Sub: Transcript of Investors/analysts Call – Q3 FY 2024-25 Unaudited Financial Results

Dear Sir/Madam,

Pursuant to the requirement of Regulation 30 read with Part A of Schedule III of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed herewith Transcript of Investors/analysts Call organized on January 30, 2025 post declaration of Unaudited Financial Results of the Company (Standalone & Consolidated) for the quarter and nine months ended December 31, 2024.

The same shall be available on our website i.e. www.askbrake.com .

This is for your information and records.

Thanking you.

Yours Faithfully,
For ASK Automotive Limited

"ASK Automotive Q3 & 9M FY25 Post Conference
Call"

January 30, 2025

MANAGEMENT : MR. KULDIP SINGH RATHEE - CHAIRMAN &
MANAGING DIRECTOR , ASK AUTOMOTIVE LIMITED
MR. PRASHANT RATHEE - WHOLE-TIME DIRECTOR,
ASK AUTOMOTIVE LIMITED
MR. AMAN RATHEE – WHOLE-TIME DIRECTOR, ASK
AUTOMOTIVE LIMITED
MR. NARESH KUMAR - CHIEF FINANCIAL OFFICER,
ASK AUTOMOTIVE LIMITED

Moderator: Ladies and gentlemen, good day and welcome to ASK Automotive Q3 & 9M FY25 post conference call hosted by Adfactor PR.

As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*" then "0" on your touchtone

phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Snighter. Thank you and over to you, sir.
Snighter Albuquerque: Thanks, Sejal. A very good evening to everyone, and welcome to the Q3 & 9M FY25 earnings call of ASK Automotive Limited.
From the Senior Management, we have with us Mr. Kuldip Singh Rathee – Chairman & Managing Director; Mr. Prashant Rathee – Whole-Time Director; Mr. Aman Rathee – Whole-Time Director; and Mr. Naresh Kumar – Chief Financial Officer.
Before we begin the Earnings Call, I would like to mention that some of the statements made during today's call will be forward-looking in nature and hence may involve risks and uncertainties, including those related to the future financials and operating performance of the company. Please bear with us if there is a call drop during the course of the conference call. We would ensure the call is reconnected at the earliest.
I would now like to hand over the call to Mr. Kuldip Singh Rathee for his “Opening Remarks”. Thank you and over to you, sir.
Kuldip Singh Rathee: Thank you. Good evening, ladies and gentlemen.
It gives me an immense pleasure to welcome you all for our Q3 & 9M FY25 Earnings Conference Call.
Before I proceed, I hope you all have had the chance to go through the detailed presentation submitted to the Exchanges and uploaded on our Website. I am elated to be with you today evening to update you on our business performance for the third quarter and nine months ended December 31st, 2024. I would like to begin by giving some insights on the industry update, followed by details of our business performance.
As per SIAM report, the automobile sector in terms of vehicle production across all segments grew at around 6.4% in Q3 FY25 against the same period last year. Amongst all segments, two-wheeler posted production growth of 8% in Q3 FY25 and 13.1% in 9M FY25 on YoY basis.
The two-wheeler industry registered robust vehicle production volume of 5.9 million in Q3 FY25 against 5.5 million in the same period last year. The two-wheeler production in 9M FY25 was at 18 million against 15.9 million in the same period last year.

India's stable policy ecosystem in 2024. Building on the foundation of previous years has significantly supported the automotive industry growth. As 2025 begins with the optimism generated by the Bharat Mobility Global Expo, this positive momentum is expected to further accelerate the sector's progress in the coming year.
I am now moving on to ASK Business Performance:
I am delighted to share with you that we had a strong finish to the Q3 & 9M FY25 in both revenue and profitability. This is the fifth consecutive quarter of robust performance by us since listing of the company last year. During Q3 FY25, we delivered strong performance in business and recorded significant growth of 21% in revenue, 41% in EBITDA, and 32% in PAT on a year-on-year basis.
We have also continued to outperform the two-wheeler industry vehicle production growth in Q3 FY25. Further, I am glad that we have delivered the highest ever EBITDA margin of 12.5% in Q3 FY25, which is 180 basis points higher than Q3 FY24.
As a result, of strong performance in Q3 FY25, our revenue has grown by 24%, EBITDA by 50%, and PAT by 51% in 9M FY25 on a year-on-year basis. Our EBITDA margins stood at 12.2% in 9M FY25 with an improvement of 205 basis points

on year-on-year basis. These strong
results reflect the result of our continued focus on expanding value-added businesses, improving utilization of production capacities and bringing cost efficiency. Our aim is to sustain this level of EBITDA margins and improve gradually in the subsequent quarters depending upon the growth of the two-wheeler industry.
With strong performance on profitability, our earning per share in 9M FY25 has increased to Rs. 9.64 per share against Rs. 6.39 per share in the same period last year.
Let me now go into further details of our performance on both revenue and margin side:
We have delivered robust performance in Q3 FY25 and recorded consolidated total income of Rs. 919 crore, which is 21% higher on year-on-year basis. As a result, the consolidated total income for 9M FY25 stood at Rs. 2,760 crore, posting a 25% year-on-year growth. All the three product segments continue to perform well and deliver robust revenue growth in Q3 FY25. We have sustained a market leadership position in the advanced braking systems business with 14% year-on-year growth.
The aluminum lightweighting precision solutions have a largest business segment with 43% share of revenue, let the growth momentum and delivered 25% year-on-year. And safety control cables also grew by 10% on year-on-year basis.
We have recorded strong growth in our margins and profitability. Our Q3 FY25 EBITDA stood

at Rs. 115 crore, recording 41% year-on-year growth and 9M FY25 at Rs. 337 crore, posting

50% year-on-year growth. We have delivered PAT of Rs. 66 crore with 32% YoY growth in Q3 FY25 and Rs. 190 crore in 9M Fy25 with 51% growth on year-on-year basis. If we exclude onetime deferred tax gain of Rs. 7.15 crore in Q3 FY24, adjusted year-on-year PAT growth is 54% in Q3 FY25 and 60% in 9M FY25.
I am glad to inform you that in 9M FY25; we have achieved an EBITDA of Rs. 337 crore versus last full year EBITDA of Rs. 311 crore in FY24. Similarly, in 9M FY25, we have achieved PAT of Rs. 190 crore against the last full year PAT of Rs. 174 crore in FY24.
Now, let me talk briefly about status of expansion plans of our production capacity:
1. Our mega manufacturing facility at Karoli is expanding fast. The increased economies of scale and operational efficiency are benefiting us in delivering better results.
2. Our 18th manufacturing facility at Bengaluru, incidentally that is our third plant in southern India, in Bengaluru. It has commercialized on 14th January 2025.
3. Solar power plant of 9.9 megawatt in Sirsa, Haryana for captive consumption started trial production on 27th January 2025 and will start supply of power soon.
Further, out of the union budget allocation of Rs. 11,10,000 crore for FY25 for infrastructure, the major portion is still unspent. Regarding the remaining portion of the budget allocation, we expect the government to spend in Q4 in a big way. Thus, the money shall percolate to the lowest level, including rural areas. This shall give a further boost to the sale of two-wheelers in the country.
As we go forward, we are hopeful of maintaining trend of outperforming industry growth in the subsequent quarter of FY25. We anticipate the growth momentum in two-wheeler sector to continue for the remaining part of the year with prevailing positive market sentiments. Lastly, we are confident that we would continue to deliver strong performance in coming quarters and generate value for our stakeholders.
With this, I open the floor for question and answer. Thank you very much.
Moderator: Thank you very much. We will now begin the question and answer session. The first question is from the line of Sanjeev Agrawal from Avighna Investments. Please go ahead.
Sanjeev Agarwal: Good evening, everyone. Am I audible? Please confirm.
Moderator: Yes, sir.
Sanjeev Agarwal: So, first of all, thank you for this opportunity. And I would also congra

tulate the team for
achieving such a high EBITDA margin, which is definitely a one-triggering factor for us as investors. So, I would like to know if you can help us with the EBITDA margins on the three to

four product lines that we are having in our organization, be it advanced braking systems vis-à-vis aluminum lightweighting, these are the two main and the other three as well?
Kuldip Singh Rathee: Well, Sanjeev, all our EBITDA margins in all the three verticals are very close to each other. They are similar. So, the good part is, as you said, that we could achieve the highest EBITDA margins by better capacity utilization because in the last two years, we invested very heavily. We invested Rs. 475 crore in the Karoli plant till date and we are continuously investing up to Rs. 200 crore in the 18th manufacturing facility in Bangalore.
Sanjeev Agarwal: Thank you. So, the second question is can you please explain us the percentage between the EV versus non-EV that we are selling right now?
Kuldip Singh Rathee: See our percentage is similar because we are supplying to 80% of the OEMs in the EV sector. So, the EV percentage at the moment is only 5% of the total vehicle production in two-wheelers and our share of business is also that.
Sanjeev Agarwal: Thank you, sir. That's all from me.
Moderator: Thank you. The next question is from the line of Joseph George from IIFL Securities. Please go ahead.
Joseph George: Thank you for the opportunity, and congratulations on good numbers. Just two questions. One is, the JV with AISIN Group, you mentioned that you are going to launch the products in April 2025. Wanted to understand how should we think about the scale of operations in year one in terms of revenue or profitability?
Kuldip Singh Rathee: Well, Mr. Joseph, there was a very good response. We had an exhibition in the Bharat Mobility Expo and there was an extremely positive response from the dealers all over the country. We are in the process of appointing dealers all over the country and we hope to launch the operations in Q1 FY26 as we had always told before.
Joseph George: Any sense on how big the scale of operations would be in year one?

Kuldip Singh Rathee: No, I think year one is always a start. As we progress in the quarters, maybe we will give you some feedback after H1 FY26.
Joseph George: Sure, sir, no problem. The second point I want to touch upon was the subsidy that is expected for the Rajasthan plant. I think earlier you had mentioned that it will start flowing in from the end of FY25. Is that the status even now and nothing has flowed in 3Q?
Kuldip Singh Rathee: No, it has flowed in, and we could achieve all the conditions and we have applied for the subsidy and it started from June season.

Joseph George: So, some of that subsidy has already started accruing in Q3 itself?
Kuldip Singh Rathee: Yes, it is about Rs. 6.65 crore subsidy from the Karoli plant in the Q3.
Joseph George: Understood.
Kuldip Singh Rathee: Now onwards, a similar figure of around Rs. 7 crore will continue in the forthcoming quarters also.
Joseph George: Understood sir. Thank you.
Moderator: Thank you. The next question is from the line of Hitesh from HDFC Securities Institutional Equities. Please go ahead.
Hitesh: Hi sir. My question is, how do you see the two-wheeler demand shaping up over the coming months? And is there any concern of higher inventory-led production cuts by two-wheeler players because the export market pickup for two-wheelers is also gradual. How do you see the production schedules of our two-wheeler customers shaping up?
Kuldip Singh Rathee: Oh, I see, I feel that the coming quarter, this Q4 is very much sorted. And I am an optimist on the two-wheelers very much. And I feel, as I mentioned in my presentation, that once this infrastructure spend

ing is done, a lot of money is going to flow down the line and they are the real customers of two-wheelers, and I feel positive even of the next Financial Year.
Hitesh: And one more question on how do you compare the difference in the content per vehicle of the ICE two-wheeler and electric two-wheeler for our components?
Kuldip Singh Rathee: The EV component because we are into very critical lightweighting and thermal management products. In EV, the component is higher, it's 30% to 50% higher in EV. So, since we are agnostic, ICE agnostic and EV agnostic, so once EV actually picks up, then I think our revenues will further grow.
Hitesh: Thank you.
Moderator: Thank you. The next question is from the line of Ronak Mehta from JM Financial. Please go ahead.
Ronak Mehta: Hi, sir. Thank you for the opportunity, and congratulations on good set of numbers. So, I have a couple of questions. First is on the Karoli plant. Can you help us with the utilization level of the plant, and how do you plan to ramp it up further over the coming quarters?
Kuldip Singh Rathee: See, the good part is, Ronak, that we have invested. We keep on investing, and as you know, present status is Rs. 470 crore. So, the utilization percentage is similar, between 45% and 50%. But now the capacities are further ahead, and we expect that the coming years growth shall be

very much taken care of from there, you know, as well as the plant, new plant in the south in Bangalore, which is a variety plant.
Ronak Mehta: Okay, so is it fair to assume that the asset turn for the plant, even on the new investment will be about 2x to 2.5x?
Kuldip Singh Rathee: It's not 2.5x. We operate in 2x. Always we operate in 2x, and we definitely intend to achieve that with our lead manufacturing. We always aim for that.
Ronak Mehta: Alright. The second question is on the new Bengaluru plant. So, have you started supplying alloy wheels? Can you just indicate who all are the customers? How do you plan to ramp it up? Any new order wins with respect to alloy wheels?
Kuldip Singh Rathee: The commercial production has started. Some items of the existing product lines which we had already supplying, they have started billing. But the new product lines are getting the QAV done. You remember in Karoli also it had taken some time, one quarter at least we had taken so that QAV is going on. I expect that all QAV to finish by March in this quarter, next two months. And from the next financial year, it should come on a good stream level.
Ronak Mehta: Okay, and any new order wins on the alloy wheel business because you indicated last time that you were in negotiation with customers and customers were doing trial runs. So, any update on that?
Kuldip Singh Rathee: I definitely said because it is a safety item, the testing go on quite long. We are into the business of safety and we have enough patience and that takes little time. But we hope that some news

should come by end of Q1 or sometime in Q2.
Ronak Mehta: Alright, okay. Thank you so much.
Moderator: Thank you. The next question is from the line of Basudeb Banerjee from CLSA. Please go ahead.
Sorry to interrupt Mr. Basudeb, I would request you to please use your handset.
Basudeb Banerjee: Yes, am I audible?
Moderator: Yes, sir, please continue.
Basudeb Banerjee: Yes, a couple of questions. One, Honda announced their new EVs. So, what kind of orders we are getting from Honda for coming months, coming quarters and such?
Kuldip Singh Rathee: Mr. Basu, their plans are not very aggressive. The whole year plan for next year, they have taken only around 18,000. That's all, yearly plan. One more model is also coming. They'll launch it in, I think, around Q2.
Basudeb Banerjee: So, you mean 1,500 per month from these two models. That's what they're aiming at?

Kuldip Singh Rathee

: The first model, second model will give the different projections. When they give it, we will let you know.
Basudeb Banerjee: Sure. And the second sir, now as overall European situation is not that great and your export outlook also corrected. So, any new major orders or some progress you are making in geographies from scratch, scope for expanding your exports outlook. If you recall, we are aiming at Rs. 300 crore exports revenue for FY27. So, these challenging times definitely are acting as a hurdle. So, how one should look at it?
Kuldip Singh Rathee: You are right, Mr. Basu. The things are not very rosy in the European sector. In spite of such good results, we would like to tell the investors that our exports may not grow this particular year because the customers, very prominent customers, they are first consuming the vast inventories in the pipeline. However, not to be getting totally disappointed, our Q4 is trying to be getting better than the Q3 and Q2 in exports. So, maybe once they correct the inventories, then better orders start. Second thing is we had also mentioned for the next year that we have got an export order of Rs. 100 crore for Ford Motor, but that is under testing. We have already given the samples and once the approvals come, and then that will start hopefully in the beginning of the next financial year.
Basudeb Banerjee: So, I saw a press release regarding aftermarket plans with the tie-up with AISIN where it was mentioned. So, any specific strategy, timeline, revenue potential you were aiming at?
Kuldip Singh Rathee: So, as I just told Mr. Basu that there was a very huge response in our exhibition in the expo in January, and we are in the process of making further dealers all over the country and we will be launching in the Q1 as was initially decided. And the only thing we are trying to do is breakeven in the first year and if we do that, I think that should be a good achievement.
Basudeb Banerjee: Last thing sir, if I missed it out. Basically for a South Indian two-wheeler OEM, trials were running for your new alloy wheel. So, is it completely done and commercial production has started or still the results are yet to be there?
Kuldip Singh Rathee: Mr. Basu, since it is a safety item, the trials go on in various terrains and they are time consuming. So, I think we hope to receive the results by Q1 end or maybe early Q2 and then only the supply will start.
Basudeb Banerjee: And as you said in one question in the call earlier that you have already commenced production, so?
Kuldip Singh Rathee: That plant is the complete ALPS plant. So, it is not confined to the alloy wheel. We can make anything and for any customer there. So, the machines are like that and there's a fungible line. And we are making various other products as a start. And then because we have gone to the South, now we are getting some new orders also from various customers in the South, because

we have reached. Initially, we had exhausted our complete capacities in South, but now the customers have reposed confidence that we have come near to them.
Moderator: Ladies and gentlemen, we have lost the connection of the current participant. The next question is from the line of Kuber Chauhan from Anand Rathi. Please go ahead.
Kuber Chauhan: Thank you for taking my question and congratulations on good set of numbers. Most of my questions have been answered, but I want to know about you mix, how much the contribution was from EV and how much was it from ICE for this particular quarter?
Kuldip Singh Rathee: So, the ICE contribution is 76% in our business and the EV contribution is about 5%.
Kuber Chauhan: And have we seen the trend moving on this or we saw a dip in this particular quarter?
Kuldip Singh Rathee: It is moving as per the plan, as per the production of the people. Yes, one of the largest manufacturers, its production

levels went little down. Otherwise, we are expecting even better
performance in the EV.
Kuber Chauhan: Okay. Thank you.
Moderator: Thank you. The next question is from the line of Naveen Kumar Dubey from Narnolia Financial
Services Limited. Please go ahead.
Naveen Kumar Dubey: Thank you for the opportunity and congratulations on a very strong set of numbers, sir. I have a couple of questions. The first one is related to your aluminum lighting product segment. So, I
want to understand what kind of potential market size this segment could have?
Kuldip Singh Rathee: We have always said Mr. Naveen that the continuous focus in the motor vehicles industry, whether it is passenger car, whether it is two wheelers, that is on lightweighting. So, I think the
best material for lightweighting is aluminum. So, we call it our sunrise sector. And we see huge
potential in the sunrise sector domestically as well as in exports. And second thing is the more
and more electronics coming in all the vehicles. So, in electronics, the aluminum being the very
good conductor and it's the best material for thermal dissipation and there also it fits very well.
So, because of these two qualities, we see very huge growth in this. And as you must be noticing
that in nine months, we have grown 25% in this sector.
Naveen Kumar Dubey: Yes sir. Related to same, I think earlier it was more of import substitute product. So, any figure or any data related to that is what could be that import percentage, that aluminum product is
imported in India. Any ballpark figure?
Kuldip Singh Rathee: No. Aluminium is not getting imported. In fact, there are so many manufacturers for the last 30 years who are manufacturing here in nearby to our plants and they are approved by the OEMs

like Maruti Suzuki, Hero and Honda and we have to buy from them. So, this is never, yes they
do import the scrap. So, that data, neither we have nor we feel the need to have.
Naveen Kumar Dubey: Okay sir. Couple of questions related to, sir, any customer addition in the recent past, in the last one, two months, is there any new customer getting added in your portfolio?
Kuldip Singh Rathee: One customer added for export, but that's, we got the orders, but the supplies, as per schedule, have to start in the Q3 of next financial year.
Naveen Kumar Dubey: Okay, Q3 of next financial year, okay. Because we had kind of Rs. 75 crore of order book for export, I think, earlier we had some.
Kuldip Singh Rathee: Yes, we are still maintaining that we have that. That is already there, so that we are not mentioned.
Naveen Kumar Dubey: Thank you, sir. If I have more question, I will come back to the queue. Thank you.
Moderator: Thank you. The next question is from the line of Pradyumna Choudhary from JM Financial
Family Office. Please go ahead.
Pradyumna Choudhary: Yes, hi sir. Congratulations on a good set of numbers. My first question was on the aluminum lightweighting solutions vertical. So, I just wanted to get a better sense of what growth triggers
are. One would be related to the lightweighting happening on the EV side, but are we witnessing
more and more aluminum being used even on the ICE vehicles? Like if you can just explain the
growth triggers here.
Kuldip Singh Rathee: Yes, even in the new vehicles they are trying to make it lighter. So, more and more aluminum is getting used.
Prashant Rathee: And also, the use of electronics is also increasing. So, a lot of ECUs are all using aluminum as
the preferred material.
Pradyumna Choudhary: And sir, like just for a better understanding, would it be possible for you to quantify how much aluminum content has increased in new ICE vehicles versus older vehicles and how much would
be the increase in case of EVs?
Prashant Rathee: It is very difficult at the moment and what we do is we keep on adding new products with our existing customers. So

, we are increasing our content and that's our continuous endeavor to
increase our business even with our existing customers.
Pradyumna Choudhary: Okay and who are we taking away the market share from when we are adding new products?
Kuldip Singh Rathee: We don't inquire from the customer. If the customer is in some requirement, then we do supply. That's what we do.

Pradyumna Choudhary: Okay. And so on the aluminum lightweighting side, your sense is over the next 2 to 3 years, we can continue growing that 25%-30% kind of number?
Kuldip Singh Rathee: We have a good growth, as I said, for the last 30 years we have outgrown the industry and we have grown in big teens. That's a record of not one day, but 30 years. And this year also, luckily,
we are doing that. So, I always say that we will keep on growing in big teens.
Pradyumna Choudhary: Alright. Lastly, if you can just quantify the revenue from non-two wheeler segments like

passenger vehicle and what is the percentage of revenue? I know it would be very small. Just wanted to get some sense of passenger vehicles and function?

Kuldip Singh Rathee: It's actually very small. We just do 4% of the export which is in that two-wheeler is not there and maybe 3% miscellaneous, 7% to 8% that is all.

Pradyumna Choudhary: Okay. Thank you and all the best.

Pradyumna Choudhary: Thank you. So, just another question, sir. So, apart from aluminum lightweight for the other two verticals, advanced braking system and safety control cable, we expect to grow in line largely with industry or even there, there are additional growth triggers?

Kuldip Singh Rathee: So, advanced brakes, we have always said that we are number one in the country with a majority share of business for the last 20 years. So, we have to grow almost in the line of the industry except sometimes aftermarket grows in double digits. So, that's in our hands, but otherwise we grow with the growth of the industry. And regarding the other two verticals, there is definitely a very good scope.

Pradyumna Choudhary: Okay. Thank you.

Moderator: Thank you. The next follow-up question is from the line of Naveen Kumar Dubey from Narnolia Financial Services Limited. Please go ahead.

Naveen Kumar Dubey: Sir, what could be the CAPEX for future, maybe next 2 to 4 years if you can help with that?

Kuldip Singh Rathee: No, Mr. Naveen, now the CAPEX that we have, as I said, we have invested Rs. 600 crore and this will see us through for the next 18 months. However, whenever a new opportunity comes, we don't feel stingy on not putting the excess CAPEX. Whenever we see the opportunity, we grab and we don't find doing more CAPEX because whatever strong cash we are generating, we always put it back in our new expansion and that's how we keep on growing.

Naveen Kumar Dubey: Okay, so maybe some Rs. 150 crore to Rs. 200 crore of CAPEX?

Kuldip Singh Rathee: I can't say, the new opportunities keep on coming. So, we don't shy away from investing. But the only thing is we are very, very judicious in investing. And I am happy to share that last year

we closed at a debt equity of 0.42. And in spite of such a heavy investment, we will be most likely closing at a debt equity of 0.38. Further next year our target is 0.3.

Naveen Kumar Dubey: That's great sir.

Kuldip Singh Rathee: We are very cautious in spending, but when the need and the opportunity arises, we just don't hesitate. We immediately spend it.

Naveen Kumar Dubey: Okay. Sir, one more question related to the Bangalore plant, which is just started. I think what kind of cost increases can we see over the next two, three quarters because it will be in the initial phase?

Kuldip Singh Rathee: Well, we have plans to breakeven in the Q4 of next year. I think that will be pretty fast if we are able to manage that. And we are confident that w

e should do that.

Naveen Kumar Dubey: That's it from my side. Thank you, thank you so much.

Moderator: Thank you. Ladies and gentlemen, we will take this as the last question. I would now like to hand the conference over to Mr. Kuldip Singh Rathee from ASK Automotive Limited for closing comments.

Kuldip Singh Rathee: Thank you very much everyone. It has been a pleasure talking to you and let me assure you that we remain optimist, we remain confident that we will be performing and adding value to our stakeholders. Thank you very much for your patience and see you and talk to you in the next quarter. Thank you.

Moderator: On behalf of ASK Automotive Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Call: May 2025

Sub: Transcript of Investors/analysts Call – Q4 FY 2024-25 Audited Financial Results

Dear Sir/Madam,

Pursuant to the requirement of Regulation 30 read with Part A of Schedule III of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed herewith Transcript of Investors/analysts Call organized on May 14, 2025 post declaration of Audited Financial Results of the Company (Standalone & Consolidated) for the quarter and financial year ended March 31, 2025.

The same shall be available on our website i.e. www.askbrake.com .

Kindly take the above information on your record.

Thanking you.

"ASK Automotive Q4 & FY25 Post Results Earnings
Conference Call"

May 14, 2025

MANAGEMENT : MR. KULDIP SINGH RATHEE – CHAIRMAN AND
MANAGING DIRECTOR , ASK AUTOMOTIVE LIMITED
MR. AMAN RATHEE – WHOLE-TIME DIRECTOR, ASK
AUTOMOTIVE LIMITED
MR. NARESH KUMAR SHARMA – CHIEF FINANCIAL
OFFICER, ASK AUTOMOTIVE LIMITED

Moderator: Ladies and gentlemen, good day and welcome to the ASK Automotive Q4 & FY25 Post-Results

Earnings Call, hosted by Adfactors PR.
As a reminder, all participant lines will be in the listen-only mode. And there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*", then "0" on your touch tone phone. Please note that this conference is being recorded.
I now in the conference over to Mr. Rushabh Shah. Thank you and over to you, sir.
Rushabh Shah: Thank you. A very good evening to everyone, and a warm welcome to the Q4 & FY25 earnings call of ASK Automotive Limited.
From the Senior Management we have with us Mr. Kuldip Singh Rathee – Chairman and Managing Director; Mr. Aman Rathee – Whole-Time Director; and Mr. Naresh Kumar Sharma – Chief Financial Officer.
Before we begin the Earnings Call, I would like to mention that some of the statements made during today's call may be forward-looking in nature and hence it may involve risks and uncertainties, including those related to future financials and operating performance of the company. Please bear with us if there are any call drops during the course of the conference call. We would ensure that the call is reconnected at the earliest.
I would now like to hand over the call to Mr. Kuldip Singh Rathee, Chairman and Managing Director, for his opening remarks. Thank you and over to you, sir.
Kuldip Singh Rathee: Good evening, ladies and gentlemen. It is my great pleasure to welcome you all to our Q4 and FY25 earnings conference call. I hope you have had the opportunity to review the detailed presentation submitted to the exchanges and available on our website.
As we all are aware, the global economy is facing headwinds which have caused uncertainty across the world, especially in the emerging economies. However, the Indian economy remains resilient based on its sound economic growth and strong fundamentals. Adding to this positive outlook, the Indian Meteorological Department's forecast of an above average normal monsoon brings renewed optimism, especially for the rural economy. This is particularly encouraging for the Two-Wheeler industry.
Now, let me begin by sharing a quick overview of the broader industry as reported by SIAM:
The Indian automobile sector witnessed healthy momentum in FY25 with overall vehicle production across all segments registering a robust year-on-year growth of 9.1%. The Two-Wheeler segment in particular stood out with the production growth of 11.3% on the year-on-year basis. This recovery is because of the rising rural demand and a notable resurgence in consumer confidence. And as a result, Two-Wheeler domestic sales grew by 9.1% year-on-year.

This segment was supported by better connectivity in rural and semi-urban areas along with the launch of new models, offering enhanced features and greater value.
The Two-Wheeler industry closed FY25 with a strong production volume of 23.9 million units, up from 21.15 million units in FY24. In Q4 alone, production touched 5.8 million units as compared to 5.5 million in the same quarter last year.
On the exports front, the Two-Wheeler segment delivered an impressive performance with a 21.4% increase year-on-year, reaching 4.2 billion units. This was driven by the introduction of new models and successful penetration into new international markets.
Turning to electric vehicles, a key focus area for our industry:
Total EV registrations in the country reached 1.97 million units in FY25, making a 16.9% growth year-on-year. However, it still has its share of business of less than 5% of the total Two-Wheeler industry. Our share of business is growing as per the growth of the EV industry. Looking ahead, we believe

that industry stands to gain further from supportive macroeconomic policies.
The recent reforms in personal income tax announced in the Union Budget 2025-2026, combined with two successive rate cuts by the Reserve Bank of India, are likely to enhance consumer purchasing power and improve access to vehicle financing, creating a conducive environment for sustained demand. The good monsoon forecast will ensure rise in income in the agriculture sector and will be beneficial for the Two-Wheeler sector. With this positive backdrop, we remain optimistic about the growth trajectory of the sector in the coming quarters.
Before we move on to ASK's business performance, I would like to highlight an important development from this year:
CRISIL Ratings upgraded our long term credit rating from "AA-" to "AA", while reaffirming our short term rating at CRISIL "A1+". This upgrade reflects the company has improved capital structure, better financial flexibility and strong volume growth.
Moving on to the business updates:
I am delighted to share with you that we had a strong finish to the fourth quarter and full year in both revenue and profitability. This marks our sixth consecutive quarter of robust performance

since the company's listing last year.
During Q4 FY25, we delivered a growth of 8.5% in revenue, 24.7% in EBITDA and 20.6% in PAT on year-on-year basis. We continued to outperform the Two-Wheeler industry in terms of vehicle production growth during Q4 FY25. Additionally, we delivered an EBITDA margin of 12.5% in Q4 FY25, representing an improvement of 162 basis points over Q4 FY24.
As a result of strong performance in Q4 FY25, we have surpassed our FY25 EBITDA margin guidance by achieving a full year EBITDA margin of 12.3%. Our revenue has grown by 20.2%,

EBITDA by 42.7% and PAT by 42.5% in FY25 on year-on-year basis. Our EBITDA margins for the year stood at 12.3% in FY25 with an improvement of 193 basis points on year-on-year basis.
Our aim is not only to sustain this level of EBITDA margins, but to improve gradually in the subsequent quarters, depending upon the growth of the Two-Wheeler industry in FY26. This strong performance on profitability, our earnings per share in FY25 has increased to Rs. 12.6 per share against Rs. 8.8 per share in the same period last year.
Our all three product segments performed well in FY25 in terms of revenue growth. We have sustained our market leadership position in the Advanced Braking system. Our Advanced Braking system revenue grew by 9% in Q4 and 16% in FY25 on year-on-year basis. The Aluminum Lightweighting Precision Solutions revenue grew by 21% in Q4 and 28% in FY25 on a year-on-year basis. The Safety Control Cable revenue also recorded growth of 1% in Q4 and 14% in FY25 on year-on-year basis.
As mentioned in DRHP, our Wheel Assembly business has very low margin and we were requesting the customer for the last two years to shift this business to someone else. Now the customer has shifted 60% business from Q4 FY25. In FY26 it will impact our revenues by approximately Rs. 300 crore. However, our EBITDA margins will improve by 80 basis points on account of this.
In the dynamic and unstable global geopolitical environment, our revenue from exports remained the same at Rs. 147 crore against Rs. 174 crore last year also. As expressed in the previous interactions, I am delighted to share that we have achieved double digit margins at 12.5% in Q4 and 12.3% in FY25 compared to 10.3% in last year. Improvement in margins during FY25 were mainly driven by better economies of scale, improved volumes, better product mix to the customers and continued focus on cost optimization.
We have delivered strong returns in FY25 with ROACE at 27.7% and ROAE at 26.5%. We have also improved our debt profile with debt to equity reducing to 0.38x against 0.42x last year. Our average debt to EBITDA is

at 0.83x in FY25. The Board has recommended a dividend of 75%,
i.e. Rs. 1.5 per equity share on the face value of Rs. 2 each.
I would now like to give you updates that our Bangalore facility started commercial production on 14th January 2025, and ramping up fast. This will be our eighth manufacturing facility and the third one in South India. Our largest manufacturing facility at Karoli, Rajasthan, with an investment of Rs. 4.9 billion as on 31st March, 2025, is ramping up fast to deliver future growth.
Some more key new initiatives to be highlighted are, we signed Technical Collaboration Agreement with LIOHO, Taiwan, to manufacture Two-Wheeler HPDC alloy wheels in February’24. The capacity is already built up and the product is under testing.

We entered into a strategic partnership with Kyushu Yanagawa Seiki Co. Ltd., Japan, in March’25 for high pressure die casted alloy wheels for Two-Wheelers. We also signed a joint venture agreement with AISIN Group, Japan, a top 10 global Tier 1 auto component supplier to market and sell passenger car products in independent after market in April'24.
Product range unveiled at Bharat Mobility Global Expo 2025, the products have been launched in market in April 2025. Largest manufacturing plant at Karoli, Rajasthan, with investment of Rs. 4.9 billion up to 31st March 2025, is ramping up fast to deliver future growth. Bangalore facilities started commercial production 14th January 2025 and ramping up fast. These initiatives underscore ASK Automotive's commitment to innovation, sustainability and market leadership.
Thank you very much for your patient hearing. With this we leave the floor open for question-and-answers. Thank you.
Moderator: Thank you, sir. Ladies and gentlemen, we will now begin with the question-and-answer session.
The first question comes from the line of Mahesh Atal from Atal Investment Advisors. Please

go ahead.
Mahesh Atal: Sir, my question to you is, now the tie-ups that we have done with die casted wheels with Yanagawa, can you give some color on its potential? And what is the market for this particular die cast wheels in India? When I speak about the market, how much penetration could we have in this market with Yanagawa's strategic partnership, if you can elaborate a bit?
Kuldip Singh Rathee: See, Yanagawa is a Japanese company and already is supplying to the Japanese OEM suppliers with this technology. We have made this tie up to supply to some Japanese manufactures. The potential of it is of the scooter alloy wheels, which is around Rs. 2,000 crore market overall. Already the alloy wheels are being supplied with gravity die casting. So depending on how the results are of it we will get to know the potential of it.
Mahesh Atal: Currently the market that we have, it is getting imported or is it being manufactured in India, this Rs. 2,000 crore material that you talked about?
Kuldip Singh Rathee: It is being manufactured in India only but with other technology which is gravity die casting.
Mahesh Atal: So will it be right to say that all the Japanese manufacturers will automatically become your potential clients?
Kuldip Singh Rathee: It is not necessary, it depends on the project. This project is coming at a fast pace, and in this year itself the project will get completed and the product will come out, and you will be able to see its results next year.
Mahesh Atal: And sir for this AISIN Group, you have written that you have already launched the products of it in April. So, I wanted to know that these products which have been launched, in numbers what could be the aftermarket potential of these products?

Kuldip Singh Rathee: We have just launched these products, on 30th April. We have made 40 dealers in the country, so slowly and steadily it will grow. It is not like we can give you the numbers o

n the first day
itself.
Mahesh Atal: What would be the market size of this entire product profile of AISIN Group?.
Kuldip Singh Rathee: The market size will be the whole aftermarket size which is there. And within that too there are some identified products, and this is a trading venture, it is not a manufacturing venture, you should appreciate that.
Mahesh Atal: Alright, alright. Thank you so much.
Moderator: Thank you. The next question comes from the line of Ronak Mehta from ICICI Securities. Please go ahead.
Ronak Mehta: Yeah. Hi. Thanks for your opportunity. Congratulations on good set of numbers. I have two questions. First is, can you highlight some of the new order wins that will drive your continued outperformance for the next year? Because I believe alloy wheel businesses products are still under testing, so apart from the alloy wheel business what are the new orders if you can highlight? That will be the first question.
Kuldip Singh Rathee: See, we have the orders, I can only assure you that we will be growing in the mid-teens and we will outperform the market, outperform the industry again in this financial year because we have the confirmed orders to that extent. However, we also expect that the alloy wheels with high pressure die casting that we made with the Taiwan technology is under an advanced stage of testing. And we hope to get the clearances by June or July end. And we are confident of starting the supplies in the H2 of this financial.
Ronak Mehta: Okay. So is it fair to believe that the second half will see alloy wheels about Rs. 100 crore revenue from alloy wheel will be outlook for this year?
Kuldip Singh Rathee: Let the things stabilize like, I cannot quantify the numbers like that. But yes, as I have told you, we will again outperform the industry as is our track record.
Ronak Mehta: All right. The second question is on the EV business. So, as EVs become more prevalent, what role do you foresee ASK Automotive playing in the supply chain? Would you restrict yourselves to just aluminum casting which is an agnostic component? Are you are open to a bigger role in EV ecosystem with EV specific components? Slightly a longer term question.
Kuldip Singh Rathee: Overall, we are playing a bigger role. We are already supplying to 80% of the organized EV market for the last two years. But as you know, the EV market still is less than 5% of the total Two-Wheeler market. So, we are growing as the EV market is growing. However, our content per vehicle is higher because of the aluminium lightweighting components in the EV segment. So, if it grows faster we will also gain out of it.

Ronak Mehta: No, sir. Sir, actually my question was with respect to new products, specifically for EV. Are you also looking at adding new products specifically for EVs apart from the aluminum casting related products? Or you will restrict yourself to aluminum casting?
Kuldip Singh Rathee: We have the three verticals at the moment, so we will remain in the three verticals.
Ronak Mehta: Alright. Okay. Sure. Thank you.
Moderator: Thank you. The next question comes from the line of Naveen Dubey from Narnolia Financial Services. Please go ahead.
Naveen Dubey: Thanks for the opportunity, sir. And congratulations on a very good set of numbers. My question is firstly related to the Two-Wheeler industry. So, recently Hero is saying that the Two-Wheeler industry is expected to grow around 6% to 8% in FY26 in the domestic market, and how do we see export markets to pan out? Any thoughts on export markets also?
Kuldip Singh Rathee: Well, as far as the Two-Wheeler industry is concerned, we are also very hopeful that it will grow about 6% to 8%, what Hero has said. And we are confident because of the various reasons, just like I mentioned, good monsoon, interest rate cut, and the tax benefits that the government gave in the Budget. So that

kind of growth we will see of the Two-Wheeler, number one. And number two, exports, I think the geopolitical situation is quite dicey at the moment because of the tariffs and the various wars. But I am an optimist and I hope the clouds will clear very soon and we expect a very good growth in this year. Though last year we could remain stagnant, but this year we are still hopeful of a very good growth in the exports.
Naveen Dubey: Okay. The second question is related to the agreement which we have done with to Kyushu Yanagawa, Japan. Sir, is this product related to ICE or specifically to EV products?
Kuldip Singh Rathee: This can go in both the vehicles, ICE as well as EV.
Naveen Dubey: Okay, okay. And we have done two technical agreements in last two years, so any other agreement in pipeline or any other product adjacencies are we looking at?
Kuldip Singh Rathee: We keep on looking for good technical opportunities. As you have seen that we like to have the first-mover advantage, so we are talking to different people. And once something materializes, the whole market will know through the stock exchange.
Naveen Dubey: Great to hear on that front, sir. A couple of questions related, one is, we have seen a sharp improvement in gross margin. So I think that is related to that wheel assembly business or any other thing in that?
Kuldip Singh Rathee: The wheel assembly business has gone from March only. So there's not much to be seen in the last Financial Year25. However, in the Financial Year26, as I just said, the revenue will drop by Rs. 300 crore. However, the margins will grow because of the wheel assembly by 80 basis points.

Naveen Dubey: Okay. Thank you, sir. That's it from my side.
Moderator: Thank you. The next question comes from the line of Abinash S. from NAFA AMC. Please go ahead.
Abinash Swamenathan: Hi, sir. Congrats on a good set of numbers. So when I went through your PPT, you have mentioned that you already had a technical collaboration with LIOHO to manufacture HPDC, and in March'25 we have signed new technical collaboration with another manufacturer. So, what is the reason for signing up with a new person? Is it a different technology or a different grade of technology for the same HPDC? Or is there any delays in new technical arrangement? That's question number one.
Question number two is, you have said that the capacity utilization is improving in the Karoli plant, so at what is the current utilization rate? And when can we achieve full utilization? And at full utilization what would be our peak revenue, because that being the largest plant, could we provide some insights that would great? Thank you.
Kuldip Singh Rathee: Yes, regarding the two collaborations, we have the first-mover advantage with that technology and we want to be the best in the class. That has been the philosophy of the company. So we will imbibe both the technologies. And the Japanese player will be feeding the Japanese Customer more, and the Taiwanese player will be feeding the rest of the market, that has been the philosophy behind it, number one.
And the second question, Karoli we have already invested Rs. 490 crore, as I mentioned, till March end. The investments are still carrying on because we have a huge potential in the growth in Karoli, so another approximately Rs. 200 crore we will be spending this year also further. And the peak potential of the Karoli plant will be around Rs. 1,100 crore to Rs. 1,200 crore, which we will see in the times to come. At the moment, the Karoli plant, we have revenues of about Rs. 500 crore to Rs. 600 crore, and it's operating on 50% capacity utilization.
Abinash Swamenathan: Thank you, sir.
Moderator: Thank you. The next question comes from the line of Bismit Nayak from Coast Park Advisors. Please go ahead.

Bismit Nayak: Thank you. Sir my first question would be on, we are seeing a sharp slo

wdown in growth, like
earlier we were going around 20% to 30%, now this quarter we have grown 9%. So was there a one-off in the base or something, or postponement of order or something like that?
Kuldip Singh Rathee: No, no, there is neither postponement of order, nothing has happened, we have grown at 9%. However, actual growth has been 16% if we count, as I just mentioned that 60% of the wheel assembly went from 15th February onwards. So, if we add on what would have been the revenue of that, then it would have been 16% growth. This phenomenon will play in the next financial

year also, because as I said that if we were supposed to, let's say, grow 20%, then out of that that Rs. 300 crore business of the financial year we will be seeing less.
Bismit Nayak: Understood, sir. And in an interview in the morning you had called out 14% guidance for FY26, so 80 bps is coming from wheel assembly.
Kuldip Singh Rathee: In my interview in the morning I said that we will be improving by 150 basis points, so that becomes 13.8%. And I said out of this 150 basis points, 80 basis points will come because the wheel assembly has gone, and 70 basis points will come for the internal more efficiencies and economies of scale. However, we are aiming to achieve 14% EBITDA margins in this coming financial year.
Bismit Nayak: Understood, sir. And largely on the die cast HPDC wheels, who are the major players in gravity die casting? Who will be our competitors from whom we will take market share?
Kuldip Singh Rathee: First, let the product be tested and approved. Because so many gravity die casting players are there, as you know very well, are there in the market. So we cannot say whose share will come once it is approved.
Bismit Nayak: Sir, who are the top players in the segments that we are targeting?
Kuldip Singh Rathee: So the top players, we will target all the OEMs for the scooter and motorcycle alloy wheels. So, let the product be tested and approved. Then it is for them to judge what are the advantages and whose share or whether they do not cut anybody's share, they just cut the import part or something.
Bismit Nayak: Understood, sir. One last question, any plans of foray in to disc brakes?
Kuldip Singh Rathee: Disk brakes we are already supplying to the system suppliers. We are not into the system and we do not intend to be in the system, that's a very small market of the Two-Wheeler. But we already supply the disk brakes pads, we are supplying to Brembo for Hero, it goes there, and also to Endurance. Moreover, we are exporting also the Two-Wheeler disk brake pads to the European market.
Bismit Nayak: Understood, sir. Thank you.
Moderator: Thank you. The next question comes from the line of Mahesh Atal from Atal Investment Advisors. Please go ahead.
Mahesh Atal: Sir, for the FY25 what will be our borrowing scope, if you can give some details about it whether we are doing to reduce or keep it at the same level? Second is, I wanted to also know about the cable business that why are we not growing in cable? What we have achieved in braking system why are we not able to replicate the same in cable, what are the problems we are facing?

Kuldip Singh Rathee: No, you said that why we are not growing in cable, first let me answer it. In cable we have grown 14% which is not less, mid-teens growth for the full year. So I think if you look at the full year performance it is quite good, and we are getting good response in cable, number one. Number two, your question about your debt position, so you will see that the investment that we have made, we invested last year around Rs. 354 crore in plant and machinery, and its after that too our debt to equity has reduced from 0.42x to 0.38x. So, our financials have improved and our debt to EBITDA has also reduced which is about 0.8x.
Mahesh Atal:

So, would we be trying to reduce these absolute number in this financial year?
Kuldip Singh Rathee: What would you like to reduce, ratios or amount?
Mahesh Atal: Borrowings, amount.
Kuldip Singh Rathee: How can we reduce the amount? If you see, the business is growing at a fast pace, it is expanding rapidly, so just imagine that the amount is not increasing, even you see the debt to equity or debt to EBITDA ratio.
Mahesh Atal: Yes, I got it. will you be expanding more in the future?

Kuldip Singh Rathee: Why won't we expand, we are very optimist on the Indian market, we are further going to invest Rs. 450 crore for future expansion.
Mahesh Atal: Sir, let's say in a Rs. 60,000 vehicle how much percentage cost are we able to deliver, I mean, how much percentage of that vehicle?
Kuldip Singh Rathee: Our content per vehicle overall would be around Rs. 1,000.
Mahesh Atal: Alright. Thank you.
Moderator: Thank you. The next question comes from the line of Naveen Dubey from Narnolia Financial Services. Please go ahead.
Naveen Dubey: Thanks for the opportunity again. Just two questions. One is, our working capital has improved over the last two years, so what are the drivers for improving this?
Kuldip Singh Rathee: One driver is certainly the very good inventory management, and the second is I think our customers are also so good that they are paying us before time even.
Naveen Dubey: Okay. The second question is on, how big we can scale our Bangalore plant? I mean, we are investing, and how further we can go from here on?
Kuldip Singh Rathee: See, in the till 31st March we have invested Rs. 155 crore in the Bangalore plant, which is our third plant. And we will be investing Rs. 100 crore more this year. So that will be an investment

of about Rs. 250 crore. So it will give us a revenue of approximately Rs. 400 crore to Rs. 500 crore or so.
Naveen Dubey: So is there a scope to increase investment further, considering the land area, etc.? Or we have to go for greenfield if we go ahead?
Kuldip Singh Rathee: We think this year itself we will have to invest in another next plant, we are just looking where we should go, whether we should go to Gujarat or we should go to Bangalore, because we anticipate with one customer Gujarat also the expansion is coming.
Naveen Dubey: Okay. That's great. Thank you, sir. And all the very best for future endeavors. Thank you.
Kuldip Singh Rathee: Bye, bye. Thank you, Naveen ji.
Moderator: The next question comes from the line of Kairav Sundar from Spark Capital. Please go ahead.
Kairav Sundar: Hi, sir. Congratulations on a good set of numbers. I just wanted to check with you on capacity utilization across our plants, especially the new plants in Bangalore and Karoli, also if you can give it segment wise if possible.
Kuldip Singh Rathee: No, the capacity of all our plants except Karoli and Bangalore has just started, it will be starting this quarter only actually. So capacity utilization of Karoli plant, I have repeatedly said, is around 50% to 55%. And even this new plant in Bangalore, we expect by end of the last quarter of FY26 we should have a capacity utilization of 60% to 70%. Rest all plants are in full capacity.
Kairav Sundar: Thank you.
Moderator: Thank you. The next question comes from the line of Joseph from IIFL Capital. Please go ahead.
Joseph George: Hi sir, just one question. You mentioned that you are going to spend some Rs. 450 crore this year CAPEX spend, so is that entire amount we are going to be spending in FY26?
Kuldip Singh Rathee: Yes, this is entire. That's what we propose to do. As I said that we will be making additional capacities. And out of that the bigger amount of about Rs. 150 crore to Rs. 200 crore will be for this alloy wheel plant for the Japanese collaboration, of which we will see the results in the next financial year.
Joseph George: Sure, sir. And when

we think about CAPEX beyond FY26, I mean, is the intensity going to be as high or do you expect the intensity to come off?
Kuldip Singh Rathee: We are optimists, so we always think that the intensity should remain the same, because now the world is looking at India. Hopefully, once the peace prevails throughout the world, I think they will look towards India.
Joseph George: Sure. Okay, thank you.

Moderator: Thank you. The next question comes from the line of Hitesh Thakurani from HDFC Securities Institutional Equities. Please go ahead.
Hitesh Thakurani: Yes. Hi. Sir my first question is on the content per vehicle, how different is it in a motorcycle versus a scooter? And do we view the scooterization trend continuing?
Kuldip Singh Rathee: Our content is almost similar, there's hardly any difference. And yes, at the moment there is a trend towards scooters which is good.
Hitesh Thakurani: Sure, sir. And my second question is, how much more expensive on average is a HPDC alloy wheel than a regular alloy wheel? And what are the benefits of the HPDC technology?

Kuldip Singh Rathee: Pricing, we do not know at the moment. Once we start the supplies then probably in the next two calls we will be able to tell you about the difference in pricing or something. But well, the supply should be smooth with less rejection, that's what our presumption is in the HPDC alloy wheels.
Hitesh Thakurani: And the benefits of the HPDC technology?
Kuldip Singh Rathee: That's what we said, that it's a much smoother supply with less injections and much more mechanical controls.
Hitesh Thakurani: Sure, sir. Thank you.
Moderator: Thank you. The next question comes from the line of Ashok Shah from Eklavya Invesco. Please go ahead.
Ashok Shah: Thanks for taking my question. Sir, can you just explain the future of the EV scooter in a scooter market or a bike market we are doing for the EV also?
Kuldip Singh Rathee: Can you repeat that?
Ashok Shah: Okay. Sir, we are doing supply to EV scooters also, so due to the cost effectiveness, the market of the EV scooter will increase and overtake over the next five years to the normal scooters and the bikes?
Kuldip Singh Rathee: So that we cannot say, that you need to ask to the EV manufacturers. But we wish that it increases. We had expected it to increase further, but I think there is a price cap, and they are losing money on that same price. So I do not know, we can tell the statistics that it is less than 5% of the total market.
Ashok Shah: So what's our supply to the EV market currently in our total pipe?

Kuldip Singh Rathee: We are also the same ratio we are supplying to the EV players, all EV players. So we are fully hedged whether the ICE grows or the EV grows, we are supplying to everyone. It doesn't make a difference to us.
Ashok Shah: Okay. Thank you, sir.
Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand the conference over to Mr. Kuldip Singh Rathee, Chairman and Managing Director, ASK Automotive Limited, to give his closing remarks.
Kuldip Singh Rathee: Thank you. Ladies and gentlemen, thank you for such patient hearing. I will only say that we will keep on working the way we have worked in the past, and hopefully we will justify our performance in the times to come to the market. One thing we forgot to mention that this year we improved our ROCE with the capacity utilization from 23.64% to 27.5%. I may assure you that next year also we will be doing very well and we will be achieving an ROCE close to this with the debt to equity also further improving and the performance growing on a very sound footing. That's what we will make all out efforts to justify our performance and we will be in touch every quarter, and thank you very much for your patience.
Moderator: Thank you,

sir. Ladies and gentlemen, on behalf of ASK Automotive Limited, that concludes this conference. Thank you for joining us. And you may now disconnect your lines.

Call: Aug 2025

Sub: Transcript of Investors/analysts Call – Q1 FY 202 5-26 Un-Audited Financial Results

Dear Sir/Madam,

Pursuant to the requirement of Regulation 30 read with Part A of Schedule III of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed herewith Transcript of Investors/analysts Call organized on July 30 , 2025 post declaration of Un-Audited Financial Results of the Company (Standalone & Consolidated) for the quarter ended on June 30, 202 5.

The same shall be available on our website i.e. www.askbrake.com .

Kindly take the above information on your record.

Thanking you.

Moderator : Ladies and gentlemen, good day and welcome to ASK Automotive Q1 FY'26 Post Results Earnings Conference Call hosted by Ad factors PR.
As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance

during this conference call, please signal an operator by pressing '*', then '0' on your touch - tone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Sn ighter Albuquerque. Thank you and over to you, sir.

Snighter Albuquerque : Thank you . A very good evening to everyone and welcome to the Q1 FY26 E arnings Call of ASK Automotive L imited .

From the Senior Management , we have with us Mr. Kuld ip Singh Rath ee - Chairman and Managing Director ; Mr. Prashant Rath ee – Whole -Time Director ; Mr. Aman Rath ee - Whole - Time Director ; Mr. Naresh Kumar - Chief Financial Officer, and Mr. Manoj Sharma - Chief General Manager, Investor Relations.

Before we begin the Earnings Call, I would like to mention that some of the statements made during today's call may be forward -looking in nature and hence it may involve risks and uncertainties, including those related to the future financials and operating performance of the company. Please bear with us if there is a call drop during the course of the conference call , we ensure that the call will be reconnected at the earliest.

I would now like to hand over the call to Mr. Kuld ip Singh Rath ee for his opening remarks. Thank you and over to you, sir.

Kuldip Singh Rathee : Thank you, Mr. Sn ighte r. Good evening, ladies and gentlemen. It is my great pleasure to welcome you all to our Q1 FY26 E arnings Conference Call. I hope you had the opportunity to review the detailed presentation submitted to the Exchanges and available on our website.

The global economy in 2025 continues to face significant challenges, including rising trade barriers and increased policy uncertainty leading to a broad -based slowdown in growth. However, India remains a bright spot with the IMF projecting a robust 6.4% gr owth for calendar year 2025 despite global disruptions. This positive outlook is further supported by the RBI's cumulative 100 basis points rate cuts over the past 6 months, and above normal monsoon and upcoming festive season, all of which are expected to boost sentiment, particularly in the rural economy. This is especially encouraging for the two -wheeler industry.

Now , let me begin by sharing a quick overview of the broader industry as reported by SIAM : The overall performance of the auto industry has remained muted so far with total vehicle production across segments growing by just 1.5%. The two -wheeler industry's Q1 FY26

production volume was flattish at 5.9 million units, up 0.7% compared to the same period last year.

Moving on to the business updates :

I am delighted to share with you that we had a strong finish to the first quarter in both revenue and profitability. This marks our seventh consecutive quarter of robust performance since the company's listing in 2023. During Q1 FY26, we delivered revenue growth of 11.1% that is excluding the wheel assembly business, because wheel assembly 's strategic reduction has been -53.5%, and thus consolidated revenue has grown by 3.5% on year -on-year basis. We achieved growth of 19.3% in EBITDA and 16.3% in PAT on ye ar-on-year basis. We continue to outperform the two -wheeler industry in terms of ve hicle production growth during Q1 FY26. Additionally, we achieved highest quarterly EBITDA margin of 13.8% in Q1 FY26, representing an improvement of 183 b asis points over Q1 FY25.

Improvement in margins during Q1 FY26 were mainly driven by better economies of scale due to higher volumes, increas

ing capacity utilization of Karoli facility, ramp -up of new Bangalore facility, continued focus on cost optimization and strategic reduction in low value -added wheel assembly business. Our aim is not only to sustain this level of EBITDA margins , but continue our efforts to improve gradually in the subsequent quarters, depending upon the growth of the two-wheeler industry in FY26 . With this strong performance on profitability, our earning per share in Q1 FY26 has increased to Rs. 3.35 per share against Rs. 2.88 per share in the same period last year.

Despite flattish two -wheeler industry growth, our all three segments delivered a positive growth. We have sustained our market leadership position in the Advanced Braking system. Our Advanced Braking System revenue grew by 4% in Q1 on year -on-year basis. The Aluminum Light-weighting Precision Solutions revenue grew by 15% in Q1 on Y-o-Y basis, and the Safety Control Cable revenue also recorded growth of 6% in Q1 on Y-o-Y basis.

In the dynamic and unstable global geopolitical environment and the uncertainty caused by USA tariffs has impacted the overall environment. It has resulted in low demand from our existing export customers. Our revenue from exports was stagnant at Rs. 33 crore in Q1 FY26 against Rs. 33 crore last year in the same period. However, we are still confident that we will grow the exports at 20% year -on-year during FY26.

I would now like to give you updates that our Bangalore facility which was commissioned on 14th January 2025 :

I am delighted to share that this facility has delivered positive EBITDA in Q1 FY26 . This facility is ramping up fast and expected to achieve 60% capacity utilization by Q2 FY26 and this facility will be cash positive in Q2 FY26 itself. At our mega facility at Karoli plant, expansion is going

on full swing and accordingly, capacity utilization is also increasing and we are currently running at around 65%.
So thank you very much for your patient hearing. With this, we leave the floor open for questions and answers. Thank you very much.
Moderator: We will now begin with the question -and-answer session. The first question comes from th e line of Vijay Pandey from Nuvama Wealth. Please go ahead.
Vijay Pandey : Hi. Thank you, sir, for taking my question. Sir, there is one question I w anted to check about the growth, w e had previously guided around mid -teens growth in FY26. So this is organic growth , excluding the wheel assembly business. That is my understanding. Let me know if this is correct or not ? Secondly, o ur gross margin was much better than last year and also on quarter -on-quarter basis. I just wanted to check what is driving this growth , is it primarily coming from the product mix or we saw some ailment i n terms of raw material expenses? How should we look into it and what is the expectation going forward? These will be the two questions from my side ?
Kuldip Singh Rathee : Well, I would like to correct your understanding on the revenue growth because in our last call also, we had very clearly mentioned that in this year , you will see our mid -teens growth in the revenue excluding the wheel assembly business because that constituted between 7% -8% of the total revenues. That we had very clearly mentioned in the call. So please, throughout the year , in next quarter s also, you see our growth like that. I would like to repeat that. And as regards the mid-teens growth, we are very confident though the quarter one has not been good for the industry , but as the GDP is growing well, even as per the IMF, I remain an optimist and I feel that we will be able to achieve the target of the mid -teen growth in revenue this year. As far as your second part is concerned on the margin improvement that also very clearly we had mentioned in the last call, that 80 basis point, we will improve from 12.2 % to 1

3% just by this
wheel assembly business is going, because it was a non -profit business. So if it is going, so we will be touch ing 13 % and we will strive to achieve 13.7% EBITDA margin by all these new plant in Bangalore ramping up and a better capacity utilization in the Karoli plant. So both the things have happened as I mentioned just now that even in the quarter one, our new plant in Banga lore has become EBITDA positive a nd as we had mentioned in the last call, the Karoli plant was already cash positive. So that has all led to good EBITDA margins.
Vijay Pandey : Thank you. One more question, sir, just if you can highlight about employee expenses, employee expenses as percentage of sales cost went up. It came at 6%. So just wanted to check if this is because of our ramping up the new plant in Bangalore as well as Rajasthan. Is it because of that? And should we expect it to come down for coming quarters in the range of 5% to 5.5%?
Kuldip Singh Rathee : What is that percentage? Employee expenses, we have not mentioned anywhere. What are you saying that 5%?
Vijay Pandey : Employee benefit expenses as a percentage of sales.

Naresh Kumar : Hello, Hi . Naresh this side. Actually, you compare our sale with the apple to apple because this time our sale is lesser because our wheel assembly business is not there , 53.5% is not there. So due to that, the percentage seems very high.
Kuldip Singh Rathee : And in future for our consumption in this particular year, I would still like to mention that whatever growth in revenue you see , please add 7 %-8% in that. So it clear s the confusion once for all throughout the year.
Moderator : Thank you. The next question comes from the line of Naveen Kumar Dubey from Narnolia Financial Services Limited. Please go ahead.
Naveen Kumar Dubey : Yes. Thanks for the opportunity, sir. And congratulations on decent performance despite the two-wheeler industry declining. My question is related to two -wheeler industry only first. Are we seeing any reason in the guidance we had previously given of industry growth that is 6% - 8%?
Kuldip Singh Rathee : Industry growth, well, it is too early to say the quarter one has got below expectations. But as I say, I remain optimist and I feel that the festival season is approaching, maybe we cover up and monsoon has been good. So the g ood demand should come, I think, t hough yes . Today , overall in two -wheeler segment, people feel that the industry may not grow at 6%. They may grow at about 3 %-4% throughout the year, but we expect that we will still achieve the mid -teens growth. That is what I feel.

Naveen Kumar Dubey : So the second half should be better ?
Kuldip Singh Rathee : Yes, quarter two will be better than the quarter one, much better.
Naveen Kumar Dubey : Sir, one question is related to, have we seen any competitive intensity increasing in advanced braking system? Because in last 2-3 quarters, we see this growth percentage is declining ?
Kuldip Singh Rathee : No. I have always maintained right from the time of my first roadshow that since we are the leaders for the last 20 years in the country and all the segments, so we will grow as per the growth of the industry. So ideally, we should have grown only at 1% or 0.7%, w e have grown at 4%. And that is all because we little bit outgrow in the aftermarket.
Naveen Kumar Dubey : And sir, any new client addition, have you seen recently in last 2-3 quarters ?
Kuldip Singh Rathee : The customers remain the same because we are supplying to each and every two -wheeler manufacturer. So there is no addition possible in the list of customers on the two -wheeler side.
Naveen Kumar Dubey : So product lines increasing, maybe customer is not increasing, but new products which are coming from the OEMs that must be increasing ?

Kuldip Singh Rathee : Yes.
Naveen Kumar Dubey : And sir, can we share our top 3 customers' revenue details? What percentage of sales our top 3 customers contribute?
Kuldip Singh Rathee : See, our top customer is the Honda Motorcycle Scooter India (HMSI) and that constitutes around 35%. The second big customer is TVS, which is now 20% -21% and the third one is the Hero MotoCorp, which is about 17% or so.
Naveen Kumar Dubey : So Honda, if I see FY23 revenues break up , there the top one customer was 35%, s econd one was 16%. So I think TVS has taken share from somebody else ?
Kuldip Singh Rathee : Yes.
Naveen Kumar Dubey : That is it from my side, sir. Thank you and all the best.
Kuldip Singh Rathee : Thank you very much.
Moderator : Thank you. The next question comes from the line of Prat eek Lad ha from Nirmal Bang Institutional Equities. Please go ahead.
Prateek Ladha : Good evening, Kuld ip sir and team. Thank you for the opportunity. I had a couple of questions on the wheel assembly business in particular. So the remaining part of the business that we were expected to scale down was a quantum of Rs. 150 crore for this year. And what we have seen in the first quarter itself is we have recorded or accrued Rs. 47 crore s to be precise. So is there a faster ramp down that we are seeing of this business that we can probably forecast in our numbers for this year?
Kuldip Singh Rathee : No. We had said that this business is about Rs. 380-Rs. 400 crore this year and 60% will go. That was the approximat ion, so a business of about Rs. 240 crore was to go, almost. So I think we are very much on that path , but even that 40% will go, maybe the end of this Financial Year however, i f it goes, we will let you know at least one quarter before.
Prateek Ladha : All right, sir. On the new joint venture with TD Holding , so sir, what is the thought process , we have strategically collaborated with a lot of seven other partners that we have , the thought process on this collaboration and what kind of value will it bring for us as a company?
Kuldip Singh Rathee : See, we have signed this joint venture because as I have mentioned many times, we like to have the first mover advantage in any particular line that we choose. So there is no Indian manufacturer producing in India these sunroof cables. So that is why we signed with Germany, so that we are the first one to produce these cables and then supply to the system.
Prateek Ladha : And this would be for the domestic market in particular or well ?

Kuldip Singh Rathee : Yes. First, it will be the domestic market and simultaneously, to derive the economies, we may export also.
Prateek Ladha : And this would just be the electric cable? This won't include the electronic as well?
Kuldip Singh Rathee : No. This joint venture is only for the cable.
Prateek Ladha : Alright. And s ir, while the outlook for rural demand is looking strong, the monsoon has been good, MSPs are also where they are , so, just trying to understand, even though the first quarter was subdued, based on your interactions with customers, what the outlook is on the festive and thereafter, are we expected to see some sort of a recovery going forward? Or would it be more gradual in nature?
Kuldip Singh Rathee : I always, as I said, remain optimist and after Ganesh Chaturthi, normally what we have seen till Diwali, there is a big boost in demand and I am still hopeful and optimistic that it will come. That is my understanding.
Prateek Ladha : Alright. And just to understand from the month of July itself, because we are at the end of July to understand what the production schedules and if you can give any color, I am not asking fo r

anything specific on customer?
Kuldip Singh Rathee : I strongly feel the sudden spurt, if it comes, it will come i n September only .
Prateek Ladha : Because Navratri is a

t the end of September and Diwali is in October ?
Kuldip Singh Rathee : Yes, Diwali is in October, s o I think September and October will be very good. This is what we have seen for the last 30 years . And I strongly feel that it will remain like that.
Prateek Ladha : Alright , sir and you guided for a 20% growth in our exports, which we are looking for FY26. Is this particularly from the non -auto business that is looking to ramp up? We have seen that ramp up significantly, especially in the Q1 as well. We have seen about 48% increase in the non -auto business. So is it largely from that or are there any other new products that we have made and we have developed and we are going to be supplying those?
Kuldip Singh Rathee : Exports, I have said that the export market in the current geopolitical situation is still not very stable and there is a big confusion on the tariff front. So our US exports are not picking up and that is what I mentioned that we may not achieve our own very ambitious targets, which we had mentioned in the last call. But it is still hopeful to have a 20% growth in the exports from last year.
Prateek Ladha : Alright, sir. Thank you. Thank you so much for the opportunity and all the best.
Kuldip Singh Rathee : Thank you.

Moderator : Thank you. The next quest ion comes from the line of Smit Shah from Monarch Networ th Capital Limited. Please go ahead.
Smit Shah : Hello, good evening, sir and team. Congratulations on a good set of numbers despite the challenging environment. Sir, my question is regarding the alloy wheels. Is there any update on the testing completion and whether we have received any confirmed orders?
Kuldip Singh Rathee : No, alloy wheels, still the testing is going on and in the last call also, we said that before H2 ends, we should know something. And I am quite hopeful that the supply should start in H2, because there is no other news at the moment. This is the status on our collaboration with L IOHO Taiwan, where the tests are going on, and on about the status of the other collaboration with Japan, now, in Karoli with this year, we have already ordered the machines. The investments have almost been done, the advance is given and we hope to receive the machines by December. And in January, the sample should come and get tested so that we can start supplies in the next financial year.
Smit Shah : Sir, a question is also on the front of the new JV that we have done on the sunroof cables, sir, can you put some color on the opportunity size that we have?
Kuldip Singh Rathee : See, it was not a question of opportunity. The two thoughts were involved when we signed the joint venture. Number one, I like to be the one of the first ones to do the import substitution. So all these cables are being imported at the moment. So we will be the first one to produce in the country. I think that gives me a lot of satisfaction, number one. Number two, more and more passenger vehicles are now getting the sunroof. They are coming with the sunroof. So t his business will slowly keep on growing. And third thing, I am confident that with our best quality that we will be able to export also in future.
Smit Shah : Sir, but any number on the market size as such?
Kuldip Singh Rathee : Number , we have not calculated. It will not be a big number, but still it will be very prestigious. And good part is that all the sale will be to the passenger vehicle segment where we are not there much.
Smit Shah : Sir, in terms of capacity, do we have to put up any capacity? And when do we expect the revenues coming in from this?
Kuldip Singh Rathee : The revenue should come in our opinion in the next financial year only, because I feel we should put up the capacity by the end of this current financial year.
Smit Shah : Sir, how much are we investing for this?

Kuldip Singh Rathee : Not much, because some of the things are very common with our existing business. And then we will be investing around Rs. 10 crore this year. We h ave the land, we have the building, everything we have.
Smit Shah : Sir, last question being on the CAPEX front , what w ould be the CAPEX for this year and the next year?
Kuldip Singh Rathee : This year, we have already announced that we will be investing Rs. 450 crore and that is going on as per the plan. And this CAPEX , we will ensure that we complete, we are ready for supplies

for the next 18 months, so the whole of FY27 is sorted. And as regards the CAPEX next year is concerned, that will be announced in the due course of time.
Smit Shah : Thank you, sir and a ll the best.
Kuldip Singh Rathee : But the good part I may announce again that in spite of investing Rs. 450 crore, we wi ll be having a better debt equity ratio and that will get slightly improved. That is what we target.
Smit Shah : Thank you, sir.
Moderator : Thank you. The next question comes from the line of Sagar Shetty from BP Wealth. Please go ahead.
Sagar Shetty : Yes, thank you for the opportunity. Congratulations on a good set of numbers. So I just wanted to know that given the regulatory acceleration of ABS or adoption across two -wheeler models, and while we specialize largely in Brake Shoe in the ABS segment, so are we seeing that as a headwind and how are we planning to assess those and is there any strategic initiative you are planning to take in the due course?
Kuldip Singh Rathee : See, this is a sudden draft notification that everyone received from the government. Nobody was mentally prepared for it. And there are not many suppliers of ABS in the country, and neither do they have the full capacities. So all our OE customers , through SIAM , they have represented to the government that it is not possible. And since it was a draft notification, I think we are waiting to see the results of what the discussions take place. And only after the discussions that, when the final notification co mes, maybe in a month or two, then only we will come to know what the exact situation is there.
Sagar Shetty : Thank you , sir. So do we have any plan to expand our disc brake segment?
Kuldip Singh Rathee : See, point is the ABS current capacities of the manufacturers is hardly 10 %-15% of the total requirement. That is what we could understand in interaction with our customers. So they have to gear up, how fast they gear up, what will be the quantum of the business that gets generated. But the good part is after the draft notification, even we have opened discussions with some of the players that what best we can do, what new opportunities we can encash on. Of course, there

will be, if it is implemented in tot o, some headwinds will be there for us, but then we will compensate through some other new opportunities and the new setup.
Sagar Shetty : Thank you, sir . Thank you so much.
Moderator : Thank you. The next question comes from the line of S uvaan Mittal from MFC. Please go ahead.
Suvaan Mittal : Hello, sir. Thank you for the opportunity. I mean, they have two questions lined up. First being, in the last concall, we are guided for Bangalore facili ty to reach anywhere between 60% -70% capacity utilization by end of this quarter of FY26 a nd we have already projected to reach by 60% in Q2. So by Q4, could we reaffirm that we should reach 70% or at least cross 70%?
Kuldip Singh Rathee : Yes, you are right. We are lucky that it is already in Q2, we will reach 60% capacity utilization. So now , I would like to revise the guidance that in Q4, we will be at 70 %-75%. Yes, you are right.
Suvaan Mittal : And where do you see the main growth coming from, sir, from the aluminum precision business or the ABS business?
Kuldip

Singh Rathee : That plant is only aluminum castings with machining.
Suvaan Mittal : And s ir, the second question being, on a more long -term perspective, as we have major CAPEX' s planned for the coming 3-4 years at the K aroli facility and Bangalore facility, and you had also mentioned, we will also be investing in a new next plant in Gujarat or Bangalore in this FY. So we will be having significant operating leverage. So over a long -term perspective of 3-4 years, in what kind of a term could you see the operating leverage to maximize out? And if you could give some color on what kind of roadmap is set for us and for the company?
Kuldip Singh Rathee : So the operating leverage, once the plant gets commissioned , it reaches 60 %-70%, we almost can start getting the full operating leverage. So all our plants are doing so well, because these last two plants, when they will become cash positive, then I think we will be deriving very good operating leverage right from the next quarter. And because when the new plant comes, it takes time. All other plants, they run at full capacity, almost full capacity.
Suvaan Mittal : Thank you. That is it.
Moderator : Thank you. The next question comes from the line of Vijay Pandey from Nuvama Wealth. Please go ahead.
Vijay Pandey : Thank you, sir, for taking my question again . I just wanted to check if you can share the detail about what will be our revenue expectation from Bangalore and from Kar oli planters, like, in order to model the operating leverage growth from these two plants. If you can just share, not exact number, but even in terms of percentage or range, that will be very helpful ?

Kuldip Singh Rathee : No, we see our asset turnover in the new plants is 1.75 x. So our only target is to achieve that. That is what I can tell you.
Vijay Pandey : 1.75x for both Karoli a s well as Bangalore ?
Kuldip Singh Rathee : Yes. So we have invested Rs. 490 crore in Karoli and here , we have last, till March, we had invested Rs. 155 crore in Bangalore and now further we will be investing about Rs. 75 to Rs. 100 crore in Bangalore more. So you can imagine that 1.75 x we should achieve. Maybe I am not saying this FY, but of course, certainly next Financial Year .
Vijay Pandey : Sure. Thank you, sir. Thank you.
Moderator : Thank you. The next question comes from the line of Nitin from JM Financial. Please go ahead.
Nitin : Thanks for the opportunity. Coming back to ABS thing, assuming that ABS is implemented as in tot o, what would be the impact in terms of number that we are going to have on our financials , if you could throw some color on that ?
Kuldip Singh Rathee : See, Nitin, this is a very hypothetical question that if it is implemented, because there are no suppliers who can supply in tot o. So we would like to wait and watch to comment. However, if you really want to know the numbers, the total headwinds are about Rs. 230 crore, which are very nominal and they are into the aluminum segment. And as I said, that these is the extreme headwind, whenever it comes and how many years it comes, and there will be new opportunities, which will explore an d encash. So it is very difficult to give that number sir, but I have told you the worst number.
Nitin : Yes. So that is for the entire year. That is what the impact that we can have , like Rs. 230 crore a year?
Kuldip Singh Rathee : That is the maximum. If it is implemented 100% in tot o, because all the OEMs are representing, there are only 3 suppliers in the country of ABS, and they don't have their own capacities. So when they don't have the capacity to supply, how will the manufacturing take place? So maybe, I can't say at this moment, that is why I repeatedly say, let the final notification come. And maybe in the next quarterly call, we will have a visibility and we will be able to answer much better.

Nitin : Thank you. That is it from my side.
Moderator : Thank you. The next question comes from the line of Manish from MNCL. Please go ahead.
Manish : Thank you for the opportunity and congratu lations on a good set of number, sir . So basically, my question relates to the previous participant that if the regulation gets implemented, so from a long -term point of view, how do we see ourselves positioning here? So if we have any plans to venture into anti -breaking systems, and how do we intend to mitigate this?

Kuldip Singh Rathee : That is what I said, please let the notification come , I will answer all your questions in the next call, because by that time, I am very sure the final notification will come. And we will study it thoroughly a nd since we have already done 8 collaborations cum joint ventures, 5 collaborations and 3 joint ventures. So if it is implemented in tot o, certainly, we will be looking for some new joint ventures or collaboration.
Manish : A follow up on that question. So is the aftermarket growing faster than the OEMs in the advanced breaking for us?
Kuldip Singh Rathee : Yes, it is growing much faster. This quarter, we have grown in double digit.
Manish : And my second question is regarding any new components addition that you are working on the aluminum business side?
Kuldip Singh Rathee : We keep on doing a lot of RFQs always remain in the pipeline, we keep on developing new components. So that i s an ongoing process and that is why this segment is growing at 15%.
Manish : Yes, thank you.
Kuldip Singh Rathee : In spite of the industry is growing at 0.7%.
Manish : Great , sir. Thank you.
Kuldip Singh Rathee : Thank you.
Moderator : Thank you. As there are no further questions from the participants , I now hand the conference over to Mr. Kuld ip Singh Rath ee from A SK Automotive Limited for closing comments. Please go ahead.
Kuldip Singh Rathee : Thank you, everyone for being with us and having such a patient attendance and listening and thank you for contributing to our thought processes with your very inquisitive questions and we are very grateful. And in the end, I would only like to say one thing that our revenue guidance of mid -teens is intact for this financial year in spite of the sector not doing well and our EBITDA margin, what we have achieved, we will certainly maintain it. I again reiterate and so I feel the year is going to be good. Thank you very much.
Moderator : Thank you. On behalf of ASK Automotive Limited , that concludes this conference. Thank you for joining us a nd you may now disconnect your line s. Thank you.

although an effort has been made to ensure high level of accuracy

"ASK Automotive Limited Q2 & H1 FY '2 6 Earnings
Conference Call "

October 31, 2025

MANAGEMENT : Mr. Kuldip Singh Rathee – Chairman And Managing
Director , ASK Automotive Limited
Mr. Aman Rathee – Joint Managing Director , ASK
Automotive Limited
Mr. Naresh Kumar – Chief Financial Officer , ASK
Automotive Limited
Mr. Manoj Sharma – Chief General Manager -Investor
Relations , ASK Automotive Limited

Moderator: Ladies and gentlemen, good day and welcome to ASK Automotive Q 2 & H1 FY '2 6 Earnings
Conference Call, hosted by A dfactors PR.
As a reminder, all participant lines will be in listen -only mode and there will be an opportunity

for you to ask questions after the presentation concludes . Should you need assistance during the conference call, please signal an operator by pressing "*", then "0" on your touch tone phone. Please note that this conference is being recorded.
I now hand the conference over to Snighter Albuquerque from Ad factors PR. Thank you and over to you .
Snighter Albuquerque : Thank you. A very good evening to everyone , and welcome to the Q 2 & H1 FY '2 6 Earnings Call of ASK Automotive Limited.
From the Senior Management we have with us Mr. Kuldip Singh Rathee – Chairman and Managing Director ; Mr. Aman Rat hee – Joint Managing Director ; Mr. Naresh Kumar – Chief Financial Officer ; and Mr. Manoj Sharma – Chief General Manager -Investor Relations .
Before we begin the Earnings Call, I would like to mention that some of the statements made during today's call may be forward -looking in nature and hence it may involve risks and uncertainties, including those related to the future financial s and operating performance of the company. Also, p lease bear with us if there is a call drop during the course of the conference call. We would ensure the call is reconnected at the earliest.
I would now like to hand over the call to Mr. Kuldip Singh Rathee , Chairman and Managing Director , for his opening remarks. Thank you and over to you , sir.
Kuldip Singh Rathee: Thank you, Mr. Snighter . Good evening, ladies and gentlemen. It is my great pleasure to welcome you all to our Q2 &H1 FY '2 6 Earnings Conference Call . I hope you have had the opportunity to review the detailed presentation submitted to the exchanges and available on our website.
The Government of India's GST 2.0 reforms mark a pivotal milestone that is set to elevate the Indian automobile industry and energize the broader economy, given the sector's deep forward and backward linkages. Despite the revised GST rates being applicable for very few days of September, all automotiv e segments like passenger vehicles, two -wheelers and three -wheelers have recorded their best ever September sales.
Now , let me begin by sharing a quick overview of the broader industry as reported by SIAM :
The Indian automobile sector witnessed healthy momentum in H1 FY '26 with overall vehicle production across all segments registering a robust year -on-year growth of 5.8%. The two - wheeler segment matched the overall vehicle production growth at 5.8% on year -on-year basis.
We are optimistic to achieve higher growth traject ory in FY '26, supported by strong festive

season momentum, stable macroeconomic conditions, and GST 2.0 reforms that have improved overall affordability and consumer sentiment.
The two -wheeler industry closed H1 FY '26 with a strong production volume of 12.8 million units, up from 12.1 million units in H1 FY '25. In Q2 alone, production touched 6.9 million units as compared to 6.3 million in the same quarter last year.
Looking ahead, we believe the industry stands to gain further from supportive macroeconom ic policies, particularly GS T 2.0 reforms, personal income tax rationalization announced in the Union Budget 2025 -26, combined with two successive rate cuts by the Reserve Bank of India. These measures are likely to enhance consumer purchasing power and improve access to vehicle financing, creating a conducive environment for sustained demand. The good monsoon will further ensure rising income in the agriculture sector and will be beneficial for the two -wheeler sector.
Since all our products were under the category of 28% G

ST, hence the reduction of GST rate
from 28% to 18% is especially good for ASK because it will help us to outgrow in the Indian aftermarket and gain more market share from grey market operators and dup licators. With this positive backdrop, we remain optimistic about the growth trajectory of the sector in the coming quarters.
We would like to highlight that our 9.9 MWp solar plant at Sirsa , Haryana has started supplies from April '25. We are excited with the results in terms of sustainable operational economies and h appy to announce that the company is installing one more captive solar power plant of 11.55 Megawatt at Rajasthan, which is expected to be operational by Q1 FY '27. This reflects ASK's special focus on green energy.
Moving on to business updates, I am delighted to share with you that we had a strong finish to the second quarter and half year in both revenue and profitability. This marks our 8th consecutive quarter of robust performance since the company 's listing.
During Q2 FY '26, we delivered revenue growth of 16.6% excluding wheel assembly business. Wheel assembly strategic reduction was (-) 53.6% , and thus consolidated revenue has grown by 8.5% on year -on-year basis. We achieved growth of 19.5% in EBITDA and 18.6% in PA T on year-on-year basis. This is the highest ever absolute revenue, EBITDA and PA T earned by us in

any quarter in the past.
We continue to outperform the two-wheeler industry in terms of vehicle production growth during Q2 FY '26. Further, we have achieved the EBITDA margin of 13.4% in Q2 FY '26, representing an improvement of 124 basis points over Q2 FY '25. But for the significant increase in aluminum alloy prices during the quarter, our EBITDA margin would have been 13.7%. Our EBITDA margin is affected by aluminum alloy prices. Upward increase in prices of aluminum affects our EBITDA percentage because o f the denominator effect ,however, our absolute EBITDA number remains the same.

With this strong performance on profitability, our earnings per share in Q2 FY '26 has increased to Rs. 4 .05 per share against Rs. 3. 41 per share in the same period last year. Improvement in margins is mainly driven by better economies of scale due to higher volumes, benefit from increasing capacity utilization at Karoli and new Bangalore facilities, and strategic reduction in low-value -added wheel assembly business.
As a result, in first half of FY '26, we delivered revenue growth of 14%, excluding wheel assembly business. Wheel assembly's strategic reduction by (-) 53.6%, the consolidated revenue has grown by 6.1% on year -on-year basis. Achieved growth of 19.4% in EBITDA and 17.5% in PAT on year -on-year basis, we have delivered EBITDA margin of 13.6% , an improvement of 151 basis points on year -on-year basis. With strong performance on profitability, our earning per share in H1 FY '26 has increased to Rs. 7.4 per share against Rs. 6.3 per share in the same period last year.
Our all three product segments performed well in Q2 & H1 FY '26 in terms of revenue growth.
We have sustained our market leadership position in the advanced braking system with a revenue growth of 10% in Q2 and 7% in H1 FY '26 on year -on-year basis.
The Aluminum Light Weighting Precision Solutions ' revenue grew by 22% in Q2 and 19% in H1 FY '26 on year-on-year basis. The Safety Control Cable revenue also recorded growth of 2% in Q2 and 4% in H1 FY '26 on year -on-year basis.
In the unstable global geopolitical environment due to tariff and other issues of rare earths and magnets, our revenue from exports were at Rs. 63 crore against Rs. 74 crore last year in the same period , however we do feel that w e will cross last year's number.
Thank you very much for your patient hearing. With this, we leave the floor open for question and answer.
Moderator: Thank you very much. We will now begin the question -and-answer session. The first question is from the line of Rishi Kapadia from CLSA India Private Limited. Please go ahead.
Rishi Kapadia: First of all , congratulations to the management for reporting such a strong number. S ir, first of all, congratulations that you delivered a strong 19% growth in the EBITDA front and you did call out that there was a 30 bips impact due to the aluminum price inflation. So, is it fair to assume that the revenue was inflated due to this by around 2.5 % to 3%? That's one.
And second, for this quarter as well for Q3, we are seeing some aluminum cost inflation. So, anything to highlight what would be the effect on the revenue and the margin for the Q3? That's my first question.
Kuldip Singh Rathee: Yes, you have very rightly pointed out that if the EBITDA margin percentage gets affected by 30 basis point, even the revenue also goes up by about 2.5 % to 3%, that is a very correct observation of yours because of the aluminum price increase.

Kuldip Singh Rathee: Aluminum prices are going up only , they have not stopped. We will let you know quarter -on-quarter what the trend remains . We are getting the aluminum prices, whatever is the raw material cost plus the value addition , so, in percentages it will keep on changing, but the absolute numbers will remain the same.
Rishi Kapadia: My second question is towards the safety cable segment where it was one of a growth segment. But for this quarter, we have just grown by 2% and that on a lower base. So , anything to highlight? Was there anything significant happened in the segment?
Kuldip Singh Rathee: Nothing significant has happened , except that , the approvals from the companies is on few certain models . If the model ratios change, then it gets affected and it is a result of that basically.
Rishi Kapadia: Going forward, what growth assumption do you think in safety cable segment ?
Kuldip Singh Rathee: That will depend on what more demand comes for which vehicle now after this GST reduction. All efforts are in that there should be a reasonable growth. Overall growth in the revenues will

be totally as per our guidelines. From the beginning, we have given the guideline of mid -teens
and plus this aluminum price impact , that we still hold.
Rishi Kapadia: We have seen very strong growth in the export front, despite adverse macro-economical
conditions. So , any highlight on how the exports volume would look like? What is your outlook
for FY '26 and ' 27 on export front?
Kuldip Singh Rathee: Export front, we were very bullish. We were trying hard on that, but suddenly this geopolitical
situation changed , and that has really affected this particular year , otherwise we were very
bullish even on this financial year. As per the news, if this rare earth and magnet issue gets
resolved, I think the Q4 should be, again, normal. That is why we still believe that we will cross
the last year's number , in spite of all the odds against us.
Moderator: The next question is from the line of Yash Agarwal from Nirmal Bang. Please go ahead.
Yash Agarwal: First of all, congratulations for a great set of results. My first question is, can you please give
breakup of Rs. 600 crore of CAPEX done in last two years and Rs. 250 crore of CAPEX done
in first half and also the outlook for remaining FY '26 and next year?
Naresh Kumar : Our CAPEX in the last two years is mainly towards the plant and machinery and some part is in
the building. This year we have a plan of around Rs. 450 crore of CAPEX in the complete total
year, out of that, Rs. 370-odd crore already released and the rest will be in the second half.
Yash Agarwal: And for the next year?
Kuldip Singh Rathee: Next year will depend because now after doing this CAPEX , we are completely sorted for the
growth of the next financial year. As per op

timism , whatever the way the situation develops, we
will be investing , normally we do invest around Rs. 400 crore every year because on an
optimistic note.

Yash Agarwal: When do you expect the additional capacit ies to ramp up fully, like based on my assumption , it
is close to 6 0% right now?
Kuldip Singh Rathee: Yes, it is 60% right now. In next financial year, we expect this to go to something like 75 %,
80%.
Yash Agarwal: What will be your projection for next few years when they can reach close to 80 %, 85% in next
year?
Naresh Kumar : Actually, our capacities also keep adding.
Kuldip Singh Rathee: We keep on adding , we can't mention in the terms of percentages . We have the ambition to grow
at mid -teens, so accordingly we have to invest because we have been outgrowing the industry
always so far. And for that we need to do the CAPEX .
Yash Agarwal: Given the fact that two -wheeler aluminum casting is h ighly competitive, what growth do you
expect here beyond FY '27? And what are your internal targets for aluminum casting in other
types of private vehicle and exports?
Kuldip Singh Rathee: This is sunrise industry, not only ours for everyone in the segment. We see a great potential
going ahead in this particular segment.
Yash Agarwal: Do you have any tentative targets , anything , like, how much would be the growth?
Kuldip Singh Rathee: We have to grow at mid -teens , that is our internal target .
Yash Agarwal: What is the update on the alloy wheel business ? How much CAPEX do we plan here and what
are the timeline ?
Kuldip Singh Rathee: Alloy wheel business already we have done the CAPEX and the machines will get delivered by
February this financial year in the Q4 .We will take out the product with the Japanese
collaboration by around April or May and after testing, the supplies should start to the Japanese
OEM. Whereas the Taiwan collaboration is under testing with one of the OEMs , being a safety
item, they are taking a little more time. All our parts are safety parts and the customers do take
time to test it , so, as and when it comes, even that should start.
Yash Agarwal: That's very helpful. That's all from my side.
Moderator: The next question is from the line of Raghunand han from Nuvama Research. Please go ahead.
Raghunandan : Thank you, sir, for the opportunity. Congratulations on strong profitability and festive greetings.
Sir, my first question is on Bangalore and Karoli plants. For Bangalore plant, utilization was
expected to reach 60% in Q2. Has this been achieved? And is it on track to be 75% by Q4? Also,
how much was the utilization at Karoli? I think last quarter it was 65%.

Kuldip Singh Rathee : We have mentioned that in Q2, utilization reached 60% in the Bangalore facility, which we
opened on 14th January and in Q4, we are very confident that it will reach 70 %-75% capacity

utilization. As far as the Karoli plant is concerned, since there is more and more investment going on there, we cannot go by the percentages , but yes, we will probably remain anywhere between 60 %-70% capacity utilization. Because more and more investment is being done , I think we may be at 60% counting that investment.
Raghunandan : Got it, sir. And would you be tracking the margins at these plants, sir? How would they compare with the blended level? And you can indicate by when would you think that they will match the blended level of margin?
Kuldip Singh Rathee : They have already matched the blended level.
Raghunandan : Good to hear that, sir. Thank you. My second question was on alloy wheels business. You indicated that April onwards, the production could start off and supplies to Japanese OEMs will pan out. So, how do you see the business shaping up in terms of what could be the possible revenue in FY

'27 or 28? Or based on the CAPEX , what can be the peak revenue potential here?
Kuldip Singh Rathee : There are two collaborations we are having. In the first collaboration with Taiwan, the product we have already taken out last September , it is under testing for more than around one year. As I said, all of our parts are safety items , so we know it takes a lot of time and we are never in a hurry. The customer has to be fully sure to grant clearance for that , so once the clearance comes, we will start supplies from that collaboration. The second collaboration is from Japan, which is for a particular Japanese customer. This, as I said, the machines will come and installed in Q4 completely . In the Q1, we will be taking out the samples and giving to the Japanese customer s. Whatever time they take on the testing and approvals, after that the supplies will start. The moment the approvals come, we will be able to give you the guidelines , otherwise, before that, to give the financial guidelines will be a little premature.
Raghunandan : Understood, sir. Thanks for the explanation. Just a clarification here, sir. Based on the CAPEX you have incurred for alloy wheels , what would be the capacity in terms of revenue potential here? Would it be like Rs. 200-Rs. 300 crore ?
Kuldip Singh Rathee : Yes. Already that CAPEX that we have done will ensure the revenues of Rs. 250 crore . Whenever the approval comes, we will let you know and I think we are geared up to supply up to Rs. 250 crore .
Raghunandan : Thank you for that, sir.
Moderator : The next question is from the line of Nitin from JM Financial. Please go ahead.
Nitin : Thank you for the opportunity. In light of increasing aluminum alloy prices, do we maintain a margin target of around 14% on FY '26?
Kuldip Singh Rathee : No. Nitin, we are doing pretty well and we do hope to maintain the present margins.

Nitin : So, there will be slight miss on the margin trend in light of this rise in the aluminum prices, is that correct?
Kuldip Singh Rathee : Why do you say guidance was what? What was the guidance?
Nitin : It was 14%, if I remember.
Kuldip Singh Rathee : It was 13.7% guidance andwe have already explained that 30 basis point in percentages only will get affe cted, nothing else ,absolute EBITDA numbers remain the same. We are not off the mark in that guidance.
Nitin : Got it. Second is related to the mandatory ABS anti -lock braking systems. So, is there any further update from the government or from your customer that you see that it is going to be mandated from 1st of January, 2026?
Kuldip Singh Rathee : Not to our knowledge. And I think this question was asked to the one of the reputed OEMs also, even they could not answer to that. There is a lot of uncertainty. Let the notification come, then only we can clarify.
Nitin : All right. That is it from my side.
Moderator : Thank you. The next question is from the line of Ron ak M ehta from ICICI Securities. Please go ahead.
Ronak Mehta : Congratulations on good set of numbers. My first question is just a clarification. I think one statement was, I think you mentioned that you have already done CAPEX for the , one of the tie - ups of the alloy wheel business. I believe that CAPEX would be about Rs. 125 crore, right? Because typically asset turns are about two times , and which is how you came to that number of Rs. 250 crore revenue potential. Is that understanding correct?
Kuldip Singh Rathee : The good part in the process that we are taking of producing alloy wheels with high pressure die casting is that all the machinery and the investment is very fungible , it can be used on any other product. Since, that plant where we had invested Rs. 125 crore that already will be reaching 70%-75% capacity utilization , so that is already fully used.
Ronak Mehta : Understood, sir. Just want

ed to check , for the Karoli plant, how much investment have we done
so far? And ye s, so that is the first question ?
Kuldip Singh Rathee : This year, we will be doing total investment of around Rs. 450 crore of in that, the Karoli plant will be doing about Rs. 250 crore and rest will be some maintenance expenses and Rs. 100 crore will be further doing in the B angalore plant.
Ronak Mehta : So, Rs. 250 crore this year for Karoli and till last year, we have already invested about Rs. 450 crore , so about Rs. 700 crore ?

Kuldip Singh Rathee : Last year, till March, we had invested Rs. 490 crore .
Ronak Mehta : My second question is on the new products side. So, any new products under development that you want to highlight? When are you likely to come up with some new products? Because new product addition can obviously d rive much faster growth for you g iven how the growth has been for you in the last few years, you have substantially outperformed the underlying industry backed by the new products and new customer addition. So, any update, anything that you are working on, you want to highlight on the new product side?
Kuldip Singh Rathee : We are continuously working on some new products and I think as soon as the breakthrough comes, we will keep on briefing everyone on that account , but that effort continuously goes on.
Ronak Mehta : Sir, should we expect the new product to come this year, next year?
Kuldip Singh Rathee : It will come next financial year because this year , the business plan we are through ,what we have projected and given, I think we will be achieving it confidently .
Ronak Mehta : Fair enough, Sir. Thank you so much and. all the best.
Kuldip Singh Rathee : Thank you.
Moderator : Thank you. The next question is from the line of Naveen Kumar Dubey from Nar nolia Financial Services Limited. Please go ahead.
Naveen Kumar Dubey : Congratulations on a strong set of performance. My question is related to the two -wheeler industry itself. So, one more thing which is coming from 1st January, I think that the pay commission is getting implemented. So, what kind of additional benefit for two -wheeler industry we can expect?
Kuldip Singh Rathee : This quarter 4, we are very optimistic because as you rightly said, all the good developments are taking place already. The whole industry is quite bullish this year , so we expect that growth, which has been 5.8% so far overall in the years, maybe it touches 7%.
Naveen Kumar Dubey : Yes, because TVS was guiding, I think around 8% in the second half ?
Kuldip Singh Rathee : As you see that quarter 1 was 0.7% only, so Q2 has improved substantially , and I think that is a big boost to the two -wheeler industry.
Naveen Kumar Dubey : Will this growth be continued for maybe next 2-3 years, considering the kind of tailwind that industry is going to have for at least next 2-3 years?
Kuldip Singh Rathee : Well, I can't explain that much , but yes this year and next year, it is likely to continue.
Naveen Kumar Dubey : How is the export market situation right now? Is it improving or is it the similar as it was a few months back?

Kuldip Singh Rathee : No, it is almost similar to what it was because it is not in good shape. The news that China is releasing all the rare earths and the magnet situation that has given a boost in our minds that next few months or ne xt one year, I think there is a truce for one year between US and China. Next one year, the supply should be normal and hopefully it should pick up.
Naveen Kumar Dubey : We have seen some reduction in cash flow generation from operations in the first half compared to last year. So, was there anything different from last year or?
Naresh Kumar : You are talking about the standalone or consolidated basis?
Naveen K

umar Dubey : Yes, consolidated basis.
Naresh Kumar : Yes, this is mainly due to 2-3 things. One is the inventory increase because this time, festival season . We were expecting very good festival season and GST 2.0 impact, we invented some inventory , so working capital is impacted .
Kuldip Singh Rathee : Actually, the implementation and reduction in GST came from 23rd of September. There were very few days in Q2 and all the festivals right from Dussehra to Diwali, which is the main sale period that was in October , so there was a transition, so we built up the inventory.
Naveen Kumar Dubey : How is our content value is increasing? Do we have any kind of data since last 2-3 years? How is that moved?
Kuldip Singh Rathee : Our content value remains very strong. Whatever it was, it is carrying on. As we said earlier, though EV is not performing much . otherwise in EV content is about 40% - 50% more than ICE .

Naveen Kumar Dubey : Thank you, sir. That is it from my side and all the best .
Kuldip Singh Rathee : Thank you.
Moderator : The next question is from t he line of Vijay Pandey from Nuv ama Wealth Management. Please go ahead.
Vijay Pandey : Congratulations for an excellent quarter. Sir, couple of questions, just wanted to check in terms of aftermarket, this includes the ABS sales or like the aftermar ket sales, it includes all 3 segments, our ABS, AL PS, and safety control, or is it only one or two segments?
Kuldip Singh Rathee : In aftermarket, it is only 2 segments that is the brakes and the cables, not the aluminum.
Vijay Pandey : And the passenger vehic le will be entirely ALPS?
Kuldip Singh Rathee : Yes, it will be ALPS.
Vijay Pandey : Secondly, sir, I wanted to check about the German JV, which we discussed in the last quarter conference call. Any idea what will be the revenue potential and what can be the profit potential from that?

Kuldip Singh Rathee : Well, the JV potential, we will start working next month and we hope to come into production early in H2 of next financial year.
Vijay Pandey : H2 of FY '27?
Kuldip Singh Rathee : Yes, please. It will take like 9 months or so.
Vijay Pandey : Sir, what can be the topline or bottom line in that case for the JV business?
Kuldip Singh Rathee : Sir, let it come first. I think we will let you know. There will be many more calls before that.
Vijay Pandey : I will fall in the queue. Thank you.
Moderator : Thank you. The next question is from the line of R onak Mehta from ICICI securities. Please go ahead.
Ronak Mehta : Thank you for the opportunity once again. Sir, just one last question from my side. Looking at your growth in the aluminum segment, is it fair to assume that you are gaining market share in the ICE aluminum casting segment as well?
Kuldip Singh Rathee : We are doing well on all fronts, ICE as well as EV , and some aluminum segment, the growth has come from the PV also.
Ronak Mehta : Sir, so can you highlight some of the new programs that can drive this kind of a growth rate even for next year?
Kuldip Singh Rathee : We are very confident that this will continue next year also. I think the visibility is there.
Ronak Mehta : Sure, sir. Thank you so much, sir.
Moderator : Thank you. The next question is from the line of Sagar Shetty from BP We alth. Please go ahead.
Sagar Shetty : Thank you so much for the opportunity and congrats on the good set of numbers. So, actually, I would just like to follow up on the new plan. So, should we go with the previous assumption that the asset turnover expectation will continue to be around 1.75 or is there any update on the ratio?
Kuldip Singh Rathee : It will certainly continue like that.
Sagar Shetty : The revenue potential will also continue to be the same for both the plants ?
Kuldip Singh Rathee : You can see the financial prudence of the company and we

are very cautious on investments ,
especially focus on the bottom line , so this will definitely remain like that. We would like to maintain our ROC Es also, which is one of the best in the industry and we are very focused on that also.

Sagar Shetty : Just on the Sunroof Cable JV, so is the setup for the project on schedule like the Rs. 10 crore investment which you planned earlier? So, is it in line with your timeline or is there any changes on that? Like we were expecting the revenue to be expected by 2027?
Kuldip Singh Rathee We told you that the Sunroof joint venture will be putting into production in 9 months and in H2 of next financial year, some breakthroughs should come in revenue.
Sagar Shetty : Thank you.
Moderator : Thank you. The next question is from the line of Maulik Gandhi from V al-Q Investment Advisory Private Limited. Please go ahead.
Maulik Gandhi : My first question is that currently , in the aluminum lightweight intervention solutions for the four-wheeler , you are currently doing for only the ECU body. So, are we planning to add more products in the four -wheeler space so that we could explore into some other areas in four - wheelers for Aluminum Light Weight ing?
Kuldip Singh Rathee : Yes, you will see the numbers have improved and the supplies to the passenger cars and we have

added some more products.
Maulik Gandhi : What would be our content for vehicles in the four -wheeler?
Kuldip Singh Rathee : It is not significant at the moment.
Maulik Gandhi : By 2-3 years' time, do we expect this business to be, let us say, around 10 %-12% of our total is turning ?
Kuldip Singh Rathee : We are trying hard to improve on all fronts and our main aim is to focus on our mid -teens growth , that is more important.
Maulik Gandhi : That is it from my side. Thank you.
Moderator : Thank you. As there are no further questions from the participants, I now hand the conference over to Mr. Kuldip Singh Rat hee from ASK Automotive Limited for closing comments. Thank you and over to you.
Kuldip Singh Rathee : Yes, thank you very much, everyone. Thank you for your patient listening and well, I hope that I could clarify your queries quite transparently. In fact, I would also like to say that I am an optimist and I always remain optimist. The numbers that we give you are our aspirational numbers. But let me tell you, we work very hard to achieve those numbers , that is what we have been doing so far. The company will hopefully keep on performing a simi lar manner in the coming future a nd create value for our stakeholders ,that is the intention. Thank you very much.
Moderator : Thank you. On behalf of Adf actors PR, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

"ASK Automotive Limited Q3 and 9 M FY26 Post-
Results Conference Call"

January 29, 2026

MANAGEMENT : MR. KULDIP SINGH RATHEE – CHAIRMAN AND
MANAGING DIRECTOR
MR. PRASHANT RATHEE – JOINT MANAGING
DIRECTOR
MR. AMAN RATHEE – JOINT MANAGING DIRECTOR
MR. NARESH KUMAR – CHIEF FINANCIAL OFFICER
MR. MANOJ SHARMA – CHIEF GENERAL MANAGER ,
INVESTOR RELATIONS
MODERATOR : MR. RUSHABH SHAH – ADFACTORS PR

Moderator : Ladies and gentlemen, good day and welcome to ASK Autom otive Q3 and 9 M FY26 Post Results Earning call hosted by Adfactors PR.
As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing '*', then '0' on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Rushabh Shah from Adfactors. Thank you and over to you, sir.

Rushabh Shah : Good evening to everyone and welcome to Q3 and 9 M FY26 Earnings Call of ASK Automotive Limited.
From the management, we have with us Mr. Kuldip Singh Rathee – Chairman and Managing Director; Mr. Prashant Rathee – Joint Managing Director; Mr. Aman Rathee – Joint Managing Director; Mr. Naresh Kumar – Chief Financial Officer and Mr. Manoj Sharma - Chief General Manager, Investor Relations.
Before we begin the call, I would like to mention that some of the statements made during the call may be forward -looking in nature and hence it may involve risks and uncertaint ies, including those related to the future financials and operating performance of the company. Please bear with us if there are any call drops during the course of the conference call . We would like to ensure the call is reconnected at the earliest.
I would now like to hand over the call to Mr. Kuld ip Singh Rat hee - Chairman and Managing Director for his opening remarks. Thank you and over to you, sir.
Kuldip Singh Rathee : Thank you, Mr. Rushabh . Good evening, ladies and gentlemen. It is my great pleasure to welcome you all to our Q3 and 9M FY26 Earnings Conference Call.
I hope you have had the opportunity to review the detailed presentation submitted to the exchanges and ava ilable on our website. The Government of India's GST 2.0 reform marks a pivotal milestone that is set to elevate the Indian automobile industry and energize the broader economy, given the sector's deep forward and backward linkages.
Now, let me begin by sharing a quick overview of the broader industry as reported by SIAM :
The Indian automobile sector witnessed healthy momentum in 9M FY26 with overall vehicle production across all segments registering robust year -on-year growth of 9.3%. The two -wheeler segment matched the overall vehicle production growth at 8.8% on year -on-year basis. We are

optimistic that the growth momentum will remain in the coming quarters as well, supported by stable macroeconomic conditions and GST 2.0 reforms that have improved overall affordability and consumer sentiment.
The two -wheeler industry closed 9M FY26 with a strong production volume of 19.6 million units, up from 18 million units in 9M FY25. In Q3 FY26 alone, production touched 6.8 million units as compared to 5.9 million in the same quarter last year.
Looking ahead, we believe that the industry will continue to gain from the far -reaching macroeconomic policy reforms undertaken by the government, particularly GST 2.0 reforms, personal income tax rationalization announced in the union budget 2025 -26, succ essive rate cuts and liquidity enhancement measures by the Reserve Bank of India. These have positively impacted consumer purchasing power and improved access to the vehicle financing, created a conducive environment for the sustained demand. Rising rural income will also be beneficial for the two -wheeler sector. Since all our products were under the category of 28% GST, hence the reduction of GST rate from 28% to 18% is helping us to outgrow in the Indian aftermarket and gain more market share from grey ma rket operators and duplicators. With this positive backdrop, we remain optimistic about the growth trajectory of the

sector in the coming quarters.
Before we move on to ASK's business performance, we would like to highlight that our 9.9 megawatt solar plant at Sirsa, Haryana has started supplies from April 25. We are excited with the results in terms of sustainable operational economies. Happy to anno unce that the company is installing one more captive solar power plant of 11.55 megawatt at Rajasthan, which is expected to be operational by Q1 FY27. This reflects ASK's special focus on green energy.
Moving on to business updates :
I am delighted to share with you that we had a strong finish to the Q3 and 9M FY26 in both revenue and profitability. This marks our 9th consecutive quarter of robust performance since the company's listing. During Q3 FY26, we delivered revenue growth of 28% excluding wheel assembly business. The wheel assembly strategic reduction was 51.5% and thus our consolidated published revenue has grown by 18.5% on year -on-year basis. We achieved growth of 26.8% in EBITDA and 21.3% in PA T on year -on-year basis. This is the highest ever absolute revenue EBITDA and PA T earned by us in any quarter in the past. We continue to outperform the two - wheeler industry in terms of vehicle production growth during Q3 FY26. Further, we have achieved the EBITDA margin of 13.4% in Q3 FY26, representing an improvement of 88 basis points over Q3 FY25. Our EBITDA margin is affected by aluminum alloy prices. Upward increase in prices of aluminum affects our EBITDA percentage because of denominator effect. However, our absolute EBITDA number remains the same.
With this strong performance and profitability, our earnings per share in Q3 FY26 has increased to Rs. 4.05 per share against Rs. 3.34 per share in the same period last year. Improvement in margins is mainly driven by better economies of scale due to higher volumes, benefit from

increasing capacity utilization at Karoli and New Bangalore facility and strategic reduction in low-value added wheel assembly business. As a result, in 9M FY26, we delivered revenue growth of 18.6%, excluding wheel assembly business. Because of wheel assembly strategic reduction by 52.8%, the consolidated revenue which is published has grown by 10.2% on year - on-year basis , achieved growth of 21.9% in EBITDA and 18.8% in PAT on year -on-year basis.
We have delivered EBITDA margin of 13.5%, an improvement of 130 basis points on year -on- year basis. With strong performance and profitability, our earnings per share in 9M FY26 has increased to Rs. 11.45 per share against Rs. 9.64 per share in the same period last year.
Our all three product segments performed well in Q3 and 9M FY26 in terms of revenue growth.
We have sustained our market leadership position in the Advanced Braking System. Our Advanced Braking System revenue grew by 22% in Q3 and 12% in 9M FY26 on year -on-year basis. The Aluminum Lightweighting Precision Solution revenue grew by 36% in Q3 and 24% in 9M FY26 on year -on-year basis. The Safety Control Cable revenue also recorded growth of 22% in Q3 and 10% in 9M FY26 on year -on-year basis.
In the unstable global geopolitical environment due to tariff and other issues, our revenue from exports were at Rs. 100 crore against Rs. 108 crore last year in the same period. However, based on Q3 FY26 performance, we do feel that we will touch the last year's number.
Thank you very much for your patient hearing. With this, we leave the floor open for question and answer.
Moderator: Thank you so much, sir. Ladies and gentlemen, we will now begin with the question -and-answer session. First question comes from the line of Raghunandan N L from N uvama Research. Please go ahead.
Raghunandan N L: Thank you, sir, for the opportunity. Congratulations to you and the entire team for the strong numbers. My first question was on the CAPEX side. The new CAPEX of Rs. 35 crore and increasing th

e capacity to 32 crore Brake Shoes and Pads. So how much would now the total CAPEX be for FY26 and also your thoughts on FY27 CAPEX ? And even for FY26, if you can also provide a breakup of CAPEX that will be very useful ?
Kuldip Singh Rathee : We will close the FY26 CAPEX . We had planned Rs. 450 crore initially in the FY26. However, we tried to minimize wherever it was possible. But then , another CAPEX of Rs. 40 crore we did to set up the solar power plant, which was not scheduled initially. And with this extra CAPEX , but still we will close the CAPEX at Rs. 500 crore.
Raghunandan N L: Noted, sir. And how do you see it for FY27?
Kuldip Singh Rathee : FY27 CAPEX will be less. We intend to be within limits of Rs. 400 crore only.
Raghunandan N L: Got it, sir. And on Brake P ads, approximately what would be your market share?

Kuldip Singh Rathee : See, the Brake Pads, overall market is less than that. So our market share should be around between 10 %-12% or something.
Raghunandan N L: Got it, sir. And congratulations on the performance on exports in this quarter. You had earlier spoken about the Ford order. Would that be commencing by end of FY26? And how do you see that Ford order commencing and ramping up over FY27 and FY28? And also because of this order, would you expect FY26 exports to be flat?
Kuldip Singh Rathee : See, FY26 exports, as I mentioned, will be flat. However, the exports to Ford have already started. The containers are going, but because of the great uncertainties created by the tariff issues, not only by US, but also by Mexico, where some parts were going and they have also imposed 50 % duties. But still, we are very hopeful that since our product is highly technical, we feel there will be some smooth supplies in the FY27.
Raghunandan N L: Got it, sir. Just the last question. Can you share , how was the utilization at Bangalore and Karoli plant this quarter?
Kuldip Singh Rathee : Yes, sir. In this quarter, we have reached between 75 %-80% capacity utilization in the Bangalore plant. And now , it is almost fully operational Bangalore plant. And the capacity utilization in Rajasthan plant remains at 65 % only, because in that we are waiting for some new items to be started, which are likely to start in the H2.
Raghunandan N L: Got it, sir. Thank you. Thank you so much and wishing all the best.
Kuldip Singh Rathee : Thank you, sir.
Moderator : Thank you. Our next question comes from the line of Naveen Kumar Dubey from Narnolia Financial Service Limited. Please go ahead.
Naveen Kumar Dubey : Yes. Hi, sir. Congratulations for the strong set of numbers. I have two questions. First question is related to the margin. Our ALPS business is like 50 % of the revenue currently. And aluminum

prices have gone up, but we do not see much of impact on the margin. Have we taken any price increases in that?
Kuldip Singh Rathee : No, Mr. Naveen, we have not taken any price increase so far. And the margins that you see is already down by at least 30 -40 basis point because of the aluminum price increase. The revenue has gone up by that much and the EBITDA margin has come down by 30 basis point. So what you see, the EBITDA margin in this quarter of 13.4 % would have been 13.7 % or 13.8 % had the aluminum prices have not skyrocketed.
Naveen Kumar Dubey : And the second question is on the same frame, Alloy Wheel business. We have d one that Japanese collaboration a nd how is that progressing, sir?

Kuldip Singh Rathee : That is progressing pretty well. We are going to take out the product in our premises, first product before February end. They will be testing for a few months and we hope to start the supplies in the start of H2.
Naveen Kumar Dubey : Thank you, sir. That is it from my side.
Moderator : Thank you so much. Our

next question comes from the line of Vijay Pandey from Nu vama Wealth Management. Please go ahead.
Vijay Pandey : Hi, sir. Thank you for taking my question. S ir, two questions. One was on the commodity prices. How are we tackling this increased commodity inflation, especially on the Aluminum side? Do we have any hedge or is it a pass -through? How should we look into that?
Kuldip Singh Rathee : The Aluminum prices are pass -through s month -on-month. So we are not very much affected on that account. So that is what we said that the absolute EBITDA number is remaining the same. Only the percentage of the EBITDA has gone down by 30 basis points.
Vijay Pandey : Second ly sir , our new plan t, which we are setting up, this will be powered by solar. So is there any extra incremental CAPEX because of the solar situation, because the cost of solar panel has gone up? Like, can you confirm the incremental unit economic sales?
Kuldip Singh Rathee : No, w e are not incurring any extra. There is no impact because the project is getting almost complete. All the supplies had already come before the price increase. So this new solar plant will be set up within the stipulated budget.
Vijay Pandey : And sir, i s it possible if you can give us an outlook for the remainder of the 4th quarter and go into FY27, slide breakup for the two -wheelers, especially in the rural and urban that will be pretty helpful ?
Kuldip Singh Rathee : So as regards the coming quarter is there, we have very strong projections from the OEMs. And even the independent aftermarket is looking very good because of the GST reduction from 28 % to 18% in our line. So we are very bullish even on this Q4. And as regards the next year, we are very bullish on that because we feel that this two -wheeler story will continue because it has started continuing only after a gap of many years. So even the next year seems to be very good.
Vijay Pandey : Thank you.
Moderator : Thank you. Our next question comes from the line of Deep Shah from Y ES Securities Institutional Equities. Please go ahead.
Deep Shah : Yes. Hi, sir. Thanks a lot for the opportunity. Sir, few questions. So first to begin with on the Alloy Wheels itself. While you have alluded some timelines to our Kyushu Japanese JV, if you

can throw some light on the Lioho , the Taiwan JV that we were working for. So any progress in that? That would be my first question?
Kuldip Singh Rathee : Yes. Taiwan, I think is going on well. It is under testing. There were a few amendments to be done. We have already done those amendments. But I have explained it in every call that this being a safety item, we cannot do any hurri ed call, we cannot take . So let the customer take the call. But we are very confident all the results will definitely come in the Taiwan collaboration. Also, positive results will come.
Deep Shah : And sir, the second question is about the S unroof Cable JV that we did and then some sort of supply what is expected from 1H FY27. So where are we on that journey? Is it on track or is there any initial , let us say, soft commitments by the O EMs, if you can throw some light there?
Kuldip Singh Rathee : We are very much on track on that. Already, the machines have come, the setup is there and I think all our samples, etc., production will come out in the Q2 FY27 and the supply should start in the H2.
Deep Shah : And sir, roughly, what would be the addressable revenue size for us?
Kuldip Singh Rathee : Addressable revenue side is not too big. Addressable revenue side is about Rs. 100 C r. That is all. But you see, I told in the last call that we don't do many things just for the sake of money. We take pride in saying that this is Atma nirbhar Bharat project and we will be the first one to

initialize it in the country.
Deep Shah : Surely. And sir, last question is about the A

ISIN JV. So there also we had commented about
some appointment of some 40 -50 odd dealers for aftermarket penetration. So where are we on
that aspect?
Kuldip Singh Rathee : That is ramping up now , slowly and gradually and maybe in the first quarter of next year, we will breakeven in that.
Deep Shah : Thanks a lot for that.
Kuldip Singh Rathee : Thank you.
Moderator : Thank you. Next question comes from the line of Yash Ag rawal from Nirmal Ban g. Please go ahead.
Yash Agr awal: Good evening, sir. And congratulations for the great set of results. I just wanted to know your view on any update on the draft ABS exhibition which was meant to be implemented by the 1st Jan. So do you have any update on that?

Kuldip Singh Rathee : No, there is no update from the government. I think it was a draft which is now hanging because of the request of the OEMs .
Yash Agr awal: And also in the quarter 3, we have seen that a two -wheeler I CE segment growth outpaced the two-wheeler E V segment. So maybe because of the GST benefit, the I CE segment is doing better in the two -wheeler side. So do we expect this trend to continue going forward?
Kuldip Singh Rathee : You are right, because now the gap is very less because of the GST reduction. And that way, I think the I CE sector is rather in a stronger position.
Yash Agr awal: And what are your expectations for the Q4 two -wheeler production growth estimates? Have you revised it higher as compared to the last time?
Kuldip Singh Rathee : We know our projections. We always say we will grow in mid-teens and we will be growing in mid-teens .
Yash Agr awal: Thank you from my side.
Moderator : Thank you. Our next question comes from the line of Harsh S heth from PI Square. Please go ahead.
Harsh S heth: Hi, sir. I just wanted to understand your guidance about your debt levels and what are our plans with that?
Kuldip Singh Rathee : Our debt equity nev er increases 0.5 x and we will remain below that in spite of the extra expenditures on CAPEX that will be increasing this financial year. And it is always one year of EBITDA. Normally, it is close to that.
Harsh Sheth: I just also wanted to understand what would be your ideal capacity utilization across your various plants on a blended level?
Kuldip Singh Rathee : See, the economies of scale come and we are overall at 80% capacity utilization. We love to do that. But however, we put up the next plant much before because we are suppliers to all our prestigious customers and direct online and just -in-time suppliers. So we keep al ways some extra capacities .
Moderator : Thank you. Our next question comes from the line of Sahil Sanghvi from Mona rch Networ th Capital. Please go ahead.
Sahil Sanghvi : Good evening, sir. Thank you for the opportunity and congratul ations for very good numbers. Sir, just wanted to understand the growth in the ABS segment and the ALPS segment that we have reported. So ideally, in the Braking segment, we usually have something, some growth around the two -wheel er industry. But this time, it is much higher. So if you could help us with

the reason and also the Aluminum segment has grown a little higher than our run rate for the last 2-3 quarters. So just the reason for that and do you expect that these growth rates will sustain?
Kuldip Singh Rathee : See, there has been an impact on the Indian aftermarket. As I have mentioned many times that before the reduction of GST, we were unfortunate to be on the 28% bracket, now that it has come down to 18%. So a lot of grey market, we are giving a tough fight to the grey market operators, which are prevalent in the country. So I think we are grabbing more and more share from them. So that there is a very huge growth in the Indian aftermarket. That is the main reason p lus our ICE OEM playe

rs, their duty was also reduced from 28% to 18%. So their numbers have also increased tremendously. And in the Q3, even they grew by 15%.
Sahil Sanghvi : So similar reasons apply for the Aluminum segment?
Kuldip Singh Rathee : Aluminum segment, yes. Similar reasons or even otherwise, the work can come from anywhere.

That is a very flexible and great opportunity. That is why we call it the sunrise industry.
Sahil Sanghvi : Got it, sir. Got it. Thank you, sir.
Moderator : Thank you. Our next question comes from the line of Sagar Shetty from BP Equity. Please go ahead.
Sagar Shetty : Yes, sir. Am I audible?
Kuldip Singh Rathee : Yes, please.
Sagar Shetty : Yes. So congrats on the good set of numbers. So I just wanted to get a picture on h ow, like after the GST rate cut , how is the sentiment going on with the OEMs? Are we seeing any particular better demand from two -wheelers or PVs or anything like that? If you could just give some color on it?
Kuldip Singh Rathee : See, after the reduction in GST, two -wheeler demand is really picking up , both at the OEM level and the independent aftermarket level. And it has been a real big boost to the two -wheeler sector.
Sagar Shetty : And s ir, do we expect some like, if not in Q4, but FY27 onward, do we expect some revision in our growth guidance, like from mid -teen digits to somewhere around high teen digits or anything like that? Or do we expect some ?
Kuldip Singh Rathee : We always expect mid -teens and we are happy to achieve that. Because, see, we are outgrowing the market. You will appreciate that. Even this year, in spite of such good times, the two -wheeler sector in 9 months has grown only by 8.8%, and whereas we have grown substantially higher.
Sagar Shetty : Right. And s ir, if I could just ask one more thing, like with the ABS thing going on, so if the draft has not been announced by the government, so what is going on with the OEMs right now?

What is the sentiment with the two -wheeler manufacturers? Have we had any conversation with them? And is there any kind of thing you have discussed on how ?
Kuldip Singh Rathee : No. I have repeatedly said that we will not talk on this hypothetical question and we will discuss when the final notification comes because our OEMs are already in discussion with the government that it is not practical. So let the result come out of that. We are not aware what they are discussing with the government.
Sagar Shetty : Got it, sir. Thank you so much.
Moderator : Thank you. Our next question comes from the line of Nitin Agr awal from JM Financial. Please go ahead.
Nitin Agrawal : Yes, thanks for the opportunity and congratulations on a great set of numbers. I wanted to know about your EBITDA margin guidance since we have ramped up the Bangalore facility and the Rajasthan facility is expected to ramp up. So are we trying to, are we thinking of revising our estimates upwards going in FY27 or are we maintaining around 13.7 % thereabouts?
Kuldip Singh Rathee : We had given a guidance of 13.7 %, but that gets affected at least by 30 basis points because of the denominator factor of the Aluminium price increase. So that 13.7 % becomes 13.4 % and we are very hopeful that we will try to maintain around that only in the next financial year.
Nitin Agrawal : Sir, but you highlighted that the A luminium prices are a pass -through on a month -on-month basis. So eventually the margin will come back to what we were guiding for initially. Is that understanding correct?
Kuldip Singh Rathee : No, that understanding is not correct. The contribution that we get for doing the job remains the same. So when the Aluminium prices go up, the EBITDA margins percentage goes down. But the absolute EBITDA remains the same.
Nitin Agrawal : Got it. That is it from my side. Thank you.
Moderator : Thank you. Our next question comes fr

om the line of Vijay Pandey from N uvama Wealth Management. Please go ahead.
Vijay Pandey : Thank you for the follow -up. I just want to confirm about the launch pipeline for the new products in the next year. So we have Sunroof, we have two programs of Alloy Wheels. If you can just confirm when can we expect commercial production or mass production?
Kuldip Singh Rathee : Both the programs we will be launching in the start of H2.
Vijay Pandey : So both elements, the element with Taiwan, the one element with the Japanese company, both will come in the second half only?

Kuldip Singh Rathee : Yes, second half they can come. They will come in second half after due testing and even this Sunroof Cable will also come. That will also come.
Vijay Pandey : I think generally how much time does it take for the full ramp up? So when can we expect?
Kuldip Singh Rathee : We are prepared from day one. We are prepared today also because we have already invested everything. So once the testing is complete, then we will immediately gear up.
Vijay Pandey : Thank you, sir, and all the best for the quarter .

Kuldip Singh Rathee : Thank you.
Moderator : Thank you. Our next question comes from the line of Rishi Kapadia from CLSA. Please go ahead.
Rishi Kapadia : Yes, thank you so much for taking my questions and congratulations on a good set of numbers. Sir, my first question is on Wheel Assembly business. By w hen can we expect that this would kind of completely phase out?
Kuldip Singh Rathee : Sir, the customer has assured that by March end the balance will also go, which is about 48%. So let us see once the customer takes it back , we wi ll be announcing in the next call. But if the customer takes it back in March, then next year also , you will see the same representation from our side that excluding Wheel Assembly, this is the growth and without Wheel Assembly published is this much.
Rishi Kapadia : Thank you, sir. And sir, my second question is on your ROC E, you are currently delive ring 27% - 28% of ROCE and despite capacity utilizations of your two plant at lower levels. So what do you expect? Can ROC E go ahead from current levels or 27 %-28% is something that would kind of build in?
Kuldip Singh Rathee : I hope, Rishi, you are satisfied with 27% ROC E. That is a tough job to achieve, which we are achieving. And the second thing I would correct that one plant has already gone to 80% capacity utilization. So only one is left now at 65%. ROC E will remain. This will be difficult to maintain 27%, but we make all our efforts to maintain 27 %.
Rishi Kapadia : And s ir, lastly, just the clarification, would Aluminium inflation would lead to roughly 2% revenue inflation as well o r it will be lesser than ?
Kuldip Singh Rathee : Certainly. One side, it leads to revenue inflation. The other side, it leads to reduction in the percentage of EBITDA margin, not the absolute, but percentage of EBITDA margin.
Rishi Kapadia : So the quantum would be just 2% roughly, right?
Kuldip Singh Rathee : Yes, you can say , 3%. 2%-3%, ye s.

Rishi Kapadia : Thank you so much.
Moderator : Thank you. As there are no further questions from the participants, I would like to hand the conference over to Mr. Kuldi p Singh Rathee from AS K Automotive Limited for closing comments. Thank you a nd over to you, sir.
Kuldip Singh Rathee : Thank you, everyone, for such a patient hearing. And I would like to once again reassure you that the future looks very bright. And as you know that I am always an optimist, our Q4 is going to be very bright and even the next year seems to be very good. On that positive note, I would like to end and thank you. Thank you very much once again.
Moderator : Thank you so much, sir. On behalf of AS K Automotive, that concludes this conference. Tha

nk
you for joining us and you may now disconnect your lines.

"ASK Automotive Limited
Q4 and FY26 Post Results Earnings Conference Call"
May 20, 2026

MANAGEMENT : MR. KULDIP SINGH RATHEE – CHAIRMAN AND MANAGING DIRECTOR
M R. PRASHANT RATHEE – JOINT MANAGING DIRECTOR
M R. AMAN RATHEE – JOINT MANAGING DIRECTOR
M R. NARESH KUMAR SHARMA– CHIEF FINANCIAL OFFICER

MODERATOR : MR. RUSHABH SHAH – ADFACTORS PR

Moderator: Ladies and gentlemen, good day and welcome to ASK Automotive Q4 and FY26 Post Results Earnings Conference Call, hosted by Adfactors PR. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing star then zero on a touchtone phone. Please note that this conference is being recorded. I now hand the conference over to Mr. Rushabh Shah from Adfactors PR. Thank you and over to you, sir.
Rushabh Shah: Thank you. A very good evening to everyone and warm welcome to the Q4 and FY26 earnings call of ASK Automotive Limited. From the senior management, we have with us Mr. Kuldip

Singh Rathee, Chairman and Managing Director; Mr. Prashant Rathee, Joint Managing Director; Mr. Aman Rathee, Joint Managing Director; and Mr. Naresh Kumar Sharma, Chief Financial Officer.

Before we begin the earnings call, I would like to mention that some of the statements made during today's call may be forward-looking in nature and hence it may involve risk and uncertainty, including those related to future financials and operating performance of the company. Please bear with us if there are any call drops during the course of the conference call. We would ensure that the call is reconnected at the earliest. I now hand over the call to Mr. Kuldip Singh Rathee, Chairman and Managing Director for his opening remarks. Thank you and over to you, sir.

Kuldip Singh Rathee: Thank you, Mr. Rushabh. Good evening, ladies and gentlemen. It's my great pleasure to welcome you all to our Q4 and FY26 earnings conference call. I hope you have had the opportunity to review the detailed presentation submitted to the exchanges and available on our website. In FY26, Indian economy remained resilient and stands as the world's fastest growing major economy.

As per RBI's recent estimate, the GDP is expected to attain an impressive growth rate of 7.6%. This momentum is driven largely by robust domestic demand, resilient private consumption, strong investment in infrastructure and enabling government policies. The Government of India's GST 2.0 reforms mark a pivotal milestone that is driving structural shift in the growth momentum across the Indian automobile industry and has energized the broader economy, given the sector's deep forward and backward linkages.

GST 2.0 being a structural reform, the benefit of which will accrue over a long period of time. After 28th February, 2026, geopolitical conflict in West Asia has disrupted the global economy, posing an unprecedented challenge in supply chain, creating undue volatility in energy, commodity and currency across the globe and it has started affecting Indian economy as well. The phenomenal increase in aluminium alloy prices in particular have affected our industry. Despite these challenges, we are optimistic that the growth momentum will remain in the coming quarters. Let me begin by sharing a quick overview of the broader industry as reported by SIAM. The Indian automobile sector witnessed healthy momentum in FY26 with overall vehicle production across all segments registering a robust year-on-year growth of 11.8%. The two-wheeler segment matched the overall vehicle production growth at 11.8% on year-on-year basis.

The two-wheeler industry closed FY26 with a strong production volume of 26.7 million units, up from 23.9 million units in FY25. In Q4 alone, production touched 7 million units as compared to 5.8 million in the same quarter last year. I am happy to share that this year the two-wheeler industry production volumes have surpassed the previous peak of FY19.

Looking ahead, we believe that the industry will continue to gain from the far-reaching macroecono

mic policy reforms undertaken by the government, particularly GST 2.0 reforms, personal income tax rationalization announced in the Union Budget 25-26, successive rate cuts, and liquidity enhancement measures by the Reserve Bank of India. These have positively impacted consumer purchasing power and improved access to vehicle financing, created a conducive environment for sustained demand.

Rising rural income will also be beneficial for the two-wheeler segment. Since all our products were under the category of 28% GST, hence the reduction of GST rate from 28% to 18% is helping us to outgrow in the Indian aftermarket and capture more market share from grey market operators and duplicators. Happy to share that our independent aftermarket has grown by 24.7% in FY26. We still remain optimistic that the geopolitical situation shall normalize soon, and the growth trajectory of our sector shall be maintained.

Before we move on to ASK's business performance, we would like to highlight that on the green energy front, as already shared with you earlier, I am happy to update that our 9.9 megawatt solar plant at Sirsa, Haryana has been fully operational since April 2025 and is delivering the sustainable operational economies on the expected lines. Our second captive solar plant of 11.55 megawatt in Bikaner, Rajasthan is progressing well and is expected to be commissioned in Q2 FY27, this reflects ASK's special focus on green energy.

Moving on to our business updates. I am delighted to share with you that we had a strong performance in the fourth quarter and full year in both revenue and profitability. This is the 10th consecutive quarter of robust performance by us since listing of the company. As already shared in the previous con-call that our EBITDA margin gets affected due to volatility in the aluminium prices because of the denominator effects.

We delivered strong performance in Q4 FY26 in business and recorded consolidated revenue growth of 35.3%. Excluding pass-through impact of significant increase in aluminium prices on

revenue, which was 8% and wheel assembly business strategic reduction, which was negative 2.7%, overall, our net revenue has grown by 30% on year-on-year basis.
We achieved EBITDA of Rs. 140 Cr with 31.1% year-on-year growth. EBITDA margin at 12.1%, however, this EBITDA percentage was impacted due to pass-through alloy prices as mentioned earlier. For this impact, EBITDA percentage would have been higher by 80 basis points. We achieved PAT of Rs. 72 Cr with 24.2% year-on-year growth. EPS has increased to Rs. 3.63 against Rs. 2.92 in last year in the same period, up 24.2% year-on-year.
As regards our annual results for FY26, we delivered consolidated revenue growth of 16.2%. Excluding pass-through impact of significant increase in alloy prices on revenue, that is 3.1%

and impact of wheel assembly business strategic reduction, that is 7%, overall net revenue has grown by 20.1% on year-on-year basis.
We have outperformed the two-wheeler industry production growth of FY26. We achieved EBITDA of Rs. 551 Cr with 24.1% year-on-year growth. EBITDA margin at 13.1%, however, EBITDA percentage was impacted due to pass-through alloy prices. For this impact, EBITDA percentage would have been higher by 40 basis points.
This reflects the result of our continued focus on expanding value-added businesses, improving utilization of production capacities and bringing cost efficiencies. Our aim is to sustain current level of EBITDA margins and continue our efforts to improve gradually in the subsequent quarters, depending upon the growth of the two-wheeler industry and geopolitical environment.
With strong performance, our EPS has increased to Rs. 15.08 per share against Rs. 12.56 per share in the last year same period. Our all three product segments performed well and surpassed the industry growth of 11.8% in FY26 in terms

of revenue growth. We have sustained our market
leadership position in the advanced braking system. Our advanced braking system revenue grew by 32% in Q4 FY26 and 17% in FY26 on year-on-year basis.
The aluminium light-weighting precision solutions revenue grew by 47% in Q4 FY26 and 30% in FY26 on year-on-year basis. The safety control cable revenue also recorded growth of 26% in Q4 FY26 and 14% in FY26 on year-on-year basis. Our revenue from exports were at Rs. 141 Cr in FY26 against Rs. 147 Cr last year because of the trade disruptions due to higher tariff rates, geopolitical tensions, supply chain issues, logistic costs and other bottlenecks. We could not achieve our target on the export front. We have delivered strong returns in FY26 with ROACE at 26.9% and ROE at 25.3%. The board has recommended a dividend of 92.5%, that is Rs. 1.85 per equity share of face value of Rs. 2 each.
Another key update, strategic reduction in low margin wheel assembly business is now complete. From 1st April 2026, wheel assembly revenue will be nil. On year-on-year comparison in FY27 also, our real growth will be 4% higher than the published growth on year-on-year basis.
Recent developments in geopolitical scenario and significant increase in minimum wages by some of the state governments has created an input cost pressure on the industry. The customers have been requested to support, and we are confident that all our prestigious OEMs will compensate this input cost escalation. We also remain optimistic on the medium-term industry outlook supported by improving consumer sentiment, expected benefits from the 8th Pay Commission and continued policy support for manufacturing and formalization through labour reforms.
These structural developments provide greater confidence in India's long-term consumption and manufacturing growth trajectory. We are confident that will continue to grow around mid-teens in FY27. Thank you very much for your patient hearing. With this, we leave the floor open for questions.
Moderator: Thank you very much. We will now begin the question and answer session. The first question is from the line of Ankit from IIFL. Please go ahead.

Ankit: Thank you so much for the opportunity. I just wanted to know if there is any deficiency in margins other than the already called out 80 bps impact of pass-through of alloy prices in Q4 FY26?
Kuldip Singh Rathee: No, there is only differences because the alloy prices shot up through the roof and especially they rose about 10% in the March itself. That is why the whole Q4 margins were affected and because of the abrupt increase in March in the aluminium prices, some of the aluminium rise could not be passed on, in the aftermarket.

There was a conscious loss by us of Rs. 5 Cr because every day we cannot increase the prices and the prices were rising actually every day. Everything has been corrected April onwards and all these aluminium price rises which has happened in April also, they have been passed on to the customer both on the aftermarket front as well as to our OEM customers.
Ankit: Okay. So how much would be the price hike in April?
Kuldip Singh Rathee: Price hike of what, aluminium?
Ankit: Yes.
Kuldip Singh Rathee: The aluminium is abrupt. It rose, it has risen from 285 to even 365 the price, but the price has been given by the customer.
Ankit: Okay, got it.
Kuldip Singh Rathee: In April, we have also increased the prices in the aftermarket and we said that whatever rise happens because it's such a volatile situation that we need to pass it on. In the month of March, neither we expected the prices to go up on day-to-day basis and nor everybody as an optimist was expecting that the war will end soon, which of course has prolonged at the moment.
Ankit: Yes, got it. And just another housekeeping question. Can you share what was the utilization at the Bangalore and Karol

i plant?
Kuldip Singh Rathee: Very, very happy to share that Bangalore we have reached 90% capacity utilization that we set up last year, our 18th plant and the third plant in Bengaluru. The Bangalore all capacities are full now. In the Karoli plant, the capacities utilization is still 65%, that is the reason that we have made investment for the alloy wheels.
The alloy wheel supplies to the Japanese customer in the beginning of the H2, so this current year you'll see much higher capacity utilization in the Karoli plant also.
Ankit: Okay, sir. Got it. Great, sir. Thank you so much.
Moderator: Thank you. The next question is from the line of Nitin Agarwal from JM Financial. Please go ahead.
Nitin Agarwal: Thanks for the opportunity and congratulations on great set of numbers despite the challenges across the Board. Just wanted to understand your outlook for FY27 for the underlying industry.

So where do we see FY27 for two-wheeler industry production volume growth? Are we seeing any production cut by the OEMs given the challenges that we are facing in terms of exports and the freight rates?
And secondly, on the margin, where do we see the margin going forward given the denominator impact is going to be there as we have indicated that we have taken the price hike in April also. What could be the steady state margin guidance from your end? Thanks.
Kuldip Singh Rathee: As far outlook of the two-wheeler industry is concerned, our all our OEM customers they are carrying on with their original production schedules which shows a nice growth in this year also and none of the supplies have been affected by the raw materials or anything. We have passed on the aluminium price increase impact. Overall we achieved EBITDA margin of 13.1% and except for the denominator factor. We will be able to maintain that EBITDA margin. If the aluminium prices are shot through the roof, then our EBITDA margin may look less but the absolute numbers what we have planned in the next financial year will remain the same.
Nitin Agarwal: Okay, one more question with regards to ABS implementation. We don't see anything. Do you hear anything or any update out there if it is going to be implemented?
Kuldip Singh Rathee: We are not aware of anything and after that nothing has come.
Nitin Agarwal: Okay, thank you. That's it from my side. Thank you.
Moderator: Thank you. The next question is from the line of Rahul Kumar from Nuvama. Please go ahead.
Rahul Kumar: Yes, hi. Thank you for the opportunity and congratulations on strong quarter. Sir, on the independent aftermarket segment, it has grown by 25% year-on-year in FY26. So what has driven the strong growth and how do you see the outlook for this segment in FY27?
Kuldip Singh Rathee: I have been explaining right from beginning in each and every quarter that we were suffering on the GST front in the independent aftermarket because of the 28% GST. The government was kind enough to revise it to 18% in GST 2.0. As soon as it was revised, our sales in the independent aftermarket shot up because we could snatch some share of the gray market operators and the duplicators from the in the aftermarket. That's how this stupendous growth and we do feel that this year also we'll be maintaining a good growth in the independent aftermarket.
Rahul Kumar: Thank you. Sir, on the second question, how do you see the export outlook for FY27 and on the Ford order, can you talk about the execution timeline and also if there are any new order wins that can support export growth ahead?
Kuldip Singh Rathee: This year we are very confident of growing at 20%, provided the geopolitical situation remains reasonable, which we are as an optimist, which we feel that it shall be sorted out soon rather than later. So, if it is sorted out, we have the orders in hand and we are definitely going to grow at

20%.
Rahul Kumar: Okay. Lastly, on

FY27 capex plan, what would be the capex for FY27 and are there any plans
on new investment which can help in launching new products in FY27?

Kuldip Singh Rathee: No, the products that are going to be served to the customers, we have already invested because we go one year in advance. For next year growth of mid-teens, we need to invest around RS.400 Cr which we shall be investing in this year also. All these internal accruals free cash will be ploughed back in the company, so we will see to it even the debt levels are contained within the limits.
Rahul Kumar: On alloy wheels, what is the revenue expectation for FY27 and 28?
Kuldip Singh Rathee: FY27 we are expecting revenue of around Rs. 90 - Rs. 100 Cr and FY28 will be about Rs. 220 Cr.
Rahul Kumar: Okay. Thank you very much. That's all from my side.
Moderator: Thank you. The next question is from the line of Mrunmayee Jogalekar from Asit C Mehta Investment Intermediates. Please go ahead.
Mrunmayee Jogalekar: Yes, thank you for the opportunity. Sir, firstly I wanted to ask that in Q1 so far, have we faced any production disruptions as such?
Kuldip Singh Rathee: No, we have not faced any disruption in the production side. Even the even the orders from the customers are also robust.
Mrunmayee Jogalekar: Okay, great, sir. You touched upon the fact that, the employee costs have been inching up and you are in negotiations with the customer. But any can you quantify by how much have the costs increased and any timeline as to when you expect some pass-through to happen on that side?
Kuldip Singh Rathee: Whatever the aluminium prices, the customer is already compensating us. As far as regarding the wages, everybody knows the government has increased the wages and whatever the government wages increase, it's always compensated by the customers. We don't see the margin pressure on that side. Of course, it may be the customers will need to increase the prices of the vehicle by some percentage.
Mrunmayee Jogalekar: But we might see the impact of that in Q1 at least and then probably with a lag the benefit.
Kuldip Singh Rathee: No, there's hardly any impact because the wage increases what I feel is optimistically, the money remains in the country only. We give more wages to the workers and that class and they have more buying capacity because more money in their hand. If the price increase by Rs. 1,000 - Rs. 2,000, it shouldn't make a difference to the overall sales in the sector.
Mrunmayee Jogalekar: Got it, sir. A slightly probably medium-term question. Like with rise in alloy prices, it could be just a near-term impact, but then does it become a tougher conversation to probably increase our wallet share in the ALPS segment or for the alloy wheel business?
Kuldip Singh Rathee: No, that content it will not increase. Only thing is sometimes as we clearly mentioned, this year also we are very transparent in our reporting that our overall revenue in the quarter looked 8% more, sales growth, that was only aluminium price increase, nothing else. We also talk of the real net growth every quarter and every year.

Mrunmayee Jogalekar: No, I mean from the OEM side, does it become a conversation that, whether to go for aluminium or to stick with steel for certain component because the price differential?
Kuldip Singh Rathee: No, in two-wheeler segment, there is no such conversation till now.
Mrunmayee Jogalekar: Okay, sir. Thank you for that.
Moderator: Thank you. The next question is from the line of Michell Shell from Alquity. Please go ahead.
Michell Shell: Thank you. Could you please give me your thoughts on what would happen if the monsoon is deficient this year? Given your sensitivity to the two-wheeler industry, we could expect some weakness versus your expectations or has that not historically been the case for

you? Thank you.
Kuldip Singh Rathee: This monsoon if it is deficient, it certainly affects the agriculture income, that everyone knows. But we can't quantify the impact that it will have, let the time come. Many of the times the forecasts have been reversed also. In last 2 years also they were saying El Nino factor which never happened and maybe the government increases the MSP prices of the farmer farmers' crop and they get duly compensated because of that.
Michell Shell: And last time there was a deficient monsoon, was there a material impact on your business or not really?

Kuldip Singh Rathee: I think not in this year. Maybe we'll see what happens next year, but this year seems to be good.
Michell Shell: I'm sorry, I'm not clear. Last time there was a bad monsoon, what happened to your sales?
Kuldip Singh Rathee: Sir, we don't clearly remember. Sorry, I don't want to give a wrong data to you, but I don't think we were much impacted because we got impacted, yes, two-wheeler sector got impacted only when COVID came, that was a big impact. Before that till FY 18 - 19, we don't even remember and after that there has not been any deficient monsoon.
Michell Shell: Okay, thank you.
Moderator: The next question is from the line of Rishi Kapadia from CLSA. Please go ahead.
Rishi Kapadia: Thank you so much for taking my questions and congratulations for such good set of results. I have two questions. One is if let's assume that government comes up with a mandate of ABS, but it is still fair to assume that majority of our sales in the braking system is through independent aftermarket and OEM?
So, the impact would be relatively lesser for us considering we are not directly selling majority of our sales to the new vehicles and catering major to the population of two-wheelers on road. That's one? Second, if I look at the two-wheeler EV revenue for us, it is more or less growing at high single digit in FY26. Is that correct? And if yes, versus the EV volume growth for the industry, it is relatively lower. So anything to kind of call out there?

Kuldip Singh Rathee: I'll take your second question first. The EV segment is growing still at single digit, and we are also growing with the EV segment. As you are aware, we are supplying to almost every EV manufacturer in the country, so we are growing as they are growing.
Our one of the major customers has grown less in this last year, which is Ola, that was our quite a major customer. Still, we have taken the other customers and good share in that and we are growing. If the EV sector now grows further in double digit, we'll also grow in the double digit.
Regarding your first question, I think that's a very hypothetical question and I'm sorry I can't answer on that.
Rishi Kapadia: Okay, thank you.
Moderator: Thank you. The next question is from the line of Yash Agarwal from Nirmal Bang. Please go ahead.
Yash Agarwal: Hi, sir. Thank you for the opportunity. I just wanted to know your capex outlook for FY27.
Kuldip Singh Rathee: FY27 we'll be spending about Rs. 400 Cr.
Yash Agarwal: And what will be the breakup of the like capex exactly?
Kuldip Singh Rathee: Capex breakup is very little is the maintenance budget, that's about Rs.40 to Rs. 50 Cr, rest is all the capex for the new plant capacities, which we keep on adding.
Yash Agarwal: Also, the one bookkeeping question, like the working capital is negative in the FY26. Any particular reason why it was so negative in like what was the key items which were there in that?
Naresh Kumar: This is Naresh this side. This is due to sudden increase in aluminium prices in the month of March and the impact is on the balance sheet date. That's why it's looking like that because the pricing to the customers takes time to pass on in the terms of invoices. So, there is increase in receivables share and I think that is the only reason.
Yash

Agarwal: Okay. So, like going forward, we will expect them in coming quarters to reverse, right?
Naresh Kumar: Yes, yes, it will normalize, you know.
Yash Agarwal: My second question is basically on the strategic partnership that we have with Lioho and Kyushu on the alloy wheel. So where are we right now and when can we expect them to contribute to our overall top line?
Kuldip Singh Rathee: The second partnership is also as I've already mentioned under testing and we are very confident that something should come out before H2.
Yash Agarwal: And update on the cable JV with TD Holding.
Kuldip Singh Rathee: GTD cable holding, the production has come out and to the system suppliers have audited the plant and the supplies again will start in H2.

Yash Agarwal: Our current capacity is basically sufficient for the initial level of orders for both?
Kuldip Singh Rathee: Yes, that already we have set up, you know, because as you know last two years we have invested heavily and now they are giving the results.
Yash Agarwal: Okay, sir. That's it. Thank you from my side.
Moderator: Thank you. The next question is from the line of Sahil Sanghvi from Monarch Networth Capital. Please go ahead.

Sahil Sanghvi: Hi, sir. Thank you for the opportunity and well done to your team and yourself for the good results. My first question is, sir, looking at the 35% growth that we've done this quarter, even if I remove the impact of a 8% of the price pass-on, then also we have outperformed the underlying industry, which grew two-wheeler industry which grew by 20%. So, what's exactly driving this growth? Is it wallet share expansion in our current customer base or how would you explain this?
Kuldip Singh Rathee: Mr. Sahil, that's with the God's grace, that's the track record of the company that for last 30 years we've been outperforming the industry., I think that's what we have done in the last quarter also and we'll outgrow current year also.
Sahil Sanghvi: Right, sir. And sir, on the alloy wheel side, the first product was expected to be out in February. So, if you can give us some update on that front, how?
Kuldip Singh Rathee: That's already that's already out. It came out on scheduled time from the Karoli plant and handed over to the Japanese customer. That's what I said that H2 beginning the supplies will start.
Sahil Sanghvi: Right, right. And sunroof also we are on track?
Kuldip Singh Rathee: Yes, very much on track. The plant has been audited by the sunroof system suppliers and I think again the same time H2, all the previous ventures shall bring fruit, and the supplies will start.
Sahil Sanghvi: So then including all this incremental revenue that we can expect something from sunroof and from alloy wheels, this is the 20% guidance is including all of this, right?
Kuldip Singh Rathee: We have not given you 20% guidance, we have given you mid-teens guidance.
Sahil Sanghvi: Okay, okay.
Kuldip Singh Rathee: I would like to correct that, you know.
Sahil Sanghvi: But including the sunroof and alloy wheels, right?
Kuldip Singh Rathee: Naturally, because how you outgrow the industry? You add new products, you add more content, you know, and you add new customers and this is how you grow, you know, there's no rocket science in outgrowing.
Sahil Sanghvi: Sure, sir. Thank you. Thank you, sir.

Moderator: Thank you. The next question is from the line of Preet from InCred AMC. Please go ahead.
Preet: Thank you for the opportunity and congratulations for the good set of results. Sir, just adding on to the last participant's question that you mentioned you have been outgrowing the industry from past 30 years and by adding new products and so what was the reason exactly reason behind this year that how we outgrow the market and what would be the reason that we would be doing outgrowing the market in FY27?
Kuldip Singh Rathee: I just now told the, answered this question that one is the historical reason because we've been outperforming and that we continue to do so. Second thing is that whatever joint ventures we signed or the collaborations we signed, they will bring fruit in the coming year. They'll start bringing fruit from H2 onwards, and they will totally fructify in the next year, so these two years we'll be outgrowing because of the new products and meanwhile we keep on adding small, small new customers. They start small after lot of testing and then they grow, you know, have a natural growth. Am I clear?
Preet: Yes, Thank you, sir. That was helpful.
Moderator: Thank you. As there are no further questions, I now hand the conference over to Mr. Kuldip Singh Rathee from ASK Automotive Limited for closing comments.
Kuldip Singh Rathee: Thank you, ladies and gentlemen. Thank you very much for sparing your valuable time and attending the conference earnings call and we would like to reassure you that again this year we'll be working hard and we'll try to come up to your expectations. Thank you very much.
Moderator: Thank you. On behalf of Adfactors PR, that concludes this conference. Thank you for joining us and you may now disconnect your lines.
