"Puravankara Limited Q4 FY23 Earnings Conference Call"

May 26, 2023

MANAGEMENT : M R. ABHISHEK KAPOOR – EXECUTIVE DIRECTOR AND
CHIEF EXECUTIVE OFFICER , PURAVANKARA LIMITED
MR. NEERAJ GAUTAM – EXECUTIVE VICE PRESIDENT ,
FINANCE , PURAVANKARA LIMITED
MR. VISHNU MOORTHI – SENIOR VICE PRESIDENT ,
RISKS & CONTROL , PURAVANKARA LIMITED

MODERATOR : M R. SAMAL SARDA – AXIS CAPITAL

Moderator : Ladies and gentlemen, good day, and welcome to the Puravankar a Limited Q4 FY '23 Earnings Conference Call hosted by Axis Capital Limited.

As a reminder, all participant lines will be in the listen-only mode, and there will be an opportunity for you to ask questions after the presentation con cludes. Should you need assistance during the conference call, please signal an operator by pressi ng “*” then “0” on your touchtone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Samal Sarda from Axis Cap ital. Thank you, and over to you, sir.

Samar Sarda : Thanks, Niku. Good evening, everyone, and thank you again for taking the time out. Let me start with congratulating the Management on a great year of sales and collections and also wishing them good luck for the next year ahead. As always, the senior management of the company is here with us today led by Mr. Abhishek Kapoor – the ED and CEO; Mr. Moorthi – Senior VP (Risks and Control); and Neeraj Gautam – Executive Vi ce President (Finance). I'm handing it over to the managem ent for the initial comments.

Neeraj Gautam : Thank you, Samar. Good evening, ladies, and gentlemen. Welcom e to Puravankara Limited Earnings Call for the Fourth Qua rter FY '23 and Fiscal Year 202 3.

I'm Neeraj Gautam – Executive Vice President, Finance, of Purav ankara Limited. Thank you for joining us today. We are delighted to present our financial res ults for the quarter ending March 31, 2023, and the full fiscal year 2023. The results, along wit h the comprehensive presentation have already been uploaded to the stock exchanges for your revi ew.

Today, we will provide insight into our outlook and key initiat ives. Before we delve into our financial performance, I would like to highlight the promising prospects of Indian economy and the real estate sector present for the investors backed by init iatives of the government and a vigilant central bank, the Indian economy has demonstrated robu st growth, controlled inflation, and enhanced current account balances, posting a stable and fav orable economic environment. Simultaneously, the real estate se ctor in India is experiencing and upward trajectory, fuelled by factors such as expanding internet penetration, e-commerce adva ncements, increased infrastructure investments and mo dernized supply chain, the rea l estate market is projected to grow at a remarkable compounded annual growth rate of 7% to 8% during 2023 to 2025.

The sector's resilience is evident and strengthened developer b alance sheet and the sale of equity investment, reflecting a strong investor confidence. Additional ly, housing sales have witnessed significant growth across the top cities, focusing sustained de mand and lucrative opportunity for investment.

Now let's dive into our operating performance for FY '23 which showcase significant achievements. Our sales reached to an all-time high with a tota l value of Rs. 3,107 crores, a

substantial increase of 29% compared to the previous fiscal yea r. Moreover, our customer collection from the real estate business experienced a remarkab le jump of 57% totaling Rs. 2,258 crores in FY '23. The average price realization also displayed strong growth, rising by 14% to Rs. 7,768 per square foot during the fiscal year.

These outstanding results reflect the growing demand for housin g and demonstrate our ability to meet the solution of end users. For quarter 4 of FY23, we achie ved the highest ever sales value of Rs. 1,007 crore, representing a significant 21% increase com pared to Q4 FY '22 of Rs. 831 crores.

This outstanding performance was supported by a sales volume of 1.21 million square foot, underscoring our strong market presence. Furthermore, our custo mer collection amounted to Rs. 661 crores, reflecting a remarking 48% year-on-y

ear increase an d indicating improved operating efficiencies.

Our average realization for the quarter was Rs. 8,321 per squar e foot. In terms of business development, we are proud to announce that we acquired a 100-ac re land parcel in Chennai for product development in FY23. This strategic move strengthens ou r presence and provides a lucrative opportunity for future growth.

Throughout FY '23, we successfully launched 9 projects across 3 cities, covering a total area of 6.04 million square feet, Bangalore and Chennai witnessed a maj ority of our launch area. Furthermore, we have an impressive launch pipeline to approxima tely 16 million square feet, ensuring a steady flow of new projects in the coming period

Non-Bengaluru projects now account for 44% of the share of ongo ing projects and 68% of launch pipeline. In addition to our residential offerings, we i ntroduced Zentech Business Park, a commercial project catering to the growing demand of office spa ce. Moreover construction commenced on the Purva Aerocity , a prominent 2 million square f oot commercial project further expanding our portfolio.

When it comes to the debt management, our net debt increased fr om Rs. 1,846 crores in Q4 FY '22 to Rs. 2,208 crores in Q4 FY 2023. The primary cause of thi s increase was the rise in the number of project launch and aggressive project execution. Howe ver, it is worth noting that our debt per square foot of building space declined from Rs. 1,248 to Rs. 1,106 per square feet in Q4 FY23, showcasing our efficient capital utilization.

As of March 31, 2023, the balanc e receivable from sold units in all launch projects amounted to Rs. 2,967 crores, which cover about 62% of remaining costs of u nder construction projects when combined with value of unsold inventory for all ongoing project s of worth Rs. 11,232 crores. From the ongoing projects, the company is projected to have a t otal surplus of about Rs. 10,118 crores. This projection is favorable when compared to current n et debt of Rs. 2,208 crores.

Now let's move on to our financial performance. In FY '23, our revenue from projects increased by 29% to Rs. 1,236 crores compared to Rs. 955 crores in FY '22 . Our, EBITDA for FY23 was Rs. 442 crores with a 31% EBITDA margin, down from the Rs. 635 crore FY22.

I would like to update that for previous year, our EBIDTA was i nclusive of a onetime transaction. The PAT for FY23 was Rs. 63 crores, while it was Rs. 146 crores in FY22 with a 4% PAT margin. In Q4 FY '23, our revenue from projects grew by 32% yea r-on-year to Rs. 389 crores. The EBITDA for the Q4 FY23 was Rs. 117 crores, up by 90% from Q 4 FY22 with a 26% EBITDA margin.

The PAT for Q4 FY23 was Rs. 28 c rores compared to Rs. 21 crore loss in the same quarter previous financial year. I would also like to highlight our ded icated arm for plot plotted and land development, Purva Land. Currently, we have 9 projects across 3 cities, totaling approximately 7 million square feet. These projects are located in Bangalore, Chennai, and Coimbatore. Our recent edition in the launch of Purva Raagam in Chennai in Q1 F Y24. With Purva Land, we aim to provide well planned and flexible plotted land options to me et customers desire for their dream homes or profitable investments.

Lastly, I want to mention our wholly owned subsidiary, in Starw orth Infrastructure and Construction, they are focused on technology level construction solutions with an order book over Rs. 1,600 crores. Starworth undertakes Residential, Commer cial, Infrastructure & Industrial Projects providing en d-to-end services from design t o handover. Operating a fully operational factory in Bangalore, they emphasize technology and off-site construction method. Some of their marquee clients include BMRCL, ITC Limited, Jinda l Steel & Power, TajGVK, B I L , H A R C , G o d r e j P r o p e r t i e s , B A E , a n

d A M P A . I ' m p l e a s e d t o i n f orm that ICRA has reaffirmed our Credit Rating at A1 stable during the year.

In conclusion, Puravankara Limited’s financial performance for FY23 has been exceptional with record sale, strong customer collection and promising growth in dicators in the real estate sector, our strategic acquisition, successful project launches, and deb t management initiatives position us well for future successes. We remain committed to delivering value to our stakeholders while navigating the evolving market dynamics.

Thank you for your attention. And now I'll open the floor for q uestions. Thank you.
Moderator : We will now begin the question-and-answer session. Our first question is from the line of Sristhi Tandon from NVS Brokerage. Please go ahead.
Sristhi Tandon : How do you see margins picking up since PAT has been negative ?
Abhishek Kapoor : So, PAT is a factor of 2 or 3 things. So, basically, PAT is a factor of 2 or 3 key parameters, right?
Neeraj Gautam : Your question is related to the PAT?
Sristhi Tandon : Yes.

Neeraj Gautam : I thought it was the market. So , PAT was negative in the simi lar quarter previou s financial year because the single quarter previous financial year, our revenue recognition were less and thereby, we delivered less gross profit and there was a loss for the qua rter. However, for full financial year, we recorded a profit of Rs. 146 crores. And this year, fo r the quarter, we recorded a profit of Rs. 28 crores as well as a full financial year basis, we hav e reported a PAT of Rs. 63 crores. So, this financial year as a whole basis, we have recorded a pr o f i t . A n d l a s t y e a r a l s o a s a financial as a whole, we recorded a profit. Only for a that par ticular quarter because of the less revenue recognition that quarter resulted in the negative, but that was the Q4 of the last financial year. This Q4 and this financial year, we are profitable.
Sristhi Tandon : Okay, sir. Sir, can you please tell your plans for commercial along with timelines? How many square feet overall are we planning to launch in FY24 and FY25?
Abhishek Kapoor : So, yes, I'll answer that commercial, but I'll just add to th e previous question. Basically, revenue recognition and PAT is dependent on the quantum of possessions that you hand over in a particular quarter, that is one. And secondly, it's also depend ent on what expenses you booked in the quarter which could generate revenue in the future. For example, even if we do a launch in a quarter, there are expenses that we booked at cost in the same quarter, but we can't book those revenues.
So, those are the factors that typically influence the PAT and the revenue reco gnition numbers. So, I just wanted to clarify on the previous point on what cons titutes revenue recognition for a particular quarter. And the moment you see higher possessions h appening in a particular quarter, you'll see more and more revenue recognition and higher PAT.
Coming to your commercial question, we currently have about 3 m illion square feet under construction. We intend to conti nue to execute these. These wil l come up for completion in 2025 including about 800,000 square feet, which is called Zentech an d about 2.1 million square feet of a project called Purva Aeroci ty, which is in North Bangalore . And these are both very unique projects in very unique markets, and we are quite optimistic wi th these developments, and the development is going on at full pace. At this point in time, we are not intending to add any more commercial in terms of new launches for this financial year. Bu t we are out there in the market looking at new opportunities as well.
Sristhi Tandon : Also, it is the news that circle rate for Karnataka will incr ease. So, what is the impact? Will it affect our demand?
Abhishek Kapoor : No, circle rates don't necessarily imp

act the demand. See, lo ok, all our projects are kind of priced in a way where the circle rate doesn't really have an impact on the stamp duty calculation. The area where circle rate may have certain impact is on cost of ap provals wherein certain premiums, et ceteraetc , that are payable are dependent on the circle rate. But we don 't see any significant impact at all on the demand side at all.
Moderator : Our next question is from the line of Harish Shah from HS Inv estment. Please go ahead.

Harish Shah : So, I have a couple of questions. So, basically, recently, th e home interest rates have increased. So, have they led to decline in footfall or conversion rate? Ho w do you see the current state of the end demand market of mid income and luxury segment consider ing the impact of the hike?
Abhishek Kapoor : So, at this point in time, we have seen no impact of the incr eased interest rates on any of our demand. I mean, if you look at our last quarter numbers, and I can tell you some ground reality, as of date, we are seeing no impact even today in terms of impa ct due to interest rate calculation. Last quarter numbers as Neeraj mentioned, has been our highest quarter, highest number. We crossed 4 million square foot of sales last year.
So, we're not seeing any impact on the demand or any footfalls due to interest rates. However, having said that, I think what is very interesting for us and w hy we see the demand going up is we are entering an appraisal cycle for all the corporates and e ven if we assume that it will not be as significant as the last year which was upwards of 20% and so mewhere in the mid-teens, we believe that will obvio usly give more headroom for a lot of peo ple to make their buying decision.

So, that is point number 1.
Point number 2, the work from home concept and the hybrid kind of is really healthyhelping in the per person demand of housing. So, when people work from hom e, at least 2 to 3 days a week, they need their own private spaces, which could normally be a w orking couple with kids. Therefore, we have seen increas ed demand on per person basis fo r residential demand.
And the other fact is that rentals have gone up across the boar d very, very significantly. So, if you see with that kind of increased rent, the arbitrage opportu nity is so low that people would rather buy than to rent. And of course, you're seeing this happ en with the decreased inventory levels in the market. I mean today, we are talking about a litt le less than 12 months of inventory across India. And Bangalore in fact, if you look at it around 8 months of inventory. So, no indicator or no numbers can show that right now we have any kin d of resistance on the demand side.
Harish Shah : And my second question is just linked to what you have just s poken now. So, in that context, do we see the pricing getting on the higher side for your both exi sting and the upcoming projects?
Abhishek Kapoor : Look, I think realization is a factor of multiple sales. For us, it's also a mix of inventory. Realization is a factor of the kind of product that we're launc hing and the marketing you are launching in and the demand supply dynamics.
So, currently, the way the demand supply dynamics is definitely supportive of the pricing and of course, the kind of products that we are launching and the v alue we bring as a brand on the project and in the markets, we are present in, we definitely br ing a lot of value, and therefore, command a premium in all of those markets. So, I think from pri cing point of view, we're quite confident that we will see a positive uptick in the pricing.

Harish Shah : And is it possible to quantify that, that would be in low dig its or a higher double digit, something like that?
Abhishek Kapoor : Look, last year, we got an appreciation of mid-teens, if I am not wrong,

it was around 14%
average increase Y-o-Y basis as a number, right? See, what happ ens in real estate, and I'll just take a second to explain. If any project that we launched throu gh its project life cycle normally goes through an appreciation of anywhere between 50% and 70%.
So, as we go along selling our project, and that normally happe ns because start s eeing visibility of the development and it starts getting closer to the construc tion completion. And of course, as you sell, you'll have financial closure and as people see the p rogress, they are willing to pay a higher price. Of course, subject to the fact that it's a strong brand, good quality, all of those parameter's hygiene are not accompanying into this. So, we see that trend continuing for us in this financial year as well.
Harish Shah : Last question from my side. How do you see your plotted devel opment projects panning upplanning , especially in Chennai? Given that you have close to more than 3.7 million square feet saleable area? And how do you see the cash flow coming in from this project in this financial year?
Abhishek Kapoor : So, 2 parts. Why we are too excited about Chennai. We launche d a project last year called SouthBay, that got 100% sold out in 3 days. In this quarter, as we just mentioned, we have launched a project called Raagam. We've got a very positive res ponse. We've just gone to market as we speak and within the first 2 days, we have crossed 100 bo okings, right? So, we are seeing great traction there, and we are confident that with launches w e see and because of the quality of product that we are delivering across the brands, and in fac t , l o t o f p e o p l e f i n d i t v e r y interesting that we have really upped the quality of the brand and command a premium in any market that we go in.
So, when people are seeing, because we have delivered already a project over there, people are seeing what we are capable of delivering as a plotted developme nt and how it assures them of the value that we get out of the project and appreciation they will get over the life of the development that they do of their homes. And we are very, very confident that we'll sell very well. As far as the collection is concerned, typically, from th e date of launch within the first year, we typically look at anywhere between 50% to 60% collections of the sold realization. That's the minimum we look at. So, suppose like for example, Raagam we have launched now. We would anticipate in like 9 months because it's 9 months, I woul d say between 40% to 50% collections will happen this financial year.
And similarly, depending on when we launch the next project, it will be the same way. I mean last quarter; we launched a project called Oakshire in Bangalor e. And it is almost, I think, 80% sold out as we speak. In the first 2 days, we sold about Rs. 10 0 crores of inventory. So, again, we are looking at in this financial year itself from Oakshire c ollecting almost 60% to 70% of the

sold value. So, that's the kind of traction and that's the kind of turnaround we are able to see as far as the cash flow is concerned and profitability.

Moderator : Our next question is from the line of Yashvi Jain from ICICI Direct. Please go ahead.

Yashvi Jain : Sir, my first question is about the Chennai project. As you t old that you are planning to launch. So, when is the date you are planning to launch? And what you'r e expecting the revenue from this project.

Abhishek Kapoor : Sorry, you're talking about the Chennai plotted development? Is that the one you're talking about?

Yashvi Jain : Yes.

Abhishek Kapoor : So, there are 2 projects in Chennai. One is a project which w e have just launched, which is about 700,000 square feet. In the 700,000 square foot, we are looking at revenues of in excess of Rs. 200 crores. There is another project, which we will launch with in next

2 quarters. which we will launch about 1 million square foot in the first phase. The tota l revenue potential there will be about another Rs. 250 crores to Rs. 275 crores. Of course, ther e are subsequent phases where we will add because that's a 3 million square foot of development. So, subsequent losses will also add on. So, that's the kind of number we're looking at for this year.

Yashvi Jain : Sir, my next question is, what are your plans for the debt re duction since the de bt is increasing? So, how you planning to control your debt-to-equity ratio and r educe the debt?

Neeraj Gautam : If you refer our Slid e #32 in our investor presentation, ther e we have given a detail of how debt under as a different segment of business has increased or decre ased during the last quarter. If you look at the debt which we had taken for our residential bus iness, their debt has come down. At the beginning of the quarter, gross debt was Rs. 2,195 crore and at the end of the quarter, it was Rs. 2,122 crores, so we have reduced debt by Rs. 72 crores. We have taken outstanding debt of Rs. 245 crores for land purchases, that debt also has come d own.

That is Rs. 220 crores at the end of the quarter, so that was d own by Rs. 25 crores. However, if you look at the debt, which we have taken for 2 commercial proj ects, which is backed by a full-fledged CF line and there we are developing commercial projects , there debt has gone up by Rs. 33 crores. And as we progress the construction that we will hav e to draw down that we will use towards completing the project, and that has gone up during the quarter. Beside this, we have also taken a debt of Rs. 115 crores to buy the cash flow of the JV partner. JV partner still in the project, 25% of the cash flow we bought out for Rs. 115 crores. And that Rs. 115 crores, the entire 25% cash flow is now available for the company while we are paying debt to the landowner. And besides that, I would just like to update this R s. 115 crores of the loan, which was taken during the quarter, which was Rs. 55 crore was repaid during the Q1 of FY24. So, as we are speaking today, this Rs. 115 crore debt also has been re duced by Rs. 55 crores. And hence, thereby, which we are trying to communicate is in terms of our debt taken for residential

projects and the land is coming down. However, debt taken for a commercial project has gone up because of the condition of creating a capital asset.

And we would like to give you fu rther informati on. If you refer to Slide #33, there, we have also worked out kind of measure the debt vis-à-vis are the area unde r development. what is the square feet under production today with the company and what is the de bt against it?

So, if we have plotted this number from the Q4 FY '19, which wa s at that point of time debt per square feet about Rs. 2,077 per square feet. Today, as we are s peaking today, the debt per square feet for second development is Rs. 1,106 crores. So, it's subst antially down and it's a decreasing trend. Immediate previous quarter, it was Rs. 1,291 crores. And hence, it's reflecting though the debt in absolute number has not come down substantially. Howeve r, while we added the 9 projects during the financial year, and thereby these all 9 pro jects have gone for production as well. And hence, per square feet debt which we realized has com e down.

Yashvi Jain : So, my next question, are we planning any new projects in fut ure, especially for pipeline sector?

Abhishek Kapoor : Yes, of course. Total, we are looking at launching 16 million square foot of developable area and a saleable area of 13.7 million square foot, which is on Sl ide #21 of the ICP. Of this, about 3.74 million square foot saleable area in Puravankara, 6.22 mil lion square foot in Provident and 3.73 million square feet in Purva Land. And this is spread acro ss the South and West of India.

M

oderator : Our next question is from the line of Tirath Muchhala from El usividya Advisory. Please go ahead.

Tirath Muchhala : Just coming to the cash flow statement. I wanted to understan d that there is a significant increase in operating outflows for the ye ar. So, is it because of accele rated construction? Or is it because

of some other reasons?
Neeraj Gautam : I would like to give you the comparison between operating in flow and outflow both. Our operating inflow has also increased during the quarter and duri ng the financial year. At the same time, operating outflow also reflect. So, operating outflow has gone towards number a, for passing the construction and the more construction progress we achieve, its resulted into more collection, that's point number 1. Point number 2, we have laun ched 9 Projects during the financial year. And hence, to launching these 9 projects we hav e initial working capital is required to launch expenses, approval expenses, et c cetera . And that outflow also gone towards launching these projects. Outflow or the collection of these pr ojects will come in the coming quarters. Besides that, we have also spent about Rs. 125 crores on these 2 commercial projects, which we have mentioned, the Zen tech and Aerocity, that is also included in our outflows. And hence, the outflow has 3 characteristics. One is outflow relate d to the ongoing under construction project against which we have collected Rs. 2,680 crores. Outfl ow, which is for new launches, which is the initial working capital. Inflow for this investmen t will come in the coming quarters. And third, the outflow for the commercial development for again st this by spending this money,

we are developing a capital asset, and this outflow is fully ba cked by the CF line. Hope this clarifies your question related to increase in outflow vis-a-vi s our inflow.
Tirath Muchhala : Yes. And coming to 2 particular matters. One is 12 months ago , we announced that we are aiming at 12 million square feet of launches for FY23, and we have don e 6 million. And now you guys are speaking, I'm mistaken, but is it 16 million that you're ta rgeting for the next 12 months?
Abhishek Kapoor : 16 million of developable area and about 14 million square fe et of saleable area.
Tirath Muchhala : Right. So, we've had a history of not meeting these targets, if you look at all our presentations in the last 5 years. So, how confident are you at meeting this target?
Abhishek Kapoor : Look, I think what's positive and I'll start, I'll always loo k at the optimistic side first. And I personally believe that we are in the right direction, we are w orking on actually the entire portfolio. Fortunately, unfortun ately, in real estate sector, i t takes time, and the timing can't be fully in your control because of the external environment we de al with. Having said that, if you look at the new launch pipeline, it consists of the previous ye ar's pipeline, which is of that 6 million square foot that we missed.
But having said that, we missed by a quarter or 2. So, what is happening is that there may be deferment, the value is not lost. In fact, value has really gon e up because the prices have gone up fortunately for us. And hence, in fact, we have gained value . But having said that, our focus is really, really to launch it as quickly as possible. All of t hese 14 million square feet today, what we are talking about is in advanced stages of approval.
S o , w e a r e q u i t e c o n f i d e n t t h a t t h i s y e a r , w e s h o u l d m e e t t h e t arget or maybe we will get definitely very, very close to t he target if not across it. So, yes, I mean what I can state for sure is that we're working on the entire portfolio and unfortunately t h e n a t u r e o f t h e b u s i n e s s everything from the local environment to elections to everythin g that impacts t

hat. But having
said that, I think we are very m uch on track as far as our new launches are concerned.
Tirath Muchhala : I wish the best for the team. Can I squeeze in one more quest ion?
Neeraj Gautam : Yes, please.
Tirath Muchhala : So, just for deliveries, I think we are missing the slide in this particular presentation. For FY '23, how much have we completed or delivered to the end customer?
Abhishek Kapoor : Give us a moment, we'll confirm that number.
Tirath Muchhala : Sure. And for FY '24, what's th e delivery number in mind that we should be able to hand over?
Abhishek Kapoor : So, we have delivered in excess of 1,600 units in the last fi nancial year. And for the next financial year, our target is to double it and deliver in excess of 3,000 units. Total area that we have

delivered in last year is 1.73 m illion square feet. And next ye ar, we are talking about delivering in excess of 3,000 units. So, obviously, almost doubling the nu mber.
Tirath Muchhala : So, does that imply that revenue recognition might be almost double in the next year?
Abhishek Kapoor : That implication is for you to understand. But yes, I mean wh at I'm suggesting is that's the kind of delivery that we are working toward.
Neeraj Gautam : As revenue recognition is a function of delivery, hence, your understanding is correct.
Moderator : Our next question is from the line of Sukhim Mafde from Almon d Securities. Please go ahead.
Sukhim Mafde : Sir, my question is on the land bank front, are we looking to do any acquisitions?
Abhishek Kapoor : Of course, we are looking actively pursuing transactions acro ss South and West. We have a robust pipeline of acquisitions. And we are moving forward, but the process is quite painstaking

because the funnel can be as large as we want, but it takes tim e to conclude. But yes, we are actively out there looking at acquisitions. For Puravankara, Pr ovident and Purva land with a special focus on the Western region, especially in Mumbai and P une.

Sukhim Mafde : Sir, my next question is how much is the ready to move in inv entory left for your projects launched recently?

Abhishek Kapoor : There is nothing ready to move in for launch recently. Total ready-to-move-in inventory is down to 0.26 million or 260,000 square foot approximately. And that' s pretty much insignificant because most of this inventory is in some of the newer projects , which we have just about completed and we're looking at selling and handing over.

Sukhim Mafde : Sir, anything new on the ESG front?

Abhishek Kapoor : Yes, definitely. So, we are completely focused on ensuring th at we are not only ESG-compliant, but we are going to be ahead of the curve in the next 2- to 3-y ear time frame. So, there is a lot of work going on in this space, all for environment, social and governance, on all pieces. We should publish our ESG report in the coming quarter for the pre vious financial year.

Sukhim Mafde : Sir, my last question is, what is the launch date for your Go regaon project? What's the category and ticket size?

Abhishek Kapoor : So, for the Goregaon project, that's a Provident project. We are looking at ticket size of about Rs. 1 crore per square foot. And at this point in time, we are looking at it currently in this financial year for sure to take it to market.

Moderator : Our next question is from the line of Sristhi Tandon from NVS Brokerage. Please go ahead.

Sristhi Tandon : Any redevelopment in pipeline like there is a lot of competit ion. So, how are you planning to expand in MMR?

Abhishek Kapoor : W e l l , s o w e h a v e c u r r e n t l y 2 p r o j e c t s o n g o i n g . O u r M M R s t r a t e g y i s r e a l l y f o c u s e d , a s I mentioned earlier, in redevelopment as well as JDA and brownfie ld projects. We understand the market very, very well. The lea

dership team that has been put i n place there and the leadership in Bangalore is very familiar with the landscape in the Western markets. So, impact Puravankara comes with an advantage in the western r egion because we come with the strength of our fast delivery of over 45 million square foo t in the rest of Southern market. And the fact that we bring a high quality of development, and w e have demonstrated it in some of our projects on how we display and the kind of traction we a re seeing, we are very, very confident that we'll be able to be extremely competitive in the marketplace. Our footprint, of course, in MMR will range right from South Mumbai going up to t he MMR region, wherein we are looking at projects to acquire and do under Provident plan and, of course, few plotted developments. So, we will have a fair reach of our footprint ov er the next 2 to 3 years' time frame in MMR.

Sristhi Tandon : Sir, what is the clo sing time from start to the launching of project?

Abhishek Kapoor : From the day we deploy capital to launch typically depends on the market, but generally will be anywhere between 9 to 12 months outer limit, but our attempt, o bviously, is to do it shorter than 9 months, but between 9 to 12 months out limit.

Sristhi Tandon : One last question. Can you ple ase share your growth plans, pr ofit visibility?

Abhishek Kapoor : We don't give any forward-looking statements. But as we menti oned earlier, we're looking at adding another 14 million square feet of new launches. And I th ink we should refer to our Slide which mentioned, which is 2 slides. One is the Slide #29, which kind of gives you the total cash flow potential and also the Slide wherein which is Slide 34 whi ch talks about what is the total surplus from projects which are in the launch pipeline. So, if you look at that slide surplus from ongoing projects, we are looking at about Rs. 6,550 crores from the projects which are in the launch pipeline in '24, we are looking at Rs. 3,568 crore that leads up to about Rs. 10,000-plus crore at the current prices. And then if you look at the gross debt that we are sitting on, it's about Rs. 2,600 crore and cash and cash equivalents, net of Rs. 2,200 Crore. So, that should kind of give you a trend of what kind of surplus is and then eventually all of these lands up in your P&L and the balance sheet.

Sristhi Tandon : Can you give any guidance in terms of CAGR and profitability in next upcoming 2 to 5 years?

Abhishek Kapoor : So, I leave the CAGR to you to calculate given what informati on I have already shared with you. But what I can say is that our EBITDA numbers are stable betwee n 26% to 35%, depending on the asset class we're looking at, Provident typically is betwee n 26.8%, Puravankara around 30%

over there. and Purva Land is in excess of 35%. So, that's the kind of EBITDA margin we are

talking about and with the volume, I leave that math to you.
Moderator : Our next question is from the line of Chandra Bhanu from Indi vidual Investor. Please go ahead.
Chandra Bhanu : See, this year, on a consolidated basis, we got a net profit of Rs. 67 crores, but I could not see in the results that the company has announced any dividend for the shareholders. This is one question I have. And then the se cond question is, is it a patte rn for Puravankara that compared to the fourth quarter, the first quarter delivers better PAT? I s it anything a regular pattern?
Abhishek Kapoor : Not really. Our goal is really actually, honestly, to stabili ze this in terms of quarter-on-quarter launches and quarter-on-quarter delivery. However, that journey , I mean, because of the change in accounting standards, et c cetera , that journey takes its own course to deliver because our product delivery cycles are fairly long. So, our goal is to try and stabilize that on a quarter-on-quarter basis as we go forward , but that resul

t we will see ove r time. And as far as the second question on the dividend. On the dividend, we have not taken an y decision at this point in time. I think we will wait for the opportune time and revert to you o n that.
Moderator : Our next question is from the line of Mr. Samar Sarda from Ax is Capital Limited. Please go ahead, sir.
Samar Sarda : Abhishek, I thought I'll take a couple of questions this time . On the cash flow, Neeraj did explain like the outflow to include CAPEX also, I might have missed tha t. If you could conclude how much of this Rs. 20 crores to Rs. 80 crore is capital outflows and establishment expenses?
Abhishek Kapoor : So, how much is capital outflo ws and establishment. So, I thi nk we acquired land worth about Rs. 200 crores in last year, if I'm not wrong.
Neeraj Gautam : About Rs. 124 about towards CAPEX. And operating inflow is ab out Rs. 90 crore odd is our G&A and marketing cost about….
Abhishek Kapoor : So, capital investment bas ically is Rs. 124 crores.
Neeraj Gautam : And the establishment cost, wh ich we have about Rs. 90 crores in the establishment cost,
Samar Sarda : Like cost towards residential construction would be around ab out Rs.1,650 crore, Rs. 1700 crore?
Abhishek Kapoor : Yes.
Samar Sarda : How much is the jump like-to-like from FY '22 on this number?
Neeraj Gautam : Samar, what we'll do is we'll send this detailed comparison. I understand your question, you want to understand the split of our cash flow for the residenti al, which is for establishment and comparative numbers, we'll work out the numbers and send you of f-line.

Samar Sarda : The second question was the Rs. 4,200-odd crore of surplus fr om area which is already launched. Like what is the timeline for other than like what is left for sale? How much of these cash flows will come in over the next 2 years to Puravankara?
Abhishek Kapoor : So, the way we look at it is al l this cash flow visibility, w hich we are talking about, which is the full of Rs. 6,550 crores, Rs. 4,229 crore is definitely within the next 3 years' time frame and the Rs. 6,550, you would look at anywhere between 4 to 5 years oute r limit.
Neeraj Gautam : If you look at our run rate from a residential business itsel f, we collected Rs. 2,248 crores from last financial year. If I maintain that rate, that will definit ely grow by the new launches and the project toward completion. But even at that rate, also, we can collect in 2 years. Rs. 5,000 crores definitely is going to come.
Abhishek Kapoor : Yes. Rs. 5000, so we will definitely collect in the next 2 ye ars. But he is talking about the surplus, so the surplus I would think in total including the new launche s, which is going to be coming up, all of that surplus, you can take the number as maximum 4 t o 5 years from now because I'm assuming this year when we are launching, maximum 4 years, 48 m onths for all the completion of all the projects. Some may be earlier because, as I mentione d earlier, almost 4 million square foot is plotted development, and that should come around within a short span of time. That capital will come back anywhere between 18 to 24 months outer l imit. So, I think we should bring that down into these 3 parts and you will see that the ca sh flow will continue to remain strong.
Samar Sarda : The next question was on the inventory months, like most of u s have become quite scientific with respect to tracking these numbers like so are you at the c ompany. So, we have roughly 16 million square feet, which we ha ve released for sale, of which we've sold 8 mil lion square feet. The current run rate is 4, God willing it will go up. But even at 4, we have 2 years of inventory, and we are planning to launch another 16 million square foot or release 16 million square feet for sale this year. So, like what is the inventory months of th e company we are comfortable with because

like most of your peers are less than 12, of course, so me of your peers are between 30 and 35 also. For us, like what is the comfortable number?
Abhishek Kapoor : So, I'll tell you how we manage our inventory. Our project wh en we say we are taking it to

market, it doesn't necessarily mean that we open the entire inv entory for sale, right. We open inventory basis the quantum of volumes we are selling at launch and in a particular year. Our optimal number to add any new inventory in a particular project , which is a subsequent phase is 70% of sales have been done in the previous phase. So, if you l ook at it at any point in time, our inventory, which is available in the market is in a manner, whi ch is very, very comfortable for a financial closure of the project.
And then, of course, we are looking at the surpluses. So, we ma nage our inventory in a manner at any point in time, never to overcome it on the construction cost for the project. So, when we launch typically within the first year of the launch, if you ha ve seen most of our numbers, our sales will be anywhere between 4 0% to 50% of the inventory open for sale. In the next year,

typically, it will go to almost 70%, somewhere in the middle of the year, and then we'll open another phase of that project and so on and so forth.
So, that guideline principle controls our commitment as well t he construction cost is concerned. And then you're right, last year, we moved 4 million square fee t, but 4 million square feet at that rate will take 2 years to go. And then another 16 million, we a re adding but 16 million opening for sale at one go. Let's assum e we'll open another 6 million s quare feet. I'm not giving you the right number right now. I'm giving you an assumption. Please do n't take it as my indicated number, the number in reality will be very different.
But I'm saying, even if I opened 6 million square foot and I se ll 3 million square foot this year, plus the 4 million of last year and close to almost 7 million s quare feet. But what has happened is that my overall sales numbers have gone up at any point in t ime, I have neve r overcommitted to the quantum of construction I'm committing myself. So, that' s how we operate. That's the principle with which we operate.
Samar Sarda : That 16.5 million square feet, excluding the Kenworth commerc ial or even the Kenworth commercial, which is the case th at's already released for sale, right?
Abhishek Kapoor : Sorry, 16.5 million?
Samar Sarda : On Slide #38, the 16.5 million square foot across the 30 proj ects, that's the entire area which is released for sale.
Neeraj Gautam : I'll explain to you, Samar, ou t of 16.53 million square feet, which is released for sale, 52% has already been sold. Today, inventory, which is open for sale, av ailable is only 8.53 million square feet. Then the second last column on the Slide of 38, so 8.53 m illion square feet, which is inventory, which is right now open and available for sale to da te.
Besides that, we have about 7.12 million of square feet, which is third column from the left, which is 7.12 million square feet with our inventory from the e xisting projects, which we have not opened for sale. So, out of today, which are the projects, which is under production today, 8.53 million square feet, which is available in the market for sale and 7.12 million square feet, though we have all the growth in place, but we have not committ ed any construction costs, we have not decided the construction, we have not opened for sale. Based on the requirement and how market performs, we will keep opening the towers out of exi sting projects. Okay.
Samar Sarda : And my last question was on the cost of debt, like from a bal ance sheet perspective and like even like how good the promoters are, like your absolute debt is com fortable. But if we compare the cost of borrowing for Puravankara vers

us some of the peers, pro bably 250 to 300 basis points higher. So, why is that so? And are we working to probably brin g it down and closer to some of like the larger peers of Bengaluru or Mumbai?
Abhishek Kapoor : Number 1, we are working to bring it down, point #1. Point #2 , if you look at the last 1.5 years, interest rate has gone up. And if you look at the banking and f inancial institutions, they have

increased the repo rate, RBI itself has increased the repo rate by 250 basis points. However, if my interest rate is concerned, of course, where we are comparin g to the market, it is a little higher side. But if I compared to my own performance, it was a 10.569% at the beginning of the year, today 11.31%. So, though interest rate has gone up by 250 basis points, our interest has not gone up. However, as the price feedback you have given, that we are continuously working on reducing the debt. Part interest rate of course, is also a litt le higher because part of my debt is against the land loan and part of debt is for the construction of commercial project. And the comparison which you are making from some of the companies of t he Bengaluru, which has substantial part of debt against LRD and hence, the LRD interes t rates are lesser compared to the construction debt or the debt for buying land.
Samar Sarda : Fair enough. Neeraj. I'll probably hand it over to you guys a gain for final comments.

Neeraj Gautam : Thank you, ladies, and gentlemen, for joining us for our Q4 a nd annual conference call and I'm wishing a happy weekend to all of you. I hope that me and my co lleague has answered all your questions correctly. And after that, we are also available for further questions or any clarification. You can reach out to us; we will provide you with a suitable re sponse. Thank you very much.

Moderator : Thank you. On behalf of Axis Capital Limited, that concludes conference. Thank you for joining us, and you may now disconnect your lines.

"Puravankara Limited
Q2 FY202 4 Earnings Conference Call "

November 14, 2023

ANALYST : MR. SAMAR SARDA – AXIS CAPITAL LIMITED

MANAGEMENT : MR. ABHISHEK KAPOOR – EXECUTIVE DIRECTOR AND
CHIEF EXECUTIVE OFFICER - PURAVANKARA LIMITED

MR. NIRAJ KUMAR GAUTAM –PRESIDENT FINANCE - PURAVANKARA LIMITED
MR. VISHNU MOORTHI H – SENIOR VICE PRESIDENT RISK & CONTROL - PURAVANKARA LIMITED

 Moderator: Ladies and gentlemen , good day and welcome to the Puravankara Limited Q2 FY2024 Earnings Conference Call hosted by Axis Capital Limited . As a reminder , all participant lines will be in the listen only mode . There will be an opportunity for you to ask questions after the presentation concludes . Should you need assistance during th e conference, please signal an operator by pressing '*' then '0' on your touchtone phone. Please note that this conference is being recorded. I now hand the conference over to Mr. Samar Sarda from Axis Capital . Thank you and over to you Sir!
Samar Sarda : Thank s Darwin. G ood evening, everybo dy and I hope everybody had a good Diwali. Wishing you a good Vikram Samvat 2080 . As always from the Puravankara management we have the senior most guys attending the call led Mr. Abhishek Kapoor the ED and CEO , Neeraj , President Finance and Vishn umoorth y H, Senior Vice President R isk and Control. I will hand over the call to the management for their initial comments. Over to you.
Niraj Gautam : Thank you Samar . Good evening, ladies and gentlemen . Thank you for joining Puravankara Limited 's Q2 FY202 4 earning call . I am Niraj Gautam , President of Finance . Your presence is highly valued. We are delighted to share our financial results for the quarter ending September 30th, 2023 . Comprehensive details can be accessed on stock exchanges . Today I aim to offer insight into our strategic outlook and key initiatives. Let us commence by delving into the overarching economic landscape before delving into our compan y's individual perform ance. T his analysis will furnish insights into the consistent demand for building our sales achieve ment thereby highlighting the potential for future growth . Amidst global challenges , India's economy stands out as a beacon of hope . In the initial quarter of this fiscal year, it recorded a robust growth rate of 7.8% as reported by the National Statistical Office. Looking ahead, the Reserve Bank of India has upheld a GDP growth forecast of 6.5% for the FY 2023 -2024 . Even in the face of global challenges institutional investments in

the Indian real estate market saw a substantial uptick reaching $ 4.6 billio n from January to September 2023 . This marks a noteworthy 27% increase compared to the previous year. The resilience and appeal of the market are further highligh ted by investments inflows reaching an impressive 93% of the total record in 2022. F urther the stability ensured by unchanged interest rates acts as a catalyst inspiring prospective buyer to explore real estate investments. A con sistent interest rate environment fosters a sense of financial security driving individuals to make confident home purcha ses. Turning our attention towards Puravankara Limited, this favorable environment has consistently driven us to surpass sales records quarter after quarter as ev ident from our o perational update. We are thrilled to announce that once agin we have achieved the highest ever sales value of Rs.1600 Crores in any quarter since our inception. This refl ects a remarkable increase of 102% compared to Rs.791 Crores in Q2 FY 2023 breaking it down Rs.736 Crores is attribut ed to Puravankara brand, Rs. 740 Crores to Provi dent brand and Rs. 124 Crores to Purva Land . Our collections experience d a significant surge reaching Rs.879 Crores

 reflecting an impressive 70% year on year increa se. Additionally, the average price realiz ation witnessed a 7% uptick rising to Rs.7947 per square feet during Q2 FY 2024 from 7396 per square feet in Q2 FY 2023. In terms of new launches , we are delighted to shar e significant developments in our portfolio for this quarter . Provident Ecopolitan in Bengaluru takes center stage, a new project spanning a saleable area of 1.13 million square feet. Additionally unveiling itself as a new phase in Bangalore, Purva Park Hill Tower B contributes a saleable area of 0.2 mi llion square f eet. In Chennai we introduce d another new phase for Purva Windermere phase 4B featuring a saleable area of 0.75 million square feet. Regarding our launch pipeline, we are pleased to report a substantial figure of approximately 13 million square feet, assuring a consistent influx of new projects in the foreseeable future. Notably non-Bengaluru projects now contribute 44% of sales of our ongoing projects and an impressive 72% on the launch pipeline. Breaking it down by division Provident accounts for 50 % of launch pipeline aligning with market trends and the strategic focus of the group. Turning our a ttention to debt management, we are pleased to report a positive trajectory demonstrating physical prudence; our net debt has reduced from Rs.2144 Crores in Q2 FY20 23 to Rs.1992 Crores in Q2 FY 2024. Signif ying a substantial decrease in th e net debt to equity ratio from 1.10 to 1.01. Not eworthy is the decrease in net debt b y Rs.127 Crores from the previous quarter. Equally significant is the decline in debt per square foot o f building a space decreasing from 1376 per square feet in Q2 FY 2023 to Rs.886 per square feet in Q2 FY20 24 u nderscoring our commitment to efficient capital utilization and fiscal responsibility emphasizing our strong financial standing , I want to highlight that as of September 2023 the outstanding receivables from our so ld units stand at approximately Rs.3636 Crores this substantially amounts covers about 77% of the remaining cost needed to complete the inventory currently available for sale. This indicates that a significant portion of the cost to finishing the remaining inventory has already been secure d through receivables establishing a robust foundation for meeting our financial commitments. Furthermore, our cash flow visibility is equally promising with a projected amount of Rs.6455 Crores anticipated over the next t hree to four years. This underscores our robust financial planning and substantial ca sh result positioning us as well as support our operations,

projects and growth initiatives in the foreseeable future. In Q2 FY 2024, ou r revenue from project s grew by 54% year on year to Rs.368 Crores. The EBITDA for Q2 FY2024 was Rs.98 Crores with a 26% EBITDA margin. Our PAT for Q2 was negative by 11 Crores due to only 481 handovers o f units during the quarter. We are targeting to hand over 2500 units during H2 FY2024. In conclusion, it is crucial to emphasize that Puravankara is strategically poised to seize opportunities in the nationwide ex pansion of real estate sector. The substantial interest generated by our robust launch pipeline has translated into exceptional sales performance, consistently breaki ng records since Q2 FY2023. This success is attributed to our meticulous project selection, robust marketing strategies, personalized customer outreach and an unwavering focus on delivering exceptional products. Significan tly, t he ongoing quarter aligned with the impactful festive
 season in India, historically associated with increased investment in real estate. As a developer, we have strategically devised attractive deals to incentivize property purchases, acknowledging the historical surge in housing demand during the season. We are steadfast in our commitment to leveraging this opportunity. With that I c onclude my remarks . Thank you for your attention. Now the floor is open for the questions you may have and suggestions you would like to give us. Thank you.

Moderator : Thank you very much. We will now begin the question -and-answer session. We have the first question from the line of Samar Sarda from Axis Capital. Please go ahead.

Samar Sarda : So Neeraj a couple of things if you would like to want to inform the participants. One, like you made roughly Rs.3.7 billion in the first half, 377 odd Crores after interest and tax with a lot of deliveries happening in the second half like you mentioned a little more than 2500 units how would the operating cash flow post your interest costs and the other things tend to look like at the end of the fiscal so that is question number one. From an absolute debt perspective, we have a gross debt of roughly 2600 Crores. So given that you are also looking to deploy money for land and capex how would this 2600 Crores number move over the next two quarters?

Niraj Gautam : I will answer first related to P&L then the operating cash flow and then the debt, three thing s you have asked . During the quarter, as I mentioned in my opening remarks, we have handed over only 481 units and therefore the gross profit which came to P&L is only related to th ese 481 units. However, a s against to this we have sales and marketing costs for the quarter as well and the overhead has been charged to this gross profit and thereby there is a loss for the quarter. However, for the second -half year for the period we are targeting to handover about 2500 units and the n corresponding gro ss profit will come to the P &L and we are expe cting if the sales and marketing expenses and as well as the G &A will kind of maintain the tr end and then the outcome will be positive. We are not giving any guidance . We are not quantifying the number. However, in a broader ma th against 481 kind of delivery, this kind of number we are reporting and next H2 I am going to deliver or targeting to deliver 2500 units and thereby the fixed cost remains the same, the outcome will be different as far as the P &L is conce rned. As far as cash flow is concerned as it is evident from the slide number 26 of our presentation we have been posting the operating surplus for last few years by now if you look at operating inflow also consistently we are increasing for half yearly ba sis we have collected 1756 Crores that was our inflow and this by doing the sales of about 27 25 Crores for the half year period a nd the ope

rating activity
and if this trend continues, the cash flow and operating inflow will grow further , commensurate with the number of sales growth will happen in the next six months as well as the construction activity and the delivery happens during the second -half of the period. So commensurate operating inf low will increase for the next half year of the period.

Coming to the third question which you asked about the debt, my gross debt was 2616

 Crores. However, as against first time my net debt was less than 2000 Crores. My ne t debt at the end of the quarter was 1992 Crores only. This is because we have cash and ca sh equiv alent lying in my bank account is about 624 Crores . This cash and ca sh equivalent is lying in different project RERA account and other accounts which due to certain RERA regulation and debt related requirement the money is available however I am not repayi ng or not using it but the overall liquidity is there in the business . Coming to the debt level is concerned about 700 odd Crores is slated by the end of the next year that repayment will automatically happen due to th e schedule plus by SI also some reduct ion will happen. However, as we mentioned that we are on a growth trajectory, and we will be acquiring land parcel and thereby there will be some increase in debt as well as the drawdown of the construction finance. However, our endeavor will be maintaining the debt as of this level, at least by the end of this financial year.

Samar Sarda : Thanks and something about the launches like last year also we had a big guidance on launches. Most of your launches in this year again are skewed in the second half . What is the likelihood that the 13 odd million square feet which is planned in t he second half might be spilled over to the next year and which are the really big launches which are slated during this year like which could give impetus to the sales further from the 16 00 Crores already done in the quarter.

Abhishek Kapoor : Samar Abhishek here , hi. If you see the slide which is slide 20 on the launch pipeline, we have kind of given an indication of what the timelines are looking like or most of these projects are in very advanced stages of either RERA and submitted for RERA and awaiting approval in RE RA or in advanced stages of approval. So we are expecting that almost all these are about total of 15 odd projects and out of the 15 projects, at least 12 to 13 projects definitely will go to the market by March. That is the target that we are definitely working towards it. Having said that, the point you made on what can be expected in terms of sales trajectory given the fact that we have all of the earlier launches have gone into sustenance and the new launches add to the impetus of sales. We expect that this mom entum will continue in the coming two quarters at the second half of the year and largely on account of approvals is where it is. And from the beginning we have been saying that in the third and the fourth quarter we do a lot more launches. So I think we are pretty much on track as f ar as the launches are concerne d and obviously we are working on other assets as well for the next financial year.

Samar Sarda : Great all the best for the second half as well .

Moderator : We have the next question from the line of Samar Sapre from Wealth Tree Advisors. Please go ahead.

 Samar Sapre : Good evening Sir and congratulations on your good set of numbers . Sir just with regards to our debt, I believe we are having some 2000 Crores on books and if you can just share how would be the t rajectory going fo rward and especially seeing tha t we have a good collections and sales , would you see that this would be sustaining it for next couple of years seeing that real esta

te market is not very strong footing.

Abhishek Kapoor : So let me just break this down for you on an overall debt basis. If you see this is slide 31 of the debt composition, our residential debt continues to come down. There is obviously some addition of land that has happened and capex towards commercial development has increase d the debt. Howeve r, with the cash and cash equiv alent we have been on an overall basis, on a net debt basis, the number has come down to 1992 Crores. There is another slide we have wh ich is slide 32. If you look at our trend of debt per square foot and I keep going back to this number continues to come down from about Rs.2077 a square foot down to about Rs. 886 a square foot on per square foot area under development. Why I keep pointing this out is because I think that is relative to the quantum of business that you do. Our business clearly has shown 100 % growth this year in the first half of the year and therefore we are continuing to see this debt level come down. Our intent and goal is to keep the debt level in and above the current absolute number and not increase it substantially while we go into the acquisition and these new launches and the liquidity that is further coming into the system along with the schedule repayment as N eeraj mentioned is to the extent of about 700 Crores if I am not wrong in next 12 months . About 700 Crores in next 12 months but having said that we will obviously not hold back from acquisition, and you will start hearing a lot more about the new acq uisitions that we are looking at going forward. So therefore, the way we are seeing it, we will try and keep it at similar levels, but

increase the volume of business that we do and continue to reduce our debt per square foot
by launching more and more projects and hence creating a lot more surplus available from
coverage servicing and liquidity perspective.
Samar Sapre : Okay that wa s helpful and one last question with regards to realization, I believe we are
now close to 8000 per square foot in residential division vertical. So how would the gross
margins behave in this segment, and would that be sustainable seeing your new launches
coming ahead ?
Abhishek Kapoor : Sure. So I will break this again into two parts. What is ongoing currently, where we see
current ongoing and new launches coming in. I think our average realization because of a
large number of launches, especially coming in Provident, will hover around a similar
number and also Purva Land, so on an average realization yo u may see in fact slight di p
because the mix of product will be different in coming two quarters having said that, our
new acquisition strategy that is currently from the land point of view especially adding west
as a significant contributor in the next financial year both in terms of new launches and
acquisitions that we are doing other than what we are already working on in South should

 take up our average re alization over the next one year's time as we do those launches. So to
answer that question, I thi nk on the longer -term trajectory, you will see our average
realization continue to go up while the vol umes go up specifically on account of addition of
projects in Mumbai, Pune and also o ther projects in Puravankara. H aving said that, having
added Pu rva L and and Provident where the realizations, Purva L and the realization s maybe
as low as 3500, which drags down my average realization, but gives me the volume an d the
margins. So if you look at the margin level, I think to answer that question, our EBITDA
levels will continue to remain on an average hovering around 30% and above and while the
average realizat ion in this coming couple of quarters might slightly drop our average
realization will continue to go up in the longer term.
Samar Sapre : I will be joining back in the queue

again if needed. This was with regard to the current
quarter, how much of the portion is attributed to the new launches of the sales.
Abhi shek Kapoor : Of the total new launches would be to the extent of if I am not wrong to the extent of about
600 Crores, I am not wrong in the number about 1000 Crores should come from sustenance
projects b ut I will confirm that number to you. I am just giving from back of the envelope
calculation, but we will just confirm the number .
Samar Sapre : So that run rate, would be maintained for the current quarter s in the launches coming ahead
in H2 also.
Abhishek Kapoor : We do not give forward -looking statements.
Samar Sapre : Roughly ballpark . I do not want an exact one.
Abhishek Kapoor : It all depends on the laun ches that hit the mar ket and the timing of those launches. So I
think we will wait and watch, but our expectation is that we will continue the trajectory.
Niraj Gautam : We are targeting the launches. We have already reported in our investor presentation.
Samar Sapre : Sure Sir. Thank you so much for answering all the questions in detail. If needed, I would be
back in the queue.
Moderator: Thank you . Ladies and gentlemen, that is the end of the results call. I would now like to
hand the conference over to the management for closing c omments. Over to you, Sir.
Abhishek Kapoor : I will just add it is about 570 Crores from new lau nches out of 1600. So, my number was
off by about 30 Crores.

 Niraj Gautam : Thank you for joining our earning call today. Thank you very much once again and wishing
you all a very Happy Diwali and I and my colleagues are available for any query, any
question you have, you can write to us, and we will respond back to you. Thank you very
much.
Moderator: Thank you . On behalf of A xis Capital Limited that concludes this conference. Thank you all
for joining us. You may now disconnect your lines.

"Puravankara Limited Q3 FY-24 Earnings Conference Call"

January 23, 2024

MANAGEMENT : MR. ABHISHEK KAPOOR – EXECUTIVE DIRECTOR &

GROUP CEO , PURAVANKARA LIMITED
MR. VISHNU MOORTH I – SENIOR VICE PRESIDENT
(RISK & CONTROLS), PURAVANKARA LIMITED
MR. NIRAJ GAUTAM – PRESIDENT (FINANCE),
PURAVANKARA LIMITED
MODERATOR : MR. ASHUTOSH MITTAL – AXIS CAPITAL

Moderator : Ladies and gentlemen good day and welcome to Q3 FY24 Pur avankara Limited Earnings Conference Call hosted by Axis Capital Limited.

As a reminder all participant lines will be in the liste n-only mode and t here will be an opportunity for you to ask questions after the presentation concludes . Should you need assistance during the conference call, please signal an operator by pressing '*' then '0' on your touchtone phone.

Please note that this conference is being recorded.

I now hand the conference over to Mr. Ashutosh Mittal from Axis Capital Limited . Thank you and over to you sir.

Ashutosh Mittal : Good evening , everyone and welcome again to the Post-Result Conference Call of Puravankara Limited.

We have with us the senior management of the company with us led by Abhishek Kapoor – Executive Director & Group CEO , Vishnu Mu rthy – Senior Vice (President Risk & Controls) and Neeraj Gautam – President (Finance).

I now handover the call to the management for the initial comments.

Neeraj Gautam: Thank you As hutosh. Good evening , ladies and gentlemen. Thank you for taking the time to join Puravankara Limited Earning Call for the 3rd Quarter of FY24. I am N eeraj Gautam – President Finance at P uravanka ra Limited. Thank you for joining us today.

We are pleased to present our Financial Results for the Quarter Ending December 31st, 2023. The results along with a comprehensive presentation have already been made available for your review on the stock exchanges.

To begin with let me share my thoughts on the broader circumstances both globally as well as on the macroeconomic front :

Amidst global uncertainties India 's economy remained robust evidenced by the RBI 's upgraded FY24 GDP growth forecast to 7.0% from 6.5%. A stable interest rate and controlled inflation bolster the economic prospects , the surge in demand for residential real estate , mirrors increased economic activity and rising income in 2023 strong interest from both foreign institutional investors and domestic institutional investors boosted India 's global index rate. Political stability and ongoing economic reforms positioned India as the fastest growing major economy.

Turning to the performance of our Company Puravankara Limited :

The first nine months of FY24 have witnessed exceptional presales marking a strong growth of 89% compared to the same period last year. We achieved a sales value of INR 3,967 crore s for the nine -month period FY24, the highest ever for a nine -month period since inception .

In Q3, coming to the quarter sales figures, the sales performance across our brand s howcased robust figures. Pur avankara led with INR 6 63 crore s, provident followed closely at INR 419 crore s and P urva l and contributed IN R 158 crore s with a total sales value of 1 ,241 crores which is 56% up compared to the same period previous financial year.

Now coming to the geographical contribution :

Bangalore emerged as a primary driver capturing a dominant share of 52%, followed by Chennai at 27% and Cochin by 9%. The average realization was INR 7 ,610 per square feet for the quarter. However , if you look at a nine-month period our average realization was Rs. 7,916 per square feet.

Coming to the new launches:

In Bengaluru, we introduced Provident Deans gate boasting a s aleable area of 0.6 million square feet with an initial launch area of 0.3 million sq ft. Meanwhile in Chennai we presented Purva Soukhyam, a plotted project with a s alable area of 3.16 million square feet initiating with a launch area of 0.8 2 million sq ft.

Coming to the business development front :

We are expanding our horizon in aligning our strategic vision , we eagerly step into the Mumbai redevelopment market. Our inaugural project encompasses approximately 6 lakh square feet

with a gross domestic value of about 1 ,500 crore s. The Mumbai landscape holds tremendous potential, and we are actively pursuing several opportunities , currently engaged in advanced strength of 4 societies. Our launch pipeline is equal ly robust . We have an impressive launch pipeline of approximately 13 million square feet ensuring a steady flow of new projects in the coming period. Non-Bangalore projects now account for 42% of the share of ongoing and 77% of launch pipeline . On a division basis , Provident accounts for 44% of launch pipeline in line with market trend and the group 's strategy .

Coming to debt management :

In addressing our debt we 're pleased to highlight a positive trajectory demonstrating a fiscal prudence. Our net debt has reduced from INR 2 ,135 crore s in Q3 FY23 to INR 1 ,741 crore s in Q3 FY24, making a substantial decrease in net debt ratio from 1. 09 to 0.85. Notably our debt has decreased by INR 251 crore s and gross debt by INR 53 crore s from the previous quarter. Equally significant is the decline in the debt per square feet of building space dropping from INR 1 ,291 crore s in Q3 FY23 to INR 791 in Q 3 FY24 reflecting our commitment to efficient capital utilization and fiscal responsibility. With this our debt per square feet of under construction area has decreased by around 62% over the last 5 years.

Coming to the customer collection :

Customer collection has been a driving force in our financial performance totaling to IN R 2,515 crores for the first nine months of FY24 and 941 c rores for Q 3 FY24. These robust collection figure s underscore our commitment for execution excellence. The impact of our effective collection strategy is evident in the operating surplus reaching IN R 418 crore s for Q 3 FY24 and INR 965 crore s for the cumulative nine months of FY24. Remarkably our operating surplus has experienced a substantial year -on-year growth of 101% , a testament to our aggressive execution , heightened collection efforts and operational efficiency.

I would like to draw your attention to the fact that as on December 31st, 2023, the balance receivable from our sol d units amounted to approximately 3 ,857 crore s. This impressive figure covers around 78% of our remaining cost required to complete the inventory currently open for sale. This indicates that a significant portion of the cost to complete the remaining inventory has already been secured through receivables, providing us with a strong foundation to meet our financial commitments. Moreover , our cas h flow visibility is equally promising with a projected amount of INR 6 ,747 crore s expected over the period of 3 to 4 years. In addition to this there are cashflows from two new commercial projects , if we value this today it is about 1 ,308 crore s. This signifies our sound financial planning and ample ca sh reserves to support our operations , projects growth initiatives in the foreseeable future.

Finally turning to our financial performance ; in Q3 FY24:

Our total revenue grew by 45% year -on-year to IN R 596 crore s. The EBITDA for the Q 3 FY24 was 218 crore s with a 37% EBITDA margin. The P AT for the Q 3 FY24 was INR 78 crore s. For nine months FY24 our total revenue increased by 37% to 1 ,313 crore s, in nine months FY24 which was 961 crore s in nine months of FY23. The EBITDA for nine months FY24 was 392 crore s with a 30% EBITDA margin , the PAT for the period of nine-month period was 49 crores.

In conclusion :

I want to highlight that Puravankara is we ll set to benefit the real estate sector 's growth nationwide. Our strong sales consistently beating targets , thanks to careful project choices , effective marketing , connecting the customers and the commitment to delivering great products as we move forward. Thank you for listening and now I am closing my opening remarks. F or your ques

tions and suggestions, my colleagues and I are here to answer all your questions and take the feedback which you would like to give us .

Moderator: Thank you very much. We will now begin the question -and-answer session. The first question is from the line of Chintan from P uniska Family office.

Chintan: How many units we have delivered this quarter?

Neeraj Gautam: 498 units.

Chintan: What is the plan for FY25? How many square f eet we have delivered to planning ?

Abhishek Kapoor: So, while we don 't give any guidance numbers . We will come back with the exact number that we are looking at delivery in the next financial year.

Chintan: In last con-call you mentioned that we have a pending delivery of 2500 unit s in H2 FY24. So now we are pending of close to delivery of 2000 unit s, correct ?

Abhishek Kapoor: Correct. You 're right.
Neeraj Gautam: We have already delivered about 1405 units for nine-month period.
Abhishek Kapoor: Now, OC already we have received for three of our projects in the last quarter , towards the end of the last quarter . We're expecting three more projects to give OC within the next two fortnight. The f inal stages where we are expecting the OCs to come in and those deliveries will happen. So, I think the last quarter we have been mentioning for a long period of time will be possibly one of our biggest quarters for delivery because all the OCs and the delivery of the projects are coming in. And of course, the handover takes a little time but once the OC is there then it 's only a matter of time for delivery.
Chintan: What is the current unrecognized revenue?
Neeraj Gautam: If you go to our balances. If you go to our cash flow plus the revenue to be recognized , cash flows if you go to our Slide # 29 that gives the detail of the balance receivable from the sol d units. However , the question I understand your question is more related to how much balance revenue to be recognized. If you go to ou r, we have not published in these nine months period the balance sheet because that is not required to be published , about 6 ,000 crore s is a sales value which is advanced from customers for which I have yet to recognize the revenue which is part of our advanced from customers in the balance sheet.
Neeraj Gautam: Which are value of our unsold inventory which is there in the Slide #29 is about 5 ,617 crore s and of course as I mentioned to you about 6 ,000 crore s is the advanced received from customer where I have yet to recognize revenue. However , I will send you the exact number of f-line.
Chintan: If I look at your cost from borrowing just , it is close to 11.49. Any efforts we are doing to bring it down more whether real estate taking borrowing or any efforts or any plan for it?
Neeraj Gautam: Yes, it's very much a plan. If you look at my cost of borrowing has come down compared to the immediate previous quarter , it's 11.49% which was the previous quarter is at 11.61 %. So as and when I'm launching project , I'm converting land loan into the residential loan at reduced interest rate and which is already reflecting previous quarter to this quarter which has come down. And we are putting the continuous effort to reduce interest rate by taking the new loans at a competitive rate and refinancing the existing ra te also for a lower interest rate loan.
Chintan: For the commercial project we are looking for lease it out or to sold it out, how we are ….?

Abhishek Kapoor: So currently our goal is to lease out one asset and sell one. There is one asset which is about 2.1 million square f oot which is under construction on the airport road in Bangalore and the other one which is at Kanakpura which is about 800 ,000 square feet. At this point in time , we haven't sold anything. Very active interest is there in

leasing. There are multiple LOIs which are currently in progress. So ye s, we'll wait it out and see how it goes. If we can hold on to the inventory, we prefer the whole lease model because we want to build a portfolio over the long term. However , one is a JD A, one is an own ed asset . 2.1 million which is an own asset , definitely we are going to own and keep . The JDA asset we will evaluate as and when we get closer to completion. Currently , we are leasing out both the assets.
Chintan: One request if you can tell that in the presentation the pos session date of each ongoing or development project. That would be a great help.
Abhishek Kapoor: We'll make sure that we can publish the expected date of completion of these projects.
Moderator: The next question is from the line of Mr. Ashutosh Mittal from A xis Capital.
Ashutosh Mittal: My question is related to your entry into Mumbai redevelopment. So , you guided for you are an advanced discussion for four projects. What kind of projects and what micro-market specifically you are looking at and how would the margins be different for these projects versus your other existing projects?
Abhishek Kapoor: We are looking at all the markets both in the western and central suburbs and of course in south Bombay. Currently actively pursuing , actually we have participated in more than 12 projects . In terms of the tendering process active , shortlisted conversation engagement going on four , mix of all three markets which is south , west and central. And from the margin point of view , we are continuing to target our EBITDA margin of about 30%.
Moderator: The next question is from the line of Vignesh Iyer from Sequen t Investment.
Vignesh Iyer: I just wanted to know which projects are expected to get OC in the coming quarter and could you tell me how many units is coming from this each project?
Abhishek Kapoor: So, we are expecting Zenium , Somerset , Promenade and Tivoli . Tivoli partially we have received the release of sites. The balance we will get now in the coming week or 10 days. Between all of these , the total inventory would be about 840 units. We also got OC for Equinox in the last quarter. So , in all if you take including the last quarter , we'll have about (+2000) inventory available with OC.
Vignesh Iyer: Including the Quarter 3 OC, right?
Abhishek Kapoor: Yes. Will be available for handing over about (+2000) units will be available for handing over

with OC.

Vignesh Iyer: We have got a good pipeline in Quarter 1 of FY25 and followed by Quarter 4 and Quarter 1. What is the presale target that the company , what is the internal estimate of the presales target for FY25 for the company unit wise and maybe even value wise if you could help us understand ?
Abhishek Kapoor: We don't give guidance as I mentioned earlier on what we are expecting in terms of the sales numbers . But we do publish our expected launch pipeline. And from our past track record you can kind of assess for yourself. But we normally don 't give guidance. But what we do give guidance on is the number of launches that we are booking . If you look at our Slide # 16 that will kind of give you a trend of the sales trajectory that we have achieved. For example , for the nine-month period last year v ersus this year , we were in 23 at 2.78 million square f oot for three quarters. This year we are at 5 million square feet for the three quarters. I think the sale s value has gone up by about 89% and volume has gone up by little over 80% if I'm not wrong .
Vignesh Iyer: So, going by the trend we can expect similar or better performance going ahead would be the right , like you have done a CAGR of 28% in last 4 years. So , we can expect similar line improvement going ahead.
Abhishek Kapoor: Look again as I said we don 't give guidance, but our effort is definitely to co

ntinue our growth
trajectory .
Moderator: The next question is from the line of Shivan g Joshi from Cent rum PMS .
Shivang Joshi: You indicated in one of your slides about your launch pipeline for the fourth quarter. Just wanted to understand there are six projects in that slide. I 'm referring to Slide # 22. What is the stat us of approvals for all these projects? What is the likelihood of any project launch getting delayed to price here quarter or two?
Abhishek Kapoor: No there are none of them which will get delayed by a quarter or two. We are actually at the final stages of all of these projects. Some of these are already approved projects where we are opening a new phase. We already have the approvals and some of these projects we will get the approval. So , we are confident that we should be able to take these to the market in between this quarter and the next quarter. There is nothing that out of this inventory that will go to the quarter beyond this quarter in the next quarter.
Shivang Joshi: And indicatively can you give a number as to I understand you gave your launch pipeline for next year but a ballpark number as to what will be your area to be open for sale , new projects as well as new phases in existing project for FY25, any number ?
Abhishek Kapoor: So, look if you look at our current inventory which is available for sale it 's about 5 .65 million square feet. What we have sold already in the nine-month period is 5 million square feet. What we are planning to add and open for sale from the launch point of view , is about 10 million square feet, we are going to add in next day two quarters. Now if you look at this trajectory and our existing what is inventory available which is not open for sale , I think we will continue to open approved project for sale as w e get, we have our own internal criteria that only upon certain

percentage of sales having been done , we will open for sale. But our goal obviously will be to continue our growth momentum. Last quarter we will see where we land up. It will obviously be (5+X) million square feet and then again , the next quarter. So , our endeavor will be to continue the growth momentum and we will publish our data on next year 's launches in the first quarter of the next financial year.
Shivang Joshi: I just wanted to understand since you are venturing big time in Mumbai what kind of outlook would you have? So , when you mentioned margins, you have been giving a brief idea what kind of project level margins that you may keep , including your target 30% in Mumbai projects , what would be the overheads over and above this project overheads ? If you can just briefly indicate since you are aiming big in Mumbai markets now.
Abhishek Kapoor: So, are you asking —just to confirm you 're asking—about the margins only or is there any other question you had ?
Shivang Joshi: Margins only but 30% I believe would be a t project level. What kind of other overheads do you have in your books?
Abhishek Kapoor: So, if you look at our standard model , EBITDA number will continue to be 30%. And when we say EBITDA it 's largely the cost of capital that is left for the calculation of the P BT. So , we will continue to target the cost structure there , how we operate is a percentage of the construction cost and we target that percentage of construction cost. In fact , fortunately because we are kind of a player who is multiregional, we have scale and that helps us keep our overheads in check and uncontrolled . We have three different brands which require different level of overheads

versus a Purva Land where your turnaround time is very short versus a Provident where scale is very large versus a Puravankara where it's all premium and the construction cost is slightly higher. So , on an overall average , we are quite certain that we should be in the 30% ballpark r

ange or plus. As far as each of the brands is concerned , I think we are and region wi se is concerned our average goal has to be at 30% , Provident maybe b etween 27 % and 32% , Puravankra between 30 % and 35 % and Purva Land will be in excess of 35% EBITDA numbers.

Shivang Joshi: Last one from my side on the debt piece , your debt numbers have been coming down well. From a strategy perspective wanted to understand , your foray into Mumbai or other western region , Mumbai and Pune , should be more asset like. Can you correct my understanding and if that is the case then any rationale behind keeping 800 crores cash and not prepaying something which is costing 11.5%?

Abhishek Kapoor: I'll answer this question in two parts. One is as far as the model in the western region is concerned , it is a mix of redevelopment , joint development and outright . We always believe that there is a lot of margins to be made in an outright transaction as well. Of course , Mumbai as a market is hard to find enough outright transactions , so largely will be redevelopment and maybe JDA to some extent. Pune may be a lot more outright because there are opportunities available there. Having said that , coming to your cash balance question , I think what we are doing now is going in an aggressive investment path because if we have to continue our growth momentum

as we have said on the debt piece, we have said that we will keep it range bound somewhere between 2000 -2200 crores in that range is what the net debt is what we are intending to keep it as. On a per square foot basis our target is to keep it if our average realization is between Rs. 8000 to Rs. 9000 our target is that we should keep our range , our debt per square feet of Rs. 1000 square feet or lesser. So, keeping those numbers in mind because if you want to do larger volumes and keep your debt , there is a natural course in which the debt is going to get repaid. So, one is use of capital is going to be , of course , is always an opportunity to return capital. We are in active conversation in some places to return some of the capital ahead of time and at the same time deployment of capital towards new investments which will add GD V and bottom line for us. And of course, there is some bit of liquidity that is always kept in the system for organization and size of our scale.

Shivang Joshi: That answers most of my questions. This last thing since you mentioned 2000 to 2200 crore sustainable debt number , say two years from now when your commercial development is at advanced stage or complete what would be the total debt? I believe when you 're saying 2000 to 2200 crores that includes your commercial debt.

Abhishek Kapoor: As I said there are two contexts. Commercial is to be treated very differently. I 'll explain myself a little bit. In commercial you 're creating an asset. The moment you have leased out the asset on an LR D basis the asset gets completely 100% freed out even if you do an LRD depending on how much loan you have taken anywhere between four to six years ' time frame. And so that debt is pretty much self -liquidating. The second category of debt is residential which is also self - liquidating is because if you see our debt pool right now and we publish now that data on how the debt is moving in each of the cat egories you 'd realize that in its natur al course a lot of debt is going to get repaid because these projects are self -repaying as we launch these projects. Right? So, in our mind all of the debt is pretty much self -repaying. The capital invested in commercial assets and the debt thereof which is repaid through LRD obviously the cost of capital is much lower and then your asset gets free over a period of time. And on the other side residential debt. So having said that I 'll go back to my earlier conversation, and I 'll say that our debt is going

t o
remain range bound. That 's the target which we are working towards , both on a cost plus basis and the goal is obviously to try and see how we can make sure that the volume goes up significantly , so it becomes irrelevant really to have this conversation on debt.

Moderator: The next question is from the line of Ronald Siyoni from Sharekhan Limited .

Ronald Siyoni: During this quarter we have seen good margins around 35% operating margin. So, it was just because of job sales mix because of Purva land getting more booked during the quarter or are there any one -off items in these margins?

Abhishek Kapoor: See revenue recognition is a factor of the handing over possession and any real estate related transaction that we may have done. As far as presales happen presales have no impact on the revenue recognition. So therefore, these numbers are purely from the real estate activities that we have done.

Ronald Siyoni: Yes, so that 's what I meant to say. So, more revenue booking was towards the Purva land projects?
Abhishek Kapoor: I will share that breakup offline. I think we 've handed over a lot more in Pur avankara and in Providen t, but we'll share that offline with you.
Ronald Siyoni: And this kind of margins are sustainable going ahead also or the margins can vary to a larger extent going ahead for sale …
Abhishek Kapoor: Let me explain this in this context. Our margins are pretty much on target. It 's more a matter of time on when you recognize the revenue and how the margin looks in a particular quarter. So, if you look at it over a period of time it will always average out with the kind of margins that we are working on. Because as you deliver these projects your presales convert into your revenues and therefore your margins start showing up on the books.
Neeraj Gautam: In addition to that I would like to add is as we are scaling up in all our front in terms of sales in terms of construction , so fixed cost which is there in the company will of course it will come down per square feet and as the scale goes up . So, to that extent the margin will improve.
Ronald Siyoni: And second question was that you are closely looking at to close deal in Pune. So, at what kind of level you are there in Pune to go ahead with some outright or JD acquisitions in Pune? When should we see Pune acquisitions start?
Abhishek Kapoor: Well, you will see acquisitions happening between this quarter next quarter and thereafter. So, we will start hearing some announcements happening in coming quarters including this quarter.
Neeraj Gautam: I just thought to add that we have received OC in one of our important projects in Pune. Just thought to update you. Of course, the acquisition plan Mr. Abhishek has mentioned about it. We have a project Purva Silvers ands, t here we have received OC during th e quarter and started giving the possession .
Ronald Siyoni: And my last question was on this various Provident and Pur avankara and Purva Land. So, both in terms of the mix of the different segments and different geographies where you are seeing a better traction and where the segments which are lagging both segment wise and geography wise.
Abhishek Kapoor: Look of course our biggest volumes have come from Bangalore. But having said that currently our projects are active in all the markets which are Bangalore , Hyderabad , Chennai , Kochi Mumbai , Pune and Goa. Across all of these markets we are seeing traction. And one can safely say that we are not seeing any challenge. In fact, we are seeing increased momentum in our sustenance projects at increased prices because the projects are getting more an d more visible towards completion. So, we are confident that the sales momentum from all of these regions are cutting across Purva Land. Provident and Pur avankara will continue to be there.
Moderator: The next question is fr

om the line of Deepak Purswani from SVAN Investment s.

Deepak Purswani: Just wanted to understand our strategy on the western India. We mentioned we are looking out for the four projects in the Mumbai region and then there are some project s we are looking in the Pune market. So could you please throw some light in terms of the investment outlay we are highlighting over the next twelve months for these geographies . And also, if these things materialize what would be the GDV a ddition we would be looking at .
Abhishek Kapoor: So as far as an already acquired project is concerned, we have added a GDV of about 1500 crores with our first redevelopment project which we have acquired at Lokha ndwala in the western suburbs of Mumbai. We are as I mentioned earlier in active engagement with multiple societies for redevelopment and of course multiple transactions which we are engaging in Pune market. Having said that I think your question was on the capital outlay. We are expecting over the next 9 to 18 months ' time frame to deploy approximately 1 ,000 crores in the western region including all of these markets. This is in addition to what we have already deployed and the projects which are ongoing.
Deepak Purswani: So, from the cash outflow point of view if I were to think on an average, we would be requiring 1,500 crores kind of cash outflow for the construction and 1 ,000 od d crores would be this investment in the new project. And apart from this there would be a kind of debt repayment to the extent of 750 od d crores over the next twelve months. Would that be the correct understanding?
Abhishek Kapoor: Not really because we are also going to be making investment in southern part of India in all three brands which is Pur avank ara, Provident and Purva land. So obviously that also needs to be factored in when we are looking at the free cash flows from the business because a lot of free cash flows will get deployed instead of repaying debt towards these new acquisitions and then taking them towards launch. So, I must add that a bunch of cash is also going to go into , so we still have land bank which we are working on which is from within the company which also will get unlocked in the next year. So, there 's obviously capital going in there as well. I missed out

on mentioning it.
Moderator: As tha t was the last question , I would now like to hand the conference over to management for closing comments.
Neeraj Gautam: Thank you for joining us for today ’s call. I’m wishing you all of you happy Republic Day and me and my colleagues are available , if any further questions you have you can write to us. We ’ll respond to your questions. Thank you .
Moderator: On behalf of Axis Capital Limited that concludes this conference. Thank you for joining us. You may now disconnect your lines.

Call: May 2024

Date: 30.05.2024

To,

May 23 2024

MANAGEMENT : MR. ABHISHEK KAPOOR – EXECUTIVE DIRECTOR ,
GROUP CHIEF EXECUTIVE OFFICER AND CHIEF
FINANCIAL OFFICER – PURAVANKARA LIMITED

MR. NIRAJ GAUTAM –PRESIDENT -FINANCE –
PURAVANKARA LIMITED

MR. VISHNU MOORTHI H –SENIOR VICE PRESIDENT -
RISK AND CONTROLS -- PURAVANKARA LIMITED

MODERATOR : MR. ASHUTOSH MITTAL -- AXIS CAPITAL

Moderator: Ladies and gentlemen, good day, and welcome to Puravankara Limited Q4 FY '24 Earnings Conference Call hosted by Axis Capital Limited. As a reminder, all participant lines will be in the listen -only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing s tar then zero on your touchtone phone. Please note that this conference is being recorded .

I now hand the conference over to Mr. Ashutosh Mittal from Axis Capital. Thank you, and over to you, sir.

Ashutosh Mittal: Thank you, Neha, and good evening, everyone. Welcome again to the post result conference call of Puravankara Limited. We have with us the senior management of the company, led by Abhishek Kapoor, Executive Director, Group CEO and CFO; Mr. Vishnu Moorthi, S enior Vice President, Risk and Controls; and Neeraj Kumar Gautam, President Finance. I now hand over the call to the management for the initial comments. Thank you.

Neeraj Gautam: Thank you, Ashutosh. Good evening, ladies and gentlemen. Thank you for joining Puravankara Limited earnings call. I'm Neeraj Gautam, President of Finance at Puravankara Limited. We appreciate your time today as we present our financial results and quarter 4 ending March 31, 2024. The results and a comprehensive presentation are available on the stock exchanges for a review.

In FY '24, Puravankara Limited achieved exceptional performance, recording a presales of INR5,914 crores, marking a remarkable 90% year -on-year growth. We anticipate continued upward momentum in future, driven by our strong pipeline of launches and the unw avering trust of our customers. Our commitment to replenish the strength in all aspects of our operations beyond this financial metrics.

For FY '24, Puravankara led with sales of INR2,7 52 crores followed by Provident at INR2,041 crores and Purva Land at INR1,122 crores. In Q4 FY '24, we achieved an interested presales figure of INR1,947 crores, reflecting a 93% year -on-year growth. Collections were robust at INR1,094 crores for Q4 FY '24, representing a 66% year -on-year growth. For the entire FY '24, collection total increased to INR3,609 crores, demonstrating a 60% year -on-year growth. Throughout this financial year, we launched 12 projects with a total saleable area of 9.47 million square feet to meet the preferences of our diverse clientele across various categories. We have given total possession for 2,614 units in FY '24 across Puravankara Group. In line with our strategic plan and commitment to expansion, we are excited to enter the Mumbai redevelopment market.

We are selected as a preferred developer for redeveloping a residential housing society in Pali Hill, Mumbai . The project has an estimated development potential of 0.4 million square feet

carpet area and our share of saleable area engaged is 0.21 million square feet and the potential gross development revenue of over INR2,100 crores.

There is strong response and numerous inquiries from the societies indicate a continuous expansion of our development portfolio. In the previous quarter, we were appointed as a developer for a redevelopment site in Lokhandwala, Mumbai. Salvable area of 0.6 million square feet with a GDV over INR1,500 crores.

Our launch pipeline is robust with approximately 14 million square feet of the new projects slated for the coming period, notably non -Bangalore projects now comprise 47% of our total launch pipeline. Additionally, Provident accounts for 52% of the launch pipeline, aligning with the market trends and our group's strategic progress.

Coming to our debt management. Our net debt increased from INR1,741 crores in Q3 FY '24 to INR2,151 crores in Q4 FY '24 and net debt -to-equity ratio

from 0.85 to 1.14. I would like to update and highlight that the way the debt has increased its value of the price is increased . We have repaid IFC and ASK, 2 marque e investors who were with us and invested in 2 of our projects. And both the projects we have fully repaid them and by utilizing this increased debt. Our cash and bank balance stood at INR931 crores as on 31st March, 2024, which indicates the strong liquidity profile, ensuring stability and operational continuity.

The strong collection figures highlighted our commitment to execution excellence except for our effective collection strategy is evident in our net operating surplus reached to INR513 crores for FY 2024.

To underscore our strong financial position, I would like to emphasize that as of March 31, 2024, the balance receivable from sold units totalled approximately INR4,457 crores. This notable amount covers approximately 80% of the remaining costs needed to complete the inventory currently available for sale. It indicates that a substantial portion of the costs for completing the remaining inventory has already been secured through receivables, giving us a solid foundation

to fulfill our financial obligations.
Moreover, our cash flow visibility is equally promising, with a projected amount of INR 7,455 Crores expected over the next 3 -4 years. In addition to this, estimated surplus from 2 commercial projects is INR 1,356 crores. Estimated surplus from launch pipeline projects is INR 2696 crores totalling to surplus of 11507 crores .
Finally, turning to our financial performance. In Q4 FY '24, our total revenues grew by 112% year-on-year to INR947 crores. EBITDA for Q4 FY '24 was INR139 crores with a 15% EBITDA margin. There was a loss for the quarter of INR7 crores for FY '24. Our tot al revenue increased by 60% to INR2,260 crores. The EBITDA for FY '24 was INR53 1 crores with an EBITDA margin of 24%. PAT for the year was INR42 crores.
Our presale value. I would like to highlight that our presale value for FY '24 was INR5,914 crores. And in sales and marketing expenses related to the sales number and also the overhead

income to achieve these sales numbers has been charged to the P&L for the financial year. However, the revenue in the P&L has come only for 2,614 units, which were handed over during the financial year, which has a revenue value of INR2, 260 crores.
In conclusion, FY '24 has been significant and eventful period for our company characterized by the remarkable achievements across all key performance indicators. We are poised to expedite the development of new residency projects across India, delivering exceptional value to our customers and fostering long term shareholder value. Thank you for listening, and we welcome your questions you may have.
Abhishek Kapoor: This is Abhishek here. Hello, everybody. Let me start with an apology for the delay. And sorry for late upload of the financials. Going forward, I'm assuring everybody here on the call that we will keep this call the next day and give sufficient time for everybody to study the financials and be comfortable with asking questions. Again, apologies, and we are happy to answer any questions you may have. Thank you.
Moderator: Thank you very much. We will now begin the question and answer session. T he first question is from the line of Himanshu Jain from Tiger Assets. Please go ahead. Mr. Himanshu your line has been unmuted please go ahead with your question. As there is no response for the current participant, our next question is from the line of Deepak Purswani from S van Investments. Please go ahead.
Deepak Purswani : Hi. Good evening to the management team. Congratulations for the excellent set of numbers and also for the HDFC platform deal. Sir, my first question is regarding the HDFC Capital platform deal only. We have mentioned in the PPT, there

are some projects which are from the existing land bank to the extent GDV of INR 9,400 crores. And there would be some new acquisit ion which we are looking at INR 7,700 -odd crores.
So could you please share further details in terms of , which are the projects which are being a part of the deal now? And also, since this deal will also incrementally monetize our cash projects at a faster pace, how should we look into that going ahead? And whether this would be predominantly for the low capital or there would be some part of the debt reduction from the incremental cash?
Abhishek Kapoor: Thank you, Deepak, for your wishes. So Deepak, just to give you a background, as you rightly mentioned, about INR17,000 crores of which about INR 9,400 crores from exiting. So what is happening is a part of the capital is getting deployed to unlock these lands where you have either some position or some settlement or some sanctions or something, some conversion costs like that to bring these projects to the launch.
Having said that, balance money that is available will get deployed in new projects, and that will create a further GDV of about INR7,700 crores at a conservative basis. Second thing is that which is –Provident Housing as a business is poised for growth, both in terms of bringing

capabilities to the market. And to add more land banks, which is currently in the pipeline where we are in advanced conversations in the marketplace.
So overall basis, I think this will add tremendous value to provident housing. The second part I must mention is that from within the focus of existing projects, and this is INR9,377 crores to INR9,400 -odd crores of GDV if you tell we'll be able to repay the entire amount to HDFC so entire new investment then becomes free, completely that you deploy.
So in that sense, we already have a financial process to repay the entire money that is getting

invested by HDFC Capital. And if you look at existing projects, we are looking at about saleable area of 14 million square foot coming from the existing project s and you're looking at a surplus of about INR1,200 -plus crores -- sorry, INR2,600 -plus crores coming from the existing projects.

Deepak Purswani : Okay. And sir, secondly, on the Mumbai expansion plans in the second half, we have added 2 projects one in Lokhandwala and one in Pali Hill. If you can throw some light in terms of the profitability engine of these projects, also we have also mentioned the re are certain few deals, which are at the advanced stage of negotiation in the MMR region.

If you can throw some light on that part as well, whether these would be continuously in the southern central market or this would be in the northern part of the market or in the western part of the Mumbai, if you can throw some light on that part that cou ld be really helpful.

Abhishek Kapoor: Right. So good question. One is as far as both these topics are concerned, like we have always mentioned, our EBITDA target is in the range of 30%. On an average, whatever investments we are making, some may be a little lesser, some maybe a little higher. But I must tell you that both these are marquee projects and the scale and size of these projects in these loc ations is just not available.

To have an excess of 2.5 acres in Bandra Pali Hill, I don't think that we have many plots or any plot which is of that size. So that obviously clearly commands a premium in that market. And we are already receiving calls for savings there, right? So we're very, very optimistic about what kind of realization we can make at Pali Hill, and of course, in Lokhandwala again, which is absolutely a prime Lokhandwala plot.

And there is significant demand in that market. It's a very mature market, and we believe that we will be able to bring in the kind of quality that Puravankara will be able to command a premium in that market.

So again, as I mentioned, we will target as pe r our company policy, the 30% EBITDA.

As far as the planning is concerned, as a business, when we look at the various geographies, for us, what we intend to do is we intend to have presence in Western suburbs and South Mumbai and Central suburb in terms of redevelopment. So if I were to break this down, redevelopment strategy will spread right from like Dadar, Mahim going up to Western Suburb to Borivali. And on the southern side, in the Highland city, and on the central side up to Chembur.

Beyond Chembur redevelopment opportunities, we may be very, very mindful and careful we may not evaluate because of the feasibility of the redevelopment opportunity. That is one. As far as development JDAs or acquisitions are concerned, we are looking at a cross the board, across the city. Clearly, we want t o enter.

We already have a project in Dombiv ali, Shilphata . We are intending to add a project in Thane because Thane is a big market, and we believe that we want to be active participants in that market and bring in and get a piece of that market as well. So, Mumbai as a strategy, I think we are very clear that we are looking at presenting all of these markets. Of course, we are also evaluating the new airport area and opportunities thereof because we believe that at some point in time, that market will open u p.

Deepak Purswani : And sir, just continuing on that part, what is the investment we have made in the Mumbai region so far in terms of the project acquisition? And what would be the investment we will be looking out to do incrementally? And when -- what would be the launch pi peline for the -- this Bandra project as well as for the other projects & Lokhandwala project?

Abhishek Kapoor: I frankly feel that Lokhandwala, we should definitely take it to market and -- Lokhandwala, we have said Q3, between Q3 and Q4 for sure. And Pali Hill, our target will be that we should take it to market in Q4 FY25 or Q1 of next year. And as far as investment is concerned, I think I can -- we can send that data to you separately.

Moderator: The next question is from the line of Sumit Kumar from JM Financial Institutional Securities.

Sumit Kumar: Congratulations on a great set of numbers as well as...

Moderator: Sorry to interrupt you, sir. May I request you to use the handset, please?

Sumit Kumar: Yes. So congratulations on a great set of num bers and also on conclusion of two marquee deals in the Mumbai market. My first question is on the land bank that the company has, which is sizable close to around 28 million square feet of, I think, development potential.

So in terms of BD, business development, how are you looking at it? How -- what is your target at least on an indicative basis for the next 2, 3 years? And as a follow -up to that, how much of the launches would come from the existing land bank monetization ? And how much would be from the newer projects started?

Abhishek Kapoor: So for the next year, as we have published, we are looking at launching about 1 4 million square foot from within the current land bank, as you know that we've sold out about 7.35 million square foot last year. So the velocity at which we are selling, we need to replace our inventories. So our

target will be to maintain our 40 -plus mil lion square foot of land bank at any point in time.
So therefore, there is a big gap in terms of acquisition now given that we are launching so much as well as we have sold the kind of sales that we have already done. So therefore, our goal will be to minimum maintain 40 million square foot. But at any poin t in time, our target is that from

a date of deployment, we take the product to market within 9 to 12 months out er limit, right? So that we're not sitting on any investment. It's just a ma

tter of plan sanction and launching the project at any point in time. So in that sense -- and that's point number one. Point number two, in terms of -- I think you asked about geographies, isn't it?
Sumit Kumar: No. I mean what will be coming from the existing land bank of 28 and how much do you intend to add?
Abhishek Kapoor: So 14 million square foot will come from current land bank and whatever we add this year. So I think somewhere we have mentioned in the I CP that we have already paid INR300 crores of land advances, and we are expecting closure of some of these projects in next, say, you can assume within next one quarter, say, 90 days time frame. And as those get closed, our endeavour will be as much as possible, we can bring some of these projects to the market within the same financial year.
So we're not able to give a guidance right now on what we'll be able to bring to the market. Obviously, there is an internal target, and there is a bunch of stuff that is going on. But our goal will be to definitely bring in more inventory to the market so that we can continue to grow at a rapid pace and we are able to get the market growth rate. So to answer your question, 14 million secured, and it will be definitely about 14 million what we take to market .
Sumit Kumar: Sure. And in Mumbai, is it that you're only looking at redevelopment or in the newer markets like Thane and near the airport new airport area, we'll be looking at outright land acquisitions as well?
Abhishek Kapoor: We're looking at outright as well, JDA as well, both in Thane and the Navi Mumbai as in Panvel area because we see that also as a growth sector over time, but we are looking at good options.
Moderator: The next question is from the line of Shivang Joshi from Centrum PMS.
Shivang Joshi: Firstly, I want to understand, when I look at the presentation on your debt slide, so your net debt has lightly gone up, and consequently, your NCD OCD amount has gone down. Can you throw some light on this? And continuing to your borrowing costs, as highl ighted in your cash flows, net interest cost has gone up on an average of INR80 crores to INR 100 crores .
Neeraj Gautam: So if you're absolutely right, few of the NCD amount which we have been reporting as in NCD issued to the IFC and NCD issu ed to ASK hasn't come down because we have NCD repaid to them. And in slide number 14, we have given the detail about INR410 crores we have repaid to them, and we have repaid to them with a project which already launched, we have raised the money at a very competitive cost.
And from there, the growth investment has been there. So that is the reason of these 2 NCDs going out of our debt slide and now the while we repay them it's not that debt has gone up. So for the quarter, if you compare the beginning to previous quarter, debt has gone up by INR519 crores. The end use also, we have given on slide 14 , about INR410 crores is going towards

repayment of IFC and ASK. And we also invested about more than INR300 crores as advances in the acquiring new land parcels. So part of the loan has gone towards in funding those advances and part of the money was used from different accruals. I hope I 've given the answer of all your questions. If there is anything more, I can answer it
Shivang Joshi: So okay. So largely, you've refinanced your N CDs through your interest bearing debt …
Neeraj Gautam: Those NCDs are equity in nature and thereby, there are a certain amount of IRR could have gone from the projected cash flows. However, paying them back then is actually in a sense reducing the implicit cost of capital. Today the borrowings are at bank rates and thereby the overall cost which is otherwise would have continued, which is not going to increase. And added to the bottom line.
Shivang Joshi: Okay. So the payout of interest of INR 200 crores is

essentially of that nature and you see...
Neeraj Gautam: Yes. However, the return, which otherwise I would have given to IFC or ASK that will not go. That is even much more than the interest which may otherwise going to pay to the bank.

Shivang Joshi: Got it, because for the first time, we saw such interest payout .
Abhishek Kapoor: Abhishek here. We have great tailwinds and create volumes and velocity that is happening right now. So we want to take advantage of the cash flow coming in and making sure that we are able to bring as much value to the bottom line and to the value creation for the shareholders as possible. And therefore, it makes so much sense to say that what -- why don't you reduce your cost of capital and take it to the bottom line and pay this off so that's the basic thesis.
I mean, the demand has been fantastic when we started. The cash flow has been fantastic and you're saying, why not impact the money taken for ASK, I think, should be over before December in this account because everything is sold out over there pretty much, it's selling pretty fast and the construction is happening to complete the project. Si milarly, we'll have the other products which IFC invested in, we are expecting the surpluses coming in there and starting to repay pretty quickly on the money that we go down and then the cost to go. So in the businesses sense, it's fantastic.
Shivang Joshi: Okay. Great. Second, when -- on your launch pipeline, when you had 30 million square feet, 7 million is the phases that you would be opening and this would be from your land bank. So optically, should we expect -- I mean, last year, you closed at how much 9 million square feet of launches?
Abhishek Kapoor: We opened 7 million square foot of inventory for sale last year out of 13 -odd million that we got for sanction, 10 million square foot, we opened about 7 million square foot.
Shivang Joshi: And this year, what you have mentioned in your slide 22, launched pipeline, 7.28 million square feet. What is the status of approval of these projects are these already at advanced stage of

approvals? And should we see a large part of or all of them coming in this year itself? Some -- something that you can highlight there?
Abhishek Kapoor: Absolutely. So I think a lot of momentum you will see starting from the end of second quarter and possibly make most of it -- a lot of it will come in the third and fourth quarter because they are all in approval stage. And as I mentioned earlier, our targ et will be to make sure that the goal will be that we make sure that we open higher than what we have opened in the last year. So while we have opened 7 million, we'd like to beat that. But this is what we have done here we give you visibility of what we already have in hand, which we have complete clarity on that this is definitely coming. Having said that, I mean, we will possibly and all likelihood add some more projects to it in next two quarters.
Shivang Joshi: Okay. Finally, on your cash flows when I look at the closing cash and cash balance is INR931 crores, could you give a broad spread between how much will be in escrow, which you cannot transfer to the other -- I mean, which has to be retained at the project level and how much would be free cash... ?
Neeraj Gautam: About INR500 crore s money is lying into different project escrow accounts, RERA accounts, etcetera, subject to submitting our certificate , withdrawal, etcetera. And about INR400 crores are the fixed deposits, money which we have raised or taken some loans and then money yet to be deployed , money for land purpose, that is money lying in the form of fixed deposits with the bank s.
Shivang Joshi: If I may continue on a follow -up question on that. On the deployment please, the Mumbai...
Moderator: Sorry to interrupt you, sir. I request you to come back for a follow -up que

stion. The next question
is from the line of Abhisekh from Yes Securities. Please go ahead.
Abhisekh : My only question is that I just want to understand the structure of HDFC platform. So how -- I mean, what are the responsibilities? How equity would be infused, I mean, INR 1,150 crores of total platform. So what could be our share in that? And how cash flow would be distributed?
Neeraj Gautam: First and foremost, I would like to update you the HDFC NCDs are zero coupon NDCs, zero coupon bond. So there is no interest servicing for those NDCs. And this money, they will be investing -- the NDCs will be issued by the Provident Housing Limited, 100% owned subsidiary of Puravankara Limited or subsidiary of Provident Housing Limited. In the first tranche, Provident Housing Limited will be using NCDs of INR550 crores. And those NCDs will be zero coupon bond.
That is the structure . And the money will be utilized out of the entire facility of INR1,150 crores. We will be investing about INR350 -odd crores in existing projects, the remaining money will be going to acquiring new land parcels. And service will happen to this NCD by saving 7 percentage of cash flow surplus from the projects, and there is no fixed obligation.

Abhisekh : Understood, sir. And sir, another part is when we are adding up to -- when we are transferring our projects, right, which already we have , so are we going to get something out of that or that is a part of structure only?
Neeraj Gautam: We are not transferring any of our assets. Those assets are there where they are. In Puravankara Limited, assets are there and Provident Housing, assets are there. The money which we are utilizing towards unlocking those assets, either land parcel on exist ing projects and the surplus of these projects will go towards servicing the debt. Our plan is that service or repay -- fully repaid this NDCs from the existing project itself. And new projects which we're going to acquire from the investment will be a digital assets for the company.
Abhisekh : So grossly, what kind of cash flow or the percentage of cash flow will be diverted to us in general?
Neeraj Gautam: There's no fixed capital that will be diverted to them. If these projects, which are part of the platform, there will be escrow mechanism and basis the business plan, if there is any surplus left in the month, then out of that surplus, certain percentage wi ll go towards servicing of the NCD . In a manner, that NCD will decide fully the actual repayment of NCD , also NCD gets a great return.
Abhishek Kapoor: So if you look at it, Abhishek, I'll just add to this. So total from within the existing projects where the capital is getting deployed, which Neeraj was talking about, we are looking at about INR2,600 -plus crores of surplus. Now that INR2,600 -plus crores of surplus will be more than sufficient not just to repay HDFC , give their return, but leave surplus for us.
Other than that, what this will do is it will add further, we are estimating about INR1,900 -plus crores of surplus for us on the new investments. So with this, our ability to scale Provident Housing and almost develop 21 million square foot, which is what we are targeting from this platform , will be possible and adding significant value to the business and the organization.
Moderator: The next question is from the line of Ranodeep Sen from MAS Capital . Please go ahead.
Ranodeep Sen : Congratulations on a great set of numbers for FY'24. My question is at a strategy level, like how we have a sub -brand provident under Puravankara? Is there a pool of thought for having another sub-brand...
Moderator: Sorry to interrupt you, sir. May I request you to use the handset, please?
Ranodeep Sen : My question was on the strategy level, like how we have a sub -brand in the affordable housing space, which is Provident . Is there a sc

hool of thought of having an ultra -luxury brand, given the premiumization theme in India is picking up loud and clear, and we've seen success stories of some of the listed players? Some of the great projects that they have launched and it's s old like in record days. So is there a thought on those lines?

Abhishek Kapoor: See, as a strategy, I'm sure you're aware that Puravankara is clearly the luxury brand. And from the way we present or we will present the product, as far as ultra -luxury is concerned, it will be obviously a much higher -- many notches higher and, therefor e, the whole approach and model that we are looking at is different. But to answer the question, will we look at a new brand? We don't need to look at a new brand because Puravankara itself is known for luxury homes, so -- and the kind of quality and the product that we bring on the table. I'll give you an example.
For example, all of these development projects that we have won and a bunch of them, which is currently we are closely engaging with, all of these customers are already living in these ultra - luxury homes, right? And of course, the project is being develope d long back, and they may go into redevelopment. But having said that, they all come from very wealthy positions. And they have visited our projects, and they have said, we think your quality and your brand is fantastic and it's brilliant. So we don't need another brand.
I think brand over the last 50 years has gained so much respect in the marketplace. I mean, if you go out there and we see this every day, especially in the Mumbai and Pune market, which is relatively people say it's a new market, but then every time I'm o ut there talking to people and the team is out there, we realize that the brand has a phenomenal recognition in that market. So we don't need another brand as a strategy. What we will do clearly is take the product several notches up and be extremely comp etitive in the kind of products we bring in the market.
Ranodeep Sen : Sure. A connected question on similar lines. Our average realization seems to have kind of stabilized very nicely around that INR7,900 mark. With our foray into Mumbai and with the luxury brand that you spoke about, do you see it tracking the INR10,000 mark in the next coming year?
Abhishek Kapoor: Look, I definitely see -- if you just look at Pura vankara in isolation, without Purva Land and Provident, our average realization is already above INR 10,000 per square foot, INR10,229.
Provident Housing is at INR7,800 and Purva Land is at INR5,444. Now see, what's happening

is now if you look at Purva Land, like last quarter, we had launched a project in Chennai, where our average realization was INR3,000 per square foot. That dragged down the overall average realization.
But are we making money at INR3,000? Of course, we are making money on INR3,000, right? But your average is smaller. But if you break this down -- we've already crossed INR10,000 in Puravankara. And I can tell you for sure that once we -- and which we are already in Mumbai, we will definitely -- average realization s will go up, and Puravankara average realization will relatively go up much higher. That's clearly going to happen.
Ranodeep Sen : Sure. So , and my last question, I think great set of numbers in terms of the sales value, not almost touching INR6,000 crores. And I understand, as per Ind AS, the realizations will happen at the time of delivery. So tentatively, can you give me a sense when do we see the peak EPS that we've seen in 2012, 2014 levels of around INR6, INR6.5? When do we see that coming back?

Abhishek Kapoor: Yeah. I think the journey is between next -- I would say, between next 3 to 4 years' timeframe. But you will start seeing green shoots possibly in the early third year from now. So ,

I would say,
this is '24 -'25, '25 -'26, so '27 -'28, we will start seeing the green shoots. Because, see, the thing is that you are expanding so rapidly and your -- these sales have happened in the past, which you are delivering now, and that is causing -- as per the accounting standard, what we slightly said, the way it is looking on paper.
But as you start to deliver more and more projects and newer projects and the pace of delivery starts catching up with the pace of sales . Closer, if you'd ever catch up , obviously, because you will continue to grow. But it starts becoming better and better. You will see better and better gross profits, and therefore -- and some of these older investments will start making capital. Like, for example, a large amount of G&A may have been spent in the Western region. But you've added or you will continue to add significant top and bottom line to the business in the next 9 to 12 months' time frame. So , I think, I would say, the answer is, I would say, third year and fourth year will be significant. You will start seeing green shoots possibly in the 24 to 28 months.
Moderator: The next question is from the line of Rishikesh from RoboCapital.
Rishikesh: So, my question is with regards to the launches for FY '25 that we have mentioned around 14, 15 msf could you please also mention what's the value of the launches that you are going to do?
Abhishek Kapoor: So, we are looking at a total top line -- estimated top line is about INR7,443 crores, presales value, and you're looking at a surplus from these projects of about INR2,696 crores.
Rishikesh: Okay. And we have delivered around 2,6 14 units for FY '2 4 as per our PPT. How many units could we target to deliver in FY '25 and '26?
Abhishek Kapoor: Look, I mean, last quarter itself, we delivered about 1,188 units, and we have received OC for total of 4.57msft for the year and 2.26 msft which is pending to be recognized, is about 1,7 14 units, right? Out of 3,600 units for which we have already received the OC, we have handed over 1,700. We will be handing over at least 1,700 from the OC, which is already received.
Our target for the year is about 4,000 approximately between 3,500 to 4,000 units because what may also happen, as it happened last year, is when you get the OC to the time over here, the customer, really, to take possession sometimes there is a worry. But our target will be to deliver, like we delivered last year, about 2,200 -plus units to 2,600 -plus units. In the next year, our target will be to deliver anywhere between 3,500 to 4,000 units.
Rishikesh: Okay. And would it be fair to say that, likewise are reported, on a reported basis, our revenue growth would also be upwards of 50% for FY '25?
Abhishek Kapoor: If you do the math, clearly, from 2,600 units, it will go up to 4,000. Obviously, you will see the international growth. As far as the revenue recognition is concerned, we'll have to just see the

mix of inventory, whether it will be exactly proportion with that. Because, obviously, there will be a certain amount of land and a certain amount of plotted development is also capable to get developed and get delivered. So we have to just look at the realization and come back to you with a specific answer. But having sa id that, I think, yes, we can expect that revenue growth will be impacted.
Rishikesh: Okay. And lastly, on a reported basis, again, then what would be our sustainable EBITDA margins?
Abhishek Kapoor: Look, EBITDA margin, as I mentioned earlier, is also factoring into my marketing costs and my

G&A for expansion. I will leave that disclaimer on the table because a business that is growing very rapidly, we will have to make investments ahead of getting th e return on the investment in terms of GDP and surpluses, where that G&A is concerned.
As far as marketing is concerned,

clearly, we are extremely aggressive in the marketplace. And with the quantum of presales that we will look at, as it goes up, we'll definitely look at increasing cost, which will clearly get booked as expenses. So to that extent, leaving that disclaimer, I would think that our target is pretty much intact. In fact, if I look at the project -level EBITDA margin, they're absolutely intact .
But what's happening at the corporate level is that when you put back gross margin and then you put in your marketing cost of new launches that have increased sales and you look at your G&A, and that's where it starts to look different. So that is what ear lier conversation was as to when do you see the books reflecting really the kind of value we are creating in the organization. And I think the brand will start seeing that reflecting on paper, I would say, the third and fourth years quite steadily and the n possibly grow pretty rapidly.
Moderator: The next question is from the line of Sushil Jaiswal from Bajaj Capital.
Sushil Jaiswal : Based on the existing growing sales and good collection, what is your going -forward trajectory? Do you think that it will sustain the same in the next couple of quarters, too?
Neeraj Gautam: If you look at -- if you're asking about the overall, we fixed some market ye s, we believe that taking in sustained. That market is good and demand is well there in -- well, and it will sustain.
Abhishek Kapoor: See, I think what may happen is that we have pulled a lot of launches in the last quarter in the last year. We may see some of our launches to lower to the second, third and the fourth quarter.
We will see a lot more presale , I would think, in the second, third and fourth quarter. A lot of it will happen in the third and fourth quarter, specifically.
So in the first 2 quarters, I think we have plan sizes. We are waiting for -- they are all in advanced stages, but elections are around the corner. Elections are ongoing across the country, then there are some state elections happening. So keeping those in m ind, you may see some of these launches come in the third and fourth quarter. So I mean, keeping that disclaimer in mind, I think everything else is on track. I would see a lot more presales in the third and the fourth quarter.

Sushil Jaiswal : Okay. And my second question is, so as the real estate sector has begun to rise, so do you think this scenario is in every part of the country or just some specific parts? Also, a majority of the business comes from southern part and some from western side also. So do you have any plans to expand your presence in northern side like Delhi NCR region also?
Abhishek Kapoor: So look, we are seeing demand across the country and we see tailwinds and consolidation across the country, across the segments, which is a great advantage for a brand like Puravankara. To answer the second question, yes, we are looking at NCR. We are evalua ting opportunities. We have already started to put a team on ground.
And we will definitely look at -- I mean, our intent is clear that we will be a national player and we will rapidly expand in new geographies and that is obviously something which is maturing as we are already seeing. And enter to first while we do the acquisitions and look at new acquisitions in NCR , Gurgaon, Delhi to started . Our first endeavour will be to make sure that we get our launches in the western region . So this year, I think this financial year, western region will be a big one for us.
Moderator: The next question is from the line of Shivang Joshi from Centrum PMS.
Shivang Joshi: I wanted to understand what is your take on the amount to be spent on BD in FY '25 and '26, considering that you have got decent free cash and good collection run rate. And on the 2 Mumbai projects, what is the capital that would be different. So if you can quant

ify this in both the Lokhandwala and Pali Hill .
Abhishek Kapoor: So as far as, look, BD is concerned, as I mentioned earlier, we're not looking at a capital target, but we're looking at a replacement target . In the sense that we have already sold last year about 7.35 million square feet and this year, we are looking at launching another 14 million square feet. Clearly, we are looking at replacing that inventory and staying about 40 million square feet land bank at any point in time.
And the second thing that you asked about debt, our total cost to launch for these projects is about INR900 crores. And as I mentioned earlier, we will be looking at about INR650 crores land costs plus cost to launch will be about INR 650 crores. So these 2 projects, specifically, which you asked about. And as we mentioned earlier, between these 2 projects, we will be able to generate more than INR3,800 crores.
Shivang Joshi: Okay. Any specific number you have in mind or any strategies? What amount you will be putting

as a capital or the rest into your land banking, you'll have to start a fresh in the western region. Operations relatively, you have a higher land bank in the South versus the West.
Abhishek Kapoor: Look, as I mentioned, so one of the things which I mentioned in the previous call is that a market like Kochi, we are sitting with a significant surplus of about INR1,800 crores. What we are really looking at doing and, hence, you will see some amount of c apital churn and debt churn and is that we see at reallocating this capital into the Western region, which is Mumbai and Pune . And that is significant capital.

I mean even if I discount it and say that I will take out a certain amount of capital from this region and reallocate that capital in the Western region. Clearly, the number eventually is there, right? So I think we have enough and more within our portfoli o to look at in terms of equity to be able to deploy in the actual retail.
And as I mentioned, Mumbai in the past also, Mumbai is going to be a significant part of our portfolio. I mean, I've been saying this for a long time. We intend to get back to at least 40% to 50% of our value -wise square footage would be lesser. But value -wise, we'll definitely look at getting at least 40% to 50% of our presales from the Mumbai region. So we continue to deploy in that market.
Moderator: Thank you. The next question is from the line of Sourabh Gilda from Motilal Oswal Financial Services. Please go ahead.
Sourabh Gilda: Congrats on the good set of numbers. And most of my questions are answered, I just have 1 question on your trajectory for presales, doing it. I know you don't give exact guidance, but I just wanted to understand what sort of presales do you want to achieve? What sort of growth that you intend to achieve for at least for the next 2, 3 years?
Abhishek Kapoor: Look, I think I've mentioned this in the past. As we burn the guidance, you're already seeing what we give guidance on is the number of projects and strategies we've been able to bring to the market and have also indicated that we'll definitely try and win more than what we bought in the last year. Having said that, our goal is definitely to beat last year's number and to beat the average market growth rate.
So if we are assuming that somewhere in the mid -teens will be the market, we will definitely beat that growth rate in terms of our presale number. And our plan is to ensure that we are able to achieve that number.
To answer it in another format, we are definitely part of the consolidation in the sense that we are going to make sure that we gain a lot more market share in the process of this consolidation. What will be the extent of market share? I think that is yet to be seen. It's also a factor of how much supply we are able to bring into the market, which we are working on

an ongoing basis.
So we'll see where we land in the end of the year, but obviously, we're not looking at just growing at a market rate.
Moderator: Thank you. The next follow -up question is from the line of Deepak Purswani from Svan Investments . Please go ahead.
Deepak Purswani : Sir, firstly, on the launch pipeline, on the launches front, how much was the same contribution from the new launch projects in FY '24?
Abhishek Kapoor: In FY '24 from new launches, Let me come back to you with the exact data. I can share with you. We'll try and see if you can give it while you ask your next question. I'm sure you'll have

more. Otherwise, we'll contact you on the, at a later date. You can write to us and we'll respond to it, for sure .
Deepak Purswani : Sure. And sir , just hopping again on the interest expense . If I were to look on the cash flow statement point of view, our interest outflow was INR443 crores against a net debt of 215 0. Just wanted to understand, when we say repayment of the NCD of ASK and other investors, was there any premium component, which was late payment was made for that during this quarter? And if yes, then what will be the sustainable kind of intersections out flow, which we will be looking over the current deficit ?
Neeraj Gautam: So, these NCDs have been paid at agreed IRR. There's no additional premium. However, whatever IRR was agreed to the investment, that IRR, it has been paid. And the second question, while repaying these NCDs of IFC and ASK, we have taken the debt at competitive rates. So, to that extent, interest will go up by servicing those debts.
However, what, in the beginning of the conversation, Mr. Abhishek mentioned about it, these

are both the debts for ASK as well as the IFC investment which we have returned, repayment
which we have given from the existing project, which project is doing ver y good. And we are
estimating that from the project cash flow itself can be used for repayment mechanism,
substantial amount of debt will be repaid in this financial year itself.
Abhishek Kapoor: Plus, there are surplus from the next phase of the project. Significant surplus in that project. I mean significant surplus in the project which Neeraj is talking about
Deepak Purswani : Okay. But from the cash flow perspective, I mean, from the next year versus what would be the interest outlook we'll be looking?
Neeraj Gautam: INR3,000 crores IRR at 11.5% is the average cost of this.
Deepak Purswani : Okay. So roughly INR350-odd crores, 350, or INR360-odd crores?
Abhishek Kapoor: INR 350-odd crores as well as we're not adding more debt to …
Neeraj Gautam: To our existing houses .
Abhishek Kapoor: Yes. Correct. Okay.
Neeraj Gautam: We also have over INR900 crores repayment in next 12 months.
Abhishek Kapoor: Does that answer your question?
Deepak Purswani : Yes.
Moderator: Thank you. The next follow -up question is from the line of Abhis hekh from Yes Securities .
Please go ahead.

Abhishek: Sir, just one question. We have invested roughly upwards of INR750 crores towards land in last 2 quarters. So basically, we are taking care of BD. So how much more capital is -- are we allocating towards BD? Or how we are going to -- how much of BD we are targeting to maintain the growth, which we have seen in last 1 years , 2 years. So that is one. And secondly, with that growth, how we are going to maintain the balance between growth and debt?
Abhishek Kapoor: So let me break this down for you in 2 parts. One is -- as I mentioned earlier, our growth -- we are always going to go towards outperforming t he market and gain market share. And we are expanding in new geographies to ensure that our portfolio is diversified, wider and deeper. Now having said that, as I mentioned earlier, we want to first get to make sure

that whatever our
original land bank, which is expected to be about 40 million square foot , is secured back in our book.
We want to maintain at least that much land bank at any point in time. And the target is that we are able to move efficiently to scale launches and do their launches within 90 to 10 months .
Because we don't want to sit on any assets, you don't want to buy and wait, we will buy and deploy and launch.
So between these 2 things, the fact is that we have about INR 11,500 crores of surplus within the accruals -- within the business, internal accruals. At this point in time, from projects which are already launched and from the project which we launched in the current financial year, we would like to assume it's going to take a 4 years' time frame.
Now as that capital comes in and we are reallocating that. So we can't necessarily wait for that capital to come in. We will, say, for example, Kochi, I mentioned on earlier on the same call, we have got significant surplus. I would estimate it would be about INR 1,800 crores is surplus sitting in cost and for not even including line end profit.
So what we want to say is that and obviously, that means that to bridge that unit draw some money against that and take some cash out from there and put that money in Mumbai because we believe that you'll be able to pay a lot more value in Mumbai. So in that sense, first priority will be to create growth from rebalancing and reall ocating capital within regions. That is priority number one.
Priority number two for us is to look at opportunities where we can raise equity. So for example, we are working towards now we are evaluating the next area. The first is almost deployed. The money is starting to enhance the next quarter, in fact to return becaus e the project is still launched. So look at AIF as an opportunity.
Third, you will go and create another platform, where like in asset return platform and trade - level platform where we will look at deploying capital. Other than, for example, the first priority is we take money out of the region include in the new region. So this will be a constant term of capital to create a growth opportunity that ensure that your lead is robust and you are able to

plan not for this year, but for the next year and the year after. Because whatever we do this year

will have an impact on the next year and then the next year, right?
So that's how we're looking at the business. And look, as I mentioned earlier also, that we are very comfortable with debt numbers on a per square basis being under about 1,000 in square meter. So we will keep these parameters in mind. And the other factor that we must first for in our operating surplus.
Now last year, if you see, net oper ating surplus was more than INR500 crores, INR 513 crores. Obviously, like Neeraj mentioned earlier, we have paid out abo ut INR300 crores of land advance. So the target will be to stay focused on cash flows within collections, continue to spend money on your operations, value operation s aggressively and efficiently.
And with that, you create, So for example, if you look at total operating, not net operatin g but operating surplus was INR 1,298 crores. So what I'm trying to say here is that between internal approvals, reallocation of capital, AIF equity platform, you will be able to manage the entire BD that you are working towards. Special requirement for the BD.
Neeraj Gautam: And to just get to it in the first question, when you asked about the HDFC structure, there, INR750 crores is committed for BD only. It's part of the structure.
Abhishek: Thanks, that's all from my side. And best of luck.
Moderator: Thank you. Ladies and gentlemen, we'll take this as the last question. I would now like to hand the conference over to the management for closing comments.
Abhishek Kapoor: Thank you, ladie

s and gentlemen, for joining our call. I hope we have been able to answer all your questions. Me and my colleagues are available if you have any further questions. You write to us, and we'll answer your questions.
Moderator: Thank you. On behalf of Axis Capital Limited, that concludes this conference. Thank you for joining us, and you may now disconnect your lines. Thank you.

"Puravankara Limited Q1 FY '25 Earnings Conference Call"
August 01 , 2024

MANAGEMENT : MR. ABHISHEK KAPOOR – EXECUTIVE DIRECTOR , GROUP
CHIEF EXECUTIVE OFFICER AND CHIEF FINANCIAL
OFFICER - PURAVANKARA LIMITED
MR. NEERAJ GAUTAM – PRESIDENT FINANCE -
PURAVANKARA LIMITED
MR. VISHNU MOORTHI H. – SENIOR VICE PRESIDENT ,
RISK & CONTROLS - PURAVANKARA LIMITED
MODERATOR : MR. SUMIT KUMAR – JM FINANCIAL INSTITUTIONAL
SECURITIES

Moderator: Ladies and gentlemen, good day, and welcome to the Puravankara Limited Q1 FY '25 Earnings Conference Call, hosted by JM Financial. As a reminder, all the participants' lines will be in the listen -only mode . And there will be an opportunity for you to ask questions after the presentation concludes.

Should you need assistance during the conference call, please signal an operator by pressing "*" then "0" on your touchtone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Sumit Kumar from JM Financial. Thank you and over to you, Mr. Kumar.

Sumit Kumar: Hi. Good evening , everyone. On behalf of JM Financial Institutional Securities, I would like to welcome all of you to the Puravankara Limited 1Q FY '25 post -earnings conference call.

From the Management we have with us today Mr. Abhishek Kapoor – Executive Director, Group Chief Executive Officer and Chief Financial Officer; Mr. Neeraj Gautam – President (Finance); and Mr. Vishnu Moorthi H. – Senior Vice President (Risk & Controls).

I would now like to hand over the call to the Management for their Opening Remarks . Over to you, sir, and thank you.

Neeraj Gautam: Thank you, Sumit. Good evening, ladies and gentlemen. Thank you for joining the company's earning conference call to discuss the performance of the 1st Quarter of Financial Year 2 025. The results and a comprehensive presentation are available on the stock exchanges. We hope that you have had a chance to review the same.

Now, let's begin with the macroeconomic industry outlook :

The Indian real estate sector is quite far robust group in FY '25, driven by the country's strong economic performance and the rising demand across the residential, commercial, and industrial segments. The IMF has revised India's GDP forecast to 7% from 6. 8% for FY '25. Increased urbanization, infrastructure development, and several government policies are boosting homebuyers ' confidence. The residential sector is witnessing a continued surge in demand. And Puravankara is expected to experience sustained growth in line with the sector supported by the conducive economic environment involving consumer preference.

Moving into the company's Operational Highlights :

In Q1 FY '25, our sales were Rs. 1,128 crores, while collections were at Rs. 965 crores, representing a growth of 39% year -on-year, indicating an improvement in our operating efficiency. The average realization witnessed a growth of 6% year -on-year to Rs. 8,746 per square feet for the quarter. Our sales across projects were led by Puravankara with Rs. 585 crores , Provident followed by closely at Rs. 449 crores, and Purva Land contributed Rs. 95 crores. The sales values at Puravankara Land were lower due to no new launches during the quarter, while Purva maintained its sustained sales velocity with 12% higher realization and sales at Provident grew by 109% from year-to-year consistent sales in ongoing projects and new launch projects, Provident Botanico.

Now , coming to geographical contributions :

Bengaluru sales was 54%, followed by Chennai at 17%, Mumbai and Pune at 14%, and Kochi at 10%. Our launch pipeline is robust with approximately 12.7 million of new projects from the land bank, while Mumbai and Pune together constitute 47% of the planned visits, marking our strategic expansion into West India.

On the business development front :

The company deployed Rs. 762 crores for land acquisitions in MMR, Goa and Bengaluru. This includes a 12.77 -acre land parcel in Thane, with an estimated potential development area of 2.8 million square feet. This acquisition further solidified our commitment to MMR's sustainable and dynamic real estate market. Additionally, we acquired 7.26 acres of land in Basavanagudi , Bengaluru. We have al so secured the land owner's share in two existing projects, 0.17 million square feet in Adora De, Goa; and 0.26 million square feet in Botanico.

Coming to our debt management :

Our net debt increased from Rs. 2,151 crores in Q4 FY '24 to Rs. 2,237 crores in Q1 FY '25. Our net debt to equity ratio at the end of the quarter was 1.17%. Our cash and bank balances increased to Rs. 1,044 crores as on 30 June 2024, which indicates the strong liquidity profile ensuring stability and operational continuity. We have consistently focused on reducing our debt per square foot of our under -construction area, which stood at 912 per square foot, ensuring the effective optimization of financial r esources in our projects.

As of 30 June 2024, our cost of debt stood at 11.64%. Despite a slight increase due to higher rates in land loans, we are continuously working on maintaining our average cost of debt down.

We have delivered 929 units with an area of 1.16 million square feet i n Q1 FY '25, when compared to 446 units with 0.49 million square feet in Q1 FY '24, which has more than doubled, demonstrating our operational progress.

Finally, turning to our Financial Performance :

In Q1 FY '25, our total revenue grew by 101% year -on-year basis to Rs. 676 crores. Our EBITDA for the quarter was Rs. 148 crores with 22% EBITDA margin. PAT for Q1 FY '25 was Rs. 15 crores, which compared to Rs. 17 crores los s in the Q1 of previous financial year.

In conclusion, Q1 FY '25 has seen a sustained financial performance with a strong collection. We are expanding our footprint with new projects across India, delivering exceptional value to our customers, and fostering long -term shareholder value.

Thank you for listening, and we welcome your questions you may have. Thank you.

Moderator: Thank you very much. We will now begin the question -and-answer session. The first question is from the line of Deepak Purswani from S van Investments. Please go ahead.

Deepak Purswani: Sir, firstly, I wanted to check it out. Recently we got approval from the Board of Directors for Rs. 1,000 crores odd QIP. Just wanted to understand the utilization of these funds, whether th ese would be utilized primarily for debt reduction, specifically land debt to the extent of Rs. 745 crores ? Or this would be for the additional land acquisition for the business development we may look it up in future ? If you can throw some light on that part.

Neeraj Gautam: Our Board has approved us to raise the funds for QIP to an extent of Rs. 1,000 crores . At the same time s hareholders have also approved it. We are currently evaluating all our options to raise capital including the QIP . And as and when we will take a decision about it, we will let you know.

Abhishek Kapoor: I will just add here that typically, generally in the industry what happens is , QIP capital is generally allocated between debt reduction, new acquisition and operations to unlock the existing land bank or whatever people may have . Generally the trend is that . And obviously when the organization decides to go ahead with the proposal, we can then update on the specifics of the matter , but at this point in time I think it is early to answer that question.

Deepak Purswani: And secondly sir, in the presentation we have also mentioned regarding Keppel Puravankara Development Private Limited, we have mentioned that we have already repaid the investment. If you can give some background about this investment and what has been the recent development, that would be really helpful.

Abhishek Kapoor: This transaction, I mean this was repaid long back.

Neeraj Gautam: Yes. See, we are currently a very big company, a joint venture company with Keppel Land, where Puravankara Limited is holding 49% share and Keppel is holding 51%. Under that company, we developed three, four projects, and currently we are

not developing any projects in that company,
that's the status.

Abhishek Kapoor: The Keppel Land was given in exit or return of capital , and closure of that entity or that partnership happened in FY '23 - '24, if I am not wrong.

Deepak Purswani: And thirdly sir, with regards to our interest expenses part, if I am looking into the P&L part of it, that is roughly Rs. 119 crores, which is implying average cost of borrowing to the extent of 14.5%. While I do understand there is a cash and non -cash component, but if you can give some sense in terms of what is the convertibility structure in the overall debt component at t he current juncture.

Abhishek Kapoor: Sir, could you repeat your question please?

Deepak Purswani: So, in terms of the interest expenses, in Q1 FY '25, our interest expenses in the P&L is Rs. 119 crores, showing a debt of Rs. 3,280 crores, which is implying an average cost of borrowing of 14.5%, right ?

Abhishek Kapoor: But if you look at our debt slide, Rs. 3,200 crores is our debt which is serviceable where we are paying interest month on month. Besides that, we have also Rs. 417 crores debentures, which we have issued to HDFC Care , and about Rs. 162 crores investment by Purva Investment in our projects. These two instruments, though I am not servicing any interest, however, under the IndAS

accounting I have to do a fair value accounting for the implicit interest cost for these two instruments . And thereby my interest which is charged to P&L includes the interest cost or the fair value cost attributable to these two instruments also, and that is where the difference is.
Deepak Purswani: And how much was the amount for that?
Abhishek Kapoor: So, this, the security amount is Rs. 417 crores and Rs. 162 crores . The exact amount I will separately connect offline and tell you how much is the amount we have accounted for, related to these two investments.
Deepak Purswani: And thirdly, on the launch pipeline, just wanted to check it out on slide number 19 . We have given the details about the Lokhandwala and Thane launch. On Lokhandwala, we have given the area of 0.6 million square feet and for Thane it is 2.8 million square feet. Firstly, on the Lokhandwala site, 0.6 million square feet is a pre -saleable area and other component , or this is the entire project area.
Abhishek Kapoor: So, both are sa leable areas and not RERA carpet , because we are reporting in the sellable area across the board, which is normally the practice. So, both are s aleable areas, free for sale.
Deepak Purswani: And sir, would we be looking to launch the entire project at one go for both, for the Lokhandwala and Thane?
Abhishek Kapoor: Look, as far as Lokhandwala is concerned, it will be in two phases , and Thane also is likely to be in two phases. Depending on the response , but most likely both of them will be in two phases. Sometimes the response is so high that then we decide to accelerate and complete it faster. The plan is in two phases for both the projects.
Deepak Purswani: And sir, continuing on the launch pipeline, I mean, if I were to look at another project, Clermont Tower C, which we were looking to launch in Q2 FY '25. This time in the presentation, it is not there. Just wanted to get a sense on that Chembur project.
Abhishek Kapoor: No, it is there. It is basically at the bottom. If you see, there is a line mentioned new phase launches in existing projects, which says 4.56 million. This is on Slide #19, right, which is then totaling up to 17.25 million square feet. So, if you see there, we have actually captured all those launches there.
Deepak Purswani: And this is on track to get launched in Q2 FY '25?
Abhishek Kapoor: Yes.
Deepak Purswani: And just final question from my end. If you can give a sense in terms of the industry or demand environment at the current juncture, e

specially in the context of marginal price hike we have seen in the industry, especially in the micro market in Bangalore and MMR region. How has been the absorption trend in the last six months or so after the price hike?
Abhishek Kapoor: So, from the market point of view, today the struggle for all of us is really to keep up with the demand, and that is the challenge. Like in the 1st Quarter we have largely sold out of subscribers

projects. We have not had a new launch. But on a much -increased price, we have still maintained the velocity as well as the value of the business that we have done. So, overall, demand continues to be robust. And we expect, and if you see it on the ground , I think it's more a challenge for us, also the industry in general, to bring in the suppl y to catch up with the demand. Specifically in the example of the markets we spoke about, Bangalore, in fact, Mumbai , if you look at Pune, if you look at Chennai, in all of these markets currently I think the issue is much more related to how much supply you can get, specifically definitely in Bangalore.
Moderator: Thank you. The next question is from the line of Akshada from Vivog Commercial Limited. Please go ahead. Akshada , your line is unmuted.
Akshada D.: So, I just wanted to have a general guideline for the company, what expectations or what guidance would the management like to give us for this year, FY '25, in either units or what kind of launches that are expected or collections, anything would be helpful.
Neeraj Gautam: Sure. So, overall, the company is expecting to launch 17 million square foot, including phases of the launch projects. New launches to the extent of 12.7 million square foot is expected, and 4.56 million square foot of the existing launch projects, the new phases wi ll be opened up for launch, a total of 17.25 million. If you look at the distribution, we will see about 9.3 million square foot is in Puravankara and about 3.28 million square foot in Provident , and there is a small project called the Bougainvill a in Purva Land. Currently, this is where the pipeline is. Of course, this year, substantial launch of about 3 million square foot is expected in terms of sanctions , in phases obviously, in the Western region , which was our commitment in terms of what we were looking at in terms of new launches and adding to the business . And we are obviously already seeing increased contribution for the Western region in the business. So , we are expecting these launches to go to the market.
Akshada D.: And do you expect the per square feet realization to keep a positive momentum throughout the year? Are we expecting to maintain the growth that we got this quarter?

Neeraj Gautam: See, the per square foot average realization is a mix of inventory that we sell. So, in certain projects, for example, especially Purva Land where the average realization may be as low as Rs. 3,000, Rs. 3,200 a square foot, would drag your average realization down. So, if you see, for example, in June quarter, our plotted development average realization is Rs. 4,360, whereas Puravankara is at Rs. 11,000, say approximately Rs. 11,500, Rs. 11,464, and Provident is at Rs. 8,000. But the average realization is only Rs. 8,746. So , it's more a mix of inventory that derives the average realization . But let me come to what we expect in terms of overall how we are looking at it. So, this year, with Mumbai MMR coming into play, definitely it will have some impact on our average realizations , average contribution increases. That is one. And second is , the new launches that are coming will also have a certain impact on our average realization. But if you look project -wise, I would expect under the tenant, we would look at, my expectation is, the industry will look at an average of about 9% in terms of ave rage growth.

Now, of course, project -to-project, market -to-market it would be different. And depending on the micro -market and the state of the project, it differs. Like, for example, in the last year we have seen average realization go up from 11%, 12%, up to 27% in certain markets, where we have seen significant demand, shortage in supply, and the product is positioned in a certain manner by the company. So, that's the general direction that we would expect to see. Of course, project -to-project would be different this year, depending on the state and completion of the project.

Moderator: Thank you very much . The next question is from the line of Abhishek from YES Securities. Please go ahead.

Abhishek : Sir, basically my question is around debt. We always said that the debt per square foot, we aspirationally look at Rs. 1,000 per square foot and we are comfortable with that. From last two quarters we are seeing there is a bit of increase in that. And by the end of Q1 we are at Rs. 912. And even our gross debt is increasing. So, how do we see that? And secondly, with the kind of debt we are right now and the cash, why we are not reducing the debt? That's a second question , because we also have a QIP ahead.

Abhishek Kapoor: Thanks, Abhishek, for the question. So, if you see the trend, in March of '22 we were at about Rs. 1,248 per square foot on debt; in March of '23, at Rs. 1,106; March of '24 we were at Rs. 874; and June of '24 we are at Rs. 912. And you are right in that observation. So, we are very much under the comfort level. At the same time, I must mention that our average realization is also going up. Having said that, the way we look at debt, and if you look at the debt profile and the debt breakup on where the debt has gone up and how it has gone up , to the extent net debt has gone up to the extent of Rs. 86 crores. Now, if you see that movement, CAPEX towards commercial is about Rs. 47 crores. This is #27. So, if you see CAPEX towards commercial of the Rs. 86 crores incremental net debt has gone towards CAPEX . And we have also deployed, as Neeraj mentioned earlier on, Rs. 760 crores in new acquisitions. Now, so that clearly indicates, and you have today, you are sitting with a thousand plus crores of net cash in hand?

Neeraj Gautam: Yes, cash and cash equivalents.

Abhishek Kapoor: So, if you look at the overall scenario, our collections is approximately ranging between Rs. 900 to 1000 crores currently at this current run rate, not including the new launches that we are looking at doing. So, if you look at the overall scenario and the deployment of capital, the company is really, really focusing on replenishing its land banks and scaling our business in terms of creating further land, which will then go into the pipeline for launches, which is geared towards growth of the business.

So, our focus is to maintain debt at similar levels in terms of per square foot number, keep it under Rs. 1,000 , and continue to scale the business so much that then it becomes an irrelevant conversation. And that strategy will continue to play out. So, but if you see the liquidity in the system and if you see the deployment, which is most important, I mean, today, Rs. 762 crores, we have added more than 4 million square foot between Mumbai and Bangalore and Goa. And you see that the value is getting creat ed in that.

So, repaying debt versus creating value, there is a significant gap and upside, in terms of margins and churning the capital and return on capital employed. So, we are very comfortable with the current number, and we would like to aggressively grow the business while we keep it at a similar number.

Moderator: Thank you. The next question will be from the line of Deepak Purswani from S van Investments. Please go ahead.

Deepak Purswani: Just wante

d to, I mean, harp on it again, specifically considering the Q1 sales and the launch pipeline, over the broader timeframe what would be the pre -sales run rate we would look at over the medium -term?

Abhishek Kapoor: So, again, I must mention here, we do not give guidance. But what I can share with you is our performance for the last three years. And of course, what you are looking at in terms of our acquisition plan in the launch pipeline. So, if you see the launch trend of the last three years, we have launched last year about 10 million square foot, and it started three years back with about 2 - odd million square foot of launch per year. That launch trend has resulted into last year selling about 7.36 million square foot approximately . And our intention is to continue to push the new launches. So, for example , this year we are looking at a new launch pipeline instead of a 14 million projection last year, on overall basis of which we opened about 10 million square foot . So, we opened about 8 million square foot. This year with 17 million launch pipeline, we are expecting to continue that momentum, and of course, with an increased number.

So, our goal will be to continue to push our new launches from existing land bank, which will help us unlock our existing equity as well as profit . And add to that new acquisitions and new launches, which will also help us to bring more momentum in terms of the pre -sale number. So, our goal will be to continue that push. So, if you just look at the CAGR of units sold in the last three years has been about 48%, and if you look at our CAGR for volume, it's been 45%, in value it's been about 57%. This is on Slide 8, this has been our past track record.

Deepak Purswani: So, in that context, Abhishek, if you can also throw some light in terms of the approvals for most of the projects, especially in the context, because of the election in between are all the approval processes are on track during this year or should we expect there can be some kind of slight delay in terms of the project launches?

Abhishek Kapoor: See, the general elections are over, now the state elections are there , so you know how it works during the state elections . And your observation is right , our target would be, our goal would be to try and meet the annual target, which is what we have set for ourselves in terms of launches. A quarter here, a quarter there could be because of the planned sanctions, maybe you would miss it by a month, not much a nd then it would spill over into the next quarter. But our endeavor is to ensure t hat we take these projects to the market on time.

Deepak Purswani: And then moving to the collection and construction cost during this quarter, how was that trend? And how should we see it, I mean , if you can give the numbers for this quarter ? And also , how should we look into it, collection and construction outflow during this year?

Neeraj Gautam: We have collected Rs. 965 crores during the last quarter, and if you look at the trend, it is in Slide 15 of our presentation, we are slightly down from immediately this quarter. However, if I compare to the quarter a year ago, we have substantially grown in terms of collection as well. That is the trend. As far as the construction outflow is concerned, last quarter we have incurred or paid Rs. 247 crores on contractor cost and Rs. 65 crores on cost of raw material. So, if we total that, abou t Rs. 300 crores plus we have spent on purely in construction cost on our projects. And then the construction projects are switching in our project and this trend will continue.

Neeraj Gautam: Of course, it will go up as different projects will reach different phases and new launches get added.

Abhishek Kapoor: Pretty much in line. I mean, if you look at , your quarterly expenditure of Rs. 300 crores towards operations, your coll

ection is about Rs. 900 crores, which is typically one -third of your collection s.

So, it's pretty much stacks up in that sense, because collections are directly linked also to progress of construction and invoicing that we do.

Deepak Purswani: So, most of the sales which we did last year, to the extent of 35% to 40% collection would flow in this year. Would that be the correct assumption?

Abhishek Kapoor: See, in the first year, typically, of the launch, from the date of the launch, you would land up collecting anywhere between 30% to 40% of the total sale value, which you have done in a particular project. And then the balance comes over the next three yea rs, typically. So, I mean, depending on the timing of the launch and the type of launch. Now, for example, Purva Land would be slightly different and you would get much better collections within the 12 months of the launch. But if you look at Provident and Puravankara, that would be the general trend. So, we would expect the overall collections to continue to be robust.

Moderator: Thank you. The next question is from the line of Tushar Wankhede from JM Financials. Please go ahead.

Tushar Wankhede: Sir, my question is, any guidance on your EBITDA margins? And will the new projects in Mumbai will bring in higher margins?

Abhishek Kapoor: See, our current EBITDA margins which we are holding up for last, I guess, couple of years have been at around 22%. Largely, it has been on account of 22% and 23% FY '24, right?

Neeraj Gautam: FY '23 was 31%. FY '22, it was 46%. And FY '24, 23%. And this last quarter, it was 22%.

Abhishek Kapoor: Yes. So, generally, if you see , the EBITDA margin do take a hit because of some amount of marketing cost of new launches and ongoing projects hit the EBITDA . While old projects which you are giving handing over of , some portion of those marketing costs also hit the bottom line. So, unfortunately, as per the accounting standard s, the new launches marketing costs, and expansion overheads, for example, our expansion in Mumbai, now we have set up an office in NCR, will be hitting our bottom lin e today. So, on paper you will see a squeeze on the numbers. But as delivery picks up more and more and starts catching up with our sales number and gets closer and closer,

those numbers will evolve and change. They will get closer to our target number, which is at about 30% of EBITDA. So, on paper, I think it will take us some time to get close to that number.
If you look at margins, typically we expect in Provident between 27% and 32% margin; in Puravankara, between 30% and 35%; Purva Land in excess of 35%. Coming to Mumbai, if you look at our margins, see Mumbai redevelopment, it depends on what kind of project. An outright project will be very similar in most of the countries, where you will see in excess of a 30% EBITDA margin. But if you look at JDA, it would be somewhere around 15% margin, which will be a net of interest, because the interest will be lower, because land cost is muc h lower , it's an asset -light model.
In Mumbai, if you look at redevelopment projects, because you are not paying the entire land cost upfront, but most of the cost evolved , is paid over the life of the project in terms of other than the initial cost, and the rent that you pay over the life of the project, the biggest cost is the cost of sanction. Now, that cost of sanction also is paid over time. So, that margin typically lies between a JDA margin and an outright margin. And that's how we look at the margins in the Mumbai redevelopment marke t.
Now, if you look at the absolute number, clearly the Mumbai per square foot margin will be much higher, because just the values are very different. And hence, it adds on an absolute value on the per square foot number that we will see as margins coming in, and on an absolute basis. On an overal

l basis, I think both our average realization definitely will go up in terms of Mumbai projects getting added to the rest of the country.
Moderator: Thank you very much. The next question is from the line of Chintan Mehta from Puniska Family Office. Please go ahead.
Chintan Mehta: Sir, on Slide #23, you mentioned about pending to be recognized number of units and area. If you can throw out a group, this is specific to '24 and '25, so if you can throw on entire group level, what is to be pending to be recognized unit or revenue is pending?
Neeraj Gautam: This slide only includes the pending to be recognized inventory out of the recent OC we have received . However, we can give you the complete detail of all the projects put together, what is our pending to be recognized unit and inventory, I can give you the information offline.
Chintan Mehta: Okay, sure. And sir, we have aspiration to be a national level player, so what's the new geography we are looking in ? What will be the rough timeline for that?
Abhishek Kapoor: So, our focus is, of course, Bangalore, Chennai, Hyderabad, Mumbai, Pune, and we are adding NCR to it. NCR, we just put the team on the ground, so we are hopeful that in the next financial year. We need to track very carefully, it's a new market, it takes some time to acquire and do the right acquisitions from the brand and strategy point of view, and also to be careful in markets, especially in NCR. So, we want to be cautious, and our strategy is to enter with the asset -light model there . So, we are hoping that in the next financial year we will see some results there. Other than that, on the other markets we already see launches, we already have ongoing projects. So, the

rest of it is already there, the only large market that we have been missing out on is on NCR, and we are hoping to see some direction coming in by the next financial year end.
Chintan Mehta: Sure sir. The last question from my side, you always mention a slide which is cash flow potential from the Group . I think this slide, this time is missing. So, if you could add that, that would be great the next time in con -call or presentation.
Abhishek Kapoor: Sorry, you broke up in between, you said cash , some slide which was there earlier?
Chintan Mehta: Cash flow potential.
Abhishek Kapoor: Cash flow potential, no, it's there.
Neeraj Gautam: It's not there .
Abhishek Kapoor: We can share those details offline, Chintan.
Chintan Mehta: Okay. Sure, sir. And just a suggestion from my side, on to the current construction project, if you mention the completed construction percentage, that would be great and helpful to us.
Abhishek Kapoor: Yes, sure. The feedback is noted . In the under -construction projects, we can give that details going forward.

Chintan Mehta: Thank you so much, sir. All the best.
Moderator: Thank you. The next question will be from the line of Jinen Dharamshi from GGD Consultants. Please go ahead.
Jinen Dharamshi : Sir, what we are anticipating in the market going is in next big 14 cities, you are currently present in almost four or five of it. Do we have a strategy to be penetrating in all 14 of those cities?
Neeraj Gautam: Sorry, we could not get you clearly, fully, because there's too much background disturbance. Is it possible to repeat the question, please?
Jinen Dharamshi : So, top 14 cities in India are having lot of potential, what we have read. And you are present in almost five of them. Are you having a strategy to be present in all fourteen of them?
Abhishek Kapoor : Okay, so as a business, it takes time to understand the local environment and build a business in a new city. Over the last 49 years of business that we have done, today we are in 9 cities, which is Bangalore, Hyderabad, Chennai, Kochi, Coimbatore. Mangalore is one market we do not want to be in , we will p

ossibly get out of it. Mumbai, Pune and Goa, and now, Hyderabad also. The only other market we want to enter at this point in time is NCR. And I think this is enough for us to really scale our business.
Because see, if you look at the business, we have the entire spectrum of product that says residential from plotted, which starts at Rs. 3,000, to the top end of the business which will go possibly at over Rs. 100,000 per square foot eventually. So, if you have the whole range, and you

have these cities, our goal will be first to go deeper, and work on the market share for these cities before we look at any other city. And as I said, it's taken us time, and it does take time to understand the local dynamics, do the acquisition, and then get it to launch, complete a certain project, and showcase your delivery capability in each of these markets. So , at this point in time, we will stay limited to the current cities that we spoke about. And at a later and appropriate time, we will evaluate a ny other cities that we may look at. But right now, we see enough potential to just focus on these cities and the business we are in.
Moderator: Thank you. Thank you. Ladies and gentlemen, as there are no further questions from the participants, I now hand the conference over to the management for closing comments.
Neeraj Gautam: Thank you, everybody, for joining our conference call, and I hope me and my team has been able to answer all your questions. We both of us are available offline. If you have any further questions, please write to us. We will provide answers to the extent possible. Thank you.
Abhishek Kapoor: Thank you, everybody.
Moderator: On behalf of JM Financial, that concludes this conference. Thank you for joining us . And you may now disconnect your lines.

Call: Nov 2024

“Puravankara Limited
Q2 FY '25 Results Conference Call ”
November 08, 2024

MANAGEMENT : MR. ASHISH PURAVANKARA – MANAGING DIRECTOR – PURAVANKARA LIMITED
MR. ABHISHEK KAPOOR – EXECUTIVE DIRECTOR , GROUP CHIEF EXECUTIVE OFFICER AND CHIEF FINANCIAL OFFICER – PURAVANKARA LIMITED
MR. NEERAJ GAUTAM – PRESIDENT (FINANCE) – PURAVANKARA LIMITED
MR. VISHNU MOORTHI – SENIOR VICE PRESIDENT (RISK AND CONTROL) – PURAVANKARA LIMITED

MODERATOR : MR. HARSH PATHAK – EMKAY GLOBAL FINANCIAL SERVICES

Moderator: Ladies and gentlemen, welcome to the Q2 FY '25 Results Conference Call of Puravankara Limited, hosted by Emkay Global Financial Services. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions at the end of today's presentation. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that thi s conference is being recorded.

I would now like to hand the conference over to Mr. Harsh Pathak from Emkay Global Financial Services. Thank you, and over to you, sir.

Harsh Pathak : Thanks, Sagar . Good evening, everyone. I would like to welcome the management and thank them for this opportunity. We have with us today Mr. Ashish Puravankara, Managing Director; Mr. Abhishek Kapoor, Executive Director, Group Chief Executive Officer and Chief Financia l Officer; Mr. Neeraj Gautam, President, Finance; and Mr. Vishnu Moorthi , Senior Vice President, Risk and Controls. I shall now hand over the call to the management for the opening remarks. Over to you, gentlemen.

Neeraj Gautam : Thank you, Harsh . Good evening, ladies and gentlemen. Thank you for joining the Company's Earnings Conference Call to discuss the performance of the second quarter and first half of financial year 2025. The results and the comprehensive presentation are available on the stock exchanges. We hope that you have had a chance to review the same.

Now let me first start by giving the macroeconomic and industry outlook. The Indian Real Estate sector continued to experience a robust demand, with Tier 1 cities witnessing the sturdy demand, while Tier 2 cities are emerging as a new investment destinatio n. FY '25 is poised for the robust growth driven by the country ’s strong economic performance, rising demand across business, commercial and industrial segments, increased urbanization, infrastructure development and favourable government policies are boo sting homebuyers' confidence.

Now moving to the operational highlights for the quarter. In Q2 FY '25, our sales were INR1,331 crores, while sales volume was 1.53 million square feet. Customer collections for Q2 increased by 18% year -on-year and for H1 by 27% year -on-year, indicating im proving operating efficiencies.

It is important to note that collections have increased significantly, growing from around INR350 crores per quarter in FY 2022 to our current quarterly run rate of INR1,000 crores approx . The average realization was 9% higher year -on-year to INR8,697 per square feet because of the mix of inventory, while Puravankara and Provident saw increase of 17% and 15% year -on-year, respectively.

Our sales across projects were led by Puravankara Limited with INR612 crores, Provident Housing at INR628 crores and Purva Land contributed INR90 crores. Puravankara maintained its sales velocity with 17% higher realization. At Provident, sales realization have risen by 15% with new launches planned in H2 FY '25, we anticipate growth in sales. While Pura Land , the sales value was lower due to no new launches during the quarter. The geographical contribution

for the first half was Bangalore share of 56%, followed by Chennai at 18%, Mumbai and Pune at 11% and Kochi at 11%.

On the delivery front, in Q2 FY '25, we have given possession of 591 units, and the area of 0.77 million square feet. In H1 FY '25, we have given possession of 1,520 units with area of 1.92 million square feet for the Puravankara Group. Our launch pipeline for the company is robust, with approximately 12.2 7 million square feet of new planned projects and 3.44 million square feet for new trade launch totalling to 15.7 million square feet. With Mumbai and Pune together constitutes 49% of the planned

projects, marking our st rategic expansion into the West India.

On the business development front, the company acquired the redevelopment rights of a prestigious society, Miami Apartments at Breach Candy in Mumbai, spread across 2,000 square meters of land. This marks our entry into Uber luxury South Mumbai market where rates are estimated in the range of INR125,000 to INR140,000 p er square feet of carpet area.

The company expanded its footprint in the Lokhandwala, Andheri West. Adding a new cluster of societies with the potential of GDV of INR700 crores to its existing redevelopment projects, bringing to the total land area in the region to around 4.3 acres with a combined GDV of INR2,350 crores for the project.

The company also signed a J DA for 1.95 acre land parcel at the prime location in Electronic City Market in Bangalore. The land parcel is adjacent to Purva Western project and will be saleable

area of 2.6 lakh square feet with a potential GDV of INR250 crores.
Coming to our debt management. Our net debt stands at INR2,430 crores as on September 30, 2024, with the net debt -to-equity ratio at 1.29. Our cash and cash balance was INR939 crores as on 30th September 2024, which indicates the strong liquidity profile, ensuring stabil ity and operational capability.
We have consistently focused on reducing the debt per square foot of our under construction area, which stood at INR928 per square feet, ensuring the effective optimization of financial resources in our project. It is important to note that debt per square feet under construction area has reduced by 26% to INR928 per square feet as of September 2024 from INR1,248 per square foot as of 31st March 2022 . Our cost of debt stood at 11. 62% as of 30th September 2024.
Now let me highlight our financial performance. In Q2 FY '25, our total revenue grew by 36% year-on-year to INR520 crores, and revenue for H1 FY '25 grew by 67% year -on-year basis to INR1,195 crores. Our EBITDA margin stood at 28% for Q2 FY '25 and 24% for H1 FY '25. We had a net loss of INR19.88 crores for the quarter and INR5 crores for H1 FY '25.
Also, we want to highlight that a total of around INR945 crores has been invested in land, with a potential gross development of value of INR9,700 crores from 5.8 million square feet of new acquisitions . This showcase our robust pipeline of new business being added to the company's future growth.

In conclusion, Q2 FY '25 has seen sustained financial performance with a strong collection. We are expanding our footprint with new projects across India, delivering exceptional value to our customers and forcing long -term shareholders value. Thank you for listening.
And now we can open the floor for the questions and answer session. Thank you.
Moderator: Thank you very much. We will now begin the question and answer session. The first question comes from Deepak Purswani from SVAN Investments .
Deepak Purswani : Good evening, sir. And thank you for the opportunity. First, sir, I wanted to get a sense what was the GDV of the project which was launched in H1 FY '25? We had launched two projects, Bayscape and Botanic o. And what are the contribution of new launches in the total presales of 2,500 in H1 FY '25?
Abhishek Kapoor : Okay. So just to clarify, Bayscape was actually launched towards the end of the quarter, we just got the plan sanctioned. And the total launch contribution in the first half of the year has been INR148 crores, approximately. It's been the new launch contribution, versus last year, where the new launch contribution was INR700 crores.
The GDV for Bayscape and for the other project -- Botanico in fact was launched in the previous year, end of -- in the March quarter last year. So Botanico was not launched in this year. So total GDV for Bayscape that has been launched is about INR480 crores.
Deepak Purswani :

Okay. And just on the launch pipeline front, in the presentation, we have mentioned we are planning to launch inventory of 1 2.7 million square feet in H2 FY '25. So first question is, what would be the GDV of this launch inventory in H2? And secondly, at what stage are we in terms of approval stage?
And have we got any approval out of these at the current juncture? And are we RERA ready at any project at the current level? And just continuing on that, how many of them are currently ready to launch? And how has been the response to this festive season during October, if there is any new launches?
Abhishek Kapoor : Right. So for the new launches, our expectation is in the current quarter and the next quarter, we will launch - the GDV of the launch pipeline is approximately INR13,600 crores, of which we are expecting to totally open for sale approximately INR8,000 crores. And what we are expecting is the sustenance sales plus this launch pipeline of INR8,000 crores which we will open for sales will contribute for the rest of the two quarters in terms of the sales numbers.
As far as the status of these projects is concerned, all of them are at a very advanced stage of either plan sanction or under RERA. And we are expecting that because we have not taken any of these projects to market so far. However, our understanding is that because majority of these projects are actually in Bangalore and Mumbai and one in Pune, we are expecting -- and of course, in Kochi, we are expecting good response on these projects because of the location of these projects and the way these project s have been designed.

So as I said, of the 8,000 square foot, we can do the -- we can do our own assumptions on what

we would expect to sell in the last two quarters. From RERA readiness, obviously, once we have the plan sanction, we go into RERA and then take it to launch. But our target is to push these projects into the market between this quarter and the next quarter.
And most of the -- actually, the delay has happened on account of almost a quarter that got lost off during the election process. So the plan sanction across the country was kind of deferred in that sense. So that's been the challenge.
Deepak Purswani : Okay. And then finally, I just wanted to understand the broader management thoughts towards the strategic direction on the debt to equity. And coming more from the point of view a few years back, we had a net debt equity less than 0.9x and absolute net deb t less than INR2,000 crores. And today, we are at 1.3x with an absolute debt of IN R 2,500 crores.
While I do understand our debt per square feet has reduced below INR1,000 crores because of the business development equity. But just wanted to get this -- and even on the absolute debt front, what would be the peak level of debt we would be looking at? And what will the peak level of net debt to equity, that is a cap whic h management is thinking at the current juncture?
Abhishek Kapoor : Look, as far as debt is concerned, you're right. And when we talk about debt per square foot , we could we talk about a lot of acquired land, but of land which is under development. So I'd just like to add that this is debt which is getting serviced from ongoing projects and not from the land which has been purchased. That is one.
Second is from the point of view of debt, the way we look at the debt -- and we've had this conversation in the past. And our goal -- ideal goal is to keep it sub -one. Obviously, temporarily, it may go up and down because it's a way of business. There are multiple action points that we take -- undertake to bring the debt down because that's a constant process. But our goal will be to maintain similar absolute number of debt over a period of time. And eventually, because we can't compromise growth at this p oint in time.
However, over the next 2 to 3 y

ears, we would anticipate that we'll reach a stage where this debt number will become irrelevant for our conversation because we believe that more and more collections will come in, more and more cash in hand will happen beca use larger number of projects will be on the floor and the sales volume will go up. So therefore, over a period of time, our goal obviously always will be to keep that under ratio under 1.
Having said that, at net debt level, at some point in time, in next 3 years, we would expect to bring it down further in terms of the net debt level. So the goal is that once we have reached a certain level of growth, then we'll focus only on bringing the net debt down towards 0. In fact, that would be our goal over the next 3 to 4 years' time period.
Having said that, the debt will always remain in the book. But the cash collections will improve. Cash in hand will improve given the quantum of business that will be going on and therefore, that picture would look different.
Deepak Purswani : Thank you. Thanks a lot, and wish you all the best.

Moderator: Thank you. The next question comes from Krishna Shah from Ashika Stock Broking .
Krishna Shah : Yes. So wanted to understand the consumer mix that we are having. How many of them are the end users and how many are investors at this point?
Abhishek Kapoor : Look, from our point of view, all of them are end users because we don't do any bulk sale, any multiple unit sales. These are all customers who are buying homes, either upgrading or first time.
In fact, the Provident Housing is largely around first homebuy ers. Puravankara has a mix of first home and a mix of upgrades. Generally, that's what happens in Puravankara. Purva Land is an investment product in that sense, if you want to look at it, where people eventually -- they're investing in li ne with an objective to building their homes.
We haven't seen much of resale happening from the Purva Land perspective at this point in time.
So most -- I would say more than 90% of our business is coming through end user, and they are all availing some kind of loan to transact with us.
Krishna Shah : Got it. So what will that percentage in terms of like, let's say, X percent of homebuyers are taking home loans? If you would have that?
Abhishek Kapoor : From the data. But I mean, we don't have it handy because it has changed a lot. But post -COVID, we had a period where more than -- in fact, 40% of customers who are paying from their own contribution because there were a lot of savings that customers have done. And that number slowly has gone back towards more and more people going towards loan.
So I would -- and I would hazard a guess, but we can give you a specific number. My hazard a guess is -- and don't hold me to it -- would be approximately 65% to 75% of our customers are currently taking loans.
Krishna Shah : Okay. Got it. So one last question. Do you -- are you seeing any pricing pressure in any of the markets that -- or micro markets that we are in?

Abhishek Kapoor : No impact. If you see, at least as a brand in our case, as Neeraj mentioned in opening remarks, we have seen last year to this year, price appreciation in sustenance projects of between 15% to 17% between Purva and Provident. And also, what we have seen is that with the increased prices, our sustenance projects, sales have gone up by about 14%. So on an overall basis, as far as Puravankara and Provident or Purva and Provident and Purva Land as a brand is concerned, we are not seeing that as a challenge.
Moderator: Thank you. The next question comes from Anoushka Roy from Trade Brains .
Anoushka Roy : So first question I would want to ask is why did we see a weak quarter this time? And if you could give a guidance for the upcoming quarters in terms of revenue and EBITDA?
Abhishek Kapoor : Look, when you're saying weak quarter, are

you referring to sales numbers or you're referring to revenue numbers? Because revenues have gone up significantly.
Anoushka Roy : I'm referring to the sales number.

Abhishek Kapoor : Yes. So as I mentioned earlier, we have not had any launches. So last year, during the first two quarters, we had INR700 crores worth of new launch sales that had happened. In this year, that number is down to INR148 crores of sales from new launches. So majority of our sales has come through sustenance projects. And this lack of new launches is where we have kind of -- however, I must admit and mention here that the price has gone up and even then, we have seen in creased velocity of sales.
The focus really, I think, for the team -- and this has largely happened on account of deferment of these launches and mostly on account of administration being busy almost for a quarter on account of elections, etcetera ., and some of those disruptions. Having said that, I think we are all, as an organization, focused on now doing -- getting these launches done in this quarter and the next quarter.
So we'd like to believe, as I mentioned earlier, we'll open about INR8,000 plus crores of inventory for new launch in this quarter and the next quarter, in fact, majority being in the last quarter because of these delays that have happened on the approval side, which was beyond companies, in fact, the entire industry has seen this, and I'm sure you might have heard this across the board.
And that's why the inventory levels across the board are also pretty down. Because at least in the markets that we are present in, we have seen some of these challenges come through. So we are expecting the INR8,000 crores of new launch for opening for scale, and we are quite optimistic with the performance expected by the end of the fourth quarter. And of course, sustenance projects will continue to perform.
Anoushka Roy : Okay. And all right. So recently -- I had one more question. Recently, you had -- like with the redevelopment of certain projects, you have entered into the Western India. So I just wanted to ask, are there any other expansion plans in the H2 of FY '25 and FY '26, specifically in the Tier 2 cities or northern region of the country?
Abhishek Kapoor : Look, as an investor concern, our redevelopment strategy is very focused on Mumbai and only Mumbai. And we have acquired -- and we are intending, in fact, we have acquired three significant redevelopment projects in very prime locations of Mumbai in the We stern region, in Lokhandwala, in Pali Hill, Bandra and in Breach Candy . In fact, in this -- in the coming two quarters, we are anticipating we should take Thane and Lokhandwala to market, that's our target before 31st March.
And as far as entry into Tier 2 and Northern region is concerned, we are definitely keen on NCR as a market, but we are very cautious, and we are now putting a team on ground to understand and look at acquisitions. So it's a longer journey. But Tier 2 citi es, we have no program at this point in time. As well as Purva and Provident is concerned, not currently because we want to really narrow down and focus on the larger markets, which contribute almost 80% to 85% of the business across the country so that w e can get more market share in these markets.
And those are basically Bangalore, Chennai, Hyderabad, Mumbai, Pune and NCR, as and when we start scaling up there. But in other cities, it can be opportunistic where we are already present,

which is Kochi, Coimbatore, Goa. We will continue to be opportunistic in these markets. But focus will continue to be between Pune, Mumbai, Bangalore, Chennai, Hyderabad and NCR.
Moderator: Thank you. The next question comes from Chintan Mehta from Punishka Family Office .
Chintan Mehta : I want to know some things

about commercial project. You mentioned looking for INR400-500
crores of rental income. If you can throw light on the project and time -wise contribution of it?
Abhishek Kapoor : So currently, we have about a total of 3 mi llion square foot which is plan approved , of which we are expecting to complete about 2.2 million square foot, 2.3 million square foot in the next financial year. From the 2.3 million square foot which will be completed in the next financial year, we are expecting rental income of about INR150 crores. The balance will come in the following financial year once we complete the balance phase of tho se projects.
For the larger portfolio, our -- the target is, of course, to get the rental income over the next 5 years of INR500 crores. The targets coming from the fact that we're looking at a robust acquisition pipeline of projects, where we are working on more city center projects. And as and when we complete these acquisitions, we would like to share it with you. But the tar get and the strategy there is to look at city center prime location projects, where we will expect more and more capital appreciation over a pe riod of time.
Chintan Mehta : So sir, in 5 years, we are looking for INR500 crores, correct, sir?
Abhishek Kapoor : Yes. So in the next year, we would expect by next year, financial year, March, we should get to INR150 crores. The year after, we should get to about INR200 crores by the end of the year. Or 6 months later, I would say possibly by October 2026 is what we are expecting. So that will get us to the year after next to about INR200 crores.
And then there will obviously be a gap because the new acquisitions that we will complete in next 6 to 12 month time frame will take us about 3 years to bring it too. So the next phase of rental income coming in will then -- will be about another 2.5 years or to 3 years away. So over a 4 to 5 years' timeframe, we will expect this -- to achieve this.
Chintan Mehta : Sure, sir. And sir, do you have any other land or more space specific to the Aerocity commercial project?
Abhishek Kapoor : So we are currently working on, as I said, on more land parcels between Bangalore and Pune and Mumbai at this point in time. And Chennai, in fact. But we will make those announcements once we complete those acquisitions.
Chintan Mehta : Sure, sir. And sir, we are searching for any other opportunity like data center or logistics park to monetize our land bank or we are looking for only residential and commercial?
Abhishek Kapoor : No, we are absolutely clearly focused on residential. Our residential portfolio cuts across INR30 lakh a unit to now INR35 crores to INR50 crores a unit. We are very focused on that. And secondly, our absolute clear focus is on commercial office. Ancillary retail will always be there with office and residential development but these are the 2 asset classes currently we are really

focused on. I think we have a fair distance away from evaluating any other asset class at this point in time.
Chintan Mehta : Sure, sir. And sir, any update I think or something thrown light on Starworth for our precast facility? And do you have any plan to monetize it?
Abhishek Kapoor : I think we are investing in the business at this point in time to strengthen the business. And I think once we reach an optimal scale where we believe that it can create significant value for the organization, we will evaluate it. But currently, I think re ally, the team is focusing on building the business. So it's too early to have any discussion on any of these.
Moderator: The next question comes from Deepak Purswani from SVAN Investments .
Deepak Purswani : Yes. Sir, just wanted to check it out. In terms of the total presales of INR2,500 crores plus in H1 FY '25, what has been our embedded margin in this presales, embedded EBITDA margin?
Abhishek Kapoor : I th

ink I have mentioned this in the past, that our project level margins range from anywhere between -- on the JDA side as low as 16%, 17% to as high as 35% to 40% for Purva Land. So that's the range of margin. But if you look at an average, we would land up at about a 30% margin between -- EBITDA margin bet ween 28% and 32% on an average.
That's the range that we normally land up with because of the mix of both the JDA , outright and the kind of projects that we are selling, whether it's Purva , Provident or Purva Land. So that's the general range with which we operate, and that's the general margin that you can assume in industry sales numbers.
Deepak Purswani : Okay. And if you can also throw some light specifically on the Mumbai region, how should we look into the embedded margin in the project like Thane as well as the redevelopment project, which we have back recently in Lokhandwala as well as Pali Hill ?
Abhishek Kapoor : So if you were to look at Thane, EBITDA margin would be about 30%. If you look at the redevelopment project, the EBITDA margin will be anywhere between 23%, 24%. And I think it also -- because we believe that Mumbai as a market is a very stabilized market. And the markets in which we have done these acquisitions have -- do not have that quality of supply that we have brought into the market. Fo r example, if you see Pali Hill , this is a 2.5 -acre project. There is no 2.5 -acre land available i n Pali Hill .

If you look at Lokhandwala, the entire redevelopment space that is there, we are doing a cluster development. In that location, technically, there are only 3 developments, in fact, only 1 other development. And in that particular location, only 1 developme nt, which is other than us. So in that sense and the kind of development we are doing, we believe that positions us uniquely. So the advantage with Mumbai and, of course, Miami, and I should mention that this is right next to Breach Candy and the kind of location you have is, again, very, very significant. It's overlooking Breach Candy and then directly to the sea.
What we are seeing increasingly is the demand coming in from the society residents itself in advance. I mean, we are not taking bookings but we're getting messages and we're getting a

request to inform at the time of launch. And of course, from generally in the market, the feedback for u s has been very, very positive.
So we would expect Bombay to contribute significantly, and you would expect this -- these kind of margins to be available to us between 22%, 24% for a redevelopment project, and in Thane, about 30% EBITDA.
Deepak Purswani : Okay. And when you say this -- specifically for the redevelopment margin of 23% to 24%, if you can also share what are the realizations, which are underwritten in these 2 projects? For the Pali Hill as well as for the Lokhandwala?
Abhishek Kapoor : So in Lokhandwala, you would expect anything between INR36,500 to INR45,000 a square foot. That would be the range of pricing depending on floor rise, PLC, etcetera. And for Pali Hill, we would expect an average realization of anywhere between INR105,000 to INR115,000 square foot.
Deepak Purswani : Okay. Got it. And secondly, I mean, if I want to look specifically at these big ticket size of project. Yes. Secondly, if I were to look into these big average ticket size of project for the redevelopment. Historically, our experience has been in the other markets where the ticket size has been up to INR2 crores or INR3 crores, whereas in this region, ticket size are significantly higher. So I mean, if you can throw some light, is there any change in the sales and marketing or business development efforts w hen we would like to sell these projects?
Abhishek Kapoor : So again, I think our busine ss is about location and demand -supply. If you look at Mumbai as a market and the location we hav

e picked up, Thane, for example, you mentioned, and then I'll come back to the redevelopment. There is no other plot on that main road at that kind of location. In Lokhandwala, there is only redevelopment opportunity.
And as I mentioned, there's only 1 other development in that area, which is coming up because there is nothing available in that market. Then you have to go to Versova, where you have only smaller developments, which are not more than INR75,000 to INR1 lakh. The layout we are developing will have a sales potential of almost 6 lakh square foot, which is significantly different, right?
So again, similarly, as I mentioned in Pali Hill. So here, in all of these projects, which are prime locations, Puravankara as a brand has got a great amount of traction. And we have -- it's not the first time, honestly, that Puravankara or Purva is doing business in Mumbai. In fact, the business was founded in Mumbai.
And Chairman and the founder started the business in Mumbai. And there is significant traction as far as the brand is concerned. We have demonstrated this in Chembur already. If you see Chembur itself, we command -- it's technically not Chembur, it's techn ically Deonar. But in that market for that location, we command the 15% to 20% premium for most of the developers in that market, right? So this is already demonstrated and delivered.
Now what we are doing is we are taking the kind of products that we -- and we have done projects, of course, very long back in Mumbai market. But having said that, I think the team that

is there today in the Western region is an extremely strong team, not to mention that the promoters are from Mumbai, and there's significant professional experience in the org anization in the Mumbai market.
We believe that -- and because of the brand and the reach that the team has already structured, we are seeing significant interest. So from sales and distribution, the distribution will clearly be channel partner focused.
And the sales is very unique in Puravankara in the way we approach, and we are transparent in terms of how we demonstrate our product. I mean, if you go to our Chembur sales gallery, we

have a construction museum, the kind of transparency and service stand ards we approach our customers with has created that brand reput ation already for us in Mumbai.
So we believe that going forward, with that kind of brand reputation, service and quality, which we bring on the table along with transparency and service standards will make a big difference in terms of our sales. Our focus will be -- of course, because w e are all over India, we have large AOP partners who work with us, who have signed AOP transactions with us for the year and have commitments. And we have a very strong network of local channel partners who are related with the brand as well as the team.
So I think we have significant presence over there, which is already demonstrated. And the increase in sales. If you see last year versus this year, the sales increase. What we did in the last full year, we've already done in the first 6 months of the year -- of the business in the first half of the year in the Western region. And that kind of growth, which has happened on account of the quality of work that the team is doing. So we are very, very confident and optimistic and excited about our new launches in Mumbai.
Deepak Purswani : Okay. And then moving to the HDFC platform deal. If you can please update us in terms of whether we have received the money on that platform and has this money been deployed so far and what has been the quantum so far deployed on that platform?
Abhishek Kapoor : So far, we have deployed INR417 crores. That has been deployed between 2 projects, and we are expecting to deploy another approximately INR300-plus crores very, very shortly. And we will -- once we deploy that capi

tal -- of the INR1,150, as soon as we deploy, we will make the required announcement, yes.
Deepak Purswani : So far, entire deployment has been on the existing land bank? Or it is from the new development as well?
Abhishek Kapoor : New acquisitions have happened. And of course, unlocking of some of the older land bank is also happening. So the deployment is a mix of these things.
Moderator: We have our next question from the line of Mr. Harsh Pathak from Emkay Global.
Harsh Pathak : Sir, I have a couple of questions. So sir, from a strategic point of view, we're also looking to scale up our presence in NCR, MMR - how should we evaluate our presence pan-India? Are we

looking to just strategically look at some projects in some smaller markets, or we are planning something big? How should we look at it?
Abhishek Kapoor : Look, the way to look at it is as a strategy, if you were to look at us, and I give a thought process, which is 1 -year, 3 -year, 5 -year thought process at this point in time. The strategy for us is to focus on these 5 or 6 geographies, which is Bangalore, H yderabad, Chennai, Mumbai, Pune, and in NCR, we are looking at Gurgaon and Delhi. So these are 6 locations we are focusing on. There is no other location other than the locations where we are already present, we have relationships and we h ave business going on.
Now coming back to what it means for us in West and NCR. NCR is going to be, as I mentioned in the past, that it will be an asset -light investment opportunity where we are looking for JDAs. We're not looking at large outright commitments, at least for next year to 2 years, and we are very, very -- we'd like to be a little conservative in our approach there from the market perspective, and very, very choosy in the kind of proj ects we want to look at in NCR.
And hence, every time we are asked a question on where do we think we will see any contribution coming in, we keep saying it will take anywhere between 12 to 24 months. Having said that, Mumbai, we have already invested, already announced, already acquired these projects, and that will be meaningfully higher going forward. Today, the team has already achieved a ce rtain level of scale in Mumbai.
So the team is now looking at -- or the company is also looking at Pune as an opportunity to scale up our presence in Pune in some of the geographies. And this is a constant process. So West, sooner, in fact, in this financial year, next financial year and the financial year after that, we'll see significant contribution coming in from Pune and Mumbai.
For the South, our strategy is because this is our forte, we are based out of it, we have a strength here. We will continue to take more and more -- make inroads into the market and take more and more market share. So the team here in the South is really t rying to take on more and more market share from across the bank between Purva Provident and Purva Land through strategic acquisitions.
And I think those results, we will start seeing on larger -- taking larger market share in the southern region over next 12 to 18 months' time frame, we'll start seeing as we make more announcement. I mean, you're already seeing -- we've made a few announc ements in Bangalore. I'm sure that we will make a few more. And then in Chennai. So we will continue. Hyderabad is one, which is slightly open and I think we will wait and watch till we come across the right

transaction there.
Harsh Pathak : Right. And this opportunistic projects like in Goa that we did. So how do we look at this kind of markets? We'll keep on evaluating such kind of projects or our major focus will remain on the major 5 markets that you highlighted?
Abhishek Kapoor : As I mentioned, like a Goa or a Kochi, Kochi is already we are very large or Coimbatore. These markets will be opportunistic because we have presence, becau

se we have relationships, because

we have built a team, we obviously want to continue to, and we are familiarized with these geographies and they have shown performance and meaningful profits for us.
We will continue to look at opportunities there but not like an opportunity -- because I would say, 80% our focus will be on these 4, 5 markets, 20% will be more opportunistic on the markets -- other markets, which we are present. That's how we are looking at it as a strategy. But 80% of our focus, big team, big deployment is happening in these 5 and 6 markets to really create scale because there is enough depth available. I mean, the way we look at it is -- of the 500 million square foot, which is increasing annually, about 50% of that bus iness happens in these markets. And if we can take more and more market share and it is -- I mean, whoever may say whatever, it is a geography center business, and you don't want to spread yourself too thin. At least that's our view at this point in time till we reach a certain stage of maturity where we say there is not enough opportunity now to scale in these markets, which I think is very far from us.
So I think with the organization design and bandwidth that we have created, I think we have enough headroom for the next 5 years to scale up our operations in these markets. So we'll continue to focus on that. But yes, I mean, will we leave Goa and go out? Answer is no. Our idea will be that the team we have, the system and the strength and presence we have and our ability to distribute across the country.
Because if you see Goa alone, since you asked on that, most of the sales are happening in other parts of the country and not necessarily in Goa. So we have a distribution capability. So we will continue to capitalize on distribution capability and intend t o have at least a project ongoing on most of the time.
Harsh Pathak : Understood. And I understand you gave a sense of NCR market, maybe it will take some more than 12 months to -- for something to materialize. But what are the updates there? How are we going for that market? Where are we seeing the potential? Because we understand it's a large market, there's Delhi, there's Gurgaon, and within Gurgaon also, there are many hot markets. So what's our strategy? How are you thinking to approach this market?
Abhishek Kapoor : So the way we are looking at it, for example, if you were to look at this, let's look, of course, Delhi as an opportunity. South Delhi is definitely an opportunity. In Gurgaon, we're very clear that we won't go on the Dwarka expressway. We want to be in Gu rgaon. We want to be on -- anywhere from Golf Course Road to extension and further on down this side before we reach Dwarka expressway because we believe that these are the markets where we will be able to, as a brand, would like to enter from.
In Noida, we are looking at it more opportunistically but ideally in Phase 2. Phase 1, our real focus is to do Gurgaon in any of these markets. And in Delhi, if possible, we'd like to focus on South Delhi to get some acquisitions going. Post that, we will look at Noida. Again, not something where you have to go to Yamuna expressway further away from the city but closer to the city in the main part of the city so that we come in with a strong product in a good location, and then we start expanding ourselves .

Harsh Pathak : Understood, sir. And sir, 1 final question. Any sense on the presales growth? Any target we have maybe on a 2, 3 year perspective, not in the near term but any 2, 3 year medium -term perspective, any CAGR growth that we are may be targeting? So that we may align our launch pipeline accordingly. So I'm just tryin g to understand from that front?
Abhishek Kapoor : See, if you see in last 4 years, our launch pipeline has

gone up from 3 million square foot to this
year, almost 17 million square foot, right? This has happened over 4 years. Our CAGR for the presales number over the last 3 to 4 years has been about -- in fact, 3 years has been 57%. But if you take the year before that, it would be in mid 30s or early 30s. I think for us, if the industry is growing at x, we have to grow at x plus y.

And for that, as you already heard from Neeraj, we have, in fact, deployed more than INR900 crores in the last 6 months towards new acquisition. And our goal will be to continue to scale up our operations in the segments that we have present in. And therefore, while we do not give guidance but our past performance can be reflective of what we intend to do in the future.
And I think there is an opportunity to scale. We do have a target land bank. Today, we are down to about 28 million square foot, of 28 million square foot we are taking about 13 million square foot to market in this year, which will leave us with only 15 million square foot. That net 15 million square foot, we would like to take it up to 45 million square foot. And the logic behind that is that we should have over the next 3 years' time frame, not today, not tomorrow but over 2, 3 years' time frame.
If you have to get to that number, obviously, the speed of launch is critical. But then the goal will be that if you're looking at 2 year inventory or land bank being in your hand, you're looking at about 22.5 million square foot of launch capability in the system of new launches. And for that, which is this year at about 12.7 million square foot, right, for the new phases. So I think that's the general direction I can give you in terms of the direction that the organization, the Board and the management, the promoters are looking at from the team to deliver.
Moderator: Thank you. As there are no further questions from the participants, I now hand the conference over to the management for closing comments.
Neeraj Gautam : Thank you, ladies and gentlemen, for joining our conference call. And I hope we have been able to answer all your questions. And if you have any further questions, please write to us. We are available to answer all the questions. Thank you very much.
Moderator: Thank you. On behalf of Emkay Global Financial Services, that concludes this conference.
Thank you for joining us. You may now disconnect your lines.

Call: Feb 2025

"Puravankara Limited
Q3 FY '25 Post Results Conference Call"
February 14, 2025

MANAGEMENT : M R. ASHISH PURAVANKARA -- MANAGING DIRECTOR – PURAVANKARA LIMITED
MR. ABHISHEK KAPOOR – EXECUTIVE DIRECTOR AND GROUP CHIEF EXECUTIVE OFFICER – PURAVANKARA LIMITED
MR. DEEPAK RASTOGI – GROUP CHIEF FINANCIAL OFFICER – PURAVANKARA LIMITED
MR. NEERAJ GAUTAM – DEPUTY CHIEF FINANCIAL OFFICER – PURAVANKARA LIMITED
MR. VISHNU MOORTHI – SENIOR VICE PRESIDENT (RISK AND CONTROL) – PURAVANKARA LIMITED
MR. RAJAT RASTOGI – CHIEF EXECUTIVE OFFICER – WEST AND COMMERCIAL ASSETS
MR. MALLANNA SASALU – CHIEF EXECUTIVE OFFICER – PROVIDENT HOUSING LIMITED

MODERATOR : M R. ABHISHEK LODHIYA – MOTILAL OSWAL FINANCIAL SERVICES

Moderator: Ladies and gentlemen, good day, and welcome to Puravankara Limited Q3 FY '25 Post Results Conference Call hosted by Motilal Oswal Financial Services. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assi stance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Abhishek Lodhiya from Motilal Oswal Financial Services. Thank you, and over to you, sir.
Abhishek Lodhiya: Thank you, Yusuf. Good evening, everyone. On the behalf of Motilal Oswal Financial Services Limited, I would like to welcome everyone to Puravankara Limited Q3 FY '25 Results Call today. As always, we have from the management , Mr. Ashish Puravankara, MD; Mr. Abhishek Kapoor, Executive Director and Group CEO; Mr. Deepak Rastogi, Group CFO; Mr. Neeraj Gautam, Deputy CFO; Mr. Vishnu Murthy, Senior VP, Risk and Control; Mr. Rajat Rastogi,
CEO, West and Commercial As sets; Mr. Mallanna, CEO, Provident Housing Limited.
I would now like to hand over the call to the management for their open ing remarks, after which we will move on to the Q&A session. Thank you, and over to you, sir.
Deepak Rastogi: Yes. Good evening, everybody. I'm Deepak Rastogi here. I thank you for joining the company's earnings conference call to discuss the performance of the third quarter and 9 months ended financial year '25. The results and a comprehensive presentation available on the stock exchanges. We hope that you have a chance to review the same. Before we begin, let me thank our host for today's earnings call, Motilal Oswal.
Now moving on, let me first start by giving yo u some brief highlights on the sector performance and outlook, followed by our financial and op erational performance for the quarter. India remains the beacon of growth and opportunity, with our balanced foreign policies, India is a strategic player in the global geopolitical and economic landscape. These factors have continued to propel the momentum of the country's real estate sector, reflecting the broader optimism surrounding the country's economic future.
India's residential real estate market gained new heights in 2024, achieving a 12-year high in annual sales and is recording steady growth across major cities, with a final quarterly performance accelerated by the seasonal festive demand. This growth propelled annual sales over 300,000 housing units for the second consecutive year, while there is a Q-on-Q growth of 7% in housing unit sales during Q3 of financial year 2024-'25.
We witnessed a clear shift towards premiumization, the evolving buyer preference driven by aspiration for an enhanced lifestyle and confidence in Indian economic trajectory. The office real estate market has sustained its record-br eaking momentum with annual transaction volumes surpassing 72 million square f eet, the highest on record to an all-high absorptio n of 79 million square feet in 2024.
There is a strong momentum in leasing activity during October to December quarter of '24 with the record quarterly space takeup 22.2 million square feet. This robust performance led to a 10%

Y-o-Y jump in the office leasing during Q4 of 2024 and an 8% Q-on-Q increase in absorption. Technology sector drove highest leasing activity, followed by Flexible Space operators and BFSI.
The recent changes in the union budget and RBI reducing repo rates by 25 basis points to 6.5%, marking the first rate cut in the last 5 years, which would actually stimulate economic growth and is expected to make loans, including those for homes and vehicles more affordable, potentially boosting consumer demand in the real

estate sector and provide incentive to India's real estate industry.
We expect that coming years are poised for robust growth driven by country's economic performance and rising demand across residential, commercial and industrial segments. Increased urbanization, infrastructure development and favorable government policies are boosting homebuyer confidence.
Now I will actually move to the company's financial performance and operational highlights. So during Q3 of '25, our sales were INR1,265 crores, where sales volumes were 1.43 million square feet. Customer collections for Q3 increased by 6% Y-o-Y to INR993 crores. Similar numbers for 9 months of financial year '25, the customer collections improved by 19% Y-o-Y.
It is important to note that collections have increased significantly, growing from around INR350 crores per quarter during financial year '22 to a current quarterly run rate of approximately INR1,000 crores. Average realization for the quarter has also increased by almost 16% Y-o-Y to INR8,847 per square feet because of the mix of inventory, while Puravankara and Provident saw 29% and 7% Y-o-Y increases, respectively.
Our sales for the quarter across projects were led by Provident, which saw massive growth of

76% Y-o-Y and the sales were INR737 crores on account of consistent sales in ongoing projects and successful launch of Ecopolitan Phase 2, while Purva maintained its sustenance sales velocity, achieving 29% increase in realization.

The geographical contribution for 9 months peri od for this financial year, 60% was contributed by Bengaluru, followed by Chennai at 16%, Mumbai and Pune were at 11% and Kochi at 9%, respectively. Increase in sales from Mumbai and Pune is indicative of growing presence in Western region. New acquisitions and redevelopment projects in Mumbai with GDV of approximately INR9,200 crores plus is expected to contribute to the market share in the coming quarters.

Our launch pipeline for the comp any is robust with approximatel y 12.63 million square feet of the new planned projects with non-Bengaluru projects now accounting for 47% of the share of ongoing and 73% of planned projects. Mumbai and Pune together constitutes 50% of the planned projects, indicating our robust pipeline in West India.

On business development front, we have done land investments of approximately INR1,236 crores during the 9 months of the financial year. We have done business development close to 7 million square feet with GDV over INR12,000 crores during this time. This strategic investment

strengthens our development pipeline, positionin g us for sustained growth and value creation.

Our operating cash flows for the 9 months stood at INR3,209 crores, up by 14% Y-o-Y.

Coming back to the Q3 perfo rmance for this quarter. Our to tal revenue was INR334 crores.

EBITDA margins for the quarter were around 10%, while we had a net loss of INR94 crores.

For the 9 months ended for this financial year, our total income increased by 16% Y-o-Y, while the total comprehensive loss was approximately INR99 crores. The presales value for 9 months was INR 3,724 crores.

The sales and marketing expenses and overheads incurred for the presales have been entirely charged to P&L as per Ind AS Standard 115. While we have reported a loss of INR99 crores for the 9 months for the financial year under Ind AS, under the percentage of completion method, we would have actually reported profits for this particular period.

Similarly, like last year for the financial year '23, '24, we had reported under Ind AS a PBT of around INR68 crores versus under percentage of completion method, the profits were actually at INR160 crores for a similar period. Further, we are expecting occupancy certificates for the projects like Capella, Atmosphere, Oakshire and Adora De Goa in next 2 quarters with total salable area of 3.95 million square

feet with total GDV of INR3,200 cr ores, out of which the sold value is INR2,550 crores.

Coming to our debt management. Our net debt stands at around INR2,824 crores as on 31st of December '24 with a net debt equity ratio at 1.58. Our cash and bank balance was INR736 crores, which indicates strong liquidity profile, ensuring stability and operational continuity. The debt per square feet has increased vis-a-vis the previous quarter, primarily due to capex towards commercial development and land acquisition for future growth and deferment of projects launch due to delayed approvals.

However, we remain committed to optimizing financial resources by co ntinuously working to reduce debt per square foot for under-construction project. And we are also focused on maintaining optimal financing structure, including raising equity through QIP, AIF, platform level funding, etcetera.

We are excited about next 15 months, which will see increased velocity in acquisitions and new launches in line with the growth plans of the company and also the country. We want to highlight our strong growth trajectory over the last 3 years. Our sales growth has grown at CAGR of 57%, while collections have increased at a CAGR of 58%. The area delivered has expanded at a CAGR of 47%, reflecting our commitment to execution excellence.

To conclude, we continue to be optimistic about the sector considering the demand-supply gap and the rapidly growing economy. We are strategically launching the projects in our focus markets with a strong pipeline of already launched projects and further planned launches as well as ongoing business development.

Thank you for patiently listening. We can now open the floor for the question-and-answer session.

Moderator: First question is from the line of Is hita Lodha from Svan Investments.

Deepak: Deepak this side.
Moderator: Mr. Deepak, your voice is breaking.
Deepak: Am I audible now?
Moderator: Yes. You're audible now.
Deepak: Congratulation, Mr. Rastogi for new…
Moderator: Mr. Deepak, your voice is breaking again.
Deepak: Am I audible now?
Moderator: No, sir. it is not clearly audible. It is breaking in between.
Deepak: I will join back in the queue.
Moderator: Next question is from the line of Chintan Mehta from Puniska Family Office.
Chintan Mehta: My question, can't we recognize the purchase of land cost in -- for many years, 5, 10 years, that kind of we need to only recognize in upfront?
Abhishek Kapoor: What do you mean by recognize it? These are land investments which go into our inventory and investments. so sorry, I didn't follow the question. Please come again.
Chintan Mehta: Can't we amortize for th e 5, 10 years or until we exit the -- project?
Abhishek Kapoor: No, no. So basically, this is raw material for us as a real estate development company. And as we go along, we are not expensing it out of the P&L. I think when Deepak was referring to cash flow and debt he meant was there is a substantial amount of investment that has been done from cash flow perspective in land.
And obviously, as and when as per accounting standards, the cost is booked when we deliver the project because this is a project completion method of accounting. So that's how it operates. I'm not sure if I've answered the question.
Chintan Mehta: Okay. And sir, subcontract cost, it is for the -- onl y for the project which we delivered or it is for the entire -- in particular quarter time?
Neeraj Gautam: So subcontracted cost is for the projects which have been delivered. No, it includes subcontractor cost and subcontractor cost, which is coming on th e face of financial statement. It reflects the kind of construction activity we are doing and amount we have incurred in our ongoing projects.
That also includes the cost of the inventory, the inventory which we realized during the period.

Chintan Mehta: Okay. Understood. And sir, I have a question regarding the land asset. We mentioned we have close to around 27.23 million square foot. This is the total land bank we have, not the developable area, correct?
Abhishek Kapoor: Area under development currently is about 33 million square foot and land bank is about 27 million square foot.
Chintan Mehta: Okay. So if I need to arrive at saleable area, I need to multiply with FSI, correct sir?
Neeraj Gautam: This is the saleable area. FSI, correct. FSI is diffe rent in different geographies, different locations and our length are spread in different part of country. And the easier understanding of the user of this statement, we have applied the applicable FSI and publishing the data, which is saleable area.
Chintan Mehta: Okay. Sir, just I mean, any real estate company post that in which area or which geographical part they own the land? For example, South Ba ngalore, North Bangalore. How much acre they own? So if you can arrive or share that data on presentation? That could be great help to us.
Abhishek Kapoor: Sure, we can do that. As of now, Page 17 of the ICP consists of city-wide distribution and brand-wise distribution. If you need any further details, you can write to us separately and we can answer it.
Chintan Mehta: And sir, what is the peak debt we are targeting that maximum debt which we go to?
Deepak Rastogi: Sorry, what is it? What we are targeting?
Chintan Mehta: Peak debt number.
Abhishek Kapoor: Peak debt number. So as I said, and we have been maintaining that. From the residential debt perspective, our target is always to maintain at INR1,000 a square foot and under of area under development. That's the target with which we work. Now if you refer to Slide 21, it shows that debt per square foot on residential and land currently is at about INR910 per square foot.
Now eventually, debt is a factor of the quantum of business that you do. And how we look at it is what kind of surplus are you able to generate with the debt that you currently have. So if you look at -- while our debt is at INR2,800 crores and if you look at our slide of surplus, the surplus is including the new launches, wh ich we have shown is of INR14,000-plus crores, which means there is more than adequate cover in terms of the surpluses coming in from this debt.
Chintan Mehta: Okay. And sir, typically construction cost in Bangalore is [inaudible 0:19:22] for example, Bangalore per square foot construction cost in Mumbai?
Abhishek Kapoor: So construction cost differs from market to market and area to area. In Mumbai also, it would differ should it be in a market like a Thane or in a market like Virar or Borivali versus what

would be in south of Mumbai. So it could be anywhere between INR7,500 to INR8,000 a square foot on saleable area, going as low as INR3,500 a square foot area in distant suburbs, depending
on the height, type of product, specifications, etcetera. So that's the general range if you're asking
about the Mumbai market.

Chintan Mehta: And sir, for the Bengaluru?
Deepak Rastogi: I'm sorry?
Chintan Mehta: For Bengaluru.
Abhishek Kapoor: And for Bangalore, Bangalore would be anywhere between INR3,200 a square foot going up to
INR3,800 square foot on saleable area.
Moderator: Next question is from the line of Deep ak Purswani from Svan Investments.
Deepak Purswani: Congratulations, Mr. Rastogi. And sir, I just wanted to check it out a couple of things. Firstly,
from the debt point of view, currently, we have a net debt of INR2,800 crores, and it is showing
that in the next 1 year, we have a repayment schedule of INR1,071 crores.
And I'm looking at the operating cash flow before the land investment, this 9 months, we had
close to INR250-odd crores. So just wanted to get a sense what is our broader plans to manage
-- in terms of the debt management

over the next 1 year, especially this debt repayment part over
the next 1 year? How should we look from the broader point of view?
Abhishek Kapoor: So currently, if you look at our quarterly collections is about INR1,000 crores a quarter. And
with the launches which we are expecting, there are about 8 launches which are lined up in next
-- between this quarter and next 2 quarters. Between these launches, we are expecting that the
cash surplus will increase significantly and the cash collection will increase significantly.
And of course, I think somewhere in the presen tation, we've also mentioned the way forward in
which we are looking at different methods of capital raising in terms of equity, which includes
QIP, platform level and project level, which is on Slide 31, AIF and of course, the commercial
platform. So there are multiple levels at wh ich we are looking at increasing our equity.
At the same time, significant increase we should see in our cash flow collections as the launches
come through, which have largely been delayed on account of planned sanction approvals, which
has been the industry situation, largely on account of elections last year.
So we would expect that this should more than adequately cover. And as I mentioned earlier, if
you see the surplus slide which is given, the cash surplus out of the new launches and existing
projects itself is about INR6,600 crores. From the commercial platform, it's about almost
INR1,950 crores. And with the new launches will be another INR5,700 crores . So that more than
adequately is just a matter of time as you start seeing that money coming in. This is surplus. So obviously, the collections are higher.
Deepak Purswani: And secondly, sir, if you can also throw some light on the launch pipeline? How has been our
launch pipeline in last 9 months? And how should we look into it in the Q4? And which are the
projects which are at the RERA-ready at the current juncture from the launch point of view?
Because we do understand there was some approval-related issue. But where do we stand in
terms of the launch point of view at the curre nt juncture? Which are the key projects which
would be coming up for the launch in the next 6 months, specifically in the Q4?

Abhishek Kapoor: Right. If you see Slide 19, it mentions the laun ches, which is expected in this quarter and the
next quarter. And some of the launches which we are expecting in this quarter are Bellandur,
Grand Hills, Mundhwa, Thane, these are launches which are expected in this quarter, including
Hebbagodi, but these 1 or 2 may spill over to early Q1.
But having said that, most of these launches you will see in next 2 quarters coming. And other
than that, a couple of additional projects will come in. Mallasandra will come in the next quarter
for sure. Cityspire will co me in. we're expecting Bouganvilla to come in.
So what we're expecting is, in addition to this, there are a couple of other projects which are
there in the pipeline. I think we will announce mo re projects by 31st of March, which will get
added for the next year's plan. So we have a very robust pipeline and an extremely robust pipeline
of acquisitions, which will continue to help us maintain and create the momentum for further
growth, which I think we will -- when we talk in April quarter, I th ink you will get a better sense
of it in terms of what more we will add in the next year. But currently, what visibility we have,
we have shared on Slide 19, which is about 12.63 million square feet.
Deepak Purswani: Okay. So sir, my question was more majorly related to the -- in term s of the -- out of these launch

pipeline, how much are currently RERA-ready, which are about to launch in the next 15, 20
days?
Abhishek Kapoor: As I said, currently, you have another 50 days to go in the year. Currently, Mundhwa, Grand
Hills, Thane and Bellandur have visibi

lity. Hebbag odi may come in this quarter, we'll have to
see.
Deepak Purswani: Okay. Okay. And secondly, sir, in terms of the 9 months, what are the key projects which have
been launched? And what has been the contribution in the presales from the new launches in
these 9 months?
Abhishek Kapoor: Look, so for the last 9 months, I can tell you that we have higher sales from sustenance out of
about INR3,700-odd crores, INR3,200 crores have been from sustenance. This is the highest
ever we have done in sustenance. Last year, we were at about INR2,800 crores in sustenance. The gap has largely been at
about INR500-plus crores has come from new launches.
The gap has really been in the new launches, and we are expecting to catch up with this gap, as
I mentioned earlier, largely on account of procedural delays and the government approvals,
which has been the case with the industry for this financial year. There has been a supply side
constraint. I mean if you look at the industry data also, you'll realize that there has been more
absorption than supply. And I think that trend kind of continues till we all are able to bring in
more supply, which I think wi ll normalize in the next in the coming 2 quarters after.
Deepak Purswani: Okay. And finally, sir, I mean, from the trajectory point of view, we have been highlighting that
this growth trajectory will con tinue. But from the overall perspect ive, if I were to look from the
9-month perspective, this time, we are somewher e close to INR3,800 crores. And last year, we
did a sales of INR5,900 crores. So how should we see this trajectory now from the overall
perspective of the financial year as a whole?

Abhishek Kapoor: So as I said, it's -- so INR3,800 crores, it's in and about similar number of what we were at last
year. I think we were at INR3,966 crores. And so it's not very far from where we were 9-month
period. Obviously, the last quarter, as I mentioned, we are expecting these four launches. So that
will add value in terms of the pr esales number. And some of this, as I said, will spill over in the
next quarter or the quarter after.
And from the way we are looking at it, the growth trajectory will continue. If it was not for the
delay in planned sanctions, I think we would have had a very, very robust growth in this financial
year as well. Having said that, I think we will definitely beat the industry average. That's our
goal and target with which we are working.
Deepak Purswani: Okay. And sir, from the investment point of view, we had also raised the capital from the HDFC
fund as a whole. If you can give -- please provide us an update how much capital has been
deployed out of this? And how should we look from the deployment point of view over a period of time?
Abhishek Kapoor: About INR417 crores is already deployed. The balance capital, which is a little over INR700
crores is expected to be deployed before June of this year. That's the target with which we are
working. A lot of active deals are currently at fi nal stages. Of course, due diligence, and I'm sure
you will hear about it, it takes its own time. I think we are in that process. Hopefully, within the
next 90 days, you will start hearing more and more deals. But definitely before June is the target
to deploy the entire capital.
Deepak Purswani: Okay. And then, sir, finally, on the demand environment front, we have seen especially in your
core micro market, which is the Bangalore, there has been a price hike -- in double-digit price hike over the last 9 months or
something of that sort. How do you see the absorption trend going
ahead in that particular micro market?
Abhishek Kapoor: So you're right. I think from price appreciation point of view, we have reached a steady state.
Absorption has been very, very robust. As I mentioned earlier, we have seen the highest ever
sustenance sales. And largely, the prices ha

ve also gone up because of the supply side flat, right?
We have not been able to bring, the industry has not been able to bring enough supply to the
market. And hence, the supply is literally somewhere betwee n 7 to 9 months in the Bangalore
market, for example.
But across the country, we are s till currently looking at less than 12 months supply in general on
an average. And what we are expecting is with the new supply coming into the market, we would
expect an inflation plus 2%, 3% kind of averag e incremental price appreciation, unlike in the
past where it was also on account of increased cost of -- input costs of construction, etcetera.
But we would expect that it will be a steady state.
We're continuing to see significant demand in the market, and I'm sure you'll hear about it as
and when we do our launches. On ground, there is a lot of anticipation and requirement and need

for housing in all of these markets, somewhere Deepak covered the point that about 71 million square foot of commercial office has been leased out in the country this year. That's a clear

indication of multiplier effect in terms of employ ment and the economy, and we believe that this demand is going to continue.
And add to that, consolidation will continue, and I'm sure Puravankara is going to be in a very good position to capitalize on that consolidatio n. So we believe that the demand is definitely there. Price appreciation will be possibly in infla tion plus 2% or 3% industry average. Of course, different micro markets may have exceptions.
You may have certain markets where you will see very high price appreciation because of lack of supply. In certain markets, you will see rela tively low price appreciation because there is too much supply. So those factors could be in differe nt projects and micro markets. On an industry average, that's our position.
Deepak Purswani: And from the margin perspective on the...
Moderator: May we please request you to rejoin the question queue for the follow-up question. Next question is from the line of Harsh Pathak from Emkay Global.
Harsh Pathak: So I have a few questions. First is, I guess, in the current quarter, we have so far launched two projects, one in Bangalore, the Ecopolitan and one in Pune, Keshavnagar. So how has the response been on these two projects?
Abhishek Kapoor: Both the projects respon se has been quite good. Ecopolitan phas e 2 is sold out. In fact, and as far as Keshavnagar is concerned, we have had over INR100 crores of sales at launch. And we're seeing very, very good and increased traction in that market.
Harsh Pathak: Great. So how big would this launch be? I mean, each of this, Bangalore and Pune?
Abhishek Kapoor: We can't share that data separate ly in detail, if you don't mind.
Harsh Pathak: Sure, sure. That's fine. And the second is on the approval side. I guess in the first half, we had seen approvals move very slowly. But how have things picked up? I mean, from the last 2, 3 weeks of December, we have been starting to see some approvals come through. But how is the situation now?
Abhishek Kapoor: It definitely improved. Somebody earlier on the call asked what is the pipeline looking like and I did mentioned -- you mentioned Ecopolitan and Mundhwa. I also mentioned Grand Hills and Hebbagodi and Thane and Bellandur. These are projects that we are working on, which we see visibility of. And then, of course, the rest of the projects we are seeing possibly remains favorable in the next quarter.
But overall, there is a much better momentum on the approvals. But given the number of sanctions and approvals that real estate deals wi th, and then you do still have certain situations where you may have certain authorities not fu nctioning, changes in committees, etcetera, Chairman getting appointed. So those are individua l certain things that happen. But overall, yes, you're ri

ght, there has been a much better momentum on the planned sanctions.

Harsh Pathak: Right. And sir, coming to the West region. So I think we already have a couple of projects, Pali Hills and Breach Candy, maybe this would be on the luxury side. So how is the demand shaping up? And when can we see these launches coming up?
Abhishek Kapoor: So from the new project perspective, we have 4 projects, which is Thane, Apna ghar, Pali Hills and Breach Candy. Thane, we are expecting to launch in this quarter. Apna ghar and as well as Pali Hills and Breach Candy, we are expecting between the Sept ember and December quarter to
take it to the market. But our target is that within this calendar year, on or before December, we should take all the projects which we have taken in Mumbai to the market.
Harsh Pathak: That's great to hear. So I visited the Pali Hills project. I mean the location is superb. But are we seeing, I mean, demand traction there because we are seeing a lot of fuss around the luxury segment. So how -- what dynamics are you hearing on the ground for this project?
Abhishek Kapoor: Look, fortunately, each of these projects, and we can get into a detailed discussion, like example, Pali Hills is extremely unique in itself because it's 2.5 acres, the larges t project -- largest land parcel in that market. All the projects, I'm sure you're aware since you are from Mumbai is largely 0.5 acre at best, short than an acre, whic h is a 2.5-acre project. And that gives us an opportunity to really create a large community.
And for example, Juhu doesn't have any large communities. And whenever 1 or 2 projects have come where you have created la rge communities, you've comman ded a premium of more than 40% to 50%, in fact, equivalent to Juhu and higher than Juhu. So we expect that this market -- this particular project in Pali

Hills will see significant demand given the scale and size of the project and that market is possi bly the largest. That is one.

Secondly, very interestingly, the residents themselves have shown keen interest in buying homes here, not only getting what they have already got, but buying. So we see that interest. There are already a lot of people who have heard of the project, reaching out to let them know as and when we do the launch and similarly, at Miami again, this is next to Breach Candy Club and overlooking to see, again, something which is very premium because every unit will have sea view, and it's a very, very prime location.

Lokhandwala, again, very similar in the sense ther e isn't any project of this scale and size in that market. The only other project is one project, which is SRA project. So in that sense, and the previous project that was launched there in the same area was sold out 100%. So we're very confident about what we expect in the Apna ghar market. And of course, Thane is a brilliant location. It's right to One Hiranandani Park. Again, you will see that the numbers should look good in all of these projects.

So from the demand perspective, the strategy of acquisition has worked very well in terms of choosing the right project in the right location. So we're very, very confident about pushing through these -- expecting good robust sales from these projects.

Harsh Pathak: Great. Just last 2 bits from my side. So one is we are targeting to take the land bank to 45 million square feet over the next 2 to 3 years. So how is the project visibility and especially since we are

focusing more on the West region. So what kind of projects are we targeting? I mean, in terms of locality in the Mumbai and Pune, if you can throw some light there?

Abhishek Kapoor: So when we say 45 million, it's not just the West. Substantia l acquisition will also happen in the South between Puravankara, Provident and Purva land. Of course, West will conti

nue to remain focused. But West is not about volume of square footage, especially Bombay. Mumbai will be more about value. Of course, Pune, we will definitely bring in more acquisitions, but much larger volume of acquisitions will happen in the other parts of the country in the Southern market specifically.

And in terms of square footage, the 45 million square foot will -- majority, if you were to look at square foot, not value, will definitely happen in the southern market. And how we look at each of these markets is we have divided the city into different submarkets where we understand the supply and demand dynamics.

And those are the markets that we are going after across these cities to look at focused effort for each of these categories, Puravankara, Provident and Purva Land, all got differentiated product offering to ensure that we are able to create the scale of acquisitions that we are targeting.

Harsh Pathak: Sure. And one last question. What is the update on the commercial project? When can we see rental start kicking in? And I mean, for both the assets?

Abhishek Kapoor: So we're expecting to complete a total of about 2.2 million square foot in this coming calendar year, which is expected between June and September. As we complete these projects, we expect that a large amount of leasing should get completed by December. But any commercial asset to get fully occupied and have fully stabilized income takes anywhere between 6 to 12 months from date of completion. So we would expect to see rentals obviously coming in between December and March of the next financial year. And thereafter, I think another 3 to 6 months, we should see completely fully occupied stabilized income in these projects.

Moderator: The next follow-up question is from the line of Deepak Purswani from Svan Investments.

Deepak Purswani: Sir, firstly, I wanted to check it out on the portfolio basis on the -- from the embedded EBITDA margin point of view, how should we look into at the current juncture? What are our the embedded EBITDA margin at the current realization on the portfolio basis?

Abhishek Kapoor: So EBITDA margin, I think we have mentione d in the past will be somewhere between 27% and 30%, of course, barring what we do in a redevelopment project and in a JV. Generally, on an outright basis, somewhere between 27% to 32%, 35%, depending on the kind of product. In fact, Purva Land is a much higher EBITDA margin. Of course, redevelopment will have a lower EBITDA margin. So therefore, on an average, we could easily assume we should target between 27% and 30% of EBITDA margin.

Deepak Purswani: Okay. So considering that in mind, if you can also share your thought process, what are our internal targets in terms of managing the ROE of the company? I mean, how should we look from the trajectory point of view, return on equity from the next 2-, 3-year perspective?

Abhishek Kapoor: Look, I think that's a very different way of looking this, being real estate and being the way the sector is and the way we operate. We don't look at return on equity. We look at our margin on the top line. And the reason I say that is, for ex ample, if I wind up doing a JDA and make an investment of deposit, you can't compare the return, right?
Because you put in a deposit of INR50 crores, but you may have landed up with a substantially higher margin. And therefore, the equity return is very, very disproportionate. And hence, we do not calculate equity return as far as overall business is concerned.
We focus on what kind of sales we're able to do and what kind of -- and your earlier question, which was a perfect question, what kind of EBITDA margin and PBT margin you can target, which our goal is that if you were to look at an EBITDA margin, we'll continuously work towards 27% to 30%. And of course, the ROE will be very, very different in terms of -- in certain cases

, will be very exponential.
Deepak Purswani: Okay. So let's put it in this way, what would be the threshold IRR or targeted IRR we are looking based on the -- whatever investment we have made in the last 12 months? And these IRR would be based on the last 1 year realization and we have seen some kind of -- I mean, whatever quoted IRR we would have looked at the underwritten price in the last 1 year, if there is some hike in the realization, where does these IRR stand at the current juncture?
Abhishek Kapoor: So to answer that question, IRR would be anywhere -- I mean, again, it is extremely exponential in JDA. So I'll put that as a disclaimer here when I answer that question. But should it be a redevelopment project or an outright purchase, your IRR will be in high 20s and early 30s. And of course, that is pre-cost of capital. And of cour se, once you subtract the cost of capital, that's where you arrive on the company's IRR. Bu t that's the target which we work to.
Deepak Purswani: Okay. And sir, sorry, again, harping on this cash flow point again. If I were to look from the debt point of view of repayment schedule of INR1,000-odd crores, if you can also give some sense in terms of -- like you mentioned about there would be improvement in the operating surplus that would be sufficient. But if you can also throw some light in term s of the collection and construction outflow and what are our land payment plans over the next 12 months, that would be really helpful.
Abhishek Kapoor: Okay. Let me answer this question a little more differently. We have a de bt slide, which gives a breakup of where the debt is sitting in land or in residential. So if you look at the debt, INR2,200 crores is in residential, right? Out of the INR2,800 crores, this is Slide 22. Okay. If you see Slide 22, there's INR2,192 crores of debt sitting on the residential. Now this is self-liquidating debt, pretty much money going from the project itself, right?
Deepak Purswani: Yes.

Abhishek Kapoor: Now the land debt, which is about INR889 crores is what really is the only debt we are talking about because INR479 crores is again capex towards commercial development. And as soon as it gets completed within 6 months thereafter, that is pretty much self-s ustaining coming from the lease rental. In fact, you can discount it and you can spare a lot of debt and use that excess capital, correct?
Deepak Purswani: Yes, yes.
Abhishek Kapoor: And then you have about INR736 crores of cash and cash equivalent against INR889 crores of land debt.
Deepak Purswani: Okay.
Abhishek Kapoor: Now this INR889 crores of land debt is what we are talking about movi ng to the residential piece. So the moment this moves, and in fact, wh at we are taking to the market, if you look at 12-plus million square foot, is far more than adequate to cover. So from the debt perspective, as I said, INR2,200 crores liquidating from the ongoing projects where inventory is already sold.
Money is coming in, it's getting liquidated as we go along. INR479 crores taken care of from the commercial lease rental, INR736 crores of cash equivalent lying against INR889 crores of bank, which is going into production.
So from our perspective, the way we look at it -- and another way to look at it, the same thing is, I think somewhere I mentione d about the cash surplus, which is about INR6,600 crores and about INR4,851 crores from the ongoing open for sale projects. That also more than adequately covers the debt scenario from your perspective.
Deepak Purswani: Okay. So would it be fair to say -- I mean, probably just checking from the broader point of view, let's say, even if there is -- we were planning to raise the fund, even if that does not get implemented over the next 6 to 12 months, we would be sufficiently placed to reduce the debt from the current juncture?
Abhishek Kapoor: Absolutely, we'll be

very, very comfortable to reduce the debt because, as I said, INR2,192
crores is going right from the project, which is already under construction correct? The second
thing is with these launches, the rest of the debt not only starts getting repaid, but starts providing you further room for acquisition.
So from the debt perspective, I mean, of course, the choice will be us whether we want to square
debt, their debt or continue to grow. And this has been a conversation we have had. We continue to grow the business because we believe that th e brand able to really perform well and in the
consolidation phase, enjoy the premium in the market where we should bring in more and more supply and take more and more market share.
So hence, from our perspective, yes, to answer the question, debt can be easily paid by the
ongoing and new launches. But not just that, we are confident we'll be able to go forward and
get more liquidity in the system with the launches to be able to continue our new acquisitions.

Deepak Rastogi: Just one more point. The surplus, which we continue to maintain is close to INR14,300 cores,
right? So -- and the debt is hardly INR2,800 crores. So whichever way we look at it, the debt is
far more lower than compared to the surplus which gets actually generated out of the ongoing residential projects. So we are not really concerned from that perspective.
Moderator: Next follow-up question is from the line of Chintan Mehta from Puniska Family Office.
Chintan Mehta: Sir, if you can -- you have mentioned somewhere that the capital value of commercial projects
is INR2,833 crores. It is excluding debt value or the total value of the commercial project?
Abhishek Kapoor: This is the total value of the -- capital value of the asset.
Chintan Mehta: Okay. So you are taking at 10% of the yield of the rental value, correct?
Abhishek Kapoor: Yes, it would be at about 8.5%.
Chintan Mehta: Okay. So we have hold it for the longer time. We are expecting a more square foot realization
going forward for 5, 10 years and the capital value will multiply manifold. And I think what our
ROIC return would be close to 2020 number, correct, sir?
Abhishek Kapoor: I genuinely didn't hear a thing about what you said. Sorry, but the voice is very muffled. Can
you repeat that for me, please?
Chintan Mehta: Hold this commercial project for the many years, correct? We are expecting more square...
Abhishek Kapoor: So the two -- I'll just ask if I got the question now right. You said will we hold the asset. So there
are two assets which we are talking about currently, which are under production. One is Aerocity
and the other is Zentech. As far as Aerocity is concerned, we intend to hold that asset and build
the platform. In fact, we are looking at another acquisition also in Bangalore itself.
On the other one, which is Zentech, which is a JDA, we are evaluating an exit there. And there,
of course, we will care of the debt and move ahead. At this point in time, that's the thought
process.
Chintan Mehta: Okay. And sir, most of the combined value, we are spending close to around INR1,250 crores
somewhere, correct? I have seen it somewhere?
Abhishek Kapoor: Correct.
Moderator: As there are no further questions from the participants, I would now like to hand the conference
over to the management for the closing comments.
Abhishek Kapoor: Thank you this evening for joining us for this call. And we look forward to hearing from you if
you have any more questions. Have a great weekend. Thank you.
Moderator: Thank you. On behalf of Motila l Oswal Financial Services, that concludes this conference.
Thank you all for joining us, and you may now disconnect your lines.

Call: Jun 2025

"Puravankara Limited Q4 FY '25 Earnings Conference Call"

May 30 , 2025

MANAGEMENT : MR. ASHISH PURAVANKARA – MANAGING DIRECTOR , PURAVANKARA LIMITED
MR. MALLANNA SASALU – CHIEF EXECUTIVE

OFFICER , SOUTH , PURAVANKARA LIMITED
MR. RAJAT RASTOGI – CHIEF EXECUTIVE OFFICER , WEST AND COMMERCIAL ASSETS , PURAVANKARA LIMITED
MR. DEEPAK RASTOGI – GROUP CHIEF FINANCIAL OFFICER , PURAVANKARA LIMITED
MR. NIRAJ GAUTAM – DEPUTY CHIEF FINANCIAL OFFICER , PURAVANKARA LIMITED
MODERATOR : MR. HARSH PATHAK – EMKAY GLOBAL FINANCIAL SERVICES

Moderator: Ladies and gentlemen, good day, and welcome to Puravankara Limited 's Conference Call , hosted by Emkay Global Financial Services Limited.
As a reminder, all participant lines will be in the listen -only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*" then "0" on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Harsh Pathak from Emkay Global Financial Services. Thank you, and over to you, sir.
Harsh Pathak: Yes. Thanks, Manav. Good evening, everyone. On behalf of Emkay Global, I would like to welcome the Management and thank them for this opportunity.
We have with us today Mr. Ashish Puravankara – Managing Director; Mr. Mallanna Sasalu – Chief Executive Officer, South; Mr. Rajat Rastogi – Chief Executive Officer, West and Commercial Assets; Mr. Deepak Rastogi – Group Chief Financial Officer; and Mr. Neeraj Gautam – Deputy Chief Financial Officer.
I shall now hand over the call to the Management for the opening remarks. Over to you, gentlemen.
Deepak Rastogi: Thank you. So, I am Deepak Rastogi, thanking you all for joining our Earnings Call to discuss the performance for 4th Q uarter and Financial Year ended '25. I would like to thank our host for today's Earnings Call, Emkay Global Financial Services. The Results and Investor Presentation have been uploaded to the Stock Exchange , and I hope that you have had the chance to review them.
Now, let me first start with some brief highlights about the sector performance and outlook, followed by our financial and operational performance for the quarter.
Despite global headwinds and geopolitical uncertainty, India continues to demonstrate a remarkable resilience and stands out as a compelling growth story. The last quarter has reaffirmed India's position as the fastest -growing major economy, supported by prudent fiscal policy and strong domestic consumption. Recent RBI repo rate cuts, liquidi ty measures, and fiscal incentives are expected to improve credit availability and drive demand, especially in real estate.
On the real estate front :
The residential market continued its strong momentum with over 88,000 units sold during Q4 of Financial Year ' 25 across the top 8 cities and more than 350,000 units for the full year. Pune and Chennai led the growth for these increases, while Mumbai recorded steady demand. These trends reflect the resilience of Indian housing sector supported by urbanization, risi ng aspirations and favorable policy support.

On the commercial side :
Office space absorption crossed 70 million square feet across six major cities, driven by demand from GCC, which is Global Capability Centre, and hiring momentum, which was reported by Savills India. Bengaluru continues to be one of the head start, especially on this. Both residential and commercial real estate are benefiting from favorable micro trends with steady leasing activity and upbeat buyer segment. As a company, we are aligned with India's growth story, focused on prudent expansion, operational excellence and customer consensus.
Puravankara is well -positioned to capitalize on these trends with a robust launch pipeline of over 13.5 million square feet, planned for Financial Year ' 25-'26, aiming at centering our presence amid a consolidating market.
Now moving on to the company's financial and operational highlight. For Financial Year ' 24-'25:
quarterly sales was Rs. 1,282 crores and for the full year it was Rs. 5,006 crores, while sales

volume was 1.42 million square feet for the quarter, and for the whole year, it was 5.67 million square feet. Customer collections for Q4 stood at Rs. 946 crores, and for the

financial year, it
grew by 9% to Rs. 3,937 crores from Rs. 3,609 crores, which is the last financial year.
Average realization also witnessed healthy growth for Q4. Average realization stood at Rs. 9,031 per square feet, up 9% year -on-year. For the full year, it improved by 10%, up from Rs. 8,035 to Rs. 8,830 for this year versus last year. We have achieved our highest ever sustenance sale during this year with a total value of Rs. 4,223 crores, marking a 14% growth over the last year.
In terms of geographical sales contribution :
Bengaluru led our sales with 56% followed by Chennai, Mumbai and Pune, which was close at around 17% to 15%. Notably, Mumbai and Pune saw a significant rise in contribution in terms of the overall sales, which grew up from 6% to 15% versus last year. This is actually driven by our growing presence in the west. With recent acquisitions and redevelopment projects in Mumbai totaling over Rs. 9,500 crores in GDV, we expect this momentum to continue.
Our launch pipeline remains strong with approximately 13.5 million square feet of planned launches. It is important to highlight that non -Bengaluru projects now constitute 54% of our ongoing developments and 52% of our planned pipeline. Mumbai and Pune tog ether account for about 21% of the planned projects, underscoring our focus on diversifying the portfolio across high-opportunity markets.
On the business development front :
We made significant progress during this financial year with land investment of approximately Rs. 1,284 crores, which added almost 8 million square feet of our development portfolio, representing a GDV value of Rs. 13,000 crores. These strategic investments have further

strengthened our pipeline and position as well as position us for sustained growth and value creation in the coming years.
In May, we basically have announced a JV with KVN, Property Holding Limited LLP for approximately 25 acres land parcel located in North Bengaluru with a potential GDV of Rs. 3,300 crores and a planned saleable area of approximately 3.5 million square feet. This development marks a key addition in our portfolio in a high growth micro market and is expected to launch within the next six months. We successfully launched our much -awaited Project Purva Panorama in Thane, Mumbai, with a total development potentia l of 3 million square feet, with estimated GDV of Rs. 4,000 crores, commencing with Tower C, which covers 0.52 million square feet.
On commercial portfolio :
Currently we have 3.2 million square feet of development underway, with nearly 2 million square feet expected to receive OC during this particular year. We have two projects, one is Zentech and Aerocity. And they both are in Bangalore. And these two projects are exp ected to generate a surplus of Rs. 1,870 crores, making a significant value creation opportunity for the company.
Coming back to the Quarter 4 of '24 -'25:
The total revenue clocked was Rs. 564 crores. EBITDA margins for the quarter was around 9% while we had a net loss of Rs. 88 crores. Given that, as you are aware that, we had delays in terms of getting the approvals, and hence, the handovers were actually delayed. However, given the cost, which was there already, that being a period cost, it got accounted for during the quart er.
Similarly, for the year ended '24 -'25, the total income stood at Rs. 2,933 crores, with a total loss of Rs. 186 crores for the year. The pre -sales value for Financial Year ' 25 was Rs. 5,006 crores.
The sales and marketing expenses and overheads incurred for the pre -sales have been entirely charged to P&L as per the accounting policy as for India.
Operating cash flows for Financial Year ' 24-'25 stood at Rs. 4,342 crores, up 10% Y -o-Y. We have delivered approximately 3.09 million square feet during this year. Further, we are expecting to receive occupancy certificates during thi

s year, which is '25 -'26 for key projects, such as
Capella, Atmosphere, Oakshire, A dora De Goa for which we have already secured OCs for a few phases in the last quarter. These projects together account for a total saleable area of approximately 3.95 million, with a total GDP v alue of Rs. 3,200 crores, of this approximately Rs. 2,600 crores have already been sold to our customers.
Coming to our debt position :
As on 31st of March 2025, our net debt stood at Rs. 2,949 crores with a net debt equity ratio of 1.7x. We also had a cash balance of Rs. 732 crores, which reflects a strong liquidity position and gives us the comfort to manage operations smoothly. We continue to stay focused on managing

our finance as well. Our aim is to gradually reduce debt per square feet especially for projects under construction. We also are exploring funding options as we have been communicating with you, like QIP or platform level partnerships to keep our capital s tructure balanced and support our growth plans.

To conclude :

While Financial Year ' 25 post challenges in the former deferred launches and approval delays, we made decisive investments in land and business development that have strengthened our growth runway. Our sales performance and collection efficiency reflects operational resilience. As a marked 50 years of Puravankara, we are proud of our legacy and energized by the opportunities ahead. With a strong pipeline, key projects completion and strategic land acquisitions, we are well -positioned to deliver sustained gr owth and long -term value creation for our shareholders during this year and beyond.

Thank you for patiently listening. We will now open the floor for further questions.

Moderator: Thank you very much, sir. We will now begin the question -and-answer session. We have our first question from the line of Deepak Purswani from SVAN Investments. Please go ahead.

Deepak Purswani: Yes. Hi, Good evening, sir. My first question is to Mr. Ashish Puravankara. Sir, just wanted to get the sense, I mean with the resignation of Mr. Abhishek Kapoor in the month of May. If you can give the broader sense of how we are looking into the organiza tional structure at the first place? Secondly, if you can touch base on the broader aspect in terms of the growth and also the aspiration, I mean, where we should see this company over the longer trajectory point of view, and what would be your approach towards the capital allocation policy from the long -term perspective? That is my first question.

Ashish Puravankara: Okay. I think, just in terms of the organizational restructuring, we just believe that instead of having a very tall structure where we had the MD, then we had the Group CEO, and then we had regions and we had different businesses, in order to get more ope rational efficiency, cost efficiency, process efficiency, a regional structure, the organization will benefit a lot more from efficiency and cost as well, both. So therefore, the new structure is where we have a CEO for the South region , who manage the entire South business. We have a CEO for the West region, who manages the entire, and both then report into the MD.

So a more sleeker structure, so a lot of cross -learning otherwise that were happening, which was not happening, will start happening now. Cost efficiencies earlier while we had duplicated a lot of departments within different verticals of brands, today tho se you will see some benefit coming out of that. So , it was a long -term discussion that we were having and eventually we put it into play and we strongly believe that it will do great efficiencies as well as cost.

In terms of growth aspirations, we continue to focus on the markets where we are present, which is Bombay, P une, Chennai, Hyderabad and Bangalore, so these are the key markets, where we

will continue to expand. As a business, you are aware, I think our focus and strength also has been residential, so that will continue to be our focus area. Surprisingly today, the brand is very, very strong. We have been able to secure and I think the asset test is when you enter a new market, A, when you launch a new project and the kind of sales that you sort of receive being a new brand in that city, I think has been extremely encouraging.

In addition to that, in terms of business development, we have been able to secure Marquee locations in new markets, even like Bombay. So, for example, the project that we have secured, most of the society redevelopment that we have secured, which is extremely prime, one being Breach Candy, the second one being Pali Hill in Bombay. If you are aware of the Bombay market, the third being Lokhandwala. And each one of these cases, we were competing with the number one, number two in the city. Eventually, I thi nk we were able to position the brand, and these customers are also highly discerning, right? So they understand real estate, they understand brands, the entire team, the SGBM team made a trip to Bangalore, saw the quality, saw the differentiation, or even the vision in the product that we bring around. And therefore, we were able to secure these projects. All these projects that we speak about have been secured, DA has been signed, it has been registered. In some cases, we have submitted our plans for sanc tion. In some cases, they are in the final stage of designing. So, this is extremely, extremely encouraging.

So going forward, we will continue to focus on these markets. And as far as commercial is concerned, also, today, we have a strong portfolio, and these are very good locations. And that's what's very encouraging of 3.2 million square foot, out of which I think about 2.5 million is on the Bellary Road, which is a new sunrise destination in Bangalore. If you understand the Bangalore micro market, the Ring Road is completely congested, Whitefield is congested, and

everyone is now looking towards the New Airpo rt Road, right? So , two of our largest projects
are coming up on that Airport Road. One will be ready by December. We are already applied
for RFPs, and we have visits already on. So even that aspect of the business is looking very
positive.
Deepak Purswani: Okay. And sir, just continuing on that part, I mean, previously, we were communicating that
historically, we have grown at a 30% CAGR in the last five years. And we would continue to
look into this kind of growth. How should we see this trajectory at the c urrent juncture? And
also, any thoughts in terms of the debt reduction at the current juncture, if you can share your
broader thought process how we are looking to reduce the debt over the next six to 12 months?
Ashish Puravankara: Sure. I think I am positive. I do not want to give you any forward -looking statements, but I am
with the kind of projects that we have secured. Yes, there has been some approval delays. Like
for example, in Bombay, there's an NGT issue, if you are aware. All the builders are stuck. The
case is going on in the Supreme Court. So, we have really secured some Marquee projects. I
think this coming year, the next 12 months, you will see some extremely big bang launches
across Bombay, across Bangalore and other cities, right? So that in itself I think, we should be
able to better the growth trajectory that we have.

In terms of capital allocation, one important thing that we are also doing is, even in terms of land
acquisition strategy, I do not think we are in any aggregation mode. So right now, we are looking
at ready projects where we are able to give advances and take them to market within six months.
I think the minute you are able to do that and get your land assets into production, I think that's
the key, t

hat's our business that we are in, as opposed to aggregating smaller pieces of land,
incurring holding cos ts, etc., etc. So that's a clear strategy, A.
B, we have also very consciously started sort of, we have had a land bank for a long time, for
some reason we were acquiring new lands. So if you see the last two, three launches, Deansgate
for example, right, so two, three launches have been a part of our old historic, so that's a land
bank. So, that's another thing. So, the minute you take these projects to launch, automatically the
cash flows from these projects, etc., you are going to see that debt number significantly come
down. Of course, we are a bu siness, we are in real estate, there is a requirement for capital for
growth to buy land, etc. There, I think we will be opportunistic to look at a combination of, what
do you say, joint development and outright, right?
Bombay, there is a benefit, where today society redevelopment per se, while these are large
Marquee high value projects being society redevelopment. You do not need huge upfront capital
in that sense, right? So for the existing society, your investment, which is essentially your land
cost to build their area, you are spending it over four years. So even there, it's a relatively lesser
upfront requirement for cap ital. So I do not see that number going up extremely significantly.
Deepak Purswani: Okay. And then moving to the operational part of the business, just wanted to check it out. I
mean, in terms of the approval, see, I mean, last year also we had a launch pipeline of 14 million
square feet, and eventually we ended up launching only the 3 mi llion square feet out of the entire
14. I do understand, I mean, there has been some approval issue in the last year. Now this year,
we are also looking into the 13.5 million square feet in terms of the overall launches. Out of this
invent ory would be 9.25. If you can share your thoughts where we are in terms of the approval
and how confident are we that these projects will be launched this year comfortably, or if you
can give a broader sense .
Ashish Puravankara: In a broader sense, I am fairly confident, obviously. So it's not been stagnant, right? Obviously,
there is a delay, but none of the approvals I can assure you have been stagnant, which means that
from last year to this year, they have not moved, right? No w, for example, Lokhandwala and I
think, Thane, both are affected by NGT. Now, entire Bombay and those areas, all developers are
affected by it. My sense is, and those are high value projects. My sense, what I am getting from
CREDAI as well, is that there should be some sort of a resolution come September, right? So,
in terms of planning, everything done. In terms of base approval, everything done. In terms of
NOCs, airport, etc., that's all done. But for the want of that NGT, the minute I get that NGT, then
it's a matter of two months.
Mallanna Sasalu: I will just add to this one, Ashish, if with your permission.
Ashish Puravankara: Sure

Mallanna Sasalu: So, here it is. Basically, you asked three questions, and I was just wondering on those three
questions. The first one is about the way forward. And we have positioned our company in a
very unique way compared to any other organization. That is, we have created two brands, that

is, Purva and Provident, and we have created two geographic locations, South and West, so that we are very focused in our approach as to what we want to do going forward. Because as you know that real estate developm ent is a business, is a localized business, and you need to have local competencies to run the business.
So, as you know that the South business that what we have currently, that when it comes to now the operational efficiency and other things. I will just reel out some of the things that what we are trying to do and where we were a little bit dis

advantaged by a few things that happened in
the South, because we are predominantly, currently as the West is picking up, today we are South -based business, o ut of which more than 50% of our revenues have come from Bangalore alone.
In Bangalore, the numbers that what we have reflected is, are for two reasons. One, about the launches, the other one is about the handover. When you look at the launches that what we were supposed to do, the launches got delayed for various reasons, for v arious rules and regulations that are being currently altered. As we speak, there is another government order which is coming up, which is making more changes. So, we got a little bit delayed there.
On the handing over, Karnataka went into a very new method of actually giving the Khatas, which is called the e -Khata, which for millions of documents had to be redone and reconverted into an electronic format called e -Khata and that was put into a line. S o, we all were waiting in the line to get the Khatas because of which we could not register. Unless we register, we cannot get the revenues recognized.
At the same time, today when we are looking at the expenses has gone up, expenses means that we do not call it as an expense, we call it as an investment. For example, if there are four projects which are ready to get launched and under approval, means they are already, that is the marketing office, sales office, marketing initiatives, the monies that have already been spent, the spend is actually not an expense, it is an investment which is going to be coming out as a product and as an outcome over the ne xt three, four years.
So just to give you a few of the things is that. So we got a project in Bellandur in Bangalore, Puravankara Winworth in Kochi, and Grand Hills Phase -1 and Phase -2, and then Apna Ghar redevelopment, and which Rajat probably is going to add to that, Hebbagodi, Westend, Hennur Road and Kanakapura Road. These are not something that we are saying that something that's going to happen tomorrow. These lands have been acquired, fully paid for, almost 70%, 80% of the NOCs received, and only these things are because of the town planning and other things wherein they got little bit changes that came into play. They were stuck, and in fact, a s a matter of fact in the last quarter of the last year that the year went by, we were supposed to have launched three or four projects, which got either it will be in the first quarter or the second quarter of this year.

So looking at all these things and whatever the debt that we are talking about with the surplus of Rs. 15,000 crores and which is more than 5x the debt that we have, we feel it very, very comfortable as a company. And with our focus, particularly, Mr. Rajat Rastogi being there in the West, taking care of the Western region, very focused and who has got that much of in -depth experience in that region. And his experience in commercial, we got 3 and 4 million square of commercial, which he is handling, and of course, in the South that we are there. I think the company is in great shape. And today's result, today in my opinion is probably it's at a level where it is supposed to take off from here. And that is what I would like to convey to the investment community.
Deepak Purswani: Okay. And finally, just wanted --
Moderator: Sorry to interrupt you, Mr. Deepak. Can you please request you to rejoin the queue?
Deepak Purswani: Sure. Thank you.
Moderator: Thank you so much. We have our next question from the line of Premsingh from AC Choksi Brokers. Please go ahead.
Premsingh Rajput: Yes. So I would just like to ask, what has sales growth been from the last 12 to 18 months, and could you also repeat what is your current debt profile?
Deepak Rastogi: So I will tell you, versus last year we were down in terms of sales around 8% versus last year, but overall f

rom a launch perspective, we have been growing for the last five years, we have
been growing at a CAGR of close to around 25%. So, this year has be en an anomaly, we intend to continue with similar growth plans.
Ashish Puravankara: I think one highlight there is, I think one needs to appreciate that our annual sales numbers comes from two buckets, which is your ongoing projects and your new launches. So in terms of our sustenance and ongoing projects, I think we have done much, much better than last year. So, that

just shows how strong the brand is, the market sentiment and our sales efforts, right, the bone
fruits from our sustenance launch projects. Any miss in sales that have happened is on account
of those dela yed launches, which from last year has now gone into the following year and like
Mallanna explained, we are all there almost in the final stages of getting the approvals.
Rajat Rastogi: And Ashish, just to add to that point is that our sustenance sales has come at a price increase, so
there has been a decent price increase across all our sustenance projects. So, there is a
profitability also that has been kept in mind.
Ashish Puravankara: Yes.
Mallanna Sasalu: Our sustenance has gone up from Rs. 3,689 crores in FY24 to Rs. 4,223 crores in FY25 , where
there has been a struggle is a little bit of that extraneous thing that with regards to the approvals.
Today, we are sitting on a pipeline of 6.53 million square feet of approvals that are in advanced
stage in various locations and of various sizes , and more than eight projects which are ready for

the next year. So, I believe that investment that what we have made so far in bringing those
projects to that level will yield good results going forward.
Premsingh Rajput: Yes. And also another question, how do you exactly propose to enter and solidify your presence
in South Bombay's market?
Deepak Rastogi: Rajat, you may want to take it.
Rajat Rastogi: So, our thought process are in Mumbai market is around two lines. The first line of thought
process is a redevelopment where we already have secured Marquee assets across multiple
regions in Mumbai, be it West Mumbai or be it Pali Hill, or in also as well in South Bombay.
So, that is going to be one part of our strategy.
The second part of the strategy is to acquire land parcels on outside basis or on JDA basis, where
we have done a recent acquisition in Thane, which is around 1 2.77 acres that we took over. We
have also sold one tower, we launched one tower in the month of March and we got very
encouraging response, and we sold at a premium to the market in Thane. So, our strategy is
going to be dual strategy and we continue to focus on the strategy. Of course, every asset that
we are taking and every redevelopment that we are focusing on, we are focusing on the
profitability aspect of it. So, until the location is a Marquee location or the project comes out to
be a Marquee project, we will only focus on those ones. So, that is what the strategy is.
Premsingh Rajput: Yes. Okay. Thank you so much, and all the best for the next quarter.
Mallanna Sasalu: Thank you, sir.
Rajat Rastogi: Thank you.
Moderator: Thank you very much. Next question is from the line of Mr. Shah from Shah Advisors. Please
go ahead.
Mr. Shah: Sir, out of the Rs. 12,000 crores , Rs. 1,200 crores we spent on land acquisition. If you can share
what is the estimated timeline we are targeting to convert into entire GDV of Rs. 13,000 crores ?
Deepak Rastogi: The question you have is that, Rs. 1,284 crores we have invested, what is the timeline to go to
market, right?
Mr. Shah: Yes, correct.
Mallanna Sasalu: Basically, what you are asking is that, you are asking about the Rs. 1,284 crores of investment
that what we have done. The resulting of that is what basically any project in our real estate takes
from anywhere betwee

n 8 to 12 months to bring to the market. Depending on the size of the
market, the maturity period, the sales period is a round 2 to 2.5 years, and the project completion
period is 3 to 3.5 years, 4 years. So the collection will be between 3.5 to 4 years, so that
realization will happen over that period.

Ashish Puravankara: But just to reaffirm, I think in terms of the acquisition strategy, all these new investments are
for, our projects which are sort of ready, which can be the minute we paid this money, we have
already started the designing. So from a timeline perspective, the plan is to take this to market
within whatever around 8 months to 10 months to take it to market. So none of this is aggregation
or this is not a future investment.
Mallanna Sasalu: As Ashish was saying that in previously that we do not get into the aggregation mode. These are
ready to develop, which means that the land would have been converted, land would have got
all the necessity, land level approvals that are required would have been finished, only for the
development level approvals would be pending like the MOEF and building plan approval and
so on and so forth.
Rajat Rastogi: And just to add for the reaffirmed projects, all our projects are into multiple stages of approvals.
As Ashish clarified that all the DAs have been done. In fact, we are looking at a launch in quarter

3 for one of our projects. So all of the projects are i n the pipeline right now for launches.
Mr. Shah: Okay. In fact, assuming all of the land cost is recognized upfront, in earlier accounting was same, but now we can see across the geography from last five years realization are growing up and up from 4% or 8% year -on-year. But we are still maintaining our margin guidance between 25% to 30%. If there are any changes where we want to revise the topology or something like that, because we own the traditional landline. I mean, many district players are now revising margin for your reporting margin to the sort of 40% .
Deepak Rastogi: We could not actually understand your question. What is it that you want to understand
Ashish Puravankara: I think we do not give guidances but I think your sort of assumption is right and I think it will be in line with most other real estate developers. I think with the kind of acquisitions that we have done, we should see those margins improve.
Mr. Shah: Okay. One thing I want to understand that we are recognizing land as a raw material to us, correct sir?
Niraj Gautam : Yes, sir. Land is an inventory. It's a cost of the project.
Mr. Shah: Okay. So just from the accounting perspective I want to understand, from last 10 years, we have recognized the revenue worth of Rs. 18,000 crores and we have paid taxes somewhere between Rs. 400 crores only. So, this effect is because of the land cost we are recognizing upfront and that helps us to compounding the taxes.
Niraj Gautam : I think we can answer this question offline. You send us mail; we will respond to you. As far as accounting is concerned, though the day we buy land, we treat it as an inventory. However, it is charged to the P&L only when I recognize revenue. The day we recognize revenue, that day the cost of land, including the cost of con struction, put together becomes the cost of the product. And that is charged against the revenue.

Mallanna Sasalu: The tax is against moneti zation, tax is not against holding or buying the land. So, upon monetization then that will be recognized and taxes paid.
Niraj Gautam : If you drop us a mail, we can able to answer it better because tax regulation over a period of time has changed. Still, tax we are paying on the basis of the POC computation. However, the revenue recognition happens basis of the handover. So, there is a little bit of anomaly versus the companies, the w

ay we are putting profit and the way we are computing income tax profit and then we are paying tax over it.
Mr. Shah: Okay. And sir, let's say, next FY '26 or '27, you are looking for the similar kind of land acquisition on absolute amount?
Deepak Rastogi: So, we do not give guidance and obviously we will be looking for growth for sure and we will want to maintain similar kind of a growth. So, you can expect obviously land acquisitions.
Mr. Shah: Okay. Earlier you mentioned that we have some 40 million square foot of land every time we wanted to be in inventory, so do you want to maintain that?
Deepak Rastogi: So, the current land bank currently is around 25 million at this point in time. This is what under development is, or it will be planned over a period of time. So, we will continue to work on it. That's the way the current status is.
Mr. Shah: Okay. Just for last question from my side. Any other reason of Mr. Abhishek Kapoor to resign, or he is joining any other? If you can explain a bit.
Ashish Puravankara: No, there is no other reason for Mr. Kapoor to resign. Like I said, there were two things that happened almost parallelly. A, also the view of reorganizing it region wise was one. And also, I think at that point of time, even he was sort of some personal r eason, even he wanted to look at some opportunity, what we are told is outside the country. But yes, there is no other reason.
Mr. Shah: Okay. Thank you so much, sir. Thank you.
Ashish Puravankara: Thank you.
Moderator: Thank you. We have our next question from the line of Harsh Pathak from Emkay Global Financial Services. Please go ahead.
Harsh Pathak: Yes, sir. I have a few questions. So after Q4, what is the sustenance inventory that we are left with in value terms? Just to confirm, is it the same Rs. 6,500 crores as we have mentioned in the presentation?
Deepak Rastogi: That's correct.
Neeraj Gautam : That is correct. Yes.

Harsh Pathak: Great. And sir, so in Q1, I guess, we are having one launch, Mallasandra. So what will be the size in value terms and at what stage are we with respect to the launch? And when can we expect the launch to happen?

Mallanna Sasalu: So, all the approvals have come and even the development plan and other things have already been approved. And it's gone to the last level of the building plan approval is in process. NOCs are all in place and you should be looking at in the second quarter that the launch will happen.
Harsh Pathak: No, no. So Mallasandra would be in the second quarter or the first quarter itself?
Mallanna Sasalu: So first quarter in the sense that is only one month left, one month left. So I believe that depending on its little what can I say, it's uncertain when you go to the government. And so, we may start with some kind of an expression of interest program and other things in this month, but we will be officially launching it in the second quarter.
Harsh Pathak: Okay. And how has been the sales velocity so far in the quarter? Just because I guess we are left with the sustenance inventory itself. So any thoughts on that?
Deepak Rastogi: So I think we will not be able to comment on it, Harsh. You know that, right?
Harsh Pathak: Yes. Sure. But the velocity is going fine. I mean, I am just trying to gauge the demand sentiment on ground. That's where I am coming from.
Mallanna Sasalu: No, I think the demand sentiment is good on the side, on the ground. Whatever the project that we are there is, okay, just if I have to put a reverse corollary to that one that you are asking, whether we are maintaining the same momentum. So I can assure you that, I think the momentum is continuing and the market is still continues to behave well, and people are still wanting to look for good opportunities from listed players. So wherev er we have the stock that we continue to do at the almo st s

ame place. Without putting a number for this thing, yes, I can say that that much I can say that. We are continuing to do well.
Harsh Pathak: Okay. And sir, with coming to the commercial side, I guess how should we look at the Zentech asset, are we looking to lease this asset, or we would be selling it? And just in case, we are we are looking to sell it when can you expect the transaction to get completed?
Rajat Rastogi: So for the Zentech asset our strategy is dual we are looking at both leasing and sale primarily sales as of now. And as we speak we are already seeing good traction in our sales volumes over there.
Harsh Pathak: Okay. So, this is largely been focused from a sales perspective.
Rajat Rastogi: Yes.
Harsh Pathak: And what would be the total size of this asset maybe if you are selling it?

Rajat Rastogi: Our share in the total asset is close to Rs. 6.5 lakh square feet.
Harsh Pathak: Okay. And leasing side at the Aerocity asset?
Rajat Rastogi: So Aerocity is overall a 2.3 million square feet asset. We are looking at a 1.2 million OC by December this year. And right now, we are filling lot of RFPs and getting very, very encouraging response from Grade A companies. So yes, we are hoping that we should be able to announce our leasing very soon.
Harsh Pathak: And are we able to command the rentals better than the market, or we are going at the market rate itself per year?
Rajat Rastogi: Yes, we are. We will be hitting at the slightly better than the market rate because the quality of the product that we have put in is a Grade A Platinum rated product, and it's much better than the what the market is offering.
Harsh Pathak: Sure, sure. And just maybe a couple of questions more. In Mumbai, you highlighted there is this NGT issue, I mean we have been hearing since quite some time. So, how are we placed in terms of approvals mainly at the Lokhandwala asset? Do we expect some launches to get delayed because of this and what stage are we with respect to the approvals at all th e projects in Mumbai, if you can take up project to project please?
Rajat Rastogi: So, on our Mumbai portfolio, just since you started with Andheri, Lokhandwala, our approvals, excluding the N GT which is MOEF, everything is going as per the plan. We are in the final stages of securing IROD, but however, this NGT issue is pending in Supreme Court, so it will be difficult for me to give you any timeline for that. But we are hopeful that, by Septem ber this year, that this problem should get resolved and then we can apply for MOEF and look at a launch. Simultaneously, our redev elopment portfolio for other projects also the plans have been submitted or in the final design stages, so we are looking at a quarter 3 to Q4 launch for all our projects.
Harsh Pathak: Okay, okay. Sure. Just one last one. In terms of completion timeline for some of the key projects in this year, where are we currently with respect to these projects? And if you can highlight some key projects that are getting completed and when can we exp ect the revenue recognition for them?
Rajat Rastogi: Deepak, would you like to answer that?
Deepak Rastogi: That is actually part of the ICP already. We have provided some of those details when we are going to get that. So especially like there is a comment that we have already received partly some of the OCs for a project called Atmosphere, Oakshire, Capella an d Adora De Goa. So the

full OCs would get received during this year, again. And I am sure that we will be able to at least see some of the handovers coming through. So we are not expecting any like the way we have expected last year. We are not expecting that.

Harsh Pathak: Okay. So, close to Rs. 3,000 crores is what we will recognize in the revenue this year?

Deepak Rastogi: Yes, yes. But the sal

es have already happened. Almost Rs. 2,600 crores worth of sales have already happened in those projects actually.

Harsh Pathak: Sure. I was just looking from the accounting perspective. Sure sir, these were my questions. Thanks a lot for taking up.

Deepak Rastogi: Thank you.

Moderator: We have our next question from the line of Deepak Purswani from Svan Investments. Please go ahead.

Deepak Purswani: Yes. Thank you for the follow -up opportunity. So firstly on the project delivery perspective, I mean this year project delivery has again come down to 2,500 versus 2,600. So has there been any delay in terms of completion of any project if you can give a b roader sense?

And the second part of the question, if I am looking into the operating profit in the P&L, I mean since last two quarters it has come down to the single -digits. So just wanted to check it out, any cost escalation has been booked into this particular project? And when we are looking into the huge quantum of project delivery, which are coming in next year, what kind of the run rate we should be looking it out?

Mallanna Sasalu: Project delivery is a function of the burn and I think so far in this year we have constructed more than Rs. 1,500 crores of money has been spent only on the construction. And also, the projects which as Deepak was mentioning, those projects which are about to get the OC. In some of the projects that we have received OC as well, but because as was saying that because of the Khata, e-Khata issue that delivery to the customer got delayed. So, the two parts to this one, delivery to the custome r after the paperwork, and the other one is the construction part. I think that with the effort that has gone in this year and without giving too much into the numbers, I can say that next year looks good for good handover and revenue recognition.

Deepak Purswani: And in terms of the upcoming projects which are coming for the delivery, how should we see the operating profile margin for these projects? And is there any cost escalation?

Mallanna Sasalu: It's healthy in terms of the way that whatever the currently that we are doing and that's probably slightly better than what we have achieved so far.

Deepak Purswani: Has there been any cost escalation booked during second half of this year on the construction side?

Mallanna Sasalu: There is not much of a cost escalation that has happened in our books. And in fact, we have been able to keep the cost of construction to the estimated cost of what we had. So, operationally we feel that we are in control. As soon as these things will reso lve, the handover will start and then you will see healthy margins, I think.

Deepak Purswani: Okay. And finally, just wanted to check it out on the interest cost component and from the cash flow perspective this year, it is at Rs. 478 crores, and even on the P&L it is Rs. 550 odd crores on a rate of even if I were to consider gross rate of Rs. 3,800 crores, right? So just wanted to get the sense, I mean how should we see these numbers from the next year perspective, even on the cash flow perspective or something of that sort, if you can throw some?

Deepak Rastogi: Yes. Deepak, as we have been telling you, we are expecting obviously the cost should come down given the handovers and everything, the cash flows which would actually come up going forward given the investments we have made so far, even though we will cont inue to do it. So we expect those things to obviously get , I am sure that we are getting to a level wherein it has to only deliver and come down to that extent. So we will see how best we can actually handle it. But given the growth aspirat ions we have currently, obviously we will continue to repay the old debt, but at the same time for our growth aspirations or on land acquisitions we would continue to do that.

If we are able

to at least raise some equity from the marketplace which you have been telling all of you, so then we would be able to at least take those steps to do it. The other steps which we are doing is more of an obviously equity or a platform fundin g which will come as part of equity. So we have been communicating and talking to the investors and let us see how it basically pans out. So the idea is to continue to have the debt under control, which is there already. In fact, the residential debt per square feet has actually come down, overall so it has come down. But because of the commercial development as well as the land acquisitions, it looks like the debt continues to go up. But from a residential perspective, whereas the debt has come down for t he year as well.

Deepak Purswani: Okay. That's it from my end, and congratulations to Mr. Mallanna and Mr. Rajat Rastogi, and wish you all the best.

Mallanna Sasalu: Thank you very much.

Rajat Rastogi: Thank you so much.

Moderator: Thank you. We have our next question from the line of Shivang Joshi from Motilal Oswal Financial Services. Please go ahead.

Shivang Joshi: Hello. Good evening, sir. I have been resting to your direct cash flow slide, since reported numbers are not a proper way to gauge your profitability. I am trying to gauge profitability from direct cash flow slide only and taking operating surplus as a percentage of co llection. Historically, the trend has been pretty decent, but off late, I mean, FY '25 numbers particularly, it seems that I am just dividing operating surplus by direct co llections. It seems to be below 20%. I am just trying to understand what is your outlook for operating surplus to go up? I me an, because this should rather mimic EBITDA margins of 25%. Also, this is before the land apportionment.

Deepak Rastogi: Yes. We will not be able to provide you the forecast. But definitely, if you were to see our historical numbers, the collections have consistently gone up and we are confident that a similar thing will continue going forward also. In fact, this year, the c urrent year can be very, very good given the kind of launches and the handovers, which we would actually, we are expecting.

Shivang Joshi: Okay. Yes, sir. Go ahead.

Niraj Gautam: So, now I was saying, the operating surplus is closer to the margin, but not necessarily here. What happens is, some quarter over here, if I am going to spend more money on construction, doing the faster construction of some project, my operating outflow w ill be a little comparatively higher than the scheduled outflow, and thereby the operating surplus will be less. So, if you look at our P&L also, this financial year, we have incurred on a direct construction of Rs. 1,500 crores. Compared to the previous financial year, our construction has spent, which is directly developing a project is more, and these are part of our operating outflow. And hence, there will be a little bit of deviation in terms of operating surplus, but it's not impacting t he projected or estimated margin of a project.

Shivang Joshi: So, we can expect a directional improvement, not asking for guidance, but directional improvement in operating surplus going ahead.

Deepak Rastogi: That is correct.

Neeraj Gautam: Correct.

Shivang Joshi: That is the first part. Second, on the debt, I understand your net debt equity seems higher, because the net worth, the denominator itself is not a proper indicator, it is impacted by the reported losses, which are not actual losses. But the overall net de bt number itself seems to be an obviously, reasonably high number. What is your take on a comfortable, absolute net debt number going ahead, if you can speak on that?

Deepak Rastogi: We do not give a specific number or guidance towards how much will be the number, but what we do is that the overall debt per square feet, especially f

or the residential, should not go up, let's say, for Rs. 1,000 per square feet, right? So, if you have an ICP, you can see our debt per square feet for residential and land has actually not gone up, right? It is within the control. We have also repaid some of the Resi debt. However, we have invested in land, and we have also invested in the commercial asset for development, because there is no revenue coming from that. And hence, it looks like that overall debt is coming up. So, that is the anomaly, but we have provided this information in our ICP, how the debt movement is. We are not definitely looking to increase the debt per squar e feet for the Resi business.

As far as the commercial is concerned, as Rajat was mentioning earlier, once the asset comes up for either LRD or sale, obviously, we will see dramatic improvement in those debts as well.

Shivang Joshi: Perfect. And lastly, I will connected question to debt. You mentioned about certain fund -raise options. I believe that would be for overall reducing the cost of borrowing. Directionally, again if you can, I am not asking for any guidance to what extent your cost of borrowing can com e down in the coming year or two? What is the study?

Mallanna Sasalu: Cost of borrowing will come down and I think I am sure that both Neeraj and Deepak will have their views. The cost of borrowing will come down because the equity that is locked inside the company at this point of time due to, for whatever reason, the launc hes that have not been happening or happened so far. And once we start to launch the projects and once we start to realize that, automatically debt will have to be coming down. Today that if we are going to be expanding and borrowing the m oney, then debt will always look upwards. It is just about now the thing is to get the projects going and launching and delivering the projects, and that will bring down the debt. That is probably the right way to bring down the debt. Of course, generally that now maybe Neeraj has a view.

Neeraj Gautam: As far as interest rate is concerned, you have also asked a question about the interest rate which we are paying.

Shivang Joshi: Yes.

Neeraj Gautam: Our current interest rate is about 11.85%. However, it looks a little bit higher. But if you compare for the last year, one year ago, what are our weighted average costs already? It was 11.59%.

During the year, we have added or we have invested about Rs. 1,300 crores in the land, and that means we have funded this land cost from the additional borrowing. Despite that, we have not let our cost of debt go up.

As you know, the land financing are not done by the bank or any other housing finance company. To finance the land, we have to reach out to the NBFC or the AIF and those costs are a little higher. Yet, our continuous endeavor is to check the interest rate and keep it down. And going forward, this is also as Mallanna said and Deepak said, as we are going to launch the project flexibly better and we will be repaying some of the debt. Also, once we launch the project, we have the option to convert these proje cts into residential debt and thereby also the rate will come down.

Shivang Joshi: Okay. Thanks, N iraj. Thank you, sir and looking forward to your launches in the current year.

Neeraj Gautam: Thank you.

Mallanna Sasalu: Thank you.

Moderator: Thank you. As there are no further questions from the participants, I now hand over the conference to management for closing comments.

Deepak Rastogi: So, thank you all of you for your time, and your thoughtful questions. We appreciate your continued support and interest in Puravankara journey. Should you have further queries or

require additional information, please feel free to reach out to our Inventor Relation team. We keep forward to updating you on our

progress in the upcoming quarters. Have a great day and nice weekend. Thank you so much.

Moderator: Thank you. On behalf of Emkay Global Financial Services Limited that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

"Puravankara Limited Q1 FY '26 Earnings Conference Call"

August 08, 2025

MANAGEMENT : MR. ASHISH PURAVANKARA – MANAGING DIRECTOR , PURAVANKARA LIMITED
MR. MALLANNA SASALU – CHIEF EXECUTIVE

OFFICER - SOUTH , PURAVANKARA LIMITED
MR. RAJAT RASTOGI – CHIEF EXECUTIVE OFFICER ,
WEST AND COMMERCIAL ASSETS , PURAVANKARA
LIMITED
MR. DEEPAK RASTOGI – GROUP CHIEF FINANCIAL
OFFICER , PURAVANKARA LIMITED
MR. NIRAJ GAUTAM -- DEPUTY CHIEF FINANCIAL
OFFICER , PURAVANKARA LIMITED
MODERATOR : MR. HARSH PATHAK – EMKAY GLOBAL FINANCIAL
SERVICES LIMITED

Moderator: Ladies and gentlemen, good day, and welcome to Puravankara Limited Q1 FY ‘26 Earnings Conference Call hosted by Emkay Global Financial Services Limited.
As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing “*” then “0” on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Harsh Pathak from Emkay Global Financial Services Limited . Thank you. And over to you, Mr. Pathak .
Harsh Pathak : Yes. Than ks, Manav. Good evening . First of all, apologies for the delayed start of this con-call.
We shall now begin. So, on the behalf of Emkay Global , I would like to welcome the Management and thank them for this opportunity.
We have with us today Mr. Ashish Puravankara – Managing Director , Mr. Mallanna Sasalu – Chief Executive Officer (South), Mr. Rajat Rastogi – Chief Executive Officer (West and Commercial Assets), Mr. Deepak Rastogi – Group Chief Financial Officer , and Mr. Neeraj Gautam – Deputy Chief Financial Officer.
I shall now hand over the call to the management for the opening remarks. Over to you gentlemen.
Deepak Rastogi: Good evening, everyone . I am Deepak Rastogi and I thank you for joining Puravankara ’s Earnings Conference Call to discuss the performance for the 1st Quarter of this financial year.
The Result and Investor Presentation are available on the Stock Exchanges, and we hope you have had a chance to review them. I would also like to thank our host for today ’ s earnings call, Emkay Global Financial Services .
Now, let me start with some brief highlights about the sector performance followed by our financial and operational performance for the quarter.
As you know, India ’s economy continues to demonstrate strong Resilience despite persistent global uncertainties, geopolitical tensions, supply chain disruptions and evolving tariff policies in key markets such as US. Amid these external challenges, India ’s macroeconomic fundamentals continue to remain robust. The RBI has maintained its GDP growth forecast at 6.5% for this year, financial year 2026, reaffirming India ’s position as the fastest growing economy in the world.
In the first half of 2025, India ’s Residential real estate sector benefited from supportive macroeconomic policies, especially from RBI rate cut of 100 basis points, which brought down the repo rate to 5.5%. This measure was aimed at stimulating credit growth and investment at the backdrop of g lobal uncertainty. As a result, the inflation also pulled significantly with consumer price inflation easing to obviously the lowest in the last six years.

The Residential market remained steady during the period under review, with sales volume for the quarter stood at approximately 82,000 units across the top eight major cities. Chennai and Hyderabad led in terms of growth, recording impressive year -on-year increase s of 16 % and 6% respectively. Mumbai maintained consistent demand and remained the largest market by volumes during this quarter. India ’s Residential real estate market witnessed 9% quarter -on-quarter growth in new unit launches as sales remained l argely stable during the Q2 of calendar year 2025.
The mid -end and high -end housing segments continued capturing the attention of Mumbai ’s constituting about 58% of the total sales across the top seven cities during the quarter. The office sector continued its strong momentum during Q2 of this calendar year with steady absorption observed across key markets. Office leasing during the quarter reached 20.3 million square feet while new office supply of approximately 17 million squa

r e feet became operational. Space was
taken up by domestic corporates and GCC p layed a pivotal role in boosting the office absorption.

Now, moving on to the Company 's financial and operational highlights for this quarter :

We achieved a pre-sales value of Rs. 1,124 crores reflecting a 6% year -on-year growth. The sales value of West region increased by 58% Y-o-Y primarily due to the new launch of Purva Panorama in Thane, Mumbai. Sales volume for the quarter stood at 1.25 million square feet. The customer collections for the quarter stood at Rs. 857 crores. The average realisation also improved by 9% Y-o-Y to 8,988 per square feet , underscoring sustained demand and strong pricing traction across our portfolio.

In terms of geographical sales contribution :

Q1 of this year, financial year 50% was contributed by Bengaluru followed by Mumbai and Pune were at 24% ; Chennai at 15% ; and Kochi at 8% , respectively. Increase of sales from Mumbai and Pune from 15% to 24% during this quarter , indicating growing presence in Western region.

Our launch pipeline for the year remains robust with approximately 12.32 million square feet of planned development, which includes 9.22 million square feet new project launches and 3.1 million square feet of new phase launches. Notably, non -Bengaluru proj ects now account for more than 50% of ongoing and planned projects. Reflecting our strategic geographic diversification, Mumbai and Pune together represents 21% of the planned pipeline, underscoring our strong focus and expanding presence in West India.

On the commercial front :

We are on track to complete 2 million square feet during Q1 of 2026. In 2026, we have signed LOI with IKEA for 80,000 square feet of carpet area at Rs. 150 per square feet on carpet area for Purva Zent ech. The building will be ready by January 2026 with handover expected one months – two months later post their custom modifications.

With regulatory changes such as e -Khata have impacted handovers and revenue recognition timelines . We remain on track for planned delivery of more than 4500 plus units during this financial year. Out of the planned handovers, 3000 plus units, 3015 units, approximately 3.65 million square feet have been completed and the OC has been received already. Thes e are currently awaiting e -Khata issuance for handover possession. During the quarter, we handed over 667 units covering 0.68 million square feet, generatin g revenue of Rs. 539 crores.

On the business development front :

We have been selected as the preferred developer for the redevelopment of 8 housing societies in Chembur , Mumbai with an estimated GDV of Rs. 2,100 crores with developer area of 1.2 million square feet. This forms part of our broader redevelopment portfolio in the city with four key redevelopment projects collectively with a developer area of 3.63 million square feet , which is expected to generate a GDV of approximately Rs. 7,700 crores, further reinforcing our strategic presence and growth momentum in the Mumbai market.

Further strengthening our presence in key micro markets, we have entered into a JDA for 5.5 acres land parcel in East Bengaluru with an estimated GDV potential of over Rs. 1,000 crores. Earlier this quarter, Puravankara partnered with KVN Property Holdings LLP for a 24.59 acres land parcel with 3.48 billion s aleable area with an estimated GDV of 3 ,300 crores. The project is located in North Bengaluru near the airport and is expected to launch within six months. These strategic initiatives underscore our foc used approach towards expanding in high opportunity locations and driving long -term value creation.

Coming to the financials of this quarter :

Our revenue was Rs. 539 crores, EBITDA margin for the quarter was 15% while we reported a loss of Rs. 69 crores. The sales and marketing expenses and overheads incurred for the p

re sales
have been entirely charged to P&L as per Ind AS Standard 115. On our debt position, our net debt stands at around Rs. 2,825 crores which is at a net debt equity ratio of 1.68 with a cash balance of Rs. 718 crores, indicating a strong liquidity profile ensuring stability and operational continuity.

Gross debt during this quarter actually reduced by Rs. 138 crores with major debt coming down on the Resi side, but because of the changes or the increase in the commercial, the net increase, sorry reduction was Rs. 138 crores. Cost of debt has reduced to 11.35% driven by continued focus on improving funding efficiencies. We remain committed to optimize financial resources by continuously working on reducing the debt per square feet for under construction projects.

In the next couple of quarters, we will see increased acquisition and new launches in the line of growth plans of the Company . We want to highlight our strong growth trajectory over the last three years and the sales growth continues to be at CAGR of 28% while the collections have increased at a CAGR of 37% reflecting our commitment to execution excellence.

To conclude :
We continue to be optimistic about the sector considering the demand supply gap and rapidly growing economy. We are strategically launching the projects in our focus markets with a strong pipeline of already launched projects and further planned launches as w ell as ongoing business development activities. Thank you for patiently listening. We will now open the floor for questions.
Moderator: Thank you very much. We will now begin the question -and-answer session. We have a first question from the line of Harsh Pathak from Emkay Global . Please go ahead.
Harsh Pathak : Yeah, hi, sir. Thanks for the opportunity. So, first of all, on the upcoming launches, especially in the West region. So, since there is the NGT order has come , and I guess , there has been some clearance in, taking clearance from the state government. So, how do we see launches in the West region? And I see in the presentation, most of them are lined up in Q3 and Q4. Now, where are we on the approval stage? And when can we expect progressively the launches to come in?
Deepak Rastogi: Rajat, do you want to take it?
Rajat Rastogi: Yes, I will answer it. Hi. Good evening to everyone. So, as you rightly said, a couple of our launches were stuck because of the NGT reason. But now with the favorable order, we have started putting our applications for the MOF A approval. Understanding there is a long queue for all the cases that have been pending for the last one year. We hope that our Andheri project and our Thane project, they both will be available for launch in quarter four or maybe end of Q3. So, from an approval perspective, I think our files, our approvals, our files are moving in the right direction. They are moving swiftly. And I think in a matter of two to three months, we should start getting approvals. But I think the launches, as you said, will happen either in the end of Q3 or in the early of Q4.
Harsh Pathak: Sure. And I guess this would be phase -wise launches so you know, what is the quantum will be opening, maybe phase -wise, if you can highlight some part of that.
Rajat Rastogi: Yeah, I think amongst the three launches that we intend to do in the West region, the total inventory that we open for sale will be in the range of around Rs. 3,000 crores.
Harsh Pathak: Sure. And so any, I mean, in terms of hierarchy, so which project can we see first coming? Maybe would it be Bandra, the Breach Candy, and maybe down the line we will go for Apna Ghar, because we see there are a lot of launches lined up in those clusters. So, how do we see the launches there in terms of the timeline ?
Rajat Rastogi: So, in terms of timeline, of course, not 100% accurate, but in terms of ti

meline that we predict,
I think it is going to be Thane, followed by Andheri, then Pali Hill and Miami. Yeah, that is how we are planning.

Harsh Pathak: Sure, sir. And the Chembur projects, which we recently secured redevelopment rights ., when do we plan to launch th is project?
Rajat Rastogi: So, typically, I mean, the approval process takes time, we just started working on the design and the prospects of it. So, from a launch perspective, we are expecting it only in the next financial year, maybe in the quarter two of next financial year.
Harsh Pathak: Sure, sir. I will come back in the queue. Thank you.
Rajat Rastogi: Thank you.
Moderator: Thank you. We have a next question from the lineup, Deepak Purswani from S van Investments . Please go ahead.
Deepak Purswani : Good evening to everyone. Thank you for the opportunity. Yes. So, firstly, just wanted to get the sense in terms of the launch pipeline in the Bangalore. I mean, if you can give the broader sense about the approval process there, I mean, how should we see the approval? I do understand in the presentation, there is a timeline is given for each of the projects. But in terms of the at what stage of approval, if you can give the broader sense for the project like Grand Hills , Bellandur , Hebbagodi , Kanakapura and Westend .
Mallanna Sasalu : Yeah, this is Mallanna here. So, I think in the document that what we provided, we have already said that, Bellandur is going to come in Q3 and the other one in Kochi , there is a project called Winworth Phase 2 , we said it is going to come in for Q4, Grand Hills in Q4 and Hebbagodi in Q3, Westend in Q3, Hennur Road , probably Q4 or Q3, Mallasandra , that is our one of our project in Kanakapura Road that should be coming up in Q3 and another Kanakapura Road project which is called Vajrahalli, it should be coming in Q4. Also, a small part of development, this is that supposed to come in Q3.
The issue here has been that the Bangalore Development Authority and BBMP were revising the bylaws for the setbacks. So, which what it did, what it did do for us is we went on revising it and there were several couple of revisions that was brought in by th e authorities themselves

while we did our thing and when we went for the approvals and the approval got delayed further revision and further revision . And I do not see any challenges in bringing these things within this year.
Within the timelines, we have said maybe one or two projects may go one or two quarters this way or that way but we are committed to probably launch all these projects within this year.
Deepak Purswani : Okay. Got it.
Mallanna Sasalu : So, as far as where are these approvals and all NOCs received on all properties that now we have got the NOCs, it is just a matter of authority approvals is what is pending now.

Deepak Purswani: Okay. And s ir, I mean in terms of the demand in environment in both of the regions, I mean firstly on the Bangalore side and secondly on the western region side, I mean what is the kind of the absorption based on the current traction in the launches we are seeing? I mean what should be the broader absorption trend we are observing? I mean we are expecting in terms of the launch pipeline and in terms of the getting the new sales from these and for the upcoming projects.
Mallanna Sasalu : Rajat, do you want to talk about it from Mumbai and Pune and then I will talk about Bangalore and South India?
Rajat Rastogi: Sure. I can give him a gist. So I think the market remains very favorable especially on any product which is above Rs. 2 crores and that is the segment primarily that we are catering in the west especially in Mumbai. All the products that we have in the launch pipeline be it Andheri, Bandra or Breach Candy and the Thane P

hase 2, they are actually in phenomenal locations. The ir
locations that customers are really , really looking for , we already have started getting a lot of inquiries. So, we remain to be very positive and the market is also very supportive in the segments that we are currently catering to. Mallanna , you want to?
Mallanna Sasalu: Yes. So, and if you really look at what is happening across I think in Deepak 's introduction, opening remarks, he said about how the markets are doing. Nevertheless, see if you look at all over India 66,300 units were sold in Q2 of 2025. Units launched were 72,200 , which means that it is a very balanced market at this point of time. That is the number of units that are coming in versus number of units that are getting sold are almost in tandem.
So, if you look at 58% of these things are coming from Mumbai, Pune, Bangalore and South India. So, which is exactly where we are operating , and particularly in Bangalore and in Chennai and in Kochi , what we are seeing is the demand is quite stable . And I would say that between stable and robust because any of the projects that have been launched and the offtake is very good. The number of players have come down and whoever is the larger players, listed people, players like us, we are really taking a premi um out of that.
So, it is a great market and maybe my thing is that we had a good run over the last two years on the pricing side as well. Maybe pricing might have achieved its target and maybe it is going to be there. Prices cannot go at the same rate as which went up in the last two year, three years. Nevertheless, it will beat the inflationary numbers is my opinion. So, it is a great market to be in.
Deepak Purswani: Okay. So, I think Thane project, actually we launched Phase 1 at the 2nd of the March and early update. So, if you can give the broader sense, what was the total launch pipeline inventory, launch inventory during that time and how much has been sold and how has been the response for that project?
Rajat Rastogi: So, for the Thane launch, we launched close to around inventory around Rs. 300 odd crores. We have already sold around 70 % - 75% of all the inventories at the launch. The launch was very, very successful. The price that we received was about Rs. 20,000 as a realization at the launch,

which probably is one of the highest in that micro market. So, most of the people who bought with us were keen on the quality that Puravankara provides and we continue.
We are very, very hopeful that in the Phase 2 and the new inventory that we get post these recent approvals, I think this launch can be a much, much more bigger launch in the numbers perspective .
Deepak Purswani: Okay. And so, if I understand correctly, earlier in the presentation, we were giving that the total GDV for this project would be around Rs. 3,500 crores. So, eventually, what would be the timeline where we would be looking out to monetize this complete project? And also, is there going to be purely a Residential development or is there going to be the mixed use development of this project?
Rajat Rastogi: Yeah. So, let us break up the question into two. So, one is the overall, you are right, it is overall a Rs. 3,700 odd crore s GDV project. We are looking at launching the entire project over a period

of 1.5 years. As I said earlier, it got a bit delayed because of the NGT issues and now with that issue being over, we are quickly working on the approval. So, within a matter of 1.5 years , we should be able to launch all the towers in the project. Number one.

Number two, yes, it is a mixed use. We have a sizable retail because it is right on the Ghodbunder Road , one of the most premium locations in Thane and we are developing close to 3 lakh square feet of retail in this project.

Deepak Purswani: Okay. And I mean, what would be the ti

meline for the next project and what would be the GDV we would be looking at out? And in terms of, and second question to it, what would be the retail area which we would be launching? And when would be the, we would be looking out to launch that project ?

Rajat Rastogi: So, as I said, I think this is a composite project with five towers. We have joined the first phase which was around half of a tower as per the current last approval. So, now we are going to be launching another two towers and hence over a period of 1.5 years, we woul d be launching all the five towers. In terms of the retail area, we are not launching, we intend to hold the retail area. We are not looking at selling the retail area. As of now, we will try and build a product which can lead to annuity income in the future. So, right now, I think we are not opening any retail area.

Deepak Purswani : Okay. And on the commercial side of the development, I mean, Zentech , we were looking to monetize that project. I mean, if we can give this broader update at what stage we are in, where has been the progress about the monetization of that deal?

Rajat Rastogi: So, as Deepak mentioned in his presentation, just now that we will be able to lease the entire retail area to IKEA. That is one of the most significant deals that happened in the last quarter at a rental of close to Rs. 150. Apart from that, as you rightly said, we are monetizing the asset. We have already sold close to 15% of the asset so far and right now, as we speak, I think there is a

business which is going on. So, we hope by the end of this financial year, we will be able to monetize the substantial part of the asset.

Deepak Purswani: Okay. And just final question from my part. If I were to look on the cash flow slide, on the Slide #23, couple of things. One, on the collection side, I mean, year-on-year, I have been flattish, I do understand because this time there was only the sustenance sales and there has been no launches. But if you can also give the broader perspective, once the launch pipeline opened, how should we see this collection number going ahead? And second part of the question, second part of the question is in terms there is also the line item exit or investment equity in nature to the extent of Rs. 322 crores. If you c an give the broader reason of what this amount pertains to what?

Niraj Gautam : Yes. So, your question has two parts. A is you said that collections or operating surplus is little less compared to the previous quarter. What are the reason and how it will going forward looks like? So, current quarter as we have mentioned that there is less launches and that impacted our collection a bit. However, the second question 's answer lies in Slide # 24. If you look at Slide #24, we have balanced collection to receive from the sold units itself Rs. 4,643 crores. So, that means we have sold the inventory and collections will be coming as we construct faster, the collection will come.

So, going forward, we see there is increase in collection as we build faster and the collection will come in. The third point which we ask about the cash flow, which is Rs. 322 crores, which is investment in equity in nature. So, we are referring about the drawdown which we have done from HDFC capital, which is Rs. 282 crores, which is payable and enable structure and zero - coupon bond. And we utilize this money in acquiring one of our, which we announced Hardware Park property. And another Rs. 50 crores we have drawn from 361. That facility is also payable and enable in nature. And that is a basis of surplus sharing and IRR based, again, a zero coupon bond. And that money we have utilized for our Deccan redevelopment project in Mumbai. That is why it has been classified as a separate line item.

Deepak Purswani: Okay. Just continuing --

Ashish Puravankara : One ad

dition to the first point in terms of the cash flow reduction, obviously, it is, I think the contribution that would have come from new launches. Also, if you notice the handover, while the projects are complete, the balance 10% that we get on possession, right those have gotten delayed on account of that e-Khata . So, the projects are ready as and when that e-Khata comes and we start doing the registration, because most of these apartments are funded by banks. So, they pay that balance 10% only on registration. So, which have gotten delayed because of some change in government rules and this whole e-Khata business. So, if we had handed over, for example, what we had targeted for this quarter, while on the business side, the project is complete, but from a handover point of view, because of the e-Khata , that possession has gotten

delayed. So, that is the second reason why you see that smaller number.
Deepak Purswani: Okay.

Mallanna Sasalu: And that also answers the question why the comparatively the revenue is lower. And that is one of the reasons why the revenue is lower as well. While the expenses remaining constant on the future project, the marketing and general expenditures going up and the revenue not recognized despite the project is completed because of this e-Khata business. And that is the reason why you see that the revenue numbers being low.
Deepak Purswani: So, would it be fair to say now this e-Khata issue would be behind us and incrementally one on the sustenance part of this collection should improve. Second, with the launch of new project, there would be a substantial increase in the collection going ahead. And secondly, this balance collection fro m sold units of Rs. 4,643 crores, what would be the timeframe where we would be looking out for this collection of sold units?
Deepak Rastogi : So, that is for coming from our current ongoing project, which is two years to three years, we will be able to achieve this collection.
Deepak Rastogi: From a first question perspective , Deepak , we are expecting next, mostly from Q3, Q4, you will have very, very strong collections. Q2 also will have something more. But Q3, Q4 will be the higher collections is what we expect because what Mallanna just suggested on the e-Khata thing, with the glitches there, if everything goes right, obviously, everything will fall in place in the current quarter. Else, it will actually get into the next quarter. But let me assure the team here that we are very confident that whatever we think we should be able to do it, we will be able to achieve it during this year.
Deepak Purswani: Okay, thank you. Thank you and wish you all the best.
Moderator: Thank you. We have our next question from the line of Chintan Mehta from Puniska Family Office . Please go ahead.
Chintan Mehta : Hi, sir. Thanks for the opportunity. I just want clarification. In press release, we mentioned about the surplus cash flow. This surplus cash flow also include the redevelopment project, all of the redevelopment project?
Deepak Rastogi: This surplus includes all our ongoing projects, plus also our projects, phases of the existing project which are yet to open for sale . And also the launch guidance which we are given, which is there in our launch guidance in this ICP, Slide # 16. It does not include any business development, new business development or which we are signing. It is precisely from our inventory open for sale, plus inventory not open for sale, plus the launch guidance which we are given, which is on Slide # 16. Nothing more than that.
Mallanna Sasalu: So, redevelopment is actually included in this, is what I can confirm, basically, which is your, Apna Ghar, which is, you know, Rajat was mentioning, we just got the NGT clearance, Miami, and for Deccan. So, those are the three redevelopments, which is par t of the

current cash surplus,
which would obviously, once we launch it over a period of time, you know, we would be able to at least get those surplus in place.

Ashish Puravankara : But certain ones like, for example, what we just recently announced, Chembur , the 4 acres, that is not part of this, that those cash flows have not been included. So, those are all additional.
Rajat Rastogi : Correct.
Mallanna Sasalu : Chembur and also we announced that the one which is the KIADB land that is 3300 GDV, that is not included. We announced another one, Balagere in Bangalore, that was another Rs. 1,000 crore rupees, that is not included, and they are all there in the public domain. While we are actively pursuing quite a number of opportunities which are coming to closure, but these are the things which are not included.
Chintan Mehta: Okay.
Ashish Puravankara : So, there are about four projects or five projects where the transaction is closed, but have not been included in this cash flow.
Chintan Mehta: Okay. And sir, what is the margin difference between these two, owned land development projects and redevelopment projects?
Mallanna Sasalu : So, among the 10 in the South India that we have, nine of them are owned lands and one is a joint development agreement. And I think rest of the three that are listed here are all redevelopment.
Chintan Mehta: I just wanted the margin differentiation between…
Ashish Puravankara: So, even in redevelopment projects, Chintan , the margins are different for every project, but just to give you a perspective, I think the EBT levels that we would like to operate would be between

20% - 25% across our project portfolio. I am talking about redevelopment projects.
Chintan Mehta: Okay. And for owned land development, it would be higher than 35% or 30%?
Ashish Puravankara : Approximately about 30%.
Deepak Rastogi: It again depends, obviously, what kind of but we look for our internal purposes. We look for, obviously, a particular IRR benchmarks and we also look for gross margins. So, generally, we will look for more than 24%, especially for the own the land acquisition and all, as far as the gross margins are concerned. And I can tell you, most of the projects will be in and around or even higher than what you are referring to.
Mallanna Sasalu : Also, it will not be a perfect science because it depends on…
Chintan Mehta: No, no, I am talking about IRR only.
Mallanna Sasalu : When we acquire the piece of land…

Deepak Rastogi: Okay, he is talking IRR. So, IRR, purely from an IRR perspective, redevelopment would have higher IRR because there is no land cost which gets associated with it. It is more of a construction and some kind of, obviously, the approval cost which comes in. As far as the outright sales is concerned from a land perspective, obviously, IRR would be slightly less comparatively. But anything which we look at it should be u pward of at least 18% IRR. That is the way we look at it. And it can go up to, you know, 30 % - 35% and even higher than that. So, it depends upon what projects we are talking about and which are the locations. And it will be very difficult for us to give you a very generic answer to that because it has to be project by project.
Chintan Mehta: Okay, okay. And one commercial project which we are looking to monetize it, what is it updated there?
Ashish Puravankara : Rajat?
Rajat Rastogi: I think on that commercial project, as I said, that we are already, the work is already processed in progress. We have already monetized around 15 % - 20% of the asset as we speak. And we are very hopeful by the end of this financial year, we will be able to monetize a substantial part of that asset.
Chintan Mehta: Okay, sure. So, just a last question from my side.

How we see this digital khata, e-Khata registration? Because of that, the price can go up or, I mean, how you see that in Bangalore specific market?
Mallanna Sasalu : So, the question here was that e-Khata was a piece of paper. Now, they made it, it is just the same khata , but it is in electronic form. And so, basically, what happens is that once you complete the project, and the khata means the ownership comes into the developer 's name first, and then it gets transferred to the ultimate customer, customer again goes back and makes their own e-khata.
The entire thing that because of the process, and it is all machine driven, and the software are new, and some of the things cannot be uploaded, and some of the options are missing, and probably was kind of, I would say that not well thought through. And b ecause of which what has happened is that when we get the khata, then only we can go and register it. So, that is the challenge. And there is no cost increase and etc., because if the project is completed, and maybe it is a delay of one or two months that we need to take it in our stride and move forward.
Chintan Mehta: Okay, so just one for curiosity, this e-Khata also require compulsion to register l ands and all the records. And are we following, I mean, we have intent to following or how you see that as a positive, negative?
Mallanna Sasalu : And in the long run, it is positive in the short , always, always anything technology coming in and everything becoming paperless is fantastic. But the thing is, in the short run, till it is implemented properly, just exactly like the way it happened in GST. Once it is implemented,

once it is going fine, then it is fantastic. It is a very good thing for the industry, and for the entire state of Karnataka in terms of land records and other things.
Chintan Mehta: Sure, sir. Understood. Thanks for the opportunity and best of luck for that.
Mallanna Sasalu : Thank you, Chi ntan.
Moderator: Thank you. We have a follow -up question from the line of Harsh Pathak from Emkay Global Financial Services. Please go ahead.
Harsh Pathak: Yeah. Hi, sir. Thanks for the follow -up. So, you highlighted that we have leased the space in Zentech for 150 per square feet. So, if you can throw some light on how the micro market is and what the prevailing rates are. And this rate of 150 per square foot that we have got, how is it comparable to the micro market? And what is enabled to us to get this kind of a rate?
Rajat Rastogi: So, Harsh, I think, just to give you a perspective of South Bangalore market, I think, first and

foremost, I think this asset, what we are building is one of the best, really, I think, that is there in the micro market. From a perspective of IKEA coming an d choosing us as a product because IKEA does a very, very long due diligence before finalizing any place, especially for the retail operation. So, for them to come over, that really says about this product, which is clearly by far the best product available in the South Bangalore market, number one.
Number two, the ongoing rentals for retail vary. I think this asset is bank opposite for a m all in Bangalore and the rentals over here in this micro market are in the range of Rs. 100 - Rs. 120 per square f eet. The reason why we were able to get a higher rate is because of the quality of this asset, the way it has come up as I said. And obviously, there is an entire layout, the frontage of the asset itself in the overall sales for IKEA. So, just to give you a per spective from the rental perspective, the Rs. 120 to Rs. 100 is the range in South Bangalore and we were able to get a rate of around Rs. 15 0.
Harsh Pathak: And how does the pipeline look for the remaining space in Zentech ?
Rajat Rastogi: It looks very healthy. As I said, I was just saying in the other call, so it looks pretty

healthy right
now. We started sales in April this year. We have already done over 15% of the area. And as we speak, every month we are selling some area, monetizing some area. So, we are very hopeful by the end of this year, we will be able to substantially reduce our inventory in Zentech . Especially with IKEA coming in, it really helps us to increase the price further because it becomes a landmark by itself. So, that will further help us to get a higher value and further realization.
Harsh Pathak: Right. And with respect to Aero city, how are we placed there in terms of leasing activity?
Rajat Rastogi: So, Aerocity is coming up very, very well. We are expecting OC to come by December for both towers, which is around 1.3 million square feet. There is a lot of inquiries that have been generated on a daily basis. We are hopeful that in Q3 and Q4, we will be able to get a hang for to start with the leasing activity in that asset.

Harsh Pathak: Sure. And I guess we are having a third asset also. So, what are the timelines there? Have you finalized something? Where are we in stage of progress?
Rajat Rastogi: So, that asset, we are at the final stages of closing on the legal due diligence. We should be able to sign the sale deed by September end and we are hopeful that by Q4 of this year, we will start pouring concrete.
Harsh Pathak: Sure. And coming back to the Residential space, how does the BD pipeline look for the remaining of the year? I guess we have done a commendable work in the 1st Quarter . So, how are we placed for the remaining of the year and where would our focus be in terms of the region selection?
Rajat Rastogi: You mean to say for the West region or you want to get over the South region?
Harsh Pathak: No, the overall. So, in terms of mix of the region, so where are we focused more? Because I guess in the 1st Quarter , we have done a lot of additions in West and also in the Bangalore side also. So, how do we intend to take the BD pipeline forward for the remaining of part of the year?
Rajat Rastogi: Mallanna would you like to --
Mallanna Sasalu: Yes. Bangalore is our headquarters and thus, we are quite strong in Bangalore. And so, we have done extremely well in closing deals in the last one year or so. So, we will continue to do that at any given point of time. We are evaluating more than 20 - 25 opportunities and some of the things which are closed also not announced. And so, then of course, we are in Chennai and Chennai that actively we are pursuing and now there are four projects which are going on. And Cochin, we have become quite large in Kochi and one of the projects is expected to launch. And again, there also we are pursuing. Hyderabad, we are pursuing, even though we have not had great luck. Hyderabad, we are pursuing. We are coming to the end of the project in Goa. We are looking for some assets in Goa as well. So, these are all not definitive things can be told. Everything has to match and our return on our investments and our ability, our matching our Company 's philosophy of the product and all those things have to match. Then we go forward in all these locations because we have put th e hard work and the knowledge investment has been done in all these places. So, we will continue to be aggressive and pursuing opportunities.
Rajat Rastogi: Likewise, for the West region, I think we are growing especially in Mumbai and obviously looking at opportunities in Pune. We will expand further in Pune in the near term. Also, in Mumbai, there is huge scope for us to further grow and be evaluating opportunities, which is o ur strategic goal, what we want to achieve. So, I think we are looking at opportunities more than giving a definite number.
Harsh Pathak: Sir, in terms of overall quantum, last year we did around Rs. 11,000 crores of BD. So, this year, any number we

have in mind, we look to at least cross this or is there some target?

Mallanna Sasalu: As I said, there is no target. We do not go after target. We must close this much. It is about number of opportunities that come in, in terms of end of the day, it is not about race to close the deal. It is race to be profitable in all projects, the way we expect it to be. So, there is, I mean, we can say that it will be as healthy as anything that can be, without getting into the numbers. It will be healthy this year as well.
Deepak Rastogi: See, Harsh, we will continue to grow the way we are growing our business and that would continue, that thrust will continue going forward also.
Ashish Puravankara : I think two inputs from my side there are A, on a thumb rule basis. Thumb rule, what you sell a year, for example, as an organization, if you are selling about 5 million square foot to 7 million square foot a year, I think the thumb rule logical target would be to replenish your land bank by that much every year , right . So, as you keep going forward, that much production and if not more, you keep increasing volumes as well. But I am just saying as a thumb rule, sort of that would be th e number.
But most importantly, I think is that change in strategy in terms of business development as well. So, today, we are able to replenish this in three formats, one being outright, second being joint developments and now the new bucket in the western region, which is the society redevelo pment. So, the latter two basically come at a relatively much lesser upfront capital cost, because these are joint developments and society redevelopments. So, that comes at a much lower cost.
The third point being again as a strategy, extremely clear that all the new BDs, in fact, what have been done over the last 2 years - 3 years, these are projects which are clean, clear, converted lands, where the target to the team is that from the time you acquire, you need to turn around on an average six months to eight months, you need to get these projects to launch. So, there is no sort of aggregation or aggregation risk or conversion risk or approval risk per se as a new strategy for the BD that we have been doing over the last two years. So, you are going to see a lot faster turnaround.
Harsh Pathak: Sure, thanks for that elaborate answer. So, just two final question from my side. So, are we looking at any pre -sales growth target this year? And second, in terms of debt, I think this quarter sequentially, we have seen some decline in the net debt levels, even the cost of debt has gone down. So, how do we think in terms, how should we think in terms of net debt going forward? Just these two poi nts.
Deepak Rastogi: So, Harsh, it is difficult for us to put a number there. But what I can say is that given that on the Resi, you have seen that the Resi per square feet has actually come down and that will continue to obviously pair , because whenever the project goes under production, automatically it is a self pairing. Where we have continued to increase our debt level per square feet is on the commercial side, because that development continues on the capital asset side until the time we either do a strata sales or leasin g, that would take some more time to start obviously getting pairing.

So, Resi I think I am not really, really concerned at all. As far as commercial is concerned, there is no concern as such. But obviously, it will show some increase per square feet, but eventually it will dipper down as what Rajat was also mentioning that we are looking to at least do the OCs for almost 2 million square feet this year. So to that extent, obviously, slowly we would start seeing some pairing after that.
Ashish Puravankara : I think an easier way to understand that is I

think you classify the debt into essentially three buckets, right? The first bucket being the debt which is on under construction projects. Now, these projects are selling well, collections are good, burn rates are good. So, which means that there is absolutely no concern, it will be self -pairing. The second bucket you look at is the debt that has come on account of business development. Like I mentioned a little earlier, extremely clear th at any BD that we do have to be clean, clear, which means from the day we do the transaction, the designing starts, approval starts, and the target being six to eight months to launch. So, that in mind, that is the second bucket of debt.
Again, there, if you are able to follow even 90 % - 95% where we are able to turn these projects around and get them launched in six to eight months, again, that goes into production in that sense. So, it is a productive debt and with the sales collections, it will get pared down. The last bucket is the debt against the commercial. Now, commercial, the debt is on essentially three projects. The one which you are anyway going to be monetizing, which by the year end, so that debt should be paired off automati cally.
The other one, for now, we are hoping to complete construction by December and as the leasing starts, you convert that construction finance into LRD at a much lower cost. So, again, with the

rental that you collect, it will be self pairing. I think just to sort of put it into perspective.
Harsh Pathak: Yes, thanks a lot again for the detailed answer. And just on the pre sale growth, any target or...
Ashish Puravankara : When you say growth, you are comparing it to the last year?
Harsh Pathak: Yes.
Ashish Puravankara : Yes, of course.
Harsh Pathak: No, no, I mean, any targeted number we have in mind, just...
Ashish Puravankara : No, we have never given a guidance or a number, but definitely, there will be a growth in that number. With the kind of launches that we have, especially over the quarter three and quarter four, if you look at the kind of locations and the spread that we have within Bangalore, the kind of spread that we have, then even the Kochi project, the following phase, Phase 1 of which has done extremely well, execution is happening extremely well. So, that is a great location.
Again, we had a great experience in that project. Again, you come to Bombay, if you look at the kind of spread that we have right across the city from Thane, different price points, Thane, Lokhandwala, Pali Hill, etc. Again, very unique locations. And the reason I say that in terms of,

while the micro markets are great, again, but the property itself, right, I think the frontage, the size and scale of these projects, for example, in the Bandra, most projects, I mean, if you are from Bombay, in that entire vicinity, they are standalone to wers with no amenities.
We were fortunate to get the site, which is 2.75 acres. So, we are able to pack in every single amenity. And that is the USP of that site. And that is, you know, we are already, I mean, we are in designing phase. The office receives almost 10 to 15 enquiries a day. Have you opened up sale? Have you opened up sale? So, within the Bandra market, there is so many people who want to move into a larger development that provide you a lifestyle and, you know, a lot more amenity than what is existed. And they are the small plot car, single tower developments.
Harsh Pathak: Understood. Thanks, Ashish , for taking my questions. Thanks a lot.
Ashish Puravankara : My pleasure.
Moderator: Thank you. We have our next question from the line of Chintan Mehta from Puniska Family Office . Please go ahead.
Chintan Mehta: Sir, just wanted to know, do you have any more land parcel or space at Aerocity to launch something commercial or Residential?
Deepak Rastogi:

So, we have a Grand Hills project, which is there as part of our launch pipeline, right? So that is there apart from commercial that is a Resi, obviously, which is coming up. So, if you see in Slide #16, you can see number three, Grand Hills actually, you know, pertains to that same Aerocity site, which you are referring to.
Rajat Rastogi: Grand Aerocity , part of same campus.
Chintan Mehta: Okay. Understood. And further after that, I mean, we are looking at a big one to develop that area or when?
Ashish Puravankara: See, Phase 1 of that Aerocity project, the total commercial is about 2.2 million square foot. What we are completing by December will be 1.2 million square foot . And then we hope in January, start the Phase 2 of the commercial, which is another million square foot. That micro market is really developing well, because of the metro connectivity, the entire micro market, you have the best of schools, you have Resi, you have offices, you have hospitals, the best of schools are in that vicinity.
And once the metro starts, the entire micro market like Outer Ring Road five years ago, the entire place will get related in that sense. And then at the back, currently, what we have designed is so 2.2 million square foot of office space in the front, and at the back Resi, the whole walk to home concept.
Chintan Mehta: Okay. Okay. Thanks, sir. That is the detail I wanted to know. Thank you so much, sir. All the best.

Ashish Puravankara: Sure. Thank you.
Moderator: Thank you. As there are no further questions, I now hand the conference over to the management for closing comments. Over to you, sir.
Deepak Rastogi: Thank you all for your time and questions. We appreciate your continued support and interest in Purvankara 's journey. Should you have further queries or require additional information, please feel free to reach out to our investor relations team. We look forward to updating you on our progress in the coming quarters. Have a great day and a nice weekend. Thank you so much.
Moderator: Thank you, sir. On behalf of Emkay Global Financial Services Limited , that concludes this conference. Thank you for joining us and you may now disconnect your line s.

Call: Nov 2025

“Puravankara Limited Q2 and H1 FY'26 Conference Call”

November 10, 2025

MANAGEMENT : MR. ASHISH PURAVANKARA - MANAGING DIRECTOR , PURAVANKARA LIMITED

MR. MALLANNA SASALU - CHIEF EXECUTIVE OFFICER
(SOUTH), PURAVANKARA LIMITED
MR. RAJAT RASTOGI - CHIEF EXECUTIVE OFFICER
(WEST & COMMERCIAL ASSETS), PURAVANKARA
LIMITED
MR. NIRAJ GAUTAM - CHIEF FINANCIAL OFFICER ,
PURAVANKARA LIMITED
MODERATORS : MR. HARSH PATHAK - EMKAY GLOBAL FINANCIAL
SERVICES

Moderator : Ladies and gentlemen, good day and welcome to Q2 and H1 FY '26 Conference Call of Puravankara Limited Hosted By Emkay Global Financial Services Limited.
As a reminder, all participant lines will be in the listen only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing '*' then '0' on your touchtone phone. Please note that thi s conference is being recorded.
I now hand the conference over to Mr. Harsh Pathak from Emkay Global Financial Services.
Thank you and over to you.
Harsh Pathak: Thanks Yashas vi. Good evening , everyone. On behalf of Emkay Global, I would like to welcome the management of Pur avankara Limited and thank them for this opportunity.
We have with us today, Mr. Ashish Pur avankara – Managing Directo r, Mr. Mal lanna Sasalu – Chief Executive Officer (South), Mr. Rajat Rastogi – Chief Executive Officer (West & Commercial Assets) and Mr. N iraj Gautam – Chief Financial Officer.
Also wish ing N iraj ji the be st for his new role as the CFO. I shall now hand over the call to the management for the opening remarks. Over to you , gentlemen.
Niraj Gautam: Thank you , Harsh. Good evening , everyone and thank you for joining us today. As CFO of Puravankara Limited, I will take a few moments to highlight our key financial and operational achievements for Q2 FY '26, provide context on the macroeconomic environment and share our outlook for the balance of the year. I will aim to keep this concise while addressing the metrics that matter most to you.
Let me start with the broader macro landscape which continues to underpin our sector's resilience :
India's economic delivery is robust 7.8% year -on-year real GDP growth in Q1 FY '26, solidifying our position as the world's fastest growing major economy. The IMF forecasts 6.4% growth for full year while the RBI has upgraded its projection to 6.8% fueled by a strong domestic consumption and a rural rebound. On the monetary front, the RBI has cut the repo rate by 100 basis points to 5.5%, adopting neutral stance amid healthy liquidity conditions. In residential real estate, demand remains strong especially i n the 1 -2 crore s segment with price appreciation ranging from 5 %-17% across major metros like Bangalore, Mumbai NCR and Chennai. These fundamental positions Pur avankara favourably to capture ongoing market momentum.
Turning to our financial and Operational performance :
In Q2 FY '26, we recorded pre -sales of Rs 1,322 crores, a 4% increase from Rs . 1,270 crore in Q2 FY '25. Notably, this growth was driven solely by sustenance sales, underscoring the enduring customer trust on our portfolio and brand strength. Average price realization rose 7% year -on-year to Rs . 8,814 per square feet , reflecting sustained demand and effective pricing discipline.

Customer collection reached Rs . 1,047 crore, up 8% from last year, demonstrating strong er execution and payment adherence.
For H1 FY '26, pre -sales totaled to Rs. 2,445 crore, up 4% year -on-year and collection hit Rs . 1,904 crore up 1% year -on-year maintaining a solid cash conversion ratio.
On the PL side :
Revenue grew to Rs . 663 crore in Q2 compared to Rs . 520 crore last year. We reported a loss of Rs . 42 crore versus Rs . 20 crore in Q2 FY '25. Let me clear this. This is largely due to the timing of revenue recognition under IndAS and our strategic investment in new projects. It is not indicative of any underlying operational weakness. Our cash flows are robust, with operating cash generation supporting our growth initiatives , and our balance sheet remains strong.
Switching to business development :
We have made meaningful strides in bolstering our pipeline during H1 F

Y '26, hitting over 6.36
million square feet of developable area, with a potential GDP of approximately Rs . 9,100 crore.
Key additions include a 24.6 -acre partnership at KI ADB Hardware Park in North Bengaluru, a preferred developer status for eight societies in Chembur, Mumbai, adding to 1.2 million square feet, a 5.5 -acre joint development in Balagere , East Bengaluru, valued at Rs 1,000 crore GDP.
The prestigious Mala bar Hills redevelopment in Mumbai, contributing to Rs 0.7 million square feet and a GDP of Rs 2,700 c rore premium residential share.
These moves diversify our exposure across premium and mid -income segments, enhancing revenue visibility. Our land bank now exceeds 32 million square feet , providing multi -year runway for launches and de -risking our growth trajectory.
Looking forward, our H2 FY '26 pipeline includes 15. 46 million square feet across Mumbai, Bengaluru, Chennai and Pune. This carries a potential of Rs . 5,800 crore plus, which we expect to accelerate pre -sales momentum. With resilience demand, favorable financing and our proven execution track record, we are well equipped to deliver on these opportunities and sustain profitability improvements. In summary, Q2 FY '26 was marked by steady topline growth, disciplined cash management and targeted expansion that f ortify our long -term value creation.
Despite the reported loss, our fundamentals are sound, healthy collections and fortified balance sheet in a high -potential pipeline, we are committed to optimize costs, enhance efficiency and driving shareholders' returns as we navigate the second half.
Thank you for the continued support. Now, I will open the floor for questions. Thank you.
Moderator: Thank you very much. We will now begin the question -and-answer session. We will take our first question from the line of Deepak P urswani from S van Investments. Please go ahead.
Deepak Purswani: Good evening, sir a nd thank you for the opportunity. Sir, my first question is related to the Mumbai pipeline, especially for the Andheri project and Miami project. It seems the launch has

been delayed by another 3 -4 months. If you can give broader sense, how should we see and what are the reasons we are facing the delays vis -à-vis the other players? That is my first question on the Mumbai. If you can please explain ?
Niraj Gautam: I will request my colleague Mr. Rajat to answer this que stion. He is there on the call.
Rajat Rastogi: Hi, Deepak ji. Just to answer your question, first on the Andheri launch, Andheri launch, we have received all the approvals, including MOAs. Vacation notice has already been served to the society. As we speak, members are leaving the society. We are in all good position to launch it in January. In fact, our sales office work and everything else has also started. Regarding the Miami launch, approvals are already going. We are already informed earlier that Miami launch is going to be either in Quarter 4 or in beginning of Quarter 1 next financial year. The way the approvals are progressing, we are most likely to have it in the month of March or in the month of April or May next year. So, we seem to be on track. We are absolutely facing no regulatory problems. Our approvals are on track and we are probably getting approvals at one of the fastest pace in the industry.
Ashish Pur avankara : You can update them on your Bandra an d your Thane approvals as well.
Rajat Rastogi: Of course. And just to also inform you, we are also on the Thane approvals, w e are working on the approvals. We are expecting to get all the requisite approvals by end of December. All good to launch by Quarter 4 of this financial year. We should be able to get close to around 6 lakh square feet of inventory in Thane. In Bandra, we have also received the concession plans. We are expecting the IOD to come within a week's time a

nd post that, we will serve the vacation
notice for the society. Just to inform on Bandra as well, we are looking at getting all the approvals including the environment approvals by end of December, post which I think we will start working on the launch timeline. So, Bandra also, we are very, very positive that we should be able to launch in Quarter 4 of this financial year.
Deepak Purswani: So, would it be fair to say that 3 out of the 4 projects at least should see launching in Q4 for the Mumbai project?
Rajat Rastogi: You are absolutely right.
Deepak Purswani: Okay. Now, moving to the Bangalore market as a whole. See, I mean, there also if I were to look into some of the key projects which we were looking to launch in Q3 that has been now moved to the Q4 FY '26 like Bel landur West end and some of the other projects which has been pushed to the Q4. And especially in the context now again, Mumbai Municipal Corporation would also come out with the election in some time. So, in this context, how should we see the launch pipeline for our core market?
Mallanna Sasalu: This is Ma llanna here. So, I will just try and answer your question. So, with regards to the launches that Hebbagodi and KIADB are coming in this quarter itself, that means that the EOI program and I think that we are starting them. And you know, it's just that M oEF on approval

that is the committee meeting got successively postponed for last 3 weeks or 4 weeks and which has taken some time. And rest of the projects are there in Q4. Some of them may go to the 1st Quarter of the next year, but largely Mall asandra, I am just looking at the investment proposal that the ICP that what we have circulated and I am reading out of that Mal lasandra, Kanakapura and West end, Hennur Road and Hebbagodi and KIADB, I don't see any problem. Be llandur is a touch and go and City Aspire could be a to uch and go and Grand Hills could be a touch and go. That means those 3 projects may go to the 1st Quarter of next year. Otherwise, as planned that we are in line for the launches. Just to give you the perspective and we were hit by many number of regulatory changes that came about from starting from the e -khata and then registrations because that once the e-khata is done, the registration department had to have their software working with the revenue department that was taking some time. Then we had the creation of GBA that is, five different corporations because of which the fi les had to be moved from one place to another place. So with all this, I think we are still confident that, we are in for the launches. And I also believe that we are in the fag -end of the whole transition in the long run, which may work out very well for Bangalore. But we got a little bit pushed back on our approvals because of this.
Deepak Purswani: Okay . And again, if I were to look into the cash flow statement, interest expenses have seen a sharp rise in this time as well. This has moved to the Rs. 177 crores. If you can give the sense why there has been a sharp jump in the interest expenses during this time?
Niraj Gautam: There's no sharp jump, I would say. The last quarter also, it was about Rs. 160 odd crore. And now it's up 176. And this interest payment is in the line of the debt which we have and some of like H DFC loan which facility which we have taken, which is payable in nature. However, we choose to pay them on time and not accruing that interest and it will be paid when the projects are completed. And hence, the interest as and when project is doing well, I am serving the interest IRR which is applicable and that is why it's increased marginally. Otherwise, as far as the cost for the quarter is concerned, it's about Rs. 168.58 crore for the quarter. If I look at immediate previous quarter, it was Rs. 160.90 crore. And as compared t o a year end it was Rs. 140

crore.
Mallanna Sasalu: Just to add to that, that we had this Rs. 1,150 crore of paya ble when able structure at 16% -17% of money. And then it took this long, almost a year, 15 months for the projects to throw the cash flows out. And from that cash flows that we are now servicing that debt, because of the higher debt cost that it has, that it looks like that we have paid the debt higher. In fact, what's going to happen is that at some point of time, because of healthy cash flows, that we may even look at reducing o ur debt position at higher cost and moving towards the lower debt cost. So, it is a good thing that is happening. Before the good thing that's happening, you are seeing a little bit of more .
Niraj Gautam: Payout is accrued today and 100% paid on IRR basis . There's no interest accrued in the books which is unpaid and 100% is paid. And hence, on a tenor of the facility, we will end up paying less interest because we are paying on time. As far as cost to the, as I explained once again, if you look at the profit loss statement, as far as cost, which is going to the P&L, it's Rs. 168 crore.

If I compare to the immediate previous spot, it was Rs. 160 crore. So, it's not a substantial increase, just a marginal increase of interest.
Deepak Purswani: Okay. And then from the cash flow statement point of view, year as a whole for FY '26, how should we see the collection for this year and construction outflow?
Niraj Gautam: If you look at the collection, we have collected Rs. 1,900 crore for the half -year basis. And as construction progress is going fast, collection has been robust and we expect it will be better onwards. Because A, the collection which will come from my ongoing projects where construction is going in fast pace , plus the launch guidance, just now both of you have spoken, the moment we launch this project, that is the incremental collection will come. And hence, it will enhance here onwards.
Mallanna Sasalu: We have done a fewer construction of Rs. 1,000 crore that we have done and Rs. 1,950 crore rupees is what we have collected. And as you can see that it is going in almost like a 2x kind of a position. And in the third and the fourth quarter next half -year, and I don't see that from the ongoing projects where the construction is going on and the collections are going on, that should remain same. And whatever the additional collections that we are going to do from the launches is going to become addition to the cash flows that we already have.
Deepak Purswani: Okay. And finally, if you can give the update on the HDFC platform side, how much capital has been deployed so far on that platform? And also, any thoughts on the Pune launch, Pune business development activity, if you can share thoughts on that part, that would be really helpful.
Niraj Gautam: As far as HDFC capital is concerned, we have already deployed Rs. 700 crore out of the Rs.

1,150 crore. And just to add, out of the Rs. 700 crore which we have deployed, we have already repaid also about Rs. 110 crore as while we are speaking today. And remaining Rs. 450 crore also we have given them a utilization plan. The few land parcel has already been identified and due diligence are on. And we are expecting to utilize in the next 3 to 6 month time period that money as well to fund our gr owth. As far as Pune is concerned, Pune we have last Purva Atmosphere we have launched. And I would request Mr. Rajat to add some more thoughts about our plans in Pune.

Rajat Rastogi: Thanks, Niraj . So, we are aggressively expanding in Pune. We are looking at much more opportunities in Pune, primarily in the western side of Pune, where right now we are in kind of advanced discussion for at least couple of land parcels in the west side of Pune. Also, we have started looking at redevelopment opportunities in Pune since we have do

ne so well in the Mumbai marke t. We are looking at a lot of encouragement from Pune societies with regards to Puravankara as a redevelopment partner. So, that is another one se gment that we are looking at. And we are very hopeful that in next quarter or two quarters we should be able to get at least couple of land parcels closures in Pune. Having said that, we still have enough and more inventory right now in a whole ongoing project in Pune, which is close to around Rs. 4,000 crores. And right now the brand is playing a very, very strong role. I think we are doing very

well in Atmosphere launch also and the project also. So, we are pretty, pretty, I think, optimistic about the Pune market.

Deepak Purswani: Okay. Thank you and wish you all the best.

Moderator: Thank you. We have a question from the line of Harsh Pathak from Emkay Global Financial Services. Please go ahead.

Harsh Pathak: Thanks for the opportunity. My question is on the Thane project. So, we are seeing that the inventory there is still high. I mean, in Panorama, it's around 73%, whereas in the first phase also there is 59%. So, how is the pace there? What kind of demand we are seeing and what are the steps we are taking to push sales at this project?

Rajat Rastogi: So, just to explain about the Thane project, the existing towers we have not opened for sale. We are completing the existing towers. We are expecting the OC to come in Quarter 4 for the existing towers and that's when we are going to open these towers for sale. From the existing inventory right now, we are looking at launching two towers, which is one which is completed tower and other one a new tower, the one that we had launched. So, hopefully in Quarter 4, I just want to say that we are looking at the launch of that tower and that's when we are going to see much more inventory being sold. Right now, on the overall market position side, we are very well positioned right now. We are getting a good pricing in the market. Our current realization is in close to around Rs. 20,000 per square feet. So, from the launch perspective, we are quite hopeful that we will do a very successful launch in Quarter 4.

Ashish Pur avankara : Just to put that into perspective, so when we acquired the project, there was an existing building there with sales done. So, the strategic call was , today let's get that front building done. Like Rajat said, we will be completing that building in the next quarter and we just believe that we will get a greater value. So, that stock was never opened up for sale. The focus is on completing it and getting a higher value for a completed product. On the towers that we have opened up, we have seen extremely good sales. Now, we are waiting for additional approvals to come and then we launch those phases. So, Thane is absolutely not a concern in terms of sales or velocity.

Harsh Pathak: Sure, understood. And also on the commercial side, so Zentech, since we opened for sale, there also, I mean the inventory, this quarter we have sold around 2% of the inventory because 95% has moved to 93%. So, what kind of response are we seeing there? And also, if you can give some update on the Aerocity project, please?

Rajat Rastogi: Sure. On the Zentech project, what you are seeing, we have sold almost 60,000 square feet of area. We have also leased, which we are going to be announcing very soon, a substantial area to one of the large retail players. I think that we are announcing very soon, which is close to around 80,000 odd square feet. We are getting very good response right now in discussions to do couple of large leasing and cum sales transaction. So, Zentech is getting good demand from the micro market and that's what we are poised to do it. We are hopeful by end of this year, we will be able to do a substantial amount of sales in Zentech. Aeroc ity is

also, just to coming back on Zentech,

we are looking at getting the OC of the asset by February of the financial year. So, hopefully in

Quarter 4, we will get the OC for Zentech. And then that's when we say we will expect the sales to get even more robust. On Aeroc ity right now, we are fulfilling a lot of RFPs right now. A lot of large players have shown interest in Aeroc ity. We are hoping to get the OC of Aeroc ity in January, which is close to 1.2 million this year. And that's when I think the leasing will gain momentum of that asset. So, on t he AOP piece, on the plan piece , we seem to be on track on both these assets on the commercial side.

Harsh Pathak: So, to dig more on the Aeroc ity project, maybe if we can give some color on what kind of interest we are seeing. I think it's around 2 million square feet of an area. So, what kind of interest have we seen and at what rates are we targeting? I mean, if you can give some color on with respect to the vicinity rates, something like that, please ?

Rajat Rastogi: So, I think just to give you a perspective, right now, we are getting OC for the first 1.2 million square feet. The balance 9 lakh odd square feet is something that we will do building phase 2, and which will start pouring concrete in the next financial year. On the ongoing rental side, the current micro market is running at a rental of around Rs. 55 to Rs. 60 a square feet on the leasable area. And most of the traction that we are receiving right now is from large IT players who have been lo oking at a 3 lakh to 4 lakh square feet area. So, I think most of the transaction will rectify once we get closer to OC. And as we speak, I think a lot of visits are happening at the site. So, we are very hopeful that we should be able to close a large transaction in Aeroc ity soon.

Harsh Pathak: Understood, and any update on the He bbal land?

Rajat Rastogi : Hebbal land, we are working. I think there was a work in progress. So, we have got a lot of work done in the last few months. We should be able to conclude the sale agreement by end of December and start putting for approval. So, I think we should be able to get the approvals in next six months and then we will start pouring concrete.

Harsh Pathak: And any plans on adding further commercial assets? I mean, if we have some pipeline or are we scouting some projects there because we are hearing more and more developers get on the commercial side. So, any additions that we have in our plans apart from th e assets that we are already having?

Rajat Rastogi: Of course. I think we have seen commercial as a good growth sector for us. I think as I am building a large annuity income. Right now, Aeroc ity and Hebbal will add as an annuity income for us by 2030. We are also looking at opportunities in growing in good markets like Pune, where we are looking at business development activities for commercial. Yes , I think from a business perspective, we are quite optimistic about this segment and we will see if the right opportunity come, we will look at investing in that opportunity.

Harsh Pathak: Sure. So, now coming to the debt side, I mean, it's commendable that despite the project additions, I understand they are largely debt light in nature. So, despite these additions, the debt

has remained largely stable. And I understand you did highlight upon the collections part. So, how do we see debt by the end of the year or maybe if you can give some target for FY '27-'28?

Niraj Gautam: So, if you look at our slide number 22 on our presentation, if I not be doing anything, then debt will be down by Rs. 800 crore in next 12 months. That's the schedule repayment. And another next second year, it will be down by Rs. 1,646 crore. So, we have given the debt repayment schedule

how the next four years, if assuming I am not adding any debt, that will automatically become zero. However, business is built on the basis of leverage . And as today, opportunities are more in the marketplace, and we a re in a growth phase, a nd hence, we will be continue to be utilizing the capital which is available to acquire a land and fund our growth. But at the same time, we are mindful about the debt and some of the debt which will be repaid through the schedule repayment, as I mentioned to you during the sometime back, that HDFC platform which we signed about a year back. Out of that, the 12 months was a lock -in period. The day lock-in period over the first tranche of repayment is done by Rs. 100 crore. And we will be progressing as w e launch a project with keep paying the debt. And then continuously, we are monitoring the leverage versus the growth and will be continually keeping the balance of it.

Harsh Pathak: Understood. So taking it that forward, so on the project additions part, I mean, I understand Rajat highlighted for the Pune region. So additionally, how is the pipeline looking from the project additions front, especially in Mumbai and the South region? And what kind of additions are we expecting? Will there be more outright acquisitions or the focus remains on the asset model?

Mallanna Sasalu: So, I will just speak for South, Ma llanna here. I will speak for the South. And basically, that the pipeline is quite strong, there's quite a number of opportunities that we are pursuing in this quarter itself, as you saw that, the K IADB hardware park and Balagere, we closed in South and of course, West, that is going to talk about Ch embur and Malabar Hills. So, coming back to th e pipeline that is there, that without getting into too much of details is because the last signatures have not happened, we have around Rs. 400 crore from HDFC to be in vested. So, we have, which is in our good interest that we have to deploy it as quickly as possible. To answer your question that whether we are going to go for joint development kind of arrangement or outright, it's always an evaluation and also the preference of the landlord. When there is a money that's available for us at a 17% payable if the landlord is going to make 25% from the current valuation of the land, definitely we would like to, we want to take that risk and buy the land parcel and then go fo r it, right. So, it is just that calculation and also of course capital investment and the risk against it that will be paid and then the decisions are going to be taken. So, it's one way or the other, it is not really that how much capital we want to invest and there's no target, any capital for growth will be investe d. So, ye s, so that is the way it works in terms of the investment side.

Rajat Rastogi: So, just to add to what Mal lanna said, I mean, so we continue to look at good opportunities in Mumbai, in Pune. We obviously, the preferred player right now in the Mumbai redevelopment markets, continue to add markets like Malabar H ills and Chembur. Right now also, as we speak, we are evaluating top redevelopment opportunity. On a business momentum side, as I think Mallanna also said that we are agnostic to the kind of opportunity coming, we evaluate on the basis of our internal parameters an d be it a land buyout or a JDA or a redevelopment, we look at

opportunity and then we decide whether we want to do it. But just to answer your question, I think we are very hopeful and very positive. I think the market is doing pretty well and we will continue to add good assets in our portfolio. Right now, we are in advanced discussion with a couple of assets and we hope to close them in the next half of the financial year.

Harsh Pathak: So, maybe what would be the total GDV that we are currently into active discussions or maybe in advanced stages of

discussions with the landlords?

Niraj Gautam: What I would say, Harsh, is for whatever we acquired, H1 GDV is worth Rs. 9,100 crore, which we have already published, I have also said and rest, a s Mr. Mal lanna and Mr. Rajat said, unless we sign the last paper, it is not appropriate on our part to disclose what is GDV, what is the area, what is the location, etc. As and when we conclude the deal, we will keep updating and announcing those details.

Harsh Pathak: Understood. One last question from my side. For the Malabar Hill project, what is the kind of profitability that we have kept into the consideration? What is the project level EBITDA margin that we have targeted?

Niraj Gautam: I would request Mr. Rajat to take this question.

Rajat Rastogi: So, I think without disclosing the exact EBITDA, I think the margins are pretty healthy. Of course, Malabar Hill is the most premium part of Mumbai and of course, one of the most premium part of India. So, the margins are pretty strong and healthy and I th ink the margins are also meeting the internal requirements that are there. So, the EBITDA margin, if I can tell you, is upwards of 30% roughly.

Harsh Pathak: Sure, that answers. Thanks a lot for taking my questions.

Niraj Gautam: Thank you.

Moderator: Thank you. We will take our next question from the line of Deepak Purswani from S van Investment. Please go ahead.

Deepak Pursawni: Thank you for the follow -up opportunity, sir. Firstly, I wanted to check it out. Last year, we did a pre -sales of Rs. 5 ,000 crores. This time in the first half on the sustenance basis, we have done a pre -sales of roughly Rs. 2,400 and something crores. So, if you can share the broader thoughts, I mean, how should we look into FY '26 and '27 pre -sales based on our launch pipeline as well as how do you see the current demand environment in each of the micro -markets?

Mallanna Sasalu: Looking at the numbers for FY '27 and so on and so forth would be a little bit of a stretch and whatever is left out in this year, the second half of the year, as you rightly pointed out, we do around Rs. 1 ,250 to Rs. 1 ,300 crores of sustenance. And we think that we will continue to have that kind of sustenance numbers, more or less. So, which means that we got another Rs. 2 ,600 crores. And as we said that we have around Rs. 12,000 crores of launches that's coming up, even if you are able to launch around 80% of that Rs. 9,000 crores or Rs. 10,000 crores. We sell

anywhere from 30% to 50%. And so, I would not want to pick a number, I will let you do the calculation by yourself. So, on some project could be 20%, some project could be 40%. So, it's anybody's guess, right? But bringing the product to the market is going to be our responsibility and that's probably going to happen up to around Rs. 9,000 crores to Rs. 10,000 crores.

Rajat Rastogi: I think just to answer, on the demand side, I think the demand seems to be pretty robust for top branded players like Pur avankara. In all the micro -markets where we are operating right now, I think we continue to be one of the top leaders in that micro -market, both on the pricing side and also on the velocity side. So, we are obviously very, very positive with th ese launches coming in, I think. And now I am sure we will be able to showcase Pur avankara brands and the kind of Puravankara products, especially in market size, Mumbai, where we will be something new like Andheri , Lokhandwala or maybe the Pali Hill product that we have built in. So, we continue to be very, very positive with the market. The current market trend is very encouraging. So, we don't see any challenges out there.

Deepak Pursawni: Okay. And just continuing on the launch pipeline, we mentioned about, we would be looking out to launch Rs. 12,000 crore kind of inventory in the H2. So, just wanted to seek it out. Is

it a
full project or what would be the inventory value out of this that would get launched?

Mallanna Sasalu: So, speaking about South, and if you really look at around 11 projects, 9 in Bangalore, 1 in Coimbatore, 1 in Cochin, out of which the KIADB and the Cochin project, that is the Winw orth 2 are the two large projects. So, basically, they will run for a longer time. And if you look at all other projects, 700,000 Sq Ft. , 600,000 Sq Ft. , 440,000 Sq Ft. , 520,000 Sq Ft. , we believe that there is no phasing for any of these things. They're all one phase development and one phase launch. So, looking at the demand that what we have in KIADB, even though it is going to be in excess of 2,800 units, I believe it is going to be one launch. And meaning to say that tower by tower that we sel l, but launch is going to be one launch. So, probably that answers your question because it's quite distributed. I don't see a problem that all of them is going to be in a single launch.

Deepak Pursawni: So, for example, why I am coming out to that point, for example, if I am looking into the presentation, the Deccan project, that is a 0.36 billion square feet saleable area. Out of this, we are looking out to launch only the 60,000 square feet.

Rajat Rastogi: Yes, I just wanted to add to what Mal lanna said. In the West, I think the size of the projects are pretty huge, both in terms of the value and also sometimes in terms of the area also, in Thane is a very large project. So, we will be launching in tranches , including A ndheri , Lokhandwala where we are going to get launched. We will do our launches in two phases. Obviously, getting Rs. 1000 odd crores of inventory, worth of inventory in Andheri, Lokhandwala, almost around Rs. 1,000 crores worth of inventory in Thane. In Pali hill also, I think we would like to do it at 60,000-70,000 square feet of area in tranches because I think this is a very, high -end, top -of-the-line project and we would like to first showcase to the market, launch a small inventory and then probably you go with a larger launch. That is what the plan is.

Niraj Gautam: If I can help you with the math, if you are looking at our presentation, slide number 19, which we are saying is we have launched guidance is 15.46 million square feet. Out of that, we will take to the market 9.28 million square feet. If you look at the last row on the slide, if I value today 9.28 million square feet as an average rate between Mumbai and Bangalore and Pune, say Rs. 1 1,000 per square feet, it's come about 10,000 crores value. Hence, that is what Mal lanna had said while speaking that we will be bringing the inventory, about 12,000 crores of inventory we will be bringing to the market. Hope that clarifies.

Deepak Pursawni: Yes, that clarifies my question. And second part, if you can also give some sense of project completion and delivery timeline , I think in the first half, we have done approximately 1 ,300 units. How should we do this delivery part in the second half and how should we see the revenue recognition in the second half? Is it going to grow exponentially with any other significant project which is getting completed and hitting the revenues or how should w e see from the P&L perspective in the second half of FY '26?

Niraj Gautam: Sure. So, if you look at our slide number 34 in our ICP, we have 2.97 million square feet ready inventory OC received 2,352 units. Beside this, we are going to get some more OC during the period, during the second half year of the period. And there were some issues in terms of giving possession and handover in Bangalore because of the e -khata issue and the registration issue as you would have read in the newspaper. And that is where two of our large projects, we could not give possession. Howe ver, our teams are working with the government and there is some c

ensus also going on in the state government, thereby the government officials are a bit busy. But now I think everything is falling in place and we are reasonably sure that we will be able t o hand over a substantial part of it during the second half of the period. And year as a whole, our numbers will be much better than which we have published as of now.

Deepak Pursawni: Okay. So, initial plan of delivering 3,000 plus units during this year are on track?

Niraj Gautam : Absolutely on track.

Mallanna Sasalu : Just to round it off, it is basically 4.3 million square feet is what we thought about. We gave the guidance that we are going to be delivering and so basically now around 1.3 million is what we have delivered and another 3 million square feet is what need s to be just registered. It is nothing to do with the construction delivery, construction is over. OC has been received more than 2,000 units. The snags have already been corrected. Customers have come and accepted. The question here is that without the re gistration, it is hard to hand it over to the customer. So we have not handed over without the registration. We are not able to recognize them as sold units. So, that's the reason that we are waiting for it. In fact, you will see from this quarter and the next quarter that in the five months remaining in this second half of the year, we should be doing well.

Deepak Pursawni: Okay. And just to get the update on recent four project addition which we have done, if you can give the broader status on each of these projects, how should we see into each of these projects and what would be the broadly the timeline we are considering f or launching each of the projects. For example, North Bangalore, Chembur, Mumbai, and then East Bangalore and Malabar Hills.

Mallanna Sasalu: I will talk about the two projects in Bangalore, the 24. 59 acres in Hardware Park. It's around 3.48 million square feet of developable area. I think we signed the agreement some 6.5-7 months back. And probably January, February that this project is going to get launched. We are in substantially the approvals are already there and a little bit of the Mo EF and PCB approvals are pending and otherwise, everything is r eady and I am sure that January -February it will happen. Same thing with Balag ere. Same again, it was signed six months back. Again, it is in advanced stage of approvals. That is what joint development in East Bangalore, that's what we call that. So, both of them, I think both of them should be in this year.

Niraj Gautam: Other two projects which we added during the first half was eight societies at Chembur and the Malabar Hills, another redevelopment project. I am requesting Mr. Rajat to throw some light on that, our plans for launch and these two projects.

Rajat Rastogi: Yes. So, I think both these projects, I think your redevelopment and they are all in this 33 (9) scheme. And we are aware that these different projects are taking normally a longer time because of the society involvement and the DA process, etc. So, just to get time perspective, I think we should be able to launch both these projects by Quarter 3 or Quarter 4 in the next financial year.

Deepak Pursawni: Okay. And in both of these redevelopment projects, what is the kind of area sharing or broad sharing which has been done with the tenant or how should we see from the profitability perspective in each of these projects?

Rajat Rastogi: Both the projects are really, I mean, in terms of the location, Chembur being, I think, one of the most hottest property markets right now in MMR , this is close to a 5 acre land parcel that we are doing in Chembur and probably one of the largest land parcels that we are doing in Malabar Hills. Both these projects are really one of the best land parcels that you have in the micro market. And I think on the profita

bility s ide, I think both of them will fetch out better than the market returns r ight now. I think because one is the size of the project and also, I think, the location that they are in. So, as I said earlier also, I think we are very, very positive with both these assets and we are working very hard to finalize the due diligence and get these launches on track.

Deepak Pursawni: Okay. Thank you and wish you all the best.

Rajat Rastogi Niraj : Thank you.

Moderator: Thank you. We will take our next question from the line of Chintan Mehta from Puniska Family Office. Please go ahead.

Chintan Mehta: Thanks for the opportunity. Sir, I just want to understand on the debt part, what is the peak debt which we are targeting even in a per square foot basis and we can expect debt per square foot for commercial to start declining once we monetize or rental wi ll start coming. Thank you.

Niraj Gautam: Chintan, if you look at today as an end of the quarter, we were at net debt of Rs. 2,894 crore and if I look at the debt in terms of per square foot, per square foot debt on residential was Rs. 859 per square foot and commercial it was Rs. 252 per square foot. Our commercial debt comprised

of the debt for the two of our commercial projects, which the project Zentech , which we have already sold part of it for about 50,000 square feet already sold and as it completes, we are planning to sell this project and as we sell the project, the debt will be repaid and the commercial project Aero city, where we are planning to retain and lease it out. Once we lease this asset, we have taken a loan from SBI to construct the finance. There will be some more drawdown that will happen for completing this asse t. Once the asset is complete, we will convert this loan to an LRD facility. That is the terms of the quality approved by SBI and the construction finance itself and hence, it will go up in the case of Aero city to fund the rest of the construction costs, but once the project is completed and leased and once we convert this loan into an LRD facility, it will come down as per square foot basis as well as overall also.

Chintan Mehta: Okay. And sir, both of these major two projects will get completed by next year in rental . So, there are commercial projects, which we are targeting next to financial year, if you can throw

some light on it ?
Niraj Gautam: And these two assets, as Mr. Rajat said during his conversation, we are expecting to complete or get the OC for both these assets by before on or before the March 31st. And Zentech , which is the first asset which I have spoken, have already partly sold and leasing is also underway and we will be targeting to selling the substantial part of this asset during the coming financial year. As far as the second asset is concerned, as it co mpletes, a lot of inquiries has been done. Our target to lease this 1.2 million square feet. Once leasing will start, then as Mr. Rajat said, we will be targeting to start construction for the rest of the area in the next financial year.
Chintan Mehta: Thank you so much. All the best.
Moderator: Thank you. Ladies and gentlemen, as there are no further questions, I now hand over the call to management for closing comments. Over to you, sir.
Niraj Gautam: Thank you. Thank you everybody for joining for this call. And if you need any further question, any clarification, please write to us. Me and my team is always available to answer your all questions and clarification. Thank you so much once again.
Moderator: Thank you. On behalf of Emkay Global Financial Services Limited, that concludes this confe rence. Thank you for joining us and you may now disconnect your lines.

Call: Feb 2026

Date: 16.02.202 6

"Puravankara Limited
Q3 and 9 Months FY '26 Earnings Conference Call "
February 13 2026

MANAGEMENT : MR. ASHISH PURAVANKARA – MANAGING DIRECTOR – PURAVANKARA LIMITED
MR. MALLANNA SASALU – CHIEF EXECUTIVE OFFICER , SOUTH – PURAVANKARA LIMITED
MR. NEERAJ GAUTAM – CHIEF FINANC IAL OFFICER – PURAVANKARA LIMITED
MR. RAJAT RASTOGI – CHIEF EXECUTIVE OFFICER (WEST & COMMERCIAL ASSETS) – PURAVANKARA LIMITED

MODERATOR : MR. HARSH PATHAK – EMKAY GLOBAL FINANCIAL SERVICES LIMITED

Moderator: Ladies and gentlemen, good day, and welcome to Puravankara Limited Q3 and 9 Months FY '26 Conference Call hosted by Emkay Global Financial Services Limited. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes.

Should you need assistance during this conference call, please signal an operator by pressing star then zero on your touch -tone phone. Please note that this conference is being recorded. I now hand the conference over to Harsh Pathak from Emkay Global Financial Services. Thank you, and over to you, sir.

Harsh Pathak: Yes. Thanks, Rudra. Good morning, everyone. I would like to welcome the management of Puravankara Limited and thank them for this opportunity. We have with us today, Mr. Ashish Puravankara, Managing Director; Mallanna Sasalu, Chief Executive Officer, South; Mr. Rajat Rastogi, Chief Executive Officer, West and Commercial Assets; and Mr. Neeraj Gautam, Chief Financial Officer. I shall now hand over the call to them for the opening remarks. Over to you, gentlemen.

Neeraj Gautam: Thank you, Harsh. Good morning, everyone. I'm Neeraj Gautam, CFO of Puravankara Limited, and I welcome you all to Puravankara Limited's earnings conference call to discuss the performance for the third quarter and 9 months ended FY 2026. The financial resu lts, investor presentation and press release have been filed with the stock exchanges and is available for your reference.

I will begin with a brief overview of the macroeconomic and sector environment followed by the company's operational and financial performance for the third quarter and 9 months ended FY '26. India's macroeconomic environment continues to remain resilient despite ongoing global uncertainties, supported by strong domestic consumption, sustained government capital expenditures and a stable policy framework.

India remains one of the fastest -growing major economies globally, Referencing the strength, the Reserve Bank of India has revised its FY '26 GDP growth estimates upward to 7.4% from its earlier estimate of 6.5%, supported by robust economic momentum, incl uding a strong GDP growth of 8.2% in Q2 FY '26 and easing inflationary pressure.

On the residential real estate front, end user demand continues to remain resilient, aided by interest rate cuts and income stability, while aggregate housing sales across the top 8 cities moderated marginally on a year -on-year basis, underlying market fun damentals remain stable. Buyer preferences continue to shift towards mid and premium segments with homes pricing above INR10 million, accounting for approximately 50% of total residential sales, highlighting sustained demand for the larger and high -value homes.

On the commercial real estate side, India's office market maintained strong momentum. Gross leasing during calendar year 2025 reached to 56.4 million square feet, representing a 20% year -on-year increase and marking a new all -time high. Global commodity ce nters remain the primary demand driver, accounting for nearly 38% of total office absorption .

Supported by continued expansion in multinational occupiers and a preference high -quality Grade A office assets amid limited new supply. Overall, the sector outlook remains positive, supported by a strong macro fundamentals, declining interest rates and imp roving affordability.

Moving to the company's operational performance for the quarter. During Q3 FY '26, we recorded a presales of INR1,414 crores, registering a 17% year -on-year growth, largely driven by sustained sales across the key markets. On the collection front, we delivered our highest ever quarterly collection of INR1,140 crores, representing a 22% year -on-year growth, supported by a steady constructi

on progress and strong customer traction.

Sales volume during the quarter stood at 1.49 million square feet, while average realization improved by 12% year -on-year to INR9,500 per square foot, reflecting a strong pricing momentum across the portfolio. For the 9 months ended FY '26, presales stood at INR3,839 crores, up 9% year -on-year, while collections amounted to INR3,045 crores, marking an 8% year-on-year growth. Sales volume for the 9 -month period aggregated 4.24 million square feet.

On the execution front, during the quarter, we handed over 1.23 million square feet, comprising of 1,116 homes. This took our cumulative handover for the 9 months ended FY '26 to 2.58 million square feet across 2,446 homes, underscoring our continued focus on timely delivery and disciplined project execution.

Coming to our financial performance. Total income grew to INR1,104 crores in Q3 FY '26 compared to INR334 crores in the same period last year, reflecting a strong year -on-year growth of 230%, driven by higher handovers during the quarter. For the 9 -month period, revenue stood at INR2,305 crores compared to INR1,529 crores last year, reflecting a 51% year -on-year increase.

On the profitability front, we reported an EBITDA margin of 23% in Q3 FY '26 compared to 10% in Q3 FY '25, reflecting a significant improvement in operational efficiency, better cost control, operating leverage. As a result, we reported a profit after tax of INR58 crores for the quarter compared to a loss of INR94 crores in Q3 FY '25.

Coming to our debt position. Our net debt stood at approximately INR2,482 crores as on 31st December 2025, with a net debt -to-equity ratio of 1.47x. During the quarter, gross debt reduced by INR35 crores, while net debt declined by INR244 crores, reflecting effective debt management. Our cash and bank balance at 31st December 2025 stood at INR1,082 crores, indicating a strong liquidity profile and ensuring operational stability. Additionally, the cost of debt declined further to 11.08% from 11.32% in Septe mber 2025.
Now moving to launches and business development. During the Q3 FY '26, the company launched Purva Silversky in Bengaluru with a total saleable area of approximately 0.77 million square feet. Cumulatively, launches during the 9 months ended FY '26 stood at 2.83 million square feet, including new phases launches across existing projects.
On the business development front, during the 9 -month period, we added 5 new projects, including 2 projects in Mumbai and 3 projects in Bengaluru. In total, we added 12.76 million

square feet of potential development area with an estimated gross development value of approximately INR13,900 crores.
In Mumbai, we secured redevelopment projects in Chembur and Malabar Hills. The Chembur development involves 8 residential societies expanding 3.78 acres with approximately 1.2 million square feet of developable area and estimated gross development value of INR2,100 crores.
The Malabar Hills project covers 1.443 acres, offering around 0.7 million square feet with estimated gross development value of INR2,700 crores. In Bengaluru, key addition includes 53.5 acres land acquisition in Attibele, contributing approximately 6.41 million square feet with an estimated gross development value of INR4,800 crores.
A joint venture in North Bengaluru with KVN Property Holdings LLP expanding 24.59 acres and about 3.48 million square feet with an estimated gross development value of INR3,300 crores located near the airport. And a joint venture -- joint development in East Bengaluru at Balegere covering 5.5 acre land parcel with around 0.85 million square feet and estimated gross development value of INR1,000 crores.
Collectively, these additions significantly strengthen our long -term growth pipeline and enhance geographic diversification across key markets. Going forward, we r

emain continuously
optimistic on sector outlook. The combination of a strong macroeconomic en vironment, declining interest rates and sustained end -user demand continues to support residential real estate.
We remain focused on project launches, accelerating construction activities and maintaining healthy collection. We are committed to optimize costs, enhance efficiency and driving shareholders return. Thank you for listening to us. With this, we can now open the call for the questions.
Moderator: Our first question comes from the line of Deepak Purswani from Svan Investments.
Deepak Purswani: Congratulations for a very good set of deliveries turning into the profitability this time. Sir, firstly, I wanted to get the sense on the -- I mean, launch pipeline in Mumbai for the Q4 FY '26. I think Lokhandwala project is already launched at this point of time. Firstly, if you can give a sense on that? And then if you can also update about the -- what are the launch pipeline? How should we see other project launch pipeline in the Mumbai at this point of time?
Neeraj Gautam: I request Mr. Rajat to take this question.
Rajat Rastogi: So Rajat here. So from a launch perspective, we have already received RERA for our Andheri project, and we are looking forward to launch it in the coming week. So Andheri, Lokhandwala will definitely happen in the month of February. For our Thane launch, w hich is the 2 towers, we are in the final stages of the securing the approvals, and we are very positive that we should be able to launch it in quarter 4, maybe end of February on the first week of March.

Our approvals, we have already secured IOD for our Pali Hills project. Vacation notice has already been sent to the society. We are looking forward to launch it by end of March or in April. Similarly, for our Miami project, we have -- we're in the advanced stages of getting the approval, hoping to be completed by the end of February.
And then subsequently, we will issue a vacation notice. So we're hoping that in quarter 1 of the coming financial year, we should be able to launch our Breach Candy project which is Miami. Rest all the projects are in the various stages of either approvals or documentation and the work

is going on.
Deepak Purswani: Okay. So I mean, -- if you can also share the medium -term perspective for the Mumbai as a market, how should we see this entire region from the organization as a whole, given the launch pipeline? And what is the kind of potential we would look to explore f rom this particular Western region as a whole?
Rajat Rastogi: So we remain quite bullish in terms of our progress in the Western market, both in Bombay and Pune, where we have projects going on. Not only that we've been acquiring projects, we're also registering strong sales momentum in both these markets. Our Andher i launch so far, response that we've got from the market has been very encouraging.
We are hoping that we'll have a very, very good launch. Similarly, our response so far in Thane market, where we are now looking at the 2 towers that we're going to be launching has already been good. We are experiencing a good premium sales that we are ge tting over there. So from a market position point of view, I think Puravankara now, I think we have -- are in a very strong position to deliver good numbers from the Western region.
Pune also continues to be a strong market for us. We will add -- try and add a couple of projects in Pune also in the coming financial year to strengthen our overall Pune layer in terms of the overall coverage that we have in the Pune market, primarily try ing to be in the western part of Pune. So from overall company numbers, I think our numbers will continue to be healthy and growing from here.
Deepak Purswani: And the project which we mentioned about the -- I mean, Thane project, what would be th

e GDV
which we would be launching in the month of March? And how should we see the sales response for this project?
Rajat Rastogi: So we are coming with a new inventory of approximately INR800 crores. And as I said that so far, I think the project has received very, very positive response from the micro market. And I think by end of March, I think the numbers will strongly improve from there.
Deepak Purswani: Okay. Now coming to the Southern region, I mean, similarly, if you can also share the pipeline for the Southern region. I mean, how should we see the key launches in Bengaluru from the Q4 perspective and then from the medium -term perspective? And if you ca n share the overall perspective on the Southern region as well, please?
Mallanna Sasalu: Yes. Thank you very much. So Mallanna here. As we had given the guidelines in our investment presentation, that we had around 11 projects for launching. And so they are in various levels of

approvals. And for sure that there are going to be 4 projects that are going to be launched in this quarter, namely Hennur Road .
And there's a project called Westend and Kanakapura and KIADB. And the value of that would be approximately INR4,700 crores and which is going to come to market within this quarter.
And we are trying to see if we can add a couple of more projects into it, as you know that
Yes. So as I mentioned that 4 projects are going to be launched in this quarter. We may add a couple of more projects of the 11 projects that we actually listed in our investment presentation. So it's all in line with the way we want the approvals -- the launch es to go. Maybe 1 or 2 projects may go into the quarter 1 and quarter 2 of the next year.
Deepak Purswani: Okay. So sir, if I were to put into the perspective, I mean, Q4, we would be looking somewhere close to 4,700 in Bengaluru. And then Mumbai would be -- there would be the 3 projects, putting it all together, that should be roughly 2,000 plus. All these are on track to get launched in Q4?
Mallanna Sasalu: I believe so, yes. Yes.
Deepak Purswani: Okay. So sir, if I were to see from the overall perspective, I mean, looking at the current market environment, what is a typical kind of run rate we are believing we would be managed to sell it out during this time? And also from the medium -term perspecti ve, if I were to look your sales trajectory, I mean, we had a very good run -up in the last few years, moving to the INR5,900 crores.
And then last year, we were at INR5,000 crores and this 9 months, INR3,800 crores. So if you can share your perspective from next 2 -, 3-year perspective, how should we see this entire things? And how -- where we are planning to head up and what are our internal targets, which we are looking in terms of the Presales at this launch pipeline?
Mallanna Sasalu: Okay. It's a loaded question, so I'll try and answer this. If you really look at the pipeline and INR3,900 crores has already been done and the pipeline that generally we do around INR1,100 crores to INR1,200 crores from our sustenance which means that when you add them together, we're already at INR5,200 crores. And it is anybody's guess what happens in the launches. Generally, we sell around 30% to 40%, even if I sell -- even if we sell around 25% in this launch of whatever the numbers that you've just now rolled out, and you can do the calculation. I think we should be in -- rather than putting a number to the whole thing that I'm giving you kind of a

guidance as to where this may be heading towards.
And looking at the next 2, 3 years, with the business development that is going on and as you may be seeing that there is an announcement almost every couple of months, once about our business development activity. And we think that this run is going to co ntinue stronger and stronger over the next 1, 2, 3, 4 years, I believe.
Dee

pak Purswani: Okay. And any broader, I mean, targets or internal targets we have set up in terms of the presale, which we would be looking out from this launch pipeline along with the sustenance sales, which we are looking at out?

Mallanna Sasalu: As I said, it's around 25% that we should be able to sell of everything that we are going to be launching. So from the launches itself, we should be getting around -- somewhere around INR1,800 crores to INR2,000 crores and add to that -- INR1,800 crores to INR2,000 crores and add to that another INR1,000 crores of sustenance. So you have your number there. So we should be doing better than what we initially thought about the year or also compared to the previous years.
Deepak Purswani: Okay. Okay. And second part of the -- this thing, if you can also give a broader sense in terms of the -- I mean, definitely, this time, there has been a significant ramp -up in terms of the execution of the projects and delivery of the project. If you can share your perspective, I mean, how s hould we see deliveries in the Q4 as well and FY '27 as a whole? What are the key projects which will flow in terms of the delivery schedule? If you can give a broader sense on that part as well, please ?
Mallanna Sasalu: Yes. I think rather than getting into the numbers itself, and as you might have seen that in the last couple of years that our construction, the burn rate has improved and that we are constantly spending more money on the construction side, which means tha t we are moving more towards completion. At least there are 2, 3 projects which are going to be delivered probably a year before the dates that what we have promised to the customers.
And also that we have given in our investor presentation as to what is our Q4 to -- the numbers that we are going to be delivering in terms of the handing over, I think, in Q3 FY '26 that we are looking at almost 2.40 million square feet to be handed over and pending to be recognized in this unit is that it's 2,443 units. So we are moving faster and maybe that you will see even more briskier handing over in the coming years, that is next year and the year coming up.
Deepak Purswani: Just to add, I think -- just to add, we have a strong delivery pipeline for our …
Moderator: Sorry to interrupt you, sir, but if you have a follow -up question, please re -join the queue.
Deepak Purswani: Sure.
Moderator: Our next question comes from the line of Vatsal Kothari from AlfAccurate Advisors.
Vatsal Kothari: Congratulations on a good set of numbers. So I have a couple of questions actually. I'll just start off with a broader question in terms of just curious about the pricing strategy in the new projects for the upcoming launches in Mumbai specifically. And if you could be more specific with terms to the strategy in place for different micro markets. I think you have also number of launches coming in Q1 FY '27 as well. So pricing strategy for the next couple of quarters, and then I can ask my ne xt question with regards to the Andheri project?
Rajat Rastogi: This is Rajat here. So with regards to our pricing strategy in the West region, I think for Puravankara by default has been a premium player. And whatever projects that we are doing currently also, they're all at least 5% to 10% higher than the micro marke t. So our strategy in the Andheri market as well as in the Thane market will always be slightly not higher than what the local pricing is. So just to -- and I think with the kind of reception we are getting from the customers .

I think people are willing to pay a premium to Puravankara's quality of products. So I think from a strategy point of view, that is very, very clear. Also from a distribution point of view, for the launches, we are in almost all the micro markets in M

umbai , where we're trying to get deeper into each and every micro market. So that is going to be our strategy for the medium to long term. And from there, I think we'll pick up on the pricing part.
Vatsal Kothari: Sorry, no, no. Please carry on.
Mallanna Sasalu : So what -- the thing that -- what I want to emphasize is that there are micro markets and the

quality of the land and then there is a place, where it is located and also the local economics actually drive what is the kind of pricing strategy that will happ en. And larger as a company, the strategy is very simple, where we are among the crowd, then we got to be better than everybody else in terms of our pricing by 5%, 10%, 12%.

There are certain micro locations that what we are doing at this point of time in Bangalore is to be really be going away from the competition itself. That is to place ourselves a little far away from the competition by producing products, which are stando ut products. That is you can always look at a micro market and say where everybody is selling at INR13,000.

And so if differentiation means how do we move to INR15,500 rather than being INR250 or INR300 more than the competition. So that's the strategy. As we move forward, that is going to be consistent in our pricing strategy.

Vatsal Kothari: Sounds good. My next question is specifically with regards to the Andheri project. So just a few layman questions in terms of the GDV and details of the rates and the prices at which we are planning to launch this? And secondly, when would the second phase of the project would be launched? What are the time lines of the project? If you could just throw some color on that, that would be great.

Rajat Rastogi: Sure. So the overall GDV of the project right now is around INR1,550 crores -- right now, what we are launching is close to around INR850 crores worth of inventory. Pricing, frankly, we're still to reveal the pricing to the market. But I think as I said that the current micro market is hovering in the range of around INR38,000 to INR40,000.

And definitely, I think at Puravankara, we are looking at getting a site premium in terms of the launch. So that is number 1. In terms of the Phase 2 launch, Phase 2 launch, we're expecting to happen in the -- by the end of quarter 1 or early quarter 2.

Vatsal Kothari: And any update on the Breach Candy project? Sorry, just one more.

Rajat Rastogi: I just updated that. So we are in the advanced stages of getting the final approvals. In fact, most of the approvals have already received. We're just waiting for getting the IOA from the respective authority, which should happen by -- hopefully by end of Feb and then the vacation notice. So hopefully, I think in quarter 1, we should have a Miami launch as well.

Moderator: Our next question is a follow -up from Deepak Purswani from S van Investments.

Deepak Purswani: Sir, just wanted to get the sense, if you can -- now since we have gained the traction in terms of the project pipeline, I mean, over the next 6 to 12 months, there would be a lot of launches which are coming it out. If you can share your perspective, how should we see this in terms of the cash flow? And if you can also give broader sense for the debt, how should we see the debt level over the next 6 to 12 months? And what are our internal targets?

And consequent to it, I mean, if you can also share your perspective on the cash flow -- I mean, interest expenses, which are flowing into the cash flow statement. I mean, in 9 months, they are currently at a INR450-odd crores. I mean, how should we see this number over the next 12 months?

Neeraj Gautam: Thank you, Deepak. As far as if you look at -- if you're referring to my cash flow, please refer to Slide Number 26 of the investor presentation. We -- this quarter, we had done our total customer collections was INR1,360 crores

, and we have generated an operating surplus of INR64 crores. And as a 9 -month basis, our operating surplus was INR755 crores. So if you look at our cash flow over a period of time, consistently, we are generating operating surplus.

And we have been meeting our interest obligation on a quarter -on-quarter basis and all the -- as owners. And further, to understand on the context, we have also added -- if you look at the last 9-month period, we have added 12.76 million square feet of bus iness development and which is a potential of INR13,000, so these investments in the new land parcels and new projects require capital investment.

And hence, to that extent, these needs to be financed from the external capital, and that is where we have borrowed debt. But by and large, if you look at our debt, even if you look at just quarter -on-quarter basis, if I compare my debt compared to the imm ediate previous quarter, gross debt has come down. My cash and cash equivalent is about INR1,000 crores and thereby my net debt is down by about INR200 crores more than INR200 crores.

So though we are continuously watching our debt, the cash flow and liquidity position. But at the same time, business development is key for the long -term success of the organization. And hence, we will be doing this business development, acquiring land pa rcels to the -- achieving long-term shareholder value for the company. At the same time, we'll be managing the debt, and we'll see that debt are not going beyond acceptable limits. But just rest assure, we are managing it well for the shareholders.

Ashish Puravankara: I think the only addition there to the cash flow would be, I think, all the effort in the business

development that has happened over the last, I think, 12 to 18 months to secure all these projects, right? I think what we would or what we are planning is w e're going to see a new launch almost between the West and the South, almost on a monthly basis, right? So all these projects, the investment is already done. So now with the sales, you're going to see an exponential sort of improvement in terms of cash flows, etc. So we're going to see the benefit of that.
Deepak Purswani: Okay. And finally, sir, just wanted to reconfirm in terms of the launch pipeline, I mean, on the approval and everything, now everything is looking much better at the current juncture, and we

are ready to launch a lot of projects. How should we see this? If you can give a broader sense on that part?
Mallanna Sasalu: Yes, absolutely. So of course, approvals are a large set of variables, right? But give or take 1 or 2 months of the planned idea that we should be there as we have projected.
Deepak Purswani: Okay. So would it be fair to say over the next 6 to 9 months even in the Bangalore as well, we will see a lot of launches coming out -- I mean, out of these 11 projects which we have shown in the planned pipeline, most of them are lined up in Q4 and Q1. So we are almost on track for all the approvals for these projects?
Mallanna Sasalu: The next 6 to 9 months and probably all these projects would have been launched. I think if it is beyond
Deepak Purswani: Yes. Sir, if you can give a broader sense in terms of the approval pipeline and I mean, launch traction, that would be really helpful, especially for the Bangalore. I mean, since there has been a lot of delays in the last 6 to 12 months for the launches, i f you can give a broader sense how we are placed at the current juncture in terms of the approval pipeline as well as the launch pipeline? And how should we see over the next 6 to 12 months for this plant project pipeline in the Bangalore?
Ashish Puravankara: So I think till Mallanna comes back online. I think about 6, 8 months ago, there were a few changes that the authority had done in certain setback rules, etc, and therefore, we had to sort

of
redraw the plans. But that said, I think that is behind us. We should be almost hitting a 90% target in terms of the launches that we have identified in our investor presentation.
Most of them are all -- at least I think 60% would be in the final stages of approval and the balance also should be secured as per the direction and the guidance that we have given in the presentation.
Deepak Purswani: Okay. That's interesting. And looking like we are well on track now in accelerating the launches.
Moderator: Our next question comes from the line of Samarth Khandelwal from ICICI Direct.
Samarth Khandelwal: Thank you for the opportunity my questions have been answered.
Moderator: Our next question comes from the line of Ja hnvi Shah from Share India Securities.
Jahnvi Shah : Congratulations on the numbers. I had like 2 questions mainly one about the industry and other on the business. I wanted to know what is the split between the mature projects and the newly launched projects in the 9 month presales for this financial year? That split?
And the second question is basically what is our outlook on the residential prices, price appreciation in the next couple of years? Will it be appreciating the way it did in the last couple of years? Or will it be more on the moderate pace?
Ashish Puravankara: I think a significant contribution in the 9 -month sales have been from the sustenance projects because -- and they've been -- in fact, we are ahead of our targets in terms of our annual operating

plan. Like I think everyone knows, due to changes in the South in terms of bylaws, etc, the launches got sort of delayed. So all the sales, most of it that you see is from the sustenance. What was the second question?
In terms of pricing -- in terms of pricing -- in terms of pricing as well, I think we've been extremely strategic in terms of the various locations that we have secured in terms of new projects. So if I give you an example, even in a city like Bombay, righ t, we've been extremely careful. So we are very well spread out. So we have Thane, we have Lokhandwala. So almost at every price point, right? We have Beach Candy, we have Bandra. That is point number 1.
Point number 2, even in Bandra, while there are so many projects that are going on, we've been careful in terms of size. I think ours will be one of the largest projects in the micro market of Bandra. Now what does that mean? That means that in terms of the amenities, in terms of the lifestyle, in terms of the product, there is a clear USP for our project as against competition. So it's very carefully and strategic acquisitions of projects.

Similarly, even if you look at Bangalore, right, if you look at the locations, for example, what we're about to launch. So these are very high velocity micro markets. Let it may be Bannerghatta Road, let it be Hennur Road or for that matter, Hardware Park. And for example, we have one project which we are in advanced stages of completion in Hardware Park.

Maybe if you track that project, we had almost sold out 85% of that project in the first 8 months of the launch at a 10% higher APR than the micro market there. So these are, I think, very strategically acquired projects. So I'm pretty confident even in te rms of price appreciation because of those micro markets should be pretty healthy year -on-year.

Jahnvi Shah: Okay. Sorry, if I can ask one more question. It would be on like the business development. Like in the last 9 months, you had a good BD. Next year, are we thinking along the same lines or will be more or less can you throw some light on that?

Ashish Puravankara : One basic thumb rule for business development is it has to sort of surpass your annual sales in terms of square footage. At least you need to replenish, if not more. So for example, if your annual run rate is going to be 5 million square fo

ot a year, if yo u're going to sell 5 million, 6 million square foot a year, if you're going to sell, your basic business development will have to -- in terms of growth year -on-year also, right .

You need to create that pipeline of projects. You need to at least acquire 20%, 25% higher than that number to give you that headroom for growth. So I think BD is a continuous process. We are always evaluating deals in the market, but extremely strategic. Also as an internal strategy, we are very clear, and I think that's something that you would also track from acquisition to launch, right?

Back in the day, it would take a really long time. Today, we are able to turn these projects around within 6 to 8 months of acquisition, which means we are -- even in terms of acquiring new projects, we are very clear, most of the land approvals should be in place in terms of, for example, conversion.

So we're not getting into projects, where we acquire it and then we got to do certain land approvals, converting it from agri to non -agri, etcetera , etcetera , which takes 8 months, 10 months or whatever. So these are converted clean, clear lands. The minute we acquire it, we immediately go into design and approvals. And as a strategy, we would like to take these to market 6 to 8 months from acquisition. So faster turnarounds.

Moderator: Our next question comes from the line of Harsh Pathak from Emkay Global Financial Services.

Harsh Pathak: So first of all, congratulations for a strong set of operational and financial performance. So Ashish, my question is about regarding the launch strategy. So it's encouraging to see how we have brought the projects in the West market within 1 to 2 years of acquisition. So what is our strategy around the Chembur project and the next phase of the Andheri and Pali Hill projects? How are we thinking about those?

Rajat Rastogi : Okay. So Harsh, just to give you a perspective, first, I'll answer for the Andheri project. Andheri Phase 2, we are good to launch. So we have all the basic approvals in place, be it MOA, etc. We just need to load in FSI and launch it. So we would probably look at launching it in the quarter -- end of quarter 1 or beginning of quarter 2. The Chembur project is moving good. We are in the final stages of securing the basic approvals at the site level .

And then we'll go for the formal approvals for the project. So I think we should be in a position of launching it in quarter 3 of the coming financial year. Malabar Hill also, I think, is on track. I think we are working with the society to conclude the dev elopment agreement, which I think is 100% should be concluded in the month of February and then we go for the approval.

So Malabar hill should happen between quarter 3 to quarter 4 of the coming financial year. So from a project pipeline perspective, all the projects that we have signed for -- they're all on track. I think they're all in, obviously, the various stages of planning and approvals. And we are looking at in next 6 to 9 months, all these projects shoul d be launched.

Harsh Pathak: Sure. So in terms of growth, how should we evaluate the coming financial year? Because I think for Q4, your launch pipeline looks very strong. So how should we look at the next fiscal? What kind of growth shall we expect?

Rajat Rastogi: Ashish, you would like to answer that?

Mallanna Sasalu: I can take that, Mallanna here. So I think it's quite strong, right? Basically, if you look at that today, we are sitting at around INR4,000 crores of sales and the next quarter that we are launching close to around INR6,000 crores of stock into the market, and we do sustenance of around INR1,000, INR1,100 crores. And you add the math and even if we sell around 25% -- 20%, 25% on launch, even the conservative estimate says a good number, right?

So rather than putting a number, this i

s the number that we are going to achieve. I'm just trying
to give you a guidance on where it is going. And for the coming years, it's very clear from where we are, the remaining that what we have already given in the investor presentations about the launches that are deferred to the first quarter and the second quarter of next year and also that you are hearing quite a bit from us about the deal closures.

And those deal closures are already, as Rajat said, that they're all in different levels of designing and approvals and NOCs and so on and so forth. So we seem to be in a good footing now and rest is the future.
Rajat Rastogi : And Harsh, just one more thing to add. I think also all these projects that we are doing are large projects in nature, which obviously will be done in various phases. So once you get these basic approvals, all you have to do is to get the next tranche of a pproval is to get the FSI loaded, at least I'm talking about the West season. So for example, Thane is a INR4,000 crore s project for us, and we are launching around INR800 crores now, INR300 crores that we have done in the past.
So I think Thane, you will see a lot of action happening continuously over the period of next 2 years because we will keep on getting new towers and new phases in that. So from a numbers perspective, I think there'll be a lot of action happening because ev ery project that we are trying to do is large in nature, will have a substantial in terms of sales velocity that is going to come.
So we're very positive on the overall thought process in the next 6 to 12 months.
Harsh Pathak: Sure. That's great. And what's the update on the commercial projects, the Zentech and Aerocity?
Rajat Rastogi: So the Zentech project is doing really well. I think we've sold almost 127,000 square feet. We've also leased to IKEA, which is close to 90,000 square feet. So that project is getting good momentum in the micro market. Happy to share that both these projec ts will get occupation certificate by end of March.
So I think that's when I think we start handing over. Aerocity also is getting a very good traction from global companies, GCC is doing a lot of visits. We're hoping that we'll be able to sign a good deal in the coming quarters.
Harsh Pathak: Sure. So any maybe interest from the potential leases that we have already signed, if you can just highlight something around that?
Rajat Rastogi: You're referring to Aerocity?
Harsh Pathak: Yes.
Rajat Rastogi: So, Aerocity, as I said, we filled in a lot of RFPs, really marquee ones, big deals. Nothing concluded so far, but we are in the top 1 or 2 stage with a couple of large players. As I said, this is a long driven process, and we are expecting the OC to come end of March. So I think we should be able to conclude something in the next quarter or so.
Harsh Pathak: Sure. And my last question is around the debt front. So I think sequentially, there has been some decline in the debt number. And like Ashish rightly highlighted that the collections are going to significantly increase. So how should we think about the deb t number maybe in the next 2 to 3 years from the current levels?
Neeraj Gautam: So at the same time, we have mentioned our debt schedule also, what are the kind of debt slated for repayment this financial -- from this coming financial year. From now from December

onwards, if we target, say, 12 months from hence, the scheduled repayment itself is INR682 crores. Besides that, the projects where we have taken money and the collection happens and through SI and all the mechanism, it has been our experience that we always pay the loans ahead of schedule.
So INR632 crores in next 12 months, any which will be repaid from the scheduled repayment.
And besides that, the collection goes up, I'

ll be repaying the debt. As I mentioned and also Mr.
Ashish mentioned and all of us mentioned, we are continuously monitoring the debt and wherever there's opportunity, the collection, it will immediately going for the repa yment. That will happen.
But at the same time, we'll be looking at the business development, construction progress, and we'll always be trying to keep the debt at optimum level, manageable level and which creates the higher shareholders' value on an overall basis.
Moderator: Our next question comes from the line of Chintan Mehta from Puniska Family Office.
Chintan Mehta: Just a question on the commercial part. What is the current lease rental income, which we would receive in the square foot we own and the guidance for FY '27 and FY '28 and '29?

Rajat Rastogi : So the current rental yield that we are expecting or rather the rentals that we're expecting right now in Zentech is around INR75 a square feet. Of course, the I KEA transaction that we have done is at INR97.5 being the retail area. And for our Aerocity project that we're expecting is somewhere in the range of around INR60 to INR65.
Chintan Mehta: Sir, combining total at the end of quarter consolidated level, how much rental income we are going to own on FY '27 and FY '28 and FY '29?
Rajat Rastogi : So the assets are coming for OC only by end of March, and that's when the rental is going to start. So all these -- both the assets of Aerocity and Zentech once fully leased, will set us a rental of close to around INR200 crores annuity.
Chintan Mehta: Okay. And we have any other project which is in pipeline?
Rajat Rastogi : We have a project in Bangalore in Hebbal. I think we have not started construction. We are now putting for approval. So we should be start pouring concrete in the project by quarter 2 of the next financial year.
Ashish Puravankara : And the second phase of Aerocity.
Rajat Rastogi : And the second phase of Aerocity. Yes.
Moderator: Our next question comes from the line of Rajiv Rupani, an Individual Investor .
Rajiv Rupani: Yes, sir. So my first question was in our Mumbai redevelopment portfolio, our share is 2.67 million square feet. So could you please guide us what kind of revenue will this generate for the company as a whole, this full 2.67 million square feet?

Rajat Rastogi: See, all our redevelopment projects was fully launched. The total GDV value for all our projects put together is close to around INR15,000 crores. That includes projects which are not even launched right now. So I think from a -- and this portfolio continues to grow because we are looking at marquee acquisitions in this arena.
We are one of the most premium players or premium players rather in this segment. So we'll continue to be actively looking for opportunities in portfolio. The ones that we have already signed, launched and in the various stages of approvals are close to ar ound INR15,000.
Rajiv Rupani: Okay. My next question was a follow -up question on the debt. Sir, year ending March 2020, our debt was about INR2,700 crores. Our interest cost is about INR340 crores. And now in 9 months September '25, our debt is about INR4,500 crores and the interest cost is about INR495 crores. So I was just seeing the trend. The trend is the debt has gone up and the interest cost has gone up -- has doubled. So how do you plan to -- going forward in the next 3, 4 years, do you plan to increase more debt fo r buying land or this shall be stable here? Or how do you plan to make it come down?
Ashish Puravankara: One preamble to that is that if you can just sort of evaluate the kind of business development that has happened over the last 24 months across the South and the West region. And for good or bad reason, the approvals are getting delayed. So that was -- that's the reason the number went up. But these, again, like I mention

ed earlier, these are across the West and the South, these are extremely marquee locations, excellent projects. I think they have come together.
We've got the best of consultants, international consultants on board and the product has really come out well. So from now on, from the next 12 months, the way it may go a little bit here and there, but almost every month, you're going to sort of see a launch between the West and the South. So all the effort that has gone in over the last 24 months in terms of busi ness development, the debt number going up .
The investments that have gone into these projects for prelaunch, etc, once we put it into production, right, you're going to automatically start seeing cash flows on that bucket. And therefore, as the sales pick up, the collections pick up, you're going to see those debt numbers specific to those projects go down.
Mallanna Sasalu: And add to what Ashish said, the most important part of this one is if you go back to 2020 and look at what was our portfolio value, that is our ability of the lands that were tied up and which were about to be launched and the pipeline of the projects, ma ybe I do not know the exact number, maybe it was INR15,000 crores, INR18,000 crores today I think we have surpassed INR50,000 crores of top line portfolio number that we are currently handling.
That is projects which have been launched and projects which have been launched and yet to be sold and the projects which are about to be launched and the projects which are -- which have already money has been paid and in various stages of approvals and a lso some of the places, where we have already advanced the money and the last bit of due diligence is going on if you look at this thing that we are in excess of INR50,000 crores of portfolio.

So if you're saying that it's -- what you mentioned is that the debt has gone from INR2,700 crores to INR4,700 crores. That's around INR2,000 crores of debt increase has resulted in more than INR30,000 crores of capability to develop has increased. So which means that it's a combination of that debt that what we have taken and the money that we have earned consistently by delivering what we are delivering at this point of time.
Neeraj Gautam: And to add to that, as a strategy, we are financing our growth, these investments we have done largely from the performance -linked instruments, where the servicing of debt is linked to the project performance. And hence, it is not impacting our overall the cash flow or the pressure on the project and you also refer about the interest accounting.
All those performance instruments, which we have issued, but interest as a prudent measure, we keep accounting the interest and creating a liability in the balance sheet. But in fact, it is not impacting overall the operational cash flow for the company.
Mallanna Sasalu: And also to add to that, one, if you look at the presales numbers from 2020, '21 to now, we even doubled there as well. So that's already showing the numbers are showing that where the trajectory is moving towards in the coming years.
Rajiv Rupani: That was helpful. My next question was on the dividend policy of the company. Our company has been very erratic in terms of paying dividends. It gives a dividend 1 year, then it skips for 2 years and then it's again giving a dividend. So what is going to b e the dividend policy going forward?
Rajat Rastogi: Ashish, please.
Ashish Puravankara: Yes. See, I think by intention, let me say, I think the intent is obviously to reward the shareholders for the support and the faith they have in the organization. I think the last 4, 5 years have been unpredictable starting from COVID, etc, right? And then the call is today, we are seeing the consolidation that's happening across the major cities in terms of the strong brands.
If I go back 7, 8 years, even

in a city like Bangalore, as today, we had 250 members, almost 50% of them were launching projects. But today, we are seeing -- you cannot name more than 10 or 15 developers maximum in a city that are actively launching projec ts. So we are seeing projects come to us in terms of business. So there's a capital requirement for growth this is the time in consolidation.
There are certain projects which are in trouble. There are certain banks offering us projects. So this is nothing, but investing for our future over the next 5 to 7 years, securing marquee projects. So it's -- quite honestly, it's a decision between those 2. But as an organization, yes, it is always there on our minds. And whenever the opportunity allows us, I think those years, we will issue dividend.
Moderator: Ladies and gentlemen, as there are no further questions from the participants, I now hand the conference over to the management for closing comments.

Neeraj Gautam: Thank you. Thank you, everybody, for joining our call. And me, myself and my team is always available for -- if you have any further questions, please write to us. We'll answer those questions. Thank you very much.
Moderator: Thank you. On behalf of Emkay Global Financial Services Limited, that concludes this conference. Thank you for joining us . And you may now disconnect your lines.

Call: May 2026

"Puravankara Limited
Q4 FY26 Earnings Conference Call "
May 19 2026

MANAGEMENT : MR. ASHISH PURAVANKARA – MANAGING DIRECTOR – PURAVANKARA LIMITED
MR. MALLANNA SASALU – CHIEF EXECUTIVE OFFICER , SOUTH – PURAVANKARA LIMITED
MR. RAJAT RASTOGI – CHIEF EXECUTIVE OFFICER , WEST AND COMMERCIAL ASSETS – PURAVANKARA LIMITED
MR. NEERAJ GAUTAM – CHIEF FINANCIAL OFFICER – PURAVANKARA LIMITED

MODERATOR : MS. SAVITA SINGH – DOLAT CAPITAL MARKETS
PRIVATE LIMITED

Moderator: Ladies and gentlemen, good morning, and welcome to the Puravankara Limited Q4 FY2 6 Earnings Conference Call hosted by Dolat Capital Markets Private Limited. As a reminder, all participant lines will remain in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal the operator by pressing star then zero on your touchtone telephone. Please note that this conference is being recorded.

I will now hand the conference over to Ms. Savita Singh from Dolat Capital Markets Private Limited for opening remarks. Thank you, and over to you, Savita.

Savita Singh: Thank you, R yan. Good morning, everyone. I, Savita Singh, on behalf of Dolat Capital, welcome you all for the Q4 earnings conference call of Puravankara Limited. I would like to welcome the management of Puravankara Limited and thank them for this opportunity. We have wi th us today Mr. Ashish Puravankara, Managing Director; Mallanna Sasalu, CEO of South; Mr. Rajat Rastogi, CEO, West and Commercial Assets; and Mr. Neeraj Gautam, CFO for the company.

I shall now hand over the call to Mr. Neeraj Gautam for the opening remarks. Over to you, sir.

Neeraj Gautam: Thank you, Savita. Thank you, R yan. Good morning, everyone. I'm Neeraj Gautam, and I welcome you all to Puravankara Limited earnings conference call to discuss the performance for the fourth quarter and year ended FY2 6. The financial results, investor presentation and press release have been filed with the Stock Exchanges and are available on the company website as well.

I would also like to thank Dolat Capital for hosting today's call. I will begin with a brief overview of the macroeconomic and sector environment, followed by the company's operational and financial performance for the quarter and year ended FY2 6. India's economy remained resilient during FY25-26 with the real GDP growth estimated at 7.6%, reinforcing its position among the fastest -growing major economies globally.

Growth was supported by a strong domestic demand, a stable policy environment and continued investment activity. Looking ahead, the RBI has projected a GDP growth of 6.9% for FY2 6-27 compared to 7.6% in FY2 5-26, indicating a moderation from the current year's high base.

This expected easing is largely due to global factors, including geopolitical conditions in West Asia, which may lead to higher energy price, supply chain disruption and increased logistics costs. Despite the external challenges, a strong domestic demand continues to support the overall growth outlook. On the residential real estate front, the market entered a phase of consolidation after a sustained period of strong growth during Q4 FY2 6.

Housing sales across the top 8 cities stood at approximately 84,800 units. Buyer preference continues to shift towards premium and high- value housing with homes priced above INR 10 million, accounting for nearly 53% of overall residential sales, reflecting a sustained demand for larger and lifestyle-oriented developments.

On the commercial real estate side, India's office market maintained a strong momentum, recorded its highest ever quarterly leasing during Q4 FY2 6 with gross leasing activity reaching

approximately 29.9 million square feet, representing a 6% year -on-year growth. Demand remained broad -based across key markets and continued to led by the global capacity centers, which accounted for nearly 48% of total leasing activity during the quarter.

The continued preference for high- quality Grade A office assets, coupled with limited new supply supported healthy occupancy levels and stable rental growth across major office markets.

Overall, the outlook for the real estate sector remains positive, supp orted by stro

ng

macroeconomic fundamentals, improving infrastructure, favorable demographics and continued institutional participation.

Moving to our operational performance for the quarter and the financial year ended FY2 6. FY26 has been a landmark year for the company. We have delivered our highest ever quarterly and annual sales performance, supported by a strong launch momentum, healthy customer demand and improved realization across key markets.

During Q4 FY26, our presales stood at INR3,547 crores, registering a strong growth of 190% year-on-year and 151% sequentially. The performance was driven by successful new launches and sustained traction across our existing portfolio.

For the full year FY2 6, presales reached to an all -time high of INR7,407 crores, reflecting a robust year -on-year growth of 55%. Customer collection during Q4, FY26 stood at INR 1,213 crores, up 36% year -on-year, while FY26 collection reached a record INR 4,258 crores, reflecting a growth of 15% year -on-year. This growth was supported by a steady construction progress, healthy conversion of sales into cash flows.
Sales volume during Q4 FY2 6 stood at 3.01 million square feet compared to 1.42 million square feet in Q4 FY2 5, reflecting a strong demand momentum during the quarter. Average realization also improved significantly by 37% year -on-year to INR 11,787 per square feet, driven by better pricing and improved product mix across markets.
For the full year FY2 6, total sales volume stood at 7.25 million square feet, which average realization increased by 21% year -on-year to INR 10,213 per square feet highlighting a sustained demand for premium and higher value offering across the portfolio.
On the execution front, we handed over 1,301 homes aggregating to 1.67 million square feet during Q4 FY2 6. This took our cumulative handovers for FY26 to 3,747 homes, aggregating 4.25 million square feet, demonstrating our continued focus on timely delivery, execution excellence and customer satisfaction.
Coming to financial performance for the quarter and year. Total income grew to INR 1,541 crores in Q4 FY2 6 compared to INR 564 crores in the same period last year, reflecting a strong year - on-year growth of 173% driven by higher handovers during the quarter. For FY26, total income stood at INR 3,846 crores compared to INR 2,093 crores last year, reflecting 84% year -on-year increase.
On the profitability front, we reported an EBITDA margin of 22% in Q4 FY26 reflecting a significant improvement in operational efficiency, better cost control and operating leverage as

a result of reported profit after tax of INR 111 crores for the quarter compared to a loss of INR 88 crores in similar quarter previous financial year.
Coming to our debt net debt stood at INR 2,321 crores as on 31st March 2026 with a net debt equity ratio of 1.31x. During the quarter, the net debt declined by INR 160 crores. Our cash and bank balance as on 31st March 2026 stood at INR 1,695 crores, indicating a strong liquidity profile and ensuring operational stability . Additionally, the cost of debt also declined further to 11.05%. Now moving to the launches and business development.
During the financial year, we have launched three new projects, Purva SilverSky, Purva Northern Lights and Purva Estrella and seven new phases of existing projects with a total developable area of 6.39 million square feet, of which approximately 3.39 million square feet came from new projects.
On the business development front, FY26 was a strong year for us. We added six new projects across key markets, including Mumbai and Bengaluru. During the year, we added approximately over 12 million square feet of potential development area with estimated gross development value of around INR 15,200 crores significantly strengthening our long -term growth pipeline.
In Mumbai, we secured two redev

elopment opportunities at Chembur and Malabar Hills. The Chembur project involves eight residential societies spread across nearly four acres, unlocking over 1.2 million square feet of developable area with an estimated GDV of around INR 2,100 crores.
The Malabar Hills project spans 1.43 acres and offers approximately 0.7 million square feet of development potential with an estimated GDV of around INR 2,700 crores. In Bangalore, we continue to strengthen our presence across key micro markets through multiple business development additions during the year. We recently added a joint development project in Hennur Road with a sal eable area of approximately 0.8 4 million square feet with an estimated GDV of over INR1,300 crores.
We also added a joint development project in Bal agere in East Bengaluru with a development potential of around 0.85 million square feet for an estimated GDV of over INR 1,000 crores , along with 53.5 acres land parcel in Attibele having a development potential of approximately 6.4 million square feet and estimated GDV of around INR 4,800 crores.
Earlier during the year, we had entered into a joint development agreement with K VN Property Holdings LLP in the Northern Bangalore near Airport with a developable potential of approximately 3.48 million square feet and an estimated GDV of INR 3,300 crores. We subsequently launched Purva Northern Lights during Q4, highlighting our strong execution capabilities and ability to quickly operationalize and monetize acquired business development opportunities.
Coming to the outlook for next financial year. Going forward, we remain positive on the momentum to long- term outlook of our residential real estate sector, supported by strong macroeconomic fundamentals, improving infrastructure and sustained end user dem and,

particularly in premium and well -located developments, while global uncertainties may continue
to impact sentiment, underlying demand across key markets remain healthy.
For FY26-27, we would like to provide a guidance for both sales performance and debt
reduction. We are targeting a presales value of approximately INR 11,200 crores for FY26-27
and the total projected number around 48% is expected to be driven by sustained sales with the
remaining 52% is anticipated to come from new product launches.
On the balance sheet front, we are targeting a debt reduction of approximately INR 750 crores
for FY26-27, excluding any incremental borrowing undertaken for strategic business
development opportunities.
Thank you for your patience. With this, we can open the call for questions. Thank you.
Moderator: We take the first question from the line of Deepak Purswani from Svan Investment Managers.
Deepak Purswani: Congratulations for a very good set of operating metrics, and strong guidance. Just wanted to
check out a couple of things. Firstly, if I were to look into the Slide number 18 for the planned
project pipeline, if you can give a broader sense in terms of the key projects like Bandra, how we are placed in terms of the
launch pipeline? And what would be the GDV of these projects as a whole, which we are looking out to launch in the next
year?
Rajat Rastogi: Good morning, everyone. My name is Rajat. The Bandra launch as of now, the vacation notice is underway.
Members are leaving. By end of June, we hope that the members will vacate, post
which we will demolish and start working on our launching timeline.
So, I think we're looking at around the Dusshera to Diwali as a launch period for us to launch.
The second part of the question was on the GDV, the GDV of the asset right now is around
INR2,700 crores up for a sale portion.
Deepak Purswani: And for the entire launch pipeline of 14.85 million square feet inventory as a whole, would it be
fair to say this would be somewhere close to INR 20,000 -odd crores kind of inventory?
Rajat Rasto

gi: INR22,547 crores to be precise.
Deepak Purswani: Okay. And see, I mean, historically, if I were to look from the launch pipeline point of view, there has been
some slippages in terms of the launching the project, given I do understand there
has been some delay in the approval. Looking at the current progress of the launch pipeline, how
confident are we, we would be launching these projects on time? Or how should we look into
this pipeline from the next year perspective?
Mallanna Sasalu: Yes, you are right. And maybe the previous year that we had some launches that which did not
go through, and that's all the more reason why that we were confident that this will go through
because whatever reason that whether the e-Khata or some of the changing parameters in the
planning authority and also creation of the Greater Bengaluru Authority and the four, five
divisions, which really took the toll. And if you look at across Bangalore, even all the entire
sector in Bangalore is havin g difficulty in launching the projects.

So given that situation that now it's all mature and they are all in the last steps, also now the
question here is how to space them in such a way that the entire team and resources and
everything are deployed for successful launches of the project. We are reasonably confident or
I should say that most of the projects have to go through the most of the projects will go through
to the launch.
Deepak Purswani : Okay. Just on the second part of the business, just wanted to check it out on the cash flow point
of view. See, I mean, we had a very strong sales momentum this time, especially in Q4 and if I
were to look year as a whole. But just wanted to get a sense, if I'm looking into the sales
collection nu mber on the year -on-year basis.
It's just a 15% and on the quarter -on-quarter, relatively not seeing significant growth, especially
if I were to look on the Western side region collection, which we have given in the presentation, that seems to be mo re or less
flattish since last three quarters. So if you can give a broader sense
in terms of the collection, how should we see from the next year perspective?
Neeraj Gautam: Sure. What happened is if you look at our quarter -on-quarter sales, more than INR 3,000 crores
sales has come in Q4. And this comes from largely because of the two big launches which we've done in the quarter, which is
Northern Lights in Bengaluru and Purva Estrella in Mumbai.
Because these launches happened in the last quarter and hence collection will spill into the next financial year. So that means
the sales has been committed, receivable has been committed all
while we have to convert this into the billing and collection, etc. Hence, all collection for all

these sales, the sales which presales we have done during the entire financial about INR7000 -- more than INR 7,000 crores.
The collection will follow in the next financial year. And also, we have given a guidance on INR11,200 crores of sales for the next financial year. The collection from that sales also will come. And hence, we are the outlook is absolutely positive and there is a sustained growth in collection, which we are expecting for next financial year.
Deepak Purswani : Can you please quantify the collection for the next year point of view? How should we see that as a number?
Neeraj Gautam: We have given a guidance for s ales and the debt reduction, but collection we have not given, but rather I'll give you estimate offline, we'll connect and I'll give you an estimate what kind of collection we are looking at.
Mallanna Sasalu: It will be reasonable to expect that it is not going to be flattish and it is going to be in double digits, you will see that it's becoming better than what it is right now. It's reasonable to estimate and we may n ot have the perfect number to say that. But nevertheless, from the sales t

hat
whatever the projections that we have done or also the sales that has hap pened in the previous year, INR 7,400 crores of sales have happened, it's reasonable to expect that with those big launches in the first year that we collect almost 45% to 50% of whatever the sales that might have happened. which should really augur well with our collections.

Deepak Purswani: Okay. And just finally on the operating surplus after interest and -- tax and interest, if I were to look into this year, this year we have done actually INR270 crores versus INR292 crores last year. On the collection part, we already had a discussion. Jus t wanted to check it out another component which has seen significant increase is interest expenses, which has increased to INR600 crores. Now if you can give a sense, I mean, you highlig hted that next yea yes that will reduce?
Neeraj Gautam: One thing you have to look at is that our business if I look at business on a going concern basis, that means the kind of inflow I'm doing in the business, kind of outflow I'm doing in the business, whether overall basis I'm generating the surplus after meeting all my expenses or not. So if you look at not only the last two financial years, for the last four, five -- more than five financial years, we have been generating continuously operating surplus.
Now why it is kind of this kind of number, but operating surplus is also a function of the kind of outflow I'm doing. Today, as we have given a kind of launch pipeline. So today the collections from which -- collection we are making not only I'm investing that money on completing the construction of existing projects, are also investing this money for making the other projects ready for launches.
And hence, the money was getting deployed in the business development only. And after this all, the business development expenses, after the meeting the launch expenses and construction also and also paying all my interest, we are generating surplus. That is how we should look at the cash flow, that is how we are looking at it.
Interest again, interest is a little bit has gone up because of the incremental debt which we have taken, though these debts were not taken for the business operations. These debts were taken for the business development. Yet we are servicing and paying off interest out of the ongoing inflows and yet I'm generating surplus. That's how you have to look at it.
Deepak Purswani : So see, I mean, if I were to look at even if at the gross debt level, which is somewhere close to INR3,900 crores or INR4,000 crores. And if I were to look into the annual interest cost of INR600 -plus crores that seems to be at a 15% kind of interest cost, right? I mean how should we see this number on the absolute basis?
Neeraj Gautam: We have to connect offline for this. What happens is it cannot be -- debt is taken over a period of time. Not that it can be overall when you calculate interest like this. Some of the processing fee also have to pay, some amortization has to happen. I can give you the correct figures offline.
I can give you the detailed working of how interest figure we arrived at.
Deepak Purswani: Okay. Finally, if you can just give an update on the commercial property portfolio. I think we have received the OC for Zentech this time. And how should we see commercial portfolio shaping up over a period of time? And finally, on the possession point of view or delivery point of view, how should we see FY 27 as a whole? If you can throw light on these two aspects, that would be helpful?
Rajat Rastogi: So Deepak, on the commercial business, we have received OC for Aerocity. The leasing process for the asset is underway. We are getting very, very good inquiries right now. And we are pretty

hopeful that in the quarter, we will start leasing in Ae

rocity. With regards to Zentech, we're
expecting the OC to come any time this month.
And right now, I think last year was a good year for Zentech. In fact, this year also, we have started leasing in Zentech. So that asset is also picking up really well. Overall, last year, we did almost 2.6 lakh square feet of sales and leasing in the comm ercial assets. And that number, I think is going to substantially increase in this financial year.
Deepak Purswani: Okay. And what was the delivery guideline for the next year for FY 27?
Rajat Rastogi: I think our two under construction assets have both been delivered. So I think we have a total of close to around 2 million -odd square feet of assets which is delivered now. The other assets which are in the other stages of construction and planning, they're going to take some time for delivery.
Deepak Purswani: Delivery guideline for the resident ial business as a whole for FY 27, how should we look into it?
Neeraj Gautam: Deepak we'll come -- we can give you the number offline.
Deepak Purswani: Sure. No problem. Wish you all the best and congratulations for the strong operating performance.
Moderator: Thank you. We take the next question from the line of Rupin Mathew who is an Individual Investor. Please go ahead.
Rupin Mathew : I just had a few questions. So where was the incremental debt used for?
Neeraj Gautam: Incremental debt is used for the business development. If you look at, we have also mentioned about what kind of business development, we have done in the previous 12 months. And if you go to Slide number 32, we have given a detail about 6 projects we have added INR15,200 crores of GDV and that is where the incremental debt has been utilized. Partly the money would have also gone for the working capital for funding the launch expenses, etc, but substantial amount of incremental borrowing has used only and only for business development purpose.
Rupin Mathew : Okay. And one more question was how much is the Lokhandwala project contribute for this quarter in presales?
Rajat Rastogi: Lokhandwala has done slightly more than INR800-odd crores of sales in quarter 4.
Rupin Mathew : Okay. Thank you. That was useful.
Moderator : Thank you. W e take the next question from the line of Chintan Mehta from Punashika Family Office . Please go ahead.
Chintan Mehta: Thanks for the opportunity sir and congratulations for that. I had a query regarding Cash flow Slide . Total estimated surplus cash flow is INR19,290 crores. To arrive at that number, wha t kind of GDV we have included a nd after this INR19,000 crores of cash surplus, what kind of land we will remain with?

Neeraj Gautam: All three are different question in itsel f. See, if you go to our Slide number 25, how we arrive at the surpluses are we have -- there is a component of this is about INR8,816 crores, which is coming from the surplus from all current ongoing projects where either we have launched or we are about to launch.
If I reduce all my construction and project expenses, what kind of surplus you're estimating to generate. After that, we have two commercial assets. If we choose to come exit out of those assets, what kind of surplus we're going to generate. After that whi ch is INR2,131 crores.
Besides that, we have given a guidance for the new launch pipeline.
If those new launches, if I estimate a surplus from those new launches that will come about another INR 8,343 crores and thereby adds up all three, the estimated surplus from current ongoing projects, commercial projects in the launch pipeline, it comes to INR19,290 crores. So coming to the what kind of GDV we have taken.
The launch pipeline GDV we have told you about INR22,000- odd crores. Ongoing project, it's not coming out of the GDV. The ongoing project is coming from the balance collection from sold or unsold units, which has rema

ined there. And then that is how it is c alculated. I hope I
have clarified your questions.
Chintan Mehta: So this surplus is the free cash flow after all the expenses we have right now?
Neeraj Gautam: This cash flow is we have to meet sales and marketing expenses out of it. We have to pay income tax out of it. And of course, there are -- what are our debt within our balance sheet, that debt needs to be paid out of the collection surplus.
Chintan Mehta: Understood. And after this, how much land bank approximately we'll be left with?
Neeraj Gautam: Our current land asset is about 56.48 million square feet. Out of that, we have given a guidance

of about 21 million square feet right now. So, 56 minus 21 is about 35 million square feet still land bank will remain with us.
Chintan Mehta: After this INR 19,000 crores of cash surplus you are generating
Neeraj Gautam: Yes. That if you refer to Slide number 15 of our investor presentation, there we are giving detail of what kind of land asset we have. And if I minus it from the launch guidance which we have given this number will come.
Chintan Mehta: Understood. And sir, last many times I was asking about any diversification apart from residential project and we were some on initiation or some finding out. We have on something on card?
Neeraj Gautam: Commercial has already -- we have commercial business already two commercial assets have been developed and new -- as Rajat has mentioned Hebbal we are coming up the with a new commercial business. I think both the CEOs are there. They can give some thoughts about it that any new vertical you want to explore.

Rajat Rastogi: So just to add to what we are doing on commercial, we also steadily developing our retail portfolio like in Mumbai, in one of our projects in Thane, we have almost 3 lakh square feet of retail portfolio that we are developing over there. Also as a business strategy and expansion, we're looking at the gr owth verticals like data center.
And warehousing where we are looking a t right opportunities to enter. So from an overall business perspective, I think we are open to opportunities in terms of where we get the requisite benchmark IRR rates and then we'll explore that. But right now, data center and warehousing and retail are the three areas that we are look ing at opportunities.
Chintan Mehta: Understood, sir. But any timeline you want to give like two quarters, one quarter?
Rajat Rastogi: No, it all depends upon the right opportunity at the right time. So we are open in the market. We're looking at meeting the respective partners. But right now, I think it's difficult to give any time line. As I said, if it is the right opportunity that we' ll enter.
Chintan Mehta: Okay. On the Starworth side, what is the current order book size a nd any possibility we can separately start reporting a bit?
Neeraj Gautam: Right now, Starwor th is not a segment of Puravankara Limited's business. However, financial statement of Starworth is currently separately published and uploaded on our website. It's not a listed company, hence, I do not need to the stock exchange, but our website, we published financial statement of Starwo rth.
As of now, financial sta tement of Starworth is up to FY 2025 is uploaded and available. FY26 after this financial results, we will publish the Starworth financial statement as far as publishing is concerned. Coming to the order book is concerned, Starworth today has an order book of more than INR 2,000 crores.
Chintan Mehta: Okay. Fantastic. And sir, last question from my side. Any geographical diversification we are looking on the East side like West Bengal or Bihar. The emerging real estate or a possible percentage, again we are l ooking apart from Southern belt?
Rajat Rastogi: So we are looking at NCR as an expansion strategy for our business. I think our teams are the

re.
Again, as I said, we're looking at right opportunities. We're looking primarily at the region of Delhi, Noida and Gurgaon to focus on right now.
Chintan Mehta: Okay. Not Tier 2 towns or anything like kind of opportunities we are looking at?
Rajat Rastogi: Not as part of the strategy right now.
Moderator: We take the n ext question from the line of D andwani, who is an Individual Investor .
Dandwani: Sir, what is the update on Malabar project on the approval side? And what is the price per square feet we are looking in this project?
Rajat Rastogi: So Malabar project, I think the DA has been completed. I think we are yet to register it, which we are going to do in the next 45 -odd days. Subsequently, we're going to apply for approvals.

So I think the approval time line is between 9 to 12 months. The pricing that we're looking at is around INR115,000 to INR 120,000 on carpet areas.
Dandwani: Okay. And I have one more question. And also given the ongoing geopolitical uncertainties, are you witnessing any change in customer behavior, particularly in delays in booking decisions from end users? And how is the actually company managing the impact of rising construction costs? Do you expect any meaningful effect on project margins or demand going forward?
Mallanna Sasalu: Yes, I think it's in two buckets that you asked the question. One is how are the non-resident

Indians or the buyers from outside, how they are behaving. Since we had a very successful launch quarter last previous quarter that we didn't find anything that is substantially different from what it is. And in fact, we had a good sales from NRI market. So as we go forward, yes, any such situation like a war is not something that is desirable, and it will have an effect on people.

But whether it is a positive or negative at this point of time, we couldn't say that because, generally, people want to invest from outside the country in India when there is distress outside the country. Also, one thing that needs to be taken into conside ration is the rupee depreciation. The rupee depreciation should encourage people to put more money into India and -- coupled with uncertainties. At the same time, we should also be mindful of people may be having some uncertainties about their earning out side the country because of whatever is happening.

So we're cautiously looking at it and maybe in a couple of months that things will be sorting out, I believe. Let us look at it. As part of the second part of this the construction cost, at this point of time, yes, we are looking at some 6% to 7% construction costs going up because of the diesel prices, which went up recentl y.

but with the kind of margins and other things that are already taken into consideration and the contingencies that are developed. At this point of time, we are not unduly concerned about it. But as we go forward, again, in the next couple of months, we'll have to wait and watch how all these things unfold.

Moderator: we take the next question from the line of Manik Shah, who is an Individual Investor .

Manik Shah: So I just want to know like what is the per square feet we are charging on the Northern Light project? And like what is the broader margin on such development we can expect? And what is the contribution of this project in this quarter, like presales contri bution?

Mallanna Sasalu: So Northern Lights, we are at around INR 10,700 per square feet and above is what is the average price realization is what we say. So that's where we are at this point of time. And usually, these kind of projects make in excess of 20% to 21% gross profit margins are there in a project like this. Apart from that, the third question is that I think it contributed for INR 1,100 crores -- INR1,100 crores to INR 1,200 crores for the quarter presales number.

Manik Shah: And I also want to know like can you t

hrow some light on the margins in the redevelopment projects as well as in Purva provident and the Purva Land project?

Rajat Rastogi: On the redevelopment projects, our strategy has been clear that we want to take opportunities which are close to around 20% margin, and that's what we're following. Even in the recent launch that we did in Purva Est rella, I think our margins are close to 20% now, slightly upwards of 20%. Neeraj, you want to talk?

Neeraj Gautam: So Purva land is if you're referring to the plotted project, plotted project margins are 35% plus all the plotted projects, maybe 35% to 40% on the gross profit margin in the plotted development projects.

Mallanna Sasalu: Also it is not -- it depends on each project also. So there may be some projects where we go for joint development with a partner, then maybe our margins could be a little bit lower as well. So it is project to project specific, as Neeraj spoke it's 30% to 35% on land is possible.

Moderator: We take the next question from the line of Harsh Pathak from Motilal Oswal Financial Services Limited.

Harsh Pathak: Congratulations, Ashish and team for the strong Q4 performance and very encouraging to see the growth guidance as well as the outlook on debt reduction. So my first question is on the growth guidance that we have given and especially now that we are ramping up in Bangalore and Mumbai. So particularly to Bangalore, given this narrative on the demand impact due to AI. So what kind of dynamics are you seeing on ground? And what are the strategies we are adopting to counter that?

Mallanna Sasalu: I don't see that in the residential development at least that we are seeing any kind of a large difference. Yes, if you look at what I call the frenzy a year back, and that might not be there, but it's a very realistic market, Bangalore being very end user market. So it's been -- the sales have been steady. So you can also look at from our previous -- the launch that what we had. We did extremely well, and we sold around 30% of our project.

And also that now there are another three projects which are coming up, and we are studying the market warming up the market, and we've got some encouraging results from there as well. So whether it is AI, I would actually look at it as a positive thing fo r any place which is technology centric simply because AI also requires work and implementation and everything else that goes along with that.

And with the kind of AI plus GCC that is the combination, I expect the markets to be doing better, even better. And it's also kind of reflected in what's happening in the commercial offtake in the first quarter and what is happening in this quarter of the new year and also the last quarter of the last year. So I believe that it is -- AI is a good thing to happen, and it will be good for all businesses, which serve the people.

Harsh Pathak: Sure, in the last 1 or 2 months, have you seen some difference in the footfalls or the conversion ratios that the projects that are ongoing? Any color on that?

Mallanna Sasalu: As I said that if you look at the last 1 year, 1 year before, the frenzy, which I spoke about, may not be there, but it is a very, very steady market. I have not seen any decrease in the footfall. Maybe people sometimes take a little bit more time to decid e, but we are quite comfortable with

it, and it is -- most of the sales and the numbers are matching whatever the plans that we had to sell, quite comfortable.

Harsh Pathak: Understood. And I see the response at the Lokhandwala project was also very strong. So what kind of strategies we have adopted because we have seen there were players in the vicinity who have already been in the Mumbai market. So what kind of strategies di d we adopt to capture this market? And how do we intend to get -

- capture a higher sales velocity at the upcoming projects in Mumbai?

Rajat Rastogi: See, honestly, I think our brand is playing a very, very key role in the overall the numbers that we're achieving right now. Of course, not to say that we spend a lot of time in understanding the consumers, getting the right product in the market. And I think that's going to be a strategy for even the upcoming launches that we're going to be having in Mumbai. So we -- as a company, as a part of the process, there's a lot of time we spend on design. I think that was one of big differentiating factor.

We also spent a lot of time in identifying the asset that we want to enter, like, for example, the Lokhandwala asset right next to the Lokhandwala Market and Lokhandwala Circle, I think itself was, I think, a big bonus point for us. Similarly, like the other launches like we're going to have is the Pali Hill or Breach Candy or even the Deonar Baug launches that we're going to have planning this year, the amount of effort that we're making at each and every checkpoint, asset, product and the sales strategy, I think that is all coming up to resulting in these kind of numbers.

Harsh Pathak: Understood, sir. And in terms of our expansion in the Mumbai market, how are we looking at different micro markets? And what are the kind of projects under evaluation currently?

Rajat Rastogi: So Harsh, I think as we've always said that we want to be catering to all parts of Mumbai. We will start from Dombivali and Thane to even the most expensive part of Mumbai in Cuffe Parade or even in Breach Candy. So, from a strategy point of view, I think that will continue to be a mantra in Mumbai growth story.

We want to be more in the Western suburb. We also want to grow in the eastern side of the city.

Also we want to grow in the Mumbai 3.0. So we will be technically in all parts of Mumbai and cater to entire consumer strata of Mumbai...

Harsh Pathak: The portion on the commercial segment that you mentioned in one of the earlier questions. So, what is the kind of traction you said that you are getting an encouraging traction. But if you can quantify or maybe give some deeper color into that, that will be really helpful.

Rajat Rastogi: Yes. I think the traction is phenomenal. I think if you look at the Zentech asset, we're already almost 44% either leased or sold. And I think all the leasing is gone to Grade A companies. So, I think from a -- even I think when the OC is expected in the next 15, 20 days' time.

So even before the OC, we are around 40%, 45% leased and sold. Similarly, on the AeroCity, I think it's a large grade A platinum rated asset. I think we are obviously talking to a lot of GCCs right now.

We're talking to a lot of filling in a lot of RFPs. In fact, the quantum RFP that we fill is in excess of around a couple of million odd square feet. So, we are very, very hopeful that in the next couple of quarters, we'll be able to do a couple of large deals in AeroCity and the traction in Zentech is anyways going on. So, I think the momentum on the commercial business is also very, very positive.

Harsh Pathak: That's really encouraging. And finally, on the data center that bit you mentioned earlier, so what is the outlook there? I mean how are we planning to enter this segment? And what is the broader road map to this?

Rajat Rastogi: So, as you know that data center is a very, very micro market -centric business, right? I mean Mumbai is around 49% of the market followed by Chennai. We are open to opportunities. We are talking to partners, but I cannot give any time line in terms of when we will enter this business. If the right opportunity basis our benchmark, IRRs meet us, I think that's when we're

going to enter the segment.
Harsh Pathak: So, this will be, I believe, broadly a leasing business, right? Not we won't be partnering with any da

ta center operator or any such thing?
Rajat Rastogi: Yes, it will be purely on the leasing side.
Harsh Pathak: Again, many congratulations for the performance and the encouraging guidance.
Moderator: We take the next question from the line of Dhananjay Mishra from Centrum Broking.
Dhananjay Mishra: Am I audible?
Neeraj Gautam: Yes, you are.
Dhananjay Mishra: So, congrats on very strong operating performance and very encouraging guidance as well. So just a bookkeeping question with respect to debt, which is not including NCD of INR 1,400 crores. So, in P&L, whatever interest we are providing of INR 650 crores, so are we also considering interest to be payable on NCD in that INR 650 crores?
Neeraj Gautam: Yes, yes. Because of the accounting norms borrowing the standards that is payable in our debt or even debt which I have taken, which is payable as a performance function of the project also. But on a fair value accounting perspective, I have to calculate t he cost, fair value cost of that instrument and we have to charge to the P&L. That is the accounting regulation...
Dhananjay Mishra: But we are not paying interest...
Neeraj Gautam: We are not paying it -- for example, I can give you, if I've taken money from a -- in a kind which are equity in nature, where my repayment is a function of the performance of the project because the servicing and the prepayment has been linked with the pe rformance of the project. So essentially if I dissect , if by any chance, I'm sure all our project will do well.
But by any chance, project doesn't do well, then my cost of debt even for repayment of debt will come down. But for the fair value accounting perspective, today, we have to get as a -- has this

debt continued and taken on an arm's length basis , what would have been the cost on that basis, we have to charge P&L and that has been done.
Dhananjay Mishra: So, I mean interest cost or coupon rate, whatever you say, that will be higher than the 11% of the overall book on the equity?
Neeraj Gautam: Of course, fair value will be more of that particular instrument, not what my overall book is at 11.05%. However, that particular instrument which we -- against which we have raised money to buy land, that particular cost will be more. Again, as I said, the cost of more or less would be the function of the performance of the project. But today -- higher than the 11.05%.
Dhananjay Mishra: So INR750 crores reduction plan we have, that is on net debt of INR 2,300 crores, not the gross debt, right?
Neeraj Gautam: Same thing. Net debt is after reducing cash and bank balances. If my gross debt reduced by INR750 crores, the same amount will be reduced by the net debt as well.
Dhananjay Mishra: I mean if we use our cash to reduce our gross debt, net debt will be same...
Neeraj Gautam: I'll not be -- see cash is not that I'm -- my scheduled repayment is about INR 800 crores this financial year, INR836 crores. So, whatever said and done my debt will be reduced by INR 836 crores. Besides that, I'll be also doing some excess collection and then some loan repayment happen through the SI itself. So those repayments will happen from project level itself. As far as cash and cash equivalent is concerned, it has multiple uses.
If some cash is sitting in the RE account which is for projects still after meeting all my project cost servicing all the interest if there is any surplus that can be used for repayment on debt as well.
Dhananjay Mishra: So, INR750 crores reduction are on gross debt, right? Okay, Thank you.
Moderator: We take the next question from the line of Rohan Joshi, an Individual Investor.
Rohan Joshi: Would like to congratulate you on great set of numbers. And sir, we have done well in FY - 26 in terms of presales and collection. And I know we usually don't give such forward-looking guidance. But

can we expect such growth going forward? And what will be the geographical split and...
Neeraj Gautam: We have given guidance this financial year. In my opening remarks, we have mentioned that next financial year, we are targeting a sales of INR 11,200 crores as a company as a whole. Out of that, about INR 7,000 crores will come from the Southern market and remaining sales we are expecting to come from the west and commercial business.
Rohan Joshi: Okay, sir. And sir, I would like to ask one more question that are we looking into the senior housing space as we have seen many players in the North has entered into, it has like a bit of higher margins. So, I just would like a comment on that ?

Mallanna Sasalu: Yes. So basically, because we are developing large townships kind of projects, right? One or some of the projects are in excess of 2 million and 3 million and so where we have a number of towers. And so now we would like to look at it, explore the possibility of putting 1 or 2 towers into this senior living. At the same time, senior living has three different components that is one is the real estate, the other one is the hospitality, the other one is the health care.

So do we want to become the service providers ourselves is another question that we have to -- we are just exploring internally. But being in there as real estate developers, and I think that is a must for us as we go forward as the population also will age and also the people who have the affordability are becoming older, right? So, I'm sure that there is a great opportunity in thi s, and we will definitely participate.

Moderator: Ladies and gentlemen, as there are no further questions from the participants, I now hand the conference over to the management for their closing comments.

Neeraj Gautam: Thank you, everybody, for joining this conference call. And I hope myself and my colleagues have been able to answer all your questions. For any further questions, you reach out to us on our mail ID, which is provided on investor presentation. We'll be hap py to give you any information and explanation. Thank you very much once again.

Moderator: Thank you. On behalf of Dolat Capital Markets Private Limited, that concludes this conference call. Thank you for joining us, and you may now disconnect your lines .
