Moderator:
- Mr.RohitThorat–AxisCapitalLimited

Moderator:Ladiesandgentlemen,gooddayandwelcometoixigo'sQ4FY'24Earnings ConferenceCallhostedbyAxisCapitalLimited.Asareminder,allparticipantlines willbeinthelisten-onlymodeandtherewillbeanopportunityforyoutoask questionsafterthepresentationconcludes.Shouldyouneedassistanceduringthis conferencecall,pleasesignaltheoperatorbypressingstar,thenzeroonyour touchtonephone.Pleasenotethatthisconferenceisbeingrecorded.
InowhandovertheconferencetoMr.RohitThoratfromAxisCapital.Thankyouand overtoyou,Mr.Thorat.
RohitThorat:Thankyou,Neerav.Goodevening,everyone.OnbehalfofAxisCapital,Iwelcome youalltoixigo'sQ4FY'24EarningsCall.WehavewithusMr.AlokeBajpai, Chairman,ManagingDirectorandGroupCEO,Mr.RajnishKumar,Directorand GroupCo-CEO,andMr.SaurabhDevendraSingh,GroupCFO.BeforeIhandoverthe calltoAloke,IwouldliketohighlightthattheSafeHarborStatementonthefirst slideoftheearningspresentationisassumedtobereadandunderstood.Overto you,Aloke.
AlokeBajpai:Thankyou.WewelcomeeveryonetoourfirstEarningsCallpostourlistingforthe FourthQuarterandtheFullYearofFiscal'24.FY'24hasbeenagreatyearforthe ixigoGroup.Ourplaybookofbuildingthebestcustomerexperiencefortravelershas

helpeduscontinueourrobustgrowthtrajectory.Forthefullyear,wecrossed480 millionannualactiveuserscumulativelyacrossourGroupandourGTVforFY'24has shownsignificantgrowthofalmost38%year-on-year,reachinganall-timehighof INR10,283crores,upfromINR7,452croresduringlastyear,makingusthefastest growingOTAonGTVinIndiainFY'24.

InQ4,wealsocrossed10%adjustedEBITDAmarginonthebackofexpanding contributionmarginsinourbusesandtrainsbusinesses,wherewearenowableto seesomemoresynergiesplayingoutwithtighterintegrationwithouracquisitions, ConfirmTktandAbhiBus.RobustGDPpercapitagrowthinIndiaisleadingtogrowth indisposableincomes,fuelinghigherfrequencyandshareofwalletspendontravel byboth/themiddleclassandtheaffluenttravelers.

Increasedgovernmentinvestmentsinrailwayinfrastructure,roads,highways, airportsandpublictransportationhaveimprovedaccessibilityandoveralltraveler experienceinourcountryandimprovedtheoverallconnectivitytoTier2,3,4 towns,allowingustogrowfasterincapturingshareofthenextbillionusertravel

segment'sneeds.AsofMarch24,therewere morethan100VandeBharattrain servicesoperationalacrossIndianrailways,offeringtravelersaconvenientand moderntrainwithcomfortableseats.

TheAmritBharatstationschemehasalsobeenlaunchedforthedevelopmentand modernizationofrailwaystationsinIndia,with1,318stationsselectedfor redevelopment.MostoftheselieinTier2,3,4towns.Withtheintroductionof VandesleeperrakesandAmritBharatnon-ACtrainsinthenextcoupleofyears,we expectcapacitygrowthtoaccelerate,whichwillbefurtheraidedbyfreeingupof thefreightcorridoratsomepoint.

On28June,wehavebeeninformedbyIRCTCthattheexistingrestrictionsonOTAs andagents,tonotbeabletoselladvancereservationperiodtraintickets,whichare booked120daysinadvance,andTatkalbookings,whicharethenextdaybookings, forthefirst15minutesisnowbeingloweredtojust10minutes,witheffectfromthe verynextday,whichis29thJune.

ThismeansOTAssuchasourselvesnowhavefiveextraminutesforbookingsduring thepeakdemandtimeinthemorning,whenthe120-daypriorbookingsopen,as wellaswhenthenextdaybookingsopenundertheTatkalscheme.In2018,this restrictionhadalreadybeenloweredfrom30minutesto15minutesandwe welcomethisfurtherreductionto10minutesasaconsumer-friendlymovebythe RailwayMinistry.Weexpecttoseesomebookingsupsidecomingfromthismove, andtheearlydayslookpromising.

Inthebusmarket,we'vegrownslightlyfasterthantheoverallmarket,with21.2% growthinpassengersegmentsforthefullyearandwe'vealsoseengreater operatingleveragecomingin,bothattherevenuelevelandthecontributionmargin level.We'vemanagedtoonboardmoreoperatorsonourpopularfreecancellation andserviceguaranteeprogram,AbhiAssuredandwecontinuetoworkonsupply enrichmentpanIndia,aswellasproductenhancements.

InternationalairtrafficinIndiahasseenfastergrowththandomesticairtrafficinFY '24,witha22.5%year-on-yeargrowthintheoverallmarket.Weareproudtoreport thatourinternationalflightpassengersegmentshavegrownby100%year-on-year inFY'24,fueledbyinventoryandsupply-sideexpansionaswellasproduct enhancementssuchastherolloutofixigoAssuredforourinternationalflights business.

2024
Interestingly,one-thirdofourinternationalflightbookingsforFY'24camefromTier 2,3,4airports.India'sdomesticairtrafficstoodat15.34crorespassengersinFY'24, a13.5%year-on-yeargrowth.Thereareover545routesoperationalizedunderthe UDANscheme,aimedatimprovingairconnectivitytounderservedregionsand regionalairports.
Withover1,100planesonorderbyairlinesinIndiaandplanstoconstruct70more airportsoverandabovetheexisting150-plusairports,Indiaispoisedtobecomethe fastest-growingaviationmarketintheworldinthecomingdecade.However,inthe shortterm,capacityissues,groundingofplanesduetoenginetroubles,highload factorsandhighairfaresareconstrainingthegrowthoftheoverallmarket,ascould beseenbythesingle-digitpercentagegrowthinbothQ4FY'24andQ1FY'25for theoveralldomesticflightmarket.
Despitetheseheadwinds,ixigomanagedtogrowourflightpassengersegmentsby 41.8%forQ4FY'24versusQ4FY'23,andbyaremarkable77%forthefullyear.This waslargelybecauseofourabilitytocross-marketbetterwithinouruserbase, improveourproductuserexperienceandinitiativessuchasperformanceandbrand marketing,coupledwithournewAU-ixigoco-brandedcreditcard,whichhas startedtoclearlybecomeacardofchoiceformanyfrequenttravelers,including internationalones.
Weseeauniqueopportunityoverthelongtermforourflightsbusiness,giventhe numberofnewflightbookersbeingaddedinIndiaeveryyear.Therefore,weare alsoleveragingmoredistributionchannelsnowtogodeeperintotheNBUmarket. Firstly,throughonlinedistributionpartnerships,forexample,withPhonePe,the leadingpaymentappinIndia,wehadanexistingpartnershipforpoweringtheir trainsticketingthroughourConfirmTktbrand.Recently,PhonePehaschosento extendthispartnershiptoexclusivelypartnerwithusforourflightsandbuses businessaswell,primarilyduetothesuperiorcustomerexperiencewe'vebuiltand ourabilitytoservethefast-evolvingtravelneedsofIndians.
PhonePewillnowhaveflights,busesandtrainsintheirtravelsectionpowered solelybyixigo,AbhiBus,andConfirmTkt.Thisisabrandeddistributiondealthatwill exposeourbrandtonearly54croresusersofthePhonePeapp.Andthoughitis early,it'salreadyresultinginsomegainofmarketshareonboththeflightsand

busesbusinessforus.WehaveenteredintoasimilarpartnershipwithMeesho,a leadinge-commercecompanycateringtotheNextBillionUsers.
Secondly,weareexpandingintoindirectandofflinedistributionthroughtravel agentsthroughtechnology-enabledsolutions.Today,ourgrouphaslaunched travelsupermall.com,nicknamedTSM,ourB2B2Cdistributionplatform.TSMwill distributetravelinventorytoofflinetravelagentsandhelptravelagenciesgrowtheir businesswithourindustryexpertise,givingussomefardeeperreachwithinthe NBUsegmentwherethetravelagentswillbeenabledtoservecustomersfromevery nookandcrannyofIndia.
YouwouldnoticeanincreaseinourbrandmarketingspendinFY'24,goingfromINR 21.4croresinFY'23toINR55croresinFY'24.Thisisintentional,andthisisinline withourplanstogrowourunaidedbrandrecallandbuildmoretrustwiththeNext BillionUsers.Werecognizethatwhenitcomestoconsumerbrands,marketing spendisalong-terminvestmentforimprovingbrandsalience.
SomemajormarketinginitiativesinFY'24werethebrandingactivitiesattheAsia CupixigodealandsigningupofRanaDaggubatiasthebrandambassadorfor ConfirmTkt,renewingourpartnershipwithMaheshBabuasthebrandambassador ofAbhiBus,aswellasacampaignwedidinTamilNaduforAbhiBuswithSimbuas thebrandambassador.Thesesuperstarshelpedusbuildtrustandbrandrecallin southernmarketsforourapps,andwehaveseenadecentresponsetotheregional campaignsfeaturingthesecelebrities.
Withthis,IamnowhandingoverourcalltoourCo-CEO,Rajnish,whowillgiveyou someinterestingupdatesonourproducttechnologyandAIinitiatives.
RajnishKumar:Thanks,Aloke.It'sgreattobedoingourfirstearningscall.Thescaleofouruserswe

nowhaveismind-boggling.Wehitaround8.3croresMAUsinSeptember2023,and for(FY)2024,wehadalmost7.7croresMonthlyActiveUsersonaveragewithover 10.5croresappdownloadsaddedacrossixigo,ConfirmTkt's,andAbhiBusduringthe year.Over9.5crorespassengersegmentswerebookedwithusduringFY'24andwe touchedanMTUtoMAUratioof3.4%inQ4ofFY'24.

supportthatwelaunchedrecently?
Aditya:That'sright.
RajnishKumar:Okay,great.Sovoicecall,voiceasachannelforcustomersupporthasalwaysbeen
like,inIndiaoneofthemostimportant.
Moderator:Aditya,mayIrequestyoutomuteyourlinefromyourside,please?Thankyou.Sir
goahead.
RajnishKumar:OkaysolikeIwassaying,voiceasachannelforcustomersupporthasbeenlikeone
oftheprimarychannels,especiallyinIndia.Andsomeofthoseusecaseswhichare

usualsuspects,youcanthinkabout,peoplecallingtoconfirmtheirbookingorto checkthestatusoftheirrefunds,etcetera.Imean,apartfromthoseusualsuspect usecasesthatwearenowprogressivelymovingtoAIbecauseearlier,thereusedto belikeveryirritatingIVRcallsthatpeoplehadtofaceandgothroughlikeonphone lines.

Andnowthereisthisabilityfortheagentstotalkinyourlanguagein English,Hindi, Hinglish,etceteraanddirectlyhavearealconversationjustasyouwouldhavewitha humanbeingandgetthosestatusupdatesorresolvethosequeries.Someofthe otherinterestingusecasesthatwehavestartedusingaswellis,whenpeoplecheck outfromahotel,we'reabletokindofaskthem,howtheirexperienceortheirstay wasandkindofcollectthosereviewsdirectlyoverthephonecallstotheseagents.

Andallofthisishappeningwithoutanyhumanintervention.Soyoucouldimagine there'salotofoperatingleveragethatistocreateinthebusinessgoingforward.But likeIsaidpreviouslyoverthecall,theseareveryearlydaysstill.

Aditya:Thankyouverymuch.

Moderator:Thankyouverymuch.NextquestionisfromthelineofDaivikRawalfromTrifecta Capital.Pleasegoahead.

DaivikRawal:Hey,thankyou.Firstofallcongratulations,stellarIPOandgreatnumbers.Ijust wantedtocheckonthecontributionmarginfeesforflightsegmentasithasbeenon apercentageofnetrevenue.It'sslightlylowerthanFY‘23.Sohowtothinkaboutit? Andconsideringthenewpartnership,etcetera,doweseethatgoingaroundthe currentleveloranyfurthercompressionorexpansiondoweexpectfromyou? Thankyou.

SaurabhSingh:Hi.Thanksforyourquestionandthanksforactuallyaskingitbecausewealludedto itbefore.Butit'sanimportantquestion.Solookthearetwoorthreepointson thecontributionmarginpercentage,whichiscontributionmargindividedbythe segmentrevenue.Ifwestartfromthetop,IthinkAlokeinhisinitialtalksalso mentionedandinthefirstquestion,whichwasalsomentioned,thattherehasbeen anissuewiththetakeratesandingeneral,thesupplysidehasbeenunderstresson theflightside.Sothereissomepressureonthatside.

Havingsaidthat,whatchangeswithourrelationship(withPhonePe)iswewould sharethedistribution.Wewouldhaveasharewiththecounterpartyandwhich lowersourcontributionmarginpercentagetosomeextent.Andusuallythesedeals arespecificdealsandarecomplexdeals.Sotheimpactvaries.Aswe'vealwayssaid thatwebelievethatatthestagewearein,havinga48%contributionmarginforthis LOB,wewouldbewillingtoletgoofsomepercentageofthatforgrowth.

Again,wewanttogrowprofitablyandthathasbeenourfocus.Butwewouldinvest ingrowthattheLOBlevelandwhereyou'llseeeitherthroughdistributiondealsor occasionallythroughperformancemarketingfocus,wewouldbeinvestingabiton ourgrowthbecauseweseeamassiveopportunityforouruserbase.TheNBUworld isstartingtotravelalotmore.

Webelievetheofferingthatwehave,evenfortier1,tier2citiesisveryinteresting. Andinfact,Iwouldrecommendthatyoutryourflightsappifyouhaven'tandyou'll seethedifferenceandtheproductthatweareoffering.Sothat'stheidea.

AlokeBajpai:IjustwanttoaddthatQ4FY’23wasabitof--anomalytocomparewithbecausein thatenvironmentwewereactuallyspendingalotlesseronperformanceandin generalonbrandaswell.AndIthinkwhathashappenedis,beinginthe40son

contributionmargininflightsiswhereourcomfortzoneis.Idon'tthinkthat'sgoing
tochange.So,likeSaurabhsaid,wemighthavesomecompressiontherebecauseof
ourdistributiondeals,etc.ButIthinkgiventhepaceofgrowthweareexperiencing,
despitetheoverallmarketgrowinginthesingledigits,wehavegrownatcloseto
42%Q4-over-Q4.AndIthinkjustmaintainingitintheearly40salso,wearehappy
withandpushingthepedalongrowth,takingmarketshareasmuchaspossible
despitethedifficultenvironment.Thatiswhatweareouttodo.
DaivikRawal:Andjustontherevenuefromoperationbit,whichisacombinationoftheticketing
revenueandtheotherrevenue,whichislikeadvertisingandancillaryservices
revenue,etc.So,anyguidancelikeitusedtobe93%netticketingrevenueofthe
totalrevenue.Howwasitthisyearoverallintermsofsplit?Ifyoucanguideus,that
wouldbesuperhelpful?
AlokeBajpai:So,Idoubtifwehavegivenanysplitonancillaryrevenueeveninthepast,norwere
weintendingtodothatinthefuture.Ithinkfromaticketingrevenueperspective,I
mean,theonlythingoutsideofthatisadvertisingrevenue,whichagain,Idon't
thinkthere'sbeenanymaterialchangeinmixbetweenticketingandadvertising
revenue.Themixbetweenthetworemainsalmostthesame.Butticketingobviously
willgrowmuchfasterfromhere,giventhepaceofflightandbusbusinessgrowth
thatwehaveseen.
SaurabhSingh:Onadvertisingrevenue,acoupleofthingsIwouldhighlightortalkaboutbysayingis
thatagain,notintheshortterm,butinthelongrun.WebelievewhenIsayalong
runinthenextcoupleofyears,becausethesekindofthingsneedtimetodevelop,
timetocreate.Butweseeapotentialinadvertisingrevenuegrowingmuchmore
thanwhatitisrightnowasthebusinessgrows.Soit'samulti-yearsstory.Butyes,
thatasapercentagewillgrow.Butit'samulti-yearsstory.
DaivikRawal:That'sit.Thankyou.

Moderator:Thankyou.NextquestionisfromthelineofSwapnilfromJMFinancial.Pleasego
ahead.
Swapnil:CongratulationstoallyouguysforasuccessfulIPO.Ihad2to3questions,starting
withyourambitionsontheB2B2Cside.Youmentionedtravelsupermall.So,just
curiousastowhatwasthereasonthatweareenteringtheB2B2Cside.Andthat's
onethatIfollowuptothatislike,howdoweintendtodothisbusiness?Dowe
intendtohaveourfeetonthestreetoritwillbejustaplatformfortheagents
wheretheycanbooktheticketsizeasandwhentheywant?
AlokeBajpai:Yes,soI'llpointyoubacktoourvision,whichistobecomethemostcustomer
centrictravelcompanybyofferingthebestcustomerexperiencetoourusers.AndI
thinkifwereallywanttodothatintheIndiancontext,whereforeveryverticalout
there,asignificantdoubledigitpercentageofbookingsarestillbeingdonethrough
travelagents.AndifyoulookatallOTAsoutthere,theydohavesomeB2Bmixin
theirbusinesses.
It'sjustthatixigoasanOTAissonewinthisgame,right?We'vebecomeanOTAjust
overthelast5-6yearsthatit'sonlynowthatwehavereachedapointwhereitkind
ofmakessenseforustoexpandourhorizons.Andonereasontodoitisthat
rememberthatintier2,3,4,theskewtowardsofflineremainsabitbiggerin
categorieslikehotelsorevenbuses,etc.
Justtryingtodothisonlineintheshorttermwillnotyieldasmuchgrowthasalso
doingahybridapproachwhereifyou'reabletobuyaticketthroughyourlocaltravel
agent,butthey'reusinganixigointerfacemeantforagentstodotheticketingfor
you,right?Andweintendtodothisacrossthefourverticals,althoughwewillroll
outmoreincrementally.Butwebelievethiswillexpandourreachinthesmallestof
townsandvillagesinIndia.
Wecouldsignupagentswhocandistributearoundthem.Italsosolvestheproblem
ofpayments,becausetherecouldbepeoplestillouttherewhohavenotsetupUPI,
whohavenotsetuppaymentmethods,etc.Andifwewanttoservethem,
especiallyoncategorieslikebusesandtrainseventually,wecouldwanttotapinto
that.
Butevenonflights,like,lookatwhatpercentageofinternationalflightbookingsstill

getdonebyofflineagentsinourcountry,right?AndIthinkovertime,itjustmakes

senseforustoaugmentourbusiness.Havingsaidthat,it'sveryveryyoung.We launchedittoday.So,Idon'twanttosetunreasonableexpectationsonwhereitwill getto.It'sgoingtobeanotherlearningcurveforus.Wewilltrytodoitinatech intensivemanner.So,wewillneedtohavesomepeopleontheground,obviously.

SaurabhSingh:Swapnil,justonthecostpart,Iwouldreiteratethatthereisnosignificantnewcost thatisbeingallocatedtothisbusinessasofrightnow.Thepeople,asinthelaunch, orwhathasbeendone,hasbeenplannedanddoneoverthelast1year.So everything,intermsofthecostpart,isalreadybeingbakedinforthisbusinessasof rightnow.

Swapnil:Okay.Thesecondquestioniswithrespecttoyourinternationalflights.You mentionedthebusinessdoingverywelllastyear.Canyoujusthelpusunderstand whatpercentageofyourflightGTVwillbecomingfrominternationaltoday?And howdoyouseethatdoinginthenearterm,next1yearsor2years?

AlokeBajpai:WearenotgivingabreakoutofinternationalGTVslashbookings,etc.Atthispoint oftime.It'sstilltiny,tobehonest,incomparisontosomeoftheincumbentplayers. Butweareveryhappywithtwothings.Oneisthatonethirdofourinternational flightbookingsarecomingfromTier2,3,4airports,whichisnothowtheoverall marketlookslike.Andsecondly,thefactthatweareabletogrowthisat100% year-on-year,whichiswayfasterthantheoverallmarket.So,Ithinkwewillcontinue workingonthis.Idon'tthinkwehavethebestproductoutthereyet.Wearestill workingoninventoryininternationalmarkets,product,deeperintegrationwith certainairlines,etc.Soovertime,you'llseeustalkmoreaboutthis.

Swapnil:Andanotherqueryiswithrespecttoyouradvancereservationperiodthatyou mentionedinthebeginning,thatyouarenowallowedtodobookings120daysprior tothetraveldateontrain.Whatwasthesituationearlier?Whatwastherestriction earlier?Ifyoucouldjustelaborateonthat.

AlokeBajpai:Sohere'showitworks.TheARP120dayspriorbookingswereavailabletous.It's justthatwhenthewindowopens,whichis8inthemorning,itusedtoopenfor OTAsat8.15.AndnowitopensforOTAsat8.10.Soforthefirst10minutes, obviously,it'sonlyavailableonIRCTC.Neitherofflinenoronlineagentshaveaccess tothatinventory.Forexample,let'ssayforDiwali,theinventoryhasjustopenedup. Andthefirst10minutesofthat,wewouldnothaveaccesstoit.Butearlier rememberthatthisusedtobe30minutesbackin2018.Soithascomedown

substantially.Andwebelievethatthisisagreatstepandreflectiveoftheintentof thegovernmenttobringmoreparityinthisspace.

Swapnil:Sonextquestioniswithrespecttoyourgrowthguidance,ifany,ifyouwouldliketo giveoutacrossthethreemainsegments,startingwithrail,giventhatyouhave significantlyhighmarketsharethere,howdoyouseethatdoing?Andthenflights andbuses,ifyoucouldjustelaborateonthat.

AlokeBajpai:Ithinkourintentonallthesethreecategorieswillbetotrytogrowfasterthanthe market.Andontrains,we'vebeendoingthatnowforseveralyears.Wethinkthat maintainingdouble-digitgrowth,mid-teensgrowthonvolumesissomethingwhich isquitedoablethere.

Ontheflightside,wehavebeengrowingwayfasterthantheoverallmarket.Andwe intendtocontinuethat.Onbusesside,we'vebeengrowingmarginallyfasterthan theoverallmarket.Andagain,Ithinkthereisscopetoimprovecertainthingsthere

overtimeandcontinuethatmomentum.SoIdon'tthinkwehaveanyspecific
guidanceatthispointbeyondthis.
SaurabhSingh:Butit'sagreatplacetobeinasanOTA.Asin,ifyoulookatindustryreports,the
underlyingindustryismovingatan18%CAGR.AndthesecondpointthatIwould
sayisthatwhatwecallNBU,NextBillionUsers,theyaretheoneswhoareusing
moreoftheseservicesandarespendingahigherpercentageoftheirdiscretionary
income.So,whenIlookatthis,Iseetheworld,Iseethemarkettravelingtowards
ourcaptiveareaandtheunderlyingbusiness,anywaymovingfast.
AlokeBajpai:TheonlycaveatI'lladdis,thislastquarter,thisquarter,andmaybeoneortwomore
quarters,therewillremaincapacityconstraintsacrossacoupleofthecategorieswe
operatein.So,overallmarket,wewouldwishittogrowmuchfasterthanhowit's
moving.Andobviously,asandwhenthathappens,itwillbenefitusasmuchasall
otherplayers.
Swapnil:Andjustonequestiononthecostsideaswell.Now,youhavebeencallingout
adjustedEBITDA,whereinweaddbacktheESOPexpenses.Ijustwantedtogeta
senseastohowshouldwelookatthisESOPexpensesgoingforward?Willtherebe
ameaningfulincreasegoingahead,orwillitbeatthecurrentlevels?Anysenseon
thatwouldbeveryhelpful,becausethathasbeenthetalkofthetownoflatewitha
lotofinvestors.

SaurabhSingh:Coupleofthings.AsinESOP,it'sbeenareachforushistoricallyifyousee.And
whereit'speakedthehighestwasaroundCOVID.Andthatwasbecausealotof
employeesdecidedtocuttheirsalariesoutquiteaggressively.Andpeopleworked
onhalfsalariesorlower.Andthecompanyrewardedthisloyaltyoncewewere
gettingoutofCOVIDwithESOPs.
Butonanongoingbasis,youcanthinkofitasarange.Whatwehavedoneis,it'sa
rangethatwe'veseeninthepastcoupleofyears.Wedon'tintendtogetoutinthe
foreseeablefuture.Wedon'tintendtobreakthatrangeaggressively.Havingsaid
that,remember,ESOPisalsoinsomewayarewardmeasurewhichisputin.
Andsay,ifweasacompanydoexceedinglywellinbothourtop-lineand
bottom-line,muchmorethanwhatweoryouareexpecting,thenasadollar
amountorasarupeeamount,ESOPsmightvaryhigher.Butonanongoingbasisina
normalbusiness,itshouldnotbreaktherangethatwe'vehadinthepastcoupleof
years.
AlokeBajpai:IalsojustwanttohighlightthatouradjustedEBITDA,unlikeothercompaniesthat
youmentioned,isactuallylowerthanourEBITDA.Sothatisalsosomethingwhich
wearecallingoutjustbecauseofthefactthatwethinkthat'samoresecularwayof
lookingatit.There'saninterestincomethat'scominginandthereisanESOPcost
that'sgoingout.
Andeveninthepastthesehavebeenverysimilaroronehasbeenslightlyloweror
higherthananother.ButIthinktherightwaytolookataclosertocashkindof
metricinourbusinessisadjustedEBITDA.AlthoughourEBITDAhasalsobeen
growingverynicely.
SaurabhSingh:ButSwapnil,itisagoodquestion.AndagainasIsaidthatweasacompanydon't
intendto.Wecontinuetousethismetriclikewehaveearlier.Andwedon'tintend
togoaggressivewiththismetricatanypointoftimeinthenearfuture.
Swapnil:Justlastthingoncashconversionalso.Ifyoucan,anyspecificrangethatyouwould
belookingat,byanychanceyouwouldbegoingaggressiveonthesupplierside?
Anythoughtsonthat?
SaurabhSingh:Soyou'resayingthatintermsofwhenyousaycashconversionorwhenyousaythe
useofcash.Look,thecoupleofthingsandaswe’vementionedinDRHP,wherein

theworkingcapital,whywewouldneedmoreworkingcapitalandstufflikeasour
flightbusinessgrows.Andaswegetintomoreandmorerelationshipswiththe
banksandcreditcardcompanies,thereisacertainamountofworkingcapitalthat
youneedbecauseofthepaymentcycleinthiscase.Sothatisonethingthatwillbe
there.Asabankoffer,it'sa4-6monthcycle.Andaswebecomebigger,itkeepson
increasing.
Theotherareawhereweusecashisforstuffwhereweareincreasingthe
convenienceforapassenger.Andletmegiveyouanexample.Inourtrainbusiness,
whichisthere,inourtrainbusiness,oneofthethingsthatwewoulddosay,inan
assurance,ismycounterpartyisIRCTC.AndwhatIwoulddoisIwouldgive,ifthere
isanAssuredtransactionwhereapersoncancelshisticket,Iwouldrepayhim.And
thatisanumberthatwearegivingonourrefundtime.Andit'samatrixwhichwe
areveryproudofandwewouldpayinstantlywhilethemoneywouldcomeina
coupleofdays.
Sowhereverwehaveacounterpartywherewehavealittleriskbuttheconvenience
ofthepassengerisincreasedsubstantiallymore.ThisistheotherpartwhereIuse
thethirdpartwhereIuseiswhereItalkedaboutearlier.Themorethe
advertisementsgrowonourplatform,thereisaworkingcapitalrequirementfor,in
generalforadvertisementbusiness,orintheonline,itwillbeusedthere.Sothat's
wherewewillbeusingmoreofcash.
Swapnil:Anyrangeifpossibletoquantifyorthatwillbedifficultatthispointoftime?
SaurabhSingh:Thatwillbedifficultatthispointhere.We'vegivenyouabroadideaasaworking
capitalrangeinourDRHP,soifyouseethepartoftherangethatwehaveoncapital
wasthat.Butremember,theotherpartthatI'msayingisifanyoneofthis,the
secondpartisnot,doesn'treallyshowinaworkingcapitalbecauseit'soneortwo
daysofcapitalusage.
So,it'sacapitalwhichgetsuncirculated,aswegrowbigger,thatwillbemore.Bank
offersandadvertisingweneedtoworkonmore.Iwishwedoalotmorethere
becausemycounterpartyinbothofthemwouldbeabigcorporateswhereIhavea

Dear Sir/Madam,

Sub : Announcement under Regulation 30 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 - Transcript - Earnings Call - Financial Results for the quarter and half year ended September 30, 2024

Ref : Le Travenues Technology Limited (the "Company")

BSE Scrip Code: 544192 and NSE Symbol: IXIGO

In compliance with Regulation 30 and other applicable provisions of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 (as amended), please find enclosed the transcript of the Earnings Call conducted on October 24 , 2024, pertaining to the financial results of the Company for the quarter and half year ended September 30, 2024.

This is for your information and record s.

Thanking You,

For Le Travenues Technology Limited

Suresh Kumar Bhutani
(Group General Counsel, Company Secretary and Compliance Officer)

Le Travenues Technology Limited ("ixigo")
Q2 FY25 Earnings Conference Call
October 24, 2024

Management Representatives:
● Mr. Aloke Bajpai, Chairman, Managing Director And Group CEO
● Mr. Rajnish Kumar, Director And Group Co -CEO
● Mr. Saurabh Devendra Singh, Group CFO

Moderator:
● Mr. Rohit Thorat – Axis Capital Limited

Moderator: Ladies and gentlemen, good day and welcome to ixigo Q2 FY25 Investors Conference Call hosted by Axis Capital Limited. As a reminder, all participant lines will be in listen -only mode and there will be an opportunity for you to ask questions after the prese ntation concludes. Should you need assistance during the conference call, please signal an operator by pressing star, then zero on your touch tone telephone. Please note that this conference is being recorded. I now hand the conference over to M r. Rohit Thorat. Thank you and over to you, sir.

Rohit Thorat: On behalf of Axis Capital, I welcome you all to ixigo's Q2 FY25 Earnings Call. We have Mr. Aloke Bajpai, Chairman, Managing Director and Group CEO, Mr. Rajnish Kumar, Director and Group Co -CEO, and Mr. Saurabh Devendra Singh, Group CFO. Before I hand over the call to Aloke, I would like to highlight that the safe harbour statement on the second slide of the earnings presentation is assumed to be read and understood. Over to you, Aloke.

Aloke Bajpai: I'm joined here by my colleagues, Rajnish, who's Director and Group Co -CEO, and Saurabh, who's the Group CFO. Welcome to the ixigo Earnings Call for the second quarter of fiscal year 2025. Our playbook of building the best customer experience for traveller s and addressing the needs of the next billion -user market segment continues to drive our ability to grow faster than the overall market at the GTV level. This quarter, we are pleased to share, yet again, that the ixigo Group hit an all -time high on our gross transaction value, revenue from operations, contribution margin, as well as EBITDA for the quarter. We exceeded INR 3,528 crores of total gross transa ction value booked through our platforms in Q2, a 40% increase year -on-year compared to the Q2 of last fiscal year.

Our trains business grew at 36.1% at the GTV level, Y -o-Y. Our flights business grew at 42.6% at the GTV level, Y -o-Y. Our bus business has delivered the strongest growth with a 45.5% increase in GTV, Y -o-Y. This acceleration in our growth in a seasonally weak quarter has been achieved while keeping our EBITDA margins stable, with the company delivering a INR 22.4 crores EBITDA in Q2, a 6.55% increase in our EBITDA. For the month of September 2024, we have recorded nearly INR 1,200 crores of monthly GTV, a new record, and we closed the quarter with a 20% increase on that number sequentially if you compare with the month of June 2024, when it was around INR 1,000 crores.

Over 93.97% of our transactions in the quarter, close to 94%, continue to be those with a leg of the journey in a tier 2, 3 or 4 town. Despite the unusually strong monsoon rains disrupting travel in some parts of the country, we achieved the growth accele ration in GTV while maintaining a double -digit adjusted EBITDA margin in the quarter, achieving a margin of 10% of our revenue from operations, with the Q2 adjusted EBITDA coming in at INR 21 crores for the first time ever.

This was achieved on the back of the operating leverage derived from the expanded contribution margins in our business with INR 91.1 crores of contribution margin in the quarter, up 23.6% versus last year. For our trains line of business, we continue to see good momentum in growth on the back of capacity growth as well as market share gains, with 27.6% growth in train passenger segments, crossing INR 2.5 crores passenger segments booked in a quarter, and strengthening our market leadership even further within the trains OTA market. Domestic aviation continues to be plagued with su pply -side constraints, though the situation is now showing signs of marginal improvement every quarter. The domestic air market has grown at just around 5%

year -on-year for H1 of FY25. However, we managed to continue on our trajectory of beating the market pace of growth by delivering 28.4% growth in passenger segments and over 42% growth in revenue from our flight segment. While our overall flight GTV grew 42.7% to INR 1,237.5 crores, our international flight GTV continued outpacing our domestic growth wit h a 47% GTV expansion.

We continue to see a large opportunity over the longer term for our flights business, given the number of new flight bookers being added in India every year, and our right to win in our captive user base, relying on our own distribution flywheel that allow s our airline partners to tap into a unique user base of potential first -time flyers, as well as international flyers emerging from tier 2, 3 airports in India.

From and to certain tier 2 and 3 airports such as Vijayawada, Jharsuguda, Varanasi, Rajkot, etc., we continue seeing 50% plus growth Y -o-Y in passenger segments, and for some of them it has even crossed 100% growth. In the bus market, we have materially a ccelerated our business this time with 45.5% growth in Q2 GTV and a 44.8% growth in bus passenger segments in Q2 Y -o-Y. Thereby, we have gained market share and where the market would have grown in the 20s, we have grown in the 40s.

We have signed up more operators in far -flung regions in this quarter and we have also nearly doubled the number of operators that form part of our Abhi Assured program. As we mentioned in our last call, we have shifted our focus towards growth over contr ibution margin percent in the categories of buses and flights, and the results have started becoming visible in terms of growth acceleration.

Though it leads to a lower contribution margin per booking, but at an aggregate level, due to the volume growth, our contribution margin continues to grow, given we see a large opportunity of acquiring first -time online bus bookers and first -time flyers on our platform.

We also have a more strategic announcement today. Our board, at its meeting held today on October 24, has approved entering into a definitive agreement to acquire 51% stake in Zoop Web Services Private Limited, known as Zoop, for a total consideration of INR 12.54 crores, including non -compete fee, subject to the completion of certain conditions precedent through a combination of secondary and primary share purchases.

Additionally, we have the option to purchase the remaining stake in the future, subject to fulfilment of certain conditions.
Zoop started in 2016 and is a leading IRCTC -authorized e -catering partner for food delivery on trains. Led by Puneet Sharma and Manoj Kumar, the team has grown the business frugally and with a lot of resilience, emerging as one of the respected train

food delivery players, delivering food at over 192 stations in 18 states from over 400 partner restaurants. Zoop has also been building its own in -station logistic network for delivering food more efficiently, directly to the berth or seat of the passenger s. E-catering on trains has become a fast -growing part of the market for IRCTC and its food aggregator partners, and as per management estimates, food on trains has a TAM potential of nearly $1 billion.

This strategic partnership also gives us an opportunity to deepen our partnership with IRCTC on another front of e -catering growth, with synergy creation for everyone involved in this process.

With this, I'm now handing over our call to our Group co -CEO, Rajnish, who will give you some interesting updates on our business, products, and technology. Over to you, Rajnish.

Rajnish Kumar: Thanks, Aloke. So, indeed, it's been a pretty busy quarter for us. We had over 78 million monthly active users this quarter, and 3.43 million monthly transacting users. Over

3.1 crores passenger segments were booked with us during Q2 FY25, which helped our GTV grow that fast, and we achieved a high MTU to MAU ratio of 4.4% in the quarter.

Our monthly transacting users grew nearly by 43% year -on-year to almost 3.43 million for the quarter. We saw growth in conversion rates and transactions through data science and AI -led optimizations in our conversion funnels, optimizations in our payment f lows, and better targeting of our non -transactional users for transactional use cases.

The lowest -hanging task for us remains to convert more of our large user base into first-time bookers with us, and to improve retention, repeat, and cross -sell within our existing booker base. We are working on both of these, as we speak. We are proud to share that we now have 38.2 million lifetime transacted users on our platform.

Now let me share some key developments in our business from this quarter, and I'm going to start with the bus line of business, which was our fastest -growing line of business in the previous quarter. We continue to add bus supply every quarter in certain p arts of the country where we had some missing inventory. Certain new operators, such as FlixBus, have come on board on existing routes as well. We've also added Jammu & Kashmir State Road Transport Inventory this quarter further strengthening our SRTC inve ntory footprint. We've almost doubled the number of Abhi Assured operators as well.

In addition, we have been doubling down on marketing as well as distribution channels for growing our bus ticketing volumes in order to capture a large share among the first -time online bus bookers, given how low the overall online bus market penetration c ontinues to be, which is roughly around 20% as we speak. This should allow us to continue growing faster than the overall market for some time. This quarter, we launched a very interesting product called Bus Insights. This provides a real-time view of the exact bus likely to be assigned to your trip right on the search

result page so that you can know how old the bus is, what make it is, and what its likely conditions will be, helping travellers to decide what to book based on the age and quality of the bus they will travel on.

On the flight side, ixigo Group's unique advantage continues to be our unique access to a large user base of the emerging middle class, where rising aspirations and increasing discretionary incomes continue to fuel the aspiration to start taking a flight instead of a bus or a train for a long -distance trip.

The fact that most trains tend to get waitlisted closer to the peak season also leads to a lot of spillover demand from these passengers who are unable to find a confirmed seat. Our users have familiarity with our brand, with our customer service, and with our ability to handle cancellations and refunds efficiently.

Hence, as their incomes improve, or as an airport arrives in their proximity, or as they start spending a larger share of their wallet on experiential travel, etc., our flight business and eventually our hotel business will continue to be a natural benefi ciary of that. I'm going to talk about another interesting and innovative product that we launched, which is Price Lock.

A Price Lock feature in our flight business is a fintech -driven product. It's a game - changer for both our customers and our monetization. Price Lock addresses a key pain point that travellers often face, which is the fear of price hikes before they are ready to book. With Price Lock, bookers can secure flight fares for a small fee, giving them the flexibility to finalize their plans after a few days, without the pressure of fluctuating fares. If the price falls, customers can book at the new lower fare, and if the price goes up, the custo

mers can pay the locked amount to book the flight. This
added peace of mind has resonated strongly with our users, as it empowers them to plan their trips at their own pace, without the fear of missing out on the best deals. The early response is quite positive, and we are extremely satisfied with the early progress.

Now, on the train side, we have accelerated our growth. A large part of it is due to the capacity improvements that we have seen, but on our train searches, you can now see trains from Nearby Stations, which is immensely helpful when there are no direct t rains available, or there are limited trains available from stations being searched.

And with the Zoop acquisition that Aloke talked about, we have also just gone live in the ixigo Trains and ConfirmTkt apps with food ordering on trains, with food being directly delivered to the passenger seat off berth, from restaurants at 192 plus statio ns.

We will roll this out to all our app platforms and web platforms over time and integrate more deeply within all major train use case funnels. We believe we have a unique advantage in this, due to the depth of data that we possess about trains, as well as the user base that we have. A unique position in the market, catering to the next billion users, means that we have an unprecedented opportunity to add new

transacting users to the online travel market, and grow the market by offering more value -added services that cater to these users.

To do that, we have to invest in product enhancements that can lead to conversion and MTU growth, as well as double down on performance marketing, and brand building in those lines of business where our contribution margin was decent, but we were not the market leaders. Customer experience continues to be a reason why users shift to us.

We managed to improve the percentage of customers who connect to a customer support agent over a call within two minutes, to almost 94.9% in the second quarter. And we have maintained our average refund time to customers at three hours and five minutes, de spite the increase in scale of our business.

We will also continue with our ahead of the curve investments in technology and AI, wherever we see an opportunity to create a more evolved user experience, and create efficiencies. Now I'm handing it over to Saurabh, who will talk about our financial high lights.

Saurabh Singh: Thanks, Rajnish. Now, if I had to imagine a structure of a result that sets us on track for our long -term ambition at this point of time in our evolution, this would have been this quarter. It's got everything we hoped for. We earned where we wanted to. Ou r spending was more or less on plan. And the success and challenges we faced were broadly in line with expectations.

Now, for the sake of efficiency, I will use rupees crores as the unit of reporting unless otherwise specified. The ratios will remain as stated. While discussing year over year changes, I will refer to change from Q2 FY24 to Q2 FY25, unless otherwise state d.

Indians are traveling more, and we believe this trend is a multi -year trend. And that is why continuing our GTV growth is important to us. Our GTV increased 40%, as Aloke had mentioned earlier to INR 3,528.74.

Gross ticketing revenue grew by 30.3% to reach INR 258.21 up from INR 198.17. This growth comes at a gross take rate of 7.32%, which fell slightly year over year from last year's 7.86. The ATV average transaction value per segment improved from INR 1,055 t o INR 1,137. Revenue from operations, which excludes discounts and other operating revenues, rose by 25.96%, amounting to INR 206.47 up from INR 163.92 crores.

At the group level, the contribution margin, which we defined as revenue from operations, less direct expenses such as partner fees, payme

nt gateway fees,
performance marketing costs and cancellation costs, increased to 91.08 up from 73.67.

Correspondingly, the contribution margin percentage as a proportion of revenue from operations decreased slightly to 44.11% this quarter from 44.94%. Our adjusted EBITDA, defined as EBITDA excluding other income and ease of cost, rose to 21 up

from 4.92. Now, I would take a moment here to highlight what Rajnish discussed just before.

We are a data company with users in over 2,400 towns and cities and more than 78 million monthly active users. This extensive reach has enabled us to develop proprietary data and analytics, allowing us to be more selective in when and where we allocate our branding expenses. Consequently, the branding expenses may not follow the strict seasonality of the rest of the business. While this may add some fluctuation in our adjusted EBITDA on a quarterly basis, it's important to note that these variances are expe cted to balance out over the course of the fiscal year. I wanted to explain this because there was a massive difference between this time's EBITDA and last time's EBITDA, even though it's great EBITDA even otherwise.

Now, our profit after tax reached 13.09 compared to 26.70 in the previous fiscal. Now, this includes one -off, which I will discuss in the end like I usually do. Now, let me talk about the three core lines of business. In FY25, trains booked 2.48 crores se gments up 27.7% YOY, generating a GTV of INR 1,895.86 up 36.1%. As I said before, whenever I'm not putting in crores on it, it means rupees crores as I've stated before.

Revenue from operations of INR 110.43 crores with a contribution margin of 37.66% which accounted for around 41.34% of our group contribution margin, down from 42.27% as our business diversified.

Now, our train business takes great pride with its flawless execution and the results are evident in the continued market share gain, even as we build on an already dominant position in the train OTA market.

Now, in fact, many of our brands like ConfirmTkt and ixigo Trains are becoming synonymous with the OTA business for trains, much like xerox is for photocopying or Vaseline is for petroleum jelly. Now, this adds further responsibility for us to maintain and exceed our standards going forward. Now, as I mentioned last quarter, our bus line of business, AbhiBus, was focused on growth and this quarter it managed to achieve it.

The bus vertical booked 4.14 million passenger segments generating a gross transaction value of INR 377.69. This represents a 44.76% increase in segments and a 45.52% higher GTV compared to the second quarter of fiscal year FY24. The gross take rate was al most flat at 11% compared to 10.78%.

The contribution margin for the segment grew 34.74% YoY to 25.99% with the contribution margin percentage decreasing, as we had discussed last quarter, to 65.22% from 66.13% last year. Buses contributed 10.7% of group GTV up from 10.3% in Q2 2024 and its s hare of group contribution margin increased to 28.54% from 26.18% in the subsequent quarter last year.

Our flight business performance underscores the quality of our offering and our unique funnels. We managed to shake off, as Aloke mentioned, sluggish industry conditions and have a great quarter. In Q2 FY25, flights achieved INR 1,237.48 of GTV

which represents a 42.61% YoY growth. Our contribution margin in Q2 FY25 grew at a rate of 32.53% to 27.29%.

Flights contributed 35.07% of our group GTV and 29.97% of our group contribution margin. I would like to highlight here that if you see, the contribution margin is getting more equally divided among the three lines of businesses, which

is something that we like and we have strived for.

In Q2 FY25, let me also discuss the one -offs now. In Q2 FY25, our share of loss on FreshBus which is an equity minority investment that we have amounted to INR 1.93 crores with the loss increasing from INR 0.75 crores. The tax amount was a tax credit of IN R 0.43 in Q2 FY24 whereas for Q2 FY25, there was a tax expense of INR 5.24 due to the reversal of deferred tax credit.

Going forward, I think we will see a more normalized tax rate and we believe that is how and we said that before, how it should be looked at. Now, I will end up with the thought that although in this quarter we have achieved our initial goal, we remain hum ble, recognizing that this is but a small step in a very long journey.

Mahatma Gandhi once said, “The future depends on what we do in the present.” A principle we are committed to implementing. With that, I will hand it back to Aloke for closing comments.

Aloke Bajpai: Thanks Saurabh. Thank you everyone for joining our earnings call. Take care and have a great Diwali, Christmas and New Year break with your loved ones. Keep travelling and speak to you again soon, but now we are handing it back to the moderator for Q&A. Mo derator, please take it forward.

Moderator: Thank you very much. We will now begin the question and answer session. The first question is from the line of Swapnil from JM Finance. Please go ahead.

Swapnil: Hi, thanks for the opportunity. We have got a great set of numbers, absolute positive surprises there. My first question is not related to the operations, it's related to your acquisition. I mean, any particular reason you would like to call out by the loo ks of it, the acquisition looks more like a food services company. I might be wrong there, please correct me if I'm wrong, but do you think the acquisition was necessary given that this is not our core business area of operations? So if you can just answer that, I will come back with more questions later.

Aloke Bajpai: See the way we look at travel and this is something from day one ixigo has been very unique at. The way we look at travel is very different, essentially it's an experiential category where whatever is happening before, during, and after the trip is as much a part of the traveller's experience as the process of booking a ticket and this company has never started with the booking a ticket part as the core.

If you look at how we got into trains, how we got into flights. I mean the story is really about solving the pain areas of travellers. Now, the more we speak to train travellers, the more we identified that getting quality meals during the trip was as much a part

of that experience and it was essentially an integral part of the journey. So today you have premium trains where that could be bundled in and that could be available, but that's a very small percentage of trains where essentially it's a single digit perce ntage of trains where you have that option.

A large number of most of our train passengers today do not have the option to get a quality meal during the trip. And the options that do exist out there like again from a NPS perspective or a liability perspective, quality of service being provided persp ective, I think there was a lot lacking. The other thing which is very unique here is that delivering food on the seat is not an easy problem. It's actually a Goldilocks zone problem as I call it. So the food has to arrive just at the right time. If it arr ives at the station early you get a cold meal. If it arrives late, you don't get your meal.

Now, ixigo's crowdsource running status as you all know is one of the best out there in the market today because of the depth of users that we have. And our ability to therefore make sure that the food arrives

on time and in the right sort of Goldilocks
zone as I call it is something that we have already identified as a huge mode for us when we get into this business.

And the third most important thing is that we have the largest data of train users outside of IRCTC in the country. And obviously, we are the largest partner for them on the B2C side. We see a lot of not just PNRs, but also people checking their running status and many of these people we are able to use the data to identify based on the time of the trip and the stations along the way where this person would likely need a meal. Now, using those sorts of insights, we can actually grow this category. So the way we think about it is, it's worthwhile entering a category if you think you can grow the category. So we are not in this category to take market share, but actually to create a market. We believe that we can create a market here. Today that market may be sub $100 million in size, but the way we look at it is that it's a billion -dollar TAM opportunity and we have the right to kind of go and take a large share of that. That's the way we think about it.

Saurabh Singh: Swapnil, this is Saurabh. Just to add on that. Remember, this is not food delivery anywhere in the city, anytime. This is a very specific use case which we are saying there is a user travelling with us. We are increasing the attach to the user when he's travelling with us. Where we are getting more confidence is a, as Aloke talked about our products. Also, if you see this is an area which is growing. There is a set policy created on this and Zoop has been doing it and we realized the culture that Zoop had and that's what they do. They don't deliver generally, they just deliver on a train. So that was the idea. It's an ancillary which we are selling. It's another product that we are selling to our train users.

Swapnil: Sure Saurabh, but a follow -up to that would be how will the business be built, given that you are focusing on category creation here. And it can need substantial investments, that's one. Two, management bandwidth and three, how do you intend to execute be cause the services will be limited to ixigo. People do booking tickets on ixigo app or it will be open to all, you might also extend this service to other competitor apps?

Aloke Bajpai: See the way I look at it, Aloke here. The way I look at it is very simple. Where do companies burn money when they create a category? They burn it on two things. One is the distribution of the marketing part which I don't need to burn money on that. I have a very large, I mean, just to remind everyone close to 80 million monthly active users and many of these using our apps several times a month almost on every trip they take on a train. Number two, on creating the supply/bringing the other si de of the network online. Now Zoop has been around 8 years, and they have already got a network in 192 stations, more than 400 restaurants they have onboarded, and they are onboarding more as we speak.

Now in that sense it looks like a perfect marriage because you have on one side supply and operations and delivery excellence already in place and on the other side you have a very large demand funnel already in place. And on the other side, you have a very large demand funnel already in place, right? And I think those are areas where typically people would burn money on category creati on. I think all we need to do is just make sure that we integrate this beautifully into the journey and experience in our products. Which, by the way, we have just gone live with. So you can open the ixigo Trains app and experience it yourself on what that journey. This is just a sneak preview that we have taken live. It will be obviously enhanced in the coming quarters. But this will be live in

our ixigo Trains app, ConfirmTkt d app, our website. Over time, you'll see it on all our platforms.

And it will be an integral part of all our journeys inside our apps and products. So in that sense, I can assure you that the idea here is not to go and burn money because this company we are acquiring is profitable. We think that we can grow this profita bly from here. And the growth has been staggering in the past also for them. I mean, last year they almost doubled their revenue. And it's not a business where we are anticipating burn for category creation. But we can do this in a way which is saner.

Saurabh Singh: So Swapnil, again, just to be very clear on this number. We would not burn anything, at least for the next couple of years, as we are seeing on this business. And most of the things that we have are internal, are already connected. And in terms of the mana gement bandwidth answer, one of the reasons why we chose, and we got Zoop was the management is well known to us. We worked with them as a counterparty. And the founders are people whom we trust in their ability to grow this business with our other businesses.

Swapnil: And the other one, with respect to where all would people be able to book these Zoop services? I mean, will it be limited to ixigo?

Aloke Bajpai: The other part of your question, to some extent, look, there is definitely. I mean, I've already talked about Zoop, right? 192 stations across 18 states, more than 400 active restaurants. But to your question as to are we open to partnering with others? It 's a function of, again, who wants to do the last mile delivery, right? I mean, we definitely want to be the company that does the last mile and make sure that you get a great experience in getting the food warm and on time on your seat or be rth. And I think if there are partners, both on the supply side, whether it's a restaurant or a food chain,

who wants to partner with us or whether it's some aggregator app who also wants to use our last mile, I think we are open to those conversations.

Swapnil: And a couple of questions on your operations. I understand that we have seen some decline in our contribution margins, partly because we are investing. But what is interesting is your train ticketing gross take rates have also come down meaningfully. And t hat I don't think would be related to your investment. I think on the bus side, I can understand, but I think on the train side, if you can explain that.

Aloke Bajpai: So contribution margin, if you're talking about absolute, has kept increasing for the company. I don't think there is a decline there. If you're talking about bus and flight, yes, the contribution margin as a percentage you would have seen that. But that's something we guided last quarter as well, that we would rather pursue growth in these categories as opposed to growing our contribution margin percentage. Because we are already operating at a very healthy contribution margin. Even if you lo ok at this quarter we are still operating at a very healthy contribution margin of mid 40s for the consolidated level. And if you look at the bus side, then it will be in the 60s. So I think in that sense, we are happy with where we are there. If you're ta lking about the train take rate, look, there's also seasonal variation in that.

There's some revenue deferral that happens on certain items because many of the bookings get stretched, right? Because the people are booking for Dussehra and Diwali in the JAS quarter. And some portion of those revenues pertaining to our ancillary busine sses get deferred there as a result of it. And therefore, you might have some minor variation there.

I think from a guidance perspective, right, 6% kind of a take rate, on an annual basis is, that's something we will co ntinue to maintain. Plus, there has been a change in mix also. So some of the ATV expansion also optically leads to a drop in take rate, a s you can imagine, right? Because part of the train earning is linked to a fixed convenience charge, right? So when the ATV actually expands a bit, you start seeing a take rate percentage drop. But in reality, on an absolute basis, the take rate hasn't dropped.

Saurabh Singh: Swapnil, just to add on to Aloke's question, as in I think there are two parts to your question. One of them is the take rate for trains. I think, yes, it's showing lower right now. But part of it is, as we said, it's a mix. Part of it is how it's grown. S o if you see on a volume basis as well as on a GTV basis, it's grown very fast. And it is how the mix changes in that sense and how the underlying number is.

In terms of the contribution margin percentage, remember last quarter, we had guided that for at least two of the businesses we would be investing for the long term. And this is what we've done. It still remains healthy. If anything, if you ask me, probabl y I'm a couple of percentage points more in the flight business compared to where I would want to be if I had to choose between a 45% contribution margin in flight. And a far stronger growth on a sustainable basis. As of right now, I'll choose growth in th at area.

Swapnil: And just last one, it is related to your costs. Our branding seems to have come off a bit YoY?

Saurabh Singh: So that's what I told you. That's what I mentioned there. Remember, branding in quarter -over -quarter, which is what I highlighted in my speech. Look, whenever I was talking about EBITDA, maybe I should have been more direct talking about branding. What hap pens is our branding is very different from anybody else's branding because I'm spread across a lot more towns and my user base is way deeper. So I selectively decide where and when I would invest in branding over time.

So at times looking at it purely on a quarter -over -quarter basis isn't right over the course of a year. We will manage it out. Last year, remember, we had bunched it up because we saw an opportunity in the Asia Cup. But the broad idea is that branding will always be bunched up based on what we are seeing. So this time we're seeing selective opportunities in selective areas where we are investing.

And what the broad thumb rule guidance we've always talked about will remain in as a percentage will be near and near about what I think is about 3.5% of the GTV as my branding plus performance plus discount, which is where we internally think of that business as an expense.

Swapnil: Just the last one. Will there be any seasonality benefits because of the festivals? I mean, you can just call out that if that is the case.

Aloke Bajpai: Yes, I mean, usually look O&D the third quarter is usually the seasonally strong quarter, right in travel. The quarter that we reported is usually the weaker quarter, even though we have managed to grow faster than the market. But I think usually O&D is wh ere all the action is. Yes, we've started to see some of that.

Moderator: The next question is from the line of Anmol Garg from Dam Capital.

Anmol Garg: I have a couple of questions. Firstly, I wanted to understand that from a sequential perspective, our flight take rate has gone up almost by 100 basis points. Now, what is, if you can indicate that from which part, of the flight take rate has gone up in th is particular quarter?

Aloke Bajpai: See, I think there's some quarter -on-quarter variation that you see on flight take rate, which is quite expected due to, not just seasonality, but also just the mix of, whether you are getting more of the tier 2, tier 3 bookings or more of the long -distanc e booking. Right? So in this case, I think compared to last quarter, indeed, it looks like a move, which is positive, right? It looks like a move, which is positive, right? About 1% but if you look at the last year number, which was around 8. 96%, I think compared to that take rate has remained kind of in the ballpark. So if you look at JAS quarter, typically for us, has always had a slightly higher take rate as compared to the seasonally high quarters of AMJ and OND is just the nature of booki ngs that happened during that particular season.

Anmol Garg: See, I'm also coming from the perspective that there was a relatively higher supply issue in the market for some time. And therefore, the airline incentives were fairly low. So have we seen any increase in the airline incentives in this quarter versus the last couple of quarters?

Aloke Bajpai: Not particularly, I think one factor which has also influenced our take rate is the launch of some new ancillary products, you would have seen that we launched Price Lock which is our new, you know, value added service. Now, some of that has also started p laying into this take rate. And of course, this take rate also includes the ixigo Assured, Assured Flex, and some of the other, advertising/offer led third party incentives. So, I think it's a mix of all of that.

Anmol Garg: Just one quick on the bus part, we have seen very strong Y -on-Y growth over here. Now, while our bus business is growing, but again, in terms of the overall size of the business, it's still far behind our largest competitor. So if you can indicate what ste ps are we taking to expand this business, particularly to increase the bus operators as well as to increase our presence, particularly outside of the southern part of India? And would this require more ad spends from your side?

Aloke Bajpai: See, I think if you just look at what we are doing right now, it's very simple that we're trying to, first of all, plug all the supply holes or inventory holes that we have, which means if there are routes where there were no operators available, or very f ew operators available, we're trying to add more operators there. So this quarter, we have added more operators. I can't go into the numbers, but I can tell you that we've added quite a few operators, right? Both private and SRTC, we added JN K, SRTC, we added a bunch of private operators.

Secondly, I think it's a function of targeting our existing user base and making sure that more and more of the confirmed ticket ixigo and web users, etc., start looking at booking buses, right, through AbhiBus as well. And I think we made significant prog ress there in the last quarter. We're quite happy with what we've been able to achieve there.

So if you look at, and when you talk about competition, basically, there's just one major player that we're talking about. But essentially, if you look at the growth of that player versus us, you might think we've grown twice as fast in this particular qu arter, right? So I think, given that we are coming off a smaller base, we can afford to do that, which is to grow faster than the market, in the foreseeable future. And that's what we'll attempt to do. But again, remember, we don't want to sacrifice too mu ch on the contribution margin, we'll try to keep it in the 60% plus kind of ballpark. So we don't want to sort of, again, play a discounting game or anything like that here, it's more a function of bringing new bus bookers online, that's a real opportunity out there, only 20% of the market books online, and we think that we have a significant opportunity of bringing more bus bookers online.

Saurabh Singh: Remember in our case being multimodal also has an advantage where both flight as well as train and bus have people who are traveling across these three mediums

and
shifting these three mediums during the course of the year, the journey that they are

taking and what is available. Which is the other thing, which is beneficial, and we want to continue doing that as we move forward.

Anmol Garg: I just had one question from a more longer term point of view, wanted to understand that, what is our right to win in a flight business? As you have indicated earlier that a larger part of our bookings comes from tier 2, tier 3 towns. So if you can give a ballpark number on how much percentage of the booking within the flight segment would be within the tier 2, tier 3 towns, and what would be the approximate growth rate over there?

Aloke Bajpai: Yes, we had declared one number in our RHP if you recollect, right? And I think we pretty much remain within that ballpark in terms of what percentage of our flight bookers emanate from the NBU user. So that is something that pretty much is still going on with the same kind of velocity. But if you look at our overall percentage of bookings which have a tier 2, 3 leg, which is something we do declare every quarter. It continues to be, despite our growth on the flight side, but it continues to b e close to 94%. And having said that, I mean, look, right to win the way we think about it is very different here. We don't think of it as a zero sum game at all. The next 50 million flyers are people who are already traveling today by trains and buses, an d a lot of them already use ixigo, ConfirmTkt, or AbhiBus, right?

And I think that's the biggest right to win we have over the next 5 years, in terms of getting faster growth than the overall market, because most of those people have already used this multiple times. And for them, making their first flight booking is a quantum leap in terms of trust and spend. I mean, maybe Rajnish, you want to add something there. But this is a very different playbook we are following here as to how we are growing flights.

Rajnish Kumar: Yes, I mean, the only thing I would say is that, and it might again sound like a broken record, because that's what I keep saying every time I get the question, this question specifically asked about the right to win, is that, for any company, in a suffici ently long term play, the company with a superior customer experience will always win, irrespective of their current size. And this has happened over and over again and will continue to happen.

So our bet will always be that we'll continue to kind of endeavour to build the best customer experience and differentiate ourselves. If you think about us, unlike all the other OTAs, not just in India, but globally, the most important focus area for all o f them has always been ticketing, which means that once you have the money from the customers and you've issued the ticket, your job is done. But for ixigo, if you look at our line of products, our job starts much before they book the ticket, and our job doesn't end once we sell the ticket. After we have sold the ticket, we still continue to build interesting products and services to cater to the customer and their needs, even after booking.

Like, for example, we have Flight Tracker Pro, we have automatic web check -in, and all those things are basically, contributing to and same for trains as well, if you think about it. Our entry into the food space is basically a confirmation of the fact th at we

are obsessed about customer experience. And we are not worried about just selling a train ticket, but also helping them get a choice of meals delivered safely and on time at their seat or berth.

Anmol Garg: Just a small thing. Should we assume an ESOP cost to be INR 3 crores for the follow

ing
quarters as well?

Saurabh Singh: Sorry, could you repeat the question? I think your voice broke.

Anmol Garg: Yes, just wanted to understand that should we assume ESOP cost to be around INR 3 - odd crores on a quarterly basis for coming quarters as well?

Saurabh Singh: Well, I retain that. How you should look at it is, look at the past 2, 3 years, we won't break that range. And I'll maintain the same answer, we won't break that range as of right now. If we do that, we won't do it in an unfair way. So, just for ESOP cost, just assume the last 2, 3 years, what it's been, and it will be broadly in that pin code.

Anmol Garg: Thank you so much, guys, for answering our questions.

Moderator: Thank you. The next question is from the line of Pankaj from Bank of America. Please go ahead.

Pankaj: Congratulations on a great set of numbers. My first question is, could you talk about the repeat rates on the platform that you're seeing?

Aloke Bajpai: Aloke here. I think at this point, we're not really disclosing repeat rates, so I couldn't talk very specifically about it. But I think what I'll guide you to is two things. One is, if you look at the way our organic user funnel flows, right, and then the fact that we do disclose that large percentage, 90% of our user base continues to remain organic. And I think the fact is that for the remaining portion that we actually spend to acquire, most of that spend goes towards new user acquisition. Larger part of that spend goes towards new user acquisition. So we have fairly healthy retention cohorts, which is also reflected in our growth, because that's the only way I think companies can grow faster than the market, which is to retain users better and give them something valuable enough to come back to.

The other reason is frequency. So if you look at categories like trains or even buses, the frequency with which you interact, especially on trains where people end up doing five, six bookings a year, and I think those kinds of categories inherently have more stickiness. I mean, imagine someone checking their PNR status to see if they will confirm or not, and then coming back on the day of the travel, checking their running status again, and then sitting there and maybe consuming some content in our app, new s, etc., and coming back again for the next trip to look at the schedules and routes.

So there is a frequency of engagement that's pretty high. And we do disclose our screen views, and you can do the math around screen views to MAU ratios to see how

it's actually pretty similar to what content apps have as opposed to what travel apps have.

Pankaj: Understood, Aloke. That's helpful. Second question is about the early trends that you're seeing from October data. How is the OND quarter panning out? Any directional thing that you could say?

Aloke Bajpai: All I would say is that, look, it's a seasonally high quarter and it's panning out that way only. So, typically, this year, obviously, Diwali is a little in the earlier part of the quarter per se. So I think we started to see some of that already.

Saurabh Singh: And I think the other good thing which is happening is, as Aloke mentioned earlier, the products that we've introduced, the response on that has been good. The initial response on those has been good.

Pankaj: Just one last question from my side. Could you speak about any early indications that you are probably seeing or any sort of impact that you could call out on the basis of one of the large flight operators wanting to go or push more direct booking? That's it from my side.

Aloke Bajpai: Yes. So, again, direct versus indirect is a moot question in the context of someone who's making their first flight booking of their life, right? That's the way we have to start

thinking about the world that ixigo is in. Because for that person to not take a bus or a train on their next trip and instead consider taking a flight is the more important question in life than the question of whether I should book it direct or indirect. And we have that unique capability to, a, target that person at the right step of that journey or process when he's thinking through this decision.

And secondly, being able to offer the most convenient and trustworthy platform for making that transaction and getting customer support and refunds in case something goes wrong. So I think that is one. And the second is, remember that a large percentage of our customers come to us for our value -added services. We do disclose this number, unlike any of the other peers that we have. We do tell you that about 28% to 29% of our transactions have some kind of value -added service being bought alongside. That is s omething that helps in two areas.

One is that typically these customers who are willingly coming to pay you more for an added service or benefit are the ones who are also more sticky. And secondly, it does help to keep the take rates sane in order for you to be able to match whatever deals are out there being offered by anybody else. So in that sense, we remain competitive without burning money.

Pankaj: Just a quick follow -up on that. Would it be safe to say that because of the customer base, you are rather immune to any perceived challenge that could come in the future?

Saurabh Singh: Immune is a strong word. What I would say is that we believe that our products make us more resistant. And our products and our user base make us more resistant.

Aloke Bajpai: I think one has to look at it this way that the more evolved customers usually have a larger prerogative of spending, which is counterintuitive because their time value of money should be higher. But they end up spending more time, deal hunting. And this is a user behaviour insight from India, as opposed to people who actually are just looking for the fastest, most trustworthy, and most reliable way to get their travel done, which is a behaviour we see from the tier 2, 3 side. So I wouldn't call it immune, but I would just say that at least in our cohorts, we see the NBU cohort as much more sticky as compared to the cohorts you are referring to, which may get swayed by what's happening elsewhere.

Saurabh Singh: And if anything, what we need to be worried about much more is a fall in our service quality because our customer is based on trust. As long as we keep on listening to the customer, we keep on giving him the things that he needs. That is what we are most worried about.

Moderator: The next question is from the line of Aman Singh from ProfitGate Capital Services. Please go ahead.

Aman Singh: Basically, I want to ask about the flight bookings that is happening from ixigo's app. Can you throw some light on that, the way it was before and now? And what's your outlook on that? Are we focusing on that area? Sorry, I just mistakenly said flights, hotel bookings. I want to know about the hotel bookings.

Rajnish Kumar: Yes, so I think it's still too early to make any comments on that side as to where we are trending in terms of numbers. But we have been working hard on building the right product and experience last few quarters. As you know, we launched in December last year. And we have been working very hard to figure out what those customer problems are in this sector for different customer cohorts that we cater to, both on the train side and the flight side.

The good thing is that, you know, it's very advantageous to be in a situation where you have access to 80 million monthly active users. And you could then, you know, throw in a product, which is like a

latch on or an add -on product and see how it works.
What do they need, you know, and how they kind of scale up that cross -sell or up -sell that's happening.

So I think most of our time these days is spent on building the best product funnel, best customer experience, and seeing how we could sustainably keep cross -selling and up -selling from the large distribution that we have into the hotel funnel. But I think as and when the time comes, we might start revealing those numbers. But as of now, I think we'll refrain from that.

Moderator: As there are no further questions, I would now like to hand the conference over to Mr. Aloke for closing comments.

Aloke Bajpai: Thank you, everyone. Thank you for joining our call. Wish you a very Happy Diwali. Thank you so much.

Moderator: On behalf of Axis Capital Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Call: Feb 2025

Limit ed

- January 28, 2025

Moderator: Ladies and gentlemen, good day and welcome to ixigo Q3 FY'25 Earnings Conference Call hosted by Axis Capital Limited. As a reminder, all participant lines will

be
in
the
listen-only
mode
and
there
will
be
an
opportunity
for
you
to
ask
questions
after
the
presentation
concludes.
Should
you
need
assistance
during
the
conference
call,
please
signal
an
operator
by

pressing

the

star

then

zero

on

your

touch-tone

phone.

Please

note

that

this

conference

is

being

recorded.

I

now

hand

the

conference

over

to

Mr.

Rohit

Thorat

from

Axis

Capital

Limited.

Thank

you

and over to you.

Rohit Thorat: Thank you. Good evening everyone. On behalf of Axis Capital, I welcome you all to ixigo's Q3 FY'25 earnings call. We have with us Mr. Aloke Bajpai, Chairman,

Managing

Director

and

Group

CEO,

Mr.

Rajnish

Kumar,

Director

and

Group

Co-CEO,

and

Mr.

Saurabh

Devendra

Singh,

Group

CFO.

Before I hand over the call to Aloke, I would like to highlight that the safe harbor

statement

on

the

second

slide

of

the

earnings

presentation

is

assumed

to
be
read
and
understood.
Over
to
you,
Aloke.
Aloke
Bajpai:
Thank
you,
Rohit.
Good
evening
everyone
and
welcome
to
our
Q3
FY'25
earnings
call.
We
are
very
happy
to
report
a
super

strong

quarter

in

Q3

on

the

back

of

acceleration

in

our

flights

and

buses

business

and

a

gain

in

market

share

in

every

line

of

business.

Adding

more

fuel

to

our

outperformance,

the
market
was
also
stimulated
by
the
rise
of
spiritual
tourism,
a
stronger
wedding
season
and
addition
of
some
capacity,
though
I
will
still
give
most
of
the
credit
for
this
growth
to

the superb execution by our team.

We have broken all records on almost all fronts this quarter. With overall Gross Transaction Value or GTV crossing INR 4036.3 crores this quarter, a 48% increase Y-o-Y and our overall revenue from operations reaching INR 241.8 crores, a

42%
increase
Y-o-Y
for
Q3
and
a
sequential
increase
of
17%
compared
to
Q2.
Our
flights
and
buses
business
have
been
the
heroes
of
this
growth
with
flights
GTV
growing
at
over
73%

Y-o-Y for Q3 and buses GTV growing at over 63% Y-o-Y leading to market share gains.

In fact, despite the change in advance reservation period from 120 days to 60 days by Indian

Railways, which had a one-time negative impact on our train segments last quarter, train GTV has still grown at 27% Y-o-Y in Q3 and train revenue from operations has grown by 26% Y-o-Y.

I am glad to also share that we have gained market share within the rail segment among

OTAs, with our estimated share now standing at about 58% as of end of December 2024, as against 52.4% in

H1

of

FY'24

and

42%

at

the

end

of

FY'21,

implying

steady

gains

in

market

share

year

over

year.

We have also achieved our highest ever EBITDA and profit before taxes in Q3.

In

fact,

our

9-month

YTD

EBITDA

has

doubled

from

INR

34.3

crores

to INR 68.2 crores for 9 months ending December 2024, maintaining a double-digit EBITDA margin.

Saurabh, will later elaborate further on our financial performance, but let me talk about the business growth. You may be wondering what has given ixigo the ability to grow

this
fast
in
the
OTA
market.
Let
me
remind
you
that
ixigo's
strategy
is
unique
in
the
online
travel
space
since
we
started
by
building
a
large
user
base
for
utilities
among
the

next billion users at a time when no one was paying attention to it, and we were empathetically solving problems that the next billion users faced.

Then, we became transactional more recently

and
started
selling
tickets,
ancillaries,
and
value-added
services
to
those
travellers.
We
also
started
cross-marketing
and
selling
other
services
to
those
travelers
with
multi-modality
of
options
across
rail,
bus,
and
flights,
thereby
deepening

our

relationship

with

our

customers.

This is how the ixigo Group has not only maintained the number one position

in

India

when

it

comes

to

user

base,

usage

penetration,

and

app

downloads

in

the

OTA

space,

but

also

outpaced

all

major

online

travel

players

in

India on growth in both users and GTV, a fact that has been reiterated in some recent investment banking research reports.

Our own data shows that we crossed 86 million monthly active users

across
ixigo,
ConfirmTkt,
and
AbhiBus,
and
31
million
passenger
segments
were
booked
in
Q3.
We
got
over
30
million
app
downloads
last
quarter
with
a
growing
proportion
of
our
users
starting
to
book

flights, buses, trains, and even hotels with us.

In terms of flight transactions and revenue, we are the youngest flight OTA, and therefore we are growing from a lower market share than the incumbent. But given how fast we have grown in the last three quarters,

we

are

now

placed

in

the

top

four

flight

OTAs

in

India

basis

our

GTV

and

passenger

segments.

If we talk about buses, the overall market penetration is still pretty low at around

20%.

So

it

is

pertinent

that

we

continue

to

double

down

on

growth.

And despite already being the second largest player, we have continued to make steady gains in market share by growing faster than peers by bringing a large number of first-time bus bookers online. We have also expanded our bus supply with 4 State Road Transport Corporations, or SRTCs, and 200-plus private bus operators being added on AbhiBus in Q3. And the number of our Abhi Assured operators

has

also

gone

3x

compared

to

what

it

was

last

year.

As for hotels, we are only getting started. We also anticipate our growth there

to

accelerate

with

ongoing

product

enhancement,

supply

expansion,

and

organic

growth

initiatives.

As

we

mentioned

in

our

previous

calls,

we

have

deliberately

swung

the

pendulum

towards

growth

and

acceleration

in

the

last

couple

of

quarters,

even

at

the

cost

of

losing

a

few

points

on

the

CM

percentage,

and

yet

we

have

managed

to maintain a double-digit EBITDA margin in the business.

If you see our track record, most of the growth for ixigo ConfirmTkt and AbhiBus pre-pandemic had been organic. And when we compared our marketing investments to what many OTAs have spent historically, we realized that there was room for accelerating the organic growth base further without losing out materially on CM growth in absolute terms. It is in this spirit that we have upped our marketing spends a bit

on

flights

and

buses

and

onboarded

Rohit

Sharma

as

our

new

Brand

Ambassador

for

ixigo

Trains

to

launch

digital

and

offline

brand

awareness

initiatives

to

further

build

trust

and

improve

penetration

of

our

brands.

We have also been able to consistently add value-added services that have helped us monetize our transacting users better to further enhance revenue, the most recent one being Travel Guarantee, where the initial response and uptake by our users has been positive since

it

gives

them

up

to

a

3x

refund

to

take

a

flight,

bus

or

alternate

train

in

case

their

wait-listed

tickets

do

not

confirm,

solving

a

real-life

problem

faced

by

hundreds

of

thousands

of

travellers

every

single

day.

Even as of January as we speak, we are continuing to see strong momentum
thanks

to

the

Maha

Kumbh,

the

largest

congregation

of

humanity

on

the

planet.

Just

to

share

a

few

statistics

with

you,

our

overall

passenger

segments

for

Prayagraj

in
the
first
24
days
of
January
alone
have
grown
4.62
times
compared
to
the
same
period
last
year.
And
within
that,
though
metros
are
playing
a
huge
role
as
origin
cities,
origin

towns such as Nagpur, Jaipur, Lucknow, Gorakhpur, and Varanasi are also playing a pivotal role.

Our flight and bus searches have grown nearly 14 times for travel to Prayagraj and train searches nearly 10 times, reflecting exceptionally. When

28,

2025

we look at the demographic that is traveling, the surprising fact we are noticing

is

that

more

people

in

the

20

to

25

age

group

are

going

to

the

Maha

Kumbh

than

in

the

46

and

above

age

group,

implying

that

spiritual

travel

is not just a phenomenon for the older population but increasingly being embraced by the youth of our country.

This is also reflected in solo travellers being the dominant demographic on the train side, making up over half of train bookings to Prayagraj. Having said

that,

Prayagraj

is

also

my

place

of

birth,

so

I

will

also

be

visiting

the

Maha

Kumbh

shortly

even

though

I

am

neither

in

the

20

to

25

nor

the

46

and

above

demographics

myself.

If any of you are planning as well, I highly recommend the Maha Kumbh microsite

we

launched

earlier

this

month,

which

over

lakhs

of

families

have

already

used

to

plan

their

journey

in

Prayagraj.

We

have

all

the

info

at

one

place,

ghats,

temples,

tents,

cottages,

places

to

visit,

things

to

do,

food

recommendations

and

more.

In fact, spiritual tourism as an overall vector for growth has shown remarkable

potential

for

us,

with

many

destinations

such

as

Varanasi,

Gaya,

Shirdi,

Puri,

Haridwar,

Katra,

Vaishno

Devi

recently

seeing

a

100%

to

150%

growth

in

train

bookings

if

one

compares

year

over

year.

With that, I will hand it over to Rajnish, to talk more about growth and products.

Rajnish

Kumar:

Thanks,

Aloke.

As

Aloke

was

talking

about

the

growth

numbers

that

various

lines

of

businesses

have

been

achieving,

let

me

start

by

talking

about

what

growth

means

to

us

and

the

quality

of

growth

we

intend

to

achieve.

For us, sustainable growth has always been more important than just chasing

growth

at

all

costs.

Sustainable

growth

comes

from

having

a

good

product,

providing

a

great

customer

experience

to

our

users,

and

acquiring

users

at

zero

economics

that

are

positive

over

the

long

term.

Once retention and repeat behavior of our customers come in over and above

the

rapid

organic

growth,

incremental

spends

on

marketing

deliver

acceleration

as

well

as

better

return

on

capital

as

we

have

seen

over

the

last

few

quarters.

Value-added services constitute an important part of our business with our attached

rate

for

all

value-added

services

at

29.85%

last

quarter.

On

that

front, we also launched Travel Guarantee last quarter. When people are

booking a wait-listed train ticket with a high probability of confirmation and yet do not get a confirmed seat, it is the worst situation to be in as a traveller.

Given one would have typically not made any alternate arrangements, last-minute fares for flights and buses can be quite high on popular routes, and even Tatkal train fares are typically higher than the regular fares. So

when

a

traveller

opts

for

a

Travel

Guarantee

ticket,

we

are

not

necessarily

guaranteeing

a

confirmed

seat

on

that

train

itself,

but

what

we

are

guaranteeing

is

that

if

your

ticket

doesn't

get

confirmed,

we'll

give

you

enough

money,

so

3x

of

fare

if

you're

booking

a

flight

or

bus,

and

2x

of

the

fare

if

you're

booking

another

train,

to

make

an

alternate

arrangement

for

yourself within the next seven days. Since we have a lot of data on how wait-listed tickets move and get confirmed on various trains, we have a reasonable ability to control which tickets

we

show

this

option

on

and

how

to

price

it

using

our

proprietary

data

science

and

AI

models.

On our bus business, we have revamped our operator-facing interface called Edge,

and

we

have

launched

a

mobile

version

of

the

app

for

Edge

for

operators

as

well

to

track

their

performance,

understanding

their

operations,

and

engage

with

their

users.

The team has also significantly improved our consumer apps' performance
and

user

experience

as

well

as

integrated

our

AI

Chatbot

Tara

on

the

AbhiBus

app,

as

a

result of which the AbhiBus app rating on Android is now 4.8+, reflecting a strong improvement in overall NPS. For the group, Tara is now handling 1.59 million customer queries per quarter end-to-end without any human intervention across the group. This is almost like 92% of all our customer support reach-outs over chat.

Let's move to the food delivery on trains business. Last quarter, we integrated

Zoop,

our

latest

acquisition

across

ixigo

and

ConfirmTkt

apps,

enabling

our

rail

users

to

order

food

and

get

it

delivered

to

their

berth

or

seat.

And

we

have

seen

decent

growth

in

food

orders.
We're
expanding
the
number
of
stations
of
our
delivery
staff,
as
well
as
signing
up
restaurants
and
chains
at
more
stations.
We're
also
learning
ordering
patterns
to
anticipate
demand
better
and
to

identify
what
kind
of
supply
expansion
we
need
to
enable
more
conversions.
And
most
importantly,
we
are
doing
this
while
still
maintaining
profitability
there.

Let's
talk
a
bit
about
hotels
as
well,

where

we

are

still

in

the

early

phase

of

product

market

fit

and

supply

build-out.

As

we

discover

pain

areas

that

hotel

bookers

face

in

this

industry,

we

are

figuring

out

ways

to

solve them through

better hotel ranking, NPS measurement, and data science in order to surface the right quality of supply to the users. Quarter-on-quarter growth, we are seeing there is a double-digit percentage. And for

now,

we

are

only

driving

growth

organically

from

our

own

existing

user

base

across

flights,

trains,

buses,

etcetera.

Our

diversification

narrative

has

become

more

compelling.

Last

quarter,

if

you

examine

the

contribution

margin,

with all three lines of businesses contributing more evenly in the mix, trains constitute 39%, buses constitute 33%, and flights 27% of the overall contribution margin mix, making ixigo a very well-diversified OTA.

I would also like to talk about our technology and AI initiatives across the group. Recent developments in AI, including the new DeepSeek model from China, have shown to the world that more powerful AI models will be available at a fraction of the current cost in the future. For travel companies, this suggests that the race isn't just about having AI capabilities, but about identifying customer pain areas and solving them with AI capabilities, creating user interfaces that make those capabilities indispensable to the users and to be able to distribute them at scale.

At ixigo,

there's a transformation going on in how we use custom-built AI tools instead of manual operations for many of our day-to-day workflows. Our vision is to have more AI agents deployed across the organization that help increase observability and make various operational tasks more automated and efficient. Also, in some areas, this requires re-engineering of our existing stacks, and hence, some of these one-time investments will

show
up
in
operating
leverage
only
over
time,
while
others,
which
are
ongoing
ones,
will
lead
to
incremental
NPS
gains
or
conversion
rate
improvements
for
our
existing
lines
of
businesses
and
value-added
services.

An interesting observation to end this is that we've had in the NBU market, which is dominated by Tier 2, 3, and 4 travellers, which forms the core of our business, we have

also
started
to
see
material
flight
growth
starting
to
come
from
Tier
1
towns.
Tier
1
to
Tier
1
flight
passenger
segments
for
us
have
grown
with
a
similar
momentum
as
our
NBU

flights,
bookings
over
68%
year-on-year
Q3,
and
we
have
seen
our
international
flight
segments
growing
at
61%
year-on-year
in
Q3.
With
deepening
partnerships
with
international
carriers,
we
expect
improved
supply
and
content
even

further on international flights in order to serve our Tier 1 users better.

Handing it over to Saurabh now to talk about our financial highlights.

2025

Saurabh

Singh:

Good

morning,

afternoon,

evening,

everyone.

I

truly

appreciate

your

presence

today,

and

I

extend

a

special

thanks

to

those

joining

from

time

zones

where

it's

still

or

already

night.

Now, as we come together to reflect on the third quarter of FY‘25, it's tempting

to

get

lost

in

the

maze

of

numbers

and

percentages.

Yet,

we

must

pause

and

appreciate

the

broader

journey

we

are

on,

a

journey

defined

by

empathy,

resilience,

innovation,

and

a

shared

vision.

This quarter represents both a milestone and a stepping stone in our ongoing

journey.

It's

a

testament

to

our

collective

efforts

and

an

indicator

of

the

path

yet

to

be

explored.

We

faced

challenges,

celebrated

triumphs,

and

embraced

changes,

all

the

while
staying
true
to
our
core
values.
Now,
each
figure
we
discuss
today
is
more
than
just
a
statistic.
It's
a
snapshot
of
our
dedication
and
transformative
impact
we
are
making
in
the

lives

of

our

customers

and

also

within

our

industry.

Now,

for

clarity

and

efficiency,

I

will

use

rupees

crore

as

a

unit

of

reporting

unless

mentioned

otherwise.

Regarding

the

mention

of

periods

and

year-over-year,
Y-o-Y
changes,
I'll
be
referencing
to
the
year's
shift
from
Q3
FY‘24
to
Q3
FY‘25,
again,
unless
otherwise
specified.
At
the
heart
of
our
journey
lies
Gross
Transaction
Value,
or
GTV,
a

powerful
barometer
on
how
well
our
offerings
resonate
with
those
whom
we
serve.
For
a
company
at
our
unique
stage
of
evolution,
experiencing
healthy
growth
in
this
metric
isn't
just
beneficial,
it's
vital

to our forward momentum. Year-over-year, our GTV has increased by 48% to INR 4,036.3 crores. Gross ticketing revenue has also expanded in parallel by 49% to INR 301.3 crores, with a stable gross tick rate at 7.47.

The average transaction value, which I will define here as ATV per segment, is another essential metric. I see that as an indicator of our share of the customer wallet. ATV improved nearly 15% to INR 1,282 crores from INR 1,115 crores year-over-year. Revenue from operations, which is gross revenue after removing the discounts and including other operating income, rose by 42% to INR 241.8 crores, up from INR 170.5 crores.

At the group level, our contribution margins, defined as revenue from operations

less

direct costs, grew to INR 102.5 crores, up from INR 77.5 crores, an increase of 32%. However, the contribution margin percentage slightly decreased this quarter, from 45% to 42%, due to our investment in accelerating growth, something which Rajnish talked about in detail.

Our adjusted EBITDA, excluding other income and ESOP expenses, increased to INR 24.3 crores, up from INR 19.5 crores. Our profit after tax

for

this

period

reached

15.5

compared

to

30.6

in

the

prior

fiscal

year,

and

includes

one

of

an

event

which

I

will

elaborate

on

shortly.

Let's go to our three core lines of business and they performed as planned,
or

dare

I

say,

even

better.

Trains, we asserted our dominance against this quarter. In Q3 FY'25, we booked 2.4 crore segments, marking a 21% Y-o-Y increase, generating a GTV of INR 1,828.3 crores, up by around 27%.

Revenue from operations reached INR 119.7 crores, with a contribution margin of INR 39.9 crores, at a contribution margin percentage of 33%. Now, this accounted for 39% of our contribution margin.

Our bus business continued its encouraging growth journey. In Q3 FY‘25, it booked 0.5 crore passenger segments, produced a GTV of INR 494.6

crores. This translates to a 64% growth in segments, and a 63% higher GTV, compared to Q3 FY'24. The contribution margin surged by 48% Y-o-Y, to 34.3% at a contribution margin percentage of

66%.

A

slight

fall

from

68%

last

year,

as

we

mentioned

and

guided

to,

enhancing

the

bus

line

share

of

Group

GTV

to

12%,

and

increasing

its

share

in

overall

contribution

margin

to

33%.

In flights, we invested in growth. This quarter, we booked 0.24 crore segments

at

a

GTV

of

1682.6,

reflecting

a

73%

Y-o-Y

increase.

The

contribution

margin

for

flights

grew

by

42%

to

27.3%,

at

a

contribution

margin

percentage

of

40%,

with

flights

now

contributing 42% to the Group GTV and 27% to the Group Contribution Margin. This number has also increased from 24.81% of the Group Contribution Margin last year.

Finally, as promised, I want to discuss some unique factors impacting this quarter.

Our share of loss

from

our

associate,

Fresh

Bus,

was

INR

1.9

crores,

compared

to

a

loss

of

INR

2.1

crores

in

Q3

FY‘24.

Tax

expenses

shifted

from

a

credit

of

INR

16.7

crores

last

year,

to

an

expense

of

INR

5.9

crores

this

year,

largely

due

to

deferred

tax

credit

reversal.

Now, while we've achieved significant milestones, as Aloke and Rajnish highlighted

in

the

call

today,

our

journey

is

just

beginning.

To

quote

one

of

my

favorite

Urdu

poets, Mirza Asadullah Khan Ghalib, " Hazaaron Khwaishein Aisi ki har Khwaish pe dum nikle, Bahut nikle mere armaan magar phir bhi kam nikle " Over the past years, we have fulfilled a number of our dreams. But many, many, many more are yet to be fulfilled.

With that, I'll hand it back to the moderator for Q&A.

Moderator:

Thank

you

very

much.

We

will

now

begin

the

question-and-answer

session.

The

first

question

is

from

the

line

of

Swapnil

from

JM

Financial.

Please

go

ahead.

Swapnil:

Hi,

thanks

for

the

opportunity
and
congratulations
on
a
very
good
set
of
numbers.
My
first
question
would
be
on
your
flight
side.
I
would
like
to
know
what
percentage
of
your
flight
bookings
are
happening
through

NBU apps? Earlier, that number was to be close to one third, has there been any meaningful change over there? Aloke Bajpai: Hi Swapnil, this is Aloke here. Good to hear from you.

So,
on
the
percentage
contribution
from
the
NBU
side,
I
think
at
the
time
of
the
IPO,
we
had
mentioned
that
it
was
about
30%-31%
And
I
think
we've
just
tried
to
maintain

it
that
way.
But
what
has
happened,
like
Rajnish
pointed
out,
is
that
in
the
recent
couple
of
quarters,
we've
started
to
see
Tier
1
also
starting
to
contribute.
And
as
our
flight

funnel
has
expanded,
especially
due
to
the
product-led
growth
that
Rajnish
was
talking
about,
features
like
Flight
Tracker
Pro
or
Price
Lock
or
Assured,
they're
driving
significant
word
of
mouth
in
people
from

Bangalore,
Delhi,
Bombay,
etc.,
the
big
cities
and
we've
started
to
see
meaningful
growth
come
from
that.
I
think
that
mix
from
here
on
the
flight
side,
how
it
evolves
will
be
a

function of how our Tier 1 penetration goes.

So, on the Tier 2-Tier 3 side, I think pretty much you can assume that it will grow in line with our MAU growth. But on the Tier 1 side, it's a function of the product, it's a function of the

brand
awareness
initiatives
that
we
might
choose
to
do,
right?
And
that
may
skew
it
a
little
bit
towards
Tier
1
as
we
scale
further.
Swapnil:
Understood,
Aloke.
The
second
question
is
a

bit

broad-based,

and

I

might

be

jumping

the

gun.

Here

I'm

assuming

4Q

will

be

a

decently

good

quarter

in

line

with

our

total

3Q

numbers,

because

of

Kumbh

and

the

continued

festivities

there.

But

if

I

were

to

look

at

it

from

a

slightly

medium-term

perspective,

FY'26,

given

that

our

base

for

all

the

three

segments

will

be

very

strong,

how

do

you

see

your

numbers

panning

out

next

fiscal

year?

I mean, yes, you would have this benefit of more customers coming from
Tier

1

cities,

but

still

the

base

would

look

very,

very

high

to

sustain

the

current

growth

momentum.

Aloke

Bajpai:

Yes,

great

question.

I

think,

look,

if

you

had

asked

this

question

one

year

back,

I

don't

think

I

would

have

told

you

that

we

would

grow

flight

GTV

at

70%

plus.

So

I

think

we've

managed

to

surprise

ourselves, and I think I give a

lot of credit on that to the hard work of the team, the product, the tech behind the scenes. I mean, small things like how fast our search results load or how fast

your

booking

confirmation

comes

or

the

fact

that

your

boarding

pass

comes

seamlessly

on

WhatsApp

and

you

get

checked

in

automatically,

and

a

bunch

of

things

that

we've

done

there

which

are

pretty

much

industry

first.

I think the impact of those is harder to sort of preempt and talk about because

we

invest

in

these

initiatives

not

with

some

kind

of

explicit

growth

assumption

around

them,

but

essentially

implicitly

assuming

that

it

will

improve

the

experience

and

therefore

the
NPS
and
the
rating
and
therefore
will
accelerate
the
organic
growth.
So
you
can
assume
that
we'll
continue
doubling
down
on
such
product
initiatives,
and
I'll
let
Rajnish
talk
more
about
this.

But
the
base
effect
that
you're
talking
about,
right,
I
think
if
you
zoom
out
and
see
today
our
market
share
is
still,
we
are
the
fourth
largest
OTA
from
GTV
or

passenger

segment

perspective.

So

I

think

our

market

share

is

still

not

that

big

compared

to

some

of

the

incumbents

and

on

the

flight

side.

So

I

think

there

is

still

scope

to

continue

accelerating

this

growth

given

that

when

you

compare

our

MAUs

with

any

other

OTAs,

we

are

the

number

one

on

MAUs,

but

not

yet,

let's

say,

in

the

top

3

on

the

flight
side.

Can
we
get
there
faster?
I
think
we
can
because
we
have
the
kind
of
growth
in
terms
of
quality
of
growth,
right,
which
allows
us
to
also
sell
flights,
also

sell
hotels
and
other
meaningful
products
and
not
just
trains
and
buses,
right.
So
Rajnish,
if
you
want
to
add
anything
to
that.
Rajnish
Kumar:
Yes,
I
mean,
I'll
just
reiterate
the
fact

that
for
us,
we
have
always
thought
about
growth
as
something
which
should
be
sustainable,
and
we've
never
chased
growth
at
any
cost.
Otherwise
we
would
have
always
done
this
process
of
raising

a
lot
of
capital,
spending
that
on
building
a
brand
too
early.
But
what
happens
is
that
when
you
reach
that
natural
progression
of
a
point
when
your
product
maturity
level
has
reached

a certain tipping point, that is when customer stickiness and word of mouth starts to have that multiplier effect.

And then the bang for the buck that you get for every dollar

that

you

spend

on

marketing

is

significantly

higher.

And

that's

where

we

feel

that

we

have

kind

of

hit

that

sweet

spot

now,

and

which

is

why

we

are

seeing

this

growth

happening.

I
mean,
obviously,
you've
seen
that
our
growth
has
been
there
even
on
a
segment
like
trains
where
we
already
enjoyed
decent
market
share.
We
have
still
grown
there.
But
on
segments
like

buses, you can see

that the penetration is still 20%. So there's still a lot of room for everybody to grow.

And if you have a product which is rated 4.8 and which solves customer pain areas, I don't

think

you

need

to

spend

a

lot

of

money

to

grow

there.

On

the

flight

side,

it

is

still

too

early

because

we

are

very

small

when

it

comes

to

market

share.

So
there
I
would
say
we
still
have
headroom
for
growth.
And
I
think,
like
I
said,
we
won't
spend
money
to
grow
there
by
spending
money
on
marketing.
But
we'd
rather
spend

money
on
technology,
product,
and
AI
to
create
a
customer
experience
which
should
then
fuel
and
enhance
and
have
a
multiplier
effect
on
our
marketing
spend.
Saurabh
Singh:
Just
at
a
risk
of

sounding
repetitive,
I
would
say
something
I've
said
in
the
previous
quarters.
What
makes
us
slightly
different
from
most
of
the
other
people
is,
A,
we
are
multimodal.
B,
there
is
a
product

superiority,

C,

we

have

an

ability

to

get

a

product

out

at

a

much

better

economic

just

because

of

our

frugal

DNA.

So

all

of

it

combined,

I

think

going

forward,

you

talk

about
a
year,
I
think
even
3
years
from
now,
we'll
still
be
scratching
the
surface
of
what
we
can
be.
Swapnil:
Understood.
Just
a
related
question
to
that.
You
touched
upon
some

investments
towards
technology.
And
I
can
clearly
see
that
your
technology
costs
have
grown
more
than
50%
year-on-year,
if
you
look
at
it
that
way.
So
can
you
just
call
out
any
specific

investments
that
you're
making
on
that
side?
I
understand
AI
chatbots
and
those
things
are
definitely
one
of
them.
But
in
particular,
any
cloud-related
investments
or
any
other,
to
better
help
us
understand

the
investments
you're
making
on
technology?
Rajnish
Kumar:
Yes,
sure.
Some
of
these
investments
in
technology
and
AI
initiatives,
it's
hard
to
figure
out
what
kind
of
impact
it
will
create
in
the

future

because

if

you

think

about

what's

happening

today

in

terms

of

technology,

the

world

is

sitting

at

an

inflection

point.

And

I

think

with

all

these

advancements

that

are

happening,

if

you

do

not

invest

in

this

technology,

if

you

do

not

protect

yourself

from

that

disruption,

I

think

the

risks

are

much

higher

than

that.

So

these

investments

that

we

are

making

in

AI
and
technology,
I
think
these
would
probably
have
a
much,
much
bigger
upside
in
the
future
than
you
see
right
now.
And
we
talked
about
these
things,
like
our
vision
is
to

create,

internally

we

have

AI

efficiency

as

a

focus

area

where

we

are

creating

the

vision

of

having

agents

across

the

organization

that

help

increase

observability

and

efficiency

across

all

the

operational

tasks

that people are performing and make them automated and efficient.

I mean, obviously, all these things will require us to completely re-architect the way we have been conducting business and operations in the past, and

do
that
on
the
back
of
this
new
tech
that
has
come.
So
this
investment
is
what
will
show
up,
obviously,
as
a
cost
item.
And
obviously,
there
is
investment
that
is
happening

on

a

new

vertical

which

is

still

in

the

build-out

phase,

which

is

hotels.

So

I

would

still

guide

for

this

investment

to

be

there

for

the

next

few

quarters.

And

it

might

take
a
few
percentage
points
away
from
the
PM
that
we
are
generating,
but
I
think
this
is
for
the
greater
benefit
in
the
future.
Swapnil:
Just
a
last
question.
So
we
had

acquired
Zoop.
Last
quarter,
you
mentioned
about
that.
So
first
of
all,
I
would
like
to
understand
how
do
we
consolidate
this
number?
Do
you
consider
it
in
trend
segment
or
you
show

it

in

others?

And

any

benefit

that

you

would

have

got

in

this

particular

quarter?

Saurabh

Singh:

So

Swapnil,

it

comes

in

others.

At

a

point

of

time

when

it's

big

enough,

we'll

move

it

out.

And

it's

a

different

segment

and

we

feel

that

it's

early

days

as

of

right

now.

What

we

are

seeing

in

terms

of

the

integration,

the

response

initially

has

been

very,

very

impressive.

Even

though,

remember,

when

we

see

of

it

as

a

product,

we

are

just

about

starting

it.

So

the

thing

is

not

just

having

it

in

our

funnel.

The

thing

is

about

finding

the

user

issues,

solving

those

problems,

trying

to

predict

this

better.

So

it's

still

early

stages,

but,

yes,

it

shows

in

others.

Swapnil:

Okay.

Thanks

a

lot,

Saurabh.

And

all

the
best,
guys.
Very
solid
numbers.
Hope
you
continue
to
grow.
Moderator:
Thank
you.
The
next
question
is
from
the
line
of
Anmol
Garg
from
DAM
Capital.
Please
go
ahead.
Anmol
Garg:
Thanks

for

the

opportunity.

A

couple

of

questions.

Firstly,

if

I

look

at

our

monthly

active

users

for

9

months,

then

that

has

not

increased

much.

However,

our

monthly

transacting

users

have

increased

very

strongly.

So

I

wanted

to

understand

that

going

ahead,

would

our

marketing

spends

be

targeted

more

towards

conversions

or

would

we

want

to

have

more

broad-based

marketing

spends

to

increase

the

number

of

active
users?
Aloke
Bajpai:
Hi,
Anmol.
Excellent
question.
I
think,
if
you
think
about
our
annual
active
users,
right,
when
you
look
at
last
year's
numbers,
right,
that
was
almost
half
of
all

the Internet population of India, which means almost one out of two people who are on the Internet use at least one of our services or one of our websites, at least once.

And so, we are already at a point where like 80-plus million MAUs, I don't know how many Internet properties would have

that
kind
of
scale.
And
we
are
not
a
horizontal
property,
right.
We
are
a
vertical
property
in
that
sense.
And
I
think
our
focus
as
a
team
is
--
because
a
lot

of

this

is

coming

organically,

right,

so

our

focus

as

a

team

when

we

do

marketing

is

not

as

much

as

driving

MAU

growth

as

the

output

metric,

but

really

about

seeing

how

we

can

drive

up

conversions,

how

we

could

look

at

app

installs

from

the

relevant

user

base,

right.

Those

are

the

kind

of

things

that

we

optimize

our

campaigns

for.

And I think broadly in the long term, you want to acquire high-quality users
who

come

and
do
high-frequency
repeat
purchases,
right,
with
you.
So
in
any
of
the
verticals
where
we
spend
money
on
marketing,
right,
that's
the
kind
of
approach
that
the
team
follows.
And
we
are

very
pertinent
about
looking
at
CAC
and
LTV
and
making
sure
that,
I
mean,
most
of
the
marketing
acquisition
we
do
from
the
second
transaction
itself,
we
are
able
to
get
back
the

kind

of

money

that

we

are

spending

to

acquire

those

users.

So in that sense, we will keep scaling those initiatives in line with where we see

better

bang

for

the

buck

when

it

comes

to

online

spends.

When

it

comes

to

offline

spends,

it's

very

discretionary.

So
there
could
be
some
kind
of
quarters
where
we
choose
to
spend
more
or
when
we,
let's
say
last
quarter
when
we
took
on
board
Rohit
Sharma
as
a
celebrity
and
we

started
doing
some
360-degree
campaign
in
certain
regions.
I
think,
again,
there
could
be
some
offline,
some
online
in
that
mix.
But
the
objective
there
is
to
stay
within
the
guardrail.
And
maybe,

Saurabh,
you
want
to
talk
about
what
kind
of
guardrails
we
maintain?
Saurabh
Singh:
What
I
just
want
to
say
is
that
we
are
extremely
prudent
in
our
approach.
And
usually
when
we

see
customer
inducement
costs,
this
is
not
guidance,
this
is
how
we
think
of
it
internally.
We
would
look
at
it
as
wanting
it
to
be
around
3.5%,
which
is
a
combination
of

discount
plus
branding
plus
performance.
And
what
we're
also
doing,
what
we
would
also
do
is
that
we
would
have
a
metric
to
check
the
return
on
each
kind
of
investment
and
remain

around

that.

So

we

would

be

cautious

on

that

too.

Anmol

Garg:

Understood.

So

more,

if

I

have

to

think

more

from

a

broader

perspective,

should

we

assume

that

our

ad

spends,

which

are

currently

at

around

8.5%

of

revenues,

would

increase

and

we'll

get

maybe

leverage

benefits

from

employee

or

maybe

other

expenses?

Saurabh

Singh:

So

Anmol,

how

you

should

look

at

it

is

how

we look at it internally. And when I look at it, so when I'm talking about a combination, so every line of

business has a flexibility on which of the three customer inducement he wants

to
spend
on.
Or
also
at
times,
one
becomes
costlier
than
the
other.
So
we
play
around,
we
are
strategically
looking
at
it.
But
how
I
would
look
at
it
if
I
was

you,

who

was

taking

it

as

a

percentage

of

GTV

and

saying

that

broadly,

the

combination

of

three

should

be

around

3.5%.

Again, I'm saying that this is not a guidance. This is how we think. And there might

be

opportunities

where

we

might

go

one

way

or

the
other.
But
broadly,
this
is
the
number,
unless
we
find
something
extraordinary
either
way,
where
we
would
want
to
be.
Anmol
Garg:
Understood.
Secondly,
I
wanted
to
understand
our
overall
strategy
on

the
bus
business.
So
while
we
have
done
excellent
growth
in
this
quarter,
I
just
wanted
to
understand
that
how
are
you
looking
at
this
business
in
terms
of
our
market
share
expansion,

particularly
in
the
northern
and
western
part
of
India?
And
how
do
you
see,
what
I
wanted
to
understand
is
that
in
this
particular
business,
should
we
expect
higher
ad
spends
going
ahead?

Or
what
is
the
other
strategy
that
you
are
building
up?
Aloke
Bajpai:
I
think,
look,
just
zooming
out
again,
right?
Like
if
you
look
at
online
penetration
in
this
space,
it's
somewhere

between

20%-22%

as

we

speak,

right?

And

I

think

the

big

opportunity

we

see

on

buses

is

how

can

we

bring

those

people

online

to

book

buses

who

are

today

not

booking

them

online

at

all,

right?

That's

the

largest

opportunity

because

that's,

let's

say,

close

to

80%

of

the

market,

right?

And then step two is, those people who may not be using us, if they're online,

can

we

make

them

aware

that

we

are

a

great

product

for,

I mean, the highest NPS product, no doubt. 4.8 app rating with that scale of reviews and downloads is very, very hard to do if you ask any practitioner in our space. But

essentially,
to
do
that,
A,
we
have
to
have,
obviously,
selection,
which
means
we
need
to
have
all
the
operators
that
matter.
And
let
me
assure
you
that,
you
know,
on
that,
we

would
compare
with
anyone
out
there
in
terms
of
the
kind
of
supply
that
we've
built.
And
we
keep
expanding
that.
I
just
mentioned
that
last
quarter
we've
added
200
more
private
operators

and
a
bunch
of
more
SRTCs.
So
our
objective
is
to
have
all
the
supply
that
is
possible
to
have
in
terms
of
bringing
them
online.
But
we
have,
again,
a
guardrail
around

quality.

So what we don't want is to bring on an operator who's not able to service our

customer

with

the

kind

of

expectation

of

customer

service

and

quality

of

bus,

etcetera,

that

we

desire.

So

we

will

be

very

prudent

about

not

bringing

-

January

28,

2025

on operators who will reduce our NPS and making sure that we onboard operators

who

are

likely

to

bring

on

better

quality

assets,

etcetera.

Now, two things are driving the growth there. One is there's a proliferation of

new

age

bus

operators

out

there.

You

know,

multiple

of

them.

And,

we

could

name

a
few,
but
Fresh
Bus,
which
is
doing
EV
buses,
which
we
also
have
a
minority
investment
in.
Players
like
ZingBus
or
InterCity,
all
these
players
obviously
are
growing
and
expanding.
And
some

of

them

have

raised

more

capital.

So

I

think

in

that

sense,

and

then

FlixBus

entered

the

market.

So in that sense, supply expansion is happening. And similarly, SRTCs are also upgrading

the

quality

of

their

assets

and

bringing

on

new

assets.

At

least

three

SRTCs

in

South

have

started

adding

electric

vehicles

as

well.

So,

all

that

is

helping

with

this

growth.

Last thing, but not the least, spiritual tourism, which I mentioned earlier. On that,

I

just

wanted

to

share

that

the

stat

on

buses

was

most

staggering.

Prayagraj,

which
again
is
in
the
North,
right?
I
mean,
we
saw
an
almost
14
times
increase
in
bus
booking
Y-o-Y
towards
Prayagraj,
thanks
to
the
Maha
Kumbh.
But
those
kinds
of
spurts,
we

are

able

to

do

also,

because

look,

a

lot

of

the

people

go

to

check

for

a

flight

and

then

the

fare

is

too

expensive.

And then they go for a train and the train is, you don't get a confirmed seat, you

have

a

waitlisted

seat.

So

then

the

bus

becomes

the

only

viable

option

for

hundreds

of

thousands

of

Indians

every

single

day.

And

tapping

into

that

demand

is

easier

for

a

player

like

ixigo

to

do.

And

that

is

why

you
see
us
growing
faster
than
the
overall
market,
probably
growing
twice
the
velocity
of
the
incumbent
here.
Saurabh
Singh:
What
also
many
people
don't
understand
and
which
is
where
the
uniqueness,
and

I

think

what

Aloke

had

mentioned

in

his

speech,

about

the

searches

becomes

very

important,

because

what

happens

is,

there

are

a

lot

of

people

who

don't

realize

how

good

buses

have

become

now

as

compared

to

say

10

years

earlier.

So

what

products

like

TG

do

for

us

is,

they

allow

people

to

experience

buses

if

they

don't

get

a

particular

mode

of

transport.

So what you have is you can, we are exposing people to newer ways, and the other

thing

is,

as

Aloke

mentioned,

you're

talking

about

north,

you're

talking

about

a

route

and

not

doing

well

and

that's

helping

buses.

Yes,

and

Rajnish,

maybe

you

want

to

add

something

there?

Rajnish Kumar: I think there are two things here. One is obviously like we said, there is a lot of room for everybody to grow at 20% penetration, etc. But the other thing is that most of the growth that we expect should come mostly from investment in product and solving customer pain areas. I think you would have seen, we announced recently, in this call itself I mentioned

about

4.8

plus

rating

on

the

NPS

side.

It's not so easy to achieve a rating of 4.8 on Android as a travel app with that scale

of

users,

etc.

And

this

is

a

testament

of

how

good

the

customer

experience

has

to

be

to

reach

that

kind

of

NPS

level.

And

I

think

this

is

where,

the

word-of-mouth

growth

that

kind

of

aids

organic

growth

and

kind

of

accelerates

or

spreads

some

marketing

as

well

happens.

And I think this is the most sustainable way of growing. Obviously, you need to

make

sure

that

you

have

the

right

kind

of

product

supplies

and

relationships

at

the

back

end

which

our

team

is

working

on

and

we

are

making

sure

that

we

have

the

right

kind

of

operators

and

suppliers.

But I think just to underline this one key point which is that we will continue to

keep

customer

experience

at

the

center

of

everything

and

we

will

keep

solving

core

customer

pain

areas.

And

that

would

be

probably

the

key

thing

which

will

drive

growth

for

us

across
all
segments.
Anmol
Garg:
Understood.
Thanks
for
answering
my
questions
and
congratulations
for
a
very,
very
good
set
of
numbers.
Moderator:
The
next
question
is
from
the
line
of
Gaurav
Rateria
from

Morgan
Stanley.
Gaurav
Rateria:
Hi,
thanks
for
taking
me
and
congratulations
on
superb
execution.
I
have
three
questions.
First,
if
you
could
lay
down
what's
happening
on
the
competition
side
in
the
flight

ticketing

business

in

terms

of

competition

from

airlines,

competition

from

other

OTAs,

who's

losing

share,

who's

gaining

share,

just

the

landscape

part

of

it.

The second question is if you could help us understand your strategy around the

hotel

business,

how

you're

going

to

build

that

business.

And

lastly,

you

did

touch

upon

the

technology

investments,

especially

in

AI.

If

you

could

peel

off

some

of

the

layers

of

what

these

investments

are

looking

like

and

what

it

will

mean
or
how
will
it
manifest
in
the
form
of
product
enhancements,
etcetera.
Will
it
be
more
like
an
incremental
change?
Will
it
be
more
like
a
dramatic
change
on
product?
So
those

colour
will
be
very
helpful.
Aloke
Bajpai:
Yes,
hi.
Good
to
see
you
on
the
call,
Aloke
here.
Just
on
the
first
question,
which
was
around
flight,
look,
we
have
a
very
different

philosophy

with

respect to how we look at competition because I don't think we're tracking like

who

is

gaining

share,

who

is

losing

share.

I

think

we're

just

trying

to

do

a

decent

job

at

getting

the
product
experience
right
and
trying
to
expose
flights
as
an
option
to
millions
of
users
out
there
who
still
don't
look
at
that
option.
I
mean,
4%
of
Indians
fly.
And,
I

think
if
that
number
has
to
move
up,
it
has
to
come
from
people
who
today
are
taking
a
train
or
a
bus
instead.
And,
just
on
that
singular
insight,
we
still
have

a

lot

of

work

to

do

as

a

company.

I

mean,

the

blessing

we

do

have

is

that

we

have

a

lot

more

users

than

any

other

company

in

this

space.

So

if

there's

a

company

which

has

a

right

to

grow

faster,

it

has

to

be

us

because

we

are

sitting

on

that

large

user

base

that

may

still

not

be

flying

yet.

And of course, even in Tier 1 towns, there's some spillover growth coming.
Not

that

we

are

doing

anything

beyond

building

a

great

product,

Like

in

that

sense,

none

of

our

marketing

initiatives

are

particularly

targeting

Tier

1

towns,

etcetera.

But we are seeing, I keep meeting people at industry events who are using us

because

they

love

the

product.

So

in

that

sense,

we

are

seeing

people

move

to

us

just

because

of

certain

things

on

the

product

that

they

love

or

certain

things

on

our

customer

service

that

they

love.

I mean, our refund times, we believe are one of the best. We don't know what

the
others
actually
have
because
nobody
discloses
that.
But
if
you
look
at
our
average
refund
time
of
just
over
three
hours,
that's
one
of
the
big
pains
we
keep
hearing
time
and

again
from
people.
And
then
we
keep
hearing
that
it's
hard
to
get
through
to
call
centers,
for
OTAs.
And
again,
we
decided
to
publish
what
percentage
of
calls
we
pick
up
within

two
minutes.
And
in
that
sense,
again,
we
are
disclosing
that
every
quarter
and
that
numbers
keep
moving
up.
So
I
think
the
last
we
disclosed
is
around
94%,
which
is
up
from

92%.

So,

I

think

these

are

the

things

we

worry

more

about.

I

think

if

we

keep

executing

well,

hopefully,

we

do

keep

gaining

share

on

flight

side.

On hotels, like Rajneesh and I mentioned, I think it's very early days. So I wish

I

could

talk

a
lot
about
it,
but
honestly,
like
we're
in
the
product
market
fit
discovery
phase
and
getting
the
supply
right,
getting
a
lot
of
the
content,
right.
Understanding
how
the
ranking
works.
It's

a

complex

space,

right.

It's

not

as

simple

as

transportation.

So,

we

know

it's

going

to

be

a

long

journey.

I

mean,

trains

took

us

10

years

to

crack,

right.

I

don't

think

we're
going
to
crack
hotels
in
a
year.
So
in
that
sense,
we
are
seeing
month
on
month
growth.
We
are
seeing
quarter
on
quarter
growth
there,
but
of
a
much
smaller
base

obviously. But, it's going to take a few quarters to start talking

more about this. And the last question I will defer to Rajnish on the tech and AI piece.

Rajnish Kumar: I mean, just to close out the

hotel
question.
We
mentioned
that,
we'll
solve
it
in
the
exact
same
way,
like
we
solve
the
other
problems
of
train
travellers
and
flight
travellers
and
bus
travellers.
So,
which
is
by
understanding

their

pain

areas

and

creating

a

product

which

solves

those

pain

areas.

So

we

are

still

in

that

product

market

fit

phase,

build

out

phase

where

we're

building

the

right

product,

right

supplies,

etcetera.

The

advantage

we

have,

and

that's

the

only

thing

I

wanted

to

highlight

here

before

I

move

to

the

next

question

is

that

we

have

massive

distribution

sign.

And

I

think

this

is

one

of

the

advantages

of

kind

of

introducing

a

product

that

is

out

there

for

users

who

just

need

to

be

introduced

to

these

products,

like

entering

into

a

mall

and

discovering

a

new

section.

So, coming to AI, it's very hard to predict what's going to happen, because if you

can

see

every

week,

things

are

changing,

and

what

was

making

sense

in

the

previous

month

is

not

making

sense

right

now.

But

if

you

look

at

some

of

the
current
developments
around
OpenAI
operator
or
DeepSeek,
etcetera.
You'll
see
that,
it's
like,
it's
like
a
full
circle
moment
for
those
of
us,
who've
seen
the
travel
tech
space
for
a
while.

We

had

demonstrated

that

I

focused

right

in

2017

where

we

envisioned

a

future

where

voice

interfaces

would

seemingly

connect

with

AI

seamlessly

and

create

a

customer

interface,

which

would

remove

all

the

clutter

of

travel

complexity.

Now operation is doing the same thing with a different approach now that you

would

have

seen.

They're

kind

of

working

with

e-commerce

companies

to

kind

of

create

a

place

where

people

can

book

their

travel

seamlessly.

And

obviously

this

is

kind

of

a

plastic

innovators

dilemma

for

OTAs

to,

whether

they

should

move

on

this

platform

and

create

new

intermediary

or

create,

all

the

risk

of

missing

out,

etcetera.

But ultimately, if you look at whether it is Chat GPT or DeepSeek, etcetera,
like

all

these

guys,

the

underlying

AI

capabilities

for

most

of

them

were

very

similar

that

there

were

a

lot

of

companies

out

there

who

had

similar

capabilities,

but

the

reason

why

Chat

GPT

became

big

is

because they figured out user interface lock-in much earlier. They were more customer centric in their approach. And so they were the first ones to launch an app for an AI driven technology.

And so they created massive distribution with a product, which was not too superior compared to some of the other products out there. Now, what this suggests is that, just the technical capability is not enough to create market dominance by creating distribution. What you need to have is the ability to understand customer

pain areas and problems and create interfaces and create interface lock-in, which makes

those

capabilities

indispensable

for

users.

And

that's

how

you

create

massive

distribution

and

moat

in

the

process,

not

by

having

a

technology.

Moderator:

The

next

question

is

from

the

line

of

Saksham

from

Axis

Capital.

Saksham:

Congratulations

on

good

set

of

numbers.

My

first

question

is

just

to

follow

up

on

one

of

the

initial

questions.

So

within

slides,

the

growth

has

come

from

in

the

quarter

from

PO

and

users

as

well,

where

some

of

the

drivers

has

been

growth

from

international

markets.

So maybe can you give some more colors on some of the initiatives that the company

is

doing

within

this

space

to

expand

international?

And

do

we

see

this

growth

being

sustainable

coming

from

Tier

1

space

as

well,

as

well

as

international

markets?

The second question is around, we keep talking about ixigo is having the highest

user

base

in

terms

of

targeting

the

next

billion

users

and

expecting

the

next

billion

users

to
incrementally
increase
travel
spend
and
the
company
benefiting
from
there.
So
what
are
some
of
the
key
challenges
that
a
company
sees
in
this
space?
Maybe
is
it
a
case
of,
let's

say,

in

the

longer-term

perspective,

if

you

zoom

out

some

of

the

competition

also

targeting

the

same

space.

So

what

are

the

initiatives

strategy

thoughts

that

the

company

is

doing

to

maybe

gatekeep

those
customers
some
colour
on
that
would
be
really
helpful?
Aloke
Bajpai:
Sure
Saksham.
The
first
question,
which
was
around
international
flights
and
the
ability
to
sort
of
grow
in
Tier
1
markets.

If

I

read

the

question

correctly,

I

think

on

that,

if

you

just

look

at,

like

if

you

rewind

a

few

years.

Like

we

started

first

as

a

train

utility

app

and

then

became

a

train

OTA

and

then

flight

OTA,

we

became

much

later.

And

just

after

COVID

is

when

we

actually

got

started

on

the

flight

OTA

journey.

So

in

that

sense,

you

can

say

that

we

are

a

4-4.5

year-old

kind

of

a

flight

OTA.

And

in

that

obviously

domestic

was

the

early

focus

and,

but

international

where

you

need

GDS

integrations

and

multiple

international

airlines

to

sign

up

commercially

with

you.

It's something that we've been obviously doubling down on in the last couple

of

years

and

the

last

couple

of

quarters

even

more

so.

The

other

thing

is

that

we've

been

obviously

enhancing

some

of

the

features

that

make

more sense for international travel. For example, ixigo Assured is now available on international routes as well. Similarly, we have other such

features, for example, Flight Tracker Pro, Price Lock, these kinds of features are

also

now

being

exposed

to

international

users.

And I think as we roll out these features, some of which are industry first or better

than

what's

out

there,

I

think

we

are

seeing

the

word

of

mouth

and

what

Rajnish

talked

about,

right.

Product

led

growth,

word

of

mouth
growth
sort
of
kicking
in.
And
once
you
hit
a
critical
mass,
right.
We
did,
we
saw
this
in
trains,
right.
Like
you
hit
a
critical
mass
of
users,
and
you
suddenly

have

people

sitting

opposite

you

in

the

coach

actually

talking

about

what

app

they

use.

And, you start seeing the trickle down of that also accelerating your growth.
So

some

of

that

we've

started

to

see

very

recently

on

the

flight

side

where

a

few

people

were

talking

to

each

other

might

say,

Hey,

this

is

an

app

that

I've

switched

to

now

because

it's

way

better.

And,

it

does

create

that

buzz.

And

that's

happening

now

in

Tier

1.

So

Tier

2/3,

because

we

already

had

the

reach

was

not

a

big

challenge

for

us

to

grow

in,

but

Tier

1

is

exciting

to

see.

And obviously we, we'll see how we could continue growing that again, competition,

like

we

don't

really

spend

too

much

time

thinking

or

worrying

or

looking

at

because

ultimately,

right.

If

we

treat

our

customers

well

and

we

give

them

a

great

post

booking

experience,

there

is

no

reason

why

they
would
switch
out
from
us
only,
only
if
we
let
them
down,
will
they
actually
do
that?
So
I
think
we
just
focused
on
not
screwing
up
if
I
had
to
put

it

that

way.

And, that's pretty hard to do in this vertical as you would have seen as an end

consumer.

So,

I

think

we

just

focus

around

that.

And

maybe

Rajnish

if

you

want

to

add

anything

on

the

flag

side.

Rajnish

Kumar:

Yes.

I

think

I

just

want

to

add

one

thing

on

competition

that,

we

do

get

this

question

asked

a

lot,

right.

But

then

somebody

could

copy

us.

And,

my

answer

to

them

is

that

of

course

they

can,

anything

can

be

copied

today,

right?

Like

anybody

can

copy

anything.

And

especially

when

technology

has

been

commoditized,

but

we

don't

really

worry

about

them.

I'll tell you why because eventually what happens is that if your core focus
and

culture

and

DNA

is

about

customer obsession and solving customer problems, then you always have your ears to the ground. You'll be listening to your customers and you'll be finding those problems before anybody else can find.

Now, from that point onwards, it's just a matter of having the courage to solve those problems before anybody else does. And that requires that vision to say that, I'm willing to invest in something right now that

will

only

give

me

benefits

later

on.

So

sometimes,

it's

not

about

solving

a

problem.

It's

more

about

solving

the

right

problem

at

the

right

time.

And

that's

what

innovation

is

all

about.

When

you

do

that,

you're

always

ahead

of

others

and

others

can

copy

you,

but

they'll

always

be

behind

you.

And

I

think

when

somebody

copies

you,

I

think

this

is

the

most

flattering
thing
you
can
see
for
yourself.
Moderator:
As
there
are
no
further
questions
from
the
participants,
I
now
hand
the
conference
over
to
the
management
for
the
closing
comments.
Aloke
Bajpai:
In

closing,

I

just

want

to

say

that

it

took

us

almost

16

years

to

get

to

our

first

billion

run

rate

of

GTV,

but

it

has

taken

us

less

than

two

years

to

get

to

close

to

2

billion

GTV

ARR.

And

I

think

that

reflects

the

power

of

thinking

long

term

and

thinking

of

businesses

more

like

a

marathon

than

a

sprint.

And

with

that,

I would like to thank everybody who has joined us today. Take care and keep traveling.

Moderator: On behalf of Axis Capital Limited, that concludes this conference. Thank you for joining us. And

you

may

now

disconnect

your

lines.

Call: May 2025

Capit al

Moderator:

Ladies and gentlemen, good day and welcome to Le Travenues Technology Limited Q4 and FY '25 Earnings Conference Call, hosted by DAM Capital Advisors Ltd.
As a reminder, all participant lines will be in the listen-only mode, and there will be an opportunity for you to ask

questions

after

the

presentation

concludes.

Should

you

need

assistance

during

the

conference

call,

please

signal

an

operator

by

pressing

‘*’

then

‘0’

on

your

touch-tone

phone.

Please

note

that

this

conference

is

being

recorded.
I now hand the conference over to Anmol Garg from DAM Capital. Thank you and

over

to

you,

sir.

Anmol

Garg:

Thank

you,

Steve.

Good

evening,

everyone.

On

behalf

of

DAM

Capital,

I

welcome

you

all

to

ixigo's

Q4

FY

'25

Earnings

Call.
We have with us Mr. Aloke Bajpai, Chairman, Managing Director and the Group

CEO

of

the

company.

Mr.

Rajnish

Kumar,

Director

and

the

Group

Co-CEO

of

the

company;

and

Mr.

Saurabh

Devendra

Singh,

Group

CFO

of

the

company.

Before I hand over the call to Saurabh, I would like to highlight the safe harbor

statement

on

the

second

slide

of

the

Earnings

Presentation

and

is

assumed

to

be

read

and

understood.

Over

to

you,

Saurabh.

Saurabh

Singh:

Hi,

thanks,

Anmol.

As

we

sit

on

this

call,

I

am

reminded

of

a

year

ago.

That

time

we were in the last stages of our IPO. ixigo was stepping into a new arena, public market, where scrutiny is sharper, timelines are shorter, and the stakes are inevitably higher.
A question kept on circling in my mind, sometimes quietly during the meeting,

and

sometimes

loudly

in

the

solitude

of

late

night,

would

we

be

able

to

honor

the

belief

that

the

public

market

investors

are

placing

in

us?

As

some

of

you

might

know,

I

have

spent a large part of my career in the public market. I have seen many IPOs, and that is why the transition worried me. The IPO is a moment, yes, but being public

is

a

mindset,

a

discipline,

a

daily

commitment

to

openness,

accountability,

and

performance

under

the

bright,

unforgiving

light.
And these lights are glittery, the coverage, the clap, the ringing of the bell,
but

they

cast

long

shadows.

A

single

misstep

travels

fast.

Win

needs

context,

mistakes

must

be

owned,

in

real

time,

in

full

view.
That's the reality we stepped into a year ago. And today, as we close FY '25,
our

first

full

year

as

a

listed

company,

I

feel

something

deeper

than

relief.

I

feel

gratitude,

that

even

in

this

new

paradigm,

we

stayed

faithful to who we are and what got us here. And more importantly, we have shown that being

public doesn't mean being something else, it means being more of what matters.

With this

thought,

I

will

pass

it

on

to

Aloke,

our

Group

CEO.

Aloke

Bajpai:

Thanks,

Saurabh.

Good

evening,

everyone.

There

are

great

quarters

and

there

are

blockbuster

quarters.

Q4

FY

'25

was

a

blockbuster

quarter

for

us.

In

fact,

FY

'25

was

a

blockbuster

year

because

we

grew

quarter-on-quarter

without

any

impact

of

seasonality

that

our

industry

usually

witnesses.

When I use the word blockbuster, it's not just because of our GTV for the full year

being

close

to

INR

15,000

crores,

which

is

actually

more

than

Bollywood's

annual

box

office

collection

even

in

its

best

year,

but

also

because

it

is

a

quarter

that

demonstrated

our

ability

to

scale

with

discipline,

and

generating

operating

leverage

that is both visible and sustainable with INR 122 crores of cash generated from operations in the full year, as well as a more than doubling of our Profit After Tax for Q4.

While building a company, we have to make conscious decisions that balance our short-term interest with our long-term ones. We have had the good fortune at ixigo to never have to compromise our long-term interest in optimizing for purely short-term objectives.

Our investors have also been always supportive of this approach. This allows us to continue

betting
on
areas
that
could
one
day
disrupt
our
core
business
or
derisk
it
to
a
large
extent.
It
also
allows
us
to
keep
taking
small
side
bets
time-to-time,
which
if
they
work

well,

can

end

up

defining

us.

And

if

they

don't,

will

give

us

learnings

at

hopefully,

not

too

big

a

cost.

What

matters

most

here

is

the

foresight

and

conviction

that

the

team

needs

to

build

about

how

the

market

will

evolve

in

the

future

and

what

would

be

required

to

offer

superior

customer

experience

and

product

differentiation.
As an outsider, at times, it is hard to appreciate this approach because some
of

the

things

we

spend

disproportionate

time

or

effort
talking
about
or
doing
may
not
make
much
sense
today.
And
it
is
only
after
2
to
3
years,
sometimes
more
that
those
start
to
impact
our
growth
and
P&L
in
any

meaningful

way.

When we listed in June last year, we had a solid foundation of a large and sticky

user

base,

dominance

among

OTAs

in

the

Train

line

of

business,

a

young

but

fast-growing

Flight

and

Bus

OTA

business,

and

the

product

agility

and

nimbleness

that

a

challenger

brand

typically

needs

to

have

in

a

competitive

space.

The promise was that as our large widespread base of aspiring middle-class travelers

would

mature,

they

would

come

back

to

us

for

a

wider

array

of

their

travel

needs,

pay

up

for

value-added

services

that

solve

their

pain

areas

and

as

their

incomes

improve,

spend

a

larger

share

of

their

wallet

on

us

through

premiumization

of

the

spend.
Our FY '25 performance is proof that the market is evolving exactly how we expected

it

to,

with

flights

and

buses

becoming

our

fastest-growing

verticals,

both in GTV terms and revenue terms. There are visible market share gains we see across the 3 core lines of business. We have hit pretty meaningful scale with annual active users crossing 544 million

for

the

full

year

and

our

monthly

active

users

crossing

83

million

across

our

brands,

apps

and

websites.

The bigger achievement, though, is how we have grown our monthly transacting

users,

which

have

crossed

3.7

million

monthly

transacting

users

as

of

Q4

with

a 4% MTU to MAU ratio. If we look at our GTV scale now, it is nearly 2% of all B2C e-commerce being sold in our country today.
In the Flights and Buses business, we are seeing material acceleration and some gains in market share

as
well.
Buses,
in
fact,
now
have
the
largest
share
of
contribution
margin
across
our
lines
of
business.
So
we
are
a
much
more
diversified
business
in
that
sense.
We
are
no
more

just a Tier 2, 3 brand either. If we look at our growth coming from Tier 1 to Tier 1 flights, it was at 68% in Passenger Segment terms in Q4, which is multifold

faster

than

the

overall

market

growth

of

flown

passengers

between

the

top

metros,

indicating

our

increase

in

market

share

even

in

those

axis.
ixigo's uniqueness lies in its ability to tap into a growth vector that is rare,
which

is

not

just

that

of

people

making

their

first online travel booking, but of people booking the first ticket of their life on that mode of travel itself. This new-to-market segment essentially allows us to create a blue ocean for ourselves rather

than

compete

in

existing

red

oceans.

An interesting statistic to share with you all is that the NBU users that we have,

the

ones

that

come

and

book

new

flights

with

us,

the

ones

that

came

in

Q4,

our

surveys

indicate

that

half

of

those

users

that

was

the

first

flight

booking

of

their

life.

So

essentially,

half

of

those

new

users

who

came

to

book

on

the

NBU

apps

had

never

booked

a

flight

in

their

life.

So

we

are

basically

creating

a

new

market.
One contributor to that is also Travel Guarantee, which is now fully rolled out across

Ixigo

trains

and

confirmed

ticket,

a

value-added

service

that

leverages

our

unique

advantage

of

a

strong

presence

across

the

travel

segments

that

we

operate

in,

trains,

buses

and

flights.

Travel Guarantee helps travelers gain greater visibility into seat availability
for

their

trips

and

allows

them

to

get

steeper

discounts

on

alternate

modes

of

transportation

in

case

their

waitlisted

train

ticket

does

not

confirm

on

the

date

of

travel.

In many cases, this introduces the next billion users to new modes of travel such

as

flights

and

buses.

This

product

has

received

strong

initial

uptake

and

is

helping

a

lot

of

travelers

to

be

able

to

benefit

from

up

to

3x

discount

on

a

bus

or

a flight booking or up to 2x discount in an alternate train booking

when their train ticket doesn't confirm. All 3 lines of businesses are seeing a positive impact of Travel Guarantee on the revenue

and GTV growth.
At this stage of our journey, we are not optimizing Travel Guarantee for margins, but instead prioritizing trials and adoptions by our customers, and measuring customer satisfaction while observing their propensity to book alternate transport.
Our AI-based optimization algorithm for pricing this product as well as deciding for which waitlisted ticket this product even

gets offered for, allows us to run this product in a profitable manner. But in the initial phase, the Travel Guarantee will be a lower margin offering than the overall margins in our business,

given

there

is

a

slightly

higher

variable

cost

to

operate

this

product.
As you can see in our financials, it has strengthened our overall portfolio.
And

despite

the

marginal

dilution

in

unit

economics

that

it

brings

for

the

Trains

business,

31%

trains

contribution

margin

in

Q4 FY '25 versus 34% in Q4 FY '24, it has still contributed to a healthy GTV and revenue growth for the Trains business and the other lines of business.
In FY '25, we have also doubled down on brand and performance marketing across our portfolio,

building upon the organic growth foundation that we had. We partnered with Rohit Sharma for our ixigo trains brand campaign, which had visibility across railway stations, TV channels, Maha Kumbh and more.

We also doubled down on our ConfirmTkt partnership with RCB in IPL and executed

a

new

campaign

for

Travel

Guarantee

featuring

Virat

Kohli

and

other

cricketers.

We

also

renewed

our

Mahesh

Babu

association

for

AbhiBus

brand

as

well

as

signed

up

with

the

CSK

team

in

IPL. Apart from these, we did several tactical campaign sponsorships, brand partnerships and offline activations, which have been enhancing our brand recall across our brand portfolio.

Let me speak a bit on the macro development since we last spoke: The Maha Kumbh Mela in the months of January and February 2025 saw a surge in searches and bookings for us

across

our

3

lines

of

business.

And

not

just

for

Prayagraj,

but

also

for

nearby

towns

such

as

Varanasi,

Lucknow,

Kanpur,

and

Ayodhya.

These

act

as

feeder

routes

into

Prayagraj.

Our bookings to Prayagraj surged 20x Y-o-Y for buses, 5.4x Y-o-Y for flights and

4x

Y-o-Y

for

trains

during

this

period,

reflecting

that

for

categories

such

as

bus,

where

supply

was

not

constrained

like

the

others,

there

was

a

decent

spike

noticed

during

the

Mela.

What

came

as

an eye-opening insight for us was how Gen Z and solo travelers form the dominant demographic for Maha Kumbh, shattering stereotypes about what demographic drives spiritual travel demand in our country.

On train, solo travelers made up over half the train bookings to Prayagraj and a staggering 50% of all visitors to Maha Kumbh across all modes of travel that we saw were under 30 years of age.

Having

witnessed

it

myself,

I

believe

that

this

event

was

a

testament

to

the

true

power

of

spiritual

tourism

in

our

country,

marking

the

beginning

of

a

structural

multiyear

theme.

Though some bit of our performance in Q4 might appear to be influenced by what

was

happening

at
the
Maha
Kumbh,
let
me
also
clarify
that
only
a
mid-single-digit
percentage
of
our
GTV
for
that
quarter
is
directly
attributable
to
the
Maha
Kumbh.
The
event
was
an
eye-opener
to
many

on

the

power

of

spiritual

travel

in

India,

and

there's

an

opportunity

in

the

long

term

to

serve

this

market

in

many

ways.
In more recent developments, the Pahalgam terror attack happened at a time

when

Jammu

and

Kashmir

was

seeing

70%

growth

Y-o-Y

in
bookings
for
us
in
the
month
of
April.
The
attack
marked
a
significant
blow
to
the
state's
tourism
momentum
and
the
region's
security
environment
and
led
to
a
military
conflict
that
impacted

flight

operations

in

North

India.

At ixigo, our first priority was to ensure the safety and well-being of our travelers

by

ensuring

we

were

disseminating

information

about

disruptions

and

closures

in

a

timely

manner

and

to

help

them

find

alternate

means

of

transportation

to

return

to

their

homes

safely.
We were also supporting our users by offering full refunds, including
convenience

fees,

free

reschedules

to

all

passengers

flying

from

or

to

the

affected

airports.

We

also

saw

some

increase

in

customer

reach

outs

to

our

customer

support

channels

and

our

CX

teams

work

proactively

day

and

night

in

coordination

with

our

airline

and

hotel

partners

to

resolve

customer

queries

efficiently

with

the

help

of

some

AI

as

well.
On May 10, 2025, driven by feedback from our users, we took a decision to suspend

flight

and

hotel

bookings

for

certain

countries

whose

actions

and

stance

during

the

conflict

sparked

significant

public

outrage

in

India.

As a company deeply rooted in Bharat, we believe it is our responsibility to take

a

stand

in

solidarity

with

our

nation

during

this

critical

situation.

This

action

reflects

our

unwavering

commitment

towards

aligning

our

business

practices

with

the

sentiments

of

the

people

in

our

country.
We remain dedicated to reviewing this position as the situation evolves.
Should

geopolitical

equations

change,

we

will

reassess

the

stance

and

we

will

do

what

is

right

for

the

broader travel ecosystem. This decision aligns with our core value of empathy and is reflective of our responsible corporate citizenship.

Lastly, I want to end by quoting Swami Vivekananda, whose life and principles

have

been

inspiring

for

me:
“Take up one idea, make that one idea your life, think of it, dream of it, live on

that

idea.

Let

the

brain,

muscle,

nerves

every

part

of

your

body

be

full

of

that

idea,

and

just

leave

every

other

idea

alone.

This

is

the

way

to

success.”
For us, that idea has been to serve the underserved travelers. When I say underserved,

travelers

not

just

from

the

next

billion

user

segment,

but

also

the

ones

from

the

existing

market

who

haven't

been

fully

served

in

terms

of

the

depth

of

customer

experience

as

of

now.
On June 3, we will complete 18 years from launch, and our journey is a testament

to

the

true

power

of

compounding.

We

remain

thankful

to

the

immense

faith

of

our

customers,

employees,

airline

partners,

IRCTC,

bus

operators,

hotel

partners,

and

all

our

stakeholders

who

have

reposed

their

faith

in

us

throughout.

And

we

remain

conscious

of

the

great

burden

of

trust

we

carry

on

our

shoulders.

With

that,

I

will

now

hand

over

the

call

to

my
friend
and
Co-CEO,
Rajnish.
Rajnish
Kumar:
Thanks,
Aloke.
Today
where
we
are,
it
involves
a
series
of
all
the
bets
we
took
ahead
of
time,
even
when
it
seems
counterintuitive
on
why

we
were
taking
those
bets.
We
took
those
bets
because
we
felt
they
would
help
improve
customer
experience
and
pain
points
in
the
travel
industry
over
the
long
term.
What
we
are
seeing

now

is,

therefore,

a

result

of

some

resource

allocation

decisions

we

took

several

years

ago.
If you see our growth trajectory over the last 3 quarters, the acceleration
coming

quarter-on-quarter

is

a

result

of

multiple

factors;

improvement

of

our

products,

especially

for

more

evolved

users,

firstly,

with utility features such as Flight Tracker Pro, automated trip management, Bus Insights. Secondly, enrichment of supply in buses and flights is now starting to happen in hotels as well. Thirdly, deeper cross-integration and synergies across our products and services in our app ecosystem across ixigo, ConfirmTkt, AbhiBus. Fourthly, better cross-sell through the integration of food, hotels, advertising, etc. And lastly, enhanced monetisation from new value-added services

such

as

Travel

Guarantee

and

Price

Lock.
We already have a large user base, so our focus is on enhancing our monetisation

and

expanding

our

share

of

wallet

among

our

users.

Our

approach

to

expanding

the

share

of

wallet

is

centred

around

solving

customer

problems

through

innovative products that build trust and loyalty through a better customer experience. This loyalty and trust then translates to better cross-selling and upselling, leading to enhanced monetisation per user over the long term.

Over the years, we have focused on utility-first, community-driven use cases to organically acquire customers.
Since travel is an infrequent use case, the best way to measure share of wallet growth for our business is by tracking annual spend per transacting

user calculated as GTV divided by annual transacting users. This metric reflects how much each transacting user is spending on our platform annually and serves as a proxy for our wallet share expansion.

We have grown from INR 6,537 per user per annum in FY '23 to INR 9,705 per user per annum in FY '25, compounding at 22% CAGR, signifying our deepening relationship with our customers. This increase in share of wallet is also correlated with the rising trend of what we call premiumization in

our

country.
We are witnessing a clear and accelerating growth trend of premiumization in

Indian

travel,

a

shift

driven

by

rising

purchasing

power

and

innovations

that

are

delivering

better

value

at

lower

cost

to

the

customers.

Destinations

once

considered

aspirational,

such

as

Goa,

are

being
substituted
at
times
by
international
travel
places
such
as
Vietnam,
Thailand,
Dubai,
Abu
Dhabi
and
Singapore.
Domestically,
too,
there's
a
strong
surge
in
spiritual
travel
destinations
like
Prayagraj
and
Ayodhya,
reflecting
both

evolving

aspirations

and

deeper

cultural

exploration.
Mode of transport is also seeing upgrades. We are seeing people transitioning

from

trains

and

buses

to

flights.

These

behavioural

shifts

are

being

fueled

by

2

core

underlying

drivers.

First

one

is

rising

disposable

income,

enabling

more

Indians

to spend on travel and experiences. And secondly, massive infrastructure investments, including expansion of airports to tier 2 and tier 3 cities and the development of major tourist lines like temples and monuments.
The recently introduced Travel Guarantee value-added services are another

step in this direction, created to ensure that users without a confirmed train ticket can conveniently and affordably switch to alternate modes of transport. As previously highlighted, this feature is also enabling many

users
to
experience
new
modes
of
travel
such
as
flights
for
the
very
first
time
in
their
life.
Aloke
has
already
talked
about
the
growth
in
our
flights
and
buses
vertical,
which
continues

to

surpass

our

own

expectations.

Hotels

is

still

nascent,

but

we

are

very

satisfied

with

what

we

have

achieved

in

the

fiscal

year

where

we

have

worked

upon

it.
There are quite a few learnings we have in that vertical when it comes to product

market

fit,

both

on
the
supply
side
and
the
customer
side.
There's
also
lots
of
work
to
be
done
there
in
the
coming
quarters
to
get
to
a
point
where
we
feel
we
have
solved
some

customer

pain

points

that

still

exist

in

that

space

in

terms

of

customer

experience

on

the

ground

and

the

expectation

versus

reality

of

it.

As a trusted customer-first brand, it is important for us to continue investing in

technology,

AI

and

new

initiatives

that

will

enhance

our customer experience as well as in brand marketing. Some utility products that we launched, such as crowdsourced products on trains, Flight Tracker Pro or Bus

Limited - May 14, 2025

Insights may, at times, lead to disproportionate growth in tech costs without a proportionate increase in revenue. However, in the long term, these products help increase engagement and stickiness and improve our repeat bookings, leading to a reduction in our

consumer acquisition costs.
Over the past year, a number of investors have asked us about this. So let me share an interesting metric for you. In FY '25, 85.8% of our transactions were done by repeat bookers, who have booked with us, which shows the loyalty and faith our

users

have

put

upon

us.

Given the accelerated progress in the field of AI, the adoption of AI tools has accelerated

across

all

our

teams

as

well

as

in

customer-facing

products.

This

incremental

investment

also

shows

up

in

our

technology

costs,

but

it

ends

up

creating

operating

leverage in other areas, such as employee costs and customer support costs.
To give you an example, recently, we rolled out voice AI agents for our flight and train customer support, and we are already seeing 45% of our flight customer support on voice being done end-to-end by

these

AI

agents,

allowing

us

to

scale

the

flight

business

without

adding

incremental

human

support

agents.

If you look back and see where we are coming from, it looks like an impossible

feat

to

have,

grown

nearly

23x

of

our

revenue

from

operations

from

INR

40

crores

pre-COVID

in FY '19 to INR 914 crores in FY '25. However, we remain extremely paranoid about the future, and we will continue to place our bets on areas that can potentially disrupt us

because

that

is

the

only

way

we

know

we

will

remain

relevant

and

continue

growing.
I want to end by thanking our team now, 509 people strong in the ixigo core business.

Their

contribution

to

this

journey

is

commendable,

and

I

think

they

are

the

true

creators

of

this

impact.

As we approach our 18th anniversary as a company, I can't help but reflect on

the

early

days,

marked

by

a

series

of

venture

capital

pitches

and

the

string

of

repeated

rejections

that

we

faced.

Back

then,

we

believe

that

securing

that

funding

would

have

significantly

accelerated

our

growth

trajectory.
What we didn't realize then was that those very rejections were helping shape

the

DNA

that

would

allow

us

to

build

a

stronger

foundation

for

future

growth.

With

capital

always

in

short

supply,

we

were

left

with

no

choice

but

to rely on technology, creativity, product-led growth, organic growth marketing. And we built a culture deeply rooted in capital efficiency and customer centricity. What began as a necessity soon became second nature, and that discipline has served us remarkably well till this day.

With that, I am handing over to my friend and Group CFO, Saurabh Devendra Singh. Over to you.

Saurabh Singh: Thanks, Rajnish. Let's walk through

some
highlights.
As
always,
all
figures
shared
are
in
rupees
crores
in
case
I
forget
to
mention
it,
unless
mentioned
otherwise.
Year-over-year,
comparisons
refer
to
the
same
period
in
FY
'24
for
annual

and

Q4

FY

'24

for

quarterly.
Now let's start at the top. Our gross transaction value or GTV rose by 65% in
Q4

to

INR

4,418.4

crores.

For

a

full

year

FY

'25,

we

recorded

INR

14,971.6

crores

in

GTV,

a

46%

increase

year-over-year.

Revenue

from

operations

stood

at

INR 284.1 crores for the quarter, a 72% increase Y-o-Y. For FY '25, the number was INR 914.2 crores, a 39% increase Y-o-Y. On contribution margin, we delivered INR 120.9 crores in Q4, up

69%.

For full year, our contribution margin totalled INR 401.3 crores, growing 37% Y-o-Y.

While

the

quarterly

margin

percentage

dipped

slightly

from

43.5%

to

42.5%

in

Q4,

that

was

in

line

with

our

decision

to

lean

into

growth

opportunities

and

along

the

lines

of

what we have been talking about in every call that we have had.
Adjusted EBITDA, excluding other income and ESOP costs, improved to INR 29.1 crores for the quarter, up from INR 17.1 crores in Q4 FY '24. On a full year basis, we

closed
FY
'25
at
INR
94.8
crores
in
adjusted
EBITDA
compared
to
INR
55.3
crores
last
year.
Profit
After
Tax
stood
at
INR
16.8
crores
for
the
quarter
compared
to
INR
7.3
crores

in Q4 last year, an increase of 128%.

For the full year, PAT was INR 60.3 crores versus INR 73.1 crores in FY '24. This year-over-year difference is explained by one-off, which we have already discussed in the previous quarter, and I will also summarise again close to

the

end.

I

should

highlight

that

our

operating

cash

flow

has

nearly

quadrupled

over

3

years

from

INR

30.8

crores

in

FY

'23

to

INR

122

crores

in

FY

'25.
Now let's take a quick look at how our major business lines are performing
this

quarter.

Our

Bus

segment

is

now

cruising

like

a

well-maintained

Volvo

9600,

smooth,

category

refining

and

ahead

of

schedule.

Whoever

hasn't

traveled,

please

travel

in

AbhiBus

and

you'll

realise

how

good

it

is.

In Q4, we recorded INR 0.55 crores Passenger segment bookings, making a
78%

year-over-year

growth and generating a GTV of INR 552.5 crores. The contribution margin rose to INR 40.1 crores with a healthy contribution margin percentage of 60.9%. Thanks to this strong profitable growth, the Bus

segment now contributes 33.2% of our overall contribution margin.
Now, much like the Boeing 787 Dreamliner, which was a bold rethinking of what long-haul travel should be, our approach to the Flight business has been intentional, ambitious and built for the long-term. We didn't rush to

scale. Instead, we invested in the underlying systems and customer experiences needed to build something enduring. And now the strategy is taking off. In Q4, we booked INR 0.25 crores Flight segment,

a

73%

year-over-year

increase

with

a

GTV

of

INR

1,709.2

crores,

which

is

a

92%

growth

Y-o-Y.

Contribution

Margin

reached

INR

39.6

crores

with

a

margin

percentage

of

45.2%.

Flights

now

contribute

38.7% to overall GTV and 32.7% to group's total Contribution Margin.
When it was first launched in 1969, the Howrah Rajdhani taught India to expect more from train travel, not just in terms of speed, but in consistency, comfort and trust. Our Train line of business

carries forward the same spirit. In Q4, we booked INR 2.62 crores segment, marking a 30% growth over Q4 FY '24 and contributing to INR 2,107.1 crores, up 41% year-over-year. Operational revenue came

in

at

INR

126.3

crores

with

a

Contribution

Margin

of

INR

39.2

crores

at

a

31%

contribution

margin

percentage.

Trains

accounted

for

approximately

32.4%

of

group's

total

Contribution

Margin.
Now as promised, I would like to highlight a few one-off or call-out items
that

influenced

the

comparison

between

FY

'25

and

FY

'24.

Revaluation

gains

for

our

associate,

Fresh

Bus

was

INR

29.7

crores

in

FY

'24

and

INR

5.8

crores

in

FY

'25.

Share of loss of Fresh Bus increased from INR 5.9 crores in FY '24 to INR 9.1 crores

in

FY

'25.

FY

'24
also
had
a
Fresh
Bus
loss
of
INR
5.2
crores
consolidated
with
us.
At
that
point
of
time,
it
was
a
subsidiary.
There
was
INR
1.2
crores
related
to
share
issue
expense

in FY '25, related to our IPO. Further, we had a tax expense of INR 21.5 crores in FY '25 as compared to a one-off tax credit of INR 12 crores in FY

'24.
Thus,
due
to
the
above
item,
on
a
like-for-like
basis,
we
had
a
net
charge
of
INR
26
crores
in
FY
'25
against
a
net
gain
of
INR
30.6
crores
in
FY

'24.
Lastly, let me quickly touch upon the impact on our business due to the recent geopolitical issues. The temporary shutdown of 32 airports resulted in some disruption to flight services with cancellations affecting 5% to 8% of total scheduled flights between May 7 and May 12.

While there wasn't much impact on train business, our bus business actually saw

some

increase

in

demand

during

this

time.

And

hence,

at

a

company

level,

we

didn't

see

much

impact.

With

the

announcement

of

the

reopening

of

affected

airports

from

12th

May,

we

are

glad

to

report

that

as

of

13th

May

and

onwards,

we

have

returned

to

normal

flight

booking

levels

prevalent

in

early

May.
Now where does the end of FY '25 leave us? It leaves us with a strong start
on

a

long

and

ambitious

journey.

While

we

have

strengthened

our

platform, invested and reinforced our value proposition, we know that next few years won't be easy, because defining chapters are rarely the comfortable ones.

-

May

14,

2025
I will end up with a quote, which means more or less what Aloke said, but he's

a

spiritual

guy,

while

I

am

a

dark,

brooding

type.

So

Kafka,

once

wrote.

“
Don't

bend,

don't

water

it

down.

Don't

try

and

make

it

logical.

Don't

edit

your

own

soul

according

to

the

passion.

Rather,

follow

your

most

intense

obsession

mercilessly.”
We are following our mission to democratize access to travel with integrity, empathy

and

innovation

at

the

heart

of

everything

we

do.

It's

that

obsession

that

has

brought

us

here.

And

it's

the

same

focus

that

will

carry

us

through

good

quarters

like

this

one

and

also

through

others,

which

may

not

be

as

smooth,

though

in

which

things

don't

go

as

planned,

regardless

of

the

challenges,

we

will

remain

steadfast

to

our

core

values

and

mission.

Thanks.

And

with

that,

I

will

hand

it

back

to

the

moderator

for

Q&A.

Moderator:

Thank

you

very

much.

We

will

now

begin

the

question-and-answer

session.

The

first

question

is

from

the

line

of

Anmol

Garg

from

DAM

Capital.

Please

go

ahead.

Anmol

Garg:

Yes.

Hi.

Congratulations

guys

for

a

very

strong

performance.

I

have

a

few

questions

that

I

wanted

to

understand.

Firstly,

in

both

our

Flight

and

Bus

businesses,

our

take

rates

have

gone

up

significantly

versus

the

last

quarter.

So

just

wanted

to

understand

whether

there

has

been

an

increase

in

the

overall

international

booking

in

our

Flight

segment?

Saurabh

Singh:

So

I

will

take

the

first

one,

Anmol.

Look,

part

of

it

is

what

we
have
as
a
value-added
offering.
So
one
of
the
things
that,
say,
in
the
case
of
bus,
what
we
have
been
doing
is
we
have
been
increasing
and
expanding
the
footprint
of

Abhi Assured across. And in general, as we have discussed in the presentation, we have introduced a number of value-added services and a part of, look, why our take rate would always be

slightly
different
is
our
underlying
route
mix
might
end
up
being
different
to
the
market,
and
we
don't
know
what
the
market
is
right
now.
But
partially,
it's
more
of
math
in
that

sense.
On the second question, sorry, you had was?
Aloke

Bajpai:

International.

So

I

will

take

that,

Anmol,

Aloke

here.

I

think

the

growth

we

saw

in

international

this

time

around

was

pretty

much

in

line

with

the

kind

of

growth

that we saw for the overall Flights business, you could look at it that way.

Anmol Garg: Understood. Understood. Secondly, I wanted to understand that you have launched a Travel Guarantee this quarter.

Also,

we

have

other

value-added

products.

So

currently,

what

would

be

the

percentage

of

revenue

that

is

currently

coming

out

of

this

product?

And

how

has

it

changed

over

the

last

year?

Saurabh Singh: We are not declaring the revenue on this. Firstly, and again, it was launched last quarter. So whatever it is

over
last
year.
But
let
me
give
you
a
more
qualitative
idea
and
probably
Aloke
and
Rajnish
can
talk
a
bit
more
about
the
product.
Remember,
the
product
came
from
the
need
of

the

users

a

lot

of

times.

So

it's

a

product

which

came

with

the

need

of

users.

And

secondly,

with

the

kind

of

base

that

we

had

in

train,

we

felt

we

could

make

it

really

work

in

this

sense.

So

what

I

can

tell

you

is

that

the

product

is

doing

extremely

well

for

us.
And what we are trying to do is and part of what you see in the decrease in the

margin

of

the

train

business

is

what

is

happening

with the Travel Guarantee, because we are not optimizing the product right now for margins. We are keeping it profitable, but we are prioritizing adoption by customers, trying to see the customer satisfaction

really
works,
where
it
works.
But
yes,
it
is
a
very
popular
product
for
us.
So
if
you
see
the
in
general
growth,
what
has
happened
in
that
segment
has
been
driven
by

this,

and

we

are

getting

a

lot

of

people

in

this

segment.

I will let Aloke and Rajnish to add more.
Aloke

Bajpai:

Yes.

So

I

will

just

add

that,

if

you

look

at

the

utility

value

of

this

product,

right,

as

an
end
customer,
it's
superb,
right?
Because
if
you
were
planning
to
go
somewhere
and
you
had
a
waitlisted
ticket,
now
you
have
the
chance
to
be
assured
about
the
fact
that
if

the

ticket

doesn't

confirm,

you

will

have

enough

discount

to

buy

a

bus

or

a

flight

at

a

steep

sort

of

discount

from

where

the

fares

typically

are

at

the

last

minute

or

you

could

take

a

train

the

next

day

and

still

you

could

afford

a

more

premium

tatkal

train,

right,

with

2x

the

refund.
So in that sense, the folks who actually do opt-in for this product, and who do

not

get

a

ticket

at

the

end

of

the

day,
confirmed
seat,
you
can
assume
that
a
large
part
of
them
will
actually
start
using
this
to
book
an
alternate
trip.
So
in
that
sense,
it
also
kind
of
expands
the
market

because
that
person
would
not
have
traveled
at
all
or
would
not
have
found
anything
on
our
app
worthy
of
their
spend,
but
now
get
that
option
and
largely
priced
with
data
science

and
AI.
So
we
keep
it
profitable
that
way.
But
like
Saurabh
said,
it's
very
early
days.
I
think
I
would
love
to
talk
more
about
it
in
a
few
quarters
from
now.

Rajnish,

you

want

to

add

something?

Rajnish

Kumar:

No,

I

just

wanted

to

say

that

as

the

name

suggests,

the

goal

of

this

product

was,

like

I

said,

everything;

it's

not

about

making

money
right
in
the
beginning.
So
as
the
name
suggests,
Travel
Guarantee,
the
goal
of
the
product
was
to
make
people
travel.
Moderator:
The
current
participant
got
disconnected.
We
will
move
on
to

the next question. It's from the line of Swapnil from JM Financial. Please go ahead.

Swapnil Potdukhe: Hi. Thanks for the

opportunity,
and
congratulations
on
a
good
set
of
numbers
all
through.
Just
starting
with
the
Flights
business.
See,
if
I
were
to
look
at
from
a
seasonal
perspective
Q-on-Q,
4Q
to
1Q,
typically,

I

believe

there

is

a

decent

growth

that

you

see,

because

of

holiday

season

in

1Q.

But

there

were

few

events

like

you

called

out,

right?

There

was

some

disruption

in

Kashmir,

there

was
Kumbh
in
the
base
of
4Q.
And
then
there
are
certain
markets
where
you
have
stopped
taking
some
bookings.
Now
my
question
here
is
like
will
we
see
the
usual
seasonality
despite

these
events
or
should
we
build
in
a
slightly
unusual
quarter
for
1Q
this
year.
Aloke
Bajpai:
Thank
you,
Aloke
here.
I
just
wanted
to
call
out,
first
of
all,
that
Maha
Kumbh

itself, like we said in our narrative, was just contributing single-digit percentage of additional GTV as of Q4, right? So even though it did help us grow a tad a bit faster. But

I
would
say
that
the
secular
growth
trajectory
itself
was
pretty
exciting
even
without
it.
And
this
I
am
saying
especially
for
flights
where
the
inventory
addition,
which
was
purely
Maha
Kumbh
related

was

not

as

big

as,

let's

say,

on

a

vertical

like

buses,

where

the

impact

could

be

felt

more

materially,

right,

in

that

sense.
So I think at an overall business level, we would have still grown very fast
even

if

there

was

no

Maha

Kumbh

in

Q4,

let's
put
it
that
way.
As
far
as
the
disruptions
that
you
mentioned
are
concerned,
those
disruptions,
which
happened
just
for
a
period
of
5
days
during
the
conflict,
I
think
as
I

speak
today,
we
have
already
recovered
levels
that
existed
pre-conflict.
So
let
me
put
that
to
rest.
Saurabh
Singh:
Swapnil,
you
have
to
realize
one
thing
that
because
we
are
multimodal,
as
I

called
out
in
the
last
question,
there
are
different
businesses
which
react
differently
to
this
kind
of
event.
So
it's
in
that
sense,
it's
kind
of
balanced
out
for
us.
And
so
going

back,

I

would

not

say

that

this

is

a

quarter

which

is

where

the

one-offs,

and

then

we

kind

of

have

called

everything

out.

If

you

go

through

an

FAQ,

you'll

find

most

of these things also put on paper where we have highlighted these points.

Swapnil Potdukhe: Got it Saurabh and Aloke. The second question is with respect to your Bus segment. Your take rates

have
increased
materially
this
quarter.
I
presume
this
is
one
of
the
highest
take
rate
quarter
for
a
long
period
of
time.
Now
my
question
here
is
like,
first,
is
this
a
sustainable

number
to
look
at
it?
And
secondly,
was
there
any
element
of
better
commissions
that
you
are
able
to
get
from
the
suppliers
or
is
it
purely
the
value-added
services
that
you
might

be offering?

Saurabh Singh: Swapnil, I missed the last part of the question. Could you repeat that part again, please?

Swapnil Potdukhe: My second part of the question was like is the take rate increase because of you getting better commissions from the suppliers, the bus operators or is it because of the value-added services, customers taking more number of value-added services or the percentage contribution from the services increasing?

Saurabh Singh: Yes, it's a mix of a number of things. So as you have probably summarized all the things there. As in what you have got is one is the share shift, which is private versus government, that is working out. The second, as I mentioned earlier on the VAS, which includes things like "Abhi Assured," which gets

us

into

things

like

the

first-time

users

that

we

are

getting

or

the

returning

users

after

years

that

we

are

getting

to

the

Bus

segment

from

the

Train

segment

to

the

Travel

Guarantee

move,

it

is

also

a

combination

of

us

going

deeper

into

our

relationships

with

the

bus

operators.

And remember, for bus, the interesting thing is bus is a fixed CAPEX business.
So

in

case

we

are

able

to

get

better

CAPEX

utilization,

better

utilization

for

a
bus
operator,
he
is
willing
to
share
much
more.
So
this
is
a
very
different
business
than
the
other
2
businesses.
Rajnish
Kumar:
Yes.
So
just
wanted
to
add
that
there
is

also
the
value-added
services
that
we
sell,
specifically
Abhi
Assured,
etc.
You
have
to
understand
that
these
value-added
services
are
not
priced
manually
by
people.
There
is
an
AI
algorithm
that
prices
them.

And

as

time

progresses,

these

algorithms

start

optimizing

for

P&L.
And I think what we are seeing also is that this optimization is resulting in significantly

better

attach

rate,

better

revenue

and

margins

that

we

are

starting

to

see

now.

And

this

is

one

of

the

reasons

why

we

might

be

seeing

these

things.

So

this

is

one

of

the

areas

that

could

potentially

impact

like

you

rightly

mentioned.
Swapnil Potdukhe: So will it be fair to say that 12% plus may be the new normal for your bus ticketing

business?

Rajnish

Kumar:

I

don't

think

we

would

like

to

kind

of

comment

anything

on

that

front

about

whether

this

is

the

new

normal

or

not.

All

we

can

say

is

that

we

are

seeing

these

optimization

yielding

results.

We

don't

know

what's

going

to happen in the future. But hopefully, with all the efforts we are making on the AI side and data science and personalization related to these products, we might see further optimization in

the
future.
Swapnil
Potdukhe:
Got
it.
And
one
question
on
your
cost
side.
So
you
did
call
out
in
your
earnings
note
that
there
was
some
operating
leverage
that
you
were
able
to

drive
in
FY
'25
when
it
came
to
technology
and
branding
costs.
But
what
my
sense
is
that
both
these
cost
items
increased
materially
in
the
second
half
of
FY
'25,
which
means

the

full

impact

of

these

investments,

the

technology

and

branding

investments

should

be

visible

in

FY

'26.

Does

that

mean

while

in

absolute

terms,

we

might

be

able

to

deliver

very

strong

EBITDA

growth in FY '26, but on a percentage margin perspective, things may not move in the same manner?

Rajnish Kumar: Yes,

sure. You have to look at technology expenses in a slightly different way. Technology expenses generally are proportional to the number of queries or hits or searches, as you say, as we get

in

our

tech

infrastructure.

And

this

includes

all

kinds

of

services

hosted

on

our

platform.

Sometimes

we

keep

building

these

utility

products

that

we

talk

about,

right,

whether

it

is

the

Flight

Tracker

Pro

or

the

crowdsourced

Running

Status

on

trains

or

Bus

Insights.

And

many

of

times,

this

kind

of

products,

since

they

don't

have

a

direct

revenue

impact,

will

lead

to

disproportionate

growth

in

tech

costs

without

any

proportionate

increase

in

revenue.
However, in the long term, if you look at these products, they help increase engagement,

right,

and

stickiness,

and

eventually

it

will

lead

to

a

reduction

in

our

customer

acquisition

costs,

and

we

are

able

to

acquire

more

customers

for

free.

I think what we measure in terms of our technology efficiency is whether our cost

per

million

queries,

right,

which

is

defined

as

the

server

infrastructure

cost

that

is

needed

to

support

about

a

million

queries

by

dividing

the

numbers

is

constant

or

declining

over

time

or

not.

And I can share that, that number has been only reducing year-over-year since

we

started

measuring

it.

So

an

interesting

insight

number

I

can

share

with

you

is

that

at

the

current

spend,

we

are

roughly

seeing

about

8

billion

hits

every

week

on

our

infrastructure.

This

is

the

cost

at

which

we

are

doing

it.
The other reason why this cost is an investment right now is that there is a very

accelerated

progress

happening

in

the

field

of

AI,

and

the

adoption

of

AI

tools

has

accelerated

across

all

our

internal

teams.

People

are

using

a

lot

of

AI

across

teams,

whether

it

is

engineering,

customer

support,

etc.

And

also

this

adoption

of

AI

or

implementation

of

AI

in

customer-facing

products

that
we
have
built,
like
everything
that
we
do,
every
product
feature
that
you
see,
there's
some
amount
of
AI
inside
it,
right?
This
incremental
investment
that
we
are
doing
in
AI
is

also

showing

up

in

our

technology

cost.

And I think this is something that we had already said as use of funds at the time

of

we

went

public

that

we

will

be

using

these

funds

for

investment

in

AI.

So

this

cost

may

end

up

creating

more

operating

leverage

in

the

future,

in

areas

such

as

employee

cost

reduction

or

customer

support

costs

reduction.
Just to give you an example, I think I talked about it in the call as well. We
have

our

voice-to-voice

agents,

AI

agents

now

operating

at

full

scale.

And

we

have

already

seen

that

almost

45% of our flight customer support voice queries are being completely handled end-to-end by AI, right, allowing us to scale this business significantly. So there is a rationale behind this spend. But having said that, even if you look at an overall level, even as a percentage of GTV, that number is not growing. It's the only constant.

-

May

14,

2025

Swapnil

Potdukhe:

Got

it.

And

just

the

last

one,

if

I

can

squeeze

in.

It's

more

on

a

long-term

perspective.

So

while

you

guys

are

doing

fantastic

across

all

these

3

key

segments

that

you

are

operating,

at

some

point

of

time,

my

sense

is

like

you

will

have

to

build

the

Hotels

segment

also

in

a

meaningful

manner

and

a

direct

manner.
So
any
thoughts
around
that?
How
do
you
intend
to
do
that?
And
what
kind
of
efforts
will
be
needed
or
any
thoughts
around
that
will
be
very
helpful.
Rajnish
Kumar:
Sorry,

you are talking about hotels specifically?

Swapnil Potdukhe: Yes, yes.

Rajnish Kumar: Yes. like I said, hotels is still in the build-out phase. Obviously, we are seeing very good growth in hotels.

But as of now, we are not disclosing those numbers. The reason is that we are still in the early phase of build-out. We are focusing a lot on customer experience on the

hotel
side.
There's
still
a
lot
of
unsolved
pain
areas
that
we
see
on
the
hotel
side,
which
we
are
trying
to
solve
for,
whether
it
is
on
the
inventory
side,
whether
it

is

in

solving

areas

related

to

trust

or

whether

it

is

areas

related

to

why

do

people

don't

transact

online

enough

because

of

this

lack

of

trust

or

the

availability

of

digital

content,

et

cetera,

that

allows

people

to

take

those

decisions

to

book

online,

etc.

So we are focusing on a lot of these areas in order to kind of optimize the customer

experience

on

hotel

side.

And

I

think

that

we

will

be

able

to

build

something

which

will

have

a

differentiated

customer

experience.

And

I

think

that

is

what

will

create

that

product-market

fit

that

we

are

looking

for.

And I would just reiterate the same thing. Our playbook will continue to be the

same,

which

is

we

will

go

very

deep

on

the

customer

experience

side,

and

we

will

explore

most

of

the

customer

pain

areas

that

are

there

in

the

hotel

side

as

well,

and

we

will

try

to

solve

them

from

first

principles.

And

the

thesis

is

that

if

we

are

able

to

solve

the

right

problems

at

the

right

time,

we

should

be

able

to

create

a

product

that

creates

that

customer

stickiness.
And the other thing we are confident about is that as of now, we are not spending

a

single

amount

of

dollar
or
penny
to
acquire
customers
to
transact
on
hotels
on
our
platform.
And
the
reason
is
very
simple
because
we
have
an
extremely
large
captive
audience
in
our
platform,
like
83
million

people

coming

monthly

on

our

platform.

So

our

focus

and

goal

would

also

be

to

kind

of

optimise

that

large

base

of

customers

that

we

have

and

start

cross-selling

and

upselling

in

order

to improve the adoption of hotels in the future.

Swapnil Potdukhe: Got it. Thanks a lot for the opportunity, and all the best.

14,
2025
Moderator:
Thank
you.
The
next
question
is
from
the
line
of
Harikesh
from
Avendus
Spark.
Please
go
ahead.

Harikesh
V:
Thanks
for
the
opportunity.
Firstly,
congratulations
for
the
great
result.
And

I
think
it
obviously
is
an
island
of
opportunity
in
what
otherwise
looks
like
a
fairly
sad
consumption
sentiment
in
India.
So
I
had
a
couple
of
philosophical
questions.
I
will
just
leave

it

with

some

of

the

numerical

ones

as

well.

So I think you had alluded in your opening remarks about user, usage and premiumization.

And

essentially

in

a

consumer

category,

which

is

structurally

growing,

the

people

who

execute

this

well,

multi-years

out,

essentially

both

hold

margin,

power

and

cash

flows.
Now I wanted to just address all the 3 in one question. In terms of usage, you

obviously

opened

up

with

your

original

business

model

and

opportunity,

which

no

one

else

saw,

but

multiple

players

or

large

competition

has

seen

it

and

started

entering

it,

and

hence,

you

are

being

flanked

there.

So

how

are

you

thinking

about

it

and

where

do

you

defend

that?

That's

on

users.

In

terms

of

usage,

your

ATU

to

AAU

is

a

number,

which

we

have

been

tracking,

there

is

some

improvement.

How

are

you

thinking

about

it?

Do

you

have

a

target

in

mind

and

where

it

goes?
And in terms of premiumization, I would love to hear how you think of it, or
are

there

cohorts

which

you

can

break up? You obviously alluded to the average value, which has gone up substantially. But if you break it by cohorts, are you seeing something different in terms of where you tried premiumization offerings

and

how

they

have

been

moving?

So

if

you

can

just

address

these

3,

that

would

be

great.

Aloke

Bajpai:

Sure.

Hi.

This

is

Aloke

here.

Just

the

first

part

of

your

question,
I
just
want
to
make
sure
I
understood
it.
Which
part
were
you
referring
to
when
you
said
it's
flattening?
Harikesh
V:
No,
I
didn't
say
it
was
flattening.
I
said
in

terms
of
users,
you
opened
up
an
opportunity
for
the
market,
focusing
on
tier
2,
3
and
then
everybody
else
is
seeing
an
opportunity
there.
So
obviously,
they
will
flank
you,
and
they

try
to
enter
it.
They'll
be
more
aggressive.
So
how
do
you
defend
that
core
moat?
And
between
the
prioritization,
right,
you
said
you
are
focusing
on
growth
now,
user,
usage,
premiumization,
how

does
your
focus
and
prioritization
stand
today?
So
that
was
that
part
of
the
question.
Aloke
Bajpai:
Got
it.
So
see,
we
have
to
start
by
understanding
how
we
got
here,
which
is

a
decade-long
journey,
which
was
built
largely
on
understanding
deeply
the
pain
areas
of
these
users
that
have
very
different
needs
at
time,
right,
when
it
comes
to
travel.
And
most
of
the

usage that came initially was for utility and not transactions, right?

So if you think of why ixigo has the largest user base in the market today, the answer probably will have very little to do with our transactional

funnels,

and

more

to

do

with

our

utility

funnels

because

we

cared

about

use

cases

that

did

not

make

any

money

for

us

or

made

very

little

money

for

us

in

the

first

decade.

But

we

went

very

deep

in

them

and

solved

those

problems

to

such

an

extent

that

we

built

a

very

sticky,

repeat

and

closed

ecosystem

of

these

users.
And when I talk about that, of course,the train is at the forefront of it. But even

today,

when

I

talk

about

flights

and

when

we

see

the

growth

coming

there,

a

large

part

of

that

growth

is

being

driven

by

product-led

growth,

right,

because

we

have

launched

these

new

things

like

Flight Tracker Pro or helping people get their boarding pass directly, at the time we have check-in opens. All those kind of things are essentially helping build more word of mouth and get

more

new

users

on

the

platform.

Now, one could ask why nobody else did it because everybody has been in the

same

market

for

the

same

time

as

us.

But

I

think

it's

really

a

question

of

where

you

place

your

focus

and

bets.

And

for

us,
we
spend
disproportionate
time
worrying
about
the
smallest
of
things
that
our
users
struggle
with.
And
I
think
that's
really
our
moat,
right?
And
of
course,
one
can
argue
that,
of
course,

we
have
network
effects
now.
There's
a
lot
of
data
that
we
have,
which
is
proprietary,
which
is
hard
for
anybody
to
copy,
and
all
those
things
are
there.
But
if
you
go

back
even
one
more
step
before
that,
how
did
we
get
there,
by
understanding
customer
problems
more
deeply
than
anybody
else,
right?
And
I
think
that's
a
harder
playbook
to
copy,
because
it

takes

a

while

to

build

some

of

those

things

or

scale

some

of

those

things

or

prove

them.
Now, when you talk about how this usage will grow, et cetera, see, on an annual

active

user

basis,

if

you

look

at

the

numbers,

and

there's

a

reason

why

you
will
see
that
the
growth
is
slower
there
in
the
last
couple
of
years.
We
have
reached
a
point
where
like
1
out
of
2
people
on
the
Internet
have
used
us

at

least

once

across

at

least

one

of

our

brand

apps

or

services,

right,

in

the

last

1

year.

Now, if you reach that point of growth, the focus needs to shift on how do
you

build

enough

services

that

bring

these

people

back

for

a

diverse

set

of

use

cases,

as

well

as

how

you

monetise

that

better

through

transactions

and

deepen

the

relationship

with

that

customer

through

transactions

in

other

categories.
To give you a small example, let's say, when we launched food delivery on trains,

we

are

deepening

that

relationship,

right?

We

are

bringing

the

customer

back

to

the

app

for

one

more

use

case.

We

are

monetizing

even

further

from

that

customer.

When we talk about value-added services that Rajnish talked about, all of those

deepen

our

relationship

and

give

the

user

a

reason

to

come

and spend

more on us. So in a way, TAM expansion, once you have hit this sort of scale, TAM expansion makes a lot of sense. And we have been working on TAM expansion as well as tapping into

these

new

areas,

which

is

resulting

in

this

kind

of

growth.
Now if you look at the ancillary attach rate of 29% or if you look at our repeat

transaction

rate,

right,

which

again,

has

always

been

in

the

80s,

even

if

you

look

at

our

DRHP

today,

it's

85.8%, close to 86% of our transactions in FY '25 were done by repeat bookers.
That's just a testament to the kind of stickiness that we have built. Was it built by spending money on brand or by discounting? No, right? So am I worried about if anybody

decides

to

do

that

in

this

market?

No,

because

that's

not

my

moat.

And

that

will

never

be

my

moat,

if

you

ask

me.

Yes,

those

things

will

accelerate

my

growth

as

well

if

I

do

that.
And brand is something we are already talking about how we are doubling down

on

in

proportion

to

revenue

growth.

But

to

understand

our

business,

one

has

to

understand

why

we

do

the

things

that

we

do,

right?

And

that's

the

answer.

Rajnish,

you

want

to

add

something?

Rajnish

Kumar:

Yes.

Since

it's

a

philosophical

question,

I

wanted

to

give

a

philosophical

answer

to

this

question

as

well.

So

the

short

answer

to

your

question,

whether

somebody

can

copy

us,

is

yes,

of

course,

people

can

copy

us.

And

there's

no

surprise

in

that.

But

the

reason

why

we

feel

that

we

will

keep

innovating

and

we

will

keep
being
ahead
of
the
curve
is
because
this
extreme
sense
of
customer
obsession
that
we
have
built
the
DNA
around,
it
allows
us
to
be
extremely
close
to
customers
and
their
problems,

and

we

always

have

our

ears

to

the

ground,

listening

to

what

customers

want

and

what

their

problems

are.

So

we

don't

have

to

go

looking

out

for

what

to

solve

for.

We

already

know

what

we

need

to

solve

for

next

because

of

this

obsession.
The only issue now is what is the right problem to solve is. And I think it's not really

about

solving

a

problem,

given

a

problem,

anybody

can

solve

it,

but

this

is

more

about

solving

the

right

problem

at

the

right

time

and

additionally

having

the

courage

to

say

that

you

are

going

to

spend

disproportionate

amount

of

time,

resources

in

solving

a

problem,

which

might

not

give

you

immediate

ROI

in

terms

of

revenues,

profits,

etc.
And for the company, it takes courage to do that. But you might have seen
that

some

of

those

investments

we

have

made

in

the

past,

have

yielded

results

like

after

years

or

months

or

quarters,

right?

And

this

is

the

reason
why
we
do
what
we
do,
right?
And
that's
the
reason
why
we
don't
have
to
look
outside
for
what
we
need
to
do
next.
Most
of
the
time,
what
happens
is

that we do something, and yes, people would copy us. That's something that it's unavoidable, right?

Harikesh V: Yes. Okay. I

think

that

the

last

part

on

premiumization,

in

case

you

have

some

insights

from

some

cohorts

which

you

are

looking

at,

which

are

higher

than

the

average

in

terms

of

what

I

was

looking

for

as

a

multiple

service

and

premiumization.

If

there

is

something.

Rajnish

Kumar:

Yes.

See

the

whole

point

of

premiumization

in

our

country

is

that,

so

one

thing

that

people

fail

to

understand

is

that

generally,

if

people

don't

have

enough

purchasing

power,

it

doesn't

mean

that

they

can't

spend

enough.

It

just

means

that

people

are

not

price

conscious,

really

in

the

real

sense

of

the

word.

They're

more

value-conscious.

They

value

what

they're

purchasing,

they

value

their

money

more,

right?

And

hence,

they

are

people

who

are

willing

to

spend,

let's

say,

INR

100

to

kind

of

protect

their

ticket,

and

travel

or

people

who

really

want

to

travel

are

willing

to

spend

some

amount

of

money

and

say

that

they

would

want

to

purchase

Travel

Guarantee.

And

we,

as

a

company,

would

create

a

product,

and

say

that,

yes,

we

would

ensure

that

we

would

be

able

to

take

you

from

point

A

to

point

B,

come

what

may.

If

you

won't

be

able

to

go

in

train,

we

will

put

you

in

a

flight

or

in

a

bus

and

we

will

make

you

travel.
So the purpose of the Travel Guarantee was to help people get to their destination,

irrespective

of

the

mode

of

transport.

And

then

people

are

willing

to

pay

an

additional

price

for

that

or

for

free

cancellation

or

for

Price

Lock

or

for

Abhi

Assured,

like

any

of

these

products.

And

this

is

the

trend

of

premiumization,

because

when

you

create

value

and

customers

are

willing

to

pay

for

it,

and

they

have

the

loyalty

and

trust

built

into

you

and

the

purchasing

power

as

we

see

is

increasing,

we

see

more

and

more

people

keep

on

buying

these

value-added

services

and

products

that

they

are

building.

And that trend is secular like we talked about. I think we are seeing this happen

across

the

board.

We

are

seeing

people

move

from

flights

from

process

and

trains

and
upgrading
to
flights.
We
are
seeing
like
a
lot
of
first-time
flyers
in
our
ecosystem
as
well,
because
of
the
same
trend.
So
yes,
premiumization
is
real.
It's
happening,
and
I
think

there's
an
accelerated
trend
around
that.
Saurabh
Singh:
Harikesh,
I
have
given
you
an
ancillary
attachment
rate
at
29.23%.
The
reason
you
ask
about
the
comparison,
I
can't
give
it
because
nobody
else

has

this

disclosure.

As

you

are

a

great

broking

house,

I

would

want

you

to

ask

other

companies

to

have

disclosures,

so

that

we

can

compare

better,

but

my

point

rests

there.

Harikesh

V: Sure, Saurabh. Thanks for the opportunity.

Moderator: Thank you. The next question is from the line of Manik Taneja from Axis Capital. Please go ahead.

Limited - May 14, 2025

Manik Taneja: Hi, thank you for the opportunity, and congratulations for continuing to accelerate in terms of growth through the recent quarters. I don't know if my question

has
already
been
asked,
because
I
got
cut
off
in
between.
And
you
have
already
answered
about
what
drove
the
improvement
in
take
rates
on
the
bus
side,
but
it
will
be
great

to
essentially
understand
the
improvement
in
take
rates
on
the
air
side,
and
how
that's
translating
into
the
contribution
margins
for
the
segment,
given
they
are
possibly
the
highest
in
over
5
or

6 quarters? And how should we be thinking about this trend going forward? And the second question is basically with regard to ESOP expenses on a go-forward basis, given the new approval that

you
have
taken.
Those
would
be
my
2
questions.
Saurabh
Singh:
Hi
Manik,
thanks
a
lot.
There
are
2
points
to
your
question.
One
part
is
where
you
have
talked
about
the
contribution

margins
for
the
Flight
segment
being
highest
over
many
segments,
I
don't
think
that's
the
case.
Manik
Taneja:
No
I
said
many
quarters.

Saurabh
Singh:
Many
quarters.
Remember,
look,
part
of
it

it

is

not

out

of

any

range,

which

is

there.

In

fact,

if

anything,

I

have

been

investing

on

growth

there.

A

couple

of

things

on

the

take

rate

part.

One

of

the

take

rate

parts

is

if

you

see

my

flight

take

rate

is

mathematical,

like

it's

for

many

people,

where

a

large

part

of

my

take

rate

is

fixed,

and

the

underlying

flight

price

decides

what

my

take

rate

would

be.

So if you go back a couple of years and see the range of take rates that we have

given,

hence,

it's

the

variance

in

the

take

rate

is

there,

because

it's

the

underlying

price

and

it's

how

my

mix

moves,

because

as

the

core

of

our

business

still

lies

outside

the

top

4

metros,

my

underlying

price

would

be,

is

spread

across

different

places.
The other part with Slide 2 is what Rajnish mentioned with the bus answer.
And

it's

the

products

that

we

have,

it's

the

optimization

coming

of

age

of

the

value-added

products,

where

they've

been

starting

to

improve,

and

which

are

giving

you

an

improvement,

and

also

the

cross-functional

advantage

that

we

are

getting

with

products

like

PG

adding

on

to this.

Rajnish, would you want to add on the product side on this?

Rajnish Kumar:

No, I think on the flight side, the contribution margin, if you talk about why it has improved, obviously, there are new value-added services that we have built,

like

Price

Lock,

which

is

also

contributing

in

some

way.

But

there

are

existing

value-added

services

as

well,

which

are

getting

optimized

further

as

our

algorithms

start

seeing

more

and

more

data

and

keep
optimizing
and
improving
the
algorithms.
So
I
think
a
combination
of
all
of
those
things
is
what
is
causing
this.
I
think,
overall,
the
ancillary
attach
rates
are
optimal.
I
think
the

pricing algorithm attach rate, it's something that needs to be optimized at an algorithm level to make sure that it kind of derives the best

-

May

14,

2025
value for us. And I think that is a work that AI does beautifully. So we don't need

to

do

much

work

here

in

that

sense.

And

we

see

some

of

those

benefits

kind

of

coming

in

overtime

as

these

algorithms

keep

maturing.

Manik

Taneja:

Sorry

to
prod
you
on
this
one.
Just
to
clarify,
there
may
not
be
any
element
of
one-off
in
terms
of
any
one-time
GDS
incentives,
in
terms
of
true-up
for
the
full
year
or

similarly
from
a
VAT
standpoint
in
terms
for
Q4?
Aloke
Bajpai:
Yes,
Aloke
here.
There
are
no
one-offs
in
there,
just
to
clarify
that.
And
typically,
this
kind
of
incentive,
even
if
they

come,

are

prorated

across

the

period

on

which

they

are

applicable,

etc.

So

we

don't

recognize

it

as

a

one-off,

typically

even

if

they

come.

But

more

importantly,

I

think

as

a

percentage,

the

Contribution

Margin

hasn't

really

grown

if

you

see,

in

the

last

3

quarters,

our

stated

strategy

has

been

that

we

are

chasing

market

share

growth

on

flights.

We are doing it by allowing the percentage Contribution Margin to dip a bit, which

it

has,

right?

We

used

to

be

in

the

50s

at

one

point.

And

now

if

you

see,

it's

come

down

from

there.
And as a result of also the things that Rajnish described, obviously, it hasn't
dipped

as

much

as

what

it

would

have

if

the

AI

hadn't

kicked

in,

and

sort

of

improved

the

attach

rates

and

the

value

per

ancillary

sold,

etc.

So

I

think

in

that

sense,

we

are

striking

a

balance.

We

want

to

grow

as

fast

as

we

can
without
our
unit
economics
deteriorating,
and
I
think
we
are
happy
with
what
we
are
able
to
produce
now.
Manik
Taneja:
Sure.
And
the
last
one
was
for
Saurabh
in
terms
of

the ESOP cost going forward.

Saurabh Singh: Yes. ESOP cost going forward, sometime back, I told you that we would be roughly within the range of around 20 maximum. It might go

slightly

above

20,

because

as

we

have

already

declared,

we

have

got

a

target-based

incentive

plan,

which

the

shareholders

have

voted

on.

But

it

will

be

approximately

the

same

pin

code,

which

is

there.

And

remember,

in

the

new

ESOP,

which

we

have

got,

you

can

read

through

the

filing.

Now

that

it's

public,

it

doesn't

get

kicked

in

until

the

market

cap

limits

are

reached.
And what we have also done, and it's an important thing that we have talked

about
this
ESOP
plan
too.
So
I
thank
you
for
asking
this
question.
So
in
our
case,
what
we
have
tried
to
do
is
to
make
this
fair
in
terms
of
we
have

got

a

VWAP

over

a

month,

over

30

days

as

criteria.

We

have

got

a

market

cap

criteria.

We

have

got

a

time-based

criterion

on

this

to

just

ensure

that

it's

not

unfair

to
anybody
on
this
plan.
But
you
can
get
much
more
details
in
the
filings
that
we
have
done
on
this,
but
it
will
be
around
that
going
forward.
Manik
Taneja:
Sure.
Thank

you, and all the best for the future.

Saurabh Singh: Thank you.

Moderator: Thank you. The next question is from the line of Akhil from Hornbill Capital. Please go ahead.

Akhil Gulecha: Good evening, and congratulations on a great set of numbers. So you have grown nearly 40% in revenues this year. And clearly, the industry is not doing so well. And you have had 2 years of post-COVID boom, and now we have had a great quarter for the Maha Kumbh. How do you see this

going
ahead
in
the
next
few
years?
Because
these
are
very
high
numbers.
You
are
clearly
gaining
market
share.
Your
competitors
are
not
growing
as
fast.
So
what
gives
you
confidence
that
you

can

sustain

such

numbers?

Aloke

Bajpai:

So

first

of

all,

I

don't

know

if

you

have

seen

our

growth

trajectory

over

the

last

6

years,

right?

Like

if

you

go

back

to

pre-COVID

and

look

at

where

ixigo

is

today,

we

are

at

23x

of

the

revenue

that

we

had

in

FY

'19,

right?

And

our

CAGR

is

like

68%.

Even

during

COVID,

we

were

continuing

to
grow.
We
have
not
had
a
single
down
year.
And
I
think
some
of
the
things
we
have
described
earlier
today
are
factors
that
have
been
driving
that
growth,
which
is
our

ability

to

grow

user

base

through

product-led

growth

as

well

as

monetize

through

value-added

services

and

cross-sell,

upsell

better.
Now if I speak about the industry, right, like I think we have to break it in 2
parts,

right?

So

we

are

not

just

in

the

ticketing

business.

If

you

think

about
ixigo,
right,
we
didn't
start
out
as
being
an
OTA.
Even
today,
we
are
not
your
typical
OTA,
right?
Let's
put
it
that
way.
We
have
a
large
utility-based
reason
for
people

to

come

to

us.
We monetize through avenues that are built on top, and create a new TAM.
The

value-added

services,

I

believe,

create

a

new

TAM,

which

didn't

exist

earlier,

and

allow

us

to

sort

of

grow

disproportionately

faster

by

tapping

into

that

new

TAM.

And

I

think

if

you

look

at

the

industry,

I

will

actually

not

agree

with

what

you

said,

like

if

I

look

at

how

the

incumbent

is

growing,

and

if

I

look

at

how

the

overall

market

is

growing,

it's

pretty

healthy.
If you look at categories like buses, it's actually growing all around, right? It's
not

just

us.

If

you

look

at

flights,

I

think,

barring

the

supply

constraints

that

exist,

the

demand

is

there.

It's

very

strong.

People

are

paying
a
premium
on
fares
year-on-year
and
still
flying
85%,
90%
load
factors,
so
it's
nota
one-off.
There
is
no
major
impact
of
Maha
Kumbh.
Like
I
said,
it's
a
single-digit
percentage
GTV

contributor.

And

I

think

even

without

that,

we

would

have

grown

decently

well,

as

we

were

growing

even

last

year.

68%

CAGR

is

what

we

are

doing

on

revenue,

if

I

look

at

the
6-year
view.
Akhil
Gulecha:
Got
it,
Aloke,
but
that
is
the
past.
Now
your
base
is
much
bigger.
You
are
already
probably
the
second
largest
OTA.
So,
do
you
feel
confident
that

you can sustain the growth numbers on this basis as well?

Saurabh Singh: This is Saurabh. The first thing I would

say

is

we

don't

give

forward-looking

guidance.

So

I

would

not

comment

on

any

specific

number.

Having

said

that,

yes,

as

I

said

at

the

end

of

my

speech,

as

of

right

now,

we

believe

that

there

are

problems

to

solve

and

we

will

continue

to

solve

them.

And

from

what

we

see,

we

remain

confident

in

our

ability

to

solve

problems.
As a company, we have always believed that if we solve the right problems
and

if

we

do

the right things for the customers, monetization will follow. The logic remains the same. Nothing has changed for us in that sense. Aloke Bajpai: Yes. I would just like to add that we

are
still
nascent
in
many
categories
that
define
how
OTAs
are
built,
right?
So
in
those
categories,
I
think
we
still
have
a
lot
of
upside
in
the
years
to
come
waiting
for

us,
right?
So
it's
not
like
we
are
maxing
out
on
growth.
So
on
trains,
we
disclosed
this
last
quarter,
58%
share
of
the
OTA
market.
We
continue
to
grow
at
the
speed

that
we
do,
right?
So
by
that
logic,
we
should
have
been
tapering
out.
I
think
innovation
is
the
reason
why
you
can
find
new
growth
vectors.
And
I
think
this
is
a

company

that

has

always

managed

to

find

new

growth

vectors

every

year

or

two.

Akhil

Gulecha:

Got

it.

Got

it.

Thanks.

That

was

very

helpful.

Lastly,

on

the

Contribution

Margin.

So

that

has

seen
a
slight
dip
this
year
as
opposed
to
last
year.
So
is
it
because
the
value-added
service
component
has
increased?
Is
that
the
reason
or
is
it
because
your
performance
marketing
has

increased?

Of

course,

we

will

find

out

in

the

annual

report,

but

if

you

just

throw

some

light

on

why

the

contribution

margin

has

dipped?

And

how

are

you

seeing

performance

marketing

as

a
cost?
Saurabh
Singh:
So
what
we
have
said
in
a
regular
quarterly
basis
is
that
I
look
at
performance
marketing
discount
and
branding
as
a
combined
customer
inducement
cost.
And
it
will

be
between
3%
to
3.5%,
where
I
will
remain
comfortable
on
that.
And
in
that
sense,
I
kind
of
remain
there.
Yes,
the
combined
number
is
at
a
higher
end,
but
you
should

look

at

it

in

that

range

going

forward.

And

probably

in

some

sense,

if

you

look

at

that

in

another

context,

what

we

mentioned

earlier.
So if you go back to our first quarter or say, first quarter call, at that point in time,

as

I

said,

buses

were

giving

you

a
great
Contribution
Margin,
and
we
had
said
that
we
would
be
investing
in
growth.
The
underlying
business
is
growing,
as
in
if
I
look
at
industry
numbers,
everybody
talks
about,
OTAs
being

18%
CAGR,
the
world
takes
whoever
you
are
using.
And
we
believe
that
if
that
is
the
case,
that
the
underlying
business
is
growing
this
fast,
it
is
time
to
invest.
And
that's

what

we

are

doing.

We

are

investing.

But

I

think

the

answer

that

you

are

looking

for,

if

you

go

back

to

my

FAQ

1

or

2

quarters

back,

you'll

find

it.

Akhil

Gulecha: Okay. Understood. Thank you so much. And the resul
t has been incredible, so congratulations once again.

Saurabh Singh: Thanks.

Moderator: Thank you. The next question is from the line of Shrinarayan Mishra from Baroda BNP Paribas. Please go ahead.

Shrinarayan Mishra: Thank you for the opportunity. My first question was on the headroom

that

we

have

in

terms

of

cross-selling.

So

if

you

can

highlight

what

percentage

of

users

are

using

either

of

the

2

services

and

what

percentage

are

using

all

three

3

services,

that
will
be
great.
Aloke
Bajpai:
Yes,
so
Aloke
here.
I
think
at
this
point,
we
don't
disclose
this
particular
metric,
but
it's
a
great
input.
Perhaps
at
some
point,
we
should
look

at
talking
about
it.
What
I
can
tell
you
is
that
there
are
2
things
you
can
track,
which
give
you
some
sense
of
this.
One
is
how
fast
we
are
able
to

grow

in

the

flight

and

bus

line

of

business.

I

think

a

very

significant

part

of

the

answer

lies

in

our

ability

to

cross-sell,

upsell

better.

And

now

with

hotels

also,

we

are

seeing

the

ability,

because,

like

Rajnish

said,

we

are

not

spending

any

money

outside

our

ecosystem

to

acquire

users.
So there is no brand or performance marketing, et cetera, we are doing for hotels

at

this

point,

largely

whatever

growth

we

are

driving

internally

through

cross-sell,

upsell.

And
similar
is
the
case
with
Zoop,
so
most
of
the
food
orders
that
we
are
doing
there
are
now
largely
coming
from
within
our
ecosystem.
And
I
think
there
is
still
a

huge

headroom.
Just to give you one sense of this, right, there is still a significant number of people

who

use

our

apps,

just

for

utility

and

do

not

book

yet

with

us,

right?

I

think

the

biggest

headroom

still

for

us,

lies

in

that

bucket.

Shrinarayan

Mishra:

Okay.

Okay. So, how much would that user base be, which is just for utility purposes?

Aloke Bajpai: Yes, you can look at the MTU, MAU ratio, right? We have disclosed this in

our
presentation,
if
you
go
and
see
there,
but
we
have
basically
crossed
4%
there.
It
used
to
be
early
3s.
So
we
have
managed
to
sort
of
increase
that,
which
is
a

sign

of,

again,

how

well

we

are

able

to

sell

to

our

own

users,

right?
Saurabh Singh: So, the top of the funnel if you see on a monthly basis, it's our MAUs, it's 82 million,

we

have

got

monthly

actives,

which

is

the

top

of

the

funnel,

and

that

is

the

potential

which
you
are
talking
about.
Shrinarayan
Mishra:
Okay.
Okay.
Got
it.
Got
it.
And
second
question
was
on
the
Bus
segment.
So
will
it
be
possible
for
you
to
give
the
market
share

geographically? So I was trying to gauge how the Bus segment, where this growth will be coming from?

Aloke Bajpai: See,

the
Bus
segment,
the
good
news
is
that
there
are
3
things
happening
there.
One
is
supply
expansion,
which
is
that
existing
operators
are
adding
new
buses,
and
new
operators
are
coming
in.

So
we
had
the
likes
of
FlixBus,
NueGo,
Fresh
Bus,
et
cetera,
entering
the
market
in
the
last
couple
of
years.
We
have
existing
operators
like
even
Intercity,
Zingbus
and
all
who
have

added

supply

in

the

last

couple

of

years.
The second thing is the premiumization, which we were talking about, which is

moving

from

non-AC

to

AC

buses,

moving

from

just

government

to

private

as

well.

Those

2

things

are

also

happening.
The third part, which is penetration, is that only under 20% of bus tickets get booked

online

today.

And

that
sort
of
penetration
number
will
move
over
time,
right,
because
in
other
verticals,
that's
much
higher.
But
on
buses,
there
is
still
a
lot
of
scope
to
move
this
metric
as
the

market

expands.
So experience will matter a lot, because it's a very last fitted product, right?
So

it's

the

last

people

who

typically

realize

that

they

need

to

book

a

bus

in

the

last

2,

3

days.

So

I

think

a

lot

of

it

is

being

able

to

target

the

right

user

at

the

right

time.

And

also

get

the

experience

right,

so

that

people

come

and

book

with

you.

And

on

the

experience,

we

have

launched

a

few

things,

maybe
Rajnish
can
talk
about,
which
are
also
helping
this
expansion.
Rajnish
Kumar:
So,
on
the
experience,
as
you
would
have
noticed
that
our
ratings
from
the
app
store,
at
least
for
AbhiBus

have

been

constantly

increasing.

We

are

at

almost

4.8

now.

This

is

something

that

is

proof

of

the

fact

that

the

product

experience

has

significantly

improved.
And some of the examples of the things that we have done are things like
Bus

Insights

that

we

talked

about

in

the
call,
which
have
significantly
improved
the
confidence
of
customers
trying
to
book
a
ticket.
Abhi
Assured
was
one
such
product
we
built
in
the
past,
which
has
helped
us
build
that
confidence

in

customers

to

book

with

confidence,

right,

whether

you

get

cancelled

or

not

and

whether

for

service

level

reasons,

etc.

You will never be let down all of it seems to be refunded, most of it or even more

than

that

in

certain

situations,

where

service

level

promises

were

not

delivered.

So

this

has

always

been

our

effort,

and

I

think

we

have

been

using

now,

AI

tech

and

data

science,

all

the

more

to

kind

of

create

these

kinds

of

experiences

where

we

can

predict

exactly

what

bus

gets

assigned

to

you,

what

case

the

bus

has,

etc.

And

people

can

kind

of

make

that

decision.
The problem with buses as a category is always because the inventory is so fragmented

and

unpredictable

that

you

generally

don't

know

what

kind

of

bus

you'll

get,

or

what

the

experience

of

travel

experience

will

be.

Giving

people

that

kind

of

insights,

using

Bus

Insights

product

is

helping

people

make

that

decision

and

is

letting

them book with confidence.

So we are seeing that kind of product and features also result in revenue and margins, although the intent was just to solve customer problems, right? But the side effect was that

it

led

to

better

stickiness,

it

led

to

better

conversion

rates

,

and

then

eventually,

we

were

able

to

kind

of

drive

higher

revenues

and

margins.

Moderator:

Thank

you,

sir.

Ladies

and

gentlemen,

that

was

the

last

question

for

today's

conference

call.

I

now

hand

the

conference

over

to

the

management

for

closing

comments.

Aloke

Bajpai:

Thank

you.

I

would

like

to

thank

everybody

who

has

joined
the
call
today,
and
we
will
speak
to
you
again
very
soon.
Have
a
great
day,
good
night,
depending
on
where
you
are.
Take
care.
Moderator:
Thank
you.
On
behalf
of
DAM

Capital, we conclude this conference. Thank you for joining us, and you may now disconnect your lines. Thank you.

Call: Jul 2025

July 23, 2025 LTTL/L&S/2025-26/07/24
To,
The Listing Department, BSE Limited, Phiroze Jeejeebhoy Towers, Dalal Street, Mumbai - 400 001 Maharashtra, India The Listing Department,
National Stock Exchange of India Limited, Exchange Plaza, C-1, Block G, Bandra Kurla Complex, Bandra (E), Mumbai - 400 051 Maharashtra, India
Dear Sir/Madam,
Sub :
Announcement under Regulation 30 of th e SEBI (Listing Obligations and
Disclosure Requirements) Regulations, 2015 - Transcript - Earnings Call -
Financial Results for the qua rter ended June 30, 2025

Ref : Le Travenues Technol ogy Limited (the "Company")

BSE Scrip Code: 544192 and NSE Symbol: IXIGO

In compliance with Regulation 30 and other applicable provisions of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 (as amended), please find enclosed the transcript of the Earnings Call conducted on July 16, 2025, pertaining to the financial results of the Company for the quarter ended June 30, 2025. This is for your information and records. Thank you, For Le Travenues Technology Limited
Suresh Kumar Bhutani (Group General Counsel, Company Secretary and Compliance Officer)
Le Travenues Technology Limited ("ixigo")
Q1 FY26 Earnings Conference Call
July 16, 2025
Management Representatives:
●Mr. Aloke Bajpai, Chairman, Managing Director and Group CEO
●Mr. Rajnish Kumar, Director and Group Co-CEO
●Mr. Saurabh Devendra Singh, Group CFO
Moderator:
●Mr. Anmol Garg - DAM Capital

Moderator: Ladies and gentlemen, good day, and welcome to the Le Travenues
Technology Limited Q1 FY '26 Earnings Call, hosted by DAM Capital
Advisors Limited. As a reminder, all participant lines will be in the listen-only mode, and there will be an opport unity for you to ask questions after
the presentation concludes. Should you need assistance during the
conference call, please signal an operator by pressing star then zero on your touch-tone phone. I now hand the conference over to Mr. Anmol Garg
from DAM Capital Advisors Limited. Thank you, and over to you, sir.
Anmol Garg: Thank you, Zico. Good evening, everyone. On behalf of DAM Capital, I
welcome you all to ixigo's Q1 FY '26 Earnings Call. We have with us Mr.
Aloke Bajpai, Chairman, MD and Group CEO of the company; Mr. Rajnish Kumar, Director and the Group Co- CEO of the company; and Mr. Saurabh
Devendra Singh, Group CFO of the company.
Before I hand over the call to Aloke, I would like to highlight the safe harbor
statement on the second slide of the earnings presentation, and it is
assumed to be read and understood. Thank you, and over to you, Aloke.
Aloke Bajpai: Hello, everyone. This is Aloke here. Welcome to our Q1 FY '26 earnings call.
We kicked off FY '26 with a fantastic quarter for the ixigo Group. We have
managed to beat our own expectations and continue to grow at a strong
pace despite this quarter having its share of challenges for the broader market.
Q1 FY '26 had a few events that impacted the aviation market in India and
the region. Operation Sindoor led to a temporary airspace closure across
parts of North India in May, affecting flight operations for nearly 8 to 10
days. While this was a significant disruption during the period, the post-event recovery has been swift, and the ecosystem has adapted quickly.
The tragic AI 171 crash in June created another setback due to the dent in
morale and passenger confidence in the immediate aftermath. In addition
to this, the airspace closure in Pakistan as well as the airspace disruptions
in the Middle East during the Iran, Israel situation led to some dampening of international flight growth in the interim.
Air India also voluntarily cut 15% of its international wide-body flights till

mid-July to accommodate enhanced safety inspections. And then the Middle East airspace closures affected many carriers as well towards the end of the quarter.

While all this is normalizing, we believe that quarters like these, which have some headwinds, give us an opportuni ty to test our customer-oriented mindset. In Q1 FY '26, our team saw spikes in customer reach out for reschedules, cancellations and alternate arrangements. With the help of our AI augmented customer support and newly launched voice AI capabilities, we got the ability to go above and beyond for our customers, and we were able to demonstrate more agility and responsiveness in these situations, helping us to continue to gain market share.

Penetration of air travel in India is still in its early innings compared to global benchmarks, and we see headr oom for growth, particularly from regional airports and underserved segments. Just over 4% of Indians travel on flights compared to 37% plus in China and 85% plus in the U.S. And once the GDP per capita crosses the $400 mark in India, we expect discretionary to flow further into flight and hotel categories.

India's airport infrastructure is also undergoing a transformative expansion, with a number of operational airports doubling from 74 in 2014 to over 160 in 2025. The government is targeting 200 airports by next year and 240 airports by 2030, through an INR 92,000 crores investment push. The regional connectivity boom backed by INR 60,000 crores in private terminal upgrades, unlocks massive dema

nd from tier 2, 3 cities, where ixigo already has a very deep market penetration.

Our multimodal capabilities and personalized offerings position us perfectly to serve and scale with this next wave of Indian air travelers. In our bus business, we have strategicall y been prioritizing growth over near-term margin optimization for a few quarters now, given the sheer size of the opportunity in front of us. That philosophy remains unchanged. Bus travel in India is also undergoing an inflection point. Despite the segment scale, only 20% of bus bookings happen online, leaving vast room for digital expansion.

Simultaneously, most buses run at 60% to 70% capacity while trains and

flights on parallel routes are frequently wait-listed or overbooked. This supply-demand mismatch, coupled with rising expectations around travel comfort and flexibility, presents a massive opportunity. Private operators are already upgrading their fleets, and bus travel is now happening on clean, modern buses and is being marketed as a preferred mode of transportation for Gen Z travelers. This growth is being further accelerated by the massive expansion of India's road infrastructure.

We've been expanding our geographic footprint, AbhiBus, which initially had strongholds in South and West I ndia, now has a growing presence in the North and East as well, and our partnerships spanning both private fleet operators and SRTCs across the country have continued to grow. These relationships are foundational to our ab ility to scale efficiently.

Our bus partners are working more closely with us than ever before to identify ways in which we can help their business not just grow but also market their new routes, bus amenities and improved passenger experience.

This quarter, we've made significant strides in cross-selling buses and flights both across our ecosystem on ixigo, ConfirmTkt and AbhiBus apps and websites, thanks to proprietary tech enhancements and products such as Travel Guarantee, which offer customers flexible multimodal alternatives, capturing spillover demand from wait-listed customers.

Our biggest achievement has been our ability to maintain leadership in the OTA category in terms of user base, not by outspending competition, but by continuing to see a lot of organic product-led growth as well as word-of-mouth about the overall customer experience we've built, leading to market share gains on all three lines of business that we operate in.

On the train front, our market share has now crossed 60%, up from 58% two quarters ago. We have recently seen some minor volatility due to a

series of passenger-oriented policy changes introduced by Indian Railways.
However, our train business remains res ilient, and our user experience has
continued to improve, which is reflected in our rising App Store ratings as well as our growth.
I'm pleased to report that now we operate India's highest-rated travel apps

by far. ConfirmTkt and AbhiBus have both got a 4.8-plus rating on the
Google Play Store. ixigo flights have crossed 4.7, and the ixigo trains app is
4.6 plus. And we have a staggering 50-plus lakh user ratings, 5 million-plus
ratings on the store across these apps, reflecting our scale.
For the first decade of our existence, our entire growth story was organic,
and we spent almost nothing on brand and performance marketing. It was only in 2023 that we began making deliberate long-term investments in the
brand, once we gained more confidence in the superiority of our product
and customer experience.
We recognize that top-of-mind recall, brand affinity and trusted scale not
only serve as a long-term moat, but also materially improve conversion rates and the effectiveness o

f our performance marketing channels once
product-led growth has established a strong base of early adopters.
This quarter, we ramped up brand spend in line with growth and ran a
major ixigo anniversary sale and flat sales for flight and hotels in which we
leverage AI into our marketing workflows. Our AI video production cost is
0.1% of what it would be with traditional campaign production. On the
train side, we've entered into various brand partnerships, most notably
with Rohit Sharma for ixigo trains, which help drive awareness and
adoption of our Travel Guarantee features and improve top-of-mind recall,
particularly in North India.
On the bus side, AbhiBus partnered with Chennai Super Kings and the Tamil
Nadu Premier League, while ConfirmTkt collaborated with the Royal
Challengers Bengaluru team. The RCB partnership gave us nationwide
visibility especially during the iconic 18th year title win, an emotional high
recall movement that coincided with ixigo’s 18th anniversary.
These campaigns were not just about visibility, they were about building
deep user trust and emotional resonance across markets. Our line of
business owners may choose to prioritize between performance marketing
discounts or brand building initiatives based on when and where they see
most value for these throughout the year.
And we focus on measurable outcomes such as the baseline shift, the
stickiness and repeat behaviour of the incremental traffic as well as lift in

conversion rates across organic and performance channels. Since this is a
multiyear exercise, some of these efforts may not show material impact
immediately, but early results indicate these initiatives are working for us,
and we'll continue to do them within specified guardrails.
Our strategy of building for Bharat, staying asset-light and creating deep
user trust over years is what has led to the kind of growth you have seen at ixigo over the last few years. The gross transaction value CAGR of 83.7%
over the last 6 years or EBITDA CAGR of 84.3% since we turned profitable
in FY '21 are a reflection of what execution-DNA we've built over time.
Over the next few years, I believe that we can continue to grow significantly
faster than the market in hotels, buses and flights and in line with the online market growth in plain with multiple optionalities for new latch on
additions such as what we did with food delivery on the trains business.
Travel is an inherently unpredictable experience due to constantly
changing prices, availability, terms and conditions, finding trains and all. At
ixigo, we believe it's not just our responsibility but our duty to offer not just
tickets, but peace of mind to our users. Our unique peace of mind stack of
value-added services allows us to reduce anxiety, protect downside and
increase predictability for our customers. And our ability to use AI to price
and personalize all these products ha s been accretive to our growth and
margins.
We are now able to use a large user base and trust built over years to move
up the value chain and grow faster in new categories such as flights and

hotels. Very few companies have been built this way in India since more
chose to focus on the top 50 million consumers only. But since the
proverbial pyramid will now become a diamond as middle-class India growth or I should say Bharat, ambitions and wallets continue to expand,
consumer discretionary categories will continue to see disproportionate
growth.
Travel continues to be in the top three things people want to spend on to
improve their lifestyle. And when you look at buses, budget hotels, tours,
etcetera, online penetration is only getting started. Finally, I'd like to point
out that our business has a seasonal cadence. Q1 and Q3 tend to be strong
quarters due to vacations and major festivals.

Q2 is historically a leaner period while Q4 sees regional surges, particularly
in South India, driven by festivals like Pongal, Ugadi and the regional New
Year celebrations. Despite this seasonality, we remain well-positioned to sustain Y-o-Y growth faster than the overall market in the near to mid-term.
With that, I'll hand over to Rajnish, who will talk about something we have
been talking about for many, many years, but people have recently started
paying more attention to, which is AI and our reinvention to an Agentic
organization. Over to you, Rajnish.
Rajnish Kumar: Thanks, Aloke. So Aloke talked about why we are growing the way we are.
But I believe this growth is a privilege that has to be earned and re-earned every single quarter. Our conviction comes from a clear understanding of
what drives our differentiation, which is the ability to identify, design and
deliver tech-led innovations, at par with what we call our Peace of Mind
product stack, features that reduce anxiety, improve reliability and simplify
complex travel decisions.
This focus has enabled us to acquire and retain customers cost-efficiently,
even in competitive markets, whether it's delay predictions, intelligent fare
locks or multimodal routing. We are not just optimizing bookings. We are
elevating the experience of travel. That's what fuels our continued
momentum. At ixigo, our journey with Agentic AI started as early as 2017. When we introduced our travel assistant and recommendation agent,
better known as TARA today, an award-winning multimodal agentic travel
assistant. TARA was way ahead of its time.
It was autonomous, pre-emptive, multimodal with voice and app-based
and hyper-personalized. It could understand our users' past travel patterns, preferences, loyalty programs, everything else to make intelligent travel
decisions, showcasing our early beliefs in the power of agentic systems to
transform the travel experience.
Fast forward to today, agentic AI is now deeply embedded across our
business, enhancing efficiency, personalization and autonomy at scale. From real-time fare trackers and price prediction agents to autonomous
web check-in agents that deliver your boarding pass straight to your Apple
or Google Wallet, much of what a user experience is on ixigo today is

already powered by invisible agents working behind the scenes, interacting
with complex third-party interfaces to get your job done efficiently and pre-
emptively.
Internally, we are driving significant productivity gains through our Project
Trishul, our three-pronged AI-first infrastructure strategy, centered around
efficiency, revenue and disruption. Automated testing, intelligent code generation, smart deployments, rollbacks and ML-driven pricing models for
products such as Price Lock and Assured all run on self-governing agentic
pipelines.
Teams across HR, finance and marketing use DIY agentic tools to automate
workflows, generate content or even deploy voice agents that run all customers or partners autonomously. One of the most powerful
applications of Agentic AI at ixigo is in voice agents. Today, more than 60%
of our customer support voice interactions are handled end-to-end by fully
autonomous AI agents.
These voice agents don't just respond, they proactively call customers to

deliver critical travel updates, collect NPS scores or feedback and even
follow up with business partners on behalf of our users or internal teams.
This is saving time, improving service levels and enabling proactive
customer care at scale. Democratization of agentic AI across the
organization is a key part of our strategy as well.
Anyone at ixigo can build, test and deploy autonomous workflows without
needing an engineering b

ackground and without having to write a single
line of code. As for the future, we believe travel apps will evolve into
conversational multi-model and hyper-personalized autonomous agents,
not just recommending but doing for you.
From booking your trip at the optimal time to reserving your travel at a
restaurant on arrival, future travel assistants will act, not just advise. And
to power this, they'll need real-time inventory, context-aware decision
systems and value-added services, all of which ixigo is uniquely positioned
to provide.
A lot of people ask me what percentage of our code is now AI-generated.
And I think the commonly coded metric, X% of our code is now AI-

generated is fundamentally flawed if you're trying to really measure the
real impact of AI in software engineering. And the reason is simple, coding
itself is not the main bottleneck in software development.
In most real-world engineering workflows, writing code barely accounts for
about 20%-30% of a developer's time. The remaining 70-80% is spent on
far more cognitively intensive and collaborative tasks like system design, architectural planning, writing detailed documentation, thinking through
edge cases, defining interfaces, creating test strategies, setting up CI, CD
pipelines, etcetera.
In that context, even an AI assistant can generate 80% of your code. That's
still just a productivity boost on a small slice of the overall effort. And mathematically, it amounts to only about 15% to 20% efficiency gain at
best. And that's assuming a near-perfect AI-generated code, which often
still requires a lot of review, debugging, refactoring, etcetera.
So more of a code generation has been getting incrementally easier over
years, whether it's by autocomplete in the early version of CoPilot or
people just copy-pasting stuff from Stack Overflow. But more recently, with
tools like Copilot or Cursor, etcetera, those things have evolved a lot. So
while these are impressive evolutions in productivity, they are at best
evolutionary, not revolutionary.
Where AI is now playing a role in tracking, in tackling the upstream and
downstream parts of the software development lifecycle, from exploring
trade-offs to helping with design and architecture decisions, generating
documentation, writing test cases, creating mocks or deployment scripts,
and managing infrastructure code, or handling observability and rollback
logics for self-healing failures. This is where Agentic AI becomes especially powerful, not just passively generating code when prompted, but through
actively owning parts of the entire software engineering process.
So rather than asking what percent of our code is AI-generated, a better
question would be what percentage of the end-to-end engineering process
is now autonomously handled or significantly accelerated by AI? And for us, that number currently would be north of 40%. When it comes to
leveraging emerging AI models and tools, we have taken a forward-leaning
experimental approach, both to enhance internal efficiencies and to power

new customer-facing experiences.
We recognize that we are still in the early innings of what is effectively a
new industrial revolution. The AI landscape is evolving at breakneck speed, with no single model, platform, or framework having yet emerged as a clear
long-term winner for deep-scale investment. In such a dynamic
environment, we believe it's critical to stay agile and continue investing in cutting-edge technologies and capabilities.
These technology expenditures may not immediately translate into
operating leverage in the short term, but when one of these bets pays off

and a particular use case matures and can be deployed at scale, it un

locks
significant operating leverage and competitive advantage. Our philosophy is to stay ahead of the curve, absorb the learning costs today, front-load it,
and build a defensible mode that compounds over time through
proprietary AI-driven efficiencies and user delight.
The other question I get asked frequently is whether Agentic AI will disrupt
OTA businesses. Agentic AI may pose risks for those who don't adapt, but
for us, it's a once-in-a-decade opportunity to leapfrog. We're not only ready
for this shift, we've been building towards it for years. If you want to
measure how good a company is at AI adoption for accelerating growth and
efficiency, the best measures would be to look at their revenue per
employee.
For us, last quarter, we crossed INR 2.2 crores annualized revenue per
employee in Q1, or roughly USD 256,000, which even on global
benchmarks, is pretty decent. We believe this is just a start. In FY '25, we
managed to grow our revenue nearly 40% while growing our employee
base by less than 10%, in spite of ad ding newer business lines like hotels,
food on trains, etcetera, which will require a couple of years to scale. This
is only possible if the mindset inside the team is to use technology and AI
instead of just hiring more people.
And with that, I'll not bore you further and pass it to my friend who has a
unique knack of being good with both numbers and people, Saurabh Devendra Singh.
Saurabh Singh: Thanks, Rajnish. And you are not even close to being boring. In fact, I have

to tell the larger forum, I feed on Rajnish discussions on AI. In fact, I
regularly get inspired by them. A few days after our last quarterly call,
inspired by Rajnish and the work he's doing on AI, I fed all our past
presentations, financial for 6 years, annual reports, DRHP, and conference call into an artificial intelligence model that I've been using a lot recently
just to see what it comes up with.
I requested AI models to give me a hopeful best case prediction for this
quarter. The model came out with three outcomes, outcomes that were
back then classified as highly optimistic. One, ixigo would build on its momentum, gain OTA market share across every segment we operate in.
Two, ixigo would kick off FY '26 with record revenue and more notably,
record profit.
And three, I, Saurabh Devendra Singh, would finally stop saying hmm after
every couple of words and lose the fumble or the retroflex, sa and dha , that
heavily defined my conference call accent. I'm happy to report that AI got
two of the three right. Okay, jokes apart, let's walk through the highlights
of Q1 FY '26.
As always, all the figures are in rupees crore, unless specified otherwise.
Year-over-year comparisons are made for Q1 FY '26 against Q1 FY '25.
Starting with the headline numbers, our gross transaction value, GTV
reached INR 4,644.7 crores marking a 55% increase over INR 2,988.1 crores that we saw in Q1 last year. Revenue from operations stood at INR 314.5
crores, up 73% from INR 181.9 crores in Q1 FY '25. Contribution margin
grew to INR 128.1 crores, marking a strong 48% year-over-year increase.
Contribution margin percentage stood at 40.73 versus 47.74 in the prior
year. The decrease in percentage wa s as per plan and as Aloke talked
about, driven by our focused investments in driving growth and strong
performance of cross-sell products like Travel Guarantee. We've talked a
lot about this in the previous FAQ in case somebody wants to dig deeper.
Adjusted EBITDA, excluding other income and ESOP costs, improved to INR
31.4 crores compared to INR 20.3 crores last year, an increase of 54%. Profit after tax came in at INR 18.9 crores compared to INR 14.9 crores in
Q1 FY '25. There are some one-off/callouts in this number, which I will
discuss in the end.

Turning now to our individual busine ss lines. For Flight, this was a

challenging quarter with several unfavourable developments in the macro
environment, which Aloke alluded to in his talk. Despite these headwinds, the supply team has risen to the occasion, staying focused on delivering
peace of mind to our customers.
Our suite of value-added products have played a key role in maintaining
the strong performance and building customer trust during these times.
The numbers reflected that. We booked 2.79 million flight segments with GTV rising to INR 1,848 crores. Contribution margin grew to INR 43 crores,
representing a 42% contribution margin percentage. Flights accounted for
33.5% of the group's total contribution margin this quarter.
Our bus business operates out of Hyderabad. And like the city itself, is a
seamless blend of the traditional and the modern. The business pairs deep-
rooted empathy for customers and operators with cutting-edge technology
to drive efficiency and scale. Fittingly, the results this quarter were fully
balanced, calm, steady and right on plan.
This quarter, we completed 6.67 million passenger segment bookings,
marking a 74% year-over-year increase. GTV rose 81% to INR 681 crores.
Contribution margin for the category grew 44% to INR 42.3 crores with a
contribution margin percentage of 55%, a planned tapering consistent with what we talked about in Q1 FY '25 conference call.
Buses contributed 33% of the group's overall contribution margin in Q1 FY
'26. The pace of growth of the trai n business continues to surprise me
personally. We have a dominant position in this business line. And in that
context, the fact that this business continues to grow significantly faster than in the train OTA market is extraordinary.
In Q1 FY '26, we booked 26.6 million train segments, marking an impressive
26% Y-o-Y growth. GTV stood at 2,055, a 30% rise. Revenue from
operations was INR 129.9 crores, up 29% and contribution margin came in
at INR 41 crores, up 14% and at a 32% contribution margin.
The train segment contributed 32% to the overall contribution margin, the
group contribution margin. Now as promised, let me discuss the one-off

items and the callout. Now in Q1 FY '26, the share of loss from FreshBus,
which is an associated company, was INR 2.34 crores. For Q1 FY '25, there
was a revaluation gain of INR 5.77 crores on Freshbus, share of loss from
Freshbus of INR 2.01 crores and IPO expenses of INR 2 crores charged to the P&L.
Now if I was to compare on a like-to-like basis by excluding all these items
in both periods, our profit before ta x would have increased by 76.2% from
INR 16.2 crores to INR 28.7 crores. So what do I expect from the rest of FY
'26 and beyond? To answer that, we'll have to start with the reality of what we are stepping into.
Artificial intelligence isn't just another trend, it's a seismic shift. On par with
the invention of the wheel, printing press or maybe even greater. It's
already reshaping how we think, build and adapt. And in moments like
these I'm reminded of a line often misattributed to Charles Darwin, but
actually written by Leon C. Megginson in 1963 when he reinterpreted
Darwin ideas for the business role.
“It is not the most intellectual of the species that survives, it is not the
strongest that survives. But the species that survives is the one that is best
able to adapt and adjust to the changing environment which it finds itself
in.” That insight has never been more relevant. And as Aloke and Rajnish
have talked about, we are ready.
There will be quarters like this one, full of energy growth and the sale of
getting things right. And then there will be quarters that humble us, when
we reflect, recalibrate and learn. But

through both of our - through both
our compass will remain steady. Empathy, honesty and adaptability. With
that, I'll hand it back to the moderator for questions.
Moderator: Thank you very much. We will now be gin the question-and-answer session.
Our first question comes from the line of Anmol Garg from DAM Capital.
Please go ahead.
Anmol Garg: Hi, guys. Thanks for the opportunity and congratulations on very, very
strong performance. Just a few questions. Firstly, I wanted to understand what led to a sharp increase in the take rates in the flight business in this
quarter. We have now reached almost at a 9% kind of take rate. And is this
sustainable going ahead?

Saurabh Singh: So yes, there are a couple of things. So one is that the underlying ticket
price has gone down. It's a fixed business. Second, as I said, we have what
we call a peace of mind or value-added services product and I've talked about how some of them have done well. It's such a combination of these,
which are leading you to feel as though the take rate is higher, but
remember a large part of what we have in the take rate as a percentage is a fixed amount.
And thirdly, you have to realize that in place, what has led to some of the
things is also the fact that we've run promotions. So look if you see us
compared to others and as I've mentioned multiple times before, we look
slightly different because we are more domestic. And domestic is the underlying amount, it's a lower ticket item.
Our geographical shifts are different. So on the take rate, going back to your
original answer on a take rate percentage, yes, we don't look at it that way
as a take rate percentage because I don't control the price of the tickets. I
control what I take as commission. But what we take a commission and
what our attach rate for our products should be, we remain confident on
that.
Anmol Garg: Understood. And secondly, I wanted to understand that while our bus
segment is growing at a very fast rate. However, if I look at the contribution margin here, on a Y-o-Y basis, it means that it has dropped almost 20
percentage points. Now is this because of this onetime IPL advertisement
that we have done in this quarter or do you think that this is the range that
it will be going ahead as well?
And from that perspective, overall margins for the company, should we
expect the leverage to come in the overall margins or the focus currently
will be on the growth side?
Saurabh Singh: So let me break the question down in a couple of parts. The easiest part
out of these is that whenever we are doing branding, that will come below
because we see branding as more long-term. And I think Aloke has talked about the IPL in buses that we have do ne, why we've kind of done it for the
Tamil Nadu market, which is where we've been focused on.

Look, a year ago, we talked about we were in the mid-70s as a contribution
margin, and we talked about that we see this as a very low penetration
market. We believe it can grow. And when I look at the numbers right now,
I know that looking at the contribution margin percentage is important in a lot of cases. But for me, the growth of 44% in the actual absolute
contribution margin is very important, especially in an industry or in a
sector where it's underpenetrated, it's very underpenetrated.
So we have been focusing on that. Is it something where we feel that this
is a number that if we continue growing like we are would we be comfortable with this kind of CM? Yes, we would be. But I would say on
both sides that, and I said it multiple times before, I don't believe that you'll
see all quarters being 81% growth in bus es. I think we're doing well. I hope
we continue doing as well

. But we'll keep a look out here in that sense. And
in terms of what we have, our CM is a very controlled expense. We can
manage it because it's on a per unit basis. It's much easier to manage.
Aloke Bajpai: Also, Aloke here, the brand expenditure is not knocked up from CM, it's
actually below. So I don't think brand has played a role here. It's largely
discounting performance and variable costs that is knocked off from the
CM side in that sense.
Anmol Garg: Understood. And so should we expect that for the full year basis, we will
see some kind of operating leverage benefit to the company.
Aloke Bajpai: See, operating leverage on the fixed cost level is already visible. It's just that
we are reinvesting that into multiple areas, right? So if you think about new
initiatives like hotels or some of the AI initiatives that Rajnish was talking
about are also things like food delivery on trains and things. Those are areas
where, as a company, we are pushing the pedal on saying, okay, how do we capture the market opportunity, how do we build out.
So despite those investments, etcetera, we are essentially seeing this kind
of operating leverage play out. So have we not been making those new
initiative investments on the operating leverage, will be more visible in the

bottom line? But we choose to do that because we want to continue to grow fast and seize on those opport unities. So that's what Saurabh was
alluding to.

Saurabh Singh: And the other part, which you said, this quarter, and as I've said that
multiple number of times, you have to realize the branding is bunched up
together. What you're seeing is the branding cost right now, the amount
that we are putting that on branding, which is below CM and above EBITDA. That will kind of spread across the year. This quarter was a heavy branding
quarter because of the IPL being there. So a little kind of balance out.
Anmol Garg: Understood. Understood. Sure. Thanks, guys, for answering my question.
I'll get back in the queue.
Saurabh Singh: Just, I think Rajnish wants to add.
Rajnish Kumar: Yes, just one more thing that I wanted to add is that there are new business
lines which are very far, far away from reaching operating leverage. In fact,
they are in the buildout phase, and they are like a bigger cost centre than
all of the other businesses. So you might not completely see that operating
leverage. There's some absorption of that happening because of these new
lines of businesses like hotels and food on trains, etcetera.
Anmol Garg: Sure. Understood.
Moderator: Thank you. Our next question comes from the line of Swapnil Potdukhe
with JM Financial. Please go ahead.
Swapnil Potdukhe: Hi, guys . Thanks for the opportunity and congratulations on a very good set
of numbers again. My first question is with respect to your Travel
Guarantee feature. I would like to know what percentage of your flight
business and the bus business in this particular quarter came from this
feature that you have been running and what would be the contribution in
GTV terms? So how would you like to explain?
Saurabh Singh: Swapnil, I would have loved to give you a lot of details, but we don't declare
that. So the answer would be, we can't tell you because we don't declare
that.
Swapnil Potdukhe: Yes. But would it be fair to say.
Aloke Bajpai: Just to say something here, I mean, even if you look at just the fact that
even when we hadn't launched Travel Guarantee, we were able to grow at
a certain velocity even 2 quarters ago. I think we are starting off at a very

low base of market penetration when we started our flight business just
about 4-5 years back. So in that sense, I think there is still a very, very, very
long runw

ay even outside of the additional delta that Travel Guarantee
might be adding in terms of upsell, etcetera. So I think in the larger scheme of things, it will look like a smaller piece.
Swapnil Potdukhe: Okay, Aloke.
Saurabh Singh: And I would recommend this. Last quarter, if you go to our FAQ, we did a
very detailed explanation of how we think of this product. So you can just go through that part and you'll get a lot of your answers on this product
thematically.
Swapnil Potdukhe: Right. Great, sir. But if I were to just prod you a bit more. I mean, yes, you
may not give me any numbers per se, but any sense as in, incrementally,
how much is that growth coming beca use of this future. And also because
of not just Travel Guarantee, but also your partnership with someone like
a PhonePe, which has been there for 1-year now almost, but because I'm
just trying to triangulate things because your contribution margin has been
a bit under pressure. So where exactly growth is coming from?
Saurabh Singh: So firstly, Swapnil, I think you are slightly different on the definition. When
I say contribution margin, it's a rupee crore number, contribution margin
percentage is what you are referring to?
Swapnil Potdukhe: Yes, I'm talking about the percentage.
Saurabh Singh: So, I'd like to kind of clarify that part. The second part is to realize, look,
contribution margin percentage is something you look at. And when I look
at them, which is what I'm saying, in each of these businesses, when I introduce a new product and which is why I'm saying -- I've given that logic
in a lot of detail in the last FAQ, when I introduced a new product, I then

decide on what I want to optimize on. Am I optimizing it on margin, or am I optimizing it on usage?

Now a couple of things from our side is we don't like having a loss-making product sustainably for a very long time. So when we look at it, we say that, firstly, we are able to launch the product and why we can launch the product at probably a more optimized cost than anybody else is because of

what Rajnish talked about in his section, in the AI and products that he is launching.

So when we launch a product, we kind of take that call saying, look, in the initial parts of the product, I don't want to get a crazily high margin. I want to make money on that because otherwise, it doesn't make sense to me.

I'm an OTA, that's my idea, but I wanted to be a win-win between me, the customer and the supplier in cases where it might be, which is why whenever you see a product initial and especially what we call the peace of mind stack product, we would optimize this for a lesser margin. Now as the products grow, we might choose to increase the margin if people find the utility and people are using it much more.

The other part for you to realize what you've asked for on Travel Guarantee. Say you have a train ticket with Travel Guarantee, you can buy a flight. Essentially, you should use Travel Guarantee if you travel on trains, you'll realize the utility of the product. If you have a time-sensitive meeting, event, function where you have to be there. In that case, what I'm doing is giving you an incentive to get into a new mode of transport in many cases.

So when Aloke talked about the 4% penetration of flight and where it is growing, I think if you want the real answer, you can check how many new flyers are coming in, in India. And I would argue that a significant percentage of those would be from us.

Aloke Bajpai:

So last time we had given out this metric that, for the new flyers that we are adding from our NBU apps, half of them were actually flying for the first time because we've run surveys on that cohort and ask them whether it's the first flight of their life, right?

So I think the real win-with products like Travel Guarantee is that we are mak

ing flyers out of people who have not flown before. And in that sense, we are growing the market, growing the aviation market and not necessarily eating into anybody's market share.

Swapnil Potdukhe: Understood. That's pretty clear. So , another question on flight business over here and this is a follow-up to the previous question that was asked by Anmol. You did mention three reasons for your take rates going up. One was your domestic pricing coming down, which is understandable. But you

did mention that there were some anniversary sales and flash sales promotions also with certain bank partners. How does that help your take rate or do you.

Saurabh Singh: It doesn't. I was just talking about general flight business. So I wasn't talking about take rates. I was giving you the two reasons which I said. One is the domestic/Tier 2 base. The second, which I was giving was the fact that I have these products, which are also included in the take rate. And the third, which is the underlying ticket price, which was what I said is the ticket price because mine is a fixed price, what I get if the underlying ticket price of a flight changes or average flight changes in our route, my take rate varies.

Swapnil Potdukhe: Got it. So just to be clear, when you report gross revenue, you don't include ad income there. You include that in the net revenue that we report?

Saurabh Singh: So when you're looking at GTV, there wouldn't be any ad income, GTV into take rate would be ticketing revenue, then you add other income, which is ad and bank offers. And then you take off the discount, you get revenue from operations. So things like advertising will show up in the revenue from operations growth. So whenever we run these kinds of campaigns, if you see any excess jump in the revenue from operations, some of it could be because of that. But on the gross take rate side, it's basically the gross

ticketing revenue that we consider.
Swapnil Potdukhe: Right. Perfect. That answers that question. And just on your bus business,
was there any tailwind on, when you look at a Y-o-Y basis, because last year,
probably there was an election quarter. And so the numbers could have
been a bit depressed when you look at it from a Y-o-Y perspective? And any
incremental benefit you had mentioned in the last quarter also that some
of the traffic which was affected on the air side because of the situation in the North Indian states with Pakistan. The bus business was likely to benefit
from that right there some traffic shape shifted.
Aloke Bajpai: Not really see the growth you're seeing on the bus side, it's not just a 1
quarter story if you look at the last 3 quarters. Actually, we've been growing
pretty rapidly on the bus side. And again, there is no base effect here. I mean elections, what happens is yes, there could be some people who may
choose not to travel during that, but then there are other people who will
go back to both in the city where their vote is.

So in some cases, we've seen even more travel on certain access as a result
of the elections. So I don't think there is any kind of a base effect playing
out here. And the fact is that, look, we are still number two in this, and there's a long runway for us to grow because the market is only 20%
penetrated.
So like Saurabh said, I think those are the reasons why we are not looking
at whether the CM is 55% or 60%. I mean that's not material for us because
as long as the absolute CM is growing at this kind of velocity there will naturally be operating leverage slowing because our fixed costs are not
growing at that kind of base of contribution margin growth.
Saurabh Singh: But you should see the product that we have right no

w. What has
happened over the past year is, we have really improved the product.
Again, maybe Rajnish can talk a bit more about what we have done there,
but it's a product that has really improved.
Rajnish Kumar: Yes. I mean, like a lot of changes that we have done in the product recently,
including the introduction of the new Edge platform utility features like Bus
Insights, etcetera., which is giving passengers really deep insight into an
otherwise a really fragmented inventory business side when you're actually
traveling in bus, you really don't know what kind of bus is going to arrive.
And I think Bus Insights is giving you this peak into the quality of the fleet
and to be filters like brands in bus filters, etcetera. All of this has boosted a
lot of trust and conversion rate in bookings. And I think some of these
things are kind of feeding into a positive customer service getting us to 4.8
rating and the conversion rates, etcetera.
All of these things are kind of impacting our conversion rates and creating
a virtuous cycle of quality and demand where we are able to kind of
capitalize on this and grow purely lik e with a product-led growth approach
and then amplifying that with performance spends, which are optimized.
Swapnil Potdukhe: Okay. Just one thing on the train as well, some comments because there
were some changes by IRCTC recently. And I think Saurabh also had
touched upon briefly on this point. So any impact of those changes, if you
can just clarify or give some color on that?

Aloke Bajpai: There were probably three types of changes that happened there. Just so I
mean, one was because the change in the Tatkal timings, which reverted
back to a 30-minute delay from 10 minutes that it had earlier been reduced to and while we are still in discussion to understand what the impact and
why, it's just too early to quantify the impact of that.
We did see some volatility as a result of that. But of course, since we are
also growing quarter-on-quarter, month-on-month. So it's harder to break
out how much of that is resulting from the change in particular. Aadhaar linking is the other change where on Tatkal tickets, you need to link your
Aadhaar and there's an Aadhaar OTP that needs to be filled in.
And while this is now rolled out, it's just the first couple of days that this
change has been implemented. So it's very early and we haven't seen, we

haven't really seen a material impact as a result of that, but there is a slight impact, I would say.

And in terms of the third change, which was chart preparation being done 8 hours prior rather than 4 hours. I think that's a great move because it allows customers to plan accordingly and maybe shift to alternate modes of transport sooner rather than later. So in that sense, I think that has been a positive move in terms of even booking volumes, etcetera.

So I think net-net, we are not seeing, if I had to say that some impacts were positive, somewhat negative and they kind of are cancelling out each other as we speak. But it's very early to comment. I think these changes are very, very recent. And I think even passenger behavior will adapt to it over time, over the next few weeks. So I think we will only know at the end of this quarter how this kind of impacts us. But nothing materially negative to report here.

Swapnil Potdukhe: Got it. And just a last word on Zoop. How is that business doing? You mentioned that it's doing more than 10,000 orders per day. I would like to understand, like any sense on the unit economics of what kind of revenues you make on a per-order basis?

Saurabh Singh: Swapnil, it's still a smaller business in that sense. If it were material enough, I would have held it out to another line of business. It's not material as of

now. Look, as I said before, when we acquired Zoop, the idea of Zoop to increase the monetization of the users that we have.

So it's our funnel, which is traveling to increase the monetization. So right now, we're still building the product, expanding our user base. So giving any color, it won't help you, it won't help me and it will put unnecessary pressure on the team beyond this.

So the idea is we have been factual in what we've been reporting, but beyond that, we're still working on the product. And like we do for everything which is new, we would only start giving more numbers once the product has been established and stabilized.

Swapnil Potdukhe: Got it, sir. Thanks a lot for your time, guys, and all the best for future quarters and great going. Thanks.

Saurabh Singh: Thanks a lot, Swapnil.

Moderator: Thank you. Our next question comes from the line of Rohit Thorat with Axis Capital. Please go ahead. Rohit, yo ur line has been unmuted. May I request you to unmute your side and go ahead with your question, please?

Rohit Thorat: Thank you for the opportunity. First of all, congrats on the good set of numbers. My first question is on the technology and related cost part. So we have seen a sharp decline on a sequential basis in technology costs.

Now, in the previous quarter, you had mentioned that the cost increased because you had seen a surge in the number of queries in some of your products like Flight Tracker Pro and Train Tracker, due to which the cost has gone up.

Now, this quarter is also not like a seasonally weak quarter. So those queries should be high in this quarter as well. So what is driving the reduction in technology costs for this quarter? And how do you see the trajectory going forward for the rest of the year?

Saurabh Singh: Technology costs are getting bunched up. I would say just look at it over the years. Over the years, what we've talked about last time will remain.

So it is what you see this time, is just some bunching up, but otherwise not reflective of the year in that sense. The simple answer is what we said last

quarter is what you should look and model.

Rohit Thorat: Okay. And the second question is on the bookkeeping side of things. Today also you have made an announcement that you have granted some ESOP.

So how do you see the ESOP costs going forward on a full year basis?

Suarabh Singh: Look, I've talked a lot about ESOP and you can go through question nine.

But ESOP cost going forward would be around, I think, slightly north of INR 30 crores per year. If you see what I' ve talked about, the change from, I think, Manik or Swapnil, one of these guys asked the question last time. And in this FAQ, I thought I'd document my answer in a lot of detail, why

there was a difference between INR 20 crores and INR 30 crores. Part of it is because we get three kinds of ESOP.
So one is the Black-Scholes, which is a time-based ESOP. The other is a success-based ESOP, which is calculated using Monte Carlo. And you have to realize that if the success doesn't happen, it is expensed, but there is no real payment. The ESOPs are not given, but it's still an expense, and you don't get it back in that sense.
And the third is when, say, something like Zoop, where we have a choice to either decide to acquire Zoop and give them cash or give ESOP, because we feel ESOP is more aligned to the long-term vision for the company.
So Zoop, we have chosen the ESOP path, even though it affects the P&L rather than cash, which won't have affected the P&L at all. So it's a combination of these three, but yes, the number would be slightly north of INR 30 crores.
Moderator: Mr. Rohit, does that answer your question? So there is no response from the participant. May we move to the next one?
Saurabh Sin

gh: Yes. We can take one more question. And again, I apologize to all the others who've asked a question and we can't answer, but please drop an email and we'll set up a call and do that. But, yes, we can ask one more question.
Moderator: The next question comes from the line of Lakshminarayanan K G with Tunga Investments. Please go ahead.

Lakshminarayanan: Sir, a couple of questions. First, I just want to understand how the hotel's vertical is gaining traction. The second question is, I just want to understand, do you have any B2B verticals for travel, especially air and hotel? And the third question is that I just want to understand, what's your market share, and how it has trended on airlines? And second, on IRCTC,
your train market share and how the bus share has been shaping up? These are my questions.
Aloke Bajpai: Can you repeat the second question? It wasn't very clear.
Management: Yes. We didn't get the second question.
Lakshminarayanan: The second question is that, do you ha ve any B2B verticals? For example, some of your competitors do offer B2B options where they tie up with the corporate and the entire corporate travel happens to some kind of a micro vertical based on the internet. Do you actually have that thing? Is that a big opportunity for you? That's my question.
Rajnish Kumar: Sure. So let me answer the first two for you and then I'll let Aloke answer the third one. So on hotels, like, I mean, it's still very early. We're still in the build-out phase. And we believe it will be premature to share specifics or discuss any numbers at this point beyond the fact that we are seeing very strong month-on-month growth in room nights, which is the only metric.
Checked out room nights is the only metric that we are right now tracking very obsessively.
But apart from that, fortunately, we have access to this very strong top of the funnel, which is 84 million unique monthly active users on our platform.
And this large user base gives us this unique advantage of creating the right product market, which requires you to kind of run your product through multiple iterations, identifying problems, and then iterate through
solutions.
And we have an amazing test of a massive number of users, which we are using to kind of fine-tune the product and arrive at the correct product market fit. The fact is that, you know what, we've been very, very late entrant to this vertical. And there have been lots of players out there in the
last two decades in this space.

And what we have discovered, there a re still a lot of uns olved customer pain areas and even supply-related problems that could drastically improve customer experience and solve some of these problems. And so we have focused entirely on some of these problems, and we are trying to kind of get to a point where we have this product market fit, and we feel confident
about scaling beyond that. So that's what I would say about hotels.
Regarding corporate, etcetera, it's pretty obvious that these are verticals

that we would definitely want to get into at some point of time. It's only a
matter of time. And the reality is that, given that your platform has 84 million monthly active users, it's almost like saying that you have a mall
where you have a huge amount of footfalls, but you don't have a certain
kind of section in the mall.
And so it would only make sense to ki nd of have some of these products.
However, at this point, I can't tell you exactly where that fits in our
roadmap or timeline, etcetera, but defi nitely something that we have on
our radar.
Lakshminarayanan: The third question is regarding the market share in shares? And your
market share outside IRCTC, I mean, IRCTC and train,

and outside the bus?
I know it has been trending?
Aloke Bajpai: So on the train, like we said earlier, we have crossed 60% of OTA market
share, and I think that's about 2% more than where we were two quarters
ago. On buses, we would be in our mid-to-late teens. We still await others
to declare their results, conclude where the market share exactly was.
And similarly on flights, I think since we are the first to disclose our results
this time around, I think we will awai t numbers from others in order to get
a sense. But based on DGCA numbers, we are growing nicely quarter-on-
quarter in terms of market share, even on the flight side. So we would have
definitely gained share.
Rajnish Kumar: I mean, that should be obvious with our growth numbers. You can look at
how the market is doing, how others are doing and what our growth rate is. That part is pretty obvious.
Lakshminarayanan: Right. Just on the train thing, what percentage of train reservation happens

outside IRCTC?
Aloke Bajpai: It is 20-21% of IRCTC bookings that are happening through OTAs, based on
their last disclosed numbers. And I think that, outside of that, there are also third parties which are offline or B2B, etcetera, which would be another
10-15%. But, Yes, I think in that 20 -21% bucket, we are 60% of that.
Lakshminarayanan: Got it. Yes. Thank you so much.
Moderator: Thank you. Ladies and gentlemen, that is the last question for the day. I
now hand the conference over to the management for closing comments.
Aloke Bajpai: Thank you so much for all of you joining us today from all parts of the world
to hear our story. And it's definitely getting late here in India, so I'll let you
all go. We'll speak next quarter. Thank you.
Moderator: Thank you. On behalf of DAM Capital Advisors Limited, that conclude this
conference. Thank you for joining us, and you may now disconnect your
lines.

Call: Nov 2025

November 05, 2025 LTTL/L&S/2025 -26/11/08

To,

as

ixigo

Earning

Calls

Q2

FY25-26

hosted

by

DAM

Capital

Advisors.

As

a

reminder,

all

participant

lines

will

be

in

the

listen-only

mode

and

there

will

be

an

opportunity

for

you

to

ask

questions

after

the

presentation

concludes.

Should

you

need

assistance

during

this

conference

call,

please

signal

an

operator

by

pressing

star

then

zero

on

your

touchtone

phone.

I now hand the conference over to Mr. Anmol Garg from DAM Capital Advisors. Thank you and over to you sir.

Anmol Garg: Thanks Danish. Good evening everyone. On behalf of DAM

Capital,
I
welcome
you
all
to
ixigo's
Q2
FY26
Earnings
Call.
We
have
with
us
Mr.
Aloke
Bajpai,
Chairman,
MD
and
Group
CEO
of
the
company.
Mr.
Rajnish
Kumar,
Director
and
the
Group

Co-CEO of the company. Mr. Saurabh Devendra Singh, Group CFO of the company. Before I hand over the call to Aloke and Saurabh and Rajnish, I would like to highlight the Safe Harbour

Statement

on

the

second

side

of

the

presentation

and

it

is

assumed

to

be

read

and

understood.

Thank

you

and

over

to

you

guys.

Aloke

Bajpai:

Thank

you

Anmol.

Good

evening

to

everyone

on the call. Hope everyone had a fabulous Diwali break. Before we begin with our regular quarterly updates, I wanted to touch upon the fundraiser for around INR1,296 crores through preferential issuance that

we
are
undertaking
at
ixigo.
This
fundraiser
will
strengthen
our
balance
sheet,
accelerate
AI-led
growth,
fuel
our
investments
in
the
hotel
OTA
space
and
allow
us
more
flexibility
in
pursuing
inorganic
opportunities.
You

may
be
wondering
why
we
are
raising
money
at
this
time
when
we
are
cash
flow
positive
and
growing
quite
decently.

Let
me
tell
you
why
we
think
it
is
time
to

double

down

on

our

conviction.

Over

the

last

18

years,

we

have

patiently

built

travel

technology

building

blocks

across

utility

and

transactional

use

cases

for

the

next

billion

users.

Our

early

years

marked

by limited capital and the multiple crisis we had to overcome along the journey, have given us the muscle and resilience to do more with less.

Even though we had raised very little

capital

throughout

our

journey

when

compared to most of our peers, we ended up innovating and solving deeper

problems

for

Bharat,

giving

us

a

solid

foundation

and

the

largest

organic

base

of

travel

and

tourism

users

in India. In the recent five years, we've evolved further into a company that not just sells tickets but also offers peace of mind with our AI-powered value-added services and AI native customer service.

In the last 16 months as a public company, we've established our track record of driving rapid growth and operating leverage through thoughtful investments in technology development, marketing and building AI-first experiences, all while generating free cash flow from our core business.

Given the world is at an AI inflection point and our hotels OTA business is nascent, this investment comes at an opportune

time

for

us

to

take

advantage

and

double

down

on

these.

A

little

bit

about

our

incoming

investor,

MIH

Investments

One

B.V.

or

Prosus

as

the

world

knows

them.

Prosus

is

a

leading

global tech company that invests in high-growth markets with a significant focus on India, Latin America and Europe.

Prosus is well known as a patient long-term investor, bringing deep domain expertise in e-commerce marketplaces, a global perspective and an AI-first mindset to its portfolio. Its portfolio spans sectors such as e-commerce, food delivery, travel, payments and fintechs and classifieds.

A long-term investor in India with

over 8.6 billion dollars capital deployed to date, Prosus' investment portfolio includes Swiggy, Meesho, Urban Company and Rapido. Its global portfolio includes Tencent, Latin American OTA, Despegar, OLX, iFood, Just Eat Takeaway among others.

We

wish

to

clarify

upfront

that

we

have

no

intention

to

start

any

price

war

or

discounting

war

nor

get

into

any

sort

of

projects

involving

major

cash

burn

just

because

we

have the capital. Our track record demonstrates our discipline and capital efficiency quite well.

We have never believed in the capital as a moat playbook and hence we have never been the biggest aggressor on discounts or marketing spend. Our competition has historically been better capitalized than us and invested a higher percentage of GTV back into marketing and despite that we have managed to

continue

going

faster

by

deploying

our

capital

towards

long-term

product,

tech,

AI

and

growth

investments

along

with

some smart acquisitions along the way.

This

capital

allows

us

to

solve

customer

problems

that

need

deeper

longer-term

investment

horizons

with

long-term

returns.

We

will

soon

arrive

at

a

point

where

accelerating

our

investments

in

hotel

product

enhancements

and

supply

creation

will

bring

sustainable

long-term

gains

and in terms of brand recall and marketing spend we'll continue investing given the critical mass of organic users we have.

Judicious investments every year can help us bring top-of-mind brand recall

in

categories

such

as

flights

and

buses

over

time.

As

far

as

optionality

on

acquisitions

is

concerned

our

playbook

for

acquisitions

remains

exactly

the

same

as

when

we

acquired

ConfirmTkt

in

February

21

and AbhiBus in August 2021 both of which are not just successfully integrated but yielding synergies for our core business.

A balance sheet will broaden our canvas for both organically seeding new opportunities

and
judiciously
pursuing
investments
and
acquisitions
allowing
us
to
take
bolder
long-term
bets
when
we
have
strong
conviction
in
any
team
technology
market
or
vertical.

Moving
to
this
quarter,
using
a
cricket

analogy
we
learned
this
quarter
that
one
has
to
adapt
to
the
pitch
conditions
when
we
come
out
to
bat.
Despite
some
market-led
headwinds
in
the
flight
and
train
business
lines,
the
teams

found
areas
of
opportunity
where
our
agility
diversification
and
resilience
led
to
continued
growth.

Our
leadership
demonstrated
that
it
could
take
calls
on
where
to
go
more
aggressive
and
where
to
defend.
On

the
bus
side,
this
quarter
further
reinforces
the
long-term
runway
that
exists
for
growth
in
online
bus
bookings.
At
an
overall
level
I'm
pretty
happy
with
what
we
have
achieved
both
this
quarter

and in the first half of the year.

We have delivered strong cash flows of INR91.5 crores and a GTV growth of nearly 38% for H1 FY'26 and a revenue from operations

growth
of
nearly
54%
for
H1
versus
H1
of
last
year.
In
second
quarter
our
revenue
from
operations
was
INR282.7
crores
for
the
quarter
up
37%
Y-o-Y
and
a
GTV
growth
of
23%

for the quarter coming in at INR4347.5 which is INR4347.5 crores.

Our adjusted EBITDA was INR28.5 crores maintaining 10% adjusted EBITDA margin for the quarter. In fact our adjusted EBITDA for H1 has grown at nearly 45% Y-o-Y versus last year surpassing our own expectations on balancing profitability and growth.

We do understand that optically the

PAT
may
look
negative
but
that
is
largely
due
to
a
non-cash
non-recurring
ESOP
one-off
that
Saurabh
will
provide
more
color
on
in
a
bit.
For
flights
the
overall
domestic
market
had
actually

contracted by about 2% Y-o-Y that means decline of 2% in Q2 due to capacity constraints and impact of stronger monsoons and Delhi runway closer during the quarter.

However, at ixigo we still

grew our GTV by 29% Y-o-Y and our flight revenue grew by 60% in Q2. This was despite some moderation in our discounting and hence our contribution margin percentage came out even better than

Q1.

Our

growth

headroom

lies

in

our

scale

of

users

though

we

are

still

relatively

small

on

flights

as

compared

to

our

true

potential

and

our

strong

brand

presence

in

NBU

markets is driving a decent part of this growth.

Over 50% of new flight bookers that were coming from our NBU app users continues to be first-time flyers allowing us to keep adding new travelers to the overall market even in a time when the overall market did not grow, demonstrating the unique demand pool we have access to.

Our Tier 1 flight bookings also

continue

to

grow

nicely

and

we

see

our

brand

searches

for

the

keyword

‘ixigo’

continuing

to

rise

as

evident

on

Google

Trends.

Finally

our

international

flights

business

is

growing

faster

than

domestic

and

remains a focus area for product enhancement. We've also managed to improve take rates through our peace of mind stack and other ancillary services that we sell to those users.

On capacity 2

we

are

seeing

some

green

shoots

in

October

with

a

peak

day

recently

crossing

500,000

passengers

flown

in

the

market

in

a

day

and

as

for

the

winter

schedule

filed

with

DGCA

departures

across airlines will be up nearly 6% to 26,495 per week over the winter schedule of 2024 when there were 25,007 weekly departures.

On buses we saw good inventory additions in the overall market with private operators adding many new buses and routes and the addition of seven new SRTCs in our inventory Odisha, Southern Bengal,

Telangana,
Punjab,
Kerala,
Sikkim
and
Uttarakhand,
now
aggregating
17
major
state
transport
corporations
on
AbhiBus
for
wider
route
connectivity.

We
saw
strong
demand
for
pilgrimage
routes
to
Tirupati,
Nashik,
Ujjain,
Varanasi
and
Haridwar

this
quarter.
On
trains
it
was
actually
a
defining
quarter,
testing
our
resilience
amid
ecosystem
related
adjustments.
Our
DNA
to
adapt
and
turn
change
into
opportunity
has
helped
us
maintain
our
market
share

leadership and seed new growth engines.

While growth in this vertical standalone appears softer compared to our exceptionally strong past quarters, we have to see it in the context of the overall

business

growth

as

well

as

the

real

markets

inventory

growth

given

the

series

of

changes

introduced

by

Indian

Railways

this

quarter

and

prior

which

I

had

already

alluded

to

in

our

previous

earnings

call
last
quarter.

These
changes
include
things
like
the
reduction
of
the
advance
purchase
window,
some
reductions
in
waitlisted
inventory,
Aadhaar
based
authentication
for
Tatkal
bookings
and
the
restricted
time
window
regressing
to

30 minutes for Tatkal bookings. However for the advance reservation period bookings, Aadhaar verified users on OTAs have been allowed to book just 10 minutes after opening time for ARP that is 8:10

a.m.

onwards.

So

all

these

changes

temporarily

altered

booking

patterns

in

the

beginning

of

the

quarter

for

the

whole

ecosystem

and

it

took

a

couple

of

weeks

for

the

users

to

adjust

to these changes, making year-over-year comparisons less representative of the underlying momentum in the train segment.

Though we rapidly implemented Aadhaar based authentication, these changes impacted our algorithms for ixigo Assured and travel guarantee

which

we

now

know

as

Alternate

Travel

Plan

and

it

took

some

weeks

of

data

for

the

algorithms

to

recalibrate

and

adjust

to

the

new

demand

patterns

as

well

as

the

new

waitlist confirmation prediction patterns, leading to some contribution margin squeeze in this segment when seen year-on-year.

By the end of the quarter we

saw
some
normalization
and
stabilization
from
the
dip
we
saw
in
the
beginning
of
the
quarter
due
to
these
changes.
In
fact
we
touched
a
new
all-time
high
of
350,000
train-pax
segments
in

a day around the time when the advance bookings for Diwali opened in August.

The new policies introduced also mean that the future revenue and profit pools will need to come from more product and tech-led solutions and we will continue identifying more opportunities to solve customer problems and maintain our growth.

To summarize, this was a quarter that tested our resilience, agility and responsiveness

to
changes
in
the
macro
environment
and
the
fact
that
we
still
deliver
profitable
growth
across
all
three
lines
of
business
and
remain
the
fastest-growing
OTA
in
the
market,
I
remain
hopeful
that

in quarters where the macro is more favourable we can continue to shine.

With that I hand over the mic to my dear friend and Co-CEO Rajnish to talk about hotels and our

product
and
AI
initiatives.
Rajnish
Kumar:
Thanks,
Aloke.
This
quarter,
our
product
and
teams
were
quite
busy
improving
the
customer
experience
by
users.
Beyond
Amadeus
integration,
we
expanded
our
international
both
GDS
and

ONDC content. We also launched smart AI filters on our flights desktop funnel, allowing users to apply filters to national language.

Our sales team rolled out an upgraded version of Train Alternate feature, even more conformed ticket options by exploiting near-by stations, partial journeys and alternate dates. We implemented AI-based authentication, advanced bookings in record time, which resulted in us doing over 10,000 verifications daily

and
fully
compliant
with
the
railway
regulations.
Moderator:
I
am
really
sorry
to
interrupt
you,
sir,
but
your
voice
is
not
audible.
Rajnish
Kumar:
Okay.
I'm
afraid
I
think
Aloke
will
have
to

take this.

Aloke Bajpai: Sure. I'll take it forward. So we also integrated Delhi Metro rail ticketing through ONDC, which is seeing encouraging uptake. And partnerships with

October

29,

2025

HDFC SmartBuy and Rapido are already helping us expose our trains funnel

to

new

user

segments.

Even

small

UX

changes

are

improving

food

on

train

uptake

and

conversion

rates.

Overall,

our

MTU

to

MAU

ratio

reached

4.9%

in

the

first

half

of FY '26, reflecting better engagement and monetization.

We're still in the early stages of scaling up performance and brand investments in buses, flights and hotels. So there are plenty of growth levers ahead. On hotels, I'm pleased with our progress on both product and supply enrichment and as well as the consistent room night growth quarter-on-quarter.

Many of you have asked how building

a hotel OTA today differs from building one a decade ago. The short answer is a lot has changed, but a lot still needs to. 10 years ago, most hotels were offline, manual pricing, opaque inventory and on-ground aggregation teams doing the heavy lifting. Today, a majority of midrange and budget hotels use PMS and channel manager, making rates, availability and content live across platforms.

Access to inventory is now a commodity - Tier 2 and Tier 3 cities are the new growth engines. Digital payments and pay-at-hotel options have reshaped booking behaviour. Consumers are no longer chasing the lowest rate. They want peace of mind. Assurance, transparency, cancellation, flexibility and refund speed matter as much as discounts.

For hotel owners, the OTA role is also evolving. The real value-add

comes
from
solving
their
pain
points
with
empathy,
ensuring
that
travelers
actually
get
what
was
promised.
Over
time,
as
we
integrate
more
directly
and
curate
deeper
mid-tier
supply,
quality
of
experience
will
matter

more

than

sheer

quantity

of

inventory.

And

interestingly,

even

today,

OTAs

only

drive

about

10%

to

20%

of

bookings

for

the

average

budget

hotel

in

India.

So

the

opportunity

remains

massive

with

over

2 million rooms to fill daily.

Now moving to AI. We believe that our company is at an inflection point in fulfilling its vision of building the best AI-first travel experience. The immediate opportunity is to invest deeply in emerging agentic AI capability. This is needed to solidify our presence in hotels, build stronger brand recall and accelerate growth through new AI platforms, products and services.

Our incoming investor Prosus has been a global pioneer in AI-led innovation and backed companies that are reshaping industries. Their vision of unlocking an AI-first world for billions aligns beautifully with ixigo’s mission to build the best AI-first experience for the next billion travelers of Bharat. This moment in history is rare.

First, the global

build-out

of

AI

and

infrastructure

means

the

cost

of

models

will

keep

falling

as

adoption

grows.

Second,

efficiency

gains

are

already

visible.

Early

adopters

are

driving

meaningful

productivity

jumps.

And

third,

we

are

still defining what the best AI-native experience looks like for travel, which will open entirely new demand pools and business models.

The dawn of the AI era gives us a once-in-a-lifetime opportunity

to
reimagine
our
company's
future.
Companies
that
succeed
in
the
next
decade
will
look
very
different
from
those
today.
Travel
apps
will
evolve
into
conversational,
multi-modal,
hyper-personalized
agents
that
don't
just
assist
but

act. At ixigo, that's a vision we had even back in 2017 when we launched TARA, our travel assistant.

On the AI efficiency side, the impact is already visible. Nearly half of our voice support calls are now resolved end-to-end by agentic voice agents. And over 90% of customer chat interactions are handled by AI, managing 2.69 million interactions this quarter. As a result, 97.4%

of calls are answered within two minutes now, and refunds now happen in just under 3 hours on average, with a large percentage processed within minutes.

Now stepping back for a moment,

every

few

decades

the

world

experiences

a

technology

inflection

point.

These

movements

don't

just

change

tools,

they

redefine

entire

industries.

For

incumbents,

they

are

both

an

opportunity

and

an

existential

threat.

Startups

born

in the new era move faster, unbundled by legacy systems, while incumbents struggle with inertia. The paradox is simple. The very size and success of incumbents make them vulnerable. The only way to avoid being disrupted is to disrupt yourself first.

With that I will hand it to Rajnish.

Rajnish Kumar: The paradox is simple. The

very
size
and
success
of
incumbents
make
them
vulnerable.
The
only
way
to
avoid
being
disrupted
is
to
disrupt
yourself
first.
We
call
this
building
a
new
co
inside
the
old
co.
The

new

co

behaves

like

a

startup,

small,

focused,

unencumbered,

but

with

the

parent's

data,

domain

expertise,

and

resources.

Done

right,

it

can

disrupt

your

old

business

model

before

the

outside

world

does.

We've

lived this story before. Back in 2013-14, as the mobile revolution was unfolding, we were hit with this desktop-first business that was at risk. Instead of tinkering at the edges, I locked myself in a room with key engineers. Out of this, a sprint was born, the ixigo Trains app. That app didn't just supplement the old business; it rewrote our future. It gave us massive distribution, created a new growth engine, and eventually made old business models obsolete.

We disrupted ourselves, the new co overtook the old co. Today we stand at the biggest friction point in

the
history
of
humanity,
which
is
AI.
Unlike
mobile,
which
changed
how
we
accessed
the
internet,
AI
is
reshaping
how
we
think,
work,
and
create.
At
scale
of
disruption
means
the
risks
are

proportionately larger. For incumbents, the danger is not simply losing market share, but becoming irrelevant overnight. So this time, our new co must be AI native from day one.

Rethinking products, processes, and

customer
experience
with
AI
as
the
default,
not
as
an
add-on
or
a
band-aid.
Becoming
AI
native
means
re-adjusting
around
three
key
vectors.
Conversational
multi-modal
interfaces,
which
means
moving
away
from
Pig-based
rigid

workflows,

from

natural

human-like

interactions

that

scale

infinitely.

Number

two,

hyper-personalization

through

vertical

data.

Using

our

deep-traveled

data

to

deliver

predictive

preemptive

experiences,

knowing

what

the

user

wants

before

they

ask

for

it. And lastly, agent autonomy.

Going beyond just recommendations to real actions. Researching, booking, and solving tasks automatically on behalf of the customers, without them having to lift a finger. These three pillars map

directly

to

our

AI

strategy,

that

is

Project

Trishul,

around

efficiency,

leveraging,

and

disruption.

Because

when

disruption

arrives,

you

only

have

two

choices.
Be
the
company
that
gets
disrupted
or
be
the
company
that
creates
that
disruption.
The
only
safe
path
is
to
choose
the
latter,
again
and
again,
at
every
inflection
point.
There's
a

narrow window right now to combine our deep tech DNA and proprietary data with disciplined investments in self-disruption. Those who do will be rewarded disproportionately in growth and operating leverage.

As I've said

before,

we'll

deliberately

deploy

some

capital.

Our

AI

disruption

strategy

led

to

what

execution

looks

like

in

the

AI

native

world

ahead.

I'll

end

by

saying

that

we're

all

probably

using

the

worst

AI

we'll

ever

use

in

our

lifetimes.

From

here,

it

only

gets

smarter,

stranger

and

far

more

capable,

which

makes

this

the

most

exciting

and

slightly

terrifying

time

to

be

building.

And

with

that,
I'll
hand
over
the
call
to
our
friend
and
Group
CFO,
Saurabh
Devendra
Singh,
to
talk
about
numbers.
Saurabh
Singh:
Now,
if
I
had
to
name
this
quarter,
I
would
call
it

adolescence.

We've

outgrown

childhood,

but

our

journey

towards

who

we

are

meant

to

become

is

only

just

beginning.

Now,

we

are

at

an

age

that

allows

us

to

stumble,

like

we

did

right

now,

or

occasionally

fall,

scrape

our

knees,

then

rise

again,

stronger

and

perfect,

and

then

smile

and

say,

we

told

you

so.

Now,

I

know

what

you

might

be

thinking

here.

Here,

I'm
being
pompous,
and
you've
just
seen
the
result,
and
Slide
28
of
what
we
call
the
beautiful
slide
has
its
first
hint
of
red.
Now,
you
would
not
be
wrong
to
point

out

that

unlike

recent

quarters,

this

one

was

not

perfect.

But

then

again,

like

all

things

adolescent,

this

was

never

meant

to

be

perfect

or

easy.

If

I'm

being

totally

honest

here,

most

of

the

quarter

was

tough

and

that

is

what

makes

it

special.

We

fought

hard,

we

accelerated

when

we

had

to

and

we

also

learned

to

stop

when

that

was

the

wiser

choice.

When
the
present
looked
tough,
we
built
for
the
future.
We
also
made
new
friends
through
new
customers,
new
partnerships
and
some
great
new
investors.
Quarters
like
this
showcase
the
ixigo
DNA,
and

form the foundation of our growth for years to come.

Now, let's talk numbers. As always, all numbers are in rupees crore, unless stated otherwise, and year-over-year comparisons are Q2 FY ‘26 against Q2 FY '25. On the headline numbers, our gross transaction value stood at

INR4,347.5 crores, up 23%, from INR3,528.7 crores last year. Revenue from operations came in at INR282.7 crores, a 37% Y-o-Y increase. Contribution margin was INR109.6 crores, up 20%, with a contribution margin percentage at 39%.

Adjusted EBITDA stood at INR28.5 crores, compared to INR21 crores in Q2 FY ‘25. This was a growth

of

36%.

PAT

came

in

at

a

negative

INR3.5

crores

versus

INR13.1

crores

last

year.

This

included

a

one-off,

listing

milestone-based

non-cash

ESOP

charge

of

INR26.9

crores,

and

also

some

other

one-offs,

which

I will discuss closer to the end of my speech. Our cash flow, as Aloke mentioned earlier, came in at INR91.5 crores for the first half of FY2026.

Let's go on to

the
business
segment
overview.
In
flights,
now
it
was
a
month
and
a
half
ago
when
I
found
myself
sitting
in
the
Gurgaon
office
mess,
for
a
late
lunch.
Now
as
luck
would

have

it,

our

flight

business

head

walks

in

a

few

minutes

later

and

chooses

the

seat

furthest

away

from

mine.

I

obviously

ask

him

why.

He

smiles

and

says,

he

wants

to

avoid

another

conversation

about

how

we

will

be

growing

in

the

flight

business

compared

to

the

industry.

Now

that

the

numbers

are

out,

I

owe

Nitin

an

apology

and

thank

you.

In

a

slow

market, we stood out for our growth. We booked 2.41 million flight segments, up 19% with a GTV of INR1,592.4 crores, up 29%. Contribution margin for flights rose 45% to INR39.6 crores, at a contribution margin percentage of 44%. Flights contributed 36% of our group's total CM.

Our bus business reminds me of elephants. They listen carefully, remember everything that matters, and move with a

surprising
speed
to
turn
feedback
into
better
products.
And,
before
you
say
elephants
are
not
fast,
remember
they
can
move
at
almost
40
kilometres
per
hour,
not
too
far
away
from
peak
Usain

Bolt.

Now,

the

speed

for

our

bus

team

was

evident

in

this

quarter's

numbers

too.

Our

passenger

segment

grew

at

46%

Y-o-Y,

reaching

6.04

million

passenger

segments,

with

a

GTV

up

51%

to

INR571.9 crores. Contribution margin was up by 31% to INR34.1 crores, at a 52% contribution margin. Now, we see this as a high-growth area and will continue to invest in this business. Buses contributed about 31% of our total CM.

I think I've mentioned this before, but I have a standing coffee bet with our train

business
head.
With
our
dominant
market
share
in
trains,
we
shouldn't
be
able
to
grow
faster
than
the
market.
Now,
every
quarter
till
now,
I
have
lost
this
bet
badly.
It
took
what

I
call
a
perfect
storm,
or
what
Aloke
referred
to
as
ecosystem-related
adjustments,
to
convert
this
to
a
closed
site.

Still,
we
grew
faster
than
the
market,
and
though
it
was
much,
much

closer than before. So, Dinesh, if you're in this call, I think we'll call this quarter a draw. In the Train segment, we booked about 27.2 million train segments, up 10% Y-o-Y, with

a
GTV
at
INR2,125.9
crores,
up
12%.
Revenue
stood
at
INR122.9
crores,
up
11%
Y-o-Y.
PM
shrank
by
9%
to
INR34.2
crores,
with
a
28%
contribution
margin
percentage.
Trains
contributed
31%
to
our

overall
group
CM.

Now,
in
their
sections,
both
Aloke
and
Rajnish
talked
about
the
capital
race
and
why
the
future
will
allow
us
to
be
more
strategic
and
allow
us
to
invest

in
building
AI-driven
digital
assets,
platforms,
and
capabilities
that
will
power
the
next
phase
of
growth.
That
said,
as
an
ongoing
business,
let
me
highlight
the
one-offs
and
key
call-outs
in
our
current

operation.

The one-offs and call-outs that are there in Q2 FY '26 include a one-time ESOP accounting charge of INR26.9 crores on account of early achievement of performance thresholds specified in the grant terms. Two, share of loss from FreshBus, an associate company, of INR1.47 crores.

For Q2 FY '25, the one-offs and call-outs comprise of the following. Share of loss from FreshBus, an associate company of INR1.93 crores.

Gain on account of reversal of exceptional item pertaining to share issue expense amounting to INR0.83 crores. If we were to compare like-by-like basis by excluding the respective item in both the periods, our profit before tax would have increased by 26% Y-o-Y from INR19.4 crores in Q2 FY25 to INR24.4 crores in Q2 FY26.

Now, this quarter is about

growing

up

and

putting

the

building

blocks

in

place

for

what

we

know

is

our

true

destiny.

I

am

reminded

of

a

few

lines

from

Shivmangal

Singh

Suman's

poem

that

my

father

used

to

recite

back

when I was an adolescent. Kya haar mein, kya jeet mein, kinchit nahi bhaybeet

mein,

Sanghash

path

par

jo

mile,

ye

bhi

sahi,

wo

bhi

sahi,

Vardaan

maangunga

nahi.

Over the next few quarters and years, there will be victories and there will be

setbacks.

And

then

there

will
be
moments
when
patience
will
be
the
most
prudent.
During
this
journey,
we
ask
not
for
luck,
but
for
endurance
and
focus
to
deliver
perfect
journey
to
our
customers.
And
with
this

slightly
philosophical
closure,
I
will
pass
it
on
to
operators
for
Q&A.
Hi,
can
we
pass
it
on
back
to
the
operator
and
you
can
pick
it
up
from
us?
Moderator:
Thank
you

very much. We'll now begin with the question and answer session. The first question is from the line of Anmol Garg from the Dam Capital Advisors. Please go ahead, sir.

Anmol Garg: Yes,

hi.
Thanks
for
the
opportunity.
So
I
have
a
couple
of
things.
Firstly,
out
of
the
INR1,300
crores
that
we
are
raising,
we
have
allocated
nearly
INR320
crores
to
acquisition
and
a
similar

amount
to
working
capital.
Now,
I
understand
that
working
capital
in
our
business
is
a
negative.
So
what
is
the
reason
for
raising
money
or
allocating
the
same
money
for
working
capital?
Are

we
looking
to
acquire
a
company
with
higher
working
capital
requirements?
Saurabh
Singh:
Hi,
Anmol.
So
there
are
parts
to
this.
One
of
the
part
of
this
is
as
the
business
grows,
there

is a need for working capital based on how the business is growing. And I'll explain it to you. In fact, I had done that earlier too. But I'll explain to you something

like

when

bank

offers

come

in

or

when

we

build

up,

build

out

our

advertising

platforms.

And

then

more

and

more

advertising

come

in.

All

of

these

require

working

capital.

Then

with

volume

in

the

normal

course

of

business,

even

though

it's

not

for

a

large

period

of

time,

it's

just

for

a

few

days.

When

you

see,

say,

look

at

my

March

31st

number,

look

at

the

number

right

now.

Whenever

you're

in

the

long

holidays

or

there

is

a

certain

amount

of

money

where

train

and

flight

do

need

working

capital.

So

bus

is

a

negative
working
capital
business,
but
train
and
flight
do
need
working
capital
and
as
they
grow,
there
will
be
a
need
there
too.
So
it's
a
combination
of
these
and
it's
a
combination

of how the business grows, where this comes in.

Anmol Garg: Okay, understood. Just on the second part of this question, what kind of

acquisition
are
we
looking
at?
What
I
mean
is
that
in
which
particular
area
are
we
looking
to
acquire
any
assets?
Aloke
Bajpai:
Yes,
hi
Anmol
this
is
Aloke
here.
See,
we
have

specified

unidentified

acquisitions

because

at

this

point

we

do

not

have

any

identified

acquisition

target

per

se.

But

I'll

just

walk

you

through

our

typical

thinking

on

our

acquisition

philosophy.

Typically

a

past

track

record

is

that

we

have

found

good

quality,

high

quality

entrepreneurial

teams

who

are

building

something

either

synergistic

to

what

we

do

or

which

can

add

a

new

vertical

or

a

new

market
to
our
business.

And
the
process
for
evaluating
these
deals
typically
spans
several
quarters.
And
I
think
Saurabh
will
vouch
for
how
rigorous
that
process
is
at
our
end
in
terms

of
how
long
we
take
to
evaluate
these
deals
and
due
diligence
on
them.
So
typically
the
criteria
is
essentially
around
four
pillars.
So
there's
quality
of
the
leadership
or
founding
team
and

its

cultural

fitment

with

us,

clear

strategic

fit

and

synergy

with

the

existing

business

either

in

terms

of

offerings

or

in

terms

of

what

we

want

to

enter

and

market

impact,

including

share

gains
or
is
it
entering
into
a
new
vertical
or
a
new
geography
or
a
new
product
type.
And
then
there's
access
to
technology
or
IP
or
some
sort
of
leverage
that
you

can

gain

on

some

of

the

AI

stack

that

we're

building.

I

think

those

are

the

areas

where

we

look

at.

And

of

course,

the

pricing

has

to

be

reasonable.

The

terms

have
to
be
favorable
and
the
company
should
not
be
heavily
into
losses
and
all
that.
We
typically
don't
even
look
at
those
assets.
Those
come
as
a
natural
filter.
So
our
playbook

will not change if you look at what we did with ConfirmTkt and AbhiBus and even Zoop.

These were companies which were already well proven, small team, frugal, capital efficient, profitable. And that's the kind of acquisition that we typically like. Having said that, we usually have a long pipeline of things we are evaluating and as and when we build conviction, we'll move on something.

Saurabh Singh: What this capital does give us is the ability to be very, very strategic and

decide when such an opportunity arises. But having said that, as Aloke said and Rajnish can vouch for and

I've

seen

Aloke,

Rajnish

both

on

this

and

the

team.

I

think

the

first

reaction

is

not

to

look

at

anything

rather

than

look

at

anything.

Anmol

Garg:

Sure,

understood.

And

second,

on

the
quarter
itself.
So
just
talking
about
the
air
segment,
while
our
Y-o-Y
growth
looks
decent
versus
the
industry.
However,
we
have
seen
a
sharp
dip
in
the
GTV
in
this
quarter
when

I look at it more sequentially, where the dip is around 14%, while the industry dip or the DGCA dip is relatively lesser. So while I understand it was a weak quarter from

the

volume

perspective

from

the

industry

level,

but

still

can

you

indicate

that

why

our

growth

sequentially

was

a

little

lower?

Is

it

because

of

lower

ad

spends

during

the

quarter

or

is

it

something

else?

Saurabh

Singh:

So,

Anmol,

firstly

you

have

to

realize

something

and

Aloke

mentioned

it

in

his

call.

The

audience

that

we

are

getting

have

a

different

cycle

than

the

audience

you

are

conventionally

used

to

on

this.

So

what

you

have

to

realize

is

when

you

start

looking

at

sequential

on

a

particular

thing,

it's

a

different

audience

I'm

creating.

So

when

I
launched
a
Travel
Guarantee
product
and
when
we
are
getting
new
flyers
in
this
world,
I
think
this
is
a
metric
which
you
can
look
at.
In
my
mind,
it's
on
either

way.

It's

a

great

growth

and

last

time

my

growth

number,

my

base

number

and

which

I've

said

in

your

meeting

or

every

meeting

that

I've

had

is,

last

two

quarters,

the

growth

number is something which was extraordinarily high.

Aloke Bajpai: Yes, I mean, just to add to that, we have to recognize we are in a seasonal business, when it comes to all three lines

of

business.

Flights

are

typically

JAS,

B2C

flights,

seasonally

weakest

quarter.

But

not

just

that,

if

you

look

at

year-on-year,

I'm

very

satisfied

with

what

we've

achieved

this

quarter,

because

if

you

look

at

the

market,

there

was

a

2%

decline.

So,

I

mean,

if

you're

talking

about

growing

29%

on

GTV

in

an

environment

where

there's

a

2%

decline,

I

would

rate

it

as

an

achievement

and

nothing

to

be

shy

about.

I

think

what

we

could

have

done

and

maybe

we

underinvested,

we

could

have

grown

faster

if

we

actually

chose

to

invest

more

and

sort of not optimize on discount or marketing spends as we did, because if you look at our contribution margin percentage.

And there if

you

look

at

it

sequentially,

our

contribution

margin

percentage

has

actually

gone

up

Q1

versus

Q2,

where

we

have

actually

increased

our

contribution

margin

in

the

flight

business.

But

that

was

deliberate.

When

the

market

is

not

growing

why

would

you

choose

to

invest

more?

So,

we

kind

of

remained

a

little

conservative.

That's

my

read

on

it.

And

as

the

market

comes

back,

which

we

are

seeing

already

green

shoots

in

October,

November,

how

the

market

seems

to

be

coming

back

in

terms

of

supply,

I

think

you

will

see

the

kind

of

acceleration

we

want.

Saurabh

Singh:

But

Anmol

looking

at

business

here.

I

don't

look

at

things

quarter

by

quarter.

If

I've

had

a

great

quarter,

that

doesn't

mean

that

next

quarter

we

need

to

do

anything

silly,

just
to
give
a
segment
number
for
the
next
quarter
or
so.
Anmol
Garg:
Understood.
And
just
one
last
thing
from
a
more
outlook
perspective.
Going
ahead,
how
should
we
look
at
the

business?

Are

we

looking

at

growth

going

ahead

or

the

focus

would

be

towards

market

expansion?

Saurabh

Singh:

The

biggest

focus

would

be

trying

to

solve

customer

problems

like

Rajnish

and

Rajnish

can

talk
about
that.
We
believe
everything
else
is
a
follow
up
from
that.
Aloke
Bajpai:
Yes,
I
think,
I
mean,
I
don't
think
any
changes
in
our
playbook
and
Rajnish
can
add
to

that.

But

basically

we

keep

doing

the

same.

I

don't

think

we

did

anything

dramatically

different

last

quarter,

except

that

we

were

trying

to

sort

of

understand

the

ecosystem-related

or

macro-related

impacts

and

try
to
optimize
for
that.

But
then
again,
you
know,
as
supply
comes
back
and
I
think
I
see
it
as
a
one-time
problem
last
quarter,
essentially
supply
on
both
train
and
flight

felt
a
squeeze
in
the
market.
And
you
saw
the
result
of
that,
not
just
for
us,
but
also
for
our
peers.
And
I
think
as
that
situation
improves
and
we
already
see

it

improving.

I

think

that's

the

demand

is

very

strong.

I

mean,

that's

something

we

can

just

put

out

there

that

the

demand

continues

to

be

very

strong.

I

think

it's

the supply side that has to catch up. And buses is a proof that when the supply actually catches up, you see the growth in that category.

Anmol Garg: Yes, sure. Understood. Thanks, guys. I'll join back in the queue. And

best
of
luck
for
going
ahead.
Thank
you.
Moderator:
Thank
you,
sir.
Next
question
comes
from
the
line
of
Swapnil
Potdukhe
from
JM
Financial.
Please
go
ahead.
Swapnil
Potdukhe:
Hi,
everyone.
Thanks
for

the
opportunity.
I
have
two
or
three
questions.
And
just
continuing
with
the
previous
participant's
question
on
the
flight
growth
over
there.
And
especially
when
you
look
at
it
at
a
sequential
basis.

I

was

just

looking

at

your

numbers

and

comparing

it

with

your

large

competitor.

And

the

passenger

segments

declined

on

a

sequential

basis

seems

to

be

far

more

than

for

the

last

year

also.

So

any

particular

things

to

look

at?

Any

things

related

to

your

PhonePe

partnership

coming

into

the

base

this

quarter?

Saurabh

Singh:

It's

more

basic

than

that.

Last

year,

the

look

at

what

last

quarter,

why

did

a

particular

person

decline

or

not

decline?

Even

that

point

of

time,

you

have

to

look

at

the

market

and

you

look

at

the

performance

last

quarter.

Yes,

sequential

quarter-on-quarter.

First

thing,

this

is

not

a

sequential

industry

as

Aloke

mentioned

right

now.

The

second

part

is,

say

I

mentioned

it

in

the

last

quarter

answer

too.

Why

did

I

do

better

with

geopolitical

problems

is

because

I

was

more

domestic

on

that

sense.

Even

in

that

part,

with

the

world

changing

like

it

is,

I

believe

that

on

a

world

where

it's

moved

minus

two

and

me

giving

you

29%

growth.

As

in

on

any

level,

it

looking

at

a

sequential

number

where

Operation

Sindoor

or

issue

around

it

happened

for

international

problems.

Yes,

it's

mathematical.

I

kind

of

more

than

what

it

happened

on

the

outside

world

or

why

did

somebody

perform

badly

last

time

is

not

something

that

I

can

cure,

but

what

I

can

cure

is

what

I

did

last

time

and

what

I

did

this

time.

And

I

think

in

both

the

quarters,

I've

done

far

better

than

the

market.

And

that

is

what

I

have

to

do.

Swapnil

Potdukhe:

Yes,

Saurabh,

but

if

I

were

to

just

add

one

more

variable

to

that,

your

attached

rate,

which

used

to

be

around

29%

to

30%,

that

also

seems

to

have

come

down

to

27%.

Because

we

were

benefiting

from

the

Travel

Guarantee feature in the past. We were able to move some custom train customers

to

flights.

And

is

that

also

a

part

of

the

reason

that

the

numbers

seem

slightly

below

what

most

of

the

sales

or

the

consensus

was

expecting?

Saurabh

Singh:

Firstly,

why

is

the

number

below?

I

like

you

saying

it

that

is

your

choice

the

number
below,
what
is
the
industry
number
for
this
quarter.
Swapnil
Potdukhe:
No,
obviously,
the
industry
numbers
are
poor.
No
doubt
about
that.
I'm
just
building.
Aloke
Bajpai:
Let
me
come
in
here

for

just

a

very

macro

perspective

on

this

side.

Last

quarter,

where

I'm

saying

Q1,

despite

Sindoor

and

everything

and

20

other

things

that

were

going

wrong

in

that

quarter,

if

we

were

growing

at

a

70%

plus

sort

of

revenue,

I

think

it's

not

a

great

benchmark

to

look

against

on

a

sequential

basis,

to

be

honest

because

I

think

that

was

by

far

in

the
last
five
quarters
we've
given
out
our
best
quarter.

Having
said
that,
even
if
you
look
at
it,
including
that
and
you
look
at
the
overall
pace
of
the
industry,
the

OTA
market
growth
and
our
growth,
we
are
going
faster
than
all
OTAs
out
there
in
all
the
three
categories
we
operate.
I
mean,
and
that's
something,
I
think
that's
the
way
we

think
about
building
up
like
we
are
not
going
to
hold
ourselves
accountable
to
what
somebody
else
is
doing
out
there.
Saurabh
Singh:
Look,
think
of
it
differently.
And
I'll
come
and
answer

your

question

on

attach

rate

now.

Now,

one

of

the

parts

of

attach

rate,

if

you're

asking

me,

are

we

getting

more

train

bookers

to

fly?

The

answer

is

a

vehement

yes,

we

are

still.

And

if

you

look

through,

I

know

that

we

have

to

increase

the

time

between

we

release

the

FAQ

and

let

you

absorb

it,

but

if

you

look

at

FAQ,

we

have answered that question, saying that we are still doing that quite nicely and getting a lot of new users in the market.

The other part is to realize that the attach rate

that
you
have
is
a
combination
of
attach
rate
across
all
parts
of
business.
Now,
what
has
changed
is
that
monsoon
did
affect
the
trains
and
buses
side
of
the
business.
And
in

some of the scenarios in trains, as Aloke mentioned in his call, the algorithm needed to be rechecked.

And TG is just one

of

the

many

products

that

we

are

selling.

So

if

your

question

is,

did

that

change?

No,

in

fact,

I'll

say

the

reason

that

why

when

the

industry

shrunk

and

we

grew

29%

was
because
we
were
doing
that
a
lot.
But
the
pattern
changes,
the
thing
changes.
It
takes
some
time,
but
attach
rate,
yes,
it
did
go
down,
but
not
for
the
reason
which

you

suspected

to.

Swapnil

Potdukhe:

Got

it.

Now,

just

taking

this

forward

conversation.

How

do

we

see

this

full

year

FY26

planning

for

you

at

a

GTV

growth

level?

Because

if

I

remember

correctly, we were aspiring to do around 40% GTV at a console level. But obviously, it was not a guidance. It was an aspiration?

Saurabh Singh: I will repeat, but I am always

there.

I

have

said

that

where

we

are,

we

expect

to

grow

significantly

faster

than

the

market

on

this.

And

I'll

keep

it

there.

I

have

never

guided

to

a

particular

number

on

this.

But

yes

in

either

of

the

three,

we

continue,

continue

growing.

And

I

can

talk

about

in

more

detail

why

we

feel

we

can

grow

significantly

faster.

I

feel

that

had

you

asked

me

earlier,

say,

this

was

a

15%

market

quarter.

And

had

you

asked

me

what

is

a

20%

market

quarter

and

you'd

ask

me,

what

would

you

have

expected

on

flight?

I

would
have
said
it's
a
20%
market
quarter
where
the
market
has
grown
by
20%.
I
would
have
ideally
wanted
to
expect
that
grow
of
flights
at
40%.
Now,
it's
a
lower
market

quarter. I'm in the market as a participant and the idea is 29% is great.

So I'm a market participant. It depends on market, but I still continue believing that way. Buses

is
the
one
which
is
more
interesting
in
that
sense.
It's
a
lower
penetration
market.
A
lot
is
changing.
We
believe
a
lot
can
happen
there.
So
that
is
how
it
is.
And

as
I
said
in
my
train
section,
and
I've
always
said
that
I
personally
believe
that
with
our
market
share,
we'll
grow
closer
to
the
market.
My
train
LOB,
we
believe
we
still

grow
faster.
And
so
it's
who
you
want
to
believe
out
of
the
two.
Swapnil
Potdukhe:
Saurabh
sorry
to
push
you
on
this
a
bit
more.
So
now
what
I'm
hearing
is
that

the
supply
side
issues
on
the
flight
side
will
slightly
improve.
There
is
not
a
meaningful
improvement,
even
if
in
the
December
quarter
also.
So
should
we
be
looking
at
-
should
we

start reworking our numbers with that thought in mind going ahead in the second half is what I'm trying to understand.

Saurabh Singh: If

I

was

you

and

if

I

had

a

clearer

view

on

where

the

market

would

be

based,

your

knowledge

on

where

you

feel

the

market

should

be

and

expect

us

to

grow

significantly

faster than the market. If you're very bullish on the market or if you're an analyst who covers the flight is very bullish on the market. And if you can base it, take a multiple of that and that is where we will be.

Swapnil Potdukhe: Got it. And just on the cost side. Now, there are two ESOP numbers mentioned in your presentation, one

of
INR32
crores
and
one
of
INR27
crores.
You
have
mentioned
INR27
crores
as
a
one
off.
Saurabh
Singh:
Swapnil
as
discussed
if
you
go
back
to
my
last
quarter
FAQ,
there
are

three

kinds

of

ESOP

that

we

would

have.

One

is

the

normal

Black

Scholes

based

ESOP.

The

other

ones

were

the

ones

which

were

given,

which

were

target

based,

given

to

guys.

And

then

there

is

another

ESOP

which

we

give.

Say

I'm

acquiring

a

company

like

we

did

with

Zoop.

I've

got

a

choice

of

either

giving

and

I've

talked

about

it

a

lot

in
detail.
That's
the
question
which
I
would
recommend
that
you
go
to
the
last
FAQ,
but
I'll
give
you
a
summary
on
this.
So
there
are
some
ESOPs
we
say
I
acquired

Zoop.

I

could

have

given

him

cash.

It

goes

from

the

balance

sheet.

I

don't

think

that's

right

because

that

doesn't

align

him

to

me.

I

would

take

it

on

the

-

take

it
on
as
an
ESOP.
And
I
would
give
it
because
I
want
his
interest
to
be
aligned
to
the
company
interest
going
up
in
the
future.
So
it's
a
combination
of
these

three,

which

I

would

give.

Swapnil

Potdukhe:

So

going

ahead,

we

should

factor

in

the

difference

between

the

two?

Saurabh

Singh:

There

is

one

and

that

too

I've

given

in

a

lot

of

detail.

There

were

two

targets

and

both

were

based

on

and

in

fact

this

one

too.

So

both

were

based

on

30-day

revamp.

And

in

fact,

if

anything,

I

believe

that

the

fact

that this was reached earlier is a kind of reflection of investors believing in it because it was in the public domain all the time.

And I've kind of hinted at it

much,

much

more

clearly.

One

was

at

INR9,000

crores.

The

other

is

at

INR14,000

crores.

So

depending

on

when

you

believe

or

when

you

project

that

INR14,000

crores

to

come

in

and

I

have zero idea on that, but that will be the other part. But these would be

the only two, which would be what I call the Monte Carlo based ESOPs.

Swapnil Potdukhe: Okay. And just a last one

on

your

brand

spends.

Sequentially,

they

were

down

by

around

INR10

odd

crores.

Is

that

entirely

because

there

were

few

spends

related

to

the

IPL

last

quarter

and

this

quarter

onwards,

we

should

see
some
normalized
spends
of
around
INR20
crores?
Is
that
how
should
we
look
at
those
brand
spends?
Saurabh
Singh:
Swapnil,
I
discussed
this
last
time
in
the
first
quarter.
Sorry,
because
there

are

English-speaking

audience

too.

But

what

happens

with

us

is

that

we

choose

our

brand

spends

across

quarters.

So

when

you

look

at

brand

spend,

look

at

it

as

a

complete

year

number.

As a mass business, there are times when I would be using IPL to increase the buck for my brand spends. So it all remains the same, what we've talked about for two

years.
There
is
no
other
change
in
this.
But
again,
broadly,
it's
nothing
else
to
do
apart
from
where
we
had
budgeted
it.
Aloke
Bajpai:
Just
to
add,
I
think
brand
spend
is

somewhat
discretionary
in
nature.
So
there
could
be
quarters
where
we
choose
to
spend
more
and
there
could
be
quarters
where
we
choose
to
spend
less.
And
again,
it's
a
function
of
the

strategy
and
how
we
believe
the
market
and
demand
for
supply
is
shaping
up
out
there.
And
I
think
given
how
these
quarter
macros
were
looking
like,
we
chose
not
to
spend
more.

Swapnil Potdukhe: Got it, Aloke. Thanks a lot for the answer. And all the best guys going forward.

Saurabh Singh: Thanks a lot.

Moderator: Thank you, sir. Our next question comes from the

line
of
Arpit
Shah
from
Stallion
Asset.
Please
go
ahead.
Arpit
Shah:
Hi,
Saurabh.
Hi,
Rajnish.
Hi,
Aloke.
Phenomenal
execution
in
a
tough
quarter
growing
aviation,
flight,
railways
also
in
a
very
tough

situation

with

Aadhaar

card

authentication.

Was

it

a

tough

scenario

to

judge

what

the

demand

patterns

could

look

like?

But

it's

coming

to

quarter

3

like

you've

already

seen

Diwali

gone

by,

Dussehra,

gone by, October gone by. It's probably the advanced bookings for the quarter which is happening currently. Do you see trends which are similar to Q1 in terms of growth

Limited

-

October

29,

2025

rate or you would see a very muted quarter like Q2 or Q3?
Aloke

Bajpai:

Yes.

I

think

I

wouldn't

call

it

a

muted

quarter.

I

would

just

call

it

a

quarter

where

the

macro

was

tough

and

we

managed

to

continue

executing

our

strategy.

But

having

said

that,

I

think

there

are

green

shoots

in

October

that

we

are

seeing.

Both

in

terms

of

supply

coming

back

on

the

air

side

and

we've

seen

announcements

from

airlines.

We've

seen

the

winter

schedule

that

was

filed

in

DGCA.

Both

indicate

that

there

will

be

more

planes

in

the

air.

And,

of

course,

because

of

the

change

from

four

months

to

two

months

for

the

train

advance

booking

we've

started

to

see

now

bookings

for

Christmas,

New

Year

break.

And

I

think

that's

shaping

up

quite

well.

So

all

I
can
say
is
that
the
macro
environment
looks
better
in
this
quarter.
I
mean,
I
would
not
give
any
specific
guidance
around
it,
but
I
can
just
say
that
we
don't
see

the kind of supply constraints we were seeing in the beginning of the previous quarter.

Arpit Shah: Got it. And now when do we start expecting to see the cash on the books

from

Prosus?

Like

does

it

happen

from

quarter

3

and

onwards

or

when

do

we

see

the

cash

come

in

the

books?

Saurabh

Singh:

So

the

EGM

happens

in

about

two

days

time

and
the
voting
happens.
So
once
that
happens,
then
there
is
a
process
of
a
couple
of
days
and
you
get
that.
Arpit
Shah:
And
it
will
be
complete
cash
coming
on
one

go,

there

is

no

disruption?

Saurabh

Singh:

Remember

that

this

is

the

voting

is

still

not

done.

So

whatever

I'm

saying,

I

assume

that

the

voting

gets

passed,

but

if

the

voting

gets

passed and EGM is successful on first, in a maximum of a couple of weeks, we should have the capital in.

Arpit Shah: Got it. And you mentioned ESOP targets for INR14,000 crores

market
cap.
So
would
the
quantum
also
be
similar
to
what
we
had
this
quarter?
Saurabh
Singh:
It
is
exactly
similar.
So
what
I
would
recommend
here
and
I
have
given
all
the

links

to

all

the

filings

in

the

last

quarter's

FAQ.

Just

go

through

that.

It's

the

same

amount

as

this

one.

And

the

stock

needs

to

be

there

for

30

Le

Travenues

Technology

Limited

-

October

29,

2025

trading days for that to actually come into action.

Also

remember

that

the

actual

thing,

the

actual

vesting

that

will

happen,

will

happen

after

a

year

for

this.

And

so

right

now

what

we're

doing

is

because
the
target
has
been
hit,
but
even
in
that
case,
too,
if
it
happens
before
and
I
have
no
way
of
knowing
whether
it
will
happen
before
or
not.
But
if
it

happens
before,
it
will
be
in
a
similar
way.
Arpit
Shah:
Got
it.
Yes.
Thank
you
so
much.
Saurabh
Singh:
Thank
you.
Moderator:
Thank
you,
sir.
Our
next
question
comes
from
the
line

of Akhil Gulecha from Hornbill Capital. Please go ahead.

Akhil Gulecha: Yes. Hello and congratulations on another great quarter and the fundraise as well. My question is on the flight segment. You showed

a
GTV
growth
of
29%,
but
we
see
a
revenue
growth
of
60%.
So
would
it
be
fair
to
understand
that
the
difference
between
the
GTV
and
the
revenue
growth,
as
a
large

portion of that has come from the value-added services component. So are there any new products that you worked on in the flight segment? Can you explain the difference? Saurabh Singh: That's a

good
question.
What
you
mentioned,
there
are
a
couple
of
legs
to
that.
Now,
part
of
it
was
what
you're
saying,
yes,
it's
WAP
or
what
we
call
the
peace
of
mind
stack.

So
say
something
like
what
we
called
as
either
Travel
Guarantee
or
Price
Lock.
All
of
that
appear
much
stronger
in
the
operating
revenue
than
otherwise,
but
then
there
is
more
to
it

too. It kind of answers what we talked about earlier in the question.

Things like bank offers and advertisements, they are chunky and campaign based. So they'll appear in some quarters. They

won't
appear
in
some
quarters.
My
hope
is
that
as
we
keep
on
gaining
more
market
share
in
the
flight
segment,
assuming
we
continue
doing
that,
these
keep
on
increasing,
but
they
are

selective.

So again, what I would always say is that for this line item to think more over the year, don't think of it as sustainably, we'll keep on having that difference.

Apart from this, there's just one more small point, which also

leads to this and which Aloke mentioned in his speech, which is that the discounts this quarter were slightly less than the corresponding quarter last year.

Because
our
team
took
that
call,
which
is
what
I
was
mentioning
to
Swapnil
in
his
meeting.
At
times,
they
could
have
chosen
to
chase
the
top
line,
but
they
took
the
call

that
it
is
not
profitable
chasing
top
line
because
the
markets
are
tougher.
So
they
took
a
call
that
let's
not
go
too
aggressive
on
everything.
There
are
times
when
you
kind
of

work
through
things
which
are
more
sustainable.
Akhil
Gulecha:
Okay,
got
it.
Thank
you
so
much.
And
last
question.
So
all
of
these
investments
that
you
would
be
making
in
the
hotel
segment

or on AI, etcetera. How would we be accounting for it? Will we be writing it off immediately as investments happen? Will we be following a depreciation policy? What are your thoughts on it?

Saurabh

Singh:

So

look,

there

is

something

we've

always

done.

So

part

of

it

and

it

depends

on

what

kind

of

investment

it

is

and

what

the

impact

is.

Things

which

are

more
short
term,
they
will
be
expensed
off
right
away.
Things
which
are
massively
strategic
in
nature
and
I'll
give
you
an
example.
You've
done
it
before
when
the
world
changed
and
what

Rajnish referred to when he talked about the mobile evolution. At that point of time, there will be some things which will be capitalized and which are more long term in nature. So it will be a combination of both.

Akhil Gulecha: Okay, got it. Thank you so much and best of luck.

Saurabh Singh: Thank you.

Moderator: Thank you, sir. Our next question comes

from
the
line
of
Prateek
Kumar
from
Jefferies.
Please
go
ahead.
Prateek
Kumar:
Yes,
good
evening
everyone.
I
have
a
couple
of
questions.
Firstly,
what
is
ixigo’s
current
market
share
in
air
and

bus
bookings
and
how
do
you
expect
it
over
the
next
12
months
and
24
months?
And
in
general,
how
do
you
see
competitive
intensity
across
segments?
Aloke
Bajpai:
Yes,
so
hi,
this

is Aloke here. I think we haven't called out specifically the

market share. But what I can guide you towards is that on buses, we would be mid to late teens of the OTA market. On flights, we

would
be
close
to
10%
of
the
OTA
market
at
this
point.
And
I
think
we're
not
really
super
obsessed
about
chasing
market
share
for
the
sake
of
it.

But
I
think

what

we

want

to

do

is

grow

faster

than

the

overall

OTA

market,

which

is

what

Saurabh

was

talking

about,

which

I

think

we've

managed

to

do

in

the

last

five

quarters

in

a
row.
And
we
want
to
continue
doing,
going
forward.
But
there's
no
sort
of
short-term
target
that
I
can
talk
to
you
about.
Saurabh
Singh:
And
remember,
flight
market
share,
we
know

once
everybody
releases
too.
And
one
of
the
participants
doesn't
release,
so
otherwise.
Prateek
Kumar:
And
what
about
the
competitive
intensity
as
you
said,
lowering
of
discount
for
yourself.
But
overall,
like
smaller

players

or

larger

players,

how

is

the

overall

competitiveness

in

segment?

Aloke

Bajpai:

We've

not

seen

it

change

materially,

like

for

us,

because

remember

that

we

don't

really

overlap

in

terms

of

audience

with
most
of
the
other
sets.
Even
on
flights,
I'm
talking
about
our
audience,
part
of
it
is
pretty
much
unique
to
us.
So
we
don't
really
spend
that
much
time
looking
at

the
competitive
intensity,
to
be
honest
because
we've
been
kind
of
immune
to
it
for
the
last
five
years
that
we've
been
building
the
flight
OTA
business.

And
I
think
one
thing

is

very

certain

that

in

the

world

that's

coming,

if

you're

building

with

the

AI

first

approach

that

we

are

now

building

our

entire

new

existence

around

product

and

tech

capabilities

are

what

will

matter.

And

I

think

on

that

metric

if

you

talk

to

industry

experts.

You

will

get

to

know

that

there's

a

few

companies

who

have

the

kind

of

talent

or

the

kind

of
resources
disposable
to
build
what
we
are
talking
about.
And
of
course,
it
requires
patience
because
it's
not
going
to
get
built
overnight.
It
might
take
several
quarters
to
build
out
what

our
vision
is,
but
we
are
confident
that
we
will
build
it
because
we
have
a
track
record
of
doing
these
things.
Prateek
Kumar:
Just
another
philosophical
question.
What
do
you
think
can

be

most

breakthrough

AI,

which

you

may

probably

work

on,

which

can

help

solve

problems

which

you

are

currently

not

able

to

solve?

Aloke

Bajpai:

Yes,

I

will

defer

this

question

to

Rajnish.

I

hope

his

line

is

better

at

this

point.

Rajnish,

do

you

want

to

come

in

on

that?

Rajnish

Kumar:

Yes.

Can

you

hear

me

or

is

it

still

not

clear.

Aloke

Bajpai:

It’s

better

Rajnish.

Go

on.

Rajnish

Kumar:

Okay.

Sorry.

So

just

I

mean,

just

trying

to

understand

your

question.

Your

question

was

about

any

specific
technology
built
with
AI
for
travel
or
like
you're
talking
about
in
general
AI
as
a
technology
doing
to
travel
as
a
vertical?

Prateek
Kumar:
My
question
was
like
the
general
AI-related

travel,
which
can
help
boost
your
market
share
and
engagement
with
the
customer?
Rajnish
Kumar:
Yes,
I
mean,
so
now,
as
you
can
see,
what
has
happened
with
AI
is
that
execution
in

some
form
has
been
commoditized
to
a
large
extent.
I
mean,
companies,
everybody
has
the
same
starting
point.
Everybody
has
the
same
set
of
technologies
to
build.
And
so
right
now
if
you

think

about

it

like

earlier,

in

the

earlier

work

customer

experience

used

to

share

the

center

stage

with

things

like

distribution,

IT

technology,

etcetera.

But

none

of

that

matters

anymore.

I

think

the

only

thing

that

matters

in

the

current

world

is

customer

experience.

So,

if

you

have

that

DNA

of

extreme

customer

obsession,

if

you're

obsessed

with

customers

and

solving

their

problems,

this

is

the
best
time
to
be
building
because
it
has
kind
of
commoditized
execution
to
a
large
extent.

So,
our
belief
has
always
been
the
same.
So,
we
keep
focusing
on
customer
problems

and
keep
solving
them
through
AI.
What
is
definitely
going
to
happen
is
as
you
know,
with
AI,
you
will
see
like
a
complete
cross-functional
change
in
how
consumers
research
and
look.
And

a
lot
of
those
things
that
I
think
we
talked
about,
how
multi-modal
and
hyper-personalized
experiences
will
change
the
way
people
look.

This
kind
of
opens
a
new
way
for
people
to

kind

of

research

and

look

because

it

just

makes

it

a

lot

easier

for

them

to

kind

of

research

and

look,

but

at

the

same

time

people

are

also

able

to

kind

of

in

this

kind

of

world,

the user experience and the user interface is such that people are actually exposing

a

lot

more

about

their

tastes

and

preferences

and

a

lot

of

personal

information

about

what

they

really

want compared to the world where they were just doing a keyword search on Google and just putting some hypertext links.

So, in that sense, the world is changing very rapidly. And

I

think

there

are

already

scenarios

where

we

are

experiencing

people

using

our

products

and

services

where

the

users

themselves

are

not

doing

anything

whereas

our

agentic

systems

are

doing

a

lot

of

things

for

them

on

their

behalf.

So,

I

think

those

the

rise

of

agentic

systems

is,

I

think,

probably

that's

one

thing

that

I

think

is

going

to

change

the

whole

landscape

of

how

travel

or

any

other

vertical

is

seeing

the

consumption

of

purchases

online.

And

I

think

that

shift

is

going

to

be

game-changing.

Prateek

Kumar:

Thank

you,

Rajnish.

These

are

my

questions.

Moderator:

Thank

you

very

much.

In

the

interest

of

the

time,

that

was

the

last

question.

I

now

hand

the

conference

over

to

management

for

the

closing

comments.

Thank

you

and

over

to

you, sir.

Aloke Bajpai:

Thank you, everybody, for attending our Q2 earnings and hope you all have a great Christmas and New Year break and we'll see you on the other side.

Moderator:

Thank

you,

sir.

On

behalf

of

DAM

Capital

Advisors,

that

concludes

this

conference.

Thank

you

for

joining

us

and

you

may

now

disconnect

your

line.

Call: Jan 2026

January 29, 2026 LTTL/L&S/202 5-26/01/22

To,
The Listing Department,
National Stock Exchange of India Limited,
Exchange Plaza, C -1, Block G ,
Bandra Kurla Complex ,
Bandra (E), Mumbai - 400 051
Maharashtra, India The Listing Department ,
BSE Limited ,
Phiroze Jeejeebhoy Towers ,
Dalal Street,
Mumbai - 400 001
Maharashtra, India
Dear Sir/Madam,

Sub : Announcement under Regulation 30 of the SEBI (Listing Obligations and
Disclosure Requirements) Regulations, 2015 - Transcript - Earnings Call -
Financial Results for the quarter and nine months ended December 31 ,
2025

Ref : Le Travenues Technology Limited (the "Company")
NSE Symbol: IXIGO and BSE Scrip Code: 544192

In compliance with Regulation 30 and other applicable provisions of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 (as amended), please find enclosed the transcript of the Earnings Call conducted on January 22, 202 6, pertaining to
the financial results of the Company for the quarter and nine months ended
December 31, 2025 .
This transcript is also be available on the website of the Company at
https://investors.ixigo.com/ .
This is for your information and records.
Thank you,
For Le Travenues Technology Limited
Suresh Kumar Bhutani
(Group General Counsel, Company Secretar y & Compliance Officer)

Le Travenues Technology Limit ed ("ixig o") Q3 FY26 Earnings Conference Call Januar y 22, 2026
Manag emen t Represen tatives:

- Mr.

  Alok e

  Bajpai,

  Chairman,

  Managing

  Director

  and

  Group

  CEO

- Mr.

  Rajnish

Kumar ,

Garg

-

DAM

Capit al
Le

Travenues

Technology

Limited

-

January

22,

2026

Moderator: Ladies and gentlemen, good day, and welcome to Le Travenues Technology,
also

known

as

ixigo,

Q3

and

FY
'25-'26,
Earnings
Conference
Call
hosted
by
DAM
Capital
Advisors
Limited.
As
a
reminder,
all
participants'
lines
will
be
in
listen-only
mode,
and
there
will
be
an
opportunity
to
ask
questions
after
the

presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing star, then zero on your touchtone phone.

I now hand the conference over to Mr. Anmol Garg

from

DAM

Capital.

Thank

you,

and

over

to

you,

sir.

Anmol

Garg:

Thank

you,

Danish.

Good

evening,

everyone.

On

behalf

of

DAM

Capital,

I

welcome

you

all

to

ixigo's

Q3

FY

'26

Earnings

Call.

We

have

with

us

Mr.

Aloke

Bajpai,

Chairman,

MD

and

Group

CEO

of

the

company;

Mr.

Rajnish

Kumar,

Director

and

Group

Co-CEO

of

the

company;

Mr.

Saurabh

Devendra

Singh,

Group

CFO

of

the

company.

Now

before

I

hand

over

the

call

to

Aloke

and

Saurabh

and

Rajnish,

I

would

like

to

highlight

that

the

Safe

Harbour

statement

on

the

second

slide

of

the

presentation,

and

it

is

assumed

to

be

read

and

understood.

I'll

hand

over

the

call

to

Aloke,

Saurabh

and

Rajnish.

Thank

you.

Aloke

Bajpai:

Thank

you.

Good

evening,

everyone.

This

is

Aloke

here.

Thank

you

for

joining

us

on

our

Q3

FY

'26

Earnings

Call.

Q3

was

a

defining

quarter

for

ixigo.

Not

only

did

we

deliver

strong

growth

and

improved

profitability,

but

we

also

demonstrated

the

resilience
of
our
platform,
the
benefits
of
our
diversified
multimodal
strategy,
the
strength
of
investing
in
an
AI
customer
experience
stack
and,
most
importantly,
we
lived
up
to
our
customer-first
philosophy
during
one

of the most disruptive periods for the flight industry.

Let me start with the headline numbers. We reported an all-time high revenue from operations of INR317.6 crores, up 31% year-on-year, an all-time

high
Gross
Transaction
Value
or
GTV
of
INR4,902.9
crores,
up
21%
year-on-year;
and
our
profit
after
tax
came
in
at
INR24
crores,
up
54%
Y-o-Y.
These
results
reflect
strong
execution
across
our
core

business and continued operating leverage. What makes this performance particularly meaningful is the context in which it was achieved.

During December, following the implementation

of
revised
FDTL
norms
by
the
DGCA,
a
leading
airline
experienced
significant
operational
disruptions.
Over
12
days,
there
were
approximately
4,500
flight
cancellations
and
reschedules,
with
the
impact
peaking
between
December
3rd
and

8th. This period saw a two-fold surge in customer reach-outs and a five-fold increase in usage of our flight tracking products.

As soon as the situation escalated, we set up a dedicated cross-functional

war

room

to

manage

an

environment

that

was

evolving

daily.

We

were

also

the

first

OTA

to

announce

a

proactive

customer-friendly

response,

refunding

not

just

the

full

ticket

amount

but

also

convenience

fees and ixigo Assured fees on impacted bookings during the peak disruption window.

When we take such calls, the only lens we apply is whether we are doing the right thing for our

customers
in
that
moment.
Travel
is
a
high-trust
category,
and
moments
of
disruption
are
when
that
trust
is
most
visibly
tested.

Our
approach
during
this
period
was
multipronged,
reducing
customer
anxiety
through

timely and transparent updates, enabling affected users to quickly receive refunds or rebook stranded customers using alternate modes of transport, and ensuring operational resilience at scale.

Despite the severity of the disruptions, our

flights
business
grew
faster
than
the
overall
market,
with
flights
GTV
growing
at
22%
and
flight
revenue
growing
at
49%
Y-o-Y.
We
gained
some
market
share
and
a
lot
of
goodwill
as
a

result of our customer-friendly policies during the time of crisis, and lived up to our playbook of doing the right thing for the customer in all such times of crisis.

Another important

highlight of the quarter was the continued momentum in our international flights business. International flights GTV grew over 50% Y-o-Y in Q3 and has now crossed 20% of our overall flights GTV for the quarter. This growth is no longer restricted to Tier 1 airports. We are seeing strong demand from Tier 2 and 3 cities, driven by improving connectivity to Southeast Asia and the Middle

East, both through direct routes and efficient one-stop connections.

On the supply side, we have strengthened our international coverage significantly. Today, we have GDS partnerships across Amadeus and Travelport, giving us access to all leading full-service carriers. In addition, we have onboarded 26 airlines on NDC pipes, including marquee Middle Eastern, Southeast Asian and European carriers. NDC enables access to better fares, richer content and deeper airline integrations, allowing us to build more direct relationships with these carriers to deliver better value to our customers.

We are also seeing

new outbound destinations emerge strongly on our platform, including Vietnam, Japan, South Korea, Oman, Kenya and Indonesia. In parallel, we are beginning to see early signs of organic inbound travel, particularly from the

Middle East and Southeast Asia, which will be further aided by the government's expansion of the e-tourist visa scheme to 211 countries.

On trains, while the business continues to grow well, the mix

of

trains

in

our

GTV

and

revenue

has

reduced

as

flights

and

buses

grew

faster,

with

flights'

GTV

starting

to

come

in

nearly

as

big

as

train

GTV

now

in

our

business.

The train segment remains an important pillar of ixigo's multimodal strategy, accounting for 43% of GTV and 35% of contribution margin and growing in the mid-teens. Our leadership here is underpinned by deep product innovation, AI-driven complexity management and a strong peace of mind stack for train travellers.

On the railway policy front, Indian Railways has implemented several passenger-friendly changes since July, including mandatory Aadhaar verification

and
linking
during
peak
booking
windows
such
as
the
advanced
reservation
period
and
Tatkal,
in
order
to
curb
misuse
and
fraud.
While
these
changes
introduced
some
friction
initially,
we
were
quick
to
implement

them in coordination with IRCTC, and user experience tends to normalise after the first booking.

More importantly, we are encouraged by the government's intent to expand capacity. Plans to double originating train capacity across 48 major cities by 2030, along with initiatives such as Vande Bharat Sleeper and Amrit Bharat Express, give us confidence that the capacity growth in

22, 2026

subsequent years will be better than in the past. That said, capacity expansion involves long-cycle infrastructure investments, so please do not treat this as guidance.

The bus segment continues to be one of our strongest growth engines. Since acquiring Abhibus in 2021, our business doing roughly INR400 crores to INR500 crores of annual GTV. We have scaled it to over INR2,400 crores of GTV in the last 12 months, representing nearly 6x growth, and it continues to compound at 40% to 50% Y-o-Y. Our strategy here remains tilted towards growth over margins in the short to medium term as we continue to invest in penetration, brand recall and industry-first product innovations.

Before I hand it over to Rajnish, a quick word on spiritual tourism and base effects. Q4 FY '25 benefited from the Mahakumbh, which drove extraordinary demand across trains, buses and flights with mid- to high-single-digit GTV in Q4 last year coming directly or indirectly due to Kumbh, depending on the vertical.

While this creates a base effect for Q4, our Great

Indian Travel Index 2025 also shows that spiritual tourism still remains a strong secular trend. Destinations like Varanasi, Tirupati, Prayagraj, Ayodhya and Shirdi continue to see long-term growth with Gen Z participation rising sharply,

particularly

through

bus

and

train

travel.

With

that,

I

will

hand

over

to

my

friend

and

Co-CEO,

Rajnish,

to

talk

about

our

AI

products

and

new

growth

strategies.

Rajnish

Kumar:

Thanks,

Aloke.
Q3
was
a
real-world
stress
test
of
our
AI
customer
experience
stack,
and
I
am
really
proud
of
how
the
platform
performed
in
a
time
of
need.
The
December
disruptions
and
how

we

handled

them

underscores

the

importance

of

our

sustained

investment

in

an

AI-led

customer

experience

stack

and

utility-driven

product

innovations

such

as

Flight

Tracker

Pro,

which

proved

critical

in

managing

large-scale

disruptions

during

a period of crisis.

We orchestrated a coordinated response that combines the speed and scale of AI with human judgment, deploying both efficiently to support impacted customers. Verified information was continuously sourced from authoritative channels and proactively communicated to users, while well-defined SOPs enabled rapid handling of customer queries.

Multiple proactive touch points were initiated to ensure timely refunds and smooth rebooking wherever required.

We leveraged AI-driven outbound calls to proactively inform customers of flight cancellations or reschedules, automatically trigger refunds and alternate bookings and guide them through the next steps. TARA, our AI agent, played a central role by actively assisting customers with refund processes and recommending alternate travel options.

In parallel, our AI-augmented human support teams operated extended hours during peak disruption periods, helping us maintain strong customer satisfaction despite elevated volumes that we saw during this period.

In the third quarter, the percent of voice calls that were handled end-to-end by AI stood at 76%+. But what really stood

out

for

me

was

that

in

December,

when

the

crisis

unfolded,

we

stepped

up

proactively,

voice

calling

and

with

AI

handling

a

whopping

90%

of

all

calls

in

December,

and

that

was

more

than 150,000 calls handled end-to-end by AI during this period.

Thanks to this, even though overall customer contact volumes across voice and chat more than doubled, resolution times remain within internal benchmarks that we strive for, and customer satisfaction metrics stayed stable throughout the entire period.

This is evidenced by our calls answered within 2 minutes metric, remaining at 96.7% despite the elevated volumes and our average refund time remaining just 3 hours and 10 minutes. Flight Tracker Pro also saw extensive usage. In fact, it was a godsend product for a lot of users and airline staff.

This enabled customers to track real-time flight schedules at airports, with multiple instances of positive feedback from both travellers and airport staff on its usefulness during these challenging conditions. These moments reinforce our belief that AI is not just a cost lever, but a trust and experience lever, especially in moments of crisis.

I'll reiterate that

we believe we are living through a once-in-a-lifetime technology transition with AI, even bigger than the emergence of the Internet or smartphones. AI has clearly moved beyond experimentation and is now entering a phase of real product-market fit across agentic workflows, core infrastructure and applied vertical use cases, including travel.

We are at a juncture in history where we'll be judged not by our performance in any one of the quarter or any one year, but by how we were able to lead our industry's AI transformation and demonstrate the results in customer delight with long-term growth and profitability.

In
our
flight
business,
we
also
added
more
inventory,
as
Aloke
talked
about,
launched
airport
cabs
so
that
you
can
seamlessly
book
taxis
to
or
from
the
airport
right
from
inside
the

app

and,

most

recently,

have

enabled

Armed

Forces

fares,

which

allows

those

who

serve

our

country

get

access

to

preferred

fares

from

airlines,

offering

them

up

to

25%

off

the

regular

fares.

Moving

to buses now. The bus category has started seeing more innovation, both for the customer and the operators, partly due to our intense focus on this category over the last 4 years. If

I had to name all the industry-first features Abhibus has launched since we got involved, the list would be very, very long.

Starting from our Abhi Assured Service Guarantee and full refund

for

delays

in

cancellations,

the

Pink

Seat

feature

for

women

travellers

who

wish

to

be

seated

next

to

other

women

travellers,

Bus

Insights

where

we

even

tell

customers

right

at

the

time

of

booking

their

exact

bus

model

with

license

plate

number

and

the

age

of

the

vehicle;

360-degree

Walk-through

that

we

have

built

inside

several

buses

to

allow

customers

to

see

what

their

seat

or

sleeper berth will look like exactly and many more features.

Last quarter, we observed that some bus incidents and breakdowns happened, and then it made us reflect on how important safety is for our customers. So our bus safety reports now cover over 40,000 buses, where our platform regularly validates their permits, their insurance, their RC

and fitness certificates.

The Ready Go platform for bus operators now gives them more real-time insights and control over their operations. And last quarter, we launched an industry-first Roadside Assistance Program, offering alternate travel options in case of bus breakdowns or incidents.

Moving to the train business. We have added Mumbai Metro, along with Delhi Metro, for QR code-based metro ticketing and are seeing decent usage on that. And

we
also
went
live
with
our
ConfirmTkt
train
ticketing
funnel
inside
the
Rapido
app.
Both
ixigo
trains
and
ConfirmTkt
are
now
at
4.8
app
ratings
on
the
Play
Store,
and
that
is
at

a scale of millions of reviews, by the way, reflecting consistently high customer satisfaction.

Having lived and travelled globally, I can confidently say these apps work better than any train app I have used, even in any country outside India, and, hence, would be the top global train apps in terms of product utility and user experience.

Now, let me talk a bit about hotels

as well. We made several product improvements on hotels that users are complimenting us for, including our AI summaries for hotels and smarter ranking algorithms.

Despite seeing good quarter-on-quarter growth, I would

say

that

we

are

still

not

at

the

product

market

fit

stage

on

this

business

yet,

which

would

involve

solving

what

you

see

versus

what

you

get

problem

that

the

budget

hotel

space

is riddled with. We now have some deeper learnings on what is broken in this space, and we are building our hypothesis on how those can be solved.

We have talked to many

customers
and
hoteliers
and
also
done
on-ground
market
research
to
test
the
hypothesis,
and
we
expect
to
intensify
our
efforts
on
both
product
and
supply
in
the
coming
fiscal
year.

Last
quarter,

we

kicked

off

adding

direct

total

supply

by

tying

up

first

with

channel

managers

who

work

with

multiple

hotel

chains

and

independent

hotels.

Through

these

tech

integrations,

we

can

onboard

direct

supply

without

deploying a large team on the ground. We're now also adding budget hotel chains and the first set of independent hotels focused on

those segments that overlap with our core user base.

Now,

going

back

to

my

favourite

topic,

which

is

AI,

let

me

elaborate

a

little

bit

more

on

our

AI

strategy.

The

disruptive

use

cases

for

AI

travel

need

some

key

ingredients,

talented

teams

and access to large data sets and real user journeys, time to execute AI-first DNA. We have the ability to accelerate ideas and teams.

I will find founders at the forefront of

AI understanding and building promising products as well, but without enough real-world use cases or enough vertical data or distribution to test, learn and demonstrate the impact of those ideas. Based on our

deep
experience
with
AI
over
a
decade,
we
have
a
unique
ability
to
scout
and
diligence
such
AI-first
teams
and
ideas.
A
strong
preference
will
be
access
to
frontier
AI
talent,
working
on

ideas or applications that are synergistic with our own future plans and product vision.

We also continue to invest organically within our own AI stack. AI is also already deeply embedded in our products from planning and discovery to production, pricing, discounting, customer support, operations and supply side efficiency. We use AI practically everywhere, and we are doubling down now on voice and personalisation as well.

So why now? The current phase of the AI cycle offers early access to exceptional founders, talent, and platforms, which we believe is a durable strategic advantage. We intend to make a small

number

of

focused

high-conviction

investments,

partnerships

or

acquisitions

in

the

short

to

medium

term

where

there's

a

strong

alignment

with

ixigo's

core

travel

ecosystem,

data

and

AI

strength

and

distribution.

These

investments

are not financial returns alone. They are designed to accelerate learning, enable faster internal adoption of AI and create long-term strategic optionality.

Here is another important reason why the timing is correct, and

this
is
about
the
slow
death
of
software
as
we
know
it.
All
software
will
be
rewritten,
not
line
by
line
but
rule
by
rule,
because
the
assumptions
it
was
built
on
are

breaking. Intelligence no longer needs to live inside hard-coded logic.

Interfaces no longer need to be fixed artefacts. And humans no longer need to adapt to machines. In the new model, software infers intent. It remembers context, and it renders itself on-demand, turning applications into temporary projections rather than permanent products. Code stops prescribing behaviour and starts defining constraints, data access and truth while intelligence lives above it, adapting continuously to each user and moment. Stability shifts from deterministic outputs to successful outcomes, and change becomes cheap, local and constant.

Most existing software cannot survive this inversion, not because it's bad, but because it encodes the old rules too deeply. So it will fade into the background as a system of record while new AI native players quietly replace the experience.

This isn't just a rewrite of software around humans for the first time. It's also a once-in-a-generation opportunity for builders, making this the moment to scout relentlessly, back exceptional teams and place bold, concentrated bets on those shaping what comes next.

With that, I'll hand over the call to our friend and Group CFO, Saurabh, to

talk
about
the
numbers.
Saurabh
Singh:
Thanks,
Rajnish.
At
the
end
of
last
year,
I
had
two
choices.
One
was
to
go
to
my
IIT
Delhi
25-year
reunion,
something
I've
been
looking
forward

for months. The other was to use the days off slightly differently. Almost on a whim, I packed a couple of ixigo branded T-shirts and decided to take a simple trip, part flight, part bus, part train, starting at Ayodhya Airport and ending up at Varanasi railway station.

Now I won't lie here. I did miss meeting a lot of old friends, getting silly drunk

and
also
the
networking
that
comes
up
with
reunion
of
this
kind.
But
alternating
between
ixigo,
ConfirmTkt
and
Abhibus
T-shirts,
I
realized
something
I
hadn't
fully
appreciated
for
a
long
time:
the
impact

we as ixigo are having on people's lives.

Everywhere I went, people came up to me, smiled, shared their little ixigo stories, moments where our brand had quietly become a part of their journey.

Some

simply

said

thank

you.

Others

told

me

how

we

made

travel

a

little

easier,

a

little

less

stressful.

And

some

even

took

time

to

offer

January

22,

2026

suggestions not as customers, but almost as partners who genuinely wanted us to do better. In those moments, it all made sense.

Now I can talk about the trip for hours, but this is a 1-hour call, and I

have
an
obligation
to
talk
numbers.
So
let's
discuss
the
numbers.
As
always,
all
the
numbers
are
in
rupees
crores
unless
stated
otherwise,
and
year-over-year
comparisons
are
Q3
FY
'26
against
Q3
FY

'25.

Our gross transaction value stood at INR4,902.9 crores, up 21% from INR4,036.3 crores last year. Revenue from operations came in at INR317.6 crores, a 31% Y-o-Y increase. Contribution margin was INR115.3 crores,

up
12%
Y-o-Y,
with
contribution
margin
percentage
at
36%.
Adjusted
EBITDA
stood
at
INR30.8
crores
compared
to
INR24.3
crores
in
Q3
'25,
a
growth
of
27%.
PAT
was
up
64%
at
INR24
crores

versus INR15.5 crores. Now these numbers include some one-offs that I'll discuss closer to the end.

Moving on to the business segment overview. On trains, I'll confess, I regularly try to get invited

to

train

team

meetings

because

for

me,

they

are

a

master

class

in

focus.

What

I

like

most

this

quarter

was

the

team's

agility

at

this

scale,

adapting

quickly

and

benefiting

from

the changes Aloke alluded to earlier.

In trains, we booked 26.12 million train segments, up 8.8% Y-o-Y. GTV was INR2,095.5 crores, up 15%. Revenue stood at INR134.1 crores, up 12%. Contribution margin was

INR40.6 crores, up 2%, with the contribution margin percentage of 30%. Trains contributed 35% to the group's total CM.

In flights, it was a tough quarter, and our response stood out. Those

12 days in December reflected years of customer obsession and technology-led execution. We booked 2.8 million flight segments, up 15.2%. GTV was INR2,055 crores, up 22%. Revenue stood at INR102.4 crores, up 49%.

Contribution margins for flight rose 45% to 39.4% at a contribution margin percentage of 39%. Flights contributed 34% of the group's total CM.

Buses continued on the growth trajectory, and there's still plenty of road ahead. The passenger segment grew 33% Y-o-Y to 6.73 million with revenue from operations up 47% to INR75.6 crores. GTV rose 36% to

2026

INR671 million. Contribution margin was down 1% to INR34 crores and at a 45% contribution margin percentage. Buses contributed 30% of the total CM.

Now, as promised, let me highlight the key one-offs and call-outs in the current quarter. The one-off and call-outs in FY '26 Q3 included a share of loss from Fresh Bus, an associated company of INR2.9 crores, INR2.8 crores onetime impact due to the new labour code.

For Q3 FY '25, the

one-off

and

call-out

comprised

a

share

of

loss

of

Fresh

Bus

of

INR1.9

crores.

Now,

apart

from

this,

the

disruption

in

the

flight

operations

during

December

arising

from

operational

challenges

faced

by

a

leading operator, including the impact of loss booking and cancellation, would have resulted in an approximate adverse impact of INR2 crores on our EBITDA in Q3 FY '26.

On the AI investments

Rajnish talked about, I want to reiterate that when we raised the preferential issue last quarter, we had earmarked 25% of the proceeds for inorganic growth opportunities and 25% for organic growth initiatives.

Going forward, we will continue to deploy capital only into high-impact opportunities that align with our strategy and offer clear synergies, whether through AI, travel tech or exceptional talent that fits into our long-term vision.

To maintain prudence, we have constituted an Investment Committee to evaluate and approve such investments and acquisitions where we will benefit from the deep expertise of two of our Board members, Mr. Shailesh Lakhani, formally a Managing Director at Peak XV and widely recognized for backing some of India's most successful ventures; and Mr. Rajesh Sawhney, the Founder and CEO of GSF India, a serial entrepreneur and active investor in Indian startup ecosystem will be the part of this committee.

I'll end with an anecdote. When we started preparing for this earnings call, our design and

branding
team
was
running
on
a
packed
schedule,
and
I
had
just
come
back
from
my
Varanasi
trip.
So
by
the
time
we
got
on
to
kick
off
the
meeting,
it
was
very

close to the results.

As they walked me through the concept, they spoke about the perspective

and the depth, the isometric language of the visuals, the tiny details that they wanted to add on the runway on the presentation slide covers and the discipline of keeping it all consistent across every page.

Seeing how much they already had on the plate, I tried to make things a little easier for them and asked, why do we really need to spend so much time on the design template of an investor deck? Last quarter's template could work. They looked at me with a stare

usually

reserved

for

an

unwanted

rodent

about

to

devour

its

favourite

cheese.

And

then

the

Design

Head

said

something

that

stayed

with

me.

It's

never

about

taking

an

easy

path.

It's

always

about

doing

what

is

right.

We

do

it

for

the

craft

because

that

is

what

we

are.

And

when

I

think

about

it,

it

captures

what

ixigo

has

always

been

about,

and

we

will always be. We do it for the craft because that's who we are.

And with that final thought, I'll pass it on to the moderator for Q&A. Moderator: The first question comes

from

the

line

of

Mr.

Anmol

Garg

from

DAM

Capital.

Anmol

Garg:

Congratulations

on

a

good

set

of

numbers

in

a

tough

quarter

for

flights.

I

have

a

couple

of

questions.

Firstly,

in
our
bus
business,
while
the
growth
there
remains
very
strong,
we
have
seen
that
in
a
year,
there
is
a
20
percentage
point
in
the
contribution
margin
in
this
business.
So
how

should
we
think
about
a
more
sustainable
contribution
margin
in
this
business
in
the
medium
to
long
term?
Aloke
Bajpai:
Yes.
Anmol,
this
is
Aloke
here.
I
think
we
have
been
calling
out

for

at

least

3-4

quarters

that

we

have

been

seeing

the

opportunity

to

push

the

pedal

on

growth

on

buses,

given

how

low

the

penetration

of

digital

bookings

is

in

the

country,

and

it's still in the low 20s.

The other thing we have seen is the ability to cross-sell and upsell buses to a large part of our funnel, and of course, products like Travel

Guarantee,
now
Alternate
Travel
Plan,
have
actually
aided
the
growth
of
some
of
that,
right?
Because
if
a
train
ticket
is
wait-listed,
you
do
get
the
option
to
actually
buy
the
bus
almost

for free, given you get 3x back.

So, what we have chosen to do over the last few quarters is deliberately chase growth

over

purely

chasing

more

profits

because

I

think

there

is

a

phase

of

the

business

where

this

strategy

makes

more

sense,

just

like

we've

done

in

other

phases.

Like

if

you

asked

me

about
flights
4-5
years
ago,
I
would
have
said
the
same
thing.

But
now
flights
have
reached
a
certain
scale
and,
therefore,
produce
a
certain
margin.
So
I
think
on
buses,
the
idea

is

to

-now

we

are

in

the

40s,

right,

on

contribution

margin

-

our

intent

would

be

to

stay

somewhere

in

that

sort

of

range

and

not

go

down

too

much

from

here.

I

mean,

the

idea

is

if

there

is

an

opportunity

we

see

in

a

certain

quarter

where

we

want

to

invest

in

brand

or

in

performance

because

we

see

more

returns

from

it,

I think we'll not be shy of doing that.

And just to add, like what Rajnish had mentioned about these new products that we've launched, so I'll just give you one example.

We
launched
an
industry-first
product
where,
if
your
bus
breaks
down,
we
will
arrange
an
alternate
mode
of
transport
to
take
you
to
your
destination.
Now
these
products
involve
a
cost,
right?

And

if we are doing this for our customers, we're doing it to improve customer experience. This is not very different from our playbook on flights, where products like Flight Tracker Pro are built at a certain cost, and they involve a certain cost even in operating them. But we do it because that's the right thing to do for the customer at that moment, right?

So,

I

think

the

way

you

will

see

the

rewards

coming

back

is

in

not

just

growth,

but

better

NPS

and

better

stickiness

over

time.

And

just

to,

it's

not

a

guidance,

but

I think we'll be comfortable operating even a couple of percentage points, 1 or 2 percentage points lower than this even there. But we would not want this to go into the 30s,

just
to
give
you
some
comfort
on
that.
Saurabh
Singh:
So
just
one
more
thing
there,
Anmol.
As
we
mentioned
in
the
FAQs
last
quarter,
we've
chosen
to
double
down
on
marketing
activities

and
promotions.
And
it
would
have
had
a
bigger
impact
if
it
was
not
for
the
additional
safety
inspections
that
led
to
the
grounding
of
some
suppliers
in
November.
But
we
also
discussed

your question in detail as question 3

in the FAQ.

Anmol Garg: Sure. And is there any one-off in this margin? You indicated that some part of

the
ixigo
Assured
and
the
convenience
fee
was
returned
back.
So
is
there
any
kind
of
impact
because
of
that?
Saurabh
Singh:
So
as
I
mentioned,
so
if
you
take
a
combination
of

the

convenience

fee

and

as

I

mentioned

as

a

one-off

this

time,

which

I

did

in

the

end

of

the

speech,

if

you

take

both

of

these

plus

what

we

estimate

as

the

lost
booking,
it
would
be
around
INR2
crores,
which
would
have
been
the
effect
of
those
12
days.
Aloke
Bajpai:
Which
is
already
fully
absorbed
in
the
Q3.
Saurabh
Singh:
Yes.
Anmol
Garg:

Understood,

understood.

Secondly,

in

our

comments,

we

indicated

that

we

are

adding

direct

supply

in

the

hotel

business.

So

do

we

want

to

scale

up

this

business

organically?

Or

are

we

planning

to

go

through

the

acquisition

route

to

add

more

direct

supply

into

this

business?

Aloke

Bajpai:

Yes.

What

Rajnish

talked

about

was

the

fact

that

we

have

kicked

off

direct

supply

addition

predominantly

through

the channel managers out to begin with and by tying up with certain budget hotel chains, which we can tie up directly through either these channel managers or otherwise.

And at this point,

it's

not

a

people-intensive

way

of

adding

the

supply

that

we

are

sort

of

pursuing

as

a

strategy.

The

reason

is

that

till

the

product

market

fit

that

Rajnish

talked

about

at

this

point,

where

we

want

to

be

in

product

market

fit,

on

what

you

see

versus

what

you

get,

right?

I

think

that's

an

exercise

happening

in

parallel

with

a

bunch

of

interactions

with

customers

as

well

as

hoteliers

to

figure

out

what's

the

way

we

could

solve

on-the-ground

issues

where

the

budget

hotel

promises

something

and

does

not

deliver

it.

I

think

once

we

have

a better handle on that, is when you will see us scaling up supply even faster, right?

And both these exercises are happening in parallel. And Saurabh alluded to, there is a point where you step up those investments to build that

even faster. But I don't think we are sort of saying that we are in a hurry on this.

So the idea is to have better NPS in whatever we are

selling
directly,
which
means
that
customers
are
satisfied
with
whatever
we
are
able
to
do.
And
of
course,
there
is
a
slight
take
rate
expansion
you
can
go
to
when
you
go
direct.

But beyond that, it's not something that we need to build overnight. The reason is that both these exercises have to happen in parallel. Saurabh Singh: Anmol, though, I would just add one

thing

on

hotels.

Look,

in

case

the

conviction

increases,

and

I'll

request

Rajnish

should

talk

about

where

our

conviction

is.

But

let

me

put

it

this

way,

as

our

conviction

increases,

we

will

put
in
more
resources
and
capital
behind
this
idea
as
our
conviction
increases.
But
I
will
pass
it
on
to
Rajnish
to
talk
about
it.
Rajnish
Kumar:
So,
just
reiterating
what
Aloke
said,

but

I

think

there

are

2

key

points

to

understand

here

that

we

are

still

in

the

build-out

phase

and

we're

still

in

the

product

market

fit

phase.

That

means

if

you

look

at

our

obsession

in

the

past

on

building

for

consumers,

we've

never

gone

out

and

spent

too

much

money

on

a

product

that

hasn't

reached

product-market

fit

because

that's

how

product-led

growth

happens.

And so once that point doesn't reach, we won't be burning a lot of money on this vertical. It would mostly be on spending money on scaling up the teams, supply and bringing about the product market fit, etcetera.

Having said that, on the inorganic side, we are always on the lookout for great teams and great products. If we do find something, we will

always
be
on
the
lookout.
And
if
you
find
something,
that
always
goes
without
saying,
irrespective
of
whether
it
is
hotels
or
buses
or
any
vertical
for
that
matter
or
AI
for
that.

Anmol

Garg:

Sure.

Just

one

last

question

from

my

end.

We

have

seen

very

strong

growth

in

our

flight

business

despite

weaknesses

in

the

sector,

particularly.

So

is

this

largely

driven

through

our

own platforms? Or is there any increase in volumes to our partner platforms as well during the quarter?

Aloke Bajpai: So I'll take that.

I think this was asked last earnings as well, but just to reiterate this again. The fastest-growing channel for growth on all 3 lines of businesses are organic for us.

Saurabh Singh: In

fact,

I

would

say

that

if

you

look

at

if

we

were

declaring

just

organic,

the

growth

would

have

been

faster,

way

faster.

Aloke

Bajpai:

That's

another

way

to

think

about

it,

yes.

Moderator: Our next question comes from the line of Swapnil Potdukhe from JM Financial.

Swapnil Potdukhe: My first question is with respect to some announcements that you made on the BSE regarding a

Singapore subsidiary. Can you elaborate a bit more on what you intend to do over there and the kind of engagement you intend to have through that subsidiary?

Saurabh Singh: Swapnil, as we

mentioned and even Rajnish talked about during his section, about how we are looking for ideas, looking for great teams, looking for great companies.

So, the Singapore subsidiary in some sense would be a channel for the overseas investment that we would be doing. And as we've said, and we've defined how and why we would be doing the investments through the past, it's that channel

that

we

are

looking

for

and

setting

up

for.

Swapnil

Potdukhe:

So,

would

it

be

fair

to

say

that

these

investments

that

you

would

do

will

be

for

localised

travel

in

those

countries, geographies and targeted towards the locals? Saurabh Singh: Swapnil, as Rajnish just said, so it could be a range of things. It could be technology, it could be travel. It could be anything adjacent to us. What the key always has to be is that it has to be a great synergy.

It should be a great team. It should be, in some sense, like

what

we've

done

with

either

ConfirmTkt

or

Abhibus.

Rajnish,

could

you

talk

about

the

AI

part

that

you

mentioned?

Could

you

just

touch

upon

that?

Rajnish

Kumar:

Yes.

I

mean,

see,

the

adjacencies

in travel, of course, that goes without

saying and global markets are great as well. So, adjacencies anywhere, any market is always good. As I said, we always keep looking out for great teams, great products.

They could be anywhere. So that's one.

Second is the adjacency with respect to how obsessed we are with AI and how it's going to change the world, how transformative it is

as
a
once-in-a-lifetime
opportunity;
that's
the
other
aspect
that
we
are
very
closely
looking
at.

And
you
can
see
that
the
opportunity
that
it
presents,
I
think,
globally,
all
smart
tech
folks
right

now,

they

are

all

kind

of

looking

at

building

something

big

in

the

next

2

to

3

years

because

there's

a

massive

amount

of

opportunity

that

AI

presents,

not

just

for

the

fact

that

software

is

dying

and

it's

going

to

be

completely

rewritten.

It's

also

because

a

lot

of

adjacencies

across

not

just

the

compute

layer,

but

beyond

services,

compute-like

things

like

life

sciences,

quantum,

etcetera.

And

even

in

the

foundational

layer,

as

well

as

below

the

AI

vertical

native

layer,

all

of

those

present

a

massive

amount

of

opportunities,

and

I

think

every

smart

person

on

the
planet
sees
that.
And
so
there
will
be
a
flurry
of
really
smart
people
assembling
smart
teams
and
building
AI
native
products
in
the
next
2
to
3
years.
And
I
think

one
of
the
goals
for
us
also
is
to
kind
of
scout
for
such
teams
and
invest
in
them.
Swapnil
Potdukhe:
Yes.
And
pardon
me
for
probing
you
a
bit
more
on
this

piece.

And

the

reason

I'm

doing

it

is

that

there

was

a

mention

of

some

organic

inbound

traffic

that

you're

targeting.

And

in

the

past,

we

had

instances

where

some

of

the

Indian

OTAs built some platforms specifically for Indian diaspora in the Middle East kind of region. So, do we have those kinds of plans? That will be the other question related to this? Aloke

Bajpai:

Just

to

answer

this

directly,

Swapnil,

this

is

Aloke

here.

See,

there

are

2

kinds

of

things

here.

One

is

something

which

could

be

within

travel

outside

which

excites

us,

but

like

Rajnish
said,
it
has
to
fit
into
a
broad
lens
through
which
we
look
at
team,
technology,
synergies,
etcetera.

But
it
could
also
be
just
something
which
is
more
AI-led
and
where
we

believe

that

there

is

a

way

in

which

we

can

benefit

from

it

in

the

long

term

as

well,

right?

And

I

think

that's

the

broad

way

we

are

thinking

around

it.

Le Travenues Technology Limited - January 22, 2026

At this point, we don't have any, but as and when we have any specific investments or acquisitions to announce, obviously, we'll come to the market with them. But at this point, Rajnish said, we are living through a moment in history where, in the next couple of years, the kind of things we will see out there

will

be

unprecedented,

right?

And

so

if

we

don't,

as

a

company

that

is

at

this

scale,

that

understands

technology

and

AI

and

has

a

massive

user

base,

if

we

are

not

able

to take bolder bets at this time, when will we take them. So I think that's the broader thought process behind why we want to look at both organic and inorganic strategies for

making
these
kinds
of
investments.
Swapnil
Potdukhe:
Perfect.
Got
it.
My
second
question
is
with
respect
to
the
operating
leverage,
which
is
visible
in
your
business
in
that
your
contribution
margin
growth
has

been
significantly
slower,
but
still,
you
have
been
able
to
deliver
a
very
strong
EBITDA
growth.
And
I
can
see
that
mainly
that
is
coming
from
employee
cost
ex
of
ESOPs,
which
seems

to have been coming down on a quarter-to-quarter basis, INR46 crores in 1Q to INR41 crores now.

I just wanted to understand, is this also because of some AI investments that you

have
made?
Or
are
there
some
other
reasons
why
our
employee
expenses,
especially
the
fixed
cost
side,
have
been
coming
down
on
a
quarter-to-quarter
basis?
There's
a
decent
decline
that
has
happened
over

the
last
couple
of
quarters.
Saurabh
Singh:
Look,
two
parts
to
it.
Remember
that
employee,
as
we
increase
the
vertical,
there
will
be
a
cost.
So,
as
I
remember,
as
Rajnish
mentioned
to

Anmol's question, if the product market fit starts connecting, starts working, that will be there. On the technology part, remember, we were always working on technology.

So in that sense, nothing has really

changed

because

if

you

see

even

on

a

customer

service

use

case,

TARA

has

been

there

forever

now.

So

it's

been

based

since

the

Google

Transformer

models'

age.

So

it's

not

something

new

to

us.

Everything

that

we

are

doing

right

now

has

a

technology

layer

in

between.

And

again,

on

a

personal

level,

I

love

getting

into

Rajnish's

meetings

or

-

January

22,

2026

calls just to see where the world is changing, what's happening, what the new

thing

is

that

is

happening.

And

we've

always

been

that,

but

I

won't

call

it

something

very

differentiated.

It

was

something

that

was

there

from

the

start

for

us.

It's

in

the

DNA

for

us.

Aloke

Bajpai:

And

the

other

way

to

see

this

is

that

on

the

mature

businesses,

you

start

seeing

operating

leverage

come

in.

But

on

new

businesses,

you

are

still

investing,

right?

So

when

we

talk

about

growing

hotels,

there

will

be

a

stage

once

you

have

product

market

fit,

where

you

think

that

expanding

that

team

or

direct

supply, or for whatever you want to do on the ground, I think makes more sense. So I think there are phases for this.

Last 1 year, obviously, on our mature businesses, we

started
to
show
that
there
is
operating
leverage
coming
in.
And
part
of
it,
obviously,
is
because
of
all
the
things
Rajnish
talked
about,
but
if
you
don't
need
to
deploy
100
more

people
to
service
peak
time
calls,
I
think
that
shows
up
also
on
the
bottom
line
in
some
sense,
right?
So
I
think
that's
a
mix
of
both.
But
don't
think
of
it

as

like

we'll

not

be

shy

of,

let's

say,

investing

and

putting

more

people

to

work

in

areas

where

we

believe

that

it's

required.

But

on

the

core

business,

when

you

talk

about
mature
categories
like
train,
we
are
seeing
that
operating
leverage
coming
in
on
flights.
You
can
see
it
coming
in
on
buses.
We
are
investing
as
we've
always
been
calling
out.
I

think

it

just

makes

sense

to

invest

when

the

category

is

at

20s

penetration.

Hotel

category

is

at

20s

penetration.

So

you

want

to

grow

more

new

users

from

it.

So

these

are

areas
where
we'll
not
be
shy
of
investing,
yes.
Swapnil
Potdukhe:
Okay.
Is
there
any
EBITDA
margin
in
your
mind
that
you
work
with
or
the
range
that
you're
targeting?
Right
now,
you're

at

around

on

a

reported

basis

around

8%

margin.

But

do

you

have

any

plans

to

go

to

a

low

teens

kind

of

a

number?

And

is

there

any

thought

process

on

that

side?

I

understand

that

there

could

be

investments

in

hotels

and

in

between.

But

still

directionally,

how

do

you

look

at

the

margin

expansion

going

forward?

Saurabh

Singh:

Swapnil,

I

think

of

it

in

a

very

different

way.

And

again,

I'm

not

giving

you

a

quarterly

guidance

because,

as

I've

always

said

with

you

right

from

the

start,

the

first

time

we

talked,

that

especially

in

our stage of business, a quarterly guidance doesn't make sense because we are in the growth

stage. Having said that, think of it this way. As of right now, I'm not declaring what is widely considered the highest margin

business
just
because
I'm
investing
in
that
business.

So
if
you
believe
like
I
do
that
we
will
succeed
in
it,
and
I'm
not
saying
we'll
succeed
tomorrow,
I've
always
said
it's
a

long-term
vision.
But
we
believe
where
we
are
right
now.
We
are
at
par
or
probably
better
than
what
we
expected
ourselves
to
be
when
we
started
this
journey.
But
that
is
the

highest
margin
business.
So
you
can
see
that.
You
can
see
that
growing
over
the
next
5
years.

And
I
believe,
as
you
can
see
from
every
business
segment
that
we
have,

once

we

get

the

segment

right,

we

do

give

a

higher

margin

than

what

anybody

else

can

give

in

that

segment.

And

trains

are

the

proof

of

the

pudding,

that

we

are

unable

to

give

the

contribution

margin

for

trains

because

I've

got

it

as

a

profitable

business.

I

don't

know

other

numbers

because

people

don't

give

them

out,

but

I

would

be

very

surprised

if

anybody
could
match
our
margins
in
that
kind
of
business.
So
what
I'm
saying
is,
if
you
look
at
it
in
the
long
run,
it
will
improve.
On
a
quarter-on-quarter
basis
or
the

investment
phases,
as
in
due
to
competition
reasons
or
due
to
reasons
why
we
are
building
it
up,
you
might
visually
see
numbers
varying.
But
visually,
if
we
don't
invest,
we'll
never
make

a great business. Aloke Bajpai: Yes, I think the answer to this question will be more obvious, let's say, in a 3 to 5 year time frame rather than, let's say, 6 to

12-month time frame, that's the way to think about it, which is why we are not guiding on any sort of margins formally to the market. Saurabh Singh: I know I didn't answer

your
question
but
that's
the
truth.
Swapnil
Potdukhe:
Yes,
it's
fine.
Now
just
a
quick
question,
one
on
your
hotels
business.
Any
sense
as
to
how
much
your
business
on
that
side
is

happening on the direct side, given that you are already getting some supply, you said through channel managers?

Saurabh Singh: We'll probably come back with it over the future calls.

Aloke Bajpai: We are not going to put the cart before the horse. So you have to be a little patient for the answers to these questions.

Saurabh Singh: What I would recommend, though, is that you should use our app and continue using it, and you'll keep on seeing the difference in the product as it comes about. I've seen

some

of

the

upgrades

that

we

are

planning.

And

you

just

keep

on

using

the

product,

and

you'll

get

an

idea

around

it.

Swapnil

Potdukhe:

Got

it.

Just

the

last

one.

You

did
highlight
that
there
could
be
some
base
impact
because
of
Kumbh.
But
you
didn't
happen
to
quantify
those
numbers
in
your
letter.
If
you
can
just
quantify
some
impact
on
the
base

that
we
should
work
with.
Aloke
Bajpai:
Yes,
I
believe
I
did
talk
about
it,
but
just
to
reiterate
what
I
said.
Last
year,
Kumbh
was
a
mid
to
high
single-digit
GTV
contributor.

So in the Q4 numbers for last year. And remember, because of that, there were secondary effects like a higher average transaction value.

I still remember we even sold buses in INR10,000,

INR14,000
sort
of
ticket
price
range.
So
I
think
we'll
have
to
see
how
this
year
pans
out.
But
basically,
for
most
travel
companies,
right,
not
just
for
us,
I
would
say,
for

the whole industry, all OTAs, all airlines, buses, etcetera. You will see a base effect because of the Kumbh factor.

Moderator: Our next question comes from the line of Pankaj Mehendiaratta from BofA.

Pankaj

Mehendiaratta:

I

just

have

one

question

around

your

hotel's

strategy.

So

just

some

big

picture

thoughts

around

how

you

think

about

the

product

market

fit.

So,

for

example,

if

the

penetration

in

hotels is already at about 20-odd percent, let's say, 5 years, 10 years down the line, if that number doubles or 1.5x, what would it mean for you to achieve it?

Is it,

let's

say,

discounting

lower

take

rates

or

getting

some

sort

of

supply

that

is

not

out

there

on

other

platforms?

And

what

does

it

take

to

convert

those

guys

which

are

not

already

online?

So

just

wanted

to

understand

how

do

you

define

what

sort

of

properties

you

already

have

live

on

your

platform?

And

incrementally,

what

is

it

exactly

that

you

are

looking

for?

Rajnish Kumar: Yes. So I think in terms of inventory, there is more or less parity in the industry, right? I mean, because of the way

people

source

it.

I

mean,

one

thing

is

that

if

you

have

a

direct

relationship,

you

will

have

better

take

rates,

which

is

obvious.

So,

we

are

investing

in

that

side.

But

in

terms

of

very,

very

unique

inventory,

as

of

now,

that's

not

really

something

that

we

will

be

able

to

focus

on

because

right

now,

our

bigger

focus

area

is

on

creating

product

market
fit
by
very,
very
deeply
looking
at
customer
pain
areas
and
solving
for
them.

One
of
the
things
that
we
keep
talking
about
is
what
you
see
versus
what
you
get,

especially

in

the

budget

category,

right?

I

mean,

if

you

happen

to

walk

into

a

5-star

hotel,

I

mean,

the

pictures

would

look

worse

than

the

hotel

actually

is

if

you

go

and

see it there. But if you look at the budget category of hotel, then the picture is completely different.

It's completely the opposite. Pictures look way better than the hotel actually, and that leads

to

a

lot

of

dissonance.

So,

there

are

these

kinds

of

pain

areas

that

customers

have

or

customers

landing,

ending

up

at

a

hotel,

only

to

find

that

the

booking

is

not

in

the

system,

or

there's

no

room

left,

or

it

was

sold

to

some

walk-ins.

Those

are

the

kind

of

pain

areas

that

are

like

much,

much

bigger

pain

areas.

And

also,

the
fact
that
consumers
who
are
still
walking
in
and
booking
offline
still
do
not
have
the
confidence
to
kind
of
book
online.

So
we
are
entirely
focused
on
these
kinds
of
customer

pain

areas

and

how

to

solve

them

with

product

solves

and

AI

and

technology

in

the

context

of

the

customer

base

and

customer

cohort

that

is

most

relevant

for

people

who

visit

or

who frequent our platform. And that's the thing about creating this product market fit.

The reason it takes time is that if tomorrow I need to figure out a way in are

the

hotels

which

have

consistently

given

good

experience

or

which

are

the

hotels

which

have

consistently

given

bad

experience,

etcetera,

this

will

also

depend

on

a

lot

of

data

that

we

are

collecting

as
of
now
in
the
form
of
AI
reviews
and
AI
calls,
customer
check-ins
and
stuff
like
that,
which
over
a
period
of
time
is
getting
baked
into
the
algorithms
as
well,
right?

And this is how we are trying to create a product that is going to create product-led growth and not rely too much on marketing expense. But having said that, the fact that we've been the brand, even if it's so built organically, it has always been built with transportation as the primary focus.

And a

lot

of

people

who

kind

of

know

our

brand

or

name,

they

only

relate

to

us

as

a

brand

that

does

flight

booking

or

train

booking

or

a

bus

booking.

And

so

at

some

point

of

time,

when

we

are

confident

about

our

product

market

fit

and

the

product

and

the

experience,

we

would

obviously

definitely

want

to

create

that

perception

that

we

also

stand

for

hotels as a brand. Aloke Bajpai: Yes. I would just add to what Rajnish said, and I'll take a small anecdote. So Varanasi gets about 140 million footfalls a year. That's about 3,80,000

people
landing
there
in
a
day,
now,
not
all
of
them
may
need
a
hotel
or
a
room.
But
even
in
a
small
town,
you
can
imagine
that
a
large
part
of
that

demand
is
still
not
being
tapped
into
online.
And
we
saw
this
last
year
during
Kumbh
as
well
that
offline
and
just
walk-in
remains
a
dominant
channel.

The
interesting
thing
is
that
if

you

look

at

our

user

base

and

if

you

look

at

the

number

of

segments

that

we

are

doing

today,

we're

very

close

to

4

lakh

segments

a

day

now.

And

these

passengers,

a

lot

of

them

who

actually

need

hotels

today,

their

behaviour

is

actually

to

just

land

in

those

cities

and

look

for

a

hotel.

I

think

we

are

talking

about

changing

that

behaviour
through
superior
product
experience
and
superior
customer
experience,
as
well
as
some
sort
of
solve
on
the
what
you
see,
what
you
get
problem
that
Rajnish
talked
about.

But
once
that
happens,

remember

that

will

change

this

penetration.

So

if

you

roll

back

10

years

and

I

ask

you

what

the

hotel

penetration

in

India

was,

the

answer

would

still

have

been

the

same

or

maybe

slightly

less,

right?

But

if

you

look

at

what

is

needed

to

change

that,

it's

basically

to

solve

that

problem,

right?

And

we

are

fortunate

to

have

the

right

audience,

where

once

you

solve

that

problem,

you

can

see

growth

in

bookings

very

rapidly.

So

look

at

the

train

vertical

before

we

got

in

the

OTA

business,

would

have

been

around

14-15%

of

the

overall

train

tickets

sold.

We

got

in

and

today

it's

close

to

20%

and

we

are

the

leader

there.

On

the

bus

side,

we

have grown the market after we entered it. I think on the hotel side, we expect to do the same.

Pankaj Mehendiratta: Understood. And just one quick follow-up on that. When I, let's say,

browse

the

app

and

website,

on

some

of

the

hotels,

especially

in

a

few

cities,

I

saw

something

called

as

the

best

price

guaranteed

applicable

for

the

hotel.

So,

on

a

real-time

basis, how does the team essentially ensure the pricing that is available to an ixigo user is probably one of the cheapest or cheaper out there compared to other guys out there. And

what

is

the

sort

of

effort

you

are

putting

in?

So,

is

price

actually

the

moat

currently

for

whatever

the

supply

is

today?

And

that's

it

from

my

side.

Saurabh

Singh:

I'll

just

start
with
the
first
part
and
then
I'll
pass
it
on
to
Rajnish.
If
I
had
a
moat
that
was
very
clearly
defined
and
a
public
right
now,
I
would
have
been
putting

it

out

as

a

separate

LOB.

As

I've

always

said,

and

you

can

read

through

my

past

FAQs,

I

believe

that

we

are

in

the

process

of

defining

what

it

will

be,

and

that
is
why
we
don't
break
it
out.
But
I'll
pass
it
on
to
Rajnish
for
the
other
part
of
the
question.
Rajnish
Kumar:
Yes.
I
mean,
of
course,
there's
a
certain
percentage.

I

mean,

we

use

a

lot

of

data

science

to

figure

out

what

we

have

in

terms

of

deals

and

pricing

and

commercial

relationships

where

we

can

actually

afford

to

do

that.

Remember

that

this

is

a

build-out

phase,

and

I

think

you

will

never

be

able

to

figure

out

whether

there's

a

product

market

fit

if

consumers

don't

even

know

about

your

product

or

haven't

used it once.

So, there's obviously the cost of kind of acquiring a first-time customer. And I think some sort of inducement on the customer side, discounting side, etcetera, is needed to

get
customers
to
come
on
board
and
use
the
product
for
the
first
time.
These
are
strategies
on
the
same
lines.
There's
nothing
new
that
we
are
doing
here
that
has
not
been

done before. So yes, I mean, what was the second part of your question, sorry?

Pankaj Mehendiratta: I just basically wanted to understand if

pricing
the
lever
right
now
for
users
to
come
in,
and
let's
say,
try
and
book?
Rajnish
Kumar:
Pricing
will
always
be
a
lever,
not
the
only
lever,
though,
okay?
But
like
I

said,

if

you

are

looking

at

building

a

great

product,

I

mean,

if

customers

don't

come,

for

example,

if

somebody

has

never

booked

a

flight

on

ixigo,

they

would

never

understand

the

kind

of

post-booking

experience

that

we

offer,

right,

in

the

form

of

the

ability

to

get

refunded

instantly

or

to

be

able

to

get

checked

in

automatically

or

to

be

able

to

kind

of

track flights with the Flight Tracker Pro, which provides predictive AI-based alerts and predictions on flight status.

Nobody will get exposed to that kind of user experience unless you've not booked the flight first,

right?

And

obviously,

there's

a

word

of

mouth

that

would

kick

in

after

that.

So,

some

form

of

customer

inducement

cost

will

always

be

incurred

in

order

to

scale

the

product

in

the beginning.

There are very, very few products in the world that have been able to scale purely by word of mouth and the ChatGPT kind of success, right? I mean, that's very,

very

fair,

right,

maybe

one-in-a-million

product,

right?

But

otherwise,

for

the

normal

human

beings,

there

will

always

be

a

combination

of

a

great

product

and

some

sort

of

marketing

spend

in

the

form
of
discounts,
etcetera.
Moderator:
Our
next
question
comes
from
the
line
of
Vinamra
Hirawat
from
Jefferies.
Vinamra
Hirawat:
So,
congrats
on
a
good
set
of
results.
Just
a
couple
of
your
financial

bookkeeping
questions.
Your
other
income
for
the
quarter
has
basically
doubled
or
more
than
doubled.
What
is
the
reason
for
that?
Saurabh
Singh:
It's
simple.
Last
quarter,
we
raised
primary
capital.
It's
the

interest
on
that.
Vinamra
Hirawat:
Okay,
okay.
Got
it.
And
your
revenue
versus
contribution
margin,
what
are
the
costs
basically
that
you
take
out
from
your
revenue
to
reach
your
contribution
margin?
Saurabh

Singh:

So

last

quarter,

we

talked

about

it

in

detail

in

the

FAQ

and

earlier

too,

but

let

me

still

give

it

out.

So

what

I

do

is

we

would

take

out

any

directly

attributable cost, which would include performance marketing. It's a classic

CM2.

It's

partner

expenses,

payment

gateway

expenses,

performance

marketing,

and

any

kind

of

distribution.

Everything

would

be

included,

anything

that

can

be

directly attributable.

Vinamra Hirawat: Got it, got it. That's it for me. Thank you.

Saurabh Singh: In the case of, remember, the other thing that you should realise is that we have a large amount of what we call the peace of mind stack, which is our value-added services stack. And if you see the attach is about 29%, 30%. And the cost of that product also gets deducted at this level.

Moderator: Thank you. Ladies and gentlemen, due to the interest of the time, that was the last question for today. I would like to hand the conference

over

to

management

for

the

closing

comments.

Thank

you,

and

over

to

you,

sir.

Aloke

Bajpai:

Thank

you,

everyone,

for

joining

our

Q3

earnings.

And

once

more,

wishing

you

a

Happy

New

Year,

and
see
you
all
in
the
next
quarter.
Moderator:
Thank
you,
sir.
Ladies
and
gentlemen,
on
behalf
of
DAM
Capital
Advisors
Limited,
that
concludes
this
conference.
Thank
you
for
joining
us,
and
you

may

now

disconnect

your

lines.

Le Travenues Technology Limited (“ixigo”)

Q4 FY26 Earnings Conference Call

May 21, 2026

Management: Mr. Aloke Bajpai, Chairman, Managing Director and Group Chief Executive Officer – Le Travenues Technology Limited
Mr. Rajnish Kumar, Director and Group Co - Chief Executive Officer – Le Travenues Technology Limited
Mr. Saurabh Devendra Singh, Group Chief Financial Officer – Le Travenues Technology Limited

Moderator: Mr. Anmol Garg – DAM Capital Advisors Limited

Moderator: Ladies and gentlemen, good day and welcome to the Le Travenues Technology Q4 & FY2025-'26 Earnings Conference Call hosted by DAM Capital Advisors Limited. As a reminder, all participant lines will be in listen -only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Anmol Garg from DAM Capital Advisors Limited.

Thank you, and over to you, sir.

Anmol Garg: Thank you, Rutuja. Good evening, everyone. On behalf of DAM Capital, I welcome you all to ixigo 's Q4 FY26 Earnings Call. We have with us Mr. Aloke Bajpai, Chairman, MD and Group CEO of the company; Mr. Rajnish Kumar, Director and the Group Co-CEO of the company; Mr. Saurabh Devendra Singh, Group CFO of the company. Now before I hand over the call to Aloke, Saurabh and Rajnish, I would like to highlight the safe harbor statement on the second slide of the presentation and it is assumed to be rea d and understood.

I'll hand over the call to Aloke. Thank you.

Aloke Bajpai: Thanks, Anmol. Good evening, everyone and thank you for joining us for our Q4 FY26 Earnings call. At ixigo, we've always believed that in the travel industry, the real test of our business is not what it looks like in ideal conditions, but how it performs when the macro environment is noisy, unpredictable and turbulent.

This year, our diversified business model and customer -first mindset helped us deliver exactly that kind of resilience and growth amidst challenges that the environment kept throwing at us. In FY26, the ixigo Group achieved 34% revenue growth and 28% adjus ted EBITDA growth Y-o -Y with a gross transaction value crossing about INR18,693 crores or about USD2 billion for the full year.

Revenue from operations was INR1,228 crores. Contribution margin was INR474 crores. Adjusted EBITDA came in at about INR121 crores and cash flow from operations was a record INR96 crores, a 60% growth Y -o-Y in operating cash flow. Our profit after tax for the full year came in at INR71 crores.

In Q4 FY26, we continue to remain the fastest -growing OTA in India and gained market share in all key categories while continuing to demonstrate operating leverage even against a distinctly high base in Q4 because the corresponding quarter last year benef ited from the Maha Kumbh surge.

And despite the uncertainty that the current Middle East situation has created for travel sentiment and the air corridor starting from March this year, we continue to see resilient growth. Let me move to the headline numbers for the quarter. For Q4, we de livered INR4,798 crores of GTV, INR308 crores of revenue from operations, INR121 crores of contribution

margin and over INR30 crores of adjusted EBITDA.

Our PAT for the quarter was the highest ever at INR32 crores for the quarter. What is particularly encouraging to me is not just the absolute scale of these numbers, but the quality of the growth underneath them. Our business is becoming more diversified, more resilient and more balanced.

In Q4, flights became our largest vertical by GTV, while buses became our largest vertical by contribution margin. Trains meanwhile continue to remain a very large strategic and profitable franchise for us. That is exactly the kind of multimodal mix we ha ve been working on towards for years in the past.

Let me now spend a minute on each of the major lines of business because each one tells an important part of the story. Starting with buses. We were the fastest -growing OTA there with 32% growth in passenger segments and 26% growth in GTV despite the high Maha Kumbh base we saw in

both volumes and fares.

Buses is now our largest business by contribution margin in Q4 and we continue to see it as our fastest -growing major line of business for the foreseeable future. This category still has a long runway and our growth continues to be driven by strong execut ion, deep partnerships with our operators, product innovation, especially around peace of mind products and deepening customer trust.

On flights, this is now our largest business by GTV with INR2,018 crores of GTV in the quarter. Passenger segment grew year -on-year by 14%, while GTV grew 18% despite only a 1.2% growth in the market on domestic passenger segments and with a degrowth in t he market on international flights in the overall market.

Despite that, we continue to give out double -digit numbers on growth. Sequentially, we have delivered a better contribution margin percentage on this business as well. So if you see, despite the external headwinds that the environment kept throwing at our category, we continue to gain market share.

What gives us confidence is that our growth is not being driven by just one narrow lever. It is being driven by product, by trust, by better customer experience, and by a growing ability to cross -sell and monetize intelligently. On trains, Q4 saw some vol ume and GTV compression that reflects broader industry and policy changes rather than any company-specific issue.

Despite this environment, we continued to gain OTA market share in trains, reaching 62% last quarter versus 60% a few quarters ago, while also preserving healthy margins. The quarter also faced a particularly high base due to elevated Kumbh -related demand and additional special train supply last year, especially across North India.

At the same time, Indian Railways has implemented several policy changes over recent quarters, including more restrictive time periods for Tatkal access by OTAs and agents, reduced waitlist inventory for the whole ecosystem, user re -verification for repea t users, Aadhaar verification norms and more.

These policy measures, combined with the supply constraints during peak travel periods, which were particularly acute on the second seater or 2S side and have impacted overall ticket availability across the ecosystem, have naturally led to some demand shi fting towards buses and flights.

That said, we remain optimistic that some of these constraints could ease once the upgraded PRS system is rolled out later this year and as and when Tatkal time window policies are revisited for OTAs by the government. In hotels, we remain excited but dis ciplined. With the launch of our hotels Extranet HELLO, we have started onboarding hotels directly and now have a small on -the-ground team already.

Though we have some confirmations emerging on our hypothesis of how we will differentiate our experience for the customer and supply side, we will start disclosing hotels separately only once we believe the business has reached the right level of product -market fit, operational maturity, and meaningful scale.

For us, hotels is not about chasing transaction volume before trust is earned. It is about solving the peace-of -mind problem in a category where fulfilment quality, post -book experience, and reliability matter enormously. We announced at our recent ixigo NEXT launch event that we are no more in the OTA business.

We are in the Peace of Mind business and that is now visible in the operating metrics. In Q4, our value -added services tax attachment rate was over 31%. Our AI systems handled 4.35 million customer queries end -to-end, 81.5% of voice conversations and 91.1% of chat conversations with our customers were resolved by autonomous AI agents.

Our average refund time was 3 hours and 55 minutes and 95.7% customer calls are being answered within two minutes. We disclosed these numbers not because they m

ake our slides look better, but because they reflect lower anxiety for travellers. They reflect fewer moments of friction, faster issue resolution and a stronger reason for users to come back to us.

During the quarter, we continued strengthening our ecosystem through a series of strategic partnerships, product launches and brand initiatives across our bus and train businesses.

AbhiBus partnered with KSRTC in Karnataka to expand digital access to gove rnment bus services and also enabled intercity bus bookings directly on the Uber app.

On the train side, ConfirmTkt launched an AI -powered seat finder feature powered by TARA to simplify confirmed seat discovery, while our partnership with Swiggy further scaled our food-on-trains delivery business to 40,000- plus restaurants and 160 -plus ra ilway stations. We

are seeing good early traction on this.

We launched metro ticketing for Delhi, Mumbai and Bengaluru and have also strengthened our consumer brand presence through the multi -year ‘ixigo New Delhi Metro station’ branding right at the NDLS station. Finally, we are excited that ixigo, ConfirmTkt an d AbhiBus are now live as native apps on ChatGPT, reflecting our continued focus on AI -led distribution and discovery.

In terms of the near term, our stance remains disciplined and opportunistic. When it comes to margins and growth, we continue to see buses as a secular growth engine with higher contribution margins than the rest of our business. We continue to see flight s as a business where we can gain market share through superior product and customer experience while maintaining cost discipline.

Trains may continue to see some near -term headwinds until the underlying frequent policy changes stabilize or the new PRS system gets rolled out later this year, but we remain confident about our strategic position and our ability to keep taking market sha re. Coming to

AI.
We believe travel will be one of the industries most meaningfully transformed by this shift because travel is inherently high context, deeply personal, operationally complex and highly fragmented. Planning and managing travel involves uncertainty, changing conditions, multiple micro decisions, real -time disruptions, fragmented information and highly ephemeral pricing and inventory.
A large part of travel supply also exists in an unstructured and non -standardized format, possibly the vertical with the most broken plumbing, making AI particularly powerful in improving discovery, decision-making, operational efficiency and customer ass istance across the journey life cycle.
Marrying the user's persona and context to the state -of-the-art intelligence available on tap as well as proprietary models and data, makes the experience more intuitive, preemptive, and personalized and this is something that has never been done in our i ndustry before. But I don't want to steal the thunder from my friend and Co-CEO, Rajnish, who will talk more about AI, ixigo NEXT and the way we are thinking about the next phase of our growth.
Rajnish Kumar: Thanks, Aloke. Over the past year, we have been thinking deeply about what AI truly means for the future of travel and more importantly, what it means for our company. Every major technology inflection point rewrites the rules of an industry. The PC change d how we worked. The internet changed how we discovered information.
The smartphone changed how we lived. AI is different because it fundamentally changes the nature of software itself. Software is no longer static. It is no longer just a collection of screens and workflows sitting behind buttons and forms. Software can now reason, understand intent,

take actions autonomously and continuously evolve.
So this was my AI clone talking and now back to the real world where human beings are still manually conducting earnings calls. So yes, AI is different because it fundamentally changes the nature of software, as we heard, and we believe that travel will b e one of the industries most transformed by this shift.
Travel is inherently high context, deeply personal, highly visual and operationally complex. Planning and managing a trip involves uncertainty, comparisons, fragmented information, changing conditions and dozens of micro decisions across the entire journe y. Historically, travel apps were built around the limitations of old user interface.
Users had to kind of manually navigate forms, menus, filters, screens and workflows that were fundamentally designed decades ago. That model is beginning to break now with AI.
So today, users instinctively go to AI systems whenever they hit friction or uncertainty. Every time a user leaves an app takes a screenshot and asks an external AI platform for help, that app is losing engagement. It's losing context and eventually, it's risking what I call de -distribution. So we believe this will become one of the defining challenges for every consumer Internet company over the next few years. And the solution is not slapping a chatbot to an exist ing product. The solution is AI -native reinvention and that reinvention cannot happen only at the product layer.
One of the biggest realizations we had internally was that you cannot build an AI -native product with a non-AI native organization. To move at AI speed, the company itself has to become AI -native first. So over the past year, we created what we internally called NewCo inside ixigo.
A small, highly focused team with a mandate to rethink the future of travel from first principles. But more importantly, we rebuilt the organization around AI. We made our systems AI -readable. Our API is AI -accessible, our workflow is AI -compatible. Our i nternal process is AI -native. Because once the factory itself is reinvented, product velocity changes dramatically.
So what previously took years can now happen in months. As a result of this journey is ixigo NEXT. ixigo NEXT is not just a chatbot. It's not even a separate AI tab. It's not an assistant bolted onto a legacy app. It is fundamentally a new operating layer for travel. The core of ixigo NEXT is the fusion of four things.
So the first is a proprietary small language model trained on years of voice data built into the layer of voice intelligence. This is what gives TARA the ability to answer any question related to travel and the second one is a deep traveller context built over years of user interactions, preferences, bookings and behavioural signals built by using short -term and long -term memory that makes TARA contextually intelligent.

This is the place where the app knows what you want without you even having to go to settings and say that your home airport is Delhi or you always travel with two kids, et cetera, etcetera. The third thing is the real -time supply intelligence across flig hts, trains, buses,

disruptions, fares, cancellations, refunds.
And lastly, our proprietary intelligence stack, including pricing systems, discounting systems, recommendation systems, crowd -sourced travel intelligence, prediction models and automation built over the last two decades. Now these systems, they work toget her as one, as one unified intelligence layer across the apps.
The most important breakthrough for us, however, was rethinking the user interface itself.
We realized that conversational interfaces alone are insufficient for travel because travel is highly visual and decision -heavy. There's comparison. At the same tim e, traditional point -and-click interfaces are increasingly static, rigid, and unintelligent. However, they're also extremely fast to solve certain simple problems. If you just have to apply a filter, you just click on a button, you can d

o that, very easy r ather than saying like a long sentence or typing a long sentence.
So instead of replacing traditional interfaces, what we did is, we fused them together with a conversational multimodal intelligence. Now every screen inside the app is readable by AI.
It's navigable by AI, scrawlable by AI, and actionable by AI. So the a pp understands the context. It understands the intent. It understands what the user is trying to achieve at that moment. This creates an experience that feels far more natural, personalized and adaptive.
We internally think of this architecture as a 3-layer system, like the layer 0 is the traditional app interface layer. Now what we have done to this step is make it AI ready by making sure that AI can read it, AI can navigate through it, AI can scrawl thr ough it, AI can understand its capabilities that live inside the screen.
Layer 1 is the ambient intelligence that sits across the entire experience, entire app and it understands every screen, every workflow and every capability of the app. And then there is this layer minus 1, is what we call the contextual and the Ephemeral UX. This doesn't always exist, but it just magically appears at the right moment whenever it's contextually relevant.
This is where the app can dynamically metamorphose based on the user's journey and intent. For example, when a trip becomes active, the entire experience transforms into a real -time operating system with contextual capabilities that only surface when relevant. This is fundamentally different from how software was historically designed to work.
Now the second major pillar is memory and hyperpersonalization. Historically, personalization systems were rigid and rules -based. With AI -native memory systems, the app continuously learns user preferences naturally through behaviour instead of requiring manual configuration. The system understands long-term context and short -term context intent simultaneously, creating far richer personalization.

And finally, the third pillar and the most powerful pillar is the agentic execution. It's not just about recommending things to users. It's also about doing that heavy lifting behind the scenes for them. We believe that the biggest productivity unlock in AI that has happened in the past few quarters is not because of conversational AI. It is because of autonomous agents executing workflows on behalf of users.
Inside ixigo NEXT, agents can now autonomously handle multiple workflows such as automatically checking you in, figuring out your boarding pass, fare tracking, refund management, booking reconfirmations, trip monitoring and trip sinking, disruption handli ng and even proactive travel assistance.
The user no longer has to continuously manage travel manually. The system increasingly does the heavy lifting autonomously. This has profound implications not just for user experience, but also for engagement, retention, conversion and long-term platform defensibility.
What excites us most is that we believe we are still very, very early. Over the last 2 decades, ixigo has always focused on solving high-friction travel problems through technology. AI now allows us to rethink the entire travel stack from first principles . And while execution is becoming increasingly commoditized in the AI era, imagination, customer obsession, speed and depth of understanding become even more important.
Those are the real moats. The company that will win in the AI era will not simply be the ones that use AI, they'll be the ones willing to completely reinvent themselves around AI. And that is the journey we have started with ixigo NEXT. What you see live in our app is only a sneak peek of the agentic AI future we are building.
And what excites me the most is we still believe we are early in the journey of reinventing our industry with AI. That is the opportunity in

front of us, and that is the work we are now fully committed to. With that, I will hand over the call to our friend and Group CFO, Saurabh,
to take you through the detailed financials, cash flow and one -offs for the quarter.

Saurabh Singh: Thanks, Rajnish and Rajnish's AI Avatar. Please welcome me also for the next call. Now if I have to summarize the financial results for the quarter in one word, I would call them boring. And if I had to do it in 3 words, I would say boring is good. The qua rter had a high base, which we had highlighted before. And despite a few hiccups on the way, performance broadly played out in line with our expectations and operating plan.

Now of course, expectations and operating outcomes are both subjective. And I know that you'll be far more interested in numbers than my philosophical discourse on what the quarter represents. So let me get straight to the results. As always, all numbers are in rupees crores, unless stated otherwise. Year -over -year comparisons for the quarter are Q4 FY26 versus Q4 FY25, while full year comparisons are FY26 versus FY25.

So starting with the headline numbers for the quarter. Our gross transaction value stood at INR4,797.7 crores, up 9% Y -o-Y.

Moderator: I'm sorry to interrupt...

Saurabh Singh: Revenue from -- sorry, I lost the connection for a minute. Revenue from operations came in at INR308.1 crores, 8% Y -o-Y increase. Contribution margin was INR121.4 crores, up 0.4% Y-o-Y, essentially flat with a contribution margin percentage at 39%. Adjuste d EBITDA stood at INR30.3 crores compared to INR29.1 crores in Q4 FY25, a growth of 4%. PAT stood at INR32.1 crores versus INR16.8 crores last year, up 91% Y -o-Y. Now these numbers include some call -outs that, like always, I will discuss at the end.

Now for full year FY '26, GTV stood at INR18,692.7 crores, up 25% Y -o-Y. Revenue from operations stood at INR1,228 crores, a 34% increase over FY '25. Contribution margin stood at INR474.3 crores, up 18% for the year with contribution margin percentage at 39%. Adjusted EBITDA for FY '26 stood at INR120.9 crores versus INR94.8 crores, an increase of 28%. PAT for the year stood at INR71.5 crores, up 19% Y -o-Y. I would also highlight my favorite cash flow from operations, which was up 60% for INR195.7 crores.

Moving on to the business segment overview. Buses continued to grow well, and there was little not to like in the results. For Q4 FY '26, passenger segment grew 32% Y -o-Y to INR7.22 million. GTV rose 26% to INR696.8 crores. Revenue from operations stood a t INR80.4 crores, up 22%.

Contribution margin stood at INR42.8 crores, up 7% with contribution margin percentage at 53%. At the CM2 level, buses were the largest segment for us, contributing 35% of total CM.

The numbers were equally impressive if you look through the FY '26 lens. Passenger segment stood at 26.6 million up 44%. GTV was INR2,620.7 crores, up 46%. Revenue stood at INR298 crores, up 51%. Contribution margin stood at INR153.2 crores, up 18% and at a 51% same percentage.

On flights, it was a difficult year for aviation in India and probably the world. A lot went wrong for the ecosystem. And in that context, the performance of our flight business was particularly admirable. For Q4 FY '26, we booked 2.74 million flight segm ents, up 14% Y -o-Y. GTV stood at INR2,018.6 crores, up 18%. Operating revenue came in at INR95.7 crores, up 9%. Contribution margin was INR38.3 crores, down 3%. Now flights contributed 42.1% of our group GTV and 31.6% of our group's total CM.

Now for FY '26, Flight segment stood at INR10.74 million, up 27%. GTV was INR7,514.6 crores, up 33%. Revenue stood at INR390.7 crores, up 54%. Contribution margin stood at INR160.3 crores, up 39% at a 41% margin percentage. On trains, even though we conti nue to maintain our OTA market share in trains as Aloke has talked about

in his section, the exceptionally high Kumbh-led base along with the impact of certain structural and regulatory changes was visible in the business of this quarter.

That said, it's important to also highlight that strong customer loyalty and engagement with our train brands command, continue to play a critical role in fueling the growth across our other businesses through ecosystem synergies. For Q4 FY '26, we booked 24.18 million train segments, which was lower by 8% Y -o-Y. GTV stood at INR2,002.4 crores, down 5%. Revenue came in at INR124.4 crores, down 2% Y -o-Y. Contribution margin stood at INR39.7 crores, up 1% and at a 32% contribution margin. Train contributed 32.7% to overall group CM.

For FY '26, the train segment stood at INR104.12 million, up 8% Y -o-Y. GTV was INR8,278.9 crores up 12% Y -o-Y. Revenue was INR511.3 crores, up 12% Y -o-Y. Contribution margin was INR155.5 crores, up 2% and came at a 30% contribution margin percentage. Now, as I usually do, let me highlight the key one -offs and operational call -outs during the quarter. The call -outs for Q4 FY '26 include share of loss from Fresh Bus and associate company of INR45.59 million, tax benefits amounting to INR82.5 million --

actually INR8.25 crores, just to be consistent here. For Q4 FY '25, the callout comprised of
share of loss from Fresh Bus of INR3.29 crores.
Now I am currently a part of the travel and leisure industry, and I started classifying travel
and leisure as work. A month ago, this line of thinking got me to U.S. for what was supposed
to be a Route 66 road trip. Now somewhere between the endless deser t highways and my
growing enthusiasm for authentic retro burger, my swiftly vegetarian wife staged a rebellion. The trip actually pivoted into a drive down the Pacific Coast Highway.
It was at a pit stop in Santa Cruz, while looking at sea, I noticed a bunch of people just lying around in water, doing absolutely nothing. Naturally, I asked somebody what they were
doing. I was told they are surfers. Now this was confusing to me because what I've seen on
TVs and social media, I had assumed surfing mostly involves cinematic waves, dramatic
shots, people with suspiciously good hair appearing to defy physics for about 30 or so
seconds.
But standing there, I realize something fascinating, that's the point of surfing. Watch the water
carefully, understand the currents, maintain balance, preserve energy, know where to position
yourself, ignore waves that are wrong for you. And then when the right one finally arrives,
be prepared to ride it well. In many ways, what we are doing at ixigo is the same. With that
final thought, I'll pass it on to the moderator.
Moderator: Thank you very much. The first question is from the line of Pankaj Mehendiratta from Bank
of America.
Please go ahead.
Pankaj Mehendiratta: Hi, thank you, management. Good evening. I have 2 questions. First around growth, and it
has 2 parts. When you say that you continue to see resilient growth out there, is there any
way to quantify it given that we are 50 days already into 1Q? And second pa rt of the question
is, given where the macro is heading, led by oil and some inflationary pressures, can you
share some examples from your past around user demand and its impact on ixigo's growth

and margins?
Aloke Bajpai: Yes, Pankaj, Aloke, here. See, I think while it may be difficult to give full color yet because
obviously, some part of the quarter is still remaining. What I can tell you is that last quarter,
given that there was a large Mahakumbh base, right, which does n't exist this quarter -- last
quarter, in fact, February last year, was phenomenal in comparison to February this year. And
therefore, you see that in terms of our growth also for Q4, we could have grown even better
without that ba

se effect.
Having said that, right, and we are in the peak season, summer season as we speak, we do
see that demand trends continue to remain strong, at least for domestic. International
continues to be affected somewhat, right, because of the Middle East situation as well as the
fares, right? I mean the fares have gone up significantly on many routes. And given that there
have been some curtailment of routes by certain airlines, I think that's not helping that
situation there.
Despite that, given that we are starting off from such a low base on international flights, I
think we still believe that we'll be one of the more resilient players out there on the flight side
of the business. But just directionally, obviously, Q2 doesn' t have the -- sorry, Q1 FY '27
doesn't have the same base effect as Q4 FY '26. And therefore, we expect that to start showing
up in terms of growth. So, the second part of the question, can you just come again on that?
Saurabh Singh Can you repeat the question on the second part of the question, please?
Pankaj Mehendiratta: Sure, Aloke and Saurabh. So it was given where the macro is heading right now led by oil and some
inflationary pressures; can you share some examples from past around user demand
and impact on ixigo's growth and margins?
Aloke Bajpai: See, I think we have seen 2 things. One is substitution. So international trips being substituted into domestic
because of the massive difference in fares that are now visible, at least for
Europe or Far East or even U.S., the fares have actually gone up s ignificantly. Even for
Southeast Asia, we are seeing that the fares have actually moved materially up. So there could
be some substitution starting to play out.
The other part of that, see, because even domestic flight fares are trending higher than what
they usually used to be this time of the year. We are seeing some people go into the bus
funnel. We are seeing some people go into the train funnel, although tra in remains perennially
impacted by the fact that there is less supply than demand, right? That's always been the case.
Therefore, buses is the biggest beneficiary of that growth, which you also saw last quarter, right? So I think when -- in an
environment where flights are expensive and the train
availability is running very low, buses naturally sort of get the benefit of that, right? So we
continue to see that kind of a trend playing out for the last few months.

Saurabh Singh: And Pankaj, on the fuel price for the last cycle versus this cycle, remember, there are a couple of parts to it. One is if it starts affecting the operator in terms of the sustainability of an operator, that changes things much more. In the interim, assumi ng that doesn't happen. In our different divisions, what you will see is that there is -- starting with flights, there's a play which happens between the segments and GTV because flights are very sensitive to the price, a large part of the f uel price is passed through.
In buses, this also happens, but buses, because it's a take rate business, it's actually, in some sense, a bit more beneficial, as why it's in the goldilocks zone if it doesn't cross the goldilocks zone in that sense. So as a business, that also plays arou nd.
Pankaj Mehendiratta: Got it. And the last question, coming on ixigo NEXT, how should we think about benefits being visible in financials across both revenue growth or costs being lower?
Rajnish Kumar: I think it will be too premature and too early to talk about the impact on financials of ixigo NEXT. But like from the early results, what we can tell you is that we have extremely positive NPS and feedback from the customers who have started using it. And everything is looking green like all the metrics - everything that we really track and obsess about, all those metrics are up and looking great.
Pankaj Mehendiratta:

And if we think about the overall initiatives that ixigo has been taking across user segments, solving for customer pain points and things like that, any way to quantify that on an overall basis for the company or not really?
Rajnish Kumar: It's hard to quantify it. But one thing is like the fact is that ixigo NEXT is basically a giant leap forward in terms of how apps were designed and how users use those apps in the past.
And I think that's going to fundamentally change. I think right now, there is no discrimination between different kinds of target audiences, like people living in Tier 3 or 4 cities who are more technically challenged and their ability to use a bespoke app is substantially lower than somebody living in a Tier 1 city who already is tech savvy and understands how to use the app.
So that understanding of how to use the app is disappearing with AI. That's the whole power of ixigo NEXT because it just makes apps -- it democratizes apps. I mean you can -- anybody can use it. It's so simple to use it. You can just speak to the app and the app does stuff for you.
And sometimes the agentic capabilities of the app does a lot of those things even behind the scenes without you even knowing about them.
Aloke Bajpai: Yes, just to add to that, Pankaj, basically, like Rajnish said at the end, right, like what we've launched right now is just a sneak peek of how we are imagining the future, right? So you've got to think of this as a new paradigm for travelers to engage wi th companies that are trying to help them, right?

And for companies to actually leverage all the intelligence that's out there to create new ephemeral user interfaces that work in a multimodal way. And I think the beginning of that is with flights and hotels for us, right? But over time, you will see this play out in all the categories we play in. We started with English, Hindi, English. But obviously, we'll look at more languages eventually, right?
So, there's a natural path of evolution from here. And this is a very, very early sort of, you can say, sneak peek of what our road map will really look like.
Moderator: The next question is from the line of Swapnil from JM Financial.
Swapnil: My first question is with respect to your air business. I would like to understand like what percentage of your air business is outbound focused? The reason I'm asking is because of the recent comments from some of the government officials regarding foreig n travel. So I just wanted to get a sense as to what percentage of our business would be at risk if certain changes happen. Curbs are increased.
Aloke Bajpai: Yes. So I don't know if I heard this right, but what you asked is what percentage of our business is focused on outbound, right, for flights?
Swapnil: Absolutely.
Aloke Bajpai: Okay. So I think for the previous quarter, we have called this out in Q3 that we were at more than 20% of GTV in that quarter on -- for the flights business, the more than 20% was actually outbound. We haven't particularly looked at this number for this qu arter in Q4, but my sense is we would not be far off from there. So, in that sense, there has not been any material change from a GTV line perspective.
But of course, there has been a change in the fact that remember, volumes have gotten impacted and the fares have gone up. So that's the way to read through this that the volumes would have been slightly more impacted on the international side, whereas the fares for the

remaining volumes would have gone up to cover up for it.
Swapnil: So essentially, what you're saying, Aloke, is like there should be no impact despite the -- despite some impact on supply side as well?
Aloke Bajpai: No, there has been impact, because see, the way to think about the flight business is that convenience fee forms an important part of revenue, right, as you know. And theref

ore,
volumes are as important as value in some sense. So, I think on the internatio nal side, we would have seen some impact, obviously, on Middle East and some of the European routes, etcetera. But then domestic growth more than covered up for it. And then the remaining international, which was still happening, the value we nt up and therefore, the GTV contribution would have remained in the same ballpark.
Saurabh Singh: Just a couple of things there. Remember, we as a business are much more in -- our

international business is much more short haul than long haul as in terms of the mix. And then a significant part of our mix is around Southeast Asia or the other side of where -- so it's -- yes, it's the other -- it's the nature of our mix, which kind of -- it does affect Middle East affects us, but it affects us relatively less than an average market, how things are. And because vacation travel would be a larger part for us, people shift where they are traveling to.
Swapnil: Got it. The second question is with respect to one of the comments that you made in your release. You mentioned that the bus segment henceforth should grow securely. So just wanted to understand what do you mean by securely over here? Do you mean growth would be in line with the industry or it will be 1.5, 2x of the industry which I think...
Saurabh Singh: Swapnil, you're trying to give us a guidance again. We won't. But we should...
Aloke Bajpai: Swapnil, you would have seen that last almost 3 years, right, like we've delivered on the bus growth being higher than the industry as in the OTA industry bus percentage growth numbers, right? And we have consistently been able to grow the fastest in the b us OTA market. The reason has been the fact that, a, we are starting off a very low base ourselves, right? So we are the number 2 player, and we've been catching up, obviously, year -on-year on that gap. But there's still a large part of the market that is continuing to remain offline. So even though online penetration would have gone up from 20% to maybe about 22%, 23-odd percent as we speak. But then there is still a large part of bus bookers that are booking offline. And therefore, the addressable market remains very, very large.
Secondly, I think we've been very innovative on product. The bus team has definitely been first to market with several product innovations, including the recently launched product where the assistance is provided in case there's a bus breakdown. There's a cab that comes and takes you to the destination, then we were very early to the market with products like Abhi Assured, where we have a service level guarantee.
And we have 360 bus views, which means you can see the interiors of your bus, you know whether it's a brand -new bus or not. So I think many of these innovations have really helped us grow faster. And we still have a long pipeline of such innovations to execute. So, in that sense, we remain confident that as those things hit the market, they will deliver on growth.
Swapnil: Just to extend that question, Aloke, like earlier, we have certain regions where we were not present through our bus offering or there were certain suppliers which are not working with us. Are such any easy peakings available to us on the AbhiBus side even now, which you can get -- the benefit you can get going forward?
Aloke Bajpai: I think that was the case maybe a couple of years back or maybe up to a year back. But I think as we speak today, we would be pretty much at parity with whatever is out there, at least the operators that matter; they are all partnered with us. We have, I t hink, in total, 6,000 -plus. In any given month, more than 4,500 would be transacting with us. And I think we would be at

parity with anybody else out there in terms of both service

s and routes.
So, I don't see a major inventory gap as such. In fact, we were the first to market with the Karnataka State Road Transport inventory as well in that sense. So I think we have been making progress there. And we continue to remain confident that if there is a new operator that comes up and who wants to tap into online growth, we'll be one of the two companies out there that they will call and want to partner with.
Saurabh Singh: Swapnil also remember, in bus now we are at the stage where we would be spending -- and we've been doing that last couple of quarters, spending on branding in certain locations where we have got the back end right and now the market share has to catch up t o what our high
market share is in some of the other markets.

So, if you see the Tamil Nadu campaign, which we are doing, it is something on those lines where we are trying to -- yes, it's a long -term play and trust or brand takes time to play, but it remains the priority which will kind of where the product is ther e, people have started using the product. It, in our mind, is a better product than what is available outside. And then we kind of continue to get the brand and the trust right to make more people use it.

Swapnil: Understood. Just the last one, if I can. So this is related to your capitalization of certain costs. And presuming these are mainly related to tech employee costs. My question out here is like are this related to the AI investments that you are making? Or this is related to the hotels business in particular?

Saurabh Singh: So, it is AI. What we've done is we've capitalized a portion of the core usable AI investment, which is related to building the foundational infrastructure orchestration layer and platform capabilities that we expect to deploy across the multiple use cases within the OTA ecosystem.

And remember, this is for several years, and this is a similar policy to what we followed in the past too when we built the train and the other apps.

Now remember, in this case, it is -- what we are doing there is what we view as the core infrastructure. And maybe Rajnish can talk about a bit about what we are building there in AI. And Rahish, I'll pass it on to you to just talk about the AI build over and give a sense of what we would be building over the next couple of years to the extent we can.

Rajnish Kumar: Yes. I mean AI is right now an investment focus for everybody in the world. And I think it's going to pay off in a really, really big way because we all know that we are using the worst and the most expensive AI we will ever use in our lifetime. So I'm not going to say investing on AI because this is one investment that any company is not making, they're basically kind of risking the future existentially.

We're using a lot of AI, obviously, to invest in like the core infrastructure and converting our company and making the whole entire company AI -native, like creating this layer of organizational operating system, which will make every single person in the organization

more efficient. Obviously, we don't disclose token usage as of now, but with time, I think this will probably become an important area of expense to kind of show that as a line item at some point of time in the future. But the token usage for all the AI products that we are building, all the infrastructure investments that we are building to convert our organization into an AI -native organization. All of that is part of the spend that you are seeing right now.

Saurabh Singh: Swapnil just to add to that, remember, this is not about capitalizing all the spend. It's the costs which are experimentation, model testing, ongoing operations that are through P&L. So it's just specific long -term costs which are being capitalized.

Swapnil: Just two related points there, Saurabh. One, to be clear, there is no hotels - related capitalization that we are doing?

Saurabh Singh: No.

Swapnil: And two, how do you amortize this cost? I mean what would be the period of the amortization? And any specific number that you will end up spending every year towards this.

Saurabh Singh: So, look, there are two parts to it. Let me answer start with the hotels part and the reason why, look, hotel, we are not. That's the first part. Secondly, on the amortization, it will be 5 years. And as the product, as the infrastructure layer comes up, i t will be a 5 -year amortization.

Moderator: The next question is from the line of Anmol Garg from DAM Capital Advisors Limited.

Anmol Garg: Aloke, you indicated that train should see some kind of headwind going ahead from that perspective and since we have a higher base over there led by Kumbh effect. So how should we look at the growth of train in this particular year? And beyond FY27 as well , what should be the growth rate that we should look for the train business?

Aloke Bajpai: Yes. So, I think there were two things that impacted obviously the growth, and I'll just call them out again. One were a myriad of policy-related changes, which affected the entire OTA ecosystem, including the Tatkal timings and the wait list reduction; in fact, impacted everyone, including IRCTC themselves, right? I mean in that sense, there are some things that we can't really change.

And those things, because they are onetime changes, those changes, you have to live with on a year -on-year comparison basis, right? Because once those changes happen, the subsequent quarters get impacted at least till the point where it doesn't become the new normal, right? So to that extent, I think there is some impact that I foresee will be there.

However, having said that, like I said, we are continuing to see market share gains within the OTA segment going from 60% to 62% and given all the things we have in the pipeline,

hopefully, that continues. Also, there will be some impact from the fact that we've just
acquired a new business in Europe, right? So there could be some impact, positive impact, in fact coming from that.
But broadly, I think look, it's harder to guide at this point unless the fact that the new PRS
system coming in August or September based on the government announcements, right? I
mean if that new PRS system comes in and some of the policy changes that were made are
reversed, I think there could be more positive momentum also if we see any unreserved
ticketing opening up sort of a situation, right, which we keep hearing about time to time whether unreserved ticketing gets opened up for OTAs. As and when that happens, that could
be positive for the business.
Saurabh Singh: Also in this part, let me put it in a very different way, right? Can I gain more market share in trains if I am focused on that? The answer is, yes. Do I want to and believe that's the best way
to add more shareholder value over the long run? Answer is, no.
So what we see in trains is us maintaining and mildly increasing market share at the level that
we are. It's tough to increase from there, and we are probably 3x or 4x the next competitor in
trains. So it's that. What we do also believe, as I said, both i n, you can read that in question
three, we've pointed it out and talked about it in our FAQ. But the point is, look, our train
offering is premium, convenience -led and users pay extra for the reliability experience and
peace of mind. That’s what it offers.
Now what this means is that I have probably one of the largest cohorts of high-intent
discretionary travel users anywhere globally. The point is, we believe that there are, the
monetization of these users and what we can do with the trust that we have ear ned over
decades can be much, much better used through going into adjacent categories. And that is
what we have focused on with o

ur train business. And you'll see more of that as you go about this year. And again, at the risk of repeating myself and what R ajnish said earlier, ixigo NEXT
and what that infra offers will be part of what this would come through.
Anmol Garg: Sure. Saurabh and Aloke look just one more thing. And good to see our contribution margins
have inched up in this quarter. However, if I look at our technology cost that have increased
also in this quarter, therefore, the increase in the contribution margi ns haven't translated into
EBITDA margin increase. So both on contribution margin and EBITDA margin, should we
expect the contribution margins to remain stable from here on? And should we expect,
therefore, the EBITDA margin to increase given t here will be some leverage on the fixed cost
for us?
Aloke Bajpai: Yes. So, Aloke here, I think the way to think about this is that we are in two categories where we have a stated intent to pursue growth as an objective, right? And we've already mentioned that both flights and buses, we are, we were okay to push the pedal up to a certain extent,
obviously, within a guardrail.

And if you look broadly, right, whether it's the full year picture or the last quarter picture,
30%, 40% and 50% is around where we were hovering, right, for train, flight and bus in terms
of contribution margin, right? Now there could have been quarters where we push the pedal
harder, right, and therefore, have more either performance marketing or a new product that
we launched, which essentially has, let's say, initially, we want that product to be adopted and therefore, we keep it at a price point that' s attractive or we are willing to invest in the first
one or two quarters.
So we've done that in the past, right, when we launched new things, value -added services.
And then there could be quarters which are more normalized where you start seeing,
obviously, that contribution margin playing out. I hope what we've been able to de monstrate
over the last three, four quarters is that this is something that we can control at will, which
means if there is a quarter where we want to play more aggressively and therefore, have some
leeway on letting this contribution margin grow because w e see an opportunity to gain market
share or we see some opportunity to launch a new product, we are never shy of doing that.
And then there are quarters where we want to play slightly more conservatively because the environment has issues or there are performance marketing is not yielding the same upside. So I think there you will see us playing it based on what we see out there .
Net-net, I think what we can expect, and remember, EBITDA level, there is one more thing.
There is also the hotels business we are building, which is not visible to you guys, but there is some cost obviously going in building that, right? So it doesn't sh ow up in any other place,
except for the overall EBITDA for the business, right? So I think there, you can assume that there is obviously some operating leverage being eaten up by that new vertical we are
building. However, the core business continues to be delivering operating leverage. That is
something which hopefully is visible in the last couple of years.
Anmol Garg: Understood, Aloke. And just I was referring to our last quarter's comment that at 36%, 37%
is where we see a bottom of our contribution margin and our contribution margins will not

kind of dip from here. So just wanted to understand that, that kind of unde rstanding remains
true as of now?
Aloke Bajpai: Yes. I think what matters more, and again, I'm speaking from the other side of the table, right?
What matters more here are two things. Number one, can we achieve the kind of scale we
desire to achieve where operating leverage, when it comes in, will be mo re meaningful, right?
To give you an example, in the first few years when

we were building the train business or
the flight business, we were losing money as well, or not making enough money, very small
trickle of revenue, but we did not care because we are pushing the pedal o n growth to achieve
a scale where once we swing the pendulum the other way, we start seeing the operating
leverage start to play out.
I think on categories like hotels, we are far away from that. We've just started building that

out over the last couple of years. On flights and buses, I would rather, at this point, chase
market share as an objective and therefore, be okay with 1% or 2% less contribution margin at times. So I'm not really that obsessed about that as long as the overall contribution margin
at the company level, which you see has grown year -on-year, as long as the overall company's
contribution margin absolute number continues growing, you will see that we will have
operating leverage flowing in at the EBITDA level.
Saurabh Singh: So just to clarify so that there is no confusion like there was last time. We are focused on the absolute number in contribution, the rupee number for contribution margin and rupee number for EBITDA. And we believe that growth will continue happening even while we invest in
new businesses like hotels.
Anmol Garg: Sure very clear. Thank you so much Aloke and Saurabh. That’s it from my end..
Saurabh Singh: Thank you. And I think I called you Prateek, who's the next guy. So apologies.
Moderator: Thank you. The next question is from the line of Prateek Kumar from Jefferies. Please go
ahead.
Prateek Kumar: Yes. Good evening I have two, three questions. Firstly, is there a way to quantify the cost of
ixigo NEXT project for you? And how do you recognize that in your P&L, balance sheet?
Saurabh Singh: So look, there are two parts of ixigo NEXT, and I think it's the answer that we talked with,
that we just had right now. So the parts which are either experimental or already implemented,
they would be passing through and you would see that in the tech cos t or the employee cost.
The parts where we are building the infrastructure and which is building things which are the
orchestration layer or the platform capabilities, this you will see in the capitalization. So you
see it in the line on capitalization there on the balance sheet . So it's two parts of this. Now
what is being implemented and what you're seeing right now is a small sliver of what it will
become.
So as things keep on coming up, as the things keep on developing and coming out, or when
the thing is in experimentation, both cases, we are taking it as an expense. It's just that when
it's in the defined development stage, and the long-term identifiable benefit has been defined,
it's when it's being capitalized. So it's multiple places.
Aloke Bajpai: And to think about it this way, right, like I think there will be two impacts on the P&L, if you ask me. I mean, one is top of the funnel, if this becomes a new way of doing things in travel, right, because we are kind of reimagining how our industry works . If this becomes a new way
of doing things in travel, then obviously, it impacts your top of the funnel and the growth,
right?
And the second part is in efficiencies because the agentic flows fundamentally replace the
manual operational flows that used to exist in the travel industry, which were, a) slow and

b)expensive because it involved perhaps somebody working for several hours and being able
to follow up with an airline or a supplier or a hotel to get whatever needed to be done for you.
And now if an AI agent is doing that on your behalf, obviously, there is a cost efficiency
element that starts coming in. So I think in that sense, as and when this scales up, it starts
showing up, but it's very early days to talk about those t

hings. Like Rajnish said, it's
something that over time, we'll start talking more about as we see the adoption go.
Prateek Kumar: Sure. The other question is on your hotel segment. Where do you think, how is your progress
on product market fit for the segment as we have been talking about it for some quarters, but where have we reached in this segment?
Rajnish Kumar: Yes. I mean we will eventually start reporting hotels separately. But only once we feel that we have
meaningfully solved the customer problem. I know that we have been saying this

for a few quarters now. But it's a hard problem to solve when it comes to solving the problem
of peace of mind. We did it for flights; we did it for hotels. We did it for buses. We did it for trains. We will eventually do it for hotels as well.
But the good news is that like we've actually started making progress on the inventory side. So we launched HELLO, our AI -based Extranet Software, which basically is accelerating
total on -boarding on the platform. So I think a lot of rules of the game have changed. I don't
think we will be going through the same process that some of the others have, OTAs have to go through to kind of build like a massive base of supply.
I also think that there is fortune at the bottom of the pyramid, so, which is sitting right inside
our ecosystem of apps and solving for them continues to be a challenging problem. And we'll
make sure that, that peace of mind problem that we have, we will solve it.
Also, I think ixigo NEXT is an interesting step in that journey. Like I think the way people find and book hotels is changing, like it's no longer that same way people used to kind of go
and search for hotels and apply 20,000 filters, etcetera, like you c ould literally go and say
that show me hotels in with the Udaipur with the views of Lake Pichola and restaurant at the
rooftop, and it should basically be able to kind of show you exactly those hotels.
So fundamentally, a lot of these things have changed the game. The rules of the game are
changing both on the supply side and on the demand side. And I think AI is doing that. And
with us being really at the forefront, we are seeing that we should be able to kind of get to a
point where we can start disclosing those numbers very soon.
Prateek Kumar: Lastly, on your, have you been moved or made progress on identifying the objective of the fundraise from Prosus last year?
Aloke Bajpai: We've already quantified the objectives of the fundraise at the time when we did the fundraise. There were four buckets, which we talked about, which was.

Prateek Kumar: I know more than that, but more specifically like usage of like how do you plan to use in
terms of time line?
Saurabh Singh: We have time right now as in timelines are, we've still got a couple of years left for that. We
don't want to rush into anything. But yes, as you said, there is a reason why we give a certain
amount of time on the use of funds. And the reason is not to rus h into things and which is
what we intend to do.
Aloke Bajpai: Yes. And some part of it is, in a way, getting utilized like in the build -out of the AI stuff that
Rajnish is talking about or the AI investments that we said we will make. We already announced one of them. And then we've also made one acquisition already Trenes and we
obviously keep evaluating several assets out there. So I think we don't want to necessarily look at it as a timeline for usage, but we have enough on our plate to sort of look at it in terms
of investing into our future, whether that happens organically, inorganically; we keep
evaluating both parts.
But hotels, definitely, we are expanding supply. We talked about the fact that we've been
onboarding hotels on the ground now for a few months. And hopefully, that picks up pace.
And obviously, initially, that is an investment you end up making, righ

t, be cause you build
your team that goes out and gets these long-tail stand -alone hotels.
We are seeing some early signs of how that can be also solved agentically and with AI that can be accelerated. So yes, I mean, it's still a few quarters to go when we can quantify more about how much of this has been used and how much is still something w e are going to use.
But yes, I think the path to build out hotels involves some investment, the path to build out ixigo NEXT, and this is just a sneak peek, but the path to build out ixigo NEXT requires
further investment and the potentiality of any furthe r M&A always is there.
Prateek Kumar: Sure thank you these were my questions.
Moderator: Ladies and gentlemen, that was the last question for today. With that, I now hand the conference over to management for closing comments.
Aloke Bajpai: Thank you. Thank you, everyone, for joining our call today, and we do look forward to
engage with you next quarter. All of you have a great summer break and hope you get to try
out ixigo NEXT.
Moderator: Thank you very much. On behalf of DAM Capital Advisors Limited, that concludes this
conference. Thank you for joining us. And you may now disconnect your lines.
