"Enviro Infra Engineers Limited
Q2 and H1 -FY25 Earnings Conference Call"
December 18 , 202 4

MANAGEMENT : MR. SANJAY JAIN – CHAIRMAN AND WHOLE -TIME DIRECTOR – ENVIRO INFRA ENGINEERS LIMITED
MR. MANISH JAIN – MANAGING DIRECTOR – ENVIRO INFRA ENGINEERS LIMITED

Moderator: Ladies and gentlemen, good day and welcome to Enviro Infra Engineers Limited Q2 and H1 -FY25 Earnings Conference Call . As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on you r touchtone phone.
Please note that this conference is being recorded. I now hand the conference over to Ms. Astha Jain, Senior Research Analyst at HEM Securities. Thank you and over to you, ma'am.
Astha Jain: Thank you, Sagar. A very good evening, ladies and gentlemen. T hank you for joining the Enviro Infra Engineers Limited Q2 and H1 -FY25 Earnings Conference Call.
Joining us on the call today from the management team is Mr. Sanjay Jain, Chairman and Whole -Time Director and Mr. Manish Jain, Managing Director. We will commence the call with opening thoughts from the management, post which we will open the forum for Q &A sessions, where the management will be glad to respond to any queries that you may have. Before we go on to the main call, I would like to read the standard disclaimer.
There may be forward -looking statements about the company, which are based on the beliefs, opinions and expectations of the company's management, as on the date of this call. The company does not assume any obligation to update their forward -looking statem ents if those beliefs, opinions, expectations or other circumstances should change. These statements are not guarantees of future performance and involve risk and uncertainties that are difficult to predict. Consequently, listeners should not place any undue reliance on such forward -looking statements. With this, I will hand over the call to Mr. Sanjay Jain, Chairman and Whole -Time Director to take it forward. Over to you, Sanjay sir.

Sanjay Jain: Thank you, As tha. Good evening, everyone. Firstly, I would like to thank you for trusting our company and our team for the great response reflected in the IPO.
We have received an overwhelming response from the investor community, and we are truly grateful for valuing our company. We would remain focused in our commitment and would stay on ground, continuing to focus on our execution of the project and pushing ourselves to reach greater heights with determination and focus.
Coming to the background of the company, the company was established in 2009 and has grown into a prominent player in the water and wastewater treatment sector.
We specialize in designing, construction and operation and maintenance of water and wastewater treatment plants, including sewage treatment plants, common effluent treatment plants, sewage networks, and water supply schemes projects. We take immense pride in our role in contributing to the India's ambitious national initiatives such as Jal Jeevan Mission, Atal Mission for Rejuvenation and Urban Transformation. It is under AMR UT scheme and National Mission for Clean Ganga, NMCG.
By delivering critical infrastructures, we are not just building projects, but shaping a cleaner, sustainable future. Our presence spans across multiple states in India, including Gujarat, Rajasthan, Punjab, Karnataka, Haryana, Uttar Pradesh, Madhya Prades h, and Chhattisgarh. Today, our diversified projects order book comprises of around 22 projects across India with a total aggregate value of

approximately INR1,960 crores.
Our team has embraced renewable initiatives like compressed biogas, CBG plants, and solar power systems, aligning our work with India's focus on sustainable development. I would like to highlight the strengths of our company. Basically, it is in -house desi gning, diversified

order books of projects in 11 states of India, in -house execution

capability with timely delivery, use of advanced technologies, sustainability and ways to energy initiatives, experience promoters and senior management and teams.
The growth strategy, it is increasing the size of the project, expansion of geological footprint, plan to bid for more H AM projects, capitalize on government policy initiatives in wastewater treatment and water supply sector, and new initiatives towards ways to energy as a part of projects.
Ladies and gentlemen, I will be pleased to share some really exciting and successful development from the three ongoing H AM projects.
First H AM project, it was at Bareilly.
The total cost of the project was around INR230 crores. We are proud to announce that we have achieved commercial operation date 71 days ahead of schedule on 18th July, 2024. Further, its first quarterly annuity, which got due on 17th October, 2024, has also been released.
The second H AM project is at Mathura. The approximate value of this project is around INR190 crores . The effective date for this project has been declared with effect from 29th November, 2024. And the physical progress has also commenced in full swing. The third H AM project is at Saharanpur . The total cost of this project is around execution project, execution cost is around INR267 crores.
There has been an exciting development in this project with the support of our banker that is HDFC Bank. The term loan was sanctioned for this project on the date of signing of the concessionary agreement, which was 27th September. A timeline of four months is made available for financial closer and completing other conditions precedent.
The scheduled time for declaration of this project is 26th January, 2025. And we are ahead of time again and trying our level best to get the effective date declared before the actual scheduled date. At Enviro Infra, we are guided by a clear vision to deliver sustainability and technological advanced infrastructure solutions that address the critical water challenges of our nation.

Quality, innovation and timely executions are the pillar of our success. We are not just building infrastructure, but creating a legacy of cleaner water, healthier communities and a greener tomorrow. Now, I would like to hand this opportunity to our MD, Mr . Manish Jain for providing financial and operational information abo ut the company. Over to Manish.
Manish Jain: Good evening, everyone. I take this opportunity to address you all today and provide an overview of the company's financial performance for Q2, financial year 2025.
For the Q2 under review, our revenue from operations stood at approximately INR213 crores, showing a significant increase by around 77.82% from the corresponding quarter of the last financial year. Net profit for the quarter stood at INR36 crore s, which increased by more than 189% from the corresponding quarter of the last financial year. For the first half of financial year 2025, our revenue from operations reached at INR418 crores, which has increased by 50% from the corresponding period of last financia l year.
Net profit for the period was approximately INR66.33 crore s, which grew by 106% from the corresponding half of last financial year. For the half year, basic E PS rose to 4.85 from 2.61 in FY24. Our project order

book stands strong at approximately INR1,960 crores for execution and more than INR750 crores for operation and maintenance. With the execution expected to accelerate in coming quarters, we remain confident of continuing with our growth pattern, which we are achieving right now.
Looking ahead, we are having a strong pipeline of prospective new bids, which are expe

cted to be opened in the coming months, which will help us to sustain our momentum and enhance our operational outlook for the future. Our strong financial and cash flow management reinforce our position to deliver sustainable growth while creating long - term values for all stakeholders.

This remarkable performance underscores our growth trajectory and strong fundamentals. As we move forward, we remain committed to delivering excellence, strengthening our market presence and achieving new milestones. For the current quarter, our cash flow from operations has been negative. It is basically because of an increase in the unbilled revenues and a trade payable which has got reduced by around INR105 crores. So, we expect it is a temporary phenomenon and going forward, since these are the main ex ecution months, so the cash flow from operations during the future quarter is expected to turn to positive.
With this, I hand over to moderator and open the floor for question and answer sessions.
Moderator: Thank you very much. We will now begin the question -and-answer session. Our first question comes from Sagar Tanna from Alchemie Ventures. Please go ahead.
Sagar Tanna: Congratulations on a great listing and amazing numbers for the first half. I have two questions, sir. I didn't get the number of the order pipeline. Can you give us what is our order book and what is the bid pipeline?
Sanjay Jain: Mr. Sagar, the total order book position as on date is around INR1,960 crores. It is for the execution and around INR750 crores, it is for the operation and maintenance. This will be executed in the next 10 years. Basically, our revenue, if you see our bal ance sheet, it is around 3% to 5%. O&M revenue is around 3% to 5% of the execution value.
Sagar Tanna: So, this INR1,960 crores is the existing order and what is the bid pipeline, sir? How many projects have we already bid?
Sanjay Jain: We have bidded around INR800 crores projects and in the coming months, a lot of opportunities, as Manish has already told, a lot of opportunities are coming in many states. We are bidding a number of

projects in the coming months or up to March. We are bidding a lot of projects.
Sagar Tanna: Can you give us a break up of this existing order book in terms of how much is from effluent treatment, from sewage and from drinking water supply projects?
Sanjay Jain: It's a -- Manish, could you answer this, sir?
Manish Jain: Yes. Our water supply scheme project constitutes somewhere around INR400 crores of the order book. Our common effluent treatment plant order book right now is somewhere around INR70 crores and the sewage treatment and that rest all is our EPC and HAM of s ewage treatment plants and sewerage projects. Out of this, let me give a number that HAM project revenue order book is somewhere around INR450 crores on execution side.
Sagar Tanna: Okay. Thank you and all the best, sir.
Sanjay Jain: Thank you.
Moderator: Thank you. Our next question comes from Darshil Jhaveri from Crown Capital. Please go ahead.

Darshil Jhaveri: Hello. Good evening, sir. Thank you so much for taking my question.
Firstly, congratulations on a great listing, sir. Hope I am audible.
Sanjay Jain: Yes.
Darshil Jhaveri: Thank you so much, sir. Just wanted to know, I think we said previously, I think Q4 nearly is 40% of our revenue, right, sir? So, on that basis, currently, what kind of revenue guidance could we give for FY'25?
Sanjay Jain: If you see the growth pattern of our growth pattern, which is visible from H1 current and the comparing it with the last financial year, it is 50% growth rate. So, if we break it into water supply schemes and the wastewater treatment projects, the ratio is currently somewh

ere around

55% to 60% from the water supply schemes and around 40%, 45% from wastewater treatment projects.
So, since the order book has entirely changed and it is more aligned towards wastewater treatment projects, so for FY'25 itself, the ratio of WWTPs to WSSPs is going to increase. And I think to my understanding that WWTP projects will assume that ratio of around 60% to 65% for the current financial year. And for future as well, the ratio is going to be more towards WWTP projects. So, with the number, with this growth of 50%, we are quite aligned what we had proposed and we are moving ahead in the same direc tion.
Darshil Jhaveri: So, could we quantify that direction? Like, aren't we done INR400 crores for H1, so INR600 crores in H2 is possible, sir?
Sanjay Jain: If this 50% growth pattern is there, then it itself speaks the numbers and we are -- we look quite aligned to achieve those numbers. So, we stay committed and we understand that we will be meeting those growth numbers again.
Darshil Jhaveri: Okay. That helps a lot, sir. I just wanted to know, in terms of our order pipeline, I think we said around INR800 crores project we are bidding for, we have INR1,960 crores order already in hand. But such a high growth rate that we have, so this will get e xtinguished nearly, the current order book will get extinguished in one and a half, two years maximum. So, what kind of order book are we targeting to have by the year end? And what kind of -- how do you see FY'26 panning out, sir?
Sanjay Jain: First of all, during the current financial year, because this was general election year, so the bids were not invited initially. Just in the last one month, a lot of projects under AMRUT -2, the bids have been invited. And if I quantify those numbers, that is in excess of somewhere around INR3,500 crores to INR4,000 crores.
Darshil Jhaveri: So, these are the bids where we are interested and we are bidding for these projects?

Sanjay Jain: So, a lot of work is coming up and this INR3,500 crores, INR4,000 crores, I am saying it is for two to three states only. So, all the states are coming up with the projects and we don't foresee any shortfall in the order book which can be available. So, we are expecting a fresh order book of somewhere around INR2,000 crores for current financial year. So, we seem to be on target and we are hopeful that we can easily achieve it.
Darshil Jhaveri: Sorry, sir. Fresh order book means we want additional, we want to win additional INR2,000 crores order, right?
Sanjay Jain: Right.
Darshil Jhaveri: Okay. That helps a lot, sir. And so we have been going at that 50% rate, so with a higher base, will we be able to continue this growth rate? So, in the next two years, how do we look at it, sir? What kind of growth can we expect?
Sanjay Jain: Basically, this sector is wide open. There are lots of opportunities available and a lot of work needs to be done in this particular sector.
So, there are a lot of government initiatives and the works are coming

up. So, the sector will continue to grow and the way the sector is growing and there are exciting opportunities, we understand that a target which we have set for ourselves going forward, we shall be maintaining a CAGR growth rate of somewhere around 35% to 40% for maybe next four, five years. At least this much growth which we can foresee at least at this point of time, so this is quite achievable.

Darshil Jhaveri: And sir, with corresponding growth in revenue, even a margin will benefit from operating leverage, right? I think we already have quite great margins compared to anyone else. So, just wanted to know that what kind of margin trajectory we could see like we have, I think, 23% plus. Can we expec

t that will maintain?

Sanjay Jain: We are having our own strengths in terms of our in -house designing capabilities where we are able to give the most economical and most

viable solutions to our end clients. Our executions remain in -house and we depend upon the capabilities of our own company, not on the capability of our subcontractor for executing the projects. And that is, we remain ahead of time and we are executing the projects timely. So, with these initiatives, we are able to maintain those EBITDA margins of somewhere around 25%. And going forward, we don't look any downside in this and we expect that we will continue to maintain similar margins.

Darshil Jhaveri: Okay. Great, sir. Thank you so much for answering all my questions, sir. That's it from my side. All the best, sir.

Sanjay Jain: Thank you.

Moderator: Thank you. The next question comes from Dilip Kumar from Jai Arbuda Investment. Please go ahead.

Dilip Kumar: Congratulations. Those are great thing. So, my question is, as you mentioned that the order book is INR1,960 crores. So, can you let us know what is the execution time for this INR1,960 crores?

Management: The execution time in general, in the size of the projects that we are operating is 18 to 24 months. So, this entire order book is to be executed over a period of maximum 2 years.

Dilip Kumar: Okay. And sir the operation and maintenance you mentioned is INR750 crores. Is this also included in the order book or it is separate from this INR1,960 crores?

Management: This INR750 crores order book is separate from INR1,960 crores. This INR1,960 crores is for execution values and this INR750 crores is separate from this INR1,960 crores. So, this operation and maintenance is to be executed in the period varying from 5 yea rs to 15 years. Certain projects are having operation and maintenance timeline of 15 years, certain 10 years and certain 5 years.

So, it is over 5 years to 15 years. So, you can just average it out at 10 years. So, this can be the order book and the revenues which can keep on coming from the operation and maintenance itself.

Dilip Kumar: Okay. And sir, last question is there any challenges related to manpower, I mean, are we going to increase the manpower with the order book?

Management: Yes, with the increase in the orders coming to the company, the company is continuously engaging fresh teams, company is creating the departments, the delegation of power. So, there is a rapid growth and change in the company structure itself and we are al igning with the growth trajectory so that we can deliver right on time.

Dilip Kumar: Okay. Thank you so much, sir. That's it from my side.

Moderator: Thank you. The next question comes from Alisha Mahawla from Envision Capital. Please go ahead.

Alisha Mahawla: Hi, sir. Good evening. Thank you for the opportunity. Sir just wanted a clarification. You said you're expecting INR2,000 crores of order inflow

for the year or you want to end the year with an order book of INR2,000 crores?
Sanjay Jain: We will be bidding for around INR4,000 crores project and based on our success ratio, we are expecting that around INR2,000 crores project will add up in our portfolio.
Alisha Mahawla: And you're expecting that in 3 months, 4 months, we should be able to get this kind of inflow?
Sanjay Jain: Yes, we are quite hopeful depending upon our success ratio.
Alisha Mahawla: Understood. And typically, because these are EPC contracts that take some time to kick off, are we still confident that they will start contributing from FY26 to our revenues?

Management: Once a project is awarded, after that a design part is there. So, designing in itself takes somewhere around 4 months to 5 months. So, if we see for the first half of next financial year, we are having a decent order book available in our hands. These new projects will start contributing to the top line maybe after the monsoon period or maybe after October. So, that will add to the revenue in top line with effect from October. So, that can be the journey how we can move.
Alisha Mahawla: Understood. And sir our margin is 25% which we're saying that we should be able to maintain. Do you see high for the EPC companies? So, if you could just share two or three things that you do differently that help us enjoy industry -leading margins?
Management: As I have explained earlier as well, it is basically the in -house designing capabilities of our company. Sanjayji and myself, we both are chemical engineers. So, process designing has been the core domain of the company. With this, our waste -to-energy sust ainability initiatives, we are able to give quite viable and economical solutions to our end clients and giving handsome margins to the company as well.
Apart from this, the execution capabilities also remains in -house. We are not dependent upon external agencies for the execution or we are not giving back -to-back subcontracting. So, that gives us an edge in completing the projects ahead of time which give s us an edge over the quality which we maintain and the timelines in which we are able to execute the projects. So, the costing remains lower. We are not parting with the profits by giving projects to the subcontractor. So, all these sectors are contributi ng to the EBITDA margins of the company.
Alisha Mahawla: Understood. And if you could just help us understand that for this INR2,000 crores order it is a kind of...
Moderator: Sorry to interrupt ma’am we lost your audio in between.
Alisha Mahawla: Am I audible now?

Moderator: Yes ma’am. If you can repeat the question once again.
Alisha Mahawla: Sure. Sir just wanted to understand for this INR2,000 crores order inflow that we are targeting for the balance of this year, when we win an order what kind of bank guarantees do, we have to give at the start of a project? And typically, once the project ends, what is the kind of retention lines that is typically held back? What kind of bank guarantees we need to give?
Management: Yes. The total bank guarantees remain in form of performance security and retention. So, these two combined forms 10% of the project cost. So, the performance guarantee and retention can be 5% each or a performance security initially at the start can be gi ven which can be 10%. So, you can take it at 10% which is required for once any of the project is awarded.
Alisha Mahawla: And what is our limit currently with our banks?
Management: Our present limits are in the range of INR700 crores. We are operating under multiple banking arrangements with nine bankers. Our existing bankers are further increasing the limits and we are quite hopeful that

our requirement of various working capital li mits for current financial
year which we proposed at INR1,000 crores.
So, we are just on target and we will be achieving that working capital
limits with our various bankers. And one new banker is also expected
to join us. So, the total multiple banking arrangement can be 10 banks
and we are quite hopeful that we will achiev e that INR1,000 crores
target, which we understand which is required by us.
Alisha Mahawla: And just one last question, INR700 crores that we have credit limit, how
much is utilized currently?
Management: Out of this somewhere around INR400 crores, INR450 crores
maximum it is utilized. I think it will be somewhere around 400. So, there
is a substantial limit which is free even now.

Alisha Mahawla: Understood. Great. Thank you.
Sanjay Jain: Thank you.
Moderator: Thank you. The next question comes from Dheeraj Ram from Ashika
Institutional Equities. Please go ahead.
Dheeraj Ram: Hi, sir. Thank you for taking up my question. Sir, could you please let
me know the breakup between the margin in EPC and O&M?
Management: Margin between EPC and operation and maintenance?
Dheeraj Ram: Yes, sir.
Management: Operation and maintenance margins are somewhere in the range of
30% to 35% and EPC margins ranges between 25% to 30%.
Dheeraj Ram: Okay. Understood, sir. But my focus is also on the EBITDA margins,
but your competitors also have in -house designing and you are also
saying that you also have an in -house designing. So, I'm just trying to
understand where do we exactly separate out from the competitors
which makes our EBITDA margins almost 10% to 12% higher than our
competitors. Could you please throw some more light on this?
Management: It is a combination of that in -house designing, the initiative which we
are taking through sustainability and waste -to-energy which are driving
further higher capex and opex margins for us, our advanced
technological initiatives, our execution capabilities . So, all these
combining are giving us these EBITDA margins are somewhere around
25%. So, that way we are confident and we are sustaining those
margins.
Sanjay Jain: Just I would like to add one more thing. I just give you an example. We
did one project in Kota. There we were higher as compared to our
peers. The difference was around INR10 crores in the capital cost, but
when the final authority they evaluated the bid based on the life cycle

cost. We were the L1 because there we have used the solar plant to
lower the power consumption.
So, that way even we are higher as compared to our competitor. We
are getting the project based on the life cycle cost and that gives the
better margin as compared to the peers.
Dheeraj Ram: Understood, sir. So, the capex cost might be some or less the same,
but the opex cost, that's where the company's forte is. So, that's where
we generate the maximum of our margin?
Management: Yes.
Dheeraj Ram: Okay, got it. And just the last question. So, how do you see the growth
from the industrial segment? It can be industrial water treatment or
industrial desalination plant or industrial wastewater treatment plant?
Management: With the industrialization happening in India, the requirement for
common effluent treatment plants is definitely increasing and we see a
lot of opportunities coming up from the industrial areas as well. We are
not primarily interested for individual efflu ent treatment plants for
industries. However, we are interested in common effluent treatment
plant for an industrial area.

So, the opportunities are definitely coming up and we are bidding for those projects and we are executing the works of common effluent treatment plants as well.

Dheeraj Ram: Understood, sir. Thank you.

Moderator: Thank you. The next question comes from Saket Kapoor from Kapoor Company. Please go ahead.

Saket Kapoor: And thank you for the opportunity. Firstly, sir, since we are - it is the quarterly results for the September quarter and the balance sheet you have provided. After that, we came with the equity issuance. So, correct me, we raised around INR650 crores was the book build issue and 572

was the fresh issuance that had been accrued to the company. So, taking that into account, what is the current utilization of the fund and what is the cash on books?

Just to get some sense, sir, we are eyeing a top line of say INR1,000 crores for this financial year and we raised around

INR500 crores,

INR650 crores in the book build issue. Is the numbers correct, sir, on my part?

Management: Yes that's correct. Your numbers are 100% correct. First of all, the objects of the issue that are quite clear, we have proposed INR120 crores, which we have earmarked for repayment of the term loans which we were having in our books. INR181 crores, it was earmarked for working capital requirement of the company. INR30 crores is proposed for the equity contribution for one of the HAM projects, which is ongoing at Mathura. So, our equity total term loan requirement is INR120 crores and equity con tributions from the sponsor side is INR30 crores.

So, this INR30 crores is earmarked for this purpose. We had kept inorganic growth acquisition, which is 10% or maybe higher out of the GCP. And so, rest of the portion after this with 25%, which is GCP. So, this is how this entire breakup is. Right now, w e have used this INR120 crores for the term loan, which we have repaid. And this term loan, this has come down substantially.

We intend to use the working capital as and when it will be required for the company, and there will be a judicious use. Since we are targeting another INR2,000 crores order book, so the performance bank guarantees which will be required to be submitted, that cash flow, which will be required for the execution of this project. So, as and when it will be required, only then that fund will be used, that fund is safely par ked, and we will use it slowly as and when it is required.

Saket Kapoor: Sir, you mentioned GPP. Can you just elaborate, sir?

Sanjay Jain: No, GPP, it is GCP, General Corporate Purpose.

Saket Kapoor: And what percentage of the total proceed is for the General Corporate Purpose? 25%?

Sanjay Jain: Yes, it is total 35%, out of which 10% is earmarked for an inorganic growth or acquisition of a technological buyout, and balance 25% as per regulations as the GCP.

Saket Kapoor: Okay. So, just to get it right, out of the INR570 crores, INR200 crores is kept aside for general corporate purpose and the small acquisition, which we may be eyeing. Right. And currently, these are parked in our money market instruments, our proceeds.

Sanjay Jain: Can you please repeat?

Saket Kapoor: Sir, these proceeds are currently parked in money market instruments, in the liquid funds, or where are they parked?

Sanjay Jain: They are in liquid funds, the balance funds are parked in FDRs only.

Saket Kapoor: Okay. Sir, when we look at the cash flow part, I think, so we did around INR11 crores in the, I think, so the plant purchase, I think the equipment. So, what are we eyeing, sir, in terms of the capex going ahead? I think, sir, INR2,000 crores, when we create pipeline – order book, so for this, how much we have to create asset going further in terms of equipment or other things if you would like to elaborate?

Sanjay Jain: If you see the past trend, we have remained asset -like. We are having our own machinery, but that machinery, that overall machinery is somewhere around INR35 crores . Apart from this, there is office and industrial land. So, we have remained asset -like and we do not foresee that there will be any major gross block or any major capex going forward as such.

Saket Kapoor: Right, sir. And lastly, from the tax part, when we look at the cash flow, the tax component is only to the tune of INR3 crores -INR4 crores. So,

if you could just explain what have been the tax outgo and we are at MAT or any tax advantages we get, any rebates from the government, if you could just explain.

Sanjay Jain: So, there are no rebates at all. This is advanced tax, which we have already deposited. So, with the advanced tax, that you will be seeing as

the next net tax liability, or maybe some additional advanced tax that might have got deposited. So, that advanced tax is getting deposited from outside.

Saket Kapoor: No, sir. My point was, we made a provision for current tax to the tune of INR25 crores for the first wherein when we look at our cash flow, the amount debited for tax paid net of refund is only to the tune of INR4 crores. So, that was my, if you could jus t clear me my doubt, what is, how should one read this number?

Sanjay Jain: Let me ask my CFO to get in touch with you and he will clarify. It is just a clarification required. So, definitely he will be in touch with you.

Saket Kapoor: Right. So, sir, going ahead, this finance cost line element would not be, would be a net of then the FDR interest that we will be going to and it would be much ahead of that until and unless we go for any inorganic or general corporate expenses with debit . So, that should be added to the bottom line.

Our bottom line would increase substantially just on the account of the money that will be parking in increased deposit instrument. The finance cost should not be a line item. Yes, that would be net of.

Sanjay Jain: Yes, definitely. This FDR interest that will be getting accrued and it will be in form of other income to the company. So, there will be an increase. If I talk about the March '24 numbers, so the various banking facilities which we were having with our ban kers in under multiple banking agreements, we were having the FDRs of INR180 crores already parked in our various banks. So, this additional FDRs definitely

will have that interest getting accrued and it will get reflected in the other income.

Saket Kapoor: Okay. And lastly, sir, on the government capex part, I think so you did alluded to the fact that last month, many -- bit pipeline maybe traction. But what we have seen as the GDP numbers or the capex done by the government, I think so this is an election affected year also. So, going ahead, whether it is the Jal Jeevan scheme or the AMRUT scheme, we have been hearing from other participants, especially, sir, even people like Electric Steel Casting, who are your creditors, that there is some bit of somberness or little bit of softness on capex front. So, where do you think these – what is the outlook on government capex?

Sanjay Jain: If you just recall the contents of my speech, I had clarified that cash flow from operations has been negative. Basically, since March till November, there has been a bit slow down on the government spending. And that is 100% true.

So, the funds which were very easily coming, the moment we used to put up the bills, the funds used to be released against the bills. So, now it is taking some time. It is not that the funds are not being released, but the process has got a bit slow.

So, the government spending going forward, as we see from the news channels also, the government spending is expected to increase in the future months and a lot of opportunities which are coming up even under AMRUT schemes. So, the government spending is bound to increase and that funding, there doesn't seem to be any reason that the projects are going to be slowed down at all. So, it has been a temporary phenomenon and things are moving. Things have been a bit slow but are moving.

Moderator: Thank you so much. We'll move on to the next question. And the next question comes from Tej Patel from Niveshaay. Please go ahead. Tej Patel, your line is unmuted. Please proceed with your question.

Tej Patel: Sir, I mean, as you mentioned, probably you would take around INR120 -odd crores of loans from Mathura. So, what term loans are we expecting for the Saharanpur projects? So, total, how much term loans are

we expected to take for these two HAM projects?

Sanjay Jain: The total term loan requirement or the funds to be brought in by the concessionaire for Mathura project, it is INR120 crores. Out of that INR120 crores, INR90 crores is the term loan which we have got sanctioned from Kotak Bank. And balance INR30 crores is being infused by the company. For Saharanpur project, the total contribution from the concessionaire side remains at INR160 crores.

Out of this INR160 crores, INR120 crores is being -- it has been sanctioned by HDFC Bank and INR40 crores is the equity contribution which we are -- which we shall bring from our parent company.

Tej Patel: And out of this bid pipeline, which you are probably expecting about 4 more thousand odd crores which you will be bidding, how much would be HAM out of -- in this how much would be HAM?

Sanjay Jain: Probably somewhere around INR500 to INR600 crores can be under HAM and rest will be EPC.

Tej Patel: So probably more INR200 -odd crores plus term loans would probably have to take more for this project, right? So total about INR400 -odd crores term loans you will take for this HAM projects, right?

Sanjay Jain: Yes.

Tej Patel: And sir, I have observed, I mean, if you look at the cycle, it's looking, on the face of it, it's looking negative because what I've observed is, we are probably almost booking 10% to 15% of our revenue in the -- has unbilled revenue, right? Which is showi ng in other financial assets. So, so what is the reason for, booking such a high unbilled revenue? What is the criteria when you define, let's say, your billing as unbilled revenue and out of this, let's say INR400 odd crores which have you --

which we, you have booked in the first half, how much was unbilled revenue and what's your typical working capital cycle? And the follow - up question on this.

I mean, it's quite interesting to see an EPC company making, let's say, 45%-50%, return ratios, where we have seen companies making about, let's say, 25% of these return ratios. And this is primarily because your cycle is probably too, too less and then you're also making big margins. But I'm not understanding on how…

How on such a small capital we are able to generate this kind of revenues which are resulting into this high return ratios. So, if you could just elaborate on this.

Sanjay Jain: First of all, regarding this unbilled revenue, let me first clarify what exactly is unbilled revenue. Unbilled revenue is when I am executing a project, there are stage -wise payments. So, once any of the stage gets completed, after that we take that into t he monthly billing cycle. So, this stage which is not completed, so this will be a part of unbilled revenue. This is one. Second one will be the billing cycle. As per the billing cycle, we raise a bill to our end client. Once that PI, this performer invoice, this is passed by the client, then we raise the GST invoice. So, until and unless there is a pass order, w e shall not be raising the GST invoice. So, with this, the unbilled revenue, the revenue, whatever we are doing. It will remain in unbilled revenue. That unbilled revenue gets converted to revenue with the GST invoice getting issued. So, this is the cycle. Now, what has happened is during the past, as I was explaining earlier as well, there has been a certain slowdow n in the cash flow cycle for the JJM projects.

If I say in this current financial year, there has been a realization to the extent of around INR200 crores from Jal Jeevan Mission projects. However, there is an equivalent number which has got built up in the

unbilled revenue also. So, this is a cycle in the -- if you see our creditor days used to be 120 for FY24.

Right now, this cycle has gone d

own to, this creditor cycle has gone down to 75 days. So, there is an outflow on the cash, outflow of cash from the books to the tune of somewhere around INR105 crores. So, this is all translating into a negative cash flow i n operations. So, this is one part which is cash flow. The second one is the revenue.

Revenue that says the matching expenses. So, that our strength of in - house designing, our execution capabilities -- our on -time performances that is contributing to those margins. And we are able to sustain those type of margins and it is quite doable, whi ch we have been replicating for the past three, four years on a continuous basis.

Tej Patel: But sir, I mean, it's quite, I mean, I haven't seen any company is having such a high payable days. So, I mean, what are the terms or what are you doing different, where your supplier is giving you so much high credit days?

Sanjay Jain: No, the supplier debt payable days have come down to 75. We are making payment to our creditors within, MSME vendors within 45 days and non -MSME vendors within 60 -day cycle. So, our cash flow, cash flow from operations had got a bit skewed, but we are payi ng, we are paying to our vendors on time. We are not delaying the payments to them.

Tej Patel: Got it. If you are saying this is only because of the elections, but let's say in the previous year also, where your cycle is kind of a bit of appearing negative. And even if I include, let's say the non -billed revenue, your cycle is too short. So, I'm sur prised, how is the cycle too short for an EPC player?

When I compare similar to an industry where the cycle is about, let's say, net cycle is about, let's say, 90 -100 days, but our cycle is probably less than 40 -50 days, right? Correct me if I'm wrong here. I'm just trying

to understand how is it possible? And because of this, you're probably making very good return ratios?

Sanjay Jain: Boss, I cannot comment on others, how they are doing. I am managing this company and we are able to make payments to our vendors. We are able to make that cycle to somewhere around 40 days at least for our FY24. So, going forward as well, we are quite hope ful and we expect that we will be meeting those targets.

The execution cycle has been quite fast. So, we are making good margins. We are cash flow positive. We have remained cash flow positive. So, the cycle, that working capital gap, that has not got built up in our books.

Moderator: The next question comes from Prince Choudhary from Pinc Wealth.

Prince Choudhary: Yes, sir, I just had a little – if you could just throw some light on the cash flow statement. Sir, we have shown proceeds from issue of shares in H1 FY24. I am a little confused with that fact, sir?

Sanjay Jain: We had gone for a private placement in September 2023. The total fundraising at that point of time was INR58 crores. So, that amount is getting added to our equity and reserves.

Moderator: The next question comes from Manish Khandelwal from Brijwasi Steels Private Limited.

Manish Khandelwal: Hello Manish Ji and Hello Sanjay Ji. Sir you have already answered all my questions. Just want to congratulate for such a good listing and such good numbers. And in future also try to do the same.

Sanjay Jain: We will try. Thanks a lot for the compliments. And we will stick to the targets and we will do the best possible.

Moderator: Ladies and gentlemen, we would take that as our last question for today. I now hand the conference over to Ms. Astha Jain for closing comments.

Astha Jain: Thank you. On behalf of HEM Securities Limited, I thank Enviro Infra Engineers Limited team for giving the time we spend on this call and responding all the queries in a detailed way. I would also like

to thank all the participants for joining this call. Now, I would like to hand over the call to moderator for the closing remarks.

Moderator: On behalf of HEM Securities, that concludes this conference. Thank you for joining us. You may now disconnect your lines.

Sanjay Jain: Thank you, everyone. Thank you all. Thank you.

"Enviro Infra Engineers Limited
Q3 FY25 Earnings Conference Call"
February 07 , 202 5

MANAGEMENT : MR. SANJAY JAIN – CHAIRMAN AND WHOLE -TIME DIRECTOR – ENVIRO INFRA ENGINEERS LIMITED
MR. MANISH JAIN – MANAGING DIRECTOR – ENVIRO INFRA ENGINEERS LIMITED

Moderator: Ladies and gentlem en, good day and welcome to Q3 FY 25 Ear nings Conference Call of Enviro Infra Engineers Limited. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing the star then zero on your touch -tone phone. Please note that this conference is being recorded.

This conference call may contain forward -looking statements about the company, which are based on the beliefs, opinions and expectations of the company as on date of this call. These statements are not a guarantee of future performance and involve risks an d uncertainties that are difficult to predict. I now hand the conference over to Mr. Sanjay Jain, Chairman and Whole -Time Director. Thank you, and over to you, sir.

Sanjay Jain: Thank you. Good afternoon, everyone. I would like to extend a very warm w elcome to all of you for Enviro Infra Engineers Limited Earnings Conference Call for the third quarter and 9 months ended 31st December, 2024. I would like to begin by expressing my gratitude to all of you for taking the time to join us today. We have on call with us Mr. Mani sh Jain, Managing Director and Adf actor s PR, our Investor Relations team. We have shared our results presentation.

I hope you all must have gone through it. Since this is only our second earnings conference call, I would like to take you through recent development before we get into business and financial performance for this per iod. We started in 2009. Enviro Infra has emerged as one of the leading and trusted players in water and wastewater treatment in India. We specialize in designing, building, operating and maintaining treatment plants and also take on water supply projects for government agencies.

Our work plays an essential role in supporting some of India's most ambitious national initiatives such as Jal Jeevan Mission, the Atal Mission for rejuvenation and urban t ransformation, and the National Mission for Clean Ganga. These projects are not just about

infrastructure, they are about keeping cleaner and more sustainable communities for future generations.

We take immense pride in contributing to these initiatives by delivering solutions that align with India's vision of development. In the recent budget the emphasis on water infrastructure and urban redevelopment to the commendable steps highlighting the government's commitment towards sustainable growth. The extension of the portable tap water mission to 2028 and the launch of the 1 lakh crores urb an challenge fund demonstrate a forward -thinking approach.

At Enviro, we proudly support these initiatives and are ready to contribute to India's water sustainability and urban transformation goals. One of the aspects that we are particular about is our commitment to timely project execution. In fact, one of our r ecent developments further highlights our ability to deliver on critical projects.

We are proud to have achieved early commerc ial operation dates on major HAM projects, including the Bareilly project, which was completed ahead of scheduled times by more than 2 months. The Mathura and Saharanpur p rojects are progressing smoothly with the achievement of financial closures and construction of Math ura projects as per schedule. These developments reinforce our reputation as a reliable and appreciated partner for large -scale infrastructure initiatives.

Our strong order book is a testament to our ability to win and deliver critical projects. As of today, our project order book stands at approximately INR1,687 crores, comprising 22 diverse projects across multiple states. And operation and maintenance orde

r book stands at
approximately INR738 crores worth of contracts which provide long -term stability and recurring revenue streams.

Our ability to maintain a robust order book demonstrates the trust that stakeholders and government authorities place d in us. We have submitted bids for projects close to INR2,200 crores and are expecting another INR2,000 crores bidding in the coming months. In regards to sustainability and green energy, we are taking significant steps towards a more sustainable future.

The company is in the process of formin g a new subsidiary under Enviro Infra Engineers Limited. This new subsidiary will focus on solar energy, 24x7 renewable energy, power hydro and green hydrogen projects. As part of this strategic initiative, the company has already identified opportunities with existing solar assets, solar inde pendent power producers, projects in solar engineering, procurement and construction projects.

To lead this critical endeavour, we will soon have a Chief Operating Officer who will be formally on project in the coming week or two. The appointment of this key leadership position underscores our commitment to expanding our capabilities in the renewable energy sector. Now I would like to hand this opportunity to our MD, Mr. Manish Jain for providing financial and operational information about the company. Over to Mr. Manish.

Manish Jain: Thank you, Sanjay sir. Good afternoon, everyone. I will brief you all about our consolidated financial numbers for this quarter and 9 months. Our revenue from operations for Q 3 FY25 stood at INR 247.45 crores against INR149.94 crore s in Q3 FY24 , growing at a rate of 65% year - on-year. EBITDA for the quarter stands at INR53.94 crore s as against INR27.67 crore s in Q3 FY24, r egistering a growth of 95% year -on-year basis.

The EBITDA margin for Q3 FY25 stands at 21.8% versus 18.5% in Q3 FY24 r egistering an improvement of 334 basis points. The profit after tax stands at INR 36.7 crore s against INR17.91 crore s in Q3 FY24 registering a growth of 105% on Y-o-Y basis. The P AT margin for Q3 FY25 stands at 14.5% against 11.7% in Q3 FY24. So it's up by 277 basis points.

Now coming to 9 month FY25 numbers, consolidated revenue from operations for 9 months FY25 was INR665.65 crore s vis -à-vis INR428.57 crore s in 9 month FY24, registering a growth of 55%. The EBITD A for this period stands at INR 160.84 crore s as against INR80.64 crore s in the previous corresponding period r egistering a growth of 99% year-on-year basis. The EBITDA margin for 9 months FY25 came in at 24.2% versus 18.8% in 9 month FY24, up by 534 basis points. Profit

after tax stands at INR103.06 crore s against INR50.86 crore s growing 103% on a year -on-year basis. The P AT margin for 9 month FY25 was 15.1% vis -à-vis 11.7% in 9 month FY24. During this quarter, our project order book stands at a strong level of INR 1,687 crore s approx for execution, complemented by over INR738 crore s from operation and maintenance contracts.

We are also bidding for projects of around INR2,200 crore s which we have already bided and another INR2,000 crore s projects which are in line, which we are bidding in the next few months. This healthy pipeline ensures sustained growth and long -term revenue visibility. This is all from our side. We can now open the floor for questions.

Moderator: Thank you very much. We will now begin the question and answer session. The first qu estion is from the line of Rahil from MAPL. Please go ahead.

Rahil: Yes, sir. F irst of all, thank you for the opportunity. I actually missed the introduction, so if the question was repetitive please excuse. Usually, we see EPC businesses make margins in the range of 10% to 15% and sometimes 15% to 18%. How is Enviro Infra doing 25%?

What are we
doing different to attain this?
Manish Jain: Basically, we get differentiated from our peers that we are having our in-house designing, which helps us in giving the most viable and most economical solutions to our end clients. And then further, we are having our in -house execution teams. So the execu tion is being done in -house, so the timeline for execution that always remain in control. There are no cost overruns which are observed.
We are well in time even if there are any challenges which we face during the execution of the project. So that way we are not parting with the margin by giving any subcontracts. These factors are making us to meet that EBITDA margins of around 24% to 25% year -on-year basis.
Rahil: Okay, so the primary reason for what I understood is that you don't subcontract it to contractors below and the whol e execution is from Enviro Infra itself. So then if I see your margins free FY23 that is FY22

and 21, your margins were in the range of 9 % to 12% EBITDA. So what changed in FY23 for you?
Manish Jain: Basically, with the execution of project on year -on-year basis, the single -ticket size project that size is incr easing. We are having our own T&Ps. When we are deploying those T& Ps, definitely our costings are coming down as a percentage of that project. So that is driving those margins. And now we have reached at a level where the EBITDA margins are getting consolidated at a level of around 24%.
Rahil: Sorry, sir. I missed your part. What is coming down. I couldn't hear you clearly ?
Manish Jain: I was explaining it was single -ticket size project which we were earlier executing. Those were small. So with the executions going on year -on-year basis, our pre -qualifications are improving our single -ticket size projects, what we are bidding. So that is increasing. So the machinery, the fixed cost as a percentage of the costing that is coming down and that is driving the EBITDA margins. And those margins have now got consolidated at a level where we are seeing a continuous EBITDA margi n of around 24% for the past 2 years , 3 years.
Rahil: Okay. So previously, what was our average ticket size and what is it now?
Manish Jain: The ticket size, if I say around 3 years, 4 years back, it was somewhere in the range of INR30 crores to INR50 crores. I t was getting increased and now the single -ticket size is somewhere in the range of somewhere around INR150 crores.
Rahil: Okay. And sir, if you could exactly explain me when you say the usage of the cost basis for the machinery is coming down in the larger projects, how is that possible b ecause if the project size grows, so would the expenses, right? So how is it exactly reducing, if you could explain it?
Manish Jain: I would say the machinery says that is the T&T or the fixed asset of the company. If I am putting up a fixed asset of around INR4 crores, INR5 crores for a INR50 crore s project or I am putting that for a INR150 crore s project and then again the staff, the deployment, so the costing, the cost

as a percentage of that sale definitely that will come down when we will go for a higher ticket size project.
Rahil: Okay. Understood. And sir, if you could explain me the margins in pure sewage EPC versus the margins we make in STP projects versus the margins in O&M?
Manish Jain: Margin in STP is in EPC of STP is somewh ere in the range of around 24% a nd that for operation and maintenance, we understand that the margins are somewhere in the range of 30 % or 35%. So the margins in O&M are always better.
Rahil: Okay. And so we do not do any sewage what we only do STP and the O&M?
Manish Jain: We do all three types of treatment plants which says it is water

treatment plants, se wage

treatment plants, common effluent treatment
plants. Along with this, we do the se wage schemes when it is an integrated package which includes STP as well as pipelines. And we also do that O&M water supply schemes as well.

Rahil: Understood. S ir in H1 we saw that due to the external reasons of elections, etc etera the order flow had slowed down. Now that all those things are behind us, what sort of order flow we are seeing, any pipeline that you have bid for?

Manish Jain: Due to general election, definitely in H1 there were no fresh bids which were submitted or it was just too small. But in this H2, there is flooding of projects and a number of projects have got lined up. So we are continuously bidding. Just in the last month itself we have submitted our bids for somewhere around INR2,000 crore s projects. And we understand that we are also submitting bids further for another INR2,000 crore s in next 1 or 2 months to come.

So the projects are definitely coming up now. It is under AMRUT schemes or the common effluent treatment plants. So we are submitting our bids. We are getting good opportunity and we are moving ahead.

Rahil: Okay. And previously, we were hearing that these schemes were seeing some delays in payments. Is that all behind us now or are we still seeing some delays in payments?

Manish Jain: There are no delays of payment in AMRUT projects or Namami Gange projects. Since March 24, JJ M had got a bit slowed down. In the recent budget, the JJM has been extended till 2028 and the budgetary , central budgetary allocation of INR67000 crore s has been confirmed. So the payments are go ing to be streamlined at least i f I say as of now, yes, there is some stress and t here is some cash stress from JJ M.

But we are able to manage that cash stress from our other projects which are going on under AMRUT or Namami Gang e.

Rahil: Okay. That's helpful. So my last question is, as we told you previously, we were targeting ticket sizes of INR30 crores to INR50 crores and right now it's close to INR15 0 crores. So talking to a few other players in the industry, we got the understanding that in smaller ticket sizes, the competition is a lot more .

So right now, as we are upwards of INR100 crore s progress , what sort of a competition are we seeing in bidding, in tenders or is it rather only two, three, four players at max for you?

Manish Jain: There is different type of competition in across different segments. First of all, let me explain about common effluent treatment plants. In common effluent treatment plants, generally there is no competition or I will say the number of players are just to o less. So the competition is less, the works are more challenging and hence the margins are also quite good.

So ETPs in itself is initial then we come down to STPs. In STPs, the segment in which we operate in there are generally 10 -12 players which are prevailing in that particular segment or the ticket size. So definitely the competition remains, but there is so much of work available. So there are some threshold margins which all the company requires for executing these projects. So we are quite in a position to maintain those margins.

Third one is water and water supply schemes. We have definitely gone through this JJM phase, we have executed, we are on executing this INR12,500 crore s order which we received from MP Ja l Nigam, but the margins were a bit skewed and then DI pipeline was also a bit challenging.

So we are restricting ourselves to high margin projects where we are submitting our bids and we are looking for any of the water supply

schemes or water treatment plants where the margins are good. So we
have been a bit selective now in submitting our bids further .
Rahil: Understood. Got it. T

hat would be all from my side. Thank you.
Moderator: Thank you. The next question is from the line of Sarabjyot Chawla from
Niveza. Please go ahead.
Sarabjyot Chawla: Conference call sir you have mentioned that the company was...
Manish Jain : Your voice is not audible. Please speak louder.
Sarabjyot Chawla: Sir, last conference call, the company had given guidance that they
were currently bidding for orders worth INR 2,000 crores and given the
success rate, the company would be able to secure orders worth rupees
INR2,000 crores before the end of the financial year. I just wanted to
know, are we on track with that?
Manish Jain: The last earning call was on 18th of December, but we have confirmed
at that point of time, we are aligned with it. We have already submitted
bids somewhere in the range of around INR2,000 crores and are
expecting another INR2,000 crores order which are in line with our
projects. So, we are definitely bidding for these projects also and we
are quite hopeful that based on our success ratio in the past, we'll be
having a decent order book available with us going forward.
Sarabjyot Chawla: Understood, sir. One more question, sir. So, given the current revenue
for 9 months ended FY25 I think we have added somewhere about
INR650 crores. So, considering that the contribution in the quarter 3 has
always been higher historically, can we look at ending FY25 at the top
line of INR1,000 crores?

Manish Jain: If you see in the presentation also, the first three quarters are
comparatively lower in comparison to Q4 numbers. So, we generally
expect 20% each in the first three quarters with a delta of around 5%
on positive or negative side. And the Q4 numbers are i n general 40%.
So, that way we are aligned, the company is moving in the same
direction and we also foresee that we'll be crossing that number.
Sarabjyot Chawla: Crossing the INR1,000 crore s milestone . Yes, understood, sir. Thank
you so much. Congratulations on a great set of numbers.
Moderator: Thank you. The next question is from the line of Dheeraj Ram from
Ashika Institutional Equities. Please go ahead.
Dheeraj Ram: Hi, sir. Thank you for taking up my question. Sir, just wanted to know
what is the amount of IPO proceeds tha t we have utilized for working
capital in this quarter?
Manish Jain: Till n ow we have utilized INR47 crore s out of INR181 crore s which was
earmarked for the working capital requirements.
Dheeraj Ram: Okay. And what is the amount of revenue that is stuck in receivables
during the quarter?
Manish Jain: The total amount of receivables right now is INR238 crores.
Dheeraj Ram: Okay. So, how do you see by the end of FY25, sir, do you see any
slowdown? Do you see this increasing by the end of the FY25?
Manish Jain: To our understanding the level of debtors and unbilled revenue th at will
come down substantially. A s we understand that the funds in JJ M are
going to s moothen . So, the trade receivables as well as UBR should
come down. And regarding the growth of the company, that is quite
satisfactory and we expect to maintain the growth going forward as well.
Dheeraj Ram: So, are we doing any UP Jal Nigam project as per your DRHP?
Manish Jain: Yes, we are doing a number of projects in UP for UP Jal Nigam. We
have recently completed this HAM project at Bareilly and we are glad
to inform that we have completed this HAM project and COD has been
achieved 2 months ahead of time. A bonus has also been given to the

company and two of the annuities have also been released. So, the
project is well in line.
Apart from this, we are doing one project of 55 MLD STP at Varanasi.

It is under EPC. Then we are doing one 60 MLD STP at Mathura and
another 135 MLD STP at Saharanpur. So, these two projects are un

der
HAM.
Dheeraj Ram: Got it, sir. So, from your peer concalls, they were also doing UP Jal
Nigam projects which they have said that they are seeing a tremendous
slowdown in outlay of funds from the government, especially in UP Jal
Nigam project. So, it 's not the case for you clearly? Am I right, sir?
Manish Jain: It is basically the scheme in Jal Jeevan M ission throughout India, there
was a slowdown. Basically, it was related to that completion of project
and then extending the timelines for the project. So, that has got a
streamline now. So, apart from this, even in UP Jal Nigam, there are no
other challenges.
The work which I have confirmed you, these are all Namami Gange
under NMCG. So, for all these projects, the funds are already aligned
and these are 100% centrally funded schemes. So, there are no
challenges at all.
Dheeraj Ram: Understood. So, last question, sir. How do you see the EBITDA m argins
going forward as 25% s ustainable margin for the next 2 to 3 years?
Mansih Jain: These margins are because our capabilities, we are banking on those
capabilities itself and the type of projects and the selection which we
are doing for our projects, the way we are bidding, we understand that
we will be in a position to maintain these ma rgins.
Dheeraj Ram: Okay, sir. Thank you.
Moderator: The next question is from the line of Prateek Bhand ari from A art
Ventures. Please go ahead.
Prateek Bhandari: Yes. Hi, sir. Thanks for the opportunity. I wanted to understand that we
have targeted for margins in the range of 22 % to 24%, whereas we
have seen the margins to be contracting and getting below the previous

quarter. In spite of the fact that we have done a top -line growth of 66%
and the base for the previous quarter of the last year was relatively low.
So, what is the reason behind that?
Manish Jain: Basically, it depends upon the mix of the project and the cycle of the
project in which the project is into. So, if you see our 9 month s results,
our EBITDA margins are at a healthy level of 24.16% in totality. So, still
we are maintaining the level which we have confirmed that the margins
are somewhere in the range of 24 % to 25%. So, in Q2, if you will see
the EBITDA margin was 26.11%.
So, basically it will always remain there. Tha t way, there will be a mix,
but if you see as a whole in the year to our understanding, those
margins of around 24 - 25%, that will be maintained.
Prateek Bhandari: That somehow indicates that you would be ending the year around
about INR950 - INR1,000 crores of top -line and with an EBITDA of
around about INR240 crores to INR250 odd crores?
Manish Jain: The way the company is growing and the level at which the company
has maintained the growth, definitely that thousand crore growth seems
to be quite achievable. And yes, we'll be in a position to maintain those
margins.
Prateek Bhandari: All right, sir. And just one last question on the JJM front. So, when do
you see these payments getting normalized and receivables getting
down?
Manish Jain: The payments are being released on a monthly basis even now.
However, the pace of release of payments has gone slow. So, there
has been a buildup in the trade receivables and UBR. We are expecting
that the quantum of flows should be decent enough to pay to all the
contractors for all the balances. To our understanding, by the end of this
financial year, these funds should come. And this is what we have got
a confirmation from our departments.
Prateek Bhandari: All right. So, the trade receivables due is around about INR240 odd
crores, which you feel optimistic that you would be receiving by year
end?

Manish Jain: We do hope definitely we will be in a position to get these funds
released.
Prateek Bhandari: Yes. Okay. T

hanks. Thanks a lot, sir.
Moderator: Thank you. The next question is from the line of Hardik, an individual
investor. Please go ahead.
Hardik: Namaskarji. Congratulations on the good set of numbers. I think most
of my questions are already answered. So, I would just say
congratulations once again. And we wish to see the company grow at
good levels. Thanks a lot.
Moderator: Thank you. The next question is from the line of Shaurya from Arjav
Partners. Please go ahead.
Shaurya: Most of my questions have been answered. Just one more. What kind
of top line growth we are expecting in 2026 -2027?
Manish Jain: We do expect a continuous growth of 35% to 40% going forward for
next 4 or 5 years, because there is a huge quantum of work which is to
be done in this wastewater field. So, we expect to achieve this top line
growth of 35% to 40% on a continuous basis.
Shaurya: And what will be the main source of this good and which segment will
contribute more?
Manish Jain: The segment will be wastewater, which constitutes maximum. It will be
STPs or sewerage schemes followed by common effluent treatment
plants. And we will drive some strength in water treatment plants.
Primarily, we will be focusing on STPs and common efflue nt treatment
plants.
Shaurya: And what kind of margins we are expecting, sustainable basis?
Manish Jain: We expect to maintain this 24% -25% EBITDA margin.
Shaurya: Okay, sir. Thank you. Excellent.
Moderator: Thank you. The next question is from the line of Muhammed Sufyan
from Dinero CapServ. Please go ahead.

Muhammed Sufyan: Thank you, sir, for the opportunity. I just need to ask, the order book we
have of INR1,687 crores. So, what will be the execution time period?
And like INR2,000 crores was your bid, what is the success ratio we
have? I just need to understand the same.
Manish Jain: The orders which we have in our hands, the general timeline for these
projects is 18 to 30 months. So, this entire order book is going to be
executed by middle of FY27.
Muhammed Sufyan: Okay, middle of FY27. And in INR2,000 crores order book, what's the
success ratio generally, for us?
Manish Jain: Pardon, can you repeat this?
Muhammed Sufyan: So, the order that we have bid for INR2,000 crores, so what will be the
success ratio, I'm asking?
Manish Jain: The success ratio of the company for the last financial year, I'll say it
was around 50%, 47% or 50%. And the average success ratio was in
the range of 30% -35%. So, we are quite hopeful that order book of
around INR2,000 crores, which we have analysis for current financial
till FY25, at least we will see that L1 or the orders coming into our hands.
Muhammed Sufyan: Okay. And what is the confidence for the margin? Don't you like you
said for the, you know, compared to your peers, it is better. So, like the
orders you have bided? So, are there the margins sustainable or it
should improve from here? What's giving you th e confidence for the
same?
Manish Jain: It depends upon how a project is carried and how the execution, how
its designing is taken forward. So, the way we are carrying these
projects, it always remains the same for all the companies, but it is
different margins for different type of companies be cause the way they
are carrying it forward, it depends on it. So, the way we are going
forward, we understand and we are quite hopeful that we'll be in a
position to maintain the margin, but we are confirming.

Muhammed Sufyan: And just confirming again, in the previous like participant, you said that 40% of your revenue comes in Q4, right? So, on that basis, we can say

like around FY25, you will do around top line of like INR1,100 crores or something?
Manish Jain: I have confirmed you the past trends what have been there. So, there wil

l be definitely an increase in top line and we are quite hopeful that we will be crossing INR1,000 crores and we will definitely like to outdo those numbers then.
Muhammed Sufyan: Okay. Thank you, sir.
Moderator: Thank you. The next question is from the line of Tej Patel from Niveshaay. Please go ahead.
Tej Patel: Thank you so much for the opportunity, sir. Sir, as far as I recall in the previous call, you said that we have for about INR500 to INR600 crores of HAM projects and currently we have two H AM projects in hand, right? So, I wanted to get your understanding on why we are chasing H AM projects. Why am I saying this? Because probably you need to put 60% of your upfront capital there and then you get your payment after 3 years that also in annuity terms, right?
So, what's the motivation there? Why we are bidding for H AM projects where we have to probably give an upfront capital, which in turn increases your long -term borrowings and we are getting payments after 3 years in annuity forms. So, why H AM over EPC and what's the thought process there?
Manish Jain: What we understand is HAM are having even better margins in comparison to EPC. You have said it right, it is 60% infusion of funds from the concessionaire end. So, the balance sheet looks a bit heavy. However, the competition gets reduced. So, attraction is always there.
So, we ha ve to keep a combination of H AM and EPC going forward that we can absorb some of the H AM projects in our balance sheet because we are getting good margins and rest of the projects will go in EPC.
So, right now, one of the H AM's is completed, COD is achieved and annuities are coming and two H AM projects are under execution mode.
So, for other H AM projects for which we have submitted our bids, we have not got those projects.

Tej Patel: Got it. But then when you say higher margin, how much of a higher margin and in terms of competition, you say 10 to 12 players in a normal STP bid. But then in H AM, what's the competitive scenario?
Manish Jain: In HAM, that competitive scenario reduces to around 7 -8. So, there is a filtration of another 3 -4 players. So, the number of players are getting reduced in H AM projects.
Tej Patel: In terms of margin, how much if you could just throw light on?
Manish Jain: An EPC project of STP is having a margin of around 24% -25% for us and for H AM, we look forward to a margin of somewhere around 30% plus.
Tej Patel: Got it. And sir, I just, again, your viewpoint on we are expanding to other sectors like solar, as you mentioned. So, what's the reason? Why I'm asking is this because although let's say the government has extended the scheme, if you look at the capex, esp ecially across all the schemes, especially in the Jal Jeevan Mission, although the allocated budget was quite high, the expenditure has been almost 50% and about let's say 60%-70% under AMRUT and all.
So, your reason for expanding into other sectors is low order inflow or what's the thought process behind it? Because, I mean, in the start of the call, you said you are getting a healthy order inflow, right? Then why are we expanding to other sectors? I mean, do y ou foresee orders getting slowed down although the budget has been , I mean, the scheme has been extended and the budget allocations are also higher?

Manish Jain: First of all, there is humongous work which is to be done in India in the water and wastewater sector. So, the sector is very, very strong and a number of projects are coming up, projects are lined up and projects will come up in future as well and we are quite hopeful. And the same support is there from the central government and states and ULBs as well.

So, there is no challenge at all if we see to this water and wastewater sector. And with the growth in this sector, we are also aligned and we are also growing at the

same rate. So, there are no challenges at all

what we foresee in future or at least next 4 to 5 years to come. So, the scenario is, it is very, very healthy and the sector is bullish and there will be huge work which will come up and we are also bidding and will be executing.

The slowdown in JJM was basically what we got to understand is that the scheme was earmarked till March 2024. In this budget, the timeline for the completion of the scheme has been extended till 2028 and the funds have also been allocated for this. So, we don't think that there is going to be any slowdown or the funds not being made available from the government side. So, it was just a temporary phase which was to be handled.

Now, coming to when we are going bullish on this sector, there was an organic growth initiative which we had also foreseen and we had also mentioned in our DRHP and RHP. Our focus has always been on the sustainability and green energy concepts. We are putt ing up solar power plant as a part of the project in our various STPs which we are installing. So, our focus was that we can definitely enter into this particular sector wherein as a standalone solar power project, we can also think of this line.

There is humongous work again available in this green energy sector. There are commitments from the central government from India to achieve the zero emission norms. So, having said that, since the sector is so bullish again, so we are trying, we are taking some small steps and we are trying to develop ourselves.

So, this new company which will be forming will be a part and will be a subsidy of Enviro. It will be double growth. The growth which we are achieving from water and wastewater sector, it will continue at this level itself and we expect that a small growt h that will also get added to our parent company from this green energy and sustainable growth.

Tej Patel: Got it. Interesting. And so, if you could just throw some light on from when and which year probably, we would start, let us say, bidding for projects under, let us say, the green energy segment and what type of projects exactly under also green energy seg ment and if you could also

throw some light on, team building because scope of work is different, right?

I mean, although you did solar projects in water, but if you just throw some light on the team building side and when could, you know, this segment start contributing in our order book and in terms of revenue also?

Manish Jain: The team building that will start, we presume it will be sometime next financial year and some revenue generation should also start from next financial year. We are already on the job. We are, we have submitted two bids in solar as well. So, we are aligned to this sector and the moment we get any of the bids wherein we are successful, so that moment will start and the revenues will start accruing from, that I can say because it is just 2 months, so the work is not going to be started. So, the revenues will also get generated from next financial year. So, it is FY26 and we will see some revenue contribution from this green energy sector as well. Now, coming to the sector, the identification is it is solar, then it is power hydro, then it is 24 by 7 renewables and green hydrogen. So, this is basically what we understand is green energy is all about. Our main focus and our concentration right now will remain solar.

When we will have a stronghold in this solar segment, then we will go on and understand the other sectors and we will move on and increase our strength there.

Moderator: Sorry to interrupt, sir, but the current participant has been disconnected. We will move on to the next question. It is on the line of Sanjay from VT Capital. Please go ahead.

Sanjay: Thank you for the opportunity, sir. So, congrats on a good set of numbers. Like, so just to mention like we are in plan of bidding for the solar project as well. So, how come that we will be able to help those solar companies in like fixing all those PPP projects?

Manish Jain: Right now, we have some small capacities which we have executed in our current projects, current water projects. So, for bidding for a bigger

or I will say for which the technical experience is not available with us, we will enter into some form of joint venture or consortium with some solar companies itself.

Sanjay: So, sir, basically what we are going to do, like what kind of things we are going to like set up? Like in the water thing we make all those canals, all those water houses, all these things. So, in the solar thing, what kind of things we are going to make, sir?

Manish Jain: This is just a start. So, for the start, we can be an EPC player or an integrator of solar systems. So, entering into that manufacturing of solar modules, so that is not in question right now. First of all, let us enter into it, do some EPC projects, have some strengths with us, we understand the industry, then we will look on what is the size available to us, how we can grow organically into that field.

Sanjay: Got it, got it, sir. And sir, just to mention in the previous participants' questions, like for the margin guidance or margin like range for the different sectors of the work, like treatment plant and all those for EPC and HAM. So, what kind of margins we are having for the water supply project? That is where we are thinking of going to be participating in future.

Manish Jain: Are you asking for the current water supply projects or for the future ones?

Sanjay: Current and future as well, sir, if you can throw some margin guidance for those segments as well, like what you did for the EPC and HAM projects.

Manish Jain: Yes, the current water supply schemes, which we are executing are having margins somewhere in the range of 17% to 20%. We will be fairly comfortable for the water supply schemes or projects if we are executing at a slightly lower margin, maybe around 22% -23% margin is there, then we are comparatively comfortable because in STP we look for a margin of around 24% to 25%. So, even though if those margins are there, then definitely we will enter into those projects. We are looking for water supply schemes, which are under AMRUT.

Sanjay: Okay, AMRUT schemes, got it. And sir, what could be the margin guidance for the common effluents, like you told in the initial call, these things are very complex to build up, so margins are pretty high in this segment. So, if you can show some numbers to understand, what kind of strategy we have compared to other segments, which we operate?

Manish Jain: When we bid for the projects in CETP domain, we expect margins somewhere in the range of around 30% on our costs. So, that way our CETP margins are almost equivalent to those HAM margins, which we

are bidding for STPs.
Sanjay: Got it, got it. And sir, are we doing any projects in water treatment plant?
Manish Jain: Yes, these water supply schemes includes water treatment plant as well.
Sanjay: Okay, so margins do differ in that segment or it's almost same like what we operate here?
Manish Jain: I have already told the margins in water treatment plant as a standalone project, means these are just two small numbers, which come individually as a treatment plant only. So, these two do generally come as a water supply scheme. So, we have to work out t hat scheme in totality then.
Sanjay: Okay, like if you go for the water supply scheme, you need to fix the water as well, right? That's what you mean to say, sir.
Manish Jain: Yes. The water supply scheme in its

elf is that it is entirely that drawing water from the river, so an intake well to be constructed, then pumps are to be installed, it is VT pumps, then a raw water pipeline, then construction of a treatment plant, then cl ear water reservoir, mean balancing reservoir, then the distribution pipelines, ESRs, distribution pipelines. So, this whole gambit makes a water supply scheme.
Sanjay: Got it, got it, sir. Thank you so much for your time, sir. Wish you all the very best, sir.
Moderator: Thank you. The next question is from the line of Siddhant from RV Investments. Please go ahead.

Siddhant: So, my question is basically we are consistently maintaining a net profit margin of 15%. So, going in these different sectors like solar and other renewable energy, will we be able to like maintain these margins?
Manish Jain: First of all, our company, parent company, Enviro Infra Engineers Limited as a standalone company, it is concentrating on water and wastewater segment. So, our margins will remain healthy and our margin will continue to sustain those margins. So, this line is entirely different and when we are talking about that sustainability entering into solar power, so it is our start into that particular line.
So, at the start, maintaining those level of margins may be challenging or we cannot confirm it right now. First of all, we need to enter into that segment. We need to understand the complexities there. Only then we will be in a position to confirm what e xactly will be the margin.
However, having said that, those margins, even if say if that margin is 10%, that is getting added to the margins what we are already generating in the parent company and the growth there, that growth is not getting hampered at all with the entry into a ne wer segment. So, basically, it will be a consolidation and it will improve to the top line and the bottom line of the company.
Siddhant: Okay, sir. That answers my question. Thank you very much.
Moderator: Thank you. The next question is from the line of Muhammed Sufyan from Dinero CapServ. Please go ahead.
Muhammed Sufyan: Yes, sir. All my questions are answered. What will be the tax rate for FY25 and going forward?
Manish Jain: There is no change in the tax rate. The tax rates are same, which have been prevailing for the past 2 -3 years. So, there is no change in the tax rates.
Muhammed Sufyan: Okay, sir. Thank you.
Moderator: The next question is from the line of Tej from Niveshaay . Please go ahead.

Tej: Yes, thank you so much for the chance. Again, I am really sorry. I do not know for some reason my line got dropped. So, again, the same question, sir. I am not sure if you have answered this. When are we planning to enter other segments and from when can we expect the

orders coming in?
Manish Jain: We expect to enter into this new segment in the next financial year. Basically, whatever the company has achieved during this current financial year because the IPO was in the month of November and the IPO funds have travelled only in the last week of Nove mber. So, the main growth story from these IPO funds, this will definitely get translated and replicated in FY26 and onwards.
Tej: And, sir, I mean, although not that material, but our interest cost has decreased from INR12 crores to about INR8 crores this quarter despite a higher debt base ahead of September. So, why is this? What is the reason? And one more follow -up question is, ha ve all the bank limits for the Saharanpur H AM sanctioned, right?
Manish Jain: We are again glad to inform you that the sanction for Saharanpur from our bankers, it was communicated on the date of signing of the concessionary agreement itself. So, that entire 4 month s period. So, the closer was already there. So, the time period

was available for doing other condition precedence. So, financial closer has already been achieved for the Saharanpur project. Can you please repeat your other question, please?
Tej: Yes. My first question was, our interest cost decreased from let's say about INR12 crores to about INR8 crores this quarter, right? Despite a higher base as on September 2024, right? So, I'm asking why the interest cost has decreased despite a much higher base?
Manish Jain: Basically, there has been a repayment of INR120 odd crores from the term loans, which the company was having. So, there is a slight reduction in the interest cost.
Tej: Got it. And what's the debt balance right now as on December?

Manish Jain: The borrowings as on September ‘24, it was INR376 crores and presently the borrowing level is INR270 crores on a consolidation basis.
Tej: Okay. Got it. And when do you expect the results for this about let's say 3000 to 4000 bids that we have submitted? Do you expect the results to come out in this quarter only?
Manish Jain: We do expect not all but it do take a time of somewhere around 120 days for which the bids are kept valid. So, for at least for some of the projects, at least we will know that yes, we are L1. So, the evaluation may get completed.
Tej: So, any number of how many orders in terms of inflow we are expecting this quarter?
Manish Jain: We are expecting, we are maintaining that level of around INR2,000 crores which should flow to the company and at least we should get that line that either we are L1 or we are going to be awarded those level of projects.
Tej: Okay. Perfect. Thanks a lot. That's all from my side.
Moderator: Thank you. As there are no further questions from the participants, I now hand the conference over to Mr. Sanjay Jain for closing comments.
Sanjay Jain: I thank the entire team of Enviro Infra Engineers Limited for their untiring efforts, hard work and dedication which drives the company forward through various market conditions. Also, I appreciate all of you for participating in our conference call. Please do get in touch with our investor rela tions team for any further questions. Thank you. Thank you.
Moderator: Thank you. On behalf of Enviro Infra Engineers Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

"Enviro Infra Engineers Limited
Q4 & F Y25 Earnings Conference Call"
May 29 , 202 5

MANAGEMENT : MR. SANJAY JAIN – CHAIRMAN AND WHOLE -TIME DIRECTOR – ENVIRO INFRA ENGINEERS LIMITED
MR. MANISH JAIN – MANAGING DIRECTOR – ENVIRO INFRA ENGINEERS LIMITED
ADFACTORS PR – ENVIRO INFRA ENGINEERS LIMITED

Moderator: Ladies and gentlemen, good day and welcome to Enviro Infra Engineers Limited Q4 and FY25 Earnings Conference Call hosted by Ad factors PR. This conference call may contain forward -looking statements about the Company which are based on the beliefs, opinions and ex pectations of the Company as on date of this call. These statements are not the guarantees of future performance and involves risks and uncertainties that are difficult to predict.
As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing th e star then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Sanjay Jain, Chairman and Whole -Time Director, Enviro Infra Engineers Limited . Thank you and over to you sir. Thank you.
Sanjay Jain: Thank you. G ood morning everyone. I would like to extend a very warm welcome to all of you for Enviro Infra Engineers Limited Earnings C onference call for the fourth quarter and year -ended 31st March 2025. I would like to begin by expressing my gratitude to all of you for taking the time to join us today. We have on call with us Mr. Manish Jain, Managing Director and Adf actors PR, our Investor Relation team. We have shared our result presentation.
I hope you all must have gone through it. Since this is our third earnings conference call, I would like to take you through our recent development before we get into the business and financial performance for this pe riod. Enviro Infra Engineers Limited is one of the India's leading infrastructure and environmental

engineering companies specializing in water and wastewater solutions.
With a strong focus on sustainable infrastructure, we bring decades of expertise in designing, building and operating complex environmental projects across the country. Our work supports some of India's most ambitious national missions, including the Jal Jeevan Mission, the Atal Mission for Rejuvenation and Urban Transformation, AMRUT, and the National Mission for Clean Ganga, NMCG.
These are not just infrastructure programs , they represent our collective responsibility to build cleaner, healthier and more sustainable communities for future generations. During the year, we have continued to build momentum with bids submitted for projects in excess of INR 5,000 crores. This robust pipeline is a testament to the trust that stakeholders and government agencies place in us.
As of 31st March 2025, our order book remains strong and healthy, standing at around INR 1,185 crores, comprising 22 diverse projects across multiple states. Our operation and maintenance order book adds another INR 806 crores, providing clear visibility into our future revenues and growth pipelines.

Further, in financial year 2026, we have secured additional new orders worth INR 200 crores, indicating a strong start to the year and continued confidence from our clients. In recognition of our commitment to excellence, Enviro Infra Engineers Limited has also been awarded ISO certifications for Environmental Management System, Occupational Health and Safety Management and Quality Management System, further underlining our focus on safety, sustainability and performance excellence.

At Enviro, we play an active role in driving India's water sustainability and urban transformation. One of the defining features of our approach is our commitment to timely and high - quality project execution. Now, I would like to hand over the floor to our Managing Director, Mr. Manish Jain, who will provide d

eeper insight into the Company's financial and operational performance. Over to you, Manish.

Manish Jain: Thank you, Sanjay sir. Good morning, everyone. I shall take you through our quarterly and full -year financial performance. Starting with Q4, our revenue from operati ons grew 31% year -on-year to INR 393 crores, driven by the robust execution of a strong order book. EBITD A for the quarter was nearly INR 100 crores, as against INR 86 crores in Q4 FY24, registering a 16% growth on year-on-year basis.

The EBITDA margin fo r Q4 FY25 was 25%. While the PAT grew by 30% to INR 74 crores with the margin at 18%. Now, coming to full-year numbers, the consolidated revenue from operations was INR 1,066 crores, up from INR 729 crores in FY24, making a robust growth of 46%. Our EBITDA grew by an im pressive 61% year-on-year to INR 268 crores, compared to INR 166 crores in the previous year.

The EBITDA margin improved to 25%, underscoring our focus on operational efficiency. The profit after tax rose sharply to INR 177 crores from INR 106 crores in FY24, an increase of 66%. The PAT margin for the year stood at 16%, reflecting improved profitability and financial discipline.

Now, coming to our balance sheet highlights, our debt -to-equity ratio remains conservative at 0.24, highlighting our strong balance sheet. Return on equity stood at 18% and return on capital employed at nearly 23%. Both are healthy indicators in

terms of value creation. In terms of cash flow, I am happy to share that we have achieved a significant turnaround.

Cash flow from operations before tax improved from a negative INR 78 crores in FY24 to a posi tive INR 26 crores in FY25, demonstrating the strong cash generating ability of our business and soundness of our financial strategy. Looking ahead, we aim to sustain our growth trajectory with an expected annual growth rate of 35% to 40%, while maintaining healthy EBITDA margins in the range of 22% to 24%.

At the same time, sustainability is central to our strategy. We are in the pro cess of setting up a new subsidiary focused on clean energy that is solar, hydro -power , green hydrogen and 24x7 renewable solutions, while also exploring opportunities in solar assets and EPC projects. At the same time, we are also expan ding in our water infra through reuse, ultrafiltration, RO and ZLD plants.

We are expanding our presence across India, strengthening our national footprint. We also plan to bid for more HA M projects as

well as str engthen our presence in the WWTP and WSSP space.
Notably, we aim to increase the scale of our projects from 50 to 200 MLD for se wage treatment plants and from 20 to 50 MLD for common effluent treatment plants. This step reaffirms Enviro's commitment to building a greener and more resilient India. That is all from our side. We can now open the floor for questions.

Moderator: Thank you very much, sir. We will now begin the question and answer session. The first question is from the line of Dheeraj Ram from Ashika Institutional Equities . Please go ahead.

Dheeraj Ram: Hi, sir. Thank you for taking my question and congratulations for the good set of results. I have a couple of questions. So the first question is on the order book. So t he order book has seen a slight degrowth from last quarter to this quarter, from close to INR 1,700

crores to INR 1,185 crores and i n the last quarter, you have told that you have bid for INR 2,200 crore s projects and you are expected to bid for INR 2,000 crore s more projects. So h ow do you see the order inflow for FY26 and what is the status of L1?

Manish Jain: Thank you Dheeraj. B asically, in the last financial year at the start of 1st of January 2025, our order book was at INR 1,687 crores. So, the amount of execution, the rev

enues for the last quarter has been to the tune of INR 393 crores. So, our order book presently stands at around INR 1,185 crores.
So, in the last financial year, not much projects were available for bidding. Bidding started in the month of January. So, three projects from the execution side have come up. Our order book is around INR 200 crores. Further, we have submitted our bids for somewhere around INR 5,000 crore s projects and we are expecting the results to be out very soon. We ar e L1 in certain of the projects, but we are not interested in announcing the L1. Rather, we will be more interested as and when we get the LOIs from the respective clients, definitely we will announce that result and then that can get added to the order book. However, having said so, since we have submitted our bids for around INR 5,000 crore s projects, our success ratio in the past has been quite good. It was in the range of around 40 % to 60%.
Even if we go by a conservative number of somewhere around 20% to 25%, even at that level, we can expect that an order inflow of INR 1,000 to INR 1,250 crores that should accrue to the Company from the bids that we have already submitted.

Dheeraj Ram: Okay, sir. Got it. And just two more questions. What is the amount of unbilled revenue that we have as on closing FY25?

Manish Jain: The total amount of unbilled revenue is to the tune of around INR 265 crores in our books.

Dheeraj Ram: Okay. And last question, sir. Sir, we have acquired two companies. One is EIE Renewables and the other is Sunaxis for 10 lakhs and 1 lakh each. And these are related party transactions. So, I know that we are trying to enter into solar, hydro and green hydrogen, b ut what is the need of creating a separate entity and then acquiring it? What is the thought process behind this?

Manish Jain: Both these companies were formed just recently with both Sanjay ji and myself being the directors in the company. We have stated quite clearly that these companies will remain to be 100% subsidiaries of Enviro Infra only. So, basically the purpose of acquisition was the shareholding. We were having that 10 lakh shares of EIE Renewables. So, basically that shares were transferred to Enviro Infra .

So, we remain as directors in the company and it becomes 100% subsidiary of Enviro Infra. Basically, we want to have a clear demarcation in the business lines. The water and wastewater business that will directly be in the parent company only and the renewable business that we are trying to develop, t hat entire business that will be taken up in EIE Renewables.
Sunaxis Renewable that has again been on the directorship was with Sanjay ji and myself. So, it will be acting as a step down subsidiary of EIE Renewables. So, if there is any solar asset or renewable asset which is taken up in the EIE Renewables , so, that particular company was required. So, that will act as a subsidiary of EIE Renewables.
Dheeraj Ram: Got it sir. Thank you. Thank you for answering the questions.
Moderator: Thank you. The next question is from the line of Peter from LIC Mutual Funds. Please go ahead.

Peter: Hello sir. Thank you for the opportun ity. I just wanted some color on the follow up on the previous participant's question on the subsidiary front. So, you are saying that you have kept a separate subsidiary for renewable. So, what is the difference between this subsidiary and the step down subsidiary?
Manish Jain: Let me explain it first of all from Enviro. Basically Enviro, when it is a parent company, it is doing all the EPC business. So, when ever we are taking any of the HA M projects, we are required to form an SPV. So, that the financials of that particular SPV that can be separated and that can be clearly visible. So, now

I will take it to the renewables.
Basically, we have formed EIE Renewables for taking the entire renewable business which we intend to do. If we are having any of the assets or if there is any PPA line for this, we require that further step down subsidiary company of EIE Renewables for which that Sunaxis Renewable ha s been created.
Peter: So, because of the first question, you had said that the renewable energy will be in solar renewable power generation itself or is it supporting the EPC projects that you are doing? Are they two sepa rate line of businesses or that is just to support your EPC business?
Manish Jain: There is one EPC business wherein we were installing some of the solar power plants. So, that earlier we were doing in our parent EPC company only. So, in future if there is any such requirement or that installation of any of the renewable plant will be re quired, that definitely will be transferred to the renewable side.
This renewable company has been formed specifically to take direct projects in the renewable sector for which the company will be bidding in taking the EPC or some of the assets for executions.

Peter: Okay, just to be clear. So, because we have seen in the presentat ion that some of the -- you have shown the images also where you have done some EPC based wastewa ter treatment plant that you do i n that you have also provided solar installations in few of your projects. So, this particular subsidiary will support this kind of activities wherein you are saying that EPC may project what you are doing for wastewater treatment.
If a client also says I want a solar installation along with this project, the subsidiary will take care of the solar installation part?
Manish Jain: That's true. That's what I am saying. It is both ways. It is the installation of renewables in our existing water projects or wastewater projects wherein we are required to install or we are

planning to install, as well as the individual installations as well for
which we will directly bid for these type of projects, renewable
project I will say.
Peter: Okay. Thank you for the color. Sir that is helpful. Sir since we
follow the last call also we are little bit aware of how the EPC part
of yours works with water treatment because that has a separat e
set of drivers and there are government schemes associated with
it and you support municipal.
So, when you say you are going to do separate solar installation
projects as well, can you please give us some color in terms of
what is the market size? Who are the – what kind of clients do
you target and, like what size of projects you do, w hat is the ticket
size and what will the order book and what can be the revenue
visibility on that front?
Manish Jain: Let me clarify that we are quite new to this sector. Right now,
giving the revenue visibility, as far as the size of the sector is
concerned, we understand there is huge potential and huge
opportunity which is available. Now, for us, how we can grow and
how we can bring more color to our Company in this particular

renewable sector. Basically, we are moving forward. We are
going slow. We are studying.
We are taking those projects wherein we can draw some
strengths. Based on that, we will go ahead. We will not forecast
any earnings right now for this renewable, but definitely we will
look forward to very good margins which will be available when
we are b idding for any of such projects.
So, we will be quite careful while bidding. We don't want to go
very big on this right now. We will have our footprints first
available. Then we will look into the sector and how we will grow.
So, maybe for a year or two, we will have our foothold in the
sector. And then we can go for a revenue visibility, particularly in
the

sector.
Peter: So, in that sense, you had done 22% margins last year, 25% this
year. So, you expect the margin profile to be higher, same or
lower for this particular business you are entering?
Manish Jain: First of all, I will separate out the two businesses. One is our water
and wastewater business. The visibility that grow th in terms of
revenue that 35%, 40% growth what we are expecting, that will
continue to be there from the water and wastewater sector itself.
So, there is no slackness in that and that robust growth that will
continue in that particular sector.
And we foresee the margins will always be there, that EBITDA
margin of 22%, 24%. We expect we will continue to drive those
types of margins from our water and wastewater treatment sector.
I will again emphasize that in this renewable sector, because it is
one of the main very interesting sectors and it is a huge
opportunity which is available in India.
Right now, we are definitely studying into it and how we can build
up a good company and we can go for some good projects. We

are visualizing some of the projects, we have definitely submitted
some bids, wher ein we have in those stands, 22%, 24% of
EBITDA margins in the renewable sector, to my understanding,
might not be possi ble, b ut yes, to an extent of around 18 -20% is
the margin what we are looking for. We will not go down beyond
that.
Peter: Okay. Got it. S o, in the next two years, as you said, you are going
to study the market, right? So, can we say that we can expect y ou

to generate revenues from FY 27 or FY28 onwards for this particular new business you are entering?

Manish Jain: We do expect to generate revenues from this company in FY26 as well, but comparatively we expect it to be a bit smaller right now.

Peter: Okay. So, what are the independent renewable projects? So, when you are doing an EPC project for water, there is solar involved that you are doing, but standalone solar projects also from this year onwards also you will st art executing here, just a color on that?

Manish Jain: Yes, definitely. This is what we are intending to do along with solar. The start very definitely with solar and we will definitely try to enter into that hybrid sector or means 24x7, which is available in this particular renewal because there is a lot of gap or the grid imbalance which is there. So, tha t draws a lot of interest.

Peter: Okay. And in terms of, additionally, because you are going to enter into this business and it may need some additional capex, any color on the capex requirement overall and specifically because of this how much you can expect to increase and also will you incur additional debt in order to fund this growth? Any color on that you can provide, sir?

Manish Jain: Right now, from our GCP, from the IPO funds, we have proposed an investment of INR 50 crore s in EIE Renewables. Through our discussions, we have kept that overall investment from Enviro Infra to EI E Renewables at a maximum of INR 75 crores. So, basically, it will depend upon the type of project that we will get and if there is any PPA project which is of significant value and which can add strength to the Company and can give good returns.

Then definitely, like H AM projects, we will be adding that debt. But we are qu ite careful if we go for a debt -to-equity ratio. So, we are quite comfortable right now. We are sitting at a level of around 0.24. We understand we will never go heavy and we will never try to cross that line of around 1, not more than that.

So, if we are having the H AM projects or any PPA projects and that debt level is going high, then definitely we have that bouquet available and we can look forward to selling those projects.

Peter: Okay. Apparently you have said that almost INR

1185 crores

order book…

Moderator: I am sorry to interrupt, Mr. Peter. I would request you to please come back in the queue.

Peter: Yes, sir. Okay.

Moderator: Thank you. Th e next question is from the line of Nikhil Rungta from LIC Mutual Fund. Please go ahead.

Nikhil Rungta: Hi, sir. Thank you for the opportunity and congratulations on a great set of numbers. Sir, most of my questions were asked by Peter already. Just two clarifications from my side. First is, right now, the water projects that we are doing and along with that, we are also doing solar EPC projects. So, those solar EPC projects will go under the subsidiary, correct?

Manish Jain: Right, sir.

Nikhil Rungta: Okay. And if we make this a subsidiary, then we can bid for standa lone solar EPC projects as well?

Manish Jain: That's true. This is our inclination and this is what we intend to do.

Nikhil Rungta: Perfect. Sir, last question. Sir, the release which has come when we have set up this subsidiary in that objects you have written that target company is incorporate for the purpose of undertaking the

business of power generation t hrough renewable sources. So
there is a confusion that are we also entering into renewable on
power generation or it is primarily EPC what we are doing?
Manish Jain: It can be both ways. It can be either IPP projects or PPA projects
means or EPC . We always intend to go asset light. We will always
have a right mix of EPC and PPA projects. The same way we are
having that mix of HA M and EPC in our parent Company. So, on
the debt side, we will never like to go heavy on this.
So, we will be quite careful while choosing any of the assets which
we can build up in that particular sector. So, our debt -to-equity,
we will always maintain the debt -to-equity ratio to be in a very,
very comfortable range.
Nikhil Rungta: Perfect. So, basically, this is made with our solar EPC project
group plus to make it independent. And if we anytime go into
generation, we will be very careful. And probably, that will start
after a couple of years, as you said?
Manish Jain: True, sir. We never want to go heavy or we want to study the
sector so that if there are great opportunities available, then we
can go big on this. But for that, we definitely need to understand
and need to understand the intricacies of the sector.
Nikhil Rungta: Okay. Got it, sir. This is quite helpful a nd thanks for the
clarification.

Manish Jain: Thanks a lot.
Moderator: The next question is from the line of Rahul Agarwal from Aventus
Capital . Please go ahead.
Rahul Agarwal: So, thank you for the opportunity, sir. And congratulations on a
good set of numbers. So, sir, I wanted to actually start with a
question on the CBG gas product s that you have mentioned. And
that seems to be something that is a bit unique to Enviro. I don't
see a lot of players working in that space. So, could you just tell
me a bit about that and how it could translate into revenues?
Manish Jain: You are talking about the r enewable sector itself?
Rahul Agarwal : No, sir. Just typically the CBG gas product that was mentioned, I
think recently I wanted some visibil ity on that, if that's possible?
Manish Jain: This sustainability and waste -to-energy, this has remained our
key focus. Presently, in three of our existing wastewater treatment
projects, which are predominantly sewage treatment plants, we
are putting up this gas generation and CBG plants. So, one of m y
plants is going at Jaipur. It is an 80 MLD plant, 80 MLD ST P. Then
there are two plants at Jodhpur, for which we are doing the
upgradation and modification.
These two are 50 MLD plants and one of the upcoming plants will
be 135 MLD at Saharanpur. So, basically, when we are doing this,
we are putting

these CBG plants in our projects. We tend to see
the performance of these plants and then based on the revenue
generation model and the success ratio, definitely, we will try and
we intend to enter into CBG, maybe for the agricultural waste or
for MSW projects as well.
So, we are again on the lookout. Basically, first of all, we are
installing the plants in our existing projects. We will see to the

performances and then definitely we'll look forward to these
opportunities, which are immensely available in India.
Rahul Agarwal: Okay sir. S ure. So, sir, the other thing I wanted to ask was, in
recent times our success ratio has been around 35 % to 40 % or
so, I think, which seems to be much higher than the peers we
have in the industry. So, can you comment on why that would be
the case? Is there anything specific that we do much better that

allows us to get such good ratios?
Manish Jain: Rahul, that gets transpired from the design and execution capabilities, which are in -house. So, we have control on the costings. So, that control on the costings as well as giving the economical and viable solutions. So, we always remain a bit competitive in comparison to our competitors and that translates into better success ratio in comparison to our peers.
Rahul Agarwal: Okay, sure. And the guidance that you gave for a conservative number of 25% of success ratio, should we consider that to be the case or can we be a bit more optimistic?
Manish Jain: Well, there are certain guidelines when we say 20 % to 25 % is the success ratio, which we can definitely foresee. But there can always be a chance for better ones, but at least if we go by that number as well and projects are further coming up. So, every quarter, if we can have that number of somewhere around may be 750-1000 odd crore s of order book available to us and if we can build up that order book of around INR 2,500 crores to 3,000 crore s in this current financial year.
So, maybe that depends. If our success ratio is higher comparatively, we will slow down our bidding in future. If our success ratio is in the range of 25 % to that 20 % 25% might be our bidding may be a bit higher at that point of time.

Rahul Agarwal: Okay, sir. Sure. Thank you so much, sir. That's all from my end. Thank you.
Moderator: The next question is from the line of Reet Ranawat from Aventus Capital . Please go ahead.
Reet Ranawat: So, most of my questions are answered. So, I just wanted to ask, what is the average, like project execution cycle of the current orders and the future orders also?
Manish Jain: The time period in general is in the range of 18 months to 24 months, apart from some water supply schemes, which we are having wherein the order, this timeline is around 28 months. So, in general, a timeline of around 24 months can be taken to be an average timeline for the execution of the projects .
Reet Ranawat: Okay. Got it. And, so do you plan to scale up your O&M portfolio like you have on this O&M portfolio on your site? So, is there a way that you will increase your scale -up of your O&M portfolio or you will continue to do EPC?
Manish Jain: Can you please repeat your question? I could not hear you clearly.
Reet Ranawat: So, will you continue to do EPC or you are more looking forward to do more O&M projects, like we can get future visibility?
Manish Jain: HAM project drives better margins in comparison to EPC projects, but we cannot be, go very heavy on HAM . So, we will always be having a right mix between EPC and HAM . So, we understand that a mix o f around 75 to 25 for EPC to HAM , I think that will be the right mix and right ratio going forward as well. So, we will try to maintain that level.
Reet Ranawat: Okay. Thank you so much.

Moderator: Thank you. The next question is from the line of Balasubramanian from Arihant Capital . Please go ahead.
Balasubramanian: Sir, my question is regarding 4 8% of revenues comes from Madhya Pradesh side and what are the steps we have taken for mitigate regional risk?
Manish Jain: Pardon couldn't get you, sir. Can you repeat, please?
Balasubramanian: Around 50% of revenue comes from MP side only. So, what are the steps are we taking mitigating regional risk?

Manish Jain: If you will see our investor presentation, our total WSSP book now remains at around INR 170 crores. So, those MP projects, there were 5 MP projects. The total order book size was INR 1,250 crores. So, now the balance portion is around INR 170 odd crores. So, the component of wastewater treatment projects and that too EPC and HA M, that will be much higher in current financial year. So, this entire WTP order book, that is spread across the states. So, that concentration which we were having in MP, so I think that will slightly go down this year and we will have some better revenues from other states as well.

Balasubramanian: Okay, sir. So, most of the like Infra and EPC players talked about delays in payments for water related projects. Are we facing the same and is there any potential delays in fund allocation for like AMRUT 2.0? Is there any impact on our growth side?

Manish Jain: We didn't face any problem in any of the AMRUT or Namami Gange projects which we were executing during the last financial year. However, there was a delay in release of payments from JJM projects. For the entire last financial year, the payment cycle that got elongated in JJM, there was a delay or I will say almost nil payments which were released from the centre.

It is just because of the timelines of the project which it was intended to complete in FY24. The timelines could be increased by the central government only during this budget and this timeline has been increased till 2028. So, the last year was definitel y crucial for all the players who were in the JJM segment. We also faced some challenges, but after December the cash flows have significantly improved even from the JJM and if you see our cash flow cycle, we have definitely improved a lot. So, if you see our cash flow pre -tax, these have gone positive from a negative number. So, that says that the cash flow and operational efficiency in the system, so that way we could manage the cash flows.

Balasubramanian: Got it. S ir, on the margin front, basically our competitors are below 15% kind of margins. I think we are above 20%. I just want to understand how we are maintaining those margins, whether it's because of input cost, competitive pricing or project mix shift or how we are sele cting these kinds of projects?

Manish Jain: Basically, if y ou see, it depends upon company -to-company how they take up the projects. So, the way the project is taken up, so that way the margins get derived. Some of the companies are having even better EBITDA margins than us, then some are having lower EBITDA margins or maintaining somewhere around 15%.

So, that is transpired from the way the project is taken up. If there is a subcontracting or there is no control on the execution front, then definitely the project may go for a delay or there can be cost overruns. We are basically trying to have our 100% control on the execution front and that is driving the growth as well as the margin in the company .

Balasubramanian: Okay, sir. Thanks.

Moderator: Thank you. The next question is from the line of Aniket Jain from Yes Securities. Please go ahead.

Aniket Jain: Good morning, sir. Hope you can hear me. Actually, I wanted to ask one question o

n trade receivable days. So, I see that those have increased from 57 days in FY24 to almost 74 days currently. So, is there any reason for that and what should be the normalized receivable days and do you expect to reduce these

receivable days in the near future? That is question one ?
Manish Jain: Yes.
Aniket Jain : And question two would be if you are planning to probably go into international markets, say Middle East or Southeast Asia, because those markets also have some significant opportunities. So, that is question two?
Manish Jain: Basically, the trade receivable days, you are 100% right. These have increased to somewhere around 70 days. The challenge this time was basically the receivables from the JJM projects itself. During the entire financial year, there was a slowdown in the receivables from JJM projects. Situation has got improved a lot. The number of days seems to be 70.
However, if you just work out the payments which we received on 3rd or 4th of April. So, it was somewhere around INR 70 crores which we received from the JJM project itself. So, if we just take it into the a ccount, then the receivable days goes back to around 45 days. And 45 days is what exactly means the right timeline for receivables.
The total receivable cycle if I divide the inventory days should be. This is what actually and optimally should be. It is inventory days should be 15. Unbilled revenue days should be somewhere around 90. Then the receivable days should be 45. So, if we add

these all, it should be 150 days and trade payable days should be around 60.
So, if we say the networking capital cycle comes out to be 90 days. In our case, this networking capital cycle comes out to be 105 days. Now, that slight means the fund which we received on 4th and 5th of April. Definitely, that cannot be taken as the fund that debtor cycle for FY26 b ecause it was just the fund which was to be released.
So, it got released two to three days later after this 31st March. So, if we just look into it or we account for this particular one, then that da ys that will go down to somewhere around 25 further. So, around 80 days. So, we are fairly comfortable in that case. And regarding this question on the international, same ways we are having some inquiries now from the international market as well. So, it would be that student exercise that we study that market carefully and then we enter. We will ta ke our own time with the study, b ut one thing that is for sure is we will definitely be inclined to enter into the international market even when the opportunity is available.
Aniket Jain : So, sir, just a follow -up on this. If you plan to go into international markets, would you be doing end -to-end work there that is the EP as well as C portion or would you try to get some local contractors to do the construction portion and you just take up the EP portion?
Manish Jain: Basically, this is what we have to study and we have to infer whether it will be prudent for us to go there and do the civil construction work from our side itself or should we hire the local contractor and give that civil construction work to the local contractor and then we look on for the equipment supplies and then performance guarantees. So, this is what we have to study only after our comfort zone and we will enter into that market.

Aniket Jain: Sure, sir. Thank you for the opportunity.
Moderator: The next question is from the line of Sarabjyot Chawla from Niveza India . Please go ahead.
Sarabjyot Chawla: So, my question to you is on the lines of again the trade receivables and the cash flow mainly. Last conference call, I believe you had mentioned that there would be complete release

of funds from JJM side, but I just want to know the status and
update

on that and also if this cash flow issue will be consistent.
Like will this be an issue for every quarter because there will be a
backlog from the previous quarter or is there a resolve to the
issue? And also the aging of the trade receivables, that's also just
a point of concern. I just want t o understand this from you once?
Manish Jain: If you see, our cash flow have turned positive and our cash flows
pre-tax are now INR 25 crore s positive in comparison to around
INR 75 crore s which were negative in the last financial year pre -
tax. So, that means our cash flows have improved significantly
despite the problems that all the players have faced by not
release of the timely payments in JJM projects.
This problem, this is one of the one problem which anybody has
faced in the last 10 years and to our understanding the worst is
over and the funds are there on the verge of being released in
JJM. Apart from JJM, I have not faced any of the challenges in
either AMRUT 2 projects or Namami Ganga projects.
The flow of funds there have been qui te smooth, w hich definitely
have helped us in our execution of the JJM projects as well. So,
we could maintain a mix of our cash flows from various projects
which were coming to us. So, this problem was once in a lifetime
kind of thing and though the central government were having the
budgetary allocations, that timeline issue that created a p roblem.

Other way round from AMRUT to Namami Ganga, the funds were
being released. So, we don't foresee that such cash flow
problems that will exist in future. We are quite hopeful that funds
will be available in the project. Regarding aging, if I will say my
entire this receivable , well it's INR 205 crores. If you see my entire
quarter, so my entire quarter is INR 393 crores. So, if you see the
aging wise also, so that does not look to be more than that 45
days itself if you just compare the last quarter only. So, that way
things are quite comfortable.
We are closely monitoring all the cash flows and we are having a
stringent watch on it and we are definitely following up. So,
everything is quite comfortable. Our cash flows have improved
significantly. This is what I can say in one of the troubled years
itself, our cash flows have improved significantly.
Sarabjyot Chawla: Sir, can we expect a positive cash flow after tax next year?
Manish Jain: We definitely look forward to positive cash flows after tax also. We
definitely look for it. One more thing which I would like to highlight,
basically that transpires from the order book, present order book.
The present order book says the WSSP lines are only to the tune
of INR 175 crores. So, rest all are our WWTP projects, EPC or
HAM. So, that way the cash flows are quite comfortable in all
those projects.
It has remained to be comfortable in the last financial year as well.
So, we can expect a positive cash flow.
Sarabjyot Chawla: Thank you, sir. Just one last question on the unbilled revenue
side. Sir, would the INR 256 crores, I believe is the amount, would
that be included in the top line for this financial year , the unbilled
revenue is included in INR 1066?
Manish Jain: Unbilled revenue is the sales valuation in INR 1,066 crores. So,
in the current financial year, it will not be the part of the revenue.

It has already been the part of revenue of FY25. The figure is INR
265 crores, not 256. It is 265. And if we see it in number of days,
it comes out to 91 days. So, in 90 days, this unbilled revenue cycle
seems to be okay.

Sarabjyot Chawla: Okay. So, just to confirm, it is included in the INR 1,066 figure for FY25?
Manish Jain: Yes.
Sarabjyot Chawla: Thank you, sir. Good luck.
Moderator: The next question is on t he line of Aditya from Synergy . Please go ahead.
Aditya: Ye

s, sir. I just wanted to have some future guidance on the revenue and the margins. Will we see any improvement for the next year?
Manish Jain: If you see to the order book, that order book primarily constitutes WWTP projects. These are EPC and H AM projects. So, if you see this profitability guidance, definitely these projects have higher margins in comparison to water supply schemes. So, we definitely expect that the margins can improve, but as a guidance, we will never go for or give any guidance for EBITDA margins going above 22% to 24%.
We will have that operational efficiency in the system and we will definitely look forward to having the better margins while we are executing.
Aditya: Okay. All right. That's it, sir. That was my only question. Thank you.
Moderator: Thank you. The next questi on is on the line of Ankur Kumar from Alpha Capital. Please go ahead.

Ankur Kumar: Hello, sir. Thank you for taking my question. Sir, I wanted to understand regarding our 30% to 35% to 40% growth guidance for this year. So, we will need more orders and you said that INR5,000 crore s bid book is there. So, when can we expect some wins from there and if we get it, how early if we get it, we will start executing it, sir?
Manish Jain: First of all, the moment we bid any of the projects, there is a timeline of around 4 months to 6 months within which the bids are evaluated and the orders are released. So, if we have started bidding for these projects in the month of January, then definitely we can have a good amount of visibility to my understanding by June and or maybe in the month of July.
The moment we get any of the projects, first 3 months to 4 months, these are mainly used in the designing of that particular project. So, that says that the entire monsoon season will be available for the designs. So, this year Diwali is also in the month of October. So, 5 clear months will be available for construction. So, we can understand that the new order book which will be coming into the company. So, November onwards, it will add on substantially to the revenues of the company and till that time, the order book which the company already has in hand. So, we have a good amount of order book available to execute at least for the next 6 to 7 months. So, that way we can foresee that 35 % to 40% revenue visibility. That is quite possible.
Ankur Kumar: Got it. And sir, on JJM side, there were reductions. Can you comment how are the things now and how are we expected things in FY26?
Manish Jain: Right now under JJM the projects which we were having and which we were executing, we are in the final stages of the execution of those projects. Since we were not having our comfort zone going further for the JJM projects, so we backed out and we

didn't bid any of our bids which have been submitted out of this INR 5,000 odd crores. So, none of the project is from JJM.
Right now, we are more interested in completing our projects and

then taking out all the funds which are blocked or which are withheld in the JJM. The guidance will be clear. The funds are being made available by central government as well as the state governments. The funds are definitely goin g to flow maybe in the next 15 days, 20 days time. There is a normal timeline. After the completion of any financial year, the funds generally get available either by May end or in the month of June.

So, that is a normal position. So, we do expect that the funds should be there. I cannot guarantee because the funds have to come from the government only , but we foresee that the funds are going to be made available in the month of June and there will be quite comfort zone in the cash flow side further.

Ankur Kumar: Got it, sir. So, last question would be on the O&M side. The ord

er

book is INR 806 crores and roughly we are doing around INR 30 crores of execution per year. So, what kind of improvement or how should we look at this O&M part of the business and is it like how much margin we make in this O&M business?

Manish Jain: O&M revenues and the profitability from O&M. Profitability is definitely higher and it is significantly higher. However, we foresee the O&M revenues to be always in the range of 3 % to 5%. In the last financial year because all the projects were in the execution stages. So, there were not much of the projects which had entered into O&M. In the past projects were continuing in the O&M phase.

So, if the O&M revenues have almost got stagnated for FY 24 and 25, we expect that in the current financial year there should be an increase in that O&M revenue to the tune of maybe another INR 10 crores to INR 15 crores. So, year -on-year basis as the projects

get completed the O&M revenues will go on increasing. If I talk 2 years down the line, we foresee that O&M revenue can shoot up to an extent of somewhere around INR 70 crores to INR 75 crores.

Ankur Kumar: Sure, sir. Thank you and all the best.

Moderator: Thank you. Ladies and gentlemen, this was the last question for today's conference call. I now hand the conference over to Mr. Sanjay Jain for closing comments.

Sanjay Jain: Thank you. I thank the entire team of Enviro Infra Engineers Limited for their untiring efforts, hard work and dedication which drives the company forward to various market conditions. Also, I appreciate all of you for participating in our conference call. Please do get in touch with our investor relationship team for any further questions. Thank you. Thank you, everyone.

Moderator: Thank you. On behalf of Enviro Infra Engineers Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines. Thank you.

Manish Jain: Thank you all.

## Call: Aug 2025

"Enviro Infra Engineers Limited FY 2026 Earnings Conference Call"

August 12, 2025

MANAGEMENT : MR. SANJAY JAIN – CHAIRMAN & WHOLE -TIME DIRECTOR , ENVIRO INFRA ENGINEERS LIMITED

MR. MANISH JAIN – MANAGING DIRECTOR , ENVIRO INFRA ENGINEERS LIMITED

 Moderator : Ladies and gentlemen, good day and welcome to Enviro Infra Engineers Limited Q1 FY '2 6 Earnings Conference Call.

As a reminder, all participant s' lines will be in the listen -only mode . And there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing "*", then "0" on your touch -tone phone. Please note that this conference is being recorded.

This conference call may contain forward -looking statements about the company which are based on the beliefs, opinions, and expectations of the Company as on date of this call. These statements are not a guarantee of future performance and involve risks and uncertainties that are difficult to predict.

I now hand the conference over to Mr. Sanjay Jain – Chairman and Whole-Time Director. Thank you and over to you, sir.

Sanjay Jain : Thank you, Varsha. Good afternoon, everyone. A very warm welcome to Enviro Infra Engineers Limited Q1 FY '2 6 Earnings Conference Call. I sincerely thank you for joining us today.

We are joined on this call by Mr. Manish Jain – our Managing Director, along with the investor relations team from Adfactor s PR. The Results Presentation has already been shared and I trust you have had the opportunity to review it.

As we begin the new financial year, I am proud to share that Enviro Infra Engineers has maintained its position as one of India's leading players in water and waste treatment, delivering high -quality, technologically advanced solutions across the country. Our focus remains firmly on treating, recycling, and reusing water, ensuring sustainable resource management for industries and cities alike.

 In Q1 FY '2 6, we secured fresh orders worth approximately Rs. 1,178 crores, a strong endorsement of our technical expertise and ability to execute large, complex and sustainability -driven projects. Key among these was our foray into the ZLD (Zero Liquid Discharge ) segment , with a Rs. 395 crores CETP project in Maharashtra, deploying advanced ultrafiltration, reverse osmosis, and MVR (Mechanical vapor recompression ) technology, to achieve near - total reuse of treated wastewater.

We also expanded our geographical footprint, adding new projects in high - growth markets such as Maharashtra and Odisha. These include tertiary treatment plants, advanced ultrafiltration systems, and long -term O&M contracts, all designed to deliver lasting values and environmental benefits.

While wastewater remains our primary focus, this quarter also saw a strategic step into the renewable energy sector by securing two solar assets, one in Maharashtra and the other in Odisha. This diversification complement s our sustainability -led approach and opens an additional avenue for clean energy integration in our projects.

Our total execution order book stands at around Rs. 2,051 crores, spread across 21 active projects, backed by a healthy O&M portfolio of around Rs. 946 crores that provides steady long -term revenue visibility.

With that, I would now like to hand over to our Managing Director, Mr. Manish Jain, to take you through the financial and operational highlights of the quarter. Mr. Manish ?

Manish Jain : Thank you, Sanjay sir, and good afternoon to everyone on the call. I shall now take you through our financial performance for the 1st Quarter of FY '2 6.

In Q1 FY '2 6, revenue from operations stood at Rs. 241 crores, reflecting a year-on-year growth of 17.4%, driven primarily by the execution of our key water and wastewater treatment projects. EBITDA for the quarter came in at Rs. 64 crores compared to Rs. 51 crores in Q1 FY '2 5, up 25.2% year -on-
 year, with stable

margins of 26.7%. Profit after tax grew by 41.8% year -on-
year to Rs. 42 crores, with a P AT margin of 17%.
Operationally, it has been a transformative quarter with the order wins which enforce our technical capabilities in delivering complex wastewater treatment, tertiary treatment infrastructure, and ZLD space, aligning with the company's goal for sustainable urban water management.
Globally, over 80% of the wastewater is discharged, and water scarcity is said to affect more than half of the world's population by 2030. This makes our expertise in recycling and reuse not just relevant but urgent. The wastewater reuse market, already va lued at $22 billion, is growing rapidly, and Enviro Infra Engineers is at the forefront in India combining scale, advanced technology, and execution excellence.
Finally, I want to express the cyber fraud incident which happened in the company, amounting to Rs. 11.15 crores detected during the quarter until 1st July. Of this, Rs. 2.5 crores has been recovered. Approx Rs. 0.6 crores is lying freezed in different accounts in which the funds got transferred. Court has issued orders to banks to release the amount freezed in different accounts to EIEL account. F IR has already been filed, and NC CRP i.e. National Cyber Crime Reporting Portal. So, investigations are underw ay. Rs. 4.95 crores has been charged under exceptional item in Q1.
As a measure of accountability and to avoid any financial losses to the company, our Chairman, Sanjay sir, and I have voluntarily foregone our remuneration till the loss is fully recovered. We are working closely with the authorities and have further strengthened the internal controls to prevent reoccurrence.
This concludes my remarks. We can now open the floor for questions.
Moderator : Thank you, sir. We will now begin the question -and-answer session. The first question is from the line of Sandip Sabharwal from Asksandeepsabharwal.com. Please go ahead, sir.

Sandip Sabharwal : Yes. So, as I understand, most of your contracts seem to be coming from the state government s. So, let me know how much percentage of contracts are from the state government and what is typically your receivable cycle?
Manish Jain : Our a ll of the projects I will say are from the state governments only , because all the state governments and the state government bodies remain to be the owning agencies. It can be a centrally sponsored scheme or centrally funded scheme in totality. So, it will all be the state government who owns these assets.
Our receivable cycle, working capital cycle is generally in the range of around 90 days. So, in March FY ‘2 5, we have been able to maintain our working capital cycle at a typical level of around 90 days, which covers inventory, unbilled revenue receivables, trade receivables ; and on the other side, the trade payables. So, the net impact of this, the net working capital cycle is 90 days.
Sandip Sabharwal : It is been observed lately by many of the companies which we are tracking , like some companies which are doing Jal Jeevan Mission projects and all the other projects where money had to come from the state government s, because of these various income distribution schemes, government finances are stressed. And I have historically seen last many like two, three decades, typically companies which rely largely on state government projects, get into a receivable issue at some stage or the other. So, what strategies are you taking to protect yourself against th ese?
Manish Jain : Basically, first of all, I will clarify on the J JM aspect. In the last financial year, and starting from March 2024, there was some issue with respect to the release of funds from the center . There was an intended timeline of completion of J JM scheme by March ‘24. Since the scheme was not completed, the general election timelines

, so these were announced. So, because the Code of Conduct was in place, the timeline and validity of the scheme that was not enhanced, it kept pending so the funds cou ld not be released even in July budget, the timelines were not increased.

This has been done in the full year budget in February 2025. So, there has been an issue with respect to the release of funds. Rather, I will say , the state governments were funding, but there was a slowdown or delay in release of funds from the center . So, this JJM scheme in itself is a centrally funded scheme in which a part of fund is from the center and a part of funds from the state.

Now, if we look into the entire water and wastewater treatment sector in India, basically, this sector is a government driven sector. There are various types of government funded or sponsored schemes like JJM, AMRUT 2.0, Namami Gang e. So, there is a different set of central funding which is involved in all these projects. The funds used to move smoothly. There has been just one year, it was last financial year wherein there has been a delay.

Now, if we look into the order book of Enviro Infra Engineers as on 1st of April 2025. So, we had an outstanding order book position of Rs. 175 crores from JJM, and with execution of another Rs. 64 crores, Rs. 65 crores from JJM. So, our net order book from JJM remains at around Rs. 110 crores . We are not bidding for any of the projects further in JJM. We are fairly concentrating under AMRUT or Namami Gang e multilateral agencies projects or common affluent treatment plants wherein the land bank is directly available with the government bodies or the industrial development corporation, and they are having their own funds available for executing the projects.

Sandip Sabharwal : Out of the Rs. 2,100 crores order book which I think you have, how much of it is centrally or multilaterally funded and how much is purely by the state government?

Manish Jain : There is not even a single project which is only the state government funded. All the projects are central driven projects wherein some central funding is involved. If it is Namami Gange , it is 100% central funding. If it is AMRUT, it is 25% center along with 75% share from state and ULB combined . For JJM, which is 50% from both . And if I am talking about CETP, so it is industrial

 development corporation , so they are having their own funds. So, we do have a clear visibility of funds across the entire order book which the company has.

Sandip Sabharwal : All right. Thank you.

Moderator : Thank you. The next question is from the line of Mr. Aniket Jain from YES Securities. Please go ahead.

Aniket Jain : Good afternoon, sir. I have two questions. Number one would be, do you plan to get into desalination or do you have the technology or key qualifications to even bid for the desalination projects? That would be number one. I will ask number two after this.

Manish Jain : Okay. Basically, if I talk about desalination, desalination in itself is RO process . So the ZLD project in Maharashtra which we have bet. So, definitely we are entering into this particular segment. We will be entering into some joint ventures right now for bidding and entering into desalination projects as well. And we do have the technical capabilities available for the execution. So, once we do have the experiences with us in the desalination sector and the RO sector, then we will be in a po sition to bid on our own.

Aniket Jain : Understood, sir. And the second one would be, since you have won your first ZLD project, so I just wanted to understand what is the margin differential between ZLD and the usual STP or WTP projects? So, are ZLD much more margin accretive than the usual projects?

Manish Jain : Aniket, basically if you see

the way the complexity of any of the projects will increase, so definitely the margin profile is expected to improve. So, a ZLD project in itself is highly technically competitive project , so the margins in it will be equivalent to the margin that we project for any of the common affluent treatment plant projects. So, it will be in the range of somewhere around 30 %.

Aniket Jain : That is pretty good . So, are there more ZLD orders or tenders in the market ? And can we expect more ZLD orders this year or probably next year?

 Manish Jain : There are clear -cut guidelines from NGT to go for ZLD plants only across all the industrial areas. So, one day or the other, all the industrial areas will have to switch over to ZLD technologies itself. So, this opens up a very, very big market in India for this particular sector so that the treated water which is permeated, so that is reused in the industries again. So, this is going to gain momentum in future.

Aniket Jain : Understood, sir. Sorry, I just have one more. So, your order book of Rs. 2,051 crores, so what is the tentative time frame to execute these orders, this backlog ? And how much of this will be executed this year?

Manish Jain : Let me break into two parts. First of all, there was an order book of Rs. 1,185 crores which we carried from the last financial year as on 1st of April which was available to us. So, basically that order book, there was a timeline of 24 months for its execution. So, when we are carrying it from the past , so I will say for this particular order book the timeline is almost this financial year. So, around 80 -85% of this order book will convert into revenues. The fresh order which we have bid, Rs. 1,178 crores in the current quarter or in four months , so the timeline for execution is 24 months.

Aniket Jain : So, probably we will reach for Rs. 1,400 crores or Rs. 1,500 crores of revenues through this year.

Manish Jain : Yes, definitely. If you see in the 1st Quarter , our revenues have been Rs. 240 crores. So, this revenue has got transpired from that order book of Rs. 1,185 crores. Q2 will also be almost similar one . Q3 and Q4 when the execution for the new projects will also start , so there will be a sharp increase in the top line that we expect from Q3 and onwards.

Aniket Jain : Understood, sir. Thank you so much for answering my questions and all the best.

Manish Jain : Thank you.

Moderator : Thank you. The next question is from the line of Mr. Dinesh Kulkarni from Finsight Group. Please go ahead, sir.

Dinesh Kulkarni : Sir, t hank you for giving me the opportunity. Good set of numbers as well. So, I just want ed to understand , how do you think the outlook is for the next two, three years because we have been witnessing some slowdown across some certain sections in space and which is getting reflected in the stock price of various companies, including us. So, what's your outlook here for the next two, three years? Do you think there are enough projects that we can bid for and win? Yep, i f you could elaborate something on that.

Manish Jain : First of all, let me give you an update on the financial numbers. If you could just recall my speech wherein I confirmed the numbers for the 1st Quarter . So, we have had a splendid quarter wherein the top line has increased by 17%, EBITDA by 25 % and then P AT by 42 %. So, this in itself says that the performance of the company is good enough. Going forward, there are a number of opportunities which are getting opened up. We are increasing our geographical presence. We are entering into reused ZLD space. There are a number of projects which are coming up in this sector. So, the slowdown in at least this water and wastewater treatment market in India, that is not happening. Rather, there is a

sudden jump in the number of projects. Rs. 1,178 crores is the order book which we have won. There are a number of projects for which we have submitted our bids where again we are L1, we will be getting orders. We are bidding for the projects on a continuous basis and the projects are coming up. So, definitely it shows a lot of traction is there in this particular segment and it will continue since reuse of water and this ZLD in the industrial segment, this is also gaining momentum.

Dinesh Kulkarni: Okay, that sounds great. So, do you think is it still possible for us to maintain at least 30 %, 40% percent revenue growth for the next two, three years with the kind of outlook we just shared?

Manish Jain : Yes, definitely. We look forward to having this 35 %, 40% CAGR growth for at least next five years. So, we understand till 2030, definitely we have that vision and we can look forward to this type of growth.

Dinesh Kulkarni: And what about EBITDA margins and CAPEX , what do you want to say about that, can we have similar levels of margins or higher margins? And whether CAPEX , will it cool off or do you think it will sustain at current levels?

Manish Jain : First of all, I will say , when I was asked repeatedly if the EBITDA margins to the level of around 22 % to 24% which we used to project time and again, these are sustainable. So, basically even after the IPO and three -quarter results are already there, similar type of margins are coming repeatedly. We want to ensure that these margins are quite possible and we will continue to sustain these type of margins. Our guidance on the EBITDA margins will always remain to be in the range of 22 % to 24%. However, we have been in a position to have still better margins against this guidance what we are giving.

Dinesh Kulkarni: Okay. And about CAPEX , what kind of CAPEX you expect for this year and next year , in absolute number?

Manish Jain : Basically, for the execution side, if I say so, these are not bloated at all. So, we are moving on a sset lit model. We do have that appetite of going ahead for some of the H AM projects , so we will limit our H AM projects to an extent that our debt -to-equity ratio does not get bloated. There should not be an extreme. We will keep it at a level of somewhere around 1.

Dinesh Kulkarni: Okay, that really sounds great. Thank you very much and all the best. Thank you.

Moderator : Thank you. The next question is from the line of Mr. Manish Gupta from Equinox Investment Advisors. Please go ahead.

Manish Gupta : Sir, thank you for taking my question. Sir, in the 1st Quarter , we have received Rs. 1,100 crores of orders. So, for the rest of the year, how much order inflow would you reasonably expect?

Manish Jain : For this financial year, we have given an order guidance in the range of Rs. 2,500 crores. So, around Rs. 1,200 crores is the order book which we have got. So, there is a balance of around Rs. 1,300 crores which we are expecting. We do expect that we will be in a position to outdo this number as well. So, at least for the time being, I will say , another Rs. 1,300 crores is the order book what we are looking for as soon as possible.

Manish Gupta : All right. Sir, while government remains our largest or let us say even the only customer that we have, is there any relevance of our products in the private sector ? Any chance that the company can de -risk or diversify into private sector , sir?

Manish Jain : Basically, the sector in itself , because it is more of a social sector so it will drive maximum traction from the government itself. But there are some opportunities which are definitely available in the B2B segment, like there can be some water treatment opportunities coming up from the thermal power plants which are being se

t up or the refineries through maybe IOCL or BPCL. So, wherein the company can find its interest , so we will always be open to entering into that segment as well as and when the opportunity permits us.

Manish Gupta : All right, sir. And sir, my last question would be that , what do you feel are the main challenges in front of the company in the next few years? Is it high competitive intensity when you are bidding for tenders or is it the slow payment from government organizations or any other factor that you would want to hi ghlight?

Manish Jain : I will say last Financial Year FY ’25, as such if I see from the cash flow point of view , was a bit challenging . And those who were mainly in the JJM, they were having some tough times. But we were having a product mix in there

from JJM, Namami Gange , AMRUT , multilateral, C ETPs. So, that way we were fairly comfortable, our cash flow cycles were also very smooth . And we could move on and we could achieve a decent growth in the company.

So, as such, if I see forward, so if I say the worst is over and that our order book in JJM is also now is too small , and all other sectors, all other machines, the funds are sufficiently available and funds are being released on time. So, as such, we do not foresee such type of challenges. Now, if we see to the level of work which is coming up, so I can say competition is always there, but the demand supply gap in itself says that the decent profitability that can be easily ensured in the good projects ar e always available for us to continue bidding and bagging the new pro jects. So, that way I do not foresee that there are any challenges which we foresee at all.

Manish Gupta : Okay. And so finally, could you throw some color on the cybercrime fraud that has happened? I mean, what was the nature of the fraud and other details if you could share?

Manish Jain : Maximum I have covered in my speech . Basically a person impersonated as being Manish Jain and put my DP on his mobile and instructed team for some funds to be transferred. So, it has been an unfortunate incident which has happened in the company. So, the main part to mitigate, we have taken up the basic mitigation measures, around Rs. 2.5 crores has come back into the company, another Rs. 0.6 crores is what we look for, maybe another one month time or so it should come back. And investigations are already underway. And just to mitigate any financial losses to the company, myself and Sanjay ji, we have taken a hit on our own and we are forgoing our salaries . There was a next part of the requirement to strengthen the process of the SOPs , so that we have done so that this process of cyber fraud , that does not impact the company in future at all.

Manish Gupta : All right, sir. Thank you very much and all the best for the recovery as well as the future growth of the company. Thank you.

 Manish Jain : Thank you.

Moderator : Thank you. The next question is from the line of Mr. Dhananjay from Sunid hi Securities. Please go ahead, sir.

Dhananjay Mishra : Yes, thanks for the opportunity. Just wanted to know this solar project we have acquired , so have we done the financial project ? And how long it will take to complete this project? And are we bringing some equity partner as well for this project?

Manish Jain : First of all, we have secured two solar assets. One of the assets is a 40-megawatt solar asset in Odisha, Bolang ir area. It is an asset of SL Infra wherein PTC was lender. So, PTC has gone for the substitution, and we have purchased this in reverse auction from PTC. The agreements are underway right now. It is expected to be executed within this month. So, term loan financial closure is also underway, and we expect that by the time this agreement is complete, so the term loan

sanction will also be there from the bank. So, another one-month time or so we can expect this closure and then we can move on with the completion of project.

A 24 megawatt is already installed for which PCOD is already there on the said project , and there is a revenue generation in terms of the power which is getting generated from the project. The second one is a 29-megawatt solar power project in Maharashtra. So, this particular project is from MS EDCL in which there is an S FA, state financial assistance of Rs. 3.2 crores per megawatt. We are just on the verge of finalizing and the process is ongoing for tying up the term loan from the banks. So, we do expect tha t another one month to one and a half month s' time all this will be in place and we will be moving forward for the execution of the project just after the monsoon is over.

Dhananjay Mishra : Okay. So, what will be the EPC remaining value for both the projects ? And have we included these orders in our order book?

 Manish Jain : These orders are directly pertaining to our subsidiary, EIE R enewables. So, these orders are not basically part of Enviro directly. So, that Rs. 1,178 crores does not include these projects.

Dhananjay Mishra : Okay. And we are not going to execute on our own , we will hire some third party , because we are in water sector , how we are going to execute this project?

Manish Jain : We are building up our capacities. Basically, we have formed a subsid iary in the name of EIE R enewables. So, these two projects are subsidiaries of EIE Renewables itself. So, basically EIE R enewables will act as the parent company for these projects. We are building up the execution capacities for executing renewable projects in that particular company. So, EIE Renewables will take up the EPC of this one.

Dhananjay Mishra : Okay. And we also have this annuity revenue coming this quarter about Rs. 6.5 crores and last year it was about Rs. 12 odd crores , so what is this annuity revenue?

Manish Jain : Basically, we have one of the projects at Bareilly for which the COD was achieved last year. So, the annuity , it is almost one year now so the annuities are coming every quarter. So, it is that portion of the annuity which is coming on a quarterly basis.

Dhananjay Mishra : Okay. And how long it will come , this annuity income?

Manish Jain : It will continue to come for another 15 years.

Dhananjay Mishra : Okay. And lastly on O&M order book which is about Rs. 950 crores . So, I mean , most of the project you must have 10 years or 15 years kind of O&M.

So, how do you see O&M revenue going ahead in terms of overall , like last
year you did Rs. 30 crores , so is it going to go up let's say Rs. 50 crores , Rs.
100 crores in next two, three years?
 Manish Jain : Yes, definitely. These order this O&M order books , so for any project it is
ranging between five to 15 years. So, at an average we can take it to be
somewhere around 10 years. So, the O&M revenue is going to shoot up with
some of the projects which we are under the execution phase right now which
will go into commissioning . And once the commissioning is done , so it will go
into operation and maintenance phase. So, we foresee that from FY '2 7 the
O&M revenue should increase to somewhere around Rs. 70 crores, Rs. 75
odd crores.
Dhananjay Mishra : Okay. And what is the EBITDA margin you are getting in this O&M? I mean ,
it will be as much higher compared to our existing margin, right?
Manish Jain : Yes, O&M margins are in the range of 30 % to 35%.
Dhananjay Mishra : Okay, that is all from my side. Thank you.
Manish Jain : Thank you.
Moderator : Thank you. The next question is from the line of Mr. Ashish from InvesQ
PMS. Please go ahead, sir.
Aashish Upganl

awar : Yes, thank you for this. So, I am attending your call for the first time.
Just wanted to check, I mean , our return ratios and our margin, both are
excellent . Given the kind of business that we are into , what is the kind
of niche that we operate in? Because in project business, typically we
have not seen such kind of numbers on the margins and returns,
basically. So, could you explain, I mean, how does this, I mean, is there
less competition or we do someth ing which is different where we make
such margins?
Manish Jain : Basically, it depends the way any of the project is carried forward. So,
basically, we are doing entire project in -house. We have our own execution
teams in -house along with our in -house design teams wherein we find our
prudence in providing the most viabl e solutions , as well as we are having the
in-house capabilities which prevent any subletting of our margins,
 strengthens our capacity to execute the projects well ahead of time and
keeping the quality of execution in control. So, these all combined are making
us to earn the margins of what we are attaining right now.
Aashish Upganlawar : Okay. And s ir, if you could give a broader picture of how the ordering
activity is likely to be, I mean, what is the feeler that you are getting ?
Because I think you have been guiding, I missed the initial commentary,
but I think you have been guiding for a very high growth in terms of
revenue growth . And that is a function of good ordering that would be
happening, that you are expecting basically. So, how are you looking at
the overall broader picture for the next three, four years in t erms of
ordering activity under the various schemes of the government?
Manish Jain : If we talk about one of the key schemes of the government which is AMRUT
2.0 mission, so the total budgetary outlay of AMRUT 2.0 mission is
approximately Rs. 3 lakh crores . Out of which around Rs. 30,000 crores has
been spent till FY '2 5. So, balance left is around Rs. 2.7 lakh crores and the
estimated timeline right now is 2029. So, if we just look into this one scheme
itself, so it leaves a lot of room for everybody and a lot of work is available
for all the players in this particular segment to work on.
So, our revenue guidance of 35 %, 40%, that shows clear visibility at least for
next four to five years on a continuous basis. Since the number of projects
are humongous and we are entering into reuse segment, ZLD, advanced
treatment technologies, so we do expect that the margin profile that we have
continued till now , so we can continue with the same margin profile and we
can have that revenue visibility of 35 %, 40% similar type of margins which
we are having right now and with good cash flows.
Aashish Upganlawar : Lastly sir, is the receivable cycle which is pretty good, is it likely to
remain the same? You do not see any challenges regarding the kind of
payment terms that you get right now from your customers ' right here,
the state utility basically. There is no doubt that this will be maintained ,
right, the receivables ?

 Manish Jain : Even in the challenging year like FY '2 5, we have been able to maintain our cash flows fluently and we had been OCF pre -tax positive. So, even if in a tough year wherein there were some issues with the release of funds in JJM, so that says that we are on the right path and our cash flow that will remain and will continue to be prudent enough . And the government, central government or state government, they are releasing their part of the funds. The funds are basically paid, some loans are being arranged for the projects. So, these are all deposi tory works, these are not moving through budgetary allocations. So, that way the funds are clearly available and the projects have to move and to be compl

eted well on time.

Aashish Upganlawar : Thank you so much , sir.

Moderator : Thank you. The next question is from the line of Mr. Manish Gupta from Equinox Investment Advisors. Please go ahead.

Manish Gupta : Sir, what would be the current debt as on the 3 1st of June?

Manish Jain : The current debt is somewhere in the range of 0.2. It is debt to equity . And if I say total debt is Rs. 222 crores. So, as of this 31st March , 2025, it was Rs. 234 crores , so it has gone slightly down.

Manish Gupta : Perfect sir. And to a previous participant's query, you were mentioning about HAM projects, aspiring to do HAM projects. So, in this regard, what is the internal guideline of the company regarding the IRR expectations from HAM project ? And how do you see in coming years HAM project contributing? What percentage of the total revenue mix? If you could share something on that.

Sanjay Jain : So, since HAM projects involve financial closures and a part of funds that is to be deployed by the company as a sponsor , so we always want to have a right mix between EPC and HAM projects. So, we always try to maintain that at a level of 75% to 25% for EPC to HAM. So, our basic thought process is that our debt-to-equity ratio that should remain comfortable. Right now, it is at 0.2. Maybe if we add on some HAM projects, means it can get somewhat
 increased , but not to a level that we will look forward to not crossing it more than 1 at any point of time . Or we will take the right decision if it happens so in future.

Manish Gupta : Perfect, sir. And finally, sir, any plans on --

Moderator : I am sorry to interrupt c ould you please rejoin the queue; we do have other participants . Thank you so much. The next question is from the line of Mr. Rohan from El evers Capital. Please go ahead.

Rohan : Good afternoon and thanks for the opportunity. Sir, I just wanted to know, we have acquired one asset under substitution from PTC. So, what is the technology in this asset being used ? Because this must be older project , is the generation happening? Are we doing IPP here or only EPC? If you can throw some light on both the solar projects.

Manish Jain : Basically, these are solar power projects. These are I PP projects . And first of all, the Odisha project, it is a 40 megawatt solar power project in which 24 megawatt is already installed. We have to install balance solar power plant of 16 megawatts . The generation is already happening and the revenues are already there. So, there is a threshold level of minimum units that we have to generate and then definitely we can go to a peak level as well.

40 million units is what is getting generated per year right now. We have to reach a threshold of 58 million units immediately , and then we have to move up to a level of 75 MU. This project is through SEKI , so we are getting our revenues from SEKI . And the power purchase agreement is signed at Rs 4.1. This is project number one. In project number two, this project is basically from MSEDCL , so in this it is state financial assistance of Rs. 3.2 crores per megawatt after the execution of the project. So, it is more of an EPC wherein almost funds are getting released on the execution of the project. Then for 25 years, the power is being sold at a rate of Rs. 0.88 per unit for 25 years .

Rohan : Sir, you mentioned about Rs. 3.2 crores per megawatt of state financial assistance. Then that should suffice the entire project funding requirement.
 Then is there a need of separate term loan for this or to raise separate debt?

And if suffice to say you will be repaying it to the state government, how is that going to work?
Manish Jain : Basically, there can be two ways of looking into the project. One is if there is an EPC, we do not require any funds and then t

he generation or the IRR can happen only during the O&M phase. The second part can be , yes, we can go ahead with some project finance wherein we do have some margins during the execution of the project wherein we look forward to an EBITDA margin maintenance of that level. And then an IRR while this O&M phase is on. So, I think the second part is prudent enough and that is why we are entering into a small term loan or project finance on the bankers.
Rohan : Okay . But then the assistance which you are getting from the state, in what form it is being given? It is a debt or is debt coming as an equity partner, how it is?
Manish Jain : No, no, no, it is directly means just like an execution, a milestone is getting achieved and that fund is going to be released. Ultimately, the project will be kept just like an asset, and it will be parked in one of the companies where this asset will be parked , and then definitely that IRR. So, it will move just like an IPV, but there is that financial modeling that has been done like that the state is giving Rs. 3.2 crores during the execution and then there is an operation maintenance of Rs. 0.88. So, t hat financial modeling was required to be done according to that , that is all.
Rohan : Okay. Thank you.
Moderator : Thank you. The next question is from the line of Mr. Swaminathan, an individual investor. Please go ahead.
Mr. Swaminathan : Very good afternoon, sir.
Manish Jain : Good afternoon.
 Mr. Swaminathan : Sir, my question is, as an investor we are very happy with your Q1 performance in terms of revenue as well as the EBITDA margin. But, as an investor, I somehow feel that earning s per share has little bit dropped down compared to Q1 of Financial Year ‘25, sir. So, can you little bit explain on that part, sir?
Manish Jain : Mr. Swaminathan, if I am not wrong, the earning s per share has not dropped , it has marginally increased. And we are here in this segment from a long time and will be there for a long, long time and with a very good growth rate in the sector. So, I will request that you continue . The performance of company will be good and definitely that will get d erived in form of the good pricing and valuation of the company in future.
Mr. Swaminathan : Sure, sir. And sir, final one more question, sir. It is not a question; it is a worrisome point from my side. On the one hand, the company is doing the operational performance excellent in terms of acquisition and in terms of the project that we are taking , including ZLD. But on the other side, some administrative issues are happening like fraud and the litigation against , the recent litigation against Karnataka drainage , that makes little bit worrisome as an investor. So, how we are going to handle such because we are going to have more and more opportunit ies in future in terms of our order growth. So, how we are going to handle this part effectively in future, sir?
Manish Jain : Let me explain these two parts separately. First of all, arbitration in any of the contracts may happen. It happens because of the understanding which both we as a contractor and then the government department , wherein they have their own thought process , and we do have our own thought process . So, if there is any point where there is a disconnect, then we have to go for a process which is clearly outlined in the agreement itself. We are continuing to execute the project for the same state government on a c ontinuous basis. These arbitrations mean it is a type of dispute which cannot directly handle. So, these are basically points wherein one has to enter into it . And if we are right, so we will get our part of the dues . Or if they are right, so that will get
 subsided. So, basically, entering into an arbitration does not

say that we are in a red zone at all. This is one what we can understand.
The second part is that the fraud which has happened in the company, the

company is existing for the past 33 years, this is the single incident I can say which has happened . And for this cyber fraud not to happen or any such type of event which should not happen in the company at all, we are taking utmost care in future so that the systems are well in place and any such type of threat , if ever , that can be avoided.

Mr. Swaminathan : Thank you, Manish sir. All the best for the coming quarter, sir. Thank you.

Moderator : Thank you. The next question is from the line of Mr. Nikhil, an individual investor. Please go ahead.

Nikhil Chaudhary : Sir, if I understand correctly, the Jal Jeevan issue was with respect to government upgrading their system , because in the system probably there was a completion to be done by 2024 and it got extended for some reason , and that is why there is a delay in funds . And it is not due to some fund issue with the central government , because I just want to understand from your end, is it more structural slowdown or it will get improved in the coming or you have already seen signs of bottoming out in release of the funds and the things will be much better from here on?

Manish Jain : Basically, what I know from my side and as my understanding is , there is no issue at least with respect to the availability of funds with the center . If same would have been the case, other schemes would not have moved. We are executing the project under Namami Gange and AMRUT 2.0 as well. So, there the position is eased out and the projects are moving smoothly and funds are also being released on time.

As far as this JJM is concerned, basically we are not inclined to enter further for these projects. These are more of the pipeline schemes. We are more towards implementation of the plants and entering for the advanced wastewater and wastewater treatment technologies. So, this is what we can

say. At one point of time we had these projects in JJM , we are executing these projects. Now, we are more aligned towards that AMRUT or multilateral agencies , Namami Gange projects . And we are moving more towards the reuse or ZLD schemes and with advanced wastewater treatment technologies.

So, what we can say is , yes, the worst is over. The JJM wherein the funds could not get aligned on time , right now the position is quite eased out. We are working in the state of MP and we are not facing at least any challenges. From the month of March, the payment cycle has eased out to a considerable extent.

Nikhil Chaudhary : Got it, got it. Okay . Because why I was asking is center is in your other projects also, right , because in all the projects, it is central driven. So, even though we are not in the Jal Jeevan , but it should not impact the receivers with respect to our other projects, which I is not the case like you explained.

Manish Jain : Nikhil ji, basically what happened in past was that if any of the project is centrally funded or centrally sponsored scheme , so that gave the confidence that the project will move smoothly, and the liquidity can be ensured. So, JJM last year what has happened is a one -off time in last 10 years. So, we can just say that the worst is over and we do not foresee any such type of incidents happening in future.

Nikhil Chaudhary : Got it. Great, sir. All the best and thank you for giving me the opportunity.

Manish Jain : Thank you.

Moderator : Thank you. The next question is from the line of Mr. Vineet Rajawat , an individual investor. Please go ahead, sir.

Vineet Rajawat: Hello. Good afternoon, sir.

Manish Jain : Good afternoon.

Vineet Rajawat: Sir, I wanted to know that when you have told that you are e

xpecting a 35 % to 40% CAGR , with the diversification of the business like into solar and HAM projects which you are expecting, your EPS will also be like in the growth range of 30 % to 40%, sir?

Manish Jain : First of all, let me clarify that the growth what we are expecting, which is this 35% to 40% CAGR growth, it is basically we are projecting from the water and wastewater treatment sector alone. So, the growth from the renewable sector that will further get added to the growth that which we announce is from the water and wastewater treatment sector.

Vineet Rajawat: Okay, sir. Thank you and best of luck for the coming quarters.
Manish Jain : Thank you.
Moderator : Thank you. Ladies and gentlemen, that was the last question from this session. I would now like to hand the conference over to Sanjay sir for closing comments.
Sanjay Jain : I thank the entire team of Enviro Infra Engineers Limited for their untiring effort, hard work and dedication, which drives the company forward to various market conditions. Also, I appreciate all of you for participating in our conference call. Please do get in touch with our investor relationship team for any further questions. Thank you, everyone.
Moderator : Thank you, sir. On behalf of Enviro Infra Engineers Limited, that concludes this conference. Thank you for joining us . And you may now disconnect your lines.

## Call: Nov 2025

Date: 8th November, 2025

"Enviro Infra Engineers Limited
Q2 & H1 FY '26 Earnings Conference Call"
November 05, 202 5

MANAGEMENT : MR. MANISH JAIN – MANAGING DIRECTOR – ENVIRO INFRA ENGINEERS LIMITED
ADFACTORS PR – ENVIRO INFRA ENGINEERS LIMITED

Moderator: Ladies and gentlemen, good day and welcome to Enviro Infra Engineers L imited Q2 and H1 -

FY '26 Earnings Conference Call . This conference call may contain forward -looking statements about the company, which are based on beliefs, opinion and expectations of the company as on the date of this call. These statements are not a guarantee of future performance and involve risk and uncertainties that are difficult to predict.

As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing s tar then zero on your touchtone telephone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Manish Jain, who is the Managing Director. Thank you and over to you.

Manish Jain: Good morning, everyone. I extend a very warm welcome to all to our Q2 and H1 -FY '26 earnings conference call. On call with us today is AdFactors, our investor relations team. Our earnings presentation has been shared and I hope you have had the opportunity to go through it.

Building on the strong foundation laid in the first quarter, Q2 has been a period of resilient performance, consistent execution and continued strategic process across our key business segments. Despite a seasonally moderated pace of process billing, the c ompany maintained healthy profitability and robust operational momentum, supported by strong order inflows and disciplined execution.

As of September 30, 2025, our total execution order book stands at over INR 1,800 crores, supported by a robust operation and maintenance portfolio of INR 932 crores. Last month, we have secured a new order worth INR 248 crores from Bhopal Municipal Corporation. It is for EPC of 60 MLD STP and 273 -kilometer seaway network, along with five years of operational maintenance, which strengthens the present execution order book position to more than INR 2,000 crores.

Since January 2025, the invitation of bids in this segment has gained significant momentum. As on date, the estimated cost of projects for which bids have been submitted, for which results are awaited, are more than INR 8,000 crores. With new bids in place, we are confident that we shall be able to exceed our guidance of fresh order book of INR 2,500 crores in FY '26.

Our momentum has been broad -based across both municipal and industrial sectors, reinforcing our position as one of the most trusted players in India's water and wastewater management space. A major highlight of the quarter was continued expansion in the ze ro-liquid discharge in tertiary treatment segments, where advanced technologies such as

ultrafiltration, reverse osmosis, and MVR systems are helping industries and urban bodies achieve near total reuse of treated water.

We have further diversified our geographical footprint with new winds across Maharashtra and Odisha. Importantly, we made steady progress in our renewable energy integration strategy, adding additional solar assets during the previous quarters. This divers ification aligns with our sustainability -led growth roadmap and enhances our recurring revenue visibility.

During Q2, the progress made is as follows. First, it is a 40 megawatt solar asset at B alangir, Odisha. The agreements for taking over control over the assets have been signed on 20th August 2025.

The term loans for the project has already been sanctioned. The project is already generating revenue since 24 megawatt out of 40 megawatt is already operational. The mobilization procurement orders for installing balance 16 megawatt has already been done.

The expected timeline for completing the installation is April 2

026. The second solar asset is
29 megawatts at Maharashtra for MSEDCL. The financial closure for this particular pro ject is expected to be complete by 30th of November 2025. The mobilization activities are underway and project is expected to be completed by June 2026. Together, these provide a strong base for growth and predictable cash flows over the coming quarters.

Now, coming to financial highlights, I am pleased to share our financial performance during Q2 and the first half of FY26 that has been both consistent and encouraging. For Q2 FY26, reven ue from operations stood at INR 227 crore s, reflecting a year -on-year growth of 6.7%, driven by continued traction in our key water and wastewater treatment projects.

EBITDA for the quarter came in at INR 65 crore s compared to INR 56 crore s in Q2 FY 25, making a 16.8% growth with healthy EBITDA margins at 28.56%. Profit after tax rose by 36% year-on-year to almost INR 50 crore s with a PA T margin of 20.5%, underscoring our disciplined execution and cost efficiency. For the first half of FY26, w e have achieved revenues of INR 468 crore s, representing 12% growth over the same period last year. EBITDA for H1 stood at INR1 29 crore s, having grown 20.8% Y -o-Y.

EBITDA margin for 6 months expanded by over 200 basis points to 27.6%. P AT came in at INR 92 crore s, up 38.6% Y -o-Y, while P AT margin grew by 330 basis points to 18.7%. Overall, the first half of FY26 has set a strong tone for the remainder of the year with a healthy order book, expanding technology footprint and a clear path for profitable and sustainable growth.
With that, we can now open the floor for questions.
Moderator: Thank you very much. We will now begin the question and answer session. The first question is from the line of Prateek Kothari from C R Kothari Stoc k Broking . Please go ahead.

Prateek Kothari: Sir, thank you for the opportunity. Given the order book visibility that you just mentioned, firstly I would like to congratulate the team. Sir, now that H1 -26 is over, are we still sticking to our guidance of year -on-year growth of 30%, 35% and what kind of margins do you think we can sustain over the next and following years? Thank you.
Manish Jain: Good morning and thank you for joining. Regarding the revenue visibility for the current financial year, as we started this financial year as on 1st of April 2025, we were sitting on an order book of somewhere around INR 1,200 crores. So basically the execution was happening on that particular order book.
In the first four months, again we got order book of somewhere around INR 1,200 crores. Since it had been a very, very good monsoon, which was there from June to September this year. So these projects were in designing stage and predominantly the execution didn't take place for the new orders.
So if I say as of now, since this festival season is also over, now it is the main construction period during any of the financial years. So looking forward to that growth rate which we expected on the top line, which is somewhere in the range of 35 to 40 odd percentage, which we expect. So we maintain our guidance of the similar top line to achieve in the current financial year as well.
As far as the margin guidance is concerned , we have always confirmed our EBITDA margins to be in the range of 22 % to 24%. Because of better product mix, we are more towards the wastewater treatment segment now, wherein we are drawing more than 70% of our top line from the wastewater treatment sector, which was our primary sector itself.
So with the product mix getting better and then definitely with the better order book, which is also in the wastewater treatment sector itself. So we do expect that we will be able to maintain our profit margins and our top line gr owth guidance that also remains intact.
Prateek Kothari: Understood,

sir. Thank you so much, sir. All the best.
Moderator: Thank you. The next question is from the line of Deepak Poddar from Sapphire Capital. Please go ahead.
Deepak Poddar: Yes. So first up on the margin front, I mean, if you see the first half hour margin has averaged at about, what, 2 7.5% an d you're still saying 22 %, 24%. So are we being conservative here? Because already first half at a lower revenue scale, we are getting much better margins, right?
Manish Jain: As far as when we are committing any of the margins, the guidance, first of all, the guidance has to remain intact. So that guidance always remain in that segment. However, expecting better margin profile and improved margins, we definitely look forw ard to achieving better

margins, b ut as a guidance perspective, definitely we will restrict ourselves to that level of 22% to 24% EBITDA margins.
Deepak Poddar: Okay. I got it. And in terms of, I mean, growth, you mentioned you maintain 35 % to 40% growth. So that effectively means, I mean, the second half, you have to grow at about 50 %, 55% rate. I mean, is that something that we look forward to?
Manish Jain: If you will see to our past presentations as well, our H2, that is always high. Q3 and Q4 combined constitutes almost 60% of the top line in any of the financial years. So if we look forward to the similar type of guidance along with the robust order book, which we got in the first four months of this financial year, on which the execution is just commencing. So basically, by that guidance, definitely we look forward to achieving that type of top line, which seems to be achievable.
Deepak Poddar: Okay. And what was the order in flow in first half, entire six months? Do we have that figure?
Manish Jain: Our first six months, as we have mentioned in our media release as well, it was around INR 1,200 crores and an order which we w on just last month for which LOS has been issued by Bhopal Municipal Corporation. So another INR 250 crore s got added. So the total order book, which we have bagged in the current financial year is somewhere around INR 1,450 crores.
Deepak Poddar: So that Bhopal is additional over and above INR 1,200 crores.

Manish Jain: Yes.
Deepak Poddar: Okay. Understood. And you mentioned you have submitted bid for around INR 8,000 crores. So what's the success rate we generally look at?
Manish Jain: In the past, the success rate has been quite high in the range of around 40%. Now if we look forward to be very conservative in this and somewhere around 15 % to 20% of the success rate is there, even then we will outdo the guidance of INR 2,500 crores, which we had set for the current financial year. So quite optimistic. I look forward to outdoing the guidance of INR 2,500 crore s order book.
Deepak Poddar: Understood. And just one last thing from my side, in other income, we have seen a very high other income. So in any one of f there, what's this other income constitute of?
Manish Jain: There are basically two parts in this. One is basically the IPO funds which are there, which are parked in various type of FDRs or the unencumbered cash flows in the company which are in form of FDRs. So it is basically first of all that interest component . And then there is a second component which has come because of the acquisition of one of the solar assets.

When we have purch ased the solar asset Vento at Ba langir, Odisha, so basically we have purchased it from PTC. So there is some hairline cuts. So some INR7.7 crores is an exceptional item which has got added to this other income.
Deepak Poddar: Okay. INR7 crores. So I missed that. So what was the solar asset, that acquisition we did?
Manish Jain : Yes. It was the acquisition that we have done for that 40 -megawatt solar power plant

. SL Infra
was the owner of the project. SL Infra, SL Green, they had gone bankrupt. The asset was good. So PTC being the lender has gone for the substitution. They had cal led for the reverse auction. So basically it is the difference between their overall lending price and then the price that has been passed. So it is basically a difference of that which is coming in form of other income into the company.
Deepak Poddar: Yes. So this INR7 crores is coming in the second quarter.
Manish Jain : Yes. Yes. It is coming into the second quarter. Let me clarify there are two parts. First is a fraud, unfortunately, which happened in the company because of which there has been an outflow of INR11.15 crores. Somewhere around INR2.68 crores is what has be en recovered from it. So there was an exceptional loss in the company to the tune of around INR8.5 crores, which got built up during these two quarters and this is an exceptional item. So basically, these things are getting knocked off now.
Moderator: The next question is from the line of Dhananjay Mishra from Sunidhi Securities.
Dhananjay Mishra: Good morning, Manishji. Congrats on decent operating performance. So can you talk more about how is the working capital situation as of now and how payment is happening from the government side? And we are entering into new states like Maharashtra and oth er states. So how do you assess the risk of payment when you are entering in these states?
Manish Jain : Basically, working capital for the first half or rather I will say Q2. Since it was main monsoon months, so the conversion from unbilled to that billed part and then conversion into cash flows. There was a slight slowdown on this. However, the debtor cycle has got improved substantially. The debtor days which was at 70 days as on 31st March 2025. It has now got reduced to 49 days. So that says as far as the realization process is concerned, the realization is happening and there is no challenge at least with the realization.
Now the second part which comes which is more of a cyclical nature of the business because of the monsoon, the conversion, the conversion into revenues or rather I will say into bills and which can get replicated into the cash inflows. There was a slight s lowdown in this because of which there is some built up in the unbilled revenues and this cycle has got a bit skewed. Further if I say in terms of the trade payables, the total trade payables now stands at around INR40 odd crores. So there is a reduction in the trade payables to the tune of INR127 crores.

The total cash flow is somewhere around INR100 crore s negative as it looks in H1. So it has got improved in comparison to same period last financial year H1 ‘24 that is.
So still we look forward to a positive cycle which will get generated because of this better construction phase which is coming up. The conversion from unbilled to billed that will increase. There are number of projects which have now entered into final er ections and commissioning phase, the projects which were ongoing for the past one and a half years. So almost 12 projects are there which have entered into advance. Am I audible?
Moderator: Yes, sir, you are audible. I am just saying that can Mr. Dhananjay rejoin the queue for further question. The next question is from the line of Prateek Bhandari from Aart Ventures.

Prateek Bhandari: Yes. Hi sir. I just wanted to understand what is the position for the JJM order book and what is the outstanding receivable over there. You mentioned when we last met that we have an outstanding order book of somewhere around about INR 110 crores and we are not bidding further for the JJM. So if you can throw some light on the same as to what is happening there.
Manish Jain : We are doing five number JJM projects in MP for MP Jal Nigam. In all these five projects we are almost on t

he verge of its final commissioning phase. So basically as we approach that commissioning phase it is an S type of curve.
When the construction process is almost complete and we are then completing the trials and commissioning phase, we are in the water supply to each and every household in different villages. That is to be ensured the pipelines need to be flushed, treatment plants getting operational. So this all activity is going on. Basically we are working on it.
There is a component of unbilled revenue which is there in the books because of these JJM projects as an -- as we are moving towards the final commissioning. So this unbilled will keep on means turning out into -- from unbilled revenue to revenues. So ther e will be a phase of another five months to six months that is what I can say till March. So this unbilled component will get converted to final bills and then the realization will happen.
In the debtors portion I will not say there is any significant build up from the JJM as well. We have been quite fortunate the funds were available in MP as far as the JJM projects were also concerned, and the funds are being released as and when the bills are being raised. So the debtor cycle is not at all getting skewed with respect to the JJM project as well for Enviro.
Prateek Bhandari: Okay. And are we L1 in any of the projects at the moment?
Manish Jain : Yes. Definitely, we are L1 in some of the projects and we are quite hopeful that in another…
Prateek Bhandari: Out of that INR8000 crores that we have bided for?
Manish Jain : Yes. Yes. Yes.

Prateek Bhandari: Okay. And just one last question what has been the O&M revenue for this particular quarter?
Manish Jain : I think the O&M revenue is somewhere around INR 12 crores to INR 15 crores. I do not have the exact number right now with me somewhere around INR15 crore s is the O&M revenue.
Prateek Bhandari: Okay.
Manish Jain: It is there in the investment presentation. I will just see to the final number and I will confirm. Sure.
Moderator: The next question is from the line of Sanmat Jain from PinpointX Capital.
Sanmat Jain: Hello, sir. Good morning. Sir, I just wanted to ask about our renewable vertical. Where do we see our renewable vertical going forward as in like what is our plan in that corner and what kind of projects are we bidding for? And if you can show light on th e revenue visibility from this vertical?
Manish Jain : Yes. Definitely from the renewable sector we do have two projects with us which I have already explained just now. It is 140 -megawatt solar asset which we have purchased from PTC and the second one is a 29 megawatts solar power project which we are executi ng for MSEDCL.
Apart from this our interest in the renewable sector will be to go forward for the hybrid systems which will include BESS, which shall include wind, which shall include a mix of maybe solar, wind, BESS. So this is what we are intending. We are not moving b lindly. We are looking forward to some good opportunities where there can be a value creation.
For the current financial year, we have confirmed a guidance of around INR 200 crores in revenues which will get generated from the renewable sector. In the coming years we expect to grow maybe in FY '27 we can expect that we should be somewhere around INR 500 crores and then look forward to a growth rate of 40% to 50% maybe for the next four years, five years further.
Management: Just one information, O&M income is INR21 crores.
Sanmat Jain: Understood. And the last question, there seems to be a slow order intake...
Moderator: Can you rejoin the queue for further questions?
Sanmat Jain: Sure. Okay.
Moderator: The next question is from the line of Manish Jain from Wealth Grow Security.
Manish Jain: Thank you for the opportunity and congratulations for a very

good set of number in a
challenging environment. Sir, my question was regarding the receivables. Sir, how much

confident you are about the receivables and you don't think there would be any accident in

the next two quarters?
Manish Jain : If you see to the growth of the company during the last five years, we have grown from INR100 crores to INR1,000 crores. That growth was primarily due to the liquidity which was there in this particular sector, because of which with the support from our ba nkers in form of various working capital limits, we were able to maintain that level of growth.
If I look forward to the numbers till H1, so the total debtor days are not more than 50 days. That in itself says that the debtor cycle is at a comfortable level. We are not having any challenges with respect to the receivables from the government side. The projects that we are bidding, these are some of the centrally sponsored or centrally funding schemes or the funding is from multilateral agencies or the projects in the industrial segment are some industrial development corporations.
So, if we say about all these mechanisms, the funds are predominantly available for the execution of the project. So, what I can confirm is based on the past precedence of five years, not even these two quarters, we are quite hopeful that with the entire o rder book in hand and the projects for which we have submitted our bidding for which the funds are tied up. So, the liquidity shall not be an issue in this particular sector.
Manish Jain: And sir, this minus INR100 crores cash flow for the first half, do you expect it to reverse in the second half?
Manish Jain : Definitely. Definitely. There has been some increase in the unbilled revenue. So, basically that unbilled revenue getting recognized in terms of the final number into revenues and the realization. So, that will happen and basically in this Q3 itself, we lo ok forward to this number going down significantly.
Manish Jain: Okay. And sir, regarding the orders which you have submitted, majority of that will be the results will be out in the fourth quarter or in the third quarter itself there is a lot of results awaited?
Manish Jain : It takes almost 120 days to 180 days for the evaluation and the issuance of the work orders. So, what I can say is by end of fourth quarter, the projects for which bids have been submitted by us. So, the visibility for this entire book will be available by end of fourth quarter. We will continue to get the orders in Q3, Q4, but the entire visibility for which the bids have been submitted will be available by end of fourth quarter.
Manish Jain: And sir, my last question is regarding the renewables, you have given a very aggressive target for '26, '27 as INR 500 crores and we knew from renewables and after that 40%, 50% growth. So, from INR 200 crores in this current year, you target INR 500 crores for '26, '27 from renewables. Right?

Manish Jain : I think the level at which the renewable sector is growing, definitely we are trying to have our strong foothold in this particular sector. We don't want to be very bullish, but first of all to have a significant presence, this is what we understand from I NR 200 crores to INR 500 crores is what is achievable. And then maintaining a level of around 40% to 50% in the renewable sector in the initial year is quite possible.
Manish Jain: But this itself is very aggressive, INR 200 crores to INR 500 crores, right?
Manish Jain: Look forward to doing it, boss. As we are doing in our water and wastewater segment, so that maintaining that growth level somewhere in the range of 35 to 40 -odd percentage. We look forward to maintaining that growth rate of around 40 % to 50% in the renewable sector .
Manish Jain: And the margins are more

than the water segment in the renewables, right sir?
Manish Jain: No, no, no. That is not true. The margin profile in the renewable sector will be a bit lower in comparison to those in our water and wastewater sectors. There we have our technological prudence which is available based on which we do have the better margin profiles.
Renewable is a sector which wherein we have entered based on our sustainability approach, and then we look forward to waste to energy segments as well. So , definitely we are growing ourselves in that renewable segment as well, and look forward to maintaining a healthy growth margin along with better than on the industry average profitability. This is what we will try to achieve.
Manish Jain: Thank you for answering all the questions, sir. Best of luck.
Manish Jain: Thank you.
Moderator: Thank you. The next question is from the line of Vidhi Shah from CRK. Please go ahead. Ms. Vidhi, please unmute your line and go ahead.
Vidhi Shah: Yes, sir. Could you please elaborate on the revenue visibility from the renewable segment project -wise? How are you targeting INR 200 crores ? Can you just give me a brief project -wise?
Manish Jain: In the renewable segment, I just confirmed that revenue visibility for the current financial year is expected to be somewhere around INR 200 crores. And for the next financial year, definitely

we don't have the order book visibility right now, but we look forward to expanding our foothold in the renewable segment. And we will look forward to achieving a revenue of somewhere around INR 500 crores by FY27, and then an organic growth which will continue in that particular segment as well.

Vidhi Shah: All right, sir. Can you just give me a split between how much will come from P PA projects and how much will come from EPC from this INR 200 crores ? Can you give a bifurcation?

Manish Jain: Basically, these two are solar assets which are in form of IPP itself. So presently, we are executing these two projects. So basically, the revenue guidance for the current financial year definitely comes from these two projects, along with one small proje ct which we have recently got from ONGC.

It is a 2-megawatt rooftop solar projects and for which the total order book is INR 10 crores. So, basically, this is the order book for the current financial year. We'll move through these projects, and our top line is based on the completion or movement in this project itself. Then the fresh bidding which is ongoing in the renewable segment and the order book that we will generate in this segment.

Based on this, we will be in a position to give an exact guidance for FY27. However, this is our thought process that we at least grow to an extent of somewhere around INR 500 crores in the renewable segment, along with our revenue visibility and profitability in the wastewater treatment segment which is separate from the growth which is there in the renewables.

Vidhi Shah: Okay, sir. And can I know what is the current EPC order book and margin profile that you're expecting for this renewable segment?

Manish Jain: Ma'am, I just confirm the same. There is no other EPC project with me now. It is just this 2-megawatt rooftop solar from ONGC. These two are IPP. No other EPC project is there in the renewable segment, at least as of now.

Vidhi Shah: Okay . And margin profiles that you're expecting from renewables?

Manish Jain: Margin profiles presently from these two projects are in the range of 18 % to 20 % EBITDA margin. For the future projects, definitely we are understanding this segment. And then the profitability or the maintenance of further profitability, we will be in a position to confirm once we do have the projects available with us. And then the estimated profits which we can earn from the projects . Wherein I'll be in a better position to give

any guidance further on this.

Vidhi Shah: Okay. Thank you, sir.

Moderator: Thank you. The next question is from the line of Manish Choraghe from Keynote Capital. Please go ahead.

Manish Choraghe: Hello. Good afternoon, sir. I just wanted to know, as you said, your order book in H1 was around INR 1,400 crores and new bids would be INR 2,500 crores in H2. So, can I assume that FY26 order book should be around more than INR 4,000 crores?

Manish Jain: No. The total order book guidance which we could understand and which we confirmed was INR 2,500 crores for the entire financial year. INR 1,450 crores is the order book which is

already in our hands in the current financial year. And then there is a bid pipeline of somewhere around INR 8,000 crores for which we have submitted the bids.

So, as a guidance perspective, I can say another INR 1,050 crores is what we should get in the current financial year. We look forward to outdoing these numbers. But as a guidance measure, I will say , INR 1,050 crores is what is balance left out of the INR 2,500 crores. And definitely, there can be an increase. This is what we can expect.

Manish Choraghe: Okay. So, and just wanted to ask, we are not bidding for new tenders of Jal Jeevan Mission, right?

Manish Jain: Yes, we are not bidding for JJM.

Manish Choraghe: And what is the amount of receivables from your current receivable of around INR 127 crores pending from Jal Jeevan Mission?

Manish Jain: The total receivable is, I say combined , is 49 days and it is INR 127 crores. So, I think somewhere around that number is right now not with me, but it is not more than INR 50 crores to INR 60-odd crores from the JJM itself.

And the funds even in the JJM in MP, we are getting the funds in a timely manner. So, the payments which were getting delayed in the past financial year, this is not the norm, at least in the current financial.

Manish Choraghe: Understood. And one last question that 35% to 40% guidance you have given for FY26, that also includes INR 200 crores revenue from renewable energy sector. Is that correct?

Manish Jain: No, no. Basically, the revenue guidance from renewable sector will always be different from what we will achieve from the water and wastewater segment. So, we will always be very clear. The revenue guidance is that 35 to 40 -odd percentage revenue guidance is from the water and wastewater segment itself.

This INR200 crore revenue guidance which we are giving from the renewable sector, it is entirely different from that top line guidance which we are giving for water and wastewater sector.

Manish Choraghe: Understood. Thank s a lot, sir, and all the best.

Manish Jain: Thank you.

Moderator: Thank you. The next question is from the line of Dinesh Kulkarni from Finsight. Please go ahead.

Dinesh Kulkarni: Hello, sir. Am I audible? Yes, thank you for giving me the opportunity. Good set of numbers in a challenging environment. So, my question is, like, I know we are just started focusing on Maharashtra, but if you could look , you know, Maharashtra as a state and the kind of development going on here, how big this opportunity could be for our company for the next three years? If you could just elaborate on that.

Manish Jain: On Maharashtra itself?

Dinesh Kulkarni: Yes.

Manish Jain: The opportunity is definitely getting bigger. The AMRUT 2 schemes are just on the verge of rollout in Maharashtra. Apart from this, this ZLD project which we have got in Maharashtra from MIDC, a number of projects are further coming up in the state.

There are some renewable projects which we have got from Maharashtra. So, basically, if I talk about the total order visibility just from one state, definitely look forward to be very encouraging. Further, I would say

we are not just focusing on one state at all. We are available pan-India. We are bidding pan -India.

So, if I see the order book or the bidding for which our bids are submitted, these are predominantly Delhi, then UP, Bihar, Odisha, Gujarat. So, basically, we are trying to diversify ourselves across all states in India. So, the revenue visibility, as we can say, and the order visibility will be very healthy from Maharashtra and the similar will be the situation pan -India as well.

Dinesh Kulkarni: Okay. So, basically, I wanted to know , like, how -- what kind of ZLD projects you mentioned. You have already got one here. I know it is maybe i n Ichalkaranji , if I am not wrong. So, my understanding…

Manish Jain: Yes, it is in Ichalkaranji .

Dinesh Kulkarni: Ichalkaranji , right. So, how many such projects you can visualize, say, in the next 3 years, maybe in -- not just Maharashtra, then across India? How many such projects are coming up based on your understanding of the market and projects? And where do you see this thing going? Because these are pretty large in size , right, compared to the normal projects ? Yes, that is my question.

Manish Jain: We, at Enviro are one of the key players as far as the Common Effluent Treatment Plant segment is concerned. So, basically, this sector with the guidelines to be ZLD compliant and go for all the plants which have to become ZLD compliant. So, a very big segmen t that is coming up.

So, this segment is going to grow very rapidly. Reuse of water, both from a common effluent treatment plant or from a sewage treatment plant. So, these reuse schemes are gaining a lot of momentum in India now. Since the industrialization level which is growing and which will continue to grow in India, the demand for water for industry is increasing.

And with very limited resources, definitely this reuse segment, it is going to grow bigger and bigger. So, it will open up a lot of opportunities for all the companies in this particular segment. And we also look forward to be one of the key players in this particular segment.

Dinesh Kulkarni: Okay, sir. I think that's it from my end. Thank you very much and all the best.

Manish Jain: Thank you.

Moderator: Thank you. The next question is from the line of Sanmat Jain from Pinpoint Capital . Please go ahead.

Sanmat Jain: Yes. So, sir, this is a follow -up question. I wanted to ask, there seems to be a slow order intake lately. What can be the reason for that and like how much, any change we are expecting in that?

Manish Jain: In terms of the order inflow, if I see in the current financial year, the order, fresh order book has been to the tune of INR 1,450 crores. If I see at least for Enviro, this is the biggest order book in any single financial year.

So, this is the government process of evaluation and then the process of processing it for award issuing the LOA. So, basically, it is a time -taking process and 120 -180 days is the timeline during which this evaluation is done and the order is processed. S o, basically, it is a normal cycle. I cannot say there is any slowdown on this.

Sanmat Jain: Understood, sir. Thank you, sir.

Moderator: Thank you. The next question is from the line of Prateek Bhandari from Aart Ventures . Please go ahead.

Prateek Bhandari: Yes. Hi, sir. Thanks for the opportunity. I'm just continuing from where the previous participant left. When we last met, you mentioned in the month of August that you have submitted bids for around about INR 4,000 to INR 5,000 crores ?

Manish Jain: Right.

Prateek Bhandari: And if I look at that numbers for which the projects were bidded, out of that only, we have received order inflows to the tune of INR 248 crores to INR 250 crores. That was the fresh order inflow for this particular quarter. So, if I look at the success rates and the bid su

ccess

rates that we usually code around about 30 %-40%, I mean that not even translates to 5 %.

So, what has the case been there? I mean, just wanted to understand. Out of those INR 5,000 crores of projects we bidded, we only got awarded with INR 250-odd crores ?

Manish Jain: Right, Pratik ji. Presently, the order inflow has been this INR 248 in this current quarter. So, I will say definitely this has flown only in the month of October. There are some projects wherein we are L1, but we definitely give any confirmation to the market only when we receive the LOA. There are some of the projects wherein we are L1 and we lo ok forward to confirming the same to the market as and when the orders are received.

So, basically, this will always remain to be a cycle. Once the details are available, then we will give a guidance on the success rate. So, I have neither confirmed to continue with a success rate in the range of 40 %. However, we were looking forward to a conservative success rate in the range of around 20 % to 25 %, which gave us a revenue order book guidance of further INR 1,000 to INR 1,250 odd crores.

So, one of this project is what for which we have received the LOA. We are just on the verge of getting orders for one more project, which may be awarded very soon, maybe in next week or 10 days' time . And definitely the process will go on and then this incremental order book is expected to be in next to what I can say next four to five months' time .

Based on that, definitely, we can give a guidance for what has been the success rate of the company for which how we submitted our -- for how many projects we submitted our bids and then how much we won. So, I think by end of the financial year, if we give that guidance, that will be more prudent on this.

Prateek Bhandari: Okay, got it. So, what you mean to say is out of those orders that you have bidded for in the month of August, there is still some orders that can be converted into LOA. And you are L1 in some of those.

Manish Jain: Yes.

Prateek Bhandari: And just one last question. You mentioned that the outstanding receivables for the JJM is to the tune of INR 50 crores -INR 60 odd crores. Are these the five projects for which you mentioned we are at the commissioning stage and the unbilled revenue would translate to build and then get realized by the month of March '26? Are these the five projects?

Manish Jain: Yes, these are from the five projects itself, which are under JJM. These are in final stages. And then there are total 1,000 villages across all these five projects. Out of these 1,000 villages, almost 100 villages are there for which the commissioning has happened. So, the teams are aligned. They are doing the needful for taking up the trial testing and then commissioning of all the tests .

So, this is a process which will go on. And maybe by March, there will be a significant turnaround from unbilled to build portion and then its realization, it getting converted into cash flows. So, this is what we expect by March , there will be a significant reduction in the unbilled revenues as well. And these projects will achieve its final shape.

Prateek Bhandari: All right. Thanks a lot.

Moderator: Thank you. The next question is from the line of Meet Shah from Finance 360. Please go

ahead.
Meet Shah: Good morning. Thanks for the opportunity. Firstly, could you walk me through the entire ordering to execution to revenue recognition process? For example, if we receive an order today, by when will it be executed? And how do we recognize the revenue?
Manish Jain: First of all, I will explain an EPC project. The total timeline for execution in an EPC project in general is 24 months. Once we receive any of the LOA, we are required to submit the performance

bank guarantees. The moment the performance bank guarantee is submitted, an agreement is signed, and then a notice to proceed is issued. Basically, that date of proceeding for the project, that is the date of commencement of the project. And it is almost within one month from the date of issuing of LOA.
After this, it is, first of all, the design components wherein we are required to design different components of the project. The design can be in the form of the process design, structural design, mechanical, electrical instrumentation, and automation design. There is a payment breakup which is assigned for the designing and approval of designs. In general, this component or thi s payment breakup is to the tune of 2% to 5%.
Once a portion of this design is approved, and any of the structural drawing for any unit is available, the physical execution starts at site. The entire payment breakup is divided into civil components, mechanical, electrical, then instrumentation and automation.
If I take up the civil works, so the civil work is again divided into a number of liquid retaining structures and buildings, which is then further divided into different stages of execution, which is like excavations, laying of the PCC, laying of the concrete draft, then walls, different stages, final finishing. So, these are basically sub -divisions of various forms of civil works execution.
For mechanical, electrical, instrumentation, automation, basically the payment breakup is divided into supply, which is almost a major component, which constitutes 70 %, 75% to 80%, then its erection, then the trials of the equipment, and then the commissioning. So, these are basically the different stages in which the entire project, it is a turnkey project, which is broken up.

So, every month, we are required to submit a running account bill for the stage, which has been completed in that particular project. So, based on that running account bill on a per month basis, the measurements are entered in the measurement book by the g overnment authority.
And then based on that measurement in the asset drawn, for which the payments are to be released, then they release the pass orders, then we get to know the exact revenue recognition. And then we issue the GST invoice. This is basically the point wherein the unbilled is getting converted to billed . And now it is a debtor cycle.
So, if I talk about the cycles, it is basically the inventory cycle, when we purchase the raw material and it remains as an inventory, then the unbilled revenue cycle when the raw material is getting converted into the work in progress, which is accounted for as unbilled revenue, unbilled revenue, and then from unbilled to billed . So, basically, this is the cycle.
So, this is the entire cycle, it is an extra type of formation during the execution of a project. At the initial part, since we are just into the designing, so it is a slow process, maybe three to four months are assigned for the design and its approval. So, this is a relatively slower process.
And the physical execution starts when we start the civil works at site and the machinery mobilization or the mechanical or electrical equipment, these are purchased. So, it is an exponential growth in the project.
Once we are there for almost a final completion, then again, the process goes a bit slow since we are hitting the executions. Then the trials and commissioning, the commissioning itself is a 90 days cycle, wherein there will not be any major expense to be incurred, but a performance guarantee test needs to be carried out after which the final bill will be processed and the revenues for that will be recognized. So, basically, this is the entire process, how an EPC project that is carried out.
Meet Shah: So, just to confirm what I understood . When we receive the payment, when the

payments are released, then it reflects in the income statement as revenue, right?
Manish Jain: When the bill submitted by us, which is in form of a proforma invoice is accepted by the government department, and a pass order is issued, basically, it is the time when we issue the GST invoice. So, basically, this is what we say from now, that is the time when unbilled has got converted to bill ed.
Meet Shah: Okay, but payments are not being made, right? At that point of time?
Manish Jain: No, no, no. Payment is not released. It is basically the debtor cycle which has started. Now,

during this debtor days, what we say then, what is the trade receivable? So, it enters the trade receivable cycle at that point of time.

Meet Shah: Okay, okay. So, got it. So, my second question is on that only, like if we combine the last three years EBITDA, it is around INR 500 crore plus, but our operating cash flow for last three years is minus INR 48 crores. So, there has been material gap between EBITDA and operating cash flow. So, if you can help me understand it.

Manish Jain: Well, to my understanding, the entire balance sheet is there, wherein there are some elements of gross blocks. When we are having various working capital limits with our bankers. So, there is a component of that collaterals and margins, which we are required to place with the bankers for disbursement of these working capital limits, which can be in form of bank guarantee, LCs or CC. The total CC limit is hardly 10% at any point of time.

If you can just look into the balance sheet of FY23, the total collateral plus margin that had swelled to a level of somewhere around INR 180 crores, the collateral was also issued in form of the FDRs itself. So, basically, as the business was growing, so definitely the cash flow was getting blocked in terms of the various type of working capital limits. It can be working capital limits on the level of growth, which is there. So, there can be a component of unb illed.

The trade receivable absolute, if you see, so it is going to increase as we are growing. The level of margins, which have got accrued and the level of margins at which we are sitting. From that 35 odd percentage of collateral plus margin, we have now come down to somewhere around 15% presently.

So, there are a lot of positives wherein we look forward to our cash not getting blocked. It will be converted into cash rather than being a balance sheet item. So, this is what we expect and the cash, the realizables, receivables, retentions, the cash mar gins with the banks, all this will go for a reduction, which will ultimately get reflected in terms of positive cash flows in the company.

Meet Shah: Sure, sir. And small question, sir, any guidance on OCF for this year?

Manish Jain: First of all, I want to be OCF positive. For the current financial year, there are basically four major areas wherein we have been concentrating at any point of time. First of all, it was the order book wherein we understand to an extent we have been in a position to give a clarity and the order guidance is not a challenge at all. Bottom line for the first half has been robust and gets aligned with our growth projection of 35% to 40% since our PAT margin has been more than 40%.

There is an increase of more than 39.6%. Third point is top line. The top line has grown at 12%, but it is related to the order on which the work was going on. So, this was the third part, bottom line, top line. Now, the fourth and the most critical one which we can understand is we should turn OCF positive.

The only point what I can say at this juncture is since we are executing some of the HEM projects as well , in renewables, these two solar assets are there. So, we will be going for the debt of our executio

n since these are IPP projects. So, the long -term debt will increase slightly in the current financial year.

So, I will not give a guidance how much we can be OCF positive, but definitely OCF post -tax will be surely positive and this is what we are working on. So, this is our first major concern area and we are looking into it very seriously.

Meet Shah: Okay, sir. Got it. Thank you, sir.

Moderator: Thank you. T he next question is from the line of Aditya Iyer from Morde Foods Private Limited . Please go ahead, sir.

Aditya Iyer: Thank you for giving me the opportunity, sir. Firstly, I would like to congratulate you on a good set of numbers. Just wanted some understanding on the borrowing side. I can see that there has been an increase in the borrowings taken by the company in this quarter, like the non - current borrowing has increased by roughly INR 34 crores and the current borrowing also has increased by roughly INR 27 crores. So, could you please throw some light on what the new INR 60 crore s borrowing is and what will it be used for?

Management: Basically, first of all, if I clarify on the long -term borrowings, we are executing two H EM projects. One is at Mathura and second one is at Saharanpur. So, as the projects at Mathura, it is progressing. So, that part of loan which has been drawn from the lender as the execution is progressing, so there has been an increase of some INR 35 crores in the long -term loan.

Short term, I will say we do have the treads limit from where we are making payment to our

MSME vendors. So, there has been an increase of somewhere around INR 25 odd crores or something. So, basically, so it is a cycle wherein we are making payment to our MSME vendors within 45 days and we are required to pay to the banker in another 90 day's time and the total interest rate is somewhere in the range of 7 to 7.5 percentage, not more than that. So, basically, that short -term borrowing has got increased because of that only. And if you see the trade receivable, basically, it has gone down drastically by INR 120 crores. So, basically, the trade table has gone down by INR 120 crores and there is an increase of INR 30 crores in the payments to MSMEs. Basically, it is just that number.
Aditya Iyer: All right, sir. Thank you so much and all the best for the further projects. Thank you.
Moderator: Thank you. The next question is from the line of Manish Jain from Wealth Grow Security. Please go ahead.

Manish Jain: Thank you for the opportunity, sir. Sir, my question was regarding our EBITDA margin are one of the best in the industry and your reasoning was that all our activities are in -house and we don't have any subcontracting. Sir, can you please elaborate on this matter a little bit? Can you explain it further a little bit?
Manish Jain: Manish, basically when we are executing the project on our own, there are three, four components wherein we save. First of all, it is the margins which we could have forgone by giving any other component on a subcontract basis. So, this is the margin which is getting accrued into the company if we are doing it on our own.
The second point is the control over the execution progress. Since we are doing it in -house, we are working on the capabilities of our company. So, we are not dependent on the execution capabilities of the subcontractor who might have some other capabiliti es or maybe lower capabilities in terms of the financial prudence which is available with the company.
So, that translates that we can deploy the right machinery as and when required, we can enhance the progress. So, that again translates into operational efficiencies and we have elaborated it in the past that execution capabilities, if these are strong, wi ll result in better margins of the company. Third point is the quality.
Let me just complete. The

quality gets ensured. W hen we are executing the project ahead of
time. So, basically, we are reducing on our fixed costs or rather what I will say if a project is continuing. So, our recurring cost, this will have to incur costs on a month -on-month basis. So, these are all basically translating to having higher operational efficiencies. And one of the major components which I will say is the design prudence with the company, wh erein we are able to gi ve a viable solution to our end to end and we generate better marg ins and profits for our company.
Manish Jain: Sir, are we bidding in the private sector in th e top 100 or top 500 companies a nd this is the first question. The last question is regarding the Telangana arbitration. Can you just clarify that one?
Manish Jain: Telangana arbitration, we do not have any arbitration at Telangana at all.
Manish Jain: Sir, some Telangana operation is there ?
Manish Jain: No, t here is no operational footprint of the company at least at present in Telangana.
Manish Jain: Okay, sir. I think you may please relook into it. And I will also check because presently company is not available in Telangana. As far as the private segment is concerned, we are not looking into the private segment at least at present. Rather, we are focusing on the industrial segment in form of common effluent treatment plants, which are ultimately being invited by the industrial development corporations and which is a government body in its own.

So, looking forward for bigger ticket size projects, so that way we are not bidding for this. Definitely look forward to some PSUs like IOC, DTCL, IOCL. So, wherein the projects for ETPs are coming up or various thermal power plants wherein this water trea tment plants tha t shall come up on the projects. If these are invited, we definitely have our interest in that segment and we will bid for it as and when the project comes.
Manish Jain: Sir, are we into solar pump projects?
Manish Jain: No, we are not.
Manish Jain: Okay, sir. Thank you for the opportunity and thank you for answering all the questions and best of luck, sir.
Manish Jain: Thank you.
Moderator: Thank you. Ladies and gentlemen, in the interest of time, we will take that as a last question. I would now like to hand the conference over to Mr. Manish Jain for the closing comments.

Sir, kindly unmute your line and go ahead.
Manish Jain: I am thankful to all of you for joining this conference call and the progress th e company has made in the past 5 years, 6 years and with the level of opportunities which are available and the order book which is in hand, we expect that the company will continue to grow organically and the profitability and the growth that will be maintained as the company is progressing further in the current financial year and in the future years as well. Thanks a lot to all of you for joining this earnings conference ca ll Q2 of Enviro Infra Engineers . Thanks a lot.
Moderator: On behalf of Enviro Infra Engineers Limited, that concludes this conference. Thank you for joining us and you may now d isconnect your lines. Thank you.

Sub: Transcript of the Conference Call for Analysts and Investors held on 10th February , 202 6

Dear Sir/ Madam,

In compliance to Regulation 30 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, we have attached herewith transcript of the Earnings Conference Call for Analysts and Investors held on Tuesday, 10th February , 202 6.

The same will also be hosted on the Company’s website at www.eiel.in .

You are requested to take the same on your records.

Yours faithfully,

For Enviro Infra Engineers Limited

(Piyush Jain)
Company Secretary & Compliance Officer

“Enviro Infra Engineers Limited
Q3 & 9M FY '26 Earnings Conference Call”
February 10, 202 6

MANAGEMENT : MR. SANJAY JAIN – CHAIRMAN AND WHOLE -TIME DIRECTOR – ENVIRO INFRA ENGINEERS LIMITED
MR. MANISH JAIN – MANAGING DIRECTOR – ENVIRO INFRA ENGINEERS LIMITED
ADFACTORS PR – ENVIRO INFRA ENGINEERS LIMITED

Moderator: Ladies and gentlemen, good day, and welcome to the Enviro Infra Engineers Limited Q3 and

9 Months FY 2026 Earnings Conference Call. As a reminder, all participant lines will be in the listen -only mode, and there will be an opportunity for you to ask questi ons once the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.

This conference may contain forward -looking statements about the company, which are based on the beliefs, opinions, and expectations of the Company as on the date of this call. These statements are not guarantees of future performance and involve risks and uncertainties that are difficult to predict. I would now like to hand the conference over to Mr. Sanjay Jain, Chairman and Whole -time Direct or. Thank you, and over to you, sir.

Sanjay Jain: Thank you. Good morning, everyone. I would like to extend a warm welcome to all of you for joining us on our Q3 and 9 -month FY 2026 earnings call. On call with us today is Adfactors, our Investor Relations team. On behalf of the entire team, I am pleased t o share our operational and strategic progress for the quarter and our outlook for the remainder of the year. We have shared our earnings presentation; I hope you had the opportunity to go through it.

During the quarter, we continue to see steady execution across our core segment: water and wastewater treatment and operation and maintenance services. Our focus remained on timely project execution, disciplined cost control, and improving cash conversion. Our water and wastewater execution order book as on 31st December 2025 stands at INR1,903 crores, complemented by an O&M order book of INR933 crores.

A key highlight during this period was the receipt of a Letter of Acceptance from Bhopal Municipal Corporation for an EPC and O&M sewerage infrastructure project valued at around INR250 crore s, covering sewer network, a 60 MLD sewage treatment plant, pumping stations, and allied infrastructure. This project further strengthens our urban sewerage portfolio.

In addition, we continue to progress on previously announced large projects, including the INR395 crore s pollution control project in Maharashtra awarded earlier in the year and contracts aggregating INR306 crore s in Chhattisgarh. Collectively, these reinforce our execution capabilities across states and project categories. As of date, we have secured order inflows of approximately INR1,500 crore s in Financial Year 2026.

The bid pipeline presently is approximately INR5,000 crore s, for which evaluation is underway. Expected bid submission during the month of February is around INR2,000 crores . The immediately expected bid pipeline under AMRUT is INR26,000 crores in coming months based on the position of approved DPRs. We remain confident of achieving our full -year

Financial Year 2026 order inflow target of INR2,500 crores , supported by strong visibility and healthy conversion rates.

The quantum of projects available for bidding ensures a healthy order book in the next financial year as well. Our portfolio remains well -balanced and diversified across municipal and industrial sectors. Moreover, our investment in technology such as ultra filtration, reverse osmosis, and MBR systems positions us well for ZLD and tertiary treatment avenues.

There is an increasing trend visible in the reuse segment, in which the treated water from STP/CETP after suitable tertiary treatment is to be reused in the process industries or thermal power plants, which gives a revenue generation model to this segment also. The technological advantage positions the c

ompany for such projects. This can become a new revenue segment for the company.

With that, I would now like to hand over the call to Mr. Manish Jain to share further developments during the quarter. Over to you, Mr. Manish.

Manish Jain: Thank you, Sanjay sir. Our execution activity picked up meaningfully post -monsoon, and we expect a steady conversion of unbilled revenues into billings and collections during the last quarter of the financial year. Our working capital discipline remains st rong, and we continue to prioritize projects with strong cash flows. Moreover, our growing share of O&M and annuity - type revenues, combined with scale benefits from larger projects, provides confidence in sustaining overall performance.

On the execution front, we continue to make strong progress across key projects. We have successfully completed a 100 MLD STP based on IFAS technology, integrated with biogas and solar power generation. We have also completed the sewerage scheme at Jodhpur ahead of schedule, reflecting our focus on timely execution.

Moderator: Sorry to interrupt you sir. Your voice has got a little muffled now. I would request you to come a little closer to the microphone. Thank you.

Manish Jain: Additionally, projects at an advanced stage of completion include the 55 MLD STP at Varanasi, the 80 MLD STP at Jaipur, and the 25 MLD CETP at Sarigam, all of which are

nearing completi on.
Our emphasis on circular economy continues to deepen across projects. We are increasingly integrating wastewater infrastructure with solar power and compressed biogas solutions, enabling on -site electricity generation for plant operations and meaningfully reducing operating costs. A recent example is our Jodhpur plant, where we have successfully implemented a biogas -to-electricity system as part of the overall project design .

Beyond water infrastructure, we have also entered the renewable energy segment, where we are expecting and executing projects under both IPP and EPC models. This diversification has already translated into a renewable energy order book of approximately INR256 crore s, strengthening our long -term growth visibility while aligning our portfolio with sustainability -led opportunities.

As we look ahead, the opportunity before us is one of consistent execution, disciplined growth, and long -term value creation. Backed by sectoral tailwinds and our execution readiness, we remain confident in our ability to translate these opportunities into robust order books, sustainable margins, and sustainable returns for all the stakeholders.

Looking ahead, we believe Enviro Infra Engineers is well -positioned to benefit from the sustained investments in the urban infrastructure sector, wastewater treatment, and environmental compliances. With the strong order book, a healthy bid pipeline, and i mproving execution momentum, we remain confident about delivering long -term value to our stakeholders.

Now coming to our financial performance for the period . In Q3 FY 26, our revenue from operations grew 1% to INR2,500 million, driven by continued execution of our order book. EBITDA grew at 25.6% year -on-year to INR677 million, while EBITDA margins increased 530 basis points to 27.1%, reflecting operational efficiency. PAT for the quarter came in at INR421 million, up by 14.7%, while PAT margin expa nded 180 basis points to 16.3%.

For the 9 months of FY 26, revenue stood at INR7,183 million, representing a growth of 7.9% year-on-year, reflecting continued momentum in order book conversion. EBITDA for 9 months improved 22.4% to INR1,969 million with a margin of 27.4%, which is a 320 basis points improvement. PAT was reported at INR1,341 million, up 30.1% with a margin growing 280 bps to 17.9%. We also proposed an employee stock option scheme during this pe

riod, subject
to requisite approvals. That is all from our side. We can now open the floor for questions.

Moderator: Thank you. Our first question comes from the line of Diwakar Rana from Prudent Equity. Please go ahead.

Diwakar Rana: Good morning, sir. Sir, my question is on the execution part. So, what led to the execution slowdown in this quarter?

Manish Jain: Pardon me, execution?

Diwakar Rana: Slowdown .

Manish Jain: Okay. First of all, I would like to emphasize the growth in EBITDA and PAT. Basically, we are having a decent growth in our EBITDA and PAT numbers, which is getting transpired from the

shift in the wastewater treatment segment, which was the primary segment of the Company, along with the operational efficiencies.

Regarding the revenue guidance, basically, we were expecting certain orders to flow in quarter 3. Some of the projects for which we had submitted our bids , these were some Delhi projects . The bids have been recalled and we are again submitting our bids for the projects. Further, there were bids to the tune of somewhere around INR3,000 crore s in Bihar , the process of evaluation is a bit delayed, because of which the financial bids are yet to be opened.

So basically, the order book which we were expecting in Q3, that didn't come to the company. So, we are right now expecting that our order book will get decently -- it will get decently accrue d. And in Q4, based on this improved order book position, in future, we look forward to maintaining our revenue guidance as well.

Diwakar Rana: Okay. Sir, to achieve 30 % to 35% growth, you have to report over INR700 crore s of revenue in Q4, which is around 70 % to 75% growth over March 2025. So, are you confident to achieve this number , INR 700 crore s revenue for Q4?

Manish Jain: The revenue expectation for Q4 is in the range of INR600 crores to INR650-odd crores. So, we expect our top line to be in the range of INR1,350 crores. And we are in line to achieve this number.

Diwakar Rana: Okay. So sir, earlier this 30 % to 35% revenue growth guidance you gave, it was excluding the solar part you did? And you have executed over INR98 crore s of solar this quarter. So this 1,350 you are saying revenue, this is excluding the solar part or including the solar part?

Manish Jain: I think you have taken it wrongly , it is 98 million . So it is INR9.8 crore s top line which we have in Q3. So, the total top line which is expected from the renewable segment for this financial year is somewhere around INR200 crore s.

Presently, when I say INR1,350 crores, basically it will be at the consolidated financial level, so our total top line expected is INR1,350 -odd crores. However, if we look into the PAT margins, so that growth of 3 5% to 40% what we projected, that remains in line. INR230 crore s to INR250 crore s is the profit growth -- is the profit PAT number which we are expecting for the entire financial year. And we will 100% do this number. The PAT number is aligned.

Diwakar Rana: Okay. One last question, sir, on the order book. So we had guided for, I think, around INR2,500 crore s order inflow in FY '25. And we have received, I think, over INR2,000 crore s right inflow?

Manish Jain: The total order inflow till now has been INR1,500 crores in the water and wastewater treatment segment, and it is an order book of around INR256 crores which is from the renewable segment. So basically, the guidance which we gave, INR2,500 crore s, it was for the water and

wastewater treatment segment only. So our bidding pipeline, as Sanjay ji mentioned, it is INR5,000 crores which is already under evaluation.

There are some L1 projects as well. We will not give any guidance on

the L1 getting converted to LOA because we have faced some challenges in the past with respect to one to two projects where L1 could not get transpired to LOA. So basically, at this point of time, I can only say that we remain confident.

Another INR1,000 crores order book that we require to fulfill our guidance of INR2,500 crores looks 100% aligned, and based on even the L1 position itself, we look forward to getting the LOAs very soon. So, I will also be very happy the moment I will be in a position to announce the LOAs.

Diwakar Rana: Okay. Thank you, sir.

Moderator: Thank you. We take the next question from the line of Vidhi Shah from CR Kothari & Sons. Please go ahead.

Vidhi Shah: Hello, sir. I have a bookkeeping question. In the consolidated financials, the PAT has increased , but the EPS has decreased. So, can you please explain that?

Manish Jain: To my understanding, there should not be any concern with respect to the lowering of the EPS. Let me just go through with my financial team , I'll revert back on this. Because there is no change in equity at all, so the EPS will grow proportionately . I think for Q3, the PAT number is INR42 crore s, for Q2 it was INR49 crore s, so maybe there might be a slight reduction in the EPS Q -on-Q basis. This is what I can say.

Vidhi Shah: No, sir, I'm talking about Y -o-Y. Last December, it was INR36 crore s, and right now it is INR42 crore s, but the EPS is decreased from 2.59 to 2.3, whereas your share capital is the same. So that's my concern ?

Manish Jain: Last year, our IPO was there in November 2024. So, there can be a change in the share capital from INR136-odd crores to INR175 crores. So, that can be an average weighted capital at that point of time.

Vidhi Shah: All right. Thank you, sir. And also on the revenue part: Sir, earlier you had guided 35 % to 40% on the water segment alone, but now you're guiding INR1,350 for the full consolidated level , water plus renewables. So, any reason for the slowdown? And also on the renewables part, you had guided INR200 crores to INR250 crores revenue and you've done INR10 crores as of now. So, can you please explain that?

Manish Jain: The revenue guidance for renewables remains intact. We expect our top line in the renewable segment to be somewhere around INR200 crore s. Our revenue guidance for water and

wastewater treatment segment was on the basis that we will be winning some projects on a continuous basis in this financial year. Till July, there was a number of projects where we won and the LOAs were issued.

However, it got slowed down a bit, and we could win only one project in the month of November. So, there was a bit of slowdown in the order receiving rates. However, we have not reduced our profit margins at all, or rather I can say because of our guidance for a good profitability, the competition is slightly higher, so we could not win the bids at that point of time. And because of this, our revenue guidance may go a bit lower for the current financial year. Still, we are maintaining good profit margins, and we are hoping that by March when we go

out and we declare our results for the entire financial year, we turn OCF positive. So right now, two major guidance that our PAT will be in line with our commitments , and OCF turning positive. We are working on it, along with our order book getting improved, so that our revenue guidance along with the profitability for future, that also improves substantially.
Moderator: Does that answer your question, Vidhi?
Vidhi Shah: Yes. Thank you, sir.
Moderator: Thank you. The next question comes from the line of Prateek Bhandari from A art Ventures. Please go ahead.
Prateek Bhandari: Hi, sir. Thanks for the opportunity. Sir, what was our order inflow during the quarter? Did we receive an

y order?
Manish Jain: There was one order which we received; it was a 60 MLD STP along with associated infra. It was an AMRUT 2 project at Bhopal. So, we have commenced our operations in that project as well. And that was the only project which we won in Q3.
Prateek Bhandari: And what was the value of the order?
Manish Jain: INR248 crore s.
Prateek Bhandari: INR248 crore s. Also, sir, if you can touch upon what has been the progress on the receivable side from the JJM projects, which were pending? Has there been any recovery?
Manish Jain: As I sa y, even in the past, we are doing the JJM projects in MP only. Because of the funding of JJM projects from the state government for this financial year, we didn't face the challenges with respect to the receivables. Now, the next point which comes to is the trials and commissioning. Basically, it is a connectivity of almost 1,000 villages, and on a continuous basis, we are doing the trials, testing, and making all the test connections functional.

So this activity -- this is a process which will remain slow, and there will be a continuous steady progress which will continue. On a monthly basis, our revenues are getting accrued to a level of somewhere around INR15 crores to INR20-odd crores . And this is what this process is expected to continue over a period of next 6 to 8 months' time when we expect that all the projects will be commissioned and the operation and maintenance will start.
There are total five projects, out of which there is one project wherein we are expecting the entire completion along with commissioning maximum by June. So, that particular project will go into operation and maintenance. If I say about the receivables, we are not facing challenges from MP at all in the JJM.
Prateek Bhandari: But what has been the pending receivables as on date , quantum of the same?
Manish Jain: The pending receivables, if I say debtor along with unbilled revenues, will be somewhere in the range of INR225 crore s.
Prateek Bhandari: Okay, 225?
Manish Jain: Right.
Prateek Bhandari: And sir, you mentioned that for the solar, you are -- for the renewable side, you have guided for INR200 crores odd revenue for the full year. So, what has been the revenue for the first 9 months? Because during the quarter 3 you mentioned we did some INR10 crores odd revenue. So, what has been the revenue run rate up till now for the full yea r, 9 months?
Manish Jain: Basically, this is first financial year itself for the renewable business. We formed this company in current financial year only. Then we got some solar assets which we purchased or acquired. So, the initial guidance -- basically, we were just either it was the sale of electricity from the IPP project that we acquired. So, we were aligning ourselves to those activities. A turnover of INR10 crores is what we have done in Q3. So, we expect a jump of this turnover getting from INR10 crores to INR200 crores in this Q4.
Prateek Bhandari: No, but what has been the turnover during the 9 months?
Manish Jain: During 9 months, it was hardly INR2 crores -INR3 crores in Q2, so if I say the total turnover from renewal will not be more than INR12 crores -INR13 crore s.
Prateek Bhandari: Okay , okay . And sir, since we have, you know, we have been able to -- due to the operational efficiencies, we have been able to clock better margins. So, is there any change in the guidance for the margins going forward, or you still stick to 22 % to 24% range which you earlier alluded to?
Manish Jain: At any point of time, we will stick to the margin guidance of EBITDA in the range of 22 % to 24%. But as the product mix -- because there are different types of p rojects, different

complexities -- so the margin profile remains different. As a guidance measure, it will never
be more than 22 % to 24%, but we look forward to having better operational efficiencies in the
system itself.
Prateek Bhandari: Okay. And just one last question from my end: if you can touch upon the bid pipeline o f
INR5,000 crore s from -- if you can share some split across the s egments from where it is
coming?
Manish Jain: This entire INR 5,000 crore s bid pipeline is from wastewater treatment projects only, which
constitutes STPs or its sewerage infrastructure, both under EPC and some parts of HAM. And
along with this, there are some projects of CETP as well. So, there is no water project right
now wit h us for which we have submitted our bids. So, this pipeline will primarily be either the
AMRUT projects, or Namami Gange projects or the projects which are funded by multilateral
agencies or the CETP projects from t he industrial development corporations.
Prateek Bhandari: Okay. Thanks, sir, for answering my questions.
Moderator: Thank you. The next participant is Meet Shah from Finance 360. Please go ahead.
Meet Shah: Thank you for the opportunity. Sir, I had a couple of questions. Firstly, you did mention
because you didn't get the expected orders in this quarter, which led to the slow execution.
But till the end of the Quarter 2, we had orde r book about INR 2,200 crores, which you recei ved
before 3, 6, 9 months ?
So, we should have executed that numbers in this quarter, right? Because all the new orders
get in execution phase after 3, 6, 9 months. So anyway, if we have received the orders in this
quarter, it could not have made to the top line of the income stateme nt, right? So, is my
understanding correct?
Manish Jain: First of all, any of the order which we get is having a timeline of 18 to 24 months. So, if I say
the total order book was to the tune of around INR2,000 odd crores. So, if that is to be
execu ted over a period of 24 months. So the order getting transpired i nto revenues is to the
tune of INR 250-odd crores. And this is same what we could do in Q3.
And all three quarters basically, almost all the quarters are in line, ma ybe with a difference of
maybe INR10 crores, INR 20-odd crores, not more than that. Basically, in my last earning call
when I reported one of the projects at Rajasthan which will get transpired into LOA,
unfortunately, that project we could not bag and that entered into a retendering.
So, there was some technical glitch and that is why the tender has been recalled. So, that
particular project was where we could have started it immediately. There were some packaged
projects which we were required to fabricate in the workshops and then we were required to
supply.

So, we could have expected some turnovers from that particular project as well. So, one more
thing which I would like to emphasize at the start we we re there with somewhere around
INR1,200 crore s order book. So, we were quite hopeful that the turnover will get on increasing
with the increasing order inflow into the company.
So, if we just forecast the revenues based on the order book that we got and the execution
the way the company is executing, basically we are well in time or we are ahead of time, as
we have re ported two projects of Jodhpur. O ne is a sewerage project which we executed
ahead of time, then Jodhpur 100 MLD project wherein we are well in time.
Then there are three more projects which we have reported in our earning call speech right
now: Varanasi, Jaipur, and Sarigam. So basically, if we just conclude it in a fashion that the
execution of the projects is timely. However, the conversion of this o rder book to top line,
basically we were more hopeful of getting a higher number of new projects which

we could
not. So, that has not get replicated into a higher revenues. However, our PAT guidance is
positive, and we are again achieving the numbers which we have given as a guidance.
Meet Shah: Okay, sir. Got it. But sir, you did mention about INR 2,000 crore s order book will be getting
executed in next 24 months, right? So each quarter gets a INR 250 crore s kind of a number,
ballpark. But if you see Q1 and Q2, we have a lower execution because of a rainy season and
other reasons?
So Q3 and Q4 are heavy on execution, right? So kind of 60% kind of a revenue we get from
Q3 and Q4 because of the heavy execution. So, we didn't had any rain or any other issues in
Q3 and Q4. So, that was our understanding that we might get a good executio n in both of this
quarter, not the linear 250 in every quarter. But yes, it gets bit skewed in Q3 and Q4?
Manish Jain : You are 100% right. In Q3, out of the three months the month of October since the rains were
prolonged and it was a festive season, so the main construction activity has started from the
month of N ovember. So, the revenue is of INR 250 crore s primarily comes out of the
functionality of two months.
If you see our guidance, so first three quarters are almost on a similar revenue path of around

20% each, with a 40% guidance for Q4. The number will definitely be a far better. So, we expect a good top -line number to be executed in Q4. So the guidance for among that movement of the revenue with respect to order book remains exactly the same; there is no change in it.

It is more of the order book wh ich we expected, which we could -- which we could not get in Q2 or Q3. Basically, a certain slowdown in getting the order book. However, the bidding pipeline still is very strong, along with the projects which are available for bidding in the month of February itself. Some INR 2,000 -odd crore s projects are there in the STP or CETP segment

wherein we are submitting our bids. We do expect that we will be having a very decent order book very soon, and based on that, we will forecast a better revenues for our next financial year, that is FY 27.

Meet Shah: So sir for Q4 till now, what fresh orders have we received?

Manish Jain: In Q3, we have received one order of INR 248 crore s.

Meet Shah: No, in this Quarter 4?

Manish Jain: In Q4, we don't have any LOAs right till date when we are into this earning call.

Meet Shah: So basic ally, sir, in like last next 15 days, 20 days you receive the order, right? But so you are confident that in one month that will have a some kind of execution and it will reflect to the top line? Because if it does not, still we have that INR250 crores, INR 300 crores only in revenue, right? Because till now we have not received any fresh orders, so i t will not convert into revenue?

Manish Jain: There is a change which happens in Q4. Basically, a lot of equipment supplies also happen in this particular quarter along with the civil executions which go on. So, there is a sudden increase in the top -line numbers for Q4 and it is well guided in our pre sentation as well from the past year's performance. And we look hopeful that we'll be in a position to have a top -line number of somewhere around INR 450 crore s from our water and was tewater treatment projects and INR 200 crore s from the renewable segment.

So along with this, this is based on the order book which we have right now. I'm not saying that any addition of the order book can impact our top line in next 45 days, 50 days which we have in this current financial year. This order book will sustain our revenue visibility and profitability for the next financial year. So as I am saying this word, the moment we are having a good order book, so as on 1st of April we will have a good order book available for execution for the enti

re financial year, on with t he basis of which we will be in a position to better project our guidance for FY 27.

Meet Shah: Sure, sir. And sir, what number you did gi ve for water treatment for Q4, INR 450 crores or INR400 crores?

Manish Jain: Around INR450 crore s. INR4 00 to INR4 50 crore s is what we do expect t o do in this particular quarter.

Meet Shah: So sir, INR400 to INR450 would translate to just a 10% Y -on-Y growth for Q4, right? B ecause last year we did around INR 400 crores. So that would be only a 10% increase. And for the full year, we have guided 30 % to 35%. So I think that would be a very great difference betwe en both?

Manish Jain: If I am not wrong, we should be more concerned with the profitabilit y in the project. Suppose I do INR 1,500 crore s and my bottom line is very weak. So, that will not give any strength to the company. As we understand, we should go with high -margin projects. So, I do understand and accept there is a reduction in the r evenue numbers which we guided. However, the profitability remains intact; there is no impact at all on the profitability in the company and we expect profitability along with OCF p ositive numbers to be replicated in the current financial year, that is FY 26.

Meet Shah: Sure, sir. Got it.

Moderator: Thank you. The next question comes from the line of Sahil Garg from CCV Emerging Opportunities Fund. Please go ahead.

Sahil Garg: Good morning, sir. Si r, when we say that we will do INR 600 crore s of top line in Q4, may I know what was the run rate for the month of January?

Manish Jain: The run rate for the month of January is somewhere around INR 120 crores which we have executed.

Sahil Garg: INR12 0. That means we have to execute INR 480 crore s of order book in the next two months?

Manish Jain: Because what happens is since there are supplies which have just got geared up, so this will—the supplies will be done maybe by 15th of March and then we will proceed for its invoicing and receiving the payments. So the process is already on and the inspection. So basically in all the mechanical electr ical equipment that we procure.

There is a clear -cut procedure wherein the approval and manufacturing clearance is given, then a 6 to 8 weeks, 10 weeks is the timeline for its manufacturing, then an inspection call is given and then the dispatch clearance is given. So basically, all these activities are done at a certain level and these supplies are going on. So we can expect this to p-line number to be maintained.

Sahil Garg: So that means everything is dependent on, sir, I mean future events we are talking about from the last 40 minutes, 45 minutes on this call. I mean, still it looks difficult. Anyways, and what would be the number of receivables by then?

Manish Jain: Boss, if you want to check.

Sahil Garg: So if we are doing INR45 0 crore s of top line in Feb and March, I'm assuming that the entire revenue would be convertible into receivables, I believe.

Manish Jain : Entire revenue will be converted in boss, I cannot say on this basis. There is some unbilled revenues in our books, there is some inventory which will definitely get converted into cash flows.

There will be the top -line numbers which we'll do in the current quarter and which will -- certain amount of this will go into unbilled revenues and there will be some part which will get converted to cash flows as well. So ultimately, if you see any of the financial year in the past, the unbilled revenue is a bit high till Q3; however, it gets reduced substantially in Q4 when this top -line number also increases and the cash inflows get substantially higher.

Sahil Garg: So for Q1, Q2, Q3, mi

ght be that you will get the payment. I am specifically asking for the Q4 because 50% of your revenue is coming in Q4, so that is why I'm asking that what the receivables figure will look like, just a ballpark figure maybe from your si de?

Manish Jain: I have given a guidance of a working capital somewhere in the range of 90 days to 100 days. So we will try our level best to maintain that working capital days and then converting the entire OCF to positive, along with taxes as well.

Sahil Garg: Okay. Okay. And sir, what is the reason for unbilled revenue?

Manish Jain: Unbilled revenue: there was a circular from government that all the invoices that we do, it -- these are to be exactly paired with the income tax TDS and the GST TDS. This circular had come in sometime in September. There was a revenue recognition mechanism which was outlined in the GST circular as well, when based on certain activities which get fu lfilled, then we could generate the invoices.

Now, the invoices are not done at least till the time the confirmation, a clear pass order . And the availability of funds with the government wherein they are depositing the TDS amount at least. So, all other amount always remains in the unbilled revenue. If you see the combined value of unbilled revenues as well as the receivables, so I think tha t will give a fair picture in comparison to the last financial year.

Sahil Garg: Okay. Sir, just last question: May I know what is the reason for margins to come down in Q3 as compared to Q2 and Q1? Specifically the PAT margins ?

Manish Jain: There is a guidance; it all is a product mix. There may be a project where we are having higher margins, there can be a project where the margins are slightly lower. So a change of maybe one to two percentage points, so that never says that the operational efficiencies are lower. Further, there is an ECL provision which is created in the books. In Q3 itself, a provision of INR6 crores has been created. ECL is Expected Credit Loss.

So basically, there is an Ind AS provision according to which ECL provision is booked. The total ECL which has been booked in our books till now stands at INR15 crores , out of which INR6 crores has been booked in just in the last quarter itself. So INR42 crores was the profit -- our profitability. If you just club it, so I think we are well aligned, at least if we talk about the profitability in the company.

Moderator: The next question comes from the line of Anmol Mittal from SMC Private Wealth .

Anmol Mittal: Good morning, sir. Sir, can you share the margin outlook for Q4, INR600 crores to INR650 crores top-line guided?

Manish Jain: Top-line guidance is this INR450 crores for water and wastewater and around INR200 crores for renewable. The overall profitability, if I talk about both combined, so I think we should be somewhere around 15 percentage PAT margin.

Anmol Mittal: 15% PAT. Okay. Thank you, sir. And my second question is, given the importance of execution momentum, would it be possible for management to provide periodic, perhaps monthly update on order book execution through press release disclosure to help investors better track progress and delivery?
Manish Jain: I will match the top line which happened in the past years with the current financial -- with the pairing it with the current financial year. So definitely we will do. No issues in it.
Anmol Mittal: Okay. So means by the next month, we will receive month -on-month basis press release regarding the order executed, right?
Manish Jain: Yes, yes. Definitely we can do it.
Moderator: The next question comes from the line of Daksh Malhotra from A adriv Global.
Daksh Malhotra: Good morning Mani shji and congratulations on a good set of numbers. You know, in this challenging and infrastructure where

the infrastructure on the whole has been a little slow, a good execution as far as the bottom line is concerned, at least. Sir, I wanted to go -- a lot of answers have been given, just wanted to understand what troubles are we facing in terms of order booking per se. Is it competition, is it state governments, their budget constraints? Why didn't we get the orders we anticipated? While you've explained that Rajasthan project, it got went into rebidding, but the flow of orders has just been very slow. And how is this going to change going into Q4 and the next financial year? What do you foresee for the time to come, sir?
Manish Jain: As far as the availability of projects is concerned, it is extremely robust and a number of projects are available for bidding also, and we have submitted our bids as well. There is some L1 pipeline, but definitely as I said, Rajasthan was one of the proje ct wherein we face some challenges, so I'm not in a position or I never want to declare the L1 status, rather I'm more comfortable putting it in the -- our bidding pipeline itself till it gets transpired into LOA.
Now, when we are submitting our bids for government, so there are challenges with respect to the evaluation; the evaluation timelines are not in our hands. We can only predict the possibility of getting any of the orders. As I said, in Delhi, we have submi tted bids for almost

five-six projects, but due to some technical glitch, the entire process was stopped at one point of time and all the projects have again been called for a re -bidding.
So there is not -- any control in our hands; these projects are again available for bidding. We are definitely bidding for these projects and look forward to having some good order book position from Delhi. We have submitted our bid for a number of projects in Bihar; the tot al estimated value for which we have submitted our bids is somewhere in the range of INR3,000 -odd crore s.
Again, the evaluation process got a bit delayed, again not in our hands. So we are just expecting that it ultimately the bids' financial bids get opened, the technical bids have been evaluated. We are just waiting for the final outcome and then it getting transpired into LOAs. So basically, these are just challenges with respect to the evaluation and finalization of bids. No other I think there can be any of the gaps which I can mention here. So we are just waiting that the evaluation process gets completed and that gets transpired to LOAs.
Daksh Malhotra: So it's not as if we're losing these orders to competitors ?
Manish Jain: No, no. There is a success ratio in particular .
Daksh Malhotra: Yes. So the state governments, Bihar, Delhi, all these governments have not placed the order to anybody. Not only to us, it is the -- you know, whether our success ratio is 25 % to 40%, but order they haven't given it to anyone till now; they've just gone into re -evaluation and whatever going on internally.
Manish Jain: Yes, yes. Bihar, it is under evaluation; in Delhi, it is under re -bidding.
Daksh Malhotra: Okay. And historically, sir, when such a situation happens within the -- when you know there's a dearth of government orders, then once it starts, does it get lumpy? Like you get all of a sudden you get lot of orders? Like it must have, yes, historically even when we were not listed, when such a thing used to happen and when things when the ball started rolling, do we get like a lumpy order booking giving us good visibility into the future or how does it work?
Manish Jain: If you just see the last financial year itself or I'll say the last calendar year from January when the projects could be available for bidding, so there was a number of projects which were available, we submitted our bids. From April to July, almost 1,200 crores projects we

re there which we won and for which we got the LOAs.
So basically, as the AMRUT project or I say any of the mission or any of the government mission is moving, so the projects are invited; there is no lumpiness which we foresee. But there can be a cluster of projects which we can expect to accrue at certain point of time and

then there can be a lull season as well, which has happened. So that is not predictable.

Daksh Malhotra: Okay. Sir, secondly on the budget estimates, you have given a slide also on JJM, Namami Gange, AMRUT, and the SBM Gramin and Urban. The has the budget increased because I think you've given a column indicating the approximate spend by the government in the last financial year, which seems to be much below what they had budgeted initially in this '25-'26. So how do we see this in the coming years or couple of years ahead? Is there enough focus of the government in this space?

Manish Jain: Whatever I can foresee is there has been a sloppiness from the -- what I can say from the government side or if there were any challenges because of which they were not releasing the funds. It was mainly the JJM scheme which was facing all the challenges. From a budgeted estimate of INR67,000 -odd crore s, now the final revised estimate is pegged at INR17,000 crore s. And for next financial year, that is FY 27, they have given a budgetary estimate of INR67,670.

So if we just look into the intent, what we can understand is the fund should start moving even in the JJM, since the revised estimate is on 1st of February when this budget has been announced. So in the next two months in that is February and March, this INR17-odd thousand crores , this fund should be allocated to the projects, and then we can foresee this number of 67,670 which has been projected for the next financial year FY '27.

So this fund is going to be released. This is how we can foresee and the project should move further now. In case of Namami Gange, as the projects are moving, there is no slowdown at all; the funds are getting moved comfortably. The budgetary estimate was INR3,400 crores but the revised estimate is INR2,687 crore s. So that is primarily based on the expenditure which has happened.

So against this, they have again given a budgeted estimate of INR3,100 crores , which in itself again looks okay, no issues in it. AMRUT from INR10,000 crores budgeted to INR7,500 crore s, and now the budgetary estimate for FY 27 is INR8,000 crores . So we look forward to -- that if the first of all this budgetary estimate of INR8,000 crores , it should get crossed. So the funds were getting released in AMRUT schemes in the entire financial year .

And then we again see that this number will continue to move. So there was no challenge which we have foreseen at least in Namami Gange or AMRUT. In SBM Gramin and Urban …

Sahil Garg: Okay. And -- yes please. No, no g o ahead sir please you complete…

Manish Jain: SBM Gramin and Urban basically there are some missions which is for the population below 1 lakh. So there are some sewerage projects which are coming up. So in the SBM projects as well, the fund movement has been smooth and the movement is okay. So as far as we see, apart from JJM, all other schemes are moving -- it is stable and moving favorably. This is what we can foresee.

Daksh Malhotra: Right. But we are primarily present in Namami Gange and AMRUT. Or given the government visible government intent of JJM revival, we will start bidding there as well, If things are smooth again and if all these JJM related issues are resolved ?

Manish Jain: Right now, we don't have any intent to bid for the JJM projects until and unless the scheme gets fine 100%, and

almost projects are there where the bids have already been done. So I don't think there is much of a bidding available in JJM, apart from som e states which were going slow.

So I'm not quite hopeful of getting any of the project in JJM, rather in AMRUT itself, yes, there are number of water projects which will come up. So we'll be fairly comfortable doing the projects under AMRUT. This is a city mission, so we'll be focusing o n the urban mission primarily.

Daksh Malhotra: Understood. Sir, one last question , even though you've explained it, we are currently at in the nine months at about INR135 crore s PAT. We are talking that we can still reach INR230 crores to INR250 crores . Given 15% PAT at INR600 crores, INR 650 crores that we are targeting for Q4, we can do anywhere in the ballpark of about INR90 crores to INR100 crores. Very tall target, 2x of what we have done in the previous quarters. Is it genuinely achievable?

Manish Jain: If I say , let us divide it into two parts: one is a renewable component which is INR200 crore s and which is moving smoothly one way, and the second part is INR450 crore s. So last year we have done INR400 crore s, so against INR400 crore s I am giving a guidance of INR450 crore s. So that looks quit e achievable in itself as well…

Daksh Malhotra: Achievable and the water we will we will do about 18 %, we are doing about 18 .5% PAT

margin, 9 months consolidated. Water we can consider approximately the same margin?
Manish Jain: As a guidance measure, I will never say -- because in guidance note, I will say the margins maybe for the consol ones it can be at 15%. There can be minor tweak; it can be 16 % or 17% for water -wastewater segment and maybe some margins -- so at a consol level, I can say the margins can be at somewhere 15%.
Daksh Malhotra: Okay, sir. Thank you, wish you all the very best. Thank you.
Moderator: Thank you. The next question comes from the line of Tejas Shigwan from Magadh Capital . Please go ahead.
Tejas Shigwan: Thank you, good morning. I just joined late, so I must have missed some part. So I just wanted to know , are you still sticking to your target guidance of achieving around 30 % to 35%? Because you have achieved around 8% in 9 months. So, hello?
Manish Jain: Yes, please. Please go on.

Tejas Shigwan: Yes, are you still sticking to your target of achieving 30 % to 35% for the full financial year? Because you have achieved just 8% in nine months. So, you will still have to achieve around 64% -- around 65% -- in the last quarter. So can you some...
Manish Jain: Our PAT growth, our PAT growth is in the range of 30% in first 9 months. So if I look at a consolidated financial level, so our top line can be somewhere in the range of 25 -odd percentage plus and the profit profitability guidance -wise, yes, it can be 30% plus further.
Tejas Shigwan: So earlier from 35% you are coming down to around 25% for the last quarter ?
Manish Jain: I have given a guidance even now in the range of INR230 crores to INR250 crore s. If I maintain a guidance of 35%, so that figure comes out to INR238 crore s. So there is no change at least in the profitability guidance. So I'm giving the ballpark figures what we can look once we complete this financial year.
Tejas Shigwan: Okay. Got it. Thank you so much.
Moderator: Thank you. The next question comes from the line of Deepak Poddar from Sapphire Capital. Please go ahead.
Deepak Poddar: Yes, thank you very much, sir, for this opportunity. Sir, now I mean, a lot we have discussed on FY '26. So something on FY '27: how should one look at FY '27 in terms of execution and all?
Manish Jain: I don't want to reduce any of my guidance for FY '27 as well. However, I look forward to the order book which we get in the current financial year in the next 2

months. Based on that,
giving any guidance or maintaining our guidance that will make some sense. So I would just request to wait for another 2 months' time wherein we I am quite hopeful and will be in a position to declare the LOAs as and when we receive, and that will give a clear guidance. I'll not be reducing the guidance at all , we want to maintain a growth rate pairing to that 35 -40 percentag e and that will look to be fine once the order book is in hand with us.
Deepak Poddar: And this 35 %-40% includes renewables also, right?
Manish Jain: Since we will be having the top -line numbers in our books in the current financial year, so for now onwards, we can say on a consolidated basis also.
Deepak Poddar: And how much execution we are targeting in renewables in this 35 %-40% growth?
Manish Jain: In FY '27? You are talking about '27 or ‘26?
Deepak Poddar: FY '27.

Manish Jain: FY '27, we are expecting somewhere around INR500 crores , INR400 crores to INR500 crore s it should happen in the renewable.
Deepak Poddar: INR400 crores to INR500 crores . And this is included in that 35 %-40% gro wth that you are talking about.
Manish Jain: Right now, I will definitely say it is included i n that top -line growth.
Deepak Poddar: Fair point. Okay, that would be it from my side. All the very best to you. Thank you so much.
Manish Jain: Thank you.
Moderator: Thank you. The next question comes from the line of Dinesh Kulkarni from FinSight Ventures . Please go ahead.
Dinesh Kulkarni: Yes. Thanks for giving me the opportunity. And I was like two quick questions, sir. Sir, like what we have seen is like government projected, forecasted, or budgeted for this year, Financial Year '26, of somewhere around INR60,000 crores, INR 70,000 crores in the previous budget, but what we have is somewhere around INR17,000 -INR20,000 crores, right? And again for the next financial year, the budget is around INR65,000 crores , INR67,000 crores , INR70,000 crores, but again there is a question mark, right, with the kind of execution

the government itself is having.
So my question is, are there not enough projects that government is coming up with, or what's happening in this infrastructure -- water infrastructure -- that are there any financial constraints from the from the ministry itself that we are not getting these projects? For any players, I'm just s aying. That's my first question?
Manish Jain: First of all, I would request you to kindly see each of the government scheme on its own. There are different schemes; first of all JJM. JJM is basically a rural mission; the entire problem in the water sector has happened because of JJM, which has not per formed well in the past maybe 1.5 year and more than that.
Since March 2024, some problems has got accrued in this particular JJM scheme. Apart from this, if we talk about Namami Gange, if we talk about AMRUT, if we talk about the projects that we are getting like CETPs from the Industrial Development Corporation or the projects which are funded by multilateral agencies, there are no challenges at all and the projects are moving smoothly a nd the execution is being done.
If we talk about AMRUT scheme itself, there has been a flurry of projects since January 2025. And number of projects are available for bidding , even if you see our speech, Sanjay ji mentioned that around INR26,000 crore s projects are just on the verge which are being invited, and that is based on the guideli nes issued by AMRUT 2.0 itself.

It is a progress as mentioned in in its own circular on 3rd of February. So there are around INR26,000 crore s projects for which bids are available for which DPRs have been approve

d
and the projects are on the move. So basically, if we say the projects are coming even from the different government schemes , projects are moving, funds are being made available. So I don't foresee any challenges apart from the JJM.
Dinesh Kulkarni: Okay. That sounds some hope is there, I believe. Okay. So now, the next question is, sir, what kind of a capex we expect in maybe this year or next 2 years? Will it be because we are doing some renewables as well, right? So if you could just split that across business segments -- the total capital expenditure?
Manish Jain: First of all, if I talk about HAM projects, so HAM projects in our water -wastewater segment, I do have two HAM projects . One is at Mathura and one is Saharanpur. So basically, these are two projects for which definitely we'll be putting , some execution is going on and there will be some term loans which will get accrued in the books.
So the total quantum of loan that can get accrued is somewhere around INR120 crore s from Saharanpur and another INR40-odd crores , INR45-odd crores from Mathura. So basically, if I can just conclude FY '27, we can expect another INR150 crore s, INR 150-odd crores getting accrued from this HAM project and around INR10 crores plus INR80 crores so another INR100 crore s in the renewable segment which is visible at present. So maybe around another INR250 crore s can be an increase in the term loans in the next fina ncial year from the projects which we are in hand.
Dinesh Kulkarni: Okay, that's great, sir. So like I am specifically asking about capital expenditure, so that is INR250 crores is equivalent to the capital expenditure which company will incur capex?
Manish Jain: Basically, if I say about the capex, what I gave -- I am sorry, it is more of the term loan which I told you. So if I talk about the capital expenditure, so the part of capital expenditure which I am required to do is even Saharanpur and this Mathura we have already done. So there is hardly another INR100-odd crore s which I can foresee which can be the capex expenditure from our side.
Dinesh Kulkarni: Okay, so that inc ludes renewable as well, right?
Manish Jain: Yes, yes. That includes renewable based on the project present order book position , this could be the capex expenditure which can happen.
Dinesh Kulkarni: Okay, so that sounds great, sir. All t he best. Thank you very much.
Manish Jain: Thank you.

Moderator: Thank you. The next question comes from the line of Rahul Ranka from Kushal Investments . Please go ahead.
Rahul Ranka: Sir, what could be the return on equity which we can expect maybe this year ending and maybe the next year, if you can give some guidance on that?
Manish Jain: Just boss that INR230-odd crores, if that can be the PAT number, so we can expect return on equity to be somewhere around 18 % to 19%.
Rahul Ranka: Okay, sir. Thank you so much. Most of my questions are already answered.

Moderator: Thank you. The next question comes from the line of Vidhi Shah from CR Kothari & Sons . Please go ahead.

Prateek: This is Prateek , Vidhi Shah colleague. Sir, firstly want to congratulate you on a good set of margins that we've showcased. It is really pleasing, I understand it's a difficult time on the top -line front. But I think so lot of the questions got answered earlier. Sir, just some basic questions that I had, on the presentation we've seen that our order book ex of O&M stands at INR1,900 crores, and assuming on the water side?

I'm talking about, and assuming INR450 crores gets executed, we are left with something like INR1,450 crores available to us in hand. So INR1,450 crores is a base number plus about INR400 crores that you mentioned earlier. So INR1,800 crores kind of a top line looks doable for next year, sir? What is

your sense on that?

Manish Jain: Sir, I will again repeat . It will depend upon the order book that gets accrued in the next two months and going further as well. But we are more particular with respect to the order book which we get in the next two months. So based on that number, giving that guidance, if I say that I will grow at 35 to 40 -odd percentage CAGR, so that will make some sense if that order book is in hand. Other way around , it will just look to be a number.

So that is why I just requested . Let the order book be there in our hands . And then going for a guidance and maintaining our guidance will make a sense. Right now, just giving a number means that figure, definitely if I say on our part, we want to maintain those numbers. But for maintaining the number, I require the order book that should flow to the company. And quite hopeful that that number will be there.

Prateek: I mean, I was just talking from our present order book only that we've shown in the presentation. So I was just talking from there. This INR1,450 that will maybe remain with us, so that can we expect to get executed next year?

Manish Jain: Entire INR1,450 cannot get executed. I can expect 75% of that to get executed in the next financial.

Prateek: Understood. No, that's very helpful, sir. And last time , in the last call, we had mentioned we had bid for close to INR8,000 -odd crore s worth of projects plus this time I think another INR3,000 -odd crores in Bihar, etc etera , that we had mentioned. So, sir, what is the total number of bids that is happened, and how many of them have opened so far?

Manish Jain: I don't have the numbers there with me with respect to the number of bids. Basically, if that number of INR3,000 -odd crore s which I told you regarding Bihar, that is the figure which gets included in the INR8,000 crore s order book. There were some bids which got opened; either we are L1 in that or there are some bids where we have been higher. So the current figure which is available with us wherein the evaluation is going or we are having L1, so it is a ballpark figure of somewhere around INR5,000 crores.

Prateek: So ■5,000 crore s worth of bids we have submitted . This includes the INR3,000 of Bihar . Is that understanding correct?

Manish Jain: Yes, that is correct.

Prateek: Okay, sir. And traditionally, I think even...

Moderator: Sorry to interrupt, I would request you to rejoin the queue. The next question comes from the line of Meet Shah from Finance 360. Please go ahead.

Meet Shah: Thanks for the follow -up opportunity. Sir, my question was on the capital allocation front. If you look at our water treatment business is particularly B2G business, which is working capital intensive and we have many a times faced problems with the -- for releasing of funds from government end. So it's a working capital intensive. But now in the renewable, we are also doing the capex .

We are entering into business which is in a way capex heavy, like I think we have undertaken two plants and we are going to do INR100 crore s plus of capex I think you mentioned few minutes ago. So on one hand, our business -- one of our most important business is working capital intensive and second is capex heavy business. So how, I mean, we are going to manage the cash crunch which we are going to have?

Manish Jain: First of all, in our water and wastewater treatment business, as our guidance says and we are working on it as well, so we are targeting an OCF positive scenario. So that will give a cash flow, positive cash flows to the company. Now, if I look forward to the capex that we expect to do in the renewable segment, we had made it quite clear that we will -- from Enviro, there will be an investment of INR75 crore s only and there will not be any further investment.

If

you will see, no further investment has happened and we stick to our guidance as well, and there will not be any further investment at least going forward from Enviro to the renewable business. Now, the total funds which got accrued in renewable segment , it was INR75-odd

crores from Enviro along with another INR40-odd crores which was infused by myself, Sanjayji, and some of the shareholders further.

This fund along with the debt which we are taking for executing those projects, basically based on those, we are quite comfortable and that capex will be done. And we expect good healthy margins in those projects . And based on that, we will look forward to any further IPP if we would take. We have submitted our bids for some of the EPC projects in the renewable segment which includes wind and BESS as well.

So definitely, there will always be a mix of IPP and EPC in the renewable segment also, and we look forward to healthy profitability, healthy top line in the renewable segment. So both the segments will move independently . There will be a separate working capital lines made available for the renewable s, separate funding lines, working capital lines for the main water and wastewater business.

Moderator: Thank you. The next question comes from the line of Kishore Jasotani, an Individual Investor. Please go ahead.

Kishore Jasotani: Hello, sir. Sir, if we look at the last three years' budget of the government or last five years' budget of the government in all these water sector schemes, there is hardly any growth in the budget, if we look at it from the three years' viewpoint. So sir , is the sector moderating in terms of growth? Like how are we targeting 30 %, 35% CAGR if the sector is itself not growing that fast?

Manish Jain: If you see, there was a sharp increase in the government expenditure in various schemes. So as we see, the expenditure is of a continuous nature which is happening in all these different schemes. And based on this, the projects are getting executed and new projects are coming up. So to our understanding, healthy projects are available for bidding. And there is a sudden jump in the AMRUT projects' visibility.

So we can look forward to the expenditures getting increased in the further years. Because at present , the projects are being invited, so there will be a point of time when almost all the projects will be moving for execution. At that point of time, a higher budgetary expenditure will be required . And to our understanding, we also look forward to that expenditure getting increased in that particular scheme.

Moderator: Thank you. The next question comes from the line of Vidhi from CR Kothari and Sons. Please go ahead.

Prateek: Sir, Prateek again, Vidhi 's colleague. Just earlier to my just a follow -up question, sir. So we continue to maintain a similar EBITDA margin guid eline for the next year, right , 22% to 24%, or do you think that will also again be in line with what we've done this quarter, last quarter, so in the 26 to 27 kind of a range? So any outlook?

Manish Jain: We will never change our guidance . We will never change at least the guidance. The guidance will always be in that range itself.

Prateek: Understood, sir. And just I think you would have answered this earlier also, but any timelines on when this order win will be announced?

Manish Jain: That is why I am telling you…

Prateek: Any percentage of the INR5,000 crores that we've bid, sir, our confidence as to what kind of orders we can win? Because I think traditionally , we had mentioned somewhere in previous calls about 30 -odd percent was our win rate earlier. So can we expect a similar win rate, or what is your sense?

Manish Jain: We have lowered our win rate as our guidance, and even if we expect 20 %-25% to be our win rate, we will well cross that guidance of INR1,000 crore s. And then definitely new projects are always available. So we look forward to good margins. We can just lower the margins and we can increase our win rate . So it is not our requirement or mandate at all.

We want to maintain our margins as well. If I have to maintain a cut -off level where my margins should remain secured, so there can be a reduction, and that is why we will also expect a lower success rate . But definitely , the margin profile that should remain maintained.

Moderator: Thank you. The next question comes from the line of Madhu from MD Advisors. Please go ahead.

Madhu: I just have a normal basic two questions. So my first question is, sir, the stock has been almost fallen like almost 50% from the all -time highs side. So do you have any plans to increase the stake further? So this is my first question. And second thing, s ir, like for the top -line guidance regarding revenue, you have given like more than 30%, right? So how confident are you to

achieve this in Q4?
Manish Jain: Regarding the stock performance ; basically, I can control the business and I can control the profitability business going forward. So the stock performance is really dependent to all my investors. So this is what I can say. Our stake in the company is more than 70%. So at least as of now, we don't look forward to increasing our stake in the company.
And your next question regarding the top line , I have already given all the guidance how the movement should go, and we remain quite confident. Because when I am reinstating the number, so I need to be quite confident and comfortable that this will be achievable . Based on this I have given that guidance how the numbers will pan out in the current financial year and look forward to maintaining these numbers.

Madhu: So we can assume like Q4 numbers would be much better than street expectations, right?
Manish Jain: I don't know the street expectations at all. I am giving the number s which is achievable on behalf of the company.
Moderator: Thank you. Ladies and gentlemen, in the interest of time, we would take that as the last question. For further queries, please contact the Investor Relations team. I would now like to hand the conference over to Mr. Manish Jain for the closing remarks.
Manish Jain: Thank you all once again for taking the time to join us on call today. We are well -positioned to capitalize on the upcoming opportunities and remain cautiously optimistic for the near and mid-term. Our aim remains to grow and generate sustainable values to all our stakeholders. I am thankful to all of you for joining this earning s call.
Moderator: Thank you, sir. Ladies and gentlemen, on behalf of Enviro Infra Engineers , that concludes this conference call. Thank you for joining us, and you may now disconnect your lines.

Sub: Transcript of the Conference Call for Analysts and Investors held on 29th May, 2026

Dear Sir/ Madam,

In compliance to Regulation 30 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, we have attached herewith transcript of the Earnings Conference Call for Analysts and Investors held on Friday, 29th May, 2026.

The same will also be hosted on the Company's website at www.eiel.in .

You are requested to take the same on your records.

Yours faithfully,

For Enviro Infra Engineers Limited

"Enviro Infra Engineers Limited
Q4 & FY26 Earnings Conference Call"
May 29, 2026

MANAGEMENT : MR. SANJAY JAIN – CHAIRMAN AND WHOLE-TIME DIRECTOR – ENVIRO INFRA ENGINEERS LIMITED
MR. MANISH JAIN – MANAGING DIRECTOR – ENVIRO INFRA ENGINEERS LIMITED
ADFACTORS PR – INVESTOR RELATIONS TEAM

Moderator: Ladies and gentlemen, good day and welcome to the Enviro Infra Engineers Limited Q4 and FY26 Earnings Conference Call. This conference call may contain forward-looking statements about the Company, which are based on the beliefs, opinions, and expectations

of the company as on the date of this call. These statements are not the guarantees of future performance and involve risks and uncertainties that are difficult to predict.
As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then 0 on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Sanjay Jain, Chairman and Whole-time Director. Thank you and over to you, sir.
Sanjay Jain: Thank you. Good afternoon, everyone, and thank you for joining us today. I would like to welcome you all to our Q4 and full year FY26 earnings call. Joining me with today are Mr. Manish Jain, our Managing Director, and Adfactors, our Investor Relations team. We have shared our earnings presentation, and I hope you have had the opportunity to review it. On behalf of the entire team, I am pleased to share our progress and key developments during FY26.
FY26 has been an important year for Enviro Infra as we continue to strengthen our position in the water and wastewater infrastructure sector, while diversifying into the renewable energy platform. Our core business remains focused on delivering high-quality water and wastewater treatment infrastructure across the country.
During the year, we completed several key projects and continued to enhance our capabilities in advanced wastewater treatment technologies and sustainable infrastructure solutions. We also maintained our focus on integrating waste-to-energy initiatives where feasible, reinforcing our commitment to environmental sustainability.

The year also witnessed a meaningful improvement in our order book position, while order finalization timelines across the sector remained longer than anticipated due to extended bid evaluation processes. We continued to secure quality projects and expand our presence across key geographies.
Alongside our core business, we took measured steps toward diversification into the renewable energy sector. Through our renewable energy platform, we have established a presence across solar, wind, and Battery Energy Storage Systems, BESS, reflecting our long-term strategy of building a broader environmental infrastructure platform.
A significant milestone during the year was the acquisition of Suyog Urja Limited, a wind EPC company. This acquisition strengthens our execution capabilities in the renewable energy segment and provides access to an experienced team with a strong track record in project delivery.
In addition, we secured multiple BESS projects and expanded our participation in emerging opportunities within the energy storage ecosystem. Importantly, our approach toward diversification remains disciplined and complementary to our existing strengths.
We believe the convergence of water infrastructure, renewable energy, energy efficiency, and environmental sustainability will create significant opportunities over the coming years, and we are positioning ourselves to participate meaningfully in the transition. Additionally, the company has strengthened its leadership structure by appointing dedicated business heads for each division and has a renewable energy team of over 250 professionals led by experienced industry veterans with expertise across the renewable energy value chain.
Looking ahead, we remain focused on disciplined execution, prudent capital al

location, and sustainable value creation. With a healthy order book and growing opportunities across both water infrastructure and renewable energy, we believe Enviro Infra Engineers is well-positioned to deliver long-term growth while maintaining operational excellence.

With that, I would now like to hand over the call to Mr. Manish Jain, who will take you through the key operational developments and financial performance for the year. Over to you, Mr. Manish.

Manish Jain: Thank you, Sanjay sir. On the order book and execution front, our total order book has surged to over INR6,814 crores, providing robust revenue visibility over the next 24 months. This comprises of water and wastewater execution order book of over INR2,733 crores, operation and maintenance order book of over INR951 crores from these water and wastewater projects. In the Renewable segment, the execution order book is over INR2,051 crores, and the O&M and IPP under the renewable segment is INR1,079 crores.

Some of the most recent additions in our order book include: in Q4, we have secured a major INR348 crores project from BUIDCO, Bihar Urban Infrastructure Development Corporation and 2 sanitation projects in Pune and Nashik, which are worth INR824 crores. It is a Swachh Bharat Mission project.

We secured 4 BESS projects from NTPC. These are EPC projects having a combined capacity of 930 megawatt-hour, and the value is approximately INR1,070 crores. These projects are in Uttar Pradesh, Assam, Karnataka, and Telangana, along with our recent acquisition of a 150 megawatt-hour BESS project in Bihar. This positions us as a first mover in India's 90 gigawatt battery storage pipeline.

As we look ahead, the opportunity before us is of consistent execution, disciplined growth, and long-term value creation. Backed by sectoral tailwinds and our execution readiness, strengthened further by our strategic pivot into energy storage and renewable integration, we remain confident in our ability to translate these opportunities into a robust order book, stable margins, and sustainable returns for all stakeholders.

With the strategic transformation that the company is undergoing, we believe Enviro Infra Engineers is uniquely positioned to benefit from the convergence of urban infrastructure, wastewater treatment, and the transition toward a flexible green grid. With an all-time high order book

of over INR6,814 crores and improving execution momentum across our diverse segments, we remain focused on delivering long-term value and operational excellence throughout FY27 and beyond.

Now coming to our financial performance. In Q4 FY26, our revenue from operations stood at INR4,273 million, representing a growth of 8.8% year-on-year. EBITDA stood at INR799 million, while the EBITDA margin came in at 18.7%. PAT for the quarter was INR543 million with PAT margin at 12.4%, bearing the impact of higher execution and operational costs during the year.

For the full year, our revenue reached INR11,456 million, a growth of 7.5% year-on-year, backed by consistent momentum in the project conversion and our strategic foray into renewable segments. EBITDA for the full year improved by 3.4% to INR2,768 million with a margin of 24.2%. Consequently, PAT for FY26 was reported at INR1,884 million with a margin of 15.9%. These results underscore our ability to scale profitably while maintaining a healthy balance sheet. This is all from our side. We can now open the floor for questions.

Moderator: Thank you very much. We will now begin the question-and-answer session. The first question is from the line of Jainam Jain from DAM Capital. Please go ahead.

Jainam Jain: Thank you for the opportunity. Sir my first question is, what is the total project cost per MLD in general within the industry for sewage treatm

ent

plants, effluent treatment plants, and wastewater treatment plants and water treatment plants?

Manish Jain: In general, the per MLD costing for a sewage treatment plant comes in the range of INR1 crores to INR1.5 crores, depending upon the specification and the characteristics. In case of common effluent treatment plants, it is very difficult to generalize because it all depends upon the type of industry for which that particular common effluent treatment plant is to be put up.

So the value may vary even from INR2 crores, INR2.5 crores per MLD to maybe somewhere around INR10 crores, INR15 crores per MLD as well. So it cannot be a generalization at all. In case of a water treatment

plant, generally, the values are in the range of INR30 lakh to INR50 lakh per MLD.

Jainam Jain: Okay. And in, sir, common effluent treatment plants, is there an industry in which there is a lower end on the INR2 crores side or any specific industry in which the project cost comes to around INR10 crores?

Manish Jain: Kindly, can you repeat the question, please?

Jainam Jain: So you said that there is -- it's very difficult to give a range specifically for CETP plants. So is there any specific industry in which the cost comes on the lower end and for specific industries the cost comes on the higher end?

Manish Jain: Basically, if a common effluent treatment plant is coming for a dry type of industry where there is no specific -- it is just a generalized process, then definitely the cost will come down. It is more of a sewage treatment plant just like a system which is to be operated. If you are talking about textile, if we are talking about the ZLD systems, if you are talking about the food industry, if you are talking about metal processing or a petrochemical industry, so everyone is having a different characteristic.

Based on that inlet characteristic, then the entire plant is designed.

Then we work out the financial cost, what exactly is the costing and the margins that we built up, and then exactly we come around what exactly can be the cost like. So just for a very crude generalization, I can just say INR3 crores to INR5 crores can be a per MLD cost, but it is just a generalization. It will not hold good in case of common effluent treatment plants.

Jainam Jain: Okay. And sir, out of this total project cost, like what is the percentage of the EPC component and the tech component? And how does this change for the different technologies -- or for the different types of plants?

Manish Jain: You are asking about the CETPs only?

Jainam Jain: Sorry. No, no, for all the treatment plants.

Manish Jain: Presently, the way the bidding is being done in India, in general, water treatment plants and common effluent treatment plants are generally coming in EPC mode. There are some projects in sewage treatment plants which are coming under HAM mode. It is either EPC or HAM mode.

But going forward, we can look forward to the opportunities since this water from a sewage treatment plant, or if it is a ZLD system, then the treated water from a CETP is required to be recirculated to the industry.

So it can definitely become a revenue stream. The models are -- it is at a preliminary stage, but the models are coming. So a revenue generation model can come up. So the project can either be EPC or can go for a BOT as well.

Jainam Jain: Okay. And sir, you gave me the range of the project cost per MLD for STP, CETP. So like the majority cost is on the EPC side, or is there any major cost incurred on the tech side as well? Because as far as what I understand in desalination plants, the tech percentage quite increases significantly. So how is it there in all these 3 types of treatment plants?

Manish Jain: There is always a tech component in all different, all type of plants. In case of STP

s, it is the technology, the biological reactor on which we
are designing the system, and then the choice of equipment as well. So
with the -- there are different types of equipment which are available,
and based on their efficiency, the cost, the capex can go for a change.
So, it is definitely a tech side where we say a right mix of different types
of technologies and the equipment that plays a major role in case of a
sewage treatment plant and a common effluent treatment plant. That is
definitely one of the most complex of all the systems. So that designing
in itself is -- that is difficult, and the tech side definitely takes a lot of
effort in designing and completion of a common effluent treatment plant.
Jainam Jain: Okay. And in the water treatment plants, the tech percentage is lower?
Manish Jain: Comparatively lower. It is more of the civil work. It is not that tech-savvy
or too tech-heavy, what I can say. In that case, it is more on the
management side or constructing of a bigger water treatment plant. So
basically, on the water side, if it is a general conventional type of water

treatment plant, definitely that will not be very tech-heavy. If we are
going for desalination plants or some these type of plants, so definitely
at that point of time, that tech component comes into picture.
Jainam Jain: Okay. So would you give any percentage of the total project cost which
would go on the tech side for all these 3 type of treatment plants? In
general, a rough number.
Manish Jain: If I say any of the project on turnkey basis, so the designing in itself
constitutes 2% to 5% of the total turnkey project values. And then it is
the civil, mechanical, electrical, instrumentation works which are carried
out. So designing component can be 2% to 5%. If we are going for
desalination plant, definitely the turnkey project size will increase, and
it will again be -- the designing component will be to that extent.
Moderator: Thank you. Next question is from the line of Manish Choraghe from
Keynote Capital. Please go ahead.
Manish Choraghe: Hello, Manishji. So last year, we had given a guidance of 35% growth
in topline, and that we did not meet. And if we look at the Q4 margins,
that are the weakest margins. So are we facing any execution delays in
the business?
Manish Jain: First of all, with respect to the projects which have come into the
physical execution, definitely there are no delays at all. The projects are
moving smoothly, and we are executing on the projects on the fastest
possible mode.
In the last financial year, as on 1st of April 2025, we were having an
order book of around INR1,200 crores. However, we were having a
strong bid pipeline. We were expecting a faster evaluation and
conversion into order.
We got some orders, but the entire order book that we were envisaging,
we were expecting that we will be in a position to grab all the projects
quite fast. However, the process got elongated. Furthermore, there was
some project in the month of November-December where we were L1,
we were expecting the project, however, it had gone into a re-bidding.

So the delay, a partial delay in the evaluation process, this is one of the
factors. And some of the projects that we bagged, it was around August
when we bagged some projects which remained in the designing stage.
So the revenue could not be generated from these projects. There are
2 specific projects, let me tell you: one is an MIDC, CETP, ZLD project,
and then there were 2 Bangalore projects where the designing process
had gone slow or the approval process did take time.
So the execution could not happen in these projects. So this is a reason
where the projects remained on the designing stage and it could not
come into the execution pipe. That is why we have missed the revenue
guidance which we pro

jected.
One more point I would like to emphasize is, since at the start it was

only INR1,200 crores order book which was available with us, right now the conversion we have done is INR1,145-odd crores. So if we see, the conversion rate seems to be somewhere around 95%. However, the replication of the orders and that conversion into revenues, that has taken time. So because of this, we have partially missed our revenue guidelines for the year.

If I talk about the present, since our order book even now has become quite exciting, it is at INR4,800 crores for the entire execution order book, and the further split is INR2,700-odd crores from water and wastewater segment and INR2,050-odd crores from the renewables. So we are just projecting a topline of INR2,000-odd crores, which will replicate into a conversion of somewhere around 42%. So we are trying ourselves to be just too conservative this time so that there is no fallback at all.

One more point that you asked is with respect to the margins which have gone down. As I have time and again mentioned, it is the mix of the projects which we are executing. So there was a component of around INR100 crores, INR120 crores which has come from the renewable side, and since these were IPP, so there was practically no margin in that particular execution, because of which it looks that there is some gap in the margin.

Furthermore, if you can just go through the details we have shared, the cost of manufacturing has gone down. It has not gone up; it has gone down. It has gone down by around 1 percentage point. But there is a slight increase in the employee cost, which has increased to somewhere around 6% for this financial year. And then other expenses, which has increased to 3.5% of the revenues. There is a provision of expected credit loss, which is as per Ind AS which we have to book.

So if we see into all these factors, so I can say the margin compression exactly is not there, but definitely as per the audited balance sheet and P&L, it looks like there is margin compression. Overall, year if you will look into, the EBITDA margins are again more 24% and above. So at the margin side, I will not say there is any compression at all, but revenue side, definitely there has been -- there is some execution parts which we could not do and the guidance could not be adhered to.

Manish Choraghe: Okay. And my second question is, if we look at the current order book, if I'm not wrong, around 35% to 40% order book is coming from energy, I mean, Renewable segment. So till last year, we have been a pure-play water treatment company. How do we look at the company going forward? And what is the margin profile in this BESS segment?

Manish Jain: If we look into the future, we are strengthening our position in the water and wastewater treatment segment. If you will see the earnings -- this release, media release, there are 4 projects which we have completed which have given a lot of strength to the company, out of which one of the project is a 100 MLD STP at Jodhpur. The entire process has been upgraded on IFAS system, which is one of the biological reactors. Along with this, we have gone for the power generation from biogas and then for disinfection, we have gone for ultra-filtration systems.

The second project is a 55 MLD STP at Varanasi, where a substantial portion of the electricity requirement has been offset by an innovative way of placing the solar cells on the top of the reactor. This has been done for the first time in India and it has been well acknowledged by NMCG as well. The other project is a 25 MLD CETP at Sarigam, then a 30 MLD STP at Bhiwadi.

So basically, when I say all this, what I want to project is that we are increasing our pre-qualification capabilities for the complex wastewater treatment plan ts and we are getting eligible for higher and higher capacities. So this is how we are strengthening ourselves in the wastewater treatment segment and we are increasing our geographical presence as well.

Now the second segment, which is renewable, which we started in the last year. See, sustainability was the key motto of the company, and as I said, this waste-to-energy and solar integration we were doing as a part of our project. So based on our previous experience in this sector, we entered into it.

We do have some solar assets with us, which we acquired. Then we got a prestigious project -- it is a combination of 4 projects, 930 megawatt-hour from NTPC, for which the work has started. We have gone for the acquisition for one of the BESS projects of 150 megawatt-hour, and then the acquisition of Suyog for wind EPC projects.

So within a year's time, we started this renewable company and at the same time, we have built up the order book to the extent of INR2,050-odd crores rupees. Whenever we will try to present ourselves, we will give the segmental revenues separately, so the segmental profitability that would be clearly visible to everyone.

On the whole, if I say INR2,000 crores is the visibility, somewhere around INR1,350 crores is what we are expecting from the water and wastewater treatment sector and INR650 crores is what we look forward to as the topline from the Renewable segment.

So the combined -- for this combined, I do understand that the profitability can be at a level of somewhere around 14%, so INR270 crores to INR280 crores can be the PAT number, which we will look forward to on a topline of INR2,000-odd crores.

There is one geopolitical global crisis which has happened, due to which some costs have also gone for a rise. So there will be a pressure, maybe to an extent of 1 to 2 percentage points. So taking into account all these factors, we have come up with this version that a topline of

around INR2,000 crores with PAT number somewhere around 13.5% to 14% what we can look forward for FY27.

Manish Choraghe: Okay. And would you be able to give a specific margin profile for BESS business?

Manish Jain: Okay. In the BESS business, which is EPC, we will expect PAT margin somewhere in the range of 10%. Because of this issue, since we will be importing the lithium-ion battery cells, so the prices have increased. So at present, we are going ahead for doing the BOS, which says the civil works, the transformer, all the electrical HT lines. So this is the work where we have already started, the design works have started, the mobilization has started.

We will delay the procurement of lithium-ion battery to a certain extent so the prices get settled down, and at that point of time, we'll go for the procurement. But at least at this point of time, we can say with the present cost as well, the margin seems to be somewhere in the range of 10%.

Manish Choraghe: All right. Thank you, sir. That's it from my side.

Manish Jain: Thanks a lot.

Moderator: Thank you. Next question is from the line of Darshil Jhaveri from Crown Capital. Please go ahead.

Darshil Jhaveri: Hello, good evening. Am I audible?

Manish Jain: Yes, yes, you are audible, please.

Darshil Jhaveri: Yes, hi sir. Thank you so much for letting me take a question. Sir, I didn't get the margin that you were saying that INR100 crores was from IPP which led to a lower margin, because even in Q3, we were very confident of being able to do INR230 crores of PAT, right? And that call would have been happening in January and February. So then what changed?

Because sir, that is just sometimes then -- because that’s a significant difference that we are planning in February and right now, right sir? So

could you explain the margin compression that happened? Like what -
- and is this the r

ate that of margin should we expect going forward, sir?
In water and renewable, what should be the margins that we should
assume, sir?
Manish Jain: If you will see our media release, the employee cost has gone up to an
extent of 6%. So there is an increase of around 1.5% in respect of the
revenues. So the employee -- when the employee cost has increased,
the conversion of the projects -- the projects were under mobilization,
but they remained in the design stage. So the cost got built up in that
year.
However, the projects have now got started, so the revenue recognition
and the profitability, that will get accrued in the current financial year.
So if the cost of manufacturing -- the positive side is the cost of
manufacturing has not gone high, rather it has dipped.
The other factors are basically the other expenses as I mentioned right
now. A ECL provision of INR10 crores has been booked. There has
been a substantial increase in the depreciation. Since we have gone for
the procurement of various equipment for the construction, so the
depreciation cost has also gone high. These factors, if you combine
this, the depreciation amount is I think INR25 crores and the ECL
provision is INR10 crores. So what I mean to say is basically if you --
we can just reconcile these factors, the margin profile has not gone
down.
I will admit the point that the revenue, the revenue guidance has gone
down. It -- we could not match the guidance which we had projected.
But on the profitability front, definitely the compression seems to be
there in Q4 since the expenses have gone high and we were on the
verge of -- we had mobilized the projects, but these did not transpire
into revenues.
So as such, I can confirm with respect to the execution, the delay was
not there. Now the projects have come into execution and the margin
profile definitely will remain to be in the same range. However, for the

global crisis, I am reducing my EBITDA guidance to somewhere around
21% to 22%, which was earlier 22% to 24%.
Darshil Jhaveri: Okay, okay sir. So now the EBITDA is around 21%-22%. So would it be
like in Q1, Q2 it would be a lower EBITDA and Q3, Q4 it will be a bit
normalized EBITDA, so then the blended comes? Or how do you see
it, sir, going forward? Like if you could -- I would not want a granular
detail, but just like some color that, you know, H1 would be a bit lower
margins and H2 could be higher, or how would you explain, sir?
Manish Jain: It all depends upon how the situation pans out. At least at present, the
pricing of the commodities or the raw materials which are we are
procuring, that has gone high to an extent. So it may impact certain
profitability. If the situation gets stabilized, as we are listening time and
again that some agreement is happening between the 2 sides, and if it
happens and the things get stabilized, definitely the prices will also get
settled down and then it can replicate into the profitability. As of now, if
what I can foresee is a 1% to 2% dip can be possible, but I don't foresee
that it will be a bigger hit at all from this number.
Darshil Jhaveri: Okay, okay, fair enough, sir. And sir, with regards to our, you know,
debt, what is the level of debt that, you know, we are comfortable with,
like in going forward, sir? As our interest cost is also inching up a bit
higher, so what do you feel going forward, what can be our peak debt?
And what is the average cost of debt, sir, for us?
Manish Jain: Right now, I am pleased to confirm that the finance cost has not gone
high, rather it has dipped from the last financial year. The total debt in
the books right now is to the tune of INR422 crores, out of which the
long-term debt which is paired to the assets or term loans HAM project,
it is INR250 crores and short-term loan is somewhere around INR175

crores, and which is also a part of CC which is utilized at s

ome point of
time and the touch limit.
So the ultimate finance cost has come down. The present debt level is 0.34. We do understand that maximum, and if I talk about all the extremes, a 1:1 debt level is we would not like to cross at any point of time. At this juncture, we also look forward to, since we do have a

number of assets available with us, so at a certain stage, if we see that we are going a bit heavy, we'll be offloading and we'll be going for the monetization of the assets.
So at this juncture, at this point of time, we can just confirm that 1:1 is the maximum possible level beyond which we would not like to go as a consolidated books as well. So that we'll keep a check on the development projects in the renewable segment as well.
Darshil Jhaveri: Okay, okay. Yes, I have more questions, I'll get back in the line. Thank you so much, sir.
Manish Jain: Thank you.
Moderator: Thank you. Next question is from the line of Prateek Bhandari from AART Ventures. Please go ahead.
Prateek Bhandari: Hello.
Moderator: Yes, you are audible.
Prateek Bhandari: Yes, hi sir. Thanks for the opportunity. A couple of questions from my side. First, if you could give the split of this, you know, INR1,146-odd crores, how much of it was from the renewable side during the year and during the quarter in particular?
Manish Jain: I think it is around INR120 crores from the renewable side.
Prateek Bhandari: And during fourth quarter it was?
Manish Jain: Just a minute, please. In the fourth quarter, it is INR117 crores. In the fourth quarter, INR117 crores, and for the entire financial year, it is INR129 crores.
Prateek Bhandari: INR117 for the fourth quarter and INR129 for the fourth quarter.
Manish Jain: For the entire financial year. So there was hardly INR12 crores which we had done till December, and INR117 crores is what we have done in Q4 from the renewables.

Prateek Bhandari: Okay. So when you were talking about a INR2,000 crores of topline, that suggests a 75% growth on FY26 topline number.
Manish Jain: Boss you cannot see it from that angle that since the Renewable segment has been started only 1 year ago, and the first project has come in August which we acquired. So the number pairing right now will not look right, rather the level at which the order book is available and then the conversion of that order book into revenues, I think that will make more sense.
Prateek Bhandari: Okay. And what would be the order inflow guidance for FY27?
Manish Jain: For FY27, we would look forward to at least INR2,500 crores further order book.
Prateek Bhandari: Okay. And what is the current bid pipeline like?
Manish Jain: Current bid pipeline as of now is somewhere around -- the bid pipeline where we have submitted our bid is somewhere around INR1,200 crores, and the projects for which bidding is to happen where we are interested, it is somewhere around INR5,000 crores further.
Prateek Bhandari: INR5,000 crores.
Manish Jain: Yes.
Prateek Bhandari: And just if you can throw some light on the working capital because it has stretched a bit, and we targeted it around 95 to 100-odd days. So if you can throw some light on the working capital.
Manish Jain: You are 100% right. This time around, the working capital has got stretched to 166 days. The main reason this time has been during the -
- during any of the financial years, we expected if there is any fund

which is not released, get released by March. We are doing AMRUT
projects across 5-6 states. The problem remained that this time around,
the funds didn't get released from the AMRUT projects. I was executing
the projects in Chhattisgarh, then MP, Rajasthan, Haryana, and Punjab.
Predominantly from these states, I was having the various AMRUT
projects. So we didn't stop our projects or we had gone slow. We kept

the momentum going, and our projects are still moving at the same level
itself.
This has led to an increase in the UBR days. Basically, I cannot go for
raising the invoices or the GST invoice cannot be raised. So if you will
see, the receivable days have come down to 53, however, the UBR
days have increased substantially to 195 days. And the net working
capital cycle is 166 days.
The positive side is the funds from Chhattisgarh have got released. We
have got the confirmation that the funds are now coming in Rajasthan,
Haryana, MP as well. So I look forward to that the situation should get
eased out very soon.
Prateek Bhandari: All right. And just one last question on this EBITDA margins that you
have lowered the guidance to 20%, 21% from earlier it…
Manish Jain: 21%, 22%. 21% to 22%.
Prateek Bhandari: In the range of 21% to 22%.
Manish Jain: Yes.
Prateek Bhandari: Okay. And so do we see that normalization of working capital days
happening in FY27? And if yes, up to what levels?
Manish Jain: Definitely. For me, as we understand, the working capital cycle should
come down to somewhere around 90 days, which is a prudent working
capital cycle. So I need to reduce these number of working capital days,
and for this, the conversion of this UBR is required. We are on it, and
we understand that the moment these funds are released, we'll be a lot
more relieved.
And apart from this, still the cash position in the company is at a
comfortable level. That is why we have not slowed down any of the
projects. There are instances where the project is for 2 years, we are
expecting the completion within 13-14 months' time itself, and the
project is complete to an extent of 70% and the funds that we have got
is hardly 10% to 15%.

So there is a huge, huge gap in 3 to 4 projects like this. So we are
working on it and we are completing the project, and at the same time,
we are chasing the departments for the release of the funds as well.
Prateek Bhandari: And you mentioned about the unbilled revenue, which is stretched. So
it is currently at what levels?
Manish Jain: Currently, the unbilled UBR days are 195 days. Let me give you the
split; inventory days are 11, receivable days are 53, UBR days are 195,
creditor days are 92, so the net working capital cycle is 166.
Prateek Bhandari: 156 or 166?
Manish Jain: 166.
Prateek Bhandari: All right, all right. Okay, thanks.
Manish Jain: Thank you.
Moderator: Thank you. Next question is from the line of Vidhi Shah from CR Kothari
and Sons. Please go ahead.
Vidhi Shah: Good afternoon, sir. Sir, firstly, I would like to understand, for our
contracts, are these fixed-price contracts or we can pass on the cost
increase to the customer?
Manish Jain: In maximum of the contracts, it is a price variation clause which is
applicable. So a part of the cost increase will definitely get offset with
the price variation clause. However, it does not take into account the
entire price increase in the market. So to that extent, we are required to

lower our guidance. So this is how the thing goes.
Vidhi Shah: Okay, understood. So sir, given the cost escalation that we are facing currently, so are we willing to forgo or postpone any project execution for the same? And how much of the current order book are we looking to execute in FY27?
Manish Jain: No, we are not going slow at all in the execution of any of the projects. It is just a matter of time that we can defer buying of some of the equipment, just waiting like I confirmed for BESS. We will defer

purchase of the lithium-ion battery, rather we will go for rest of all the equipment and the execution.
So we are not slowing down at all. We will just defer the supply to certain months where we can just see the prices get stabilize

d and then we can
procure it. However, during the financial year, we will not go slow down, rather we will move ahead.
Vidhi Shah: Understood. And how much order book execution are we looking for FY27?
Manish Jain: We are looking forward to a top line of around INR2,000 crores.
Vidhi Shah: All right. That's my question. Thank you and all the best to you.
Manish Jain: Welcome.
Moderator: Thank you. Next question is from the line of Aditya from Morde Foods and Private Limited. Please go ahead.
Aditya: Good evening, sir. Am I audible?
Manish Jain: Yes, audible.
Aditya: Yes, apologies if the question has already been addressed. I just wanted to request you to throw some light on the re-bidding of orders that took place in the…
Moderator: I'm sorry to interrupt, Aditya. Your voice is muffled. Can you use your handset mode, please?
Aditya: Am I audible now?
Moderator: Still, your voice is muffled.
Manish Jain: Aditya, you can go on. There is some roominess which is coming, but you can just complete your question.
Moderator: Sir, we have lost the connection for Aditya. So we will take the next question from the line of Darshil Jhaveri from Crown Capital. Please go ahead.

Darshil Jhaveri: Hello, thank you so much for letting me ask a question again, sir. Sir, just wanted to understand, like, that, you know, we're planning to convert like nearly half of the order book this year. So going forward, sir, what do you feel, sir, year-on-year growth, how will it be? Because this year we'll have a massive growth.
Next year, how do you feel, sir, will go on? And sir, also with regards to, we have a decent size O&M and, you know, book of maintenance. So what is the margin looking like in that segment, sir? Will it start contributing more, you know, going forward? So how will that, you know, help us, sir?
Manish Jain: Right. You asked a very right question. Basically, if you see the total order book right now stands at INR4,800 crores. So even if we go by the present number only, so it covers at least 2 financial years, that is FY27 and then 2028, along with the decent growth in the company. This entire order book is required to be executed over a period of 2 years.
So INR4,800 crores gives the visibility clearly for 2 financial years.
The operation and maintenance order book for wastewater treatment projects is INR950-odd crores, and then for that IPP income or renewable projects O&M, that is INR1,000 crores. Right now, as the executions are continuing in the wastewater treatment segment as well, on a year-on-year basis, the O&M values, these are increasing and the margins are comparatively higher in comparison to execution.

However, the O&M values, if I talk about only the water-wastewater treatment, then it forms 3% to 5% of the total revenues. So in absolute terms, definitely the amount of O&M revenues that will increase on year-on-year basis. Apart from this, the IPP income, that will also generate very decent IRR in future. So with this increase, the absolute returns in terms from the O&M for both water-wastewater treatment segment as well as the IPP income and O&M of renewable, definitely the profitability on absolute terms will get higher from the O&M business as well.

Darshil Jhaveri: Okay. Okay, got it. And sir, just wanted to understand any, you know, capex addition that, you know, we have to do for the next year or

something because of our order book also increasing? So any kind of, you know, plans for extra capex, sir?

Manish Jain: The capex plan for execution of our projects, as we start any new project, there can be a equipment requirement of INR4 crores, INR5 crores in general. So first of all, if there can be any repetition, then we will go for the repetition. And if it is at all required to further buy if th

e

equipment are not free and these are engaged in some other project, then we go for purchase.

So we don't see any major capex going on. Apart from the capex which we have done in the last financial year, but I think it can be to the tune of INR20 crores, INR30-odd crores, not more than that. So I don't think that it will be a bigger amount in terms of capex.

Darshil Jhaveri: Okay, okay. Great, great, sir. Yeah, yeah, that's it from my side. Thank you so much, sir.

Manish Jain: Thank you.

Moderator: Thank you. We will take our next question from the line of Atul Kumar, an Individual Investor. Please go ahead.

Atul Kumar: Hello, sir. Congratulations on the diversification efforts that you guys have done throughout the year to get our presence in renewable sector. So that is definitely good for the long term. So most of my questions are answered, but a few things that I wanted to understand.

I think you mentioned that total INR4,800 crores order book needs to be executed in the coming two years. And you've given a guidance for FY27, but if I would like to understand what sort of top and bottom line we should be expecting in FY28, would you be able to give some color on that?

Manish Jain: We have always projected a top line growth in the range of 35% to 40%. So if I can project FY28 order book, which will be—which will come from the balance of the current order book, which will be INR2,800 crores. So that can be a revenue guidance, or I can be a bit selective further that instead of INR2,800 crores, it can be somewhere around INR2,500

crores to INR2,600 crores on a conservative basis. So this is how we can look forward to growing at that rate even in FY28 as well. Based on the current order book positions, we are sitting at a comfortable level. So FY27 and ‘28 visibility is quite clear on the current order book position itself.

Atul Kumar: Okay. That's good. And FY27 also, you mentioned that it's a conservative guidance by giving for 2,000, so chances could be for upward revision but mostly not for downward revision.

Manish Jain: The downward revision what could have happened that I have mentioned because of the global crisis which can happen, so a 1% to 2% EBITDA downward which can happen. And it will all depend upon the entire financial year how the situation goes. So if the things get settled down and the prices get eased out, definitely then there will not be any compression which we can see.

Atul Kumar: Okay, okay, cool. And also sir, I wanted to understand since we are already two months into Q1, so can you give us some light on how are we moving ahead in Q1 with just one month left, what sort of top and bottom line we should be heading towards?

Manish Jain: Last year we did somewhere around INR250 crores in Q1. The present position will be much better even despite the global crisis which is ongoing. So our numbers seem to be much better in comparison to Q1 of the last financial year.

Atul Kumar: Okay, okay.

Manish Jain: I would not like to put any number right now. It will be much better to conclude the quarter. However, the movement in the project is smooth and we are expecting—because there are three companies now: one is the parent Enviro Infra Engineers Limited, second one is Renewable, and third one is Suyog where the wind EPC projects are being undertaken. So a combined top line, we understand it will be good enough.

Atul Kumar: Okay, okay. And sir, you said the current...

Moderator: I'm sorry to interrupt, Atul. You may please rejoin the queue for follow-up questions. Thank you.

Atul Kumar: Okay. Sure. Thank you.

Moderator: We will take our next question from the line of Yogesh Shah from YBS Capital. Please go ahead. We have lost the connection for the current participant, so we will go ahead and take the next question from the

line
of Anboli, an Individual Investor. Please go ahead.

Anboli: Hello. Good evening. Hello?

Manish Jain: Good evening.

Anboli: Sir, when can we see our OCF to be positive, Operating Cash Flow?

Manish Jain: I would again mention the investor presentation, if you will see. Our adjusted OCF has been positive even in the current financial year as well. Our OCF pre-tax in the current financial year is almost balanced around INR4 lakh positive. And post-tax, it is INR63 crores negative. However, there is a portion of the service concessionaire agreement receivables, which is by its very nature is a 15-year long-term receivables, but as per the audit policies, definitely we are required to take it to the OCF portion. That is why it seems to be negative. Despite being the UBR going so high, we have been OCF positive pre-tax. We look forward to that the situation will get eased out in the next financial year. We are heading towards the completion of various water supply projects in MP.

The projects under AMRUT which are ongoing, we are expecting release of funds very soon. So we do expect that the UBR level will also go down and the OCF pre-tax, post-tax. And then this adjusted, definitely this will also seem to be positive further.

Anboli: Sir, also my another question is, going forward, how can an investor should look at this company? Just as Mr. Manish at starting, it was like Wastewater Treatment Company, now it is into BESS. And going forward, what are the plans? Are we into desalination kind of things?

Manish Jain: One of the projects I had talked about was an MIDC Project…

Moderator: Sir, you may please continue.

Manish Jain: I was talking about one of the projects at MIDC, which is a Common Effluent Treatment Plant and it is a ZLD project. A ZLD project in itself requires -- it is for a textile complex, so UF and RO is a part of this Common Effluent Treatment Plant.

So basically, there is a pre-qualification requirement of this UF and RO. With this and this is one of the biggest plants in India. So with this, we will earn a decent qualification in terms of entering into Desalination projects as well.

We are actively looking into the projects. And if we will get any of the joint venture opportunities, definitely we would like to enter into the

Desalination projects as well. So our focus on Water and Wastewater
Treatment Projects will continue as it is.
And the renewable segment, it is a separate segment. And we will always show the revenues which will get generated along with the order book in the renewable segment as a separate company.
Anboli: Sir, one follow-up. Are we looking only into India, or just into abroad as well?
Moderator: I'm sorry to interrupt, Anboli. You may please rejoin the queue for more questions. Thank you. Ladies and gentlemen, kindly restrict your questions to one only. We will take our next question from the line of Sheetal Shah, an Individual Investor. Please go ahead.
Sheetal Shah: Good evening, sir. Am I audible?
Manish Jain: Yeah, audible.
Sheetal Shah: Sir, correct me, if I'm wrong. You've given a guidance of around INR2,000 crores in FY27 and a PAT of INR280 crore. Am I correct, sir?
Manish Jain: Right, INR270 to INR280 crore.

Sheetal Shah: Okay, sir. Okay. So my only question is, sir, what are the factors that you are banking on, which will help us to achieve this? The reason I'm asking, sir, last year we gave a guidance of around 35% growth, but somehow some project got reviewed, some project got postponed, we were not able to meet our goal.
I just want to know, do we face -- can we face such situation this year also or we are banking only on our order book to achieve this target? And what factors which can go against, which may hamper us in not achieving this goal? These are only my questions, si

r.
Manish Jain: Right. The order book at the start of last financial year was INR1,200 crore.
Sheetal Shah: Right.
Manish Jain: The replication into revenues is INR1,145 crore. So a conversion rate, if I go by that thought process, is somewhere around 95% plus.
Sheetal Shah: Right.
Manish Jain: Right now, I do have the order book in hand. I'm not talking about the order book during the current financial year what we will get further. So this is the order book which is already in hand. So if I say a conversion of INR2,000 crores on an order book of INR4,800 crore, so I'm talking about the conversion of 42%.
I'm also concerned, the guidance which we had given and we could not achieve it, so we want to be doubly sure whatever guidance we are giving, that could be possible under any eventuality. We had been very careful while working it out. We have done our best of efforts and our thought process, while we are announcing this. We are fairly confirmed and committed that this will be the level which we can achieve.
Sheetal Shah: Okay. So this means, sir, from the order book which we have, we are going to execute it and can give such type of result, right? So the problem which we got last year will not face this year, right, sir?
Manish Jain: That's true.

Sheetal Shah: Okay, sir. And sincere suggestion, sir.
Moderator: I am sorry to interrupt. Mr. Shah…
Sheetal Shah: I don't have any questions. Sir, I just wanted to give a suggestion to sir to give a realistic projection henceforth, sir. That is only our request as an investor to you, sir. Only achievable targets and realistic targets, sir.
Okay, thank you, sir.
Manish Jain: Thank you.
Moderator: Thank you, Mr. Shah. We will take our next question from the line of Aditya from Morde Foods Private Limited. Please go ahead.
Aditya: Good evening, sir. Am I audible clearly this time?
Manish Jain: Yes, yes, you are audible.

Aditya: Yes, apologies if the question has already been addressed. I just wanted to request you to throw some light on the re-bidding of orders that took place in Q3. Did the re-bidding go in the company's favor, or like, could you please throw some color through it?
Manish Jain: The re-bidding is neither in the favor of the company nor it is against. It is just a timeline which had got lost because of the re-bidding. There was some technical glitch because of which the department was forced to cancel all the bids that they had invited and they have gone for a re-invitation. So it is a cumbersome process for them as well, and we have lost some timeline. We would have expected some further orders from those projects which we had bidded, but it is I mean, it is a matter of time that we have lost.
Aditya: Okay. And this execution slowdown was more on renewables or wastewater?
Manish Jain: I can say it is a mix of both. There is some partial – my guidance was around INR200 crores in renewables, against which we have achieved somewhere around INR120-odd crores, INR120 or INR130-odd crores, and a partial slowdown in the wastewater treatment segment as well.

So around INR100 crores from each segment is what has gone down in terms of revenue.
Aditya: Okay. Thank you, sir. That answers all my questions. Thank you and best of luck.
Manish Jain: Thank you.
Moderator: Thank you. Next question is from the line of Sarab Chawla, an Individual Investor. Please go ahead.
Sarab Chawla: Hello, sir. My question is regarding the orders, sir. Like, I believe last time we had an issue where payment didn't get released from Jal Jeevan scheme, and now we are facing an issue where payment didn't get released from AMRUT scheme. So are we exploring any options to deal with private clients over government, or is that market not big? Can you just share something on that?
Manish Jain: If you wi

ll see our order book in the renewables, basically we have entered into B2B segment in a big way. We have got a major orders from NTPC, so the – we will not face at least any challenges with respect to the receivables there. Or wind EPC projects, this company Suyog, so they are executing the wind EPC projects for various private companies which are A to AAA rated. So that way, we are trying to de-risk ourselves.
Apart from this, the projects that we are executing, definitely these are centrally funded or centrally sponsored projects. It has been some delays in the government from the center side this time. Other way around, we had seen for a longer period that the funds from the center used to come.
However, during the last two financial years, yes, there has been a challenge with respect to the release of funds on time from the center. We look forward to the position getting eased out, as we have come to know the project -- the funds have been earmarked for release for various projects undergoing under AMRUT scheme as well. And look forward to things getting eased out.
Sarab Chawla: Okay, thank you.

Moderator: Thank you. Next question is from the line of Atul Kumar, an Individual Investor. Please go ahead.
Atul Kumar: Hello, sir. Thanks for the opportunity again. Just have one question. So at current time, right, our order book is looking around 30% to 40% of renewables. We're getting into BESS wind projects, etcetera. So, do we also have plans to get into the projects for transmission and distribution in power sector? Because I think that's booming for all the right reasons

due to AI and other power projects. The whole value chain in power is
increasing and expected to be at that rate for a few years. So, is there
any plan to get into the bidding for EPC for T&D sectors?
Manish Jain: In the current projects in BESS segment which we have got from NTPC,
we are executing EHV transformers and transmission lines, the HT lines
as well. So that ways, definitely we will be having the pre-qualifications
available with us.
At present, since our order book is decent enough, we don't look
forward to entering into the T&D segment very soon, but it can be one
of the segments in future wherein we can enter since some of the works
that we will execute will give the pre-qualifications to us. So the
diversification, that will definitely -- it can happen and we would look
forward to the right opportunities when we can do.
Atul Kumar: Okay, okay. Thank you, sir. That helps, and thanks for answering the
question and we look forward to the execution and guidance. Thanks a
lot.
Manish Jain: Thank you. Thanks a lot.
Moderator: Thank you. Next question is from the line of Prateek Bhandari from
AART Ventures. Please go ahead.
Prateek Bhandari: Sir, you mentioned that you are looking for INR650-odd crores of
revenue from renewable. Right? And currently, we are having an order
book of INR2,000 -- and almost INR2,000 crores, right?
Manish Jain: Right.
Prateek Bhandari: So, what would be the execution timeline of this INR2,000 crores?

Manish Jain: Execution timeline is 18 months to 24 months for these projects.
Prateek Bhandari: Okay. So, you're expecting almost 30% of it to be executed in FY27.
Manish Jain: We want to be conservative. We want to be conservative that is why I'll
not give a higher number rather first of all this number should be
achievable under any other circumstances. So, that is why we are not
projecting any higher revenue numbers at all.
Prateek Bhandari: And what typically margins do we seek in renewables?
Manish Jain: Likewise, I confirmed in the BESS segment, at present the margin range
seems to be somewhere around 10%, and we look forward to achieving
PAT margins in the range of 10% to 12%, a blended one from the
renewables. It

will vary from project to project.
Prateek Bhandari: It’s about -- EBITDA or PAT?
Manish Jain: I'm talking about PAT numbers.
Prateek Bhandari: 10% to 12% PAT?
Manish Jain: Yeah.
Prateek Bhandari: Okay, thanks a lot.
Moderator: Thank you. Ladies and gentlemen, that was the last question for today.
I now hand the conference over to Mr. Sanjay Jain for closing
comments.
Sanjay Jain: Thank you for your continued trust and interest. We are excited about
the opportunities in India's green transition and remain committed to
disciplined profitable growth. Thanks again for taking the time to join us
today, and we look forward to interacting with you again. Thank you.
Thank you, everyone.
Moderator: Thank you. On behalf of Enviro Infra Engineers Limited, that concludes
this conference. Thank you all for joining us today and you may now
disconnect your lines.
