without constraints.

Looking ahead, we're focused on three strategic imperatives. The first is deepening institutional

partnerships in developed markets like the UK, Canada and Australia where we've established strong footholds with leading universities.
Second, continuing our penetration of emerging source markets where we see substantial untapped potential for student mobility. And thirdly, enhancing our service offerings to capture a greater share of the international student value chain. Our team of 350 permanent employees and consultants across the UK and India brings together domain expertise, technical excellence and operational discipline.
The leadership team shares a clear vision to establish Crizac as the trusted digital backbone of global student recruitment. We strongly believe that the international education sector is structurally under-saturated with technology solutions that genuinely improve outcomes for all participants and we believe that we're at the early stages of capturing that opportunity. Our platform has achieved product market fit, our unit economics are strong and our growth trajectory is accelerating.
Thank you and with that for context, I'll hand over to our Chairman and Managing Director, Dr. Vikash Agarwal.
Vikash Agarwal: Thank you, Christopher. Good evening, everybody. Thank you for being a part of our investor call. As Christopher mentioned, this quarter reaffirms the strength of Crizac business model, execution, discipline and long-term growth strategy. International market is very large but segmented and still at the early stage of digital adoption. Crizac brings that trusted digital infrastructure for global student recruitment.
We provide university with access to quality controlled application, global agent networks and enabling agent with a faster turnaround time, transparency and a access to premium institutions. These improvement translates directly into higher efficiency, better outcome and scalable economics.

Last year, roughly 7.6 lakh students went abroad from India. If we talk about global student mobility, that number is 80 lakhs. Our current scale represents only a small share of that highly segmented global market. This provides a long runway for growth. Each new agent, institution and geography added adds incremental revenue with attractive margin supported by our platform-driven operating model.
As Christopher mentioned, we continue to scale across high-value developed markets like UK, Ireland, Australia and New Zealand while expanding into multiple source markets including Asia, Africa and now Latin America. Crizac is a technology-led asset-light platform operating in a structurally growing market. This is not a short-term or growth story but a scalable business model with defensible advantages, strong unit economics and clear visibility for long-term valuation.
With that view, now I invite our CFO, Mr. Manish Agarwal to take this financial performance outlook.
Manish Agarwal: Thank you, Dr. Vikash. Good evening everyone and thanks for joining the call today. Myself Manish Agarwal and I'm pleased to share you the financial performance of Q3 FY '26. With a revenue of INR278.63 crores, we were able to deliver a PAT of INR50.52 crores which is a margin of around 18%.
This result demonstrates strong execution, operating leverage and consistent profitability. Our business is seasonal in nature, typically because of the admission cycle. Q3 is our strongest quarter driven by the peak international student recruitment.
Our commission-based asset light model supports high margin and strong cash conversion. Costs scale largely with the volume while employee expenses have grown modestly, highligh

ting the
operational efficiency.
We continue to generate healthy operating cash flow with minimal working capital need. This has also helped us in announcing our first special interim dividend today. We delivered a profit of INR155 crores in FY '25 and based on the current trend, we are well positioned to exceed this performance in FY '26.
Most of our growth is organic and sustainable. We expect a normalized EBITDA margin of around 23% to 25% supported by scale benefit and platform leverage. Our priority remains to reinvest in technology, key market and strategic opportunities. Over time, we also intend to return the capital to shareholders as the business matures.
Thank you. We are now open to questions.
Moderator: Thank you very much. We will now begin the question and answer session. The first question is from the line of Samad Patel from.Please go ahead.
Samad Patel: Congratulations on a great set of numbers. I have three questions. First one is that at large UK

partner universities where we already contribute, let's say, a significant part of their intake, now

the growth would be driven by market expansion or wallet share gain from the other players?
That is my first question.
Vikash Agarwal: It will come from both the things. We expect to gain market share. As mentioned earlier, our market share, if you look at across the globe of the students we send to our partner universities, it's less than 1%. Can this market share grow further? The answer is yes. We expect market share to grow. At the same time, because of scale and volume, we expect a better revenue per student basis as well.
Samad Patel: Understood, sir. That was really helpful. Now, my second question is, are there any regulatory development across our key geographies that we should be closely monitoring over, let's say, next 6 to 12 months, which can impact our volume growth positively or negatively?
Vikash Agarwal: I mean, all the news are normally big in our forecast. We believe some of the news, for example, FTA with Europe, which came yesterday, all these are very positive. We believe the numbers, because of these impacts, and again FTA was signed with New Zealand as well, so there are a lot of positive developments which are coming up.
As far as student global movement is concerned, even though these regulations make a big impact, but over the long term, you'll see that student destinations are fungible and they choose a destination which is more attractive and easy for them to get a visa and see a better return on investment. So, any regulations and other things which are coming out at the moment, either those are already big or are coming quite positive.
Samad Patel: Understood, sir. That was really helpful. Now, my last question is on Global Tree. So, how do Global Tree unit economics and margin profile compare with this existing business? Any particular flavor which you can give us on margin and unit economics, that would be really helpful?
Manish Agarwal: Hi, Samad. This is Manish. Global Tree is a B2C company, whereas we are a B2B company. Our margins are relatively smaller compared to a B2C company. So, in terms of margin of Global Tree, we expect it to be around 50%. We acquired that company on 6th January. So, in the fourth quarter, you will see the consolidation and revenue coming into our P&L account.
Samad Patel: Understood, sir. That was really helpful. That's it from my side, and I will get back to you for further questions.
Manish Agarwal: Thank you, Samad.
Moderator: Thank you. The next question is from the line of Aman Banerjee from InCred Capital. Please go ahead.
Aman Banerjee: So, my first question was on our...
Moderator: Sorry to interrupt. Requesting, sir, Aman to please rejoin the queue while you have disconnected. We'll move on with the next question. The next question is from the line of Kaitav Shah. Please

go ahead. Sorry to interrupt. The line of Kaitav Shah has been disconnected. We move on to Savita Jain. Please go ahead.
Savita Jain: Hi, sir. Thank you for giving this opportunity. I have a couple of questions. First is, sir, can you tell me how many applications were processed in this quarter? And in this, you know, how many applications were processed mainly for UK, then for Canada, and then Ireland, and then for other countries?
Manish Agarwal: Hi, Savita. We did around 1.2 lakh applications in this quarter. Okay. Almost 50% came from, 50% for India, or you can say 50%, 90% were for UK, and rest were for other countries.
Savita Jain: Okay. Okay. And also, you know, in the other expense, the other expense has shot up, and you've also mentioned this was for professional fees, and then one more line item. So if you could help me understand, you know, what this professional fees was incurred towards. I assume this was a one-off kind of an expense. This was incurred in this quarter. If you could just elaborate a little bit on this?
Manish Agarwal: Sure. Our FY23, FY26, other expenses are on a higher side, because we engage lawyers, consultants for due diligence, and other things for acquisition purpose.
Savita Jain: Okay, understood.
Manish Agarwal: We also engage consultants for IT securities purpose, who can like audit and check our system

integrity, so that we are on a safe zone. This has led to increase in the professional fees.
Savita Jain: Understood, understood. And sir, would you be able to give us the revenue and the profit for our subsidiaries, such as GlobalTree, Careers, the Studies Planet, and Ucall FSEDI, sir, is it possible for nine-month FY26?
Manish Agarwal: GlobalTree, we acquired on 6th of January, FY26. So that has not been consolidated. Nothing has been recorded in the books yet, for QC financials. Coming to the other standalone companies, we acquired StudyPlanet.com Limited, which is a Latin American based company. Their revenue was approximately 1 crores. And almost 50% has been, since we acquired 51%, 51% has been booked in our account, and balance as a minority interest.
Savita Jain: Right, right. And Ucall, sir?
Manish Agarwal: Just a second. Savita, is it possible I'll get back to you on this?
Savita Jain: No problem.
Manish Agarwal: I don't have that data handy with me right now.
Savita Jain: Yes, yes. So just one more question and I will rejoin the queue. So you mentioned that, you know, we plan to get into the accommodation services and financial assistance services. So what exactly do we plan on this? And by when do we plan to launch the services? Could you just broadly explain what are we planning to do? In these two offerings?

Vikash Agarwal: So Savita, we have already launched the accommodation as a service in our platform. By this, we are helping our agent and the student who wants to study abroad, to choose the accommodation of their choice in and around the universities they propose to study.
We have done a tie up with multiple state agents across the globe, where we refer these students to them. Once the student has selected the accommodation, they lock the accommodation for those students, and we get paid as a brokerage of two to four weeks of the rent for the referral we have made.
Savita Jain: Okay.
Manish Agarwal: Hi, Savita. I've got the details. Our Ucall FSEDI subsidiary has a turnover of INR10.73 crores in quarter three, and Studies Planet has INR1.87 crores of the revenue.
Savita Jain: Okay. And so the accommodation services, where have we launched the geography? Have we launched this right now for UK, I believe?
Vikash Agarwal: No, we have already launched for UK, Ireland, USA, and we are looking at launching for Australia and other destinations.
Savita Jain: Okay. And how much revenue have we booked in this for Q3?

Vikash Agarwal: It's a very negligible revenue because it's just started. It will take a bit of time for it to become more popular with students.
Savita Jain: Okay. And on the financial assistance side, what are we planning to do? Are we planning to tie up with the education loan NBFCs? Are we planning to refer students to them? What exactly are we planning to do there, sir?
Vikash Agarwal: Yes, we have already tied up with many of the education loan agencies, where we will refer the students to them, and we'll get a referral fee from those NBFCs and banks.
Savita Jain: Okay. Okay. Thank you, sir. I'll rejoin the queue. Thanks.
Moderator: Thank you. The next question is from the line of Aman Banerjee from InCred Capital. Please go ahead.
Aman Banerjee: Hi, sir. Thank you for the opportunity. So my first question was with our UK geography. So we might see some rules getting stricter and some rules, new rules applicable from April of this year. So what's our outlook there? We might see a drop in our applications.
Management: Christopher?
Christopher Nagle: Hi. Yes, thank you for the question. The major recent sort of change or news item for the UK market was the launch of a new international education strategy from the UK government. This was basically a very positive announcement. The government put in a new and much higher

target to boost its international education exports to GBP40 billion sterling a year by 2030. And they also put a target for universities to diversify their source countries for students much more. So obviously, those two things suit Crizac very well, that there's an ambition for the market size to grow. And there's an ambition to diversify geographically from source market, which is a big

strength of Crizac. So yes, that's the main sort of update in terms of regulation from the UK.
As well as that, there's, you know, increasing focus and awareness in the government as the industry expands and the market expands. Increased regulation around agents and more rules is a benefit for Crizac, just because it raises the barriers to entry and entrenches our position as one of the largest senders to the UK.
Aman Banerjee: Got it, got it. That was very helpful. So second question was that we are seeing a trend change, I mean, in terms of students as their destination country, we are seeing a lot of new applications towards Canada. So but, we are not at all there in that market. So are we planning to start anything there?
Vikash Agarwal: Yes, Aman, we are adding institutions and universities in Canada as well. Though, having said that, UK is still by far the most popular destination for the students going abroad. But yes, you're right. We are adding other destination institutions in our portfolio.
Aman Banerjee: Okay, sir. Okay. Thank you so much.
Vikash Agarwal: Thank you.
Moderator: Thank you. The next question is from the line of Kaitav Shah from Anand Rathi. Please go ahead. We'll move on with the next participant. The next question is from the line of Madhur Rathi from Counter Investments. Please go ahead.
Madhur Rathi: So firstly, since we have a over-dependence on UK market, and I think the previous speaker also alluded to this, the fact that visa approvals might be hard to come by, especially in case of change of government in UK and reform party coming in power, if at all. And so secondly, now what will it take for us to break into new geographies like Canada and Australia? And in fact, the macro environment for visa is getting tougher in all of these geographies. So is that a major headwind for us going forward?
Management: Christopher?
Christopher Nagle: Yes, thank you for the question again. I think in the UK, just to comment on the government situation that the next election is not for more than three and a half years. So we're not really anticipating too much change in the near or even in the

medium term.
Our strategy is never to try and predict politics or geopolitical changes. Our strategy is to de-risk through diversification globally. It's true that our strength in the UK obviously gives us a dependence on the UK, and that's reflected in the numbers at the moment. We're working aggressively to diversify on the destination market side. This, we believe, is going to be done

more efficiently through inorganic growth, and it's a key pillar of our M&A strategy going forward.
Madhur Rathi: What's our strategy to break into newer markets like Canada, Australia, etc?
Vikash Agarwal: I mean, as Christopher said, we are looking at adding into different decision markets like Canada, New Zealand, and Australia. Any acquisition what we make, for example, you know, in this quarter, we've acquired a GlobalTree that has brought few Australian contracts to our kitty. We expect a few other acquisitions, which we are already talking, should bring more and more universities in those destinations you have mentioned to our kitty, and we should be able to diversify and recruit for those destinations in the coming future.
Madhur Rathi: Now, sir, what is our market share with the institutions in the UK? I mean, are we the single source supplier to them, or do they have multiple platforms like ours?
Vikash Agarwal: I mean, most of the universities work with multiple platforms like ours. Right.
Madhur Rathi: And now, for example, if we need to enter Canada, so I mean, is there some cash burn that we will have to, I mean, to penetrate the market, or is it that our existing tech platform, we can just add any institution without any increase in expenses?
Vikash Agarwal: In our existing tech platform, we have that capability to add any new institution without any additional cost.
Madhur Rathi: So irrespective of the geography, it is just a matter of like getting in touch with the university and getting them enrolled on our platform?
Vikash Agarwal: Yes, I mean, it's not as simple, but yes, if the university grants us the license to recruit, we can do that.
Madhur Rathi: Now, I mean, the existing university in let's say Canada, already Indian students are going over there. So what is the proposition that we are offering them, which is over and above the competitors? I mean, the competitors also would be having a similar tech platform like ours. So what is our edge, due to which we hope to get that additional business in new geographies?
Vikash Agarwal: It's not only about tech, it's also about the quality of students, the sourced countries from which you are bringing those diversified student crowd to the universities, which makes us more attractive to our partner, our proposed partner universities. We can bring in better quality, better

quantity and a very diversified crowd to any institutions we propose to work or we are currently working with.
Madhur Rathi: So will the margins in the new business in new geographies, will they be equal or lower, at least in the initial period?
Vikash Agarwal: I mean, it will be lower at the initial period, but with scale of volume should become same as the existing one.

Madhur Rathi: And so lastly, in your best judgment, considering everything at what rate do you think that we can grow our business over the next 5 years, let's say?
Vikash Agarwal: I mean, between 20% to 25% is what we have projected and that was on a growth story.
Madhur Rathi: Thank you very much.
Vikash Agarwal: Thank you.
Moderator: Thank you. The next question is from the line of Viraj Jain from Yes Securities. Please go ahead.
Siddharth: Yes, this is Siddharth here, not Viraj. So a couple of questions from my side. So one, like you mentioned, your other expenses is because of some professional fees for the due diligence that you all must have incurred for acquisit

ion. But so your base quota fees were extremely low, less than a crore. So going forward, what can be a reasonable or an average number that we can expect?
Manish Agarwal: Hi Siddharth, your question has two parts. First, our Q3 FY25 numbers are low. And second, our Q3 FY26 numbers are high. I'll take the first part first. The Q3 FY25 numbers are low because of certain writebacks of expenses, which we have done after getting the SEBI direction and approval, which was charged to the selling shareholder since it was a OFS and company which has booked the expenses has written it back. That's why the Q3 expenses are low.
Siddharth: Okay.
Manish Agarwal: And coming to Q3 FY26, as said, we have hired consultants for IT securities, acquisition. These have led to increasing professional fees. We don't expect this to continue forever. It will settle down in between the two ends.
Siddharth: Understood. Okay. And second, you said that the applications processed in Q3 were around 1.2 lakhs, correct?
Manish Agarwal: 1.02 lakhs. 1.02 lakhs.
Siddharth: 1.02 lakhs. Approximately 1 lakh. What was the acceptance rate on those applications?
Vikash Agarwal: Normally, acceptance rate is roughly 10%.
Siddharth: So we get our commission based on acceptance rate, correct? Like how many applications are accepted?
Vikash Agarwal: Yes.
Siddharth: Okay, okay. Also, from a strategy point of view, I want to understand our recent acquisitions that we've done. They are kind of hinting that we are now moving or tilting towards B2C. Any change in long-term strategy for the company or do you think that B2C is now the next growth lever or just wanted your thoughts on that?

Vikash Agarwal: We believe that B2B platform still has a lot of growth story and everything. Scalability can come only via this method. As far as B2C acquisition is concerned, most of these are done on a strategic basis. For example, the Studies Planet what we got in Latin America, we had zero footprint in Latin. So that geography, the knowledge of that geography was not with us. Doing acquisition helped us develop that footprint and this will also help us grow as a B2B in that region as well.
Siddharth: Okay. So but just going back, you all must be having the data also. So the largest exporter of students for foreign education has been primarily India and China. So these countries like Latin American countries, do you see any meaningful growth coming from those countries because the past has not shown? Do you see that future might hold or be any better?
Vikash Agarwal: These help us in diversification of the students going to our partner university, which in turn help us to get more contract, a better deal with our universities. These are the levers which we use when we negotiate with our existing university partner or when we approach a new university partner.
Siddharth: Got it. And if you can just explain what is the policy impact, UK policy impact for the change

in visa, like from 24 months post-study visa, it has been brought down to 18. So what is the
impact that you all are seeing now?
Vikash Agarwal: We have not seen any impact. This was announced almost a year back and we have been growing between 25% to 35% year-on-year basis and each quarter. So we have not seen any setback or impact on that. Just to add to it, these 18 months is given to the student to find a job. If a student gets a job, they can change their visa status to a work permit where they can stay back and work for a longer period.
Siddharth: Understood. And the last one final question, in terms of your source and destination market boards, which are the markets that you all are most excited about, ex of UK?
Vikash Agarwal: Middle East is one we are quite excited and it's growing quite good. Ireland, we have already cracked and we are doing a good number for Ireland with a market share of almost closer to
1

0%. We are looking at expanding into New Zealand and Australia in the coming days. In terms of course, definitely India is our biggest market, but we are looking at expanding into new geographies like multiple countries in Africa and Central Asia.
Siddharth: Got it, sir. And how is China performing? I mean, how is China in the Q3?
Vikash Agarwal: China is growing year-on-year basis for us. Again, China is one of the most mature markets, so the growth will be slow. But as a company, we have been growing in China at a decent pace.
Siddharth: Got it. Perfect, sir. Thank you so much. That's all from my side, sir. Thanks.
Moderator: Thank you. The next question is from the line of Rahil from Sapphire Capital. Please go ahead.
Rahil: Good evening, sir. Can you hear me?

Vikash Agarwal: Yes, Rahil.
Rahil: Yes. Hi, sir. It's a club, a few of my questions together. So firstly, the loan segment, you had mentioned that you are expected to go on stream from quarter 3. So has it started already and has it been reflected in the numbers? Secondly, why was the gross margin low in this quarter 3? And the next question will be, so growth rate you have mentioned, 20%-25% over the next few years expect to grow. However, so far, you have done in the range of like 25%-30% in the preceding quarters as well as this current quarter. So are we guiding like on a conservative basis? Yes, those are my questions.
Manish Agarwal: Okay, Rahil, let me answer it. In terms of loan, yes, we have started the loan in our platform, loan as a service, and it's already started. The initial revenue are small. We expect it to increase once it becomes more popular and. Now coming to your second question, why the gross margin has gone down? The gross margin has gone down when you compare it to quarter 2 of FY26. But if you see the 9 months result for FY26 and FY25, our EBITDA margin remains same as around 29%. Our business is seasonal in nature. So every quarter is different. Hope this answer your question. And the third part was like projection, what we are offering. We are saying we will be continuing growing at 20%-25%. This is a conservative number. Hello, Rahil?
Rahil: Yes, I'm there. I'm there. Okay. Yes, just quickly. So the ratio stays the same, right, in terms of first half and second half share of revenues. So first half is always lower, 30%. And the second half was higher…
Manish Agarwal: Yes. First half is around 20%-25% and second half is around 60%-65%.
Rahil: Exactly. Got it. Yes. Okay. Thank you, sir. All the best to you.
Manish Agarwal: Thank you, Rahil.
Moderator: Thank you. The next question is from the line of Umakant Sharma from Viansh Ventures. Please go ahead.
Umakant Sharma: Yes. Hi. Thank you for the opportunity. Chief, couple of quick questions. Could you just talk a little bit about how have you diversified the revenue from a university standpoint, from a geographical university standpoint? What was it, those numbers, let's say, last year, same quarter? And what is that those numbers, let's say, this year across UK, Canada, Australia and other geographies, Ireland?
Manish Agarwal: Hi, Umakant. Our concentration still lies with UK and almost 90% of revenue comes from UK. If you compare it from last year or last to last year, it has come down from 95 to 90. We have grown in other markets like Ireland, Middle East, Dubai, specifically, which are contributing around 3% to 5% of our revenue.
Umakant Sharma: Got it. And let's say when you guys at the Board level sit and discuss the strategy from a futuristic standpoint, let's say 3 or 5 years down the line, how do you see those numbers panning out? Let's

say what aspirational are you guys looking at the split looking like for, let's say, when we are sitting at '28 or '29, F29?
Manish Agarwal: Like when we started, our source market was 10

0% India. Now, we were able to reduce it to
50% and has expanded to different source markets, which contribute rest of 50%. Similarly, from the definition point of view, we would like to reduce UK to 50%. So maybe 5-year down the line, we would want UK to be 50% and rest other countries to be 50% of our revenue.
Umakant Sharma: And which would be those countries, which would be key countries comprising the balance 50?
Manish Agarwal: US, Australia and Canada.
Umakant Sharma: Got it. The second question which I have is, you know, when you think about from an employee, which we have employee headcount, which is about 350 odd, right. Could you just talk, how are you viewing that employee headcount? Meaning from a use case standpoint, how much would be targeted more towards the agent acquisition? How much would be directed towards the university side in acquisition? And the last one, how much would be allocated towards the running of the tech side?
Vikash Agarwal: I mean, in terms of employee division, majority of them are responsible for agent and, you know, relationship. Roughly 15% to 20% of them are on IT side, who helps develop tech and maintain them. So rest all would be in our business department.
Umakant Sharma: That would be the agent acquisition, right? When you say business development?
Vikash Agarwal: Agent acquisition and university acquisition.
Umakant Sharma: Got it. Got it. And thirdly, Yes.
Moderator: Mr. Umakant, I request you to kindly rejoin the queue for the follow-up question.
Umakant Sharma: I just have one quick follow-up. Actually, this was not, this was just a follow-up question on that.
Vikash Agarwal: Yes.
Umakant Sharma: Yes. Thanks. So just one, just from a strategy standpoint, could you also just touch down a little bit about what's the thought process on the acquisition? Would these acquisitions be led by newer? We are looking at new universities. This would be driving the acquisition to add in our portfolio or new geographies within the universities, or would it be led by the agent acquisition side?
Vikash Agarwal: It will be. It depends upon the proposition, but normally it will be for diversifying into new decision market or a new source market.
Umakant Sharma: Largely towards the geographical standpoint, right? From a university standpoint.

Manish Agarwal: Hi, Umakant. I would also like to add. We will only acquire any company which is EBITDA accretive. We'll not just go and acquire anything at any price.
Umakant Sharma: Got it. Got it. Makes sense. And just one final bookkeeping question, just the thing. Could you just touch a little bit, could you just tell me what would the normalized other expenses look like? Let's say going ahead.
Manish Agarwal: I said we are growing. Our revenue is growing. So expenses will also grow. But yes, in current quarter, this expenses is on a higher side. If you see immediately next quarter, I think it will be lower than this.
Umakant Sharma: So let's say if we remove the acquisition related expenses and the legal formalities and all of that, how much would that number look like? X of that. Could you just throw some color around that?
Manish Agarwal: Same as last quarter, around INR47, INR45 crores.
Umakant Sharma: Got it. Got it. Perfect. Thanks and all the best.
Moderator: Thank you. The next question is from the line of Smith Gala from RSPN Ventures. Please go ahead.
Smith Gala: Yes, thank you for the opportunity. In continuation to the seasonality point, which you mentioned previously on the call, which affects our gross margins. Can you help me understand what the seasonality is in detail?
Vikash Agarwal: Each university or destination country has a different intake. If I talk about UK, September, October is their largest intake where all the masters and undergrad courses are offered in every university. Followed by January, February, there is

another intake. So students who miss or
cannot make in the September can apply and go in January. And there is a mid-intake, which is in May.

So there are a handful of universities which also offers mid intake. This multiple intake scenario, bring seasonality to the business. Whenever our universities, it takes some time for the universities, for the student to join the university and the university to pay us a renovation fees. Based on when they pay, we recognize revenue. And that payment would be higher in quarter three and quarter four compared to quarter one and two, where the intake is low.
Smith Gala: Okay, okay, that was helpful. Second, I wanted to understand why are we exposed to the forex exposure? Like, is it not a natural hedge for us that we collect from the university? We record revenue when we collect from the university and then pay majority of it to the agents. So still we are booking a lot of forex losses or gains, depending on the currency movement. And why are we not hedging it?
Manish Agarwal: Hi, Smith. We book majorly of our revenue in the same currency, majorly pound, and we pay the agent in the same currency. But a substantial part of money comes to India, which comes in

INR. So we do our forward hedging to avoid the adverse currency movement. So that's why you see the whatever forex gain or loss, this is for hedging purpose only.
Smith Gala: Okay. And, you can help me when does we when do we book revenue and when the commission is paid to the agent?
Manish Agarwal: We book the revenue once the university confirms the amount of commission due to us. Once we receive the money from the university, we immediately pay to the agent.
Smith Gala: Okay, okay. Thank you. I will join back the queue.
Moderator: Thank you. The next question is from the line of Azharuddin Jariwala from Sameeksha Capital. Please go ahead.
Azharuddin Jariwala: Yes. So thank you for taking my question. I just want to ask something like our two segments like accommodation and low financial service segment came live in this quarter. So how can -- how do we expect to contribute this segment meaningfully in next year down the line?
Vikash Agarwal: I mean, this will take some time. I believe it will take between two to three years before it becomes a substantial line item. These services are added to increase the LTV of the student, but at the same time, provide a better service to our client partners, both the agent and the students they recruit.
So objective is not just to get revenue immediately from this one, but to provide a better service which will help us gain more market share from the agents. But it will take two to three years before it becomes substantial.
Azharuddin Jariwala: Okay. And on the recent acquisition we did of the Studies Planet, can you show some key financial metrics of the company like revenue, EBITDA impact?
Manish Agarwal: Studies Planet is a B2C company. For quarter three, the revenue was INR1.87 crores. And I have the PAT. I have the PAT figure with me. It's INR1.19 crores.
Azharuddin Jariwala: And can you please give us on annual basis like FY '25?
Manish Agarwal: FY '25, we didn't acquire them. We acquired them in only 23rd October 2025.
Azharuddin Jariwala: Yes, Yes, but okay. Yes, that's all right.
Moderator: Thank you. The next question is from the line of Anupama from RatnaTraya Capital. Please go ahead.
Anupama: Yes, hi. So, I have just two questions. On the application side, the number of applications that you've mentioned that 1.1 lakh, is it a total applications processed in this quarter? Or is it like a outstanding number?
Manish Agarwal: No, this is a total number of applications processed in this quarter, 1.02 lakhs.

Anupama: Okay. And out of that 15% gets enrolled. Is that right?
Manish Agarwal: No, average around 10%.
Anupama:

10%. Okay. Is it possible actually to give that numbers out like the number of enrolled applicants? Because it will be easier for us to see the seasonality actually.
Vikash Agarwal: I mean, normally we disclose applications to give you an idea about seasonality. But in future, if this is something which you want, we'll integrate that into our system.
Anupama: Right. Yes, actually, that will be really helpful. Because right now, if I see last three quarters, it looks like almost similar around 1 lakh applications, like a 5%, maybe 5% to 10% movement.
Manish Agarwal: Last three quarters, the PAT also remains in the same line. We normally don't give the student

number, because we feel it might affect the business as a whole. If we give a specific number for a specific university, the competitor might jump in, which might jumbled up our business model.
Anupama: Right, right. Yes, not for specific universities, just like as an enrollment number. So, just to see the seasonality actually, but Yes, that's perfect. And actually, second question was on the UK visa. I was reading an article on the BCA rule, and some of the universities have been like blacklisted, and they have made it stricter for the university.
So, I just wanted to understand, like even one of the universities mentioned in the DRHP of Crizac also, I think Glasgow, Caledonian University. So, I just wanted to understand what is your take on it, and how do you see that here?
Christopher Nagle: Yes, thank you. So, the change that you're referring to was that for a UK university to sponsor or to accept international students. Previously, they had a limit of 10% visa refusals before they would have a review of the license. That limit has been changed to 5%. This doesn't have any material effect on our business, because the refusal rate of the students who apply through our platform is extremely low, and nowhere near close to the new benchmark.
It actually creates a further barrier to entry because of our sophisticated compliance process. It ends up being a competitive advantage for us, because our visa refusal rate is so low. Coming to your question about, I think blacklist is not the correct word. If a university has a rising visa refusal rate, then they have a consultation with the regulator, and that gets reported. But none of our clients have had their ability to recruit international students affected.
Vikash Agarwal: The Glasgow, Caledonian University, which you refer to, is not blacklisted. They were under action plan, and things are resolved between UKVI and the university. They are still recruiting international students from India and the rest of the world.
Anupama: Okay, okay. Yes, that's actually very good to hear then. And just actually, since you mentioned, what is our visa refusal rate, like for Crizac, like what percentage of applications could be there?
Vikash Agarwal: Below the threshold of 5%, which is given by UKVI, we are way, way, way below that.

Anupama: Okay, okay, okay, great. Thank you so much.
Moderator: Thank you. The next question is from the line of Ankur Gulati from Genuity Capitals. Please go ahead.
Ankur Gulati: Hi, thanks. A quick request, last time around. Hello?
Vikash Agarwal: Yes, go ahead.
Ankur Gulati: Okay, there were two pages in the last quarterly reports which had the KPIs, so if you guys can please include it next time around. It helps the, it has the application process and number of active agents, so that will be great. Second, Q4 is typically 40%, right? Seasonal employees.
Management: Almost.
Ankur Gulati: Okay. And Manishji, Q4 F25 was 19%. Is that fair that usually Q4 will have a lower EBITDA margin? That's how it should be, you should be reading it?
Manish Agarwal: Yes, in terms of margin, it might be lower, but in terms of absolute term, it will be higher.
Ankur Gulati: Sorry, compared to absolute terms compared to w

hat?
Manish Agarwal: No, if you compare the EBITDA margin in absolute term, in rupees, it will be higher compared to quarter one, two and three. But if you compare as a percentage of total revenue, then obviously it will be low.
Ankur Gulati: That's right. And sir, what percentage of your total revenue do you guys hedge? Is it 100% hedged or is there some open exposure as well?
Manish Agarwal: No, like I said, we pay the agent directly in the same currency. So we normally hedge around 30% of the revenue which comes to India.
Ankur Gulati: Okay. And the depreciation is now INR5.5 crores per quarter, which used to be INR11 odd crores in last financial year. So anything specific which has changed?
Manish Agarwal: We use WDV method of depreciation. So it will start, it will keep on going down unless and until we acquire something new.
Ankur Gulati: Got it. Okay, thanks. All the best.
Moderator: Thank you. The next question is from the line of Swetha Jain from ANS Wealth. Please go ahead.
Swetha Jain: Hi, sir. I just want to understand on the loan part that we refer, how much fees do we get from the MDX fees on every loan that we refer to them?
Vikash Agarwal: Yes, it varies, but it follows in the range of 0.8% to 2%.

Swetha Jain: 0.8% to 2% on the ticket size, right?
Vikash Agarwal: That's correct.
Management: On the loan amount.
Swetha Jain: On the loan amount. Okay. And also, sir, I wanted to understand what is the revenue per student that we made in this quarter? And what was that last quarter? If you can help me understand that.
Vikash Agarwal: I mean, revenue in general is very similar, whether it's this quarter or last quarter. And revenue per student does not change on quarter to quarter basis.
Swetha Jain: Okay, so what was that for this quarter?
Manish Agarwal: Swetha, this is something confidential information which might affect our competitor.
Swetha Jain: No problem, sir. No problem, sir. I understand. Sir, and on the accommodation business, I want to understand what kind of margins or what is the unit economics or, you know, like, you know, there also we are making some commission, right? So, what is the commission per student or the per whatever fees, like, how do we make our fees there?
Vikash Agarwal: Between £100 to £300.
Swetha Jain: £100 to £300 per student?
Vikash Agarwal: Yes, INR10,000 to INR30,000 per student.
Swetha Jain: Okay, on the per accommodation, the per student per accommodation, right?
Vikash Agarwal: Per accommodation, Yes, that's right.
Swetha Jain: Okay, okay. So, this is obviously, this is like a one-time kind of a thing, right? Because there is nothing recurring, right? So, when we do the accommodation, just for the entire course, right? If the student is an undergrad student, you provide the accommodation, the arrangement is done for four years, is what I understand?
Vikash Agarwal: Normally, they do an agreement for 51 weeks, one year, and we get paid for one year, but if the student decides to change the accommodation, we get paid again.
Swetha Jain: Yes, Yes, okay. Sir, any agents added in this quarter, or have we lost any agents? And how many agents are there as on December?
Vikash Agarwal: We have added agents on our platform. Those additions happens on a regular basis. And as of today, there are roughly 14,000 agents which are registered.
Swetha Jain: Okay. And so, what is the cash that we have on our books as on 31st December?

Manish Agarwal: As on 31st December, we have around INR300 crores in form of reserve. And sorry, this amount, which I have told you, it is excluding the dividend, which we are offering. So, it comes to around INR450 crores as on 31st December.
Swetha Jain: Okay. So, I want to understand the kind of acquisition that we are planning, whatever we have in mind for next three to four quarters or for

next one year. Would this cash suffice the kind of acquisition or the kind of growth we are targeting, whichever geographies, or we are planning to take some debt?
Vikash Agarwal: No, I mean, we believe company has sufficient cash to get any of the acquisition they want. So, we do not believe in near future, we are looking at taking any debt.
Manish Agarwal: Okay. And depending on the scenario, but as of now, we do not have any debt, and we do not plan to take any debt in the immediate future.
Swetha Jain: Okay. And so, this Planet.com acquisition was for what amount?
Vikash Agarwal: It was 6 CIFD.
Manish Agarwal: The enterprise value was around 8 crores, and we invested around 4 crores.
Swetha Jain: Okay. Okay. And so, just to follow up, I think one of the previous participants asked you the acceptance rate on the applications. I missed that number.
Vikash Agarwal: Roughly 10%.
Swetha Jain: 10%. Okay. Okay. Thank you so much.
Moderator: Thank you. Ladies and gentlemen, that was the last question. I would now like to hand the conference over to the management for the closing comments. Over to you.
Vikash Agarwal: Thank you very much for joining the management call. As mentioned earlier, Crizac is a high margin, cash-generative, capital-efficient company with a strong growth, visibility, and a robust balance sheet. We believe these positions are well to deliver long-term shareholder value. Thank you very much.
Moderator: On behalf of Equirus Securities Private Limited that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Call: May 2026

“Crizac Limited Q4 FY’26 Earnings Conference Call”

May 25, 2026

MANAGEMENT : DR. VIKASH AGARWAL – CHAIRMAN & MANAGING
DIRECTOR, CRIZAC LIMITED
MR. MANISH AGARWAL – CHIEF FINANCIAL OFFICER,
CRIZAC LIMITED
MR. CHRISTOPHER NAGLE – CHIEF EXECUTIVE
OFFICER, CRIZAC UK
MR. SANJEEV SANCHETI – IR ADVISOR, CRIZAC
LIMITED
MODERATORS : MR. SAMARTH PATEL – EQUIRUS SECURITIES
PRIVATE LIMITED

Moderator: Ladies and gentlemen, good day and welcome to Crizac Limited Q4 FY26 Earnings Conference Call.
This conference call may contain forward-looking statements about the company which are based on the beliefs, opinions and expectations of the company as on date of this call. These statements are not the guarantees of future performance and involve risks and uncertainties that are difficult to predict.
As a reminder, all participants' lines will be listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*" then "0" on your touch-tone phone.
Please note that this conference is being recorded.
I now hand the conference over to Mr. Samarth Patel from Equirus Securities. Thank you and over to you, Mr. Patel.
Samarth Patel: Good afternoon everyone and welcome to Crizac's Q4 FY26 Earnings Conference Call.
We have with us Dr. Vikash Agarwal – Chairman and Managing Director of the company, Mr. Manish Agarwal – the Chief Financial Officer of the company, Mr. Christopher Nagle – Chief Executive Officer of Crizac UK and Mr. Sanjeev Sancheti – IR Advisor of the company.
Sanjeev Sir, if you can start by giving your overview on 4th Quarter FY26 Performance as well as Outlook for FY27 and beyond and then we can open up for Q&A.
Over to you Sanjeev Sir.
Sanjeev Sancheti: Thank you Samat. Good afternoon to all the participants. Before I hand over the call to Dr. Vikash Agarwal for the opening remarks, I would like to draw attention to the safe harbor statement in the investor presentation. I request each one of you to go through the presentation thoroughly before the Q&A starts so that you are aware of the same.
Thank you and over to you Dr. Vikash. Thanks Sanjeev.
Dr. Vikash Agarwal: Good afternoon, everyone and a warm welcome to Q4 FY26 and a Full Year FY26 Earning Call for Crizac Limited.
For those who are new to our story, Crizac Limited is one of India's largest B2B Global Tech Platform connecting student mobility globally. Founded in 2011 in Calcutta, we operate at the intersection of students, recruiting agents and universities across international market.
Our proprietary technology platform connects over 15,000 global agents and more than 400 partner universities.

Processing application end-to-end, we process 3.94 lakhs application during FY 2026 spanning from 85 plus source countries and eight destination countries. The platform is the engine of our business. It creates network effect that expanded with every incremental agents, students and universities that we add.
Revenue from operations for the year stood at 10,422 million, reflecting year-on-year growth of 22.7%. For the 4th Quarter, the revenue from operations stood at 3,917 million going 15% YoY and 40.6% quarter-on-quarter.
To contextualize the quarterly progression, our business follows a well-defined seasonal pattern. Applications submitted and processed during Quarter 3 convert into enrollments and revenue recognitions in Quarter 4, which is why Quarter 4 typically accounts for a disproportionately higher share of full-year revenue. The seasonality is structural and predictable and Quarter 4 FY '26 was strong execution of that cycle.
This performance was driven by a convergence of strong operational metrics. Application process grew 43% YoY to 3,94,000 plus applicants. Our active agent base expanded the 36% year-on-year to 5,389 agents and student enrollment grew 14% year-on-year, reflecting sustained operating momentum across our global education platform.
FY 2026 was arguably our most active year in the inorganic front, and I want to walk through

what we accomplished:
In October 2025, we completed the acquisition of StudiesPlanet, a leading Latin American student recru

itment agency. This acquisition opened up LATAM Corridor as a new source region for us, diversifying our originating base beyond Asia and Africa.
In January 2026, we acquired a 51% stake in Global Tree Careers Private Limited, a well-established B2C counseling and immigration service. The acquisition is strategically significant as it extends our reach into direct student engagement, complements our existing B2B model and broadens our service portfolio to include immigration and counseling support.
In March 2026, we committed USD 2.5 million over five years roadmap to the EduMentor project, an AI-driven platform for student university matching, mentorship and decision support, led by Mr. Dishant Kharbanda, a distinguished Edtech leader and IIM Calcutta alumnus. This investment advances our technology differentiation and over time we mean fully improve our conversion outcome and data interference capabilities.
In April 2026, we operationalized our new New Zealand business at scale through onboarding of the entire Medway Educational Consultant Team, bringing dedicated on-ground leadership and admission capabilities to one of our new destination markets.

Taken together, these four transactions expected within a year demonstrate our deliberate use of acquisition to compress timelines for geographical entry and capabilities built out.
Each acquisition was purposeful and their collective contribution to our platform will materialize progressively as integration deepens and these businesses scale with Crizac ecosystem.
Our inorganic pipeline remains highly active as we continue to evaluate opportunities across both existing and new geographies with increased vigor and strategic intent.
Our strategic direction is anchored in building an integration technology-enabled global education ecosystem. We are scaling across three interconnected dimensions:
■ Geographic diversification both in source and destination market,
■ Expanded ancillary services including accommodation, student loan, visa, insurance and FOIAs.
■ Inorganic acceleration using targeted acquisitions and partnership to extend our reach and service depth.
We are also building our B2C capabilities alongside our core B2B model.
I will now hand over to Mr. Christopher Nagle who will provide his perspective on global industry dynamics and Crizac's competitive positioning. Thank you. Over to you, Christopher.
Christopher Nagle: Thank you, Vikash, and good afternoon to everybody or I can say good morning to you as well. It's good to be here from London.
I will begin by setting the context on the global student mobility landscape. As most of you are aware, the ecosystem is navigating a period of meaningful complexity, and I would like to walk you through how we see these dynamics unfolding and why we believe Crizac is well positioned within them.
The evolution of visa policy has been a prominent headwind recently. Canada and the United States have both tightened their immigration and study visa frameworks and this has caused visible shifts in student flow patterns globally.
This has created displacement in some corridors while simultaneously redirecting demands to the UK, Republic of Ireland, Germany, New Zealand and other markets where policy remains welcoming of international students.
Given Crizac's strong presence in the UK and our expanding New Zealand and Ireland capabilities, we are structurally well placed to benefit from this redirection in global markets.
Importantly, aggregate demand for overseas education around the world continues to steadily

increase. It is just that supply has tightened in some particular destination markets while still continuing to loosen in others.
Beyond visa policy, currency FX dynamics have added to the cost burden for students from emerging source markets. The strengthening of the USD and the Sterl

ing does increase the
effective cost of education in those markets, and this can affect conversion timelines and the student decision-making process.
We monitor these dynamics carefully and our multi-geography sourcing model provides a natural hedge against any single market or single currency concentration risk. Geopolitical

uncertainty in particular regions also continues to influence student confidence and family decision-making. We are cognizant and aware of this and our agent network spanning more than 85 source countries with an on-ground presence in 11 of those gives us early cycle visibility into sentiment shifts and demand patterns in a way that purely digital or lighter touch platforms cannot replicate.

So, against this backdrop, I would like to point out why we believe Crizac is extremely competitively well positioned and why the structural tailwinds are more enduring than the near-term headwinds:

1. Network effects and scale are on our side – Our platform connects over 5,389 active agents and more than 400 universities around the globe. Every additional agent expands our reach, and every additional university enhances our course coverage and conversion optionality. Every additional student enriches our data intelligence as well. These are classic platform network effects, and they create increasing stickiness and switching costs on both sides of the marketplace that we manage.
2. Our institutional relationships cannot be discounted – Over 400 institutional partnerships with more than five years of continuous relationship tenure across our Top 30 university partners is not easily replicated by new entrants. Our top 10 university partners account for 66% of our revenue, reflecting both the depth of those relationships and the importance of trust and track record in how universities allocate recruitment resources.
3. Our geographic diversification continues to endure – The UK remains our primary destination. On top of that, we have an expanding presence in New Zealand, Ireland, United Arab Emirates, United States, Australia, Canada, Singapore, to mention a few. We combine this with active sourcing from more than 85 countries, and this means we are no longer a single corridor operator. We are a true multi-corridor global platform. The investments we have made in Latin America with StudiesPlanet, in India with Global Tree Careers and in New Zealand through Medway are early-stage contributions to a more balanced and diversified revenue mix over the medium to long term.
4. Technology and AI are another huge tailwind supporting the development of our company – Our investment in EduMentors and our in-house AI led automation

capabilities are addressing one of the most complex challenges in our industry, which is matching the right student to the right institution in a rapidly evolving landscape for so many different reasons.

So, in summary:

While we are navigating a complex external geopolitical environment, the structural demand for international higher education remains extremely robust and the regulatory landscape is on balance working in favor of structured and compliant platforms like us.

As barriers to entry rise in our industry, robust, experienced, mature platforms like Crizac, competitive moats only deepen and expand. Our network and technology investments position us extremely strongly for sustained growth over the medium and long term.

And with that, I will hand you over to Manish – our CFO for Financial Commentary.

Thank you.

Manish Agarwal: Thank you, Chris. Good afternoon, everyone. As Vikash has already spoken about the revenue performance, I will focus on the remaining element of our financial performance.

EBITDA for FY26 came around 2,824 million, growing around 31% year-on-year. With margin expanding 172 basis points to 27%, a clear demonstration of operating leverage embedded in our business model. Thi

s momentum into Q4 FY26, where EBITDA grew 42.8% year-on-year to 939 million, with margin expanding to a further 467 basis point to 24%. PAT for FY26 stood at 2191 million, reflecting a strong year-on-year growth of 41% and a PAT margin of 20.5%. Quarter 4 FY26 continues this trajectory with PAT growing 50% year-on-year to 750 million at a margin of 18.8% underscoring the scalability and capital efficiency of our operating model.

I am pleased to report that Crizac remains debt-free with healthy net cash flow position of 4674 million as on 31st March 2026. Our capital efficiency continues to be our key strength with ROE of 37.2% and ROCE of 48.6% for FY26, reflecting the asset-light nature of our operating model.

Our net cash flow from operating activity as proportion to EBITDA stood at 56% for FY26, moderated by one of termination fees payment of around INR 55 crores. If we exclude this outflow, our cash conversion would have been much higher, affirming our reported profits are backed by real cash generation, a hallmark in this disciplined highly quality business we continue to build.

Anchored by our cash generation, the board declared a dividend of Rs. 8 per equity share in Q4

FY26, representing a dividend payout of approximately 64% which is higher than our committed

40% what we have said earlier. This reflects the Board's confidence in the company financial strength and its sustainability to generate healthy cash flow.

While the global operating environment continues to evolve with visa policy framework, geopolitical development and currency movement playing out across key markets, we are closely monitoring these dynamics and will provide firm guidance as our visibility improves and we are better positioned to assess the impact of student flow, conversion rate and our revenue profile.

What I can say with confidence is structural demand for international education remains intact. Our platform is scaling, our balance sheet is strong, and our inorganic pipeline is active. We enter FY27 with a diversified geographic footprint, a growing agent network and a net cash balance sheet. We remain constructively optimistic about the medium-term opportunity.

With that, I will hand over back to the operator to open the floor for questions.

Thank you very much.

Moderator: Thank you. We will now begin the question-and-answer session. The first question comes from the line of Samarth Patel with Equirus Securities. Please go ahead.

Samarth Patel: Thanks for providing me the opportunity and congrats on a good set of numbers. I have three set of questions. First one is, if I just look at the application growth, that remained very strong at around 43% on a year-on-year basis, while enrollment growth was relatively lower at around 14%. So, what explains the divergence and how should we think about conversion rates going right? That's my first question.

Manish Agarwal: Hi, Samarth. Thanks for your question. Since we are growing geographically into multiple markets, the conversion rate varies from market to market. In total, our conversion was 14%, which shows a mix of locations like India, where a general conversion is around 10%. It also shows that we have students from China and Latin America market, where the conversion is traditionally higher around 20%. And at the same time, we also recruit students from Africa, where the conversion rate is around 5%. So, this time we have given the number of students recruited during the year, so that you can have a better idea about how the company is growing. And the conversion obviously is one of the parameters to judge that.

Samarth Patel: Understood, sir. That was really helpful. My second question is, could you help us quantify how much of FY26 growth came from existing agents versus new agent additions? And are mature agents also increasing wallet share materially for us?

Manish Agarwal: Obviously, our act

ive agent network has grown from 4,000 to 5,500, which shows a lot of new agents have joined. But at the same time, the traditional pool of old agents are with us. I don't think anybody has left us, and all of them continue growing with us.

Samarth Patel: Sir, any quantification that we can do in terms of growth, which came from existing agents versus new agents?

Dr. Vikash Agarwal: It's fairly difficult to quantify agent-on-agent basis. Our agent contribution is very widely diversified. So, the contribution from agents submitting a very low number of applications are very high. So, it becomes very difficult to quantify what's the growth agent-on-agent basis, because the number of agents are roughly 5,300 active agents.

Samarth Patel: Understood, sir. That is helpful. And my last question is, given increasing visa scrutiny in key study abroad markets globally, are you seeing any change in the student intent, application quality, or let's say acceptance rates across geographies? If you can just give some qualitative flavor around our main geographies, that would be really helpful.

Dr. Vikash Agarwal: Sure. This scrutiny was always there. And one of the key KPI, which Crizac is supposed to deliver to all the university partners is recruiting genuine students whose intention is to go and study in any of the partner universities where we are placing them. So, yes, there is a high scrutiny of visa applicants at a visa stage but as a company, we have always been recruiting high quality students. So, it's not really affecting our market share.

Samarth Patel: Understood, sir. That is really helpful. Thanks for providing me the opportunity. And I will get back in the queue for the further questions.

Moderator: Thank you. Thank you. Next question comes from the line of Sucrit D Patil with Eyesight Fintrade Pvt. Ltd... Please go ahead.

Sucrit D Patil Good afternoon to the team. I have two questions. My first question to Mr. Christopher is, looking ahead, how do you see the company's UK operations evolving to strengthen its global footprint? What measures are being taken to enhance cross-border synergies, student

engagement and compliance with international education standards? That's the first question. I
will ask the second question after this. Thank you.
Christopher Nagle: Thank you very much for the question. We are quite excited about the way that the UK is evolving at the moment. The UK recently introduced a comprehensive regulatory regime for student recruitment platforms, such as Crizac, known as the Agent Quality Framework. It's quite a burdensome, heavy regulatory regime. And this means that only mature, sophisticated platforms are in a position to comply with it and operate at large scale. So, from a UK client-side perspective, at the moment, we are focused on and excited about implementing this Agent Quality Framework. And it's sort of giving us a fantastic base and platform to continue our expansion in other markets, where we will see more growth because we are less mature.
Sucrit D Patil Thank you. My second question to Mr. Agarwal is, from a technical point of view, how is the company optimizing its capital structure to balance growth investments in education services and overseas expansion with debt sustainability, especially given the capital-intensive nature of

global advisory business? Can you elaborate on the framework being used for cash flow forecasting, interest rate management and working capital efficiency to ensure liquidity while still maintaining the profits above the green zone?
Dr. Vikash Agarwal: Sure. The company is making a very healthy balance sheet. We have more than INR 470 CR of cash reserve with the company. So, the company is in a very healthy position to make any sort of investment, which might be required both nationally and internationally for the growth of

the
company. The company is generating more cash than the investment which is required for its growth.
Sucrit D Patil Okay. Thank you and best wishes.
Dr. Vikash Agarwal: Thank you.
Moderator: Thank you. Next question comes from the line of Naitik with NV Alpha Fund. Please go ahead.
Naitik: Hi, sir. Thanks for taking my question. So, my first question is as we are diversifying our source markets to beyond India how do we see the enrolments growth coming in because these markets are new and the conversion rates are slightly lower. So, how do we see enrolments growing year-over-year in the coming years?
Dr. Vikash Agarwal: Thank you. When Crizac started, Crizac was predominantly operating in India as a source market. Today we have expanded into multiple geographies and recruit students from more than 85 different nationalities. If I look at the student origin country, predominantly till last year, India used to contribute more than 50% of our total number. Today, global rest of India is contributing more than 50%, while India's share has reduced less than 50, showing that we are diversifying into multiple countries. Diversification helps us improve our student enrolments. Again, thereby diversifying our risk from independence from any particular source country. Countries like Africa, where as Manish said, your enrolment conversions are lower, but at the same time, we are expanding into countries like Southeast Asia and China, where conversions are much higher compared to that of the rest of the world. So, overall, if I look at net conversion, it remains very similar and in line with what India converts of roughly 10%.
Naitik: My question was on absolute growth in terms of enrolments and not conversion percentage. Because I would assume that there would be some sort of ceiling, especially in terms of realization that we get for students. So, increase in the realization, there would be some ceiling. So, what sort of volume growth or enrolment growth in absolute percentage terms do we envisage in the coming years?
Manish Agarwal: Hi, we have been growing around 10% to 20% year-on-year. This year, the student number has grown by 14%. Going forward, we look to grow by the similar or higher percentage.

Naitik: Got it. My second question is, in terms of university or country diversification, country of placement diversification, we were looking at entering Australia. So, any plans on that, any thoughts around the same?
Dr. Vikash Agarwal: Sure. In terms of country diversification, we have already expanded into New Zealand. And as of today, we represent all the institutions of New Zealand. We have expanded into European countries as well, like that of Germany and France. Australia, we are doing some, we still need to diversify a bit more into Australia, which is the ongoing process.
Naitik: Got it. That's it from my side, sir. Thank you.
Dr. Vikash Agarwal: Thank you.
Moderator: Thank you. Next question comes from the line of Mohit Jain with Abbackus. Please go ahead.
Mohit Jain: Sir, I have two questions. First is on the seasonality. So, 27 also should we expect similar

seasonality, 1H versus second half that you had in FY26. And second was related to visibility, like given the admission cycle and the lag between revenue recognition and the intake that you have. How much visibility do you typically have at the beginning of the year?
Dr. Vikash Agarwal: In terms of seasonality, yes, the seasonality remains same as that of last year. Coming back to visibility, we do have reasonable visibility, but the current geopolitical disturbance and the war and everything has been bringing a bit of uncertainty in the market. Though we believe this should subside and the visibility, in our opinion, should be very similar to what it was last year, growing at a similar percentage.
Mohit Jain: So, what I mean to ask is, by Q1, you get more visibility for

the full year? How does it work in terms of?
Dr. Vikash Agarwal: We get a visibility of roughly between 6 to 9 months. So, currently we are wrapping up with September intake and we will get a visibility more of Jan intake in the next couple of months, which are two major intakes for overall recruitment.
Mohit Jain: Sure, understood.
Moderator: Thank you. Thank you. Next question comes on the line of Siddharth Jain with YES Securities. Please go ahead.
Siddharth Jain: Yes, hi sir. Good afternoon. So, 1) if you can just help us understand what is the market size of New Zealand as a country and as in the number of inbound students that New Zealand gets yearly or more, and what is the growth rate that New Zealand has been seeing for the last couple of years? And what is our roadmap when we look at New Zealand as a country and where, how are we positioning ourselves? What is our target market share that we plan to take in New

Zealand? Just your thoughts on New Zealand as a country because that’s somewhere you just recently entered. So, how do we look at it?
Dr. Vikash Agarwal: I mean, traditionally, New Zealand had been recruiting something between 8,000 to 10,000 students from India. Globally, that number is much higher. Roughly 60,000 enrollments in Year 2023, what they did. Even though the numbers seem small, they have recently announced a lot of new rules and regulations, which include allowing a higher post-study work visa for different categories of students who want to go and study there. A recent FTA signed by India and New Zealand also creates positive opportunities for work post-study in New Zealand. So, we see quite a good opportunity, and we believe these numbers will grow in coming years because of this positive news.
Siddharth Jain: Got it. And so now considering this West Asia conflict, Middle East will be kind of on a pause or a standstill for some time now. So, as a diversification strategy, by the exit of FY27 and exit of FY28, how will our destination pie chart look like? Like right now, UK is some 97%. So, by exit of FY27 and FY28, how will the composition look like? If you can, just give us a broader sense. Because 97% is super high concentration and we are just one policy decision away from being disrupted and that is beyond our control. So, just some proactive measures that we are taking and some target numbers that we have in our mind that we look at how this is going to pan out in the next one, two years.
Dr. Vikash Agarwal: Sure. I mean, you are absolutely right. Because of the current war situation, Middle East pipeline seems a bit damaged, though we believe the war should get over soon based on recent comments what we hear. But yes, it will affect our pipeline for Middle East. To offset that one, we have started expanding more towards East, which included getting into New Zealand. We are looking at expanding more into Australia as well. That should again help us offset a lot of numbers from being dependent on UK and other traditional countries where we are having higher numbers. Based on the diversification to multiple new geographies as a destination market, we believe our concentration for UK will go down. And in next two years, we will prefer the numbers of a percentage of contribution from UK to go below 60% while that of rest of the world should go roughly 40% for us.
Siddharth Jain: Understood. That’s a significant drop from 97% right now to 60%.
Dr. Vikash Agarwal: Yes, as soon as Australia, which is the third biggest market, and Canada, they opens up, including US, the numbers from those countries we believe should be pretty good for us. We have already done all the homework what was required to go on those ones. We have already tied up with more than 300 plus universities in USA and other places. Those should help us diversify our overall numbers. But again, these are all dependent upon rules and reg

ulations from all the different respective governments.
Siddharth Jain: Understood. So, just one last question. So, we have been actually trying to enter Australia since a while. If you can just help us understand what are the difficulties or road bumps that we are

facing? I know I am fully confident that we will eventually overcome, but just to understand what are these roadblocks that are coming our way, which is delaying or pushing our entry into New Zealand in a meaningful manner?
Dr. Vikash Agarwal: Sure. As we had mentioned this in multiple interactions with all our investors, getting contracts from universities is our biggest challenge or the blocker for anybody to get into this business. It applies for Crizac as well. So, for us to get these contracts secured from Australia University is not that easy. This involves a multi-year negotiation, interaction with all the university partners to make them confident that yes, Crizac can recruit the right quality of students and the right number of students for them. We believe we have already done most of the work. We have started getting some of the contracts from Australia and we believe over the next three to six months, we should be able to start recruiting and become a reasonable recruiter for all the Australian institutions.
Siddharth Jain: Got it, got it. Great, sir. Thank you so much, sir. All the best. Thank you.
Moderator: Thank you. Next question comes from the line of Niharika with Anand Rathi. Please go ahead.
Niharika: Yes, sir. Firstly, congratulations on a good set of numbers. I have a couple of questions, starting with our margins for the 4th Quarter have been higher as compared to the same quarter last year. What do we feel is the sustainability of this trend?
Manish Agarwal: Hi, Niharika. First, we have been growing and our Q4 number has been 20% higher than the last year. So, there is an increase in the margin. At the same time, because of positive currency movement in our favor, the pound has gone up substantially. This has resulted in a higher profit in Q4, which we feel is transitional in nature and it will even out gradually.
Niharika: Okay. And so, my next question is around our working capital cycle. It seems to be better in this quarter. So, are there any changes that have happened in terms of the university or the agents?
Manish Agarwal: Not as such. It’s just we are becoming more organized. So, we are able to manage it in a much better way.
Niharika: Okay. That’s really nice, sir. And one more question. When we are talking about 15% growth in line, is it in line with Q4 or are we talking about a full year perspective?
Manish Agarwal: Full year, we expect to grow by 15% to 17%.
Niharika: And, sir, just one last question. When we talk about agent diversification, how do we see the same trending with respect to China and the newer geography that we are targeting?
Dr. Vikash Agarwal: And we are adding more and more agents from the rest of the world compared to that of India, which includes China and all over different regions in the world.

Niharika: Okay. Thank you, sir. Thank you so much.
Moderator: Thank you. Thank you. The next question comes on the line of Pawan Punjabi with Viansh Ventures. Please go ahead.
Pawan Punjabi: Hello. Hi sir. Just wanted to check on the big markets, that’s Australia, Canada and New Zealand. If we have to prioritize in terms of growth drivers, I believe the next is coming from Australia. How would we rank for the 60% whether Australia will be the kicker for us, Canada would be the kicker for us or US would be the kicker for us?
Dr. Vikash Agarwal: It depends on the geopolitical situations. At the moment, US is not really issuing much of visa appointments. So, I believe Australia followed by US would be a kicker for us. But both the countries recruit huge number of internationa

l students. So, whichever opens first would be the one where we believe the numbers will be higher. But in my opinion, it will be Australia followed by US.
Pawan Punjabi: Understood. And so, given that IDP is a big player in Australia, how is the competitive intensity to go there given that IDP is already present in multiple countries across the globe, and like is a known brand?
Dr. Vikash Agarwal: Yes, definitely IDP is one of the biggest market leader for Australian market. But at the same time, they are a good number of companies who recruit decent numbers for Australian Universities. So, yes, Crizac will be one of the players, we believe will be contributing to Australian universities, including that of IDP as well. Apart from that, our business model is very different. IDP is a brick-and-mortar business, while ours is a tech-enabled platform which helps students’ mobility.
Pawan Punjabi: Understood. And so last question of the gross margin, we are seeing some improvement in the gross margin. Is this because there is a change in mix or how do we read this? And on a yearly basis, 29.5% has moved to 32.5%. How do we read the gross margin improvement to what do we attribute this to?
Manish Agarwal: A major part of this is attributed to the FOREX movement, which has like moved substantially

from 110 to 125. But in the long run, the profit margin will remain the same.
Pawan Punjabi: Okay, understood. Got it, sir. That's all from my side. Thank you.
Moderator: Thank you. Next question comes on the line of Disha of Sapphire Capital. Please go ahead.
Disha: Yes. Thank you so much, sir, for this opportunity. A couple of questions. Firstly, on our overall growth. So, how do you look at the revenue growth of FY27, given the way geopolitical situation? And we have done a lot of acquisitions as well. So, how should one look at that?

Dr. Vikash Agarwal: Disha, we are going to issue the guidance in next quarter. But we believe we should grow in line with the same percentage what we have been growing year-on-year basis.
Sanjeev Sancheti: But I think as the geopolitical situation improves, we will be in a better position to give a firm guidance in the coming quarter. So, we will hold on to the firm guidance here.
Disha: But on a conservative basis, we can say 20% to 25% will be the minimum.
Dr. Vikash Agarwal: It will be difficult to give a guidance at this stage. Let's wait for a bit more clarity to come before we give firm guidance.
Disha: Okay. Fair enough. And so, on the gross margin, you mentioned that we saw some of the benefit coming in from the FOREX movement. So, going ahead on a normalized basis, what will be the steady state gross margins and EBITDA margins that we should look at?
Manish Agarwal: Again, it's the same, the average you can take, and it will remain the same. Because there is no change in the model. So, the gross margin will remain same in the line of 20%-30%.
Sanjeev Sancheti: Yes, 20%-30%. EBITDA margin will obviously, there will be some leverage as we grow, which obviously we will be able to form once we come with the guidance on the growth.
Disha: But for the current year, we can see 25%-27% will be the number.
Sanjeev Sancheti: We are talking about the gross margin between 28%-30%.
Disha: And EBITDA, 25%-27%.
Sanjeev Sancheti: We can't give EBITDA unless we give you the growth guidance because then we can't calculate the operating leverage. Let's wait for one more quarter to give you a better sense on EBITDA.
But you can do your own mathematics depending on the standard growth.
Disha: Okay. And so, in terms of a geographical mix, how do we look at that for FY2027, because we are diversifying to Australia and New Zealand. So, what is the proportion that we can look at from UK and other countries?
Dr. Vikash Agarwal: Again, it depends upon how many contracts we are able to secure and when we secure those ones. So,

giving guidance at this stage can be challenging. But since we have now expanded into New Zealand, we are looking at expanding into Australia in the next three to six months. We believe that growth should come pretty good in the coming years.
Disha: Okay. That is it from us. Thank you, sir.
Dr. Vikash Agarwal: Thank you.

Moderator: Thank you. Next question comes on the line of Gagan Thareja with Groww Mutual Funds. Please go ahead.
Gagan Thareja: Okay. So, my first question pertains to the UK graduate visa duration, which is being reduced from 2 years to 18 months, starting January 2027. This obviously reduces the time-window available to get a job for prospective students. Do you think this will have a material impact? And to what extent, if you could quantify on a number of students looking to go to US?
Dr. Vikash Agarwal: Yes, sure. I mean, the graduate visa reduction was announced almost two, two and a half years back. And to the best of my knowledge, it was implemented almost year, year and a half back.
So, it is already baked in into all the students' future plan and will not have any immediate impact or any impact based on this factor.
Christopher Nagle: Okay. I would just like to add, if I could, onto Vikash's answer that the UK remains extremely attractive because a master's degree can be completed in 12 months, and then the graduate visa is 18 months. So, what students look at is the ratio of time from time studying to time to work or look for finding a job. And on that basis, the UK still has a ratio of 1.5:1. So, it remains extremely competitive globally.
Gagan Thareja: Okay. Is it also possible to get some idea of the statistics of number of students who you have enrolled and who finally ended up landing a job? I mean, is that ratio or fraction of students who finally got a job from the number of students enrolled? And any trends on that over the years?
Christopher Nagle: Yes, thank you. So, I would say that if you understand Crizac as a platform and as a business, our role is to have students enrolled at the university. So, our job is done when a student is successfully enrolled and begins studying. Perhaps at some stage in the future, we will follow through and provide post-graduation services, but that's not our business at the moment.

Gagan Thareja: No, I get that completely--
Dr. Vikash Agarwal: Just to add to what Christopher has said, since we are a B2B platform, we don't connect with the students. Most of our services are already done. So, it becomes quite difficult for us to gauge whether he has got a job or not, and to find it out how many percentages of students have landed up in jobs. But in the future, we will try to connect and see if we can get that data. But it's very difficult to get that data, especially keeping in mind that once the student has moved out of India, their contact number, everything gets changed.
Gagan Thareja: But finally, for a student, the investment decision is dependent upon the probability of him landing up a job because otherwise, the return on his investment falls. So, invariably, it will end up impacting Crizac's businesses, the conversion, or if the success of students in being able to get a job subsequently reduces. So, it's from that perspective that I asked that question.

Christopher Nagle: Just to jump back to that point that the gentleman asked about graduate outcomes, in international higher education today, and not just international higher education, but higher education in general, graduate outcomes is the number one topic that everybody talks about. As we explained, we are not in a position to track the data of what happens to students' years after we have completed providing our services to them. But what we can follow is the demand, right? So, we know where there is a strong graduate market because new students want

to go there.
The publicly available data and the word-of-mouth information that goes around gives us a strong indication, particularly because we can monitor demand very well based on the applications that come in.
Gagan Thareja: Sure. Thanks for all the answers. I will get back onto the queue for more.
Moderator: Thank you. Next question comes from the line of Kanishk Gupta with SS Family Office. Please go ahead.
Kanishk Gupta: Hello, very good afternoon. As you just spoke a few minutes ago that you want to increase the revenue share from the rest of the world to about approximately 40% by FY28. Is that correct?
Dr. Vikash Agarwal: That's correct. But again, as I said, it will depend upon the individual government implementation policy.
Kanishk Gupta: Okay, so the next question would be that trying to understand the sustainability of the platform model here since agents are largely non-exclusive and universities can also directly engage with recruitment partners. What do you say are the key factors driving stickiness on both sides of the ecosystem? And over time, how do you see the business of less intermediation involving in the business?
Dr. Vikash Agarwal: This was always there throughout the student recruitment industry. So, I don't see any major change happening. Though we invest a lot in technology, providing better seamless services to our partners who in turn can give us same service to their students, both at university side and student size, which we believe is the biggest cause of stickiness for both agent and university.
Kanishk Gupta: And my next question would be to Chris, I would like to get an answer from you. As the international student recruitment industry becomes more competitive, how should we think about the sustainability of commission rates and platform take rates over the long term? And do you believe that Crizac scale and institutional relationships can strengthen pricing power over time?
Christopher Nagle: So, thank you for the question. It is correct that this industry is becoming more competitive. What that also means is that as it becomes more competitive, it becomes more regulated and more mature. And as we see like agent quality frameworks coming in in the UK, Australia is introducing and updating its national codes that governs the industry. So, the competition is leading to maturity and regulation. And being a mature platform in an increasingly regulated

industry actually increases our pricing power. There is a heavier regulatory burden on universities. And this means that they want to work with fewer suppliers. So, the competition can cut both ways. For us, it really entrenches our advantages, because we are in a position to comply with regulations. And universities want to work with fewer platforms. So, they want to work only with the biggest.
Kanishk Gupta: Okay, got it. And lastly, I see the promoter holding is currently close to about 80%. So, as for the SEBI threshold is of 75%. How can we see the promoter holding post that threshold?
Dr. Vikash Agarwal: We still have two more years. So, whenever we find that the market is right, we will look into it. But we are not in a hurry to get it diluted as we have two years more with us.
Kanishk Gupta: Okay, got it. Thank you so much. That's it from my side. Thank you.
Moderator: Thank you. Next question comes from the line of Gunit Singh with Countercyclical PMS. Please

go ahead.
Gunit Singh: So, can you please quantify the FOREX gains in FY26 and the 4th Quarter?
Manish Agarwal: It's INR 1.28 crores.
Gunit Singh: Is it INR 1.28 crores in Q4?
Manish Agarwal: Yes.
Gunit Singh: All right. So, on a constant currency basis, can you help me understand the Y-on-Y growth in FY26?
Manish Agarwal: Sorry, we don't measure the revenue and profit in constant currency terms. The amount which I told is what we have earned extra from hedging the currency.
Guni

t Singh: Got it. So, and my second suggestion would be that given that the strong cash generation and net cash balance sheet of the company, would the Board consider buybacks instead of giving dividends as buybacks are more tax efficient and improve the EPS for the long-term shareholders of the company?
Dr. Vikash Agarwal: For sure. We would be looking at all the pros and cons, and we will do whatever it is for the beneficial of all our shareholders.
Gunit Singh: Got it. So, my last question would be regarding most of our earnings would be in pounds, if I am not wrong. So, what would, so for the revenues recognition of FY26, what would be the average pound-to-INR conversion rate for FY26?
Manish Agarwal: We have taken 116 as the average while preparing the financials.

Gunit Singh: 116 as the average. And for FY25, do you have the number handy?
Manish Agarwal: For FY25, I think 105.
Gunit Singh: 105. So, this is about a 10% depreciation of INR. So, you were saying that the total FOREX gains in Q4 was just INR 1.25 CR.
Manish Agarwal: No, that's what we have earned. I will let you tell you one thing. 67% to 70% of our expenses, agent commission, we pay directly to the agent in pounds only. So, the FOREX gain comes only of the part which part we bring it to India.
Dr. Vikash Agarwal: And the amount which Manish has said was from the FOREX hedging. We do hedge some FOREX based on future earnings.
Gunit Singh: Got it. Sir, I want to understand, I mean, delta in our EBITDA or PAT which comes directly due to INR depreciation. So, if you can help me understand that amount.
Dr. Vikash Agarwal: It can be roughly 1%-1.5% because of that.
Gunit Singh: Okay, so 150 basis points of EBITDA or gross margin improvement would be on account of—
Manish Agarwal: Yes.
Gunit Singh; Got it, sir. Thank you very much.
Moderator: Thank you. Thank you. Next question comes on the line of Ankush Mahajan with Sanctum Wealth.
Ankush Mahajan: Sir, thanks for the opportunity and congrats for a good set of numbers. So, my question is that in terms of diversification strategy, that's a 40% revenue we are looking from the new geographies like Australia, Canada, New Zealand, even from the US side. So can we say that what are the growth numbers that we are talking, rather than a 15% of a growth, it could be on the higher side growth.
Dr. Vikash Agarwal: I understand the 40% which you are discussing, we are talking about three years from now subjected to individual immigration rules from respective countries or destination countries.
Again, coming to the guidance, we have decided to give guidance in next quarter because of all the geopolitical disturbances which are currently making us difficult to gauge how the world will be in coming years or coming months. I would request you to wait for one quarter for us to give you the right kind of guidance.
Ankush Mahajan: So, earlier in the con-call, the guidance was given is 15% to 20% of a growth. So, how would you like to say on it?

Dr. Vikash Agarwal: We believe that we should achieve that one subjected to if the geopolitical things get settled soon. But again, we will come up with firm guidance in next quarter.
Ankush Mahajan: Thank you, sir.
Dr. Vikash Agarwal: Thank you.
Moderator: Thank you. Next question comes from the line of Smith Gala with RSPN Ventures. Please go ahead.
Smith Gala: Yes, thank you for the opportunity and congratulations on the good set of numbers. Just to understand the business and cycles more clearly, can you help me understand the cycles in the

UK and why the revenue in Q4 is so lumpy? Also, how are the commission payouts carried out and which makes the gross margins fluctuate to a large extent because on a year-on-year basis, we have seen a big delta coming this quarter.
Manish Agarwal: Hi. Typically, UK has three intakes. The major intake

is fall intake, which is September, winter
intake, which is January, and a summer intake, which is May. All the universities have an intake in fall. Around 50% of universities have admission intake in winter and very few in summer. So, traditionally, H2 is higher or almost double than what is in H1. But whatever investment goes in the fall intake, the revenue gets booked in Q3 and Q4.
Smith Gala: There is a difference between Q3 and Q4 revenues as well.
Manish Agarwal: Q3 is around 30% and Q4 is around 35% of the total revenue in general. In Q4, you get a spillover of fall intake as well as the revenue of winter intake. That is why Q4 is higher or highest among all the four quarters.
Smith Gala: Okay. That was all from my side.
Manish Agarwal: Thank you.
Moderator: Thank you. Ladies and gentlemen, due to time constraints, we have reached the end of the question-and-answer session. I now hand the conference over to Dr. Vikash Agarwal for closing comments.
Dr. Vikash Agarwal: Thank you all for joining us today and for your continued confidence in our company. We are proud of the progress we have made this year, but we are even more excited about the opportunities ahead. Our team remains focused on discipline execution, long-term value creation, and delivering sustainable growth for our shareholders, customers, and partners. We are committed to remain market leader in tech-enabled student mobility platform. We appreciate your ongoing support and engagement, and we look forward to updating you on our continued progress over the near future. Thank you. Have a great day.

Sanjeev Sancheti: Thank you.
Moderator: Thank you. On behalf of Crizac Limited, that concludes this conference. Thank you for joining us. You may now disconnect your lines.
