"CORONA Remedies Limited
Q2 & H1 FY '26 Earnings Conference Call"
January 05, 2026

E&OE - This transcript is edited for factual errors. In case of any discrepancy, the audio recording uploaded on the stock exchanges on 05th January 2026 will prevail

MANAGEMENT : MR. NIRAV MEHTA – MANAGING DIRECTOR AND
CHIEF EXECUTIVE OFFICER – CORONA REMEDIES
LIMITED
M R. ANKUR MEHTA – JOINT MANAGING DIRECTOR –
CORONA REMEDIES LIMITED
M R. BHAVIN BHAGAT – CHIEF FINANCIAL OFFICER –
CORONA REMEDIES LIMITED

MODERATOR : MR. AMEY CHALKE – JM FINANCIAL

Moderator: Ladies and gentlemen, good day and welcome to the Q2 and H1 FY '26 Earnings Conference Call of CORONA Remedies Limited. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.

Before we begin, I would like to point out that this conference call may contain forward-looking statements about the company which are based on the beliefs, opinions, and expectations of the company as on date of this call. These statements are not the guarantees of future performance and involve risks and uncertainties that are difficult to predict.

I now hand over the conference call to Mr. Amey Chalke from JM Financial. Thank you and over to you.

Amey Chalke: Thank you. Good afternoon, everyone. I, Amey Chalke, on behalf of JM Financial, welcome you all to the Q2 and H1 FY '26 earnings call of CORONA Remedies Limited. At the outset, I thank the management of CORONA Remedies for giving us this opportunity to host the call. We are looking forward to have an insightful interaction on the quarterly earnings and the company outcomes.

Today, from the company, we have with us Mr. Nirav Mehta, Managing Director and CEO, Mr. Ankur Mehta, Joint Managing Director, Mr. Bhavin Bhagat, Chief Financial Officer. We will begin with remarks from the management team followed by the Q&A session. I will now hand over the call to Mr. Nirav Mehta. Thank you and over to you, sir.

Nirav Mehta: Good afternoon, ladies and gentlemen. I would like to wish everybody a happy and healthy 2026. Thank you all for joining us on the Q2 and H1 FY '26 earnings call of CORONA Remedies Limited.

Along with me on the call, I am joined by our Joint Managing Director, Mr. Ankur Mehta, our CFO, Mr. Bhavin Bhagat, along with senior management team and SGA, our Investor Relations Partners. We have uploaded our results, press release and investor presentation on the stock exchanges and on company's website. I hope everybody had the opportunity to go through the same.

2025 has been a milestone year for CORONA. Company got listed on stock exchanges on 15th of December 2025, I would like to take this opportunity to thank entire team at CORONA, all stakeholders and investors who believed in our growth journey and continue to show faith in our business.

As this is the maiden earnings call, I would like to begin by giving you all a brief overview of CORONA Remedies Limited. As a Company, we have a core philosophy of triple C .

First C stands for CULTURE.

We truly believe that whatever today we are in these 21 years, it has been fundamentally based on the first C, that is CULTURE. We believe in ruthless execution as a part of culture. We believe in internal promotion, adaptability and humbleness.

These are the points where we differentiate our company from the other companies as far as culture is concerned. The second C is COURAGE. We have developed a courage of accepting the mistakes and improving.

At the same time, we will believe in robust, inorganic and in licensing opportunity as a part of courage. Third C is COMMITMENT. We are committed for global quality products, value creation for the stakeholders and long-term sustainable growth.

CORONA Remedies Limited, established in 2004, is an India-focused branded pharmaceutical, formulation company engaged in the development, manufacturing and marketing of formulation across key therapeutics areas like women's healthcare, cardio- metabolic, pain management, urology and as well as such as gastrointestinal and respiratory th

erapies.

Approximately 96% of the company's revenues are delivered from the Indian market. In women’s healthcare, CORONA offers a brand across the life cycle ranging from menarche to menopause along with the pregnancy, post-pregnancy, pre and post-menopause categories.

In Cardio Diabeto, the company offers brand across various stages of the treatment from insulin resistance, pre-diabetes to diabetes and diabetes related complications along with cardiac disorders such as hypertension, dyslipidemia and ischemic heart disease. In the pain management, CORONA offers a diversified portfolio of formulation across multiple dosage forms including oral, tablet and capsule, topical sprays, ointments and injections for the management of the pain associated with musculoskeletal spasm and neuropathy.

In urology, CORONA has an offering from multiple disorders such as benign prostatic

hyperplasia, overactive bladder, urinary tract infection and stone management. In the month of July 2025, CORONA had acquired seven brand trademarks from Bayer Zydus Pharma. We shall leverage brand equity and knowledge transfer of these seven brand trademarks and launch its line extension as per the market need. Let us talk about the seven brand trademarks.
The first is Noklot and Noklot CV. By this brand trademark, CORONA is going to enter 1500 plus crores anti-platelet market. Out of seven, one is Noklot, three products are from the infertility, Fostine, Menodac and Ovidac and two from women’s healthcare, three in the women's healthcare, Spye Vageston (Vagestion) and Luprofact.
With this initiative, CORONA will grow, invest and expand in a disciplined manner. CORONA is also creating a diversified product portfolio, both organically and inorganically. Today, we

have a portfolio of 70 plus brands with prominent brands like B29, Myoril, Tricium, Cortel, Obimet, etc.
We have 38 brands today having an annual sales of more than INR10 crores with many of other brands ranking amongst top five in the respective categories. In the past few years, we have consistently outpaced the Indian pharmaceutical market, growing at more than 1.5x the IPM. As per PharmaTrac data, CORONA is number one fastest growing pharmaceutical company amongst top 30 pharma companies as per MAT September '25 data.
An important and differentiating factor driving our overall growth is volume. CORONA's healthy volume growth trajectory is on the back of our focus on the chronic and semi-chronic segment which contributes approximately 70% of our total revenues.
Along the journey, we have also executed strategic brand acquisition and in-licensing arrangements to address therapy gaps in our portfolio and to establish complementary capabilities such as backward integration, marketing arrangements and diversified product offerings.
Our track record with acquired brands has been strong, having acquired brands from giants like GlaxoSmithKline, Abbott, Sanofi, etc, we have been successful in scaling those brands considerably and the similar line we are hoping the great outcome with Zydus Bayer acquisition too.
Apart from the brand acquisition, we also have in-licensing some brands in women's healthcare and urology therapies from Swiss giant Ferring Pharmaceuticals which is a Swiss multinational biopharma company. CORONA is one of the only three Indian companies to have in-licensed any brand from Ferring.
Speaking of our manufacturing capabilities, we operate two manufacturing facilities in India, one in Gujarat and the other in Himachal Pradesh, Solan city. Both facilities are WHO GMP certified. Additionally, our Gujarat facility is also EU GMP certified. We have a total installed annual capacity of 1.65 billion tablets or capsules, 20 million sachets and 10 million bottles across both facilities.
This includes capacity of around 400 million tablets and capsules which was recently comm

issioned at our Gujarat facility in December 2025. We also operate two R&D centers, both of which are located within the two manufacturing facilities, respectively. Our R&D centers are approved by Department of Scientific and Industrial Research.
With respect to procurement and supply chain management, CORONA maintains a well-diversified base of API and excipient suppliers. In line with its focus on backward integration and support chain security, the company has also invested in La Chandra Pharma Lab which operates an EU GMP and WHO GMP certified hormonal API manufacturing facility in the state of Gujarat.

Following this investment, La Chandra supplies hormone API to Gujarat under a right of first refusal arrangement and develops specified APIs enabling enhanced backward integration across CORONA's manufacturing and R&D operations.
With respect to our distribution and sales capabilities, CORONA adopts a differentiated strategy focused on the middle of pyramid. The company targets specialist and super specialist doctors through the strategic deployment of marketing and distribution team across urban and semi-urban market which together account for the largest share of Indian pharmaceutical industry.

By strengthening our field force in these markets and maintaining a clear focus on specialist and super specialist, CORONA is well positioned to capture value in the middle of the pyramid and strengthen overall marketing positioning.
Our pan-India presence supported by an expanding network of distributors and medical representatives enables deeper engagement with medical profession and hospitals driving improved market penetration and reinforcing our positioning within the Indian pharmaceutical market.
While we have considerable presence in the western market including Gujarat, Maharashtra, Goa, Madhya Pradesh and Chhattisgarh, we are augmenting our footprint in other regions simultaneously. CORONA is led by an experienced and dynamic leadership team. All members of the senior leadership come with multi-decadal experience in the respective field of expertise. Apart from technical capabilities, understanding of the industry and operating environment and business acumen, CORONA has consistently maintained strong financial prudence and commercial discipline. We have given equal attention to revenue and profitability resulting in steady growth and stable margins.
Cash flows have been a cornerstone of our journey and will continue to be so on. We have strong track of EBITDA to OCF conversions which has enabled us to reinvest for growth over the past two decades. Owing to our disciplined cash flow generation, capital allocation and steady profitability, our return ratio has been healthy. We are a net cash surplus company.
Going forward, our intent and strategy is to increase our market share across our key therapeutic areas by focusing on chronic, sub-chronic segments, offering products across the life cycle of a patient. The strategy is primarily focused on launching new products that address unmet patient needs within existing therapeutic areas. By identifying gaps in patient care and unmet medical needs, we aim to introduce brand line extensions that cater to evolving therapeutic landscapes. Apart from growing organically, brand acquisition and in-licensing arrangements remain a key growth driver for CORONA. We are also intensifying our engagement with specialist, super specialist prescribers in metro, semi-metro, urban and semi-urban which caters to our medical representative network to enhance our presence in high value therapeutic segments.
In addition to consolidating our presence in existing therapy areas, we are also strategically expanding our presence in additional therapeutic areas, leveraging existing brand equity and

market positioni

ng. We are currently catering to roughly one-third of the Indian pharmaceutical market, providing considerable opportunity to expand into additional therapeutic areas such as infertility, nephrology, CNS, oncology, dermatology, so on and so forth.
Given our diversified and expanding product portfolio, healthy brand strength, wide and growing marketing and distribution network, experienced leadership and financial discipline, we are on track to deliver 15% CAGR, 15% revenue growth and 20% PAT or EPS growth for next three to four years. Before handing over to CFO, Bhavin Bhagat on the financial number, lastly let me touch upon the very important point on the ESG.
ESG is Environmental, Social and Governance responsibility. On and above growth in revenue and profitability, we are equally committed for ESG too. As far as environment is concerned, existing solar power plant of 1.3 megawatt at Bhayla plant and investment for 4.25 megawatt in upcoming solar park spreaded over 11.9 acres, which will save significant electric city cost. Protection of environment by tree plantation, effluent treatment plant at Bhayla plant for achieving zero liquid discharge. Yes, you heard right, zero liquid discharge.
Social responsibility, financial assistance to young talented for promotion of sports and education. Blood donation camps organized by head office and manufacturing facilities. Investing in employee training increased by 50% and promoting gender equality. We have 40% of total workforce at solar plant are female employees.
As far as governance is concerned, The World Bank Group awarded CORONA with EDGE Advanced certificate recognizing the company for energy and water saving measures. We have A+ credit rating, EU-GMP certified plant, one world, one quality and we are working with the QR code technology for product counterfeiting on the strip. This is the brief on ESG.
I would now like to hand over the call to our CFO, Mr. Bhavin Bhagat, to take you through financial and operation performance. Thank you, and over to you, Bhavin bhai.
Bhavin Bhagat: Thank you, Nirav bhai. Firstly, a warm welcome to everyone to our Q2 and H1 FY '26 earnings call. Before I take you to the financial performance, let me update you the premises of sharing Q2 and H1 FY '26 results in the month of Jan '26.
As per the SEBI regulation, when a company gets listed, they need to publish the results of previous quarter within 21 days from the date of getting listed. As we got listed on 15th

December, we need to publish the results of previous quarter, that is Q2 FY '26, within 21 days. We have published our results within the stipulated time.

Now, let me take this opportunity to take you through the financial performance for the quarter and half year ended 30th September 2025. Coming to the quarterly performance first, revenue for Q2 FY '26 stood at INR 361.1 crores with a growth of 15.1% Y-o-Y with India business contributing to 96.5% of its total revenue.

EBITDA stood at INR 78.5 crores reflecting a growth of 17.4% on a Y-o-Y basis whereas the EBITDA margins improved by around 40 bps and stood at 21.7%. Profit after tax stood at INR

52.3 crores compared to INR 43.0 crores in Q2 FY '25, reflecting a growth of around 21.8% on a Y-o-Y basis.

Speaking of our H1 FY '26 performance, revenue for H1 FY '26 stood at INR 707.7 crores compared to INR 605.0 crores in H1 FY '25 reflecting a growth of 17% on a Y-o-Y basis with India business contributing to 96.4% of its total revenue. EBITDA for H1 FY '26 grew by 27.4% on a Y-o-Y basis and stood at INR 148.3 crores whereas the EBITDA margin has seen a healthy improvement of around 170 bps. EBITDA margins stood at 20.9%.

Profit after tax for H1 FY '26 stood at INR 98.5 crores compared to INR 72.9 crores in H1 FY '25 reflecting a strong growth of 35.1% on a Y-o-Y basis. On the return ratio front, our annualized ROE f

or H1 FY '26 stood at 31.1% whereas our annualized ROCE for H1 FY '26 stood at 49.7%. OCF to EBITDA stood healthy at 76.5% whereas last but not the least the net working capital days stood at the best of the class at 23 days.

With that I would like to open the floor for questions. Thank you.

Moderator: We take the first question from the line of Alankar Garude from Kotak Institutional Equity. Please go ahead.

Alankar Garude: Hi, thank you for the opportunity and congrats to the team on the listing as well as the good performance in the second quarter. Nirav Bhai, you mentioned about the fertility segment and wanting to grow further in this segment. You also spoke about it in your opening remarks. Can you comment a bit about what exactly is your presence right now within the fertility segment when we talk about infertility specialists as well as the IVF focused hospitals, which is what you have mentioned in the presentation and how exactly do we plan to grow further in this segment?

Nirav Mehta: Good afternoon, Alankar Bhai. As you know, we are among the top five or six companies in the women's healthcare portfolio. We have been available in Menarche to Menopause all the products, means starting from Menarche, pregnancy care, pre-pregnancy, post-pregnancy care, we have been available everywhere.

But as far as our infertility segment is concerned, we are meeting the doctor's fertility but not been available with a core infertility portfolio. We have done the acquisition with Bayer Zydus for about a few products in the infertility segment, like Fostine, Menodac, Ovidac and Luprofact. We are in the process of validation as of now.

And I think so in the few months of time from now, we are going to launch a separate team for infertility and entering into the infertility market with these products, a specialized team of about less than 50 people across the nation who are going to meet only infertility specialists. We are under development. I think so within a couple of months we are going to launch and then we are going to strengthen our women's healthcare position by infertility product range also.

Alankar Garude: Got it, sir. So basically, would it be fair to say that as of now our presence in this space is quite limited? The Bayer Zydus portfolio acquisition does help. But currently, I mean, it's just a fresh start for us as far as infertility specialist is concerned?

Nirav Mehta: So, Alankar Bhai, you are right. But as far as infertility doctors are concerned, they are also treating pre and post-pregnancy and the menarche and menopause issues.

So we have been in touch with that doctor for that particular portfolio. But as far as core infertility portfolio is concerned, we are now going ahead with the Bayer Zydus acquisition products. We are under development and we will launch in the core therapy of infertility within next three, four months of time.

Alankar Garude: Got it. Secondly, how would you describe your current position in the neurotherapeutic areas of nephro, CNS, onco and dermatology? And where shall we expect these therapies to be in terms

of scale for us over, say, the next three to five years?
Nirav Mehta: So, as far as CORONA is concerned, today we have been available in women's healthcare, Cardio-metabolic, Urology and pain management. We are working to develop six, seven therapies today like infertility, spine, rheumatoid, CNS, dermatology, gastrointestinal. And what we have decided, we will unlock each therapy at the right time, starting with the infertility in this year.
Slowly and gradually, we will unlock each therapies in, next 3 to 4 to 5 years of time. And whenever we launch and enter into the new therapy, our aim is to take the leadership position in that therapy and then focus into the other therapy to grow. At the same time, today, as far as our covered market is concerned, wherever therap

ies we are, we are about 1.9% market share and
that market is growing by 10%, which is about 25% more than the IPM.
So, we are optimistically positive to grow deeper in the segments where we have been present
And at the right time, we will unlock these therapies which have been told about.
Alankar Garude: Got it, sir. And would it be fair to say that similar to our existing therapies, be it women's health or Cardio-metabolic, our focus will be more on the specialist and the super specialist segment rather than the GP segment?
Nirav Mehta: Yes, absolutely. So, as far as the middle of the pyramid is concerned, our specialist and super specialist, which is the biggest chunk of IPM, we have been super focused over there. And whatever therapies we are entering from today to tomorrow, or day after, our focus will remain strong on the specialist and super specialist.
Alankar Garude: Got it, sir. And one final question, if I may. Broadly, if I look at our R&D spends have been relatively lower compared to what we see for other similar companies. And with us now looking at new therapeutic areas over the next few years, is there anything different which we need to do on the R&D side, whether it be beefing up our team or increasing our investments? Anything which you would like to highlight there, sir?
Nirav Mehta: So, as far as R&D is concerned, it's really been very, very important segment for any pharmaceutical company, growing pharmaceutical industry at the time of launching new product validations, bioequivalence, so on and so forth. As our revenue grows, I think so the percentage contribution to the R&D will remain less than 2%. And today about 100 plus scientists are

working in R&D. We will expand a little, but if we grow on the revenues, like 15% plus, I think that percentage will remain less than 2%.
Alankar Garude: That's it from my side. Thank you and all the best.
Moderator: Thank you. We take the next question from the line of Yug Modi from AP Capital. Please go ahead.
Yug Modi: So, I just had two questions. I wanted to understand the Indian's brand approach in a slightly more detailed manner. How does it help us in our overall growth? Some color on it would be helpful.
Nirav Mehta: I couldn't get the question, sir?
Yug Modi: Well, I just wanted to understand our Indian's brand approach in a slightly more detailed manner and how does it help in our overall growth?
Nirav Mehta: So, look at the Indian pharmaceutical market, so it's about INR 2,32,000 crores market growing at the speed of about 8.5% on year-on-year. This whole market is about prescription-based branded formulation market. Now, how do you differentiate brand from a product? To just give you a simple understanding about a toothpaste to Colgate or a toothpaste to Close Up or a toothpaste to Pepsodent is the market from generic to branded.
Brand gives a flavor, a quality adherence and the confidence in the set customer's mind. We are present in four therapies like women's healthcare, cardio-diabeto, urology and pain management. And we try to launch the product with little niche or little differentiated manner.
Giving you a classical example of our number one brand B29, which is about INR 150 crores plus brand.. It is a vitamin mineral, but it is the brand for neuro diabetic neuropathy management. So, whenever we launch this brand, we launch this brand in the science part of it that whatever ingredients this brand has, has been helping diabetic patients to delay the neuropathy management.
So, we try to take the road of a little differentiated manner, try to put a science into it, unmet need of the patients and the medical fraternity. And then on the basis of science and consistency, we try to make that product convert into the brand. So, I think if you look at India, it's about branded formulation market.
And if you just try to und

erstand, it seems only a branded formulation market, is with the
complex supply chain management. And hence if you look at this 8.5% growth, hypothetically it is to like 2,32,000 crores market, 8.5% growth is has been bringing whatever crores on the table every year, about 79% of that market is being diversified from the top 50 company and the rest has been diversified between 51 to 1,300, 1,400 ranked company. So, it's been a market where more or less, this becomes bigger, that story goes on because of the complex supply chain and the brand management phenomena.

Yug Modi: Okay. So, lastly, can you just highlight the strategy for our international business, like which are the current geographies where we have a considerable presence and how do we plan to enter newer geographies? How different is our product portfolio compared to India business?
Nirav Mehta: So, as far as international is concerned, today we have about 3.5% contribution with the international business. But we are going ahead to develop a complex generic female hormonal product portfolio, with help of the La Chandra as a backward integration or forward integration block on the hormones, we have already set in Ahmedabad.
And it's EU GMP approvable plant which is going to kick start by the end of Q2 or early Q3 of FY '27. And once we will start that plant, we'll develop, simultaneously we're developing and at that time we will develop those years in the women's healthcare. And the theme for international market remain - think hormone, think CORONA. It's absolutely a niche in this segment.
So we will go worldwide, except US and Japan as of now to start with rest of the world, Europe, UK, Australia, New Zealand, Brazil, Mexico, Asia and CIS, Russia, with the product portfolio.
And we will add general category products also from our plant into the international kitty. We are quite hopeful that with this, in a couple of years, we can have a CI of around eight, nine percent higher single-digit CI with international business too.
Yug Modi: Okay, perfect. So that answers all my questions. Thank you.
Moderator: Thank you. We take the next question from the line of Aditya Chheda from InCred Asset Management. Please go ahead.
Aditya Chheda: Hello, good afternoon. My question is pertaining to the Slide 17.
Moderator: Aditya, are you there? Since there is no response, we will move on to the next question, which is from the line of Rahul Jeewani from IIFL Capital Services Limited. Please go ahead.
Rahul Jeewani: Yes. Thanks, sir, for taking my question. Sir, can you talk about the productivity or the PCPM for the domestic business, which let's say versus some of the other chronic heavy peers is slightly on the lower side. So how do you see this productivity ramping us for us over the next three-to-four-year period? And can you also talk about how the productivity is between some of your mature divisions in India and some of the new divisions which you might have added over the past, let's say, two-to-three-year period?
Nirav Mehta: Yes. So, good afternoon, Rahul bhai. Look at today CORONA's PCPM per capita per month is about 3.9 lakhs, about 4 lakhs rupees. But if you dissect this PCPM from the people who have joined for zero to three years, three to six years and six to nine years. The productivity varies from 2.5 lakhs to 8 lakhs. 8 lakhs from the people who have been joined six to nine years range, three to six years is about 5 lakhs and about zero to three years is about 2-2.5 lakhs.
So considering the productivity will increase every year, we have added about 600 plus people in last three years of time. Hence today our productivity is about INR 4 lakhs. But if you look at

the other geographies, a matured market or a Western market, the productivity has gone to as high as INR 6 lakhs to INR 8 lakh

s.
Rahul Jeewani: Sure, sir. And how do you, let's say, now we are targeting -- so first question with respect to this would be that how many reps do you plan to add every year? And then, let's say, from a three to four-year perspective, do we have any target productivity in mind in terms of reaching our desired productivity level?
Nirav Mehta: So, you know, as far as expansion is concerned, we have decided to expand these MR numbers by 5% to 7% on year-on-year because today we are on a critical mark of around 2,600 plus medical representatives. And by launching our new super specialty therapies like infertility, spine rheumatoid, etcetera, we require that 5% to 7% people.
In that, we are going to add a few organically required people also to cover the nook and corners of India. Our endeavor, Rahul bhai, is to grow 15% on revenue and 20% on PAT/, EPS. And

that's been in mind while creating the model for the next 4 to 5 years of time.
Rahul Jeewani: Sure, sir. The second question which I have is around the hormonal new plant which we were building. So, you said you will use that plant to ramp up the international business. So, can you just update us in terms of progress at that plant? When do we expect to receive the WHO and the EU GMP approvals for that plant?
Nirav Mehta: So, as I told, as I told earlier also, the building is ready. We have got the state, Schedule M license also. We are now, you know, going to kick start the commercial by Q2, end of Q2 or early of Q3 of FY '27. And once we'll kick start the commercial activities by Q4, we are expecting about Q4 of FY '27, we are expecting WHO.
And by that time, we will try to take, you know, EU GMP inspection also. But that all depends on EU GMP dates from Hungary and all. So, our endeavor is to kick start this plant, you know, by taking WHO and been working hard for EU GMP approval also by the FY '27 end.
Rahul Jeewani: Sure. So, this plant will potentially then start contributing from a top line perspective in FY '28 only?
Nirav Mehta: Absolutely. This plant will, you know, help. First of all, we will transfer our India-based hormonal product in that plant and try to create the dossiers for the international market. I think for the commercial, you know, for the first few quarters, it will be India-based product and then, you know, we'll kick start the international business with that plant, with the female hormones.
Rahul Jeewani: And sir, the infertility specialists which we are targeting, so I'm assuming that some of those hormonal products for India would be launched through this plant?
Nirav Mehta: Agreed, agreed. You're absolutely right.
Rahul Jeewani: Sure, sir. And last question from my side, can you also talk about in terms of how you are seeing the M&A market in terms of acquisitions in India? So, are you evaluating any further assets to, let's say, diversify your portfolio in the India business?

Nirav Mehta: So, I think M&A is a talk of today as far as IPM is concerned. A very important thing is what you get it, how you get it and what you can do out of it. So, at CORONA we have practiced whenever we see any inorganic or in-licensing opportunities, we try to create our own model that what we can do with that product range. Is it in a fitment? Is it right to add in the therapies or enter into the new therapies?
So, we are constantly evaluating it. It's not that easy, but it's not that difficult also. So, I think so, in last year, July '25, as I mentioned, we have got, you know, there seems to be a small acquisition, Bayer-Zydus. We have paid about INR 7.5 crores, INR 8 crores behind that acquisition, but that will take us along with that acquisition.
So, important is what you can do out of that acquisition. We are bullish into it. As of now, we are looking at two, three interesting opportunities, but its Rahul bhai, if you look at 100, you may g

et one or two, you know, that sort of chances have been there.
So, nothing concrete as of now, after Zydus-Bayer, our first focus is to make this acquisition more meaningful, you know, in the days to come. At the same time, we will continue to be optimistic as far as acquisition and in-licensing is concerned.
Rahul Jeewani: Yes, sir, one follow-up on that. In the past, we have acquired assets in India, largely from MNC companies. We haven't, let's say, acquired any assets from other Indian companies. So, would you continue to adopt a similar approach in terms of acquiring some of these non-core portfolios from MNCs, which might come at a reasonable valuation as compared to some of the other assets?
Nirav Mehta: It's nothing like a multinational or a top Indian company. There is no differentiator in our mind. The important is what sort of culture we are acquiring out of the brand, what sort of character we are acquiring from the brand.
If that character is in our fitment, we have been positive. If it is not, we are not. So, you know, it hardly makes any difference whether it is an Indian company or a multinational company. You know, interestingly, we got that opportunity with the multinational, but if we get tomorrow any opportunity from an Indian company, and if it is in the fitment, we will definitely look into it.
Rahul Jeewani: Sure, sir. Thank you. Thanks for answering my questions. I will join back the queue.
Moderator: Thank you. We take the next question from the line of Niharika Agarwal from InCred Asset Management. Please go ahead.
Niharika Agarwal: Just a small correction, sir. InCred Equities. Thank you so much for taking my question. So, I wanted to ask, since this is your first public earnings call, could you help us understand the seasonality in your business? Is H2 typically stronger than H1 in terms of margins or revenue?
Nirav Mehta: So, we have more or less 70% plus chronic and semi-chronic portfolio. So, seasonality does not matter much. But still, if you look at H1 to H2, more or less it is 50-50. But, you know, 100 basis

point minus in the first half versus 100 basis point.

So, it has been more or less 100 basis point here and there as far as revenue and profitability, PAT margin is concerned. You know, if you try to understand CORONA in a more deeper manner, H1, H2 is 50-50, more or less 100 basis point here and there. And if you look at our revenue split, our Q3, more or less October, November, December is slightly been lesser as far as revenue growth is concerned with the other quarters because of this festive season. But more or less it is also 25% to 27% quarter-to-quarter split CI as far as revenue is concerned. And similarly, in line with profitability. But if you want to see CORONA, it is on 15% revenue growth on CAGR for next 3 to 4 years and 20% PAT or EPS for next 3 to 4 years, that's what our endeavor is.

Niharika Agarwal: And then, thank you so much, sir. I had one more question over here. Given the stabilization in raw material costs and your product makes shift towards chronic therapies, is 22% to 23% a sustainable margin bank for FY '27 or do you plan to reinvest the gains into marketing or field force?

Nirav Mehta: As I said to madam earlier also, our endeavor is about 20% PAT or EPS growth year-on-year for next 4 years. We have a plan in place till FY '29. And that's why I'm telling you that we will look into it that we should grow about 20% plus PAT or EPS growth.

Niharika Agarwal: All right, sir. That is very helpful. Thank you so much for giving me an opportunity to ask questions.

Moderator: Thank you. We take the next question from the line of Amey Chalke from JM Financial. Please go ahead. Amey, please unmute your line and proceed with your question.

Amey Chalke: Hi Nirav. So just had one question. We have been so far successful with our middle of the pyramid approach. On

one aspect, you did clarify on the specialist side that it will continue. But going ahead, in terms of the geographic presence, where also this approach is applicable in terms of the city, urban and rural mix. So you expect we need to change a bit there, considering we have well above now INR 1000 crores in terms of size of the business.

Nirav Mehta: So try to understand India. If you look at India, it's all about semi-urban to urban, urban to semi-metro, semi-metro to metro. So everywhere, you know, whatever been rural yesterday, been semi-urban today and urban tomorrow to semi-metro to metro.

And also the market shift has been happening in the specialist. In each category, from semi-urban to metro, it's been increasing heavily. If you look at the medical seats also, today in India, about 70,000 specialist and super specialist seats has been added.

You know, resulted, you know, I think so India will be an interesting specialist and super specialist market. And our focus will remain same on the middle of the pyramid, specialist, which is the highest chunk to super specialist, because that will take you to the newer segments. So our focus will remain same on to it.

Amey Chalke: Sure, sure. And just last one, if I can squeeze in, on the diabetes side, our focus at present, or at least the brand presence, we are largely into the Metformin combination, which is a first line therapy, but we have a very small presence in Gliptin, Gliflozins. Any thoughts over there, as well as if you can also explain our GLP-1 strategy along with that. Thank you so much. And I will join back with you.

Nirav Mehta: Yes. So as far as diabetic portfolio is concerned today, we have been available in sitagliptin, which is DPP-4, dapagliflozin and empagliflozin, which is SGLT-2. So we have been well diversified, been available in DPP-4, SGLT-2.

And we have launched this brand before a few years, we are trying to make that brand, big to bigger, with the -OBIMET-GX portfolio, which is, you said rightly about the Glimepiride Metformin and the combination portfolio. As far as GLP-1 is concerned, yes, we are working with that GLP-1, and we are hopeful that we will launch at the right time in the Indian market of patent.

Amey Chalke: Sure, sir. Thank you so much. Thank you for taking my question.

Nirav Mehta: Thank you.

Moderator: Thank you. Ladies and gentlemen, this was the last question and we conclude the question-and-answer session. I now hand the conference over to the management for their closing comments.

Nirav Mehta: Thank you all once again for joining us today on the Q2 and H1 FY '26 earnings call. We will keep the investor and analyst community posted with any update relating to CORONA Remedies Limited. We hope we have been able to address all your queries. For any further queries or information, kindly get in touch with us or SGA, our Investor Relations partner. Thank you so much and have a great day ahead.

Moderator: Thank you. On behalf of CORONA Remedies Limited, that concludes this conference call. Thank you for joining us and you may now disconnect your lines.

"CORONA Remedies Limited Q3 & 9M FY'26
Earnings Conference Call"

February 03, 2026

E&OE - This transcript is edited for factual errors. In case of discrepancy, the audio recordings uploaded on the stock exchange on 03rd February 2026 will prevail

MANAGEMENT : MR. NIRAV MEHTA - MANAGING DIRECTOR AND CHIEF EXECUTIVE OFFICER, CORONA REMEDIES LIMITED
MR. ANKUR MEHTA - JOINT MANAGING DIRECTOR, CORONA REMEDIES LIMITED
MR. BHAVIN BHAGAT - CHIEF FINANCIAL OFFICER, CORONA REMEDIES LIMITED
MR. TEJAS KOTHARI - VICE PRESIDENT (CORPORATE STRATEGY & BUSINESS DEVELOPMENT), CORONA REMEDIES LIMITED

MR. VIJAY CHARLU – PRESIDENT (INDIA BUSINESS),
CORONA REMEDIES LIMITED
MODERATOR : M R. RAHUL JEEWANI - IIFL CAPITAL SERVICES LIMITED

Moderator: Ladies and gentlemen, good day and welcome to CORONA Remedies Q3 FY'26 Earnings Conference Call hosted by IIFL Capital Services Limited.

As a reminder, all participant lines will be in a listen-only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing '*' then '0' on your touchtone phone.

Please note that this conference is being recorded.

Before we begin, I would like to point out that this conference may contain forward-looking statements about the company which are based on the beliefs, opinions, and expectations of the Company as on date of this call. These statements are not the guarantees of future performance and involve risks and uncertainties that are difficult to predict.

I now hand the conference over to Mr. Rahul Jeewani from IIFL Capital. Thank you and over to you, sir.

Rahul Jeewani: Hi, good afternoon, everyone. This is Rahul from IIFL Capital. I welcome you all to the 3rd Quarter Earnings Conference Call of CORONA Remedies Limited being hosted by IIFL.

From CORONA, we have with us today Mr. Nirav Mehta – Managing Director and CEO, Mr. Ankur Mehta – Joint Managing Director, Mr. Bhavin Bhagat – Chief Financial Officer, Mr. Tejas Kothari – Vice President (Corporate Strategy & Business Development) and Mr. Vijay Charlu – President (India Business).

Over to you, sir, for your opening comments.

Nirav Mehta: Good afternoon, ladies and gentlemen. Thank you all for joining us on the Q3 and 9-month FY'26 Earnings Call of CORONA Remedies Limited.

Along with me on call, I am joined by our Joint Managing Director, Mr. Ankur Mehta; our CFO, Mr. Bhavin Bhagat, other members of the senior management team, and Strategic Growth Advisor, our investor relations partner.

We have uploaded our result, press release and investor presentation on the stock exchange and on Company's website. I hope everybody had the opportunity to go through the same.

I would like to begin by giving you all a brief overview of CORONA Remedies Limited:

Established in December 2004, CORONA Remedies has been built on three core philosophies, which are referred to as the Triple C philosophy. The first C stands for CULTURE. It focuses on fostering ruthless execution, internal growth, adaptability, and humility. The second C represents COURAGE. It reflects our willingness to acknowledge mistakes, learn from them,

and continuously improve. The third C is COMMITMENT. It represents our dedication to deliver proven quality products and achieving long-term sustainable growth. CORONA is an India-focused, branded pharmaceutical company engaged in development, manufacturing, and marketing of formulations across key therapy areas like women's healthcare, cardio-diabeto, pain management and urology, as well as other segments such as VMN, gastrointestinal, respiratory therapies, etc. Approximately 96% of our revenue comes from India. CORONA has grown, invested, and expanded in a disciplined manner over the last two decades, creating a diversified product portfolio. It is towards the chronic and semi-chronic segment, which contributes approximately 70%-72% of our total revenue. Today, we have a portfolio of 70-plus brands with prominent brands like B 29, Myoril, Tricium, Cortel, Obimet, etc.

In the past few years, we have consistently outpaced the , Indian Pharmaceutical Market. Speaking for this quarter, we are number one fastest growing pharmaceutical Company amongst top 30 pharma companies in India for Q3 FY'26. We have grown at 18.9%, nearly twice as fast

as the IPM, which has grown by 9.6% over the same period as per PharmaTrac. This has resulted in CORONA jumping up two ranks from 30th to 28th rank in IPM, (Indian Pharmaceutical Market). An important and differentiating factor driving our overall growth is volume. There are three growths, volume, price, and new introductions, or else it is volume plus NI and price growth. But CORONA has always been a differentiating factor in the overall growth with volume plus NI. CORONA's healthy volume plus NI growth trajectory comes on back of our focus on the chronic and semi-chronic segment.

Along our journey, we have also executed strategic brand acquisition and in-licensing arrangements to address therapy gaps in our portfolio and to establish complementary capabilities such as backward integration, marketing arrangements, and diversified product offerings. We have a strong track record when it comes to acquired brands. After acquiring brands from giants like GlaxoSmithKline, Abbott, Sanofi, etc., we have been successful in scaling those brands considerably and we hope to continue the same trend with several brand acquisitions from Bayer in July 2025. The commercialization of the portfolio acquired from Bayer will begin in Q4 FY'26 with the launch of Noklot Plus. The Noklot franchise has significant market opportunities in antiplatelet and combination therapies and will contribute in our growth in years ahead. The EU GMP approved Gujarat facility has also received EAEU GMP accreditation, Eurasian GMP accreditation enables CORONA's entry into five EAEU member countries like Russia, Kyrgyzstan, Armenia, Belarus, and Kazakhstan through a B2B model. It opens access to a pharmaceutical market valued at approximately USD 25 billion and aligns strongly with CORONA's long-term vision of building and strengthening international partnerships.

Cash flows have been a cornerstone for our journey and will continue to be so. We have a strong track record of EBITDA to OCF conversion which has enabled us to reinvest for growth over the past two decades. Owing to our disciplined cash flow generation, capital allocation, and

steady profitability, our returns ratios have been healthy. We are a net cash surplus company. The performance is aligned with our annual guidance of 15% revenue growth and 20% PAT growth. Our engine brand performed in line with the expectations. Going forward, our intent and strategy is to increase our market share across our key therapies areas by focusing on chronic and subchronic segments, offering products across the lifecycle of a patient. The strategy is primarily focused on launching new products that address unmet patient needs within existing therapy areas. By identifying gaps in patient care and unmet medical needs, we aim to introduce brand line extensions that cater to evolving therapeutic landscapes. Apart from the growing organically-brand acquisitions and in-licensing arrangements, we remain key growth drivers at CORONA. We are also intensifying our focus with specialist and super-specialist prescribers through our medical representative network to enhance our presence in high-value therapeutic segments. Given our diversified and expanding product portfolio, healthy brand strength, wide and growing marketing and distribution network, experienced leadership and financial discipline we are on track to deliver consistent growth and stable profitability. We expect to continue growing our revenue in mid-teen range and our profit after tax at high-teen range.

I would like to hand over the call over to our CFO – Mr. Bhavin Bhagat, to take you through the financial and operational performance. Thank you and over to Bhavin Bhai.

Bhavin Bhagat: Thank you, Nirav bhai. A warm welcome to everyone to our Q3 and 9-month FY'26 Earnings Call.

I will take you through the financial performance for the Quarter and 9 months ended

31st
December 2025:

Coming to the quarterly performance first:

Revenue for Q3 FY'26 stood at Rs. 342 crores vs. Rs. 298 crores in Q3 FY'25 reflecting a healthy growth of 15% YOY. EBITDA stood at Rs. 83 crores vs. Rs. 69 crores in Q3 FY'25 reflecting a growth of 20% on a YOY basis. EBITDA margin improved by around 100 bps and stood at 24.3%. Profit after tax adjusted for the one-time impact of new Labor Code stood at Rs. 56 crores compared to Rs. 45 crores in Q3 FY'25 reflecting a growth of around 24% YOY.

Speaking of our 9-month FY'26 performance:

Revenue for 9-month FY'26 stood at Rs. 1,050 crores compared to Rs. 903 crores in 9-month FY'25 reflecting a growth of around 16% on a YOY basis against our guidance of 15%. EBITDA for 9-month FY'26 grew by almost 25% on a YOY basis and stood at Rs. 231 crores. EBITDA margin has seen a healthy improvement of around 140 bps. EBITDA margin for 9-month FY'26 stood at 22%. Adjusted profit after tax for 9-month FY'26 stood at Rs. 154 crores compared to Rs. 118 crores in 9-month FY'25 reflecting a growth of around 31% YOY against our guidance

of 20%. Our performance for the quarter and 9-month period is broadly in line with our guidance and is on an improving trajectory. On the return ratio front, we continued to maintain a healthy trajectory. Our annualized ROE for 9-month FY'26 stood at 31% whereas annualized ROCE, return of capital employed for 9-month FY'26 stood at 48%. OCF to EBITDA stood strong at 86%.

With that I would like to open the floor for questions. Thank you.
Moderator: Thank you very much. We will now begin with the question-and-answer session. The first question comes from the line of Alankar Garude from Kotak India. Please go ahead.
Alankar Garude: Hi, good afternoon, everyone. Sir, we have shown pretty strong outperformance versus the IPM yet again, if you look at secondary sales data. However, on a reported basis, our extent of outperformance has narrowed a bit in this quarter. I just wanted to understand what is leading to this difference between primary and secondary sales for us.
Nirav Mehta : I couldn't get your question Nirav here. But what I understand, you want to understand about the difference between primary and secondary. My understanding is correct?
Alankar Garude: Nirav bhai, my question is if you look at IQVIA data, if you compare the growth reported by CORONA in the third quarter versus what the industry has reported, there is a very significant outperformance which you alluded to as well. But if you look at the reported growth of 15% odd in this quarter, while it is still pretty strong, you have seen some other companies also reporting pretty strong growth in this quarter. I wanted to check whether there is any reason for difference between primary and secondary sales specifically in this quarter or there is nothing much to read into this?
Nirav Mehta: Okay. Honestly, there is nothing much to read into it. More or less, this data captured is just giving you the idea that how market has performed and what you have performed. It has never been possible to match apple-to-apple or pineapple-to-pineapple. It is always a plus or minus here and there. This is just the guideline which IQVIA has shown. So you are talking about 15% versus 18.9% and trying to compare that?
Alankar Garude: Yes, I was just looking at the outperformance on a relative basis.
Nirav Mehta: I understand. No, there is nothing like any extraordinary price thing on the primary or secondary front. It is more or less data captured things on the PharmaTrac or IQVIA.
Alankar Garude: Got it. The other question was, if you look at the mix of domestic and international, we do share that percentage contribution from domestic in our presentation. If you look at say the second quarter, third quarter and even if I look at say 1st Quarter from the RHP, the contribution of

international has broadly stayed similar over the last three quarters. Now given this recent EU-GMP certification for those five markets, should we expect a much faster growth in the international market compared to the domestic business?
Nirav Mehta: Yes and no. Both the things have been there. International business in the pharmaceutical industry has been typical. First, you get the accreditation approved. Then you are going to submit the dossier. For dossier to get the approval will take another 1-2 years and then the business starts. So on a long term, if you understand that the CI after you look at 3-4-5years, the CI of international and India business will be broadly more or less 90 and 10, but not more than that. So more or less it's an India focused industry. And at the same time, if you continue to grow in India business by 15% more or less here and there, it doesn't change the proportionate because there also you grow by 20%-25% and here you grew by 15%, but the pie more or less remains same. So this 3%-4% will go to 7%-8% and then further go to 8%-9% in the years to come. That has been possible.
Alankar Garude: Got it, sir. And just one final follow up. Will we need any incremental investments to drive growth in exports?
Nirav Mehta: No, I think so internal we have enough cash generated from the business as Bhavin bhai has just spoke about OCF EBITDA is 84%. Today also we have been 100 crore plus net cash positive company. I don't think so that we required any further capital to boost the international business.
Alankar Garude: Sir, my question also was on the OpEx. So any addition of manpower or any other spends on distribution etc.?
Nirav Mehta: So we have just capitalized our 600 kg line which enhances our 40% capacity as of now. Now we will need of another plant in as per our predictions and planning. I think we required one more plant in FY'28 to FY'29. So we will start thinking on this after few months.
Alankar Garude: Got it sir. That's it from my side. Thank you and all the best.
Moderator: Thank you. The next question comes from the line of Shubham Aggarwal from Burman Capital. Please go ahead.
Shubham Aggarwal: Hi, sir. Thank you for the opportunity. Sir, I was just looking at your employee and your MR related costs and comparing that with some of the other companies that are operating in heavy domestic branded formulations and more specifically in the therapy that you operate. It seems that there is like 14%-15% kind of difference which obviously has narrowed down in the past last 2-3 years and that in my analysis seems to be coming out from the PCPM which for us seems to be lower than IPM. So I just wanted to understand that given you highlight, mid-teens kind of growth and your MR is growing at 5%-7% CAGR is there a possibility that we will continue to

see margin expansion, margins probably reaching high 20s or potentially 30% in medium to long term. So just wanted to understand what's your ambition on that part.
Nirav Mehta: I request Bhavin bhai to answer the question.
Bhavin Bhagat: Hi Shubham. Your question is bang on. You asked questions which everyone asked to us and we answered them in a very clinical manner. Yes, your question is right that our employee cost percentage compared to the other peers seems to be high but to answering tot that question is that you have to see apple-to-apple growth. In the last 3 years we have deployed 600 medical reps in the system which will increase our employee cost in the initial days and you have also endorsed that in the last 3 years that employee cost percentage has reduced and yes it will come down in coming years down the line but because of the heavy expansion which we did in the last 3 years because of which the employee cost seems to be high and resulting your question another question

towards PCPM is linked with the same things that when you deploy medical reps as we mentioned in our earlier course as well that we would be deploying 5%-6% medical reps out of the total medical reps on a yearly basis on average terms so because of which in the past years PCPM was low but now if you see in years down the line PCPM will improve because of our leverage in our PCPM improvement and the revenue growth of 15% what we have committed. Answering your last question about the margin expansion by 30% what you are saying and what we are currently at 20%, 21% or 22% from an EBITDA standpoint, yes, having said then as my employee cost will reduce, my EBITDA margins will improve. But lastly speaking, our revenue will grow by 15% irrespective of our MR additions and our PAT growth which we are confident to achieve 20% that is what we would like to share.
Shubham Aggarwal: Understood, sir. Thank you for answering my question and all the best for the future.
Moderator: Thank you. The next question comes from the line of Hrishit Jhaveri from CBA Asset Managers LLP. Please go ahead.
Hrishit Jhaveri: Good evening, sir. Congratulations on a good set of numbers. My question is more on the inorganic growth plan. Do we have any deal on the table? Are we evaluating any inorganic acquisitions?
Nirav Mehta: Yes, thank you. As far as inorganic is concerned we are constantly evaluating the things as of now also we are evaluating on two brand acquisitions but it is always been once out of hundred so we never know that when you know these things will convert into the reality but yes we are bang on, we are working hard into it that if any brand or a portfolio is been in the fitment, we are happy to see it and you know we have several examples of success in this fashion so we are looking into it as of now nothing concrete into it.
Hrishit Jhaveri: Okay. Thank you and all the best, sir.

Moderator: Thank you. The next question comes from the line of Amey Chalke from JM financial. Please go ahead.
Amey Chalke: Thank you so much. This is Amey from JM. Nirav bhai, I have one question on basically long term margins. So in terms of growth, we have been one in top 30 companies in India but when it comes to margins we are still at around 22% to 24% kind of a range whereas similar business mix or product mix companies are also operating at 35% plus EBITDA margin. So at what point you think in terms of scale we will be able to achieve these kind of margins and also what is the difference in terms of the structure etc. between these companies and us when it comes to the margin profile? Thank you so much.
Nirav Mehta: Thanks, Amey bhai. Amey bhai see, as far as pharmaceutical industry is concerned more or less answering your second question first , more or less the structure remains same for majority of all top companies. So I am talking about the peers the structure more or less remains same. See what we think at CORONA we are in the business of you know revenue growth with specialist and super specialist prescription-based business and a long-term business so today we are into four therapies slowly and gradually as I have discussed last time we are going to enter in infertility, sometime we'll enter in rheumatology, spine so we are trying to enter into the new therapies. Always we keep in the mind that we will grow with the 15% and when we talk about 15%, we are talking about double than the market more or less or 1.8 times than the market right when market grows about 8%, 9%, 10% and if you are talking about 15% plus, I think so we are talking about more or less 1.75% to 2% than the market. To do it we have to enter with new therapies. We have to launch new products, we have to go ahead with superficiality focus. Whatever we do we always remain two numbers in the mind 15% revenue growth and 20% profitability growth. If we continue to achi

eve in the same line directions, I think so we will soon
be entered with the peers in the years to come the point is consistently we all we have at CORONA we have to achieve 20% profitability growth and 15% revenue growth if one happens and second doesn't happen I think so it's not a healthy mix revenue growth is equally important as the profitability growth and our eye is on 15% and 20% revenue and profitability for next few years as a guideline also. And I think so if we achieve, we will be more or less near to the peers.

Amey Chalke: Sure, so going ahead investor basically should see that you will continue to maintain, try to maintain your topline growth while your margins will keep on gradually improving as you scale actually?

Nirav Mehta: Absolutely, I think so you have sum up my answer.

Amey Chalke: Sure. Thank you so much sir and the second question I have is on the seasonality front since this is first time we are seeing the quarters of our businesses, is it possible to explain like how the quarters are typically staggered in terms of both expenses because there have been some companies in the market which typically do tend to spend a lot in terms of marketing in a fourth

quarter or something like that or the 4th Quarter is typically weak quarter for many of the India focused companies. So in that aspect if you can explain the seasonality of our businesses in terms of both revenue as well as the expenses? Thank you.

Nirav Mehta: So as far as CORONA is concerned we have about 70% to 72% of chronic and semi-chronic and acute business has been you know about another 20% 30% on overall business. More or less there is hardly a seasonality but you know 3%-4% plus or minus on quarter-on quarter variation may happen. So hypothetically if we talk about four quarter and 25-25-25-25 then it may be like 22% to 27% sort of revenue and hence the profitability more or less this is the range which we follow but if you look at CORONA since FY'22 you know always we have delivered FY'22 to today we are in FY’26 now we are approaching towards the last quarter of FY-26. We have always delivered on a yearly basis 15% plus revenue growth and (+20%) PAT growth.

Amey Chalke: Sure, so we should expect minimal seasonality impact in quarters going ahead basically and in terms of expense do we staggered our expense across four quarters or we might see one of the quarters being higher or in terms of spend because this quarter we have reported good EBITDA margins of 24%, should we expect that to continue going ahead or?

Nirav Mehta: So answering your question we staggered the expenses, there is nothing like a load on one of the quarter and I think so we will continue to do so with the guideline, the guideline and estimation which I have just spoken now.

Amey Chalke: Thank you so much. I will join back the queue.

Moderator: Thank you. The next question comes from the line of Rahul Jeewani from IIFL Capital. Please go ahead.

Rahul Jeewani: Hi, sir. Thanks for taking my question. Sir, on let's say these 600 MRs which you said you have added over the past three years, can you also talk about in terms of the divisions in which these MRs have got added and the second part to that question would be, we obviously are now trying to ramp up our IVF portfolio through the seven brands which we acquired from Bayer. So can you also talk about let's say in terms of how the team and the channel strategy is being adopted for scaling up the IVF portfolio?

Nirav Mehta: Thanks, Rahul bhai. So first of all, answering your question on about the split of the 600 medical representatives, we have launched one vertical into the cardio metabolic, names Radiance and there we have taken about 250 people the another is the Solaris which we have taken a team for gynecology women's healthcare, so another 250 people and about the 100 people all across the other divi

sions. So that's how we have taken about 600 people in the business. And as far as this Bayer seven brands deal is concerned, as I told you, one of the brand is Noklot plus which we are going to launch in this month, so this Quarter 4 of FY'26 which is in the therapy of cardiology

as the anti-platelet in the coagulant market, Noklot plus and we are going to launch couple of other combination in the category of Noklot in a quarter to come. So this is about one brand and another few brands, about 4-5 brands we are going to launch with the IVF portfolio. We have already been more or less taken the team about 46 people across the nation because these are the Super Specialty people where we want to cater about 3,000 IVF center. Our goal is to cater about 3,000 top centers IVF centers of the country. People are in field, more training is going on and we are going to launch few other products with the Bayer's trademark. The validation that is going on and we are going to make it in Quarter 1 or Quarter 2 of FY'27 which we also given the guidance last time. So more or less we will use this trademark, the capitalization of the trademark by FY'27 1st Quarter few and second quarter few.

Rahul Jeewani: Sure, sir. So of these 3,000 IVF centers which we target to cover, how many reps have we added and sir given that it is kind of an institutional business do you think that the hygiene parameters which we have for the rest of our business in terms of discounting, we might have to go aggressive in terms of trying to scale up this IVF institutional business?
Nirav Mehta: Number one, we have taken 46 people and this 46 people are meeting to this 3,000 centers where we are already been meeting them since years together with our women's healthcare three divisions like Aarush, Solis and Solaris and as far as supply chain is concerned there is only a change that if these products are coming into the cold chain management we will utilize that channel as a cold chain management or a normal chain management but hygiene, payment, credit days all is remain same as per the CORONA philosophy because we always believe that governance is extremely important in any business and in this institute business we have decided not to give any leverage onto the fundamentals of CORONA, so we will not do it but the products are little unique, little different and the technology is of Bayer, so we will take the utmost advantage of it.
Rahul Jeewani: Sure, sir and sir my second question is with respect to let's say the GLP-1 market in India, the market would open up from March '26. So what are our ambitions in terms of the GLP-1 space so if you can comment about your strategy whether you would launch both the injectable and the oral version at the same point in time?
Nirav Mehta: No, Rahul bhai, here if the 25th or 26th March 2026, GLP-1 off patent will come to the end, but at that time it is only for the injectable not for the oral. So, we are going to launch the GLP-1 injectable with Wyntide as the brand name and let's see that how this market shape up. We have been there because we understand this segment is extremely important but let's see, time to come, I think so we can debate more on this subject.
Rahul Jeewani: Sure, sir. And sir, last question with respect to the quarterly seasonality, while you mentioned that the expenses are not let's say heavy on any one quarter, but if I look at your margin profile last year, so third quarter your EBITDA margins were closer to 23% and 4th Quarter last year

the margins came down to 19%. So do you think that a similar seasonality would play out this year as well in terms of margins or would you expect let's say the margins to sustain at 2Q or 3Q levels?
Nirav Mehta: So as I said, Rahul bhai, and said to Amey bhai also, more or less if you look at 25 but

here and
there few percentage has been there because of the that quarter need or launching a new vertical or a new product whatever it is, more or less our endeavor is to give annualized 15% revenue and 30% PAT growth putting one quarter here and there. There is no seasonality factor at least, but yes hypothetically this time in March we are looking to launch GLP-1, some sales and distribution cost may incur little higher in the last quarter, may be possible, I don't know. So what I mean to say, we always eye on yearly data of 15% and 20% revenue and PAT growth as a growth. Today we have been very optimistic as far as this quarter also and hence the annualized return of FY'26 also.
Rahul Jeewani: Sure, sir. I will join back the queue. Thank you.
Moderator: Thank you. The next question comes from the line of Karan Sharma from Sharma Securities. Please go ahead.
Karan Sharma: Hi, good afternoon, everyone. Thank you for taking me. Sir, I have a couple of questions. Sir I just wanted to get some sense on the portfolio and the new product pipeline. Can you share some more details on the acquisition pipeline or in-licensing that are in the pipeline.
Nirav Mehta: Thank you, sir. Sir, as far as in inorganic is concerned, I have answered just before, a few minutes, that we are looking at some acquisitions as the proposal nothing concrete nothing finalized but we are in the process of looking at the things very-very optimistically. About the new launch , as I also said with the Bayer portfolio capitalization, we already launched one of the product Noklot and the capitalization and now we are looking at few more about 5-6 product in the infertility segment in next 2 to 3 quarters we are going to capitalize and launch. About GLP-1 also, we are you know thinking to launch in the first day of the off patent. And as a philosophy, we are launching 1 or 2 new products per division. So more or less about 8 to 10 new introductions per year, if it is with the acquisition or it is with the organically majorly about 95% it is organically and 5%-7% chances are there with the inorganically. So this is more or less our philosophy is. In the Quarter 4, we are eyeing on launching three biosimilars one about denosumab that is you know Tricium DnaB which strengthens our osteoporosis segment about recombinant FSH in another quarter with Fostine R, a Bayer's brand name Fostine R, we are going to launch about recombinant FSH and GLP-1. So, we are trying to target specialist and super specialist in the chronic therapy and trying to launch new product about 8 to 10 in a year. I hope I answered your question.

Karan Sharma: Yes, thank you. As you talked on Bayer, so what kind of market price does we have there and what is our aspirational revenue target from this product portfolio?
Nirav Mehta: About Rs. 1,500 crore of IVF market and about 800 crore of anti-platelet or anti-coagulant market.
Karan Sharma: Okay, sir and sir, just last question. As you mentioned about volume growth, can you let me know ballpark breakup between volume price and product mix for this nine month?
Nirav Mehta: It is about 5%, 5% and 5% more or less, 0.5% here and there. Volume is about 5% against the industry benchmark, is about 0.5% and about new product is about 5.5%-6% and remaining is the price.
Karan Sharma: Okay, sir. Thank you so much for detailed answer. Thank you.
Moderator: Thank you. The next question comes from the line of Sidharth Negandhi from CWC. Please go ahead.
Sidharth Negandhi: Hi, thank you for the opportunity. Just wanted to understand a couple of other sort of colors around the growth. Could you help us understand how are you seeing the growth pan out between expansion of the workforce versus PCPM growth? That is one. And on the new product introductions that you mentioned, how much of that will require any additional CAPEX towards manufactur

ing versus external CDMO or CMO lead manufacturing, so those are my two questions.
Nirav Mehta: Generally as far as the 15% revenue growth is concerned, it is more or less or with the organically with the team because any expansion gives first year, first 2-3 years is the base years, so they are not going to contribute much into the growth trajectory but yes for the future you have to expand the team also and that is our guideline is about 5% to 7% people on year on year or put together we try to expand the people in the country of India. And as far as our own manufacturing and CDMO/CMO, I think so that the ratio is about 65% and 35%. More or less it remains same, 65% and 35%. Sometimes, it goes to 40 and then 60 or sometimes it goes to 70 and 30 but the range remains 65% on manufacturing and 35% on CDMO, CMO dependability.
Sidharth Negandhi: And therefore in context of the future growth outlook, should we assume that PAT ratio will remain same and how should we then think of effects in that context?
Nirav Mehta: So as I said, we want to make sure that as much as about 65% plus we want to have the own manufacturing but at the same time if we don't have that capacity, we will go on CMO as of now and after 2-3 years when we have scaled up with that portfolio, we can think of manufacturing in-house. So more or less by next year I think so, we require to start thinking into it. As a

Company we have decided to start thinking into it about because at that time we need another block for FY'28-'29 also. So we'll try to look into it, so if you want to add any new line like injectable line or biosimilar line we'll think of at that given of time. As of now there is no need because we'll just unlock the 40% capacity by 600 kg line.
Sidharth Negandhi: Got it. That's helpful. Thank you so much. All the best.
Moderator: Thank you. As there are no further questions from the participants, I now hand the conference over to management for closing comments. Thank you and over to you, sir
Nirav Mehta: Thank you all once again for joining us today on the Q3 and 9-month FY'26 Earning Call. We will keep the investor and analyst community posted with any update relating to CORONA remedies. We hope we have been able to address all your queries. For any other information kindly get in touch with us or SGA, our Investor Relations Partner. Thank you so much and have a great evening ahead.
Moderator: Thank you. On behalf of IIFL Capital Services Limited that concludes this conference. Thank you for joining us and you may now disconnect your line. Thank you.

Ladies and gentlemen, good day and welcome to the CORONA Remedies Limited Q4 FY 126 Earnings Conference Call hosted by Ambit Capital.
This conference call may contain forward-looking statements about the company, which arc based on the belicfs, opinions and expectations of the company as on the date of this call. These statements are not the guarantees of future performance and involve risks and wncertainties that are difficult to predict.
As a reminder, all participant lines will be in the listen-only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing ‘star” then zero on your touchtone phone. Please note that this conference is being recorded.
Inowhand the conference over to Mr. Gaurav Tinani from Ambit Capital. Thank you, and over to you, sir.
Thanks, Iqra. Good morning, everyone. On behalf of Ambit Capital, we welcome you all on Q4

and FY26 Eamings Conference Call for CORONA Remedies Limited.
Today on the call, we are joined by Mr. Nirav Mehta — the Managing Director and CEO, Mr. Ankur Mehta — the Joint Managing Dircctor, and M. Bhavin Bhagat — the Chief Financial Officer of CORONA Remedies Limited
‘We will begin the call with opening remarks from the Management, followed by a question-and-answer session. Thank you, and over to you, sir.
Good morning, ladies and gentlemen. Thank you all for joining us on the Q4 and FY26 Eamnings Conference Call for CORONA Remedies Limited.
T am Nirav Mchta — Managing Director and CEO on the call, and I am joined by our Joint Managing Director, Mr. Ankur Mehta — our CFO, Bhavin Bhagat, other members from the Senior Management Team, and Strategic Growth Advisor, our investor relationship partner.
‘We have up

loaded our Restilt, Press Relcase, and Investor Presentation on the stock exchange and on company's website. I hope everybody has had the opportunity to go through the same.
It gives me immense pleasure to announce that we have consistently outperformed industry growth and delivered results that are in line with revenue and PAT, and in fact ahead of our guided range of 15% revenue growth and 20% PAT growth. Our revenue for FY26 grew at 17% while PAT increased by 33% on a year-on-year basis. This strong performance reflects our

commitment to growth, operational excellence, disciplined execution capabilities, and confidence in our long-term strategic dircotion.
Turning to the Indian pharmaceutical market:
IPM, the industry has recorded double-digit growth over the past five months, which is an extremely positive development for IPM and for all of us. The overall industry trends remain cncouraging. With a robust outlook for IPM in the short to medium-term horizon, we are proud to have significantly outperformed the matket, achicved growth at nearly 2x the industry rate, and continuing our track record of consistent outperformance.
Given the progressive outlook for the industry:
We view this as a strong opportunity to further strengthen our presence in the IPM and remain committed to outperforming industry growth, as we have consistently demonstrated historically.
As per PharmaTrac’s MAT March 2026 report, CORONA continues to be the fastest-growing pharmaceutical company among the top 30 companics in IPM. Our industry ranking has improved to 27th position, moving five spots in last three years.
We arc delighted to announce 100% dividend, which is equal to 210 per share for FY26, reflecting our strong financial performance and continued commitment to delivering value to our sharcholders.
Speaking to the specific highlight of the year:
We are proud to announce that, as per PharmaTrac's MAT March 2026 data, two of our brands have surpassed the INR 100 crore revenue milestone and continue to demonstrate consistent growth. We now have two brands in the INR 100 to INR 200 crore club and eight brands in INR 50 to INR 100 crore club, and we aim to further expand this portfolio through sustained volume growth and continued market share gains.
We continue to deliver strong outperformance in chronic and semi-chronic therapy scgments.
‘With these businesses, now we are contributing 72% to our overall revenue, as per PharmaTrac's MAT March 2026 data. This reflects our strategic focus on building a sustainable high-growth specialty business driven by improved prescription stickiness, better patient compliance, and long-term market opportunities. Our consistent performance in these segments reinforces the strength of our portfolio, ficld execution capabilitics, and deep engagement with the healthearc professionals.
To further strengthen our presence in women's healthcare, we have established a dedicated IVF taskforce in Q4FY26, which becomes our fourth focus theme in the women's healthcare

segment. This strategic initiative will enable us to effectively capitalize on the opportunities arising from the Bayers Zydus Relaunch Portfolio, which also decpens our footprint in the rapidly growing infertility market.
We have successfilly completed two strategic acquisitions in FY26, the recent acquisition of Wokadine and the carlier acquisition of the Bayers Portfolio, whose relaunch was initiated in Q4FY26. The acquisition of Wokadine, which s ranked 2 in the Indian Povidone Todine matket, cnables us to enter into the 630 plus crore Povidone lodine market, strengthening our presence in targeted specialtics. Both acquisitions reflect our focused strategy of building high-potential

brands and expanding our market leadership.
'We also have marked our enfry into the biosimilars and biologics m

arket with the launch of three
biosimilar products in FY26, that is Fostine R, Tricium DnaB, Wyntide and Tyvenza. The biosimilar and biologics space offers substantial long-term growth potential, driven by increasing adoption of advanced therapics, expanding patient access, and growing demand for cost-cffective treatment and altematives. These launches will not only diversify our portfolio, but also create a strong platform for future growth and innovation.
We are undertaking the expansion of our manufacturing capabilitics through the addition of a new 600-kg line cxpansion, alongside the commissioning of our dedicated hormone mamufacturing plant, which is expected to become operational in Q1 or Q2 of FY27.
In addition, the receipt of EAEU GMP certification marks an important milestone in our international growth journey. This certification enables us to assess and expand our presence across key Eurasian markets, including Russia, Belarus, Kazakhstan, Armenia, and Kyrgyzstan.
This capacity cnhancement and certification will further strengthen ow manufacturing backbone, improve scalability, and support our growing domestic as well as international business.
Our strategy for further growth is to remain focused on increasing market share across key thempeutic areas by strengthening our chronic and sub-chronic portfolio and offering products across the patient lifecycle. We will continue to drive growth through targeted new product launches, addressing unmet patient needs, supported by brand extensions, acquisition, and in-licensing opportunities of our India businss.
We are also decpening our engagement with the specialist and super-specialist prescribers through our strong medical representative network to enhance our presence in high-value therapy segments.

Bhavin Bhagat: CORONA Remedies Limited

Backed by our diversified portfolio, strong brands, expanding distribution network, experienced leadership team and the disciplined financial approach, we remain confident of delivering consistent growth and stable profitability. We expect to sustain 15% plus revenue growth organically and 25% revenue growth in acquired brand with 20% plus PAT growth in FY27 too.
I would now like to hand over the call to our CFO — Mr. Bhavin Bhagat to take you through financial and operational performance. Thark you so much and over to you, Bhavin .
Thank you, Nirav. A warm welcome to everyone to our Q4 and FY26 Earnings Call Iwill take you through the financial performance for the quarter and full-year ended 31* March 2026.
Speaking of quarterly performance first:
Revenue for Q4FY26 stood at INR 353 crores versus INR 294 crores in Q4FY25, reflecting a healthy growth of 20.2% Y-o-Y basis. EBITDA stood at INR 62 crores versus INR 54 crores in Q4FY25, reflecting a growth of 14.4% ona Y-o-Y basis.
EBITDA margin declined by around 90bps and stood at 17.6%. Decline was on account of an increase in employee cost with respeet to the addition of two new divisions, that is, one in the multi-specialty and one in the infertility division, and an increase in the corresponding other expenses related to medical reps and an increasc in the spend for R&D during the Q4FY26. However, let me tell you all, these are all growth investments which will reap benefits for the future period. Profit after tax stood at INR 45 crores compared to INR 31 crores in Q4FY25, reflecting a growth of 44% Y-o-Y basis.
Speaking of our FY26 performance
Revenue for FY26 stood at INR 1,403 crores compared to INR 1,106 crores in FY25, reflecting a growth of 17.3% on a Y~0-Y basis. Revenue growth for IPM market stood at around 8.6% for FY26. Ouw revenue growth in FY '26 was driven by a 3% increase in volumes, significantly outpacing the IPM of 0.7% volume growth by nearly 4.6x. Similarly, growth from new product launches for CORONA stood at 6.4%, which is almost 2.6x more compared to overall 2.5% growth for I

PM.
EBITDA for FY26 grew by 22.3% on a Y-o-Y basis and stood at INR 293 crores. EBITDA margin has seen a healthy improvement of around 80bps. EBITDA margin for FY26 stood at 20.9%. Adjusted profit after tax, excluding the impact on account of one-time labor code changes for FY26 stood at INR 199 crores compared to INR 149 crores in FY25, reflecting a strong growth of 33.4% Y-o-Y. India business contributed around 96% of the total revenue for FY26. Revenue contribution from chronic segment stood at 71.9% in FY26.

Pratik Dharmshi:
Nirav Mehta: CORONA Remedies Limited
May 12, 2026
Cash flows have been a comnerstone of our growth journey and will continue to remain a key strength for the company. Over the past two decades, we have maintained a strong track record of EBITDA to operating cash flow conversion, enabling us to consistently reinvest in the business and drive sustainable growth. Supported by disciplined cash flow gencration, prudent capital allocation, and steady profitability, we have continued to maintain healthy return ratios while remaining a net cash surplus company.
For FY26, our cash flow from operations stood at around INR 229 crores with cfo to EBITDA conversion at around 78%. Our return ratios also remained robust, with RoCE at almost 41% in FY26 and RoE at 29.2% in FY26.
With that, I would like to open the floor for questions. Thank you.
Thank you very much. We will now begin the question-and-answer session. The first question is from the line of Pratik Dharmshi from Union Mutual Fund. Please go ahead.
Many congratulations, Nirav and the team, for a splendid set of numbers. My question is on margins. So, we saw employee costs inching up this quarter, and now margins are getting impacted. How should one look at margins structurally from medium term point of view? Is 17%-18% a range one should work with or this was aberration and annualized 20% plus is the number which one should begin?
Thank you so much for the appreciation. I request Bhavin to answer the question.
Hello. Your question is very apt on the margins. But just before coming to the margins, let me first reiterate our philosophy. Our philosophy is to grow 15% on a revenue and 20% on a PAT basis on a year-on-year basis for coming 3 to 5 years down the linc.
Having said that, answering your question on the EBITDA margins. I would like to share that yes, in Q4, there was an increase in the employee cost with the expansions that we made, which we mentioned in our commentary.
But if you sec froma full-year basis, FY26, you can see the EBITDA margins 0f20.9%. So, we have improved our margins on a year-on-year basis by 80bps. Having said that, for the coming years, we would like to continue in the form of our improvement in the EBITDA margins in the form of productivity improvement.
So this was related to MR increase, right, for this quarter?
Yes.

Bhavin Bhagat: CORONA Remedies Limited
May 12, 2026
And now the number is sustainable, or do you reckon this is an ongoing expense which we will continue to see, or now you are comfortable with the MR strength?
So, for FY 127, you are absolutely right. We are comfortable with the existing MR strength.
And second question, you mentioned briefly on biosimilars and biologics as a big opportunity for us. What will be the path we will try to go for? Wl it be more organic driven or we are open to inorganic opportunity in that space too?
More or less, biosimilars have been in two ways. Either in-licensing or it is organically. Hypothetically, when we have entered in the market of semaglutide, it is organc route. While in the case of recombinant follicle-stimulating hormone, it is cither an in-li

censing or an out-
licensing sort of thing. So, we are open for all the things as far as complex, generic, and biologics biosimilar is concemed.
Once again, many congratulations.
Thanik you, sir.

The next question is from the line of Amay Chalke from JM Financials. Please go ahead.
Thank you for taking my question, and congratulations to the management on good numbers.
So, the first question I have is on the revenue growth break-up. I it possible to give the domestic and the export break up for the quarter and the year?
Yes, Amay. As far as the Q4FY26 is concerned, the breakup of growth of 20.2% revenue is as follows. Domestic growth, we have 18.3% whereas international business growthis 70%, which is totaling to 20.2% for Q4 FY '26. And for the full year FY26, our domestic slash India business growth comprise of 16.81%, whereas the intemational business comes to 29.5%, which culminates to over 17.3% revenue growth.
And internally, when we break down this 16%-17% India growth, is it in line with the [PM breakup given in the volume, new product, and price growth, oris it starkly different?
So, Amay we are above the IPM in all three volumes, price, and new introductions as far as growth is concerned.
And going ahead also, you cxpect to remain on a higher side in terms of volume and new products, right?
Yes.

Amay Chalke:
Bhavin Bhagat:
Amay Chalke:
Nirav Mehta:
Amay Chalke:
av Mehta:
Amay Chalke:
Bhavin Bhagat:
And the sccond question I have is on the gross margin front because this year we have seen a g00d expansion in gross margin to 81+. But I believe next year will be an inflationary year where the RM costs have already started going up for most of the APIs. So, how do you sce this gross ‘margin staying at this level for next year? And what levers we have to maintain this gross margin at a higher level?
So, first of all, as far as gross margins are concerned, it is 81.4% for FY '26 full year. We have altways said in our commentary that we would be maintaining the gross margins at the range of 80% in the coming years down the line.
So, how we will achieve 80%, to be very honest, or whatever we have at this moment, is that we have a strong, robust product mix involved, which helps us to grow and sustain our gross margins. So, the gross margins where we are, we would be sustaining at the level of 80% in coming days down the linc or coming years down the line.
And s it like, do we have the WPI mumber from government for which we would be eligible to take price hike for Non-NLEM products next year?
So, as far as NLEM is concerned, the government has given the guideline on WPI which has been less than 1% as far as WPL is concerned. And as far as non- NLEM is concemed, it's been always a 10% guideline. As far as CORONA is concerned, we have got 92% non- NLEM and 8% NLEM. So, it doesn't impact much to us as far as NLEM and non-NLEM is concerned.
So, we have good lever on the price hike side because of that 10% non-NLEM exposure.
Absolutely.
And the last question I have on the debt side, there is a slight increase in the short-term borowings every year over the last 3-4 years. So, i it related to working capital or anything? If you can clarify on that.
So, Amay very well-pointed question because I always tell to our investors that we are anct cash company. So, having said that, answering to your question on borrowings, if you can sce in FY 126, it is reflected as INR 143 crores in the form of borrowings.
So, first of all, let me tell to all the investors and everyone on behalf of you that we don't have any single cash credit facility from any banks. We avail the facility, but we don't use it at the end of the day. INR 142.9 crores borrowings is only because of the overdraft or majorly because of the overdraft on the basis of FDs which we have. So, we have FDs on the asset side and we have overdraft from the liability s

ide in the form of borrowings.

Amay Chalke:

Alankar Garude:
Bhavin Bhagat:
Alankar Garude:

Bhavin Bhagat:
Bhavin Bhagat:
Alankar Garude:
Nirav Mehta: CORONA Remedies Limited
May 12, 2026
So, if we net off, our net cash is INR 15 crores, and the rest, only INR 16 crores, is borrowing, which is in the form of a long-term loan from Myoril, which we took over, and will be paid off this year. Hence, there would be no borrowings in our books only in the form of FD-OD and why this OD has been created because we acquired a brand named Wokadine on the last day of the month of the March. So, that was the reason this overdrawn facility was being used. Else, there are no borrowings in the books of accounts.
Twill join back the queue.
We will take our next question from the line of Alankar Garude from Kotak Institutional Equities. Please go ahcad.
Sir, first question, excluding the spends on the two new divisions and the higher R&D spends which Bhavin mentioned, arc there any other structural reasons that drive lower margins in 4Q versus the first three quarters?
No, Alankar. These are the only reasons which you mentioned.
But then, Bhavin if1 look at the margins, yes, somy, sir. Go ahead, please.
So, I was just adding to . So, if you look at the Q4 numbers from an cmployee cost and the other cost standpoint, in the Q4, INR 9 crores was additionally spent in the form of the forming of two new divisions and deployment of MRs and the MR expense of almostINR 5 crores which is being standing in other expenses inthe form of MR expenses in the form of allowances which we give to them. So, more or less 9 plus 5, INR 14 crores relates to the employee-related cost, and INR 1.6 crores relates to the BE cost, which is an R&D in nature.
If you remove this from the Q4 EBITDA, I think the numbers would be fabulous as far as the percentage growth is concerned.
Sir, the reason for asking that question is, I mean, I was looking at 4Q margins in the last year as well and cven if I adjust for this INR 14 crores for this quarter as well, the margins in 4th quarter are lower compared to the first 3 quarters. So, just trying to understand from a scasonal standpoint, is there anything which you would like to call out when it comes to the 4th quarter?
No. So, Alankar as we have stated carlicr also, [understand we cvaluate quarter-on-quarter, but if you look at overall journey, ifithas been evaluated first half to the second half, it gives a more appropriate picture. And 4th quater 4 more or less seasonality plus launching new 2 divisions, there may be that reason. Otherwise, more or less, it will remain the same.

Alankar Garude:

Alankar Garude:
av Mehta:
Alankar Garude:
Nirav Mehta:
Alankar Garude: CORONA Remedies Limited
May 12, 2026
The second question then, Nirav is if 1 look at Slide 16 of your presentation, the pricing growth as reported by PharmaTrac is around 7.8%. Intuitively, that seems pretty high and maybe even higher than what we have reported previously. So, just wanted to understand what is driving this and is this sustainable?
It is absolutely sustainable. The reason s only about our 93% portfolio of non-NELM and we have always been affordable on the other side of the coin more or less. Our product range, there is a space of increment of the price revision. That is how we have taken that lever as lever. But at the same time, if you look at the volume growth which is 4.6x than the IPM and 14x as compared to the price growth. So, it is absolutely sustainable, Alankar.
And related to that, Nirav I mean, Middle East, the impact of that, any thoughts also when it comes to gross margins over the near term? Do you foresce any risk to that 80% number you mentioned earlier?
So, to be very honest, it is too early to comment on it. As we have about 90 days to 120 d

ays of
inventory available, we have started taking the impact on if, and because the ol and other parameters impact many active pharmaceutical ingredients. So, that will have an impact for sure, but if this situation has been controlled in one month, I think the impact is negligible. If it gocs

a lttle long, it may have a littlc more impact, but its too carly to comment on the subject.
Maybe a final question from my side, on the seven brands from Bayer.
Sorry, Alankar just to increase give an incremental outcome on the margin push and all, we have very less import. That also means making us more comfortable, but still a little long to conclude on the cffect on gross margin as far as the year is concemed.
What would be the share of RM imports for us, sir?
It's been less than 1%.
So, basically 99% is sold domestically.
But that API manufacturer has also impact on oil and other things, you know. So, it is indirect impact to us, but we are trying to balance the coin. Let's see. When this situation is under control, 1 think so then and then we can able to give you the idea at least by the 1st Quarter guidelincs, when it will come, then with that at least we will be able to tell, otherwise .
Fair cnough, sir. So, the other question I had was on the 7 brands fom Bayer Zydus. You spoke about the new division on infertility, but any thoughts, any more qualitative color on the progress

Sidharth Negandhi: CORONA Remedies Limited

over there? Can you talk a bit about the sales numbers coming in from these 7 brands and what are your expectations going forward?
So, I think, orientation in this brand has a great legacy for us two decades in the IPM. The promotion has gone a little slow because of the priorities of the carlier company. But now we have gone and launched that brand in the Indian market. The first initial response has been pretty cncouraging and we are cxpecting really, we can do wonders as far as this brand is concerned. There are two reasons to it. A, there is a legacy in the mind of the customer and the quality trust and two, we have a leadership position in women's healtheare businss. I think so, with these two, we are expecting high with the launch of this infertility division. In the, I think so, next three, four months we can get more colors and more idea on to it. But initial response is very encouraging.
And one final bookkeeping question, if [may. Bhavin what were the advertising as well as sales promotion expenses in FY '26 as a percentage of sales?
Itis in tune of 19%.
Both advertising and sales promotion put together, you are saying?
Yes, put together.
Possible to provide the split?
Yes, we can . See, it is more or less in the form of sales promotion, if I just disscet the things, 10% would be in the form of consulting.
Advertising.
Consulting agreements with the key opinion leaders, 5% would be in the form of S&D, promotion spend, and 4% in the form of scientific conferences.
That is very helpful.
Next question is from the line of Sidharth Negandhi from CWC. Please go ahead.
Just wanted to understand three things. One, what is the PCPM that you have currently? How are you sceing that PCPM grow over, say, the last 3 years in terms of productivity, which you called out?

Nirav Mehta:
Sidharth Negandhi:
av Mehta:
Sidharth Negandhi:
Nirav Mehta: CORONA Remedies Limited

Second, you spoke of exports growing faster. Is that a tailwind or a headwind to your gross ‘margin and your EBITDA margin?

And the third one, just wanted to understand, while I understand that given the Indian context, obriously, relationship-based sclling and discussions with doctors are important, but in that context, is there anything specific that you are

doing on improving engagements with doctors
through AI? Those are my three questions.
Thank you so much for asking the questions. As far as PCEM is concerned, today we have a PCPM of INR 4.11 lakhs. So, it is INR 4,11,000, which was last year about INR 3,62,000, so increment of about INR 50,000 PCPM from INR 3.62 lakhs to INR 4.11 lakbs.
As far as doctor practices are concerned, which s your third question, we arc adhering to the UCPMP, that is Unique Code of Marketing Practices, as a part of the practice. So we don't do any hanky-panky things as far as business is concerned, and we adhere to UCPMP. So whatever expenses we are doing, it is under the purview of UCPMP strictly. And this has been a story since last decade, we are adhering to UCPMP as the guidline.
About your second question you asked about export, but I forgot the question what you asked. Can yourepeat it?
Is gross margin and EBITDA margin for exports better than domestic or significantly lower?
So, it's always gross margin been lower and EBITDA been upper, because we arc adopting the B2B model as far as international business is concerned. In B2B model, in India we are working on B2C model. So, when you are working on B2B model or international business, it's been a ess gross margin and more EBITDA, while in B2C it is other way around.
And just two follow-ups on that. So, sorry, the third question was more on use of Al for improving doctor engagement, if there is anything specific that you are doing, if you can sharc that. And on your growth guidance of 15%, how should we think of that domestically versus exports?
So, as far as Al is concerned, we have started using Al on multiple levels. As far as marketing practices are concerned, we are utilizing SFE, that is, sales force cffectivencss, as a tool, which gives amore robust, critical analytic tool on a daily basis to a concerned medical representative about their last visit, last discussion with the doctor, new scientific indications, new scientific discussions for the doctor, and ongoing scientific knowledge also.
Sowe are using this Al technology for our sales force effectivencss, and as far as the doctor is concerned, we are using an Al tool for more diagnosis, a sort of purpose to help them with

Moderator:
Amay Chalke:
Nirav Mehta:
Amay Chalke:
av Mehta:
Amay Chalke:
diagnosis, on the prescription writing tool, which gives them a record of the prescription, cte.
So, we are working on both ways. To the medical representative, we are designing one tool, and for our customers, we are designing one tool.
As far as 15% organically revenue growth is concerned, we are committed for 15% organic domestic revenue growth, domestic and international put together, more or less international is about 4% to the business, so it does not impact nuch here and there, but 15% organically and inorganic portfolio which we have acquired, we are committed to give 25% revenue growth in inorganic portfolio we have just acquired and 20% plus profitability as the guiding force for now and for another 2-3 years at least we arc sceing the visibility for this.
Next question is from the line of Amay Chalke from JM Financial. Please go ahead.
So, I have one follow-up question on export. So, we have written that the Bhayla unit will give us entry into some of the key markets on the export side. So, is it possible to explain our strategy here and how much export revenue should seale up once we start launching products in some of the geography over the next 2 years?
Yes, Amay . So, as far as intemational business is concerned, so Bhayla plant has alrcady been Europe approved. We have got acereditation from EAEU, which opens the door to the Eurasian market, and it will take a fow more years, around 2 to 3 years, to really kick off the business in the European and Eurasian markets, because we have already been in the process of filing

the
dossier. It will take typically about 1.5 years to 2 years of time to register the product in that particular country and then we will go all out.
So, moving forward next I think the next 3-4 years at least I am sceing high single digit CI for international business about 8-9% and 90% plus CI with the India business. So, India business has been in focus, and we have deep roots in the India business that continucs, With that, intemational business will also grow up in years to come.

And this export strategy will be brand specific or like across the brands you will sell, like it is brand agnostic basically, like, you would be sclling as per the demand from the distributor?
So, more or less it has been on a therapy basis. We say, as far as the international business model is concarned, there arc two things. We are talking all about Think Hormone, Think CORONA onall international platforms, and number 2, we are talking about B2B business. So, it is morc of a therapy-driven, a hormone s a therapy, and the portfolio is aided by a few other supported brands in that particular portfolio.
And another question I have on the Bayer side. So, we have acquired 7 brands. So, from the 7 brands, do you sce any strong potential for any of the 1 or 2 brands that can become really big,

Nirav Mehta:

Gaurav Tinani:
Nirav Mehta:
or do you think that they will act as a portfolio going ahead because some of these brands, like Menodac, Ovidac they worked on a life cyele, right?
Yes, so there are 2 brands which have really been arrowhead, and we have high focus on these 2 brands also out of the portfolio. One is Menodac that is HMG 75, 150, 300, 600 and 1200 and number 2 is Fostine R that is Recombinant Follicle Stimulating Hormone FSH. These are the 2 arrowhead brands and this will be the arrowhead for the division also.
Andyou believe that these brands have potential to become like a INR 50 crore to INR 100 crore type of brands over next 4-5 years?
First, we will focus to make this portfolio INR 50 crore to INR 100 crore and then definitely this brand has a potential to become big.
Twill join back the queue.
Next question is from the line of Gaurav Tinani from Ambit Capital. Please go ahead.
So, sir, what would be the MR strength today and what would be the net MR addition in FY 1262
It is about 2,630 and we have added about 450. Put together today we have a MR strength of 3,100.
And apart from infertilty, this was a new division which was launched in Q4, right?
Itis a restructuring of the multispecialty division as we have INR 200 crore plus brand B29 and Myoril. We want to give a focus to the brands and hence we have done restructuring in ‘multispecialty division. So, that s the second division we are talking about that is multispecialty.
So, coming to two recent launches first, picking up Semaglutid, so can you talk more about who is your manufacturing partner for this product and what is your go-to market strategy for this? Do you have a dedicated division and how do you sce this product scaling up for you in the next year or next two to three years, please?
So, as far as Semaglutide is concerned, I think so, that's been exciting maket to me and we arc in that market with MSM as the partner manufacturing company. So, there are two, three other companies with MSM and we arc one of them.
As far as Semaglutide is concerned, we have launched two brands. One is Wyntide for our super-specialist endocrinologist and diabetologist in one division, which is focusing more on the specialist to super-specialist. And the other brand is Tyvenza, which trics to cover the rural ‘market, tier two, tier three market to the specialist.

Gaurav Tinani:
Nirav Mehta:
Gaurav Tinani:
Nirav Mehta:
So, I think for the Semaglutide market is concerned, people are talking to anticipate this market on a first year from INR 500 crore to INR 5,000 crore. And it is a big range people arc sceing with this market. My own understanding is, and the caleulation is if in India there are about 10 crore cligible patients for the Semaglutide market and if conversion ratio is about 2%-3% and the therapy cost, if you caleulate, I think the first year may be a year of INR 2,000 crore to INR

2,500 crote as the Semaglutide market.
That is my anticipation. I think so in another 2-3 months of time, we can have the greater clarity on the market. But yes, Semaglutide brings a new dimension to the diabetic market as well as obesity market. And generic Semaglutide market has been exciting for sure.
Very helpful. Thank you for that. So, secondly, on Wokadine, which you acquired, so a INR 20 crore kind of a top-line product under NLEM, price multiplicate was somewhere closer to 4.5% to 5. So, how do you think you would scale this produet from INR 20 crores over the next 2-3 years? And do you sce any cost synergies also here?
Because given it is an NLEM product, price hike may not be viable. But by changing the source o something, you can derive some cost syncrgies. Any insights on how you plan to ramp up Wokadine?
Yes. So, thank you. So, as far as Wokadine is concerned, as you rightly said, it is INR 20 crore brand and we arc anticipating about 25% revenue growth for at least 3 to 4 years in the Wokadine. And what I understand as far as 14 different SKUs of Wokadine, few are out of NELM and majority of arc in NELM. Now, we have tweaked the strategy in the way that we will do some focus metrics onto the non-NELM portfolios of Wokadine.
Resulted, we are anticipating about 400 basis point of gross margin correction in the first year. Ttwill take some time, but we are pretty sure and we have taken that also in consideration with 25% growth and 400 basis point of gross margin correction in first year. And then we will see that how this portfolio will grow. This 400-basis point can be a 600 or 700 in a year to come. That will decide by the next year. But we are pretty sure about 400 basis point of gross margin correction and 25% of revenue growth.
So, I think last question from my side. So, you have the Zydus Bayer portfolio ramp up driving growth this year. You have Sema and Wokadine also adding to growth this year. Apart from this, any other new launch or significant launch that you see in FY27?
FY27 has been a classical exciting year for CORONA for sure. Reason being addition MR, the additional multispecialty vertical will fuel the revenue growth. New biosimilars and biologics will fuel the growth, and the acquisition brand will also fuel the growth. So, that is where we are

Gaurav Tinani:

Shrikant Akolkar:
Bhavin Bhagat:
Shrikant Akolkar:
Bhavin Bhagat:
Shrikant Akolkar:
Bhavin Bhagat:

pretty surc and we understand that we can able to grow 15% organically and 25% on the inorganic portfolio considering (+20%) PAT growth for sure.
Thave no question. I will join back the queue.
Next question is from the line of Shrikant Akolkar from Nuvama. Please go ahead.
Thave a question on margin. So, we have 81% gross margins and about 21% EBITDA margins. So, what are the measures to be required to consider if you want to move our margins and what is currently under play so that we can get that 24%-25% margins in next two to three years?
So, Shrikant yes, answering to your margins first, but as we mentioned carlicr that we focus more on 20% PAT growth for years to come and this is our endeavor and this we will achicve. Having said that, your question is on EBITDA margins. EBITDA margins will definitely come in play with operative effectiveness in coming years down the line. As we have improved 80 bps in this financial

year, in coming years as well, if you see the synergies will come in the cost and with the inerease in our 15% plus revenue growth, operational margin will definitely improve.
Andwe have hired 450 MR's So, just want to understand what s the time required for the sales force to achieve peak PCPM and what is the target PCPM that we are trying to achieve in next two to three years?
So, Shrikant, just to brief you first about our philosophy, we have disscoted our medical reps into three segments. One from 0 to 3 years, that is we have PCPM of 2 lakhs. One from 3 to 6 years, where we have PCPM of 4 lakhs. And one from the MRs who arc in the company from more than 6, 7 and 8 years, where the PCPM is 6 lakhs, 7 lakhs and 8 lakhs. So, this is the journey of an MR in our organization corrclating with the PCPM what they generate. Right now, our PCPM s 4.1 lakbs per month. So, this is what we would like to share that as my aging of my employess in the organization increass, the PCPM definitely increases.
And for the current set of new hires, how long do you think they will take to achieve that peak? Maybe three, four years? Is that the right assumption?

Sir, T think you should keep the mumbers in the three buckets that I shared, 0 to 3 years, 3 to 6 years, and 6 and above. So, as the MR progresses in terms of tenure in the organization, the PCPM progresses.

And just to add, Shrikant on to it, and we have launched one multi-specialty division, which is, we have disscoted two nulti-specialty divisions in to three. So, more or less brands were thare, availability were there, but we would like to focus on that. So, by that way, we can

Shrikant Akolkar:

Rahul Jeewani:

av Mehta: CORONA Remedies Limited

May 12, 2026

expedite the speed of the productivity for swe. While launching absolutely a new therapy or a new vertical, it will take lttle longer time than the restructuring sott of thing. Justto academically answering your question on CORONA philosophy since years together.

Last question. So, we are planning to get into European and Asian markets. Now, can you talk about the margin profile of these markets? And would it be dilutive to our margins? And how should we think about the working capital requirement in these markets?

So, as far as working capital is concerned, more or less it is from the intemal acerual because what we want, what we need to do? We nced to do the R&D and bioequivalence studies with the R&D and creating a dossicr, which is a world-class dossier. So, it's been taken care with the internal accrual.

As far as, as I said ealicr also, we arc going in this market with B2B model. In any B2B model, more or less, it's been less gross margin and more EBITDA. So, it doesn't make any difference in our philosophy of 15% plus reveme growth and 20% plus PAT growth. It will remain unchanged with the international business too.

And look at the international business horizon. Ifs been about a higher single digit to lower double digit versus India market is about 90%. So, it doesn't impact anything on to the overall Kitty of CORONA.

Thank you so much for answering my questions.

Next question is from the line of Rahul Jeewani from IIFL Scewitics Limited. Please go ahead.

So, Nirav you alluded in your opening comments that the IPM growth has accelerated over the past, let's say, 5 months. And what we also sce from external data is the IPM growth, which was around 8%-9%, has now ended up to a 10%-11% kind of a number. And that acceleration cssentially has been volume driven.

So, volumes which were, let's say, nil at an industry level are now growing at 1.5% to 2% kind of a number. So, what, according to you, has led to this volume acceleration for the IPM ov the past 5 to 6 months, and how sustainable do you think this trend s for the industry, let's say, going forward?

Thaniks, Rahul . If you remember, Rahul, we ha

d a discussion on this, but let me tell you, Iwas anticipating this since last 6 months, that by November-December, industry will start giving the double-digit growth, and this is sustainable for at least a year, because that has been anticipated in the mind. And the very simple reason, this industry has always performed about double-digit growth or higher single-digit growth since last 25-30 years.

Inbetween, there is a COVID and post-COVID and post-post-COVID. So, more o less, it's been about pandemic and pandemic effect for 4-5 years. Now, this effect has been narrowed down, and industry is coming back to the higher single-digit to double-digit growth.

T am anticipating about 10% to 10.3% overall growth as far as this year is concerned, with the volume growth of about 1.5% to 2%, andrest is price and NL So, T have been very optimistic as far as IPM in FY '27 is concerned.

So, this 10% to 10.3% growth for IPM for FY '27, do you budget in GLP-1 contribution, or this

should be the base growth for the IPM ex of GLP-1?
No, I have not seen. When you arc talking about, Ralul, INR 2.5 lakh crore market, versus if youare talking about INR 1,000-2,000 crore market, I think so, T have not nailed down this with this. T am talking in total about a 10% to 10.5% growth in the IPM.
And typically, in the past, let's say, our volume growth outperformance versus the market has been around, let's say, 4x to 5x. So, with, let's say, the [PM volume growth itsclf picking up, as you pointed out, would we see an acceleration for our volume growth as well?
Yes, sir. By adding the medical representative and restructuring the multispecialty division and adding this Wokadine into it, that is a new product, I understand. But overall, we arc expecting about 3x to 4x volume growth as far as our growth is concerned.
That was it from my side.
Thank you. Ladies and gentlemen, due to time concerns, that was the last question for today. I would now like to hand the conference over to the management for closing comments.
Thank youall once again for joining us today on the Quarter 4 and FY '26 carnings call. We will keep the investor and analyst community posted with any updates relating to CORONA Remedies Limited. We hope we have been able to address all your queries and been committed to 15% revenue growth organically and 25% revenue growth on the acquired portfolio with 20% plus PAT growth in FY 127 too.
For any other information, kindly get in touch with us or SGA, Strategic Growth Advisor, our investor relationship partner. Thank you so much and have a great day ahead.
Thank you. On behalf of Ambit Capital, that concludes this conference. Thank you all for joining us today and you may now disconnect your line.
