"Investor Call of PTC India Limited Q4 FY23 & FY23
Earnings Call"

May 30, 202 3

MANAGEMENT : DR. RAJIB KUMAR MISHRA – CMD , PTC INDIA LIMITED
MR. HARISH SARAN – EXECUTIVE DIRECTOR , PTC INDIA LIMITED
MR. PANKAJ GOEL – ED & CFO, PTC INDIA LIMITED

Moderator: Ladies and gentlemen , good day and welcome to the Investor Call of PTC India Limited Q4 FY23 & FY23 Earnings Call.
The Management Team at PTC India is led by Dr. Rajib Kumar Mishra – CMD , PTC. Dr. Mishra is accompanied by Mr. Harish Saran - Executive Director, PTC and Mr. Pankaj Goel - CFO at PTC India Limited.
At this moment, all participants are in listen -only mode. Later, we will conduct a question -and-answer session. At that time, you may click on the Q&A tab on the left-hand side of your panel to ask a live question. Please note that this conference is being recorded.
I now hand the conference over to Dr. Rajib Kumar Mishra, CMD , PTC India, to make an openin g statement. Thank you and over to you Sir.
Dr. Rajib Kumar Mishra: Good afternoon, dear investors and analyst friends.
FY23 for PTC India Limited was a year of consolidation and cleaning up of our accounts. If you have gone through our results, it is clea rly visible from our results that our trading volume , we have increased our margin from a substantial number that is from 2.82 to 3.2 paisa per unit. Our short -term volume which mainly is from the exchange volumes has come down from 61% to 53%. We have alw ays maintained that the right kind of balance for our portfolio is almost 50% from long term and medium term and 50% from shorter term market. And for in this year, we have achieved this to a great extent. Our advisory business has shown a very healthy growth of around 45% and we could earn a revenue of 57.54 crore.
Now let me just share with you that this year, which has ended in the 31st of March was a year where we have seen international geopolitical tensions and the real shock of fuel supply through out the world. Now during this uncertainty, some of the PP As which we have signed was operating in the first quarter and to some extent in the second quarter was below par and that has led to the reduction of volume in some of the PP As. Most important thin g, as a prudent move, we have ceded all the volumes in the exchanges where we were getting a negative margin that is the cost to serve was more than what we used to earn from the trading margin and this was a conscious call. So, you can see very clearly th at our exchange volume has come down drastically from 44.6 billion unit, which we did last year. And this year we have done 29.49 billion unit. So, this was a conscious call, but that has helped us to consolida te our position in this market.
Now one major change which we have seen during the year was a government directive or the surcharge payment that is late payment surcharge scheme, which came into operation from August 22 and if you have gone through our results, you must have seen that the surcharge earned , which was net of what we paid and what we got , there is a difference of around INR 170 crore , for the year, which is substantial. But what I would like to mention here, there will always be some of the

things which are not under the control of the company, and that is because of the changes in the

government rules or the regulations which we get. And this was one thing which has little bit affected th e profitability of the company.
Our cash balance has increased considerably and the treasury inc ome has increased almost to 6.6 times . Now this is something which I would like to mention that as because the sundry debtors have come down from INR 6700 Crore to INR 5400 Crore approximately , our liquidity position has improved drastically to around INR 979 crores at the end of 31st March. These are all positive signs. Why I will mention it whenever I met the investors in the past, they always were a little worried that you have a significant outstanding in two of these states that is J&K and Bihar. I'm very happy to share with

you that an outstanding which was around 1600 crore in J&K last
year , we have a very manageable outstanding of less than 600 crore on 31st March. Similarly in the c ase of Bihar also , the outstanding is in very manageable level. And we are happy that the company is at a level where the borrowing for our working capital has come down drastically during this peri od.
Now let me tell you something about our subsidiary company :

For the first time, all the three companies, that is the holding company and the two subsidiary companies, PTC Financial Services and PTC Energy Limited has shown profit this year and the PTC Energy Limited , the concern which was of the tariff, wh ich was not paid by Andhra Pradesh because of the legislative disputes between the Andhra Pradesh and the wind suppliers, has been resolved and High Court has given that in favor of the IPP' s. So, with that and the payment we have received from LPS scheme, we are in a very good position for the subsidiary company and let me share you one thing before you ask question on this. The monetization of PEL is very much on cards, expression of interest has already been issued and we have received a very good respon se from the bidders and it is expected to be closed by June end. So, with this , I feel that I have given my opening remarks. I'll hand it over to my CFO to tell you about the results more and then I'm open to answer your questions if at all you have.

Panka j Goel : Thank you, CM D sir, and good afternoon to all of you. Now, as CM D has already explained regarding the holistic business scenario which is prevailing in for the PTC or power sector as a whole, so I'll go through the numbers and we'll try to explain it further.

First I'll go through the quarter wise result for the March 23 vis-à-vis the March '22 Quarter:

The volumes stood at 16.4 billion units compared to 17.3 billion units. As CM D has already explained, the volume was under pressure due to short ter m transactions, mainly at the exchange platform. There, m argin is very low. However it has a positive impact on realization on weighted average margin per unit, which has actually increased to 2.91 paisa per unit from 2.46 paisa per unit during the last quarter. So,

what we mean to say that instead of a quantity , in this year we have we have actually eye on the quality trading. That is because our weighted average margin has increased from 2.46 paisa to 2.91 paisa per unit for the quarter . So, likewise, the profit before tax stood at INR 192 crore in comparison to INR 211 crore during the last quarter , again the PBT was under pressure mainly due to the surcharge income. So, as you are already aware and in the last call we have already discussed that during the year , MoP has come out with an LPS scheme whereby all our long outstanding dues have been cleared on an interest free equated monthly installment basis . Some of the customers have opted this scheme having a total outstanding of around 2 ,644 crore. The company is regularly receiving the installment under the LPS scheme, resulting in better liquidity, which has already been explained by CMD sir that our net cash position as on 31st March was 979 crore. However, as th ese installment are without interest, he said, it has an impact on our surcharge i ncome. So, likewise because of the liquidity position , our total debtors on a yearly basis has gone down from 6,771 crore to 5 ,437 crore . Likewise, the PAT is almost at the s ame level of 155 crore during the quarter. The total other comprehensive income stood at 175 crore in comparison to 166 crore. During the last quarter, the increase in comprehensive income is mainly on account of increase in the fair valuation of our e quity investment in Teesta Urja Limited . Earnings per share stood at during the Quarter 5.25 in comparison to 5.27.

Now I'll go throu

gh the year ended results :

The volumes stood at 70.6 billion unit as compared to 87.5 billion unit. The reason I have already explained while I was explaining the quarterly results, again profit before tax stood at 481 crore compared to 571 crore. Again, it was under pressure due to surcharge income, which I have already explained due to the LP S scheme notified by Ministry of Power. The profit after tax stood at 370 crore in comparison to 425 crore . The total other comprehensive income stood at 389 crore compared to 435 crore . Earnings per share stood at Rs. 12.49 in comparison to Rs. 14.35 .

Now I'll go to the consolidated results :

For the quarter, the volume stood at 16.5 BU compared to 17.4 BU . Profit before tax stood at 171 crore compared to 216 crore . Profit after tax stood at 129 crore compared to 157 crore. Total o ther comprehensive income stood at 149 crore compared to 167 crore. E arnings per share stood at Rs. 3.94 in comparison to Rs. 5.01 during the last quarter.

And I'll go to the year ended consolidated result s:

Volume stood at 71.1 BU in comparison to 88 BU during the last year. Profit before tax stood at 680 crore comparison to 745 crore. Profit after tax stood at 507 crore compared to 552 crore . Total other comprehensive income stored at 527 crore in compared to 57 1 Crore , it almost remained at the same level . Earnings per share stood at 15.05 in comparison to Rs. 17.10 during the last year consolidated as a whole. Thank you very much.

Moderator: Thank you very much. We will now begin the question -and-answer session. We will move to our next question that is from the line of Mohit Kumra from Kumra Investment Company. Please go ahead.

Mohit Kumra: So, sir, I just wanted more light on your investment in HPX. So, is that going as planned? Are you managing to take any market share from IEX? And w hat is your future plan regarding it? Because there is a catch 22 that if you are a 2 5% investor , you can't trade on it, and that is also a situation, right? You can't trade on it and yo u have to be a 5% investor to s ell your stake and then. So, can you just give me some light on that invest ment please ? Shed some light on it please.

Dr. Rajib Kumar Mishra: Thank you, Mohit . Very pertinent and relevant question which I wanted to touch upon, but you asked me this question. HPX is doing very well in recent times and on the product which they are in right now, that is Term Ahead M arket. They are almost at par with I EX on several days and it is ahead of the other exchange that is P XL in that segment. To give you some more numbers, they have traded more than 4.5 billion units since the day it has started its operation, and in last 9 to 10 months. And every day it is improving its market share. So, that's really very encouraging. Let me tell you something about the prospects. Everything is in place. The exchange is doing very well and now they have more than 534 clients and on some of the days , it is having almost the equal volume compared to the leading exchange that is I EX. Important thing is now we are getting news that market coupling will be introduced soon and there will be a good opportunity for this exchange to get the benefit because of that . Your second part of the question was our investment in that . Right now , we are where w e were and we are not decided what to do with our investment. It is a good investment. So, we have to keep it and that's what where we stand at this point of time.

Moderator: Thank you. In the meanwhile, while we wait for the question to assemble, we have a few text questions. Sir, should we go ahead with it?

Dr. Rajib Kumar Mishra: Yes, please go ahead.

Moderator: Yes, the first text question is from Manoj Alim Chandani. What is the reason for increase in Q4 standalone PAT earnings and fall in consolidated PAT earnings? What is the

outlook in FY24 in total income margins pretax and post -tax?

Dr. Rajib Kumar Mishra: The CFO has explained the reasons . In the Q4, we are almost at par what we have done previous year and that we have already explaine d for the fut ure we will try to see, but for the month of April and May as we complete, we are almost 21% up compared to last year's volume.

Moderator: Thank you. We will take the next question that is from Nilai Kumar Raj as an individual investor. Are PTC promoter willing to sell stake to private energy companies as news circulated in the past many times?

Dr. Rajib Kumar Mishra: We have clarified this in the earlier calls also and as you know that we have said always maintain ed the same position that PTC does not have any information of such development .

Moderator: Thank you. Th e next question is from Bharanidhar V from Avendus Spark . With the increase in power demand and supply crunch being felt in summer months in India, contracts whic h assure supply is likely to be more in demand. PTC India should be a natural beneficiary in this scenario. Is this the case? Is PTC India getting more inquiries to sign short term contracts?

Dr. Rajib Kumar Mishra: I just mentioned the factual statement f or the month of April and May. Our volume as compared to previous year is almost 21% more than what we did last year. Beyond that, I will not be in a position to give more clarifications, but of course the traded volume is always higher if the increase in demand is more.

Moderator: Thank you. We'll take the next audio question from the line of Mohit Kumra from Kumra Investment Company. Please go ahead.

Mohit Kumra: So, this question is regarding PTC Financial Services. So, I have a couple of questions on that. The first is for a long time there was this stated intention from the company to sell your stake in this company. Is that still on the table since last year's purported governance issues? And my second question is that if that is not on the table, do es your company have any intention to put even more money into P FS now or is that now left alone, as was stated earlier by you?
Dr. Rajib Kumar Mishra: Second part I will answer first. We have no intention to invest more in PTC Financial Services and we ma intain the same status we mentioned in the earlier call that the divestment of PTC Financial Services is on pause and that means we are yet to take further decision on this.
Moderator: Thank you. Next question is from Manoj Alam Chandani. Please go ahead.
Manoj Alam Chandani: At the outset, Mr. Mishra, let me congratulate you for the excellent performance and the good dividend you have declared, particularly in view of the huge challenges we have faced last year, particularly in terms of governance. Now it seems in the last couple of quarters with the clear disclosures , you have clarified on lots of governance issues and the improved results and dividend are really heartening. Now I would like to come on particularly two issues, this governance issues which was a big challenge from us, apparently due to vested interest from what we understand, are they behind us? Can we focus totally on business in PTC India, the flagship and also the subsidiaries, our PTC Financial because we keep on seeing there are apparen tly very negative articles in media coming regularly, which seems to be inspired or conspired and they raised negative issues and concerns about the company. We are a first-class company, very good professional management, very good board, particularly the current board in PTC India and PTC Financials is outstanding first class and far better than earlier boards . But still, even last week we saw some negative article about MCA investigation ,

SEBI investigations, apparently they are old issues or they are new

issues. Can we focus on governance ? One is this point; I would like you to clarify . Second thing , this PTC Financial was last two years because of the macro industry , it was in a down cycle. Now it has strengthened, cleaned up th e balance sheet and o n the take off stage as we can see in terms of the last 2 quarters perform ance and growth in business and NIMs which is happening and we also appreciate the reconstitution of the management team and new members coming at the bo ard level, CFO level and Mr. P awan Singh is doing an outstanding great job. With full transparency, he has been interacting with the investors, institutions and really taken it on the next stage. I would congratulate for that. So, we actually look forward to your clarifications, particularly in terms of governance, which is coming in the media. And another thing which is impacting our valuations. Last 10 years, we have seen PTC India, the valuation around the same level while the IEX and other companies are going far ahead and pow er sector is leaping in terms of multiples and we should be at least two times of book. If not higher, considering a clean balance sheet , also our working capital management is good, our customers are good and the business has got huge opportunities as you highlighted. This is one thing, and we also appreciate you coming on the channels, particularly the CNBC and other channels every quarter and actually sharing the truth in spite of negative stories in the press. Would like you to answer the question in detail if possible.
Dr. Rajib Kumar Mishra: Thank you, Man ojji, for appreciating the efforts the company has made for the benefit of our shareholders. And as we have always maintained, we work for our shareholders and the stakeholders of the company. And let me just give you a confidence from this room on behalf of all the top management that the company is on the right path and we are doing a very good business and we are all focused towards the benefit of the s hareholders in real spirit. Well, we have given the full disclosure in the annual accounts and you have must have gone through that and nothing beyond it and whatever was mentioned, if you have gone through the results and the disclosures, it is related to the earlier issues which came out when the Independent Directors have resigned and nothing new has come up anything after that. In that , I have nothing more to add because we have already submitted our disclosures both to the NS E and B SE and to our investors also we have informed. So, once again I c an only give you assurance and confidence that the company is on the right track for the betterment of the company and is doing very well.
Manoj Alam Chandani: Thank you for your answers. It's really heartening that all the issues are old and now

we can fo cus on business . On this , I would see that we need greater institutional participation, mutual funds, foreign investors also, and they can really come in if the issues are behind us and higher engagement with you like in this call also I was expecting lot of foreign funds and mutual funds, PMSs . Apparently they are watching, but they like the sector. I would suggest the management of both PTC India and PTC Financial have a higher engagement with institutional stakeholders. So, the company and all stakeholde rs will benefit in terms of appropriate valuation and with this I would suggest thanks a nd all the best to you.

Moderator: Thank you. The next question is from the line of Mangesh Kulkarni from Almond z Global Securities. Please go ahead.

Mangesh Kulkarni: Sir, this time PFS has declared the dividend. So, can we expect some interim dividend from parents also in the Q1 or Q2 going ahead?

Dr. Rajib Kumar Mishra: Mangesh ji, let me tell you that at this point of time, we have just come out with our annual results and we have g

iven you a dividend of 78%. That is Rs. 7.80 paisa per share, and that's something which we can mention right at this point of time. Anything what will be done in next quarter or so we will be sharing with you at that appropriate time.

Mangesh Kulkarni: Thank you, sir, because after 2 years the PFS is back on the dividend list, that's why we were expectin g. Thank you .

Dr. Rajib Kumar Mishra: Right.

Moderator: Thank you. Th e next question is from the line of Vaibhav Gupta from Bowh ead Investment Advisors.

Vaibhav Gupta: Sir, can you please share the over dues which is dues beyond 45 days for Financial Year '21 , 22 and 23?

Dr. Rajib Kumar Mishra: I'll request Harishji, our E xecutive Director , Commercial to please reply.

Harish Saran: So, as far as I mean 23 is concerned, we have the total outstanding of 5,398 and as on 31st March it was 6 ,739.

Vaibhav Gupta: And sir, what are the over dues like dues beyond 45 days b ecause I am assuming that those must have reduced significantly and wi ll be better able to understand.

Pankaj Goel: As regards the ED , commercial has already told you the total debtors position as on the year end as regards the specific question of over dues debtor , so we always say that we always look at the debtors minus c reditors, because that is the open position we take. So, as far as the open exposure is concerned more than 4 5 days is around only 363 crores as on 31st March, and out of that , we have already received 157 crore. So, the net exposure with regard to 31st March more than 45 days is around 206 crore and that is just only from , some amount fr om Bihar and some amount from J&K, that is all .

Vaibhav Gupta : Sir, what was the similar number for September 22 and March 2 2, like 4 5 days over dues ?

Pankaj Goel: I'm so rry, this is the call for March 23, but if you need the other quarter details, Varun will note it down and will give you the information separate ly.

Vaibhav Gupta : Sir, just one request like I have followed up earlier as well, but I was not shared the numb er so that's why I thought that this number, if it is shared over this call, it will be for the betterment of the whole investment community , everybody would be able to appreciate it.

Pankaj Goel: You know that's you are right up to this point that because we are ready with the data for this quarter only. But we noted your request and I'll request Varun to share you with the relevant details.

Moderator: Thank you. The next question from the line of Rajesh Shah as an individual investor. Sir with bett er mix of long - and medium -term contracts as compared to short term contracts , would the margin be improved in the current financial year?

Dr. Rajib Kumar Mishra: Rajesh ji, I mean what I have just mentioned that last year we made a serious effort and the margins have improved because we have improved the mix and low margin volumes we have seeded , so similar exercise we are doing for this year and prudent every day we are trying to see that the company is engaged in the services or the

volumes where we have a better margin, so that's a continuous effort and what I can say at this point of time is these kind of continuous efforts may lead to some kind of a better results, but at this point of time it will not be appropriate that we should answer what is going to happen in the next quarter and beyond that.
Moderator: Thank you. Th e next text question i s from Narendra Kotia from Robo Capital. Can you give any outlook about the margins for the upcoming period?
Dr. Rajib Kumar Mishra: Narendraj i, I have just answer ed the same question so I will not repeat the same answer.
Moderator: We have another text question from the line of Anshuman Ash it from Ambit . Sir while the appointment for the post of CMD has been closed, the appointment process for the post of Director is

still open. Can you please share the update on the same and the timelines for the appointment?
Dr. Rajib Kumar Mishra: The process is on and it will be done shortly. That's what I can say because we these are some of the things which are with the NRC and the board, so already they are in the process and it will be done at the appropriate time.
Moderator: Thank you. So, we have another text question from the line of Vaibhav Gupta from Bowhead Investment Advisors. So, what are the receivable beyond 6 mon ths on March 23?
Pankaj Goel : So, as I have already explained that we always see as an open exposure, so more than 6 months, the open exposure is around only 261 crore as on March 23 and out of that , we have already received 150 crores, so around 100 crore is outstanding as far as the open exposure is concerned more than 6 months.
Moderator: Thank you . Next text question is from Shubham Verma as an individual investor. Any updates on stake sale of PTC Energy?
Dr. Rajib Kumar Mishra: Shubhamj i, I have just mentioned in my opening remarks that the process is already on and by 30th of June we will get the final bid from the potential investors .
Moderator: Thank you. Ladies and gentlemen, that would be our last question for today. I now hand the conf erence back to Dr. Rajib Kumar Mishra for closing comments. Thank you and over to you , sir.

Dr. Rajib Kumar Mishra: Thank you very much. And let me just before we close and call it a day, I once again thank all the investors and analysts who attended today's investor call and let me reassure you that the company is trying to consolidate its business and we have started some of the innovative things like we have a n analytical lab which is fully functional now with the company and we are having predictiv e analytical tools which we are using for conducting our business which is going to help this company to a tech savvy company in future, and there we see a lot of future in the transition of the energy trading business and we are hopeful that with the new innovative practices what we have started couple of years back, we are in a process that we are a company which is delivering our services better than others and we have a clear differentiator when we are reaching to our customers . With these words , I than k you all once again that you have joined us for today's meet and we will be coming with our updates as and when required for the development s what we have discussed. Thank you very much.
Moderator: Thank you very much. Ladies and gentlemen, on behalf of P TC India Limited, that concludes this conference call. Thank you all for joining us and you may now disconnect your lines. Thank you.

"PTC India Limited Q3 FY24 Earnings Conference Call"

February 16, 202 4

MANAGEMENT : DR. RAJIB KUMAR MISHRA – CHAIRMAN &

MANAGING DIRECTOR , PTC INDIA LIMITED
DR. MANOJ KUMAR JHAWAR – DIRECTOR ,
COMMERCIAL AND OPERATIONS , PTC INDIA LIMITED
MR. HARISH SARAN – EXECUTIVE DIRECTOR , PTC
INDIA LIMITED
MR. PANKAJ GOEL – ED & CFO, PTC INDIA LIMITED

Moderator: Ladies and gentlemen, good day and welcome to the Investor Call of PTC India Limited Q3 FY24 Earnings Conference Call.
The management team at PTC India is led by Dr . Rajib Kumar Mishra - Chairman and Managing Director , PTC. Dr. Mishra is accompanied by Dr . Manoj Kumar J hawar – Director , Commercial and Operations ; Mr. Harish Saran - Executive Director, PTC and Mr. Pankaj Goel – ED & CFO, PTC.
At this moment, all participants are in listen only mode. Later, we will conduct a question -and-answer session. Please note that this conference is being recorded. I now ha nd the conference over to Dr. Rajib Kumar Mishra for opening remarks. Thank you a nd over to you , sir.
Dr. Rajib Kumar Mishra : Thank you. Good afternoon, dear investors , analyst and the shareholders of PTC India Limited.
It is indeed a pleasure to be with you this afternoon yet again with the 3rd Quarter Results .
You might have gone through both the “Results ” published by PTC India Limited and our “Press Release ” where we have given you some brief on how we have perceived our business this quarter. Let me tell you 9 months your Company has done very well , and we are growing both in terms of margin as well as the operating profits .
As far as this quarter is concerned, again, let me reiterate that the numbers are strong and the operating margin from sale of electricity is 7% above what we have done year-on-year last year. And then the million unit sold is 4% less than the previous year, but overall , in 9 months, we have grown again in this number. Let me just once again, although this is not part of the 3rd Quarter result, but in the month of January, we have a robust growth once again and we have reported in the Regulatory filings . So, we can once again confirm to our investors and analysts that the performance of the Company as far as the trading business is concerne d is going well on track.
A couple of things which you might have noticed is :
• One, the reduction in our surcharge income and we have reported it in our income that compared to almost Rs. 58 crores last year, last quarter , the corresponding quarter, w e have reported 16.63 as the surcharge number and there is a reduction of around Rs. 42 crores on this. Let me just inform our valued investors and analyst that this is a rolling number, and the surcharge is calculated on the annual basis and what we really accrue during this quarter is report ed here. So, therefore, this number although is reported somewhere in the bottomline and can reflect in the final number. These numbers are rolling numbers, and we are very confident tha t whatever we have targeted for our surcharge earning, we will be meeting those targets at the year end.
• The second important aspect which I would like to share and which we have reported in our results are that as a prudent accounting measure we have provided for Rs. 67 crores in the value of equity stakes in one of our invested Company that is Sikkim Urja Limited to account for the natural disaster which happened in the month of October

2023. Let me just once again reiterate that though we have full faith in the long-term value of the project under the Sikkim Urja Limited and we have our value intact there, but as prudent accounting measures, we have taken this provision. This project is very important for us in two ways that we have a small investment of around 5.6% of the total equity and we have a 840 MW of a long term PP A with four of the states and we are confident that we will give you good news soon when the project will restart generation and we will be in a position to supply to those states.
Related to other areas where we are operating, let me just tell you both the subsidiary Company has done well . The generation in PTC Energy Limited has ex

ceeded what we have done in the
similar quarter last year and we are confident that this kind of performance will continue in future as well. Related to PTC Financial Services, we have maintained our profitability in that organization and the last but not the least the n ewest one , our associate , in HPX, we are doing well and I would like to share one very important development in this regard and that is

something which you all have asked me and expected this to happen in the past, The Central Electricity Regulatory Commis sion has allowed the pilot project for market coupling to take place in the Grid India, and they are expected the result to be submitted to Regulatory Commission so that this market coupling can be enabled for all the three exchanges and the market can be coupled. So, this is a very important development and then that can lead to a very positive outcome for the Company and our investment in the HPX.

What I have maintained in the past that the trading mix should be around 50% from long term and medium term and around 50% from the shorter term, although slightly we are skewed towards shorter term this year , but we have maintained a very good mix during this quarter as well. I have maintained it in the past that our core focus is to increase the trading margin and we have maintained or rather increased our trading margin , for 9 months ending December , 2023, to 3.52 paisa per unit, which is substantially higher compared to the previous quarters and we are maintaining our position that those trading volumes which are not giving the Company the right kind of returns are need to be seen and if the cost of servicing the customer is more than the margin we earn, we are not very keen to take those kind of transactions and we have maintained that strategy in this quarter as well.

So, with th ese opening remarks, I will be available for answering other questions.

But with these opening remarks, let me hand it over to my CFO, who will give you the brief and the exact numbers what we have achieved during the quarter and 9 months.

Pankaj Goel : Thank you, CMD s ir. Good evening to all of you.

Now, I will go through the “Financial Results ” for the Quarter and 9 months ended December ‘23 on a st andalone and consolidated basis :

First, I will go through the “Financial Performance ” on a Standalone basis for the Quarter :

In the quarter , volume has decreased by 4% to 14.9 billion units from 15.5 billion units . As CMD has already explained, the slight fall in the million units is due to two factors mainly , one that due to damage of our Teesta project which has given no generation in this quarter and secon d on account of low er import of power from Bhutan. So, these are the two main factors.

The total operational income has decreased by 23% to Rs. 109 crore s from Rs. 143 crore s. Although as CMD has already explained, our core operating margin has increased to 3.43 paisa from 3.09 paisa per unit , but the total operational income has gone down due to surcharge as sir has already explained. So, likewise the profit before tax has also decreased by 19% to Rs. 85 crores from Rs. 105 crore s. PAT has decreased by 19% to Rs. 63 crores against Rs. 78 crores in the corresponding quarter. The total other comprehensive income has decreased to Rs. -4 crores from Rs. 77 crores in the last quarter . So, the total other comprehensive income has already been explained that due to damage of the project to Sikkim Urja , due to flash flood in Sikkim arising out of a cloud burst accordingly an estimated reduction of Rs. 67.49 crore s in value of investment have been accounted for in other comprehensive income. Earnings per share for the quarter stood at Rs. 2.12 as compared to Rs. 2.63 for the quarter.

So, now I will go through the nine months Results on a standalone basis :

Volume has increased by 5% to

56.8 billion units from 54.2 billion units. Our total operational income has increased by 5% to Rs. 422 crore from Rs. 401 crore. As sir has already explained our core margin has inc reased to 3.52 paisa per unit from 3.28 paisa per unit. Profit before tax has increased by 28% to Rs. 371 crore from Rs. 289 crores. Profit after tax in the same lines has also increased by 33% to Rs. 286 crore from Rs. 214 crore in the corresponding 9 months . Total other comprehensive income has increased by 2% to Rs. 218 crore from Rs. 214 crore . Earning s per share for the 9 months stood at Rs. 9.66 as compared to Rs. 7.24 in the last quarter.

Now , I will go through the “Consolidated Results ”:

First on the Quarter basis :

Volume has decreased by 4% to 15 billion units from 15.6 billion unit s. Profit before tax has decreased by 8% to Rs. 131 crore s from Rs. 142 crore s. Profit after tax has decreased by 7% to Rs. 97 crores from Rs. 104 crore s. Total other comprehensive income has decreased by 72% to Rs. 29 crores from Rs. 104 crore s. Earning s per share for the q uarter stood at Rs. 2.68 as compared to Rs. 3.1.

Now , I will go through the 9 months Consolidated Results :

Volume has increased by 5% to 57.3 billion unit s from 54.6 billion units. Profit before tax has increased by 17% to Rs. 594 crore s from Rs. 509 crores . The profit after tax has also increased by 17% to Rs. 442 crore s from Rs. 378 crore s. Total other comprehensive income has slightly decreased by 1% to Rs. 373 crore s from Rs. 378 crore s. Earning s per share for the 9-month stood at Rs. 13.2 as compared to Rs. 11.11 in the last 9 months ended .

Thank you.
Moderator: Thank you very much. We will now begin the question -and-answer session to ask a question.
We will take the first question from Shivan Sarvaiya from Humi viction Investment Advisors
LLP. Please go ahead.
Shivan Sarvaiya : I will just say my couple of questions. So, the first question is, sir, what would be the additional provisioning that would be required to be done for Sikkim Urja ?
Dr. Rajib Kumar Mishra : As far as the Sikkim Urja is concerned, actually let me share with you the current development. The project as area is under maintenance or they are going to repair it and they have entered into the main building and all the equipments are intact, t he power plant is intact and the other areas also they are trying to repair as early as possible. So, all the information what was available to the Company and the management , they have done provision of Rs. 67 crores and we don't expect anything else at this point of time whatever information is available with us.
Shivan Sarvaiya : And sir, the other question that I had is that when we see the power sector which is growing, but when we look at our volumes, we don't see that in our volumes , we see de-growths , so sir what is the exact reason for this?
Dr. Rajib Kumar Mishra : Now exactly , as CFO has explained, there are two factors where we have seen the volume in the 3rd Quarter not growing to the expectations we had , but again in the month of January as I suggested, we have a growth of around 19% in the volume. So, if you compare the growth of the market as well as the power sector , we are almost doing , we are at parity or maybe slightly high.
Moderator : Thank you. We will take the next question from Suraj Nav andar from Prithvi Finmart Private Limited. Please go ahead.
Suraj Navandar : Sir, my question was on market coupling, when the market coupling will be implemented, the job of an exchange will remain only to procure the buy and the sell bridge, s o what differentiation will be there between I EX, HPX or third exchange?
Dr. Rajib Kumar Mishra : Yes, exactly. Your question is to the point . We are saying that based on the service, what you rendered to your clients, the clients will choose the exchange and

not because you are having the first exchange you ask that the customers are sticking to it. So, with the price discovery being transferred to Grid India, the exchanges will get the market, or their share based on the service what they are rendering to the customers and we are very hopeful that the third exchange which is HPX promoted by P TC will get it s pie because of its differentiation in these services what we can render better t han any other exchange. And as far as the value by the exchange , exchanges are known for the innovation, and they will have to come out with innovative products each time the customer wants it rather than bring the price discovery where it can be done by anywhere else also . So, market coupling is a good thing what we expect is going to take place in this country soon.

Suraj Navandar : Sir, in that case, let us say , IEX is one product, or we int roduce some new product and let u s say other exchanges don't have it , then how will the market coupling will work?
Dr. Rajib Kumar Mishra : Right now, they have started with RTM, then they will ship to DM , they had market where all the three exchanges are operating. If our exchange is having a unique product , then the other exchanges will not compete . That product will be sold only by that exchange.
Suraj Navandar : And how difficult it is to introduce a new product, l et us say , we introduce a new innovative product, how difficult it will be for I EX or another exchange to just replicate that product ?
Dr. Rajib Kumar Mishra : No, a gain, if you have to customize a new product, you will be a pioneer in that area and you will get the advantage, just the way you are seeing I EX has a market share which is much higher than the two exchanges. So, if somebody comes out with a new product which others will be bringing new products, you will find they will be the leader .
Moderator : Thank you. We have a next question from Rohan Desai, an Individual Investor. Please go ahead.
Rohan Desai : So, as an investor, I am happy to see the upfront accounting disclosures as well as the points mentioned in the Company notes and we expect it to continue in the near future. So, I have a couple of questions , so first one is that when can we expect to receive the sale value of PEL sale to ONGC and the second one is that how do we plan to further enhance the shareholder value?
Dr. Rajib Kumar Mishra : The first question is a very direct question. I can a nswer you straight away that PEL stake sale to ONGC is on track and things are moving. It takes a little time when you are doing the block deal or the entire stake on sale and we hav e to complete all the exercises b efore we call for the EGM for the shareholder and that is exactly the position we are in right now and we are very hopeful that in this financial year, we will be closing this deal . The second aspect is value addition to the Company . I mentioned that we are looking forward to the new products which we are trying to introduce, and it is not only the investment we had in HPX, but we are also

trying to find out new innovative products where the Company will have its niche.
Moderator : Thank you. The next qu estion is from Prashant Talpade from ISG Securities. Please go ahead.
Prashant Talpade : I have two questions. My first question on , why does PTC India consider existing the power trading business when distribution discoms have to the option to purchase power directly from discoms? And my second question is what are the benefits Gencos drive from trading with P TC India and similarly discoms?
Dr. Rajib Kumar Mishra : No, intermediaries are globally recognized as the driver for the market and if I need to explain why intermediaries or a power trader or a solution provider is needed, that is a fundamental question you are asking , but let me assure you that PTC has a

dded lot of value to its customers,
both buyers and sellers in the past and we continue to do that and we are market leader and we are very proud to say that the power market today as what it is today is created by PTC. We are the first part trader, and we are the first promoter or the first exchange of the country and the

third exchange of the country and need not to mention that they drive what we have or 12 % or 13% of the market share this power market has today was initiated by PTC and it will continue to grow in future as well.
Moderator : Thank you. The next question is from Preet Nagar sheth from Wealth Finance. Please go ahead.
Preet Nagarsheth : Sir, t he question I had is that once you receive the proceeds from ONGC within the financial year, the transaction that is completed, what are the plans to utilize the equity component of that proceeds?
Dr. Rajib Kumar Mishra : Preet, your question is very relevant , and I have replied this question in the last analyst call also. Here, I would like to repeat that we have a clear written down dividend declaration policy , so the investors can get benefit from such kind of a policy and the decisions taken in favor of our shareholders. But the important thing is the business is growing and so are the new products which we are thinking of . Once these things are being planned at the strategy level , once these things are finalized, we will declare what we have in our mind when we are investing in anything which is for the business growth, bu t important thing is everything is well planned and the capital allocations we are trying to do , so that once we get this equity return , we can deploy at the most profitable places and for the benefit of our shareholders.
Preet Nagarsheth : So, sir, given that next year is the 75th year for the Company , should we expect Rs. 20 to Rs. 30 dividend coming our way from these proceeds? Is th ere a possibility?
Dr. Rajib Kumar Mishra : Preet, asking a very interesting question, but you yourself must be knowing that it is very difficult to answer these kind of questions , but I said that we will keep in our mind the importance of shareholders for the welfare of anybody who was with this Company for a longer period . For long 25 years if the shareholders are with us, we do take care of their interest.
Moderator : Thank you. We have a next question from Vishal Mehta from Wealth Guardian. Please go ahead.
Vishal Mehta : Sir, I just had three questions. The first question is over the last two-year ends, we ha ve had about Rs. 490 crores and Rs. 870 crores lying in the current account. We are losing on the interest income. Is this because of poor cash management or there is some business need which is forcing us to do this ?
Dr. Rajib Kumar Mishra : Anything else Vishal ji you have to ask?
Vishal Mehta : Yes, the second question was related to the market coupling. Now we know that HPX is going to benefit out of it, but what will be the impact on our standalone trading business? And one more question, if I can squeeze in is that do we have any plans of stake sale in PFS at all ?
Dr. Rajib Kumar Mishra : Yes, I will answer th ese two parts, the second and third question and then I will hand it over to CFO to answer the first part. About the treasury management, CFO will be answering . For the second and third question , let me tell you that the HPX is going to get the market share for the

exchange related business where we have decided that if , I have already mentioned that the cost of service is more than our earnings or the margin, we are not undertaking that . That means we are not losing any business even if it goes to the exchanges. The second part, what you asked is the market coupling part. HPX certainly will get the benefit of it and what was the third ques

tion
you said?
Vishal Mehta : PFS.
Dr. Rajib Kumar Mishra : PFS, we have already mentioned that we have not decided that we are not going to sell this stake. It is on pause. We can take one at a time. So, PEL is in the advanced stage as you all are aware .
Then, there are two other things which we have in the pipeline including the stake share in PFS.

At the appropriate time, we will share with you what the decision of the board is and how we
are going to take it up . Now, I hand it over to CFO to answer your treasury management part.
Pankaj Goel : So, you are right that for the last two years you are in the balance sheet on a closing date of 31st
March, you must be seeing the balances in our current accounts or other investments , but as you
know that for every business to grow, we need a working capital. So, whenever we deploy, it
means that at that point of time there was cash , but as soon as if the cash is reducing so that is a
good sign that it means our business is growing and more and more working capital is being
deployed in the bu siness which we are doing. And as far as the return is concerned, that on fixed
deposits you may be knowing that we may be earning around 6%-7%, but as we deploy our
money into the business, so we get an instant rebate of 2% and we also earn some such sort of a
surcharge in case there is a delay of 15%. So, if you analy ze that 2% rebate, we are earning at
least 24%. So, that means our working capital means that there should be less and less cash in
our balance sheet , so that is the point which I wanted to e xplain regarding the cash availability.
Moderator : Thank you. The next question is from Vipul kumar Shah from Sumangal Investment s. Please go
ahead.
Vipulkumar Shah : Sir, my question is you said that surcharge is a r olling item , so can you give the guidance for
surcharge for entire financial year, although surcharge income has dipped in this quarter, but
what should be the approximate surcharge figure we should work with?
Dr. Rajib Kumar Mishra : Vipul ji, I have mentioned that when I say that surcharge income is accounted for on accrual
basis. Once it hits your account we generally take that into account . So, that is exactly the
meaning what I meant and when I say that it is a rolling thing means whatever is outstanding, if
it is the surcharge income is accrued on that , that will be taken into account . Giving guidance
for fourth quarter or for the annual number will not be prudent and I would not like to go into
that area.
Vipulkumar Shah : And s ir, my second question is regarding the benefits out of this coupling , so you have said that
it will benefit us, but if you can briefly explain how it will benefit, particularly trading business
of PTC?

Dr. Rajib Kumar Mishra : When I was saying that market coupling will benefit us means we have promoted the third power
exchange, which is where we have almost 24% of stake and we are the major promoter of that
exchange and that is in the nascent stage right now. It started operation just almost 14 -15 months
back or 18 months back and the initial months are encouraging . And we ex pect that will this can
give a really good fight to the first power exchange that is I EX in the country and we will get a
major market share in the exchange business. So, our investment in that exchange, we are
expecting to give us a good return in future and that is the reason why I said it is important
investment for us and it is going to benefit the Company . As far as the trading business is
concerned, the growth of exchanges brings different kind of products in the market. Bilateral
market will always remain, and it will have its own importance and trading will continue in the
form and format which will keep on changing in due course of time with the evolving market.
Vipulkumar Shah : What is the current market share of

HP X?
Dr. Rajib Kumar Mishra : HPX in some of the segment, they have almost one third of the market and in the area where
there is liquidity issues, they have lower market share where they can improve with the market
coupling and they expect that at least one third to half of the market share should come to that
exchange .
Vipulkumar Shah : And sir, lastly, can you quantify what should be our margins from long term and medium -term
deals and short term deals because in your presentation the figure given is blended one?
Dr. Rajib Kumar Mishra : We will clarify just a minute. I mean in the long term, what is the margin and in the shorter term,
CFO will clarify what is the margin currently we have for 9 months as well as for the quarter.
Pankaj Goel : So, for the quarter in our short -term trade, our trading margin was including the bilateral trade
in the short term and the exchange part is 0.84 paisa and for medium term it is around 1.72 paisa
on a long -term trade, it is 7.38 paisa.
Vipulkumar Shah : For 9 months also.
Pankaj Goel : For 9 months, for December ‘23 , on a short term, including bilateral and exchange is 0.75 paisa ,
for medium term again, it is 1.73 paisa , for long term trade it is 6.99 paisa a nd average is 3.5 2
paisa for December 9 months.
Moderator : Thank you. We will take some text questions now. The question is from Suraj Na vandar from
Prithvi Finmar t. How much is the cash balance on the balance sheet as on Q3 FY24? Have we
received money from ONGC? How are we planning to use cash balance?
Pankaj Goel : So, as regards the first question, our net cash balance as on 31st December was around Rs. 5 30
crores.
Dr. Rajib Kumar Mishra : And regarding the ONGC sale, we clarified that the deal is yet to be completed, so no cash has
hit to PTC till t his entire transaction is over and the deployment of once we get the equity portion

of it, I have already answer ed this question , we will let our investors and analysts more details on this.

Moderator : Thank you. Next question is from Rajesh Shah from Sayaji Industries Limited. What is the progress in sale of PTC Energy subsidiary of PTC India Limited? Do we require the approval of shareholder? When are we planning to get the same? Are all other conditions fulfilled?

Dr. Rajib Kumar Mishra : So, first question, we have already answered. So, second part is yes, we require our shareholder 's approval, and we will come to for the notification of the shareholder at EGM as early as possible. And the third is once that is done, we are in the final stages of completing all the condition precedent and once that will be complete we will go for the notification of the EGM .

Moderator : Thank you. Nex t text question is from Narendra K huthia from RoboCapital. What was the revenue and PAT for H PX for this quarter as well as 9 months FY24 and what are our plans for HPX for the next couple of years?

Pankaj Goel : So, as regards , the HPX revenue for the quarter and 9 months , for the quarter, their revenue from operations was around Rs. 6 crores and for 9 months their revenue from operation was Rs. 27.46 crores.

Dr. Rajib Kumar Mishra : As far as the future plan of this Company , we have already shared with you in previous calls, but to reiterate the thing , we want it to be the most innovative, the most modern technologically advanced exchange with the backing of with three of the most reputed institutions in the country that is ICICI Bank , PTC India Limited and Bombay Stock Exchange and the present infrastructure what has been created for this exchange is one of the world class, both in terms of the hardware and sof tware and last but not the least, the service delivery what we have seen in last 18 months is also far superior compared to other exchanges. So, we look forward and to the market coupling , better price discovery in

the market and level playing fee, so that this exchange can emerge as the number one in the country.

Moderator : The next text question is from Dungar Kasandra. As per Q3 results, PTC India has some plan for sale of PTC Energy for Rs. 900 plus crore and instructive value, Rs. 2,200 plus crore , what would result as profit or loss and amount thereof ?

Dr. Rajib Kumar Mishra : At this point of time, let this figure hit our accounts and then we will be in a better position to share with you what is the profit loss because at this point of time , it is p rudent not to answer which is like a hypothetical question at this point of time .

Moderator : Next question is from Ragini Pande from Elara Capital. Short -term volumes traded on PTC is roughly what percentage the total volumes traded on the exchanges ? And the second question is, can you share the financial for HPX for Q3?

Pankaj Goel : Financials of Q3, I have already explained that for the quarter, revenue from operation was around Rs. 6 crores and the HPX profit before tax was around Rs. 8 lakhs, for the 9 months

ended their revenue from operation was Rs. 27.46 crore s and their profit before tax was around Rs. 9. 92 crore. And as regards the exchange percentage in our total volume, it accounts for around 53% of the total units we have traded in this quarter .

Moderator : Thank you. We have a next question from Manoj Pande, an individual investor. Please go ahead.

Manoj Pande : Sir, my question is regarding P TC Financial S ervices . Sir, business wise, the Company is looking very bad, although it had some problems of course recently , but in the last 5 years, 5 years back, it has a book size of Rs. 13,500 crores, n ow it has declined to almost Rs. 6,500 crores despite a strong team de ployed over there and no visibility is being seen when we go to the investor meet over there, they say that the Company 's parent Company is planning to deploy a CEO over there , but no concrete answer is being given. What is your plan about the PFS , sir? How can the Company recoup its business and go in a g rowth momentum phase? Currently, its book size is falling every quarter since la st 5 years. How can you correct this asymmetry with your subsidiary?

Dr. Rajib Kumar Mishra: Manoj ji, generally we say that the listed companies , the questions related to PFS are being answered in the earnings call in PFS , but as because you are asking as an investor in PTC, let me tell you that we keep at arm's length , we have a major investment in that Company and the Company in recent times have met all the regulatory requirements and they are trying to revive their business plan. So, whatever your worries are can be taken care of . As far as the regular management is conc erned recently there are major 3 or 4 senior level induction s in the Company and they are planning to get a full-time MD and CEO soon. So, this is what I can share at this point of time. As far as their business growth and plan and strategy , I think the Company will be in a better position to answer you .

Manoj Pande: Sir, as a parent Company , you must be monitoring their performance , so why didn't you? Your Company had been taking action in last 5 years when the business was dropping from Rs. 13,500 crore to Rs. 6,500 crores ?
Dr. Rajib Kumar Mishra: No, let me tell you , the Company is having a close watch, and it is being monitored and it is also being seen that the growth of that Company should start from here on.
Moderator: Thank you. The next question is from Chanamallu Halagodi , an Individual Investor. Please go ahead.
Chanamallu Halagodi : Sir, I am the very serious investor in PTC India Company. On the basis of that, you are concentrating mostly on your core business. I invested in your Company ; I bought 7500 shares. As a small investor, I bought 7500 shares so but since 3 to

4 years I am observ ing that the divestment of PTC India F inancial Service is lagging behind. So, what time frame we will take to complete the divestment process of PTC India F inancial Services?
Dr. Rajib Kumar Mishra: As I just mentioned in my earlier answer that we are taking in one by one, and PTC Energy is at the advanced stage. Once that is complete, we have never mentioned that we are not going to

take it up, but we have put on pause or on hold the divestment of PTC Financial Services and we will announce the divestment once this process is complete and it is cleared by the board .
Chanamallu Halagodi : You are serious in this divestment of PTC India Financial Services?
Dr. Rajib Kumar Mishra: I know, we appreciate your concern and we know that you are a serious investor and whatever you say today , it means a lot to us.
Moderator: Thank you. We will take one text question f rom Vipul kumar Shah from Sumangal Investment s. This question was raised by one earlier participant also when power is available on exchanges why any discom should you give you spread of 3 to 4 paisa. What benefit they got by buying power through you ?
Dr. Rajib Kumar Mishra: Again, exchanges are providing power to a customer for a much shorter period, and you must have seen that the fluctuations in the power prices in the exchanges are , it is very significant whereas for a bilateral contract it is much stable and globally it has seen that a part of their total power procurement, they do only from the exchanges and rest it is done on a bilateral basis for keeping the portfolio stable. So, intermediaries and trading companies are relevant throughout the world, and it will continue to be relevant in the Indian context as well.
Moderator: Thank you. As there are no further questions, I would now like to hand the conference over to Dr. Rajib Kumar Mishra for closing comments. Over to you , sir.
Dr. Rajib Kumar Mishra: Thank you very much and all the questions what we got today from our investors and analyst s friends were very insightful, meaningful and given lot of insights to us, for our further course of business. We all take all your advice and your questions very seriously and we would like to get it implemented for our future business. Let me once again reassure you that the entire top management of PTC India Limited is working for the benefit of our shareholders and we would ensure that the interest of shareholders is of highest priority for the Company . Thank you very much.
Moderator: Thank you, sir. Ladies and gentlemen, on behalf of PTC India, that concludes today's session. Thank you for your participation. You may now exit the meeting.

MR. HARISH SARAN – EXECUTIVE DIRECTOR – PTC INDIA LIMITED
MR. PANKAJ GOEL – EXECUTIVE DIRECTOR AND CHIEF FINANCIAL OFFICER – PTC INDIA LIMITED

Moderator: Ladies and gentlemen, good day, and welcome to the Investor Call of PTC India Limited Q4 FY '24 and FY '24 Earnings Conference Call. The management team at PTC India is led by Dr. Rajib K Mishra , Chairman and Managing Director, PTC. Dr. Mishra is accompanied by Dr. Manoj Kumar Jhawar , Director Commercial and Operations; Mr. Harish Saran, Executive Director, PTC; and Mr. Pankaj Goel, ED and CFO, PTC. At this moment , all participant s are in the listen -only mode later we will conduct a question and answer sess ion. Please note that this conference is being recorded.
I now hand the conference over to Dr. Rajib Kumar Mishra for opening remarks. Thank you and over to you, sir.
Dr. Rajib Kumar Mishra : Good afternoon. Today I am with all of you to share one of our excellent performance of PTC India Limited for the Fiscal Year 2023 -24. FY '24 is remarkable for PTC India Limited which is characterized by significant growth in trading margins that is INR 250 crores. We have achieved an impressive increase in our core margin and earnings per share that is INR 16.11 per share on consolidated basis . And we are committed to delivering value to our shareholders and stakeholders.
We are proud of achievements and remain optimistic about our future prospects and we continue to build on the strong foundation that this company has given to all of you. As we step in the Silver Jubilee Year of our operation the Board of Directors have reco mmended a final dividend of INR 7.80 per share in for FY '23 -24.
Now the numbers do signify a lot of things but let me just tell you the numbers which are in front of you are reflective of our actual performance but let me tell you during the year we have recognized a provision of INR 20.48 crores as exceptional item in this financial year. Moreover, if we compare it with the previous year there was a reversal of impa irment charges amounting to INR 50 crores which has also disclosed un der exceptional item in FY '23.
So keeping these two figures in mind the real increase of the operational performance of the company will give you the clear picture. We have reported in the last quarter that the company has fair value of its investment in Sikkim Urja Limited measuring around INR 99 crores as on 31st March 2024 a nd therefore the re is a resultant impact of INR 122 crores which has been provisioned as the other comprehensive income for FY '24.
But Other than this the performance of PTC India Limited we achieved the best financial performance in its Silver Jubilee Year a nd we recognize a significant exceptional items as what I have mentioned to you just now. As far as the trade commentary is concerned, we will give you a presentation on that an d CFO will give a detailed one but let me again reiterate some of the things which we have already published that we have gone up by 6% as far as the trading volume is concerned and we have achieved 74.8 bil lion units.
Let me just further add that if we include the REC trade of 1.46 billion unit , our actual increase is 8.1% of the total volume and we have achieved 76.3 billion units of the trade. And other significant information which I would like to share with you all is the core margin has INR3.37

per unit which is 4.3% increase from the last year and we have assured you in the past that this will keep on increasing with the more value adds in future as well.
If we segmentize the entire volume what we have done almost 57% of the volume has come from the short -term or the exchange volume and long term and medium term has contributed almost 43% of the trade volume a nd we have indicated in the past that we try to balance the two to the ext ent of almost 50% -50% b ecause of the seasonal variations and the demand pattern changing every year we cannot maintain it to the extent

of 50%, but we have to a great extent
achieved that value.
As far as the stand alone profit is concerned, we have r eached a figure of INR483.99 crores compared to INR 481.44 crores for FY '23. This appears to be a flat trend, but I have just mentioned that there are some reasons and the provisions what we have made in this financial year. The key highlights or the improvement of this year is the core margin which is almost increased 11% from the last year which was INR225 crores last year a nd this year we have achieved INR 251 crores and the improvement is on an upgoi ng trajectory.
Now something which is related to Sikkim Urja that we have given a provision but let me give another picture of the project. The progress of the project is , the power plant is now clean and they have done a lot of work for recovery of the equipment’s and to a great extent it has come

back to the original shape.
As far as the reconstruction of the dam and other areas they have started working on that and they have submitted the fresh proposal to the a uthorities to get its approval a nd as you may be aware that the Sikkim Government has sold the entire stake to Greenko and now it's a Greenko company except the PTC share of more than 5.5% in this company. So it is going back on track and we expect that the short term I mean in the near future we will get the generation from this project.
There are a coup le of other reasons which I have mentioned in my past communication with you all that because of the devastating flood and the damage to this project we have lost the generation and the sale also to the respective utilities and there were lesser import from Bhutan because of their own generation going up during the last few months . So these are some of the factors which I would like to share with you.
As far as the PEL is concerned we have already shared with you that the ONGC deal is we have got the shareholders’ approval and the final leg of negotiation is going on this and we expect that this will be completed soon. The performance of our associates and subsidiary company PEL has performed extraordinarily this year and gave a PB T of more than INR 55 crores.
And similarly the other associate HPX ha s also done substantially well a nd they h ave achieved a profit of INR15 crores this financial year which is exceptional for a new company which has just started its operation previous year. Similarly, I would also like to tell that the other important developments in the HPX arena is the shadow coupling which has been allowed by the regulator and if we get the benefit of the shadow coupling and the future market coupling , we will see this investment of PTC reaching a greater height.

With this, I come to an end of my opening remarks and I'll request CFO to give a small presentation on the performance of the company and the details on the receivables from different states.
Pankaj Goel : Yes. Thank you CMD sir. Good evening to all of you. So first I will go through the financial results for the stand alone for the quarter March '24 and for financial year March '24. So first I'll go through t he quarterly results on a stand alone basis. Volume has increased by 10% to 18 billion units from 16.4 billion units. The total operational inc ome has increased by 13% to INR 193 crores from INR 171 crores.
As CMD has already explained that this is mainly due to our increase in operational income and incre ase in our core margin from INR 2.91 paisa per unit to INR 2.94 paisa per unit during the quarter and it also ha s some contribution in increasing our net r ebate and surcharge income also. So profit before tax has decreased by 41% to INR113 crores from INR 192 crores. This is mainly due to the impairment provisions of some of the doubtful debts we have taken in this quarter. Further, there was an upward revision of carrying value of

each PTC Energy by INR 50 crores
in the corresponding quarter on account of various positive developments at that point of time .
The profit after tax h as also decreased by 47% to INR83 crores from INR 155 crores. PAT has lowered due to the reason that I have already explained because of the decrease in the profit before tax. The total other comprehensive income has decreased b y 84% to INR28 crores from INR175 crores. This is mainly on account of reduc tion in our value of our Teesta project.
As you're all aware company has a 5.62% equity in Teesta. There has been a damage to Teesta project due to flash flood arising out of a cloud burst. Accordingly, estimated reduction of INR67 crores in value of investment was made in December '23. In the cu rrent quarter, furth er reduction of INR 54.59 crores has been accounted for in other comprehensive income. Earnings per shar e for this quarter stood at INR2.08 as comparison to INR 5.25 in previous quarter.
Now I'll go through the results for the year ended March '24. Volume has increased by 6% to 74.8 billion unit from 70.6 billion units. The increase i s mainly on account of our exchange trade and long -term trade. The t otal operational in come has increased by 8% to INR616 crores from INR572 crores. Our core margin has gone up f rom INR 3.20 paisa per to INR3.36 paisa per unit during the year. The operational income has also increased due to increase in our net rebate income.
Profit before tax has increased by 1% to INR484 crores from INR 481 crores. Profit after tax remained at the same le vel of INR 369 crores. Total other comprehensive inc ome has decreased by 37% to INR247 crores from INR 389 crores. The comprehensive income is as already explained that this is due to reduction in value of investment in Teesta project. Earnings per share for the year stood at INR12.47 as compared to INR 12.49.
Now I'll go through the financial performance of the consolidated results on a quarterly basis. Volume has increased by 10% to 18.1 billion units from 16.5 billion units. Profit before tax has decreased by 27% to INR124 crores from INR 171 crores. Profit after tax has decreased by 30%

to INR91 crores from INR 129 crores. Total other comprehensive income has decreased 75% to

INR37 crores from INR 149 crores. Earnings per share for the quarter stood at INR 2.91 as compared to INR 3.94.

I'll go through the yearly result on a consolidated basis. Volume has increased by 6% to 75.4 billion unit from 71.1 billion units. Profit before tax has increased by 5% to INR718 crores from INR680 crores. Profit after tax has also increased by 5% to INR533 crores from INR 507 crores. Total other comprehensive inc ome has decreased by 22% to INR 410 crores from INR527 crores. Earnings per share on the consolidated basis for the year stood at INR16.11 as compared to INR15.05 during the corresponding previous y ear. Thank you.

Moderator: Thank you very much. Ladies and gentlemen we will now begin the question and answer session. We have our first question from the line of Yogesh Jain from Garima Capital . Please go ahead.

Yogesh Jain : Firstly, when are we likely to receive the funds of the power company which we sold some time back? Secondly, what are the prospects of the power trading business for the current year?

Dr. Rajib Kumar Mishra : Yes. Mr. Jain. I mean, as far as the ONGC sale is concerned we have informed you that we have the approval from the shareholders. We are at the final stage of discussion with ONGC a couple of things which we need to finalize before we enter into the final agreement and the deal will be completed. So as yo u know this is a large deal and requires a lot of confirmation from differen t parties. So that is going on a nd we expec t that this will be done soon.

And as soon as the deal will be done we wi ll complete all the condition decisions a nd then we ca

n expect the fund from ONGC. So this is the status right now. We'd keep on informing you and the investors the s tatus of that. The second part which you asked is on the current power trading business.

It is go ing well what we have expected a nd in the month of April there was lesser demand than expe cted, but in the May month, 15 May onwards the demand has picked up a nd we are on the track as far as 15th May until date is concerned. So as far as the trading is concerned this year, we are doing fine. And if the monsoon is good and the generation from both in Bhutan as well as hydro plants in India if we get a good generation certainly the next quarter also we expect to do well.

Moderator: Thank you. We'll take the next question from Vishal Mehta from Wealth Guardian. Please go ahead.

Vishal Mehta: Sir I just have two questions. One is that we are going to receive about INR 31 per share from the sale of PEL. So just wanted to check how much do we intend to pay out as dividends to the shareholders a nd if yes when do we expect this dividend to come through?

Dr. Rajib Kumar Mishra : The second part Mr. Mehta I have just answered. The first part I would like to answer that at this point of time we have just declared the annual final dividend for the company a nd we have to call a Board meeting for deciding what to do , once we get the receipt from the ONGC sale, b ut at this point of time I would restrict myself only to the dividend declared for this financial year.

Vishal Mehta : Okay. T his question I'll just give you some backg round. The thing is we have INR 800 crores of cash already on the b ooks and we generate about INR 400 crores. So in an asset -light business we thought we could afford to be a little generous with the shareholders given that this is the 25th year of our operations. So that's the background for the question.

Dr. Rajib Kumar Mishra : No, certainly. I mean whatever you have suggested I'll pass it on to the board members.

Vishal Mehta : Great, sir. And sir one more question I had was considering the challe nges we face historically in PF S and the impact it has had on PTC itself when do we expect to sell this business?

Dr. Rajib Kumar Mishra : Last time also I said that we can't take all the subsidiary company at one go. We have i nformed in the past that the PFS sale is on hold and we have not kept it in advance . So once the PEL deal is over then we will take it to the board whether we should go ahead with it or not. So again once I get any kind of nod from my b oard, I'll come to you to share more information.

Vishal Mehta: Okay sir. Thank you so much. That’s all from my side.

Moderator: Thank you. We will take a text question from Sriram R.

Sriram R: What is the current status of the regulator with reference to market coupling? If the regulator decides to implement the same, how long it would take to operationalize the new system?

Dr. Rajib Kumar Mishra: CRC has already given for shadow pilot and that need to be implemented by the system operator that is Grid India. And they are in the process of developing it. And once it will be implemented, the regulator will get a conference and the kind of sense of im plementation based on the results

which they will get from the shadow pilot.
So that's one thing which they have already ordered as far as the final implementation of the market coupling. Of course, that will depend upon the shadow pilot. But I understand the entire policymaking in the country, they are talking about one country, one price and of course, the one price discovery through the exchan ge. So that has to be done. I think the market coupling has to be implemented.
Moderator: Thank you sir. The next text question is from Lipika Kundu, an Individual Investor.
Lipika Kundu: Kind attention CMD sir, other than regular yearly dividend, which you have already anno

unced,
are you considering any special reward like bonus, stock split, etcetera, on the special occasion of silver jubilee year?
Dr. Rajib Kumar Mishra: I just mentioned that our Board has just declared the annual dividend, and we have not discussed anything on special dividend or any bonus dividend or any dividend related to PEL sale. Once that's there, we will discuss it at the Board and then I'll be in a position to share more information on that.
Moderator: Thank you. The next text question is from Aditya Y. from Damani Securities.

Aditya Y.: Sir, can you tell us your thoughts on the business going ahead? The mix between long -term and short -term contracts are going in favour of us this coming year? What ballpark range are we seeing in volume growth? And are you maintaining our market share in India?
Dr. Rajib Kumar Mishra: Yes. I have just mentioned that we have maintained a growth in our volume year -on-year. And I have just mentioned that we would like to maintain the share of almost 50% -50% from long - term and medium -term and the shorter -term trade. As far as the projections are concerned, the growth projections in the country is to the extent of 6% -7%. And certainly, we would also like to meet that target. And do better than what the grow th of demand in the country is.
Important thing is we are trying different products. And once that is done, I'll be in a position to share you more related to the import of power from Bhutan from new projects, similarly, import of power from Nepal and similar other aspects of doing busi ness for this financial year.
Moderator: Thank you. The next text question is from Yogesh Jain from Garima Capital.
Yogesh Jain: Sir, when is IPO of Associate Company, Hindustan Exchange, expected?
Dr. Rajib Kumar Mishra: Mr. Jain, I mean I just mentioned that they have done the first profit of around INR15 crores this financial year, and they have kept a very ambitious target for this financial year as far as the volume is concerned. And we have just started this operation almost 2 years back on the 2nd of July 2022. So the company has to have a consistent growth and the robust performance before we go back to the investors for this kind of IPO. And it has not been decided in the HPX Board when they should go for the IPO.
Moderator: Thank you. We'll take a line question from Vipulkumar Shah from Sumangal Investments.
Please go ahead.
Vipulkumar Shah: What was the exit market share of HPX at the end of March?
Dr. Rajib Kumar Mishra: Shah ji, there are 3 or 4 different segments of market in which the company is doing business. They have a substantial market share in the term -end market and the ADSs market and the contingency market. But as far as the day ahead market, because of the dominan ce of one particular exchange for long, they do not have much of share. But for other segments, they have almost 1/3 or more share in those products.
Vipulkumar Shah: And sir, my second question is regarding our financial services subsidiary. So there has been a substantial increase in the provision. So what are the reasons for that? And what type of prospects do you see for that in the current year for that business?
Dr. Rajib Kumar Mishra: Shah ji, let me tell you, I mean, if I can see the accounts of this company as well as PTC Financial Services, all the worrisome things ha ve been provisioned for both the companies right now and the accounts are pretty clean. And anything where we feel that there was a scope of provision, the Audit Committee and Board has done provisioning for that. So I feel that at this point of time, the P FS as well as PTC accounts are purely clean from any kind of provisions.
Vipulkumar Shah: So we will not have provisions -- substantial provisions in subsequent quarters for both?

Dr. Rajib K

umar Mishra: Yes, that's right.
Moderator: Thank you. We'll take our next text question from Pratik Kapoor from Proinvest.

Pratik Kapoor: What is your outlook on the surcharge income? Since, it was flat in the current financial year.
Dr. Rajib Kumar Mishra: As far as surcharge income is concerned, although it's a part of the PPA and the income is booked once there is a delayed payment, we cannot give a prediction to this, but you have seen that we have maintained surcharge income in last so many years. And wi thout going into the future forecast on the surcharge income for the company, we understand that the environment in which we are operating remain same. The earning on from the surcharge income would also be either better than this o r in this area only.
Moderator: Thank you. Next question is from Vishal Mehta from Wealth Guardian.
Vishal Mehta: Can you please share the volumes, revenue and profit figures for HPX for FY '24 and FY '23?
Dr. Rajib Kumar Mishra: Yes, CFO, you can take it
Pankaj Goel: Yes. The total income was INR43 crores for March '24, INR17 crores for March '23. The profit before tax for March '24 was INR16 crores, and there was a loss of INR10 crores in March '23. Profit after tax in this financial March '24 is INR14.94 crores there was a loss of INR10 crores in last year i.e March '23.
Moderator: Thank you. Next question is from Aditya Y. from Damani Securities.
Aditya Y.: Sir, one very important question that bothers a lot of long -term investors like us. When do you see the receivables number coming down? This year, again, they went up. Do you consider the entire receivables good and no provisions required for them?
Dr. Rajib Kumar Mishra: In very simple answer, I can say that all the receivables are good, and there is no reason for any of our investors to worry on that . In many cases for some cycles, the receivables goes up. But again, with a very rigorous follow -up with these utilities, we could bring it down in the past, and we are very confident that it will come down again. I'll request Director Commercial also to add the serious ef forts what the company has made to bring it down.
Dr. Manoj Kumar Jhawar: Dear investors, basically, it must be appreciated that most of our outstandings are from the state governments. And we assume that, I mean, the Government -backed companies are not likely to default on their outstandings. That said, we are making serious efforts. Our major outstanding are towards the state of Jammu and Kashmir that is a very special status state and a lot of financials update state are dependent upon the central grants and assistance. As we understand now, the entire country and particularly J&K, they have been going through the sensitive phase of election and all.
We are expecting that since the elections are now over, we will be seeing central Government funds flowing to the J&K and we'll be able to liquidate our liabilities. That is one aspect. Other than that, we are not seeing any major default from other customers. We are in continuous touch and follow -up with our outstandings towards Andhra Pradesh Power Development Corporation

as well as the third major outstanding are against the Bangladesh Power Development Board. So that is, again, a sovereign Government to Government guarantees there. So we do not expect any default.
Moderator: Thank you. Next question is from Siddharth Shah from Vikram Advisory Services Private Limited.
Siddharth Shah: When can we expect MD coming in for PFS? In PFS con call, they had mentioned it is in advanced stage. It has been more than almost 9 months without an MD. Could you provide a timeline by which an MD would be coming in?
Dr. Rajib Kumar Mishra: I think the PFS con call, they must have given you the complete picture. But if you have asked to the holding company, let me tell you, the MD was sel

ected almost 1.5 months back and all the other formality in the company is complete. As you know, it's an NBFC. And generally, for a selection of Board level position, it goes for clearance from the regulator. And I think the final stage of regulatory clearance will be done soon, and the selected person will be in a position to join as early as possible.
Moderator: Thank you. As there are no further questions, I would now like to hand the conference over to Dr. Rajib Kumar Mishra for closing comments. Over to you, sir.
Dr. Rajib Kumar Mishra: Thank you very much. At the end of this investor presentation and call, we would like to thank all who have participated in today's call. And let me once reassure you that the company in its 25th year is doing very well, and we, once again, reassure our in vestors and all our analyst friends that we will be doing as per the expectations of our investors post their faith on this company.
One thing which I have always mentioned in the past also, that is one of the rarest company in this sector has always rewarded their shareholders and consistently given highest dividend in this segment. We would continue or strive to do something better than this. Thank you very much.
Moderator: Thank you, sir. Ladies and gentlemen, on behalf of PTC India, that concludes today's session.

Thank you for your participation. You may now exit the meeting.

November 13, 2024

MANAGEMENT : DR. MANOJ KUMAR JHAWAR – CHAIRMAN AND
MANAGING DIRECTOR , ADDITIONAL CHARGE , AND
DIRECTOR COMMERCIAL AND OPERATIONS – PTC INDIA
LIMITED
MR. HARISH SARAN – EXECUTIVE DIRECTOR – PTC INDIA
LIMITED
MR. PANKAJ GOEL – EXECUTIVE DIRECTOR AND CHIEF
FINANCIAL OFFICER , PTC INDIA LIMITED
MR. RAJIV MALHOTRA – EXECUTIVE DIRECTOR AND
CHIEF RISK OFFICER , PTC INDIA LIMITED
MR. BIKRAM SINGH – HEAD (MARKETING), PTC INDIA
LIMITED

Moderator: Ladies and gentlemen, good day and welcome to the PTC India Limited Q2 FY '25 Earnings Call.

The Management Team at PTC India is led by Dr. Manoj Kumar Jhawar - Chairman and Managing Director, Additional Charge, and Director Commercial and Operations, PTC. Dr. Jhawar is accompanied by Mr. Harish Saran - Executive Director, PTC; Mr. Pankaj Goel - ED and CFO, PTC; and Mr. Rajiv Malhotra - ED and CRO, PTC India Limited.

At this moment, all participants are in a listen -only mode. Later , we will conduct a question - and-answer session. Please note that this conference is being recorded. I now hand the conference over to Dr. Manoj Kumar Jhawar for opening remarks. Thank you, and over to you.

Dr. Manoj Kumar Jhawar : Good evening, everyone . I welcome you all to the earnings call of the company post our Q2 Financial Year FY 2024 -2025 Results .

I am joined by the entire Management Team to take you along the earnings detail of the Company . Mr. Harish Saran - Executive Director, looks after the business development and consulting business ; Shri Pankaj Goel - ED and CFO, handles t he finance functions; and Mr. Rajiv Malhotra - ED and Chief Risk Officer , handles legal risk and corporate affairs related functions. I am also having with me Mr. Vikram Singh - who is Executive Vice President of the marketing department; and Mr. Anand Kumar, who handles the investor relations and public outrage functions.

This Post-Earning Call gives us an opportunity to share insights into our company 's vision, performance and strategic direction a nd to engage with those , who are integral to our growth and success , our investors, partners and stakeholders. The Q2 quarter of every financial year , continues to be an action -packed quarter for the company. The volume growth in this quarter has been 13%, which is around 24 billion units and overall growth up to this six-monthly period has been 6%. The consolidated profit for this qua rter has grown up by 16%, whereas , on the standalone basis there has been some decline in the profit after tax. This is because we had earlier received around Rs. 40 crores dividend from a subsidiary, which this year we have not received because that subsidiary wishes to invest that in business to grow their business further. The core margin has been maintained at Rs. 3.55 per unit for the half -year and Rs. 3.60 per unit for Q2. On the supply to power to Bangladesh, which has been an area of concern and we have been listening very news about that , I wish to inform all the investing community that we continue to supply power to BPDB and our receivables have started decreasing. The change in guard at Bangladesh did have an impact on smooth supply of energy and receipt of power. But our commercial and operations teams have been managing this very effectively. We are now very hopeful that there would not be any adverse issues relating to ongoing contract 's supply power to Bangladesh .

The definitive agreement for the sale of PTC Energy Limited has been signed with ONGC Green Limited and our team is in the process of completing the conditions precedent for carrying out

the transaction. We expect this to close within the available time frame for definitive agreement .

I hope , all the investors will have received dividend distributed by the company. The concerns raised by proxy advisors & non adoption of account by the shareholders are being addressed

and we will go to the shareholders for their approval of the account at the earliest possible opportunity.
Now I will request our ED and CFO – Shri Pankaj Goel to give the Financial Highlights of the company for the quarter. Post this , we will ha ve question -and-answer sessions. O nce again, thank you for your continued support for the company.
Wish you all a very h

appy New Year and Season ’s Greetings .
Pankaj Goel : Thank you, CMD, sir. Good evening to all of you. Now, I will go through the financial highlights of PTC India Limited for quarter and half -year ended September ‘24 on standalone and consolidated basis .
First, I will go through the quarterly and half -yearly results on standalone vis à vis the previous corresponding and half -year.
So, as far as the quarter is concerned, volume has increased by 13% to 24 billion units from 21.3 billion unit. Total operational income has increased by 19% to Rs. 197 crore from Rs. 166 crore , the increase in the operational income is mainly due to our increase in the trading margin and higher surcharge income in this quarter .
Profit before tax has decreased by 6% in spite of an increase in the total operational income to Rs. 157 crores from Rs. 166 crores. A s already explained by CMD sir, that this is because of the dividend income of Rs. 41.75 crore s from PFS in the corresponding quarter ended September ‘23. Profit after tax has decreased by 13% to Rs. 117 crore s from Rs. 133 crores. T otal other comprehensive income has also decreased by 13% to Rs. 116 crore s from Rs. 133 crores. Earnings per share for the quarters stood at Rs. 3.94 as compared to the previous corresponding quarter at Rs. 4.5.
Now I will go through the half -year ended results on a standalone basis. Volume has increased by 6% to 44.5 billion unit from 41.9 billion unit. Total operational income has increased by 23% to Rs. 385 crores from Rs. 313 crores . Profit before tax has increased by 5% to Rs. 300 crore s from Rs. 286 crores . Profit after tax almost remains at the same level of Rs. 223 crores. Total other comprehensive income is also at the same level of Rs. 223 crores . Earning s per share for the half -year ended stood at Rs. 7.53 in comparison to Rupees Rs. 7.54 during the last half -year.
Now I will go through the consolidated results for the quarter :
Volume has increased by 13% to 24.3 billion units from 21.6 billion unit. P rofit before tax has increased by 12% to Rs. 306 crore s from Rs. 272 crore s. The increase in profit is mainly because of the increase in trading margin and higher surcharge income. Also, due to non-charging of

depreciation of PEL fixed set as the same are classified as held for sale as per the Indian Accounting Standard. Profit after tax has increased by 16% to Rs. 234 crore s from Rs. 202 crore s. Total o ther comprehensive income has increased by 15% to Rs. 233 crore s from Rs. 202 crore s. Earning s per share for the quarters stood at Rs. 7.34 in comparison to Rs. 6.13.
Now I will go through the half -yearly consolidated results :
Volume has increased by 6% to 44.9 billion units from 42.3 billion unit. P rofit before tax has increased by 19% to Rs. 552 crores from Rs. 463 crore s. Profit after tax has increased by 23% to Rs. 423 crores from Rs. 345 crores. T otal hour comprehensive income has increased by 23% to Rs. 423 crores from Rs. 344 crore s. Earning s per share for the half -year ended stood at Rs. 13.21 as comparison to Rs. 10.51.
Thank you.
Moderator: Thank you. Ladies and gentlemen, we will now begin the question -and-answer session. We take our first question from Chanamallu Halagodi , an individual investor. Please go ahead.
Chanamallu Halagodi : I am a serious investor in the PTC India Company, I’m holding 8 ,000 shares in your company. I invested in this company in the hope of concentrating on purely core business. So, after announcing the divestment of PTC in the financial service, I got hope that you will concentrate in the core business. But since four years that PTC India Financial Service divestment is lagging behind, so I think you are not serious in the divestment of PTC India Financial , just you announced that announcement just to increase the market to value artificially in bot

h of the listed companies . This is my question, s ir.
Dr. Manoj Kumar Jhawar : Your concern is understood. Please let me make it very clear that a call to divest in PFS as and when that is taken, the market would be taken into the confidence. As of now, the PTC board had earlier considered its divestment. But at a later stage, that entire exercise was put on hold . One reason I can tell you is we are currently , I am in the midst of the transaction relating to PEL, post that this matter will be again considered by the P TC Board. But I assure you , that there is no absolute no intention as to I mean increase the share price just on the basis of a notion that

we make an announcement and we do not follow it up.
Chanamallu Halagodi : Please take it serious and do it early, sir.
Dr. Manoj Kumar Jhawar : Yes, sir, your concern is I mean, take a note of.
Meanwhile, while the second question comes, I would like to thank our previous investor to ask this question for having faith in the company. Kindly remain invested. We really need good investors who are with us for the long -term.
Moderator: Thank you, sir. We have a question from Subhankar Ojha from SKS Capital. Please go ahead.

Subhankar Ojha : So, with respect to that, divestment of PEL, what is the time frame that we have in terms of where are we in terms of the approvals and when do we expect to close this divestment?
Dr. Manoj Kumar Jhawar : We expect to close this transaction by mid of the next month. We are in the process of completi ng certain condition precedents, if we are able to complete those conditional precedent, we have the time till mid -December.
Subhankar Ojha : And is there any thought on the uses of that fund?
Dr. Manoj Kumar Jhawar : Sir, I mean, we would like to of course in parallel w e are working and the strategic, call regarding investments would be taken by the Board of the Directors at an appropriate time.
Subhankar Ojha : And also , can you give a break -up of the receivables , which is I mean your H1? Can you give anything which is beyond say?
Dr. Manoj Kumar Jhawar : Yes, CFO would like to respond to your query.
Pankaj Goel : The total debtors for the half -year is Rs. 6,609 crore s and our main debtors out of this is including basical ly, if you see that the we are also holding the creditors. So, our net exposure per say , just say, our net exposure is around Rs. 2,400 crore s. So, we subtract the creditor out of it and an exposure is in J&K is around Rs. 990 crore s.
Subhankar Ojha : With respect to your exposure to Bangladesh, what is the receivable now and what was it say six months back?
Pankaj Goel : Basically, there is no exposure as on date , as far as the Bangladesh is concerned. So, whatever amount is receivable that i s also payable to the generator. A s on 30th September , typically our debtors to Bangladesh was around Rs. 850 crores. But after that , we have received some payment from Bangladesh.
Subhankar Ojha : So, you are saying from Rs. 850 crores, as of today, it is 0 ?
Pankaj Goel : No, no .
Dr. Manoj Kumar Jhawar : No, no, it is not an open exposure. C orrespondence on, this is back -to-back cont racts. So, whatever we receive from Bangladesh , we shall be paying to the generator. So, if we have not received the money, then we have not paid the money to the generator. But the silver lining in this entire episode is this key , the outstandings have substantially come down in past one month. Payments have been accelerated from Bangladesh side, so we do not see any problem going forward.
Moderator: The next question is from Suyash Bhave from Wealth Guardian. Please go ahead.
Suyash Bhave : Can we get a break -up of the total CBT or international volumes for quarter 2?

Pankaj Goel : Our cross -border volumes for quarter were including Bangl

adesh 3 ,700 million units for the quarter . And for half -year, it is around 4,700 million unit .
Suyash Bhave : So, 4,700 is for H1, half-year?
Pankaj Goel : Yes, for H1. Absolutely, right.
Suyash Bhave : So, and any update on HPX, performance and volumes?
Dr. Manoj Kumar Jhawar : Actually, I mean HPX is , as every investor in that company would know, HPX is not having a great presence in the DAM market . But it continues to do well in other segments of the market , except the DAM and RTM market . So, for DAM markets and for ADSS it has been able to gather substantial market share. But since the exchange business is basically revolving around the DAM and unless and until there is some policy announcement relating to market coupling , etc., it is difficult to bring volumes to on the DAM segment on HPX. So, that is it, that situation continues.
Suyash Bhave : Would it be possible to share revenue number and profit numbers for HPX for Q2?
Pankaj Goel : Yes. So, the revenue for Q2 was for the quarter is around Rs. 5.77 crore s and the profit as a whole for HPX was around , profit before tax was Rs. 80 lakhs, b ecause there was some negative taxation and all that. Profit after tax is around Rs. 1 crore.
Moderator: Thank you. We have few text questions. The first question is from Abhimanyu Lakshman from

Family Office.
I have a follow -up question on PEL divestment. Can you please elaborate or give us an idea of the range of conditions for closure of the transaction ONGC ? Thank you.
Dr. Manoj Kumar Jhawar : I mean the nature of discussions with the ONGC, I would not like to go into that detail . But we are hoping to conclude the transaction by mid of next month that much I would like to share here.
Moderator: Thank you. The second text question is from Lipika Kundu and individual.
Respected chairman sir, in spite of having good earnings in H1, why interim dividend has not been considered this time ? Does it mean that H2 earnings will not be that good?
Dr. Manoj Kumar Jhawar : No, we do not see any headwinds as to our H2 performance is concerned. But only thing is that for this quarter as we have already said that the PAT has been a little bit subdued because we did not receive any dividend from our subsidiary. So, earlier also , in the previous year also , there has not been any practice of PTC to declare the interim dividends. So , I think, there is nothing surprising about not declaring the interim dividend. But after considering all factors, we will not disappoint the shareholde rs.

Moderator: Thank you. Next question is from Chanamallu Halagode , an individual investor.
What is the timeline you will take to complete the divestment of PTC India Financial Services from here onwards?
Dr. Manoj Kumar Jhawar : I have already answered that question. E arlier there was a discussion and then that decision regarding divestment was put on hold. Currently, I have been dealing with the divestment of PEL. So, after that board will take a call at an appropriate time. Divestment for the sake of divestment, I would like to, I mean, just apprise the investing community , divestment for the sake of investment is not the right thing to d o. There has to be timing to it. A nd we believe , that PFS has potential to grow. So, I mean , decision for divestment has to be timed properly , if it is to be there . So, those aspects will be considered by the PTC board.
If there are no further questions, we can close the call.
Moderator: Sir, we have one text question. I will just read that. We have a question from Suyash Bhave from Wealth Guardian .
Regarding the approval of accounts, what is the process forward? Will it be done in an EGM or would it be in next AGM? What would be the outlo ok on that?
Dr. Manoj Kumar Jhawar : Actually , you see the reason for non adoption of the account , most likely was some a

dvice given by the proxy advisory services. So, we are first in the process of addressing the issues and the concerns which were raised by the proxy advisory services firms . And accounting being a quarterly process . So, this quarter was too little time for us to really remedy those problems. First, we would like to remedy those problems then only go to shareholders to say and apprise them about th e progress, which we have made and then we will seek the approval of the shareholders or adoption on the accounts . It may take a quarter or so .
Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I would like to hand the conference over to Dr. Manoj Kumar Jhawar for closing comments. Over to you, s ir.
Dr. Manoj Kumar Jhawar : Thank you very much, shareholders. I think all the meaningful questions have been asked and I think we have been as candidly able to answer your query. What I can share with you is here is thank you very much for remaining invested with us. Thank you for posing confidence in our company. Our company is doing everything possible to assuage the concerns raised by the investing community. W e are working very hard on that. A nd hopefully , in the coming days our company will realize the pr ogress which we have made. Thank you.
Moderator: Thank you, sir. Ladies and gentlemen, on behalf of PTC India, that concludes today ’s session.
Thank you for your participation. You may now exit the meeting .

Call: Feb 2025

Q3 FY25 Earnings Conference Call
February 13, 2025

Moderator: Ladies and gentlemen, good evening and welcome to the PTC India Q3 and Nine Months FY25 Earnings Conference Call.
Representing the company and to answer your queries, we have with us on the call the senior management team led by Dr. Manoj Kumar Jhawar – Director C&O and CMD , Additional Charge . I would now like to hand the conference over to Dr. Manoj Kumar Jhawar of PTC India Limited. Thank you and over to you sir.
Dr. Manoj Kumar Jhawar: Good afternoon, everyone. I welcome you all to the earning call of the company post our Q3, FY25 results. I am joined by the entire management team to take you along the earning details of the company . I have with me. Mr. Harish Saran , Director Mark eting, Mr. Pankaj Goel who is ED & CFO, Mr. Rajiv Malhotra who is ED and C hief Risk Officer, Mr. Bikram Singh, who is E D Marketing and Shri Anand Kumar, who is VP Investor Relations.

This post earning call gives us an opportunity to share insights into our company's vision, performance and strategic direction, and to engage with those who are integral to our growth and success, which is our investors, partner s and stakeholders . The third quarter happens to be a fulfilling one, with volume support coming from all the segments of the trading . The volume growth, quarter -on-quarter basis has been 29% total ing to 19.24 billion units. And for the nine -month period ending December '24 it grew by 12% to 63.74 billion units . With a 23% growth in trading income to Rs.60.89 crore. The total operational income, including consultancy business, was Rs 182.12 crore for the third quarter. The PAT for the third quarter was Rs 110.59 crore . On supply power to Bangladesh we continue to supply power to the Bangladesh Power Development Board and our receivables are well within the manageable lines and as per the contextual structures .

Our commercial and operational scheme are in regular interaction with the BPDB officials for smooth supply of energy and receipt of our deals . The definitive agreement for the sale of PTC Energy Limited with ONGC Green Limited was signed on 13 th September 24 and our team is in the process of completing the condition precedent for the transaction. We expect this to close very shortly, and th

e timeline for completion of the transaction has been extended to 28 th February 25 on mutual agreement.

 The business outlook, I expect power demand to remain firm and grow at 6% to 8% per annum. The demand can further rise in somewhat due to expected repairs and coupled with adverse weather conditions . The government focus on renewable energy , draft REIA guidelines to include many more traders, energy storage systems, pump storage systems, etcetera is expected to lead the supply basket in coming years. Government of India envisage a requirement of 74 gigawatt of capacity in storage solutions has better integr ation of renewable energy into the grid. The budget notification and guidance for PSP based plants will facilitate the adoption of energy from this sourcing calibrated and organized manner. We take pleasure in informing all of you that all the qualificatio ns, either in this quarter standalone accounts or in consolidated accounts of PTC Group have been dropped by our auditors . Our Board has also approved the policies which were required for compliance under the business responsibility and sustainability reporting. The same shall be uploaded on our website very soon. Now, I will request our ED and CFO , Mr. Pankaj Goel to give the financial highlights of the company for that quarter. Post this, we will have question -and-answer session . Once again , thank you very much for your continued support to the company, and thank you very much for joining the call.

Pankaj Goel: Thank you, CMD sir. Good evening to all of you. So as CMD has informed that there is a good news that all the qualification s at the group level made during the last quarters have been dropped by the auditors, and now we have a total clean results basically at the group level. So , now I will go through the financial results for the quarter ended and nine months ended December '24 . So first , I will go through the quarter ended result for December '24 quarter. So volume has increased by 29% to 19 .2 billion unit, from 14 .9 billion unit. The volume has mainly increased due to a higher short term trade. The total operational income has increased by 66% to Rs 182 crore, from Rs 109 crore . The operational income has increased mainly due to higher surcharge income and volume traded . Profit befor e tax has increased by 74% to Rs 148 crore, from Rs 85 crore. PAT has also moved in the s ame direction, increased by 76% to Rs 111 crore from Rs 63 crore . The total comprehensive income stood at Rs 111 crore compared to a loss of Rs 4 crore. So in the last quarter, the December 23 quarter, there was a total comprehensive income loss because if you are aware that last year there was damage to Teesta Project due to flash flood in Sikkim arising of Glacial Lake Outburst Flood . The company took a reduction of 67.49 crore in the carrying value of its investment in Sikkim in the corresponding quarter ended December 23 . The earning per share for the quarter stood at Rs. 3.74 as compared to Rs.2.12 in the corresponding quarter.

Now , I will go through the nine month ended results on a standalone basis . Volume has increased by 12% to 63 .7 billion units from 56 .8 billion units . Total operational income has increased by 34% to Rs. 567 crore from Rs.422 crore. Profit before tax has increased by 21% to Rs 448 crore from Rs 371 crore, as earlier mentioned PBT increased due to higher volume and the higher surcharge income . Profit after tax, has increased by 17% to Rs 333 crore from Rs 286 crore, total other comprehensive income has increased by 53% to Rs 334 crore from Rs 218 crore .

 Earning per share for the nine month ended stood at Rs.11.26 as compared to Rs 9.66 in the corresponding quarter. Now, I will go through the consolidated results for the quarter, and nine month ended December '24 . For the quarter volume has increased by 29% to 19 .3 billion unit from 15 billion unit

. Profit before tax has increased by 72% to Rs 226 crore from Rs 131 crore.

Increase in consolidated PBT is on account of that higher profit before tax of PTC and of PTC financial services also and secondly, in the last quarter we have also informed that now, because the PTC energy asset has been held for sale, as per the IndAS accounting so in the

consolidating accounts we don't have to charge the appreciation. So because of non-charging of depreciation on P EL assets the same has classified as held for sale and depreciation has been added back into the profit before tax . So profit after tax has increased by 87% to Rs 181 crore from Rs 97 crore . Total other comprehensive income has increased by 517% to Rs 181 crore from Rs 29 crore . Earning per share for the quarter stood at Rs.5.32 as compared to Rs.2.68 .
Now, we will go for the nine month ended consolidated results, volume has increased by 12% to 64 .2 billion unit from 57 .3 billion units. Profit before tax has increased by 31% to Rs 778 crore from Rs 594 crore . Profit after tax has also increased in the same direction by 37% to Rs 604 crore from Rs.442 crore . Total other comprehensive income has increased by 62% to Rs 604 crore from Rs 373 crore . Earning per share for the nine month ended stood at Rs.1 8.54 in comparison to Rs. 13.2 in the corresponding 9M December 23 . Thank you very much.
Moderator: Thank you. We will now begin the question -and-answer session . To ask a question click on the Q&A tab on the panel and click on raise hand button. You can also type in your text questions. The operator will announce your name when it is your turn to ask a question. Please accept the prompt on your screen and unmute your microphone while proceeding wi th your question. We will wait for a moment while the question queue assembles . The first question is from Narendra Kutia , from Robo Capital. Please go ahead.
Narendra Kutia: Hi, am I audible?
Moderator: Yes, you are please proceed.
Narendra Kutia: Thanks f or the opportunity. S ir my question is regarding H PX. So it's been about almost two years since the letter regarding market coupling was released. So where are we on that front , could you throw some light on when can we expect market coupling to happen, and what kind of discussions are going on ?
Management: Regarding market coupling , basically it is a call for the regulators and the government to take. We have been advocating for this , we have been having regular sort of meetings with the concerned officials. The pilot has been completed by the CEA, now those results are at a discussion at various levels. We will keep on educating for this coupling based on the sound technical logic as well as the commercial logic , but we cannot really prescribe any timeline for the same .
 Narendra Kutia: Okay, all right, sir. And what was the revenue and PBT per HPX for the nine months, as well as Q3 FY25?
Management: Yes, so for December ‘24 quarter, the revenue from operation from HPX as a whole was Rs 6.23 crore, and profit before tax was Rs 1.36 crore and pr ofit after tax was Rs 1.28 crores.
Narendra Kutia: And for nine month ended ?
Management: For nine month ended the total revenue was Rs 30.27 crore, and the profit before tax was Rs 10.12 crore , profit after tax was Rs 8.39 crore.
Narendra Kutia: Okay, sir. And if the market coupling, until and unless the market coupling doesn't happen. So our numbers in the HPX business would remain around about at the same levels, right?
Management: Actually, in a sense we are really constrained by the fact that in the absence of market coupling all the volumes in the collective segments are likely to remain engaged with the leading exchange only, and that is the global experience. So yes, that is one of the reasons we are pushi ng our case for market coupling and allowing more players to be in the exchange segment, so that basically lead t

o betterment our services through competition.
Narendra Kutia: Okay , sir thank you so much and all the best .
Moderator: Thank you. A reminder to all the participants tha t you may please click on the Q& A tab on the panel and click on the raise hand button. We will take the text question from Bharani bhar Vijay Kumar from Avendus S park . And the question is, what is the margin per unit in nine months FY25 separately in short term trades, medium term and long term trades, what are these margins for nine months FY24 ?
Management: Yes. So for short term trade, for quarter December, our margin was 0.75 paisa per unit, in comparison to 0.66 paisa per unit, in medium term trade it is 2.15 paisa per unit. In long term trade, it is 7.7 paisa per unit and for nine month ended the short term trade margin was 0.84 paisa per unit. For medium term it is 2.06 paisa per unit and for long term trade , it is around 7.5 paisa per unit.
Moderator: Thank you, sir. We will take the next question from Gopi Krishna MK a Private Investor . Please go ahead.
Gopi Krishna MK: Can you hear me?
Moderator: Yes, sir you are audible. Please proceed.
Gopi Krishna MK: Okay. Thank you for the opportunity and congratulations for the very good numbers. I want to ask you one question, what is the difference between surcharge and the rebate in the
 presentation because surcharge is more and rebate is less, and how much this surcharge can go?
Management: You see actually you have to understand the structure of a power trading contractor . It is like this, that if there is a client who has got certain obligation to make certain payment by certain date . And then if he is preceding the payment before he is making a payment before the due

date, then he is entitled to receive rebate. And if he is making a payment after that due date, then he is liable to pay the surcharge. Now what happens that , what applies to a customer also applies to us. So as a t rader, we are in the middle of this section where on the one side there is a buyer and on the other side there is a seller. So with the help of our treasury, we take advantages of the situation wherein we can make some earnings through the surcharge at the same time, also make some earnings through the rebate. B ut this situation remains very, very fluid and dynamic with liquidity position of our client . It is heavily dependent on them, so it cannot really be predicted but this is a offering to our clients t hat we can if you are facing some short term liquidity issues, so we can pitch in on your behalf .

Gopi Krishna MK: Okay, s ir second q uestion I want to ask you, what about the long term contracts , how do you think that you would be able to secure more long term contracts because the margins in long term contracts are much higher. And do you buy power from Bhutan , because Bhutan is having lot of hydroelectric power, so they have access and they export to India ?

Management: Two things , number one, now in the domestic sector currently traders are not allowed to participate in any long term trade. So , it has to be basically a direct transaction between buyer and seller. So that is by design of law, that is by design of the guidelines of the central government. So on the domestic sector, it is unlikely that, unless and until this policy environment is changed, we will be able to gather more long term contracts. Y our second question, yes we are aware of the possibiliti es of sale of power to Bhutan , and we do provide them power as per the requirement for that we have necessary approvals and infrastructure.

Gopi Krishna MK: Okay . So the third question I want to ask you, your share price have gone below book value , do you have any plans to go for a buyback of shares if you receive the money from ONGC or you can recommend to the board, my suggestion of course you cannot take a decision right now .

Management: Your sug

gestion is duly noted, of course whenever we receive this money from deal, so options will be presented before the Board, and as per the decision of the Board further actions shall be taken.

Gopi Krishna MK: Okay, thank you sir.

Moderator: Thank you . The next question is from Suryash Bhave from Wealth Cardia l. Please go ahead.

Suryash Bhave: Yes, thanks for the opportunity. Am I audible?

 Moderator: Yes, sir, please proceed.

Suryash Bhave: So, I have a question on ONGC , would it be possible to disclose the reasons for delay in the transaction , the reason why we have not yet gone through?

Management: As per the ent ered agreement there was a large number of conditions precedent which were required to be fulfilled, and this is a process in which we have to step by step a lot of legal work is required to be done. A lot of administrative work is required to be done. But , I assure that currently there are no roadblocks and we are expecting this deal to be closed very early. I again repeat that the timeline for completion on this deal has been extended till 28 th Feb this month with mutual consent, we are expecting to complete within this time.

Suryash Bhave: Alright . Sir in one of the previous calls, we had talked about some receivable situation with respect to the state of J &K, has that resolved any status update on that?

Management: Yes, that has significantly resolved. And currently it is very, very well within the manageable limits earlier, the dues had increased to as I guess around Rs.1200 crore possibly more than that. But currently, the debtor situation in respect of state of J &K, is very, very manageable. It is currently less than Rs. 700 crore, so that is normal .

Suryash Bhave: Sir regarding Bangladesh , can we.

Management: Bangladesh also. Please ask the question .

Suryash Bhave: Yes, r egarding Bangladesh can you give some maybe similar numbers as in the amounts outstanding and what kind of money are we receiving and numbers around that ?

Management: Yes, so as far as Bangladesh is concerned, the last quarter our outstanding was around Rs 859 crore. But at the end of this quarter, our outstanding was only Rs 693 crore so there is around Rs 200 crore reduction on outstanding.

Suryash Bhave: Okay. Sir, one last question I have , it is regarding Sikkim Urja and our stake in the company , would we be required to contribute any money towards its repairs or reconstruction as in, how do you see that panning out?

Management: Number one no, we do not intend to invest any more funds into that project. And number two, revival of that project depends on a lot of things , a lot of clearances would be required, many engineering and design embedded issues would be required. Those issues have to be taken care of by the developer who is in control of the project.

Suryash Bhave: Okay, all right sir. Thank you.

 Moderator: Thank you. The next question is from Vipul Kumar Shah from Sumangal Investments. Please go ahead.

Vipul Kumar Shah: Hi, am I audible sir?

Moderator: Yes.

Vipul Kumar Shah: Yes, so my question is, are dues to Bangladesh covered by any sovereign guarantee from Bangladesh government ?

Management: Yes, sir.
Vipul Kumar Shah: Okay. And second question regarding core margin, so why the margin have come down substantially for three months and nine months ?
Management: Margins are actually generally aligned with what we have been having but the entire business volume, as I told earlier, that since there are no new long term trading opportunities arising because of regulatory affairs. So margin we are trying to earn more and more margin from short term and medium term trades . Obviously, the short term and medium term trades can be a lower margin . So overall, while we increase the volumes, there is a pressure on the margins.
Vipul Kumar Shah: And where are we in the journey to di

verse PTC financials ?
Management: Right now , earlier this matter was taken up and considered by the Board of PTC, and this process was earlier started, but later on put on hold. So once we complete this period, maybe that portion will again be considered by the Board . But right now, as I told you it was put on hold.
Vipul Kumar Shah: So, r ight now we have no plans to divest PTC Financials ?
Management: As of now, no, but once we conclude this PEL transaction with ONGC this question will again be taken up.
Vipul Kumar Shah: Okay. And sir lastly regarding the power exchange you were talking about coupling. So how that coupling mechanism works, if you can explain briefly and how it will advantage, it will ?
Management: So, what I would say recommend and suggest is that there is a stamp paper by C ERC on the market coupling. So maybe if you can provide your email address, my staff will be able to send you that stamp paper, and that will explain in detail as to what is envisaged to be achieved by market coupling and how it is to be done. If you have any further queries in that regard, we can provide you more inputs when done with questions.
 Vipul Kumar Shah: Okay. Thank you.
Moderator: Thank you. The next question is from Rahul K from Florin Tree. What is the reason for a high net surcharge income book this quarter . Also, what is the situation at Teesta are and when can we expect ramp up in Teesta production ?
Management: The ramp up in Testa is expected to take, we have answered the same previously. I will just answer that question in response to another query, and regarding surcharges , as I told you that the treasury income , surcharge income and rebate income, all these three things basically are derived on the basis of cash funds available with PTC. Sometimes, if you do not have any opportunity to earn rebate or surcharge, you would want to park your funds in treasury. Sometimes, when you have opportunities t o earn the surcharge, you would want to avail those opportunities, or many opportunities to earn rebate, then you will again want to cash in on those opportunities. So it is difficult to predict in any manner the H2 which income in which quarter will go up. But collectively, this is the trend we are likely to earn total sum of treasury income plus rebate income, p lus surcharge income like this. These three things are interchange .
Moderator: Thank you, sir. The next text question is from Paresh Sandani from Joshua Investments and his questions are as follows . What is the leading to higher surcharge income , what is leading to higher volumes ? Are we included to trade in renewables and if yes, what was its contribution in last quarter, I request you to please consider a liberal dividend from energy divestment.
Management: Number one, regarding dividend , we have already answered regarding your suggestion for higher dividend, it is duly noted, but again this matter will be considered by the Board. And regarding green trading, yes we do a lot of green trading also, and for that on the exchange. So there is a separate segment itself, which is called green day and market , green turbine market. Besides that also from renewable energy sources, I will tell you very, very little capacity is available for trading in the me rchant market. All those contracts, generally there is a back -to-back arrangement between buyer and the seller. But present, when any opportunity for trading in the green and renewable sources arises, we do entertain those opportunities.
Moderator: Thank you sir. The next text question is from Amit Kumar, from Determine Invest. And he says, thank you team. What is the recoverability potential of surcharges on by the company this year. I am new to the power sector, but given our experience in gas sector, these generally go into litigation and are not resolved for many years. How many of these s urcharges remain a

s
recoverable presently?
Management: There are two components to this. One must understand the power markets. In the power market, the medium term and the long term use are always guaranteed by the prapti portal, so receiv ables including surcharge is not a challenge unless and until there is some underlying litigation. But that litigation can happen in any business , anytime with anyone. So , I am not measuring into debt, but for the medium term and the long term trades, this surcharge income
 as well as the trading margin is very high probability of recoverability because of prapti mechanism . Regarding the short term trades we do like to keep our exposure within a limits as pursued by our risk department and our relationship with our buyers or sellers. So whatever is

being shown as recoverable in our opinion and in our auditor's opinion, is recoverable .
Moderator: Thank you, sir. Before we go ahead with the next question, a reminder to all the participants that you may please click on the Q &A tab on the panel, and you may also click on the raise hand button. We will take the next question from Rajeev Agarwal from Sterling Capital. Please go ahead.
Rajeev Agarwal: Sir my question is regarding this system of rebates. So , you get rebate from the producer, or you get rebate from the Discom?
Management: We get rebate from the producer for making early payment.
Rajeev Agarwal: Okay . So from Discom you only receive the surcharge right?
Management: Yes, from the Discom side, we will receive the surcharge and from the generator side we will receive the rebate .
Rajeev Agarwal: Okay , thank you.
Moderator: Thank you. We will take the next text question from Vivek Nayak, an Individual Investor , and he says in last quarterly concall the ONGC deal was supposed to be finalized by 15 December 2024 , let us know the reason for the delay and expected date by which the deal would be completed ?
Management: The delays have occurred mainly because a lot of legal work was required to be done and it could not be completed within the expected timeline at that point of time, the current revised timeline for completion of the deal in which we are hoping really to close the deal.
Moderator: Thank you, sir . Ladies and gentlemen, to ask a question, please click on the Q &A tab on the panel and click on raise hand button. You may also type in your text questions. We will take the next text question from Siddharth Shah from Vikram Advisory Services Private Limited. I am sorry, sir, the question has left the queue. We will take the next text question from Naveen Goyal from Club Millionaire PMS. And he says, do you expect the surcharge income to continue at the rate seen in last two quart ers. Do we expect the dividends payouts to continue at least 50% of profits and a special dividend from die investments?
Management: You see, this is really a forward looking statement. I should n ot be making that comment here.
Moderator: Thank you, sir.
 Management: As I told you earlier, the rebate income plus surcharge income plus treasury income together, all three taken together, there is a sense of stability.
Moderator: Thank you, sir. The next question is from Nisha Shah, an Individual Investor. And she says, NHPC, Adani and many more to plan to buy PTC India, we think of it that's the question.
Management: I am sorry , I could not get the question. Can you repeat again p lease ?
Moderator: Sir she said, NHPC, Adani and many more to plan to buy PTC India, we think of it. Are you planning to buy?
Management: Actually, I cannot comment on the corporate plans of other people, and if they want to buy the equity, there are only two sources, which is either market or promoters. Abo ut promoters also I cannot comment , on promoter’s equity, and their wish to manage this equity as per their business plans it is their call .
Moderator

: Thank you, sir. We will take the next question from Vikram Shah from Vikram Securit ies. Please go ahead.
Vikram Shah: Namaste, sir. Thank you for such a wonderful result. My question was, obviously I joined in a bit late, sorry so I couldn't for some reason, join in. Obviously, the first question is about the ONGC money will it happen this financial year, because it's been going on for three quarters now, almost and the second question is, going forward the consulting business , how accretive do you see, or where do you see your focus on the consulting business over the next three years?
Management: Okay, the first thing regarding this closure of transaction between PTC and ONGC , as I told earlier also , would be revised for completion of transaction is 28th February, we are hoping to conclude it by then. Regarding second question about your consulting business, there are a couple of issues I would like to really highlight , the consulting business depend a lot on many other things also, just for example we used to do a lot of consulting for US AID projects. Currently, US AID has put a bar o n many things, so consulting depends on those things. But we definitely have plans to grow this sector, and in coming quarters, we hope we get some good news .
Moderator: Thank you, sir. Sir, Vikram has rejoined the queue. I will just unmute him. Please go ahead Vikram .
Vikram Shah: Yes, sorry again I lost connections , I will ONGC later and again, sir regarding the promoters request, all these news articles about NHPC and all these people wanting to sell 17% what are your comments on that?
 Management: Actually, we have no official confirmation from our promoters to us as to they wish to sell this equity. Number one, number two it is their own business plan, we need not comment.
Vikram Shah: All right , and sir regarding coupling there is always a perceived threat to the business because of government allowing coupling. So what is your view on that, sir ?
Management: It is not a threat for us, it is an opportunity for us. If coupling happens, then our HPX business

is expected to grow significantly because it will help our exchange HPX.
Vikram Shah: We only have a 20% stake in HPX, right as opposed to ?
Management: Yes, 22% stake we have in HPX that is a significant stake that is number one, but that exchange, the value of that exchange investment is likely to go off if coupling happens, that depends on that is a positive development that happens.
Vikram Shah: Right. Thank you.
Moderator: Thank you. The next question is from Amitabh Sonthaliah from SKS Capital. Please go ahead.
Amitabh Sonthaliah: Hello, sir. I wanted to ask about the impairment charges reversal this quarter compared to last quarter, which is the main reason which has given us the PBT increase year -on-year . And just want to understand what is the broad business trends , we are seeing in the next coming quarters ?
Management: So you are asking this impairment for P TC financial services, or P TC India ?
Amitabh Sonthaliah: The consolidated, I was looking at the consolidated P &L, which you have been Rs 18.6 crores of impairment charges.
Management: So, yes that is because the results are consolidated with P TC financial so this reversal is on account of P TC financial services results. Basically they have earlier made a provision for I LFS loan towards the unsustainable debt also , but in this quarter they have received some money out of the provision they have earlier made. So that 's why they have to make a reversal of the provision.
Amitabh Sonthaliah: And just some color on the various business segments. I joined the call a bit late, if you can just give us some current trends in the various businesses that we are operating in ?
Management: Okay, so broadly speaking in the trading sector, I would like to again emphasize that in domestic markets, long tr

ade is not allowed to participate in the long term deals. So it has to be a direct deal between buyer and seller. So on the long term segment domestically it is not possible to grow that segment . Regarding medium term and the short term, the electricity generation in the country is growing at about 7% per annum rate. So likewise, the trading is also increasing Page 12 of 13 in that proportion. But a lot and lot volume of trading is migrating towards short term trades. So inherently, in the short term trades, the risk is lower, but so are the markets. So we have to, device strategies, and engage with our customers as to how we can cu stomize our offerings so that we can mitigate some effects of the pressure on margin and at the same time, we grow volume in medium term and short term segments . Regarding PFS , of course the numbers are there, but that is all I can say, because that is listed in itself, and those questions better should be addressed to the PFS management. The P EL deal is happening, is likely to happen in this month itself, 28 February is the new deadline for completion of PEL transaction . HPX is likely to grow when there is a market coupling , but beside s that in other segments where the exchange is currently growing well are TAM market and A DSS market, so till such time the coupling starts the exchange is basically focusing on those numbers.
Amitabh Sonthaliah: Thanks a lot, sir.
Moderator: Thank you. We will take the next text question from Karthi Babu from Cap Stocks and Securities , and the question is, what is the net debt level in standalone business?
Management: So as far as the debt is concerned, that we don't take and there is no long term debt , only we will take the working capit al loan from the bank from time -to-time. So as on 31st December, there were very miniscule type of a debt was there. So , I will just tell you , it's about Rs 48 crore of bank debt but our net cash position was Rs 516 crore.
Moderator: Thank you, sir. The next text question is from Rupesh Sankey from Elara C apital , and the question is, what is cash in hand and receivables as of December '24 , also payable amount . Thank you.
Management: Yes, the net cash in hand was around Rs 516 crore, as on the last day of the quarter, December, 24 and the gross cash was around Rs 564 cror .
Management: Debt.
Management: So, Its Rs 48 crore.
Moderator: Thank you, sir. The next text question is from Vivek Nayak an Individual Investor, and the question is, with respect to PTC financials, are the audit issues or fees paid to consultant, et cetera are resolved by now ?
Management: All the qualifications appearing in the PFS annual account have been dropped by the audito rs based on the actions taken by the management of PFS.
Moderator: Thank you, sir. The next text question is from Paresh Shah, an Individual Investor and the question is, when we are getting ONGC money, and are you planning for dividend as 25 years?
Page 13 of 13 Management: Again I will repeat i ts 28 February this month , that is when we expect close review. We are giving dividend on regular basis and in other businesses, the call will be taken by the Board .
Moderator: Thank you, sir. The next text question is from Vikram Shah, from Vikram Securities. And the question is, are we starting the PTC financial disinvestment anytime this calendar year? And are we stating a dividend policy of 50% ballpark?
Management: Currently, we already have a dividend policy in which we pay the dividend which is more than 50% that is our policy since very long period. So that is part number one, part number two,

regarding the disinvestment of PFS, again when this deal ing of PEL is compl eted . I believe this question will be taken up for consideration on the Board of PTC.
Moderator: Thank you, sir. The next question is from Krishna Nambudiri a Retail Investor. Please go ahead.
Krishna Nambudiri: Good

evening, sir. Thank you for the opportunity and my question is, regarding the trade with Bangladesh, and what is the status now , are we getting the money and what is the receivable as of date?
Management: Receivable, C FO will tell you, but currently it is controllable, and it is now lesser than the peak debt .
Management: So, Bangladesh receivable as on the last day of the quarter is Rs 693 crore. As against the September quarter it's Rs 859 crore. So it has reduced by around Rs 200 crore in this quarter ?
Krishna Nambudiri: And we are still supplying to Bangladesh ?
Management: Yes, we are supplying.
Krishna Nambudiri: Sure, thank you.
Moderator: Thank you. Ladies and gentlemen, as there are no further questions, I would now like to hand the conference over to the management from PTC India Limited for closing comments. Over to you sir.
Management: Thank you very much investors for having shared time with company. We hope that we remain long term partners in sustainable growth from this business , good evening.
Moderator: Thank you members of the management . Ladies and gentlemen on behalf of PTC India Limited that concludes today's session. Thank you for your participation you may now click on the exit meeting to disconnect. Thank you .

Call: Jun 2025

Page 1 of 15 PTC India Limited
Q4 FY’25 Post Earnings Conference Call
May 28, 2025

Moderator: Ladies and gentlemen, good day and welcome to the Q4 and FY’2024-25 Post Earning Call of PTC India Limited.
At this moment, all participants are in the listen only mode. Later, we will conduct a question-and-answer session. At that time, you may click on the raise hand button on the toolbar or on QA tab on the left hand side of your panel. Please note that this conference is being recorded.
I now hand the conference over to Dr. Manoj Kumar Jhawar – Chairman and Managing Director of PTC India Limited. Thank you, and over to you, sir.
Dr. Manoj Kumar Jhawar: Thank you. Good afternoon, everyone. I extend warm welcome to all of you to our post Earnings Call following the announcement of our Q4 Results and Full Year Results for the year

‘24-25.
I am joined today by core members of our Management Team, which includes Mr. Harish Saran, who is Director Marketing, then we have Mr. Pankaj Goel who is ED & Chief Financial Officer, we have Mr. Rajiv Malhotra who is ED and Chief Risk Officer, we also have with us Mr. Bikram Singh, who is ED Marketing and Mr. H.L. Choudhary, who is Executive Vice President of Commercial Operations. We are also joined by Mr. Anand Kumar, who is looking after the investor relationships and strategic related affairs.
So actually, this call gives us an opportunity to share the key insights into our company's performance and the long term vision. We deeply value this engagement and with our steam stakeholders, we wish to take it forward.
During the year ‘24-25 we achieved a trading volume of 82.75 billion units, marking an 11% year-on-year growth which is credible given that the power supply in the country has grown barely by around 5.21% so trading has increased more in comparison to the power supply. Secondly, this was achieved while maintaining the trading margin of Rs.3.37 per unit. So because of this, we were able to earn more from our trading operations business in comparison to previous year. The numbers will be shared by the finance.
Notably, 52% of the trading volume came from exchange traded products, so which again confirms the broad trajectory where in the market is slowly migrating towards the exchange products from bilateral products. Improved margin realization has contributed to

almost an
 11% increase in the trading income. Nationally electricity generation rose by 5.21% during the year to reach 1829 billion units. The renewable energy was a key driver, which grew about 13% over previous year and now accounts for nearly 14% of the total energy mix. This is very, very remarkable energy transition which is taking place in the country. Within the renewable segment also the solar energy contributed almost 56% which was only 51% previous year. So this also indicates the clip at which, the rate at which the solar energy installations are growing in the country. We anticipate that this share of solar energy and battery coupled supply will continue to grow and which is support by declining cost of energy storage solution, as well as the benign policy atmosphere. In alignment with this trend of shift to renewable energy, we have floated an invitation for expression of interest for 500 megawatts of renewable capacity. The response to this EUI has been encouraging, and our team is currently actively engaging with various project developers to finalize purchase and sale arrangements at competitive rates.
In the cross border markets our operations continue across all the three grid connected neighboring countries, which is Bhutan, Nepal and Bangladesh. Energy flows to Bangladesh remain stable under agreed contractual framework with a regular flow of payments also to our accounts. Bhutan is experiencing rising electricity demand, especially during the winter months when water availability declines. To address this, we have signed a fresh agreement for supply of 2000 megawatt export of power to Bhutan during winter session. This power shall be scheduled only as per the need indicated by them.
Similarly, in Nepal also we have commenced both import and export of electricity based on their supply demand profiles. In Q4 25 we successfully completed the divestment of our subsidiary PTC Energy Limited, which has been held up since long and we have been in the process of completing the transaction for almost one and a half year. So on March 4th, 25 PTC’s stake in PEL was transferred to ONGC Green Limited for a total consideration of Rs.1175 crore.
Our Board has declared a final dividend of Rs.6.70 per share for the financial year which bring the total dividend for the FY’24-25 to Rs.11.70 per share. This includes the interim dividend of Rs.5 per share which was declared previously.
Looking ahead, we expect power demand to grow steadily at 6% to 8% annually, although short term volatility may arise due to transient weather conditions. A favorable monsoon is expected to support this outlook. Government of India's ongoing emphasis on renewable energy, including draft REIA guidelines for inclusion of traders and new bidding schemes for battery energy storage systems and pump storage systems, is expected to significantly shape the future supply landscape. The government of India has projected the need for 74 gigawatt of the battery energy storage systems and pump storage projects to support the renewables integration into the grid. The guidelines for PSP based power will further accelerate the adoption of storage in the energy basket.
 Regulatory bodies are also actively fostering the market reforms, including discussions on virtual power plants, standardization of power exchange products and also the futures market to enable a level playing field among exchanges, traders and OTC platforms. We are pleased to inform you, that all the issues leading to qualification by the auditors in both the standalone and consolidated financial statements of the company have now been resolved. You may recall that the qualifications were related primarily to legacy matters in the PTC India Financial Services Limited. We have put in adequate cheques and balances in the place to avoid recurrence of such issues. Additionally, the Board of company has approved business respons

ibility and sustainability reporting policies, which are now available on the company's website.
I now invite our Executive Director and CFO, Mr. Pankaj Goel, to present the financial highlights for the quarter. Following this presentation, we will open the floor for question-answer session. Thank you once again for your continued trust and support. We appreciate your participation in today's call. Thank you.
Pankaj Goel: Thank you, CMD sir. Good evening to all. Now, I will go through the financial performance of PTC India Limited for the quarter ended March 25 and year ended March 25 on a standalone and consolidated basis. First, I will go through the standalone results of PTC India for the quarter March 25. Volume has increased by 5% to 19 billion unit from 18 billion unit. Volume has mainly increased due to our short term trade and exchange, and the margin has also increased to Rs.3.17 per unit in comparison to Rs.2.94 per unit during the last quarter mainly on the exchange and long term transactions. Total operational income has decreased by 22% to Rs.151 crore from Rs.193 crore. In the operational income where trading margin has increased, but the total operational income has gone down primarily because of the reduction in the surcharge income.
However, the surcharge income has increased by 50% during the last year. Profit before tax has increased by 439% to Rs.608 crore from Rs.113 crore. As you are all aware, that there is an exceptional item in our results in this quarter, because we have booked the profit on PTC Energy disinvestment of around Rs.521 crore during the quarter. So, if we take out this exceptional item of Rs.521 crore, the profit before tax is Rs.86 crore as against Rs.113 crore during the last quarter.
Profit after tax has increased by 529% to Rs.521 crore from Rs.83 crore, after taking out the PTC Energy disinvestment, our profit after tax has been Rs.64 crore as against Rs.83 crore during the last quarter. Likewise total comprehensive income has increased by 1,716% to Rs.516 crore from Rs.28 crore. This phenomenally increases because of the fact that during the last quarter we have taken reduction in value of our fair value in Teesta by Rs.55 crore, and during the current quarter only Rs.6 crore taken as reduction. So because of this, comprehensive income has gone up substantially. The earning per share for the quarter stood at Rs.17.61 in comparison to Rs.2.8 during the last quarter. If we take out the profit from PEL disinvestment our EPS stand at Rs.2.16 in comparison to Rs.2.8 during the last quarter.
Now we will go through the annual results for the standalone basis. The volume has increased by 11% to 82.8 billion unit from 74.8 billion unit. Total operational income has increased by 17% to Rs.718 crore from Rs.616 crore. The total operational income has mainly increased because of the increase in our surcharge income and trading margin also, and plus as I have already explained, the profit on PEL disinvestment. Profit before tax, has also increased by 118% to Rs.1056 crore from Rs.484 crore, if we take out this profit on PEL disinvestment, our profit before tax has increased by 10% to Rs.535 crore as against Rs.484 crores during the last year. Profit after tax has increased by 132% to Rs.855 crore from Rs.369 crore if we take out PEL disinvestment, our profit after tax has increased by 8% to Rs.397 crore, as against Rs.369 crore. Total comprehensive income has increased by 245% to Rs.850 crore from Rs.247 crore. So with this, I have already explained that this is because of the reduction in our fair value during the last year, wherein we have taken a reduction of Rs.122 crore in our fair valuation of Teesta Urja. So because of this, comprehensive income has increased. Earnings per share for the year stood at Rs.28.88 as compared to Rs.12.47 in comparison to last year. If you take out PEL disinvestment, our EPS stand at Rs.13.42 in compa

rison to Rs.12.47 during the last year.
Now I will go through the quarterly consolidated results. Volume has increased by 5% to 19.1 billion unit from 18.1 billion unit. Profit before tax has increased by 255% to Rs.467 crore, from Rs.132 crore. If we take out the PEL disinvestment, so our profit before tax on a consolidated basis has increased by 23% to Rs.161 crore from Rs.132 crore. Profit after tax on a totality basis has increased by 308% to Rs.372 crore from Rs.91 crore, if we take out TL disinvestment, our profit after tax has increased by 43% to Rs.130 crore from Rs.91 crore. A total other comprehensive income has increased by 900% to Rs.366 crore from Rs.37 crore. The reason of increase in comprehensive income I have already explained due to reduction in the fair value during the last year. Our earning per share for the quarter stood at Rs.11.88 in comparison to Rs.2.9 during the last quarter.
Now I will go through the annual results on a consolidated basis:
Volume has increased by 10% to 83.3 billion unit from 75.4 billion unit. Profit before tax has increased by 71% to Rs.1117 crore from Rs.654 crore. If we take out profit on the PEL disinvestment, it has the increase by 24% to Rs.811 crore from Rs.654 crore. Profit after tax has increased by 83% to Rs.976 crore from Rs.533 crore. Profit after tax excluding the PEL disinvestment has increased by 38% to Rs.735 crore from Rs.533 crore, total other comprehensive income has increased by 137% to Rs.969 crore from Rs.410 crore. Earnings per share for the year stood at Rs.30.41 in comparison to Rs.16.11, if we take out the PEL disinvestment, our EPS stand at Rs.22.24 in comparison to Rs.16.1. Thank you.
Moderator: Should we begin with the question-and-answer session?

Page 5 of 15 Pankaj Goel: Yes.
Moderator: Thank you. Ladies and gentlemen we will now begin the question-and-answer session. We have one text question from Lipika Kundu. As per dividend policy, 50% of standalone EPS is to be distributed, which works out to be Rs.14.42 per share, why only 11.70 was declared, please clarify?
Management: The dividend policy also, we have clearly mentions an exception. We must understand that this year's exceptional profit was because of an exceptional item which was disinvestment of the PEL. Now, definitely more dividend can always be declared, but management believes that retaining this capital and investing it into the profitable ventures for future growth of the company is equally important. So currently management after discussing and debating the issue proposed this dividend which was accepted by the Board of Directors.
Moderator: Thank you. We have one more text question from Rahul K, an Individual Investor. How do we calculate the trading margin, also what is the reason for reduction in core operating revenue excluding surcharge income?
Management: If we exclude the surcharge income, then our core margin has not gone down, and our core operating income has also not gone down if you look at the results and the numbers which were shared by Pankaj currently. Now as to the methodology, calculation of the margin is a simple thing because it is always mentioned in the contract and it varies from contract to contract. So whenever we are entering into a contract, to be based on the risk profile and the tenure and other considerations and the market situation, beside as to what kind of margins we shall be taking. And that is how it is decided, so the number which has finally reported into the accounts is the aggregation and amalgamation of all numbers put together.
Moderator: Thank you. We have few text questions. I will read those, we have a question from Sachin Gamre from Iden Investment. What is the contribution of PFS in the total consolidated profit of the company?
Management: I will ask Pankaj to respond to that.
Pankaj Goel: Yes, so profit after tax from PFS for the quarter is Rs.58 crore as against Rs.13 crore du

ring the
last quarter, and on a on a yearly basis, the PFS contribution was Rs.217 crore as comparison to Rs.160 crore during the last year.
Moderator: The second question is, why PFS has not declared the dividend in spite of this being reported in exchange filing?
Page 6 of 15 Management: This question should be addressed to the PFS management himself, which is a listed entity. The Board of Directors of the PFS decided that it will be in the best interest of the company not to declare the dividend at this point of time.
Moderator: Thank you. The next question is, where in the value chain PFS fits in the company overall strategy?
Management: When we started PFS, the vision was, that it will act as a collaborating unit let us say, because we were into the power trading business, and we were seeing that the sector is capital starved. So that was the idea, at that point of time people were not really willing and forthcoming to extend credit to long duration and long gestation power sector projects. So there was a market, and there was an opportunity. That was the idea of creation of the PFS at that point of time. Now, the PFS has gone through ups and downs, and that story is well known. At a later stage what is to be done about the PFS and whether it continues to remain a good fit for our overall marketing strategy. These issues are the issues of strategy and policy. We keep on discussing these issues within the Board, but whenever we take any call, we shall be definitely informing the investing public and all our stakeholders.
Moderator: Thank you. We have a live question from Chanamalu Halagori, an Individual Investor. Please go ahead with your question.
Chanamalu Halagori: I am holding 11,000 shares in PTC India, sir, and I invested in this company only because the company will concentrate on core business. Many times I asked the same question repeatedly, and you had given the answer about the divestment of PFS. You had given the answer that after the divestment of PTC India Energy Limited. We will take initiative of the divestment of the PTC India Financial Services. And now the divestment of PTC Energy Limited is completed, sir and what initiative will start. I want the genuine answer for this, because I am the serious investor in PTC India.
Management: Sir number one, I really appreciate you being associated with us, and you being a serious investor into this company. I expect that this relationship will continue and grow. Number one, number two, regarding the divestment of PFS, again, I will have to say that this matter has to be considered by the Board considering all aspects, you must understand also that PEL disinvestment was comparatively simple procedure, because no other regulator except the market regulator which is SEBI was actually of the ROC. We had to, take into consideration as to whatever guidelines are there from these two institutions. But in case of PFS also, this is a non-banking finance company. So there are many other guidelines which are also applicable, and RBI approvals, et cetera are also required, whatever kind of decision is taken regarding investment, disinvestment, increasing the stakes, decreasing the stakes, and so many, so on

and so forth. So, this is going to be a process in which multiple levels of consultations with so many stakeholders are required. So straightforward answer as to when it will be done. Will it be done, not done, all those things are under consideration. Whenever we have something Page 7 of 15 really to declare to the market, we shall be coming out. But yes, we will also look at whether it is a good strategic fit or PTC is core business or not. So those things are being considered by the Board, and hopefully we will have more clarity as we go forward.
Chanamalu Halagori: Sir divestment of PFS is on your line of way or not sir?
Management: Earlier, the PTC board head expressed a desire that we should be divesting ou

r stake in PFS at
a later stage, that decision was put on hold. Now, again this decision has to be considered by the PTC board. This is what I can divulge as of now.
Chanamalu Halagori: No, sir since 4, 5 Quarters you are answering the same sir, when you will start to discuss about this sir?
Management: Sir, 4, 5 quarters earlier also, I had said that at the that point of time, PEL disinvestment was our prime goal, after a lot of efforts we were successfully able to close the deal. And now again, we are discussing various strategic options. So, I really cannot give you a straight forward yes or no in this forum at this point of time.
Moderator: Thank you. We will take our next question from Suresh Kamath, an Individual Investor. Please go ahead.
Suresh Kamath: I just want to ask you one thing, that after this sell off to ONGC has the debt equity will be drastically improved. And second thing is, second question is, that having sold this unit again, you are entering the same with the Bhutan. So what is the strategy, if you can explain this particular aspect. Thank you.
Management: Okay, right sir. There are two issues, number one regarding the debt to equity ratio so let me assure you practically our company is already debt free company. So whatever little debt we take, it is in the due course of normal business, whenever we have made certain investment in the FDs and all of sudden some payments are required to be made. So we draw over draft facilities from the bank, and they might be reported as loan. But other than that, there is no medium term or long term loan on the books of PTC. So our company is already debt free company, and that answers your question regarding debt equity ratio, that is one thing. Second thing, you are asking me as to why we have divested, and if we have divested our renewable assets, then why, again think about going into the same market. So, look at this, this is how trade happens. This is how business is done, when you see a good value in a deal, you conclude it. When you see another good value in a deal which may create long term good cash flows again, we will consider. So if we are trying to look at some renewal assets again. So it does not mean that, once we have sold a renewable asset we will never acquire another renewable asset. We will continue to do so and again he and again after acquisition, if we see a good deal that it can be sold. So we will do that also, so that is part of the strategy. Having said that Bhutan is a very, very stable and administratively, culturally very friendly geography to put some Page 8 of 15 investments into it. And they have got a great potential in hydro assets. They are also looking at some investments in the solar assets. So we keep on discussing with them, because we have an ongoing business relationship with them. So I hope that explains.
Moderator: Thank you. We will take our next question from Krishna Kumar, a retail investor. Please go ahead.
Krishna Kumar: You said that you are retaining some of the cash for future growth. What exactly are your plans for future growth, how much you will be investing into the Bhutan deal or other deals which is, are you going to create the new subsidiaries or what are the plans for that cash utilization?
Management: Right now, discussions are going on with many counter parties on many different initiatives. So definitely I cannot give you as to how this capital allocation is going to look like. But yes, we are trying to do multiple things, and one of those things is acquisition of some renewable energy assets, either within the country or in some friendly geographies. But right now, unless and until we have concluded the deal, it will not be right for me to speak more on this at this point of time.
Krishna Kumar: So will you be taking debt or it will be only within the cash because you will also need money for the working capital?
Management: No, I am sorry I cou

ld not follow you.
Krishna Kumar: No, like will you be taking loans to invest into this, because you will also need money for the working capital so?
Management: Yes, actually you see there are two things. The investment size would decide many things if we are able to, fund it from the internal resources. So be it, if you are able to find a partner who is equally keen equity investor in those projects, then maybe we will not need. If we need then also we will look into it. We are exploring the opportunities, and at this point of time it is difficult to say how much will be going to be loan, how much will be going to be equity, but it will be a prudent call let me assure you that, we will be very, very careful about the

investments.
Krishna Kumar: Okay. And one question about the consultancy, and earlier you have been saying that consultancy will be a good part of business. You are planning to grow to Rs.100 crore. So where are we on that objective?
Management: There has been a little bit set back on the growth of the consultancy division, let me be very honest. There have been two adverse developments. Number one we have been trying to close the contacts with the EESL in which the payments are stuck up, and we are in to discussion with them as to how to realize whatever bills we have already raised. So because of that, we have scaled down debt segment of the consultancy business. Secondly, because a lot of consultancy work was being funded directly or indirectly through US aid. Now that funding has dried up because of that, a lot many projects people are looking to short close those projects. So because of that, also it has had some impact on the consultancy business. But at the same time, there are many new areas wherein we really can grow. One of them is maybe smart metering, EV, so basically we are looking at the opportunity the evolving landscape, and definitely we will try to grow this segment. Of course, our results this year have not been to our liking.
Krishna Kumar: Okay. And finally, what is the status on the receivable from Bangladesh, the business is as usual we are getting?
Management: Very, very comfortable, sir, very, very comfortable, earlier we were a little bit worried, but now there is no reason to be worried. The receiver position from Bangladesh is very, very comfortable, not more than two months outstanding. Earlier, it was almost six months. Pankaj, can you give the numbers?
Pankaj Goel: Yes, so the receivable from Bangladesh is only Rs.577 crore as 31st Mar 2025.
Moderator: Thank you. We will take our next question from Suyash Bhave from Wealth Guardian. Please go ahead.
Suyash Bhave: Sir, I wanted the performance update on HPX regarding volumes, revenues and profits for Q4 as well as FY'25 and additionally, more from our strategic perspective, we are +5% holder, 22% holder in HPX. Are we looking at bringing in any strategic invest, maybe reduce our stake below 5% so maybe we might be able to trade on HPX as well as in. How are we looking at it from that perspective?
Management: You are right that we cannot trade on that exchange unless and until we have brought down our equity to the 5% so basically, we have started discussions as to can there be a guided and gradual road map for reduction of our equity, provided that we are loud trading. So we have started discussions along those lines with regulators as and when, when we will divest would be a call to be taken considering the evolving market situation. But as of now, we are holding this equity and we wish that we will be allowed trading, if need arises we can give a gradual road map for reduction of our equity holding. But can there be a working arrangement in which the ownership and the trading are compartmentalized to the liking of the regulators, can it be done is the discussion.
Suyash Bhave: Okay, sir. And maybe the revenue and profit numbers for Q4 as well as full year?
M

anagement: Of HPX?
Suyash Bhave: Yes, of HPX.
 Pankaj Goel: The revenue number for the quarter for HPX is Rs.7.69 crore vis-à-vis Rs.8.99 crore during the quarter, it has gone down actually, and the profit after tax for the current quarter is 2.28 Crores in comparison to Rs.5.01 crore during the last quarter. And on yearly basis, the revenue from operation has come down from Rs.36.46 crore to Rs.31.44 crore and the profit after tax has come down from Rs.14.93 crore to Rs.10.67 crore.
Suyash Bhave: Sir what would be the reason for this drop?
Management: Basically, only 10 segment business is coming to the HPX, the collective segment which is the DAM and the RTM which is the dominant segment in power exchange. So those volumes are not coming either to HPX or PXIL, because of the obvious reasons of network effect. So, the collective segment volumes are the real key driver of the growth. Other than that, it is a very small market, a free market so unless and until we trade on HPX and there is market coupling, so that anyone can choose and exchange of his own choice, unless these two things happen, the collective segment is difficult to grow. Because of that, we are seeing these numbers.
Suyash Bhave: Okay, sir understood. Sir, I have one more question in the last call you had said something about the government of India not allowing power traders into the long term PPA contracts, and there not being domestic opportunities in the long term. So can you explain this a bit, as in how this policy has come up about, and is there any chance of this getting reversed. What probably could be the considerations, policy considerations for this to be the policy of the Government of India. So maybe insight on that?
Management: As a trader, our perspective is this, that traders should be allowed in all products and there should not be any policy related prohibition. But that is our view, what is the view of the government of India when they came out with the guidelines for long term procurement of the power. So when they prescribe those standard bidding documents, the trader was specifically prohibited from bidding. So whenever there is a DISCOM which is following this SBD and

seeking long term sourcing of power, they have to utilize that SBD and in that the SBD, the trader is not allowed only generators are allowed to bid. So that is how the situation has come across, that trader cannot participate in the future biddings for the long term contracts. There is only one exception, and that exception is the RE projects, the RE projects the security one guidelines provide for Rs.0.07 per unit trading margin to the intermediary, procurer. But then again, that intermediary procurer is designated by the government, and that designation has been given to only four government owned CPSUs. So in effect, no private trader currently can bid for any long term contract, that is the situation.

Suyash Bhave: Understood, sir. Are there any industry efforts, as in if you would be aware of or maybe industry efforts regarding lobbying for this or is the industry taking any stance on this?

Management: See, actually long-term power market still is far from being a competition driven market, the original guidelines and the tariff policy if you study them, it would say that gradually we should Page 11 of 15 move from procurement of power on Section 63, that is the tariff base competitive bidding basis, but still whatever thermal capacity is being added by at least CPSUs. So it is on the nomination basis under Section 62. So, it is a interplay of many things, the capacity, the availability of capital, the overall dynamics of the power market, the goals of the government, what kind of capacity addition they want, what kind of assurances they want to give to the investors, it is a combination of so many things. But particularly speaking, I do not know of any traders, body forcefully taking up this issue w

ith the government, in the industry meeting, et cetera these points are raised, but I do not see the convergence of use.

Moderator: Thank you. We will take our next live question from Vipul Kumar Shah from Sumangal Investments. Please go ahead.

Vipul Kumar Shah: So my question is, since majority of the trading is happening through exchanges, so why would a buyer come through us, they can trade through exchanges, so what is the rationale for a buyer to do trading through PTC, would you please explain me. Thank you.

Management: There are two things which a trader provide, number one 24*7 operation support, because if a trader wants to do the trading by himself, and if he requires electricity to be traded during 24 hours of a day, so either he would himself have to set up a trading desk and then do the trading by himself, or he can avail the services of a trader like us, who are running a 24*7 operations control room to assist the trading partners, that is one reason that people want to avoid that hassle and that expenditure. Second thing, we also look into the credit profile of the buyer or the seller the counter party, we can provide them credit support also, in a manner of speaking, it would be called trade financing. So if some DISCOM wants to schedule the power and buy the power from the exchange, but currently facing some liquidity issues, so they will come to us. We will fund that trade for a while. At a later stage, we will recover that money from concerned counterparty. So that is the second service which we provide. Of course, we also assist with the market intelligence. So that is the third service which a trader can provide. Theoretically speaking, everything can be done by a buyer or a seller, but these are difficult skills and acquisition of this skills, and continuously maintaining that capability is not easy.

Vipul Kumar Shah: So five years down the line, do you expect 80%, 90% of the volume to move to be routed through exchanges?

Management: Absolutely not. Actually, you see the overall power market in the country, if we say it is 250,000 megawatt almost 85% is the long term contracts, which never go to any exchange or any intermediary whatsoever except the previously allotted long term contracts. So gradually, when they expire also there will be direct bilateral contacts, and there will be no role for exchanges, for management of that trade. Unless and until some policy initiative comes, like capacity market or some big policy announcement comes from the government, I don't see that long term volume is going to be done through the exchanges. In any case, exchanges do not have a product for giving supply for more than three months currently. So anything above Page 12 of 15 three months is not going to come through the exchanges. Now, if you ask me, from a buyer's perspective, even though his requirement will be long term, can he manage his operations by going for the shorter duration contracts of three months and continuously do it over a very, very long period of time. No one would like to take that kind of risk, so people would who are having a long term need for power would want to have a long term source also. So both things will coexist. But yes, the short-term bilateral market is definitely migrating towards the exchanges that is a truth.

Moderator: Thank you. We will take our next question from Anuj Jaiswal from Tijuri Finance. Please go ahead.

Anuj Jaiswal: So the question was regarding Bangladesh, which sir has already answered it. So can you reiterate the number that outstanding dues from Bangladesh?

Management: Rs.577 crore.

Anuj Jaiswal: Okay. So as the dues are getting reduced from Rs.557 crores, which was last to last year.

Management: I will tell you the last year number also, last year the Bangladesh outstanding was Rs.700 crore. So from Rs.700 crore, it has gone down to Rs.577 crores. And the current situation is still better we have fur

ther reduced the liabilities after 31st March.
Anuj Jaiswal: So our business is in same intact with the Bangladesh?
Management: Yes, business has grown, the volume has grown.
Moderator: Thank you. We will take our next question from Rahul K, an Individual Investor. Please go ahead. Since there is no response, we will take the next question from Vipul Kumar Shah from Sumangal Investments. Please go ahead.
Vipul Kumar Shah: Dues of Bangladesh are covered under bilateral government agreement or how it works?
Management: It is a commercial content, but it is guaranteed by Sovereign guarantee of Government of Bangladesh.
Moderator: Thank you. We have few text questions. There's a question from Darshika Khemka from AV Fincorp. Could you give the number of net rebate for the quarter and the year?
Management: So net rate for the quarter is Rs.20.46 crore, and for the year it is Rs.120 crore.
Moderator: Thank you. Next question is from Dhiraj Kripalani from Avenda Spark. What are the margins for short term trades, medium term trades and long term trades separately for the 4th Quarter and full year FY'25?
 Management: For short term trade, the margin per unit was paise 1.03 for the quarter and for medium term trade it is paise 2.06, for long term trade it is paise 7.99 per unit.
Vipul Kumar Shah: Thank you. Next question is from Paresha Shah a shareholder. Can we plan for buyback of PTC India, and we received money from Bangladesh?
Management: We could not follow this, Bangladesh connection.
Management: There are two questions. First is, can we plan for a buyback of PTC India?
Management: Okay. So, buyback of the shares is currently not tax friendly, so no one is now going for a buyback. So, I hope that answers, because there is a very, very unfriendly tax treatment of the transaction in the hands of the recipient, which is the shareholder. So buyback is definitely not planned as of now, now. What is your second question?
Management: The second question sir, have we received the money from Bangladesh?
Management: So that is already been answered.
Moderator: Okay, sir thank you. I will take the next text question from Amit Kumar. The core biz continues to do well, but FY'25 financials were strongly supported by surcharge income. So what is the outlook for the surcharge income in FY'26. Is the FY'25 level of surcharge income sustainable in FY'26?
Management: There would be a little bit volatility, a little bit cyclicity, but given the problems of the DISCOM, many of them really find it hard to make payment when they really need the power and when they need the power, there is always a cyclicity as to when they put in the money to buy more power to meet the growing demand during a particular season, and when they will receive that money through their operations and realize that cash, and that cash will accrue to them for making the payment of that power. So there is definitely a need to finance that particular portion of their short term liquidity issues, and we are well poised to meet that demand. So overall speaking, I hope this to continue.
Moderator: Thank you. We will take a live question from Rajiv Agrawal from Sterling Capital. Please go ahead.
Rajiv Agrawal: Sir, I want to understand why the revenue from operations has declined this quarter in standalone results?
Management : Actually, this decline was because of reduction of surcharge income for the quarter. So Pankaj would have the number, but the operating margin we have increased. But as I said, there would always be a cyclicity regarding the surcharge income, sometimes depending on the liquidity of the counterparty DISCOMs if they are making lump sum payments, which in current case it had
 happened that Jammu & Kashmir Government had made a payment of a significant sum. So because of that, the surcharge income which had accrued in the previous year, same quarter previous y

ear, did not materialize this quarter.
Rajiv Agrawal: Sir but the surcharge income you show in other operating revenue as per note six of your standalone results?
Management: Yes, the Chairman has replied regarding the other operating revenue. As your question is regarding, I suppose it's for the top line actually. So first of all, the top line does not matter to us, because what top line consists of, let's say we have, I will give you an example. Let us say we have sold 100 million units, and the price per unit is let's say Rs.3 during the last year. But now suppose for example the price reduced to Rs.2.5 during this year. And even though we have sold 100 units during both the years. But if there is a variation in sale and purchase price in the market which do not affect us actually, because suppose we have taken the power at Rs.3, we will add our margin into it, and then we will sell it to that Rs.3.05 or something like this. So the top of the revenue is basically related to sale and purchase price discovered in the market, so it does not affect our profit and loss account. But if you are saying so, that let's say the total revenue from operation has gone down. So it means the price of the electricity has gone down on an average basis during the last year.
Rajiv Agrawal: So why has the price of electricity has gone down this quarter, I am asking just to understand the operations of the company?

Management: Yes, so there is always a cyclicity and weather affected phenomena. If you look at the weather, extreme heat or extreme cold, those two kind of events would lead to higher consumption of electricity, higher demand for electricity, and if the rains are equally spelled out, there are no long duration heat wave days are there are no long duration cold wave days and rains are equally spelled out, then definitely it affects the demand. So number one is the demand part of it which is affected by the weather patterns as well as the growing nature of the economy which leads to overall increase in the consumption of electricity. Second thing is the supply side. So from the supply side, what has been happening that the capacity addition in the renewable segment has been very, very fast because of that, the demand has been benign and the supply side has been very good. So the demand supply equation equilibrium in the market plays out and that leads to pressure on the discord prices, rates on the exchange. Long term trades are not affected by them, and which is almost 85% of the overall market, but the remaining trade, which are the short term trade and the exchange based trade, that effect is reflected.

Rajiv Agrawal: And sir so what was the volume traded last quarter and this quarter, can you share the figures?

Management: Yes, so this quarter we have traded 19 billion unit, and during the last quarter we have traded around 18 billion unit.

 Rajiv Agrawal: Okay. And this surcharge income whenever you realize you entirely show it in other operating lines?

Management: Yes.

Management: I am sorry actually, I misread your question. Pankaj is clarifying.

Moderator: Thank you. We will take the last three questions, there is a question from Suyesh Bhave from Wealth Guardian. What are quarterly and annual numbers for net surcharge?

Management: So the net surcharge for the quarter is Rs.54 crore, and for the year it is Rs.267 crore.

Moderator: Thank you. Next question is from Vipul Kumar Shah, from Sumangal Investments. Since majority of trading is routed through exchanges, why buyers will route transaction through you, they can trade directly through exchanges?

Management: We have already answered that question.

Moderator: Okay sir, thank you. Next question is from Rahul K, what is the logic of re-entering renewable space just after the PEL sale, given valuations are elevated in this sector, also with DISCOMs seeing better financial health, will our working capita

l reduce?

Management: Two things regarding the investment and the disinvestment, that question is already answered. And regarding the DISCOMs overall health, it is a mixed bag some are improving some are not.

Moderator: Thank you, sir. That was the last question for today. I now had the conference over to Dr. Manoj Kumar Jhawar for closing comments. Over to you, sir.

Dr. Manoj Kumar Jhawar: Thank you very much shareholders. Your questions were really insightful and I really appreciate your engagement with the company. I look forward that you remain with the company for a very long duration, by remaining invested in this company up till now, you must have been happy investor. Our overall returns have been in the range of 18% CAGR, if you look at the growth in the share prices, as well as the dividend which we have been paying. So we hope to do well in coming years also, and we hope that you remain associated with us. Thank you so much.

Moderator: Thank you. Ladies and gentlemen on behalf of PTC India Limited that concludes today's session. Thank you for your participation, you may now click on the exit meeting to disconnect.

Call: Aug 2025

Q1 FY'26 Earnings Conference Call ”
August 08, 2025

Moderator : Good afternoon, ladies and gentlemen, and welcome to the Earnings Conference Call for Q1FY'26 for PTC India Ltd.
PTC India was incorporated in 1999 to undertake trading of power to achieve economic efficiency and security of supply and to develop a vibrant power market in the country. PTC is a pioneer in starting a power market in India and undertakes trading activit ies that includes long -term trading of power generated from large power projects as well as short -term trading arising as a result of supply and demand mismatches. In addition to the trading business, PTC has incubated techno -commercial consulting business to develop power market for the C&I consu mers, SECs, ports, trusts, etc.
Let us now begin with the introduction of the manage ment team. We have with us today Dr.

Manoj Kumar J hawar, Chairman & Managing Director ; Mr. Raj iv Malhotra, Executive Director & Chief Risk Officer ; Mr. Pankaj Goel , Executive Director & CFO; Mr. Bikram Singh, Executive Director, Marketing ; and Shri Anand Kumar, VP, Investor Relations.
At this moment, all participant lines are in the listen -only mode. Later, we will conduct a question -and-answer session. At that time, you may click on the Q&A tab to ask a live question. Please note that this conference is being recorded. I would now like to request Dr. Manoj Kumar J hawar, CMD, to give his opening remarks. Thank you and over to you, sir.
Manoj Kumar Jhawar: Good evening, everyone. I extend a warm welcome to all of you to our post -earning call followin g the announcement of our Q1 FY' 25-'26 results. This call gives us an opportunity to share key insights into our Company's performance and the long -term vision. We deeply value this engagement with our esteemed shareholders, our investors, partners and the representatives who play a pivotal role in ou r continued growth and success.
During the first quarter of the new financial year, while national demand of energy experienced a marginal dip of 1.2 %, our trading volume grew by 1 3% to 23 billion units. This was achieved while maint aining a trading margin of 3.37 paise per unit. Notably, 60% of the trading volume came from short term and exchange -traded products, while the remainder came from bilateral long -term and medium -term contracts. Improved margin realiz

ati on has also contributed to an
8% increase in the trading income.
 Just to recall, in the last quarter, we informed you that we have floated an invitation of expression of interest for 500 megawatts of renewable energy capacity. The response has been encouraging, and our team is working with project developers to finalize a purchase and sale agreement at competitive rates. As team developers, we will inform the shareholders and exchanges. Our product and service offerings are help ing in retaining clients, which are C&I segment, and increased business opportunities. We are a big consultant for renewable capacity development of around 1,000 megawatts in solar and hybrid mode.
In the cross -border market, our operations continue across all three grid -connected neighboring countries, which is Bhutan, Nepal, and Bangladesh. Energy flows to Bangladesh remain stable under the agreed contextual framework, with regular flow of payments to our accounts. Bhutan is experiencing rising year -round electricity demand, particularly during the winter months, when the water availability for hydel plants declines. Similarly, in Nepal, we have commenced both import and export of electricity based on their supply -demand profiles.
Looking ahead, we expect power demand to grow steadily at 6 % to 8% per annum, although short -term volatility may arise due to transient weather conditions. A favorable monsoon is expected to create more demand and support this outlook. The guidelines for PHP -based power will further accelerate the adoption of storage in the energy basket. Regulatory bodies are also actively fostering market reforms, including discussion on virtual power plants and standardization of exchange products, including amendment in power market regulations to ensure level playing field among exchangers, traders, and OTC platforms.
I now invite our Executive Director and CFO, S hri Pankaj Goel to present the financial highlights for the quarter. Following his presentation, we will open the floor for question -and-answer session. Thank you once again for your continued trust and support. We appreciate your participation in today's call.
Pankaj Goel: Thank you, CMD sir. Good evening to all .
Now I will go through the financial performance of PTC India Limited . First on standalone basis for the quarter ended June '25 vis -à-vis the corresponding quarter June '24 . So the volume for the quarter has increased by 13% to 23 billion units from 20.5 billion units. Volume has increased mainly because of an increase in exchange trade and cross border trade. The operating margin from sale of electricity has increased by 8% to Rs. 78 crore from Rs. 72 crore. Total ope rational income decreased by 13% to Rs. 111 crore from Rs. 127 crore. The profit before tax stood at Rs. 141 crore as compared to Rs. 144 crore during the corresponding quarter. Profit after tax stood at Rs. 105 c rore as compared to Rs. 106 crore. Total comprehensive income stood at Rs. 105 crore as compared to Rs. 107 crore. Earning s per share for the quarter stood at Rs. 3.54 as compared to Rs. 3.59 during the last corresponding quarter.
 Now I will go through the financial performance on consolidated basis for the quarter ended June '25. Volume has increased by 12% to 23 billion units from 20.6 billion units. Profit before tax from continuin g operation has increased by 42% to Rs. 289 crore from Rs. 203 crore. The profit before tax has mainly increased on account of higher share of profit before tax from PTC Financial Services. Profit after tax from continuin g operation has increased by 61% to Rs. 243 crore from Rs. 151 crore. Consolidated P AT from continuing operation and discontinued operation has increased by 28% to Rs. 243 crore from Rs. 189 crore. Total other comprehensive income has also increased by 28% to Rs. 243 crore from Rs. 190 crore.
Earning s per share for t

he quarter on consolidated basis stood at Rs. 6.59 as compared to Rs.
5.87. Thank you.

And now we can have the floor open for question and answer session.

Moderator: Thank you very much, sir. Ladies and gentlemen, we will now begin with the question and answer session. We will take the first question from the line of Mangesh Kulkarni from Almondz Financial Services. Please go ahead.

Mangesh Kulkarni: Yes, thank you for giving me an opportunity. I just wanted to ask about, now our subsidiary PTC Financial Services has also reported very good numbers and giving very good pictures on the recovery front in the next quarter also. So, are we expecting any special dividend from the PTC in this coming financial year? As well as, are we coming back to our disinvestment plans for the PTC? What are our PTC financials? So, what are our views on the subsidiary now?

Manoj Kumar Jhawar: Two things regarding any special dividend. I mean, the matter has to be considered by the Board. Whenever a consensus emerges that any dividend is to be declared, we shall definitely be making an announcement. Here, I would not like to go further than that. That is one thing. Second thing regarding the disinvestment of PTC Financial Services Limited. Board is seized of this matter as I had told in earlier conference calls also. This matter is being actively discussed. As and when any consensus or a directio nal view appears from the board, we shall inform the market. Right now, this matter is under consideration of the Board. So, I cannot comment more than that.

Mangesh Kulkarni: Sir, how do we view our prospects for the Hindustan Power Exchange after this new discussion came on the connectivity of the exchanges , coupling ?

Manoj Kumar Jhawar: Yes, actually market coupling is something about which we have been since a very long period advocating. We believe that it is a good development. It is a favorable development. It will help consolidate the very fragmented markets. It will bring in competition and it is likely to help the HPX significantly. So, we hope that this is going to be another business driver for us going forward. Market coupling would definitely help HPX and since we own 22.5% of the HPX, indirectly benefits would accrue to PTC als o.

 Mangesh Kulkarni: And s ir, these exchanges have also started electricity future. So, PTC as a trader is participating in these, particularly MCX and all these things?

Manoj Kumar Jhawar: Yes, actually I mean this is a new development recently and in today's AGM itself, we had put up a proposal before our shareholders to allow us to participate in this market in a significant manner and represent our clients and trade on their behalf. So, I hope when the final results of AGM are announced, we will have necessary authorization from our shareholders also in this regard. And yes, we are in discussion and continuous engagement with both NSE as well as MCX where these future p roducts have been launched. And we intend to participate meaningfully in these markets.

Mangesh Kulkarni: Thank you very much, sir.

Moderator: Thank you. We will take the next text question from Darshika Kh emka from AV Fincorp. And the question is, what is the reason that surcharge income has been recognized as other income which was a part of other operating income in the last quarter?

Pankaj Goel: You know that h istorically we were treating the surcharge income in other operating income. So, recently in '24 and the early '25, the Institute of Chartered Accountant t hrough their advisory committee has opined in some other case that these type of surcharge income and surcharge expenses has to be shown in other income and interest expenses, finance costs. And in that regard, we ha d a discussion with our statutory auditors also. And we have also examined the presentation of surcharge income made by our promoters also , like they are the big generators

and they are also receiving surcharge expense income also. So, as per the balance sheet of the promoters and other traders also th is surcharge income in the other income. So, accordingly on a prudence basis and to be more presentable, we have also regrouped the figures instead of other operating income to other income. So, that is the only reason and there is no financial implications of the same.

Manoj Kumar Jhawar: In summary, it is compliance of the regulatory directives and practice being followed in peer companies. So, this decision has been taken in consonance with that and in consultation with the auditors.

Moderator: Thank you, sir. We will take the next question, voice question from the line of Channamallu Halagodi , an individual investor. Please go ahead.

Channamallu Halagodi: What I am asking the question is a matter of transference in decision making process of PTC India, sir. Since last five years, the divestment of PTC India financial services is pending. No clear answer is given to investors from parent company regarding it s divestment. We invested in PTC India on core business but still you are engaged in financial services business. Now, government announced implementation of market coupling from January 2026. In this situation,

 management should concentrate more on core business. What is your real stand with divestment of PTC India financial services, sir?

Manoj Kumar Jhawar: Sir, as I told you earlier, if I may recapture the history, previously the Board of the PTC had taken a decision that will go for disinvestment of PEL as well as PFS. At a later stage, the process for disinvestment of PEL was taken forward, but a hold was put on the disinvestment of PFS.

At a later stage, we concentrated more on d isinvestment of the PEL and that has been successfully concluded as is known to all shareholders. Now, again that question has come up for consideration of the Board and it is under active consideration of the Board. Right now, unless and until a decision has been taken by the Board, I cannot really give a strait jacket ed answer to this question, what we are going to do, when we are going to do. Unless and until the Board itself takes a call, it cannot be responded like that.

Channamallu Halagodi: Not cancelled, no, sir?

Manoj Kumar Jhawar: No, definitely not cancelled. As I told you, this matter is under consideration of the Board.

Channamallu Halagodi: Okay, sir. Thank you.

Moderator: Thank you. We will take the next text question from Harsh it Singhania from RoboCapital . And the question is, is there any quantifiable impact from market coupling on HPX?

Manoj Kumar Jhawar: Actually, HPX is likely to benefit from this market coupling thing and if we examine the entire market scenario, the collective segment has got two components, one is the D AM and another one is the RTC. So, in the DAM component, the volume traded is roughly around 80 billion units and if we multiply the Rs. 0.04 per unit margin which is earned on all power traded in the DAM market, that gives us a revenue potential of around Rs. 240 crore per annum. That was basically 100% concentrated i n IEX earlier. Now, with this coupling thing happening, the exchange which is able to provide better services to the clients, the exchange which has got better connect with the clients, someone who has got a better technology platform, would possibly have a real shot to earn some volumes out of that market. So, that remains to be seen as to how much of that 100% concentrated market from IEX can be taken away by HPX. But currently it is zero, so I would say that journey is only upward.

Moderator: Thank you, sir. The next text question is from Suyash Bhave from Wealth Guardian. And the question is, PTC holds 22% in HPX. Due to that, they cannot trade on it. Now, post market coupling, will PTC look at reducing stake in HPX below 5% to start trading on it?

Manoj Kumar Jh

awar: Our investment in HPX was a strategic one. Now, when to divest , whether to divest would be a call to be considered at an appropriate point of time. At this point of time, we would be basically interested in watching the market as it evolves post this market coupling thing. But a decision would be taken in the best interest of both HPX and PTC. So, that long term value to the shareholders is accrued.

Moderator: Thank you, sir. The next text question is from Ragini Pande from Elara Capital and the question is, w hat was the short term volume in Q1 FY '26? And what was the long term and medium term volume in Q1 FY '26?

Pankaj Goel: So, in Q1 '26, the short term volume including the exchange trade was around 13.9 billion units. And as far as the long term trade including the cross border is concerned, so the total was 8 billion units for the first quarter of FY '26.

Moderator: The next questions are, what is the share of short term and long term volume in overall volume? And what was the trading margin in these segments, i.e., short term and medium term?

Pankaj Goel: So, the overall volume for short term i s 60% and long term is 40%.

Manoj Kumar Jhawar: Margins?

Pankaj Goel: And the margin is 3.37 paise per unit .

Manoj Kumar Jhawar: In short term?

Pankaj Goel: And in short term, the margin is 0.8 paise per unit . Long term margin is around 7.49 paise per unit.

Moderator: Sir, the next question is, why did the surcharge income decline?

Manoj Kumar Jhawar: You see, if we recall in previous shareholders interaction, a concern was raised regarding our huge outstanding accumulating against the Bangladesh as well as a few states. So, the increasing ar rears were a cause of concern for many shareholders. So, we took a concentrated efforts in that direction. And then, as a result of that effort, the outstanding position against many clients has reduced significantly. Now, the Bangladesh is making the timely payment and sometimes it is even availing rebate. So, what is happening that earlier, whatever delay was there, because of tha t, we were able to earn surcharge . We were able to earn the rebate, but the customers were not earning the rebate. Now, what is happening that consumer is also earning the rebate. They are making timely payment. And we are also making timely payment to the generators. So, our rebate income, which is net of the rebate, which earned from generator and the payment which we receive from the discom , it has come down. But it is an indication of actual better management of the receivables.

Moderator: Thank you, sir. The next text question is from Ragini Pande from Elara Capital. What was the revenue and PAT from HPX?

 Pankaj Goel: Revenue of the HPX, its total revenue from operations is Rs. 12.42 crore for this quarter. And PAT for this quarter is around Rs. 6.41 crore.

Moderator: Thank you. The next text question is from Suyash Bhave from Wealth Guardian. And the question is, is there any update on the capital allocation of the funds received from the PTC Energy Stake sale?

Manoj Kumar Jhawar: We have retained a large portion of the divestment proceeds. And we intend to deploy that into meaningful businesses, which are not far off from our core area of operations. But right now, the, CAPEX allocation for next 25 years is the kind of decision which we are going to take. So, that takes time. We are considering the options. Whenever we have concrete announcements to make, we will come to the market. We are right now evaluating many options.

Moderator: Thank you, sir. The next text question is from Harshit Singhania from Robo Capital. Is there any revenue or margin guidance that the management would like to give for next 2 to 3 years?

Manoj Kumar Jhawar: Forward -looking statements, I would not like to venture into. But, I mean, what I can say is, we would like to maintain the momentum. Our tra

ding volumes have been growing at a rate which is faster than the total energy generation rate in the country. The total overall generation had grown by a certain number, but our trading volume have grown by almost 11 %. So, we would like to keep that momentum and we hope that it will serve our shareholders nicely.

Moderator: Thank you, sir. The next text question is, what is the Company's take on virtual power purchase agreement draft notification floated by CERC?

Manoj Kumar Jhawar: It is a very interesting emerging area. And being a trader, we see a lot of value. But we have to wait for the final guidelines to appear in this regard. This will be a very interesting opportunity in the sense that a large part of that business is likely to be built on solid IT platforms and effective execution. So, we are seized off that and we are watching the development keenly . We hope to play a meaningful role in that market as and when those final guidelines come.

Moderator: Thank you, sir. The next text question is, Ministry of Power has recently withdrawn uniform renewable energy tariff. That is URET. How do you see impact of this on your Company?

Manoj Kumar Jhawar: Basically, it has to be understood that this mechanism was instituted by the government because under the REIA nomenclature and REIA framework bids, the states were unwilling to enter into power purchase agreements. Now, PTC not being designated as REIA, i t has got no impact on the business of the PTC. If we get an REIA assignment, which we have been trying for quite some time, maybe it will have a positive impact on outlook. Right now, it has got no impact.

Page 8 of 8 Moderator: Thank you, sir. The next text question is from Suyash Bhave from Wealth Guardian. And the question is, does introduction of market coupling indicate potential future introduction of MBED? And if implemented, is MBED positive or negative for PTC?

Manoj Kumar Jhawar: It is 100% positive. If MBED comes, then what it would entail is that all the capacity which has been tied into the long -term context, which are almost 85% of the power being traded, generated and consumed in the country, would also come to some kind of ma rket mechanism. And that being the case, that will be an exponential growth opportunity for traders like us.

Moderator: Thank you, sir. The next question is from Darshika Kh emka from AV F incorp. And the text question is, how will the rule of max 5% stake in HPX impact on the Company? When does the company plan to divest i ts stakes?

Manoj Kumar Jhawar: Actually, first thing, we would like to approach the regulatory commission. But right now, it is premature to take the decision. I mean, we will have to take a call. Right now, we would like to evaluate as to how this market is unfolding post this market coupling thing. So, decision to divest has to be properly timed and it has to be value accretive for our shareholders as well as HPX. Right now, I cannot give a defini tive time frame kind of thing.

Moderator: Thank you, sir. Ladies and gentlemen, as there are no further questions, I would now like to hand the conference over to Dr. Manoj Kumar Jha war, CMD, for closing comments. Thank you and over to you, sir.

Manoj Kumar Jhawar: Thank you very much, shareholders. Actually, your support is very important. And today, we had faced the shareholders in the AGM also. Hopefully, all our resolutions were supported by the shareholders. I thank you for that also. And we hope to keep a meaningful engagement with you whenever you have got any other queries also. You are free to connect with our company's security department or our investor relationship team. During coming times, we would have many more conferences. And we h ope to build a long -term relationship which is based on mutual trust and transparency. Thank you so much.

Moderator: Thank you, members of the management. Ladies and gentlemen, on behalf of PT

C India

Limited, that concludes today's session. Thank you for your participation. You may now click on the exit meeting to disconnect. Thank you.

Moderator: Good evening, ladies and gentlemen and welcome to the Earning s Conference Call for Q2 FY ’26 for PTC India Limited.
PTC India was incorporated in 1999 to undertake trading of power to achie ve economic efficiency and security of supply and to develop a vibrant power marke t in the country. PTC is a pioneer in starting a power market in India and undertakes trading acti vities that includes long-term trading of power generated from large power projects as well as short term tr ading arising as a result of supply and demand mismatches. In addition to th e trading business, PTC has incubated techno-commercial consulting business to devel op power market for the C& I consumers, SECs, Port Trusts, etc.
Let us now begin with the introduction of the management team. We have with us today Dr. Manoj Kumar Jhawar, Chairman and Managing Director, Mr. Rajiv Malhotra, Executive Dire ctor and Chief Risk Officer, Mr. Pankaj Goel, Executive Director and CFO, Mr. Bi kram Singh, Executive Director, Marketing, Mr. HL Choudhary, EVP, Commercial and Operati ons, Mr. Rajiv Maheshwari, Company Secretary and Compliance Officer, Shri Mukesh Ahuja, VP Finance and Shri Anand Kumar, VP Investor Relations.
At this moment, all participants are in the listen-only mode. Later, we will conduct a question and answer session. At that time, you may click on the Q&A tab to as k a live question. Please note that this conference is being recorded.
I would now like to request Dr. Manoj Kumar Jhawar – Chairman and Managing Director, to give his opening remarks. Thank you and over to you, sir.
Manoj Kumar Jhawar: Thank you. Good evening, everyone. I extend a warm welcome to all of you to our post-earning call following the announcement of our Q2 Financial Year 2025- 26 Results.
I am joined today by core members of our Management Team, as already in troduced by the

moderator. This call gives us an opportunity to share key insights i nto our company's performance and the long-term vision. We deeply value this engagemen t with our esteemed stakeholders, our investors, our partners, shareholders and their re presentatives, who play a pivotal role in our continued growth a

nd success.

 During the first half of the new financial year 2025-26, with the national de mand of energy grew by only 1.07%, our trading volume has grown by more than 11% to 49.22 bi llion units. This was achieved while maintaining a trading margin of 3.54 paisa per unit. Notably, 50% of the traded volume came from exchange-traded products, with the remainde r coming from bilateral long-term and medium-term trades. Improved margin realization has also contributed to a 10% increase in the trading income. Just to recall, in the las t quarter, we had informed about evaluating renewable energy long-term PPAs. So, I am happy to inform that in this quarter, we have executed PPA of 100 MW and the plant is expected to ge t operational by the first quarter of the financial year 2027. We have floated an expression of i nterest for further 500 MW of solar, coupled with 250 MW/1000 MW of our energy storage system. The re sponse from prospective bidders has been encouraging and our teams are eval uating these products. Our product and service offerings are helping in retaining clie nts in the C&I segment and also in other business opportunities. We are a bid consultant for ren ewable energy development of around 1,000 MW in solar and hybrid space.

In the cross-border markets, our operations continue across all three grid-connected neighboring countries, which are Bhutan, Nepal and Banglade sh. Energy flows to Bangladesh remain stable under the agreed contractual framework and the regular flow of payment to work account is happening. Bhutan is also experiencing rising electricity demand, especially during the winter months when water availability declines. Similarly, in Nepal also, we have commenced both import as well as export of electricity based on th eir demand-supply profiles.

Looking ahead, we expect power demand to grow steadily at 6% to 8% annually, although short-term volatility may arise due to transient weather conditions.

Regulatory bodies are also actively fostering market reforms, including discussions on virtual power plants and standardization of exchange products, amendment in power market regulations to ensure a level playing field among exchanges, trad ers and OTC platforms, fractional access to the transmission systems and some other developments.

So, thank you once again for your continued trust and support. W e appreciate your participation in today's call. Thank you.

Moderator: Thank you, sir. I would now like to request Mr. Pankaj Goel, Ex ecutive Director and CFO, to discuss the quarter's financials with everyone. Thank you and over to you, sir.

Pankaj Goel: Yes, good evening to all. Thank you, CMD sir. Now, I will go th rough the quarterly results, September ’25 a nd half-year results, September ’25, on a standalone basis.

First, I will go through the quarter results:

The volume has increased by 9% to 26.2 billion units from 24 billion units. Volume has increased in almost all segments of trade that is long-term, medium-term, cros s-border and exchange.

 Total operational income has increased by 11% to Rs. 137 crore from Rs. 123 crore. The operational income has increased mainly due to increase in cross- border trade and long-term trade. Profit before tax has increased by 15% to Rs. 180 crore from Rs. 157 crore . Profit after tax has increased by 15% to Rs. 134 crore from Rs. 117 crore, that is in line with the PBT. Total comprehensive income has increased by 15% to Rs. 134 crore from Rs. 116 cro re. Earnings per share for the quarter stood at Rs. 4.52 as compared to Rs. 3.94 during the last quarter.

Now, I will go through the half-year results:

For half-year, volume has increased by 11% to 49.2 billion units from 44.5 billion units. Total operational income has decreased by 1% to Rs. 248 crore from Rs. 251 cro re. The operational income has decreased mainly due to decrease in net rebate income in the first quarter of FY ’26. Profit

before tax has increased by 7% to Rs. 321 crore from Rs. 300 crore. Profit after tax has increased by 7% to Rs. 239 crore from Rs. 223 crore. Total comprehensive income has also increased by 7% to Rs. 239 crore from Rs. 223 crore. Earning per share for the half-year stood at Rs. 8.06 as compared to Rs. 7.53 during the last half-year.

Now, I will go through the consolidated results for the quarter:

Volume has increased by 8% to 26.2 billion units from 24.3 billion units. Profit befo re tax from continuing operation has increased by 36% to Rs. 298 crore from Rs. 219 crore. Profit afte r tax from continuing operation has increased by 36% to Rs. 222 crore from Rs. 163 crore.

Consolidated PAT from continuing operation and discontinuing o peration has decreased by 5% to Rs. 222 crore from Rs. 234 crore. Total other comprehensive has also dec reased by 5% to Rs. 222 crore from Rs. 233 crore. Earnings per share for the quarter stood at Rs. 6.46 as compared to Rs. 7.34.

Now, I will go through the half-year consolidated results:

Volume has increased by 10% to 49.2 billion units from 44.9 billion uni ts. Profit before tax from

continuing operation has increased by 39% to Rs. 587 crore from Rs. 422 crore. Profit afte r tax from continuing operation has increased by 48% to Rs. 465 crore from Rs. 314 crore. Consolidated PAT from continuing and discontinued operation ha s increased by 10% to Rs. 465 crore from Rs. 423 crore. Total other comprehensive income has increased by 10% to Rs. 465 crore from Rs. 423 crore. Since the PAT after minority interest has decreas ed to Rs. 386 crore from Rs. 391 crore, EPS has also decreased to Rs. 13.05 from Rs. 13.21 on a consolidated basis for the half-year.
Thank you.
Moderator: Should we begin with the question-and-answer session sir?
 Moderator: Thank you. Ladies and gentlemen, we will now begin the questi on-and-answer session. To ask a question please click on the Q&A tab on the panel and click on raise hand button. The operator will announce your name when it is your turn to ask a questio n. Please accept the prompt on your screen and unmute your microphone while proceeding with your question. Ladies and gentlemen, we will wait for a moment while the que stion queue assembles. We will take our first question from Vishal Mehta from Oakland Capital. Please go ahead.
Vishal Mehta: Sir, I have three questions. The first question was regarding our subsidiary HPX. If you could just throw some light on, please, almost in one month we will have the market coupling which will become active. How prepared do you think is HPX in terms of its software, the operat ions, and what kind of investments if at all we need incrementally to get on par with the largest exchange? And what is our internal estimate in terms of market share gains and volumes maybe in the next one to three years coming from that exchange? So, that is the first question. Should I go ahead with the questions and then maybe you can answer?

Vishal Mehta: The second question is, sir, we have close to Rs. 3000 crore s of cash on our balance sheet. Just wanted to understand the perspective of how you internally are lookin g at utilizing this. I mean, if there is any mix in which, you know, how much will go in supporting th e existing business in terms of working capital? How much will go to the new ventures, like the JV we planned? Or how much of that do we intend to pay out to the shareholders? If you could just highlight that, that would be great. And the final question is, sir, we just recentl y announced the JV. Now that is also in the renewable space and we just sold our assets in PEL, which were also in similar business. So, how is this venture different and what is our expectation from this in terms of scale? What is the roadmap? And if you could just highlight what w ill be the investment requirements for this, it will be great. Those are my questions. Thank you.
Ma

noj Kumar Jhawar: All right. Thank you. So, your first question related to HPX and with the onset of market coupling, you wanted to know the preparedness of the exchange . So, what I can say with certainty is that this exchange is basically operating with a ve ry, very modern technological platform. And we are having Bombay Stock Exchange as the tech support pro vider. And the exchange also has got a very, very competent IT team. So, I absolutely see no reason as to there should be any issue regarding tech support or technology not ab le to deliver what is required. I see absolutely no reason for that. In my considered professional o pinion, the exchange is functioning very well and functioning with a very latest state- of-the-art technology. So, that answers your questions regarding the preparedness of the exchang e. Regarding the market share, I mean, it is something which will evolve over a period of time. But we are expecting and we hope that because of its service offerings and its ability to connect with clients, this HPX also gains significant market shares. So, time will tell, but we are hopeful . So, that is regarding the HPX.
 Regarding Rs 3,000 crore cash utilization, you have asked me. So, out of that, you wil l see that around Rs 1,000 crore, we have to keep as working capital deployed in the main trading business of the PTC. And that is a seasonality. Sometimes with some cl ients, the outstanding position may increase. Sometimes it may decrease. And this is a ve ry, very high-volume business. So, basically, you need to be ready with adequate c ash flows to maintain your trading operations. Regarding Rs 1,500 crore to Rs 2,000 crore, we definitely need to in vest into some business ventures wherein we are able to ensure visibility of th e revenue for the coming decade or so. And that relates to your third question regarding the JV. So, one such ven ture which we have researched is investing in the renewable energy assets in col laboration with NLC Renewable Energy Limited.
So, your question, the third question and the second ques tion, if I were to answer in a joint manner, first query of you is that why we sold the PEL assets if you were to invest again into the renewable energy asset? So, my answer would be that in the PE L, we were the sole owners. And frankly speaking, we are not a very large asset operating company. We got a very good price. All our cash flow models predicted what we were to deri ve from that venture and the deal at which it happened with the ONGC was a very, very profi table deal. So, we went for that. That is one thing. But in this particular venture, we will not be actually required to deploy a large team to operate these assets because basically this is a venture with the NLC. Now NLC is a very, very large and very established player already in the field of not onl y renewable energy

but conventional energy. So, they have got wherewithal and the op erating team and the knowledge, know-how and all other things. So, basically our rol e and responsibility would be related to facilitating the trading and finding the consumers, which I think is our forte. But to be able to get those trading rights and to get into that space, we need to collaborate with them. So, this is a win-win kind of situation wherein multiple kind s of products can be thought over a period of time. We will start with the plain vanilla distribution company bids wherein someone is bidding and if we think that it is making sense for us to quote prices and if we come L1 in those tenders, then some capital definitely would be put up. But at a later stage, merchant capacity may also come, consumer centric capacity may also come. So, this is a good beginning. Now regarding deployment of capital in this particular venture, in itially we are thinking about investing Rs.500 crore also. Since we will be a minority partner, almo st three times of this amount would come

from NLC. So, that would make a decent corpus of around Rs. 2000 crore and on that we can further leverage that amount to invest into some big-size projects. Ini tially we are thinking like this. Time will tell how this venture is go ing further, but we are very hopeful and this address partly your question regarding capital deployment al so. So, I hope I answered your questions.

Vishal Mehta: Great sir. So, just one thing in that you said Rs.1000 crores will be used for the working capital, Rs.1500 crores for that. So, balance you would be able to pay out or is that?

 Manoj Kumar Jhawar: No, I think this JV is Rs.500 crore we are thinking and there are other opportunities a lso which we are exploring. We definitely, the energy sector is a happenin g sector. This is a growing sector and then this great energy transition is happening before our eye s. So, it would be not very wise to distribute the dividend, rather you would like to pu t in some productive assets to ensure long-term revenue assurance for the company for the coming decade or so.

Vishal Mehta: Great sir. Thank you so much for your detailed answers. I will send back to you.

Moderator: Thank you. We will take one text question from Ragini Pandey from El ara Capital. The question is, what is the short-term and long-term and medium-term volume in Q2 FY ’26? Second question is what? Yes, go ahead sir.

Manoj Kumar Jhawar: Yes, I would request Pankaj to answer that.

Pankaj Goel: So, the long-term, we take consolidated long-term, medium-term and c ross-border together as a long-term. So, the long-term volume is around 12.2 BU and short-term vol ume including exchange is 13.8 billion units. So, that is to say 53% of the total volume is from the short-term and 47% of the total volume is from the long-term and medium-term contracts in the quarter.

Moderator: Okay. Yes. The second question is, what was the trading margin in short-term and long and medium-term and what was the overall trading margin?

Pankaj Goel: Yes. So, in short-term trade, the total including exchange is around 0.85 paisa in the quarter and in the long-term trade, it is around 7.02 paisa.

Moderator: And the last question from her is, what was the revenue from HPX in Q2 FY ’26?

Manoj Kumar Jhawar: This half yearly you are asking or 26 is not yet complete?

Pankaj Goel: Q2. So, yes, in Q2 September, the profit before tax for HPX is aroun d Rs. 1.26 crore and after tax, it is Rs. 47 lakhs.

Moderator: Thank you. We will take our next live question from Channamallu Hall agudi, an individual investor. Please go ahead. Channamallu, your line is unmuted. Kindl y unmute your microphone and go ahead with your question. Since there is no response , we will move on to the next question from Suyash Bhave from Wealth Guardian. Suyash, please go ahe ad with your question.

Suyash Bhave: So, yes, I have a few questions. First is, in H1, we have done almost 50,000 MU. So, are you on track to cross one lakh volume for this FY and what would be the v olume guidance for the next two years as well? So, that is my first question. Second is, I can see that our lo ng-term mix has improved well as against our past few quarters. So, in our investor pre sentation as well, we talked about two long-term PPAs. One is the 100MW solar power agreemen t and the other is the 500MW solar power agreement with the additional storage costs. So, i s it that we are now having a broader strategy in place to keep increasing the long-term mix? So, what would be your guidance on the mix going forward? And finally, we own 22% in HPX. Is there any such regulation or restriction that for any shareholder of HPX, so no other player can have more than 20% stake in us? For example, one of our existing promoters acqu iring more than 20% taken together and increasing their stake in us and PTC beyond 20. I s there any such regulation which stops them because we own 22% in HPX ? S

o, these are my three questions. Thank you.

Manoj Kumar Jhawar: Allow me to answer your third question. First and second question , I will refer the matter to the Director of Marketing and the CFO. Regarding your third question , which pertains to the equity holding in the HPX, there is a restriction from the regulato r that anyone who is holding more than 5% equity in that exchange cannot become a trader member. So, that restricts our own trading on the HPS platform. So, that is the regulation. One cann ot have more than 5% if he wants to trade on that exchange. So, that is the third qu estion. First question which pertains to your guidance on the long-term volumes and overall volumes. Bikr am, would you like to answer?

Bikram Singh: Hi, yes. With regard to our volumes, actually it is difficult to s ay where we will close the year. We are definitely looking at crossing last year, but let us see how it spans out. I do not think we will reach 100 BU. That number looks a little too ambitious right now. And with regard to our focus on long-term, definitely our focus has been on long-term an d these PPAs, we are looking at signing and the volume of course will come in the next two, three years as and when the plants get commissio ned. The current volume increase is from the current long-term agreements only based on some weather patterns and scheduling b y the utilities. There is an increase under the current arrangement only.

Pankaj Goel: I would like to clarify this one thing. As you have said that in th e half year we have done around 50 billion units. So, for the year it will be 100 billion units. But as you are aware that ours is a seasonal thing and every time if you go into the history, first half i s because of the summers and all that, the volume is high. But in the second half, because of the winter season and all that, our volume is low. So, it is not just the double, but as ou r ED marketing has explained that naturally we are looking for crossing the last year's volume in line with the same.

Manoj Kumar Jhawar: We are confident and hopeful that we will cross at least the last year's volumes.

Moderator: Suyash, does that answer your question?

Suyash Bhave: Yes, they do.

Moderator: Thank you. We will take our text questions. The next text quest ion is from Ravindra ji, a n individual investor. In PFS conference call, MD and CEO said they are having a plan to raise the fund of around Rs. 300 crore to Rs. 500 crore through issuing preferential shares. And here you said the process of divestment of PTC India Financial Services is under active consideration of board. Which one is correct? Why you all are misleading all?

Manoj Kumar Jhawar: We are definitely not misleading and if you see the both are saying in a sense same thing. If they saying that they are going to raise the equity and if we are sayin g that we are going to dilute our holding, both mean one and the same thing. That is on e thing. But yes, the active action in this regard is subject to approval of the PTC board and that matte r is under the consideration of the board. That much I can tell you. We have engaged services of a reputed consultant in the field of this private equity and equity restructu ring, etc. So, we are awaiting the report and that report will be discussed in the board. This much I can give as a re sult.

Moderator: Thank you. The next text question is from Rupesh Sankhe from Elara. Dear sir, what is average expiry years of our long-term portfolio of 7500 MV? How do you see b ilateral market as exchange prices are very low? Also, exchanges have now long-d uration contract products available for participants.

Manoj Kumar Jhawar: So, third thing is the exchanges are currently not having any long -term product. The maximum time period available for any exchange to operate is three months onl y. Beyond that, they cannot do any trading. And having the long-term contracts on the e

xchange platform is technically speaking a lot many challenges have to be overcome. Very imp ortantly, in the long-term contracts, there is always a question of having a very robust settleme nt mechanism, which is a very, very difficult thing to ensure in long-term contrac ts. Because not only the energy prices, but the fixed charges and the additional charge s relating to change in law and so many other complications come into the play. So, that is one thi ng that currently the long-term markets and the short-term market or the exchange market are very, very different thin g and both are growing, no doubt. As of now, almost 85% power is b eing traded on the long-term contracts. So, that is likely to continue. 15% or less than 15% is happening through the short-term markets. Within the short-term markets, the bilateral contracts are slowly and gradually moving towards exchange products. So, that shift we are watchi ng and that is happening. And of course, we are part of both the markets. So, it directly does not affec t us. It is helping us in our business. Overall volume is growing in exchange as well as long-term. So, that was your third thing. But what else you asked?

Moderator: I will repeat, sir. How do you see bilateral market as exchange price s are very low? Also, exchanges have now long-duration contract products available for participants .

Manoj Kumar Jhawar: Okay. How do I see the bilateral contracts? One thing is very clear. If the prices on the exchange remain low, the volume of the trade on the exchanges or even in the bilateral markets increases significantly. So, basically, that helps us because there are more opportunities to trade. And long-term, as I told you, long-term will exist because for adequacy, th e long-term market has to remain. And that is very different market from the short-term market.

 Moderator: Thank you. We will take a live question from Vishal Mehta from Oakland Capital.

Vishal Mehta: Hi, sir. In context to PFS, just wanted to understand, we are pl anning to dilute our stake over the medium to long-term. But there has been a development where thr ee independent directors resigned simultaneously. So, just wanted to get your pe rspective. How do you view that situation? And is there any concern that you see impacting the business? Thank you.

Manoj Kumar Jhawar: One thing is very clear. Actually, the tenure of those independe nt directors was in any case

coming to an end in November. So, just a barely a month before their co mpletion of the tenure, they chose to resign. That was unfortunate and surprising for us. But yes, business continues. When they had quit, we have already appointed one independent d irector who is very, very reputed name in the industry, in the financial services industry, whi ch is Ms. Mini Ipe, who has been a managing director in the LIC and chairman and managing director o f LIC Housing Financial Services Limited. So, she is a very, very reputed and res pected name. And we are looking to fill up vacancies up to other IDs also. We will soon do that. Regarding business, I do not think it has made an impact.
Vishal Mehta: Thank you.
Moderator: Thank you. Next question is from Channamallu Halagudi, an individu al investor. Please go ahead. Mr. Channamallu, we are unable to hear you. Please check if your mi crophone is on talk mode.
Channamallu Halagudi: So, what is happening, madam? In PTC India Financial Services, th e divestment process is not taking any serious action and taking very lot of time and lagging behi nd. So, what is happening, madam, here in PTC India Financial Services, some directors, independ ent directors are raising corporate governance issue that damaged the name and fame and credib ility of the PTC India also. If you are not taking any serious action about the divestment of the PTC India Financial Services, that will totally destroy the wealth of the investors who are invested in the

PTC India
also. So, please take a serious action about the divestment of the PTC In dia Financial Services, madam.
Manoj Kumar Jhawar: Okay. I would request our director of strategy, ED strategy, to respond to our queries. I appreciate your concern, but I also assure you that we are cognizant o f the issues and whatever is required to be done on the business is being done. But let Rajiv give a de tailed reply.
Rajiv Malhotra: So, Mr. Halagudi, what we would like to respond to that is, one, of course, wi th the passage of time, there can be some impatience. So, no taking that away from you. But a lot of what you have said comes in the realm of conjecture. So, our response to that would be, see there is some things that happen in a boardroom which only those board members are privy to. What were the reasons? I think the facts have been placed before you. So, my request from the
Page 10 of 12 management team would be to not get into the realm of what is essentially conjecture. Thank you.
Moderator: Thank you. We will take our next text question from Mangesh Kulk arni from Almondz Financial Services. What is timeline provided by PTC board for external consul tant to complete the PFS disinvestment deal? Also, with available cash in books and expe cted better second half, what kind of dividend we expect in near future? I know the company in past has rewarded shareholders with good dividend payout.
Manoj Kumar Jhawar: Regarding dividend, we already have a dividend distribution poli cy and we hope we will be following that policy. And there has been a consistency in our dividend payment performance. We hope to maintain that trajectory that much I can say here and now. O f course, the matter regarding distribution of the dividend is always, I mean, determi ned first by the board and then later on, I mean, ratified by the shareholders. But we are on the righ t track and I see no reason to see any major deviation occurring. So, that is that. Regarding cash utilization, I have already explained as to how we shall be going to put that cash into business.
Moderator: Thank you. Next text question is from Sandeep Bhalotia from VLS Finance Limited. Wh at is the reason for substantial increase in cash and cash equivalence and trade payables for the quarter?
Manoj Kumar Jhawar: Basically, I mean, it was a better management of the outstanding positi ons against certain utilities. So, we tried to, I mean, follow it up very, very seriousl y with the utilities who were kind of, I mean, having huge accumulation of areas. So, realization of th ose areas led to this temporary surge in the liquidity. Second thing, currently, I mean, earlier it used to happen that so many distribution companies were facing liquidity crisis. Curren tly, on country wide, what we see is that the prices of the electricity in the day ahead marke ts have come down and that has really helped the utilities improve their financials. And part of that is again reflected in their better payment, timely payment, etc. So, that has led to accumulation of s ome cash into our books.
Moderator: Thank you. The next text question is from Dheeraj Kriplani from Avend us Spark. First question is, Hi, sir. Can you please repeat what were long-term margins in 2Q FY ’26? And sir, what was the HPX revenue for 2Q FY ’26?
Pankaj Goel: Yes. So, as far as the HPX revenue is concerned for the Q2, it is around Rs. 11.53 crores. And the margins for the long-term trade for the Q2 is 7.02 paisa.
Moderator: And the second question is, Sir, what are your views on virtual PPAs?
Manoj Kumar Jhawar: This is an evolving field and we hope that it will help ou r business. Currently, as we see, it is targeted mainly towards the retail customer segments. We hope that wi th a little bit tweak in
Page 11 of 12 the policies, if this product is allowed to the distribution companies also, that will really change the dynamics of the renewable energy markets in the

country. We hope that people in the policymaking circles are aware of those developments and we are hop ing that as the things evolve, it will grow and it will be an important component of the power markets in fut ure.

Moderator: Thank you. Next text question is from RK. What is the status of Teesta ? When will it be operational?

Pankaj Goel: Yes, Teesta has sorted out some dispute issues with Haryana an d they have got a good amount of some pending payments based on the judicial orders also. An d their all restructuring plans has already been approved by PFC and REC. And as per the latest informatio n available to us, the construction of the plant is going on and they are planning to start the part of the c apacity during the next year.

Moderator: Thank you. Next text question is from Channamallu Halagudi. What is th e expected timeline for the divestment of PFS? Can you please give us any timeline exactly and what is the reason behind delay in divestment?

Manoj Kumar Jhawar: You see, sir, currently if you look, if you examine the books of the PFS, the book value would be around Rs. 40 per share. The market trading price is lesser than that. Y ou would not like really a situation in which, I mean, we are selling as if it is a fire sale. That is a very valuable business and we intend to realize the value in it. So, while right now, I cannot even say that when we shall be starting that process because that depends upon certain decisions from the board. So, it is difficult to give a timeline for completion of that ac tivity. I mean, we are aware of what is happening. We are aware that what actions would be planned to be taken and the board is seized of the matter. So, kindly have some trust and faith in the board.

Moderator: Thank you, sir. Next question is from Rupesh Sankhe from Elara. Dear s ir, what is receivables as on September ’25? Also, any amount outstanding beyond 90 days?

Pankaj Goel: Yes, as far as the outstanding is concerned as on September ’25, the total debtors is around Rs. 4,960 crores. But as we also say there are creditors of around Rs. 4,145 crore and our net working capital utilized as on September ’25 is around Rs. 815 crores. And as regards the more than six months debtors, so more than six months debtors on a gross basis is around Rs. 1200 crores. But if we take out, because of back to back creditors of Rs. 1134 c rores , the total exposure on account of more than six months is Rs. 98 crores. And out of that Rs. 98 crores, we have made some provisions also. So, I will say that major amount stuc k of around Rs. 35 crores, is one of the disputes with one of the customers. T hat our advocate has said that is a very good case. So, practically we can say that there is no outstanding for more than six months.

 Moderator: Thank you. As there are no further questions, I would now like to hand the confere nce over to Dr. Manoj Kumar Jhawar, Chairman and Managing Director for closing comments. Over to you, sir.

Manoj Kumar Jhawar: Hello, shareholders. It was a pleasure interacting with you. I hop e we were able to answer to your queries, to your satisfaction. On my part and on part of my managemen t team, we assure that we shall be working in a very, very professional manner and we e xpect to maintain the great momentum which we have seen in the first half of this year and we hope to close this year on good note. Thank you so much.

Moderator: Thank you, sir. Ladies and gentlemen, on behalf of PTC India Limited , that concludes today's session. Thank you for your participation. You may now click on the exit meeting to disconnect.
Thank you, sir.

Please find attached herewith the transcript of the Investors & Analyst Call held on Monday, 16th February, 2026 on un-audited financial results for Q3& 9M FY 2025-26.

This is also being uploaded on the website of the Company at www.ptcindia.com.

This is for information and record please.

Yours faithfully,
For PTC India Limited

Rajiv Maheshwari
(Company Secretary)
FCS- 4998

Encl: as above

Moderator: Good evening, ladies and gentlemen and welcome to the Earnings Conference Call for Q3 and 9 months FY '26 for PTC India Limited.
PTC India was incorporated in 1999 to undertake trading of power to achieve economic efficiency and security of supply and to develop a vibrant power market in the country. PTC is a pioneer in starting a power market in India and undertakes trading activities that includes long-term trading of power generated from large power projects as well as short-term trading arising as a result of supply and demand mismatches. In addition to the trading business, PTC has incubated techno-commercial consulting business to develop power market for the C&I consumers, SECs, Port Trusts etc.
Let us now begin with the introduction of the management team. We have with us today, Dr. Manoj Kumar Jhawar - Chairman and Managing Director; Mr. Rajiv Malhotra - Executive Director and Chief Risk Officer; Mr. Pankaj Goel - Executive Director and CFO; Mr. Bikram Singh - Executive Director, Marketing; Mr. H. L. Chaudhary - EVP, Commercial and Operations; Mr. Mukesh Ahuja - VP, Finance; Mr. Rajiv Maheshwari - Company Secretary, and Mr. Anand Kumar

- VP, Investor Relations.

At this moment, all participants are in the listen-only mode. Later, we will conduct a question-and-answer session. At that time, you may click on the Q&A tab to ask a live question. Please note that this conference is being recorded.

I would now like to request Dr. Manoj Kumar Jhawar - CMD, to give his opening remarks. Thank you and over to you, sir.

Manoj Kumar Jhawar: Thank you. Good evening, everyone. I extend a warm welcome to all of you to our post-earnings call following the announcement of our Q3 Financial Year 2025-2026 Results.

I am addressing this conference from Goa, but my management team is in Delhi and I am joined by them virtually. So, the entire PTC management team is there and has already been introduced by the moderator. This call gives us an opportunity to share insights into our company's performance and our long-term vision. We deeply value this engagement with our esteemed shareholders, our investors, partners, shareholders and their representatives.

Page 2 of 17 During the 9 months of current Financial Year ‘25-‘26, our national demand of energy grew by less than 1%, but our trading volumes grew by 9% to 69.23 billion units. The average trading margin for the 9-month period is 3.38 paisa per unit. Notably, 60% of the trading volum

e came from exchange-traded products, with the remainder,mainly, coming from bilateral long-term and medium-term trades.

Improved volume and margin realization has increased the trading income to Rs. 234.29 crores, a 7% increase in trading income over the corresponding period for the previous financial year.

In the cross-border markets, our operations continue across all 3 grid-connected neighboring countries, Bhutan, Nepal and Bangladesh. Energy flows to Bangladesh remain stable under the agreed contractual framework, with regular flow of payments to over-accounts. Due to increased domestic demand in winter in Bhutan, cross-border power import from Bhutan has been scheduled somewhat lesser than in previous year's levels. We expect this to settle at a long-term average level as contact is for surplus power after domestic demand of Bhutan, which is currently rising, is met. However, the power from India to Nepal and Bhutan to meet their winter demand is increasing and flowing as per the executed contract.

On coupling of exchanges, recently APTEL has passed an order directing Hon’ble CERC to follow the regulatory process and frame regulations before implementing the coupling of the exchanges. We believe that this would be beneficial to our associate company, which is Hindustan Power Exchange. Looking ahead, we expect power demand to remain firm, although short-term volatility may be high due to transient weather conditions.

On regulatory and policy fronts, Draft National Electricity Policy has been announced and it proposes deepening of power markets, regulatory frameworks for distributed energy aggregation and leveraging India's energy stake for digital integration of market-based transactions. However, Hon’ble CERC is proposing to formally classify integrated energy storage systems as a regulated asset with defined technical terms. This is also expected to give clarity to investors and consequently scale up its implementation. So, thank you once again for your continued trust and support. We appreciate your participation in today's call.

Now, I would invite our CFO to give a glimpse of the financial numbers. Thank you.

Pankaj Goel: Thank you, CMD sir. Good evening to all the shareholders. Now, I will go through the financial results for the quarter and 9-month ended December 25.

First, I will go through the standalone results for the quarter. During the quarter, the volume has increased by 4% to 20 billion units from 19.2 billion units. The volume has mainly increased due to our exchange trade. The total operational income has decreased by 14% to Rs. 89 crores from Rs. 103 crores. So, this decrease mainly is on account of a decrease in our net rebate income. The rebate income is decreased basically due to the improved liquidity of the states. The profit before tax has decreased by 25% to Rs. 111 crores from Rs. 148 crores. Profit before Page 3 of 17 tax has decreased mainly due to decrease in our net rebate and surcharge income. Profit after tax has decreased by 25% to Rs. 83 crores from Rs. 111 crores. In line with the PBT, PAT has also decreased by 25%. Total comprehensive income has decreased by 25% to Rs. 83 crores from Rs. 111 crores. Earnings per share for the quarter stood at Rs. 2.79 in comparison to Rs. 3.74 during the last quarter.

Now, I will go through the 9-month results for December 25. So, volume has increased by 9% to 69.2 billion units from 63.7 billion units. The volume has increased mainly due to our exchange and cross-border trades during the 9 months. The total operational income has decreased by 5% to Rs. 337 crores from Rs. 353 crores. Total operational income has decreased due to decrease in net rebate income. Profit before tax has decreased by 3% to Rs. 433 crores from Rs. 448 crores. The main reason for decrease is due to the decrease in net rebate income and surcharge income. Profit after tax has decreased by 4% to Rs. 321 crores from Rs. 333 crores. Tot

al comprehensive income has decreased by 3% to Rs. 322 crores from Rs. 334 crores. Earnings per share for the 9-month period stood at Rs. 10.85 paisa compared to Rs. 11.26.

Now, I will go through the consolidated results for the quarter. The volume has increased by 4% to 20 billion units from 19.3 billion units. Profit before tax on a consolidated basis has decreased by 23% to Rs. 175 crores from Rs. 227 crores. So, decrease is on account of as I have already explained that there is a decrease in profit before tax on a standalone basis also and also due to the lower profit before tax of PTC Financial Services during the quarter. Profit after tax has decreased by 26% to Rs. 131 crores from Rs. 176 crores. Consolidated PAT has decreased by 28% to Rs. 131 crores from Rs. 181 crores. Total other comprehensive income has decreased by 26% to Rs. 133 crores from Rs. 181 crores. Earnings per share for the quarter stood at Rs. 3.85 in comparison to Rs. 5.32.

Now, I will go through the consolidated results for the 9-month ended. The volume has increased by 8% to 69.2 billion units from 64.2 billion units. Profit before tax from continuing operation has increased by 17% to Rs. 762 crores from Rs. 649 crores. Consolidated profit for the 9-month period has increased mainly on account of increase in profit before tax of PTC Financial Services and their profit has increased due to basically reversal of impairment provisions which were created in earlier years. Profit after tax from continuing operation has increased by 22% to Rs. 596 crores from Rs. 490 crores. Consolidated PAT from continued operation and discontinued operation has decreased by 1% to Rs. 596 crores from Rs. 604 crores. Total other comprehensive income has decreased by 1% to Rs. 598 crores from Rs. 604 crores. Earnings per share for the 9-month stood at Rs. 16.9 in comparison to Rs. 18.54 during the last 9-month period ended. Thank you.

Moderator: Thank you very much. We will now begin the question-and-answer session. We will take a first question from Dr. Naresh Mathai from Shrimati MMK College. Please go ahead. Dr. Naresh, please unmute your microphone and go ahead with your question please. Since there is no response, we will move on to the next question from Channamallu Halaguri, an Individual Investor. Please go ahead with your question.

Channamallu Halaguri: Thank you for this opportunity. In previous call regarding divestment or dilution of PFS, you said you are awaiting for the report from a private reputed consultant on private equity and we will discuss the same report in the board, then what is the outcome of the report and what is the outcome of the board discussion, sir?

Manoj Kumar Jhawar: The assignment has been given to SBI CAPS. We are awaiting their final report and we shall be discussing the report once it is made available to us. Many rounds of discussions have happened with the consultants, but before I discuss this with the board, I cannot share more on this.

Channamallu Halaguri: Thank you, sir. One more question from my side, PFS is not able to raise fresh funds and not able to increase AUM size and parent company also stopped financial support to PFS to increase AUM and delaying dilution process also. You are just wasting time of investors of PFS and PTC India. Take early action regarding divestment of PFS for benefit of the investors of both PFS and PTC India, sir?

Manoj Kumar Jhawar: I will look at it this way. Kindly understand the capital adequacy ratio of PFS is already very high, very comfortable. Almost Rs. 3,000 crores of the net worth is lying in that company. So basically, they do not need further equity infusion from the parent. So that said, it is not as if that we are not supporting them. It is for that company to raise further debt financing, complementing their existing equity structure. It is number one. Number two, even if a divestment has to be done, it cannot be done in a h

eft. Otherwise, we will be losing the investor value. So, a process has to be followed and different options have to be evaluated. So, rest assured, we are also mindful. It is not as if that we are not aware of the timing or the sales of the timing, but we are working on it.

Channamallu Halaguri: Thank you, sir.

Moderator: Thank you. Next question is from Vipulkumar Shah from Sumangal Investments. Please go ahead.

Vipulkumar Shah: So, my first question relates to this lower surcharge and lower rebate due to improved DISCOM financial situation. So, is this a new normal that in all subsequent quarters and years we will see lower surcharge and lower rebate income, sir?

Manoj Kumar Jhawar: Sir, it is difficult to predict, but let us understand the overall scenario in which the power sector has been operating. For the past one year, weather has been generally very benign and the power purchase cost on the exchanges have been very down and subdued. So, what it led to was a significant reduction in the power procurement cost for the DISCOMs. And because of that, they temporarily have better liquidity if you compare it with the prior periods. Now, going forward, if weather was again not to be as benign and the demand increases and commensurate with the demand, their power procurement cost per unit terms also increases, then situation may change again. So, these things and many ups and downs like this we have seen over the years and we expect it to continue.

Vipulkumar Shah: My second question relates to our short-term margin and long-term margin which generally is always part of the presentation, but this time those figures have not been shared. So, can you share the short-term and long-term margin for this quarter and comparable same last year?

Pankaj Goel: So, the short-term margin for this quarter was including the exchange trade is 0.87 paisa per unit and in the last quarter, the short-term trade margin was 0.75 paisa per unit and the long-term margin during this quarter is 7.91 paisa per unit as against 7.7 paisa per unit during the last quarter.

Vipulkumar Shah: Last quarter or last year, sir?

Pankaj Goel: Last quarter. Sorry, last December 24. Corresponding quarter.

Vipulkumar Shah: Thank you, sir. I will rejoin the queue.

Moderator: Thank you. Next question is from Mangesh Kulkarni from Almondz Financial Services. Please go ahead. Mangesh, please unmute your microphone and go ahead with your question, please.

Mangesh Kulkarni: Yes. So, thank you very much for giving me an opportunity. Sir, I would like to ask broadly about the decision taken earlier about the NTPC becoming the promoter and how the transaction is going to happen. Like all the remaining 3 shareholders, they will be divesting, their shareholding will be bought by the NTPC. And then whether it will be open offer for public also, what kind of transaction is thought about? And what happens to the NTPC's trading company, which is already there, just like PTC, NTPC has the second largest trading company in the trading space. So broadly how that transaction is going to happen?

Manoj Kumar Jhawar: First thing is regarding this NTPC. So, as we have already shared with the stock exchanges and general public at large, currently, the understanding is only this that the 3 promoters would relinquish their promoter rights. That means the representative shall not be sitting on the board and those companies that is PFC Power Grid and NHPC would not be having a promoter stake. Regarding their own equity as of now, we are not aware if any understanding has been reached between the NTPC and other promoters. Over the time, if there is any information on that front to be shared, and if we come to know about it, we shall be sharing with the general public at large. Second thing was regarding the NTPC Vidyut Vyapar. So of course, the NTPC is already having a power trading company full-fledged under their belt. So how and what shall come out of this transaction once NTPC becomes sole promoter of the PTC? These things it is a little early to say for me, but I think in coming days, all those things will become clear. As of now, yesterday, we have already shared with the stock exchanges that other promoters, the PTC board has approved the proposal of 3 promoters to withdraw themselves as being promoter of this company.

Mangesh Kulkarni: Anything has not discussed on this front from the management of the PTC?

Manoj Kumar Jhawar: Management of the PTC?

Mangesh Kulkarni: The role ahead has not discussed with the management of the PTC?

Manoj Kumar Jhawar: I think these things do take time. This thing does take time. Discussion is not a one-time affair. Things evolve continuously, options are evaluated continuously. So as and when we are in know of, we have anything more to share on this front, we shall be sharing.

Mangesh Kulkarni: And sir, on HPX, can you explain the financial performance of this quarter?

Manoj Kumar Jhawar: Pankaj, please.

Pankaj Goel: Yes, I will take it. So, the total income of the HPX during this quarter was Rs. 8.64 crores as against Rs. 8.22 crores in the corresponding quarter. For the 9 months ending, their total income was Rs. 36.4 crores as against 30.27 during the corresponding 9 months and the profit after tax, in this quarter, they have a loss of Rs. 2.46 crores as against the profit of Rs. 1.28 crores in the corresponding quarter and during the current 9-month period, they were having a PAT of Rs. 4.42 crores as against Rs. 8.38 crores corresponding 9 months.

Mangesh Kulkarni: So, what was the reason for loss this quarter?

Pankaj Goel: Bikramji.

Bikram Singh: Yes, for this, basically the expense on technology and some manpower expense was the main reason for this loss in this particular quarter. But with the market coupling and all, the scenario is looking positive for HPX.

Mangesh Kulkarni: Yes, that means technology investment is good for the long-term benefit that is positive?

Bikram Singh: Yes.

Mangesh Kulkarni: So, thank you very much for the opportunity and all the best.

Moderator: Thank you. Next question is from Abhir Pandit from Old Bridge Mutual Fund. Please go ahead.

 Abhir Pandit: Hi, sir. Thank you for this opportunity. Sir, with respect to the latest developments on market coupling, specifically the APTEL judgment, I just wanted to know your thoughts on the actual implementation of on-market coupling and our investment in HPX. So how will affect HPX? I understand the growth potential is expected there, but do you see that market coupling being executed in the short term, let us say in the 6-month period?

Manoj Kumar Jhawar: First, there have to be a regulation as amply clarified by the APTEL order. So, first CERC has to come out with a regulation. Meanwhile, in parallel, technological preparations can go on to some extent and they have been going on just as Bikram has clarified that we are not lagging behind in terms of investment in the IT platforms. So once regulations making process is completed, then I think it should not take long.

Abhir Pandit: Sir, is there any time frame for this normally?

Manoj Kumar Jhawar: Really, we cannot predict as to how fast or how slow CERC can come out with regulation on

this subject. That is not our domain.
Abhir Pandit: No worries, sir. Sir, also, just was looking at your balance sheet, sir, we have a good amount of investments and cash balances available. So, are there any newer areas which we are specifically looking at for investments in order to deploy those investments?
Manoj Kumar Jhawar: So that is one. If you look at our cash balances, it comprises of two components. One is the working capital, which is meant to support our core trading business. And currently, it may look as if we are having a very high level of cash on our balance sheets because the cash is not currently dep

loyed in the working capital cycle. Currently, we are sitting in a situation that there are no significant outstanding against any of our major principal trading partners. And because of that, that working capital cycle is so squeezed that we are almost, if I am right, we are not having more than 4 days of average net outstanding. So, on one hand, it is a very good operational performance, but on the other hand, it affects our rebate and surcharge incomes. But having said that, to support our trading business, I think at least Rs. 2,000 crores war chest is required to remain competitive in this business. And that has always been the case. So other than that, this Rs. 1,100 crores also, which we have received from sale of PEL, that fund is available for equity investment or other kind of investments. The management is cognizant of that. We are working on many fronts. If you have been following our company, you would know that we have recently signed MoUs with Neyveli Lignite Corporation. We have signed MoU with SECI, we have signed MoU with some of other PSUs also. So basically, all these MoUs are meant to explore what could be the possible synergy and what could be possible avenues for further investments. When we have anything concrete to share, we shall be sharing.
Abhir Pandit: Sir, basically, you are suggesting that Rs. 2,000 crores is the war chest that you have and a certain amount of working capital requirement will necessarily have the cash balances to be at a particular level continuously, right? What would that level be, sir?
Page 8 of 17 Manoj Kumar Jhawar: Rs. 2,000 crores, I would think that would be required to support the trading business, particularly if the prices for the electricity in per unit terms firm up, then for trading the same amount of electricity, basically, you need more working capital. So that thing is a little bit cyclical in nature, but Rs. 2,000 crores, I think, would be required to support the trading business. Over and above, the cash can be deployed for securing further sources of revenue. That is pure investment.
Abhir Pandit: Thank you, sir. That is it from my side.
Moderator: Thank you. Next question is from Rajiv Agarwal from Sterling Capital. Please go ahead. Rajiv, please unmute your microphone and go ahead with your question, please. Rajiv, we are unable to hear you. Since there is no response, we will move on to the next question from Suyash Bhave from Wealth Guardian. Please go ahead with your question
Suyash Bhave: Yes, sir. Regarding that MoU with SECI, can you throw some light on what is its scope, what kind of business are we looking to do there?
Moderator: Suyash, your volume is very low. Can you speak a bit louder, please?
Suyash Bhave: Am I more audible now?
Moderator: Yes, Suyash. Please go ahead.
Suyash Bhave: Yes. So, regarding that MoU with SECI, can you throw some light on what is its scope, what kind of business are we looking to do?
Manoj Kumar Jhawar: Currently, SECI is doing the REIA business only, but now they want to be in the merchant side of power business also. So, for merchant side of power business, they see a lot of synergy with the organization like PTC. So that MoU with SECI basically aims and intends to mutually beneficial opportunities on the merchant side of power renewable energy business. They are good at contacting; we are good at selling. So, there is a synergy.
Suyash Bhave: So just to understand this better, will that help us increase in our LT volumes, long-term volumes?
Manoj Kumar Jhawar: Actually, long-term traders are not permitted as of now, unless and until you are on REIA. And now that REIA thing is also at the decline. So even the already designated REIAs are unable to sell the power. So, what we see, the evolving scenario in the power sector is like this, that on the one hand, for enabling the financial closure, there could be a long-term contact with the developer. And on the ot

her hand, that power cannot be sold on back-to-back basis as it is to any DISCOMs. So that power slicing and dicing and some customization and mixing and matching and merging has to be done. So that is where a role of trader like us comes. So strictly speaking, to answer your question, no, this power on the back-to-back basis cannot be sold on Page 9 of 17 long-term basis. It has to be medium-term, it has to be short-term, it has to be exchanged, it has to be mix and match and merge of anything. So that is what our specialty is, that is what we do all the time.
Suyash Bhave: Understood. Thank you.
Moderator: Thank you. Next question is from O. P. Gandhi from Siddhi Technologies. Please go ahead. O. P. Gandhi, please unmute your microphone and go ahead with your question, please. Yes, we

can hear you now. Please go ahead.
O. P. Gandhi: Yes. So, my first question is, what is the outstanding amount from Government of Bangladesh and with new government is in place? So, what is the likely business with the Bangladesh government? And my second question is how is the volume growing in month of January, February and March this year in comparison to the last year? Thank you.
Manoj Kumar Jhawar: Outstanding, Pankaj can share. Regarding further business opportunities, I can say that currently, number one, there is a congestion in the transmission corridors. So, there is, say, I think, very little feasibility of supplying more power to the Bangladesh. Of course, there is absolutely no possibility of importing power from the Bangladesh because they are already power deficit country. Regarding the outstanding, I would request Pankaj to clarify.
Pankaj Goel: So basically, Bangladesh is presently taking rebate. So, they are making payment early. So only the one bill is outstanding around Rs. 72 crore is only outstanding from Bangladesh.
O. P. Gandhi: If you want to put that in perspective at one point of time, this outstanding was to the tune of Rs. 800 crores or so?
Pankaj Goel: Yes.
Moderator: Does that answer your question, Mr. Gandhi? Thank you. We will take one text question from Darshika Khemka from AV Fincorp. The question is, please help with the volume breakdown for the quarter and what is outlook on the performance for the next quarter?
Manoj Kumar Jhawar: Pankaj, please.
Pankaj Goel: Yes. So as far as the quarter volume breakdown is concerned, we have traded in short-term bilateral trade 1.4 BU. In exchange, we have traded around 12 BU and in medium term, it is 730 million units. In cross-border trade, it is around 584 million units. In long-term trade, we have traded around 4805 million units and in Bangladesh, it is around 411 million units. So that is for the quarter break up.
Moderator: Thank you. We will take our next question from Yash Surpuria, an Individual Investor. Please go ahead.
 Yash Surpuria: So, thank you, sir, for the opportunity. I would just like you to share some light on the long-term PPAs. Are we allowed to sign long-term PPAs or we aren't allowed? And what will be the general tenure, sir, for them?
Manoj Kumar Jhawar: As per the standard bidding guidelines, for the procurement of long-term power, which is the conventional power, tenders are not permitted. So, for the long-term conventional power, no tender or no further new contracts can happen. For the renewable power, there is a construct of REIA that is Renewable Energy Implementation Agency. So, if Renewable Energy Implementation Agency is inviting the tender, then only they can charge a trading margin. Others are not permitted to charge any trading margin or enter into long-term contracts, even for renewable powers.
Yash Surpuria: So, sir, there won't be any long-term contracts for us in conventional?
Manoj Kumar Jhawar: Market is really moving away, except for, let us say, Hydel projects, which actually are very long-station projects. I think market is now moving away. Market

is likely to be dominated by medium-term contracts and complementarity, when people realize that it is not in their own financial interest to have 25 years contract with full commitment for fixed costs over that period of time. People are now realizing the benefit of flexibility and I think market is migrating towards that situation in which there will be many mid-term contracts and even the contracts of the nature, which are not currently happening, that let us say, supply power to make for 6 months for next 25 years, things like that. So, I think market structure is evolving.
Yash Surpuria: Thank you, sir. All the best.
Manoj Kumar Jhawar: Thank you.
Moderator: Thank you. Next question is from Vipulkumar Shah from Sumangal Investments. Please go ahead.
Vipulkumar Shah: Hi, sir. So, what is the cash on balance sheet on around 31st December?
Pankaj Goel: Yes, just a minute. So as on 31st December, it was around Rs. 3,292 crores.
Vipulkumar Shah: And sir, most of our short-term volume is through exchanges. So, my question is, why should a buyer, whether it is a DISCOM or an enterprise or C&I company, should route it through us? What is the advantage for them to pay whatever little spread that we are having?
Manoj Kumar Jhawar: Previously also in many meetings, I have clarified. Basically, a trader serves 3 purposes in a power market. Number one, not every buyer would want to create a control room kind of thing in which he is manning that control center 24/7 with skilled people who can put the bid directly into the exchange. Of course, theoretically it is doable, but they prefer services of some trader who can do it on their behalf. We run a 24/7 control room specifically for this purpose. So that
 is the trade services. That is number one. Number two is trade financing. Trade financing means someone may be temporarily short of liquidity, but he may still need power. And tomorrow at a later stage, he might be expecting some liquidity. At that point of time, he may settle the accounts with the trader. So, we provide and facilitate that trade financing also. So that is our second service. And third service is the market intelligence itself. We if a consumer is availing our services, can really advise the consumer in a professional manner that what would be the

best possible way of meeting his power needs in short term or medium term. So, these are the three services which a trader can provide. These are valuable services.

Vipulkumar Shah: And last question. So over next 5-7 years, do you think that long-term market will totally go away and almost all volume will shift to short term through exchanges?

Manoj Kumar Jhawar: You see, actually, this question has to be addressed in two parts. Number one, unless and until there is a long-term contract for offtake of power from a project, the financial closure of projects won't happen. So at least one leg of the transaction for financial closure of the expected and upcoming power projects, there has to be a certain degree of assurance to the financiers that power will be taken up. So, for developers, of course, they are always perpetually in the need for a financial closure and therefore a long term PPA. So, I don't see that debt need going away. What I see is that back-to-back basis that power cannot be directly sold to a DISCOM or any other consuming entity. The consuming entities on the other hand want flexibility. So that means there is ample room for traders like us to be in this business that we can take calculated risk and we can do the long-term contracting with the developers and then we slice dice and mix and match and merge that power and tailor made and custom made the solutions for the clients at the DISCOM. So of course, long-term trade is not going away, but less and less it is likely that there would be an intermediary in between.

Vipulkumar Shah: Thank you. Very helpful, sir.

Manoj Kumar Jhawar: Than

k you.

Moderator: Thank you. Next question is from Rajiv Agarwal from Sterling Capital. Please go ahead.

Rajiv Agarwal: Sir, what is the business opportunity do you see from the market coupling whenever it is implemented? That is my first question. And my second question is how do you calculate this operational income and trading margin which you normally show in the presentation? How do we calculate this number from the financial results?

Manoj Kumar Jhawar: The business opportunity from the market coupling directly it is not coming to the PTC because PTC in any case is simply a trader on the exchanges and currently since PTC owns around 22.5% equity in the HPX. So, it is an associated company and therefore, we cannot take the trading membership on the HPX. So, our trading portfolio is being serviced with the help of other two exchanges. So, per se directly it is not affecting the PTC, but indirectly since we own 22.5% of the HPX and if significant volume of power trading was to move away from leading and dominant exchange to all the 3 exchanges in an equitable manner, then it will definitely add immense value to the HPX and then being the leading shareholder of the HPX, that benefit will accrue to PTC. So that is first part of your question. Second part I would request Pankaj to respond to.

Pankaj Goel: So, as we are saying that there are three parts of the total operational income which we show in the results. First, there is a pure trading margin that is the gap between the sale and purchase price, let us say, we purchase the power at Rs. 100 and we sell it for Rs. 100.4 this thing. So, this 0.4 paisa is our margin. So that is how this trading margin is calculated. Then there is a second element of rebate which we used to get that if we make early payment to the generator and likewise our buyer also sometimes gives us the payment on time. So, we calculate the rebate expenses and the net rebate income, then we calculate the net rebate income, the difference between the payable and the receivable and then there is a third element of consultancy income. So taken these 3 parts, so we calculate the total operational income.

Moderator: Thank you. Next question is from Anjali Singh, Retail Investor. Please go ahead. Anjali, please unmute your microphone and go ahead with your question, please.

Anjali Singh: Yes, good evening, everyone. My question is that out of the Rs. 3,200 crores cash that we have on books, what is the capital allocation plan that we have for the future?

Manoj Kumar Jhawar: Anjaliji, I think I have already answered that question. Out of Rs. 3,200 crore which we are having on our balance sheet, Rs. 2,000 crores is required to meet the transient nature working capital requirements of the cohort trading business. Today, we are sitting in a situation in which there are no significant outstanding against the Bangladesh or against Jammu and Kashmir or rather any other DISCOM utility per se. But these things are very transient. Tomorrow, that need may again come up. So, if we are unable to do the trade financing, then we will not be able to effectively manage power trading operations. So almost Rs. 2,000 crores is what I would reasonably want to keep for the trading business. So that leaves me with the remaining capital of Rs. 1,200 crores and for that we are exploring many options. CAPEX is a serious business and whatever we do it has to bring long-term value to the PTC shareholders. So, we are exploring many options.

Anjali Singh: I have one more question. The Teesta Urja plant, when do we expect to start the productions there?

Manoj Kumar Jhawar: Pankaj.

Pankaj Goel: So, the Teesta, they are developing in two stages. The first stage is they are constructing the coffer dam. I think the partial generation will be started from the constructing of the coffer dam and then in the second phase, they will do the full construction of the full dam by whic

h
 the full generation will be started. So, the construction of the coffer dam is in full swing. I think maybe within a period of next 6 months, so the coffer dam will be constructed and the power will be started generating from that.
Anjali Singh: All right. Thank you very much.
Moderator: Thank you. We will take a text question from Ragini Pande from Elara Capital. She has three questions. I will read them one by one. First question is on a standalone basis, finance cost is at INR 56 million versus INR 282 million last year. What is the reason for such a decrease?
Manoj Kumar Jhawar: Pankaj.
Pankaj Goel: Yes. So, in the finance cost, there is a surcharge expenses also included. So, it depends on that how much surcharge we have received and how much surcharge we have paid. So, in the finance cost, basically it is not just the vanilla working capital cost, it also includes the surcharge expenses. So, if you want that I will give you a full breakup of what is included. Just a minute.
Manoj Kumar Jhawar: But Pankaj, I think she is asking about the financing expenses. So, I think because of your improved liquidity, your expenses have gone down.
Pankaj Goel: No, finances expenses, it includes the surcharge expenses. Just a minute, I will give you a break up. Just a minute. So, on a standalone basis, so finance cost includes for the quarter, it is Rs. 2.49 crore of surcharge expenses are there and Rs. 3 crore of interest expenses is there. And during the last corresponding quarter, it is Rs. 25 crore of surcharge expenses and Rs. 2.32 crore of interest.
Moderator: Her second question is, please share your short-term volumes and long and medium-term volume and the share in the overall mix in Q3 FY '26?
Pankaj Goel: Yes. So, as I have informed earlier, the short-term trade is 13.4 billion units, which tantamount to 67% of the volume. And then there are medium-term, long-term trade, which constitutes around 33% of the total volume during the quarter. And during the corresponding quarter, 63% is the short-term volume and the balance 37% is towards the medium-term and the long-term trade.
Moderator: And her third question is, share your short-term and long-term and medium-term trading margin
Pankaj Goel: Yes. So short-term margin during the quarter is 0.87 paisa per unit. And under the long term, during the quarter is 7.91 paisa per unit. And during the corresponding quarter, the short-term margin is 0.75 paisa per unit. And in long term, it is 7.70 paisa per unit.
 Moderator: Thank you. We will take our next question from Dr. Naresh Mathai from Shrimati MMK College. Please go ahead.
Naresh Mathai: Good evening, everybody. With a good amount of reserves and surplus, can we the shareholders expect in the near future to get bonus shares from PTC India?
Manoj Kumar Jhawar: Recently, if you are aware that possibly our promoter structure is also undergoing a change, so I would not like to comment on that unless and until these things have been discussed among the promoters. But as an end, if you have got anything to declare, we shall come out and make a public declaration. As of now, it is not under consideration.
Naresh Mathai: Thank you so much.
Moderator: Thank you. Next question is from O. P. Gandhi from Siddhi Technologies. Please go ahead.
O. P. Gandhi: Yes, my question, repeat question. Now, assuming that NTPC will come in the promoter's seat maybe in 3 months' time after the resolution passed in EGM and all and NTPC has a large power capacity. So, do you think that you will have a benefit of synergy between NTPC and PTC, assuming that NTPC power trading may be merged in due course of time, then any synergy between you and NTPC, sir?
Manoj Kumar Jhawar: Should that happen, that possibility that the trading arm of the NTPC and the PTC, the business somehow, a synergy is provided. In that case, we are going to be benefited because now there is

a regulation which says that you are at the unequivocal surplus power of all the NTPC power plants. It has to be compulsorily first offered into the trading, for trading in the market. So, unless and until that is done, the fixed cost is not paid to the NTPC. So that power volume is also a significant volume that would come to us if, should that synergy thing happen. So yes, there is a lot of statistics synergy.
O. P. Gandhi: So, do you think that NTPC will be in the promoter's seat by 3 months' time and although the NTPC to decide to buy other promoters or not, that is their separate business?
Manoj Kumar Jhawar: Sir, one thing I would like to clarify that NTPC is not coming in to become a promoter. NTPC is already a promoter. It is the other way around that all other 3 promoters have decided to relinquish their rights as promoters. So NTPC has remained and become the sole promoter.
O. P. Gandhi: Yes, that is my intention. The NTPC will become a sole promoter. So, do you think that with the rating improvement in PTC Finance, since under your chairmanship, there is a lot of improvement in PTC finance corporate governance, but after the NTPC being the promoter, do you think that more and more rating improvement will be there in PTC Finance?
Manoj Kumar Jhawar: PTC Finance is separate and listed company. I think their own rating would depend on a lot of factors. It would not be proper for me to comment about the affairs of that company per se.
 But yes, NTPC is a very reputable player and if they become our sole promoter, then of course,

that benefit of legacy and benefit of synergy, it comes to all the group entities. That much I can say.
O. P. Gandhi: Thank you, sir. Thank you.
Moderator: Thank you. We will take a text question from Nikunj Mehta from Wealth Guardian. Do you have any plans to sell some stake in HPX to other partners in the ecosystem? And second question is, when can we see any business coming out of the MoU with NLC India and how big can it become?
Manoj Kumar Jhawar: First thing regarding the sale of the stake in the HPX, basically, if we have to bring member on the HPX, then we must first wait for the market coupling to happen. So, regarding the HPX, first thing, we must wait for the outcome of this market coupling exercise. Then only I think it will be a relevant question, whether or not we are owners of that exchange and whether or not we are selling equity of that exchange. I think a lot hinges on with how the exchange business itself is going forward. So, I would like to not comment on that aspect right now. What was your second question that was regarding this?
Moderator: Sir, I will repeat. Second question is, when can we see any business coming out of the MoU?
Manoj Kumar Jhawar: NLC, no?
Moderator: NLC to India.
Manoj Kumar Jhawar: Yes. So, it is progressing at a reasonable pace. I believe that internally NLC has to take some Government of India approvals and they are in the process of doing so. So once that comes and we know as to that concrete approvals are now available on both sides. So, we can move really very fast. They are very good company and we see a lot of synergy. Because they are a coal company and they want to migrate and become a relevant renewable energy company also. And for that, we see a lot of synergies with them. So maybe in upcoming technologies like battery energy storage solutions or some other RE projects, we can partner with them.
Moderator: Thank you. The next text question is from Paresh Shah, a Retail Investor. Please throw some light on buyback of shares. Are we thinking on it? Do we merge with NTPC?
Manoj Kumar Jhawar: As of now, there is no proposal under consideration of the management for buyback of the shares. Recently, the rules for the buyback have been changed in this budget. Earlier, it was absolutely not favorable even to the investors. As of now, there is no proposal under consideration.

Moderator: Thank you. Next question is from Rajiv Agarwal from Sterling Capital. How do we calculate operational income and trading margin shown in presentation?
 Pankaj Goel: Sir, I think that I have already replied to that question.
Moderator: Thank you, sir. We will take the next question from Dr. Naresh Mathai from Shrimati MMK College. Please go ahead with your question, Dr. Naresh.
Naresh Mathai: Good evening, everybody. In the near future, can we expect any kind of a reward for shareholders in the form of rights issue and such that benefits the company's reserves and surplus as well as increases the shareholders shareholding by subscribing to the rights issues?
Manoj Kumar Jhawar: Sir, as of now, we are not planning any rights issue because unless and until we have some definitive plan as to how to deploy that capital which we further collect from the shareholders, we should not be going to the shareholders to collect more money. If you have been present throughout this conference, you would know that many people are asking as to what you are doing with your cash reserves. So let me formulate a CAPEX plan. Then if need arises, we will discuss and debate and then take a decision.
Naresh Mathai: Very aptly answered, sir. Thank you so much.
Moderator: Thank you. The next follow-up question is from O. P. Gandhi from Siddhi Technologies. Please go ahead. Mr. Gandhi, please go ahead with your question. Please unmute your connection.
O. P. Gandhi: Yes. Jhawarji, there is a suggestion from our side. We have done some working on PTC. Today, NTPC and other promoters are holding 16%-16.5%. And Damodar Valley is also holding around 4.5% or 5%. So combined, they are holding 21%-22%. And if NTPC power trading is merged with PTC, so they will get approximately 15%-20% further stake. So then that way NTPC can consolidate in your book, say 35%-40%. Then if you buy back the shares, then NTPC can have an indirect stake of more than 45%. So, I think you pass this our suggestion to NTPC board.
Manoj Kumar Jhawar: Yes, certainly. All options will be discussed. A lot depends on as to what is the take of the NTPC management. But your suggestion is noted, sir.
Moderator: Thank you. As there are no further questions, I would now like to hand the conference over to Dr. Manoj Kumar Jhawar - CMD, for closing comments. Over to you, sir.
Manoj Kumar Jhawar: Good afternoon, shareholders. I am sorry. When I was reading my speech, a bout of sore throat, I think interrupted my speech many times. But thank you for patient listening and thank you for your support through the turbulent times. I can assure you one thing that our trading volumes and trading numbers have been robust in this quarter also. It may look as if that we have not been able to achieve that much income from the surcharge or the rebate, but those are the transitory in nature. What should be, our company should be judged basically for growth in the trading volumes. And I think we have delivered a solid growth in the trading volume and look forward to your continued support and understanding. Thank you so much.
 Moderator: Thank you, sir. Ladies and gentlemen, on behalf of PTC India Limited, that concludes today's

session. Thank you for your participation. You may now click on the exit meeting to disconnect. Thank you.

Call: May 2026

PTC INDIA LTD

Q4 FY 2026 ANALYST CONFERENCE

MAY 22, 2026

VENUE-THE TRIDENT, BANDRA KURLA COMPLEX (BKC) MUMBAI

****
Moderator:
Good afternoon everyone. Thank you for joining us this afternoon. Just keeping it very short, people on the dais, I think everybody is familiar with. Right now, on the left most, actually towards the middle, you see our MD and CEO, Dr Manoj Kumar Jhawar. To his right, Pankaj Goel, who is the Executive Director and CFO, and to Pankaj right is Bikram Singh. Bikram Singh is our Head of Marketing, ED Marketing and I am Rajiv Malhotra, here to just get the ball rolling.
It's been a year that we have completed when a lot of transition that has

happened and when we talk of energy transition, you see evidence or manifestations of that happening

In the middle of this, I think the PTC team is here to say that give or take a few business metrics and we always tell you never to look at a quarter on quarter picture because this is not a quarter on quarter business.

So having said that, it only reinforces the relevance, in fact the increasing need of power trading, trade in power and in electricity markets development of electricity markets. Three successive days practically you heard of the demand hitting the highest ever numbers.

At the same time you hear of near zero kind of tariffs and in some parts of the day and you hear of very high tariffs in some parts of the day.

What do we do? Basically when we look at these mismatches we are here to match those. So I will not take much longer than this. Thank you again for joining us. I will ask Bikram to quickly share a business overview and after that Pankaj will take you through the numbers for this quarter and the year that we have just completed. And finally Dr. Jhawar will give us his concluding remarks. So Bikram can you come up.

Business overview

Thank you sir. Very good afternoon to everybody.

So, a lot of things are already highlighted. Still as a part of the structure, I will just go through the PPT and I am sure there will be questions and answers at the end. So, first is the PTC overview.

So these are the traditional vision, mission and core values. We stick to them, we stay with them and we take our mission quite seriously which is power trading across various platforms and also with cross border countries.

These are our promoters. I think everybody is familiar with that. I heard somewhere in the informal discussions that maybe NTPC is going to take over something like that. But currently the four promoters remain with us and Ministry of Power is the largest shareholder through these companies. Largest single shareholder through these companies.

These are some of the developments that are there and of course more focus is on renewable. I will just share in the coming slides.

Last year I think everybody is familiar with the numbers. So it has been now more than 25 years of journey and we did 92.8 billion units last year with a PAT of 397 crores.

This is the view of the power market, how things are moving and where as a company we are now increasingly focusing. So these are countries' ambitions and some of them we have achieved well in time.

Others are on the radar with a 20 to 70 net zero target. So power sector is geared up to meet all the challenges and we are working towards achieving this with a 500 gigawatt target of only renewables.

This is the installed capacity of the country and the below two graphs actually reflect how things have moved over the last five, six years and why now renewable energy is actually very important and is coming into the market. Earlier it was through some long term PPAs with the distribution companies and very little was coming to the market.

However, if we see the installed capacity numbers, more than 50% is now renewable, which is installed. And if we look within the installed capacity space, which would be the graph on your right top corner.

So, solar of course dominates with 150 gigawatt followed by wind which is 56 GW and then we have small contribution from small hydro and biomass plants.

So, this is how the 223 gigawatt of renewable is, you know, and divided and the below two graphs which has said what was in 2020 and what is there in 2026.

So we can see friends where thermal is 67% and now it is in terms of installed capacity is down to 49% so less than 50% and balance all is is now renewable.

So, in installed capacity terms, the share of renewables is going up drastically, whereas thermals is also increasing in terms of the installed capacity, but in terms of percentage share is on the lower side.

So, the contribution of renewable is going up and that was in the installed capacity terms which is in megawatts and this year is the same numbers in million units that are there. So in terms of installed capacity, the renewable is more than 50% but if we look in energy terms, it has increased from 16% to 26%. So that's not a small jump in the last 10 years.

And now in the total energy that is consumed in the country, 26% is coming from the renewables. And the target for this year as far as MNRE and ministries are concerned is actually 29%. So the targets are very stiff and the generation from

renewables is coming in to meet those stiff targets.
This is, you know, that was five, six years back and this is going forward. So the growth story remains. We are all plugged into it and we are looking at 5% growth of electricity on year-to-year basis. And if the total pie grows, definitely
There is scope for PTC also in the trading space to grow. And as we were discussing just before the presentation, last three days, we touched the maximum ever. And yesterday only at 3 p.m. around this time, we touched our maximum 260 gigawatt peak met. So every day there is

a new benchmark, new target,
new milestones which are getting achieved in the power sector.
In terms of the business summary, we did 92.8 billion units which is 12% more than last year. PAT is more or less on the same lines, 397 crores dividend is there and of course the short term trades have increased. We try to keep it at 50-50 but because of the reluctance of parties to enter into long term agreements, the shorter duration agreements are seeing more traction and therefore now 56% of the businesses in the short term through the power exchanges and also some bilateral transactions.
In RECs, as I said that the installed capacity is less and then therefore the balance commitments are met through certificates. We did 68 lakh certificates last year and we were also helping Himachal Pradesh, government of Himachal Pradesh in selling their power in the country from 14 hydro projects in Himachal. And of course, some new clients have been added across C&I space and also in the cross-border domain.
And there are some consultancy assignments which are a little unique and which are helping contribute in this, especially the PM Kusum project of Honourable Prime Minister where we are helping the utilities in smart meter installations and also rooftop solar projects. And lastly the ADB funded project for connecting the three countries.
Laos, Thailand and Cambodia. So we are helping them develop the power market. Initially it will start with building the transmission systems within these countries and then also simultaneously if you are building infrastructure then you also need to have the rules in place for trading to take place.
So these are our long-term, medium-term portfolios. Right now, a little focused on thermal and hydro. However, going forward, we see this mix changing and some wind and solar also coming into it. As I said, now these powers have started coming to the market.
And of course in the customer profile more than 800 consumers are there and in this also in the generation space we are seeing lot of you know transition companies like battery, solar wind was there earlier also but their contribution has now increased and their market participation has increased. (I think there's some connectivity problem but. So now we've gone to slide Z.)
So these are some of the other initiatives which the company has been taking. There is a joint venture with NLC India Renewables where we plan to jointly develop hydro projects along with NLC which also is trying to change their portfolio to renewables now.
And in terms of various consultancy projects, so we've been doing transmission lines for Talcher Fertilizer Limited at Vishakhapatnam Port, we are building a substation and also helping MPIDC, that is Madhya Pradesh Industrial Development Corporation, developing some dedicated areas for industry parks and SCZs. So, in our consultancy business, this continues. For the financials, I request our CFO, Pankaj Goelji, to please. Thank you.
Financial Highlights .
Thank you Bikram. Good afternoon to all. So now I will go through the financial results for the quarter and for the year ended as a whole. So first I will go through the stand alone results.

Standalone Numbers
First I will go through the stand alone results. So as you can see in the first row, the volume has gone up from 19 billion units to 23.6 billion unit for the quarter. That is there is an increase of 24% during the quarter.
As Bikram has already explained, the increase in volume is mainly on account of our short term trade which basically includes the exchanges also, trading on exchanges also. And there is an increase in small contribution from medium term trade also and some of the contribution from cross border trade also.
For the year ended, the volume has increased by 12%. That is, it has gone from 82.8 billion units to 92.8 billion units. And again, the reasons are the same. The

increase in the short ter

m volume and some in medium term and cross border trade.
For the quarter, the total operational income is in the same direction because the volume has increased by 24%. And in the same direction, our total operational income has also gone up by 19%. That is from 97 crore to 115 crore.
For the year as a whole, the operational income remains same at the level of around 450 crore. The reason is although our operational income. core trading margin has gone up, but because of there is excess liquidity or I will say sufficient liquidity with the DISCOM, so they are making payment on time and that is why our rebate income actually has gone down from 121 crore to 97 crore during this year as a whole and our surcharge has also gone down. So this is because of that the total operational income, although the operating margin has increased, but as a whole the operational income remains same at the level of 450 crores for the year.
In row number 3, the profit, because in the published results you must have seen that, it is being seen that our profit is going down. But this is mainly because in the last year, we have included the profit on sale of PTC Energy Limited. So that is why I have given a break up for your better understanding.
So in row No. 3, if you will see that if we will take out the profit on PEL sale, then our profit before tax has actually increased from 86.38 crore to 102 crore. That is there is an increase of 18% during the quarter and likewise the profit before tax for year end remains at a level of 534 crores.
So, in row number 4, if we add the profit from PEL sale that is 521 crore because there was a profit of this much. And in row number 5, if we add together the profit on energy PEL sale and our normal operating income, the profit before tax including all is actually decreased. The reason I have already said that, it has decreased from 608 crore to 102 crore. That is there is a decrease of 83%. for the quarter and likewise for the year ending there is a decrease of 49%.
Profit after tax if we exclude the PTC energy sale that is actually increased from 63.99 crore to 75.74 crore that is there is an increase of 18% during the quarter and for the year it remains same at the level of 397 crore.
If we add the PAT on PEL sale that is 457 crore in row number 8. The overall PAT has gone down from 521 crore to 75 crore for the quarter. There is a decrease of 85% and for the year there is a decrease of 54%.
In row number 9, the total comprehensive, because in the comprehensive also, the profit on sale of PEL is included. So that is, it has gone down by 85% for the quarter and for the year it has gone down by 53%. Likewise, our EPS has also decreased. Gone down from 17.6 Rupees to 2.56 rupees for the quarter and for the year it has gone down from 28.88 rupees to 13.41 rupees but the reason I have already explained that is in the last year the profit from sale of PTC energy is included. Now I will come to the consolidated results.
Consolidated Numbers
So as you can see that our volume has increased on a consolidated basis. It has also increased from 19.1 billion units to 23.6 billion units. That is there is an increase of 24% for the quarter. For the year ending, again there is an increase of 11%.
The PBT before profit from PEL sale has increased from 161 crore to 163 crore. That is an increase of 2%. And for the year as a whole, it has increased from 810.79 crore to 925.64 crore. That is, there is an increase of 14%. The profit before tax for the year ended has increased because profit from PFS has also increased during the year.
Row number 3 is around the profit from PEL sale and then if in row number 4 you can see PBT after including profit from PEL sale the it has gone down by 65% and during the year it has gone down by 17% the pat before the PEL sale remains almost same at a level of 122 crore and for the year it has gone up from 612 crore to 717 crore that is there

is an increase of 17 percent so in row number 6
the profit from PEL sale figure is shown and in row number 7 The profit after tax including the PTC energy profit, it has decreased from 363 crore to 121 crore. That is there is a decrease of 67%. And for the year as a whole, it has also decreased from 853 crore to 717 crore. That is there is a decrease of 16%.
So, because the last year PTC entered, because we have sold the PEL assets on 4th March 25, so till that time the profit is also included. So, we classified as a discontinued operation for the last year, for the last quarter. So, there is a 8 crore profit in that and then for up to 4th March 25, there was a profit of 122 crore.

So, in row number 9, you will see that total comprehensive income including the profit from PEL sale it has decreased by 67% for the quarter and for the year ending it has decreased by 26% likewise our EPS including the PEL sale has also gone down by 70% for the quarter and for the year ended it has gone down by 33%, I have also tried to give the debtors position.
If you will see our published results, you will see only the short term or the bilateral turnover as per the accounting standards. We have to show only the bilateral turnover and the exchange transactions, the turnover on the exchanges we have to exclude as per the accounting standard. We show it as agency nature transactions. So, because of that, in the debtors also the receivables on the exchange transactions is also included.
So for the better analysis, I have taken the turnover as per our published results. Then in row number 2, I have added the turnover that we have done on the exchange in rupee terms actually. So in row number 3, if you will see, our gross turnover including the exchange transaction is 36,672 crore for March 26 and 34,400 crore for March 25.
And our overall debtors, including the exchange debtors, are around 4,380 crores. And last year it was 4,762 Crores there is a decrease from 4,700 crores.
And our creditors has gone up from 2,900 crore to 3,500 crore. So if you will see that net working capital has gone drastically because we have made a good recovery from J&K of around 1,000 crore during the last year. So our net working capital has gone down to 848 crore. In number of days if you will see that our gross debtor days has gone down from 51 days to 44 days and if we exclude the creditors also that is net working capital has gone down from 19 days to 8 days. Thank you. Thank you very much.

Moderator:
So before Dr. Jhawar gives his concluding remarks, I think let's open this for questions and answers. Any queries and we are here to answer them.
Q&A Session
Participant 1: Sir, we have sold PEL to ONGC Green, right?
Company : I am sorry. Could you just introduce yourself? Introduce yourself and then say the question.
Participant 1: I am Piyush Shah, HNI individual. You have sold PTC energy to ONGC Green, as per my knowledge. So what was the contribution to our company of that PTC and how it will be affecting going forward? First thing.
Company : Okay. Are you asking about financial contributions?
Participant 1: Yeah, financials. Can you repeat that?
Company : Yeah, that is I have already included in the number but just for the sake of your information again, the profit before tax which we get from PEL's transaction is around 521 crore.
Participant 1: So going forward how it will be affecting our company?
Company : You are asking the PAT contribution?
Participant 1: Yeah, PAT and overall contribution.
Company : In the last to last year, I have to tell. Because the last year we have sold. So, last to last year I have to tell.
Participant 1: So, currently how much it will be affecting without that?
Company : Just a minute. Thing is that if you wish to know what is likely to be financial trajectory of PTC then this year's number are a good indicator because in this year's numbers there is no

profit from PEL. So going forward this is likely to continue. PEL was sold last year. If you wish to know that number.
Participant 1: It's okay. And what will be the product mix as of now going forward? as we are more deviating towards renewable as per your presentation and saying. So can we know the guidelines towards 2030 or something like that?
Company : The contribution of short-term trades is increasing. So, though we are trying to do some long-term trades also, however, the way the market is shaping up, we would see that medium-term to short-term trades will start constituting a larger percentage of the total volumes.
As I said, for a long time we have kept it at 50/50, you know 50 long term and cross border plus 50 short term. But now the short term has started going up. So that's what the market demands. Nobody wants to commit for 25 years. So more and more transactions are happening on a medium term to short term basis.
So somebody has asked about the PL profit. So as sir has already said that because the last year we have sold it. So the profit for 24-25, it was profit after tax from PEL was 33 crores.

Participant 2: Okay. Yeah, good afternoon. I am DD Sharma from Risk Capital Advisor. My first question is about future volume growth. Looking to the overall economic environment, (inaudible) and the growing need of power in India, what short of growth or range of growth you anticipate in the next 2-3 years and the 2nd questions is what about the PFS, PFS divestment is still on the table on not?
Company : Can you hear?
Participant 2: Hi, so can you answer the first question?
Hi, yes, so that's why I specifically pointed out to the growth story in India. So we are expecting a 5% growth overall and we are expecting the contribution also from short term and medium trades to increase.
So in terms of volume growth, we are in line with the overall country's growth. So we should be maybe a little higher than what takes place at the national level. So that would be the relative benchmark to the volume growth.
Participant 2: And as you are in marketing, I would like to ask what kind of level of competition is there in this business?
Company : See, competition is there and niche is also there. So both things are there. So where we are present, others are not there. And there are some very plain transactions where everybody is present. So there is relatively good competition in some of these segments, whereas in some of the segments, we enjoy a strong presence like for example long term for cross border. So those are areas where we have a little edge over all the others.
Whereas if you look at power exchange transactions or short term transactions, there we have to compete with almost everybody. So there are more than 70 licensed traders in the country currently. So for those volumes, we have to compete with those 70 traders. All of them are there in the market for that.
Whereas cross-border and long-term, if somebody has to enter into a 25-year or a 15-year or a 12-year relationship, I think the first preference is PTC or maybe one or two other traders, credible traders. So there the competition is limited to maybe four, five, six traders.
But in some plain exchange based transactions, you are fighting with all 70. So, reasonable competition in some segments and very strong competition in some segments.
Participant 2: Is this competition putting pressure on your margins?
Company : Yes, definitely it will. But you have to manage both sides. So, you have to increase the volume also and you have to keep your margins intact also.
Participant 2: Are we not looking at increasing our margins in the near future?
Company : So in that two, three year horizon, so whatever growth will come, will come through the volume growth. Because increasing margins in this kind of competition is very difficult. So that was a fairly long first question, sir. So will give you an answer to the

second one.
So till sometime back you have heard us say that the issue of divestment or otherwise of PFS was before our board and for a period of time the board had said let's pause the process and there was some advisory input that we were waiting for. Now we have to report now that that particular decision to pause is not there. So, which means we can go ahead. Having said that, we divest, we hold in what manner, what is determined to be the best manner in the interest of the shareholders. Those configurations will emerge as a board committee and the board itself engages with us over the next few months.
Participant 2: Still not appointed any investment banker or...
Company : So those are things which come, the procedural things which come with the rank. As and when there is a material development, it will be reported, it will be shared with you.
Participant 2: Thank you.
Participant 3: Hi sir, this is Suyash Bhave, analyst from Wealth Guardian family office. So continuing on this PFS part, so considering we already have pretty decent huge cash balances with us, with this PFS sale, whenever it goes through, that will just add on to it. So how are we looking to deploy such a huge cash balance for business with the expectation that something more is substantially going to come in?
Company : So long as you're not recommending that we don't, if we come to that point of divesting,
we don't do it because there's a cash balance i hope that is not what you're suggesting
Participant 3: no no i'm uh saying that uh we have we already have a huge cash balances which are expected to go up again with the pfs sale coming through i'm

just trying to understand how we will allocate it going forward
Company : okay so uh let me qualify that huge you said it's a huge cash balance you are in an industry where sorry am I audible
Participant 2 : yes sir, So, the number of days debtors outstanding is, it's looking very healthy, right?
Company : It's actually way beyond or much beyond our performance scorecard. Being in this business for over 20 years, 25 years, we somehow see the cyclicity. So, when we are pragmatic, cautious that this business from time to time does need more cash to be performing it well.
Second, we have communicated in the past that a part of this is kept away or like a war chest for select investments. Don't get me wrong, I am not trying to say that a PEL portfolio will be created again. Something strategic which adds value to our core business, not big ticket. Those kind of investments is something which we are certainly going to be scanning for.
The third is of course what comes to you as enhanced returns in the future. That is again a call that is taken very very carefully. Now in those three buckets I think we do not get more specific as of this point in time, the rationale why PFS would go a certain way or why PEL has gone a certain way is that these were assets created where over a period of time their strategic value was gone. So once you only start looking at profitability or capital gains metrics, these are financial investments. And that is the reason we are sure that we want to preserve the value that we have got there and
Basically, when we do get to monetize it, monetize it in a healthy, predictable way. So beyond the first headline, which I just said, I don't think we should be getting into, like I said, one, the huge, the word, the adjective used has to be seen in the context of what the business is like and what it needs to grow for the future. And third, of course, we owe it to our shareholders. Does that answer your question?
Participant 3: Partially yes, because I just want to understand one thing. Over a long enough term, our return ratios have been...Alright, they have been okay, if you look at it from a decadal perspective. So whenever we take whatever capital allocation decision that we would take regarding the cash, do we have any thoug

ht process on internally as to any target ROCE for it or any internal IRR metric for it? I am just trying to understand that.
Company : See, the simple answer to a divestment decision is that you go with what the value maximization or value preservation calls for. If I suppose were to take a decision against a benchmark and not realize it for the next three years, I am sure you're not going to allow any of us to sit on this dais. So it's a product of what is in the best interest of the shareholders and I am repeating that for emphasis. There is always
1. You could have had a target number when you started that business.
2. The business environment changes. It changes for the better, it changes for the worse. There are realities of that business today, in terms of how a financial assets business works. And 2. What in terms of timing, process etc. should the monetization exercise look like?
So, I would say, I would not hold ourselves to a benchmark that prevents us from realizing timely value, if that answers your question partly.
Participant 3: Sure. Thank you.
Participant 4: Good evening. My name is Varun and I am a research analyst from Smiths Limited. I have two questions for you guys. The first one, as sir mentioned that the focus is not really on the margins for the next two to three years and it's more on the volume side. I would like to know what is the pipeline looking like for the longer term PPAs versus the medium term and the shorter term PPAs and how is the spread coming up in this quarter as you have seen and how you forelook in the next few quarters. Like what is the trajectory going to be like?
And the second question is around the strategic initiatives and the new things that are coming up like green hydrogen or the BESS part of the business and how is it shaping up and what are the other strategies that you are looking at to sort of give a push or impetus to the business overall.
Company : So I think the question is for Bikram.
Yeah, actually, so we discussed this earlier also. So long term appears a little difficult and even if it happens, you know, it will be a little, so not those 25 years, maybe 10, 12 years, something like that. But more focus will be on medium term and short term contracts. So that's what is moving in the market. So
In terms of the new initiative, we are trading Bess Power. There are two or three

early movers in BESS and we are in touch with them and also trading their power. Green hydrogen, we are talking to two, three people to supply electricity and incidentally, I think it was the first at that point of time. Now there is a GAIL Vijaipur green hydrogen project. So we have only supplied green power to it. It is a 10 megawatt project, not very big. but the power is being sourced by PTC only.
So all these new opportunities including data centers, so all these we are, as and when things are coming up, we are right on them and you can count on that that even for BESS also, we were the first to start trading BESS power, we were the first to supply green power for green hydrogen and similarly for this data centers also, we are talking to the ones that are coming up to see how we can service their requirements. Their electricity requirements are a little tougher than other requirements because they require round the clock green power and price is also a very big consideration.
But we are talking to all of them and right at the front for all the new initiatives that are happening. There could be some other VPPs (Virtual Power Plants) also, you will hear some financial derivatives also, you will hear all those things. So we are there dealing with all these products.
Participant 4: And so just to add on the spreads part, like how is it looking at like, Has it been better or is it going like compressing further because of the shorter term PPAs?
Company : So it is a tough, competition is tough as we said, shared earlier. And so I am not

looking at too much on the increase side, but at the same time I am not looking at too much lower than this also. So we are in a very competitive environment already.
I don't think, as I said, the growth will come from volumes. Margins we don't expect to grow substantially. Marginal, you know, decimal percentage is plus and minus. That's all.
Participant 4: And sir, any update on the Teesta Urja dam construction that was there?
Company : Go ahead. Yeah.
So actually this Teesta Urja will be developed in, as already explained in the last CONCALL also, that it will be constructed in two phases. First they are building a cofferdam. Through that I think that around 40-50% of the total megawatt will be supplied through that. And that should be operational by let's say September or October. And the full dam will be ready by 29 actually.
Participant 4: Okay sir, thank you.
Participant 5: Hello, Sagar here from Clever Capital. Couple of questions. One, can you throw some light on the NLCJV? What are we doing? What are the expectations out there? What would be the capital outlay? And by when could things hit our top line and bottom line in that?
Second, bookkeeping, what's the net cash as on today. And the third, PTC financials, we discussed, okay, there will be monetization value unlocking, the process will be followed. But till that time, what is the ambition or guidance on the growth on the asset quality out there? Like an overview on that would be great. Thank you.

Company : So NLC, I want to...
Regarding the NLC, we have had a memorandum of understanding with them. We expect to develop a portfolio of around 2000 megawatts initially, but then these are just initial numbers. It may go much higher if the things work out our way. It may not go that high if timely decisions are not forthcoming and not many things depend upon government permissions.
So the proposal is awaiting government approval at the DIPAM level. So that is regarding the NLC. But NLC is a good organization. We see a lot of synergy working with them. So if that happens quickly, then we would like to examine the opportunities, particularly in the emerging spaces, renewable energy, battery storages, etc. to co-develop. So that is one thing, but as of now, it is difficult to put any number to it.
What was your second question?
Participant 5: on Net cash.

Company : Net cash was on 31st March is around 2,800 crore and today should be around 2,400 crore, something like this. So your third question is saying, I think you are saying till the time that you find a definite event of monetization, what is the guidance on PFS? Is that what you are asking?

Participant 5: Correct, the growth and asset quality.
Company : See, it is ...NBFC which is focused on infrastructure finance, Infrastructure Finance Company (IFC) in that category I think so whatever asset accumulation or whatever building of that book will happen of course I cannot be speaking on behalf of the PFS management because they are equipped to do this better.
Remember that that is the core and there is a lot of action we see happening on infrastructure space. That sitting in PTC and looking at it strategically, we see what is the reasonable expectation. Second, as regards quality of assets, are you speaking on the classification of the current portfolio? Is that your question?
Participant 5: So the question is like, are you looking to clean it up more or you are happy with the asset quality? What's the scenario?
Company : So I think it's been a dynamic situation where whatever there was, you know, a set of assets which were distressed, which have been addressed by and large. Others in the near term, you will see them being resolved, so to say.
So no more shocks in short term?
Shocks as in what? Anything that you think would go into distress or something of that sort.
Company : Look, I will not be able to speak on the specifics of that portfoli

o if
you are saying. In terms of a shock, we will be as shocked as anybody else if that were to happen. But like I said, there is a lot which has been resolved that is as reported to us. We expect the others to be resolved in the near term.
Thank you.
Moderator: Any more queries? So if there are no more questions, I will request Dr. Jhawar to give us his concluding remarks this evening.
Concluding remarks by MD & CEO
Good afternoon and thank you shareholders for taking time out to meet us in person. It is always a sort of event for us to understand from investing community directly as to what is happening. what are your concerns and how as a shareholder driven company we can address them. Today actually I have a sore throat so I did not actually take the questions or even make a long speech but yeah actually I think whatever was to be asked was summarized into four or five questions.
So Mr. D.D. Sharma's question was regarding, he was basically concerned about the competition and how we are able to find our feet in this competitive market.
So it is all about moat Mr. Sharma and I think our balance sheet gives us that strong mode. If someone wants to enter into a power supply contract for 25 years then definitely they cannot go for someone who is light on the balance sheet side. That is one thing. Our second moat is our relationships.
Our relationships have been developed over a period of 25 years. So those relationships speak for themselves. Our legacy, our conduct, our transparency in dealing with our stakeholders, that is our second moat.
Third thing, in the cross-border space also, I think beside us, there are only one or two more players. So that is our third big moat.
So that gives us a competitive edge over many other competitive players. In the domestic market, as Bikram has said, if it is a plain vanilla kind of supply, then there are many people. But if someone is looking for a serious relationship for power trading for 25 years or even for 5 years, then we are the go-to concern.
Second thing, it is not to say that no one can enter a power trading business requirement for obtaining a trading license is not that high but then to run a power trading company you will also need to invest in money people processes and every year possibly you will have to incur expenditure to the tune of 100 crore rupees so given that key trading market is at a certain stage of development and also that it is of course growing but growing in a linear way
So if many people enter into this space and I think many people have entered but then their volumes speak for themselves. This in that sense is not that easy business to conduct. Your expenditures are fixed. Your income may highly depend upon kind of trades you are doing. So that is our big mode. Our relationships, our balance sheet, our connect, our interstate cross border relationships and our expertise. So that is our mode.
Regarding investments, I think Suresh has asked, again I would like to supplement what Rajiv says, as a company you really need to keep on reinventing yourself. Every five years if you have not been cautious enough to read the signal then you will find that you are in a root shock.
So as a company I can assure you that we actually continuously scan the competitive landscape and where we are operating. We are very very mindful

of kind of emerging opportunities in terms of new energy, renewable energy, battery energy storage system, pump storage system, or increased need and awareness and importance of hydropower.

So we are mindful and we scan the opportunities for appropriate investments. As and when we have anything to disclose, we will come to the market. But here as of now, I cannot comment on anything which is premature to discuss. So I think that will augment what Rajiv had already said.

Regarding disinvestment of PFS also, someone had asked about the asset quality. We do not have any reason to bel

ieve that there is any further surprise for us in terms of their quality beside what is already been reported and what is already in the public discourse and knowledge.

So whenever we receive that money, we will again like to invest the competitive environment where and how it can give us another mode, augment and supplement our trading business. That is what we would like to do.

And regarding PFS disinvestment also now process has to commence because earlier the board had put a pause on that process and now that pause has been removed. So we would like to quickly move forward and seek necessary approvals and should those approvals come we would like to take this process forward. So these are the things which I wanted to say. Besides that I really thank all the shareholders to have faith in us.

We will continue to do what we do best, which is do the power trading and serve the shareholders. Thank you.

Moderator :

So thank you all. And I think we will just proceed to have a cup of tea together. And any questions, any questions you still have, we are happy to discuss when we are speaking with you one to one. Thank you again for joining us.
