WIPRO LIMITED

TRANSCRIPT OF THE 76TH ANNUAL GENERAL MEETING OF WIPRO LIMITED HELD AT 9 AM IST ON TUESDAY, JULY 19, 2022 THROUGH VIDEO CONFERENCING
Rishad Premji: I welcome all the members to the 76
th Annual General Meeting. I am Rishad Premji, Chairman of
Wipro Limited. I hope all of you are keeping well. This meeting is being conducted through Video Conference as per circulars issued by Ministry of Corporate Affairs and the Securities and Exchange Board of
India. The requisite quorum being present thr ough video conferencing the meeting is properly constituted and I call this meeting to order.
Before we start the proceedings of the meeting, le t me introduce you to the persons sitting on the dais with me.

To my right are:
Mr. Azim H. Premji Mr. William A. Owens Ms. Ireena Vittal
Mr. Deepak M. Satwalekar
Ms. Tulsi Naidu

and to my left are: Mr. Jatin Dalal
Mr. Thierry Delaporte
Dr. Patrick J. Ennis
Mr. Patrick Dupuis
Mr. Sanaulla Khan
In addition, Mr. Vikas Bagaria, Partner, Deloitte Haskins and Sells LLP, Statutory Auditor and Mr. V Sreedharan and Mr. Pradeep Kulkarni, from V. Sreedharan and Associates, Secretarial Auditor have also joined us today.

I request Sanaulla Khan, Company Secretary, to read the arrangements made for the Members at the 76
th Annual General Meeting.
Sanaulla Khan :

Dear Shareholders, welcome to the 76
th Annual General Meeting of Wipro Limited. This meeting
is being held through video conferencing mode, as mentioned by Rishad, in accordance with the circulars issued by the Ministry of Corporate A ffairs, applicable provisions of Companies Act, 2013
and the SEBI (Listing Obligations and Disc losure Requirements) Regulations, 2015.

Company has enabled the Members to participate at the 76th AGM through the video conferencing facility. The proceedings of this Annual General M eeting are also being web-casted live for all the Members as per details provided in the Notice to Annual General Meeting. The proceedings of this meeting are being recorded for compliance purposes. In accordance with the provisions of the Comp anies Act, 2013 and the SEBI Listing Regulations,
the Members have been provided the facility to e xercise their right to vote by electronic means, both through remote e-voting and e-voti ng at the Annual General Meeting.
Remote e-voting facility has been made available to all Members holding shares as on the cut-off date i.e. July 12, 2022, during the period commen cing from 9 AM IST on Friday, July 15, 2022 till 5 PM IST on Monday, July 18, 2022. Remote e-voting has been blocked on July 18, 2022 at 5 PM.

Members joining the meeting th rough video conferencing mode, who have not already cast their vote by means of remote e-voting, may vote through insta-poll e-voting facility provided at this meeting. The Members who have cast their vote by remote e-voting prior to the AGM shall not be entitled to cast their vote once again.

The Board of Directors has appointed Mr. V Sree dharan, Partner, V Sreedharan and Associates, as the Scrutinizer for this Annual General Meeti ng. Based on the report of the Scrutinizer, the combined results of remote e-voting and the e-voting done at the meeting today will be announced and displayed on the website of the Company, and will also be subm itted to the stock exchanges as per the requirements under the SEBI Listing Regulations.

I now request, Mr. Rishad Premji, Chairman, to con tinue with the proceedings of the meeting.
Rishad Premji :

Thanks, Sanaulla. I am satisfied that all the efforts feasible under the circumstances have been made by the Company to enable Members to parti cipate and vote on the items being considered at this meeting.

Before we take up the items as per the Notice, I would like to share with our shareholders, the performance of the Company during the financial year 2021-22 and the gen

eral Outlook for the IT Sector.

Once again welcome all of you to the 76
th Annual General Meeting. And again, on behalf of the Board of Directors, I extend all of you a very warm welcome and thank you for joining us today. Financial year 2021-22 was a momentous year for us at Wipro, we cross the $10 billion market revenue this year. When I look back in the journey of Wipro that we have travelled in these last 77 years from a tiny oil mill in Amalner in West ern India to a Global Te chnology Company with a presence in over 66 countries and employing near ly 250,000 people today. I feel humbled but also immensely proud that we have managed to reach here on a bed rock of strong values. Overall, we had a fantastic year and I want to thank Thierry and the entire Wipro team for the solid performance.

In the last two years, under Thierry’s leadership, Wipro has seen a new direction while building on our strong legacy and core strengths of the organization.
Let me quickly share some highlights of the year gone by. Revenue grew 27.3% year on year in reported currency. We also ended the year with strong order booking and closed 37 large deals in TCV of over $2.3 billion. For the full year the EPS was Rs. 22.35 per share up 17% year on year and the operating cash flows were at a Rs. 110.8 billion which was at 90.7% of our net income. Our gross cash was at $4.6 billion and our net cash was at $2.6 billion. Our payout through buy backs and dividends including dividend including dividend dist ribution tax to our shareholders for the Financial year 2021-22 on a trailing three year basis was 81.6% of our net income. Wipro was born in an

uncertain time. The Worl d war II had just ended and India was still under
colonial rule. Not only that we overcome those har dships, but we also grew stronger, bigger and more resilient in t hese years to come.
We are going through another period of uncertain ty in the world today. The pandemic is not yet over. Inflation is soaring. An armed international conflict is underway. And we are staring at a huge climate and energy crisis.

And yet I remain optimistic. Because I believe that great up evils carry within them seeds of great possibilities. The fact that we had a Covid vacci ne within a year of the outbreak, and that two-thirds of the world population has already received at least one dose of the vaccine, is testament to this belief.

Covid has changed our relationship with technology fo rever, driven by the pandemic, all of us – individuals, and businesses – have discovered new ways to work together at scale with technology. This tectonic shift in the adoption of technology has impacted every customer we
serve in every industry in the world. Demand for digital, cloud, data, and cybersecurity services is growing and will continue to grow as more of our customers adapt to th e new world order. And so, despite some elements of uncertainty in the short term, the long-term prospects of the technology industry services industry look very good.
We, at Wipro, are doing everything we can to seize this moment.

As enterprises adopt digital business models t hey face significant challenges in navigating a complex ecosystem with multiple providers that ar e difficult to manage. They need an end to end transformation partner to orchestrate digital transf ormation for them, this is where we intend to play. We have completely transformed our structur e and our operating model. We have gone from being industry- organize d to being market-organized (support ed by our global capability units). We have added new talent across the board, wi th particular emphasis on women leaders. Our leadership team is more diverse now. We have several new leaders who br ing in a new mindset, even as many leaders in the top 200 mark a decade or more at Wipro.
We are much more growth-obsessed than before. We are driving deep strategic partnerships with hyperscalers and i

ncreasing our focus on large deals. We have also invested in a Chief Growth
Office function and changed the seniority and maturity of our sales leaders.

We have also invested significantly in acquisitions eith er for gain market access or to acquire new capabilities. We completed six acquisitions in last few quarters. C apco, our largest ever acquisition, Ampion, Leanswift, Edgile, the CAS group and most recently in May of this year Rizing. Each acquisition fulfill s different piece of the puzzle creating new synergies and differentiate for us in key strategic markets and deepening our consulting domain expertise in high growth industries. Cloud is at the core of most transformation initiati ves with a significant headroom for growth in the coming years. We have long been a cloud services pion eer. We are now investing $1 billion in Wipro FullStride Cloud Services over the next few years to deliver an orchestrated transformation that accelerates business results for clients. We will continue our investments to build capabilities and acquire market leading talent in strategic
growth areas whether they be cyber, data, AI and our engineering business. The future of technology is exciting and opportunity rich. We are accelerating our investments in Topcoder platform and in emerging areas such as Metavers e, Web 3.0, Robotics, self-learning AI, and privacy systems.
We are also very proud of our culture and values. It is a huge differentiator for us, and it is important that people experience it. To me cul ture represent the sole of the organization.
Reinforcing our values and assimilating peoples in our culture become even more important given there are significant percentage of our organization is new to the company and that we continue
to work in a hybrid model, and so my personal focus remains on people. I spent a lot of time talking to our top 200 leaders one on one as well as meeting group of employees in virtual session.
One of the things we are driving is the Five Habits . Our big learning is that people don't experience our values – they experience our behaviors, they experience the thing happen implicitly and explicitly inside an organization through which t hey interpret our values. The Five Habits takes our values closer to our people, as I have disc ussed personally with over 29,000 of our Wipro colleagues over 96 sessions spending over 300 hours.

We at Wipro believe our story is deeply connected to our communities. 66% of the economic interest in Wipro is irrevocably pledged for philanthropy through the efforts of Azim Premji Foundation. And so your company's majority is owned by a philanthropic institution. The

Foundation works tirelessly to cr eate at-scale, institutionalized c hanges in the quality of education in India. It also works with vulnerable gr oups, health, nutrition governance and livelihood.

One of the biggest challenges facing the world to day is climate change. We are already witnessed to its various manifestations. This year for e xample saw the hottest April and May in the large parts of North India while Bangalore saw the rain iest summer in decades. There was a heat wave in western Europe, wild fire in France and Spain, a drowned Italy, a record breaking high temperatures in large parts of the U.S. While it's encouraging to see governments, business and civil society step up to the challenge, much needs to be done. Wipro's climate change program goes back 15 years and over the years has evolved into a mature yet dynamically responsive set of initiatives. In April 2021, we announced our goal of achieving 'Net Zero' greenhouse gas emissions by 2040 for all three scopes i.e. scope one, two and three. We have a clear roadmap for the short and medium terms with targets of 100% renewable energy and 100% electric mobility by 2030. We were one of the first seven companies globally to have their Net Zero targets validated by Science Based Targets

initiative (SBTI).

I am proud that we are well position to meet our goals with renewable energy comprising close to 15% of our total electricity footpr int in India today. We plan to rapidly scale this up in three years through appropriate investments. Our focus rema ins on deep decarbonization of our own value all aspects of our work and encouraging all Wiproite s to be their authentic selves at all times. Our inclusion and diversity journey is an ongoing ef fort working constantly on various pillars of inclusivity. Various programs and initiatives have helped us to nearly double the gender diversity at senior leadership levels in the Company in FY'22. And overall as a Company, we are at 36.1% gender diversity. To foster a safe place for LGBTQ+ employees and protect them from bias and discrimination, we launched the Global Prevention of LGBTQ+ Discrimi nation Policy last year. We also took several steps to advance an inclusive work environment for Black employees, from introducing a holiday on Martin Luther King Day to strategically recruiting from Historically Black colleges and universities (HBCUs).

In closing I want to acknowledge that the Indian IT industry come a long way and we are today a true partner a true partner to our clients, helpi ng them navigate to a digital economy and working on their most important strategic and business priorities. This Financial year has been a momentous year for Wipro and I would like to express my gratitude to our client, our partners, our employees, our shareholders and other stakeholders for reposing their trust and confidence in us.
I am incredibly excited about the progress we have made, the path we are on, and confident of building on this incredible momentum. Thank you again.
So, before we start the proceedings, I also want to invite Mr. Thierry Delaporte for few opening comments. Thierry over to you.

Thierry Delaporte:
Thanks, Rishad.

This year our meeting can be in person while that is not the case just yet I am joining you today, live from our campuses in Bangalore, along with some of our Board members.
This Annual General Meeting is special for me, as I complete two full years leading Wipro. It's been a privilege, and an honor to lead this exce ptional company. Today, Wipro is an industry leader in the IT Services space. And Wipro is also a force for good in our community. Especially during the great hardships brought on by the Covid- 19 crisis, we led with a people-first mindset, and I am proud of that.
As a business, we have made incredible st rides in the Fiscal Year 2022.

1. We started realizing the benefit s of our transformation strategy.
2. We began to move the needle on every yardstick we set out for ourselves.
3. We became a 10 billion dollar company, and
4. We recorded our fastest-ever revenue growth in absolute terms!

Not surprisingly, we ended the year with the most robust order pipeline ever. Despite a very challenging labor market, we added new talent at a record pace, reaching a global employee base of over 240,000 colleagues around the world.

These results reflect the success of:
1. our bold growth strategy, 2. our single-minded focus on value creation for our clients, and most importantly,
3. the unwavering dedication of our colleagues.
This will not change going into the future as well, especially as technology investments grow in the coming years. We expect businesses to incr easingly turn to Cloud-based technologies, and digital tools,
1. to enable an increasingly dispersed global workforce, 2. to enhance enterprise agility, and speed of innovation to better prepare for the future.

And as companies become more sophisticated in their use of the Cloud – and as they start to understand its benefits – we expect the dema nd for our services to remain strong.

Sure, the backdrop today is a bit uncertain. We are all watching closely the rising economic headwinds,

the conflict in Europe, increasing inflation, and emerging food shortages across the globe.
In this weather, we know what we must do – we will stay focused on our clients, on our service quality, we will stay focused on our employee s and our stakeholders. Because we are, above everything else, a people business. In the Fiscal Year 2022, we ramped up investments in certain parts of our business. We made upfront investments so that we can capitalize on the growth opportunities in the market and strengthen our position as a "trusted advisor" to our clients. We invested in well-planned and strategic organic capabilities, an d prioritized certain inorganic investments. Those decisions are allowing us today to offer our clients seamless solutions, and world-class expertise. Those decisions are letting us help them realize their most ambitious business and technology transformation goals.

Cloud is one such area. We continued to invest in our Cloud Transformation capabilities because Cloud migration and Cloud-based business mo dels are becoming more of the standard.

We launched Wipro FullStride Cloud Services to bring together our portfolio of Cloud offerings, talent, capabilities, and Cloud Studio. Wipro FullStride Cloud Se rvices realizes our vision of being a "Value Orchestrator", someone that seamlessly blends capability and th inking from business and technology, and helps clients transform or realize new business opportunities.

We significantly expanded our cybersecurity capabilities as well. We acquired tw o consultancies – Edgile, in the US, and Ampion, in Australia. Both these acquisitions set us up pretty well, in the evolving landscape of cyber threats.

The closure of our largest acquisition to date, Capco, was an important milestone last year. Capco's consulting capabilities and domain expertise ha ve proved to be invaluable additions to our Banking Financial Services and Insurance offeri ngs. The addition of Capco now allows us to deliver a full-spectrum of services in this sector — from consulting and strategy, to technology development and implementation. I am pleased to share that Capco recorded a strong double-digit growth in Fiscal Year 2022, and we signed over 60 joint client wins across all our markets.

Overall, we completed six acquisitions in the last few quarters - Capco, Ampion, LeanSwift, Edgile, CAS Group and, most recently, Rizing. Ev ery acquisition fills a different piece of the puzzle, creating new synergies and differentiators for us in key strategic markets, and deepening our consulting expertise in high-growth industries.
Another investment area has been talent. We hav e continued to invest in people and added over 45,000 new employees on a net basis in the fiscal year 2022. This was the highest-ever net talent addition Wipro has seen.
Being a global company, we believe our strength comes from our ability to tap into a world of diverse views, thinking, backgrounds and experience. So, I am proud to report that, in fiscal year 2022, ethnic diversity of our senior leadership improved by 24 percentage points. And we have almost d oubled gender diversity in the leadership bands.

We know that career progression and developm ent is important for our people. To help our colleagues realize their ambitions, we revamped our promotion cycle, and incentive programs. We created new learning tools, launched new training programs to help our people stay up-to-date on latest professional and technical developments.

These investments matter. Today more and more top talent from around the world are keen to join Wipro. I am proud to see that Wipro is an employer of choice for top technology talent! When I meet clients, and Partners, I hear from them that they are noticing a major shift in our client-facing teams – they say they are noticing agility , confidence, thought leadership and quality in our people more and more.

Our people wi

ll always be our great est asset. We will continue to invest in their development, so they can deliver the cutting-edge thinking, and so lutions, that our clients expect from us.

Now, let me share with you how we are accelerating our tran sformation journey.

In Fiscal Year FY22, we achieved significant successes in all aspects of our strategy. We delivered ahead of expectations on several parameters.

To accelerate growth, we prioritized specific sectors in our chosen markets. We invested in building solutions in areas where we see strong growth potential, and doubled down on strategic sectors where we already have solid market presence.

Banking and Financial Services is one such area where we are growing our strength and brand, as a preferred partner for consulting, technol ogy, and digital transformation services.

Another sector where we see strong growth potential is Technology, Media and Telecommunications. The acquisition of CAS Group will allow us to bring specialized expertise, strategic consulting, and program management capabilities to large-scale business and technology transformation projects in this sector , while increasing our client base in the Fortune 100 segment.

Our focused and careful strategy has led to robust revenue growth, not only in our top market – the U.S – but also across Europe, where we experienced a remarkable 39% growth.

We also made significant strides in strengtheni ng our Partnerships. And we added more than half a dozen new clients with engagements exceeding $100 million each. It helps that we are increasingly shaping our clie nt approach to lead with business solutions, and investing in areas that are critical to their success. Last year, we continued to build out our AI and Data Analytics cap abilities, leveraging over two decades of Analytics experience. Today, over 30 ,000 Wiproites are focused on delivering Big Data, AI, and innovation capabilit ies, across the globe.
We made exceptional progress in strengthening our frontline sales and leadership teams in local markets. This has allowed us to deepen cli ent relationships, and better understand local challenges.

We are also continuing to expand our ‘Talent Cl oud’ through our Topcoder platform. Topcoder is turning into a significant competitive advantage for us in an environment where most companies are struggling to find the tech talent they need to deliver digital solutions at scale.
In terms of Business Performance, in Fiscal Year 2022, we crossed revenues of 10.4 billion dollars – a significant milestone that repr esents a 27% growth in constant currency terms, and an addition of $2.2 billion in revenues for the year. Our order bookings in Annual Contract Value te rms grew 30% YoY. We delivered profitability of 17.7% in fiscal year 2022 despite significant investments in so lutions, capabilities, and talent, adjusted for Capco, our largest acquisition. This will be well above the pre-pandemic margin levels.
Our net income in absolute terms was the highest ever, which grew by over 13%. Earnings per share expanded by 17% for the full year. We also had a robust operating cash flow generation of INR 110.8 billion, which is 90.7% of net income for the year.

But as you all will know, especially those of you who have been part of the company for many years, Wipro is more than just

business. We have always operated with integrity and purpose,
and believed that our company has an important role to play in society.

Wipro has always had a strong commitment to va lues and purpose, we've conducted business responsibly, and stood by the principles of democracy, justice, and equality.

As one of the only companies that gives back two thirds of its earnings to its communities, our shared sense of purpose is one of the main drivers of our success.
We had acknowledged the impact of climate change on our society many years back. We had therefore incorpora

ted Environment al, Social and Governance or ESG Principles into our core business. As a founding member of global Transfor m to Net Zero initiative, we are fully committed to reducing our greenhouse gas emissions to zero, by 2040.

I am proud to state that our long history of commitment to our communities, employees, and to the environment, continues to be a distinct and critic al differentiator for us in the market. This will become even more important as stakeholders i ncreasingly focus on 'responsible business' in the coming years. The past two years have been truly transformative for Wipro. The changes we made to our operations, and organizational structure, as well as the new capabilities we built, are changing how the market, and clients, see us. Clients are now turning to us to help them realize some of their boldest business and technology transformation goals. They are looking to us to design new solutions, to orchestrate across ecosystems so they can act with the agility and innovation they need.

Reflecting this significant transformation in our market position, we recently launched a new brand campaign that speaks to who we've become to our clients and stakeholders.
"Ambitions Realized" – our new brand campaign, is a culmination of our transformation, and I believe it will become a guiding light for where we go from here.

So, as we kick off Fiscal Year 2023, we rema in committed to helping our clients, employees, partners, and stakeholders realize their biggest ambitions, and transform their most complex challenges.
Before I close, I want to thank our employ ees across the globe, who show up every day with passion, energy and commitment. I would also like to thank you all for your continued trust in us.
Thank you, and back to you Rishad.
Rishad Premji :

Thanks Thierry!

The notice of the 76
th Annual General Meeting and the Annual Report, containing Audited Financial Statements (including consolidated fina ncial statements) for the year ended March 31, 2022 and Board's and Auditors' Reports, have b een sent by electronic mode to those Members whose e-mail addresses are registered with the Company or Depositories. 4. To consider and approve re-appointment of Deloitte Haskins & Sells LLP, Chartered Accountants, as statutory auditors of t he Company and to fix their remuneration.

We will be glad to

answer any questions, which any Member may like to ask on the financial statements or other matters.
The insta-poll e-voting facility will now be activat ed for Members who are participating in this meeting and have not already voted throug h remote e-voting. The insta- poll facility will remain active till 30 minutes after the meeting. Before we commence the Q & A session, we will play a short video on our branding that Thierry
just talked about.
- After branding video -

Thank You! I request Sanaulla Khan, Company Secretary, to share a few guidelines for the Q&A session.
Sana over to you!
Sanaulla Khan:

Thank You Rishad! In order to ensure smooth inter action and participation, we request the Shareholders to note the following guidelines for the Q&A session:

1. The Q&A session will be anch ored by me and I will call the pre-registered Shareholders to come-up one-by-one.
2. I will invite the speakers in the batches of 5 and we will answers those 5 questions before moving on to the next batch of 5 speaker Shareholders.
3. Members are requested to un-mute thei r microphone before speaking, and also enable web-cam, if they wish to appear on the video.
4. Members are requested to mention their name, folio number and location.
5. Members are requested to restrict their quest ions to two minutes, so that all speakers will get an opportunity to share their views.

6. In the interest of time, I request members to not repeat questions raised by the previous speakers.
7. It may be noted that the Company reserves th e right to limit the number of Shareholders asking questions depending on the avail ability of time at the AGM.
Question & Answer session: Sanaulla Khan:
Please unmute your microphone and switch on your video. Yes Mr. Shastri, we can see you.
Please go ahead. Sadananda Shastri :

Are you? Is it audible to you?
Yes, Sir. Yes
OK, I will start now, uh, good morning Sir, I'm Sadananda Shastri from B angalore. My number is 11702201. Sir, coming to the report, page #13 company has shown that 27% growth even in the pandemic period. But however, the market va lue of the shares is diminishing from ■620 to 300 and 290 rupees. What is the reason? There is a rumor that the company is declaring bonus shares? Is this the reason for diminishing the value of shares? Chairman sir, you have said in
your message historical milestone. Of course. Even then the company is losing big image in the market, Why? Page #47 General… General and administration expenses is increasing by 33%, is on the higher side, we feel it is because of the extension of higher emoluments to certain category of executives. Is it fact? Page #49 IT services. You have shown other operating income

growth to the extent to 2800%. Whether it woul d be a regular income here afterwards? Page #50 IT products are backbone to the company. Here there is a concern about the negative growth to the extent of 1512 million. What is the reason? Page #72 COVID-19 response, company has given cautious look towards the COVID patients by building hospital. It brings special image to the company. Thank you very much for that. Page #85 Natural Capital, Company has undertaken urban biodiversity projects, especially Butterfly Park , to cool the climate and a small contribution to lessen the global warming. Why can't you put these projects in all urban cities? Page #90 Board's report you have acquired 8 companies. Can y ou confirm that all these are profit making ones? Page #100 remuneration to the managerial. The increase of salary and allowances to managerial stop, it is a setback to the positive gr owth results of the company. 80 Crores to CEO is being questioned by the public. Nowadays CEO from other countries have become costly. Why can't the company explore the possibility of fi nding inland CEO? Page #147 in first phase balance sheet. Investment in investment. All of a sudden th

ere is an increase of 83,500 billion. Whether these are forced investment or voluntary investment. Page #221 CBS studies consolidated balance sheet, i.e., In trade receivables, credit im paired and dispatched are to the extent of 8000 million. Whether all these are loss assets for the current year. Page #148 SBS, that is standalone balance sheet. Even though borrowing saw increas ed by 18,700 minimu m million, the finance cost is in reduction to the ext ent of 352 million. Why, what is the reason? Page #293 lastly, you have 140 subsidiaries, out of which 52 are under loss. The maximum loss is in item number 51, that is, capital Market Company, 1694 million. What is the company's strategy to bring these to Positive? Thank you very much Sir. See you in n ext year in cafeteria, Wipro. Thank you very much.

Sanaulla Khan:
Thank you thank you Mr. Shastri. I now request Ms. Mansi Bihani to switch on her mic and the camera and ask your question, ma'am. Since Miss Mansi is not coming online, I request Ms. Jasbir A Puravankara to switch on the mic and the camera and ask your question. Ms. Jasbir A Puravankara :
Yes hi, good morning. Am I audible? Sanaulla Khan:

Yes, ma'am, please go ahead.
Ms. Jasbir A Puravankara :

Good morning Mr. Premji. I'm Jasbir Puravankara, member of the millennium Mams Bangalore chapter and an honored shareholder of the company. I would first like to mention that I'm extremely gratified to learn that Wipro's man agement team is diverse with many women now holding top positions in the company. Mr. Premji, I have two questions for you today. Digital economy is the buzzword in today's day and age, with India targeting to reach $1 trillion economy. This is a big opportunity for established companies li ke Wipro. How is Wipro poised to participate in this huge surge? My second question to you is our honorable Prime Minister has made an announcement of India becoming a $5 trillion economy by 2027. Where do you see Wipro in 2027? Thank you.
Sanaulla Khan:

Thank you, thank you ma'am. OK, we'll now request Mr. Santosh Kumar Saraf to come on to the screen and ask your question, Mr. Saraf.
Mr. Santosh Kumar Saraf :

Namaste Sir! I hope I am audible.

Sanaulla Khan:
Yes, please go ahead.
Mr. Santosh Kumar Saraf :

What steps company is taking to increase the women ration in company as it is stands at 36% as on date, steps to increase employment ratio; wh ether the paternity, maternity benefits and health insurance has been given to the employees? steps to increase source of green energy; explain the policy of e-wastage disposal; plan of new acquisition in future; pls give booster dose to employees of wipro.

Sanaulla Khan: Thank you, thank you Mr. Saraf. I now request Ms. Alka Karnani to come to ask her question.
Ms. Alka Karnani:
Good morning, respected chairman. Sir, I'm Al ka Karnani, a proud shareholder of the company and a member of Millennium Mams Kolkata chapter. On behalf of Millennium Mams, I would like to congratulate you for Wipro being recognize d in the top leadership category in governance practices. Sir during this growth phase of IT sector, the way dem and is going up, there will be shortage of manpower, engin eers, skilled workers in a big way. The Indian IT industry in the recent past has been dealing with an all-time high attrit ion rate of around averaging 25%. Sir, I would like to understand how will our company lower this at trition rate or retain the manpower. Second, how will you get new talent? Bec ause if the money part remains the same, why will people join Wipro? 3rd, what type of comfort are you giving to your employees? Maybe ESOPS or emotional attachment with the company because of brand value system. Sir can you please throw some more light on the same other than what y ou mentioned in your address? Thank you so much.

Sanaulla Khan:
Thank you ma'am. I now request

the management team to provide their responses to the questions asked and then we will move to th e next set of questions by the shareholders.

Rishad Premji:

Thank you. Sana. And thanks to all of you for asking your questions. I will try to answer as many of them and try and pass some of them on to ot her colleagues on the dais. So, Mr. Shastri thank you for your questions. Your comment on the pric e of the share you know that's not something we control our focus as a management team is to give the best performance. I think we've had an outstanding year last year. As you know, with everything happening in the economy, stock market is volatile holistically and that's somethi ng that we are conscious of. But our focus is to deliver the best results for our customers and for our employees and as a consequence of which to our shareholders as well by consistent good performance. Uh, the cost of G&A has gone up and that is purposeful. It's gone up because we are intentionally investing in our market organizations as we talked about and I talked about in my speech, we've invested in a Chief Growth Office that is focused on building strong partnerships with our ecosystem partners as well as focusing on helping us grow and build large deal s. Uh, the IT products business is a focused Business and you will likel y see you know lumpiness in the way that business unfol ds. The intent of that business is to very strategically tie and drive product sale, where it helps our overall services business. So, it's an integral part of our IT services business and by the nature of that business you will see lumpiness in that in that overall business.

Thank you for your comment on the COVID hospita l. That was something that was incredibly important to us and something we remained very committed to over almost 7000 people had an opportunity to use the hospital, so I think it ca me to great use. We've just shut it down because there was limited use earlier th is year. That you know our focus on sustainability holistically remains so Thank you for the comment on the urban Butterfly park.

We do other components of work in the cities that we work at through the Wipro Foundation. One of the efforts that we're drivi ng, for example, in the city of Bangalore, is helping clean up lakes.
So whether or not we are doing butterfly parks, we are focused on other elements of sustainability through the Wipro Foundation in the location that we exist as a company. You know, we don't comment specifically on the pr ofit of specific MNAs, but let me give you comfort that the MNAs we've done in the 6th t hat we've talked about both theory and I talked about have done well for the company. They are tracking to plan, and we are seeing the benefits both organically for those MNA's as well as throu gh the synergies that we are able to bring together as Wipro and that particular MNA. You know, the comment on remuneration for senior leaders, including the CEO, we think we benchma rked this very closely to global standards and to our global competition. We think it is very much commensurate and in line with our performance, as well as with where leaders of organizations of our size and repute are compensated. You had a couple of questions on in vestment and trade receivables which I will let

Jatin answer and also a question on finance cost reduction as well as on the subsidiaries. Do you want to take that and then move to the next shareholder? Jatin. Jatin Dalal:

Yes, so the increase in trade receivables is in line with the growth of the company you. You have to also appreciate that we grew 27.3% in FY22 and therefore it is commensurate with the growth in the Organization. Of our subsi diaries that you mentioned, Some of them are exhibiting laws, but that is Typically a result of portfolio approa ch where a particular type of work or a particular contract in that particular quarter or year is loss

making, but you have seen that on an aggregate basis, we have delivered a 17% earning per share growth that is collective success of our all our operating entities, including some which may have been in loss for FY22. Over back to Rishad Rishad Premji:

Thanks, Jasbir thanks for your que stions on your question on the, uh, the digital economy. You know it is incredible how COVID has just accelera ted the journey for we find for customers across industries, across geographies, across sizes to r eally sort of drive this very strong digital first agenda and the way they engage and interact with their customers and our focus and play is how do we become this strong digital / Ecosystem orchestrator that brings together for our customers both their existing world and their ex isting legacy, as well as all the new Age capabilities that a slew of past partners have to offer. And so how do you bring all of this together in a manner that is consumable inside of the organization and can retu rn great value? So, our mission is to how to become the choice; You know, preferred orchestrator ecosystem and digital orchestrator for our customers. Look, it's an exciting time for the te chnology services industry and it's an exciting time for Wipro and we are very excited about the jour ney of transformation that we've been on over the last couple of years. I talked a lot about some of the components of that change, and so I remain, and we remain as a as a management team. Incredibly excited about the opportunity of where the technology industry. And where wipro can go over the next five years. Participating in this transformation of change that is happening wo rld over. Mr. Sarafji, thank you for your comments. You know My Hindi is not very good so I will try and answer some of your questions in English, but perhaps with a little bit of English. Thank you for your comment on women leaders.

You know hamari koshish hein ki we have 50% of leaders who are joining us from campus to be is 50% and our big focus is how do we retain leaders as they move through the journey? We're driving a lot of programs to encourage women who are starting families, etc to start again with the organization? Our big focus on the hybrid model is to be more inclusive. It is to allow people to have that option if they want the flexibility to wo rk from home. It's also an objective to be more inclusive, even with people with disabilit y as well as people in smaller towns.
So, I intend to try and leverage and continue with the hybrid model to be more inclusive is an important focus for us. As we also talked about, there's been a very purposeful focus on leadership at Wipro for women, and we've almost doubled the percentage of leaders that we have in the company. We've hired over 50 leaders in th e last year at Wipro who are women leaders for the organization. We do offer maternity benefits and we do offer paternity benefits for all people both in India as well as in every market that we serve in. And as I mentioned, we are in 66 countries. That's something that's incredibly im portant. And we recently in the last year, introduced paternity benefits as well, and this exists for same-sex partners as well. You know our focus on; I will expand your commen t on rainwater harvesting and ta lk more holistically. Our focus is holistic from a sustainability perspective, not only from a renewable energy but from a waste, and from a biodiversity perspective as well. Over 40% of the water we use on our campuses is reused water. As I mentioned, 50% of the power we use in our locations is renewable energy. Our intent is to go up to 100% Of renewable energy by 2013 all of our campuses in India are intended to use 100% of electric mobility across all our campuses in India. A lot of our waste is repurposed as fuel and about a 40% of our fuel in our campuses again comes from this repurposed biowaste. So, we're incredibly consci ou

s and this is a journey we've been on for the last 15 years, and it only strengthens every year. As we move forward. You know, I certainly cannot comment on new acquisitions, but I want you to rest assured that we continue to look for opportunities that make strategic sense that ei ther give us new market access or help enhance the capability that we have in a particular mark et. We are, you know, as you know, the government has announced publicly that over the next 75 days is a free boos ter dose and we will booster dose certainly in India and we will continue to encour age our employees to get that taken care of. And I want you to be rest assured that we will certainl y explore the idea of a hybrid AGM next year, If we do this in person so that we can be much mo re inclusive and give the opportunity for people like yourself who may not be able to travel to Bangalore. Alka, thank you for your questions and for your recognition on our governance practices as well.

Thierry, do you want to comment on the skilling and the attrition and sort of what we are doing on that?

Thierry:
Yeah, you're absolutely right that you know attrition is being a reality for pretty much every company in our industry. Given the high demand driven from digital transformation and you know, development of new operating model. Across ind ustries, you know the demand for talent is such in every country is, and in particular in India, that it has created a, you know, a certain volume acceleration of attrition. It's not the biggest ev er. We have a known or in different period of our industry, picks of attrition and there's, you know, are you know? Uh, not, uh, Absolutely not in common. Uh, we have been managing attrition pretty well over the last quarters. It has, uh,
moderated, and then started to slow down two quarters ago, and I think the trend is comforting, although we stay very focused on it, uh, as you know, ta lent is our asset. It's you know it's all we have really.

It's all about talent and so you know, obviously actions in order to attract talent but also retain talent and grow talent are incredibly strategic fo r us. We are working on it. It starts obviously with,
you know, interesting job, True career oppor tunity, Opportunity to learn new technology, Opportunity to be exposed to new markets to new clients and really grow inside Wipro. It is obviously including financial aspects but also a lot of aspects around. You know how to create a sense of community? A sense of belonging, the un ique sense of purpose of Wipro is certainly helping us. Uh, to create, you know more, you know cohesion inside our organization and helps us moderate the level of attrition. But you know, we stay very focu sed and will continue to make sure that our people see their future
at Wipro more than anywhere else. It's a reality as well that as we continue to grow, as you know, this industry continues to be ex posed to high demand. The demand for talent will continue to
increase and you know, fortunately, the good news is that the potential of talent in India is quite exceptional. It's the best in the whole world. And you know, we continue to realize that you know when we are welcoming talent freshers. So, coming straight off universities that we can grow, you know we, we can really develop outstanding talents. This year at Wipro, we will go for the most ambitious plan of acquisition of freshers, you know, and that will certainly help us to continue to develop the talents that we will need for the future. Back to you Rishad.

Sanaulla Khan:
Yeah, thank you. Uh Rishad. Jatin and Thierry. I now request the next set of five shareholders starting with Bharat Narawed to come onto the scr een. Switch on your mic and ask. I can't hear you. Your mic is can you switch on your mic pl ease? OK, I now request Ashit Kumar Pathak to come onto the screen. Yes, Sir, we can see you Mr. Pathak.

Ashit Kumar Pathak :

Yes, yes. Very good morning. Respected founder chairman Mr. Aim H Premji. Present chairman Mr. Rashid Premji. CEO MD Mr. Thierry Delapor te and Board of Directors company Secretary and Good Evening overseas members, joining at 76 th AGM of Wipro Limited. My name is Ashit Kumar Pathak joining from Dominam, Kolkata, my esteemed gratitude to company Secretary Mr. Sanaulla Khan for sending me the notice of the annual report by e-mail very well in advance and allow me to speak. Also, my esteemed gratitude to secretarial department for nicely conducting site verifications and continuous touch with member Speaker. Excellent secretarial service. Sir my only request for sending the hard copy of annual report before AGM for better to read in lieu of screen. This is my small request. Excellent and transparent representations by respected chairman and CEO MD. I have noted all the very valuable points. That is focused on customer stakeholders. Capitalized growth opportunity, $1 0 billion marks revenue, industry organized and also market organized and future road map and also ECG framework. I have already casted for all the four resolutions mentioned in the notice. Sir, I have brief views which I like to share.

Financial performance of Financia l Year 22 is excellent, excel lent and $10 billion marks revenue financial year 22 and IT servic es revenue $10.4 billion. EPS al so gone up 22.35 against 19.11 and market capitalization 221 lakhs crore and book value is 119.39 and also 18 point 7718.7 and sale price yesterday 409.99 excellent management services. I congratulate my company's management team also in respect to dividend and also buyback. Sir regarding cost control, what steps my company taking. It mentioned IT services revenue increased by 29.1 percent but operating margin 17.7 against 20.3? And also, Sir uh, cost of revenue is increased by 31.3% and selling and market expenditure expense 32.7. If possible, throw some highlights.

In mentioned acquisition of CAPCO is a large d eal and achieve double digit growth. Financial Year 22. Also seeks acquisition also incurred a nd CV dollar 2.3 billion mentioned. But, uh, the acquisition for the prospective for acquisition CS Group and Rising rupees 44,600 and 22 million in mention? If so possible, prospective highlight s where it mentioned by companies' liquidity and capital requirements affected by many factors, normal ongoing operations, and some which arise from uncertainties, related global economics and mark et we target from our service. Also, debt reduction policy. The debt is 1, 51,696 million against 83,332 milli on previous year a:nd date equity ratio is 0.23 against 0.15. Also, free cash flow to net income reduced to 17%.
Sanaulla Khan: Mr. Pathak, in the interest of time. I request you to keep your questions brief please. In the interest of time can you please be brief in your question.

Ashit Kumar Pathak:
OK Sir, OK Sir. In the Capex program, next years building Virtual L ab where metaverse widely regarded as the next phase of Internet. But it is mentioned we will be worth of dollar 1.5 trillion by 2030. And said in the in Commercial Industries Ministry had inserted a new rule in Sage Under this 50% of employees can be WFH mode. So, if any positive impact in my, in our business operation, if possible, throw some highlights. Si r Capex program next to three years where it mentioned increased demand on hyper personalized production and services. Next take data and AI, mixed reality and digital engineering blockcha in, multi cloud and edge computing, mostly cyber securities, where US support several major cyber-attacks last year and also a big demand in domestic market. If possible, throw some highlights about Capex program in cyber security. Also finally my company's presence in 66 countries m entions and Americas and UK are the large key focus market. But Sir current financial year global economy is under stre

ss. US retail inflation is
9.1% in June. Also, Americans to dig deeper to pay in higher inflation and it may, the Federal Reserve may hike another 75 basis points in percent to battle inflation. So possible throw some highlights. Doing business in global markets.

Also, Indian Rupees depreciation is better than other emerging economy. So possible throw some highlights about ISD business verticals. Because t hat is comparatively down 18.1% and that should matter. My previous speaker al so mentioned I do not repeat this.

Thank you thanking you Sir.

Sanaulla Khan:
I now request the next speaker shareholder Bindu Satish Chandra. Ms. Bindu?
Bindu:

Good morning, respected chairman. I'm Bin du Chandra, a proud shareholder of Wipro and a member of Millennium Mams Bangalore chapter. C ongratulations, Sir, we are very proud of Mr. Azim Premji, who has created a large philanthrop ic ecosystem. What are your main focus areas in philanthropy? We would also like to know the female to male workforce ratio in your company and on the board. We are also keen to know why we can't have more female directors in the company.

Sir we haven't had the opportunity of you address our forum last year. This time we would like to invite you to our Millennium Mam's Investment c onclave in November. We would be grateful if we could learn more from you in person. Thank you, Sir. Sanaulla Khan: Thank you thank you, Ms. Bindu. I now request Mr. Shashank Shekhar and go ahead with your question. Mr. Shashank Shekhar:

OK, so I would first like to thank all the boar d directors and respected chairman to sharing the growth plans and the future plans. I think most of my questions have been shared with my fellow shareholders so I'll just be quick. My question is basically in the crypto space right now so we have no standard architecture we are using in India. So what will be the plan if we are going to enter into crypto space where three or any blockch ain technologies? Yeah, basically this is the question, and I mean basi cally what projects we will be targeting in future to take part in this space, so we will have something by 2025.

Sanaulla Khan:
Thank you, thank you Mr. Shashank. I now request Mansi Bihani to come onto the screen and ask the question.

Mansi Bihani:

Good morning, respected chairman and members of the board. I'm Mansi Bihani, a member of Millennium Mam's Bangalore chapter and a share holder of the company. My question to you is
the only way to grow in your industry is to acquir e, but it comes at a high cost. So, considering there is demand, how will you manage to sustain and deliver? So, also costs are going up because of inflation. The client costs are going up too since IT is a discretionary spend and there is a slowdown all over the world. How would you tackle this slowdown? Thank you.
Sanaulla Khan:

Thank you, Miss Mansi, I now request the management team to respond to the questions already asked while we get the other shareholders on board, in the meantime, thank you.

Rishad Premji:
Thank you, Mr. Sana. Thank you to all of you for your questions. Mr. Pathak. We had lots of questions. I'll try and answer as many of them as I can and that I was able to capture. Thank you for your recognition of our excellent secretarial services. Thank you also for your recognition of our excellent performance. As I, as we mentio ned and we talked about that, our focus has been on investing in the company over the last couple of years, we've invested significantly on our sales organization. We've invested strategically and smartly through MNA as well. But we remain
equally focused about how do we manage cost in our business. We manage costs through the pyramid and there's been a very purposeful focus on how do we integrate more freshers into our business.

As you will know, as we've sh ared publicly, you know two yea rs ago we hi red about 10,000

freshers from campus last year in financial year 2122 we hired 20,000 and our objective is to nearly double that. As we move into financial year 22-23 as well. So please be rest assured that we're very focused on how do we manage cost and cost is an important ingredient of our business model. As you would appreciate. You had some questions on Capex, which I will let adequately, which I will let Jatin answer in a second. We today work in a hybrid work model. We are our offices across the world are open three days a week on Monday, Wednesday and Friday and we are strongly encouraging our employees to
come in and some people choose to come in at the moment and some people don't. We are also working closely with government and with the industry association to ensure that we can work on a continuous basis in a hybrid model of work, whi ch we think allows us to leverage talent better
to be more inclusive, as I mentioned, both with people who live in smaller towns and cities, but women who want flexibilit y as well as people with disabilit ies. So, we will work and hope to continue working in a hybrid model of work. We remain focused on many of the new age technologies that you talked about, and cybersecur ity is certainly an incredibly important practice
for us that we are seeing a huge amount of relevance for, for exactly the reasons that you mentioned where the world is getting much more digitally connected. It's a sizeable scaled practice for us. We've acquired recently an asset which is agile, which brings us some cybersecurity consulting capabilities in that space. So, it's an important area of focus for us as a company. Jatin, do you want to touch on some of the other questions I may not have this question set.

Jatin Dalal:

So, Mr. Pathak, I'll try and cover 3 questions specifically that you posted. One was on debt to equity ratio. As you know, we completed our la rgest acquisition ever. In April 21 and we funded
half of that roughly through our maiden U.S. dollar denominated bond offering. An offering that was received very well. I'm very happy to share that the cost of funds that we were able to lock

in, in Q1 of last year, has been a very wise de cision given the interest rate hike since then. So that has resulted in the increase in the debt that you see in the balance sheet. That's the first question that I would like to answer. Your sec ond question on Capex, as some of you know, we completed a large Capex cycle for our investments in our development centers in India just before pandemic. So, in fact we are very well poised as we have grown, to leverage the investments that we completed by March 20. So, we do not anticipate a large Capex in India. But we will remain invested in creating exp erience centers, innova tion centers, digital pods, cloud capability, cloud migration studios in our developed markets for our customers and that would remain the focus of our Capex. The last, the third question was on how do we see the investments in agile and CAS and both are very strategic. Specifically, as Th ierry, and Rishad both mentioned; our focus one on cyber security, which is represented in agile and focus on domain, which is reflected in cash. So, we are very excited about those investments and we hope that in 2023 we will see an excellent performance from that.
Rishad Premji:

Thanks Bindu, thank you for your questions. Yo u know, the comment on philanthropy. I just, you know, as we mentioned, both Thierry and I m entioned in our opening comments, a sense of community is a very integral and important part of the company.

I'll talk briefly about what the Wipro Foundation does. Most of the efforts of the Wipro Foundation are focused in urban settings around locations in which we exist as a company. We do a lot of work around education, so from rebuilding government schools to enhancing the capacity of Government schools in urban settings to work around heal

thcare, to work around restoration.
As I shared the example of lakes to natural disaster s and then we also do a fair amount of work overseas where we work in STEM education, so both in the US and in the UK, where we work with STEM teachers to make them and enhance their capacity to be better STEM teachers so they can produce better STEM students. So, w e're working with the consortium of seven universities in the US. We've had over 450 teacher s graduated. It's a 2 year program in the US over the last many years. And we recently in the last three or four years began this program in the UK as well, so that's the effort of the Wipro Foundation and the Azim Premji Foundation, which is a shareholder like yourself of Wipro, as well, has a much broader mandate there. The fundamental focus at the more is on education and working in the poorest, most remote parts of India, working to enhance essentially the capacity of the teachers so they can produce. Better students when we work through three means of intervention, we work th rough efforts on the field where we have about 1500 people on the ground. We work through the efforts of grant making and we work through the efforts of a university which offers prog rams, both Masters and Undergraduate programs, with a very strong social orientation and social bent of mind. Over the last few years, we've become a strong grant making organization, so we offer gran ts in various different areas and of vulnerability from people with disabilities to domestic violence, to small and marginal farmers, to adolescent girls etc. And recently in the last 6 to 8 mont hs we've had a very strong thrust on healthcare as well as on livelihoods. To your point on both bu ilding female representation in the organization, I've already talked about, that I think it's incredib ly important. You know where 36.1% overall for the company. Our joining ratio, especially from campus, are 50- 50. We're very purposeful and focused about how do we retain people and so our running program so we can encourage and enhance the number of women that stay on with us and don't leave when they're making family choices, but have the flexibility of making that choice as well as continuing working in the organization. And, you know, I think our board is quite diverse, but we can remain focused on that. You know, we have 4 direct ors from overseas. We have two women directors on our board of the six independent directors, so we have, I think a fair amount of diversity and representation on our board, but we remain purposeful on t hat. And thank you. Thank you for your comments on that. Shashank, you know I don't want to comment specifically on crypto, but I just want to give you the comfort that new age technologies is an incredibly, incredibly important area for focus for us. And so, we drive this both through our mai nstream organization, but also through our CTO function, which is purposefully focused on looking at technologies that can pay off commercially on scale for the company in the long term. So, whether it be Web 3.0, the metaverse, crypto, 5G, etc. These are areas that we are investing in and investing in for the future. Uh, you know, for opportunities as we work with customers, we'v e just, for example, formalized the Metaverse practice within the company as we see more and more opportunities emerging in that space.
Mansi your question, you know, I just want to be clear, we don't acquire companies for growth. We it's not a volume play for us. We acquire co mpanies to help us build strategic differentiation in the company, so whether it's helping bring a new capability into the com pany and Thierry talked specifically about, you know some of our acqu isitions and CAPCO and CAS Group for example,

which gave us huge domain and consultative capability in two distinct areas of media and communications and banking and financial services. And also, we do it for market access to hel

p
us open new geographies, where we're perhaps underrepresented or not large enough.

So, it is not a compensation for growth. It is an enhancement to growth, strategically by bringing in new differentiators and new capabilities. And you know your point on inflation and technol ogy being a discretionary spend, you know it's interesting in some ways that the technology services industry is, at some level recession proof, right? Because in times are good people are spendi ng on the discretionary side where they're spending on new initiatives and transforming their businesses and serving their customers in this new digital first agenda. And when times are not so good, they're focused on reducing costs and transforming their cost side of their business. So, you know, at so me level, both elements work well when things don't work well. When like what happened in 2008 when decision making stops when customers are not making decisions either way. But as long as customers are making decisions, the IT services industry and we feel well placed to participate both on the cost side as well as on the revenue side. So, thanks. So now, do you want to move to the next set?

Sanaulla Khan:
Yeah, thank you. Thank you Rishad, I now request the next set of shareholders starting with Mr. Manoj Kumar Gupta to come on to the screen and ask the question please. Mr. Manoj Kumar Gupta.

Manoj Kumar Gupta :
Hello, good morning. Can you hear me?

Sanaulla Khan:

Yes, please go ahead.
Manoj Kumar Gupta:

Yeah, can you hear me? Good morning Respec ted Chairman board of Directors fellow shareholders my name is Manoj Kumar Gupta. I'm equity seller of Wipro Limited. I'm attending this meeting from my residence Kolkata. And thanks to your company secretary and his team, especially Mr. Sowrabh, to help us to join this meeting through video. And I'm a great admirer of your father, Mr. Azim Premji.

I had met him once in my life in 2005 during a CIF conference in Calcutta, and I said Namaskar. His birthday is on 24th July and I wish to God for his healthy and prosperous safe, long life. So now I will take two or three minutes for CSR. You are doing a wonderful job for in under the CSR policy to serve the community and the society. But I request you to do something in this part of the country in West Bengal, Orissa, Assam to serve the community and society under your CSR umbrella. And Sir, is there an y impact will come through Russia and Ukraine wa r on our company? Direct or indirect? And Sir, try to increase the number of fe male directors, either whole time director or independent directors. Your business runs in 66 countries, so what's the position in US, Russia, Canada and Britain. And Sir, have you any plan to launch some Wipro campus in Northeast like Tripura, Assam, Meghalaya. The se are fast growing states now. And in Chhattisgarh people are coming to Calcutta to ta ke part in New Year Wipro campus. Why are you not starting a Wipro campus in Chhattisgarh, Raipur? Chhattisgarh is developed.

Now I've seen the face of the Azim Premji, I'm a great admirer of him. Sir consumer products and inflation has gone up. So how you face the challenge of inflation in the consumer products? Because everything raw material prices has gone up by 20% to 30%. How you face that challenge due to high inflation. And healthcare products, How much your market share in your healthcare products like MRI, CT scan and cataract? How much your market share? I rushed to hospital. I've called several times to your people but they do not turn up to meet us. So that we have gone to Fuji and Philips. And
Sir, why are you not approaching to build the go vernment portals like as income tax has gone to

Infosys, passport gone to TCS. So you should have bid to get the government business. And have you any plan to reduce the number of subsidiaries? The number of subsidiaries is near about 60-76, so have

you any plan to reduce the number of subsidiari es? What will what is?
What's your vision for 2027? If our economy will cross $5 trillion, So what will be your and thanks for your COVID hospital last but not least, but last year you have forget as to reward on the eve of 75
th year. So how you will reward to the investors and the employees. Thank you, Sir.
Sanaulla Khan:

Thank you. Thank you, Sir. I know request Mr. Sunil Jaiswal to come on to the screen and ask his question. Mr. Sunil. Please go ahead.
Sunil Jaiswal:
When will we reach the market ca p of TCS and Infosys? I am doing B.Tech, from Shri Guru Gram Sahab university, Punjab. No big companies come in my university for placement, so I request you to please include our universi ty also in campus placement.
Sanaulla Khan:

Thank you. Thank you for your question, Mr. Sunil. I now request Mr. Ramesh Shankar Golla. Mr. Ramesh Shankar Golla. Can you please switch on your microphone and your camera and ask the question please? Mr. Ramesh? Mr. Ramesh, we are unable to hear you. I now request Mr. Bharat to come on to the screen and ask his question Mr. Bharat. Bharath are you there?

Bharat:

Hello

Sanaulla Khan:
Yes Mr. Bharath. Please ask.

Bharat:
Am I audible Sir?
Sanaulla Khan:

Yes, please go ahead.

Bharat: Just a minute I'm connecting with the microphones. Good morning Sir. Hello.
Sanaulla Khan:
Yes, go ahead Mr. Bharat. We are able to hear you. Bharat : Sir, very much good morning entire board of di rectors. I'm calling from Hyderabad. First
of all, I'm happy to see our entire team, Sir, I' m congratulating the entire world for a wonderful performance in the financial year Si r. First of all, I'm thank my CE O, Sir, under the leadership, my company is growing fabulously Sir. I'm very happy, Sir, for giving a highest pay in India says he deserves that. Salaries are because under his l eadership, share price and the dividend part is good Sir. So, he deserves for the highest pay. Sir what is the future plan for coming year Sir.

And respected chairman since past, we are asking fo r the bonus, Sir, we deserve a bonus, Sir, because past four years there is no bonus Sir. And in the 75 celebration also requested for the bonus, but we are not deserved Sir. Yeah, even in t he Platinum Jubilee also. At least this financial year we expect a bonus from the management, Sir. That is the only request. I thank Mr. Sanaulla Khan for this. The way he outlook for us 24x7 Sir. He is always accessible for us Sir and his entire team. And thanks for arranging a wonderful visit. Si r, once again chairman and entire board, be happy. Be safe. Be safe, Be Healthy. My best wishes to enter board of directors. Thank you very much.

Sanaulla Khan:

Thank you Mr. Bharat. I now request Dheeraj Jhamnani to come on to the screen and ask his question. Mr. Dheeraj. Mr. Dheeraj are you availa ble? Yeah, please go ahead with your question.

Ramesh Shankar Golla:

Hello, I'm in the line. Ramesh Shankar Golla.
Sanaulla Khan:

Yeah, please go ahead with your question.

Ramesh Shankar Golla:
Hello ok, can I speak?
Sanaulla Khan: Yeah, go ahead Mr. Ramesh.

Ramesh Shankar Golla: OK thank you. Thank you, Sir. Thank you very much and a very good morning.

To all, Sir, Sir. Hamara chairman Sir. Uh. Very good person Sir.
All aspects is very fine, Sir.

Actually, Sir. At Present how many clients to add ed Sir new clients, new clients to Wipro and is a Corporate social responsibility is taking very mu ch good, Sir. Our CEO is very good, Sir. All board of directors too. Thanks to you and the financial performance so good Sir. Very appreciating to all Sir. Sir, I wish to Mysore and Bangalore Ca mpuses. Please request sir. Advance wishes to Mr. Azim Premji, Birthday wishes. And Thanks to you all sir and have a good day. A nd lastly one more question sir, Expecting bonu

s
sir, please and raise the dividend sir. Thankyou. From Ramesh Shankar Golla, Hyderabad Sir. Sanaulla Khan: Thank you. So, this is the last set of shareholders, we have completed. One or two shareholders could not join, but we will cl ose the shareholder question se ssion here and I request the management team to respond to the last set of questions please. Thank you.

Rishad Premji:
OK. Thank you, uh, thank you Mr. Gupta. Thank you for your admiration for Mr. Premji. He appreciates it. Thank you, uh, for your comments on CSR, uh, you know, as you know we have a we have a campus as Wipro in Kolkata. It's of si ze and scale and we continue to invest in that campus. We have no plans to open any new campus at the moment given the fact that we have capacity in our existing campuses as well as with the hybrid model which we hope will be a reality, will also give us an option to be able to incor porate and include people from different locations without having to add new campuses. So, there's no plan at the moment of having a new campus. There has been no direct impact of the war on our business. We have no people in Russia or in Ukraine and we do no business with clients in Russia or in Ukraine. But certainly the rub off effect of our clients that do business in those markets. And that's why both Thierry and I alluded to the element of uncertainty in the environment with th e war. But we see no direct impact of the war in our business, in terms of our presence there or customers that work in that market. I've already addressed the point on female director, so I won't repeat that.

Our largest market today in the world is the US market. We do about over 55% of revenue in that market. The UK would be our second largest market and we you know we have a sizable and growing presence in Canada. Both the US, UK and Canada are incredibly important and strategic markets for us. You know this is a shareholder meetin g for Wipro Limited, which is the IT services company, so I won't comment on the consumer products or the healthcare business here. And you can connect separately and offline for that. I also want you to be assured that we do participate in government business as and where it makes sense for us as you can appreciate some of these deals are large and complex and we have to ensure that we have the ability to deliver these impactfully before we participate. Bu t we participate selectively, but we do participate in government tenders and opportunities. And you know, Jatin do you want to quickly talk on the plan to reduce subsidiaries.

Jatin Dalal:
Yes, uh, you know uh, Mr. Manoj, we continue to reduce subsidiaries. The reason you are seeing the increase is because of

the acquisitions. Uh, typically when you acquire a new business, it comes with subsidiaries that they have across the globe. So, you are seeing an increase, but every quarter we reduce and reduce the subsidiary and the complexity of the structure. Thank you. Rishad Premji:

Thank you, I also already talked about the vision fo r 2027, so I won't repeat that as well. Uh, Mr. Sunil, thank you for your comments. You know our endeavor is to outperform competition. Like every person who plays in the space and that co ntinues to remain our endeavor. So we're giving it our best shot so you know, and you know we don't control market caps, but certainly driving and performing a best among our, among our peers is a strong, continuous focus endeavor of the company. We have no plans to open a new University campus but you can participate as a campus student to apply to a job at Wipro. We have a standard test that's available across the country. Anybody can participate irrespective of the university you go to. And if you clear that exam, you certainly have an opportunity to have a job at Wipro. So, I would encourage you to do that and if you need any more information, y ou can certainly only reach out to

our company Secretary, Mr. Sanaulla Khan. Uh, Mr. Bharat. Appreciate your comments on the, the recognition for Thierry and for all the efforts he and the management team have driven over the last couple of years and we will take your comment into consideration and keep that in our mind on bonus the same for you Mr. Ramesh. You talked about the bonus and again thank you very much for all your appreciation on what we've done on CSR and Thierry and the leadership's effort as well as your comment on the bonus. Certainly, you can also reach out to Mr. Sana on any potential possible visit to our campus in Bangalore or in Mysore and Jatin, do you want to quickly comment on how many new clients we added last year?

Jatin Dalal:

We added 428 new customers in FY22.

Rishad Premji:

Super. Good, thank you very much. Great so you know, all the questions that is all the questions of the people that we were able to connect with a nd I'm sorry some of you were not able to connect at the last minute. All the items of business as per the notice of the 76th annual general meeting have been taken up. I now declare the proceedings of the annual general meeting as completed. As mentioned earlier, the Insta poll E-voting fac ility will continue to be available for 30 minutes after this meeting and on behalf of the Board of Directors and the management of Wipro, I convey our sincere thanks to all the Members for attending and participating in th is meeting, please take care of yourselves, stay healthy and stay safe and thank you very much for joining us this morning. Thank you.

Moderator: Ladies and gentlemen, good day and welcome to the Q1 FY'23 Earnings Call of Wipro Limited. As a reminder, all participant lines will be in the listen- only mode and there will be an opportunity for you to ask questions after the presentation conc ludes. Should you need assistance during the conference call, please signal an operator by pressing '*' and then '0' on your touchtone telephone.
Please note that this conference is being recorded. I now hand the conference over to Ms. Aparna Iyer, Vice President and Corporate Treasurer. Thank you and over to you ma'am.
Aparna Iyer: A very warm welcome to our Q1 FY'23 Earnings Call. We will begin the call with "Business Highlights and Overview by Thierry Delaporte, our Chief Executive Officer and Managing Director," followed by "Financial Overview by our CFO, Jatin Dalal," afterwards, the operator will open the bridge for "Q&A with our management team."
Before Thierry starts, let me draw your attention to the fact that during this call, we may make certain forward -looking statements within the meaning of P rivate Securities Litigation Reform Act 1995. These statements are based on management's current expectations and are associated with uncertainties and risks, which may cause the actual results to differ materially from those expected. The uncertainties and risk factors are explained in our detail filings with SEC. Wipro does not undertake any obligation to update forward- looking statements to reflect the events and circumstances after the date of filing. The conference call will be archived and the transcr ipt will be made available on our website. Over to you, Thierry.
Thierry Delaporte: Hello, everyone and absolutely good evening. Thank you for joining our Q1 Earnings Call.
Let me first tell you that as I speak to you today to share our financial performance, I'm both humbled and excited, humbled to have had the honor of leading this incredible company for exactly two years now, and excited for what lies ahead of us.

As always, I'll share with you a view on the demand environment and also offer some details on sectors, markets, service offerings, as well as business outlook for the quarter ahead. Despite the uncertainties of the macroeconomic environment, if I look at the pipeline, order bookings and the discussions we are having with our customers, there has been no slowdown or pullback of spends for us.

The demand for our IT services is robust. And I must say I'm thankful for that. Our overall pipeline is actually in fact at an all -time high, and it continues to be renewed as we are winni ng deals at a pretty good pace. High growth services like cloud, like digital, like engineering services or cyber security are seeing definitely strong interest from our clients. Led by our FullStride Cloud Services more than half of our bookings today ar e attributable to these strategic focus areas. And we believe this rotation to high growth areas is going to accelerate. Our bookings in cloud are up 35% year -on-year and engineering services booking literally doubled.

Overall bookings for the quarter were very solid. Our bookings in total contract value (TCV) terms grew at 30% -plus year -on-year and in annual contract value (ACV) terms grew 18% year -on-year. Three of the four markets grew upwards of 25% year -on-year in TCV terms. I've shared this with yo u in the past the large transformative deals are a key pillar of our growth. They provide

wipro.com

excellent opportunities to showcase our capabilities and scale. But I'm pleased to share t

hat our large deals bookings were nearly $ 1.5 billion this quarter, which is almost 3x of what we did last quarter and t he majority of these are new.

Our revenue growth during the quarter was at 2.1% in constant currency terms and 17.2% year -on-year. We grew 15% plus year -on-year across all markets. We are investing heavily in talent to support our ambition growth plans for the year. We added fresh 15,000 net new talent during the quarter.

In line with our strategy to reinforce our cloud and consulting capabilities, we completed the acquisition of Rizing last quarter. Rizing is a global SAP consulting firm, one of the leading strategic partners in the world for SAP. Rizing will become a critical extension of Wipro's SAP Cloud practice, but also Wipro's FullStr ide Cloud Services.

Our Q1 operating margins as anticipated were lower at 15%. This is because we're investing in solutions and capabilities for us to further strengthen our position as a strategic partner for our clients. But we've also accelerated struct ural transformation by invest ments in freshers in and IT, that will help drive operational efficiency and agility. The inorganic bets we made to accelerate our growth are presently diluting our margin by 2.3% as a reference, and at 15% we believe we have bottomed out .

I will now provide some finer details on markets, service offerings and on sectors. All markets grew double- digit. With the Americas and Europe, our top two markets growing at 18% and 16% for the quarter year -on-year in constant currency terms. Let's go through each of these regions in details:

In Americas 1, we grew 20% year -on-year in the quarter with all sectors showing strong growth. During the quarter, technology products and platforms grew 37% year -on-year, and communications, media and information services grew 26%

Let's look at Americas 2. We grew 17% year on-year in Q1. Financial services and manufacturing, led the performance, recording a growth of nearly 30% each year -on-year. This or der book in total contract value term grew nearly 30% year -on-year in Q1.

Now, let's look at Europe. Our European business delivered a year -on-year growth of 16% in the quarter gone by. UK, Ireland, Southern Europe and Benelux grew at/or over 20% year -on-year. Our pipeline here is robust and we have won many large deals in the market . Order book in total contract value terms grew at 40% year -on-year.

Finally, our APMEA business grew at 15% year-on-year in Q1. The region that did particularly well during the quarter were Australia and Southeast Asia. But here also, overall, the order bookings in total contract value terms were very robust, growing at 60% year -on-year.

We said as part of our strategy continuing to strengthen client relationships remains a top pri ority.

We have created segmentation strategy to grow in key markets by not only deepening our relationships with our existing clients but also bringing on new clients who are looking for a strong

wipro.com

business and technology transformation partner to help them digitize their business. As I mentioned earlier, we are pivoting our go-to -market investments to allow us to do this. As a result, our top five clients grew 26% year -on-year and our top 10 clients grew 22% year -on-year both in constant currency terms. If w e look now in the last 24 months, we have doubled our clients in more than $100 million segment to 20, so from 10 to 20. We also added eight clients in more than $50 million segment just in the last 12 months.

Now, from a service offerings standpoint, our iDEAS Global Business Lines grew 21% year -on-year in Q1. This growth was led by 1) digital experience 25% year -on-year; 2) domain and consulting which grew over 45% year -on-year; and 3) engineering services which grew 18% year -on-year.

And then our second Global Business Line, our iCORE Global Business Lines grew 11% in Q1.

You will certainly appreciate th

at this performance comes against a backdrop of accelerated
rotation of portfolios to the new high growth areas I talked about earlier.
And cybersecurity services led growth was 34% year -on-year in Q1. Improved customer and
employee experience are definitely fueling this growth in iCORE . Our customers want us to
reimagine what I would call traditional services such as end user computer computing services or
human resource outsourcing.
Leading with business solutions has been one of our key differentiators. Our role as a cloud
ecosystem orchestrators which we prefer stride allows us to increase opportunity to grow our
business. Last month, we hosted our first ever FullStride Sales and Partner Summit, featuring 23 of our cloud partners.
Together, during several days, we strategize around new opportunities and committed to working together to help our clients transform into cloud. There was tremendous
energy across our teams. In the market, we are partnering closely with Microsoft, for example, to
help one of our large healthcare clients transform their legacy infrastructure to Microsoft Cloud.
Now, our engineering services have grown at a compounded growth rate of 4% over the past four quarters, which is showing the consistency in growth. Given the depth of our services and
capabilities here, I can proudly say that we are a true leader in engineering services. And this
week, we have launched Wipro Engineering Edge, our full stack portfolio of engineering services.
We know this will enable our clients to innovate at scale. This also extends our engineering edge by combining capabilities such as Cloud, 5G, AI, Industry 4.0, IoT and Silicon Design.
Engineering Edge is already having an impact in the market. For example, leading mobility technology company has chosen Wipro as an extension of their global engineering team to support
them on the development of software-defined vehicle applications. We also won a multi -year
engagement with a leading US based semiconductor corporation to provide VLSI and system
design services across a variety of products globally. We will help meet the quality standards
required of semiconductor chips using applications such as high- performance computing, self -
driving cars, design and visualization, deep learning, AI.
wipro.com
I will share a couple of examples before I move on. Wipro has won a very strategic engagement
to assist in the digital transformation journey of a leading US -based fund administrator. We will
provide a range of services including digital contract management, cloud migration with Wipro's FullStride Cloud Services, quality and process engineering as well as create a talent
transformation roadmap for the client 's workforce.
Wipro has also entered a multi -year strategic agreement with one of the world's leading energy
technology companies. Here, we will reimagine the employee experience for the firm's 70,000 plus
employees across 75 countries.
I now share the view of our talent landscape. You may remember I had shared earlier about a shift
in our talent strategy towards fresher intake. In line with that, we have onboarded more than 10,000
freshers in Q1. Now, why we are on the subject of talent? I want to share that our attrition has
continued to moderate, right. That's three consecutive quarters of improvement in employee
retention in reality; in Q1, it was down to 23% on the trailing 12-months basis and we expect further
moderation ahead.
Talent investments I bel ieve are paying off. That's what it says. If you recall, we announced moving
to a quarterly promotion cycle, which will be effective, actually July 2022, and salary increases for
all those eligible in September of this year 2022.
Before I close, I will share an outlook for the next quarter. We have guided for a revenue growth
of 3% to 5% in Q2, which will translate to growth to be precise 11.6% to 13.8% on year -on-year in
constant currency terms. With this g

uidance for Q2, let's be clear, we will very comfortably grow in
double digits for fiscal year 2023.
In summary, all our markets are growing. We have doubled our 100 million strategy clients. All our bookings are strong. Our pipelines at an all -time high. I sound very optimistic about the rest of the
year.
With that, I'll hand it over to Jatin now for his comments. Thank you.
Jatin Dalal: Thank you, Thierry. I'll share some data points. As you know, we grew 17.2% year -on-year in
constant currency terms. We delivered a net profit of ■ 25.6 billion. Our ETR f or the quarter was
23.7% , which is an industry leading ETR. We had hedges of $3.9 billion. The exchange rate
realization for Q1 was ■77.81. On a trailing 12 -month basis, we have converted 68% of our net
income into operating cash flow. And as at t he end of the quarter, we had $3.9 billion of gross cash
on the balance sheet and $1.7 billion of net cash on the balance sheet.
As Thierry mentioned, we have given a robust revenue guidance of 3% to 5% for Q2 at the exchange rates which I mentioned in our press release. And we'll be very happy to take your
question from here.
Moderator: Ladies and gentlemen, we will now begin the question-and -answer session. Our first question is
from the line of Moshe Katri from Wedbush Securities. Please go ahead.

wipro.com

Moshe Katri: Thierry, just a big picture question for you. Now the Capco anniversary as we speak, at this point, you're not going to get the contributions from Capco that you've. How do you try to fill on that gap down the road and obviously you spoke about some of the different areas that you're focusing on in terms of high growth initiatives that we can get some color on that and some detail on strategy? Thanks a lot.

Thierry Delaporte: Moshe, Capco's acquisition was finalized about a year ago. We celebrated one year of Capco in the Wipro family a few weeks ago. I t's been an absolute success. Obviously, always early to say after one year but frankly, the way the team has integrated and maintained the focus on the market, the way this team has continued to play its role and started to connect with the Wipro BFSI business to develop common go-to -market strat egy with our key clients has been really remarkable. Capco, quarter -after-quarter, the growth has been extremely strong. Capco has not seen any acceleration increase or easing of attrition after the acquisition. Capco is very much involved into BUs. And, f rankly, we are not seeing slowdown in the growth of Capco. The performance in bookings in the last two quarters of Capco has been solid. This quarter again the pipeline is strong. We know that typically sometimes consulting business are more exposed when there is a slowdown, but this is not what we are seeing. And I think it comes from one aspect. One, it's the quality of the relationship built by Capco with its clients, one. Second, the fact that it's truly connected to their digital transformation. We are seeing a certain shift sometime not of the volume of opportunity, but the type of opportunities of clients who are still looking to transform, but with the ability to drive more productivity improvements and Capco is very much geared to address these challenges as well. So, at the end of the day, Moshe, Capco is going well, and is a very solid contributor to our performance.

Moshe Katri: So again, just as a follow up, now that your anniversary of that acquisition, are you comfortable that you're going to be able to sustain the growth that you've seen, and I'm talking more about the year-over -year growth cost that seem to be moderating in Q2 versus Q1?

Thierry Delaporte: The answer is yes .

Moderator: We'll take the next question from the line of Mukul Garg from Motilal Oswal Financial Services. Please go ahead.

Mukul Garg: Thierry, I would kind of add on to probably a broader consulting piece. Last two years, you've added quite a chunky bit of c

onsulting revenue to Wipro. Given the recent macro environm ent, what are the risks you are preparing for in this business because the past experiences to all of us that advisory work generally slows down at a faster pace compared to the demand, which is out there for the cost optimization piece which generally get s highlighted during weaker times. So, if you can just highlight both from a cost aspect as well as how you are managing or looking forward to the growth in the consulting business over next one year, it would be great. I also had a question for Jatin. How should we see the wage cycle play out after the shift to the quarterly promotion cycle? Thierry just mentioned that the wage hikes have been pushed out to Q3. Is that the right assumption? And besides utilization, what other immediate levers do you have which can help you take up the margin over next two quarters?

wipro.com

Thierry Delaporte: Mukul, let me take the first question and then I'll pass the mic to Jatin. I suspect your question was specific to consulting but broadly, looking at the different consulting component of the business. At Wipro, we really have a consulting business that is really very much connected with our technology business, right. So, it's not uncommon. The proportion of our business that actually combined consulting and technology capabilit ies is significant. So those are not standalone consulting business, just selling to different types of clients. And I think it changed a lot, the landscape because the reality is that, as you said, let's start with we are listening to what, the analysts, what the market, what the journalists have to say about macro environment. When we hear that we pay attention to potential implications for business. But then important is the connection with our clients, right. I'm speaking to clients every single day and having discussions about macro environment . They are like us , seeing those same signs between a war on the side, on one side of the world inflation, interest rate, potential clouds on the economy in a given country or another. But they also have learned over the last two years about technology. When I say they have learned, they have reinforced the conviction during the last few years that technology is not a cost center, it is a driver of transformation. Now, what might have happened or might happen now is that in some cases, we're driving program to drive to develop new business models or improve experience, I think they are possibly going to more focus on drive productivity gains and reduce the cost of running the business. But that's completely feeding with our capabilities and solutions that we have. We are indeed helping them leveraging technology to drive the transformation and improve their productivity. So, at the end of the day, consulting is an integral part of our go-to -market strategy. They are working with our technology teams, they are developing opportunities in the pipeline, they're winning deals together. If you look at the Rizing business, we already have several leads, where the Rizi ng team and the SAP team of Wipro are working together. The first question was on Capco. We have had more than 60 joint wins in the last 12-months. And so, this is really what's driving the growth. I confirm today we are on one end I don't want to be arrogant, I want us to

continue to stay vigilant and observe the market and see and be ready to react when there are different signs. Okay, that we cannot predict always. But what I'm telling you is that as we speak
right now booking performance solid for Q1, I should say, even extremely solid, pipeline all -time
high and extremely good engagement with our clients. So, the level of confidence on our growth
going forward is solid.
Jatin Dalal: Mukul, let me articulate the levers that can help us improve margin from here on. I see six levers.
The first is clearly utilization. As you know and it is visib

le in data sheet before including freshers
or excluding freshers you will see around 5% away from what was our peak utilization. So, that's
first. Second, subcontractors as borders and travels are difficult for all of us and particularly have
accumulated certain amount of subcontractors, which we will be able to moderate every quarter going forward, that should provide additional lever because the cost of subcontractor is typically
about 30% higher than your own employees. So that is second. Third and most important lever is
the pyramid and fresher improvement. As you know, we have hired in FY'22 more than double of
freshers that we hired in FY'21 and in FY'23, we will hire an other more than double, which means
that our ability to correct the pyramid through consistent improvement of the base and moving
people up through the pyramid would be a big structural lever. In fact, that is the only lever which
can reduce the cost press ure that we have seen in last 18-months. The fourth lever is pricing
power. The attrition on one hand and our ability to position ourselves very differently, for example,
wipro.com
the Agile acquisition puts us in a very different space of consulting in cybersecurit y and the rates
that reflect very differently than what you would see in a traditional managed services business of
Wipro. So, pricing for right services. Cloud is another area where we have invested heavily in our
ability to command price there is definite ly much better than the traditional areas that we're
working. That's the fourth.
The fifth is attrition itself because one of the biggest impact on our cost structure is when you are
simply replacing similar skill and similar capability and similar experie nce, but you are paying a
premium to a lateral of 25% to 30% as we spoke about and as you are aware, the attrition is moderating and that should certainly give us lever.
And finally, the operating leverage as we work through as the growth comes back, not all cost
structure should go up in- line with the growth of the revenue. So, there are levers, I do not want
to, for a second believe that there are not sufficient levers in our business to get back to a structural
superior position from the margin.
Mukul Garg: Thank you. Just if you can clarify on the wage side part after shifting to the quarterly promotion
cycle ?
Jatin Dalal: We are not making any shift. We have said, we will give wage increases on 1st September. And
we have given the promotion from 1st J uly. And these are the areas of investment for Quarter 2.
Moderator: Thank you. Our next question is from the line of Kumar Rakesh from BNP Paribas. Please go ahead.
Kumar Rakesh: My first question was on your earlier commentary on margin in previous quart ers that you had
talked about a margin guidance of 17% to 17.5% for foreseeable future, and below that for the next
couple of quarters. So, where do we stand on those commentary, and specifically about the band
of 17% to 17.5% by when do we expect our busi ness to get back, in the context of potential macro
headwinds in the second half as well?
Jatin Dalal: You are absolutely right, we, in the beginning of last quarter, we said that we will be away from the range of 17% and 17.5% for a few quarters. That was also purposeful because we were planning
to invest in the business apart from the fact that some of the operating expenses were coming
back like travel and facilities. And those investments have been made, roughly of 2% point, 1.5%
point comprises of 20 basis point for the rising acquisition dilution for a month or so but more
importantly, nearly 1.3% is on three areas, utilization, which I spoke about before, subcontractor
and some of the internal investments that where we have made in IT, to make our selves far more
efficient, agile and productive over a period of time. And those investments have been made.
We said this is the bottom, and from here on our endeavor woul

d be to come back to the guided range that we spoke about before. However, we will calibrate it every quarter, we are not giving a
time window or by when we will come back. For Quarter 2 specifically, I spoke before that we will
have to invest in talent. So, whatever efficiency gains we are making it will get invested back into
wipro.com
the busines s in Quarter 2. And beyond that we will talk at the end of Quarter 2 rather than making
a comment beyond that today.
Kumar Rakesh: My second question was around the Capco acquisition. So, one of the rationale we had at the time
of Capco acquisition was that it will give us a scale in BFSI. And also, the consulting capability
which comes with Capco, should help us and start delivering strong growth in the BFSI vertical.
Over the last few quarters, we have seen that the BFSI vertical has been doing reasonable growth,
but it hasn't been outperforming the industry per se. So, are we still seeing the benefit yet to accrue
from that acquisition in the BFSI space? Or is it something which we are happy with what we have

achieved so far?
Thierry Delaporte: Rakesh, you know we always expecting, always more in terms of growth, but the reality is that our BFSI business today is growing 24% year -on-year. And I think what is very visible and comforting for us is that not only we have driven growth in terms of volume, if you like, but also in terms of position in those accounts. We have increased the number of large accounts. We have increased the nature or we have changed the nature of our relationship with our clients. And we are a lot more able to work with them on more s trategic initiative than we were in the past.
So, I think it's absolutely, certainly we can do more and we will continue to do more. We have continued to reinforce our setup, if you like to trigger even more impact on the larger accounts. But frankly, I th ink we can say after a year that it's really a success, 24% year -on-year is a decent growth, I would say.
Moderator: Thank you. Our next question is from the line of Sandeep Shah from Equirus Securities. Please go ahead.
Sandeep Shah: If I just look at one metric of revenue per employee on a YoY basis, it has gone down by 8% in the IT services. And this is despite a high revenue yielding companies acquired like Capco Rizing and the Agile as a whole. So, what are the reasons for the same, I do agree utilizat ion has gone down, but that explains partly not for me as a whole. So, what are your views, is it some traditional business has a higher pricing pressure?
Jatin Dalal : If you see the overall off shoring trend, it continues to be very favor able to Wipro. And when the offshoring trend is favorable to Wipro, realization is one-third in India. So, that has definitely played out in terms of IT services per employee realization coming down. I am not seeing from a pricing power standpoint, any concern where we are giving away price discounts. In fact, I would think, it could be a little bit of portfolio play. In fact, I would believe that if you adjust for offshore, you will see a strength there because we have added Capco, we have added Agil e, we have added Rizing which are high significantly higher realizations generative business by design.
Sandeep Shah: So, just a follow up question in terms of the consulting company like Capco and Rizing, and Thierry, your comment regarding sensitivity to macro issue are slightly higher for these consulting businesses. So, how flexible we have in terms of cost management within this Company as a whole, both in Capco and Rizing. If slowdown happens, you believe the margin of these companies
wipro.com
can slide. And i f we try to manage the margin, we believe we are running a risk of high attrition as well in this Company?
Thierry Delaporte: Let me tell you one thing, we have obvious levers to pull to improve the margin of our consulting business in particular Capco, but also

Rizing, which is to continue to develop the offshore component of this business. And we have a lot more to do in that area. So, you know, certainly we will do it. And for the rest, I think we have also triggered a certain volume of cost synergies between these business for Capco, for Rizing it's obviously very new so nothing for now, but I think, we will continue to work on those aspects as well. Jatin you want to add something.
Jatin Dalal: Only additional point I want to make is these are not small businesses. These are large businesses with the right amount of governance, of the profitability management, where they have been in existence for a long period of time, they have seen ups and downs. They are able to carry themselves through one phase to the other. So, we remain quite optimistic that right now, we don't see anything, but even if two years down the line there is a downturn, we would be able to manage the cost structures quite well.
Moderator: Thank you. Our next question is from the line of Nitin Padmanabhan from Investec. Please go ahead.
Nitin Padmanabhan: This time you are pretty bullish on growth itself, based on the pipeline and the kind of deal wins that you have had. Just wanted some color on what you saw this specific quarter, considering that the organic growth was just around a percent, is it the annual productivity benefit cycle that has sort of driven the weakness? Or is this something that you had anticipated earlier? Or was it a surprise, just, broad thoughts and anything from a vertical standpoint would help.
Thierry Delaporte: Nitin, honestly speaking, if I am not wrong, for six quarters we have guided every quarter, between 2% and 4% of growth and for six quarters, we have guided, we have delivered north of the middle of the guidance, and sometimes above the guidance itself. In early Q1, we said, this quarter we see a little less than 2% to 4% it doesn't necessarily reflect a slowdown, it’s just you know, sometimes because you have a deal that is starting here or the previous quarter you had a bigger deal or just the nature of the type of deal, you see a little less and so we guided 1% to 3%. And we are delivering right in the middle of the guidance.
When we guided on 1% to 3% for Q1. W e have been delivering north of 3% for six quarters in a row. And you could expect that one quarter, you have a little less, and then another one, you have a little more. And so going on that it was not reflecting in any more profound, more deep trend of our business. And the performanc e in bookings in Q1 is just confirming this. We have done really well in the business, in our bookings, in Q1 across the whole markets and across sectors. And we have a good mix of small deals, medium deals and large deals. We have closed 18 large deals.
We have had 3x in terms of performance of what we had done a quarter ago. And I think it's also,

I would say it's all the efforts and investment made over the last quarter that are paying off.
wipro.com
And so, when you combine the visibility we have on our backlog, if you like, account -by-account that you add the bookings performance of the quarter, I think that's how we are coming with a guidance t hat indeed is rather strong for Q2 of 3% to 5%.
Nitin Padmanabhan: Actually, the context of the question was that, historically, we have always seen a weak Q1 for Wipro. And the thought process was that this should sort of come down with the acquisitions i n terms of that seasonality. Although it has come down a bit, the only, but what I was trying to sort of understand was, is this here to stay in terms of seasonality and then should sort of slowly sort of reduce on a going forward basis for Q1. I was think ing more from that aspect, then trying to nitpick Q1.
Thierry Delaporte: Nitin, I am challenging the seasonality aspect of the growth. I don't think there is necessarily a seasonality certainty to Q1. I don't really understan

d the rationale behind that. No, I think don't assume that, and don't assume that there is any season gain between Q1 and Q2, I think it's the flow of business that are delivered every quarter.
We had done very well in bookings in Q4. But we had said at that time that it was mostly driven by smaller and medium deals. We had fewer large deals, okay. I think the volume of large deals and we all know that the volume of large deals is dr iving a little more growth and that's what we are seeing for Q2.
Nitin Padmanabhan: Just one quick question for Jatin, if I may, Jatin the wage increase cycle, we had shifted to September it starts September. So, it's exactly the same as what it would have been if it was, it's just shifted by a quarter, that's the way I should think so October, November, December will be a full quarter of impact for that and the quantum of increase will probably be the same?
Jatin Dalal: See the quantum of increase will be something that Saurabh will determine closer to the date as he gauges the environment. But what I want to remind all of us , is that it is I think the wording, shifting is a little misplaced, because we had our last salary increase in September of last year, it is 12 months from that, and we are giving our increases after 12 months. So, it is not a shift for more than majority population of the company.
Thierry Delaporte: And Nitin, if I can just build on what Jatin said, keep in mind the fact that by now mov ing from a yearly cycle of promotion to a quarterly cycle of promotion, it has also some real implication from compensation standpoint.
Moderator: Thank you. Our next question is from the line of Gaurav Rateria from Morgan Stanley. Please go ahead.
Gaurav Rateria: So, I have a couple of questions. So, I will go one by one. The 18 large deals, very strong performance, how much of that was led by improved win ratio for Wipro? Or how much is because of overall market being pretty strong for large deal wins in the last quarter?
wipro.com
And a related question is that, how should one think about the contractual profitability in these large deals? Has anything changed compared to the past in terms of gross margins coming down, because of macro or things that pretty much st able?
Stephanie Trautman: We have seen tremendous momentum in large deals both in the quarter and the deals that we closed, and also in our pipeline, overall. The market is certainly creating these large opportunities, but we are also winning mor e. So, our win rates are up, our strategy to invest in the large deal team is paying off. And we are seeing a lot of momentum in the market.
In terms of margins, we are seeing margin pressure on more commoditized type services, as we compete for those, but a lot of our deals are actually more transformational in nature, where we are delivering on outcomes for clients, and therefore, we can value price our opportunity. So, it's a bit of a mix right now. But as we continue to pivot our portfolio and position ourselves better as an orchestrator for our clients and delivering those outcomes , we anticipate seeing margin improvement as well .
Gaurav Rateria: The second question is on Europe, you talked about couple of regions clocking more than 20% growth, but overall, Europe was I think, 16%. So, there were a couple of regions that clearly dragged out the overall growth there. So, what were the factors that drove that? Is it something again, related to the external environment or is it more a Wipro specific phenomenon?
Jatin Dalal: Thierry mentioned in press meeting as well as in his opening commentary that Europe remains a very strong region for us. The only reason you are seeing a slightly muted growth is Europe had a fabulous growth in Q1 of last year, whic h was from the 1st April onwards so Europe was at an extraordinarily base to climb on. And that's the reason you are seeing a little muted, but we remain very confiden

t including the deal wins that we have seen in Quarter 1, as how the Europe will pan out for Quarter 2.
Thierry Delaporte: Okay so now I understood the point, so when you look at a growth per quarter at the level of region it's sometimes slightly misleading because of a deal like you know, Metro kicking in one quarter or another, you have cert ainly a step change and therefore you know the next quarter is compared

with a challenging baseline. But if you look at the performance of Europe, two data points, if you look at the performance of Europe, year -on-year, it's 16% growth this quarter, so it' s solid. And what we see from Europe, for Q2 in terms of sequential growth is solid as well.

So, no, we had our Board over the last two days our Chair or Head of Europe was here. And we got the opportunity to discuss with him also his perception on the mar ket in Europe and so on. And he doesn't see signs of slowdown, frankly. And again, quite the opposite, given the volume of nice deals, new deals that he has won in Q1, the one he has in the pipe for Q2, I think there is a good level of optimism among his t eam at the moment for Q2 and beyond.

Moderator: Thank you. Our next question is from the line of Dipesh Mehta from MK Global. Please go ahead.

Dipesh Mehta: A couple of questions starting with first clarification, I think Jatin earlier we indicated by Q4 w e should be achieving our medium -term margin aspiration. So, I want to know, in earlier one of the

question you answered, are we maintaining those kinds of outlook when by Q4 we should have normalized margin trajectory? That is question one.

Second question is about cash generation, if I look this quarter cash generation remained fairly weak. If you can provide some sense about what played out there.

And last question is about iCO RE revenue, this quarter it is flattish quarter -on-quarter, despite Cloud, cybersecurity as part of the service line. So, if you can provide some sense what is playing out there?

Jatin Dalal: So, Dipesh, let me clarify that I did not say that by Quarter 4, it is going to be a particular range that we mentioned before. What I said that we have bottomed out, in Quarter 2 particularly we will have whatever operational efficiency gains we will get we will invest back into the promotions and the salary increase. And from here on, we will continue to calibrate upwards, but we will guide yo u on that on a quarterly basis rather than telling you a particular quarter or timeframe around it. So, that was the commentary that we have made in press conference, as well as in the earlier part of earnings call.

Your second question on cash, yes, it has been a slower quarter from cash standpoint, but we are very confident that we will catch it up in Quarter 2.

And on your question on iCORE growth, a part of iCORE is also our digital operations business, which has a reasonably large presence through our HPS business which sees a great momentum of open enrollment in Quarter 4 which it did not have in Quarter 1. And therefore, while cybersecurity and infrastructure business continued to do well we had a little bit of moderation through our DOP business purely on the seasonality of our open enrollment business. And that is the reason that there is a slight moderation there.

Moderator: Thank you. We will take our next question from the line of Sandeep Agarwal from Edelweiss. Please go ahead.

Sandeep Agarwal: I have one question on the demand side, while you have reiterated that we are probably seeing worst times behind, but if we do the adjustment for the acquisitions still our outlook doesn't look very exciting. So, is there some conservatism which you are building in or you think that it is best to wait and watch and see how things pan out, because of the tremendous amount of fear which is there for the macros, that is part one of my question.

And part two, when you talk to your clients now v ersu

s earlier, that is two years back, is there a substantial change in their mindset regarding investing in technology, in the sense that do they believe that despite challenges in the macro, it will be very important for them from a long term perspective to invest in technology so as to maintain their market share or grow their market share going forward, or you think that, again, the dominance of cost and efficiency are on their mind rather than growth when it comes to expense, so what is your assessment ?

Thierry Delaporte: L et me start with the clarification. So, you are saying our guidance 3% to 5% growth for this coming quarter is conservative and not exciting, is what you're saying?

Sandeep Agarwal: I am saying it looks a little conservative when we adjust for the acquisitions.

Thierry Delaporte: Sorry for that. But, you know, I think we will go with this guidance. And for sure, trust we will do our best to surprise you okay. W e didn't say that the worst was behind actually we have never said that. I think we are connected with the market every day and we are saying that the demand that we have seen in the last quarters continue to be good so that's what we have said. So, this is in terms of market outlook, frankly, there is demand for technology, expertise, capabilities, talent.

And in the areas that we are talking about Cloud, engineering services, cybersecurity, data, digital transformation, we have plenty of opportunities.

And again, I don't think we are neither being, we are trying to be realistic in our guidance. We are not trying to be conservative, no being overly optimistic, it is definitely not our way of guiding.

Sandeep Agarwal: I just wanted to understand a little bit more about how your clients are thinking now, given the current macro situations?

Thierry Delaporte: It's always difficult to respond in few minutes to a question like this, because clients have, different industries, different reality, different markets, but I think what's visible, see Sandeep, a week ago, I was in London visiting one of the largest insurance company speaking to the CEO. He has absolutely no intention to reduce the spend in technology. In fact, at no point in time in the discussion, did we ever discuss the concern about the cost of technology. What they are looking for, is really more the outcome. So, what is it going to drive? So, I think that's why I believe that in the way we are structuring our proposals to our clients, we are getting their attention when they can see immed iate impact of the technology investment into productivity gains. It doesn't mean 100% of the programs are with that in mind, but I think there is a growing focus on this in the current macro environment.

Moderator: Thank you. Ladies and gentleman, we take that as a last question. I would now like to hand the conference over to Ms. Aparna Iyer for closing comments. Over to you, ma'am.

Aparna Iyer: Thank you all for joining the call as always. In case we cannot take any questions due to time constraints, please feel free to reach out to the Investor Relations team. Have a nice day. Thank you.

Moderator: Thank you, on behalf of Wipro Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Wipro Limited (NYSE: WIT, BSE: 507685, NSE: WIPRO) is a leading technology services and consulting company focused on building innovative solutions that address clients' most complex digital transformation needs. Leveraging our holistic portfolio of capabilities in consulting, design, engineering, and operations, we help clients realize their boldest ambitions and build future-ready, sustainable businesses. With over 240,000 employees and business partners across 66 countries, we deliver on the promise of helping our customers, colleagues, and communities thrive in an ever-changing world.

Moderator: Ladies and gentlemen, good day and welcome to the Q 2FY23 Earnings Call of Wipro Limited. I hand the conference over to M s. Aparna Iyer – Vice President and Corporate Treasurer . Thank you and over to you.
Aparna Iyer : A very warm welcome to our Q2 FY'23 Earnings Call. We will begin this call with business highlights and overview by Thierry Delaporte - Chief Executive Officer and Managing Director, followed by financial overview by our CFO - Jatin Dalal. Afterwards the Operator will open the bridge for Q&A wit h our Management team.
Before Thierry starts, let me draw your attention to the fact that during this call we may make certain forward -looking statements within the meaning of the Private Securities Litigation Reform

Act of 1995. These statements are based on management's current expectations and are associated with uncertainties and risks, which may cause the actual results to defer materially from those expected . The uncertainties and risk factors are explained in our detailed filings with SEC. Wipro does not undertake any obligation to update the forward-looking statements to reflect events and circumstances after the date of filing. The conference call will be archived and a transcript will be made available on our website. Over to y ou, Thierry.

Thierry Delaporte : Hello, everyone. Good evening. Thank you for joining our Q2 Earnings Call . And for those of you joining us from the U .S., good afternoon, I guess maybe good morning for some.

Since t he last time we spoke in July, we have seen the macroeconomic conditions across almost all markets and sectors have changed. In speaking to our clients every day, we a re seeing a change in the level of optimism. As businesses around the world are dealing with inflation pressure, with geopolitical turmoil , with energy crisis, also the r ising interest rates. Almost every major economy is experiencing economic deceleration.

And it's against this backdrop that we delivered a strong quarter. Our business strategy is sound and our value proposition continues to resonate with clients across markets. This is reflected in robust bookings, healthy deal signings, growth in revenues, as well as operating margins.

Let's start , our bookings . Our bookings in total contract value terms grew 24% year -on-year in Q2. Two of the four markets , Americ as 1 and Europe grew more than 30% year -on-year. We said in the past that large transformative deals are a key pillar of our growth strategy. Indeed, they will allow us to demonstrate the true power and scale of our services, talent and operations. Large deals are where we deliver maximum value for our clients. So, I am pleased to share that large deal wins have continued to be really strong.

In Q2, we signed 11 deals with a total contract value of USD 725 mil lion. This actually follows an exceptional quarter in Q1 when we clocked over a billion dollar in deal signing. And this strong booking trajectory translate

s into a 42% year -on-year growth in our large deal bookings , in the first half of this fiscal year. Over the last few years, we have steadily increased our win rate, improved the quality of our pipeline. As of today, our pipeline has , a well -balanced , mix of transformation growth and cost take-out s engagements.

Now, this m ix may change in the coming quarters based on external conditions that I talked about earlier. But we expect continued strong demand for our comprehensive portfolio of services. We know that technology in good times like and bad h as become the underlying success factor for any business . Regardless of what the problem is , increasingly technology is the solution. And I believe we are better positioned than ever before to help our clients tap into the true power of technology, whether that's to drive growth and transformation, or manage cost or build a sustainable future.

Speaking of sustainability, we continue to build sustainability into everything we do, including across our tech stack. You will see us leveraging our sector domain expertise and a strong partnership to develop new, low carbon impact solutions for our clients. Our enterprise scaling and sustainability process experience is helping us standout in the market and leading to st rong client demand. Overall, with our deep engineering expertise and comprehensive set of offerings, we are well positioned, to be the partner of choice for our client as they face a growing set of headwinds.

Now, turning to our revenue grow th, we recorded 4.1% growth in constant currency ter ms sequentially, and 13% on a year -on-year basis, that translates into double digit growth across all markets.

Business growth translate into growth for our colleagues, and I am happy to share that we rolled out quarterly promotions to our employees in July . And salary increases effective September . And yet, we have achieved operating margins of 15.1%.

As we continue to enhance our portfolio with the newer and more strateg ic service offerings, our clients are recognizing the value we deliver . This is increasingly reflected in our improved price realizations . This combined with operational excellence, automation, higher productivity are the key levers for margin improvement.

As every quarter I will now have share some fi ner details on markets , service offerings and sectors. Let's start with our markets .

In America s 1, we grew 15% year -on-year in the 2nd Quarter with all sectors showing strong growth. During the quarter , the fastest growing sector in the market was Technology Products and Platforms which grew 26% year -on-year. Order bookings in total contract value terms grew nearly 34% year -on-year in Q2 .

Now moving to America s II, we grew 12% year-on-year in Q2. Manufacturing and Energy and Utilities led the performance, recording a growth of more than 20% each year -on-year. Financial Services grew 17% year -on-year.

Moving on to Europe, our European business deliver ed a year-on-year growth of 12% in Q2. Most of the markets recorded strong double-digit year-on-year growth with Benelux , UK, and Ireland and South ern Europe leading the pack.

Our order book in total contract value terms grew at 36% year -on-year, which is quite massive.

Our APMEA business grew at 11% year-on -year in Q2. Regions that did particularly well during

wipro.com
the quarter where Southeast Asia, Australia and New Zealand and Middle East so you can see across all markets, double digit growth.
Strengthening client relationships remain a top priority for us. As a result, we are gaining share in our metal accounts. Our Top five clients grew 19% year -on-year. Our Top 10 clients grew 17% year-on-year in constant currency terms.
Now moving to service offerings , we have two Global Business Line iDEAS and iCORE. Let me go through each of these two business lines. Our iDEAS Global Business Line g

rew 15% year -on-
year in Q2 . This growth was led by Cloud Transformation first, which grew 26% year -on-year , by Applications and Data which grew 21% year -on-year , and finally by Engineering Services which grew 18% year -on-year.
Now looking at iCORE, the other Global Business Line grew 9% year -on-year in Q2 . But here led by Cyber Security Services which grew 23% year -on-year in Q2 . And as the speed of transformation accelerates, we are experiencing increased demand for our full suit e of cyber offerings. We are leveraging internal methodologies , framework and intellectual property in collaboration with our technology partners to help clients manage a dynami c and complex risk environment.
In one recent example, we helped a global communications organization improve and automate their compliance processes, leading to an enhanced risk posture. We now operate and execute this program globally and have driven significant cost reductions in their security and compliance program.
Then talking about Wipro FullStride Cloud Services , which is more than 1/3rd of our business today , continues to be a driver of our success, and partnerships are at the center of t his growth. In fact, in the 2nd Quarter , bookings with Hyper Growth Partners grew 24% year -on-year.
Working alongside our partners, we know we are creating industry solutions and leading major transformation efforts designed to help clients unlock the value of Cloud , but also realize new efficiencies.
In addition to modernizing applications, we see a gre at amount of interest in modernizing data operations. Organization realized the power of data in g aining new insights into their business. For example, for a U .S. based Diversified Financial Services Group, we are working on a digital transformation and data modernization effort which actually involves building a Next Generation Cloud Analytics platform. The goal here is to deliver omni -channel experiences that help our clients get better , real-time insights into their business. Ultimately, the transformati on is helping our clients reduce time to market for new capabilities and deliver enhanced experiences.
In another example, for a leading provider of industrial automation solutions, we are working on a transformation program that will help them become more client and relationship centric. We are building a multi -Cloud solution that will transform the firm's marketing sales and services around a single client definition, creating opportunities for more meaningful engagement with customers.
wipro.com
And we continue to double down on strategic investments in areas that we know will drive long-term competitive edge , for us and for our clients. For example, r ecently, we launched Lab45, a new brand for our CTO organization. Lab45 is a new direction for Technology Research and Development Unit.
The objective of Lab 45 is to develop new assets, intellectual property, and products through client collaborations and partnerships. Lab45 will help our clients build new business models, enhance user experiences and drive growth through enterprise technologies. In fact, the opportunity to tap into our expertise and world- class talent through Lab 45 is already factoring into client decisions and making an impact on how we win in the market.
We are continuing to also expand our capabilities in strategic areas, such as Artificial Intelligence and Data , but also 5G, Metaverse, IoT and Industry 4.0 to help clients gain new competitive edge.
I will now share a view of the talent landscape. I am first happy to s hare that our attrition has continued to moderate for the third quarter in a row . In Q2, attrition was down to 23% if you are looking at it on a tr ailing 12-month basis . And our quarter annualized numbers are trending even lower than that . We expect a furthe r moderation in Q3.
And like I had shared last quarter; we are now offering prom

otions to our employees every quarter
and in Q2 , we promoted about 10,000 colleagues. I am also pleased to share that the annual salary increases were given to our colleagues across bands in Q2 where it is our philosophy a steep differentiation in a reward for our top talent .
We have also on- boarded over 14,000 freshers in H1, which is I would imagine 75% of what we added in the whole of last year. And finally, I will share an outlook for the next quarter. We have guided for revenue growth of 0.5% to 2.0 % which will translate to growth of 10% to 12% year -on-year in constant currency terms. This guidance reflects the current environment and the quarter seasonality. For the full year, we also think that we will report double digit growth. Our margin in

Q3 will have some headwinds, there' s the impact of two incremental months of salary increase and yet we expect to hold a margin in a narrow band.
In a summary, we have delivered a strong performance against the backdrop of a mixed macroeconomics environment in Q2. Our order bookings and large deals reflect an improved market competitiveness. And prove that our strategy is working. We are experiencing a real shift in the market as client s increasingly turn to us to realize their boldes t ambitions. And based on all these factors, we remain confident of gaining market share in the coming quarters. With that I will hand it over to Jatin now for his comments.
Jatin Dalal : Good evening, good morning, good afternoon everyone. We had a solid quarter we delivered slightly above the mid -point of our guidance at 4.1% sequentially which was 12.9% YoY growth.
We deliver ed operating margin which was slightly higher than Quarter 1 at 15.1%. We had an ETR of 22.5% which was again 1% better, than what we had for Quarter 1. And as a result, our net income grew 3.7% sequentially for Quarter 2.

We had robust performance in cash collection and overall improvement in working capital cycle management. We therefore have posted a very robust 180% ratio of operating cash flow to net income.
At the end of Q uarter 2, we had $4.3 billion of gross cash and $2.2 billion of net cash on our balance sheet. We had a good performance in forex, our reali zation rate was 79.93. And we had $3.8 billion of forex hedges at the end of the quarter.
Our guidance as Thierry remark ed for Quarter 3, is 0.5 % to 2% in the constant currency terms .
We will be very happy to take your questions from here.
Moderator : Thank you very much. Ladies and gentlemen, we will now begin the question-and -answer session.
We wi ll take the first question from the line of Sandeep Agar wal from Edelweiss please go ahead.
Sandeep Agarwal : So, I have a small question from Thierry . Thierry in all your discussions with the client right now , are you hearing any kind of cautiousness from the any of the clients in any of the vertical or geography regarding this macro, or it is more a preventive step that they don't want to go aggressive right now? Or they want to also be careful and watch the env ironment how it plays out.
So, what kind of re strains you are seeing whether it is a realistic pressure, which is leading to some kind of cautiousness and it is more likely to get cut, or you think that it is just a preventive step from them right now, where they want to wait and watch the macros, #1 .
#2 T he guidance w hile I understand that the environment is very volatile and because of that, probably you have kept in some bit of conservatism while guiding, but it still looks a little slower given the kind of demand environment what we are hearing from the industry, what we are hearing from the competitor. So, what is hurting us more than the others can you elaborate a little bit on that?
Thierry Delaporte : Let me take the questions, one-by -one, one is talk ing about the market environment. I think the answer was almost embedded into your question. So, here

it is that I think we all are connected with the market news. And it's quite interesting to see every single day what's happening in the whole world, macro environment weather , what's happening in Ukraine, what's happening with the energy , what's happening in market conditions in America or in most of the countries . There is a certain evolution of the climate that is certainly the confirmation that we have, the market has changed market and conditions has changed. We are no longer in the same market and condition that we were nine months ago or 12 months ago. That's a reality.
But the big question is, is this context going to impact our industry . And frankly speaking, I am not sure. That's why I see a certain level of uncertainty today . There's a bit of uncertainty, because, in talking to clients, they all are assuming that at some point in time, this will have some implications for them. And I think that would be naive on our side to not hear what they are saying.
So, that's probably what it is and I am moving to the question #2, it's probably what's leading to our guidance. The business is good. I mean, we have been growing well over the last quarters, we have been performing well on bookings. So, there is no sign on our side of any particular slowdown,

except that the market has changed, except that they are a certain environment of uncertainty that is impacting our clients.
And then obviously, Q3 is also a quarter where there is furloughs. Do we have more furloughs than the previous years ? I don't know. But we know that they will be f urloughs and so I realized that you might see a point of caution, and it's maybe the case, but I think we have tried to be cautiously optimistic.
I want to also give a perspective in terms of the growth trajectory . If you look at Q 2, we do 4.1% of gross, which is a sign of very strong performance. A ll our markets have grown double digit year - on-year, not one grew less than 10%. So, we see this trend. Now, if you take even more, step back and look at you know, Wipro 's trend, last year w e were industry leading grows, right, thi s year, double digit growth, and we are only halfway through the year, we know, that will be double digit growth. This company will have grown to 40% in two years. That's the rarity. And then again, the performance in bookings, the impact we have in the mar ket gives us great confidence that we will

continue to grow well and certainly gain market share in the next quarters. That's the mindset that we have right now.
Moderator : Thank you. Our next question from the line of Abhishek Bhandari from Nomura. Please go ahead.
Abhishek Bhandari: Thierry , I have two questions. One is more from a near term and one is more medium term. The first one is, in the backdrop of volatile macro, which you have been alluding to multiple times in your press conference, and even in the recent last 20 minutes . How are you some of your recent consulting acquisitions playing out, especially Capco and R izing, if you could share some trends over there? And also, from a pipeline perspective do you see any kind of change coming through these two particular subsidiaries?
Thier ry Delaporte : So, the first one about consulting. C onsulting business has been a massive driver of growth for us over the last two years . I was talking about Capco, we have grown more than what we had in the plan every single quarter. Now, there is no doub t that there is a slowdown, and we see it . It was actually forecasted for us, and we see a slowdown for this consulting business . We also know because it's a reality now in the industry, that consulting tends to be early cycle. So, the first one to slow down , first one to accelerate, and extremely agile to adjust to market evolution, s o that's for your first question.
In terms of as you said, looking at the pipeline, a pipeline is stronger than ever . We have a very s

olid pipeline; I think supporting our gr owth. If we look at the nature of the pipeline, they might be a certain evolution of the type of deals won, they are definitive, significant driver of growth, we s ee it. Cloud will continue to grow massively for us, and it's the third of our business . Security will continue to grow also large double digit . Engineering is growing very well, as well.
In terms of type of offerings, those are here, but I think even if we look at the C loud, I think it is the type of deals will possibly and I a m being cautious in my assessment, because the trend is to be observed over a longer period of time, but I think, we should certainly expect that a lot of the investments that our clients need to do in technology will require a business case, and therefore
wipro.com
will have a stronger focus on cost optimization , on productivity gains, and so on. That's possibly where I see an evolution of the of the pipeline.
Abhishek Bhandari : Thierry my second question which is more on the margin side; more for medium term perspective while we understand in the current context, there is around 200 basis point impact of the acquisition, which is continuing . But if I look at the gap between our margins and our peer set margin, that gap has widened quite a bit. So, maybe if you could elaborate some of the medium - term steps you think you could take to go back to your own older levels of margin of around 18% to 19%. And you think the current softening of the supply side issues could help you achieve it faster than what you would have thought maybe six months ago.
Thierry Delaporte : One in terms of the margin, yeah, you said it certainly there was, it's a strategic choice that we have made to make some significant investments in this business to make us stronger in the future. And you are right to not only look at short term but also mid-term , where are these investments, clearly strategic move with some of the acquisitions we have made , with all the acquisitions we have made they have all been driven by a strategic objective and significant investment into talent , significant investment into our operating model and into our operational excellence, significant investment into our efficiency our market impact , significant investment as well in on freshers I think we spend more time explaining this a quarter or two ag o but we didn't have a fresher strategy until a few quarters at Wipro that was at par with some of our colleagues in the market . And so , we have decided to go ambitious and really build this freshers strategy and it requires investment . Freshers are an investment that delivers over time. And so, we've made those conscious choices knowing that that would knock down a little bit the margin, we also knew that in a market where we are growing, as I said 40% of eight quarters in high demand environment with cost of people being higher would have this impact, but that is also conscious now, what did we say . A quarter ago, we said 15% is our floor , we are building from here, and we are going to progress. We will not gui de as you know beyond the current quarter, but it 's clear that we do not see the end of the road where we are absolutely not. And so, what are the levers, continue to drive our fresher strategy, continue to progress on the automation, where we' ve also made some significant investment, continue to go for larger deals, continue to go for deals delivering more value, and not only going after volume. And finally, I would say continue to work on our efficiency, we' ve made some significant progress, there' s still more to do ahead of us. So, I 'm not worried at all about our ability to continue to improve margins and close the gap with some of our colleagues.
Abhishek Bhandari : Thank you, Thierry and which you a great end to 2022 and talk to you soon. Thank you.
Thierry Delaporte: Thank you Abhishek, talk t

o you soon.
Moderator: Thank you. Our next question is from line of Nitin Padmanabhan from Investec . Please go ahead.
Nitin Padmanabhan: I have two questions. The first is, if you could throw some light on the restructuring cost that has impacted this quarter , it's around 136 crores, what does that pertains to you if you could give some color there. The second, just wanted your thoughts roughly from a vertical perspective in terms of

how you see demand on a goi ng forward basis, for instance capital market, specifically maybe

capital markets, retail and the high-tech side of things, and manufacturing so some color on those as well.

Thierry Delaporte: Yes, absolutely. So, I'll take the first one, and I 'll ask Jatin to build on it. So, on restructuring, so it's a one off , so this is not something that is to be done repeatedly. It was needed, hadn' t been done for a long time a nd it's absolutely exclusively focused on Europe. And that was really to address some, inefficiency that we were caring for a long time. Jatin, you want to say more.

Jatin Dalal: No, it 's just sitting and reconciling item, because it 's a corporate action which we took at a company level. And as Thierry mentioned it is a one off, t here could be probably a small tail spent there in quarter three, but nothing beyond that.

Thierry Delaporte: Now, your second question, Nitin was about sectors, right industries and an outlook for the industries. We are obviously observing the evolution of the market , industry by industry and certainly everyone has different kinds of challenges. You could imagine, I believe actually the banking sector should be holding pretty well and one it's a sector that is used to adjust rapidly to market changes, but also, it's an industry where a lot of efforts will have to be done around driving's, simplification, alignment, streamlining, and compliance is also another important topics for banks going forward. Now, a sector that has been growing tremendously over the last year an d certainly is slowing down is the set of technologies if you look at the large tech, look at what they 're doing hiring has been slowing down and sometimes they are even reducing headcount. And there' s perceivably more slowdown to expect in this industry going forward. Another one where I could potentially see a potential slowdown if the economy worsen is a sector like retail. So, we'll see, Nitin.

Nitin Padmanabhan: Just a follow up on the restructuring cost . Post the restructuring do you think that improves the margin profile in Europe a nd should we anticipate that it should be a tailwind on margins, from a European perspective after the restructuring?

Jatin Dalal: Yes, so Nitin it is right that we have done this to reflect what we need from technology stan dpoint of future. But I don' t think it would be right to equate this number with the reduction in spend going forward, because as you know in Europe as some of this restructuring cost you many years of pay. So, I would request you not to equate this with t he reduction in spent, but there would certainly be a tailwind where we have reduced the employee spends .

Moderator: Thank you, we' ll take our next question from the line of Ravi Menon from Macquarie. Please go ahead.

Ravi Menon: Thierry could you give us some color about how you' re thinking about the demand environment in the US and Europe. So, when you called out macro uncertainty , does that apply equally in both geographies ?

Thierry Delaporte: That's an interesting question, Ravi. What we observed in the past is that, typically when there is a slowdown or recession, it 's steeper in America but it 's quicker as well . In Europe it tends to be coming a little later, but it takes more time to bounce back. So, we will see, today the perf ormance

what 's clear is if we look at our own business the growth we see in America and Europe are, I d

on 't
know if the comparison help, but I think they are, in the ballpark they are similar so there' s no market that is growing faster than another. But if there is a slowdown, I 'm guessing it could potentially come from America now. There is something that is specific to Europe, which is more this energy crisis. So, here also, there is a bit of uncertainty here. It doesn' t necessarily impact us directly, but certainly impact some of our clients, I 'm guessing, in industry like manufacturing for example, it could have an impact on Europe, if not in Q3, in Q4 we will see.

Ravi Menon: Thank you. And you spoke about how there is almost a sense of needing to accel erate the digital transformations and continue on the journeys. So, do you think that that makes technology spending a little bit more resilient in this downturn compared to what we 've seen in the past like either the GFC or in 2001?

Thierry Delaporte: I am convinced that indeed you 're right. T echnology services company are a lot more resilient than they were , absolutely no doubt because technology is not a seen as a cost to reduce but seen as a mean to transform organizations. And that is sys tematically what I 'm hearing from clients , systematically the fact that when you are connecting with the CEO is talking about technology. It 's part of his priorities was not the case in the last economic cycles. So, it is definitely different and there is no doubt that when you' re working on topics, like security, take the topic of security, I don 't see this market slowing down. If you look at what we are doing in cloud, definitely not slowing down now for sure, it will have to be at the back of business cases right, but clients are very mature and they know what technology can bring to them and they know why they are investing in technology. So, to your questions and absolute and frankly yes.

Moderator: Thank you. Our next question is from the line of Mukul Garg from Motilal Oswal Financial Services . Please go ahead.

Mukul Garg: Thank you. Thierry I just wanted to follow up on the consulting business, it kind of sounded that you expect consulting to be a bit slow in the near term, given the volatile demand environment , how do you think about the profitability of the business in the near term , because this business usually has very high operating leverage and slowdown kind of impacts the profitability meaningfully. So, how should we think about th e profitabilit y aspect and consulting in general , I'll have a follow up question after this.

Thierry Delaporte: Okay. So, first talking about the consulting business. One point i nteresting to note, consulting is slowing down from where we were draw ing some quarters ago it's true , but what 's interesting is that consulting continues to drive growth in our business. If you look at our banking sector for example while Capco growth has been slowing down, the impact of Capco to us winning large deals in the financial service sector is higher than it was , we win more synergy deal, we win more deals that we wouldn' t have won and those deals drive, more value, they are more strateg ic and so from that standpoint they continue to drive positive impact for us. From a profitability standpoint, you're making a good point , you're absolutely right they are agile , it's part of their DNA to react and adjust to the demand rapidly. And that 's exactly what we are seeing actually as they are slowing down m argins are improving.

Mukul Garg: Okay . So, you expect consulting margins to improve as the growth moderates, not the other way around?

Thierry Delaporte: Yes, that 's what I 'm seeing for Q3.

Mukul Garg: Understood. The second question was also on the profitability side. I f we look at the net adds quarter, and the continuing decrease in utilization, can you just share some thoughts on how we should look at growth versus profitability trade off ove

r next few quarters , while I understand you have scope and you will seek improvements in both of them , is there some point where you think you need to prioritize one over other?

Thierry Delaporte: So, if I look at the situation from a client to another you may have different situation where sometimes there 's a bit of a tradeoff to do between margin and volume, but as an organization let's be clear on the margin side, we will not go down from where we are. So, that is a clear position on margins. Our objective is to continue to grow, certainly and drive profitable growth. So, that's continued, we are no doubt balancing growth and profitability. When you are referring to headcount evolution and so on, what we had said in Q1 if you remember is, we had made the conscious decision to make quite a material amount alright, significant amount of hiring knowing well that we could end up the quart er with a little more headcount and a bigger bench than expected. And I 'm excluding freshers in my statement, because we needed to get ready for the demand that we were seeing in our business. But we also made the conscious decision to invest in our fresh er's. And so, we've just followed the strategy we haven 't changed. We have hired in H1 as many freshers as 75% of the total number of fresher's we hired last year, over 12 months. And those are investments because we knew we needed it to continue to improve our operating model while being able to deliver and respond to the demand. This qu arter if you look at the utilization part of the utilization is obviously impacted still by the volume of freshers , but we 've continued to optimize, our capacity and manage deliver a significant increase of the revenue without having any significant incre ase of our headcount. It 's actually the meal of what we had said a quarter ago.

Jatin Dalal: Mukul, I will just add to the point which Thierry made where he said we continue to utilize this talent that we hired earlier, while it may not reflect in the numerical utilization number that you are seeing in data sheet, because it has effectively the more experience or lateral bench has got utilized, it has got replaced by a higher -pressure bench. So, economically, we have got an upside in quarter two out of util ization, but it is not reflecting yet in the numerical number .

Mukul Garg: Understood. Jatin if I may ask one question on capital allocation, you have in past mentioned about focus kind of moving towards acquisitions. Given the environment in which we are, do you think we need to take a step back from an acquisition point of view from inorganic growth point of view and kind of move on to more cash return to shareholders, or is th is the time to press accelerator on the pedal?

Jatin Dalal: So, Mukul we have always mentioned that acquisition remains the core part of our strategy, so there is no change in that position. We also mentioned that 50% of the cash that we generate, net income that we generate we will return back to shareholders a nd that also we will consistently

maintain, we had one of our special dividends that we announced in Q4 FY 22 as you 're very much aware. Acquisition decisions are a factor of many things, especially apart from the attractiveness of the asset it's also a factor of willingness to sell price correction in the market, and so on and so forth. But, overall, our position remains on the acquisition as well as on cash distribution back to shareholders consistent with what we have said in the quarter. Thierry if you 'd like to add .

Thierry Delaporte: No, thank you, you said what I would remind Mukul is that what we 've always said is that acquisitions, we do them for strategic reasons. So, we do not have a number like we need to do x number of acquisition in a given year. W hat is driv ing a decision is really, does it make sense, is it a sound decision from a strategic standpoint. And so tha

t approach doesn ’t change for us. Now,
acquisition will never be used to offset organic focus, organic focus is what ’s driving our day to day the ac quisition is really in order to get us to reinforce our opposition, in a place where we have already a strong position or strengths but we believe we can accelerate and have a bigger impact or actually acquire a new capability or a set of new technology or new relation with clients. So, clearly strategic drive the decision. It ’s never tactical and in second point, Mukul is we do not have a number to fill so there’ s no such thing as we have to do an acquisition. We do it when it means , when it ’s right for us .

Moderator: Thank you. Our next question is from the line of Manik Taneja from JM F inancial. Please go ahead.

Manik Taneja: I wanted to pick your brains about the aspect that while you mentioned that you have been investing in our talent supply chain. But generally, for the Indian origin or the Indian heritage IT services players, we have seen margins now being at least if not on par but being lower than pre COVID level. And that ’s the case for us as well , while for some of our global competition, both from the European heritage players as well as US, in their case we haven’ t seen any margin deterioration. So, if you could help us understand what do you think essentially explains the disconnect in terms of the margin profile, or the impact on margins for Indian companies versus the global peers?

Thierry Delaporte: You asked me to comment the margin trends of my colleagues , is it what you’ re asking me to do. I have too much respect for them to do that.

Manik Taneja: No, so I will just repeat my question, while all the players have seen.

Thierry Delaporte: I get that Manik, I’ll try my best , okay. But don’ t hold me against that , I’ll try. So, what happens is that, why have the cost gone, why has the margin been impacted, because of the evolution of the cost of employees, why the cost of the employees have gone up, because in a high demand market attrition has gone up, attrition needed to be backfield, and backfi eld was with more expensive resources. It’s what anybody in our industry has experienced, but also our clients have experienced in the last 12 months . Now, it is a reality that is uneven from one market to another , one mark et where it ’s been extremely true i s India a nd so the companies that have the biggest part of their headcount in India have been most impacted. I t’s a reality , that would be my explanation.

Manik Taneja: Sure. Thank you Thierry, but I also wanted to get a sense on how do we think about price increases over the next six to nine months given the macro volatility do you think price increases still continues to be a margin lever for the industry over the next six to nine months?

Thierry Delaporte: Over the last quarters it has been the case, we’ ve been able to raise prices with a lot of our clients, and we ’ve really driven conscious focus on that, just to make sure that obviously our client understood that given the reality of the supply pressure if you like, it was the same way they see inflation we also were exposed to the same situation and most of our clients want us , do not want us to be no pressure from that standpoint. So, we’ve been able to work on it pretty well quarter after quarter. Will it continue , that’s, we are assuming for the time being that yes, it should continue but market can change at some point in time where it becomes more difficult. I don ’t see it , for the time being I believe that we should continue to expect price increase from our clients. Certainly, our view.

Moderator: Thank you. Our next question is from the line of Sudheer Guntupalli from Kotak Mahindra AMC . Please go ahead.

Sudheer Guntupalli: Jatin probably this question has already been asked but net utilization ex-trainee s it has dropped almost 400

basis points , any client drop off or any project drop off that is causing this reduction?

Jatin Dalal: Sudheer thanks for asking that question. No, there is no such drop- off. I will just define it well, I don’t think the net utilization excluding trainees , the trainees are the fresher’s who are getting trained in the organization. So, that’s a very limited period f or that , it is not a utilization excluding fresher’s, who have come on board. So, it’s for a very limited period that they are, in training for a couple of months where we exclude it. So, as they ’ve completed the training, and they ’ve gone on projects and they are becoming productive during that period of time, they come in this definition of overall bench and that ’s why you ’re seeing a reduction. However, as I mentioned before, the economic utilization of quarter two has very clearly improved compared to quarter one and that has given us benefit. So, I will request you for this quarter not worry about the numerical aspect of utilization.

Sudheer Guntupalli: Sure Jatin. Just a follow up so, as these resources start getting bill to the projects, you should see a sharp increase in utilization in the coming quarters i s that a correct understanding.

Jatin Dalal: Yes, we will see an improvement in utilization as we move forward as they become more and more revenue generated.

Moderator: Thank you. As there are no further questions , I would now like to hand the conference back to Ms. Aparna Iyer for closing comments .

Jatin Dalal: Before Aparna goes on , behalf of Thierry, me, Saurabh, Stephanie and entire Wipro team we wish you a Happy Diwali and brilliant N ew Year for those who take it as N ew Year and over to Aparna.

Aparna Iyer: Thank you all for joining the call. In case we couldn’ t take any of your questions. Please do feel free to reach out to the investor relations team. Have a nice day a nd Happy Diwali again. Bye.

Moderator: Thank you. On behalf of Wipro L imited that concludes this conference. Thank you for joining us and you may now disconnect your lines .

Wipro Limited (NYSE: WIT, BSE: 507685, NSE: WIPRO) is a leading technology services and consulting company focused on building innovative solutions that address clients' most complex digital transformation needs. Leveraging our holistic portfolio of capabilities in consulting, design, engineering, and operations, we help clients realize their boldest ambitions and build future-ready, sustainable businesses. With over 250,000 employees and business partners across 66 countries, we deliver on the promise of helping our customers, colleagues, and communities thrive in an ever-changing world.

Moderator: Ladies and gentlemen, good day and welcome to the Wipro Limited Q3 FY '23 Earnings
Conference Call. As a reminder, all participant lines will be in the listen- only mode, there will be an
opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star and then zero on your
touchtone telephone. Please note that this conference is being r ecorded. I now hand the
conference over to Mr. Dipak Kumar Bohra, Senior Vice President, Corporate Treasurer and
Investor Relations. Thank you and over to you, sir.
Dipak Kumar Bohra: Warm welcome to our Q3 FY '23 Earnings Call and wish you all a Happy New Year. We will begin
the call with our business highlights and overview by Thierry Delaporte, our Chief Executive Officer and Managing Director; followed by a financial overview by our CFO, Jatin Dalal. Afterwards, the
operator will open t he bridge for question-and -answers with our management team.
Before Thierry starts, let me draw your attention to the fact that during this call, we may make
certain forward -looking statements within the meaning of Private Securities Litigation Reform Act

1995. These statements are based on management's current expectations and are associated with uncertainties and risks, which may cause the actual results to differ materially from those
expected. The uncertainties and risk factors are explained in our det ailed filings with the SEC.
Wipro does not undertake any obligation to update the forward-looking statements to reflect events and circumstances after the date of filing. The conference call will be archived and a transcript will be available on our websit e.

Thierry Delaporte: Thank you, Dipak . Hello. Good morning, good afternoon, good evening to you all. Thank you for joining our third quarter results. From our entire leadership team, I'd like to wish you, first, a fantastic year ahead. We are optimistic about 2023 to deliver ground- breaking work for our clients and continue on a growth trajectory. We'll talk about some of the opportunities that are ahead of us.

Joining me today is our CFO, Jatin, you know him well; our Chief Growth Officer, Stephanie, our Chief HRO, Saurabh and I'm pleased to introduce you to our new Chief Operating Officer, Amit Choudhary.

Earlier today, we reported our third quarter results as you know, I'm pleased to share that we have delivered; one, another quarter of double-digit revenue growth. Second, record order bookings of over $4.3 billion, led by large deals signing of over $1 bi llion, a margin expansion of 120 basis points, a huge surge in cash conversion and a fourth straight quarter of lower attrition.

The macroeconomic uncertainty, we had discussed last quarter continues . However, Tech spending remains the robust, so our clients, they're looking for va

lue-driven transformation, tighter governance and improved return on investments. Cloud transformation continues to be a priority even as we see a higher focus on returns .

It's against this backdrop that we have delivered our highest ever bookings in total contract value terms. Clearly, the investments we've been making in our clients , our efforts to bring about a shift in our portfolio and proactive deal shaping- are all paying off now.

On a year -on-year basis, our bookings in total contract value terms grew 26% in Q3. We signed 11 large deals with a total contract value of over $1 billion. This strong booking trajectory translates into a 50% year -on-year growth in our lar ge deal bookings on a year -to-date basis. And by the way, our pipeline of large deals is both strong and diversified.

Looking at the market, three of our four markets grew more than 20% year -on-year in total contract value terms as well. Some interesting insights worth mentioning here.

One, our strong bookings were driven by Wipro's FullStride Cloud Services and Engineering Services. Th ese grew at 25% and 45% year -on-year, respectively.

Second, our large deals include new and existing clients seeking a transformation partner or going through vendor consolidation. Renewals with existing clients are often accompanied by services expansion, taking market share from others and expanding into new areas of our clients' businesses.

The deepening of our relationships with our clients is driven by our innovative solutions , improved delivery execution, higher customer satisfaction scores and finally by strong ecosystem partnerships. In fact, our Customer Satisfaction Score has improved versus the previous such audit by 10 percentage points. The strong order book ings proves that our business strategy is working.

Third, our expertise in business transformation, coupled with decades of experience in delivering cost optimal solutions is the combination our clients are seeking in this market. A good example of this is a recent deal we signed with a U.S. based financial information, analytics and ratings agency. The project involves integration and management of their infrastructure and security estate. As their transformation partner, we will help them improve their future readiness at a lower cost.

Now, let's turn to revenue growth. And first, I'd like to note that over the last 10 quarters, we have grown at a very rapi d pace. Our revenues have grown 45% and headcount has grown by 40%.

We are now much bigger in size with a breadth of service offerings and deeper client relationships.

In Q3, we recorded our seventh straight quarter of double-digit revenue growth. We grew 10.4% on a year -on-year basis and 0.6% sequentially in constant currency term s. Our sequential growth was impacted by furloughs as expected and lower discretionary spending by clients. We have continued to turn the tide on margins. The hard-wor k we've put in to improve our supply chain, into delivery excellence, operations automation has actually resulted in greater efficiencies. All this has contributed to a margin expansion of of 120 basis points quarter -on-quarter. Our operating margin theref ore is now at 16.3% versus 15.1% last quarter.

A little later I'll ask Jatin to talk to you in more details about margin, but I do want to mention that this margin expansion is after absorbing the impact of three full months of salary increases that we've offered to our colleagues. It also factors quarterly promotions, as well as the restricted stock units with granted to our senior employees.

Another good news has been on the cash conversation side. We saw robust cash conversion for the third quarter at 143% of net income. I will now share some details on our service offerings and sectors and how we are continuing to increase market share, market -by-market.

Our Americas 1 business grew 11% year -on-year in Q3. T he fas

test -growing sector in that market
was Communication, Media and Information Services which grew at 14% year -on-year.
Americas 2 business which grew 9% year -on-year in Q3, and their manufacturing led the pa ck with more than 18% year -on-year growth. But besides, Energy and Utilities, Securities, Capital Markets and Insurance also recorded good growth of more than 12% each. Order bookings grew 40% year -on-year.
Our business in Europe also has continued to be a strong growth pillar, double-digit growth for seven quarters in a row. Europe delivered a year -on-year growth of 12% in this quarter. Almost all the markets in Europe grew double digits, led by the Nordics, U.K. and Ireland, Germany and Southern Europe. The order book in total contract value terms grew also at 25% on a year -on-year basis.
Finally, our APMEA, which stands for our Asia-Pac, Middle East and Africa region grew at 7% year-on-year in the third quarter. Regions that did, I must say, particularly well during the quarter were Southeast Asia , but also the Middle East. Our transformation efforts in this region have started yielding results. It's very visible. This quarter, we closed one of our largest deals in this market. The order bookings, they grew 22% and are looking forward the pipeline is strong.
Overall, we've continued to strengthen existing client relationships and I'm pleased to share that our top 10 clients grew 15% year -on-year, which also confirm our strategy around growing large accounts.
Now let's look at the service offerings: iDEAS and iCORE. First, our iDEAS Global Business Line grew 12% year -on-year in Q3. This growth was led by; one, cloud. The Cloud Transformation part, which grew 27% year -on-year Applications and Data, which grew 18% year -on-year, Digit al Experience, which grew 16% year -on-year and finally, Engineering Services, which grew 12% year-on-year.
Now looking at the iCORE part of the business . This global business line grew 8% year -on-year in Q3. Cyber Security led the growth at 16% year -on-year, followed by digital operations and platform growing at 9% year -on-year for Q3. From a total contract value standpoint, Cloud Infrastructure, our CIS business line grew over 50% year -on-year.
CIS revenues now are lower as we continue to rotate our existing portfolio and move towards the cloud, which is very in line with our strategy, as you know. At the same time, we are signing long-term deals with clients in this business. We are continuing to evolve our FullStride Cloud Services business, creating new in dustry offerings, working together with partners, which is in fact, helping expand our market coverage.
wipro.com
FullStride Cloud Services continue to be a high-growth area for us, c ontributing over one-third of our total revenues today. Our cloud expertise spans t he entire spectrum of cloud services, from cloud strategy, migration, modernization to full stack industry solutions and running and optimizing cloud.
Partnerships continue to be a source of growth as well. Bookings with Hyper Growth Partners in Q3 continued to be strong, nearly $2 billion, that's a 35% year -on-year growth. Bookings through hyperscalers today stand at 44% of Wipro's overall booking in terms of total contract value. Besides cloud, we are expanding capabilities in artificial intelligence , data and engineering, increasingly going to market as, One Wipro. And these investments are getting noticed.
A U.S. -based energy company has selected us to build an end-to -end greenfield fully automated warehouse in Europe. The project will allow the clie nt to manage large sums of chemical storage, while maintaining strict health and security requirements. This win, if we look at it brings together our domain, engineering, digital, cybersecurity and health and safety capabilities. But it also underscor es, how our advisory capabilities, technical and engineering expertise are differentiators for u

s in the market.
Let me now turn to our most important asset, our people. I am pleased to share that attrition continues to drop for the fourth straight quarter . In Q3, attrition dropped to 21% on a trailing 12-month basis. Our quarterly annualized number, which dropped 360 basis points quarter -on-quarter are now at 17.5%. And we are confident that our focused ta lent strategy will result in continued moderation of attrition in the coming quarters as well, frankly.
Second, we are recognizing and rewarding our talent, promoting a record number of colleagues in FY '23, the highest ever, in fact, with numerically 30% more promotions than in FY '22. Our leadership tea ms, breadth of experience, high performance standards and strong collaboration continues to fuel our growth and our transformation.
And finally, I'm encouraged to see more diversity in our leadership ranks, which has been a focus for the past several years . And definitely, we have more work to do here, we know that. But one promising change worth sharing with you is that we have more than doubled the number of women senior leaderships roles at Wipro.
As these visible impactful leaders progressed their car eer, they demonstrate the impact diversity has on our clients, on our business and on our people. We've been strict about maintaining that focus on talent quality, high performance orientation and inclusion in our graduate hiring as well.
Year -to-date, we have hired and onboarded more recent graduates than the whole of previous

years and actually ever before.
Now as always, I'll close with an outlook for the full year. We expect full year revenue growth to be at 11.5% to 12% in constant currency terms. On m argins, our Q3 number is now the new base, and we will look to improve it further. In summary, I'll say that we had an excellent quarter with record bookings, sustained growth and delivery excellence. Our strategy continues to pay -off and we will remain on course .
wipro.com
With that, I will hand it over to Jatin now for his comments.
Jatin Dalal : Thank you very much, Thierry. I will quickly summarize the financial highlights for the quarter. We grew 10.4% year -on-year on constant currency terms. Our margins expanded 120 basis point to 16.3 percentage points. If you see our ETR, it was 22.9% compared to 21.5% last year. So that impacted a little bit net income conversion. But despite that, sequentially, we delivered 14.8% growth in net income and 2.8% on a year -on-year basis.
Cash flow remained strong at 143.5% of operating cash flow as a percentage of our net income. Our cash at the end of the quarter was 4.6 billion gross and 2.7 billion net. This is a volatile year and quarter on forex. We had about $4 bill ion of forex hedges and our realized rate for quarter 3 was 82.24. As Thierry mentioned, we have guided for 11.5% to 12% growth in constant currency terms for the FY'22-23 at the exchange rates, which are mentioned in our PR. Thank you very much for joining and we'll be very happy to take your questions from here.
Moderator: Thank you very much, sir. We take the first question from the line of Mukul Garg from Motilal Oswal Financial Services.
Mukul Garg: I have two questions. One of the first ones for Thierry and Stephanie if she's there. I just wanted to better understand, how should we look at the TCV number, the total number, not just a large deal because if you look at the Q3 print, your TCV of 4.3 billion implies a book -to-bill of almost 1.5x.
You have been growing the TCV number quite handsomely over the last few quarters as well. How should we think about the duration of the deal wins, which obviously will convert into revenues and when should that impact start flowing through? And B, the revenue in last four quarters, the incremental revenue has been barely about 80 million, whereas your deal wins continue to grow in 25% to 30% range. So, is there something which is impeding the

conversion of these bookings into revenues over last four quart ers?
Thierry Delaporte: So, Mukul, its Thierry, I will take your question. And Stephanie if you want to add, of course, feel free. But Mukul, you're right. I think the performance in bookings has been good for several quarters. This quarter has been outstanding. I think we've really done a great job of not only developing our pipeline of deals, but also converting them into deals contracts for us.
We've shown two things during this quarter, two confirmations if you like. One is that we continue to see a lot of opportunities for us in the market, which confirms that this is still a robust market for us. And second, that we continue to win well over competition. We continue to show healthy levels of win rate.
From a type of deal standpoint, I would say, yes. The investment made on large deals now when was that 18 months ago is paying off a little more every quarter. It's the reality. It started with one big deal. And then few quarters later, another one. And then we are gaining in volume, but also in consistency. And you will hear from Stephanie that it's across the realization now. So, this is really reassuring because that we get a lot of comfort from that. And I would add that there's also a promising volume of a large deal in our pipeline.
wipro.com
So, the conversion of bookings to revenue that you are asking. I think this reflects a couple of points. Point one is, there is no doubt that while the market continues to be good and the investment in tech continues to be good. There is a change that I called last quarter, macroeconomic environment, drives a certain volume of uncertainty. And that exists. There are sectors, everybody will not be surprised to hear that the tech sector is a sector that has certainly felt the impact of this change in microeconomic environment.
Second is probably the fact that there is a potential slowdown of, or more, I would say, volatility of the discretionary spend from clients. Third, what we are seeing is that there is not necessarily a slowdown of the decision process. If that was the case, maybe we wouldn't have had such a good quarter in terms of bookings. But I think the time it takes to ramp up, to launch and ramp up those programs behind may take a little bit of time. And we have to go with the pace of our clients in this context of uncertainty.
An example of that is typically deals where there has been a consolidation of vendors that we have won. And then there's a period of tran sition for the business to go from one partner to another. And I think it is a fact of life that we have reflected in our projection. But certainly, the performance in bookings, the volume of deals but also the quality of our pipeline gives us quite a nice level of confidence for the next year as well. Stephanie?
Stephanie Trautman : Yes, Thierry. I would just reinforce your comment in terms of the health of our pipeline, the types of deals that we're winning. It is a mix of new clients. It's a renewal of ex isting clients who are expanding our scope, we're taking market share and vendor consolidation. And it's also a pivot of

our portfolio to the new. And you heard us talk about the growth in FullStride Cloud Services. So very happy with our pipeline, the hea lth of our pipeline for Q4 and even going into next year. So, think our growth will continue, and we'll start to see the revenue converts in future quarters.
Mukul Garg: And I had one quick one for Jatin. I was a little bit confused with the employee cost number which you printed this quarter. If you look at the cost per employee, excluding the subcontracting expenses, this was a quarter where two months of wage hike was flowing through. We also had promotions which took place. But your employee cost per employee in INR terms has been flat and actually declined almost 2% versus last quarter in USD terms. So, what really is leading

to this
flatness kind of a cost which actually has been managed quite well? What are the drivers which are helping you keeping this under check given that I think last few quarters have been exceptionally tough in terms of overall expenditure of on employees?
Jatin Dalal: So, I think the most foundational reason Mukul, and there are three reasons. I will go through each of the three. The one is the most foundational reason is that we have improved the way we manage our supply chain. We have far more freshers who are part of our pyramid. So, pyramid has continued to improve quarter -on-quarter. Second is the attrition is lower w hich helps us manage the cost better because to that extent there is the impact of premium, which reduces of lateral hires. So overall, the most foundational reason is that we have managed our cost structure much better.
wipro.com
The third and of course, the other third component is that we have released a lot of efficiency gains from our fixed price projects and those get redeployed for our T&M and other work. And therefore, you don't need your employee cost remains the constant, whether you are able to add revenue.
So, these are the most foundational, as I said, the cost structure improvements that we have made.
The second is also that if you look at it from a considered at Wipro limited standpoint, there was a restructuring cost which was sitting in the employee cost line which was not counted towards the segment margins of 15.1% in quarter 2, but it was sitting in consolidated line which is not present now so that shows a downward path on the employee cost so that is the second.
And third is quarter 3 typically the employee cost also has certain amount of accruals related with leave and other provisions, which it takes it up or down. But if you want to model it, you model it based on the first reason that I've shared, which is the more foundational improvement in th e cost structure of our employees, and we'll continue to work on that.
The second and third factors, the second factor was one quarter impact, which will not recur, and the third impact is seasonal, which will come back in next December, but won't recur i n the future quarters.
Moderator: We'll take our next quest ion, that's from the line of Gaurav Rateria from Morgan Stanley. Please go ahead.
Gaurav Rateria: First question, any colour on the percentage of renewals in TCV. Is it consistent with the historical last few quarters or anything has changed? And how should one think about timing of ramp -up of the deals that you have signed in the current quarter, would it be like a 1Q phenomen on? Would it be more like a 2Q phenomenon? How should one think about the timing?
Thierry Delaporte: To your questions, I would say, first of all, the Yes. Regarding the balance, I was trying to remember the balance between the new and renewal, what I woul d say, this is a as expected. There's a healthy balance, I would say. From one standpoint, the deals that we managed to extend them to sometimes widen the scope, increase our presence. That's also, in particular, when we've been able to consolidate some positions, but we've also had a good volume of new deals, and which is quite comforting because we know that we will be able to continue to expand and grow in those new accounts as well. So, this is good balance, I would say, a good balance between the two.
The second question that is about the timing, things will take to ramp up. It's a difficult question. if we are sticking to the rule that we're only guiding for the next quarter. But what I would say is that for sure, we are seeing growth ahead of first quar ter. So, this projection for Q4 certainly reflects for the reason that I mentioned before, a little bit the way we are seeing ramp- ups happening, but it can only go up.
Gaurav Rateria: Secondly, we made a very interesting point on percentage of the order book coming through

hyperscalers. How should one think about the nature of these deals? Is the contract profitability similar to regular deals, or there are different nuances one has to keep in mind?
wipro.com
Thierry Delaporte: Well, so the first point, Gaurav, reme mber, back mid -2020 when we started to lay out our strategy, partners was at the centre of it. And the way we grow was connecting and engaging at the strategic level with partner who was insufficient. And so, we've clearly, we organized ourselves to be able to be a lot more relevant with them. And so, we have built these teams globally with local connections under the leadership of our CGO function.
And this is paying off every single quarter ever since. At that time, I remember that the revenue we were getting from our top five or six partners was not exceeding 1/4 of our bookings. And today, as you heard, we are not that far from half of the bookings coming from our hyperscalers only.

So, it gives you a feel for the volume of growth that we've been driving wi th them. But in a very strategic way, so going to clients together, developing solutions together, literally developing strategy and going after the market as real close partners, and that is now you can ask what type of deal, typically, obviously, hypersc alers are involved in most of our cloud transformation deal.
So, the whole strategy that we've developed around FullStride has been paying off as well. And so how you should see it as a relation that is accelerating, that is gaining muscle every day, and we'll continue to drive growth.
The margin profile actually is rather good. As you can imagine, if we are improving our operating margin, so significantly, it's because the margin we are getting from our deals is going in the right direction. I think it's al so, we all know that, and it's actually visible in our books that every time we are taking winning a deal that is more where it's more value-based, if you like, we are able to deliver better margins as well.
Gaurav Rateria: Lastly, if I can squeeze one on FullStride, TCV grew 25%. This is in context of what we are hearing in the market that cloud spend is likely to moderate because of the macroeconomic involvement. So, would it be more a phenomenon of market share gain for you, or you fundamentally believe that slowdown in cloud spend may not necessarily have happened as it was feared?
Thierry Delaporte: It's interesting. Your question is a good one, Gaurav. I have a view on that. And let me tell you, what I've observed, and I spend a lot of time with the hyper scalers personally. Is that there was a gap in our, there was a shortage in our ability to deliver there on their demand, just because of the magnitude of the size of this market.
And so, the fact that they are slowing down doesn't necessarily mean much in terms of impact for us. I believe that with the size of these are hyperscalers, even when they are growing a few percentages less, we can still grow more or less at the same speed. I remain very bullish that what, what we're talking about cloud and what is representing today north of one third of our business will continue to gain grow in terms of proportion of our revenue mix, if you like, going forward. So, market may slow down, we may not slow down around cloud.
Gaurav Rateria: All right. Very clear, than ks a lot and all the best.
Thierry Delaporte: Thank you and you too.
wipro.com
Moderator: Thank you. Our next question is from the line of Nitin Padmanabhan from Investec. Please go ahead.
Nitin Padmanabhan: Good evening and very Happy New Year. I had a couple of questions. First is on Europe. So, I think it's been a little counterintuitive almost everyone has been sort of showing very solid growth out of Europe. And the geographies which we thought were relatively stronger are actually much weaker. If you could give some colour on what exactly are the dynamics at play here? That's the f

irst question, and I had one more after this.
Thierry Delaporte: Nitin, indeed, I am aware of -- and I should not necessarily comment on relative trends versus the competition. I think in the case of Wipro, what is clear is that over the last years, we have completely changed speed, focus attention -- and our impact in Europe is different. There's no doubt.
I think the organization we've put in place with a focus on key strategic market s, the leadership that we've either hired or promoted in these regions the organization that we have reinforced the connections that we have built with our clients, the intimacy, the ability to combine the power of our global network and very strong impact ful legal leaders in this market is making a difference.
And yes, Wipro is a different competitor in Europe today than it was some years ago.
Is it paying off? I'm assuming, yes, it's clear that, yes, we continue to grow. We continue to see nice deal. We h ave a nice portfolio of clients in Europe, and we will continue to gain market share in Europe.
Nitin Padmanabhan: Sure. The second one was more of a clarification. So, I think, the deal wins have been sort of pretty -- in the last three quarters have been pretty decent compared to the earlier quarters. And you mentioned that the conversion was low because of the environment. And then if I just look at how we typically grow in the Q1, apart from one of the years where we had large deals and we grew pretty we ll.
Is the understanding correct in terms of the commentary that you think the level of build in terms of the deals won is sort of sufficient enough that despite those headwinds, you'll actually see an improvement next year from a traject ory perspective, on a sequential growth rate if you look at in that way? Or alternatively, maybe the flip side of the question is, do you think the cautiousness by clients and the view on discretionary spends and all of those, do you think that cautiousnes s should sort of dissipate maybe as we get into the new year in the next fiscal?
Jatin Dalal: So, Nitin, this is Jatin, Thierry and I are smiling because this is one way to talk about Q1 numbers that we don't want to talk about, so we will give it a pass. We understand your question precisely.
It's a great question, but we are not at a point in time we would answer that. But directionally, the fact that we are winning large deals, the TCV, the revenue, the backlog is improving, and it will convert into revenue. It's difficult to pinpoint a specific quarter that will get the boost out of it.
Nitin Padmanabhan: Sure, fair enough. Thank you so much and all the best.
wipro.com
Moderator: Thank you. We'll take a next question from the line of Ravi Menon from Macquarie. Plea se go ahead.

Ravi Menon: Thanks for the opportunity. First on the overall deal with it, it looks like that's really strong. So how do you think about the market demand, especially, do you say north of 50 million discloses large deals. So, would we continue to see that momentum even over the next quarter? Or do you think that is making is largely going to be on hold?
Thierry Delaporte: Ravi, your voice came a little muffled, so I hope I understood the question. But I believe you are asking some of our views on the market itself, okay? Am I correct?
Ravi Menon: Yes, Thierry, that's right. I was just asking about the deal pipeline. Do you think the position making could slow and therefore deal wins could get a little softer next quarter?
Thierry Delaporte: When it comes to projecting bookings, you can certainly base your level of confidence on the quality of the pipeline and on your trend of win rate over a certain period of time. If I base my judgment on that, I see that we have another solid quarter of bookings coming ahead of us. Will it be as good as the one this quarter -- that I don't know. I cannot tell sometimes it depends on one deal, and it makes a big difference. So

, I think very confident that it will be another solid quarter in terms o f bookings.
Let's see how it goes, okay? But a little bit of reflection on the market. again, the softness of the economy, the uncertainty of the macroeconomic environment is a reality. I said it in this room three months ago, Ravi, at the time, we are not necessarily others were saying it. But this hasn't changed. This hasn't changed. In this context, I can only recognize looking at the performance and the activity in the field from our sales teams, that the tech spending remained robust. That's clear.
I take obviously comfort from the fact that we are winning and that we are winning nice type of deals. And if you look at being a little bit more, looking at the type of deals, you probably have noticed that we are talking about total contract value. We also look at the annual contract value.
What's interesting is that the total contract value has been our highest ever. The annual contract value performance has been also our highest ever. And what it says to me is that we have a good volume of large deal, good volume of medium deal and good volume of smaller deal. I think this tax-on, this good pyramid of size of deals also, reflect also the fact that our backlog for the quarters to come is reinforcing and is getting stronger. So, reasons for us to be optimisti c for the next year.
Ravi Menon: And next is a question, it's a bit of a revenue and margin question. If the demand is strong, why are we looking at Middle East as a geography, we talked about investing in it. I mean historically, we used to think about th e Middle East as a relatively lower billing rate at lower profitable geography. So why not focus on the developed markets if supply is still tight there?
Thierry Delaporte: This, Middle East is a very important market for us. A very important market. In fact, by size, Wipro is one of the big players in the Middle East. So, we are very proud of our business. We continue to invest in this business, such that we've decided to establish the headquarter of the region in Dubai for APMEA region in Dubai. And so, w e have invested in innovation lab in capabilities. We
wipro.com
have just decided to launch our Capco business in the Middle East also a few weeks ago. And we are very bullish about our, the outlook of Wipro in the Middle East over the next quarters. It will continue to surprise.
Moderator: Our next question is from the line of Surendra Goel from Citigroup.
Surendra Goel: Thierry, just one question. How should we think about the correlation between TCV and growth? And the reason I asked that question is for the past six quarters, whatever metric you have disclosed ACV or TCV is up greater than 24% year -on-year, while growth in that period has gone from 25% plus Y -o-Y to a guidance of around 8% at the higher end in the coming quarter. So just wanted to understand how we should think about the correlation between TCV...
Jatin Dalal: Surendra. So, I would, I meant it, it didn't ha ve a demand color but more conversion point, so I would take it. The key issue is that we have mentioned in last three quarters that in the first quarter, we said our TCV growth is 32 than 28, and this quarter also has been very robust growth.
The convers ion has two components. It has a future timing component, when does it convert? And second is clearly the immediate component, which is it converts into next quarter or in two-quarter phenomena, et cetera, you have to appreciate the fact that we have won a very large component of TCV and something that we also covered in Thierry's speech is that a large component of that is in Cloud and Infrastructure Services, which are typically long-ended contracts over four to five years.
So, we can give you comfort th at as we enter every quarter, we are entering with a superior backlog than what we are carrying in the previous quarter and the uncertainty around discret

ionary spend or the conversion of large deal continues to pay out in the immediate quarter. So, you are not seeing this correlation in an immediate 3-quarter period that of '22, '23 that you have seen the results of -- but as we model it for future, we feel very comfortable that we are moving in the right direction of securing a better book to carry as we enter '23,'24.
Surendra Goel: Jatin, the ACV that you were disclosing in Q2, Q3 and Q4 of last year was all in excess of 24% also? So, this question was more around like -- I'm sure deals would have been gone, then should have converted by now. So just wanted to understand it better if you want to kind of take it offline that’s fine.

Jatin Dalal: Yes. And we take your point, Surendra, we can -- even in next quarterly commentary, we can cover this point specifically, but we feel comfortable that the bookings i n the current environment is the only way to continue to grow, because uncertainty will always mean that in our business, there is always -- there is certain amount of projects coming to an end and only way to continue to grow is to add more on the top. So, we feel comfortable, but we can cover it as we go forward.
Surendra Goel: And just one clarification. On your comments on the margin walk. You mentioned like something in the employee cost, which kind of moved away from the cost of employees -- per employ ee cost for IT services. Could you just kind of elaborate on that? And could you also quantify it for us?
wipro.com
Jatin Dalal: Yes. So, Surendra it is quite straightforward, when you see our employee cost numbers, you see it on a consolidated basis for entire Wipro Limited. As you know that we had a restructuring cost, which was sitting in the company book. So, it was sitting in quarter 2 employee cost. But when we publish our segment results and IT services, it was sitting in not in IT Services segment, it was sitting elsewhere. And clearly, that restructuring cost has not recurred in quarter 3 and that has reduced from quarter 2 to quarter 3, that much cost in the employee cost line when you look at consolidated Wipro Limited books.
Surendra Goel: Could you quantif y that, Jatin, that's for a convenience.
Jatin Dalal: Yes, I can quantify it, but you can also see it in last quarter's numbers or Dipak, or Abhishek will give you shortly.
Surendra Goel: No, that's very helpful, Jatin. Thank you so much.
Jatin Dalal: About INR 130 crores, yes.
Surendra Goel: Thank you, Jatin.
Moderator: Thank you. Our next question is from the line of Manik Taneja from Axis Capital. Please go ahead.
Manik Taneja: Well, thank you for the opportunity. I actually just wanted to get your sense around the margin improvement trajectory, given the fact that over the course of last 18, 24 months apart from acquisitions you've invested in terms of engine especially when it came to freshers. And now you're getting much more moderated...
Moderator: I am sorry to interrupt. Mr. Taneja, it looks like there's an audio breaks from your connection. If you are on a handsfree mode, please switch to handset and speak, and you might have to repeat the question, sir.
Manik Taneja: Sure, thank you. I am on handset only and I'll repeat that question. So, the question was on margins. Over the course of last 18, 24 months we see transition in our margins because of the investments that we made around are -- around our delivery in terms of -- especially in t erms of freshers, as well as some of the acquisitions that we made. So now given the fact that growth actually slowing down and hiring essentially is coming off, is there a timeline that you can -- you would want to essentially suggest as to us getting ba ck to 18%, 19% EBIT margins?
Jatin Dalal; Okay. So Manik, thanks for your question. And as you can see, we have made a substantive move on margin in quarter 3. Certainly, we will protect this base and make an incremental eff

ort for future.
But right now, I don't think we should go ahead and quantify the quarter or year in which we'll reach a particular threshold.
Our effort clearly as we articulated in past also, is that we will -- these are not the margin we are satisfied with, from a medium -term standpoint, and our trajectory for our goal for medium term is higher and we'll continue to make an effort. But please be mindful that in quarter 3, we have made
wipro.com
significant movements, and we'll have to sustain that and on that build it incrementally in next quarters.
Moderator: Thank you. Our next question is from the line of Abhishek Shindadkar from InCred Capital. Please go ahead.
Abhishek Shindadkar: Hi, thanks for the opportunity and happy new year. Thierry, in the preparatory remarks, you mentioned about modes t slowdown in the discretionary spend, was this comment related to Capco by any chance? And given the fact that you have a solid U.K. European presence. One of your competitors had highlighted that H1 could see some of the deals delayed, these could conver t in the first half. Anything that you would like to comment on the same? Thank you for taking my question.
Thierry Delaporte : When I was referring about to discretionary spend, Abhishek, I was not referring to any units specifically. It's a reality that a pplies to all kind of discretionary spend. As you mentioned, Capco, let me tell you one thing. The acquisition of Capco that we've done -- when was that now, 18 months ago, was an extremely strategic acquisition. The purpose of this acquisition was to change -- game changers for us in the BFSI market, be able to suddenly completely transform the type of conversation that we're having with clients in order to be able to really engage with them at strategic level and drive larger program.
This is exactly what has happened. The performance of Capco quarter -after-quarter over the last 18 months has been very good, actually higher than what we had anticipated or expected at the time of the acquisition and that the nature of the strategic -- the strategic nature of the acquisition is a reality on the ground every day. So that's -- I just wanted to be clear about this -- the Capco since you mentioned it.
As for discretionary spend, I think it's -- the type of deals that the clients feel they can stop at any

moment in time. And this happened with every kind of clients across sectors.
Moderator: Thank you. We'll take the next question from the line of Dipesh Mehta from Emkay Global.
Dipesh Mehta: Thanks for the opportunity. Just on the deal related question. So, if I look now press release contain note four, which include we report only gross deal intake and any subsequent cancellation, termination and reduction is not the part of the number. So, do we see any different trend, let's say, over the last few quarters, particularly on the termination and reduction side, which could have implication about revenue growth trajectory compared to the deal intake trajectory? Second question is about the growth trend or demand trend. If you can provide some sense about communicat ion, BFSI and consumer? Thank you.
Thierry Delaporte : Okay. Dipesh, thanks all your questions. So, the first one, if I understand, well, is about, has there been more cancellation or termination? Is it what -- that's what I understood, right? The answer is we have not -- let's be very clear. We have not lost one single -- it's not like we -- there was a question earlier in another form about is it structural. It's not -- we have not lost a client.
wipro.com
We have not lost a -- there hasn't been a big termination or anything. So, it's not like there's been a particular loss. That's the nature of the discretionary spend or the nature of a slightly slower ramp -up that is more explaining the revenue profile.
Jatin Dalal: Dipesh, if you are okay, I wanted to also clarify the earlier question by Sur

endra so that we
conclude this call answering every question. Surendra's question was for clarification, I will mention that Q2, Q3, Q4 Wipro's ACV growth was quite high, and that w as -- I'm repeating 31%, 22% and 33%. And if I take the average of the three, it comes to around 28% growth in ACV and that -- if you see our '21, '22 growth in revenues was also 28% plus.
So, our ACV growth did reflect in our revenue growth. Both numbers included Capco, so they are apple- to-apple. And therefore, we continue to see a strong correlation of our booking business with revenue. And if there are any other questions on this line, IR team will be very happy to take it after the call.
Dipesh Mehta : Sorry, the second question, if you can answer.
Jatin Dalal : Sorry, Dipesh. Can you ask me again?
Dipesh Mehta : So, the second question was about the demand trend, what we are seeing in communication, BFSI and consumer verticals? Thank you.
Thierry Delaporte : Communication, no particular slowdown in communication, the market continued to be good. BFSI, we know by reading like you that there are some slowdowns . We haven't seen it so far. The performance in BFSI continues to be good. I think it's probab ly -- let's see, but I think it's our ability to really connect at the more strategic level with our clients, which is getting us to place that are less exposed to cyclicity, if you like, of volatility. The third sector was...
Dipesh Mehta : Consumer?
Thierry Delaporte : Consumer is -- okay. So, the consumer actually is sensing. If you look at our performance, it's solid as well. I suspect, however, that it may be a sector between consumer and retail, in particular, in America, which could get a li ttle bit exposed in the foreseeable future to follow.
Moderator: Thank you. Ladies and gentlemen, that was the last question. I would now like to hand the conference back to Mr. Dipak Kumar Bohra for closing comments.
Dipak Kumar Bohra: So, thank you all f or joining the call. In case we could not take any questions due to time constraints, please feel free to reach out to the Investor Relations team. Have a nice day. Thank you.
Moderator: Thank you, members of the management. On behalf of Wipro Limited, tha t concludes this conference. Thank you for joining us and you may now disconnect your lines.

Moderator: Ladies and gentlemen, good day and welcome to Wipro Limited Q1 FY24 Earnings Call . As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you n eed assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone.

Please note that this conference is being recorded. I now hand the confer ence over to Mr. Dipak Kumar Bo hra, Senior Vice President, Cor porate Treasurer and Investor Relations. Thank you and over to you, sir.

Dipak Kumar Bo hra: Thank you, Yashashree. Warm welcome to our Quarter 1 Financial Year 2024 Earnings Call . We'll begin the call with the business highlights and overview by Thierry De laporte, our Chief Executive Officer and Managing Director, followed by a financial overview by our CFO Jatin Dalal. Afterwards, the operator will open the bridge for Q&A with our management team. Before Thierry starts, let me draw your attention to the fact that during this call, we may make certain forward-looking statements within the meaning of Private Securities Litigation Reform Act 1995.

These statements are based on management's current expectations and are associated with uncertainties and risks, w hich may cause the actual results to differ materially from those expected.

The uncertainties and risk factors are explained in our detailed filings with the SEC. Wipro does not undertake any obligation to update the forward-looking statements to reflect e vents and circumstances after the date of filing. The conference call will be archived and a transcript will be available on our website. Over to you, Thierry .

Thierry Delaporte: Dipak , thank you. Hello, everyone. Welcome to our first quarter earnings call. Joining Jatin and me today, we have our Chi ef Growth Officer, Stephanie Trautman. We have our Chief Human Resources Officer, Saurabh Govil, our Chief Operating Officer, Amit Cho udhary, and our Chief Technology Officer, Subha Tatavarti. I'll start today with an overview of our financials for the quarter, moving into some details of our business, the demand environment and some direction for the coming quarters . Then Jatin will go into greater detail of our operational metrics. And of course, we'll be happy to answer your questions after this.

So Q1 was another quarter of robust deal closure s for us. In total contract value terms, we closed large deals to the tune of USD 1.2 billion, which is a 9% year -on-year growth and the highest bookings in eight quarters. During this quarter, we booked 10 deals in the greater than USD 30 million TCV range. Total bookings from a TCV standpoint stand at USD3.7 billion. We added two new accounts in the greater than USD100 million revenue bucket, tak ing the count of businesses

that contribute more than USD 100 million in revenue to 21.

So the number of USD100 accounts has more than doubled from 10 to 21 in the last two and a half years since we started on this transformation. All around us in almost ev ery industry we see businesses that have been reducing discretionary sp ends in response to the weaker macro environment. That's had an impact on our revenues as well. In constant currency terms, Q1 revenue grew 1.1% year -on-year.

This translates into a grow th of 6.1% year -on-year in rupee terms. That is very much within the previously guided range, but yes, we are seeing some softness in revenues. Despite that, we have

held margin steady. Operating margin for the first quarter was 16%. This is 112 basis points, to be precise, higher than our operating margin in the first quarter of last year. We maintained margin by mostly three points, improving productivity in our fixed price project, a better utilization of talent and finally, by managing our fixed costs. At the same time, we continue to invest in people and in technology to build a more agile and efficient organization.

This margin resiliency is especially significant. Wipro has undertaken one of the largest enterprise-wide transformations in the industry, starting November 2020. We're proud of the progress we've made since. The success of this transformation becomes clearer when you consider the magnitude of this change. And when you see that we have continued to perform w hile we continued to transform.

On one end, we were aligning to market needs and on the other, undergoing a deep internal transformation. Our focus on accelerating this transformation along with maintaining undivided attention on client experience and delivery excellence will progressively translate into improved growth and margins. We recorded an 11.5% growth in earnings per share, year on year. Cash flow has remained strong. Cash conversions stood at 130% of net income. And finally this quarter, we closed our largest ever buyback, allowing us to return USD1.5 billion to our shareholders.

Now, our industry, like every other, is undergoing a seismic shift with the advancement of artificial intelligence. AI can and will fundamentally change every aspect of business. Anticipating this revolution, Wipro had started investing and building AI capabilities over a decade ago already. We have delivered over 2, 000 global AI engagements during this time. In fact, today we are using Generative AI for multiple use cases like enterprise knowledge mining, virtual assistants, content creation, automation in software development lifecycle and for synthetic data generation.

To accelerate innovations in this space, yesterday we announced a USD 1 billion investment in AI and launched a new AI -first in novation ecosystem called Wipro ai360. This ecosystem basically will bring together Wipro's full range of capabilities, including solutions, services, platforms, research and intellectual property, as well as partnerships and talent under one umbrella, wit h additional funding and resources to fuel our growth in this area. Also placing responsible AI operations at the heart of all our AI work.

Wipro ai360 is meant to empower our talent pool and be ubiquitous across all our operations and processes and our solutioning for clients. This AI -first approach will unlock more value, productivity and commercial opportunities for our employees as well as our clients. But first, we need to train our people in this fast -moving field. Over the next 12 months, we will tra in our entire workforce, nearly 250,000 employees, in AI.

From hackathons to challenges on our talent crowd platform -Topcoder to dedicated trainings, we will leverage our blockchain- based DICE ID platform to become the industry standard for AI skills crede ntialing. Demand for AI specialized talent will grow exponentially over the coming years, we know that and we'll be

prepared. Subha is here with us today to share more on this. Now, I like to talk through our strategic market unit performances as always.

wipro.com

In America as one, order bookings in terms of total contract value grew 37% year -on-year. Revenues for the quarter grew 1.5% year -on-year in constant currency terms. This revenue growth was led by healthcare and medical devices at 9%, followed by consumer goods and life sciences at 7%. Hi -Tech and BFSI are the two sectors that were impacted the most due to softer discretionary spends. As a result, our Americas II market declined 2.7% year -on-year in Q1. Our European business unit delivered a year -on-year revenue growth of 4% in Q1.

This revenue growth was led by Southern Europe and Nor dics, which grew 26% and 14% respectively in the first quarter. In our APMEA business, bookings in total contract value terms are looking healthy, with a 23% quarter -on-quarter growth. Revenues for the quarter grew at 3% year -on-year. Within this SMU, our India business grew 7% and our Middle East business grew 6.4% year-on-year. In Q1, we also completed the transition to the four global business line model that we had announced earlier in the year.

This evolution of our business model is actually already showing up as faster time to market, but also more inclusive one Wipro customer and delivery wins. Whatever challenges our clients may have, the solution exists within our g lobal ecosystem. And we are tapping into the talent, the capabilities and the solutions from every corner of our firm. We are increasingly able to build bespoke solutions for clients and t hat's what is setting us apart.

Ultimately, our focus is, and always will be, on serving our clients with greater innovation, with attention to detail and with excellence. Great example of this is our recent win with a global digital interactive entertainment leader. Wipro will modernize their network infrastructure, deliv ering improved responsiveness and user experience. We will drive scalability to handle increased workloads and reinforce end- user security, all the while creating a platform that support s the client's expansion plans.

This project brings together Wipro's architecture, consulting, cloud migration, implementation and managed services capabilities. Thi s win is also a good example of how Wipro can bundle solutions from multiple partners to deliver a wide range of capabilities that are tailored to our clients ' needs.

In terms of the demand environment, in some ways, we are seeing tech investment normalize after the sharp acceleration in spending during t he second hal f of the pandemic. More and more clients are expecting faster return on investments and optimiz ing costs through increased use of automation and vendor consolidation. In parallel, we continue to see solid demand in high growth areas like cloud transformation. Clients are seeking out Wipro's FullStride Cloud capabilities for the next phase of their cloud strategy. We are helping them run more efficient and agile businesses and capitalize on the emerging opportunities presen ted by artificial intelligence.

For example, a large global medical device and healthcare company has selected Wipro to transform their operations infrastructure into a modern, cost -effective and cloud-first model. Wipro FullStride Cloud will deliver a consistent and Omni Channel workplace for 120,000 employees in 160 countries. We will help this client achieve 40% automation, cost optimization and while simplifying their global operations.

wipro.com

Now, we are able to do all of this and more thanks to our 250,000 associates around the world. We want to see them succeed in their roles and their career. As part of our transformation, w e've continued to work on various aspects of employee experience, with several new initiatives to streamline policies, to streamline processes, talent support and training and development oppor

tunities. We also want to make sure employees ' voice and concer ns are heard.

Our 2023 employee engagement survey showed an overall engagement of 88%, which is higher than before and now benchmarks us to global standards on employee experience. We also named one of India's best companies to work for by the Great Place to Work Institute for the second year in a row. But that, to me, is table stakes. We must and we will continue to improve how we provide the experience by our employees. Because all of these efforts, attrition has continued to moderate quarter on quarter, coming in at an eight quarter l ow of 14% in the first quarter.

I'm confident that our long term business strategy is correct and well suited to ride the changes we predict in the industry. Most importantly, I believe our business strategy will keep us competitive and resilient in the future.

Final word, as always, on our guidance before I close. For the next quarter, we are guiding for a sequential growth of -2% to + 1% in constant currency terms. We expect margins to be in a similar range as in the last few quarters.

With that, let me turn it over to Jatin for his comments.

Jatin Dalal: Thank you, Thierry and good evening, good morning, everyone. I'll summarize our performance for Q1. We grew 6% year -on-year in revenue terms. We improved our operating margin by 112 basis points year -on-year. As a result, we grew 14% on operating profit terms. Our other income was one of the highest in recent quarters. We grew it 110% year -on-year. Our tax rate went up slightly higher and effective tax rate w as 24%. As a result, our net profit year -on-year grew 12%.

Let me talk about cash flows and forex. We continue to convert our profits into healthy cash flows, our operating cash flow for the quarter was 130% of our net income and free cash flow at 126%. We had after completion of buyback USD 3.5 billion of gross cash and USD 1.7 billion of net cash in the beginning of this quarter.

Our forex, the realization rate was quite healthy and improved at 81.90 for quarter one and we had USD 3.6 billion of forex hedges at the end of the quarter. We will be very happy to take your questions from you.

Moderator: Thank you very much. We will now begin the question-and-answer session. We have our first question from the line of Sudheer Guntupalli from Kotak Mahindra AMC. Pl ease go ahead.

Sudheer Guntupalli: Yes, thanks for the opportunity. Thierry, just a bit on the macro, unlike during some of the previous downturns, this time around, many of the macro variables are continuing to be surprisingly resilient, both in U.S. and in Europe, except for a brief period of panic around the regional banking crisis.

So based on your client conversations, what is the key concern or key variable that you are gathering? Could it be the end of the rate hike cycle or what else could drive a r eturn of the spends? And if you were to second guess, how quick that could be?

Thierry Delaporte: Yes, Sudheer, I really like the question you just asked. I think it's a real one. And so let me try to respond to that. Interactions with clients have more or less, I would say, a similar pattern, which is that on one end, there is no one question the fact that technology is critical to the success of the evolution of the company, whatever the industry is, by the way.

Second, I think it's the recognition of the fact that over the last years, there has been massive investment made in technology. Now, and so there's certainly the fact that, macroeconomy continues to shed a little bit of, mixed messages to, those industries and to the leaders across those industrie s.

And so at the end of the day, I've always been very confident on the fact that technology was, on top of each of these leaders' agenda and that, they have a lot of transformation programs in mind to drive and at the same time they are a little influenced. You know, I think it's ev

en more than influenced. They are very aware of the fact that this climate of uncertainty is weighing on some potential decisions for company to continue the same volume of investment.

So they have made some choices and I think there's a certain level of cautiousness driven by the fact that the macro environment is still a little uncertain. So that's what I'm hearing. And that's probably, what we're observing is actually a reflection of that, Sudheer. I think that when w e look at the type of deals we are winning, we are winning more deals than ever before. And that is being consistent for the last three or four quarters.

Every quarter, when we look at our TCV, performance is actually solid. And I think you all have this q uestion about the conversion to revenue. The answer is, the reality is that while we close all these deals and they respond to ambition from clients, there's a reduction of what we all call the discretionary spend, which are typically smaller deals, shorter period and where it's probably easier for less strategy for clients to put a stop to it for some time. And so that's what we are seeing.

Second question is about the perspective? What about the second half of the year? Again, really reflecting on my discussion with clients. There could be a point in time where they feel, okay, we have this budget that we haven't spent yet. The year has unfolded being possibly better than feared, so it's time for us to resume the investments or the spend.

And we are g etting prepared for that and whenever it happens, we'll be ready for that. But knowing if it is going to happen in a month or two or three or four that I don't know. I am being I'm staying cautious in the way I'm projecting an evolution of this market in w hich we've been for the last six months. And obviously keeping a very, very close focus on it, we'll see, but for the time being, I would say the market we see is not dramatically different from the market we saw three months ago. Back to you, Sudheer.

Sudheer Guntupalli: Yes, got it, Thierry. Just an extension of that, is the panic around the banking crisis completely behind us and going forward, do you foresee that there can only be an improvement in the demand situation from where we are, assuming macro variables remain reasonably stable?

Thierry Delaporte: I mean, there will be, again predicting the future, you know, we've been over the last two years a bit shaken up by some macro element that we could not necessarily predict and that have had a massive impact on a lot of what has happened after. So I'm, by definition, I'll be cautious on that. But I think that, a lot of banks still have, reasonably good fundamentals.

And they are very aware of the importance of technology for their own transformation. An d so, yes, it will resume at some point in time. It will restart with a lot of, in particular, a lot of the consulting activities that have been reduced and where they will need to launch those large program aiming at improving the efficiency of the organi zation and their KPIs and ratios.
Sudheer Guntupalli: Got it, just one quick one. The USD 1 billion investment commitment in AI over three years, is it fair to assume it will be largely in the M&A route?
Thierry Delaporte: No, it's not fair. Actually, the m ajority of it will be organic. So this is organic, it is an investment that we are already engaging now and we will accelerate it steadily over the next three years -- not three quarters, three years. Yes, there is in there a bit of budget for M&A, but we do not suspend, if you like, the progression that we want to drive over the next three years to acquisition. It will come as a complement or as an acceleration, but we are already in action now.
Moderator: Thank you. We have our next question from the line of Nitin Padmanabhan from Investec. Please go ahead.
Nitin Padmanabhan: Yes, hi, good evening. Thanks for takin

g my question. I had a couple. So first, Thierry, if you think about the cut in discretionary versus, let's say, the lower ACV of deals versus w hat we would have seen in the prior two years, which do you think is a more significant driver of the weakness? Is it equally weighted or is one higher than the other? So that's the first question.
The second is how are Capco and rising sort of faring in t he current environment? And finally, Jatin, your thoughts on margins going forward and what you're thinking about, how are you thinking about compensation increases? Because we hear a couple of companies actually sort of pushing it out or sort of doing awa y with some of it. And so just wanted your thoughts on these three things. Thank you.
Thierry Delaporte: So Nitin, so the first question was, actually, I'm not sure I can easily answer your question, whether it's discretionary or ACV. By definiti on, what is ACV and not showing a difference with TCV is by definition short -term deals and that includes mostly discretionary spend. So I would say, you can call it the way you want. Those are short -term deals versus large deals, basically.
So that's, I d on't know, Jatin, you have a better way to answer this first question? No. The second one is about Capco and rising. Same comment I would have made, I'm sure I have made a quarter ago. It's a consulting business. There's where there's a lot of discretionar y spend. It's a little harder
wipro.com
these days that it was some quarters ago. It doesn't change at all the strategic nature of these deals.
And I think it is always been clear for us that these were investments for the future and not tactical. So you have -- we know consulting our early cycle type of business. So -- and that's what we are seeing. Having said that, actually, again, on the fundamentals are good. Second, I take the example of rising because that's the last addition to our organization when was that a n year ago.
Yes, about year ago. So a good go.
Frankly, the attraction it gets in our SAP business is beyond our expectation at the time of the acquisition. There's no doubt, whether it's in our, in the way we are able to develop, true strategic level of exchange with SAP, or in the way we are going for large transformation, large deals in SAP, that rising has been a great addition to the fab. So that's the second one. The third one, I'm always tempted to respond on margin. For some reason we always ask the CFO on margin. So go ahead. Go ahead, Jatin.
Jatin Dalal: So, Nitin, first, what I want to share is in quarter one, despite a significant volatility in revenue, we have done well to stay flat on operating margins. And that was because of a variety of operational levers that we were able to manage very well, including improvement in utilization, which would have been, as you can imagine, quite difficult in such a revenue scenario.
As we enter quarter two, we definitely want to hold on to this trajectory an d we will continue to leverage the efforts that we have taken in quarter one to continue with the same consistency in quarter two. As Saurabh mentioned in the press release, as we have spoken about it earlier today. We did our last salary increase in September of last year and we plan to do that for this year sometime in quarter three. So at least, for quarter two that's not something that, we are penciling in, at this point in time.
Nitin Padmanabhan: Sure, Jatin. So on the utilization, you think, you have more room because it already seems to be maxed out. So would you need to start hiring in anticipation of demand, maybe six months down odd?
Thierry Delaporte: So Nitin, next to me is Amit, our CEO, who is obviously driving utilization up, so Amit, over to you.
Amit Choudhary: Thank you, Thierry, and thank you, Nitin. Yes, utilization clearly is going to continue to be a KPI that will keep driving. We are also looking at different components of utilization

, not only the aggregate number in terms of location, in terms of seniority. So yes, there is still some room to drive our utilization up from where we are.
Nitin Padmanabhan: Sure. Thank you, Thierry. Thank you, Jatin. Thank you, Amit. Very helpful. Thanks again and all the best.

Thierry Delaporte: Thank you, Nitin.
Moderator: Thank you . We have our next question from the line of Gaurav Rateria from Morgan Stanley.
Please go ahead.

Gaurav Rateria: Hi, thanks for taking my question. So first question is for Thierry. The success of strategy pursued by us is pretty well reflected in our higher win rates, large deal closures, and even better TCVs.
But when we really compare revenue growth versus some of the peers, there is still a divergence.
So how do we really explain this? Is this more to do with the portfolio mix or any other factor that could explain this gap?
Thierry Delaporte: Gaurav as you can imagine, I run Wipro and I'm with this leadership team working on, driving, the performance of Wipro, in the right direction. We are focusing on o ur priorities. We are focusing on our journey. Just look at yourself, the profile of growth of Wipro over the last three years. The most important point is, has it been a change to the previous trend of growth of this organization. I'm not sure, I would, I 'm not go ing to benchmark our performance every quarter against, every other company in our industry.
We have our own journey. We have our own gauge, our transformation. Three years ago, we are working on many different aspects of our progression, if you l ike. Growth has been solid, double-digit two years in a row. Yes, there is a slowdown. It's a reality for everyone, if you want me to refer to, to reflect on others as well. And that's, what I'm seeing.
Having said that, I believe that, we are every day becoming more impactful in the market. As you said, it's visible in the deals that we have closed, the large deals that we have closed. It's also visible in the way, we are growing our large account, and that is showing that, our account strategy has been paying off every single quarter for the last 10 quarters.
We have doubled the number of USD100 million accounts in two and a half years. And again, it's a testament to the ability of the company to grow, when we are focused, whether it is in terms of account, in terms of sector, or markets.
Gaurav Rateria: Great. Second question is regarding the investment committed for generative AI. How are we going to fund this investment? And if we can quantify, this would have any implications on our longer -term margin aspirations? Thank you.
Thierry Delaporte: Gaurav. So, funding is funded by the operations, to be clear. So this is in our plan. It's baked into our plan. To explain to you a few minutes ago that, there's a lot going on in terms of, improving the efficienc y of our operations, of what we call our operational excellence, whether it's in the way we are, injecting more automation and AI into our delivery to be more efficient, or whether it is in the way, we are, streamlining of our operations, reducing the layers, and just being more nimble and more agile as an organization. All of that is driving operational improvements that we are re-injecting in our future.
We've never compromised on development or mid to long term strategy. We've never compromised on the obsession for our clients and for excellence in delivery. And AI, obviously, is an investment, but also a gigantic market for us. And so that's how we look at it. And so you should look and consider that, because we consider we are well positioned in that market, that it will trigger revenue growth and profitability over the next quarters
Gaurav Rateria: Thank you so much.

Moderator: Thank you. We have our next question from the line of Girish Pai from Nirmal Bang Equities.
Please go ahead.
Girish Pai: Yes, thanks for the opportunity. Co

nsidering the demand environment, how would you characterize the competitive intensity that you see in the market today compared to, say, six months back?
Management: Competitive activity.
Girish Pai: Competitive intensity?
Stephanie Trautman: So, it is a very competitive environment as we look to renew our existing book of business and acquire new clients with new opportunities. Of course, we're finding ourselves in situations, where we really have to differentiate our value proposition and drive more value for our customers. We're winning against all of our competitors. If you look at our large deal wins, this quarter, it was pretty mixed in terms of, what we were winning and who we were winning against. So as Thierry mentioned, our strategy is really paying off. We're better poised to be highly competitive and a true transformation partner with our clients and that's s howing up in our wins.
Management: Thank you, Stephanie.
Girish Pai: Is the higher competitive intensity impacting pricing as we speak right now, or is the customer able to extract sweeter deals from you in terms of larger productivity benefits down the r oad?
Jatin Dalal: Yes, hi, Girish. I hope you are well. No, the answer right now is yes, in the sense that there is nothing unusual that we see on large deals that we don't normally notice. Obviously, if there is a USD200 million or USD300 million deal, you would benchmark it with the best standards on productivity, best standards on pricing, but that is not out of ordinary behavior of dropping prices or giving deferrals in billing, etcetera. Those behavior, we have not yet observe d that would worry us.

Girish Pai: Okay, lastly on generative AI, there's been mixed commentary around the evolutionary impact of this on at least certain service lines. What's your take on this and how early or late will this happen, if at all it happens?
Jatin Dalal: Yes, so Girish, your specific question is does generative AI already, is it already reflecting in reduction in revenue and potential headcount for the GBLs for our service lines?
Girish Pai: No, I'm saying, will the productivity gains that people claim or there's been claims around it, will that be entirely passed on to customers resulting in some kind of revenue compression in the times ahead?
Jatin Dalal: Yes, so Girish, we haven't seen that yet. But as you already know that, every co mpetitive deal goes with a certain assumptions of year -on-year productivity numbers that are baked in and those numbers will continue gradually. They will continue to bake in the productivity benefits that Gen AI will bake in and I would request Subha to add from her perspective, how does she see this journey to unfold?

Subha Tatavarti: Thank you, Jatin. So Girish, we feel that Gen AI is a fundamental shift in how any business would do business or operate. So what does that mean? It means that, we will see greater and greater efficiencies and productivity in every sector and every vertical. And it will also translate into, how our business will run more efficiently moving forward as we begin to ramp up adoption of this technology across every business proces s, every technology stack and every offering and every interaction, we have with our customers. So yes, there will be productivity gains for our customers. We hope to drive it for them, but we also see significant productivity gains for our business as wel l going forward.
Girish Pai: Okay. Thank you very much.
Moderator: Thank you. We have our next question from the line of Abhishek Kumar from JM Financial. Please go ahead.
Abhishek Kumar: Yes, hi. Good evening and thanks for taking my question. I wanted t o understand the assumptions that have gone into our guidance for the next quarter. Last quarter, if I remember right, we mentioned that, some of the clients had already intimated us about certain ramp downs and the impact was to be felt i

n one quarter. So our sense is that, that probably is in the base quarter now.
So what is driving another, sort of at least at the lower end, another sequential decline for the next quarter? Have we seen more such intimations coming our way and project ramp downs continuing?
Thierry Delaporte: Abhishek, so if you look at the guidance for Q2, it's actually showing is, I would say, a slight improvement over Q1, right? And so, what I think we are saying is uncertainty remains. There's no deterioration. No, we stay a bit cautio us because of the uncertainty. Right, and that's how we see the quarter two for us.
Abhishek Kumar: Sure, so in terms of how the last quarter turned out, was there any stabilization towards the second half of the quarter or the weakness of the system through the quarter?
Thierry Delaporte: This is a difficult question. I'm not sure I can answer. It's too early to tell, right? You cannot make a trend based on 20 days or 30 days. So I don't think, I'm in a position or Jatin or anybody here is to tell you that , based on the last 30 days, we can see a trend. I think it's, this is the reality with the context of uncertainty. It is precisely, it's a little bit erratic. And so, some industries certainly are more pushers than others. Banking, financial services, tec hnology, you see that. technology has reduced.
There are actually some technology companies that have been going through several waves of layoffs, so there's a bit of a slowdown on the technology side after several years of stronger acceleration of investm ents. Comms is another sector, where we are seeing that. Some other sectors, healthcare, energy utilities, are sectors that are actually probably investing more and less cautious, if you like. So this is the context. The reality is that, you're probably going to have to wait for some more months before really getting the confirmation that the market has rebounded for good.
Abhishek Kumar: So that's helpful, thank you and all the best.

Thierry Delaporte: You're welcome.
Moderator: Thank you. We have our next question from the line of Ravi Menon from Macquarie, please go ahead.
Ravi Menon: Hi, thank you for the opportunity. Thierry, I just want to understand your organization look for global business lines. If I look at it, consulting is still separate. So I thought that, this is a good opportunity to embed consulting more deeply and try to increase the cross -sell for that. Could you explain the rational logic behind the reorg?
Thierry Delaporte: Okay, all right. Ravi, so I'll try to, I have a one hour version of the ans wer, but I'll try to be concise. So back in late 2020, when we implemented our operating model with SMU and GBLs, we decided, because this organization had never gone through a metric setup, we felt that it needed to be extremely simple for it to be rapidl y implementable.
And that's what we did. And that's why we went with two GBLs, iDEAS and iCORE. What possibly, we could not anticipate at that time is the speed of the growth we would experience in those two

GBLs in two years, 45% growth met those two GBLs, massively bigger than what we had anticipated when we launched the model. In parallel, the level of maturity of our organization to work with SMUs and GBL working together in a very integrated model has dramatically progressed.
And finally, we have seen -- we have listened to our clients and we've seen a couple of things.
One, the fact that we've done great in engineering and it was maybe time for engineering to just fly on its own a little more. Because we have a fabulous potential at Wipro to really be a leader in engineering even more.
Second was the fact that more -and-more our clients were expecting from us that we come to them with a comprehensive cloud strategy addressing both infrastructure and applications without disassociating between those two different dimensions. And I think, we felt that by comb

ining those two components into what we call now a full stride cloud services would make us more impactful and more competitive and more just able to better respond to their expectations.
Third, as you said, we've made acquisitions in consulting. We also had a consulting business and by experience that consulting is, needs to be at the forefront of the market, so needs to be as close as possible to the accounts and to the clients. They also need to be v ery closely connected to the other GBLs because basically every global business line, every offering needs to work hands -in-hands with our consultants. But at the same time, they need to be managed differently because consultants operate under different op erating model and different ways of working. And I have a deep understanding of this business and it is clearly the objective was to create this platform, this consulting platform for the future of Wipro.
And finally, our fourth GBL is what we call Enterpr ise Futuring. It's actually combining different type of businesses, DOP, data, and a digital experience that have as part of their evolution and applications, obviously, the necessity to leverage artificial intelligence in everything they do. And so those four GBLs have been put in place on April 1. It means that we are already in operation under this model for the last three months.

And it's impressive. I'm going to share with you something. It's been working so smoothly, this new model that I almost forgot to mention that we had just done it to the board few hours ago. It says a lot about how seamless this implementation has been and for sure, the intention is to increase our impact in the market with our clients and at the same time, streamline our operat ions and reduce the layers, if you like, between our teams operating and our clients.
Ravi Menon: Thank you for the detail, Thierry . And if I look at the kind of deals that you're announcing, it looks like you've actually started doing more complex deals a nd more, if I might call, outcome-oriented deals, where there is some risk transfer and you actually get paid for that transfer of risk along, and that allows you to, I guess, make better margins than a simple list and shift.
Thierry Delaporte: Completely agreed, and this is exactly our strategy that we've laid out three years ago and we're executing against that quarter -after-quarter.
Ravi Menon: Thank you so much and best of luck.
Thierry Delaporte: Thank you.
Moderator: Thank you. We have our next question from the line of Dipesh Mehta from Emkay Global. Please go ahead.
Dipesh Mehta: Yes, thanks for the opportunity. A couple of questions. First about if you can provide, Thierry, some update about the Global Account Executive Program and empowerment, which you earlier suggested is the key focus area. So if you can give some update where we are in that journey?
Second question is about the four service lines, which you said, if you can provide some update, I think, in terms of growth, how the traction is happening, which area is seeing more weakness compared to others? So if you can provide some sense about those four service lines?
Last question is for Jatin about EBIT margin aspirational. I think earlier we used to say, 17 is what we aspire to r each sooner. So if you can give some sense about how you expect that EBIT margin journey to play out? Thank you.
Thierry Delaporte: Okay, so I'm going to let Jatin address the questions three and then I'll come back for question one and two, okay?
Jatin Dalal: Yes, so Dipesh, clearly, we had mentioned that 17, 17.5 is a medium -term outlook that we have for our business but in that ambition remains. We will continue to work towards that. However, we need to manage the short -term, and in the short -term, there is volatility in the market and uncertainty in the revenue line, and that does impact our ability to drive the improvement that we want to dr

ive.
I hope you appreciate that we have been able to deliver a very strong execution in quarter 1 that despite the volatility in revenue, we have delivered a flattish operating margin for quarter 1 and that journey and focus will continue to move towards that medium -term goal. It won't be an

immediate outcome that one would be able to drive towards, but I think, we ha ve the right building blocks in place to move towards that goal. I will hand it over back to you.
Thierry Delaporte: Yes. Jatin, thank you. So, the first question, the two questions, so the first one was around GAE

program. So as part of our strategy back in 2020, we decided that we would have a very account - focused strategy. We would choose the industry we want to have a position in. We would choose the markets where we want to establish our position, grow and really invest long-term. And in these accounts , we wanted to grow these accounts, not only in volume, but also in value. So in impact, basically. With the clear ambition to be not only an IT provider, but actually a true transformation partner for our clients.

As part of this ambition, we have decided to invest in two total account executives, those GAEs. We renamed it to really send a signal inside the team that, as a GAE, you are a total leader of the account you're managing. You're the CEO of the account you're running. You're representing Wipro for the account and we must all align behind you in your account strategy. Frankly, this has triggered, that this has fueled growth over the last three years. You know, I said a few minutes ago that, the number of USD100 million account has gone from 10 to 21 in the last 2.5 years. And I think, it's a reflection of that.

We have now a lot more accounts of over USD 100 million, we have a lot more USD 15 million accounts, and we continue this strategy. In fact, we reduce the tail of accounts to have less accounts, but more impact in these accounts, we invest more. And as you said, we empower the GAEs, the account executive, to really drive and have the possibility to make decisions, invest, and grow those relationship, but also make sure that we are positioned as a true partner in those accounts.

And finally, as part of this program, I mean, we've on-boarded a lot of talent. We have today a significant diversity inside our organization and in particular in the account executive team as well which is driving a lot of positive impact inside our organization every day beyond those accounts.

The second point you had was the service lines. So the four service lines, the performance of the four service lines. Jatin, you want to say something?

Jatin Dalal: Yes. So, Dipesh, as you know, we, like most of our competitors, we no longer publish the actual financial performance of this four service line. But suffice to say that except for consulting where we have talked about the impact or a slower growth that we have seen, the re st of the service line continue to perform very well and in line with the overall growth of the company.

Moderator: Thank you. We have our next question from the line of Mukul Garg from Motilal Oswal Financial Services. Please go ahead.

Mukul Garg: Yes, hi, thanks. Thierry, I just want to clarify regarding the billion dollar investments which you guys have announced in Gen AI. Can you give some sense on where the majority of this investment will be routed to? Is it something which you guys will primarily invest into tools which you will build out on using AI, or is this something where a big portion will kind of end up supporting employees who are trained in that and hence the compositions will be higher than what you are currently kind of

wipro.com

giving, or is ther e something else where this investment will kind of be consumed given the quantum of the number?

And second, Jatin, if you can just help us understand how to look at this investment, it will pass through your bal

ance sheet, through capitalization, or will you be expensing this out in income statement? And if it is an income statement item, can this be an incremental expenditure on top of what you are currently doing?

Thierry Delaporte: So, we have a very comprehensive plan, of course, behind the USD1 billion, Mukul. And it includes, it's about investing into solutions, into assets, into accelerators, into capabilities, into methods, and it's across the organization. It's also about training. There's a lot of aspects of these investments and of course, as wel l, M&A. Jatin?

Jatin Dalal: And Mukul, I think just as Thierry described various streams of investment, I think, the accounting treatment will follow those streams for period cost, of course, that would be expensed, but large programs which could have future benefits to organizations over the years would be capitalized. And of course, M&A would be accounted as per the merger and acquisition accounting policy. So it would follow the overall approach, but it is not incremental dollar spend in adding -- and al l the expense lines will remain what they are as Thierry discussed or described earlier on this call. This would be funded through the gains on operations that we will make. So in that sense, it should not be seen or modeled as an incremental large P&L hit that you will take over the years?

Thierry Delaporte: No, it's absolutely. There's no, it's not outside of our margin profile for sure. I just want to add one thing. I realized I forgot two things. It's also about investing in research, in platform. And also, that we have Wipro Ventures. Wipro Ventures carries today about two-third of the investments of Wipro Ventures are in the AI field. So, we'll continue because it's incredibly important as well to continue to go after cutting edge startups through Wipr o Ventures. Over to you, Mukul.

Mukul Garg: No, great. I think that's helpful and thanks for the color. Thank you.

Thierry Delaporte: You're welcome.

Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand the conference back to Mr. Dipak Kumar Bohra for closing comments. Over to you, sir.

Dipak Kumar Bohra: Yes. Thank you all for joining the call. In case we coul d not take any questions due to time constraints, please feel free to reach to the Investor Relations team. Have a nice evening. Thank you.

Wipro Limited (NYSE: WIT, BSE: 507685, NSE: WIPRO) is a leading global information technology, consulting and business process services company. We harness the power of cognitive computing, hyper -automation, robotics, cloud, analytics and emerging technolo gies to help our clients adapt to the digital world and make them successful. A company recognized globally for its comprehensive portfolio of services, strong commitment to sustainability and good corporate citizenship, we have over 200,000 dedicated empl oyees serving clients across six continents. Together, we discover ideas and connect the dots to build a better and a bold new future.

Moderator : Ladies and gentlemen, good day and welcome to Wipro Limited Q2 FY24 Earni ngs Call. As a reminder, all participant lines will be in the listen -only mode and there will be an opportu nit y for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by p ressing “*” then “0” on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Dipak Bohra – Senior Vice President, Corporate Treasurer and Investor Relations. Thank you and over to you, sir.
Dipak K. Bohra: A warm welcome to our Q2 FY24 Earnings Call. We will begin the call with the “ Business Highlights and Overview ” by Thierry Delaporte – our Chief Executive Officer and Managing Director; and a “Financial Overview ” by CFO – Aparna Iyer; followed by Amit Choudhary – our Chief Operating Officer. Afterwards, the operator will open the bridge for Q&A with our Management Team.
Before Thierry starts, let me draw your attention to the fact that during this call, we may make certain forward -looking statements within the meaning of Private Securities Litigation Reform Act
1995. These statements are based on management current expectations and are ass ociated w it h

uncertainties and risks which may cause the actual results to differ materially from those expected.
The uncertainties and risk factors are explained in our detail filing with SEC. Wipro does not undertake any obligation to update the forward -looking statements to reflect events and
circumstances after the date of filing. The conference call will be archived, and the transcript w ill
be available on our website.
Over to you Thierry.
Thierry Delaporte: Thank you, D ipak and good morning or good af ternoon, good evening, everyone. Thank you for joining our second quarter earnings call.
I'll begin with an overview of this quarter's results and detail of our sectoral performance, talk about
the demand environment and some direction for the coming quart er. Our CFO, Aparna, and our
COO Amit will join in with their comments as well.
Q2 was yet another quarter of strong deal booking for us. Total contract value terms, we closed
large deals to the tune of $1.3 billion. This is the highest in the last nine quarters and this represents
79% year -on-year growth and a 6% growth on quarter -on-quarter basis. During the quarter, we
booked 14 deals in the greater than $30 million TCV range versus 10 in the previous quarter. Total
bookings from a TCV standpoint stand a t $3.8 billion, which is also a growth of 6% year -on-y ear.
We have added this quarter again one new account in the greater than $100 million client category in Q2. We now have 22 accounts in that bucket. To remember, back in FY21, we had eleven $100
millio n accounts. So, we've doubled the number of accounts in the $100 million category. With one
or so two closes to

half a billion dollar deals in two of our large accounts. As has been the case for
several quarters now, cash flow has remained strong at 145% o f net income in Q2. EBIT or
earnings before tax and interest of our IT services segment has increased 6% year -on-year.
wipro.com
All of that gives us confidence that we're winning in the market against a backdrop of economic
weakness. The business environment as you all know has been uncertain. Inflation is at high a s
have interest rates. Clients are continuing to take a much more rigorous look at their investments. They are hyper -focused on efficiency, on optimization of existing investments and faster return on
new ones. Lower discretionary spending is a reality today. Conversion of order book has become
slower. Transformation programs that are nearing the project term are being replaced by new ones, but at a slower pace. All of this has impacted our top line growth as well. In Q2, revenues
declined 2% quarter -on-quarter in constant currency terms. But even though there's some softness
in top line growth. We are continuing to hold margins steady. Operating margin for the first half of
FY24 was 16.1%. This is 110% bas is points higher than our operating margin in the first half of
FY22.
Now, let's look at the performance of our four strategic market units. One in our Americas -I market
unit revenue grew 1% quarter -on-quarter in constant currency terms in Q2. This revenue growth
was led by a strong performance in our healthcare business as well as in the technology products
and platforms business. Order bookings in terms of TCV grew 36% year -on-year.
Our Americas -II markets unit, which has higher exposure to consulting cli ents and to the BFSI
sector. Though a higher than usual impact of the macroeconomic slowdown, revenues in
Americas -II declined 2.3% quarter -on-quarter in Q2.
Europe which has been our growth engine for the last two quarters for our last two years growing
by 39% in FY22 and 12% in FY23, has also seen slowing demand and reprioritization of client
spend, weighing on the overall business revenues in this market declined 5% quarter -on-quarter.
Having said that, we are seeing strong traction on the order booking side, which in total contr a ct
value terms increased 10% in Q2 year -on-year. Given our strong bookings in this market, we are
confident of a swift rebound.
Finally, in our APNEA business, revenues for the quarter declined 0.5% quarter -over -quarter. Our
goal in this region is absolutely to capture the rapidly digitizing market. For that, we are leveraging
our global scale and domain expertise to actually continue to move our portfolio towards higher value transformation project. This focus on improving the quality of revenue is now reflecting in our margin performance, which has improved 330 basis points over the last five quarters. Being able
to sustain margin despite softer revenue is largely due to our ongoing transformation efforts. This
includes several p rograms around delivery excellence and operational efficiencies. Across the
board, we are pivoting our business towards high quality, high potential businesses and reducing
our loss -making accounts. We're also working on faster bench deployment. In the las t quarter,
talent utilization increased to 84.5%, an improvement of 80 basis points quarter -over -quarter.
Third, our segmentation strategy together with the one -way pro approach is helping us seal bigger
deals with existing clients and win in a consolidati ng market. And I'm proud that we are seeing
these benefits within three months of moving to the new four global business line operating model.
Amit will share more details shortly.
wipro.com
Both on the delivery assurance and efficiencies, these actions are having an immediate positive
impact while also setting us up for long- term margin resilience, because profitable and sustainable
growth is our top priority.

In Europe, we close

d three large consolidation deals in Q2 at a 100% bid to win rate. For example, a global bank has selected Wipro as its partner to deliver multi -year digital transformation initiatives across business units. Wipro will work with the bank to build solutions to enhance its glob a l products and services through responsible use of AI and also hyper automation. This will delive r better customer experience, analytics and drive significant operational efficiency.
Another important point to drive your attention on. Our partnership strategy continues to stay strong. Booking thr ough our partners as a per centage of total bookings have continued to increase quarter -after-quarter, from 25% in FY22 to 44% in FY23, and it was at 53% in Q2.
Increasingly, clients are not just looking to migrate to the cloud, but also run and grow their businesses more efficientl y on the cloud. Our full stride cloud services with its full stack cloud offering is setting us apart from competition and letting us tap into oppor tunities across the clou d journey. For example, multinational healthcare and insurance firms wants us to co -create the consumer and digital experience. As a strategic technology partner, we will build AI and automation solutions to drive speed to market, better client experience and reduce their cost. Our high-performance software engineering program will bring them at least 20% more efficiency.
Now, if you look at the bigger picture in this, you will see that our ongoing transformation is driving a substantial improvement in our market position and that's in turn reflected in the types of deals we are winning. C lients now look to us to help them solution and orchestrate their transformation. They trust us with their complex challenges. That's reflecting in the latest customer satisfaction survey as well with our NPS expanding by 840 basis points, which is quite s ubstantial.
I'll take a few minutes now to share an update on Wipro's AI 360 strategy. Since our announcement last quarter, we've trained as many as 180,000 employees in basic Gen AI general principles. We have rolled out personnel -based learning pathways to create a pool of specialized talent with deeper technical expertise. We are working with our alliance partners to further enhance AI learning pathways through our AI and cloud academies. Recently also, we launched a new GenAI Center of Excellence with I IT, Delhi. We're rapidly integrating GenAI into our processes, ou r solutions and our offerings. Thousands of our employees have or are starting to use GenAI. Let me give you examples, in the HR functions, our teams are seeing significant productivity gains by using GenAI for candidate background verification. Then in marketing, we are using Gen AI for content generation and translation tasks that used to take hours earlier, now takes minutes. In sales, we're deploying Gen AI for research to improve sales coll aboration and to generate responses. Knowledge engineering business. Gen AI is helping with software development a nd lifecycle automation. One of the areas with the biggest productivity gain is in quality engineering and quality assurance testing. Gen AI is helping with scenario creation, code generation, synthetic data creation as well as execution at scale. Initial pilots of these GenAI apps have been so successful that we are now rolling them out to our all our employees. On the clients' front, GenAI
wipro.com
is no w a part of every client conversation. There's a tremendous interest in exploring new use cases as well as understanding the benefits and implications of this technology. Today, we are seeing a doubling of G enAI active projects than we did just one quarter ago. For now, we're seeing rapid adoption in healthcare, consumer and financial services, but also in hi tech and utilities.
One example I can share with you here is the following: We are working with the US - based health insurer to deploy a G

enAI -based chat bot for their agents. We are developing a solution that is fine-tuned to be more contextual so that agents can provide more personalized assistance to every member. This solution is driving 30% to 40% r eduction in operation costs, significant improvements in agent productivity and improving net promoter scores.
Another example, we're working with the European multinational telecom company to unlock value from data. Working with different vendor tools and software kits, we are generating high quality synthetic data which allows the client to not only increase cross -border collaboration, but also mitigate buyers and eliminate distribution limitations that exist in real data. As the technology evolve and G enAI output becomes more accurate, we expect demand for our G enAI services and expertise to increase greatly over the next 6 to 12 months. Frankly, very excited by the opportunity GenAI presents and we are investing in new use cases, solutioning for clients as well as upskilling our employees because we really want to take a leadership position in this space.
On our guidance now, for the next quarter we are guiding for a sequential growth of - 3.5% to - 1.5% in constant currency terms. We expect margins to stay range bound as we've seen over the last few quarters. As the market starts to turn around on the back of our transformation and efficiency place, we expect to start seeing improvements in the coming quarters.
Despite the global slowdown across businesses, Wipro will continue to invest in its people through training oppor tunities, leadership development, global exposure to new clients and technologie s, and by obviously also rewarding them with merit -based salary increases. Wipro's intellectual capital, our people are our biggest strength. We're continuing to strengthen our foundation, streamline our operations and moving towards a more modern dynamic culture. We have the right

strategy and vision to keep us competitive and resilient. With that, I'll turn it over to Aparna for he r comments. Thank you.

Aparna Iyer: Thank you, Thierry. Good evening to everyone who's joining us on the call today.

In my update, I will quickly cover some key financial highlights for the quarter. To start with on the revenues, our I T services revenue for Q2 declined 2% quarter -on-quarter in constant currency terms, which is at the lower end of the guided range for the quarter.

We reported yet another quarter of healthy deal booking in total contract value terms. We closed large deals to the tune of USD$1.3 billion, which is a 79% year -on-year growth. We also booke d 14 deals which are greater than $30 million in TCV. Total bookings from a TCV standpoint stands at US$3.8 billion, which grew 6% year -on-year.

wipro.com

Turning to margins, our ongoi ng focus on operational improvement has ensured that the margin remains steady even in a softening revenue environment. Our operating margins for the second quarter were 16.1%, an expansion of 100 basis points year -on-year.

Shifting to a cash flow performa nce, our operating cash flow for Q2 is at Rs.38.6 billion, which was 145% of our net income. Our free cash flow as a percentage of net income was at 149%. Cash flow has been strong for the first half at 137% of net income. At the end of Q2, we had $4.1 bil lion of gross cash and $2.2 billion of net cash on the balance sheet. Our net income attributable to the shareholders for the quarter was at INR26.5 billion. Our EPS grew 4.1% year -on-year. Our effective tax rate remained flat for Q2 at 24%. On the FOREX f ront, our realized rate for IT services in Q2 was 82.54. Our DSO for the quarter is at 79 days, which is an improvement of three days year-on-year.

To conclude, our guidance for the next quarter from IT services business segment is expected to be in the range of $2.617 billion to $2.672 billion. This translates to a sequential guidance of - 3.5% to -1.5% in const

ant currency terms. Thank you. And over to you, Amit.

Amit Choudhary: Thank you, Aparna. Hello, everyone. I will share some updates on our business transformation and how that's reflecting in our steady margin performance.

Our new four global business line model has allowed us to deliver a “One Wipro” service excellence approach to our clients. It is reflected in our latest customer satisfaction survey with our NPS expanding by 840 basis points. This directly reflects our performance with clients, delivery, program governance and our capabilities, and this is further strengthening our delivery -led sales.

On the delivery excellence side, we have been very focused on consistency, efficiency and productivity for our clients. Automation and GenAI is a cornerstone here, with the corresponding productivity kicking in both on the delivery and functional sites.

Over the last quarter, on the operational efficiency front, utilization is now up to 84.5%. In fact, utilization has increased by almost 470 basis points in the last four quarters, including utilization of next gen associates. We have taken several actions here from sustained bench reduction efforts, pyra mid optimization to onshore, offshore rationalization and rigor around subcontracting costs. Alongside, we are keeping a very close eye on discretionary spends with increased rigor on cost and efficiency management.

Thierry has talked about skill being our biggest currency. On the talent reskilling side, we continue to scale Gen AI talent. Over 180,000 of our employees have taken the first GenAI course, focused upskilling initiatives across skill families are in place now, including several account academie s.

These are collaborative initiatives with our clients providing a skilling road map for our teams to serve them better. I am pleased with the progress we have made so far and a lot more lies ahead.

Now, I'll turn it back over to D ipak.

Moderator: Thank y ou very much. We will now begin the question -and- answer session. We have our first question from the line of Kumar Rakesh from BNP Paribas. Please go ahead.

wipro.com

Kumar Rakesh: My first question was around the large deal TCV. So, over the last four quarters, you have been consistently reporting 1 billion or more of large deal TCV. Over the last two quarters, your revenue from existing customers have reached almost close to 100% about 99.6 or so number which was about 95, 96 sorts of a percent last year. Does that imply that large part of these deals which we are seeing are renewal deals? I understand that you don't disclose those data, but this challenge of high deal win not translating into revenue is not just unique to you, we have seen with othe r companies as w ell, but at least their guidance or the commentary do suggest that in the coming quarters they are going to see a much better growth outlook, whereas in contrast, your outlook suggests that the growth is going to further deaccelerate from hereon and it's absolutely in contrast to the deal win TCV, which you're reporting. So is that a reflection that almost the entire part of the large deal TCV which we are seeing here is actually a renewal and not meaningfully new deal TCV.

Thierry Delaporte: This is not the case. I think you are certainly reflecting on the fact that indeed bookings in TCV have been very solid over the last quarter, that is true. What we are seeing is we are winning more large deals. There's a good balance between new and renewals. Renewals can include incr ea se d scope in the case of consolidation. So, we have different types of those large deals. I think you will recognize also what we've said because the market has not dramatically changed versus the previous last quarter is that while we wi n large deals that may take a little bit more time to convert into revenue. There's a lower volume of discretionary spend being clocked if you like with our clients, that is the kind of now

type of revenue that we are missing. The revenue trend you're seei ng is a reflection of those two different realities. On one side, there's a very decent volume of business in the market. We have a strong pipeline and we are winning a nice share of these deals. We are winning more larger than before. Every quarter we imp rove. I mean, it's quite interesting. We've moved from occasionally a big one to now more systematically I would say win large deals this time to close to half a billion -dollar deal for the same quarter is a sign of that. And yet at the same time, discreti onary spend is lower. You know that, like everybody in our industry, we have certain volume of our business that is more discretionary. We might be a little more exposed than some others because of our significant presence in consulting business in particular. And even if we know that it will be the first one to bounce back when the demand is there. So that's what we are saying. And now the last thing is accepting the fact we are guiding for the quarter to come and not beyond that and that's probably why That' s how we are guiding to you. But we also believe that should the market remain as it is, we will slowly bounce back.

Kumar Rakesh : My second question was around your strategy of exiting from the smaller accounts and we started seeing the effect of that fro m last year's fourth quarter and since then the revenue for the IT services has come down by about $90 million. It appears to be that proactively pruning small accounts at a time when the demand environment could be counterproductive and actually could be one of the reasons why our growth could be getting impacted.

Thierry Delaporte: First of all, our strategy that we elaborated back in 2020 was to clearly get a lot of large accounts. We had at that time 11 accounts over 100 million, which was clearly lower th an most in the industries, companies of similar size. You cannot invest unilaterally across the board. You have to make choices. And that makes a lot more sense to invest into partnership relationship with clients

wipro.com

that will allow you to drive significant g rowth, there's a potential of significant growth. And tha t ' s what we've done. The cost of sales for very small account is higher. It is proven. We know tha t until a certain point in time you are spending an abnormal amount of time to close very small deals and not so much more time to close bigger deals. So that's a conscious decision to focus on le ss number of accounts, but be meaningful as a partner in these accounts, be their partner in the transformation and that's what we've done. So, I give you two da ta points, Kumar Rakesh; one , look at the top accounts of over 100 million. We've doubled the number of these accounts in tw o years from 11 to 22, as simple as that. Second thing, if you look at what we call our middle account, which are our top 80 account s, they've actually resisted a lot better than the smaller ones. I think it's just the confirmation that this is the right strategy. We need to continue to focus our attention on those accounts where there will be growth over the next quarters, but also ac counts that are shaping our industry and reduce the wasted investments in accounts where we will never go beyond a certain point.

Kumar Rakesh : The rationale behind the strategy is very well appreciated. My question was more around the timing of that strategy to bring into effect in full effect. Can that also be contributing or pulling down our revenue?

Thierry Delaporte: So, let me address this point also. What have we done in terms of growth strategy over the last three years, in the first two years has been a period of significant growth, there was significant growth in this market. We've gone all in, and we have really got a good share of the growth. If you look at the growth during that time, company has changed in scale, right. Over 40% increase in size in 1

0 quarters , market has changed. I think you will recognize that with me the market is different. There's more macro instability, uncertainty , cautiousness , everything. So, you know this is not a growth market right now. Let's face it , right. And so I think we recognized that this is not necessarily a market where anybody will shine in terms of growth . For us , what's key is to cont inu e our focus on our transformation; c ontinue to be more relevant, continue to drive our investment priorities around AI, around cloud, around security ; continue to upgrade our talent ; continue to be more nimble, more efficient and that's how we are , you will recognize that's how we continu e t o maintain and actually deliver the level of margins we are at in Q2. And so that's we are ready for when the market will bounce back to go back i nto growth mode.

Moderator: Thank you. We have our next question from the line of Gaurav Rateria from Morgan Stanley. Please go ahead.

Gaurav Rateria: So, my first question is regarding initiatives taken by us to broaden our funnel to include mega deals wh ich are like $500 million plus kind of a TCV in pipeline and pursue the same. A nd relate d questions are also around the nature of bookings that we have had. Are they more on the cost side or more on the transformation side? Have we made any tweaks in strat egy to pivot to the changed market conditions when deals are coming more towards the cost optimization side ? Thank you.

Thierry Delaporte: Good question. Go off. So, I'll take a shot at those two upon. I feel free to jump in or I mean if you

feel like it. So, on the first point, which is the focus on the larger deals, I think it was clear that back
wipro.com
a few years ago , we were not getting our fair share of larger deals and y ou know, large deals are giving you a certain level of resilience and also a certain lev el of impact with the client and that is completely in the center of our strategy to develop as I said. Before to develop, you know strate gic relation and meaningful relation with our clients. So, to do so, with our CGO, Stephanie, w e've started to build o ur larger team, right, it started with bringing talent, people that have been that are big dealers that have been building larger teams in the past. We've also obviously refocused our account executives and our leaders to be ready to go for larger deals. It has positioned us t o engage at a different level with our clients. Let's pay more attention to their priorities and challenges and be proactive in bringing back to them solutions that would addr ess the challenges . And we've started to win larger deals. It started with one big one and then another big one, but it was more erratic at the beginning and then we started to win more of these large deals and larger ones in size. And I think it's becoming t he machine now inside Wipro, where you know as part of our deals, we have a significant volume of large deals every quarter and I think we expect this to continue over the next quarters, so that form the large deals. On the cost actions you ask or have , if I understood well your question was how did you balance focus on?

Aparna Iyer: He wants to understand whether the pipeline, the deals that you are winning ….

Thierry Delaporte: So, yes, that is, I would grab on the pipeline, I would s ay there is certainly an evolution of the type of deals that we are seeing and the attention to cost takeout , cost optimization, margin product ivit y and so on is certainly a lot bigger than it was some quarters ago. There is no doubt.

Moderator: Thank you. We have our next question from the line of Dipesh Mehta from Emkay . Please go ahead.

Dipesh Mehta: Couple of questions. First, about sales and marketing increase. T his quarter , it is showing some spike percentage of revenue. There is a good uptake Q-o-Q, Y-o-Y. If you can help us understand what drives the

se significant of expression in sales and marketing. The related question is if I look number of new client s which we had every quarter , it is showing moderat ion for last few quarters. So, these two numbers are not matching with directionally , if you can provide some sense. Second question is about if I look reconciliation item , earlier we indicated some correction is driving that item. Now this quarter again it is increased. So, 2.2 billion loss in the line item. How we should understand this line item and how would you expect it to trend in the coming quarter? Thank you.

Aparna Iyer: So, Dipesh, to your point on sales and marketing expenses being high, it's specifically in reference to one of the li ne items on depreciation amortization where we have taken an accelerated amortization pertaining to one of our customer intangi bles and that is why it's a one- off and it should normalize over a period of time . The second piece that you said on the number of accounts being moderated, you know Thierry just answered that it is a part of the strategy , we are focusing on increasing and expanding our top client relationships and it is in line with what we are pursuing as a strategy overall. To your third question that you had asked on the reconciling items , last quarter that is in Q1 of this fiscal , we had announced that knowing to a turn in the macroeconom ic environment and for us in line with all the transformation that we are pursuing, we wanted to be more agil e and we had announced a restructuring program under which we had taken in
wipro.com
restructuring expenses both in Q1 and we've indicated that there would be a spill over into Q2 , which has been now booked in the reconciling items. This is towards the employee seve rance costs and is one -off in nature and that is how you should model it.

Dipesh Mehta: So, is it now over from Q3 onwards this line item will not be there, or you expect it to recur?

Aparna Iyer: So, we're not calling out for any particular guidance o n this. We had said that it was one -of f in nature. We will need to take into account what is shifting and what's changing in our business. I f there is more update, we will share it with you in the next quarter .

Moderator: Thank you. We have our n ext question from the line of Abhishek Kumar from JM Financial. Please go ahead.

Abhishek Kumar: Thierry, you mentioned that you expect in next couple of quarters things to look up. I was just wondering what is driving your confidence. Are we seeing that t he runoff of discretionary proje ct s that we have witnessed over the last couple of quarters, is that coming to an end or you expect general demand to improve further ?

Thierry Delaporte: Abhishek, thanks for your question. I'll try to address it by staying within our policy in terms of guidance. So, one is certainly the guidance for Q3 includes a certain volume of our furloughs, l et's be clear, bigger than it was the previous year , right. It's a fact which we don't necessarily expect to repeat for sure. Seco nd is the fact that quarter after quarter with our level of TCV, we continue to build the backlog of deals. So, there's a bigger proportion of our revenue that gets covered by contract if you like for the quarters to come. So, we are staying certainly caut ious and as you know, we are not guiding beyond this quarter, but it feels that we can reasonably expect a rebound to come after.

Abhishek Kumar: Sure, that's helpful. Just one follow -up maybe. So, on order backlog you mentioned, so while you know we are w inning deals, so inflow is good , at the same time there is depletion of current book of business. So, I know we don't give that number, but any color in terms of how the order backlog has improved over the past few quarters, given these two m ovements in different directions. Thank you.

Thierry Delaporte: Well, you know Abhishek, one, the type of deals includes a bigger

proportion of larger deals than before, which will trigger a bigger stickiness in these accounts going forward, no doubt. Second, the very nature of those larger deals tends to be more strategic. So, the type of deals looking at our portfolio, we've done a lot of work over the last quarters to continue the rotation of our portfolio, market synergy based around data , around security, around cloud and engineering and this is what's happening. So, I would say the nature of these deals has certainly continued to evolve. There's a greater attention to cost rationalization. Therefore, producing business case, delivering outcomes , those are typically what we are seeing in the deals that we are closing, and I would say also we are seeing good volume of deals of clients working on the consolidation of thei r providers where we are seeing opportunities to expand our position in these accounts.

Moderator: Thank you. We have our next question from the line of Girish Pai from Nirmal Bang Equities. Please go ahead.

Girish Pai: Thierry, how would you characterize the mood of clients, would you say they seem more optimistic or pessimistic today compared to say when you interact with them three months back or six months back? That's question number one.

Thierry Delaporte: If I understood well, Girish , you asked me to characterize the mood of the market of the clients ?

Girish Pai: Mood of the clients , right?

Thierry Delaporte: So, it's an interesting question , Girish . It is every day I speak to clients, right. So, for sure, I try to gauge their mood and their prioritie s and so on. W hat do I see? First of all, technology is in lot of their priorities. They are very mature about technology. They have a lot of ambition about how technology will transform their business. They're very curious about how AI and GenAI is ei th er impacting or transforming or helping them be more efficient in their industry, and a lot of those discussions are around that. There is a certain level of cautiousness to engage in a new progra m . There is a certain level of cautiousness to spend as much as what they used to spend in the previous quarter or in the previous years. So, t hey are like you and me. So, they are reading the newspaper every day . They see the news on the American economy, European economy, the war , here and there, and the fact that all of this is creating a certain level of instability and anxiety. A lot of people are starting to project themselves and say, okay , it's going to be time to resume some of those programs because the business will obviously suffer from l ess attention to technology. So, that's the m ood, I would say is in a way cautious and anxious, but at the same time very aware of the fact that it's going to be time to resume those investments sooner than later. Over to you.

Girish Pai: Regarding your re marks that you made, a lot of comments on G enerative AI . In your operations , to what extent are you using G enerative AI today and where are you on that journey and where do you think maybe like 12 months down the road and what are the kind of productivity gains you had and connected with that are the clients you mentioned that lot of the conversations around Generative AI, are they actually asking for ? Regarding generative AI if you can give some more explanation?

Subha Tatavarti: This is Subha Tatavarti . I'm the CTO. We heard parts of your question and I want to kind of address some parts of it. One was around what is our strategy. We believe that G enerative AI will fundamentally change many businesses and also the way we live. So, we have been very, very aggressive and in the last six months we have adopted G enerative AI to streamline our technology business processes as well as people. A nd this is very, very early, but early signs are indicative of productivity gains and in many areas , we talked a little bit about in t

he HR space, specifically around background checks, a lot of work we do is around employee hiring, retention training a nd managing. So, a lot of our work is now being streamlined, at least i n early parts of our work wit h Generative AI in this space are very positive and encouraging in terms of productivity gains. Similarly on the quality assurance and testing practice, this has been quite interesting because in the last 2 to 3 months , the kind of highlights we've ran are indicative that we can significant ly

reduce the amount of time or the number of hours it would take for us to be able to perfor m functional testing or perform specifically around data generation environment setup . So, the early tests and early pilots are very encouraging, and we hope to continue to give you updates on this and the rollout as well as how we'll take our learnings from internal adoption to our custome r s shortly .

Moderator: Thank you. We have our next question from the line of Sandeep Shah from Equirus Securities. Please go ahead.

Sandeep Shah: If I just look at the third quarter guidance and look at the first 9 months of this financial year, it ' s likely to be a 4% decline on a Y-o-Y basis in constant currency term s, which would be one of the lowest in the industry and this would be a second period in a row where our growth on orga nic

basis would be actually lower than the industry. So, Thierry, my question is do we need t o introspect our growth strategy, our offerings, do you believe is there any gap in the offerings or is it we have to actually check and introspect our go -to-market model because deal wins are one indicator which everybody is winning but our growth rates ha ve been lagging quarter after quarter and per iod after period starting from FY 22 on organic business?
Thierry Delaporte: So, Sandeep , we are very clearly at Wipro on the way we want to progress, we have our own journey. We are to define our own strategy and we have our own ambition and our own focu s. Over the quarters, there have been quarters where we've grown a little more, some of them we've grown less and that's a reality. What matters is to look at the progression over the certain per iod of time and look at what we've done over the last years, and I think you'll have a response in ter ms of our growth strategy. The growth that this organization, this leadership team has been able to drive over the last 3 years is actually a pretty decent level of growth. We always want more grow t h , trust me, Sandeep, but at the same time we are focusing on our transformation as much as we are focusing on the day -to-day performance and that's incredibly important. You need to reflect and understand that. The way we have redefined our ambition, the way we have invested in our organization, in talent, in ca pabilities, in solutions, the way we've invested in our systems, the way we have invested in consulting capability is to reposition oursel ves in our operating model, in our own efficiency, all of that is to be taken into account and you cannot take only one element of the performance in isolation of the rest. That's how we are looking at our progression . We are happy with where we are for sure. We're always trying to do more, and we are always ambitious to do more, but we are looking ahead of us, quite conf ident at our opportunity to get back into growt h a s the market gets a little better frankly .
Sandeep Shah : And just a related question, when you expect a pickup in the growth and rebound in the growt h, is it fair to assume that fourth quarter onwards the guidance m ay not indicate any kind of a Q -on-Q dip? Are you indicating a rebound from 4Q or maybe 1 Q of the next financial year?
Thierry Delaporte: No, Sandeep, no, you will not get anything more from me. You know, we are not guiding beyond the current quarter.

Sandeep Shah : And a question to CFO , Aparna, j

ust in terms of margins, wage hikes are effective from 1st of December and Q3 looks like from the guidance is likely to be a soft quarter. So, in that scenario, still a flattish or a narrow band movement on the margin is still feasible or there could be some seasonal impact on the margin because of the slower growth and the wage hikes effective December ?
Aparna Iyer : Hi Sandeep, yes, you've already highlighted the headwinds that we ar e starting quarter three with. There will be pressure on margins. We've done very well on remaining resilient in the first half. The efficiency measures have only intensified. It will be a challenging task, that's why we've said that our endeavor will be t o be range bound in terms of what we've delivered over the last few quarters , but I agree with you that there are more headwinds as we start the quarter.
Moderator : Thank you. We have our next question from the line of Ravi Menon from Macquarie. Please go ahead.
Ravi Menon : Thierry, you mentioned about your win rates in the last years in Europe being 100%. Could you comment a bit on how that changed in the US over the last few years?
Thierry Delaporte: You specifically to Europe, Ravi, correct?
Ravi Menon : Specifically, to US , Thierry .
Thierry Delaporte: So, I would say, well, we do not have a 100% score in your US , it doesn't mean it's a bad score. I think we've done very well in the US as well. We just highlighted the 100% score in Europe because we consider that this is quite a performance, but the performance, the win rate is actually improving and strong in the US, like it is in in Europe or actually in Asia PAC , Ravi.
Ravi Menon : So, overall, you would say that you've seen win rates improved and your pipeline as well and that's why we're seeing the deal T CV, right overall ….
Thierry Delaporte: What we are seeing is that we are getting better at qualifying the deals that we see in the pipeline to reduce the lost investments, if you like. And so, it is definitely delivering results. T here's no doubt that when we have gone through the qualification process and feel that this is a deal that we c an win, then the entire mobilization of the team is her e to drive it till the finish line.
Ravi Menon : Thank you. One last follow -up on Europe. We saw a surprising decline here, any specific industry or country that was responsible la rgely for this?
Thierry Delaporte: Yes, you're right. It is a surprising decl ine for Europe. I can imagine for you given the way we held pretty strongly the previous quarter, I think I'm looking at Aparna just, but to me this is financia l services primarily and manufacturing, so two sectors , no, I mean we haven't lost any account or it's not like we've had a drama but certainly some significant slowdown noticed in some of our large accounting in financial services and manufacturing in Europe. Having said that, that's what Ravi, if I can just add one element . Pipeline continues to be strong in Europe. The leadership team in Europe is pretty bullish. So, it gives confidence that Europe will bounce back rapidly.

Moderator : Thank you. We have our next question from the line of Apurva Prasad from HDFC Securities.

Please go ahead.
Apurva Prasad : Thierry, it would be interesting to know your thoughts in BFSI vertical in terms of how you see the impact of potential Basel III Endgame proposals on US banks and the resultant impact on tax spend. And a related piece could be on some large banking customers who are carrying out the org structure change in terms of delayering their personnel. So, do you see this as an opportu nit y for incumbents such as Wipro or should that be more continued pressure?
Thierry Delaporte: Apurva, y our questions are specific to the financial services sector. I think certainly th e fi n ancial services sector has been significantly slower this year. I think we are seeing it across the board. It

actually started in America , then it moved to Europe. We are seeing places in particular type of Tier 2, maybe banks in America where t he growth is coming back. So, I would say these are definitely places in the banks where, when I was referring earlier discussions, I've had with clients telling me we have a lot of programs that are in the waiting room ready to be launched and start , certainly in the banks it's a reality. Banks are definitely focusing on c ost takeout and productivity exercise. There's a lot of consolidation activities going on, which we see it as an opportunit y f or us, no doubt, absolutely no doubt. So, that's what we are doing.
Moderator : Ladies and gentlemen, that was the last question for today. I would now like to hand the conference back to Mr. Dipak Bohra for closing comments. Over to you , sir.
Dipak Bohra : Thank you all for joining the call. In case we could not take any questions due to time constraints, please feel free to reach out to Investor Relations team. Have a nice evening. Thank you so much.
Moderator : Thank you. On behalf of Wipro Limited, that concludes this conference. Thank you for joining u s and you may now disconnect your lines.

MR. DIPAK KUMAR BOHRA – SENIOR VICE
PRESIDENT , CORPORATE TREASURER AND
INVESTOR RELATIONS – WIPRO LIMITED

Moderator: Ladies and gentlemen, good day and welcome to Wipro Limited Q3 FY24 Earnings Call . As a
reminder, all participant lines will be in the listen -only mode and there will be an opportunity
for you to ask questions after the presentation concludes. Should you n eed assistance during the
conference call, please signal an operator by pressing star then zero on your touchtone phone.
Please note that this conference is being recorded.
I now ha nd the conference over to Mr. Di pak Bohra, Senior Vice President, Corporate Treasurer
and Investor Relations. Thank you and over to you, sir.
Dipak Bohra: Thank you, Yashashree. Warm welcome to our Q3 FY24 earnings call. We will begin the call
with the business highlights and overview by Thierry Delaporte, our Chief Executive Off icer
and Managing Director, followed by updates on operations and delivery by Amit Choudhary,
our Chief Operating Officer, and finally financial overview by our CFO, Aparna Iyer.
Afterwards, the operator will open the bridge for Q&A with our management tea m.
Before Thierry starts, let me draw your attention to the fact that during the call, we may make
certain forward -looking statements within the meaning of Private Securities and Litigation
Reform Act 1995. These statements are based on management current expectations and are
associated with uncertainties and risks, which may cause the actual results to differ materially
from those expected.
The uncertainties and risk factors are explained in our detailed filings with the SEC. Wipro does
not undertake any o bligation to update the forward -looking statement to reflect events and
circumstances after the date of filing. The conference call will be archived and a transcript will
be available on our website.
Over to you, Thierry. Thank you.
Thierry Delaporte: Dipak , thank you. Hello, everyone. Thank you for joining us today, very glad to have you here
and, of course, here to wish you a great year 2024. So I'll begin today's earnings call with, as
always, an overview of our third quarter results, deta ils of our sectoral performance, the demand

environment, of course, and then direction for the coming quarter. Earlier today, we reported our numbers to the market and our board and I'm pleased to share with you that we're starting to see some healthy indi cators for growth.
One, our IT services revenue for the quarter is at the top end of the guidance. Our revenue stands at $2.66 billion in reported currency. We've continued to book deals at a healthy pace, but though Q3 is typically a shorter quarter due t o the year -end holidays, order booking total contract value terms stand at $3.8 billion. From that our large deals TCV for the quarter was just over $900 million. On a year -to-date basis, it actually shows a 20% growth. We booked 14 deals this quarter in the greater than $30 million TCV range. By comparison, we had 11 of such deals in the third quarter of last year.
Next point is on net income for the quarter, where we've expanded margin by 1.8% sequentially. On operating margin, we stood at 16% despite, I would say, seasonal furloughs and the annual

salary increases for our employees. On a year -to-date basis, our margin has actually improved by more than 60 basis points.
As you know, we have consistently invested in our people, in our processes and organiza tional efficiencies over the last several quarters. These investments are paying off. We are seeing it every day. Our results demonstrate that at a fundamental level, Wipro is increasingly, I would say, more streamlined, proactive and efficient. This has b oosted our clients' trust in our teams. This has improved our win rate. This is the type of deals we are winning. It's visible in that way. That is more of a complex transformation deal is what we are seeing.
Wipro is not only benefiting

from vendor consol idation , but we're also adding new logos, while we are continuing to grow our business with existing clients, of course. In fact, our clients tell me that they are seeing a more confident and united effort from us, One Wipro. We're leveraging the depth and the breadth of expertise and diversity inside Wipro. Contributions from our acquired firms, such as Capco, Rizing and Designit, you know them, are more prominent and well-received.
Looking at the demand environment, I'd say the demand environment overall remains cautious. Clients are still making conservative investments. They are looking for efficiency. They are more focusing on returns on investment and looking for better optimization, I would say, of existing investments. But we are seeing some indicato rs for growth. If you remember, we had called out a possible slowdown in the economy as growth in our consulting business slowed. We know that when the market turns, consulting will be the first area to bounce back.
With that in mind, I'm pleased to share good performance from our consulting business with Capco reporting a double -digit sequential growth in order bookings, the highest in the last three quarters.
Turning to our strategic market units, looking at America's 1 first, we recorded a strong quarter for this unit where we booked half of our 14 large deals this quarter. Revenue in this market grew 2% sequentially, led by healthcare, which grew actually 9% sequentially. In our America's 2 market unit, we continue to see some softness. This is, you know , let's keep in mind this unit is primarily a BFSI or BFSI in energy and utilities being, you know, the large part of these units. They are seeing still some softness and result ing in a 1.3% drop in revenue Q on Q.
That said, there's strong momentum in ord er bookings, which in total contract value terms increased 46% sequentially. In Europe, we won four large deals in the third quarter, despite the continuing economic weakness. These four new transformative deals add up to nearly $300 million in bookings. T hese deals underscore the success of our strategy in this market, having said that, revenue from Europe decreased 4.3% sequentially in Q3.
Across the board, but more specifically in our APMEA strategic market unit, we have worked on and -- you know, we've reported on that regularly. We have worked on reducing low margin accounts, while slowly moving towards higher value transformation projects. So in APMEA, revenues declined 5.4% quarter on quarter. However, the strategy of pivoting towards higher value bus iness reflects in the margins we delivered in the region.

Margins rose 240 basis points sequentially to 13.8% this quarter, that's the highest in the last six quarters. And once again, we are seeing consulting, especially Capco and Rizing, play a big role in the complex deals we are winning in this market.
To continue this rigor, we made some changes to our growth office recently, you know that. With the foundational pillars for sales excellence set out by the growth office over the last two quarters -- the last two years actually, we moved some of the growth office functions inside the strategic market units, thus creating an even tighter integration with the SMUs.
With this, we reinforced how we nurture large deals in each geography and we will respon d

faster to changing market needs. Simultaneously, we continued to streamline our operations as per plan. We continue to leverage artificial intelligence and automation for efficiency across all functions and business areas.
We continue to add to that the learning and development and re -skilling of our existing talent base and besides optimizing our talent pyramid to better serve clients' needs. Multiple initiatives are in place. I request Amit to share highlights of some of those programs with you today.
What I can say with confiden

ce is that Wipro is a better partner for our clients today. We are
more agile, one that is responding to and evolving with our clients and their needs. Amit, by the way, will also share with you highlights of the work done around account delivery and service excellence. This really is the centrepiece of our efficiency play and increase agility. We continue to invest in areas that we know are going to remain, I would say, fundamental for our long -term success.
And let's start with that. People are our most valuable assets. We awarded our colleagues their performance -based annual salary increases recently, as you know. The promotion cycle just closed and we'll be making the announcement soon. We've continued to stress on and offer training and development options and growth opportunities to our employees.
This is critical to why people continue to choose to work with and give the best to Wipro. Of course, returning to work more regularly after a few years of fully remote work has ab solutely helped energize the culture and the atmosphere in our offices. Then there's AI.
We'd be amiss to not share how we are using AI ourselves as an organization and for our clients. AI is now moving from the curiosity and experimentation stage to beco ming vital, I was going to say viral as well, to business strategy. In fact, we can confidently say that every long -term large deal now has an AI component.
A substantial portion of our clients are looking for us to develop use cases tied to their busines s goals. They want us to use AI models to drive tangible results. AI is now embedded across most of our existing solutions and offerings.
In addition, every business line is working to launch new offerings that use AI. That's the way it is at the moment. For example, in our full -stride cloud business, an area that's particularly hot when it comes to the use of Gen AI is digital workplace services.

Leveraging Gen AI to lighten the load on service desks, deliver faster and better client services now part of every RFP in this space. One of our largest deals in Europe this quarter is to transform digital workplace services of a multinational telecommunications company. This will help improve client satisfaction and reduce operating expenses.
We will actually build an AI -powered platform for them that provides service desks, on -site and remote support services for 100,000 users and 80,000 managed devices across 240 locations worldwide. Now, in engineering, we are seeing strong interest for AI in the automotive and manufacturing industries in particular. Clients in these industries want AI to increase productivity and the R&D process and accelerate new product development.
With Wipro Enterprise Featuring, we are helping clients accelerate adoption. We are levera ging Wipro's Gen AI framework and studio to develop key assets at all levels of the AI stack, including models, platforms, solutions. We will help clients with model development, performance, privacy and of course compliance.
We're also building governanc e frameworks around responsible, sustainable and ethical AI development. In fact, we are working with a global healthcare insurer right now to develop a Gen AI -powered knowledge research solution to transform their contact center. The goal here is to impro ve patient experience and operational efficiency by cutting the time it takes to analyze healthcare plan documents and response time.
We've also developed a Gen AI -powered assistant for a Fortune 500 investments and insurance firm. This assistant improves quality and reduces the time spent in crafting personalized email campaigns. Early results show very tangible growth in click -through conversion rate.
Additionally to those examples, I would say that expanding our relationship with strategic partners is a critical part of our ai360 strategy. During the past quarter, we col

laborated with
NVIDIA to help healthcare companies build AI -driven strategies, products and services. This partnership with NVIDIA is a great differentiator for us, given our dom ain expertise in the healthcare sector.
We are also expanding our partnership with IBM to invest in next new joint solutions built on IBM watson x that makes it easier to deploy reliable, responsible and sustainable AI solutions.
To do all this in a consis tent, innovative and scalable fashion, we are preparing our workforce.
We have now 210,000 Wiproites who have been trained on AI 101 skills.
We have now rolled out persona -based learning pathways for different roles and functions. Our

goal is to actually ensure that everyone at Wipro has the skills to fully leverage AI in their everyday work and for AI -related client projects. We are accelerating Gen AI adoption internally as well by integrating the technology across our entire portfolio of platforms.
This is resulting in quality and productivity improvements across HR, marketing, sales, operations, finance, as well as software development and quality engineering and t esting. Our investments in our ai 360 ecosystem, combined with the strategic value our con sulting business brings to clients, is the reason we are increasingly the preferred partner for our clients. So, we

are confident that we have the right vision, we have the right strategy and the right leadership to continue to grow and keep us competitive , resilient and ambitious.
On to our guidance now for the next quarter. We are guiding for a sequential growth of minus 1.5% to plus 0.5% in constant currency terms. We expect margins to stay range -bound like in the last few quarters. Now, as the market starts to turn around on the back of our transformation and efficiency play, we expect to see impro vements in the coming quarters.
With that, I'll turn it over to you, Amit, for your comments.
Amit Choudhary: Thank you, Thierry. Hello, everyone. I will cover some key areas of business transformation and focus programs that have helped us maintain margins despite the current demand environment.
On the delivery excellence front, our top priority is to deliver best -in-class solutions for our clients. We now consistently leverage our four global business line model to create the best possible ecosystem to build talent and deliver innovative solutions to our clients. This is being supplemented by strong delivery governance, to investing in a better progr am management, by building the delivery leadership cadre, through focused training interventions, AI -based assessments, and skilling for emerging technology trends.
We have a dedicated AI delivery council to identify opportunities to infuse AI into our de livery activities. Our account delivery executives are absolutely core to the client experience. We are enabling and empowering these delivery leaders to make decisions with a client -centric mind -set.
They are driving initiatives and solution offerings wi th an AI -first and a one Wipro approach.
Another area of work has been the restructuring of our low -margin businesses. Thierry talked about it briefly, especially in the context of our improved performance in APMEA.
Low-margin businesses are being reduced steadily through a multi -pronged action plan. Moving on to the operational excellence side, Thierry has spoken of how skill is our biggest currency.
We are working on an end -to-end process to provide the right skill at the right time, at the right cost, i n the right place.
We are doing this through an improved forecasting process, proactive skilling through account academies, pyramid optimization, improving our talent supply chain through an AI -powered talent marketplace, effort optimization, automation, and strong change management. We are reducing operating costs and optimizing our organizational design across all units and

geographies, which is building an agile Wipro better suited in this dynamic market.
We are heading towards more and more AI -based a utomation internally, resulting in more productivity and better efficiency. Thierry talked about how we are taking AI -led solutions to our clients. We have a similar rigor for internal -facing AI applications, like the AI -powered talent marketplace, persona -based learning pathways for sales and business teams, developers, engineers and architects. We are using AI for simplification of employee user experience as well.

We are aligning our operational structure, skilling academies and Gen AI capabilities to ma rket demand, client expectations and also to the evolving process landscape inside Wipro. We are the one of the biggest customers of our ai360 ecosystem. These transformation programs and margin expansion initiatives are delivering results. Our goals remai n profitable growth, delivery excellence, and internal capability development, all leading towards sustainable success.
Now I will hand it over to Aparna.
Aparna Iyer: Good evening, everybody. Wish you all a very Happy New Year. Let me highlight to you our financial performance for the quarter ended December 31, 2023. Following a quarter of strong execution, our revenue is at the top end of the guidance range. In constant currency terms, revenue declined 1.7% sequentially.
In terms of margins, as we had ca lled out last quarter, we had steep challenges on the backdrop of a weak demand environment, seasonal furloughs as well as salary increases for our employees effective 1st December. I'm pleased to share with you that our margins have remained resilient as we executed on 3 counts: one, maximizing our revenue performance; two, realizing savings from structural improvements of pyramids and fixed price productivity; and three, reducing

discretionary spend.
On a year -to-date basis, we've improved our margins by over 60 basis points. We worked on rationalizing all aspects of working capital. As a result, in Q3, we have delivered an operating cash flows of $576 million. This is 177% of our net income and highest in the last 5 quarters.
Our gross cash was at $4.6 bi llion and net cash was at $2.7 billion, both increased year -on-year, despite having completed our largest buyback in July.
Speaking of capital allocation, our Board of Directors have declared an interim dividend of INR1 per equity share. Our net income for the quarter is at INR26.9 billion, which is an increase of 1.8% quarter -on-quarter. Our EPS has increased by 2% on quarter -on-quarter basis. Despite a weak demand environment, it is heartening to note that on a year -to-date basis, our EPS has improved by 2.2%.
Our EPS for Q3 and year -to-date includes a charge that we have taken in our P&L on account of restructuring exercise that we had undergone during the year. I'd like to confirm that we have completed the restructuring that we wanted to do and do not anticipate such charges henceforth.
In terms of other important metrics, our ETR is at 24%, which is in line with what we d elivered in Q2. Our hedges continue to be in line with our policy and was at $3.4 billion.
Finally, I would like to summarize the guidance for Q4, as stated by Thierry. We expect revenue from IT Services business segment to be in the range of $2.615 billio n to $2.669 billion. This translates to a sequential guidance of minus 1.5% to a plus 0.5% in constant currency terms.
With that, we'll be happy to take questions.
Moderator: Thank you very much. We will now begin the question -and-answer session. We have o ur first question from the line of Moshe Katri from Wedbush Securities. Please go ahead.

Moshe Katri: Thank you and congrats on a strong result. Happy New Year. Thierry, 2 questions for you. There's clearly a lot of excitement and

bullishness in the market about the prospects for the
industry for the next 6 to 12 months. From your perspective, looking at v isibility in the pipeline, do you feel that we're headed towards that inflection point? Maybe you can talk about that.
And then the second question is on Capco. Clearly, you have a very unique asset there. Maybe you can remind us, maybe talk about the met rics. The headcount at Capco, you said that the bookings were pretty strong. Talk a bit about the nature of the work and what sort of client conversations you're having when you're kind of pitching Capco. Thanks a lot.
Thierry Delaporte: Moshe, thank you f or your question. Let me try to address them. The first one is the outlook. Let me rephrase a little bit your comment on the outlook for the service industry. Let me tell you what we see. What we've seen is that, first of all, over the last few quarters, i t has been a market unusually, I would say, slow and exposed to uncertainty.
I mean, it was visible in some industries, in particular financial services. We've seen it with banks reducing their spend, discretionary spend, with technologies who typically we re significant technology spenders before, and other industries as well.
Let's be clear, Moshe. The market has not fundamentally changed in the last weeks. What we are seeing is, I would say, we are seeing green shoots. We are seeing a certain form of stabilization and, in some ways, some pickup in discretionary spend.
That's what we are seeing. And I think we are trying to be cautious in our optimism because we want to continue to see more about it, right? And you know that typically in January, February, beginning of calendar year, are the times where, through our interactions with our clients, we get a better feel for what will be their budget and what will be their priorities.
So what I would say is, a little early to tell for the next year or the year soon to start for us, but I would say a little bit of green shoots. We've seen, hence, the ability to hit the top of the guidance. One element of -- major of this improvement is coming from the performance of our consulting business, and in particular of o ur Capco business.
Precisely in this industry, financial services, that has seen one of the most steep reductions in discretionary spend in the previous quarters, the performance of the team has been really solid in bookings during the quarter. That's why we report and share it with you openly. I was the first one to recognize that the choice of our strategic decision to invest in consulting was absolutely critical to our strategy, essential, key.
But we also knew that those are the businesses that typicall y are the first ones to slow down when there is a slowdown in the market. They are also usually among the first ones to bounce back. Let's just say, it's been a strong performance this quarter and it gives us good optimism for the quarters to come.
You ask ed about the type of business. Capco is more on the business side and it is on the IT side, but it's also on the IT side. That's the strength of Capco. And it's also because Capco have been working together with Wipro – with our clients. And therefore, it really goes from all advisory

discussions, compliance, all the way to driving transformation, large -scale transformation to technology implementation, including AI, Gen AI programs.

Thierry Delaporte: So, I hope I answered your question, Moshe.

Moshe Katri : Yes, thank you very much.

Moderator: Thank you. We have our next question from the line of Girish Pai from Nirmal Bang Equities. Please go ahead.

Girish Pai: Thanks for the opportunity. I want to go back to the Capco situation. You said that there was double-digit growth in order bookings in Capco. Can you tell us how material the order bookings are? Because for the quarter, you talked about $3.8 billion as order inflo

w. How much of that would have come from Capco? And if you were to compare the order inf low for Capco in the December quarter, how does this compare with the all -time high order inflow number that Capco had post acquisition? That's my first question.

Thierry Delaporte: So, Girish, a couple of comments. One, we are not necessarily commenting o n specifics of every brick of our organization. Okay? So, I'll keep that in mind. Second, I would say the performance of Capco is material for the organization, right? So, in good and bad times, Capco is a key strategic part of our organization. It's the r eality.

Third, difficult to compare or have a meaningful comparison with when we acquired them because between the day we acquired them and now, Capco has grown tremendously. So, it's a different business and certainly business has changed. So, not necessa rily able to relate to that. I think, let's put it that way. There has been a period where Capco has grown very rapidly and was driving growth for the entire organization.

I mean, leading growth, I would say, because everybody was growing. Then, in the ti me of slowdown, Capco has been a little more exposed. And today, we are seeing Capco showing signs of bounce back.

Girish Pai: Couple of follow -up questions on Capco. Was the growth in order book broad -based across your various BFSI clients or was it very specific to pockets within BFSI? That's question number one. Second question is, for $1 of consulting, what is a typical downstream dollars that you kind of get from Capco?

Thierry Delaporte: That's -- So, the first question. So the first question I would say is, the growth is broad -based. It's not like there's been a one account bump or anything. It's broad -based. So, your first question is, here is my answer. The second one is, what we call the pull -through, right? Consulting should lead to -- It's not al ways easy to track, but you can expect easily 5x to 6x the consulting business. That's what we are seeing with a lot of the projects we sign. And then, the reason why it's difficult to answer, Girish, is because there's an evolution of an account developm ent strategy over time. And so, when you look at the cycle, a life cycle of an account development, there will be a time where there will be a larger component of consulting.

In some moment, there's going to be a smaller versus the different type of servi ces. And that's -- we are observing this. But the pull -through is significant, that's for sure.

Girish Pai: Okay, thank you.

Moderator: Thank you. We have our next question from the line of Sudheer Guntupalli from Kotak Mahindra Asset Management. Please go ahead.

Sudheer Guntupalli: Yes, thanks. Hi, Thierry. Just one question. So, growth in Q3 ended up towards the higher end of our guidance band, and you're calling out green shoots of recovery in consulting segment. Historically, March quarter has not been so bad for us in terms of seasonality. And after multiple quarters of revenue weakness, our base looks mathematically favourable.

So, in that backdrop, I'm a little perplexed on how to reconcile the lower end of our guidance band at around 1.5% decline. So, are we being a little conservative here to keep buffer for any potential shocks? Or is there any revenue impact due to the restructuring of the low margin business that we spoke about?

Thierry Delaporte: Sudheer, this is the nature of our guidance, to give a bracket so that they are -- You know, because the reality is that we are still in a market where there's things are happening and up and down. And there's -- We need to see how this quarter turns. But I think this guidance is sh aring a, I would say, cautious level of optimism.

Sudheer Guntupalli: Got it, Thierry. No, I was just surprised as to the lower end here implies the same kind of number that we did in December quarter, which is typicall

y very weak seasonally. And this time around, almost everybody is seeing higher than expected furloughs. So, I was just trying to understand how you arrived at that base case scenario. Is there anything specific that you're looking at or just the wide band that you wanted to keep?

Thierry Del aporte: Well, if I'm not wrong, Sudheer, actually the lower end of our guidance equals the top end of the

guidance of the previous quarter. So, it shows a trend.
Sudheer Guntupalli: Got it. Thank you so much. All the best.
Thierry Delaporte: Thank you.
Mod erator: Thank you. We have a next question from the line of Abhishek Kumar from JM Financial. Please go ahead.
Abhishek Kumar: Hi, thanks for taking my question. Thierry last few quarters, our growth has been challenged by some of the project cancellations , leakages, etcetera. Now, as you say, there are signs of stabilization. Is the leakage reduced to a level where the incoming revenue from all the deals we have won has started to exceed what is leaking out and therefore, incrementally, there should be growth? Is that kind of the right understanding?
Thierry Delaporte: You know, if we look at our performance on bookings, therefore our ability to close deals in the market, it continues to be rather good. So, the sales performance has never stopped to be pret ty good. I mean, the performance for the last three quarters, and we know that through those

performance in sales, in particular with significant volume of large yields, this will definitely increase our backlog for the quarters to come.
What was hurting our growth was the discretionary spend. So, typically the smaller type of projects, but which in large volume was contributing to revenue growth. In this context, that's why you've seen that indeed we've not been able to show growth over the last quarters. We are seeing a little bit of a -- probably a significant, I would say, and I don't know how to say it, either an end of the discretionary spend or actually a slight pick -up of the discretionary spend.
But that's where we are seeing a little bit of inver sion of the trend for sure.
Abhishek Kumar: Yes, that's helpful. And maybe the next question is on margin, maybe on the medium term. We have done a tremendous job in protecting our margin despite revenue erosion. So, as growth comes back, how are we lookin g at or how should we look at margins over the medium term? Should we go back to maybe pre -Capco kind of margin levels? Any colour on margin trajectory over the medium term? Thank you.
Thierry Delaporte: So, I'll reflect a little bit on your question and t hen I'll ask Aparna to build on or to take this point more specifically. What I would say is that for sure, it was important to us to show that through our actions around efficiency, productivity, automation, process improvements, all of that deep, deep ac tivity inside the organization, the objective was to build a certain level of resilience of our margin profile. And indeed we have launched these actions a few years ago at a time where we didn't know the market would slow down.
Actually, this market slowd own has been a proof point that our resiliency has improved tremendously over the last quarters. Indeed, you say it, despite the slowdowns, despite, the lack of growth, despite, salary increase, MSI to our employees, we've been able to hold our margin. So, it gives us certainly a certain level of confidence that with the growth, we'll be able to imagine expansion. Aparna?
Aparna Iyer: Yes, you know, to just add to what you said, Thierry, that when the growth returns, obviously you will see an uptick in the margins. But we also need to remind ourselves that, we need to also invest for growth. And that will also remain a key agenda for us. There are areas of AI we need to continue to invest in our people, in processes. And therefore, yes, there is an expa

nsion
possible with returning growth, but with investments for growth.
Abhishek Kumar: Sure. Thank you and good luck.
Thierry Delaporte: Thank you.
Aparna Iyer: Thank you.
Moderator: Thank you. We'll take our next question from the line of Manik Taneja from Axi s Capital. Please go ahead. Mr. Taneja, please unmute your line. Since there is no response, we'll move on to the next question from the line of Dipesh from Emkay Global. Please go ahead.

Dipesh: Yes, thanks for the opportunity. Two questions. First, about in your prepared remark, you indicated E&U, where demand remains healthy. But if I look at our performance for the last couple of quarters, E&U remains weak, at least from a sequential growth perspective. And E&U, where we used to have significant capabil ity compared to some of our peers. So if you can provide some sense about, and most of your peers so far indicated E&U is one of the resilient verticals from a demand perspective.
If you can provide some sense, how one should look at the demand trajectory for E&U verticals.
And second is on manufacturing. Now, manufacturing remains weak for some time. And otherwise, manufacturing is showing a strong demand direction. So if you help us understand steps you're taking to expand our capability, landscaping, man ufacturing, and how one should look at it from a medium -term perspective? Thank you.

Thierry Delaporte: Okay, understood. Thank you, Dipesh. So, first of all, I always caution a little bit any conclusion, too rapidly drawn by, looking at a Q -on-Q performan ce in a sector. Because sometimes, it just, happens that in an account or in a geography, one event is slightly impacting the picture. What I would say is looking at E&U and manufacturing. So E&U is actually a reasonably good market. It's a place where, th ere's significant investment, whether it's on the engineering side, on the IT side. Significant investment made on the AI, Gen AI as well. So, that's a market where, we are expecting to see growth for us.

Manufacturing, you said it, it's been mixed over th e last few quarters. But there's particularly, for example, if I look at automotive, it is an area where there's significant investments. We are really making significant inroads in this industry in particular through our investments, whether it's on -- around the car cloud business or whether it's on, autonomous, you know, automation and so on. There's a lot that we've been doing and we will see growth over the next quarters for sure.

Dipesh: Okay, I'm looking. Yes, sorry. I'm looking from slightly medium -term perspective. Let's say manufacturing, if you look at from size perspective, for us it is 6% -7% adjusted revenue. Now, 6%-7%, whether you believe it is reflective of the market opportunity or you think it will change over the next three, five ye ars? And if it is likely to change, which area we are investing to drive that change?

Thierry Delaporte: You know, you ask me now to look at the crystal ball, right, and tell you what's going to be the growth in the next four years in this industry. It's h ard to tell. I can tell you that I certainly want us to invest in the Energy and Utilities as well as in the manufacturing sectors. Those are two key sectors for Wipro. And we have, big ambitions. We are working with large clients and will continue to do s o.

Dipesh: Thanks.

Moderator: Thank you. We have a question from the line of Anmol Garg from DAM Capital. Please go ahead.

Anmol Garg: Hi, thanks for the opportunity. So I have a couple of questions. Firstly, just wanted to understand, that when can we sta rt to expect the next headcount addition? So now that we're expecting growth to come back, maybe in the medium term, can we expect that we add supply from the next quarter?

Thierry Delaporte: So, T

ob, you want to take that one?

Management: Yes. So, look at the entire supply chain. Today, a low attrition, a headspace for higher utilization. We have enough talent pool available. And for certain specific skills which we require, we'll continue to hire. So the current environment, we feel that it's from supply will not be a constraint. As demand picks up for the quarters, we'll definitely look at hiring in more bigger numbers.

Anmol Garg: Sure. And secondly, if you can indicate how has been the trends and deal wins in terms of the net new versus renewals?

Thierr y Delaporte: Net new versus renewals. So we are not communicating this information. But what I can say is that if we look at the large deals, actually, the majority is net new.

Anmol Garg: Sure. Thanks. That's it from my end.

Moderator: Thank you. Ladies a nd gentlemen, that was the last question for today. I would now like to hand the conference back to Mr. Dipak Bohra for closing comments. Over to you, sir.

Dipak Bohra: Thank you all for joining the call. If you have any further questions, please feel free to reach out to the investor relations team. Have a nice day.

Moderator: Thank you. On behalf of Wipro Limited, that concludes this conference. Thank you for joining us. And you may now disconnect your lines.

Call: Apr 2024

"Wipro Limited Q4 FY '24 Earnings Conference Call"

April 19, 2024

M
ANAGEMENT : MR. SRINIV AS PALLIA – CHIEF EXECUTIVE OFFICER &
MANAGING DIRECTOR , WIPRO LIMITED
MS. APARNA IYER – CHIEF FINANCIAL OFFICER ,
WIPRO LIMITED
MR. SAURABH GOVIL – CHIEF HUMAN RESOURCES
OFFICER , WIPRO LIMITED
MR. DIPAK BOHRA – SENIOR VICE PRESIDENT
(CORPORATE TREASURER & INVESTOR RELATIONS), ,
WIPRO LIMITED

Wipro Limited
April 19, 2024

Con■den■al -Internal Moderator: Ladies and gentlemen, good day and welcome to Wipro Limited Q4 FY '24 Earnings Conference
Call.
As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*" and then "0" on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. D ipak Bohra – Senior Vice President (Corporate Treasurer

& Investor Relations). Thank you and over to you, s ir.
Dipak Bohra: Thank you , Yashashri . A Warm Welcome to our Q4 Financial Year ‘24 Earnings Call . We will begin the call with the “ Business Highlights and Overview ” by Mr. Srinivas Pallia – our Chief Executive Officer and Managing Director , followed by Updates on “Financial Overview ” by our CFO – Aparna Iyer, afterwards, the operator will open the bridge for Q&A with our Management Team . In this call, we also have our CHRO – Mr. Saurabh Govil.
Before Srini starts, let me draw your attention to the fact that during this call, we may make certain forward -looking statement within the meaning of Private Securities Litigation Reform Act 1995. These statements are based on management current expectati ons and are associated with uncertainties and risks which may cause the actual results to differ materially from those expected. The uncertainties and risk factors are explained in our detail filing with the SEC. Wipro does not undertake any obligation to update the forward -looking statements t o reflect events and circumstances after the date of filing .
The conference call will be archived and a transcript will be available on our website.
With that, I would like to hand over the call to Srini. Thank you.
Srinivas Pallia: Thank you, D ipak. Good evening and good morning, everyone. Thank you for being here today.
I am honored to be here as the CEO of this remarkable organization. My memories of joining Wipro in February 1992 straight from the Indian Institute of Science Campus are still fresh in my mind.
I’ve been with Wipro for more than 30- years. I am proud to say that it ’s such a unique company , the way it has combined profits and purpose , very strong global brand , present in over 60 countries , leading in technology and committed to sustainability, diversity and inclusivity.
As you know, I ’ve been in the CEO ’s role for about two weeks now. Through internal and external conversations, and the press reports I have read , I am aware of the high expectations for

Con■den■al -Internal my role. Despite my extensive experience as a business leader , stepping into the CEO ’s role for the first time feels profound e specially when it comes to leading this i conic institution.
As I go through many emotions of this transition, one thing stays strong – My unwavering belief in Wipro , our values, our people, our clients and above all our resilience.
Last year pos ed big challenges for the whole industry. It has affected Wipro ’s performance too.
The economic environment is still uncertain a nd there might be more challenges in the short -term.
However , the opportunity before us is limitless. We are o n the brink of a major technological shift. Every client I talked to a cross all industries is eager to leverage AI t o shape the future of their business.
And at Wipro, we have been gearing up for this moment. We have made substantial investments to strengthen our capabilities across the organization. We have a global and diverse team. We have made bold moves in M&A, acquiring companies like Capco and Rizing which have boosted our consulting capabilities a nd we have simplified our operating model.
The building blocks are firmly in place, and I am committed to

expanding on this even more.
While I remain optimistic about the long -term , it’s important to be transparent , there’ s still a considerable amount of work ahead of us.
Our immediate priority is to accelerate growth. Before diving into the financial performance for Q4 and the full year , I want to discuss the “Five Focus Areas” w e will concentrate to revitalize the company :
1. Accelerate large deal momentum by working closely with clients and partners.
2. Strengthen relationships with large clients and partners and further invest in accounts that have the potential to grow into large accounts.
3. Focus on industry-specific offerings and business solutions , led by consulting and infused with AI.
4. We will continue to build talented skill which is now AI -ready and able to deliver industry -specific business solutions.
5. Finally , continue to simplify our operating model and focus on execution rigor with speed.
As you see, the core tenants of our strategy remain unchanged. What ’s important i s how we build on these five priorities and adapt as necessary t o accommodate technological shifts and market conditions. By years of experience in the markets , have taught me that integrating strategy with rigorous execution yields tangible results. And that ’s where our focus will remain this year.

Con■den■al -Internal Now , let me turn to our “Financial Performance for Q4 and the Financial Year ending March 2024” :

In Q4, our IT services revenue grew sequentially b y 0.1% in reported currency. If you recall , last quarter, we had talked about seeing green shoots in our consulting business. The traction continued in Q 4, reflected in Capco ’s sequential revenue , growing by 6.6% and order bookings growing by 43.6%.

Talking of “Order Bookings ,” in Q4, total order booking stood at $3.6 billion and for the full year it was $14.9 billion.

Coming to “Large Deals ,” in Q4 we won 18 large deals against 14 large deals in the previous quarter. In TCV terms, our large deal bookings for Q4 was $1.2 billion. For financial year 2024, we recorded large deal bookings TCV of $4.6 billion. This was a growth of 17.4% as compared to the previous year.

For our FY ’24, our revenue was $10.8 billion in reported currency. We continued to increase the percentage of revenue from our top five and top ten clients. Also, we added three more clients to the $100 million -plus bracket in FY ’24. Six out of our top ten accounts grew on a sequential as well as on a year -on basis in Q 4.

Moving on to “Margins ,” in Q4 we saw a further expansion to 16.4%. This is a 40 basis points improvement over last quarter. We closed FY ’24 with a margin of 16.1% , an expansion of 50 basis points ove r FY’23.

Like I said earlier, we will continue to make investments in building capabilities and strategic acquisitions. In Q4, we took a majority share in Ag gne, a leading consulting and managed services company , serving the insurance and insure tech industry. This allows us to strengthen our value proposition in a fast growing part of the insurance vertical.

Expanding on our substantial investments in AI , in Q4, we launched the Wipro Enterprise Artificial Intelligence -Ready Platform with IBM. It ’s a new service that will allow clients to create enterprise level, fully integrated and customized AI environments.

Let me share one example of a win in Q4 that came from an AI -powered solution tailored to our consumer business. A leading global apparel brand chose Wipro as its strategic partner t o implement Gen AI solutions for driving t heir digital transformation. This actually involves implementing large language models to improve search , recommendation engines , and enable hyper personalization at scale. All done responsibly.

Before I hand it over to Aparna, let me share our “Guidance for Q1 ”:

Con■den■al -Internal We are

guiding for a sequential growth of (-1.5%) to (+0.5%) in constant currency for Q1’25.

We expect margins to stay range-bound like in the last few quarters.

The next few months w ill be crucial as we steer the company towards growth. As a passionate hiker , I deeply connect with these words from Junko Tabei , the first woman to climb Mount Everest. She said , “Even it was hard, y ou can reach the peak i f you climb step -by-step. ” Of course , I seek the trust and continued support of all of you, our clients , our associates, partners and media as we move forward.

Thank you. Let me now hand it over to “ Aparna to S hare More Details on our Financial Performance. Over to you, Aparna.

Aparna Iyer: Thank you, Srini . Good evening and good morning , everyone.

Let me highlight to you our “ Financial Performance for Q4 and Full Year -ending March 31st, 2024” :

On IT services revenue for Q4, we delivered a reported currency growth of 0.1% sequentially and (-0.3%) in constant currency terms . For the financial year ‘24 IT services revenue declined 3.8% year -on-year in reported currency terms a nd 4.4% year -on-year in constant currency terms .

Let me also give you some color on our “Market Unit Performance”:

Please note that all revenue growth numbers are in constant currency terms.

In Americas -I, we continued our momentum of strong booking in Q4. We booked eight large deals in Q4, adding up to a total contract value of 587 million . For the full year, order bookings in TCV terms in A -1 grew by 24.9% . Q4 revenue for this market declined 1.8% on sequential basis, while the full year revenues grew 0.2% year -on-year. Our healthcare sector grew by 18% in full year i n FY’24 year-on-year.

Americas -II market unit grew 1.9% quarter -on-quarter on the back of strong performance in Capco, BFSI, Hi -Tech in Canada. On a full year basis, the revenue in this market declined by 6.1% year -on-year . Almost 60% of our revenues in this market comes from the BFSI sector and as Srini mentioned in his speech, we are starting to see a return to stability in the sector led by Capco .

In Europe , revenue decreased 0.1% sequentially in Q4 and decreased by 7% on a full year basis . While Germany and UK continue to remain impacted due to slowdown in demand environment,

we are seeing a recovery in sectors like Switzerland and S outhern Europe that grew 1.7% and
1.6% in Q4. Southern Europe, as a sector , grew 14.6% year -on-year in FY ’24.

Con■den■al -Internal We also continue to see strong traction on the order booking side in Europe. In Q4, we ’ve won five large deals adding to a TCV of more than $300 million.

APMEA revenues declined 2.2% quarter -on-quarter and 4.5% for the full year. Our strategy in APMEA has been to move towards high value t ransformation projects and reduce low margin accounts. The success of our strategy is reflecting in our margin improvement of 235 basis points for the full year.

In terms of “ IT Services Operating Margins ,” our continued rigor on improving operational excellence has helped us expand our operating margins by 40 basis points in Q4. This is after absorbing the impact of two additional months of salary increase in Q4. On a full year basis, our margins are at 16. 1%; they have improved by 50 basis points year -on-year.

Our net income and EPS for the quarter increased by 5.2% . Despite being impacted by a challenging macroeconomic environment , it is encouraging to know that our EPS for the full year grew by 0.8%. The increase in EPS was after absorbing the one -time restructuring charges of INR6 ,814 million during the year .

We generated cash flow of $626 million in Q4 and $2.1 billion for t he full year, which is at 182.6% of our net income in Q4 and 159% of our net income on a full year basis. This is our highest cash flow in recent years.

Our gross cash as a result is at $4.9 billion and net cash was at $3.2 billion.

Both have increased year -on-year despite completing our largest buyback i n July of 2023 . In terms of some other important metrics that we’ve always shared, our ETR is at 24.5% for FY’24 versus 23% in FY ’23. Our h edges continue to be in line with our policy; we had about $3.1 billion of FOREX derivative contracts as hedges at the end of Q4.

Finally, I would like to reiterate the guidance for Q1’25 stated by Srini; we expect our revenues from IT services business segment to be in the range of $ 2.617 billion to $2.670 billion. This translates through a sequential guidance of (-1.5%) sequential to a (+0.5%) in constant currency terms.

With that, I now hand over t o the operator for questions.

Moderator: We will now begin the question- and-answer session. We will take our first question from the line of Moshe Katri from Wedbush Securities. Please go ahead.

Moshe Katri: Looking at the five focus areas that you mentioned, I am going to look maybe at three of them . Large deal momentum , what needs to get done to get there ? Are you talking about restructuring sales , sector -specific offerings led by consulting in AI ? Are we talking about more strategically using Capco given their expertise ? And then you talk about simplifying the operating model . Are we planning a restructuring in terms of the various segments of the business?

Con■den■al -Internal Srinivas Pallia: Thank you, Moshe. Appreciate your question. Let me answer in terms of the structure and operating model . I said we will continue to simplify our operating model, but the focus actually will be more on the execution rigor and with speed. That was the key message , Moshe. Now coming to the large deals, we want to create this l arge deal momentum and one of the things that we want to do is be more proactive with our clients and with our partners. And the second part I think a question that you s aid is we want to go very specific with the specific business solutions both on the cost transformation side and also on the business transformation side which is a lot more industry-focus with consulting- led and AI -infused. I think that ’s how we want to differentiate our large deals going forward.

Moshe Katri: Can you talk a bit about how you’ re planning to use Capco? I think you have a very unique asset that Wipro has not leveraged efficiently enough in the past since the transaction. So, what ’s going to be different here under your leadership that Wipro with Capco down the road ?

Srinivas Pallia: Consulting for us is going to be a strategic advantage and Capco plays a significant role here a s you said, Moshe. Now, there are a couple of things that we want to do with Capco. Capco for us in the context of BFSI , is going to be tip of the spear for us. So, what we want to look at is an end-to-end from a consulting- led to execution. The entire story is what we want to take to our clients. And we ’re getting a lot of good traction as we speak. There are places where the clients find it very interesting that a consulting company can actually execute and manage the end-to - end process areas for them. So, we will continue to collaborate much stronger in front of the clients, both leveraging Capco’ s capabilities a nd it is going to be a very strategic a dvantage for us.

Moderator: We have our next question from the line of Abhishek Kumar from JM Financial. Please go ahead.
Abhishek Kumar: My first question is on Capco growth. You mentioned you saw both sequential growth and strong bookings. I am just trying to reconcile this w ith the comments that we hear about discretionary spend, especially in BF SI remains sluggish. So, what explains strength in Capco , maybe if you can highlight certain areas where Cap co is winning deals ?
Srinivas Pallia: So, your observation is right , Abhishek . In the last two consecutive quarters, we have had a sequential growth both in o

rder book and rev enues. I think what we are seeing is in the BFSI sector, these are green shoots , we have seen some of the discretionary spend coming to us in the context of consulting. The second part is also wherever we are leading in with the Capco as the tip of the spear for us, we 're getting that advantage a round the deals that we are working on and there' s a lot of s ynergy deals that we are working together going forward. So, that's an advantage that we want to leverage and that 's a differentiation we want to do going forward.
Abhishek Kumar: Maybe let me follow up on this. Then given the strength here and BFSI stabilizing, I was just wondering why this is not translating into slightly better guidance for next year , at midpoint, we still see decline sequentially , so what explains slightly weaker g uidance for Q1?

 Aparna Iyer: Hi, Abhishek . Just wanted to share with you that the overall demand environment, we don 't see a material change. I think it 's very similar to how we saw it at the beginning of this calendar year. So, the macroeconomic environment and the challenges around l ower discretionary spend remain. What we've shared is that we are seeing green shoots in Capco in the set of the portfolio of clients th at Capco works with , we are beginning to see some kind of stabilization , and the growth that Capco has shown in Q4 is very encouraging. As far as Q1 is concerned, they are continuing to have stability . Now, this is coming in after a few very rough quarters for Capco. So, you should read it in that context, Abhishek. Okay? Overall guidance visibility? Of course, green shoots of healthcare and Capco are part of it, but also the overall macroeconomic environment and the softness is also very much a part of it. So, this is what we have guided based on what is visible to us now.
Abhishek Kumar: I just noticed a sharp uptick in the top client revenue this quarter. Anything to read into this – is it one-off? What explains the sharp increas e in top line?
Aparna Iyer: Abhishek, you would recall sometime in Q2, I think we had shared that in a couple of our large accounts , we had one bookings that aggregated to about half a billion dollars each, right . Now , one of those clients has actually g one ahead and become our top client . So, we're very pleased to share with you that our top client is now a different one that what we 've had for several years and we 're very happy with the progress that we 've made, that's what we would like to share , that's why you 're seeing the momentum .
Srinivas Pallia: Abhishek, just to add a few more color to that . Our large deal pipeline continues to be strong and does consist of mega deals as well. We are also well -positioned to sustain and further improve our large deal and mega deal wins going forward.
Moderator: We have our next question from the line of Ravi Menon from Macqu arie. Please go ahead.
Ravi Menon: I guess the first question is on the top ten. You've seen the top client, but even the top two to five that has seen growth , your B FSI is actually seeing pretty strong growth as well, h ealthcare also seems to be doing well. So, the ones that are actually not doing well seem to be relatively smaller segments like communications or hi -tech. Could you give some color around whether the weakness in these segments is the reason why you're still looking at muted growth outlook for next quarter? And should we expect that in your biggest verticals you're actually seeing growth?
Aparna Iyer: Ravi, yes, this quarter for us in terms of BFSI, we 've seen a quarter -on-quarter sequential growth after at least four quarters of being very soft. Healthcare has continued to do well and we will continue to see the momentum build on. We are very happy with b oth our positioning , offerings and the kind of growth that we are seeing i n that sector.

 ENU (Energy and Utilities) and Manufacturing , we do believe that has been soft for Wipro and there is some muscle to be built. We have a good pipeline, we have interesting deals in the fray and We will see how they convert , more hopeful of getting back to growth in the second half in these sectors. C onsumer and life sciences , again, it continues to be impacted by the overall spend environment going to higher inflation. Those are the broad colors that we wanted to share with you from a sector perspective. And therefore it 's a little bit of a mixed bag. So, yes, we are seeing green shoots and we ’re seeing early signs of stability because now we ’ve had two quarters where we’ve consistently s een… not just consulting, but other pa rts of BFSI coming around, but very early to say whether this is deterministically shifting , right, so we continue to remain cautious in that space. We’ve shared with you an outlook that basically has c omponents of everything that I ’ve just taken you t hrough .

Ravi Menon: The utilization number is at 84.8% . This exclude all the acquisitions, right? So, how should we think about where say for example C apco ’s utilization might be, should that be a margin lever if the BFSI demand comes back?

Aparna Iyer: Certainly , we don ’t share our utilization including some of the acquired entities that is c urrent. Overall utilization even outside of the acquired entities , we’ve seen a very remarkable progress that we ’ve made over the last f our to five quarters in that lever . We’re very happy with where we are and we hope to sustain it even as the demand comes back and maybe we will have to invest for growth at some point in time , but for now, we will try and hold to that utilization. In Capco , certainly that is a lever a nd we ’ve got an incredible asset, like Srini said, we have to drive more synergy wins a nd basically press on the revenue acceleration in Capco and that should do a lot of good to the margins as well.

Moderator: Thank you. We have a next question from the line of Kawaljeet Saluja from Kotak . Please go ahead .

Kawaljeet Saluja: Hey, Srini. Many congratulations on your elevation to the CEO role. I have three questions for you, Srini . The first one is the fact that you have been with the organization for more than three decades, and you have been quite a remarkable performer. However, you cannot say the same thing for Wipro organization as a whole. So, what is your view or what is your assessment for the reasons for Wipro's challenges and aspects of Wipro's business that require a fix?

Srinivas Pallia: Thanks, Kawaljeet . I think , thanks for the compliment as well. Having been here for three decades, all I can say is that if we continue to focus on those five key priority areas that I called out just now, and definitely execute that with the speed and the rigor that we need to bring in, I think we can make a difference. So, to me, strategy with a combination of execution is what can give us the outcomes that we are looking for.

 The second part, Kawaljeet , in the recent past, as Wipro is an organization, we have high exposure to discretionary spending. And hence, we have sometimes the softness on BFSI during those periods, and that could be another factor that you would have seen as grow a little slower.

Kawaljeet Saluja: So, you basically think that there is nothing wrong with just those portfolio challenges, etc. Those are tactical challenges which are there, you know. And just a simple focus on execution would do the trick.

Srinivas Pallia: So, Kawaljeet , if you look at it the way we are structured, we have got the four markets, right? And each of the markets are different. They have different responses to the macro environment that we are looking at. So, that's number one. Second

is, if you look at Wipro as a company, in the last few years, we have gone through significant transformation. And for a transformation like this, sometimes we have to make some adjustments across the organization, and this can lead to different view s.

I think from my perspective, my vantage point, my knowledge of our clients and our business, and of course the point that you made, having lifelong connections across our company should help us move us into act ually tract ions quickly , Kawaljeet . That's what I am looking for.

Kawaljeet Saluja: That's fair. The second question that I had, Srini, is that your organization has seen plenty of churn, senior executive churn. So, what are the measures that you will put in place to reduce the churn levels?

Srinivas Pallia: Sure, Kawaljeet. Maybe I will ask Saurabh to respond to that.

Saurabh Govil: So, Kawal, I must tell you that over the last two weeks Srini has taken over and the general euphoria among employees that somebody who started his career in the company has reached the very top. So, I generally believe that if growth comes back, opportunities are there for people to grow. They are seeing people growing. Aparna is another example for us who started a career here. People will be keen to continue to see that this is the place for them to make their careers. So, that's what they will.

Having said that, as Srini called out that structures and strategies are not changing. But leadership will evolve. There is a living organization. There will be some people who would move one kind of stuff. But there is no major disruption in the way we are going to work, organize ourselves.

So, I don't see that much of a challenge as we move forward.

Srinivas Pallia: And Kawaljeet, we want to develop talent internally , right, and also have a strong line of leaders in our pipeline. And t hat's another focus area for us going forward.

Kawaljeet Saluja: The final question that I have for you, Srini, is that I remember some time in 2020 you had a magic wand. You actually struck fairly nice lucrative two mega deals in the retail vertical. But

 the organization has been silent on mega deals since. Has the muscle memory weakened on the mega deals or good news is around the corner?
Srinivas Pallia: Good question , Kawaljeet Saluja. I think the way we have structured ourselves in terms of going after the large deals and mega deals is to try and focus not only on how you pursue a deal, but how do you originate a deal, how do you shape the deal and the entire process around that. So, that becomes very critical for us.
So, i n fact, what I would like to do is for the sales team on the ground, across the markets and across the industries, try and create a proactive pipeline because that becomes very critical for us because you work along with the client and the partner in a deal pursuit , right . The probability of winning is also much higher. So, what we want to do, what I want the team to do is stay focused on those proactive deals as we move forward.
Also, if you look at earlier, we had mentioned in Q2 that we had won close to $0.5 billion deals in two of our large accounts and one of the two accounts , Kawaljeet, now has gone on to become one of the largest customers , largest clients for Wipro. So, that, you know, w e have seen that momentum also happen.
Kawaljeet Saluja: You have been very patient with me. So, I will just squeeze in one large question . So, please don't mind. Finally, on Capco, I guess Thierry's view of Capco integration was a light touch integration, keep that as a separate organization . Do you agree with that approach, and would that approach continue or you would see a much tighter integration of Capco with the Wipro's overall portfolio?
Srinivas Pallia: So, Kawaljeet, I think keeping the Capco brand as it is a stra

tegic business , but what is more important, Kawaljeet, is I look at Capco or any of our consulting business domain and consulting teams to be the tip of the iceberg for us. So, when you go in front of the client, you go in as one Wipro in the context of how you are going to solve it. But what is very important is the kind of CXO connects Capco has . I think that is something that the rest of the Wipro organization can actually lev erage. So, I would say that we are going to focus on a joint positioning and a building discipline sales campaign that can deliver the best for the Wipro in that particular segment.
Moderator: Thank you. We have our next question from the line of Gaurav Rateria from Morgan Stanley . Please go ahead.
Gaurav Rateria: Many congratulations Srini on your new role. My first question is again with respect to your success in mega deals . When you look at the overall internal win, your mega deal participation, your win rates, where do you think the work in progress is there? Where do you think you need to make some changes? Is it more about your participation or is it more about your win rates? Just trying to understand what needs to be fixed to be able to participate more in the mega deals.

 Srinivas Pallia: So, Gaurav, if you could just repeat the question, I just lost you for a minute, sorry.
Gaurav Rateria: Yes, my question is with respect to your mega deal success . Just trying to understand is this require more fixing on the participation side , proactively creating pipeline side or is it more about the win rates ? You participate but the win rates are not so good. Just trying to understand what requires to be changed to be able to more consistently deliver some of the mega deals.
Srinivas Pallia: So, thank you. I got the question; I think absolutely there are two parts to it. What is important for us is to be very proactive within the market , whether it is our clients or partners or the influencers in actually sourcing the deals and then kind of shaping the deals which are very specific to those industries. The way you solve it and the way the business objectives of the clients are met also becomes very critical .
So, it's both. There is a combination of both which actually lead us to a better win ratio going forward, Gaurav. And I have seen the experiences wherever we have worked very well with the clients and ahead of the curve, I think our probability of winning has gone up. What we want to do is become lot more consistent, lot more repetitive across our markets and across our industries.
Gaurav Rateria: My second question is with respect to Capco . It will be great to understand what kind of deals are coming in terms of the nature of the work and is it more broad-based across large number of clients? Is it more concentrated with a few clients ? Is it just a tip of the spear engagement that is coming right now ? Is it also involving some amount of downstream work? Probably that will help us in getting some comfort in how sustainable this trend that you are seeing is. Thank you.
Srinivas Pallia: No, absolutely , Gaurav. I think there are two ways, two opportunity sets that we have with Capco. One is Capco going on its own, doing consulting work for them, which is a lot more , a different buyer within that particular organization. But what we are focused on is the synergy deals, with

the Capco being the tip of the spear and helping us in the downstream, because that is where we can actually win a lot more large deals and mega deals.
Now using Capco, we have an advantage in terms of shaping the deal, because you can be a lot more focused in the context of the customer process areas and the customer's business problem that we are trying to solve, and then put the downstream revenue, which could be either a cost transformation or it could be a

business transformation, Gaurav.
Gaurav Rateria: And the recent success that you have seen in the last two quarters, is it more again on the synergy deals that you have seen, things coming back, or is it more independent work of Capco that is seeing some success?
Aparna Iyer: It's both, Gaurav . You know, certainly it is secular, we are seeing a secular uptake across the service offerings of Capco across geographies, and it is led, it's more broad-based. Also, we are

 winning good synergy deals, and the collaboration has only increased in the last four quarters. Given the macroeconomic environment and the fact that the deals were harder to combine, we have certainly built a muscle on synergy also a lot better. Both are coming into play.
Gaurav Rateria: Last q uestion from me, Aparna. How to look at the conversion of net income into operating cash flow on a sustainable basis ? I know this has been a fantastic year for Wipro, but going forward, more on a sustainable basis, what should be the right way to look at it?
Aparna Iyer: If you look at just our historical performance, we have always been between what, like 85 to 110% of free cash flows is what we generate as a percentage of net income. And that's a good number to target. Yes, I think F Y '24 was a very good year for us in terms of free cash flow generation and we will continue to work on all fronts.
Moderator: Thank you. We have our next question from the line of Kumar Rakesh from BNP Paribas . Please go ahead.
Kumar Rakesh: My first question was , Srini, you talked about large deal acceleration. Well, I understand that mega deals haven't been around a lot, but large deal performance has been quite fairly good over the last two years. From what used to be about 600 million on an average two years back, you have been consistently doing about 1.1 billion or quarterly large deals. But that has not been reflecting into stronger growth. So, when you talk about that you plan to work on large deal acceleration, what does that mean and how should that translate into growth?
Srinivas Pallia: So, a couple of things. One is when I say large deal acceleration, Kumar, the idea here is that obviously you got to have a lot more deals in the pipeline. So, there again, my ask is that we have to be proactive on those large deals. What that means is can you shape the deal even before the deal comes out, right? And this you can obviously do with many of the large clients where you have a very strong relationship. So, that's number one.
So, second is the size of the deal and the frequency of the deals, if you can slightly increase , that can give us a momentum going forward. Now, in terms of converting the large deal of TCVs to revenue, maybe I will ask Aparna to make a comment.
Aparna Iyer: So, Rakesh, this is again something that I think is not just us, but it's just the nature of the market that the conversion is lower. It is because A, while we continue to win these deals and replenish the bucket, there is a discretionary spend environment , which is weighing on our revenue performance, right?
So, we are continuing to see ramp downs that are happening where existing projects finish but are not getting replenished at the same pace. So, that is again weighing down in terms of the conversion from bookings to revenue. And I think that's the major aspect .

 Also what has happened is while the momentum is much stronger on the large deals and the larger deals, the smaller deals' buoyancy has certainly slowed down. At least in the last four quarters, we have seen that. So, those are two things that are weighing on the revenues.
Kumar Rakesh: My second question was around the number of clients less than 1 million. So, f or the last few quarters, we have been pruning our sm

aller accounts, smaller clients. But in this quarter, on a sequential basis, it has increased. So, is this one -off or there is a change in strategy now, how we are looking at these smaller accounts?
Aparna Iyer: There is no change in strategy , Rakesh. Our strategy has only got more firm. We are looking for profitable growth and w e will continue to pivot ourselves in a few geographies where we are not in high- value transformative work that in new age opportunities that we want to be. We would like to pivot our service offerings. And i n that context, we did take action, especially in APMEA .

As a case in point, I spoke about it. So, what you are seeing quarter -on-quarter, can we manage it? There will be v olatility that will play out quarter -on-quarter. But I can assure you there is no fundamental shift in strategy. We will continue to focus on profitable growth and mine deeper.

Srinivas Pallia: So, Rakesh, just add two more points to that. One is, I think it's not just the number of accounts, but the quality of the accounts we have, which is very important for us going forward.

Second is, if you look at our, we have continued to add accounts in greater than $100 million bucket. In fact, we added three accounts in that particular bracket. So, that's another one. We want to keep tracking and keep moving. Got it.

Moderator: Thank you. We have our next question from the line of Yogesh Aggarwal from HSBC Securities and Capital Markets. Please go ahead.

Yogesh Aggarwal: Srini, first of all, congratulations on your promotion. Just a couple of questions I have. Firstly, on the structure, a few years back under Thierry , Wipro move d to the geographic structure, which was a bit of a unique setup compared to other companies. So, are you looking to go back to the vertical structure? Just any thoughts on that? And then I have a follow -up, please.

Srinivas Pallia: I think the four strategic market units that we have and the four GPS structure that we have, it will continue. No plans to make any changes, Yog esh.

Yogesh Aggarwal: And the second thing, S rini, I mean, your headcount continues to decline. It's down like 10% and 87% utilization. So, just sometimes get a feeling, are you guys even looking at any kind of an imminent pickup in growth? Because this is quite a bit of tightening, operational tightening happening.

Saurabh Govil: So, Yo gesh, Saurabh here. You know, headcount has come down. It was driven by operational efficiency. As you see, our utilization has been all -time high in Q4. We have the supply side, you

 know, as demand picks up, we will be able to quickly ramp up and we are comfortable on that spot. So, I don't see that as a challenge. We just have learned; I think we as an industry that all of us are over -hired at a point of time in this post -COVID. So, we just want to be more cautious, more judicious and as we move forward. But as demand environment improves, we don't see a challenge.

Moderator: Thank you. The next question is from the line of Sudheer Guntupalli from Kotak M ahindra AMC. Please go ahead.

Sudheer Guntupalli: Congrats and all the best on your new innings . Given that the organization had already gone through sweeping changes over the previous two to three years, certain change fatigue could have set inside the company and employees. So, do you see that change fatigue as a bottleneck to be able to make any incremental changes you need and turn around the growth path or maybe delay that growth turnaround?

Srinivas Pallia: Sudheer , the advantage I have is I have been through this transformation journey, right, in the last four years. Clearly, in my mind, we don't need a structural change. The four SMUs and the four GBLs is good to go. What we need is to change our strategic priorities, which meets the market dynamics

, which meets the changing technology landscape. And what we need is bringing a lot more execution rigor in the markets and in the sectors and in specific accounts that we call both the large acco unts of ours and also the future large accounts. I think if we can execute to that, bringing in the best of our solutions with the consulting led and AI infused, I think we can differentiate and make a difference to our clients.

Sudheer Guntupalli: Second question to Aparna on Capco. If the growth here is so strong, one would have anticipated that the company level margin expansion to be slightly higher, given this is an onsite heavy and fixed cost heavy business. So, should we assume that such an operating leverage will probably come with some amount of a lag?

Aparna Iyer: Yes, so Sudheer, C apco, like I said, had also the benefit of a seasonally furlough quarter of Q3. So, the bounce back of Q4, the growth rates that we are talking about also had, it was aided by that. There is a base effect to that. So, yes, as stability returns, we will see operating leverage, but for now, we are just waiting . This is not something, you know, we have shared with you for two quarters . Given the interest in Capco's performance, we have shared it . We are also encouraged . We are watching. It's too early to say whether this is a very definitive deterministic trend. We will watch for how they perform over the next few quarters and certainly the operating leverage should play out with a lag.

Moderator: Thank you. The next question is from the line of Sandeep Shah from Equirus Securities . Please go ahead.

 Sandeep Shah: My question is related to one of the questions asked by a previous participant. Most of your earlier colleagues in the CEO realm have also been highlighted and focused in terms of a rigor on execution. But somewhere that has not worked and improved the organic growth rates of Wipro consistently. So, what according to you in your past three decades experience in Wipro is going wrong in the execution rigor ? Is it delivery ? Is it sales ? Is it client mining ? Or is it hunting? And where do you believe weakness is higher and how do you plan to rectify that?

Srinivas Pallia: Thanks , Sandeep. What I am doing right now as we speak is based on my own experiences over the period of years. Second, I am looking at all the areas across the markets, what's working and what's not working, whether it's to do with large deals, whether it's to do with large accounts and account growths, whether to do with the solutions and approach to each of the sectors.

So, what I am doing , Sandeep , is taking stock of all that . While I called out the priorities , right, we got to bring the strategic priorities that we call out to an execution rigor, and you are right. Once you have the right strategy, right set of accounts, right set of sectors that you really want to focus on, then you have to be staying there for time too because some of these deals that we have won, it does take time.

So, what I want to do is have the staying power as well to continue to execute our strategy and not change it in midway. So, there we have to bring in a lot more consistency and perseverance, if you will , to win those deals and grow those accounts.

Sandeep Shah: And if you want t o define a performance API of your targets and strategy execution, what it could be ? And what could be the timeline for the s ame?

Srinivas Pallia: So, I don't think I have a timeline , Sandeep . This is my second week in my new job. Let me go back and see what's it, what's going on and what we need to do. But what I am very clear is, what are the priorities that we want to execute. And I think that's where I am going to stay focused on.

Sandeep Shah: And second, in terms of capital allocation, I think Wipro has done a fan

tastic job in terms of new cash flow generation. The outgoing CEO has been aggressive in terms of bold M&A, where capital allocation has been also fairly contributed towards the sizable M&A. Do you believe in that strategy? Because in the press conference, you also said that Wipro will continue to demand bold on the M&A. So, when you say bold on the M&A, is it bold in terms of acquiring capability, which may not be big in terms of size, or you still believe we have a headroom and appetite to go for M&A similar to Cap co as well as Rizing ?

Aparna Iyer: I think from an M&A standpoint, and I will add answer and then I will let Srini weigh in. I think we will continue to remain focused. We will be selective in the M&A that we do. We will invest in areas of newer technologies . We will invest in areas that give us access to markets, access to clients, the strategy on M&A and where we will play and how selective we will remain. On the

 size of the M&A, it's too, you know, we don't, we're not disclosing any one way, you know . We have said that we prefer tokens because in some sense it helps us stabilize in an environment like this, but we will remain flexible on that, and we will see what works best for our strategy.

On capital allocation, you know, there is no change to policy , Sandeep . We are committed to returning cash of 45 to 55% of our net income over the cumulative three -year period. If you want to add anything on M&A , Srini?

Srinivas Pallia: I think you have covered it . Thanks.

Sandeep Shah: And the last question , Aparna , for you in terms of margins, I think we have done well in terms of a difficult environment, but if I look at utilization, if I look at offshore revenue mix, fixed price contribution, most of them have peaked out. So, is it fair to assume now further considerable margin improvement is largely dependent on growth picking up? If it doesn't, then in that scenario, 16% flattish kind of environment is sustained going forward.

Aparna Iyer: So, what we have shared for now is that we are committed to remaining in a narrow band, a range bound between what we have delivered in the last few quarters , Sandeep . You are right that utilization has improved considerably. Our offshoring has gone up. All of that has resulted in our margins expansion. We are happy and pleased about that. We need to sustain that as we go along.

There are enough and more levers for us to flex as we go forward. Rotation, internal fulfillment. There is a lot more that we can do on optimizing, perhaps G&A . And especially given that, there are synergies to be driven as we integrate our acquired entities deeper, right? So, some of those levers will play out for us. FPP productivity is a very big lever. We are all very focused on it and the potential of how we can weave in AI. There are plenty of opportunity and there is plenty of levers for us to work on. Those are my comments, Sandeep.

Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand the conference back to Mr. Dipak Bohra for closing comments. Over to you, sir.

Dipak Bohra: Thank you, Yashashree. Thank you all for joining the call. In case we could not take any questions due to time constraints, please feel free to reach out to the Investor Relations team.

Thank you so much again and have a nice evening.
Moderator: Thank you members of the management team. On behalf of Wipro Limited, that concludes this conference. Thank you for joining us , and you may now disconnect your lines.

Call: Jul 2024

"Wipro Limited Q 1 FY'25 Earnings Conference Call "

July 19, 2024

M
ANAGEMENT : MR. SRINI PALLIA – CHIEF EXECUTIVE OFFICER &
MANAGING DIRECTOR , WIPRO LIMITED
MS. APARNA IYER – CHIEF FINANCIAL OFFICER ,
WIPRO LIMITED
MR. SAURABH GOVIL – CHIEF HUMAN RESOURCES
OFFICER , WIPRO LIMITED
MR. DIPAK BOHRA – SENIOR VICE PRESIDENT ,
CORPORATE TREASURER & INVESTOR RELATIONS ,
WIPRO LIMITED

 Moderator: Ladies and Gentlemen, Good Day and Welcome to Wipro Limited Q1 FY '25 Earnings Conference Call.
As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance

during the conference call, please signal an operator by pressing "*" then "0" on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. D ipak Bo hra – Senior Vice President, Corporate Treasurer and Investor Relations. Thank you and over to you, sir.
Dipak Bo hra: Thank you, Y ashashree. A Warm Welcome to our Q1 Financial Year '25 Earnings Call .
We will begin the call with the " Business Highlights and Overview by Srini P allia, our Chief Executive Officer and Managing Director, " followed by "Updates on Financial Overview by our CFO, Aparna Iyer ." We also have our CHRO , Saurabh Govil on this call. Afterwards, the operator will open the bridge for Q&A with our management team .
Before Srini starts , let me draw your attention to the fact that during this call, we may make certain forward -looking statements within the meaning of the Private Securities Litigation Reform Act 1995. These statements are based on management current expectations and are associated with uncertainties and risks which may cause the actual results to differ materially from those expected. The uncertainties and risk factor are explained in our detail ed filing with
the SEC. Wipro does not undertake any obligati on to update the forward -looking statements to reflect events and circumstances after the date of filing. The conference call will be archived, and a transcript will be available on our website.
With that, I would like to turn over the call to Srini.
Srini Pallia: Thanks , Dipak. Hello , everyone. Thank you for joining me and my leadership team for our first quarter results for the Financial Year 2 024-25.
In these past 90 -days I have travelled across our markets, meeting clients, employees and engaging with partners and stakeholders. With each conversation, my appreciation of our business has deepened and my confidence in our team has grown stronger. It 's truly inspiring to witness the trust our clients have placed in Wipro.
Additionally, I have been able to hone the focus of our " Five Strategic Priorities " that I shared with you last quarter. I will provide you with an update on this shortly.
But let me first start with the " Financial Highlights for the Q uarter ":

In Q1, we did not see a significant shift in the demand environment. Clients remain cautious and our discretionary spending continues to be muted. Our IT services revenue for Q1 was US2.63 billion, reflecting a sequential decrease of 1% in constant currency, which was within our guided range for the quarter. The operating margin was 16.5%, an increase of 0 .1% over the last quarter.
Let me now provide you with some color on how our S MUs performed in Q1 and our industry sectors. I will begin with Americas 1 which delivered a sequential growth of 0. 4% in Q1 . You may recall that Americas 1 had a good year in Financial Year 2 024 with the h ealth and technology sectors leading the way. We now see momentum in the consumer and communication sectors also.
Americas 2 had a sequential decline of 0 .7%, but BFSI performed well , achieving a sequential growth of 1.4% in Q1 with a year -on-year growth of 12.1% in Q1. Bookings in Americas 2, we are optimistic about returning to growth in this market in the medium -term. In Q1 , we also maintain positive momentum in our Capco business , achieving a sequential growth of 3.4%.
However, Europe and APMEA remained soft for us , with sequential decline of 1.4% and 4.2% respectivel

y. Our pipeline in Europe remains healthy and our primary focus there will be on improving conversion. We are reviewing our strategy for APMEA and we will keep you informed of our progress in the upcoming quarters.
Among industry sectors, we had varied performance. Banking and financial s ervices retained its positive momentum from last quarter , and we have now seen growth in this sector for two consecutive quarters. This sector grew 0.5% sequentially in Q1 .
Driven by deal flow, the consumer business grew by 1.6% this quarter. However, manufacturing and energy and utility sectors continue to show weakness for us , experiencing sequential decline of 3% and 6.3% respectively.
Moving to order booking, our overall bookings TCV for the quarter was US 3.3 billion with large deal TCV of US 1.2 billion.
Now, let me " Update you on the Progress " we have made on the " Five Strategic Priorities " that I outlined last quarter :
#1. If you recall , we discussed prioritizing large deals as a clear area of focus. We are driving large deal creation systematically across our client base. We are shaping these opportunities by proactively engaging with influencers and partners. As a result, our pipeline for large deals
remains robust. Once again, we had a quarter where our large deal bookings exceeded US1 billion. Our success in securing 10 large deals in Q1 was a key factor that made this possible.
Let me call out two of the deals that we signed in Q1 . The first is with a US -based communication services provider where we were chosen for a five- year contract t o provide managed services

 for select products and building industry -specific solutions. You' d have already heard about this in the media.
The second win is in the automotive segment in manufacturing. A US -based OEM has selected us to streamline their global infrastructure services. We will develop a solution leveraging both automation and AI to improve user experience and reduce o perating costs.
#2. Our next area of focus, which I had called out, is to strengthen our relationships with our major clients and strategic partners. We are investing in our established strategic accounts and high potential accounts. Our focus will be on these clients within our priority sectors and markets we have defined internally. We will further strengthen our capabilities in consulting, delivery and solutioning in these accounts.
In addition, we are actively collaborating with hyperscalers and strategic partners to c o-innovate and develop unique propositions for our clients.
In fact, I would like to emphasize that even in an otherwise soft demand environment , our revenue from top ten accounts have grown 1.3% sequentially and 3.8% year -on-year in constant currency terms.
Another key priority I had previously highlighted is to develop AI -powered industry and cross - industry solutions using a consulting- led approach. Clearly, our goal here is to help clients transform their business and operating models using the power of AI. We are also actively strengthening and accelerating our industry consulting capabilities to support this. We continue to build cross -industry solutions that will deliver value to clients across our horizontal pla y.
Let me give you two examples of our recent wins in Q1 . In the healthcare sector, we have been selected by a leading US -based health solutions company to help them comply with CMS guidelines. Our c onsulting-led AI-powered industry solution will seamlessly integrate CMS provisions into billing and various other processes. This will simplify prescription cost management for all the m embers.
Moving on to the second example , we are collaborating with the leading financial services company in North America t o develop Gen AI -powered assistant for wealth management t o help portfolio advisors.
Let me now shift to our next

area of focus w hich is building talent at scale. Our goal at Wipro is to attract, nurture and grow a diverse talent pool. We have ramped up our upskilling efforts across various practices covering both emerging and core technology areas. In fact, during Q1, we rolled out. iAspire and AI-powered career development platform. iA spire offers personalized learning pathways and aids in the career progression for each and every one of our employees.
 We have already provided foundational training to over 225,000 of our employees and an additional 30,000 employees have received advanced AI training.
With Wipro as Client Zero, we are utilizing our in -house AI expertise to develop G enAI solutions across all units and functions within the company. We believe t his will help us boost not only the capabilities of our employees, but also make Wipro GenAI ready.
And finally , we are driving e xecution rigor with speed, h elping client centricity and delivery excellence. We are focused on nurturing innovation in our delivery capabilities by investing in our Lab 45 AI platform a nd the Wipro Enterprise Gen AI Studio. In fact, we are also incorporating various GenAI tools throughout our software development lifecycle t o enhance both the productivity and quality of our delivery.
In closing, I would like to say this. The initial climb is both challenging and exciting. I am pleased with the momentum we have built in Q1 . Across the company I have noticed a fresh energy and renewed dedication towards achieving our goal . With the commitment and passion of our 230,000 plus employees across the world, I firmly believe we will seize market opportunities ahead of us and will continue to progress steadily one step at a time.
Now, on to guidance. As we move into Q2 , we do believe t hat we are now in a better position compared to the start of Q1 . For Q2, we are guiding for a sequential revenue growth of (- 1.0%) to (+1.0%) in constant currency. We are confident that we can sustain our margins w ithin a narrow band w ith an upward bias in the coming quarters.
With that, l et me turn it over to Aparna for a detailed overview of our financials. Thank you.
Over to you, Aparna.
Aparna Iyer: Thank you, S rini. Hello , everybody. Let me quickly summarize the financial highlights for Q1'25, post which we can open it up for questions.
Our IT services revenues declined 1.2% sequentially in reported currency terms, which is a 1%

decline in constant currency terms, which is well within our guided range for Q1.
We are also pleased to share an expansion in our IT services margin of 0.4% year -on-year and 0.1% quarter -on-quarter. We delivered the 16.5 % margin on the back of a tough revenue environment and even after continuous investments in talent. Improved utilization, fixed price productivity and optimization of overheads have been the key levers at play. We expect to gain from the tailwinds of our operational rigor and are confident of being able to operate in a narrow band with an upward bias.
We generated yet another quarter of strong cash flows. Our cash flows of $479 million in Q1 is at 132% of our net income. With this, our current investments and cash balance now stands at
 $5.4 billion. Our other income net of finance expenses grew by 21% quarter -on-quarter and year -on-year. Our accounting yield for average investments held in India in Q1 was at 7.6%. Our net income at INR30 billion grew 6% sequentially and our EPS for the quarter at Rs. 5.75 grew 10% year-on-year.
In terms of other key matrices, our E TR is at 24 .5% for Q1 versus 24% in Q1'24. Our hedges continue to be in line with our p olicy. We had about $3 billion of FOREX derivative contracts as hedges at the end of Q1.
Finally, I would like to reiterate the guidance for Q1

. We expect revenues from our IT services business segment to be in the range of $2.6 billion to $2.652 billion. This translates to a sequential guidance of (-1%) to a (+1%) in constant currency terms.
With that, we can open up for Q&A.
Moderator: We will now begin the question- and-answer session. We have a first question from the line of Abhishek Bhandari from Nomura. Please go ahead.
Abhishek Bhandari : Srini, m y first question is on the quarter gone by. Most of the peers w ho have reported were kind of positively surprised by the execution during the quarter. While we have reported a number which is within the band, it's towards the lower end. So, was there any incident in terms of negative surprises for you or do you think your Q1 performance was in line with what you had anticipated at the start of the quarter ?
Srini Pallia: Abhishek, the first point I want to talk about is we g ave a Q1 guidance range, and we were within that guidance range. That 's number one . Second , like I said, we are still not seeing a significant change in the demand environment . We see clients still cautious and discretionary spend is low. However, we have seen an uptick in CAPCO, BFSI , consumer business in the US, which I called out. Sectors like E&U and manufacturing have been soft for us. Outside of the US, we are yet to see momentum build up in our other two S MUs, specifically Europe and APMEA . We are also still in the early stage of the deal that we have signed and deals like this usually take a few quarters to realize its full potential and that's where our Q2 guidance is between minus (-1%) to (+1%).
Abhishek Bhandari: My second and last question is on the telco deal what you w on in Q1 . Is it due for full ramp up in Q2 or there will be sta ggered ramp up between Q2 and Q3?
Aparna Iyer: Yes, Abhishek. Like Srini said, these deals typically take s ome time to ramp up and it will take a few quarters for it to realize its full revenue potential. Of course , some upside is factored in the Q2 guidance.
Moderator: Next question is from the line of Gaurav Rateria from Morgan Stanley. Please go ahead.
 Gaurav Rateria: Srini , first question is on deal wins. Would you be able to provide some color on how average
tenor has changed versus the last few quarters , and also has there been any change in the new versus renew mix in the current quarter versus the last few q uarters ?
Aparna Iyer: I will go first and then Srini you can add. See, we don 't share that mix between new versus renewal. But you know that the large deal s that we had announced were net new. So, that should give you some color . On your point on tenure of deal wins , we do see that the TCV bookings continue to be signed for longer teno r. Some of it is also a portfolio of what we win, but that continues to go up. It 's something that we have noticed, Gaurav .
Srini Pallia: So, just to add to that . Hi, Gaurav . Deal tenures are definitely becoming shorter. Three-year to five-year deals are becoming more commonplace. The only deals where tenures exceed five years include optionalit ies and clients agree only when cost savings are front -loaded with potentially financial engineering involved.
Gaurav Rateria: Second question is on how are you thinking about implementing GenAI in your internal software development from a delivery point of view and could you share some color on initial results that

you might have seen across different service lines?
Srini Pallia: Thanks, Gaurav . GenAI is very exciting and from my e ffective there are three ways where we are deploying GenAI. First, number one like I said, as Wipro as a client zero, we are actually implementing GenAI across various process areas within Wipro across all the units. In fact, we are helping, for example, in the HR segment, the whole employee expe

rience, if you will.
Second , the iAspire that I talked about, we launched , is about how do you build career for our employees. They define what career they want to take and what kind of t raining programs that we can apply to them in the context of GenAI . So, those are the things that we are already doing, and this is also helping our teams kind of build more capabilities and competencies in G enAI. It's also helping Wipro to be really a truly a G enAI ready com pany . Seco nd, Gaurav , is that in fact if I have to really talk about some examples, one of the things that we have done is " We Now." It's actually a conversational digital assistant interacting with the various corporate systems. As of today, we had almost 7.4 million q ueries resolved in IT, HR and policy, and it has almost touched I think 230k users. What excites me is the fact that 80% favorability rating from our employees , that actually is significant. Another one which I am really excited about is "Eliza," which is an AI -powered sales assistant, which is supporting almost 3, 000 sales force across the globe for us. So , there are multiple , what I would say, GenAI related solutions that we are implementing within Wipro. I tell people that you got to drink your collate first and I am very excited that employees are bringing in so much out there with GenAI. As far as the clients are concerned, Gaurav , there are three components to it. One is how do we deploy GenAI in the context of software development life cycle, right. W e all heard of GitHub Copilot. So, how do you not only improve the productivity but also improve the quality? In that if you ask me both on the codi ng side and also on the testing side . And this to me, Gaurav, will continue to improve
 as we move forward and there is an excitement across our clients and our own employees deploying this thereby we can improve the productivity and quality. The second part is how do you infuse Gen AI into managed services, both on the infrastructure side and also on the process side. I think that 's one area that we are constantly looking at and how we can leverage Gen AI again from productivity and also experience for our clients. The third piece, Gaurav, what we are trying to do , like I talked about the indus try solutions, cross -industry solutions that we are building, right . I talked about telecom , I talked about the OEM, manufacturing , I talked about healthcare, I also talked about wealth management in the context of financial services. These are all AI -power ed industry solutions which are consulting-led . So, combination of knowing the domain aspects of the client , understanding the technology landscape of the client , becomes very critical and more so data. So , we are also able to help the clients in the context of their entire data strategy , data governance a nd how do you leverage the enterprise data within a reliable and secure way and implement GenAI. And I feel very excited because of the deals that we have won and now we are out there to execute them and some of these can be replicated across , Gaurav.
Gaurav Rateria: Last question for Aparna. What has been driving the depreciation and amortization down for the last two quarters ? And you did talk about margin in a narrow band with an upward bias. So, what would be the levers going forward?
Aparna Iyer: I think the depreciation , amortization expense doesn 't really have anything that 's very particular for me to call out . Perhaps a couple of quarters back we may have had some acceleration of amortization of a particular intangible, but other than that, I don't think there are any one -off to call out for Q1. Lever that plays like I said will continue to be the fixed price productivity , improvement in our pyramid. Saura bh has spoken about onboarding freshers . We did a good number in Q1, an

d as we build our muscle on that , that will bring down the cost of delivery. The optimization of overheads is something that we have done in the context of declining revenues. It's very critical for us to shed weight and remain lean and efficient and that 's something that we are doing. There is also some synergies to be realized as acquired entities come into the larger Wipro fold administratively. So, these are all levers that can help us as we look at our margins in the future. Hope that answers.
Moderator: Next question is from the line of Abhishek Kumar from JM Financial. Please go ahead.
Abhishek Kumar: Srini, first question is on Capco . Some of your peers have also indicated green shoots in BF SI, especially around discretionary short cycle span . Have you seen in Capco expansion of the area where Capco has been winning deals from what you 're doing maybe couple of quarters back ?
Srini Pallia: Hi, Abhishek. Thank you for the question. First and foremost, I did talk about Capco having sequential growth in the last couple of quarters and our growth has come in across Europe and Americas and we are also looking at Asia -Pacific. For us, Capco is lik e tip of the sphere which

 is consulting and strategy- led and then the rest of the Wipro engine actually implement that. So, we are seeing good traction around that, and we are seeing greater demand at larger institutional clients across the banks and financial services companies. So, to me what I would say , Abhishek , is this gives you a little bit of a color to how discretionary spending is coming back, at least in the banking and financial services , and it's also reflected in our BFSI growth, right , sequentially as well.

Abhishek Kumar: Energy and Utilities, this vertical has been unusually soft for us. While we have not seen that for any of our peers, so any more color on what is driving softness -- is it client-specific, are we losing out to peers in the consolidation scenario, any color here and how do we see this going forward?

Aparna Iyer: So, Abhishek, we lost you like for 10 seconds. Did you mean E &U?

Abhishek Kumar: Yes, energy and utilit ies.

Aparna Iyer: I will go and then maybe Srini if you want to add something. See, i n E&U we have had some end of large programs and as a result we have seen some softness in that i ndustry vertical . We got a good pipeline which we need to convert, and it has been p erhaps something that has been softer for Wipro as compared to what the market has been. Srini has spoken about both industry-specific and cross -industry service offerings that we have. We particularly bolstered our presence in E &U. Capco is doing pre tty well in that space and especially in America. So, we are seeing some bounce back there on that count . But we have some work to do. We have got a good set of service offerings that we need to win at the marketplace.

Srini Pallia: See, oil and gas is one of the areas where Capco actually has the consulting capabilities. That 's number one . Second, we are also building G enAI-powered solutions. For example, we call it as "Blue S kies," which is actually autonomous monitoring t o detect flare and smoke in degassing stations and we are getting good traction in some of the clients . Because we want to actually lead through specific business problem that our clients are facing. And in fact, this particular one, there was an 80 % reduction in efforts response time to some of the two events. And so this is what our strategy will be going forward in the context of oil and gas . Like Aparna said, energy and utilities for us , because of some of the large projects coming down has been soft in Q1 and that's why you 're seeing the sequential de growth.

Moderator: Next question is from the line of Sandeep Shah from Equi rus Securities. Please go ahead.

Sandee

p Shah: The first question, Srini, Wipro being the first one to call out green shoots especially selectively in Capco financial services , healthcare, and directionally the growth is expected to improve versus 4th Quarter being a flattish growth versus this quarter , at least it should have shown the trend of upward trajectory versus actually a (-1%) kind of a growth. So, has it surprised you

 negatively or is it more Wipro -specific rather than external factors and which you believe can be rectified going forward?

Srini Pallia: Sandeep, I will go first and of course, Srini will add. We guide based on a visibility that we have. There are p uts and takes. There are parts of the businesses where we are seeing momentum. And like you rightly said, we remain authentic and true and we share with you proactively where we are seeing some of the d iscretionary spends come back and true to that I think Capco is one place where we have seen now three quarters i t is bouncing back quite broad base. We have spoken about how Americas 1 has had a continued growth momentum; we spoke of healthcare doing well and this quarter we are seeing acceleration of momentum in consumer and telecom in Americas 1. If you look at Americas 2, we have said that BF S has done well in Americas 2 as a sector, and we are seeing a sequential growth there of 1.4% and the bookings h ave been strong. Those are things that we have shared with you very clearly. The places where we see softness is Europe and APMEA . And our guidance is actually a combination of both the pluses and minuses that we are seeing at the moment. S rini also said that we are entering Q2 with a little bit more confidence than what we did a t the start of Q1, right. So , we will have to take all that into consideration , Sandeep.

Sandeep Shah: Srini, just wanted to understand, is there any timeline which you believe by that time we could be in a full execution mode and the restructuring changes will start delivering the results which have been aspired to under your strategic direction?

Srini Pallia: Sandeep, at this point in time, I am not calling out the timeline. Our focus is to execute our Q2 guidance. Having said that, Sandeep, we have called out five strategic priorities. I did talk about the progress we made in each of the strategic priorities. I think what we need to do is to bring in that execution trigger with speed. We need to delight our customer s, focus on delivery excellence and all the operational metrics that Aparna talked about. We need to continue to focus on building large deals, growing our large clients , continue to b uild or invest into our building skills within Wipro. I talked about iA spire, which is very exciting for the employees as we speak and we will continue to invest in industry specific solutions which are powered by AI , consulting led and also cross industry solutions that are horizontal . I did talk about four wins in this segment. One was in Telecom, one was in Manufacturing, one was in H ealthcare, other one more was in Wealth Management within banking and financial services. That gives me comfort on two are as. One, I think our initial strategy is picking up momentum with our clients. Second, these things can be replicated across as well Sandeep. And the skill sets we are building is someone with people who can execute this as well.

Sandeep Shah: Fair enough. And last question, Aparna, this quarter there has been a significant shift towards the on-site which has increased by 250 bps versus that the -1% revenue growth. Is it fair to assume the volume growth or volume decline could be even higher than the headline revenue decline? And in that scenario, even the margin has actually been very good in terms of execution

 and employee cost has gone down

despite the onsite effort, which could be because of the rationalization and the decline in the employee is happening. So, just wanted some clarity on this?

Aparna Iyer: Thank you for the question, Sandeep. I want to bring to attention that we have integrated a few of our entities and as a result, which were more on site specific as so I don 't know if they are directly comparable between Q1 and last Q4 in terms of the onsite mix, but everything else that you have said is also true that our employee compensation cost continues to go down because of a focus and a concerted action around productivity and making sure you're able to deliver to a cost that we would like to given where our revenues are. So, there is a lot of focus around it and all levers are being flexed on that count. So, we are not becoming more on site centric, it 's a metric which may not be directly comparable but going forward now that it 's in the base it will be. A couple of onsite centric subsidiaries have now got integrated. That 's one of the reasons why you're seeing it. But costs are of course comparable and everything else that you set up is taste good.

Moderator: Thank you. Next question is from the line of Ravi Menon from Macquarie. Please go ahead.

Ravi Menon: Hi, tha nk you for the opportunity and c ongrats on good execution on the margin side. So, yes, I wanted to ask you about how you' re thinking about improving growth momentum. Do you want to take an approach where you invest upfront and one of your peers where there 's been a CEO change, they have taken an approach to completely disregard I think near term margins and try to focus on your growth first and then thinking that margins will come later. Do you agree with that or what do you think we need to do to accelerate Wipro's growth?

Aparna Iyer: We have spoken about profitable growth as being our focus. S rini has spoken about it and that remains. You know, our margin has continued to expand because of the operational rigor. This is something that we have been doing over the last 6 quarters. And we continue to March on that. Of course, one of the reasons why we believe that we will hold margins in a narrow band with an upward bias is also because we want to make sure that we are having enough room for us to invest for growth and you can be assured. We won 't hold back on our investments for growth, that remains the number one priority. I have also said that in Q1 we invested in our employees as well. We covered a few of our employees under the long -term incentive stock options. So, that's also coming. So, we continue to invest in our people, in our employees, in our associates and we will continue to invest for growth. Everything that Srini has spoken about, we will continue to invest in them.

Ravi Menon: Great. Thank you very much , Aparna, and there is a question on the customer tiers , yes, we have seen that in the 75 million plus tier , there has been a drop of 3 customers quarter -on-quarter, year-on-year it is still up by 1. But just wanted to understand it and if I look at it, it's not even dropped down to 50 million plus tier by that. When that is do wn by two, so are we still seeing

 some pressure with even the largest clients in terms of spending? Are they still cutting back in projects?

Srini Pallia: So, Ravi, if we look at our client base, the top ten clients have grown, top 25 clients have grown and there are certain clients where you have seen a little bit of a shrink. It's also to do with the discretionary spends which have been a little bit slow in coming. Having said that, Ravi, the strategy for us is we want to invest in our top accounts. We also want to invest in the future top accounts and then I clearly called out the investment will be at an account level where you actually brin g in the right solutions, right delive

ry and the consulting led aspects of it and that
will be the journey for us few here and there. I am not too worried Ravi, but what 's important is
how our top clients are marching forward in terms of growth for us.
Moderator: Thank you. We have our next question from the line of Nitin Padmanabhan from Investec. Please go ahead.
Nitin Padmanabhan: Good evening . Aparna and Srini, I think you had mentioned that the top 10 have grown around 1.3% , top 20 or 25 have grown around 1%. So, obviously looks like the drag has been from these smaller custom ers. Are we still cutting tail accounts or is this just a broad based kind of decline that they 're seeing or any color that you could give us in terms of what you're seeing on that side of things and what do you think will be the drivers for improvement there ?
Aparna Iyer: I think our strategy on tail accounts consolidation is newly towards the end and at least this quarter, I don 't think that 's the compelling reason for the decline. It was more specific to APMEA, more specific to sectors like India, Middle East where we had a long tail of clients and we felt it was important for us to make the clients fewer but go deeper, we are happy with the place where we are. We have executed on that . The decline that you 're also seeing is also a reflection of the lower disc retionary spends and the decline that the company has seen overall and therefore it reflects in a few client buckets like you have mentioned. We remain committed to growing our top 100 clients and you should take insurance on the growth that you're seeing from our top 25 like Srini said . There's nothing more that I need to add on that.
Nitin Padmanabhan: Perfect. And lastly on the BF SI side, so well we have been very early in calling this out and it 's worked out pretty well. What exactly is the current drag that you 're seeing? Any specific sub segments where you 're seeing a little more pain because relative to the others, although we called it out earlier, the relative growth is slightly softer. So, is there any specific sub segments which is causing a little more pain for us ?
Aparna Iyer: Yes. So, I think BFSI Americas is generally doing better compared to Europe. Asia Pacific has also done well. So, that's the color from a market standpoint, I think Europe is being slightly softer.
 Srini Pallia: So, Nitin, Srini here, just to add a little bit more color to what Aparna said . In the context of BFSI, I think we are seeing secular growth both in Europe and America that I talked about both in Quarter 1 and Quarter 2 . And if since you asked the specific where we are seeing that with Capco being the tip of the spear in some of the aspects of the clients across the risk and compliance, across cost optimization and of course some of the business transformation the clients are doing it and Capco is actually leading the charge for us and Wipro is actually becoming more on the implementation side and that 's also coming together, Nitin .
Nitin Padmanabhan: Sure, super. J ust my final question, the way you see things today and the way things are sort of evolving. And you look at the environment in terms of elections, maybe in the second- half, are you seeing clients basically sort of talking of trying to close in some execution early on, considering there could be some level of uncertainty in the end or that 's not a right characterization of what you are seeing ?
Srini Pallia: I like the word Nitin uncertainty, right. The macro environment today is definitely not really as predictable. The political situation varies, but also there could be good news from the Fed in terms of the rates and also the inflation aspects of it. So, it's kind of a mixed bag Nitin as we speak, but where we are focused is and how do we execute a quarter two especially in the context of the range that

we gave you and also the deals that we have in the pipeline, how do we convert them? I think that's the focus we are going to drive, Nitin.
Moderator: Thank you. Next question is from the line of Kumar Rakesh from BNP Paribas . Please go ahead.
Kumar Rakesh: Thank you for taking my question. S rini, my first question was for the last 4 quarters, the magnitude of Q -o-Q revenue decline was coming down and then in this quarter we have seen the decline has increased. This was despite the strength in BF SI that the industry has seen and you have relatively similar or higher exposure in that vertical. That shakes the confidence in the recovery that we were hoping that at some stage should start kicking in. F rom your commentary that you have made about the large deal wins that you are winning , some of the larg er ones are actually in ENU and the strong deal pipeline you have , some of your peers have also spoken about how the deal to revenue conversion now is improving. Do you think you have reached a stage there; you can at least say that sequentially from here on Wipro should start seeing improving revenue growth and if not , then what is holding you back?
Srini Pallia: Kumar , I will not comment how our growth will be beyond Quarter 2 the guidance that we have given. But having said that, Kumar, I want to call out a few things, right? We are still not seeing a significant change in the demand environment. There is caution from our clients and discretionary spend is low. However,

like I called out, we are seeing an uptick in Capco. We are seeing an uptick in BFSI and also talked about consumer business i n the US, but the sectors like
ENU and M anufacturing specifically for us has been soft. And if you look at outside of Americas one and Americas two, while they are building the momentum, the other two market units, which
 are specifically Europe and APMEA , we have seen a sequential decline and in the context of large deals, some of the deals we are in the early stage. Some of them are net new, are in the early stage, we have signed , and I presume that it will take few quarters for us and Aparna did talk about some component being taken in quarter two and quarters ahead. I would say that would be my summary for your question, Kumar.

Kumar Rakesh: Thanks for that. My second question was more of a clarification. So, last month, Airbus came out with a profit warning and since then we have seen a couple of Europe based ID services, some of the services companies issuing their own profit warning as well cutting their guidance. Does our manufacturing weakness has anything to do with that or do you think any of that has any implication for Wipro?

Aparna Iyer: No, not really. A ll what you mentioned really is not impacting us in fact like Srini mentioned , we have a good pipeline, we won a good deal . For us , this is about our own conversion of the pipeline that we have, and I don' t think the companies you mentioned or their profit warnings there have had anything to do with the softness that we have experienced.

Moderator: Thank you. We have a next question from the line of Sudheer Guntupalli from Kotak Mahindra AMC. Please go ahead.

Sudheer Guntupalli: Hi Srini, thanks for the opportunity and just perplexed with a set of comments from your side, which seems to be contradicting each other. On one side, we are saying that for the last three quarters, we are seeing an uptick in Capco, which is consulting/discretionary heavy and that is not necessarily translating into a very strong growth at the BFSI level or at the overall company level , which I think some of our competitors have reported almost 7 .5% to 8% sort of sequential revenue grow th in BFSI in this quarter. So, if you were to give us a cut on if Capco within BFSI is doing well, what is not doing well? I understand the geographical slicing and dicing you gave earlier, but any specific color on if you're facing any client specific issues or any corporate action related impacts so on and so forth. That would be helpful .

Aparna Iyer: Sudheer, I think let me summarize all the comments that we made. F or us , we were the first to call out the momentum coming back in C apco in Q3 . Q3, Q4, Q1, I think we have three dots of Capco doing well both on bookings and a revenue standpoint. I think they have grown 3, were upwards of 3% sequentially. The momentum looks good for Q2 and within Capco, we have secular growth. Maybe there are some pockets of continental Europe that are weak, but other than that , they have a broad-based bounce back. BFSI outside of Capco, Americas two certainly is bouncing back. We have had some good wins with a few large regional banks, and we are accelerating momentum and thin gs look to be in better shape there, r ight. On the Europe BFSI outside of Capco, we are seeing some softness which we have shared with you. It 's a combination of a lot of things we have said along with the macroeconomic environment being weak and lower discretionary spend.
 Sudheer Guntupalli: Thanks, Aparna. And Srini, if you can, is that in any way related to the corporate action that 's going on between a couple of large European banks by any chance?

Aparna Iyer: No, I don't want to call out anything specific. It 's a combination of multiple factors. It 's not really just one client or so.

Sudheer Guntupalli: Sure. And the other question is, it looks like we are now completely integrating Capco and Rizing on our books if I were to understand one of the prior responses that we had given. Is that correct understanding?

Aparna Iyer: No, they always integrated, they're fully consolidated. That 's not what I meant. I meant in terms of just the bringing together the larger, perhaps the functions and the facilities and the optimization that you have by bringing perhaps to organizations closer and that 's what I meant, including maybe integration of the systems and the IT systems and the people , cross pollination of talent, things like that. But they are fully integra ted, fully consolidated, yes.

Sudheer Guntupalli: Yes. No, I was asking because earlier one of the concerns a few quarters back was that if they are deeply integrated , then probably the go to market positioning of then Capco and Rizing will have to see a bit of a reset. So, I am just thinking as to whether that concerns were completely addressed now ?

Srini Pallia: So, one of the things that we see is both the teams are actually leveraging the complementary capabilities, especially in the context of transformation deals. So, I think the collaboration between both Capco and Wipro' s business has yielded strong origination and also significant number of synergy deals. This is also evident where we are jointly entering some of the new financial services market, especially in the AP MEA region specific to Middle East and India domestic and the advantage we hav e here is like I said, Capco is the tip of the spear, right and the areas that I called out whether risk and compliance, whether it 's to do cost optimization or the transformation of the bank or the customer experience, right. I think it 's a very good partnership between Capco and Wipro. I forgot to mention Rizing. A s far as Rizing is concerned , if you look at the Rizing, they are very strong and dominant on certain industry segments, for example, fashion, retail, right. So, the way we are doing it here is that or SAP HANA. So, whenever there's a large transformation program, the clients are looking us as sort of bringing the consulting capabilities of Rizing along with the delivery and execution capabilities of Wipro together, and that 's where we are able to win some of the trans formation deals specifically in

SAP and we are seeing a good traction there.

Moderator: Thank you. We have our next question from the line of Manik Taneja from Axis Capital. Please go ahead.

Manik Taneja: While some of my questions have already been answered, I just wanted to quiz you on the segmental margin performance, especially with regards to Europe and AP MEA m argins, while

you have spoken about some of the revenue challenges in that geography, if you could help us understand what 's driven the margin decline in those geographies, that 's question number one. And the second question was with regards to the financial services performance in Europe with some of the leadership changes in Capco and even at the company wide level , is that also creating some drag for the financial services business in Europe for you?

Aparna Iyer: So, I will take your second question first. I want to like ally of yours fully. The Capco leadership is fully stable and it's doing really well. Srini alluded to it where he said the collaboration is deeper, better and the secular growth is back, so I don't think there is absolutely anything to do with that. The softness in Europe is actually outside of Capco and actually even though we were doing well on synergy deals, there are some soft ness that is coming both due to the macroeconomic enviro nment, the lower discretionary expense and a few client specific issues as well, right. So, it's a combination and I will leave it at that. The first question on segment margin, yes there is a decline in both Europe and APMEA , actually, APMEA has improved year-on-year, but Europe has actually declined year-on-year and what you will see in the segment is that our unallocated costs have come down substantially between Q4 and Q1. We have changed the methodology in which we absorb some of these group costs. And therefore, their costs have been spread to the market unit. So, therefore you 're seeing a decline to be a little bit more exhaustible , deeper than it should be. But Europe, the weakness in margins is again linked back to our revenue performance and nothing more to add on that . APMEA actually is doing better year-on-year and perhaps someone in the IR can give you more details.

Moderator: We will take our last question from the line of Girish Pai from BOB Capital Markets. Please go ahead.

Girish Pai: Aparna, the commentary on margins, it 's moved from a narrow band to a narrow band with an upward bias. I am seeing that being introduced for the first time. So, what 's leading to that?

Aparna Iyer: I think we have been able to execute on a bit-by-bit improvement over the last six quarters. The tailwind of the operational rigor gives us confidence as we get into Q2. You must note that the guidance that we have given for quarter two is also perhaps amongst the better guidance range that we have given in the last six quarters. So, all of that adds to the confidence as we look at quarter two and beyond.

Girish Pai: An upward bias could be in a 50 to 100 basis point upward bias ?

Aparna Iyer: I think it's very that 's why you should read it along with narrow band and with an upward b and.

Girish Pai: Last year you pushed the wage hike, I think by about 3 months. Would we see the same cycle this year and the quantum, would it be pretty similar?

Srini Pallia: Salary hikes last year we done it in December. We have not decided when to give the salary hikes . We will decide in this quarter but will be in line with the market whenever we decide.

Girish Pai: My last question is to do with competitive intensity and one of your larger peers is discussing that it was giving out fairly large productivity gains back to customers in areas like BPO and testing and stuff like that because of generative AI. Is that wha t you 're

seeing in the market,
heightened competitive intensity because of GenAI?
Srini Pallia: So, Girish , like I said, clearly we have a strategy for GenAI, and I talked about the three places
where we are doing it. So, whenever we put a solution to the client, all the deals that we have,
we leverage Gen AI. So, what goes to the client is GenAI powered solutions if you will and we
are also infusing, like I said, GenAI into some of the engagements that we have with our clients.
So, that would be the combination of the two. So, GenAI does help us in terms of productivity.
So, to me, this kind of trend is not new. There will be always in the context of bidding and risky
deals. There will be some companies who will try to pick up deals at an extremely low margin or extremely high risk. But those trends do not last for long as such, approach is clearly not
sustainable in the longer -term mark, Girish . However, we are not worried about this trend and
neither does it require any changes to our strategy.
Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand the conference back to Mr. Dipak Bohra for closing comments. Over to you , sir.
Dipak Bohra: Thank you all for joining the call. In case we could not take any questions due to time constraints,
please feel free to reach out to the Investor Relations team. Have a nice evening. Thank you so
much.
Moderator: Thank you members of the management team . On behalf of Wipro, that concludes this
conference. Thank you for joining us and you may now disconnect your line s.

Call: Oct 2024

“Wipro Limited Q2 FY'25 Earnings Conference Call ”

October 17, 2024

MANAGEMENT : MR. SRINI PALLIA – CHIEF EXECUTIVE OFFICER & MANAGING DIRECTOR , WIPRO LIMITED
MS. APARNA IYER – CHIEF FINANCIAL OFFICER , WIPRO LIMITED
MR. SAURABH GOVIL – CHIEF HUMAN RESOURCES OFFICER , WIPRO LIMITED
MR. DIPAK BOHRA – SENIOR VICE PRESIDENT , CORPORATE TREASURER & INVESTOR RELATIONS , WIPRO LIMITED

Wipro Limited
October 17, 2024

Moderator: Ladies and gentlemen, good day and welcome to Wipro Limited Q2 FY'25 Earnings Call . As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing “*” then “0” on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. D ipak Bohra – Senior Vice President (Corporate Treasurer & Investor Relations). Thank you and over to you, sir.
Dipak Bohra: Yes. Thank you , Yashashri . A Warm Welcome to our Q2 Financial Year ' 25 Earnings Call .

We will begin the call with the “Business Highlights and Overview ” by Srini Pallia – our Chief Executive Officer and Managing Director, followed by “Updates on Financial Overview ” by our CFO – Aparna Iyer. We also have our CHRO – Saura bh Govil on this call. Afterwards, the Operator will open the bridge for Q&A with our Management Team .

Before Srini starts , let me draw your attention to the fact that during this call, we may make certain forward -looking statements within the meaning of Private Securities Litigation Reform Act 1995. These statements are based on management's current expectation s and are associated with uncertainties and risks, which may cause the actual results to differ materially from those expected. The uncertainties and risk factors are explained in our detailed filings with SEC. Wipro does not undertake any obligation to update the forward -looking statements to reflect events and circumstances after the date of filing. The conference call will be archived, and a transcript will be available on our website.

With that, I would like to turn over the call to Srini. Thank you.

Srini Pallia : Thanks, Dipak . Hello , everyone. Thank you for joining me and my Leadership Team for our 2nd Quarter Results for the Financial Year 2024 -25.

In Q2 , we met our expectations for revenue , bookings and margins. The long -term potential of our business is strong, and we are prepared to handle the current economic uncertainties. We continue to focus on our five strategic priorities and building a strong talent pool to capture AI opportunities.

Now , let me go over the “Financial Highlights for the Quarter ” and share some “Specific Insights on our Markets and Industry Sectors .” All the revenue growth numbers I share will be in constant currency.

Our IT Services revenue for Q2 was $2.66 billion , reflecting a sequential growth of 0.6%. This brings us closer to the upper end of our guidance.

Operating margins came in at 16.8%, which is an expansion of 35 basis points quarter -on-quarter and 71 basis points year-on-year.

In terms of total bookings, we ended the quarter at $3.6 billion, which is an 8.4% increase quarter -on-quarter.

Our Capco business continues to see traction and grew 3.2% quarter -on-quarter and 6.9% year -on-year.

Coming to our “Strategic Market Unit Performances ”:

We saw sequential growth in three of the four markets in Q2. Americas 1 achieved sequential growth of 1.2% driven by good performance in Healthcare, Technology and Communication sectors. Americas 2 also recorded sequential growth of 0.8%, supported by robust demand and strong execution in the BFSI sector. APMEA grew by 0.3%, driven by traction in Capco. We are seeing early signs of our business stabilizing in this region. Europe registered a sequential decline of 0.1% due to overall weak demand and client -specific issues in few accounts.

Among industry sectors , we experienced varied performance. With strong account mining and traction in Capco business , BFSI continue to accelerate, delivering 2.7% sequential growth. This growth was led by Americas. Additionally, we are seeing momentum in both APMEA an

d Europe.

This marks the third consecutive growth quarter of growth in BFSI.

Technology and Communications grew by 1.6% sequentially , driven by the ramp up of a recent large deal and momentum in existing relationships. However , Manufacturing remained soft for us , with a sequential decline of 2%.

We are seeing good progress with our consulting -led industry solutions in the automotive Manufacturing segment. In addition, there are also signs of uptick in demand in the industrial segment. We will focus on converting this into wins to revive growth in Manufacturing .

Energy and Utilities also remained weak, with the sequential decline of 3.7%. However, we see opportunities for vendor consolidation and cost takeout, particularly in the energy sector.

As you may remember from the last two quarters, we identified five strategic priority areas of growth. We have advanced in all five areas, and I would like to take this opportunity to share some indicators of our progress in Q2:

One, we stayed focused on growing our large accounts in our four profitable markets and six priority sectors and we will continue to invest in them for expansion and growth. In Q2, our top account grew 4% sequentially , the top 5 accounts grew 6.2% sequentially and the top 1 accounts grew 3.7% sequentially , reflecting our focus on expanding our footprint and scaling our large accounts.

Of course, large deals are crucial for our growth. During the quarter , we booked 19 large deals with a TCV of $1,489 million. This translates to a growth of 29% sequentially and 16.8% on a year -on-year basis.

It is encouraging to see the diversity in our large wins across sectors. The deals we won cover a

variety of themes, from cost reduction and vendor consolidation to application modernization and cloud operations. In fact, we are leading these deals with industry and cross -industry solutions, which are consulting -led and AI-powered.
Let me briefly talk about the two largest deals we won in Q2:

• A leading transportation and logistics company has selected Wipro to drive a business -critical SAP S /4HANA transformation program. This win involved collaboration between all our consulting arms, Rizing, D esignit and Capco . It also highlights our industry knowledge and ability to deliver customized solutions to clients.
• Second Example : A software technology company has selected us to support its product development and IT operations end-to-end. This is a total outsourcing deal where Wipro will consolidate vendors and take over Engineering, Application, Infrastructure and Operations for the Client. Additionally , we will implement GenAI -power ed solutions to solve business challenges and deliver operational efficiency.

It's important to highlight that one of these deals involves a new client , while the other marks a transition from having a minimal presence to becoming a strategic partner.
Let me now talk about another strategic priority, which is “Building Talent at Scale ”:
We believe all our employees should adopt an AI mindset , have the right skill set and use the right tool set in their work for our clients. In previous quarters, I have discussed our investments in rescaling our workforce for AI opportunities. We have now trained and certified over 44,000 employees on Advanced AI, and we have a significant number of employees actively using AI

developer tools across the company. In addition, we are developing talent closely aligned with our clients business need s. For this , we have established account -specific academies to upskill employees , providing a clear road map for building capabilities relevant to both the industry and the technology context.
Before I share our guidance for the next quarter , I want to thank all my colleagues for their amazing support. As an organization, we grow by actively listening to feedback.

In August, we conducted our
Annual Employee Engagement Survey , and in addition. I have made it a priority to connect with employees wherever I go. We have taken specific actions based on their feedback. As you're aware, we implemented a merit salary increase effective September 1, just nine months after the last cycle , demonstrating our ongoing commitment to our employees.
Last month , we hosted a Leadership Summit where our top -300 leaders from across the globe gathered right here in Bangalore to reflect on our business and chart our future direction. It was encouraging to see that we have come together as Team Wipro and there's a strong commitment to driving client success. I hope to harness this momentum and continue moving forward together.
Now , on to “Guidance ”:
Our Q3 revenue is expected to be affected by seasonal furloughs and fewer working days in this quarter . As a result , we are guiding for a sequential revenue growth of minus 2% to 0% in constant currency. Despite the softness in revenue in Q3, we are confident of maintaining our margin in a narrow band.
With that , let me turn it out, “Aparna, for a Detailed Overview of our Financial Financials .” Thank you. Aparna, over to you.
Aparna Iyer: Thank you, S rini. Good evening, ladies and gentlemen. I will share a quick update after which we will open up for Q&A.
On the IT Services revenue for Q2, we delivered a sequential growth of 1.3% quarter -on-quarter in the reported currency and a growth of 0.6% in constant currency. This is closer to the upper end of our guidance range that we had laid out last quarter.
We are pleased to share that our operating margin for the quarter was at 16.8 %, an expansion of 35 basis points quarter -on-quarter and 71 basis points year -on-year. This brings us one step closer to our earlier conveyed target band of 17 % to 17 .5%. This expansion in margins was achieved on the back of operational improvements and after absorbing one month of salary increments that we rolled out for our associates effective 1st September.

We begin Q3 with headwinds of furlough and the incremental impact of salary increases. Yet , we remain confident of staying in a narrow band of margins. Our net income grew 21.3% year -on-year. This was on the back of higher operating profits, which grew at 11.4% year -on-year. Our EPS w as at INR6.14 which grew 6.8% sequentially.
Q2 was yet another quarter of strong cash flows. Our operating cash flows of $510 million in Q2 is 132.3% of our net income. With this, we have cumulatively for H1 generated nearly a billion dollars in operating cash flows. At the end of Q2, our investments and cash balances on our balance sheet now stand at $6.2 billion.

In other key matrices , our other income , net of the finance expenses , grew 34.2% sequentially. Our accounting yields for the average investments held in India was at 7.9% . ETR was at 24.6% in Q2. Our hedges continue to be in line with our policy. We are about $2.8 billion of FOREX derivative contracts as hedges at the end of Q2.
Finally, before I move to guidance, I would like to share that in our recently concluded board meeting, the board of directors have recommended issue of bonus shares to our shareholders in the ratio of 1:1 subject to the approval of shareholders. Rationally, we are working through our revised capital allocation in line with our strategy and hopefully we will be able to share the details of that after our January board meeting .
In terms of our guidance , to reiterate what was stated by S rini, we expect the revenues from our IT Services business segment to be in the range of $2.607 billion to $2.660 billion. This translates to a sequential guidance of minus 2% to 0% in constant currency terms.
With that , we can open up for questions. Operator ?
Moderator: We will now begin the question -and-answer session. We will take our firs

t question from the line of Abhishek Kumar from JM Financial. Please go ahead.
Abhishek Kumar: My first question is on the guidance. Is this just the f urlough s or are we also seeing flow -through of the client -specific challenges that you mentioned, which kind of informing slightly mutish guidance for next quarter?
Srini Pallia : Thanks, Abhishek. As far as Q3 guidance is concerned, clearly f urloughs like Aparna called out has one and also the number of working days obviously is much lower. We also have some slowdown in Europe , thanks to client specific reasons. Having said that , we see good momentum in our deal pipeline across Americas 1 and Americas 2 and also APMEA . We do have good pipeline in Europe too. The focus for us is to actually win some of those and maximize our deal bookings for this quarter.

Abhishek Kumar: Next question is on your Energy and Utilities . You had mentioned last quarter also there are certain client -specific challenges here. Are these now behind us or are they still there in front of us? How should we think about E&U as a continuous headwind to our overall growth ?
Aparna Iyer: So, like Srini shared in his speech as well , it is work -in progress. There is a good pipeline, there is a demand across vendor consolidation cost takeout , and there are very, very good deals in the pipeline. We have to focus on conversion for us to improve our overall performance in E&U . That's all that we have to say this … it's all down to execution.
Srini Pallia : Just to add a little bit more color to what Aparna said, Abhishek , specifically in the energy sector, we are seeing opportunities around cost optimization and vendor consolidation as well, which is a good news.
Abhishek Kumar : Maybe just what I wanted to understand here is, are there any ramp downs that are continuing in few clients that is impacting us? And if that is so, when do we expect those ramp downs to be behind us?
Aparna Iyer: Yes, our guidance for Q3 has several puts and takes ; it has furloughs, it does have fewer working days, it also factors in certain impact of certain client -specific challenges that we have alluded to in Europe. All of this is factored into the guidance as we start Q 3. Given the momentum that we are building up, if you see there are performance across market units in sectors, it has improved, and it is becoming a little bit more secu lar than what it was maybe three or four quarters back. So , we are hopeful that we will build on that momentum once we are behind the seasonality of Q3.
Moderator: We have a next question from the line of Nitin Padmanabhan from Investec. Please go ahead.
Nitin Padmanabhan: Aparna, wanted your thoughts on the drivers that are helping margin, the initiatives that are sort of offsetting the wage increase impact and the revenue headwind, special things ?
Aparna Iyer: So, we have a set of traditional levers that have been at play. We have been improving our utilization consistently over the last few quarters. I do think the levels at which we are, we have to continue to sustain that . In Q2, we have dipped our utilization slightly , but we are well above the benchmark that we would like to be at. Secondly, offshoring is also a lever that we have flexed . Going forward , what are the levers that we will use? There are the traditional set of levers -- fixed price project s, pyramid improvements. The other lever that's very topical to us is around G &A optimization. We have spoken about that . We have done some work on it over the last few quarters. Some of it is paying off as we get into Q3. Also, some of the acquired entities , as they are getting integrated into the organization, there are certain synergy benefits that we are realizing around overheads and G &A. Those are some of the levers. If you look at our SMU wise profitability metrics that we share, I think Europ

e and APMEA have improved profitability and Americas 2 has improved profitability year -on-year. So ,

there is a good again orientation towards profitable growth, which is leading to operational improvements , Nitin .

Nitin Padmanabhan: The second question was around; I think a lot of work has gone behind building deal momentum and sort of looking at the cost and all of those things over the last couple of quarters . In that context , do you think that return to growth could happen sooner rather than later overall ? Are you happy with the way things are moving, or do you see there are further areas that require fixes before we are able to really move back to growth?
Aparna Iyer: Nitin, we have grown in Q2. I think the key for us is to really build sustainable growth that we can deliver consistently, right? And that is still work -in-progress. There are parts of the business which are performing much better. We have alluded to Capco I think , BFS I as an overall sector is doing very well , Americas 1 has momentum that's secular, right , and Americas 2 outside of (EMR), Energy and Manufacturing is doing well. So, there is more secular return in some sense of momentum at least in America s for us to bounce back to growth deterministically , Europe and APMEA also have to chip in. APMEA , we are seeing some early signs of stabilization. Europe is still work -in-progress. And that's something that we will have to look at before we are able to give you a better color. S rini, if you want to add something.
Srini Pallia : Sure. So, Nitin, let me give you in the context of the deal pipeline that we have built. All I can say at this point in time is healthy, there is momentum around the deal pipeline and it's also secular across the four markets and across the six sectors that we operate in, which is for me a good news. I think the focus for me and my team right now is how do we secure those winds quickly within Q3 and move forward in Q4. The advantage in Q4 is that the f urlough s and the number of working days would change. That itself is one of the positives and the deal momentum and the wins could actually add to that. So, net-net, Nitin, I think I continue to state that we have good momentum. We need to execute to that.
Nitin Padmanabhan: Are you seeing an increase in smaller deals within the pipeline that could convert faster ? Your peer had mentioned that in the recent call . Some of your peers have been suggesting that they're also seeing heightened smaller deals within their closures as well. So, just curious to know your thoughts on what you are seeing on this aspect ?
Srini Pallia : So, Nitin, while we talk about the pipeline, it's a combination of both large deals, mid-size deals and smaller deals. That's number one. Number two, if you look at our own bookings for Q2 of the 3.6 billion , 1.5 billion came in from large deals. But if you remove that 1.5 billion, the balance is a combination of both mid-size deals and smaller deals . Second, if you look at the kind of opportunities that we get especially when during the discretionary spend around Capco , BFSI, some of them ten d

to be much smaller , they need not be large deals. Overall, I think the way I see it is , we do have smaller deals, mid-size deals and large deals and we continue to remain optimistic on those pipeline .
Moderator: We will take our next question from the line of Sudh eer Guntupalli from Kotak Mahindra AMC. Please go ahead.
Sudheer Guntupalli : So, just your internals are looking very good , deal wins are looking good , you seem to sound more confident on a broad -based set of segments this time versus last quarter, however, the guidance seems to be a bit counterintuitive. So , in that backdrop, a couple of questions. So , when you say f urloughs , so this time around most of the other companies are actually indicating th

at furloughs are just in line
with normal seasonality with some of them actually saying the furlough impact will be lower than the previous year and historically, we had a relatively slightly better H2 compared to H 1. So, why is furlough such a game changer for Q3 guidance , that is number one? And number two, when you say client -specific issues in Europe, is it some part of the business that you want to rationalize as a new CEO, and you have taken a strategic call to kind of cut that business or is this something where we have a certain client because of whatsoever their specific reasons has been hurt ing us? Again, I'm asking the Europe question because surprisingly this quarter Europe has been good for most of the companies which reported so far and we have been having very localized teams in Europe. So, it's surprising why we are facing those challenges while others are not. So, just those couple of questions, first on f urloughs, second on Europe.
Sudheer Guntupalli : Sudh eer, in terms of our f urlough, the visibility that we have is very similar to what we experienced last year and that's the assumption that we are factoring in . Obviously, during the quarter we will have to work through it with our clients. As far as lower working days is concerned, that's also something that is very seasonal for Q3 compared to Q2, both of which are factored. Additionally, we have called out for us, which is factored into our guidance is the softness that we have in Europe, and I will ask Srini to respond to the questions that you pos ted in Europe.
Srini Pallia : Thanks, Aparna. Hi , Sudheer. So, I think Aparna answered the question on f urloughs . I think for us relative to what you heard from other companies seems to be constant what happened last year at this time. Maybe it could be very specific to the clients that we are engaged with and the decisions that they take because some of the sectors have a lot more f urloughs than the rest. So, maybe that's one reason why we have some impacts . we continue to have the same level of impact on f urloughs. N ow, coming specific to Europe and client -specific need , I would say a couple of clients where we have been working with them have actually changed the direction because of which there has been some

ramp downs. So , it's very, very specific to the combination of some of the industries and Europe which is actually contributing to that slowdown for us and weak growth both in this quarter that you've seen , Sudh eer. But having said that , I want to reiterate that the countries and the specific

industries that we are focusing in those countr ies, the pipeline has built up and right now myself and my team are focused on winning those.

Sudheer Guntupalli: So, is it fair to expect that possibly when we look through this furlough and specific impacted time period of December quarter, subsequently we will be able to build that secular growth momentum, part of which we had seen in this quarter as well?

Srini Pallia: Sudheer, as a process we just guide for the next quarter, which is Quarter 3 . So, you are right, in Quarter 3 , we got impacted for the reasons that we stated. Having said that, some of them will not be there in Quarter 4 and also with the deal pipeline and the momentum that we have that should also help us going into Quarter 4 , but I will not be able to predict how the Quarter 4 is going to be at this point in time.

Moderator: Thank you. We will take our next question from the line of Gaurav Rateria from Morgan Stanley. Please go ahead.

Gaurav Rateria: My first question is with respect to the large deal momentum. If you look at the rolling 12-month data for a while, you were stuck at $4.5 billion and now we have crossed that and gone to $4.7 -$4.8 billion. Just trying to understand what has driven this change. Is it more specific to Wipro in terms of the initiatives aro

und largest put in place which is triggering this increase and increase in the win ratio, or something has changed around the pipeline or our approach to the overall large de al wins, so just trying to understand how sustainable this improvement is that we are seeing here?

Srini Pallia: So, Gaurav, if you look at in the context of a large deal, what is very important for us is to be proactive with our clients. Second, we have to lead with consulting and with infuse AI or AI power solutions. So, the industry and cross -industry solutions that we have also help us solution it right for the client and customize it right for the client. So, the deal win that I talked to you about in the transportation industry very clearly demonstrates wherein we brought in our consulting arms and we brought in our industry specific domain solutions to win that particular aspect. Second, it is also disciplined right how you build the pipeline both proactively, how do you qualify that pipeline and then go for the win and the whole process and the ni ne yards that you do. So, picking the right deal that you want to go after also makes a big difference around. So, there are very small changes, but sometimes these changes can impact. Now going back to a question on sustainability, like any large deal at the end of the day, it is a binary, right, so I will not be able to predict how it is going to go, but if you have noticed, we are consistently being above billion dollars every quarter in terms of the large deals.

Gaurav Rateria: The second question is for Aparna. You did allude to couple of factors which were specific initiatives of Wipro and topical to the company on margins, so have those initiatives already played out in the

form of resulting in margin tailwind in the last two quarters or do you think that there are some more that will be flowing into the margins over the next 2 quarters?

Aparna Iyer: Certainly, there is a lot of effort that is still in process in order to improve Gaurav, if you notice that we still have to absorb two months of salary increases and it is also seasonally weak quarter in terms of furloughs, so all hands on the deck, I th ink what will be very key is to execute Q3 when and the topical levers are also at play. We still feel that there are optimizations that we can still do and achieve.

Moderator: Thank you. We have our next question from the line of Sandeep Shah from Equirus Securities. Please go ahead.

Sandeep Shah: Just wanted to understand Srini, post you took control , what in your assessment are the internal factors outside the macro factors which is affecting the demand? We have to correct, or we have to rectify for us to go into a sustainable consistent growth path.

Srini Pallia: Sandeep, if you look at it, what is very important is we have laid out our five strategic priorities and we have to consistently stay focused on that. So, if you look at the focus on large accounts in our priority sectors and prioritized markets, I think that is helping us. If you look at the growth that we got in the top five accounts, top ten accounts reflect some of the focus that we have brought in. And we have to stay focused, we have to be consistent around that going forward. Second is the large deals that I just talked about, the question that Gaurav asked about right, we have to be proactive, we have to shape the demand, and we have to understand the client, both the business and the technology needs and bring in the right industry and cross industry solutions upfront for the client to feel comfortable about Wipro and how we can execute for them. Third one is the industry solution itself that I talked about, right, consistently stay focused on that, which are consulting led and AI power ed. We have had some good successes in the last two quarters and a little of this gets into implementation, then becomes more referenceable. I

think you can actually more and more depend on those solutions.
The fourth one is building talented scale. I did talk about the fact that we have to have the right mindset, skill set, and tool set across our employee base after the initial 230,000 people who got trained on the basics of Gen AI, now we have got 44,000 employees doing that. So, how do you lead with AI in the projects, whether it is in software development cycle or engineering, how do you infuse AI into projects which are more on the managed services, be it application infrastructure or process and then how do you actually build AI powered solution, whic h is the conceptualization itself starts with AI, right. And so those things we need to stay focused on building their talent also for the specific customers and the clients that I talked about on the academies right. Sometimes it is important to understan d the industry the client has been, the specific technology landscape that they are in. So, it becomes much easier for it to execute. And the last point, Sandeep is the customer

centricity, client centricity. We have defined 5 pillars of client centricity. We got to deliver. We have got to innovate our delivery as the technology landscape changes. So, if we stay focused on these five top priorities that we called out quarter after quarter, year -on-year after, I am sure we will continue to get better.
Sandeep Shah: But despite this top five priorities every quarter, we have somewhere or the other portfolio related issue which keeps our growth rate marginally positive, negative or flattish. So, any timeline when you expect whatever rectification we wanted to do would be over and we can come back on a consistent growth path?
Srini Pallia: Fair comment, Sandeep, very fair comment. And if you look at it right, if you look at it from a markets perspective, this quarter has been a little different from the last quarter where three out of the four kind of showed us some sequential growth, which I think is a positive right step. As far as the sectors are concerned, I think we have c ontinued to lag both in Manufacturing and energy and utility. Having said that, I think we have got good momentum going in other sectors, be it BFSI which I talked about healthcare, technology and communications and also consumer. I think we will continue to stay focused on those four, bring in acceleration the momentum in those four sectors while we do the correction in both Manufacturing and E&U which is more specific to Wipro than what you see in the industry.
Sandeep Shah: And when do you expect those correction to start yielding result in Manufacturing and E&U ?
Srini Pallia: So, Sandeep, I don't give guidance beyond Quarter 3 . But having said that, I did tell you that specifically if you look at in Manufacturing sector, I called out automotive segment, I called industrial segment. We are seeing pipeline and traction out there for us. Now, the question is do we win those, if and when we win the deals that will show up on the revenue side sooner than later. On the Energy and Utilities segment, I did talk about specific deals in the energy sector, which has around cost optimization and vendor consolidation. Some of those deals are in the process, but I think you have to win. So, if we do this, if we execute this pipeline and deals that we have in these two sectors, Sandeep, things should get better, but at this point of time, I can't give you a specific timeline.
Sandeep Shah: And your earlier commentary suggests 4Q could be better than 3Q?
Srini Pallia: So, Sandeep, what I said was the headwinds we have when it comes to number of working days and furloughs, some of them may not be there in Quarter 4 . That is the comment I made, Sandeep.
Sandeep Shah: And just the last thing, post the budget, there is a tax ruling change on the buyback, so any view will we consider buyback

as a continued option to cash return to the shareholders or we may move to

dividend because the tax treatment of both being neutral going forward, in buyback, we still get a benefit of a reduced share count?
Aparna Iyer: You have said it, Sandeep, we do think that there are benefits of buyback compared to the dividend even after the budget that has been announced. But that said I think we are drawing up our revised capital allocation policy in line with this track plan th at we are putting together for the next 2 -3 years. And I think we will be in a position to share a more detailed and informed answer to your question in terms of what is going to be our approach. I think that is work in progress and we will do that.
Sandeep Shah: And just related question, as we have indicated earlier, we now look for string of pearls kind of an M&A rather than a big-ticket M&A?
Srini Pallia: Sandeep, the way I see M&A is a strategic advantage for us going forward. We do continue to look for opportunities in the marketplace, whether it is in specific white spaces, markets or sectors. So, in that context, Sandeep, the first thing is to look at what are the opportunities that you have in market and then take your decision. So, I am not calling out anything like a string of pearls, but all I am trying to do is, I want to be very deliberate and very focused in terms of what we want to do with M&A, but M&A is a big part of our strategy.
Moderator: Thank you. We have our next question from the line of Sumeet Jain from CLSA. Please go ahead.
Sumeet Jain: So, firstly, Srini, Aparna, I wanted to know from you in this guidance of -2 to 0%, what are you building for BFSI next quarter? Are you still building in growth momentum to continue, but given it

has high furloughs, but you are seeing a strong momentum?
Aparna Iyer: So, our BFSI business also has a component of Capco which has higher furloughs compared to the rest of the work consulting in general and of course Capco is far more susceptible to furloughs. It is factored into our guidance. But other than that, I think the m omentum in BFSI has been fairly strong. We have done well. If you look at our Quarter 2 growth, it has done well across all market units. It has done across various service offerings. So, we do think that the momentum in the BFSI sector from a volume trajectory is good, it has also been impacted more deeply by furloughs and that is factored as a part of our guidance.
Sumeet Jain: I just wanted to understand how long this decline in Manufacturing and E&U , the energy utility verticals will continue given that for the last 7 -8 quarters now it has been declining. So, the ramp down in the client specific areas should have been over by now. So, is it like a structural problem we are facing in these two verticals? Because when I look at Manufacturing , particularly, it has seen very strong growth for most of our peers plus the SAP S/4 HANA transformation is a big opportunity, which you also mentioned is playing out in your logistics client, so I just want to unde rstand how

Manufacturing E&U will play out, let us say over the next 6 -12 months, forgetting about just next quarter?
Srini Pallia: Sumeet, first and foremost, these are very two2 important sectors for Wipro. We have been in Energy and Utilities and Manufacturing sectors for a very long time. I have personally driven this business in the past. Having said that, your observation is right that we have been slow relative to the peer group in terms of our growth or rather lack of growth. However, like I mentioned, in Manufacturing for example, there are specific segments we continue to focus on, for example, automotive right. There are opportunities, for example in software defined vehicles, which is our Cloud Car that is more on the engineering side of it,

for example. Second, you yourself mentioned SAP S/4 HANA.
Thanks to our acquisition of rising and now we can lead with consulting in SAP S/4 HANA. So, to me, Manufacturing and Energy and Utilities are very important sectors we are staying focused on and we also have the pipeline like I mentioned, we were in energy, we do our pipeline and cost optimization and also in terms of cost transformation. So, what is important for us, what we need to do Sumeet is to double down and focus on these two sectors and bring growth back.
Sumeet Jain: Look forward to that revival maybe in few quarters. And secondly on the deal side, we can see our reported deal wins have been good, but the conversion to revenues have been a bit slow. So, is it like there is a delayed conversion of deals to revenue or is it like the duration of these deals is much longer? So, the ECV is lower leading to a lower revenue conversion?
Aparna Iyer: Large deals typically have a cycle for ramping up, right. One of the large deals that we had earlier alluded to that we had won it will take several quarters to ramp up. On the contrary, there is another large deal that we won in Q2 that has instantly ramp ed up and is giving us revenues. I think it depends on deal to deal. Overall, we are not concerned about the deal conversion being slower. We are happy with our large deal bookings. In fact, while we don't give out a number, the Net New in these bookings is fairly good, especially in Q2. I think we just need to focus on winning more and the conversion will happen. Yes, it takes 2 to 3 quarters for it to fully ramp up and deliver, but that will happen, Sumeet.
Sumeet Jain: Are you seeing any sort of delay in deal closures because of US election related uncertainty in the US geography?
Srini Pallia: So, Sumeet, I know you have been tracking US politics irrespective of which party comes in, which leader comes in. Traditionally, the US economy continues to grow , and the US is a dominant economy. If you look at it post COVID as well in terms of growth, I will say the impact of politics will not be that significant at least from my vantage point, Sumeet.

Sumeet Jain: And just lastly, when I look at your number of active customers, it has been consistently coming down for last 7 to 8 quarters. So, any particular strategy we are following out there?
Aparna Iyer: No, not really, Sumeet. I think we had referred to the exit of certain tail accounts in context of one of our market units, which was up in APMEA, I think this was several quarters back. Other than that, we have also said that this number typically gets impacted because of the discretionary spend environment being weaker and as a result, it also impacts the number of clients, especially at the bottom end of the pyramid. What I think you should also take heart with is that our top client, our top 5 or top 10, in fact our top 25 clients are doing really well. So, I am not going to read too much into that number. I think we need to focus on driving differentiated growth in our future metal accounts and that is what we are focusing on.
Moderator: Thank you. We have our next question from the line of Ankur Rudra from JP Morgan. Please go ahead.
Ankur Rudra: Maybe the first question, Srini, if you can elaborate a bit more on the US BFS strong credit sale and

also how that leads into discretionary spending, your business at Capco has a very high exposure to the capital market segment and the segment, which is seeing very strong growth recovery over the recent results season. Many of your peers have commented about how they expect that to help them. If you could elaborate how you expect to see that opportunity?

Srini Pallia: Since the question is very specific to the US and BFS, the strategy for us in the US market is to combine Wipro's strength of execution with Capco's consulting capabilities. So, if you look at th

e

banking financial services, capital markets, insurance, I think our go -to-market strategy is to combine the expertise of both these companies and take it forward. Now, specific to discretionary spend comment that you made, obviously if C apco is growing for us that means there is a discretionary spend because their dependence is completely on discretionary spend which to me is good news in the context of what is coming in the future for us because some of this discretionary spend could be also transferred to the downstream revenue as well Rudra. So, I would say at this point of time, I continue to be optimistic around the spend in BFS segment especially in the US.

Ankur Rudra: And just to read a bit more into your previous comment you said and how the US has been a dominant economy and financial services, if I might add, is a dominant vertical. At what point does US BFS strength overcome all the small pocket challenges you are seeing all of your other verticals where the smaller challenge you are seeing is overwhelmed by this and overall good momentum begins to look a bit stronger?

Aparna Iyer: So, Ankur, for us to really grow well at an overall org level, I think we need to have nearly all cylinders firing, right. And I think that is the endeavor. Yes, we are happy with the momentum that

we have in BFSI. I think not just the US but across we have a good momentum in BFSI, and we are happy about that, but I do think we need to at least arrest the decline and stabilize E&U and Manufacturing , which Srini spoke of, and I think that is very key. We need to have more and more sectors joining in. I think Health is doing well. BFSI has done well. We are seeing deals that we had won ramping up giving us growth in technology and communications, so 3 sectors good, consumers also done well. So, if you are able to revive and win new deals in energy and Manufacturing , I think that will hold the key.

Ankur Rudra: Just one question maybe on AI and generative AI, overall deal wins have been relatively strong. How are you seeing the adoption of Gen AI in particular into your deal construct to an extent? Are there any early conversations about potential productivity p assthrough or gain share as a result of those constructs in the deals you win?

Srini Pallia: Ankur, specific to Gen AI, the way I see it is there is definitely excitement and opportunity for a company like Wipro. We want to be AI powered Wipro and clearly we are investing big into Gen AI. In terms of the engagements, I would put it in three bucke ts. Number 1 is we have AI LED projects, whether it is in a software development cycle or product engineering that is one stream. The second one is infusing AI into the managed services right, which could be for existing or for the new ones wh ere the point that you made it is also operational efficiency, customer experience that you can improve and the third is AI powered solutions that I talked about which is you are conceptualizing your solution for a process into with AI being the core. So, to me, this will continue to grow and there will be productivity benefits in each of these areas. At this point in time, the way I see it is that there are specific projects in Gen AI which are going to help the clients in terms of improving some of their back -office operations, if you will, right. So, those are the projects that you get, but it is not necessarily a specific SDLC lifecycle, but it is an opportunity for the client to improve their processes or operations and so on and so forth. So, those are the three buckets, Ankur, I would say Gen AI and we will continue to improve. Net -net, I think Gen AI will be positive for us and for the industry.

Moderator: Thank you. We will take our next question from the line of Kawaljeet Saluja from Kotak Securities. Please go ahead.

Kawaljeet Saluja: The question I had for you Srini is that when

I look at your performance in Manufacturing in EU in

maybe communication though it has changed somewhat this quarter, it does indicate that it is not so much the environment but shares losses in consolidation exercise. So, at a broader level, I wanted to have your view that I was Wipro positioned as let us say vendor consolidation exercises at an overall level and then going into verticals if there are any nuances as such?

Srini Pallia: You know one of the things that I am really excited is the opportunities and the vendor consolidation. One of the large deals that I did talk about today is a vendor consolidation which is a very large deal where we are doing end to end operations for us across infrastructure applications and the process. To me, there are multiple deal wins around vendor consolidation. We have our own opportunities. We have our own wins where we have displaced com petition. And if I look at the current pipeline, there are opportunities and Kawal what happens sometimes is the combination of cost optimization and vendor consolidation comes together in the broader context of cost benefit to the client. Sometimes the vendor consolidation happens purely because you are alr eady dominant in one area. You can actually take care of the adjacent areas and bring in experience and operational efficiencies as well. So, I am very excited about the opportunities for vendor consolidation for us, Kawaljeet and we are winning.

Kawaljeet Saluja: And in this example that you gave on vendor consolidation, who did you consolidate out? Are you consolidating out other India heritage vendors or are these legacy vendors who are on their last legs?

Srini Pallia: Kawaljeet, I am sure a lot of people are listening to this conversation. All I can say is that it is a variety of vendors across the spectrum. That is all I can say.

Kawa ljeet Saluja: The second question I had is for Aparna. Aparna, when I go through your expenses in the IFRS financial statements, it appears to be quite busy with the number of notes. Was there any one -off benefit into the quarter because there seem to be a number of li ne items in which there are some one -off charges, there are one -off gains, if you can just walk in through, what is really happening in margin there?

Aparna Iyer: Kawal, if you look at it, we did have a higher S&M and we have a lower G&A. And if you look at SG&A as a bucket, there is no change. If you look at our operating margin improvement that has come through the gross margin improvement. The noise that you hav e referred to, yes, we have had certain one -off credits which are a part of our financials, but there are also hits which are in its part and parcel of every quarter and what I will request is perhaps Abhishek or Dipak can take you through those items. But if a broader direction that you can look at is S&M and G&A as a bucket have more or less remained flat and the improvement is coming in through the gross margins.

Kawaljeet Saluja: And Aparna what kind of environment do you require to get to your aspirational band of aspirational margin number? Actually, it is not even aspiration is getting there almost. But you can just walk me through it?

Aparna Iyer: So, are you asking me for levers?

Kawaljeet Saluja: Environment, the type of environment required to get to the EBIT margin that you aspire for here?

Aparna Iyer: Kawal, we have laid out, like you rightly said, we are one step closer to that 17% -17.5% target ban that we had laid out several quarters ago, we are happy with the performance that we have had in Q2. We have taken one big step towards that. Obviously in Q3, we will have to work through the headwinds that we are starting the quarter with. I think all hands on the deck as far as Quarter 3 execution is concerned, perhaps at the end of Quarter 3 , we will be in a

better position to tell you how the margins look beyond. I think over a long term for it to like really to let us say touch and sustain beyond 17% operating margins, we said that the revenue environment also needs to improve. A lot of the margin improvement that we have delivered is on the backdrop of revenue decline, so certainly the growth in revenues will help the trajectory both to surpass that 17% and also sustain, Kawal.

Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand the conference back to Mr. Dipak Bohra for closing comments. Over to you, sir.

Dipak Bohra: Thank you all for joining the call. In case we could not take any questions due to time constraints, please feel free to reach out to Investor Relations team. Have a nice evening. Thank you once again.

Moderator: Thank you members of the Management Team . On behalf of Wipro Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Call: Jan 2025

"Wipro Limited Q3 FY'25 Earnings Conference Call "

January 17, 202 5

MANAGEMENT : MR. SRINI PALLIA – CHIEF EXECUTIVE OFFICER & MANAGING DIRECTOR , WIPRO LIMITED
MS. APARNA IYER – CHIEF FINANCIAL OFFICER , WIPRO LIMITED
MR. SAURABH GOVIL – CHIEF HUMAN RESOURCES OFFICER , WIPRO LIMITED
MR. DIPAK BOHRA – SENIOR VICE PRESIDENT , CORPORATE TREASURER & INVESTOR RELATIONS , WIPRO LIMITED

Wipro Limited
January 17, 202 5

Public Moderator: Ladies and gentlemen, good day and welcome to Wipro Limited Q 3FY'25 Earnings Conference Call. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*" then "0" on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. D ipak Bohra – Senior Vice President (Corporate Treasurer & Investor Relations). Thank you , and over to you, sir.
Dipak Bohra: Thank you , Yashashri. Warm welcome to our Q 3 Financial Year '25 Earnings Call.

We will begin the call with “Business Highlights and Overview ” by Srinivas Pallia – our Chief Executive Officer and Managing Director, followed by “Updates on Financial Overview ” by our CFO – Aparna Iyer. We also have our CHRO – Saurabh Govil on this call. Afterwards, the Operator will open the bridge for Q&A with our Management Team.

Before Srini starts, let me draw your attention to the fact that during this call, we may make certain forward -looking statements within the meaning of Private Securities Litigation Reform Act 1995. These statements are based on management's current expect ation s and are associated with uncertainties and risks, which may cause the actual results to differ materially from those expected. The uncertainties and risk factors are explained in our detailed filings with SEC. Wipro does not undertake any obligation to upd ate the forward -looking statements to reflect events and circumstances after the date of filing. The conference call will be archived, and a transcript will be available on our website.

With that, I would like to hand over the call to Srini.

Srini Pallia : Thank you, Dipak . Hello, everyone. Thank you for joining us today. Our best wishes for the new year.

2024 was marked by macroeconomic challenges. 2025 looks more hopeful and resilient. Our clients are cautiously optimistic, and discretionary spending is slowly coming back. While cost optimization remains key, we expect significant growth in AI spending. We are committed to driving innovation for our clients by leveraging the transformative power of AI.

Let me now turn to the financial highlights of the quarter. All the growth numbers I share will be in constant currency :

 Our IT services revenue for Quarter 3 was $2.63 billion reflecting a sequential growth of 0.1% and degrowth of 0.7% on a year -on-year basis. This takes us slightly above the upper end of our guidance. We ended the quarter with a TCV of $3.5 billion in bookings. Our operating margins came in at 17.5% , an expansion of 0.7% quarter -on-quarter and 1.5% year -on-year. This is a 12 -quarter high. And I want to take this opportunity to thank our delivery teams for driving execution rigor.

Our Capco business continues to see improved demand. Order book grew by 9% year -on-year and revenue grew 11% year -on-year.

In our strategic market unit performance, we saw steady growth in demand across Americas, while Europe and APMEA remained soft for us. Americas 1 grew 3.9% sequentially and 3.7% on a year -on-year basis. Growth was primarily led by health and technology and communication sectors. Americas 2 degrew 0.6% sequentially and grew 1.2% on a year -on-year basis led by BFSI sector. Europe degr ew 2.7% sequentially and 4. 6% on a year -on-year basis. AP MEA degrew 2.1% sequentially and 8% on a year -on-year basis.

Moving on, three of our five industry sectors recorded year -on-year growth, reflecting the progress across key areas. Health maintained its momentum growing 6.7% sequentially and 4.5% year-on-year. While BFSI degr ew by 1.9% quarter -on-quarter, the sector grew 3.4% year -on-year. Consumer degre

w by 0.9% quarter -on-quarter and grew 0.4% year -on-year. Energy, Manufacturing and Resources grew 0.4% quarter -on-quarter and declined 8.7% year -on-year. Technology and Communications degrew 0.6% quarter -on-quarter and 5.3% year -on-year.

I would now like to share some updates on our strategic priorities that we had called out :

In Quarter 3 , we closed 17 large deals with a total value of $1 billion across markets and sectors. I would like to give you two examples in this context. We won a vendor consolidation deal with a leading American retail and distribution company. As a strategic partner, we will transform their merchandising, sales and supply chain funct ions. In fact, our AI -led approach across engineering, digital, infrastructure and application services was crucial in helping us win this deal.

My second example is a leading airline in the Middle East that has partnered with us for end -to-end technology modernization. As part of a long -term contract, we will design and implement a customized cloud -based solution to improve operational agility and resource utilization. Again, using AI-powered industry solutions, we will enhance employee productivity and customer experience for them.

 We continue to focus on our large accounts in our core markets and priority sectors. In Quarter 3 , we achieved a sequential growth of 7.3% in our top account. The Top 5 and Top 10 accounts grew 3.7% and 1.8% respectively. We remain committed to investing and scaling our large accounts demonstrating client centricity by driving greater value, increasing wallet share and expanding into new lines of business.

I would like to give an example of this. A global technology company has selected us to create and scale a cutting -edge silicon platform for its mixed reality products. We will work with the client to develop a silicon chip to deliver high performance at low power consumption. We will integrate advanced features like AI, sensor fusion and stunning graphics to enhance end -user experience. This is one of Wipro's largest cor e silicon engineering wins.

We have made good progress in our consulting -led, AI -powered, industry and cross -industry solutions. This quarter, we had several successes across our industry solutions, including Care in a Box, WealthAI and Software -Defined Vehicle . Additionally, we also secured multiple cross -industry wins with our Next -Gen Managed Services and Cyber Shield offering.

At Wipro, we continue to invest in AI Education. 50,000 of our employees now hold advanced AI Certification. Beyond skilling, we are also investing in AI tools and platforms across the software development cycle and our own internal processes.

At Wipro, we are early adopters of Agentic AI which will be delivering impactful for our clients. This technology goes beyond traditional productivity assistance. While many of these applications are still experimental, we see used cases emerging in areas like customer service and supply chain management. Building talented skill is a key strategic priority for us. We remain focused in building a globally diverse team with high performance culture. While we are promoting strong internal talent, we are also b ringing in top external talent. We are investing significantly in leadership development. In FY25 Wipro Leadership Institute would have trained over 600 leaders through a combination of in-house leadership and programs curated with leading global institute s.

Finally, I want to recognize the dedication of our employees during the holiday season in delivering business critical programs successfully for our clients.

Now, a note on guidance before I wrap up:

For the next quarter, we are guiding for a sequential growth of (-1%) to (+1%) in constant currency terms.

 With that, let me turn it over to Aparna now for a detailed over

view of our “Financials”. Thank you,

Apana over to you.

Aparna Iyer: Thank you. Good evening everybody and wish you all a terrific New Year.

Let me cover the “Financial Highlights” for this quarter in a few key points:

1. As a result of the strong quarter execution, we delivered above the top -end of our revenue guidance range growing 0.1% quarter -on-quarter in constant currency terms.
2. Our operating margins are at a 12-quarter high or 17.5%. This marks an expansion of 0.7% quarter -on-quarter and 1.5% year -on-year. Let me also add that this was achieved after absorbing two months of incremental wage revision. With this, the wage revision impact that we did as of September ‘24 is fully behind us. As we move into Q4, we are confident of staying in the narrow band.
3. Our EPS or net income grew 24% year-on-year and 5% sequentially. This was led on the back of the margin expansion and therefore the EBIT growth, better treasury returns and a stable ETR of 24%. So, I am pleased to share with you that the Board of Directors approved. Increasing the payou t percentage to 70% or above of the net income cumulatively on a block of three -year period. This is effective FY26. Along with this the board has also declared an interim dividend of Rs. 6 per share. You would note that this is substantially higher in ter ms of the quantum of dividend payout compared to what we have done in the previous years.
4. Finally, in terms of guidance, I want to reiterate the guidance stated by Srini. Our guidance for Q4 is (-1%) to (+1%) and therefore the dollar terms will be $2.602 billion to $2.655 billion. This is in constant currency terms.

With that we can open it up for Q&A.

Moderator: Thank you very. We will now begin the question -and-answer session. We will take our first question from the line of Vibor Singhal from Nuvama Equities. Please go ahead.

Vibhor Singhal: Thanks for taking my question and Congrats on a solid performance, especially in the margins front. Srini my question was on the deal wins. The deal win were definitely up on a Y -on-Y basis close to a billion dollars in terms of that large deal wins and T CV has consistently stayed above the $3.5 billion mark. How do you see this trajectory helping us achieve higher YoY growth rate. On the execution in the past few quarters has been super solid, but at the end of the day what is the number that you believe is what can take us closer to a mid -single digit kind of a YoY growth rate or maybe higher than that. And do you see the pipeline for us to be able to achieve that in coming quarters and how soon or how early can we reach this?

 Srini Pallia: Let me reflect on your question. Our current large deal pipeline is robust, and we are seeing good traction across geographies. Now if you have to put an industry lens to this, our strongest traction in large deals remains in BFSI and EMR segment. BFSI is strong in Americas, Europe and India, whereas if you look at EMR, Manufacturing is strong in Europe compared to US and our E&U is robust in Americas, including US and Canada followed by our ANZ and Europe. In terms of Healthcare, Consumer and Tech & Comms, we are seeing more traction in the medium -to-large size around $50 million to $100 million. Now if you look at our Quarter 3 , our large deal TCV has been at $1 billion, which is still up 6% year -on-year by value and up by three deals by count. So, I wouldn't read too much into it. Large deals, as you know, are lumpy and there is also seasonal element to them. If you recollect w e had a record Quarter 2 '25 and we now have a good funnel for closure so we don't see it as a cause for concern.

Vibhor Singhal: In terms of discretionary spend, outside of Capco also are we seeing tailwinds in terms of clients willing to put the spend back on the anvil or do you believe there is still some time to be able to reach th

at stage?

Srini Pallia: If you look at the from a discretionary lens perspective alone, we did talk about Capco where both the bookings and revenue, we had a good year -on-year growth in Quarter 3 . Having said that the discretionary spending in Americas is definitely we see a positive sign in BFSI segment which is a good news for us. We also see some level of up-ticking coming up in certain sectors, but it's not secular at this point in time. Also, this is a month where many of our customers are in the process of budg eting, and we are working with them to understand where the spend is going to be. But if I were to actually extend your question to the overall demand environment, we see Americas very strong, and the demand continues to pick up. While if you look at our b ookings into 1 million to 4 million and 5 million to 10 million range has been very strong. However, in Europe while the economies are challenged, whether we all know what is happening in Germany, UK or France, actually this has put some pressure on some o f our clients and some of the companies out there to trim their costs and become more efficient. And we see this as an opportunity going forward. And just to conclude, overall pipeline is healthy and has remained at the same level over the last year.

Vibhor Singhal: Just one question for Aparna. So, Aparna I think margins in this quarter were rock solid. We were able to expand margins despite two months wage hike. So, could you basically press upon or reflect upon some of the levers which we managed to use this because our gross margins have also expanded in this quarter on a quarter -on-quarter basis despite the wage hike. And related question, what would now be our target band of margins given that we are already in the 17.5% range, in the ne ar-to-medium term, where do we expect these margins to be in the next three to four quarters?

 Aparna Iyer: Yes, the margin expansion has come if you look at what were the factors in Q3. We started the quarter with two incremental months of salary wage hike to absorb. We also had a seasonally weak quarter in terms of the furloughs, right. A lot of the improveme nts have been in action consistently over the last three to four quarters. Some of that played out. A lot of the improvement that he did to offset the increase and also expand the margins came on the back of improved execution rigor, both in ou r core and in the Consulting business, if you look at rise in Capco and the core business, all of that has done very well. Now we had a set of levers which are traditional in terms of the utilization, offshoring and the fixed price productivity that played out. We also did a very conscious reduction in terms of our overheads, including G&A. So, despite the wage hike and everything, you will see those numbers coming down and these are conscious reductions that we drove and there are also yielded into the margin improvement. Where do I look at, is there a revised aspirational band? Nothing that we would like to share at the moment. We have got to 17.5% that we had shared and it it's a 12 -quarter high. So, in some sense we are very conscious that we should sustain it. And therefore, for Q4, we are saying that we are confident of holding it in a narrow band and we will take it from there.

Vibhor Singhal: So, (+/-17.5%) could be that aspirational band now.

Aparna Iyer: Yes, at least for now.

Moderator: We will take our next question from the line of Abhishek Kumar from JM Financial. Please go ahead.

Abhishek Kumar: Congratulations on a very good performance. My first question is on growth and related to that is on guidance. Last two quarters, we have now been coming closer to the top end of our guidance, which is not happening in quarters prior to that. We just wanted to understand what has changed. Are the mid-quarter negative surprises kind of abating, and that is h

elping us hit the top end, or the demand environment has been improving. So, that is on the performance and related to that on guidance. Next quarter, despite the fact that furloughs will be absent etc., at the midpoint, we are still looking at a flattish growth, similar to 3Q. So, some of the puts and takes for our 4Q guidance. Thank you.

Aparna Iyer: So, Abhishek, if you look at our guidance, when we guide, there's no change to the philosophy of guidance. We guide based on the visibility we have closer to the midpoint and then we guide in a range. The fact that in the last two quarters, we are able to come above the midpoint is because of both a stronger execution in Quarter 2 also, the demand environment is improving, right, it does show that the stability, right, that we are able to draw at the start of the Quarter 2 when we finish is better. So, it is a reflection of that. It's reflected in the fact that some of our consulting businesses are doing well. C apco , like we highlighted, has grown 11% year -on-year. Bookings are up 9% year -on-year. So, that's a good sign and it's also a reflection of that. But otherwise, there's no change. As we look

 at Q4, it is better guidance if you have to compare it to the guidance we gave for quarter three. And that's what we have the p resent visibility for Abhishek.

Abhishek Kumar: Sure. Maybe one question on margin. Aparna, there was a sharp decline in depreciation this quarter. So, is that now a more normalized level as well as depreciation is concerned, or was there any one - off there that we shou ld be aware of? Thank you.

Aparna Iyer: I don't think there are any one -offs. It's likely to sustain. You can model it at the same level.

Moderator: Thank you. We'll take our next question from the line of Abhishek Bhandari from Nomura. Plea se go ahead.

Abhishek Bhandari: I had a question on growth and the guidance again. So, Srini , if I look at your growth for this quarter, it was broadly led by Healthcare , partly by Manufacturing . But in Banking , we had a negative number. Is it because of the furlough ? And if you could talk about your outlook specifically for Banking and Healthcare businesses, given that some of your peers are talking about increasing caution amongst Healthcare clients given uncertainty around policy device, and optimism in Banking given that there could be dereg and other stuff happening whi ch could increase the business.

Srini Pallia: Hi Abhishek, let me give you some color to this. If you look at BFSI, it was impacted by furloughs in quarter three. However, the sector has grown 3.4% year -on-year. This is clearly a combination of discretionary spread led by C apco , which Aparna just talked about it, which is a consulting work, and also non -discretionary piece in some of the larger mid -sized deals , which are more on the themes of vendor consolidation, cost takeout. If you look at the BFSI budgets going forward, we feel there will be an uptick on the budgets, whereas Healthcare budgets will continue to grow, albeit maybe slower than what it was in the past. So, that's my ta ke on both Healthcare and BFSI.

Abhishek Bhandari: Got it. And Srini, secondly, last question is again on guidance part given that we had a great execution this quarter , we executed more than the top end. We are talking about some return of discretionary demand; furlough would be absent as Abhishek also asked. And there may be some tailwind coming from the execution of projects and in the near past. So, I am still curious in why have a negative number from a guidance perspective when most of the thing s are actually positive points.

Srini Pallia: So, like Aparna said, we are given the Quarter 4 guidance based on the current visibility we have. Having said that, we are seeing a gradual recovery happening and the sectors that I talked to you about just now, BFS

I and Healthcare , clearly are doing well. And some of the sectors for us, both EMR, which is Energy Manufacturing Resources and consumer, still need to recover. However, if you look at it on the geo side, we see momentum building up in America, while Europe and APMEA remain soft for us.

 Abhishek Bhandari: Got it. Last question, now that we have a return of capital to shareholders to around 70 %, how should we take the mode of return? You mentioned blocks of three years. Could it again be lumpy if you decide to use the buyback route or do you want to make it more l ike an annual setup? Thank you.

Aparna Iyer: In terms of mode of return, we continue to pre fer both dividends and buyback and or even special dividend as appropriate, the board will make a decision. We want this to be more consistent, but we have continued given that we, one cannot rule out a buyback. We have said that you should continue to measure this over a block of three years. We will assess and if at some point in time , we want to make this annual, we will, but for now, we will continue to measure this as a block of three years. And we prefer both buyback and dividend.

Moderator: Thank you. Next question is from the line of Rishi J hunjhunwala from IIFL Instituti onal Equities. Please go ahead.

Rishi Jhunjhunwala: Just one question around mining the non -top 10 clients better or basically even looking for hunting opportunities. If you look at , we have done reasonably well when it comes to growth in top 10 clients. It's up 15% year -on-year whereas, ex of that, our revenues are still declining at a 5% rate. So, I just wanted to understand outside of the top 10 client mining, given that if the overall environment were to become better, how are we preparing ourselves to ensure that when some of those opportunities come, we are able to hunt better as the decline in non -top 10 seems to be a lot higher than what we generally see in industry peers.

Aparna Iyer: Rishi, there's no change to the philosophy we would like to continue to hunt and mine, right? We do look at mining our top 10 clients or top 25 or top 50 as a show of strength, and that's something that we have focused on. The reduction that you're seeing in our active client portfolio, we report that number on a trailing 12 month. So, if there is a weaker revenue environment, that also shows up in the number of active clients. There are also the furloughs and the cross -currency impact that's a lso playing out a little bit this quarter. But there is certainly in terms of the strategy priorities that Srini spoken about, hunting remains a very, very key lever for us. And we are very, very focused on winning the must -have account s. So, there's absolutely no deep prioritization on that account, Rishi.

Moderator: Thank you. Next question is from the line of Ravi Menon f rom Macquarie, please go ahead.

Ravi Menon: I was like, the margins have been pretty good. So, surprised that you're talking about keeping it a narrow range. Are there any headwinds in the coming quarter that you're thinking about? Because it looks like at least the rupee seems to be depreciating. So, how should we think about margins for, what the headwinds and tailwinds make for?

 Aparna Iyer: Yes, the rupee has been depreciating. We'll have to keep a watch on it. It has remained volatile in the last few weeks. A lot has to play in. There are also certain hedge books. There's also a certain amount of hedges that we carry. So, it'll be a function of that. I don't think there are any particular headwinds that we start Q4 in a lot like the salary increase and everything is behind us. It is going to be a lot of business as usual. And so there are not particularly headwinds that I would like to call out.

Ravi Menon: Thank you. And Srini , Healthcare , seasonally this is actually norm

ally a good quarter for health plan services. So, is that what helped you, or are there any other segments within Healthcare that you're seeing good traction in?

Srini Pallia: If you look at Healthcare for us, it's a combination of payers, providers, pharma and medical devices companies. So, the growth that we see has been across t hese four sub industries, Ravi.

Ravi Menon: Right, so extremely broad based, can say . Thanks so much and best of luck.

Moderator: Thank you. We'll take our next question from the line of Gaurav Rateria from M organ Stanley. Please go ahead.

Gaurav Rateria: My first question is on the large deals. Have you seen any change in the average and tenure of these deals and hence the conversio n of these deals into revenues?

Aparna Iyer: In some sense, Gaurav, our large deal bookings are down sequentially, but our TCV bookings are not as down, right? So, the quantum of small and medium -sized deals has picked up this quarter, which also means our AC V growth was particularly good after several quarters. But it's still one quarter. We'll wait and watch to see if this is a deterministic trend that plays out. But as far as the overall texture of deals , when we see in the pipeline, I think there are quite a few large deals as well, b oth in terms of cost takeout, vendor consolidation, efficiency led. So, in some sense, the large deal pipeline continues to remain robust. If I look at the pipeline, it seems to be very similar to what it has been in the last few quarters, but bookings in Q3 are definitively the deal tenure has come down.

Gaurav Rateria: The second question is, what are the portfolio interventions you have done in some of the areas where growth has not been so great like EMR vertical, APM EA geography and where are we in terms of these interventions , are we likely to see any changes in the outcomes?

Srini Pallia: Sure, Gaurav. Let me just going to talk about both of them, APMEA and Europe where we have been very soft. As far as APMEA is concerned, we have the new CEO there and he's building a next level of leadership and we continue to invest in this market across the broad geography that APMEA covers. We looked at our go -to-market approach with very defined both account teams as well as teams that can go after new logos. In fact, in APMEA, specifically, each of the countries we have

 identified set of accounts and we are also differentiating ourselves with consulting rate at AI, which is definitely a different value prop to this market. The pipeline is being rebuilt, and we see the pipeline growing and I think we should continue to execute, we should see momentum coming back in APMEA. In Europe , again, very similar, we have created a new leadership at SMU level, we are also making sure we continue to focus on certain sectors and double down on them. While Europe has shown a degrowth in Q3, I can definitely tell you pipeline is strong. All we need to do is focus on deal conversion and I think with consulting teams and the local delivery capabilities that we have…. we have all the ingredients in place, now, it's all about execution, Gaura v.

Moderator: We have a next question from the line of Sudheer Guntupalli from Kotak Mahindra AMC. Please go ahead.

Sudheer Guntupalli: So, couple of questions. Firstly, your top account continues to see very good traction. So, any specific reason behind this? I think for the last few quarters we had seen that this is steadily increasing in terms of its revenue share.

Aparna C. Iyer: I will just give you one fact and then maybe Srini can speak about it. In terms of just the top five, top ten, they've been doing, right, even if you had to take in top 25, the growth is pretty good. What's driving this growth? Seven out of our 10 accounts are g rowing on a year -on-year in constant currency terms. That's something that quite broad -based. Certain

ly, sectors that are doing well, are adding to it in terms of BFSI, Health, so they are adding those clients, the top ten are doing r eally well and Srini, if you would like to add -.

Srini Pallia: Yes, sure. So, Sudheer, the context of the deals that I talked about when Gaurav asked the question, similarly, both in Europe and APMEA, like we said, we have reinforced our teams both on account management as well as delivery and that should actually he lp us mind these accounts more especially in this patch of the market that we are in. And as far as the top ten accounts that have grown, that Aparna has talked about, can be the role models for the rest of the account teams as well in terms o f part or possible, in fact, it's the top 25 accounts I would say. Also, some of these accounts are a little bit sector -specific too for us. If you look at like we talked about demand environment strengthening in BFSI and Health, whereas in certain sectors, especial ly. Energy and Manufacturing for us have been weak, but I see a turnaround, at least in based on Q3, we have seen that uptick in manufacturing, that will actually result into the accounts that we are focusing on.

Sudheer Guntupalli: Second question is in terms of headcount. So, in the last 10 quarters, if I look at it, I think net addition is negative in seven of them including the current quarter. Now that we are talking about an improvement in demand and our guidance also sort of reflects some amount of growth in the coming

 quarter. Adjusted for furloughs, we are operating at 86% to 88% kind of utilization. So, when should we think that the hiring engines should start picking again?

Srini Pallia: Hiring engine has actually kicked off, it's not that it's not there. We have called out that for the next fiscal, we will be going every quarter on campus and hiring about 10,000 to 12,000 people, over and above that, we'll have lateral hiring happening. And we also see an attrition coming down in the coming quarters because our net new resignations have been coming down. So, we will look at our supply chain in terms of utilization demand, attrition, and look at hiring, but I see that we will be robust in hiring as we move forward.

Moderator: Next in line is Mr. Sandeep Shah from Equirus Securities. Please go ahead.

Sandeep Shah: The first question I think, Srini, you mentioned that the portfolio specific issue in the energy manufacturing resources, and consumer is not behind. So, when do you expect that to get behind? Because we have also heard in the earlier calls, it may be more Wipro -specific rather than industry - specific. And why I am asking this is this contributes almost 36%, 38% of the top line and that may provide a hurdle in terms of consistently growing quarter -after-quarter.

Srini Pallia: Thanks. Sandeep. If you look at the way, we have the four strategic markets in it, clearly, Sandeep, Americas and Americas 2 we talked about our performance in the last few quarters. Having said that, we did call out that APMEA and Europe has been soft fo r us. Now, if you embed the industries into those four markets, clearly, the sectors that we see growth and opportunities in the last three quarters we are talking about have been banking, financial services and healthcare. Having said that, t his quarter we saw three of our sectors that grow year -on-year, and I think that's another positive area. In terms of specifically, energy manufacturing and resources, it has been soft for us, but within that manufacturing, is taking an uptick for us and you see the numbers that we have talked about. In terms of techn ology and consumer, it has been a good Q3, and we have a very strong and robust pipeline around that. I see that we have to just execute into that segment. And finally, if you look at the pipel ine is very broad based across these sectors and across these four SMUs. I think t

he focus will now be, Sandeep, bringing some of them home.

Sandeep Shah: Aparna, just if I am not wrong, what you said on the capital allocation, we are more tilted on dividend versus buyback as a matter of choice or am I wrong in understanding this?

Aparna C. Iyer: We prefer both dividends and buyback. That said, you have seen that the dividend that we have declared is substantially higher compared to what we have done in the previous year. The capital allocation that we have committed is 70% and above the net income over a block of three years, this is effective FY'26, you should look at the block starting FY'26 for us to meet that number. Like I said, almost including dividend, buyback, and special dividend, everything will be explored.

 Moderator: Next question is from the line of Ashwin Mehta from Ambit Capital. Please go ahead.

Ashwin Mehta: Aparna, wanted to get a sense in terms of that despite the wage hikes our employee cost number in absolute terms does not seem to have changed materially over the last two quarters. So, what have been the offsets for that? And the second question is in te rms of depreciation, we have seen almost

120-odd bps benefit on depreciation from a YoY perspective. So, what is driving this substantial reduction in terms of depreciation?

Aparna C. Iyer: Actually, Ashwin, on depreciation, in Q3 of the last fiscal we actually had one -off. So, that's not the right number to take, even if you have to look at it over the last two to three quarters of depreciation. Broadly, there is some optimization, but that's a result of the natural phase of intangible amortization that we do, right? So, like I said, what you're seeing in Q3 is actually the word of any noise and you can model that as going forward. Now, to the point on what's playing out in th e employee cost, there are quite a few things; one we have spoken about improved levels of utilization, the number print you are seeing is a reduction that's how we just define, a), because of furloughs, the utilization looks lower, but if you look at the core utilization even outside of this is very, very strong ; two, if you look at the SPP productivity that we have been driving consistently improving and what you're seeing as a flow through into Q3 is also a lot of the productivity initiatives that we'd a lready initiated through Q2, right? Also, we have actually improved our quality of revenue. If you look at our third -party services cost, it's also something that we have reduced. So, our improved quality of revenues also playing out into the margin expansion. So, those are some of the levers.

Moderator: Ladies and gentlemen, that was the last question for today. I would now like to hand the conference back to Mr. Dipak Bohra for closing comments. Over to you, sir.

Dipak Bohra: Thank you, all for joining the call. In case we could not take any questions due to time constraints, you can reach out investor relations directly. Have a nice day.

Moderator: Thank you, members of the Management Team. On behalf of Wipro Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Call: Apr 2025

Dear Sir/Madam,

Sub: Transcript of the Analyst / Institutional Investor Meeting

Please find attached herewith copy of the transcript of the Analyst / Institutional Investor Meeting held on April 16, 2025. The audio recording of the same is available at https://www.wipro.com/investors/quarterly -results/ .

Thank ing You,
For Wipro Limited

M Sanaulla Khan
Company Secretary

ENCL: As above

"Wipro Limited Q4 FY'25 Earnings Conference Call "

April 16 , 202 5

MANAGEMENT : MR. SRINI PALLIA – CHIEF EXECUTIVE OFFICER & MANAGING DIRECTOR , WIPRO LIMITED
MS. APARNA IYER – CHIEF FINANCIAL OFFICER , WIPRO LIMITED
MR. SAURABH GOVIL – CHIEF HUMAN RESOURCES OFFICER , WIPRO LIMITED
MR. DIPAK BOHRA – SENIOR VICE PRESIDENT (CORPORATE TREASURER & INVESTOR RELATIONS), WIPRO LIMITED

Wipro Limited
April 16 , 202 5

Moderator: Ladies and gentlemen, good day and welcome to Wipro Limited Q 4FY'25 Earnings Conference Call. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*" then "0" on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. D ipak Bohra – Senior Vice President (Corporate Treasurer &

Investor Relations). Thank you , and over to you, sir.
Dipak Bohra: Thank you , Yashashri. Warm welcome to our Q 4 Financial Year '25 Earnings Call. We will begin the call with “Business Highlights and Overview ” by Srinivas Pallia – our Chief Executive Officer and Managing Director, followed by “Updates on Financial Overview ” by our CFO – Aparna Iyer. We also have our CHRO – Saurabh Govil on this call. Afterwards, the Operator will open the bridge for Q&A with our Management Team.
Before Srini starts, let me draw your kind attention to the fact that during this call, we may make certain forward -looking statements within the meaning of Private Securities Litigation Reform Act 1995. These statements are based on Management's current expectation s and are associated with uncertainties and risks, which may cause the actual results to differ materially from those expected. The uncertainties and risk factors are explained in our detailed filings with SEC. Wipro does not undertake any obliga tion to update the forward -looking statements to reflect events and circumstances after the date of filing. The conference call will be archived, and a transcript will be available on our website.
With that, I would like to hand over the call to Srini.
Srini Pallia : Thank you, Dipak . Hello, everyone. Thank you for joining us today.
It's hard to believe that it's already been a year since I took over as CEO . When I look back at these 12 months , I can see clear progress across many areas. We won two mega deals this year. It's a strong sign that our large deal engine is working and continue to expand.
Our clients have responded well to our consulting led AI-Powered Industry and Cross -Industry Solutions . This is reflected in the strong growth in top accounts and large deal bookings in FY25 . We have continued to invest in our peopl e, skilling them for the new AI wave.

Our execution rigor with speed has been acknowledged by clients. And that's reflected in the clear improvement in our Client Satisfaction Scores . We have done all of this while strengthening our margins. It's a meaningful achievement in the context of such ongoing change.
The global industry environment remained uncertain for most of the year and the recent tariff announcements have only added to that. I have been speaking to clients across sectors to understand how things are playing out on the ground. Even though the underlying demand for tech reinvention remains strong , clients are approaching it more cautiously. In fact, they are focused on cost, speed and AI-led efficiency, and that's exactly where we are leading it.
We see this as an opportunity to move with purpose, make smart bets and stay committed to our 5 strategic priorities :
Driving consistent, profitable growth remains a clear priority for us and we are focused on making that happen.
With that. Let's look at our Quarter 4 and FY 2024-25 performance . All the growth numbers I shared will be in constant currency :
Our IT Services revenue for Quarter 4 was $2.6 billion reflecting a sequential decline of 0.8% and 1.2% on a year-on-year basis. The order booking for Quarter 4 was at $4.0 billion, which is a growth of 13.4% sequentially and 10.5% on year-on-year basis.
Our operating margins came in at 17.5%, whi

ch is flat sequentially and 110 basis point expansion on a year -on-year basis.
For the full year IT Services revenues were $10.51 billion reflecting year-on-year degrowth of 2.3%.
Our operating margin was at 17.1% , an expansion of almost 1% as compared to FY24 .
Now to our Strategic Market Unit Performance :
Americas 1 grew 0 .2% sequentially and 6% on a year-on-year basis. Americas 2 degrew 1% sequentially and 1.8% on a year-on-year basis.
Europe degr ew 2.5% sequentially and 6.9% on a year -on-year basis.
APMEA grew 1% sequentially and degrew 4.9% on a year-on-year basis.
Moving on to our industry sector performance :

BFSI degrew 0.5% sequentially and grew 0.8% year-on-year. Healthcare degrew 3.1% sequentially and grew 0.1% year-on-year. Consumer degrew 1.3% sequentially and was flat year-on-year. Technology & Communication degrew 0 .9% sequentially and 1.1% year-on-year. Energy , Manufacturing and Resources grew 1.1% sequentially and degr ew 7% year-on-year.
Capco continues to perform well, growing 6.5% sequentially and 11.5% on a year-on-year basis.
Let me now provide an update on our 5 strategic priorities :
As I mentioned earlier, we have continued to see strong momentum in large deals . In Quarter 4 , we closed 17 large deals w ith a total value of $1.8 billion across markets and sectors. For the full year, we closed 63 large deal s for a total value of $5.4 billion which is a year-on-year growth of 17.5%.
Now let me highlight two recent wins :

• A global technology leader has chosen us for a major Five-Year Transformation Program . We will deliver AI -Powered end-to-end IT Services , completely reshaping the employee experience for 200,000 users across 200 countries. Our solution involves proactive support , intelligent self-service and personalized digital interaction.

• My second example is our recent partnership with the leading global food distributor. We are taking over their entire IT infrastructure and corporate application which includes HR, Finance and Legal Systems . We are leveraging AI solutions, and we will drive automation and simplify user interactions. For our clients, this will result in higher efficiency , lower costs and better user experience.

As we all know AI has been part of deal conversations for a while. But this year , it becomes central to almost every opportunity , big or small helping drive productivity and efficiency. This reflects a broader shift we are seeing across the board.

Let me now move on to large accounts. :

We continue to focus on our large accounts in our core markets and priority sectors. In Quarter 4 , our top 5 and top 10 accounts grew 0 .3% and 1.1% respectively on a sequential basis.

Let me also share an example that shows our momentum in strategic accounts :

In Quarter 4 a leading Indian private bank expanded our strategic partnership as part of a business focused digital transformation. We will provide the bank AI -Powered solution to strengthen compliance management and addressing a critical need for regulatory compliance in addition to

enhancing the overall experience for the bank. Now this will also help the bank boost operational efficiency and realize its growth ambition across various functions.

We continue to create impact for clients through our consulting -led AI -powered industry and cross - industry solutions. This was our third strategic priority we had called out.

In this context, let me talk about a recent win in the Aviation sector :

A well -known Pacific Airlines shows us to modernize its crew management and operations systems in quarter 4. In fact, we were selected for our proven ability to future -proof clients' IT platforms with AI. We will deploy our own TOPS platform to manage end -to-end crew operations, providing a unified, scalable so lution that enhances experience and drives susta

ined operational efficiencies.

Alongside all of this, we have put even more focus on client -centricity and starting to show results. Our latest third -party annual customer satisfaction survey, clearly shows improvement in overall satisfaction scores and NPS. In fact, I would like to thank our teams who have made this possible.

As you are aware, we have also realigned our global business lines effective April 1 to better meet our customers' needs. This change will help us deliver stronger business outcomes for our clients.

Finally, and just as important, supporting and growing our global talent has been a top priority all year. You might remember that last quarter, I spoke about our focus on leadership development and how we are building future -ready leaders through our Wipro Leadership Institute. In fact, we have moved our top performers into key client -facing roles to ensure continuity and stability, and we have also launched a sponsorship p rogram to help them succeed.

Now a note on guidance before I wrap up. Given the uncertainty in the environment, we expect clients to take a more measured approach going forward, especially on large transformation programs and discretionary spending. With this in mind, and based on our current visibility, we are guiding for a sequential growth of minus 3.5% to minus 1.5% in constant currency terms.

Let me now turn it over to Aparna for a detailed overview of our Financials . Thank you. Aparna, over to you.

Aparna Iyer: Thank you, Srini. Good evening, and good morning, everybody. Let me share a quick update on our financial performance for the quarter ended 31st March 2025, and after that we will take questions.

Our IT Services revenue for Q4 sequentially declined by 0.8% in constant currency terms. This is within our guided range. For FY ‘25, our IT Services revenue declined by 2.3% in constant currency

terms. Our rigorous focus on operational improvement has ensured that the margins have steadily improved over the last few quarters. For Q4, operating margins at 17.5% expanded by 1.1% year on year. This brings our FY ‘25 operating margin expansion to 0.9% .

As we enter FY ‘26, we are faced with headwinds on account of an uncertain macroeconomic environment that is putting a downward pressure on our revenues. Our endeavour would be to maintain these margins in a narrow band in the coming quarters. Our net inco me grew 6% quarter on quarter in Q4 and 19% for the full year.

Our EPS for the full year was at INR 12.6, a growth of 20% year on year. We finished the financial year with a free cash flow as a percentage of net income at 118%, which takes our gross cash including investments to $6.4 billion.

In Q4, our other income grew by 45% sequentially and our accounting yield for the average

investments held in India was at 7.9%. Our ETR was at 24.3% for Q4 '25 against 26% in Q4'24.
Our hedges continue to be in line with our policy. We had about $2.4 billion of ForEx derivative contracts as hedges at the end of Q4 '25.
In terms of guidance, to reiterate what was stated by Srini, we expect the revenues from our IT Services Business segment to be in the range of $2.505 billion to $2.557 billion. This translates to a sequential guidance of negative 3.5% to negative 1.5% in constant currency terms.
With that, I turn this over back to the operator for questions.
Moderator: Thank you very much. We will now begin the question -and-answer session. We will now begin the question -and-answer session. Anyone who wishes to ask a question may press "*" and 1 on their touchtone telephone. If you wish to remove yourself from the question queue, you may press "*" and 2. Participants are requested to use handsets while asking a question. Ladies and gentlemen, we will wait for a moment while the question queue assembles.
We will take our first question from the line of Nitin Padmanabhan from Investec .
Nit

in Padmanabhan : Yes, good evening. Thank you for the opportunity. Srini, just wanted your thoughts on which verticals are you seeing the highest impacts at this point in time?
Srinivas Pallia: Hi, Nitin. If you look at sector -view, the way the economic environment has become uncertain on the back of tariff increases, we are seeing this impact not just in the U.S., of course, but also in the Europe. Similarly, we are also seeing across sectors di rectly or indirectly these impacts. But some

sectors have been impacted more, like consumer, manufacturing. Within manufacturing, specifically automotive and industrial. And we are seeing indirect impact on most of the sectors, if you will.
For us, the clients in all the industries are taking a lot more cautious approach at this point in time.
And they're also doing a scenario planning, because they would like to see when this whole thing is settled down, before they start making more busines s decisions. And that's how currently it's playing out, Nitin.
Nitin Padmanabhan : Okay. So, how are you seeing BFSI broadly, currently, in terms of how they are thinking about things, both US and Europe?
Srinivas Pallia: Well, if you look at our results, we have been seeing good traction in BFSI, specifically in the U.S. and in APMEA. And also, our Capco business, both in terms of revenue and order book. I think what we faced is headwinds in Europe in the BFSI sector. But again, the good news is that we have a good pipeline and there is deal momentum.
Now, there are, obviously, if you look at the kind of deals that we are getting, right, 1, we are definitely looking at apps and IT Infrastructure modernization. There are opportunities around BPS, which is Business Process Services and Cybersecurity, and we are also looking at opportunities in Consulting, which is a reflecti on of our Capco business.
Also, in some of our solutions, Asset and Wealth Management, I think this is a good time the customers are relooking at how they can leverage AI -powered solutions. We are also looking at insurance platform digitization, also payments, right, which is all around our AI -infused industry solutions. And we are seeing traction on that.
What we are doing clearly is that we want to prioritize how Wipro and Capco can come together, bring in more synergies, with Capco being the tip of the spear and Wipro actually executing end -to-end. And I think this is also helping us as we move forward, s pecifically on the BFSI sector.
Nitin Padmanabhan : Right, so you are not seeing any specific weakness in the near -to-medium term here. They continue to spend. You are not seeing any holdback or spending from a BFSI perspective?
Srinivas Pallia: There are 2 perspectives, Nitin. 1 is, like I said, the pipeline is strong, but the clients are cautious about the spend, especially BFSI, which is discretionary, right? So, the early signs are they are waiting and watching. Some of the decisions have slow ed down, if you will.

In case, luck would have it, if the uncertainties comes down in the next few weeks, we are hoping the clients will start taking decisions on these project opportunities, because that's the need of the hour for them.
Nitin Padmanabhan : Sure, perfect. This is very helpful. I'll get back in the queue. Thanks a ton.
Srinivas Pallia: Thanks Nitin.
Moderator: Thank you. We will take our next question from the line of Abhishek Kumar from JM Financial.
Please go ahead.
Abhishek Kumar: Yes, hi, good evening. Thanks for taking my question. Srini, first of all, congratulations on good dealings in a difficult environment. My question is on deal to revenue conversion. If we look at our book -to-bill, over the last 2 years, it has been consist ently, at least on an LTM basis, above 1.3x, but it has not really translated into revenue growth.
And if we add to that better perfo

rmance in Capco, where the conversion would be even better. Looks
like ex of Capco, the conversion is quite soft. So, I just wanted to understand what exactly has driven this poor conversion so far. Is it cancellations? Is it lower ACV growth because of longer tenure? And which of these 2, you think going forward might change for us to build some growth, given improved deal wins ?

Aparna Iyer: So, Abhishek, as you know, the booking to revenues is very difficult to correlate then within quarters, because the timing differs from deal to deal. For example, the large deal that we have secured in Q4 that we announced, will take some time for it to ramp u p. There is a schedule that's signed off with the client and there's work to be done before, for us to be able to start that. So, there will be some timing gap that will always be there, in case of some of these large deal wins that we've had.

You are right, consistently we've won more, and that is adding to revenue, even with, let's say, a deferred timing. What gets reflected in the revenue is also some of the ramp downs that happen as a result of lower discretionary spend and project spend going down , right? So, we need to win more, we need to fill that bucket a lot more for it to start reflecting in net revenue growth. And that's how I would characterize it.

We are happy with the way the engine has started to crank. With the same momentum that persists on large deals as the medium and small size deals also come back into the fray, I think you will see a pickup in revenue growth.

Abhishek Kumar: Sure, maybe a quick follow -up there. Do you think those ramp downs, which are client -specific, are now largely behind us? And therefore, it is just a matter of timing before these deals start to reflect in revenues?

Srinivas Pallia: Abhishek, let me give you some kind of a commentary on what we saw. If you look at it, we started quarter 4 on a positive note, but gradually during the quarter, the sentiments turn negative. I think this is because of tariff hike and anticipation around t hat, and it did have a cascading impact on this. Now, to me, this has definitely impacted our revenue growth momentum across sectors and markets. One example, I can tell you is we were doing a large SAP program, which was very critical for the client, and this was in the consumer sector. And when the cli ent heard about the tariff situation, they were bang in the middle of that, and they put the whole program on pause, not because they don't want to do the program, but they wanted to understand, get the certainties of the tariff situation. So, that's 1 good example I can give, where the program has been put on hold. Also, in Europe, some of the clients have slowed down transformation projects. It's not that they have paused it, but they said, we can relook at the timelines at this point in time. Also, we did see several instances of volume drop in some of our existing accounts and maybe because some of them are because of the delayed initiating the projects and some also there was an impact of ramp downs. The way I see it is that this is a transit ional phase and hopefully and obviously I can't predict how the tariff situation in the macroeconomic will turns out, but this will gradually stabilize. I think as an organiza tion what we are doing is we are working with the clients and understanding the scenario planning and trying to actually pivot to the way they are looking at how the business is coming next. And I think that's most important for each and every employee of Wipro, a sense and respond to the client situation.

Participant: Well, that's helpful. Thank you and all the best.

Srini Pallia: Thank you.

Moderator: Thank you. We will take our next question from the line of Manik Taneja from Axis Capital. Please go ahead.

Manik Taneja: Thank you for the opportunity. Srini basically just wanted to pic

k your brains on two things. Number
one, we continue to see pressure in Europe through the course of last several quarters. Would be great to get your perspectives as to what's driving that. And the second related question to that essentially is that similarly on a segmental margin standpoint as well, while Capco has recovered, we did see no improvement in terms of the segmentary margins for European geography. If you could talk about what's dragging the margins here. Thank you.

Srini Pallia: Sure. I think the Europe question maybe I will leave the margin situation to Aparna, Manik. Now let me talk about this. I think your observation is right. If you look at our revenues for last year on a full year basis, Americas has actually grown 1.2% and it is Europe which has shown a degrowth. In fa ct, APMEA had a degrowth, but in Quarter 4 they actually turned sequentially positive. Now the situation at Europe, we have a new leadership team. Second, we have a very strong pipeline of deals. Three, we just won a large deal, Phenix Steel, which you are aware of and that deal will start kicking off in few months from now as per the contract terms. Net -net, if you stay focused on the deals that we have on the table, which I think, the entire Euro pean leadership team is currently focused on, we should be able to look at a positive momentum in Europe in the next coming quarters.

Aparna Iyer: Manik can you repeat your question on margin?

Manik Taneja: So, Aparna my question on margins was that, when during second half of FY23 we started to face

some pressure in Capco, we blame some of the margin decline that we saw in European geography also because of the drag from Capco. Through the course of recent quarters, Capco has been doing quite well, but there has been no recovery in segmentary margins for Europe. So, if you could dwell into what's causing that and the last one, if I may if you just clarify on board refresh , if you could talk about where are we in that journey? Are we done with most of the organizational changes?
Aparna Iyer: Your question is not very clear. I think the question that you asked on margins was that Capco may have been a drag on Europe margins and therefore how they're rebounding in some sense. I think Capco has been doing well from the standpoint of its growth and bookings and there has been a lift - off in the margins as well. Overall, they are doing much better. Even from an operating margin performance, at least in Q4, they have done very solid performance. So, in that context, yes, our Europe margin s have also been impacted by some of the other ramp downs that we've seen and the non-Capco part of the business.
Manik Taneja: Sure. And in any sense on when do we start to see some of these pressures recede?
Aparna Iyer: In Europe, you will note that we have actually won a very large deal and that should start ramping up through the course of the year and especially towards the second half and therefore you will see a bounce back then. And we also have a solid pipeline th at we think we can close between now and September and that should also then add.
Manik Taneja: Sure.
Moderator: Does that answer your question, Mr. Taneja?
Manik Taneja: Yes. Thank you. I will get back in the queue.

Moderator: Thank you. We will take our next question from the line of Vibhor Singhal from Nuvama Equities. Please go ahead.
Vibhor Singhal: Yes, hi, thanks for taking my question. So, two questions from my side. Srini, on the overall macro weakness that you have spoken about. So, can you give a bit of color as to —I'm sorry I was disconnected for a part in that —but highlight that was some part of the weakness also responsible for the slightly lower growth that we reported in this quarter. And given that we are exiting FY25 on a nega tive, I mean on a decline, and we would be entering FY26

also on a negative note, is there a possibility that we would be able to record a positive growth in FY26 or FY26 also is likely to be year of revenue decline just like FY25 was? And then I have a fo llow up for Aparna .
Moderator: I'm sorry to interrupt sir, you are on mute mode, I believe.
Srini Pallia: Yes, sorry Vibhor, first and foremost, as you know we don't give a full year guidance. Having said that the recent developments, especially the macroeconomic situation, the tariff situation, we are , like I said , keeping a very close watch on how the situation is evolving and how our clients are responding to that or reacting to that. At this stage our Quarter 1 guidance represents the best visibility we have and definitely we will share all the updates coming quarters as we get clarity on the situation. Also, if you look at what Aparna said on the Phenix deal we announced in Quarter 4, this is actually expected to ramp up starting H2 and definitely that will help uplift our revenues.
Vibhor Singhal: Got it. The initial part of the question was, was there any weakness also felt in this quarter also because of which we came towards close to the lower end of the guidance or Q4?
Srini Pallia: So, yes, Vibhor if you look at the last few weeks, right and you've seen the economic environment, you've seen many of the analysts and how they have been forecasting from January to February to March, there's a drastic change in terms of how the industry has been looked at. And to me this impact of tariffs obviously is not just US but also in Europe. And again, it's not just in few sectors but across sectors. The only difference is certain sectors are seeing direct impact; certain sectors are seeing indirect impact. So, the ones I called out are consumer manufacturing, especially automotive and industrial, we have seen a direct impact of the customers and obviously they're looking at the cash position, they're looking at how to reduce the cost and they're also looking at significant scenario planning because they are the manufacturing plants globally and in the context of tariffs and these products, components move from country to country and so on and so forth. So, they are holding back on any further investments. And I think that's what we are seeing from our side as well.
Vibhor Singhal: Got it, sure. Thank you so much for answering my questions. Just one follow up for Aparna. I think margins have remained quite resilient through the year and for the next year and going forward that you are looking at, you mentioned that we are expecting margins to be in a narrow band. In terms of,

let's say the growth not being strong in FY26 or given the kind of headwinds that we are seeing on a macro level, do you see a risk to the margins from current levels for an overall year? Conversely, if growth were to return, especially in the second half, we also have the feeling.
Moderator: I'm sorry to interrupt Vibhor. Your voice is not very clear. Can you repeat the question and use your handset mode, please.
Vibhor Singhal: I'm sorry for that. So, I want to adjust the question on the margin. So, as you mentioned, the margins

will remain in the very in a narrow range from current levels. So, just wanted to check if let's say the growth in FY26 is weak and if it turns on the decline front, then do you think the margins could be under pressure because of that as well? Conversely, if a decision is meant for to pick up, let's say two quarters down the line in H2, we also have the feel ramping up revenue for us, woul d that mean that we could basically have a good jump up in the margins and possibly some tailwinds which could take it to the high level? What are those levels that we are looking at?

Aparna Iyer: So, Vibhor, it is very difficult to say which way the revenues are going to go. I think what I heard is if the revenue environment continues to be bad

, will we continue to hold margins? Now the reality is there will be pressure on margins as we start to Q1, there are two headwin ds. One, of course of a weak revenue environment. Two, that of a lot of deals that we've spoken about which are a part of our pipeline are actually cost takeout and vendor consolidation deals which inherently come with pricing pressure and therefore are al so very competitively fought. So, we will prioritize growth, we will prioritize the fact that we would like to invest in our clients and therefore that will become a priority . And therefore, these two are headwinds. And like I said, our endeavor would be to keep the margins in a narrow band. It is a huge task given the kind of guidance we have given for Q1. But all hands on the deck. What can be the levers, the levers will go back to everything that we have done up until so far to get to 17.5% which will in clude making sure that our bench costs are managed tightly, making sure we are driving higher productivity in our fixed price program, making sure we continue to optimize and cut down on some of the fixed spends that we have as the business comes down. So, those are things that we have done without cutting into the muscle, without cutting into S&M , that's been our journey so far, we will only have to accelerate it. And we don't guide for margins. So, the endeavor is going to be to keep it at least in narrow band in the coming quarters and then somewhere we will see.

Vibhor Singhal : Got it, got it. Thank you so much for taking my questions and wish you all the best.

Srini Pallia: Thank you.

Moderator: Thank you. We will take our next question from the line of Kumar Rakesh from BNP Paribas. Please go ahead.

Kumar Rakesh: Hi, good evening. Thank you for taking my question . My first question, for a minute, if I assume that I didn't know about the macroeconomic issues and would have looked at the numbers that you have reported just as on. Your headcount on a sequential basis has increased quarter -on-quarter after a couple of quarters of decline . Your total bookings and large deal wins are pretty strong in the quarter and Capco , which is quite discretionary focused, reported pretty solid growth in the quarter. I would have expected that the next quarter would see a decent growth. In contrast to that, the guidance that you have given at the midpoint implies that you would see one of the lowest growth outside of the COVID period, probably . So, what is incrementally that you are looking at, which is essentially making your guidance to be that weak? Are there specific ramp downs that you are looking at? Are there volume declines that you are building into that assumption? If you can give some more granular details, essentially what specifically is pulling down this guidance?

Aparna Iyer : There are two aspects . I will go for, then Srin i, you can add. Clearly, we've spoken about how there is some uncertainty in the macroeconomic environment that's playing out . While Capco has printed strong numbers for Q4, there is, and in some things, they also have business gains in market share etc. right? And they put on a solid performance. But the macroeconomic environment will impact other sectors that we spoke about, including consumer, manufacturing, where we are seeing some softness. Th e other part of from a market unit standpoint, for us Europe, the weakness in Europe is likely to continue into Q1 . And hopefully, from there we look at how to build on the momentum on the back of some of this large deal wins that we've had both in Q4 and in Q1, Rakesh.

Srini Pallia: Rakesh, s o, maybe if I could add a few more points here. Based on my client conversations, a few things I'm noticing. One is large transformation projects, programs, one of them I talked about, are getting paused or being delayed or kind of changing the schedules. Secon

d, while the clients have the budget, they want to review it post the certainty or at least understand where the situation will end up. And one of the things that I constantly see, especially in the industries that have direct influence, there are cost pressures . And definitely, I think the demand for tech -driven efficiencies and cost will continue. And that's the kind of pipeline that we are seeing, which is also how do you help the clients bring in more efficiency, automation, and of course, Gen AI. And the point that Aparna made in the previous question is around vendor consolidation, tail vendor consolidation, so on and so forth. But the po int, the good news is that right now the pipeline is strong. I think that's good news. And this is again evenly distributed both in terms of large deals and also small deals. And I can tell you, while Europe has gone soft, has been soft for us, I see a good pipeline there across sectors. So, I think the focus for us has to be closing those deals quickly, which could translate to revenue hopefully in the next few quarters, if you will. But net -net, now the situation is compared to

COVID , this situation is ve ry different. The situation is not that the clients, businesses are going to stop. The situation here is how does tariff impact the customer's business in the context of the cost,

price and consumer demand? I think that's what they're trying to wait and watch and see before they take decisions.
Kumar Rakesh: Thanks for that, Aparna and Srini . My second question was if I step back and take a little longer term view on the full year performance and the recent history. So, this is the second year in which we are seeing the revenue decline. And looking at where we would be exiting this year, the first quarter, even if for the rest of the year you grow, you most likely will see a revenue decline in FY26 as well. So, there is a high likelihood that we would end up with 3 years of revenue decline. The fi rst quarter revenue would be back to where it was, the quarterly revenue back where it was four years back . So, while I'm aware of the five criteria, the five focus ed areas that you are working on and we have started seeing progress on those areas, what do you think is the problem that essentially is ailing that we are consistently underperforming and likely to continue to underperform for the next few quarters?
Srini Pallia: So, I think it's a good question. I can tell you that it was obviously for us, FY25 was a mixed tier. And we also made progress on a few fronts. But if you double click on the revenues, while we have de-grown 2.3% in FY25, I will definitely call out Americas, which contributes close to 63% of our revenue. That piece of business has grown 1.2% in FY25. The second piece of the business, which is APMEA , it has actually de -grown 9%, but the region has recovered in the second half of the y ear and delivered a growth of 1 % in quarter four, sequentially. Well, Europe, I called out, has been a challenge for us. It has de -grown 7% year -on-year and 2. 5% sequentially in quarter four. Our focus has been to stabilize and bring this region back to growth trajectory. To this end, we had new leadership. The leadership has come together, and we are seeing it as far as the traction on the ground is concerned. The good example is the Phoenix deal that we have closed, which will help us get some momentum on the revenue side, if not next quarter, second half of the year, like I said. And what is the important thing that I want to call out is our deal pipeline in E urope. And that's very encouraging to me. And we have a good opportunity for us to stabilize and also bring growth back in Europe. Essentially, the problem statement is Europe and how Europe will turn around, which will have an overall impact on Wipro's performance.
Kumar Rakesh: Great. Thanks a lot, Sr

ini, for that.
Moderator: Thank you. We will take our next question from the line of Gaurav Rateria from M organ Stanley. Please go ahead.
Gaurav Rateria: Hi. Thank you for taking my question. I have a couple of them. Just the first question for Srini. What exactly your guidance assumes with respect to normalization of the environment? Is it that the environment remains tough throughout the quarter what your assumption is or you expect that to

normalize over the coming weeks and some a bit of that reflects in improving growth over the coming months may not be start of the quarter but back half of the quarter ?
Srini Pallia: Gaurav, I'm talking to someone who is on a daily basis looking at what's happening in the macro environment. Maybe I should ask you offline this particular question , but clearly, in the context of the guidance we are given for quarter one, right? We have factored in assumptions for both at the lower end and upper end of the guidance. So, our guidance for quarter one that we are given is based on the best visibility, both in terms of revenue and what we have seen currently. However, the upper end of the guidance is if we see the improvement in the demand situation from where we are today . So, the lower end of the guidance will obviously have to factor in worsening of the demand environment. So, we are somewhere in between that, Gaurav. I don't have a crystal ball to say when this whole uncerta inty will become certain. All of you have how you are forecasted from Jan to Feb to March. That's just never happened before. Even during the COVID crisis, we did not see the analysts coming back and changing the forecast so rapidly in three months and a few weeks. So, I'm only hoping for the best case scenario, which will impact our high er end of the guidance, worst case scenario, which will be at the lower end of the guidance. That's the best way I can answer your question, Gaurav.
Gaurav Rateria: Sure, Srini . Thank you so much for that transparency and explanation. My second question is on the TCV that you report, the total TCV minus the (Inaudible) 47:59 . If you look at that number on a trailing 12 months, it's down by around in like 13%, 14% Y oY. Is this the reason why the conversion of order book into revenue gets impacted because these deals convert into revenue much faster than your larger deals. Of course, you are doing great in large deals, but that takes time to convert into revenue. But this immediately flows in and correlate that this part of the business is driving a weaker conversion ratio ?
Aparna Iyer: You know, if you look at our overall booking, we closed the full year with $14.3 billion of booking. And in some sense, there is a down year -on-year, Gaurav. But if you look at our large deals, which

is something that we've been categorically wanting to improve, has gone up. So, you are right that the deals that are there in the smaller and medium -sized bucket are not growing fast enough. And now bookings are largely coming through the large deals . So, to that say now whether that has direct correlation with do larger deals take longer to convert vis-à-vis do smaller deals, will they come into the conversion much faster? It is just a conjecture , I don't think there is a n analysis or there is a causal effect to that extent. But yes, if that also starts to grow, it will have an impact on our overall revenue growth .

Gaurav Rateria: Got it. Last question for you, Aparna. Just trying to understand that when revenues actually decline, it has an impact on the utilization rate, which could be a possibility in 1Q. Let's say if you were to

maintain margins in a narrow band, what would be the underlying assumption for utilization rate? Should it be fair to believe that utilization has to be around 87% -88% in the current rate to hold on to margins in

the narrow band? Thank you.

Aparna Iyer: Gaurav, there are several levers at play and utilization is one of them. Totally, utilization needs to improve or at least sustain even though in a weaker revenue environment that is what we will be focused on. There are other levers that play that I spoke about fixed price productivity, further cuts in our G&A, over heads rationalization, improvement in other programs that we are driving from a standpoint of how we are looking at profitability. So there are many levers at play with utilization being one of them, Gaurav.

Gaurav Rateria: Thank you so much.

Moderator: Thank you. We will take our next question from the line of Surendra Goyal from Citi. Please go ahead.

Surendra Goyal: Thanks. Thanks a lot. Srini, just one question, your sales and marketing spend in USD terms is down high single digit Y -o-Y in FY25 at a time when you continue to lose market share versus peers, so do you think anything needs to be done differently here o r do you think you are doing enough , investing enough for this to be able to drive the catch up with peers on growth rates? Thank you.

Aparna Iyer: I think Surendra, you should probably look at our S&M, even year -on-year, I think that is a good reflection quarter -on-quarter, there could be certain (Inaudible) 51.57 that could impact, and I must tell you that from an employee compensation standpoint, there is no change in the S&M, right. A lot of what we are doing is rationalization of maybe more G&A kind of roles, right? And there again, we are looking only at those roles that are lik e by design need to operate from India and therefore they are not client facing and in high -cost geographies we have got them down. So you can be rest assured that we are not cutting down on S&M, especially from a sales standpoint. In fact, we are going ah ead and investing in our people , in the cross industry, in industry solutions and in AI. Srini, you want to add .

Srini Pallia: Yes, sure. So just to add Surendra to what Aparna said, first and foremost, right we continue to invest in sales and marketing and the strategic areas that we talked about, whether it is consulting, whether it is AI -Powered investments around innovation and so on so forth. So we are investing for growth. So I want to be very clear on that aspect of it. However, if we have created design principles where if the roles are not client facing, roles that can be done from homes, it doesn't make nece ssarily sense for them to be sitting there. So we are moving such roles to low cost, either it could be in Europe, Latin America or India, depending on where it is coming from. So that is what would have reflected, Surendra, but let me be very clear, if we have to be Consulting -led AI-Powered Wipro for the industry

segments where we are going to prioritize on, we are going to go full throttle on growth in those investment.

Surendra Goyal: Understand. So you think you are doing enough, so I get the point. Thank you.

Moderator: Thank you. We will take our next question from the line of Ankur Rudra from JP Morgan. Please go ahead.

Ankur Rudra: Hi, thank you and thanks for the guidance as well. Can you elaborate a bit on the extent of the ramp downs, cancellations, delays you mentioned that has happened only in the last 2 weeks since the tariffs came out? How much of this is fresh and is that what you are building into both ends of your guidance now?

Aparna Iyer: Our guidance digs in the current visibility that we have Ankur at the moment. It certainly reflects the macroeconomic environment and the visibility that we have in terms of the spends that our clients will make with us. So in some sense it factors like Srini said those uncertainties as well and as you know we guide in a range and that gives you a good perspective of what we are looking at for the quarter.

Ankur Rudra

: Right. So I am just trying to dig in a bit deeper to your previous answer where you spoke about if macro improves the upper end if that does not the lower end, I was wondering how much of that has changed in the last two weeks?

Srini Pallia: So, Ankur, from our perspective, I think after the pause for 90 days on the tariffs, I think there is a little bit of stability that we have seen and that is I think reflecting on the last 2 weeks that you are talking about it Ankur, but what we don't kno w at this point in time how this will play out, especially with China on the tariff side. So it is a little difficult to predict, but again, just to repeat what I said and again what Aparna said, right, based on the best visibility in terms of revenues that we have we have given the upper end of the guidance assuming the demand situation from where it is today will stabilize and improve and the lower end if it worsens further.

Ankur Rudra: Understood. Just talking a bit about AI, can you talk a bit about how AI related productivity pass backs or deflation might be playing into your contract renewals and if you are proactively infusing AI games into your existing deals, is that what existing TCV numbers at risk?

Srini Pallia: So at this point in time, Ankur, I am not seeing any significant impact either on revenues or margins, right. What we are doing is whatever benefits of GenAI that are applicable to our customers, right in many of the cases, some of the times, the customer s budgets are getting freed up. So we are actually using GenAI and also getting some incremental work done for the same customer. And that could

also offset some of the revenue drops you are talking about, but what is important to call out is while we continue to infuse GenAI into managed services, deals and also the managed services opportunities that currently exist with our existing clients, we are also leveraging GenAI to actually look at a completely new revenue stream and that is for us part of changing the game leveraging GenAI. So it is not just operating better or developing better for the clients on GenAI but also changing the game for the m. And that is an exciting piece if you ask me. And I can just put for example, we just announced the partnership with NVIDIA on Sovereign AI, right. We did this collaborating with them, and we had announced the SIAM.AI in Thailand and this is something which is very new which has a huge impact on tourism industry, starting with Thailand and it could get replicated across countries. So that is one good example I can talk about. Another example, Ankur, just leveraging GenAI, one of the large cities in Europe , as part of the smarter city, we are doing predictive maintenance of the critical infrastructure. That is very interesting, very high-end kind of work. In fact we got these AI agents physical agents I am talking about, going and looking at aging of the pipes that are there, ground situations and so on so forth. Everything is AI based, and this is the AI based problem detection, right. And also the end benefit for the city is preventive maintenance of the water pipelines, for example. So this is also going to help the city in terms of reducing the manual inspection and of course the overall maintenance costs. So these are the great examples Ankur that I am seeing where GenAI can give us new opportunities for growth.

Ankur Rudra: Yes, if I can just squeeze in one last question. You had mentioned success in your large accounts. If I look at the client metrics for the last several quarters and especially this quarter, it is across sizes, whether it is $100 million down to $10 millio n has been an element of softness. Could you clarify how much of this is from FX versus client losses or cuts in discretionary spending?

Aparna Iyer: Yes. If you look at the number of $50 million clients that we have, they broadly remain the same. We

have mentioned that our top clients are the top 5 or top 10, they are all growing. In fact, even in Q4 of ‘25 on a year -on-year constant currency basis, all three have grown. The number of active clients that you are seeing going down is just a reflection of the overall revenue environment and the lower discretionary spends.

Ankur Rudra: Appreciate it. Thank you.

Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand the call back to Mr. Dipak Bohra for closing comments. Over to you, sir.

Dipak Bohra: Yes. Thank you all for joining the call. In case we could not take any questions due to time constraints, please feel free to reach out to Investor Relations team. Have a nice evening. Thank you so much.

Moderator: Thank you members of the management team. On behalf of Wipro Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

“Wipro Limited Q1 FY'2 6 Earnings Conference Call ”

July 17, 202 5

MANAGEMENT : MR. SRINI PALLIA – CHIEF EXECUTIVE OFFICER & MANAGING DIRECTOR , WIPRO LIMITED
MS. APARNA IYER – CHIEF FINANCIAL OFFICER , WIPRO LIMITED
MR. SAURABH GOVIL – CHIEF HUMAN RESOURCES OFFICER , WIPRO LIMITED
MR. DIPAK BOHRA – SENIOR VICE PRESIDENT (CORPORATE TREASURER & INVESTOR RELATIONS), WIPRO LIMITED

Wipro Limited
July 17, 202 5

Public Moderator: Ladies and gentlemen, good day and welcome to Wipro Limited Q 1 FY'2 6 Earnings Conference Call.
As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the

conference call, please signal an operator by pressing “* ” and “0” on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Dipak Bohra – Senior Vice President (Corporate Treasurer & Investor Relations). Thank you, and over to you, sir.
Dipak Bohra: Thank you, Yashashri. Warm welcome to our Q uarter 1 Financial Year 2 026 Earnings Call.
We will begin the call with “Business Highlights and Overview” by Srinivas Pallia – our Chief Executive Officer and Managing Director, followed by “Updates on Financial Overview” by our CFO – Aparna Iyer. We also have our CHRO – Saurabh Govil on this call. Afterwards, the Operator will open the bridge for Q&A with our Management Team.
Before Srini starts, let me draw your kind attention to the fact that during this call, we may make certain forward -looking statements within the meaning of Private Securities Litigation Reform Act 1995. These statements are based on Management's current expectations and are associated with uncertainties and risks, which may cause the actual results to differ materially from those expected. The uncertainties and risk factors are explained in our detailed filings with the SEC. Wipro does not undertake any ob ligation to update the forward -looking statements to reflect events and circumstances after the date of filing. The conference call will be archived, and a transcript will be available on our website.
With that, I would like to turn over the call to Srini. Thank you.
Srini Pallia: Thank you, Dipak. Good evening, everyone. Thank you for joining us today.
Let me start with a quick view on Quarter 1 and the broader environment. We started the quarter facing significant macro uncertainty , which kept overall demand muted. Our clients priori tized initiative s with immediate impact family focusing on cost optimization and vendor consolidation. And at the same time , they accelerated their AI, data and modernization programs.
We saw a clear trend of mini -air projects moving to scale and production. We quickly aligned with these priorities , deepened our partnerships , and secured key deals. The large deals we closed this

 quarter and last quarter along with the strong pipelines put us in a good position for the second half of the year.
With that, let me now turn to our Quarter 1 performance. I will start with key financial highlights and then overview of our markets and sectors. Aparna will provide further details on the financials in her remarks.
Our IT services revenue for Quarter 1 was $2.59 billion , quarter -on-quarter degrowth of 2% in constant currency terms within our guidance range. Our IT services margin was 17.3% , an expansion of 80 basis points year-on-year.
In our mark ets, Americas grew 1.5% year -on-year in constant currency terms. And we are continuing to see strong deal momentum here. APMEA’s revenue stayed flat. Digital spending in India, Middle East and Southeast Asia kept the market resilient. Europe continued to face headwinds and clients remain focused on maintaining their competitiveness in this environment. Capco grew year -on-year, driven by strong performance in Latin America.
Turning to our industry sector, in BFSI, demand is strong and steady. Clients are modernizing their IT landscape with a sharp focus on AI -led efficiency and transformation. We also w on two mega deals here, which I will discuss later.
In Consumer and EMR, we are seeing a more cautious mode. Retail, CPG and manufacturing have been m

ost affected by tariffs. Even though discretionary budgets are tight, outsourcing renewables are creating new opportunities to gain wallet share.
In Technology and Communication, we are seeing a clear shift towards AI investments. Clients are looking to innovate and future -proof their software and platforms. We won a large deal here that has the potential to become a mega deal.
Healthcare continues to do well as clients invest in modernization and digital transformation. While payers are under cost pressures, the overall outlook for the sector remains positive. These priorities and shifts in client focus are evident in the strategic deals we have won in Quarter 1 .
During the quarter, we reported bookings worth $5 billion in total contract value, a growth of 51% year-on-year. Our large deal bookings reached $2.7 billion , up 131% year-on-year. This includes 16 large deals this quarter, including 2 mega deals. Several of these wins were driven by vendor consolidation.

 We continue to build strong momentum. These deals reflect a good balance of extension of existing work and securing new business. They also highlight our capabilities, domain expertise and progress in AI.

Let me share three examples to bring this to life. My first example is a global banking leader that selected us as a strategic partner to transform technology across multiple business lines and enterprise functions. They chose us for our deep BFSI expertise and consulting -led approach. We will transform their digital ecosystem, modernize their cloud and data platforms, improve cyber resilience, and embed AI across the software development lifecycle, helping boost engineering productivity and reimagine core processes.

Second, a leading global semiconductor company signed a multi -year agreement with us to modernize its entire product lifecycle. Building on our longstanding partnership, we will drive into an engineering transformation from silicon design and system software to platform development and hardware validation. Our focus is on using AI and automation to accelerate development, improve quality, reduce cost, and enable agile practices.

Finally, we secured a mega deal with a leading North American bank extending a decade -long partnership. We will transform their technology across core banking, wealth management, and retail using our AI-powered global delivery framework. This includes modernizing their cloud infrastructure, strengthening cyber resilience and enhancing their digital ecosystem and enterprise applications. This will accelerate innovation, improve time -to-market, and deliver a more customer - centric experience for our clients.

In fact, these examples highlight a clear trend. AI is no longer a niche. It's becoming essential to how businesses operate at scale. At Wipro, we see AI as a force reshaping industry and amplifying human potential.

We at Wipro are building an AI -first, AI -everywhere enterprise focused on solving complex challenges, accelerating delivery, and reimagining operations at scale. By embracing autonomous and authentic AI, we are transforming business models and how organizations work.

In fact, our AI capabilities are integrated into both industry and cross -industry solutions. By combining domain expertise with AI, we are able to deliver value through solutions such as hyper - personalized wealth management and predictive industrial insigh ts, to name a few.

So, far, we have deployed over 200 AI power agents using advanced technologies from leading hyperscalers. For example, these agents enable smarter lending, intelligent claims processing, and autonomous network management.

Public We are equally focused on talent and training our team with the skills and mindset to thrive in an AI first world. Building on these strong foundations and our continued focus on five strategic p

riorities,

we are well positioned for the future.

I would like to now discuss our outlook for the next quarter :

While we are cautious given the macro environment, our strong order book, healthy pipeline, and focus on consulting -led AI -powered solutions give us confidence in delivering long-term value to our stakeholders. Returning to profitable growth remains our priority.

Based on our visibility, we are guiding for a sequential growth of minus 1% to plus 1% in constant currency terms. With that, let me hand over to Aparna for a detailed view on our financials. Thank you again and over to you, Aparna.

Aparna Iyer: Thank you, Srini. Good evening, ladies and gentlemen. Let me give you a brief update on the financial performance for the quarter ended 30 June 2025. After that, we can open it up for questions.

Our IT services revenue for Q1 sequentially declined by 2% in constant currency, which is well within our guidance range. On a year -on-year basis, the revenue declined by 2.3% in constant currency terms.

Our operating margin for Q1 was at 17.3%, an expansion of 80 basis points on a year -on-year basis. As Srini alluded, many of our large deal wins are in the nature of cost takeout or vendor consolidation. These deals typically come with upfront investments and will cause pressure on t he cost. As always, we will continue to focus on operational excellence in order to offset these pressures.

Let me give you a color on our strategic market unit and sector performance :

All growth numbers that I will share will be in constant currency. Americas 1 grew 0.2% sequentially and grew 5.8% on a year -on-year basis. Americas 2 declined 1.7% sequentially and declined 2.7% on a year -on-year basis. Europe declined 6.4% sequentially a nd 11.6% on a year -on-year basis. APMEA has grown 0.6% sequentially this quarter, though declined marginally on a year -on-year basis.

Moving to sectors :

BFSI declined 3.8% sequentially and also declined 3.5% on year -on-year terms. Healthcare grew 0.5% sequentially and has grown 3.5% year -on-year. Consumer declined 4% sequentially and declined 5.7% on a year -on-year term. Technology and Communication grew 0 .4% sequentially and

Public degrew 0.3% year -on-year. Energy, Manufacturing, and Resources declined 0.7% sequentially and 2.4% on a year -on-year basis. Capco continues to perform well, growing 6% on a year -on-year basis.
Let me share with you some of the other key financial parameters :
Our net income grew 10.9% on a year -on-year basis in this quarter. This was after absorbing for a one-time restructuring cost of INR 246 crores. Our EPS for the quarter at INR 3.2 grew by 10.8% year-on-year. Our free cash flow generation continues to remain robust. It was at 115% of our net income. This takes our gross cash, including investments, to be at 6.4 billion and net cash actually expanded quarter -on-quarter. In Q1, our net other income grew 62% on a year -on-year basis. Accounting yield for the ave rage investments held in India was at 8.1% for Q1. Our effective tax rate was at 21.6% for Q1 '26. This is versus 24.5% that we had for the last year and same time last quarter was also 24.5%.
Our hedges continue to be in line with our policy at about $2.5 billion of ForEx derivative contracts as hedges at the end of Q1 '26.
Finally, before I move to the guidance :
I would like to share with all of you that in our Board meeting today, the Board of Directors have declared an interim dividend of INR 5 per share. With this, we would have now distributed cash in excess of 1.3 billion in the last 6 months. As you know, we revised our capital allocation policy in January 2025 to increase the payout to a minimum of 70% of our net income over a block of 3 years. Thus, going forward, subject to the cash position and Board approval, our endeavor would be to pay these dividends twice a year, once along with the June resul

ts and then along with our December quarter results.
In terms of guidance, to reiterate what Srini shared, we expect revenues from our IT services revenue business to be in the range of $2.56 billion to $2.612 billion. This translates to a sequential growth of minus 1% to plus 1% in constant currency terms.
With that, we can take questions. Operator.
Moderator: Thank you very much. We will now begin the question -and-answer session. (Operator Instructions) We will take our first question from the line of Abhishek Kumar from JM Financial. Please go ahead.
Abhishek Kumar: Yes. Hi, good evening. Thanks for taking my question, and congratulations on very strong deal wins. My first question is on the deal win itself. So, you know, on an LTM basis, the overall deal TCV has grown by 10%. But if I look at the smaller deals on an LTM basis, it's down 8% Y -o-Y. So, my

Public question is, have we seen any kind of given, these large deals are longer in tenure, any material increase in duration ? And therefore, how should we look at the ACV growth for us to really model growth going forward?
Aparna Iyer: Thank you, Abhishek for the question. You are correct that our TCV has been growing much faster than the ACV . And this is also because the deal tenors have been going up. Our pipeline has a good balance of both vendor consolidation, cost takeout deals, which are typically longer tenor and deals that are coming in in the areas of data, AI , and modernization that Srini alluded to. So, it is a good mix of deals.
But it is also true that today, if you look at just from a value standpoint, there is the large deals are dominating the pipeline in terms of how we won, because last year we won 2 mega deals. This year, we are starting with 2 mega deal wins in 1 quarter. So, therefore, in some sense, the TCV bookings led by our large deals is indeed growing much faster than the smaller and medium deals.
This is also true when you keep in the context that the discretionary spends have been big. And what is number 1 priority and agenda for our clients is also cost takeout. And in some sense, that also fuels what they would like to spend in newer areas. So, that's basically how I would like to characterize that.
Abhishek Kumar: Sure, that's clear. The second question is on capital allocation. The last 2 payouts after the tax regime change has been in the form of dividends. So, have we decisively moved towards the dividend route and is buyback now not in consideration?
Aparna Iyer: We raised our capital allocation policy from 45% to 50% of net income to upwards of 70% on a 3 year basis. And when we did do that, we had communicated that we continue to prefer dividends and buyback as a means of returning cash to our shareholders. For now, in the January quarter and this quarter, We have given out dividends. Buyback continues to remain an option and we could consider that at an appropriate time.
Abhishek Kumar: Sure. Thank you, and all the best.
Aparna Iyer: Thank you.
Moderator: Thank you. We will take our next question from the line of Nitin Padmanabhan from Investec. Please go ahead.
Nitin Padmanabhan : Yes, hi. Good evening. Good quarter. Aparna wanted your thoughts on the margins. Now you did mention that a lot of these deals are, obviously, will have some margin impact. So, considering that

Public you will have an execution of a lot of these deals coming through, do you believe that current margins can hold on from where it is or how should we sort of think about margins on a going forward basis?
Aparna Iyer: We don't guide for margins, Nitin. We have had a very good run on operating margin improvement over the last 8 quarters. We are very excited with the quantum of deals that we booked. These deals prove the capability of us, winning in large vendor consolida tion. In fact, we shared that nearly a su

bstantial portion of our large deals actually came from our top clients. So, we are very happy with the win.
Our focus and energy is going to be on conversion, right? A lot of these deals will ramp up over the next 4 to 6 quarters. These deals have a good balance of both renewing and an element of expansion. And the expansion will come through ramp up consistently over the next few quarters, right? So, all hands on the deck, that will mean we will have to make certain upfront investments. And these are larger deals and are like strongly contested. And therefore, the nature of the deals, the margin profile is weake r compared to the rest of portfolio. So, there will be some pressures. You have seen our ability to continuously improve our operating margins. Those operating levers will continue to remain at play. And that's what I can share at the moment.
Nitin Padmanabhan : Sure. Fair enough. That's helpful. Thank you so much and all the best.
Aparna Iyer: Thank you, Nitin.
Moderator: We will take our next question from the line of Gaurav Rateria from Morgan Stanley. Please go ahead.
Gaurav Rateria: Hey, congrats, Srini. Congrats upon good execution. My first question is on the kind of the deals. If you look at the last one year, you know, the areas where we have won the deals like the deal with the insurance on the claims side, the deal with the tel ecom player in the U.S., these are areas where Wipro had traditionally not been very strong or been present. So, what tweaks we have made to be able to win deals, which probably traditionally has not been very strong for Wipro. So, just tryi ng to understand the initiatives taken around that.
Srini Pallia: Thanks, Gaurav. This is Srini here. Thank you for the question. If you look at what we called out at the beginning of last year, we said we want to be consulting led and AI powered. What that meant, Gaurav, was as part of the strategy, we called out 5 sect ors and within those sectors, specific industries where we want to be dominant. So, that means we invested in terms of creating domain expertise to like Aparna said, we have won these deals, these mega deals in some of our top clients. We als o talked about as part of a strategic priority that we are going to invest into growing our large accounts.

Public So, the 2 strategic priorities that we talked about, followed by the third one where we said we are going to build industry and cross -industry solutions. All the 3 strategic priorities really helped us to understand what the client was looking at, both in the context of business, in the context of experience that they were looking for their clients, and the way they have to modernize them and how to leverage AI to bring in efficiency, optimization and velocity. So, these deals are for me personally very exciting, Gaurav, and that's the reason I think we have been able to dominate in some of the deals that we talked about.
Of the 16 large deals, 2 of them were mega deals, 1 has the potential to be a mega deal and I talked about the 3 case studies. And if you look at it clearly, it has been AI -powered, it has been consulting -led, and it also understands the client's landscape . And we will continue to do more of this, Gaurav, as we move forward. And the last point is also being very proactive in terms of listening to the client and responding to their needs.
Gaurav Rateria: Thanks for the detailed answer. The second question on you mentioned last time that there were certain pauses on large projects. You gave examples also on SAP project that were paused by the clients. Have you seen any update on that? Have things started to move and is this part of your guidance?
Srini Pallia: So, Gaurav, if you look at the overall environment in the context of tariffs, in the context of geopolitics and the economy, I think there are certain sectors which have been really impacted. And we ca

lled out manufacturing, especially automotive and indus trial. We also called out retail and CPG, which has a great impact due to over -reliance on the global supply chain.
And 1 of the projects that I called out last quarter was in 1 of the sectors, and as you know, tariffs are still being evaluated. So, the client has paused on that particular program at this point in time and they would want to have a complete clarity before they get started. So, those kind of projects, Gaurav,

are still on hold. I am hoping that if things settle down in the next couple of quarters, hopefully, the client will come back to reinvest in those transformation programs.
Gaurav Rateria: Thank you. Last question on margins. I understand the puts and takes you explained on margins, especially on the large deals' upfront investment, but fair to say that you aspire to be in the band of around 17% that you had been calling out in the past few quarters, keeping these puts and takes into mind. Thank you.
Aparna Iyer: So, certainly that remains a band that is where we would like to operate, Gaurav. But having secured these deals, our focus and priority is going to be to ramp up these deals and execute and deliver them. And therefore, there will be certain investments. S o, there could be certain quarters where we will

have to make those investments. But you are right when you say that 17% to 17.5% band that we called out earlier remains a band that we would like to operate in.
Gaurav Rateria: Thank you.
Moderator: Thank you. We will take our next question from the line of Surendra Goyal from Citigroup. Please go ahead.
Surendra Goyal: Yes. Hi. Good evening. So, just 1 question on the deals again, like how comfortable are you that the 10% odd increase on trailing 12 -month TCV will translate into a meaningful growth acceleration? And the reason I ask is like in FY '23 also, we saw TCV was up 28% year over year, but FY '24 and FY '25, we saw a revenue decline. And in that context, is it possible to provide any sense on the ACV growth even directionally?
Srini Pallia: Maybe I will give in my comment and ask Aparna to add to that. First and foremost, if you look at the opening remarks that I made is that we had a very strong bookings in Quarter 1. We have a very strong pipeline in Quarter 2 . And I also said that our H2 will be much better than H1 and this confidence comes based on the bookings that we have done and the point that Aparna talked about , we are now staying very focused on execution . Some of these deals will get transition and get into steady sta te anywhere from 3 months to 6 months timeframe so that gives us the confidence to talk about the second half Surendra and maybe Aparna if you want to add more .
Aparna Iyer: Surendra , your observation is right . Sometimes these TCV and ACV have different growth trajectory given how long a tenure deal keeps getting signed and therefore what impact that has on conversion . The other factor that has come in the way of the conversion has been just the discretionary spend environment and therefore how there have been subsequent leakages on that count . For now , at least the discretionary spend environment seems to have stabilized . One was hopeful perhaps that the start this calendar year that it would improve, but for the moment I think t he way we are looking at this financial year is going to be stable . If we keep that assumption in mind , you should be able to see a much better conversion of some of these bookings into revenue , Surendra and that's the endeavor.
Surendra Goyal: And any comments on ACV growth even directionally just for us to understand the trends a little better ?
Aparna Iyer: I think the ACV growth this quarter has grown well on a year -on-year basis, that is where, so this is not coming only on the back of longer -term deals, and we feel fairly confident about thes

e deals . And the (Overlap) 31.52 seeing also quite good.

Surendra Goyal: Sure. A nd just one last qu estion Capco you mentioned 6% Y -o-Y, could you share the sequential growth number there ? Thanks .
Aparna Iyer: So, we are not calling out the sequential growth rate for Capco . It's a part of all the units . One additional point that we had called out in the media interactions today is that we have had a billion dollars of bookings trailing 12 months so it should give you good sense and even into Quarter 2 , we are looking at a good momentum and trajectory as we start the quarter .
Surendra Goyal: Sure. Thank you so much .
Moderator: Thank you . We will take our next question from the line of Vibhor Singhal from Nuvama Equities. Please go ahead.
Vibhor Singhal: Thanks for taking my question. Congrats on a solid performance and a very near term environment. So, my question was again on Capco. I think as you mentioned the Capco reported a decent single digit Y-on-Y growth . So, basically if you could basically take us through the overall environment that we are looking at , this is an environment in which the post tariff uncertainty one in which we have seen a lot of challenges and discretionary spends being put on hold . Capco by the nature of its business, probably reflects that and still we are seeing good growth . Do you see this basically momentum continuing ? Any reasons that you see that we have been able to do well while others might be facing challenges ? Any bit of color on that would be really helpful.
Srini Pallia: Vibhor , as far as Capco is concerned , just to add to what Aparna talked about in the context of year -

on-year growth and also the billion -dollar booking that Capco did , we have seen Capco growth across the U.S. and APMEA on a year -on-basis and growth is driven across insurance , wealth and asset management and energy to be very specific where the growth came . Also, there has been a good momentum in both APMEA and LATAM especially in Brazil which is actually outside Capco's traditional geography . So, these actually helped us in the context of growth and opportunities that we see going forward for Capco .
Vibhor Singhal: Is the pipeline also looking good in Capco in the coming quarters?
Aparna Iyer: It continues to look good for the coming quarters, Vibhor.
Vibhor Singhal: Got it, that is really helpful, Aparna. My second question is basically on the overall basically the margins front. So, I think again a solid performance in this despite the revenue decline. So, I do not know if you have answered this, sorry I was able to join the call late, but in terms of margins, going forward do we expect to maintain the same trajectory of 17%-18% or given the kind of basically revenue that we have shown, there could be a possibility of maybe overshooting that range?
 Aparna Iyer: So, we do not guide for margins unlike some of our peers. We have in the past shared that there is an aspirational band of 17 -17.5. If you look at quarter one, we have landed somewhere bang in the middle of that band. But looking forward, our focus is going to be conversion of some of these mega deal wins that we have had, large deal wins that we have had. And some of these large deal wins will come with upfront investment and lower margins, right? So, there are going to be pressures that are going to get created. We will have to offset them through better operational rigor and a lot of levers that are there at our disposal. But it is going to be a work that's cut out for us. And that's all I can share at the moment , Vibhor .
Vibhor Singhal: Got it, got it. So, just last follow up on that. So, I mean, with all the headwinds in place of these large deals ramp up and all, we still aspire to maintain our margins in the 17 % to 17 .5% band range ?
Aparna Iyer: You know, I sai

d that, this is what we have delivered in Q1. We have done well in order to improve our profitability. For now, our number one priority would be growth.
Vibhor Singhal: Got it, got it. I was just pushing my luck. Thanks a lot for taking my questions and wish you all the best.
Moderator: Thank you. Next question is from the line of Ravi Menon from Macquarie. Please go ahead.
Ravi Menon: Hi, thanks so much. And congrats on a really strong deal wins . You see, I am just a bit confused about the commentary in America s. You sounded very optimistic about the pipeline there and the strength of demand. But when you went by the industry -by-industry segment, it didn't really, it sounded more mixed with manufacturing, retail, CPG, all. You're calling out some weakness there. So, could you talk a bit about the Americas and then also talk about the decline in Europe this quarter if that's very temporary and you're expecting a bounce back there?
Srini Pallia: Sure, Ravi. Let me take it one at a time. So, if you look at the sectors in the U.S., we have BFSI. And like I said, that BFSI, the current pipeline is very strong and steady. Having said that, in quarter one, we won 2 mega deals, which are very strategic for us as a client and also for the client, bringing in the power of AI and bringing in the power of execution capabilities, if you will. So, in that context, in the U.S., BFSI, I see a positive traction. Second is technology and communicatio n, which is another sector of ours. There again, if you look at it, Ravi, we won a large deal, which is likely to be a mega deal. And we are staying focused on that because both technology clients and also communication clients, they are investing heavy in AI because they want to modernize their current software and platforms, which is one of our core. And also, it's also a strength because it's coming through our engineering domain. So, that sector will continue to be positive for us. Third, in terms of he alth care, health care, traditionally in the U.S., we played a big role in the payers, providers and life sciences, and that has continued to grow. And we see that to continue to grow. And also some of the industry
 solutions around payers that we have built actually is resulting in good differentiation and wins for us in the health care sector. Fourth, like you rightly said, consumer business has been a challenge. Within consumers, we have retail, CPG and travel transportation. But, if I look at the deal wins in quarter one, specifically in the retail segment, we have had some good, interesting wins. And I think we are staying close to what's happening in the U.S. economy, how the tariffs will play in and how this par ticular business will keep changing or evolving. The last one is energy manufacturing and resources. In that, you're right, manufacturing has been slow for us, and we continue to stay focused because especially in the automotive segment, I think, we have seen the challenges that companies are going through. But we are also looking at opportunities where we can help them in the context of cost takeouts. And that's something that we are proactively discussing with those customers. So, that's how the U.S. and the sectors are playing out, Ravi. Now, coming to Europe, right, you know, the

pipeline continues to be strong in Europe. And in the BFSI sector, you know, specifically in Europe, we have a good pipeline. And having said that, the large Phoenix deal that we won in Quarter 4, we are going th rough the final planning phases. And actually, the revenue will start coming in Quarter 3. That can give a good momentum for us in Europe. Second, we also are staying focused on some of these deals, which are cost takeout s and vendor consolidation. And we have wins now, we have stories now, we have strength now. We will go back and bring that to bear in Europe. While the market in Eur

ope is definitely uncertain. Obviously, we have a good view on what's happening in each of the countries and across the European Union. But what is more important for us is staying focused on those clients and do the turnaround for us in Europe, which has not been great in the last couple of quarters. But I am very confident with the team that we have put together, the energy and the enthusiasm they're bringing in and the pipeline they have, we will get there.
Ravi Menon: Thanks for the detailed explanation. I have a quick question on this restructuring cost of 2.4 billion. This is showing up, I guess, as an unallocated cost in the segmental reporting, right? And whenever we had something like this earlier, there was a deta iled footnote explaining what this restructuring was due to and whether we are taking impairment charges. Could you talk a bit about what's the restructuring charge this quarter?
Aparna Iyer: The restructuring costs pertain to restructuring in Europe that we did. This is very limited to a few associates in Europe, and this is one -off in nature and unlikely to recur. And you're right, it is a part of the reconciling items and it's a part of our EPS and our net income.
Ravi Menon: Okay, thanks so much. Best of luck.
Moderator: Thank you. Thank you. Next question is from the line of Manik Taneja from Axis Capital. Please go ahead.

Public Manik Taneja: Hi, thank you for the opportunity. And once again, congratulations on some of the internals that you've shown. I had a question with regards to some of the challenges that we have seen in Europe while the Phoenix large deal will help us and possibly, you're talking about a strong pipeline there. But if you could talk about some of the customer specific challenges that you've had in Europe over the course of last several quarters, a re they largely behind us? That's question number one. The second thing is th at while we continue to essentially defend our business within our top customers, and it also reflects in the revenue performance within top customers, but our client metrics seem to essentially convey some sort of a weakness. If you could just elaborate a s to what may be causing that. Those will be the two questions.
Aparna Iyer: Sure, Manik. In Europe, we have said that it's a combination of both the macroeconomic environment, the discretionary spend environment, and a few clients' specific challenges. Client specific challenges are now behind us. To say when would Europe bottom o ut and start performing, we do feel confident that in the second half of this financial year, we should start seeing some stabilization and growth in Europe. One, certainly because of the Phoenix deal win. Also, because we feel some of these c lient specific issues are behind us. More to be done. More is desired. I think Srini has spoken about a good pipeline. We will continue to remain focused on converting those pipelines and also remain very close to our top clients in that region. What was your second question, Manik?
Manik Taneja: I was also trying to probe you with regards to our client metrics performance.
Aparna Iyer: I now recollect your question. Yes, in some sense, if you look at the total number of active clients that has come down over a period of time, again, reflects the discretionary spend environment. There's nothing strategic or intentional that we are doing in order to reduce any number of clients. We continue to also win the hunting logos, the big circle accounts where we would like to expand. That's something that we are doing, and we will continue to accelerate that momentum. We are also invest ing a lot in our large accounts. In some sense, you should look at our greater than $50 million accounts, we have actually grown quarter -on-quarter. We should continue to see momentum in what we call as metal accounts, and you will see that performance reflected t

here.
Manik Taneja: Sure. Thank you and all the best for the future.
Moderator: Thank you. We will take our next question from the line of Kumar Rakesh from BNP Paribas. Please go ahead.
Kumar Rakesh: Hi, good evening . And thank you for taking my question. I have just one question, more of a clarification. So, it seems like on margin earlier when you used to talk about that it will be in a narrow band , what you seem to be focusing more on driving top line growth. Earlier, Srini had talked about that the priority would be on profitable growth and you have spoken about that the second half

Public performance would be stronger than first half. Will you say that would also be reflecting in the bottom line growth as well? Will that also be better than the first half than second half ?
Aparna Iyer: We do not guide for either the full year revenues or the profits , right? Yes, in the last few quarters, we have been talking about narrow bands . In the last eight quarters, we have consistently improved , right, our margins . And we have also created a good runway for us to invest back into our business. And t he deals that we have secured are in our large client relationships and they will need certain investments that we will have to make up front. And w e will go ahead and focus on growth and execution. Eventually, yes, this will result in profitable growth.
Kumar Rakesh: Got it. Thanks, Aparna, for that. The only reason I was trying to ask this question was to understand what could be the bottom for margin if you are investing , is there something you would want to bet on. Earlier, we have seen during this period , earlier period when we were focusing on driving growth, margin had even fallen to 15% sort of a level. So, is there a scenario in which for a few quarters we could see similar contraction in margin by ramping up the deals and hence could have an impact --
Aparna Iyer: Yes. Right now, we are not sharing any commentary on that. Like I said, we will now focus on this execution. We are in a good place as far as margins are concerned in Q1. We will take it from there. And w e will certainly keep the market posted as some of these deals will start to ramp up, what we are able to offset, how we are able to look at some of those pressures being offset, and then we will keep you posted accordingly.
Kumar Rakesh: Sure, that would be great. Thanks, Aparna.
Moderator: Thank you. We will take our next question from the line of Sudheer Guntupalli from Kotak Mahindra AMC. Please go ahead.
Sudheer Guntupalli: Hi, Srini, Aparna. Congrats on a good quarter and strong deal wins. First question, on the deal wins front , compared to the long -term trend line of mix between maximum deals and renewals, has this quarter seen any material divergence, maybe in terms of skew towards renewal s?
Aparna Iyer: No, I do not think so. In fact, we have a good mix of both renewal and with an element of expansion in both the mega deal wins that we spoke of. One large deal where we have a potential to make it mega has a substantial portion of new in it. So, I think when you look at overall large deals, I think the mix of renewals and new is quite evenly poised . And in some sense, we are excited about the booking s.
Sudheer Guntupalli: Sure, Aparna. So, it is similar to what we had seen in the previous few quarters, right?

Public Srini Pallia: So, Sudh eer, just to reemphasize on the excitement that Aparna is talking about, these are all global companies. These are companies where we have a footprint. So, the good news is that we have secured our current book of work and now we are getting a new book of wo rk. The focus for us is , how do we maximize the new book of work and we are working through the planning process, and we will stay focused on executing those deals. And it is a very, very intense focus o

n execution and delivering to our clients.
Sudheer Guntupalli: Got it, sir. And in your presentation, Srini, you mentioned that discretionary funds are coming back in pockets, even if it is not in a uniform fashion. So, can you elaborate on which pockets are those, which specific geographies and verticals apart from the BFSI which you spoke about?
Srini Pallia: So, Sudheer, broadly if you look at it, the discretionary spend is coming around data, AI and modernization. And to just give you a little bit of a color around that, for example, we have won a deal where we are transforming for a particular retailer, we call it fashio n intelligence , right? AI will know what to sell and this is a large American fashion brand. They want to enhance sales by identifying and optimizing 40 product features per item. So, how do you display these features, right , whether it is in terms of the differentiation of the product, intelligently extracting and analyzing the impact on the market performance , and also helping their sourcing team on the strategic product decisions that they have to take to buy it. So, that is one example of a discretionary spend, which is of course integration of data and AI.
So, similarly, one of the Financial Services companies, we are working with them on the part of intelligent automation and what we call it a smart credit decision , right. Right now, the client has a lot of manual credit risk operations. They are looking at it , how can we make this more AI so that it is less error -prone and also it is more accurate, right, so that they can disrupt the existing workflows. So, these are the projects that are very important need of the business and that is a discretionary spend. I talked about entirely two different sectors, but just to give you a context around that , Sudheer .
Sudheer Guntupalli: Got it, sir. Thank you and all the very best.
Moderator: Thank you. Next question is from the line of Sandeep Shah from Equitous Securities. Please go ahead.
Sandeep Shah: Yes, thanks for the opportunity and congrats on deal wins action. The first question is, when we say when we execute these mega deals there could be margin pressure because of the upfront investment , so I wanted to understand the nature of the investment and the margin pressure. Is it more competitive pricing , because our EBIT margin is already lower than most of the other peers? So, I just want ed to

understand. And second, these deals also involve some amount of higher pass -through sales or these are normal, traditional type of deals ?

 Srini Pallia: So, Sandeep, first and foremost, none of the deals have a pass -through . Second, when Aparna said that we have to invest into these deals, this is the time for us to do the planning process because , let's say, when there is a vendor consolidation, the kind of the team s that we need to put together , both in terms of program management, program delivery, and bot management and so on and so forth, you have got to get the talent first, get them also acclimatized with the customer's environment and the process that they do. So, these are all the investments that Aparna is talking about, nothing to do with pass-through , Sandeep .

Sandeep Shah: And any comment on pricing? Are you believing competitive pressure is very high because of macro? Everybody is now behind growth, even in the large cap basket.

Srini Pallia: So, Sandeep, like Aparna said, right, some of these large deal wins are very competitive. There will be price pressures on that. What matters is, how do you transition and how do you execute these deals . And if you look at the current demand environment, I would say that each of these deals are extremely strongly contested. What's good news is that we have won despite that competition. And this is how industry has always functioned. So, we and everybody has to innovate. W

e have to generate mor e savings and continue to stay competitive.

Sandeep Shah: Okay. And Aparna, you also mentioned we have to offset this with the new levers, and you believe there are more levers. So, can you elaborate on the same? Because your margin execution has been really excellent, which has juiced out headroom in many of the margin levers. So, what are the pending levers which you believe can help you to offset some of these pressures?

Aparna Iyer: I think productivity and fixed price programs; they continue to be a theme. I know we talk about it all the time, but with newer technology, with a lot of AI focus, the productivity that we can drive is certainly a big lever. Secondly, even as we speak, there is margin improvement that we can make in some of our acquired entities and businesses. As they go from strength to strength, there will be improvement in margins that they are all executing to. Thirdly, if I had to look a t it, we are cont inuing to optimize our G&A. Again, on the back of AI, on the back of a lot of process efficiencies that we are driving, that will continue to be a focus of simplification and reducing the number of layers. These have remained something that we continue to focus on some of those levers. Apart from this, the traditional focus will remain utilization we have invested in. Maybe we will need to continue to invest in utilization for a little bit more, but there are other factors like freshers hiring, rotation, py ramid optimization, all of which become easier as we grow and win more programs. And that's also something that will continue to operate as a lever. Over and above that, FOREX is something that has traditionally helped. That's something that is not within our control, but that is always something that has played out in the past as well.

 Sandeep Shah: Thank you and all the best.

Moderator: Thank you. Thank you. We will take our next question from the line of Ashwin Mehta from Ambit Capital. Please go ahead.

Ashwin Mehta: Yes, thanks for the opportunity. So, Srini, in terms of the competition that you've won these deals against, who were the incumbents here? Was it largely the Indian providers or these were mostly MNCs?

Srini Pallia : Ashwin, I never talk about competition or name them. All I can tell you, Ashwin, is these were well - fought deals, very satisfying at the end of the day, Ashwin.

Ashwin Mehta: Okay, thanks. And just one follow -up. So, given our commentary that Capco is growing at around 6%-odd from a YOY perspective but the BFSI portfolio ex of Capco seems to have declined by 6% to 7%. So, what is exactly driving that? Is it largely ramp downs a t clients? Is it some share loss? So, any color here?

Aparna Iyer: I think these are largely ramp downs that have happened. We have spoken about even within BFSI, I think America is much stronger. Asia -Pacific has also had a much stronger growth in BFSI. The weakness is also largely emanating from Europe. And we are very confident based on the deal wins and the bottoming out of some o f the client -specific issues that we can look to stability and growth. Srini has spoken about two mega deal wins in BFSI. Phoenix is certainly in the same space that we had won in Q4. So, second half onwards, things look more optimistic, all focused on execution.

Ashwin Mehta: And just a follow -up, in terms of the restructuring charges that we have taken, are they segment - specific or they're across the board in Europe?

Aparna Iyer: They're across the board in Europe but very contained. The number of employees that would have got impacted because of this is very, very small and not material in the context of the overall business.

Ashwin Mehta: Okay. Thanks a lot, and all the best.
Dipak Bohra: Yashashri, we can now close the call. I will just put a thank you note.
Moderator: Yes. Over to you sir.
Dipak Bohra:

So, thank you all for joining the call. In case we could not take any questions due to time constraints, please feel free to reach out to the Investor Relations team. Have a nice evening. Thank you.

"Wipro Limited Q2 FY'2 6 Earnings Conference Call"

October 16, 2025

MANAGEMENT : MR. SRINI PALLIA – CHIEF EXECUTIVE OFFICER & MANAGING DIRECTOR , WIPRO LIMITED
MS. APARNA IYER – CHIEF FINANCIAL OFFICER , WIPRO LIMITED
MR. SAURABH GOVIL – CHIEF HUMAN RESOURCES OFFICER , WIPRO LIMITED
MR. HARI SHETTY – CHIEF STRATEGIST AND TECHNOLOGY OFFICER , WIPRO LIMITED
MR. ABHISHEK JAIN – VICE PRESIDENT (CORPORATE TREASURER & HEAD OF INVESTOR RELATIONS), WIPRO LIMITED

Wipro Limited
October 16, 2025

Public Moderator: Ladies and gentlemen, good day and welcome to Wipro Limited Q2 FY'2 6 Earnings Conference Call.
As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the

conference call, please signal an operator by pressing “*” and “0” on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Abhishek Jain – Vice President (Corporate Treasurer & Head of Investor Relations). Thank you, and over to you.
Abhishek Jain: Thank you, Yashashri. Warm welcome to our Q2 FY '26 Earnings Call.
We will begin the call with the “Business Highlights and Overview” by Srinivas Pallia – our Chief Executive Officer and Managing Director, followed by “Updates on Financial Overview” by our CFO – Aparna Iyer. We also have CHRO – Saurabh Govil and our Chief Strategist and Technology Officer Hari Shetty on this call. Afterwards, the Operator will open the bridge for Q&A with our Management Team.
Before Srini starts, let me draw your kind attention to the fact that during this call, we may make certain forward -looking statements within the meaning of Private Securities Litigation Reform Act 1995. These statements are based on Management's current expectations and are associated with uncertainties and risks, which may cause the actual results to differ materially from those expected. The uncertainties and risk factors are explained in our detailed filings with the SEC. Wipro does not undertake any obligation to update the forward -looking statements to reflect events and circumstances after the date of filing. The conference call will be archived, and a transcript will be available on our website.
With that, I would like to turn over the call to Srini. Srini, over to you.
Srini Pallia: Thank s, Abhishek . Good evening and thank you all for joining us today.
In Quarter 2, our IT services revenue stood at $2.6 billion with sequential growth of 0.3% in constant currency. Our Adjusted operating margin for the quarter was 17.2%. This is within the narrow band we had previously indicated, and it is an improvement of 0.4% compared to the same period last year.
Let me now walk you through some of the highlights and key moments for this quarter :

Public Within our markets, three of the four SMUs reported sequential growth. Americas 1 delivered sequential and year-on-year growth driven by strong performance in Healthcare , technology and communication sectors. Americas 2 saw a decline this quarter. However, we remain confident about future growth in this region as some of the deals we won in the first half are now beginning to ramp up.
Europe returned to sequential growth in Quarter 2 after several quarters led by BFSI. The Phoenix deal is set to start generating revenue from Quarter 3, providing further momentum. APMEA growth was fueled by strong results in India, Australia and Southeast Asia. Capco grew both sequentially and year-on-year with momentum coming from newer markets like LATAM and APMEA.
Turning to our industry sectors now:
We continue to see momentum in BFSI with clients prioritizing cost optimization, vendor consolidation, legacy modernization and scaled deployment of Agentic AI. Tariff uncertainties continue to impact the Consumer , Energy and Manufacturing sector leading customers to re-evaluate their supply chains.
In Technology and Communications , the focus is on accelerating Ai adoption and developing industry -specific solutions wi

th cost optimization remaining central.
Healthcare , especially in the U.S., is undergoing structural changes. We are actively supporting clients through this transition. And the sector remains one of our strong performers.
Coming to deal wins and pipelines :
This quarter we closed $4.7 billion in total contract value and signed 13 large deals. Much of this demand is driven by vendor consolidation, AI-powered transformations and consulting -led programs, areas where our strategy is truly making an impact.
Our order bookings this quarter also include two mega deals, one with a Healthcare client and another in BFSI. While a significant portion of these two deals are renewables, they are important for deepening our presence and unlocking future growth in these accounts.
We are seeing strong momentum in Europe, and I want to highlight two examples that bring this to life. First, Wipro has formed a strategic multi -year partnership with a leading UK financial company to modernize their business. They are using our WeGA AI platform and a new center of excellence to drive this change. We are helping improve customer experience and streamlining back office operations.

Public We are also bringing advanced AI to business and technology streams like HR, mortgages, financial crime prevention, and of course, IT. This will optimize workflows and support real-time decisions for our clients . Above all, it will help become more resilient for the future.

In my second example, we are partnering with the leading European distribution and logistics company on a multi -year transformation of their operations and IT. By leveraging our expertise in operating model design, process standardization and technology modernization, we are helping them move to a unified digital core making their operations more efficient and unlocking long-term growth with AI and digital tools.

Now, I am excited to introduce Wipro Intelligence, our unified suite of AI-powered platforms, solutions, and transformative offerings. With Wipro Intelligence, we are enabling our clients to scale with confidence and lead in an AI-first world. It strengthens our consulting -led approach, driving innovation and delivering measur able outcomes for our clients.

In fact, Wipro Intelligence brings together advanced capabilities across delivery and industry platforms. Our delivery platforms are already accelerating work from software development, infrastructure and cloud, to business process operations. And on the industry side, we have reimagined core business processes and develop ed more than 200 AI agents and platforms spanning multiple sectors.

As AI continues to evolve, we are helping clients experiment, adapt, and scale rapidly by working closely with our partners, ventures, and leading research institutions. Wipro Intelligence is about proof, not just promise. We embed productivity gain, assure business outcomes, and building responsible AI guardrails.

Let me share three examples of a solution :

One, AutoCortex for our automotive sector, WealthAI for BFSI, and Payer AI for Healthcare . Each of them is already making a tangible difference for our clients and also earned strong recommendations from industry analysts . This momentum gives us real confidence for the future.

With that, let me move on to our forecast for the next quarter. In Quarter 3, we are projecting sequential IT services revenue growth of minus 0.5% to plus 1.5% in constant currency. Our priority remains converting our strong backlog into revenue while maintaining operational discipline to ensure profitable growth.

And with that, I will

hand it over to Aparna who will take you through the financials in more detail.

Over to you, Aparna.

Public Aparna Iyer: Thank you, Srini. Good evening everybody. Let me share with you an update on the financial performance for the quarter ended 30th September 2025. After that we can open up the call for Q&A.

Our IT services revenue for Q2 grew 0.3% sequentially in constant currency terms and 0.7% sequentially in reported currency. This is well within our guided range. Revenue declined 2.6% year-on-year in constant currency terms.

Our operating margins for Q2 at 16.7% contracted 60 basis points quarter -on-quarter and 10 basis points year-on-year. Our operating margins were impacted by a one-off charge taken on account of a client bankruptcy event. Adjusted for this, our margins were at 17.2%, which is an expansion of 40 basis points year-on-year and is in a narrow band. Our Quarter 1 margins was at 17.3%. As we invest for growth, we will continue to see pressure on our margins as we make investments. But our endeavor will be to maintain the margins in a narrow band.

Let me also give you some color on our strategic market unit performance :

All growth numbers that I share will be in constant currency.

Americas 1 sustained its growth momentum, growing 0.5% sequentially and grew 5% on a year-on-year basis. Americas 2 declined 2% sequentially and 5.2% on a year-on-year basis. Europe grew 1.4% sequentially , decline 10.2% on a year-on-year basis. APMEA grew 3.1% sequentially and 2.6% on a year-on-year basis.

BFSI grew 2.2% sequentially and declined 4% year-on-year. Healthcare declined 0.2% sequentially and grew 3.9% year-on-year. Consumer declin ed 1.7% sequentially and 7.4% year-on-year. Technology and communication grew 0.8% sequentially, declining 1.7% year-on-year. EMR declined 1.5% sequentially and 0.5% year-on-year. Capco continues to perform well, growing 3.2% on a year-on-year basis.

Let me share some other key financial metrics :

Our net income and EPS grew 1% year-on-year in this quarter. Our operating cash flows continue to remain higher than our net income and stood at 104% of net income for Q2. Our gross cash including investments was at $6 billion for the quarter .

In Quarter 2, our net other income declined 14% year-on-year. Our accounting yield for the average investments held in India was at 7.1%. Our ETR was at 23.8% for Q2 '26 versus 24.6% in the same quarter in the last year.

Public In terms of guidance to reiterate what Srini shared, we expect the revenues from our IT services business to be in the range of $2.59 billion to $2.64 billion. This translates to a sequential guidance of minus 0.5% to a plus 1.5% in constant currency term.
The Harman Digital Transformation Solutions acquisition that we announced in Q2 is expected to close through the course of the quarter. Our guidance number does not factor any revenues from this acquisition.
Thank you. With that, operator, you can open it up for Q&A.
Moderator: Ladies and gentlemen, we will wait for a moment while the question queue assembles. We will take our first question from the line of Nitin Padmanabhan from Investec. Please go ahead.
Nitin Padmanabhan: Yes. Hi, good evening. Thanks for the opportunity. So, the first is just wanted your thoughts on the deal to revenue conversion. So, I think we have had very strong deal wins, large consolidation wins. Do you think BFSI, considering you had those large con solidation wins, should start flowing through this year itself, those that you closed last quarter? And how are you thinking about growth as you go forward in next yea

r? Do you think this alone can continue to help maintain a positive mo mentum on revenue?
Aparna Iyer: I will take this one, Nitin. Obviously, we have several large deal wins in the BFSI space. We had one in Q4, which is expected to ramp up in Q3 and is factored as a part of our guidance. We had a few large deals in Q1 in BFSI, all of which have a reasonabl e element of new in it. And we expect them to ramp up over the next few quarters. This may take about 6 to 8 quarters to fully ramp up on the new.
In terms of the large deal win that we had in the BFSI space in Q2, it's largely renewal, right? So, it is a mix of both renewal, renewal plus expansion, and then net new. The net new deal is likely to ramp up, like I said, in Q3. The ones with expansion w ill take a few quarters for them to ramp up. And if you look at, like I said, the one that we did in Q2 is largely renewal.
Now, to your other question on BFSI growth, yes, we have grown sequentially. That's the first dot in the plot. And we will have to sustain that momentum. We are quite confident Q3 looks positive. And from there on, we will have to build on it. Like I said, as the large deals ramp up, that will go up. A lot of t he growth was actually led by Europe and APMEA within the BFSI space. We expect America to join in in that growth as those large deals pick up.
Nitin Padmanabhan: Got it. Got it. Just one last one on margins. I sort of missed the margin walk that you sort of provided. But how should we broadly think about margins going forward? You think this quarter the transition

Public costs will start kicking in on a going forward basis, or we have already had some impact from that? Just some color on margins, how should we think about it?
Aparna Iyer: So, you know, when we started Quarter 2 , we had alluded to headwinds as some of these large deals start to ramp up. Those headwinds will continue as some of these large deals ramp up and face. In Quarter 2 , the walk, while we are not quantifying the exact impact, we had 2 positives.
One was certainly the rupee depreciation and the dollar weakness, which was a positive. Second, operationally, too, we have continued to expand in terms of our utilization has improved and attrition has come down. We also drove better profitability in our fixed price program.
All in all, I think operations and Forex were positive. Yes, we continue to make certain investments for our growth in terms of these large deals, and that is also a part of our margin. Some of it is there in Q2, and there will be more as some of these large deals continue to ramp up. So, Quarter 3 is also a seasonally weaker quarter in terms of furlough, lower working days, et cetera. That's the headwind we are starting Quarter 3 with.
We have several initiatives in place. If you look at it, our utilization has been better. We have also driven better profitability in our fixed price program. Even our SG&A, we are continuing to optimize. These 3 levers will continue, and we do not guide for a margin, but our endeavor will be to be in a narrow band of our adjusted operating margins of 17.2. The notable one -off was the provision for bad and doubtful debt provision that we took in terms of th e insolvency, which was 50 basis points. Adjusted for that, our operating margins is 17.2, which is in a narrow band of Q1 performance.
Nitin Padmanabhan: Perfect. That's helpful. Thank you so much. I will fall back in the queue. All the very best.
Aparna Iyer: Thank you, Nitin.
Moderator: Thank you. Next question is from the line of Kumar Rakesh from BNP Paribas. Please go ahead.
Kumar Rakesh: Hey, hi. Good evening, ma'am. Thank you for taking my question. My first question was around the growth side. So, over the last couple of quarters, we have seen the deal wins to have materially picked up. Total bookings have been touching close to about 5 billion.
Your lar

ge deals also have been quite high. You also spoke about Phoenix deal will start ramping up in the third quarter. So, all these momentums are something which is behind us, and should be pushing us towards growth. But at the midpoint, what we are gu iding is only marginal improvement in growth. So, what exactly is something which we are looking at from the headwind perspective?

Public Because last year, during December quarter, we had reported marginal growth. So, the furlough shouldn't be so big that it eats into all the incremental tailwind which we have.

Aparna Iyer: So, Rakesh, when we guide, we guide based on the visibility that we have at the start of the quarter. You should look at the midpoint, and then we guid in a range that's why we have a (+1.5%) on the top end, and we have a (-0.5%) to accommodate volatilities that we could see during the quarter.

Yes, there is a ramp up of the large deal wins. And you are right, that is giving us a positive momentum. If you look at it after several quarters, we have guided where the midpoint is in a positive. That, we believe, is the first step. And as we convert m ore of these large deals into revenue, this momentum should improve.

Kumar Rakesh: Thanks, Aparna. My second question was around margins. So, today you spoke about that you would intend to keep the margin in a narrow band around 17.2%. And you had earlier also spoken about some of these large deals would be margin dilutive, and there wo uld be some impact of that. So, how should we tie up these 2 comments?

Aparna Iyer: Yes, you know, so like I said, we do not guide for a range on the margin, right? Our endeavor has to be to keep it in the band of 17% to 17.5% that we had earlier alluded to. Obviously, if you look at it in terms of the investment for growth, there will be organically, we will continue to win some of these large deal wins.

There is a vendor consolidation -led pipeline, which are quite intently fought, right? So, one is also looking to be on the right side of some of those deal wins, which will also come with pressure on margins, at least as they start, right? But over a perio d of time, as we realize the productivity that we have offered to our clients and that starts to kick in, the margins then tend to improve. We are driving several other initiatives to offset some of these investments that we are making.

I also want you to know that the Harman DTS acquisition is not a part of these numbers. When that comes, that will also be an investment that we will be making for our growth. And that will come with a 60 basis points dilution that we have already spoken o f at the point of announcing the acquisition.

These are things that we are, these are the headwinds we have to the margins. We have initiatives in play that we will use to offset some of these pressures. And that's why we are saying at least for Quarter 3 , we are holding it in a narrow band, and then we will see from there, how we take those margins.

Kumar Rakesh: Got it. Thanks a lot, Aparna.

Public Moderator: Thank you. We'll take our next question from the line of Ravi Menon from Macquarie. Please go ahead.

Ravi Menon: Thank you for the opportunity. You are now growing year -on-year on an organic basis in line with the peers. So, do you think this can sustain or can you even improve from here?

Aparna Iyer: Ravi, can you repeat your question?

Ravi Menon: Now you are growing year on year basis. You are actually growing in line with a peer group on an organic basis. So, do you think that can sustain or can you even improve beyond that?

Aparna Iyer: Yes. So, Srini, you want to take it?

Srini Pallia: Good.

Aparna Iyer: Okay.

Srini Pallia: So, Ravi, Srini here. As far as we are concerned at this point in time, we have given a Quarter 3 guidance like Aparna talked about. The midpoint is positi

ve. Second point is some of the deals that we have won on the first half. Some of them we will have to start executing. And each of them have their own rhythm in terms of when the ramp ups will happ en. It varies from client to client.

Our focus right now is to execute some of the deal wins that we have. And also, we have a very robust pipeline into second half. Our focus is to convert those deals into bookings, which will again translate to revenues going into the future.

So, from that perspective, Ravi, like the main focus for us is to execute both in terms of the deal win and also win the deal.

Ravi Menon: Thanks, Srini. And going into Q3, other than seasonality, are there any specific factors that you think are headwinds to revenue?

Aparna Iyer: No, not really.

Ravi Menon: Thanks so much. Best of luck.

Moderator: Thank you.

Aparna Iyer: Thank you.

Public Moderator: Thank you. We'll take our next question from the line of Sudheer Guntupalli from Kotak Mahindra AMC. Please go ahead.
Sudheer Guntupalli : Hi, Srini. Hi, Aparna. So, I just wanted some clarity on your response to one of the earlier questions that you said a large part of it is renewal. So, are you talking about any specific large deal within BFSI, or are you talking about the overall deal wi ns that we had this quarter?
Srini Pallia : So, Sudheer, as far as Q2 deal wins are concerned, the 2 mega deals that I talked about, one is in the healthcare sector, other one is in the BFSI sector. Sudheer, I hope that clarifies.
Sudheer Guntupalli : Yes, Srini, that's fine. So, I was asking Aparna's response to a prior question that it is largely a renewal. So, you were referring specifically to the BFSI deal, right? You are not characterizing the overall deal wins that you had this quarter. So, what I am trying to understand is if you look at the deal wins this quarter, again, for the second consecutive quarter, it was very strong. So, I wanted to understand what is the mix of renewal and new within the overall space, not specific to that particular deal.
Srini Pillia : Yes. Sure, Sudheer. I think if you look at the deal flows we had in the first half, it's a combination of the 3 types of deals.
One is, like you rightly called out, there are renewals where you actually get to work in those accounts and find opportunities to bring in. One is, like you rightly called out, there are renewals where you actually get to work in those accounts and find opportunities to bring in growth. Second, there are renewals with extension of the pipeline, wherein the extensions like Aparna talked about, will take its time in the next 6 months to 8 months. And the third piece is net new deals that we have, which we wi ll execute immediately. And the two deals that I called out in Europe are the net new deals, Sudheer.
Sudheer Guntupalli : Okay, sir. Fair enough. Thank you.
Moderator: Thank you. Next question is from the line of Dipesh Mehta from Emkay Global. Please go ahead.
Dipesh Mehta: Thanks for the opportunity. Two questions. First, just want to understand whether from net new person perspective, are we seeing any change compared to, let's say, past tr end in H1, b ecause we have very strong deal booking ? So, any change in terms of net new person, if you can give some qualitative sense, if not possible, give quantitative sense, but qualitatively, if you can give some sense ?

Public Second question is whether we are witnessing any delay in this deal ramp -up? What we have signed in last six months, whether those deals are ramping up as scheduled or we are witnessing some challenges there ?
Second question is about, we earlier faced some client -specific challenges, particularly in Europe BFSI. As we speak, are we seeing, let's say, most of those client -specific challenges are behind and we can see normal trajectory of growth

based on the deal intak e and pipeline entering into H2 ?
And last question is about the vertical. If I look, let's say, even Quarter 2, the way we report our vertical mix, 3 out of 5 still showing sequential decline. So, by when you expect relatively more broad -based growth, considering very strong deal intake, what we observed in H1, if you can provide some color there ? Thanks.
Aparna Iyer: Yes. So, I will take a few questions and then, Srini, you can also add in. From a net new standpoint, we had in our last deal booking for the first half, is it better or worse compared to the past? I would say for the first half, our net new bookings have been fairly good. If you look at Quarter 2, we had two net new deals, 6 renewals, and the others are a combination of renewal plus expansion, right? In terms of whether these deals are ramping up on time and whether we are seeing any delay, I don't think there is any delay in the ramp up. They pretty much right now on course to ramp up as planned. So, there is no delay or deferral or challenges that we are facing on that. In terms of Europe , whether that client -specific issue is behind us, I guess, in some sense, the client -specific issue that we had called out earlier is behin d us. You should see the trajectory of Europe to continue to improve. We will obviously have to sustain the win momentum that we have had in the last 2 to 3 quarters, even into the next few. As you know, we continue to operate in a very competitive environment, which means that we have to be on the right side of all the vendor consolidation deals for us to be able to sustain that momentum. That's what I would like to call out.
Srini Pallia: So, Dipesh, in the context of the sector questions that you asked for, if I look at it, of the five sectors that we have, I think where we see the impact of tariff is mostly on the consumer and energy manufacturing sectors. And these are the two sectors which have de -grown sequentially as well as on a year-on-year basis. Now, for us, what we are looking for in these two sectors are , what kind of deals that we can play proactively with the clients, especially because of the challenges that they are

facing on the cost side. They are also facing challenges on the supply chain side, and we are having conversations with them. Otherwise, the other three sectors, I think, Dipesh, we're looking good.
Dipesh Mehta: Understood. Thank you.
Moderator: Thank you. We'll take our next question from the line of Girish Pai from BOb Capital Markets. Please go ahead.

Public Girish Pai: Thanks for the opportunity. I had a few questions. Just on the renewal deal side, are the clients asking for greater level of savings now compared to the past when such renewals happened considering that we're using AI? And what are they doing with the savings, if at all they are getting them? Are they kind of plo ughing that back into new work, and are you getting that work?
Srini Pallia: So, Girish, if you look at broader industry trends that we are seeing, Girish, is clients across industry segments and across the markets that we are in are clearly looking for cost optimization, and that is also driving to some extent vendor consolidation . As far as the cost optimization are concerned, clearly the clients are looking at aspects of, in addition to cost, speed, and also the efficiency through AI. And we see that as an opportunity for us. And if you look at the way we see the op portunities are, of course, on the run and operate side, which includes your application support and maintenance, the infrastructure, and business process services, where we infuse the AI, helping the client bring in efficiency, productivity, velocity. The second part is build and transform, which is our software development lifecycle, product development lifecycle, package implementation. Here, there are multiple tools that a

re available, and we are using our Wipro Intelligence WeGA platform to actually bring in those productivity benefits for our clients. And as far as the run and operate, we are using Wings as a platform to bring productivity and efficiency. Now, wherever the clients are able to get this efficiency and productivity, they are actually investing, especially on the business innovation, leveraging AI. And all the aspects of AI advisory, data architecture, and also the platforms, some of the platforms that we have built, and also solutions that industry -specific platforms and solu tions that we have built is also creating a positive impact for us with the clients. Just to name, AutoCortex in automotive, Payer AI in healthcare, Wealth AI in BFSI. In fact, some of these, we have already started implementing for the clients, and clients are seeing the benefits. We also have some of the industry analysts talking about industry -specifi c AI solutions as well, Girish. So, it's a combination of all this that w e see as an opportunity for us.
Girish Pai: My second question is regarding potential liabilities that vendors like you face because of AI work that leads to hallucinations, and there could be some damage that clients may probably have to bear. And there seems to be quite a few cybersecurity incidents that have happened with certain clients and certain vendors, Indian vendors. So, how do you ensure that you don't get hit by any of these? I mean, do you have water tight contracts where you don't bear any costs attached to these hallucinations because o f any AI contracts that you're executing or cyber security contracts that you're executing?
Hari Shetty: Hey Girish, this is Hari Shetty here, and again, glad to be on the call today. Couple of key things, and I think you bring up a very valid point in terms of your question. And one of our strengths in terms of our Wipro Intelligence platform is the responsi ble AI guardrails that we have actually built into the platform. And probably one of the best implementations of how AI can be responsibly

Public implemented, and that is what actually differentiates us from a Wipro Intelligence perspective. And these capabilities go into both of the platforms that Srini talked about, whether it is WeGA or Wings, and that gives us the confidence that we can actually deliver the promise of what we are talking about from an AI perspective, as well as make sure some of the guardrails that you have talked about are taken care of. Obviously, some of this will also translate into contractual commitments on both sides. And again, from a risk management perspective, we take care of those controls as well.
Girish Pai: Okay, just last question on H1 -B. I know probably it has been beaten to death . Do you foresee any higher pressures on subcontractor costs or on -site utilization going down because you need to maintain an on -site bench now because you can't bring in as many H1 -B workers, H1 -B employees from India as you used to, especially if wages go up in the sense that they are talking about moving away from a lock -in system. So, how do you kind of foresee that?
Saurabh Govil: Girish, Saurabh here. As you know, a large part of our workforce in the U.S. is localized. So, first of all, we don't see a supply issue from an H1 -B perspective. More than 80% of people are localized and we are looking at 250 -odd H1 -Bs in the past five years. So, we have been progressively reducing our dependence on H1 -Bs. So, either on subcontractors or otherwise, we don't see an impact. We have been building our centers in the U.S., and we continue to grow based on the demand scenario .
Moderator: Thank you. We'll take our next question from the line of Vibhor Singhal from Nuvama. Please go

ahead.
Vibh or Singhal: Thanks for taking my question and congrats on continuous solid deal wins. Actually, my question was

regarding the BFSI segment. You mentioned that amongst the five verticals, manufacturing and retail will continue to probably face challenges. But in the BFSI vertical, we have a very interesting mix in which Capco continues to do well. We have the deal ramp -up maybe next quarter. But at the same time, we were facing challenges in the European BFSI. So, putting all this together, how do you see the BFSI secto r playing out for us over the next 2 to 3 quarters?
Srini Pallia: Sorry, Vibhor. Maybe I will answer this question in a little bit more detail if that's okay with you. If you look at our BFSI sector, we reported sequential growth of 2%. Also, by absorbing near -term impact taken for the mega deals that we signed in Quarter 1, that's number one. Second is the growth for us in BFSI, like I said, was led by Europe and APMEA. And both these SMUs, if you noticed, have reported high single -digit sequential growth. Also, in the BFSI segment, the order booking contin ues to be robust. And the same point I made to Girish and Dipesh in terms of the kind of deals that we have, the clients are obviously rebalancing. And also, in the BFSI sector, the clients are modernizing a lot of their core in addition to vendor consolid ation and efficiencies provided through AI. And also, if you look at Capco, Vibhor, we saw Capco demonstrating both sequential and year -

 on-year growth for us, which Aparna talked about. So, now, if you look at it from a, specifically, if I have to double click on BFSI, banking and payment continues to be our large domain s. Also, the capital markets, some of our global top accounts and anchor accounts, they are showing po sitive growth and the m ost important is, I talked about the industry platforms, the Wealth and Asset Management is really getting traction for us. We are also in this segment, there is a lot of conversations around , how we c an advise our clients on the AI side. That is something that we are helping the customers.
Vibhor Singhal : Right. So, a lot of, I would say, traction that we are seeing in multiple parts, Capco, as you said, right, should produce because overall, as the outlook for the sector, we are looking at a more decent one in the coming quarters as well ? Would that be a good summary to say?
Srini Pallia: Yes, Vibhor, look at my pipeline, right , obviously, BFSI's pipeline is very strong. So, from that perspective, I would say, the positive momentum that we see in BFSI, also like Aparna talked about, the Phoenix deal will start executing from this quarter onwards. So, I agree with the point you made, Vibhor, BFSI continues in the positive light.
Vibhor Singhal : Perfect. That is great to hear. Just to double click on the same manner on the healthcare sector, I know not as large as BFSI, but a lot of our peers have been talking about challenge in the healthcare sector because of the beautiful bill that was introduced by the Trump administration. So, any color on that? How do we see this vertical playing out over the next 2-3 quarters?
Srini Pallia: Yes. So, Vibhor, if you look at that, traditionally, healthcare has been a strong sector for us.
Vibhor Singhal : Yes.
Srini Pallia: And we did show a year -on-year growth. But you are right. There are certain headwinds in this sector because the sector is going through structural changes. And so, number one, the good news is that one of the mega deals that I talked about is from this sector. Second, if you look at the companies, they are adapting to the whole policy changes that are happening. And I think that will drive more cost takeout, more modernization, and so on and so forth for our clients. Second, also, if you look at the healthcare companies, specifically payers, they are also trying to accelerate and transform their contact centers , so that they can improve their conversations with the members. And that is anot

her
thing that we see as traction for us. And also, a couple of areas like some of our clients are looking for real -time claim processing, for example, or trying to look at how can we bring in more efficiency in pre -authorization? How do we bring in more enhanced transparency in the context of the structural change? So, all these are opportunities for us. And I thi nk we continue to be strategic technology partners for some of the Tier 1 healthcare payers. And I think we continue to stay focused on that.

 Vibhor Singhal : Got it. Great to hear that. Just one last question, if I may squeeze in, either you or maybe a partner can answer on the headcount. We saw decent addition in the headcount in this quarter. What is the kind of outlook that we are looking for in terms of headcount addition over the next, let us say, 2-3 quarters w ith the deal ramp up and all, do we see this number maybe inching up a bit, or do you think it might stabilize around the current levels?
Saurabh Govil: So, if you look at the key people indices in this quarter, net headcount has gone up, on -boarded freshers from college, utilization has gone up. And based on the demand, which is very high, very

strong bookings in H1, I think as we convert to revenue, we will continue to hire both laterally as well as from campus .

Vibhor Singhal : Got it. Thanks, Srini. Thank you so much for taking my question s, and wish you all the best.

Moderator : Thank you. Next question is from the line of Abhishek Kumar from JM Financial. Please go ahead.

Abhishek Kumar : Yes, hi. Good evening. Thanks for the opportunity. I have two questions. First, on, we talked about three kinds of deal wins, right, n et new, scope expansion, and just plain renewal. So, net new, we understand, will add to incremental revenue. In the other two types of deals, are we seeing overall book of business for those deals growing, especially in renewal and also in renewal plus scope expansion? Or the deflation, which is there in re newal, is kind of offsetting the new scope that we are getting from those deals? Any color on that, please?

Aparna Iyer : So, you are right. Net new is fully new, so that will add to the revenues directly. In terms of just renewal, i s there a deflationary pressure, l ike I said, every deal, every time there is a productive renewal, there is a productivity that gets passed on. And we typically tend to take on more new projects, more new spends that the client initiates. We have spoken about how some of this productivity is put back into prioritized spends around AI adoption and we are playing a huge role in that. So, in some sense, in the renewal plus expansion, there is a reasonable scope expansion, and therefore, there is an increase in the bookings or the revenue value that is expected. In a full -fledged renewal, is there a compression? I wouldn't call it a compress ion, but this is just the standard productivity that gets passed on. It is very typical to what we have seen in renewal deals over the last few years.

Abhishek Kumar : Just to follow up on this one, then I have a second one. I was asking this because Q2, there have been renewal deals, and even if there is new scope, would you agree that there is a timing difference between the new scope increases versus the deflation that we see near term? So, does that mean that hits you in second half?

 Aparna Iyer : Yes. So, therefore, what happens is, yes, there is a timing difference, there is a productivity that gets passed on, the way the deals are configured and structured , typically have a certain timing and pacing, and like Srini said, each deal is very different. So, are there timing differences that could really impact in the short term and play out differently in the long term? That is correct.

Abhishek Kumar : My second question is on the impact of

the bankruptcy on your topline. Did we see any impact on 2Q revenue, or we are expected to see anything in the 3Q revenue?

Aparna Iyer : No, nothing. No, there w as no impact on the revenue. We ha ve actually made a provision for barren output debt. You will see that in our G&A sense of expected credit loss numbers going up, and we made a disclosure to that effect as well. T his has no impact on the revenue growth in Q2.

Abhishek Kumar : That is all from my side . Thank you and all the best .

Aparna Iyer : Thank you.

Moderator : Thank you. We wi ll take our next question from the line of Nitin Padmanabhan from Investec. Please go ahead.

Nitin Padmanabhan : Yes. Hi. Thank you for the opportunity again. Earlier, you had called out some large SAP implementation projects being pushed out, pauses by clients and so on and so forth when the tariff -led uncertainty started. Considering some time has passed, are you seeing some of these client conversations begin ning on trying to get these things back? That is the first question. I have three more actually ?

Srini Pallia: So, Nitin, specific to the comment you made in the context of what we said, there was in one quarter, we did talk about one of the transformation programs that came to an end. That particular client still is going through the difficulties of tariff. Unless and until that piece of the tariff is clear to them, they may not want to start the program. Having said that, we have got good traction, especially for SAP HANA across industries, Nitin.

Nitin Padmanabhan : Got it. The second is within the EMR vertical , so I think last quarter, you were a little hopeful that as there is some stability, this vertical could sort of recover in the second half. Any update on how you are thinking about EMR on a going forward basis?

Srini Pallia: You are right, Nitin. EMR sector for us has de -grown sequentially as well as year-on-year. Especially the manufacturing in auto industrial, we have seen a lot more impact on account of tariffs. This sector, where we see a lot of previous generation outsourcing deals, we are hopeful to come back to the market and t hese deals will be very competitive. So, we are definitely staying focused on that and

 some of these deals are very critical for us. As far as on the energy consulting side, we have started seeing some good traction and we will stay focused on that. But broadly, Nitin, again the point I made is that we do see opportunities in SAP S /4HANA space in some of our clients. And t his is a

quarter where many of our clients are doing budgeting planning, especially where they look at discretionary spend and so on and so forth. So, we are looking at that aspect as well. And m any of these clients in the c ontext of what is coming at them, they are also driving cost optimization and vendor consolidation. So, we continue to stay focused on that. There are certain deals we are also seeing on the post -merger integration space. So, that is another one we are focusing on. Utilities, which is a part of the energy sector, is kind of muted for now. But especially in the UK sector, we hope that sector would turn around. So, broadly, there are multiple dimensions and aspects for energy and manuf acturing. But net -net, N itin, y our question is very valid.
Nitin Padmanabhan : Perfect. Just one last one from my end . You alluded to a very strong sort of deal pipeline. Are you seeing any improvement in smaller size deals within that pipeline at the moment? And how do you see furloughs this year currently when you just think about it versus last year?
Srini Pallia: Nitin, a s far as the deal pipeline is concerned, like I said, after closing close to $9.5 billion of booking in H1, I would say our pipeline is sustained and it is robust. And this is, if you ask me, going back to a specific question, this is evenly distributed across the la

rge dea l and across small deals. And I am
seeing this consistency across sectors and Geo, so our pipeline is a lot more secular. But a broad theme, Nitin , is cost, of course, speed and AI led efficiency as opportunities that keep coming towards. And there are, in the last few months, if you ask me, we have pitched in a lot of proactive ideas to our clients, especially because of the macro challenges that they are facing. And also, they are trying to convert that into our qualified pipeline initiatives as well. Then, of course, there will be a small vendor consolidation deals . As and when it comes up, we will stay focused. The fact that we have won four mega deals, which are typically cost optimizat ion and our vendor consolidation, I think we have created a robust engine to go after the large deals, Nitin. And as far as furloughs are concerned, we are taking a similar approach like last year. We are taking that as the assumption right now, Nitin.
Nitin Padmanabhan : Perfect. Very helpful. Thank you so much and all the best.
Moderator : Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand the conference back to Mr. Abhishek Jain for closing comments. Over to you.
Abhishek Jain : Yes, thanks. Thank you all for joining the call. In case , you have any follow -up questions, please feel free to reach out to the Investor Relations team. Thank you and have a nice day.

Srini Pallia: Wipro Limited
January 16, 2026
Ladies and gentlemen, good day and welcome to Wipro Limited Q3 FY'26 Earnings Conference Call.
As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*" and then "0" on your touchtone phone. Please note that this conference is being recorded and the duration for today's call will be for 45 minutes.
I now hand the conference over to Mr. Abhishek Jain-Vice President (Corporate Treasurer & Head of Investor Relations). Thank you, and over to you, sir.
Thank you, Yashashri. Warm welcome to our Q3 FY '26 Earnings Call.
We will begin the call with the "Business Highlights and Overview" by Srinivas Pallia -our Chief Executive Officer and Managing Director, followed by "Updates on Financial Overview" by our CFO -Aparna Iyer. We also have CHRO -Saurabh Govil and our Chief Strategist and Technology Officer -Hari Shetty on this call. Afterwards, the Operator will open the bridge for Q&A with our Management Team.
Before Srini starts, let me draw your kind attention to the fact that during this call, we may make certain forward-looking statements within the meaning of Private Securities Litigation Reform Act 1995. These statements are based on Management's current expectations and are associated with uncertainties and risks, which may cause the actual results to differ materially from those expected. The uncertainties and risk factors are explained in our detailed filings with the SEC. Wipro does not

undertake any obligation to update the forward-looking statements to reflect events and circumstances after the date of filing. The conference call will be archived, and a transcript will be available on our website.
With that, I would like to turn over the call to Srini.
Thank you, Abhishek. Good evening and thank you for joining us today. A very happy new year to you.
Let me start with a broader environment before walking you through our quarterly performance and how we are positioning Wipro for an AI-first world:
Across our client landscape, one thing is clear. Organizations are reshaping priorities as AI influences how they plan, invest, and operate. In fact, AI is now a standing board-level mandate led by CEOs

who recognize its ability to transform business models, unlock productivity, and create lasting competitive advantage.
We are also seeing the same themes continue from past quarters in our deal pipeline. Cost optimization , vendor consolidation, and a clear shift towards AI-led transformation. In Quarter 3, we also marked two important milestones for Wipro. In December, we completed 80 years as a company. And in October, we celebrated 25 years of being listed on the New York Stock Exchange. These milestones reflect a legacy of strong governance, values, and integrity, a foundation of trust that continues to differentiate us with our clients, partners, and investors.
Turning to Quarter 3 Performance:
Our IT S

ervices sequential revenue at $2.64 billion grew 1.4% on a constant currency basis.
Excluding HARMAN DTS acquisition, revenue grew 0.6% in constant currency terms. Growth was broad-based with few of our four markets, and four of our five sectors reporting sequential gains.
Americas 1 delivered sequential and year-on-year growth driven by strong performance in Healthcare, Consumer, and LATAM. Americas 2 saw a sequential decline. Europe grew sequentially in Quarter 3, led by ramp-up of the earlier announced mega deal.
We are also seeing good traction in the UK and Western Europe. APMEA grew sequentially and year-on-year, led by India, Middle East, and Southeast Asia. BFSI continues to show strong traction with ramp-ups and new wins.
Capco revenue was impacted by furloughs and remained flat year-on-year. Our operating margins at 17.6% expanded 0.4% over adjusted Quarter 2 margin, and 0.1 % year-on-year. We closed $3.3 billion in total contract value and $871 million in large deal bookings.
Last quarter, I introduced Wipro Intelligence. It is a unified approach to delivering AI-powered transformation across industries. This approach is anchored on three strategic pillars:
•First, industry platforms and solutions. We are building consulting-led AI solutions across sectors. For example, platforms like Payer AI in Healthcare, NetOxygen for lending, and AutoCortex for automotive. These solutions help streamline operation, improve customer outcomes and open up new avenues for growth.
•Second, our delivery platforms accelerate AI adoption at scale. WINGS, part of our Wipro Intelligence brings AI into the heart of operation from application management to infrastructure support and business process operation. WeGA adds AI-driven capabilities

across the development lifecycle from vibe coding to model tuning and data pipeline.
Together, these platforms help our clients modernize faster and operate smarter.
•Third, the Wipro Innovation Network. This connects our labs with partners, startups, universities and deep tech talent around the world. This ecosystem helps us explore new technologies and build solutions for the future. We launched innovation labs in three cities in the U.S., Australia and the Middle East, expanding our network, growing our global footprint and strengthening our role as a trusted innovation partner. We are also partnering with client GCCs to drive transformation and turn their cost centers into high-impact innovation hubs.
Let me now share two examples of large deal wins that we had leveraging Wipro Intelligence.
•First, a leading global education provider in the UK, which is expanding rapidly across markets, has chosen us as its strategic partner for a multi-year transformation. The goal is to build a single, secure, intelligent operating model that can scale with their growth and improve stakeholder experience. Using WINGS, we will standardize core processes, embed automation and AI-driven insights, and optimize costs through a global delivery model.
•Second, a leading US-based fitness technology company has selected Wipro for a multi year transformation to accelerate its shift to a subscription-based wellness model and support global expansion. We will use both WINGS and WeGA, to embed AI and automation across IT infrastructure and core functions, driving efficiency, productivity, growth, and better customer experiences. These engagements highlight a clear trend.

Clients are bringing us in much earlier and recognizing the step change in the way we deliver and innovate.

I would now like to update you on HARMAN DTS:

First, a warm welcome to all HARMAN DTS employees joining us. With the acquisition now complete, we have added engineering and AI capabilities that truly complement what we do. This strengthens our engineering global business line and helps us accelerate AI-driven produ

ct innovation for clients. The integration also opens new regions and high-growth industries and allows us to take on larger, more complex transformation programs. As our teams come together, we look forward to entering new markets, building deeper client relationships, and turning innovation into long-term value.

Finally, guidance for Quarter 4:

In Quarter 4, we are projecting sequential IT Services revenue growth of 0% to 2.0% in constant currency. With that, I will hand it over to Aparna for the detailed financials. Thank you. Over to you, Apama.

Thank you, Srini. Good evening, ladies and gentlemen, and wish you all a very, very Happy New Year.

Let me share a quick update on the financial performance:

Our IT Services revenue for Quarter 3 grew 1.4% sequentially in constant currency terms and 1.2% sequentially in reported currency. Revenue grew 0.2% year-on-year in reported terms while declining 1.2% year-on-year in constant currency terms. Our constant currency revenue growth numbers included 0.8% as contribution from the HARMAN DTS acquisition that was closed in Quarter 3, '26. Our operating margin for the quarter was 17 .6%, an expansion of 40 basis points over the adjusted operating margin for Q2 and 10 basis points improvement on a year-on-year basis. I would also like to highlight that this is one of our best margin performance in the last 7 quarters. As we move to Q4, we will need to factor for incremental dilution of HARMAN DTS. That said, our endeavor as always will be to maintain the margins in a similar band as in the last few quarters. Adjusted net income for the quarter was INR 33.6 billion and adjusted EPS for the quarter was INR 3.21, an increase of3.5% quarter-on-quarter and flat year-on-year.

Moving on to our strategic market unit and sector performance, all the numbers I will share will be in constant currency:

Americas grew 1.8% sequentially and grew 2.8% on a year-on-year basis. Americas 2 declined 0.8% sequentially and 5.2% on a year-on-year basis. Europe grew 3.3% sequentially and declined 4.6% on a year-on-year basis. APMEA grew 1.7% sequentially and 6.6% on a year-on-year basis. From a sector standpoint, BFSI grew 2.6% sequentially and 0.4% year-on-year. Health grew 4.2% sequentially and 1 % year-on-year. Consumer grew 0.7% sequentially while declining 5.7% year-on year. Tech and Comm grew 4.2% sequentially and 3 .5% on year-on-year terms. EMR declined 4.9% sequentially and 5.8% year-on-year. To give an added color, Capco was flat on a year-on-year basis in Q3.

Before I move on to other financial parameters, I would like to draw your attention to two specific one-off charges that we took in our P&L that also impacted our net income. These charges are not included in our IT Services segment margin. First is an increase ofINR 302 crores towards gratuity expenses due to implementation of the new labor code. Second is regarding the restructuring exercise that was completed during the quarter, and its impact is about INR 263 crores. I would like to confirm that we have not completed the restructuring we wanted to do and do not anticipate any further

Nitin Padmanabhan:

Moderator:

lower working days, which is not really, this is in some sense, offsetting for those furloughs. And therefore, we have given you the guidance we have. But these deals should continue to convert. Each deal is different. We are confident it will take some time, but it will ramp up. Sriniv, you want to talk onEMR?

Thanks, Aparna. Happy New Year, Nitin. As far as EMR is concerned, our performance in this sector clearly has been impacted based on the macroeconomic uncertainty we have seen, some during tariff related and also some disrupted supply chain issues that we faced. However, our pipeline continues to remain strong in the sector. And essentially, the significant pipeline is around either vendor

consolidation or cost takeout. And ifl were to give a little bit of color to specific segments, we have good momentum in energy in both Americas and Europe. And as far as manufacturing is concerned, we are seeing that in Europe. Also, our Capco business, which is also seeing some traction on the energy consulting side. So net-net that's the situation that we have right now with EMR, Nitin.
In salary hikes, we will take a call in the next few weeks in terms of when should we be doing it. Our intention is to look at it this quarter, but we will confirm it during the next couple of weeks.
Perfect. That's helpful. Just one clarification. Do you think EMR should start getting back to growth sometime next year? That's the last question from my end. Thank you.
So as far as EMR is concerned, Nitin, I will just repeat that. One is the pipeline. Like I said, specifically, we have good momentum on the pipeline in energy in both Americas and Europe. And as far as manufacturing is concerned, it's in Europe. I think our focus right now is to convert these deals and then that should drive the revenue growth for us. And we are just staying focused on winning some of those deals, Nitin.
Perfect. Very helpful. Thank you so much and all the very best.
Thank you. Next question is from the line ofVibhor Singha! from Nuvama Equities. Please go ahead.
Hi. Thanks for taking my question and congrats on a solid performance. So Srini, my question was mainly on basically the Consumer vertical. You mentioned about the challenges in the EMR vertical, banking has been doing well for us. In the Consumer vertical, the growth was set in this quarter. We continue to decline on a Y-on-Y basis. How do you see the outlook in this vertical? We know this vertical also has been impacted a lot by the tariff uncertainty that has basically impacted the producers. But in your conversation with the clients in terms of our interactions in the pipeline, do you see it turning the corner in coming quarters or do you think it will be sometime before some clarity on this vertical?
Public ••••• • •••••• . . .. .wip. roi)}I .....• • • a••• •• . .. . •••••

Vibhor Singhal:
Aparna Iyer:
Vibhor Singhal:
Aparna Iyer:
Moderator: Wipro Limited
January 16, 2026
Thanks, Vibhor. If you look at our consumer sector, clearly, if you recollect, I talked about it before as well that the tariffs had an impact on this and that has reflected in our numbers. And also, if you reflect there was a large SAP program which was put on hold last year by our customers. And again, the client is yet to reinitiate. And that is one of the things that is impacting our year-on-year performance as well in this particular thing, in this particular sector. However, the overall trend that we see right now is mixed here for us in consumer. Some of the wins we had earlier this year is slowly ramping up and that should support the growth in this sector. I do not have-from a Quarter 4 perspective, w

hatever growth we are seeing, that is baked into our forecast, Vibhor.
Got it. And similar thing on the basically, I know it is not that big a vertical, but I think both tech and Health vertical appear to be doing good. Any specific project ramp-up that we saw in this quarter which led to this growth or do you think it is a growth which we can sustain in the coming quarters as well?
Sorry, which sector did you refer to, Vibhor?
Aparna, tech and the Healthcare vertical, both of them separately.
You know, in some sense, in Healthcare, we have been consistently doing well. And we have had a sector both in our year-on-year performance. Seasonally, obviously, we have the open enrollment season that really does improve our Health performance in Q3. So, that is also added to the performance. In terms of our Tech & Comm, we continue to do well in some of our large technology players. And there is a little bit of the HARMAN acquisition numbers which is also reflected in the overall sector's performance. And I think Communications in general have done -has been better for Europe & APMEA. That is the color I can give you.
Perfect. That is really helpful. Aparna, just one last question from my side. You mentioned about the few headwinds in Q4 that you will be facing. And ifl look at our guidance, it is 0.02% at the consol level. And if we were to, let us say, extrapolate the two-month incremental impact of HARMAN acquisition, the organic growth will probably fall somewhere between (-1.5%) to(+ 0.5%). Is that the right understanding? And is the reason for that very much as you mentioned in your opening remarks as well?
You know, Vibhor, for some reason, we are not able to hear it clearly. Can you just load on your question?
I am sorry. His line is disconnected. We will move on to the next question. Next question is from the line of Ravi Menon from Macquarie. Please go ahead.

Abhishek Jain: Yes. Wipro Limited
January 16, 2026
There is no such impediment. I mean, you can do that as in when you feel, it is the right time. Is that the way to look at it?
Yes. Absolutely, absolutely.
Noted. The second question is for you and Srini. Let us say, if those two mega deals ramp-ups were not delayed, then what would the guidance have been for the March quarter? Any way to detail it out, either quantitatively, which may be difficult or even qualitatively, that would be very helpful to understand the growth trajectory, yes.
Obviously, we cannot talk about it quantitatively, Kawai. And qualitatively, like I have said, it is only delayed. These ramp-ups should happen, and each deal is different in its nature, right. For example, something like Phoenix, which was entirely net new and fully where there was a clear go-live date and readiness, we have been able to do that and that is fully into our revenue starting Q3. So that has played out perfectly to plan.
Right now, in some of the other larger deals, that mega deals that we could be winning in terms of vendor consolidation, these deals typically have both an element ofrenewal and new. Obviously, the renewal is fully in, and that continues. And we are not seeing any changes in terms of expectations. In case of the new, the element of new, some of these things are taking longer, either due to client situations where there could be some changes in the client environment that they are going through. And therefore, there is a little bit of a delay in terms of the timing of the ramp-up.
Or it could just be the nature of how it is going to play out, right? Because it will take six quarters, that is what I alluded to. So it is going to take that time. And we are hopeful that this will flow through in the coming quarters.
Noted. And thank you so much. All the best.
Thank you. Thank you, Kawai.
Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand the conference back to Mr. Abhishek Jain for closing comments. Over to you, sir.
Yes. Thank you all for joining the call. Have a nice day. Thank you.

Call: Jan 2026

“Wipro Limited Q3 FY'2 6 Earnings Conference Call”

January 16, 2026

MANAGEMENT : MR. SRINI PALLIA – CHIEF EXECUTIVE OFFICER & MANAGING DIRECTOR , WIPRO LIMITED
MS. APARNA IYER – CHIEF FINANCIAL OFFICER , WIPRO LIMITED
MR. SAURABH GOVIL – CHIEF HUMAN RESOURCES OFFICER , WIPRO LIMITED
MR. HARI SHETTY – CHIEF STRATEGIST AND TECHNOLOGY OFFICER , WIPRO LIMITED
MR. ABHISHEK JAIN – VICE PRESIDENT (CORPORATE TREASURER & HEAD OF INVESTOR RELATIONS), WIPRO LIMITED

Public Moderator: Ladies and gentlemen, good day and welcome to Wipro Limited Q3 FY'2 6 Earnings Conference Call.

As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing “*” and then “0” on your touchtone phone. Please note that this conference is being recorded and the duration for today's call will be for 45 minutes.

I now hand the conference over to Mr. Abhishek Jain – Vice President (Corporate Treasurer & Head of Investor Relations). Thank you, and over to you, sir.

Abhishek Jain: Thank you, Yashashri. Warm welcome to our Q3 FY '26 Earnings Call.

We will begin the call with the “Business Highlights and Overview” by Srinivas Pallia – our Chief Executive Officer and Managing Director, followed by “Updates on Financial Overview” by our CFO – Aparna Iyer. We also have CHRO – Saurabh Govil and our Chief Strategist and Technology Officer – Hari Shetty on this call. Afterwards, the Operator will open the bridge for Q&A with our Management Team.

Before Srini starts, let me draw your kind attention to the fact that during this call, we may make certain forward -looking statements within the meaning of Private Securities Litigation Reform Act 1995. These statements are based on Management's current expectations and are associated with uncertainties and risks, which may cause the actual results to differ materially from those expected. The uncertainties and risk factors are explained in our detailed filings with the SEC. Wipro does not undertake any obligation to update the forward -looking statements to reflect events and circumstances after the date of filing. The conference call will be archived, and a transcript will be available on our website.

With that, I would like to turn over the call to Srini.

Srini Pallia: Thank you, Abhishek . Good evening and thank you for joining us today. A very happy new year to you.

Let me start with a broader environment before walking you through our quarterly performance and how we are positioning Wipro for an AI -first world :

Across our client landscape, one thing is clear. Organizations are reshaping priorities as AI influences how they plan, invest, and operate. In fact, AI is now a standing board-level mandate led by CEOs

Public who recognize its ability to transform business models, unlock productivity, and create lasting competitive advantage.

We are also seeing the same themes continue from past quarters in our deal pipeline. Cost optimization, vendor consolidation, and a clear shift towards AI -led transformation. In Quarter 3, we also marked two important milestones for Wipro. In December, we completed 80 years as a company. And in October, we celebrated 25 years of being listed on the New York Stock Exchange. These milestones reflect a legacy of strong governance, values, and integrity , a foundation of trust that continues to differentiate us with our clients, partners, and investors.

Turning to Quarter 3 Performance:

Our IT Services sequential revenue at $2.64 billion grew 1.4% on a constant currency basis. Excluding HARMAN DTS acquisition, revenue grew 0.6% in constant currency terms . Growth was broad- based with few of our four markets, and four of our five sectors reporting sequential gains. Americas 1 delivered sequential and year -on-year growth driven by strong performance in Health care, Consumer , and LATAM . Americas 2 saw a sequential decline. Europe grew sequentially in Quarter 3 , led by ramp -up of the earlier announced mega deal.

We are also seeing good traction in the UK and Western Europe. APMEA g

rew sequentially and

year-on-year, led by India, Middle East, and Southeast Asia. BFSI continues to show strong traction with ramp -ups and new wins.

Capco revenue was impacted by furloughs and remained flat year -on-year. O ur operating margins at 17.6% expanded 0.4% over adjusted Quarter 2 margin, and 0.1% year -on-year. We closed $3.3 billion in total contract value and $871 million in large deal bookings.

Last quarter, I introduced Wipro Intelligence. It is a unified approach to delivering A I-power ed transformation across industries. This approach i s anchored on three strategic pillars :

• First, industry platforms and solutions. We are building consulting-led AI solutions across sectors. For example, platforms like Payer AI in Health care, NetOxygen for lending, and AutoCortex for automotive. These solutions help streamline operation, improve customer outcomes and open up new avenues for growth.

• Second, our delivery platforms accelerate AI adoption at scale. WINGS, part of our Wipro Intelligence brings A I into the heart of operation from application management to infrastructure support and business process operation. W eGA adds AI-driven capabilities

Public across the development lifecycle from vibe coding to model tuning and data pipeline. Together, these platforms help our clients modernize faster and operate smarter.

• Third, the Wipro Innovation Network. This connects our labs with partners, startups, universities and deep tech talent around the world. This ecosystem helps us explore new technologies and build solutions for the future. We launched innovation labs in three cities in the U.S., Australia and the Middle East , expanding our network, growing our global footprint and strengthening our role as a trusted innovation partner. We are also partnering with client GCCs to drive transformation and turn their cost center s into high-impact innovation hubs .

Let me now share two examples of large deal wins that we had leveraging W ipro Intelligence.

• First, a leading global education provider in the UK, which is expanding rapidly across markets, has chosen us as its strategic partner for a multi -year transformation. The goal is to build a single, secure, intelligent operating model that can scale with their growth and improve stakeholder experience. Using WINGS, w e will standardize core processes, embed automation and A I-driven insights, and optimize costs through a global delivery model.

• Second, a leading US -based fit ness technology company has selected Wipro for a multi - year transformation to accelerate its shift to a subscription -based wellness model and support global expansion. We will use both WINGS and WeGA, to embed AI and automation across IT infrastructure and core functions, driving efficiency, productivity, growth, and better customer experiences. These engagement s highlight a clear trend. Clients are bringing us in much earlier and recognizing the step change in the way we deliv er and innovate.

I would now like to update you on HARMAN DTS :

First, a warm welcome to all HARMAN DTS employees joining us. With t he acquisition now complete, we have added engineering and AI capabilities that truly complement what we do. This strengthens our engineering global business line and helps us accelerate AI -driven product innovation for clients . The integration also opens new regions and high-growth industries and allows us to take on larger, more complex transformation programs . As our teams come together, we look forward to entering new markets, building deeper client relationships, and turning innovation into long-term value .

Finally, guidance for Quarter 4 :

Public In Quarter 4 , we are projecting sequential IT Services revenue growth of 0% to 2.0% in constant currency. With that, I will hand it over to Aparna for the detailed financials.

Thank you. Over to you,
Aparna.
Aparna Iyer: Thank you, S rini. Good evening, ladies and gentlemen, and wish you all a very, very Happy New Year .
Let me share a quick update on the financial performance:
Our IT Services revenue for Quarter 3 grew 1.4% sequentially in constant currency terms and 1.2% sequentially in reported currency. Revenue grew 0.2% year -on-year in reported terms while declining 1.2% year -on-year in constant currency terms. Our c onstant currency revenue growth numbers included 0.8% as contribution from the HARMAN DTS acquisition that was closed in Quarter 3, '26.
Our operating margin for the quarter was 17.6%, an expansion of 40 basis points over the adjusted operating margin for Q2 and 10 basis points improvement on a year -on-year basis. I would also like to highlight that this is one of our best margin performance in the last 7 quarters. As we move to Q4, we will need to factor for incremental dilution of HARMAN DTS. That said, our endeavor as always will be to maintain the margins in a similar band as in the last few quarters. Adjusted net income for the quarter was INR 33.6 billion and adjusted EPS for the quarter was INR 3.21, an increase of 3.5% quarter -on-quarter and flat year -on-year.
Moving on to our strategic market unit and sector performance, all the numbers I will share will be in constant currency:
Americas grew 1.8% sequentially and grew 2.8% on a year -on-year basis. Americas 2 declined 0.8% sequentially and 5.2% on a year -on-year basis. Europe grew 3.3% sequentially and declined 4.6% on a year -on-year basis. APMEA grew 1.7% sequentially and 6.6% on a year -on-year basis. From a sector standpoint, BFSI grew 2.6% sequentially and 0.4% year -on-year. Health grew 4.2% sequentially and 1% year -on-year. Consumer grew 0.7% sequentially while declining 5.7% year -on-year. Tech and Comm grew 4.2% sequentially a nd 3.5% on year -on-year terms. EMR declined 4.9% sequentially and 5.8% year -on-year. To give an added color, Capco was flat on a year -on-year basis in Q3.
Before I move on to other financial parameters, I would like to draw your attention to two specific one-off charges that we took in our P&L that also impacted our net income. These charges are not included in our IT Services segment margin. First is an inc rease of INR 302 crores towards gratuity expenses due to implementation of the new labor code. Second is regarding the restructuring exercise that was completed during the quarter, and its impact is about INR 263 crores. I would like to confirm that we hav e not completed the restructuring we wanted to do and do not anticipate any further

Public charges. Our operating cash flow continued to be higher than the net income and stood at 135% of net income for Q3. Our gross cash including investments, is now at $6.5 billion. Our net other income in Q3 grew 15% sequentially. Accounting yield for the average investments held in India was at 7.2%. Our effective tax rate at 23.9% for Q3’26 was better than the same quarter last year of 24.4%.
In terms of guidance, we would like to reiterate what was stated by Srini. We expect our revenue from the IT Services Business Segment to be in the range of $2.635 billion to $2.688 billion. This translates to a sequential guidance of 0 -2% in constant curr ency terms. Our guidance includes the incremental 2 months of revenue from HARMAN DTL. It is impacted by fewer working days in Q4 and certain delayed ramp -ups in some of the large deals that we won earlier in the year.
Lastly, I would like to share with you that in our recently concluded board meeting, the Board of Directors has declared an interim dividend of INR 6 per share. With this payout, the cash distributed to our shareholders during the current financial year will be in excess of $1.3 billion. And we will be able to significantly exceed the minimum threshold that we had laid out in our c

apital allocation
policy for the block-ending financial year 2026. With that, I am going to ask Yashashri to open it up for Q&A.
Moderator: Thank you very much. Ladies and gentlemen, we will now begin the question-and -answer session.
We will take our first question from the line of Nitin Padmanabhan from Investec. Please go ahead.
Nitin Padmanabhan: Hello, good evening. Wishing you a very happy New Year. I had a couple of questions. So, one is, I think this quarter, we lost almost $24 million of revenue in energy manufacturing resources. I just wanted your thoughts on that vertical and how do you see the deal pipeline there? When do you think this can sort of turn around? The second is, you alluded to some delays in ramp- ups impacting growth for next quarter. So, if you could give some color there. I presume this is related to the la st deal. By

when do you see this sort of beginning to ramp up going forward? And third, when are we expecting to have the wage hike cycle? Those are the three. Thank you.
Aparna Iyer: So, Nitin, I will take your second question. And then on EMR, I will ask Srini to answer. And on attrition, we have Saurabh here. He can take that on salary hike. Nitin, in terms of a large deal conversion, each deal is different. One of the significant deal wins we had in Q4 of the last financial year, Phoenix, is now fully ramped up and its revenues is fully realized and it's part of our Quarter 3 performance. So, that's on track. Some of the other deals, given the nature of the deals that we have won, we have earlier also highlighted that these deals will take a few quarters to ramp up. So, it's a question of it coming in through the course of the next few quarters. And therefore, we have called it out saying that in Q4, we may not be able to realize the full impact and therefore, we are calling it
out. The other lever that is playing out is typically furloughs do come back, but Q4 continues to have

 lower working days, which is not really, this is in some sense, offsetting for those furloughs. And therefore, we have given you the guidance we have. But these deals should continue to convert. Each deal is different. We are confident it will take some ti me, but it will ramp up. Sriniv, you want to talk on EMR?
Srini Pallia: Thanks, Aparna. Happy New Year, Nitin. As far as EMR is concerned, our performance in this sector clearly has been impacted based on the macroeconomic uncertainty we have seen, some during tariff related and also some disrupted supply chain issues that we faced. However, our pipeline continues to remain strong in the sector. And essentially, the significant pipeline is around either vendor consolidation or cost takeout. And if I were to give a little bit of color to specific segments, we have good momentum in energy in both Americas and Europe. And as far as manufacturing is concerned, we are seeing that in Europe. Also, our Capco business, which is also seeing some traction on the energy consulting side. So net -net that's the situation that we have right now with EMR, Nitin.
Saurabh Govil: In salary hikes, we will take a call in the next few weeks in terms of when should we be doing it. Our intention is to look at it this quarter, but we will confirm it during the next couple of weeks.
Nitin Padmanabhan: Perfect. That's helpful. Just one clarification. Do you think EMR should start getting back to growth sometime next year? That's the last question from my end. Thank you.
Srini Pallia: So as far as EMR is concerned, Nitin, I will just repeat that. One is the pipeline. Like I said, specifically, we have good momentum on the pipeline in energy in both Americas and Europe. And as far as manufacturing is concerned, it's in Europe. I think our focus right now is to convert these deals and then that should drive the revenue growth for us. And we are just staying focused on winning some of those d

eals, Nitin.
Nitin Padmanabhan: Perfect. Very helpful. Thank you so much and all the very best.
Moderator: Thank you. Next question is from the line of Vibhor Singhal from Nuvama Equities. Please go ahead.
Vibhor Singhal: Hi. Thanks for taking my question and congrats on a solid performance. So Srini, my question was mainly on basically the Consumer vertical . You mentioned about the challenges in the EMR vertical, banking has been doing well for us. In the Consumer vertical , the growth was set in this quarter. We continue to decline on a Y -on-Y basis. How do you see the outlook in this vertical? We know this vertical also has been impacted a lot by the tariff uncertainty that has basically impacted the producers. But in your conversation with the clients in terms of our interactions in the pipeline, do you see it turning the corner in coming quarters or do you think it will be sometime before some clarity on this vertical?

 Srini Pallia: Thanks, Vibhor. If you look at our consumer sector, clearly, if you recollect, I talked about it before as well that the tariffs had an impact on this and that has reflected in our numbers. And also, if you reflect there was a large SAP program which was put on hold last year by our customers. And again, the client is yet to reinitiate. And that is one of the things that is impacting our year -on-year performance as well in this particular thing, in this particular se ctor. However, the overall trend that we see right now is mixed here for us in consumer. Some of the wins we had earlier this year is slowly ramping up and that should support the growth in this sector. I do not have —from a Quarter 4 perspective, whatever growth we are seeing, that is baked into our forecast, Vibhor.
Vibhor Singhal: Got it. And similar thing on the basically, I know it is not that big a vertical, but I think both tech and Health vertical appear to be doing good. Any specific project ramp -up that we saw in this quarter which led to this growth or do you think it is a growth which we can sustain in the coming quarters as well?
Aparna Iyer: Sorry, which sector did you refer to, Vibhor?
Vibhor Singhal: Aparna, tech and the Health care vertical, both of them separately.
Aparna Iyer: You know, in some sense, in Health care, we have been consistently doing well. And we have had a

sector both in our year -on-year performance. Seasonally, obviously, we have the open enrollment season that really does improve our Health performance in Q3. So, that is also added to the performance. In terms of our Tech & Comm, we continue to do well in some of our large technology players. And there is a little bit of the HARMAN acquisition numbers which is also reflected in the overall sector's p erformance. And I think Communications in general have done – has been better for Europe & APMEA . That is the color I can give you.

Vibhor Singhal: Perfect. That is really helpful. Aparna, just one last question from my side. You mentioned about the few headwinds in Q4 that you will be facing. And if I look at our guidance, it is 0.02% at the consol level. And if we were to, let us say, extrapolate th e two -month incremental impact of HARMAN acquisition, the organic growth will probably fall somewhere between (- 1.5%) to (+ 0.5%). Is that the right understanding? And is the reason for that very much as you mentioned in your opening remarks as well?

Aparna Iyer: You know, Vibhor, for some reason, we are not able to hear it clearly. Can you just load on your question?

Moderator: I am sorry. His line is disconnected. We will move on to the next question. Next question is from the line of Ravi Menon from Macquarie. Please go ahead.

 Ravi Menon: Hi. Thanks for the opportunity. And congrats on a really strong margin performance this quarter. Now that you have come to seque

ntial growth, even in a seasonally weak quarter, I am surprised that organically we seem to be hinting at slight decline , possibly at the lower end of our guidance next quarter. And Capco should also be coming out from the furloughs that it has had this quarter. So, could you talk a bit about that? And beyond that, do you think that sequential growth is possible looking at th e pipeline and the slight improvement, possibly, if we have on the demand environment?

Aparna Iyer: I will ask Srini to talk through the demand environment. You know, we guide based on the visibility that we have at the start of the quarter. I have shared with you that some of the furloughs that typically does come back, have been partially offset by th e lower working days that we are also seeing this year. And to that extent, we are seeing some softness continue. But that said, our endeavor would be to obviously execute the quarter better through the next 90 days.

Srini Pallia: If you look at it, there is no significant change in the demand environment, specifically the discretionary spend as the uncertainty continues. Second, January is the time when many of our customers will finalize their budgeting process. We will have a much better understanding and view of where they're going to spend. But having said that, if I look at the current pipeline that we have, a significant piece of this pipeline is around cost optimization and vendor consolidation, which are the key levers for our clients. And they are using this as a lever for savings, and they want to reinvest these savings into AI capabilities and also some of the advanced transformation projects that they want to do. For us, we believe this is an opportunity for us to capitalize on this and we will make strategic bets in each of these sectors and markets, continue to invest in our clients to do this. From a full year of visibility, like Aparna said, there is uncertainty in the market and customers continue to rem ain in wait and watch mode. At this stage, our guidance represents the best visibility we have and if there are any further updates, we will definitely share.

Ravi Menon: You talked about vendor consolidation and cost takeout and clients actually using those savings for transformation. Are they actually giving both to the same vendor or do they prefer to split that out? What's that you're seeing, at least in the wins that y ou have?

Srini Pallia: It's mixed. There are certain clients who are doing that and continuing with their current partners. And there are certain clients who are changing and there are certain clients who are increasing the scope and using multiple partners as well. So, it clear ly varies from client to client.

Ravi Menon: One last question on the HARMAN DTS . Which segments do you think this really improves your possibility of win rates?

Srini Pallia: If I understand the question, how the HARMAN DTS acquisition will help us, right?

 Ravi Menon: Correct. Which sectors do you expect the win rates to improve?

Srini Pallia: So, clearly, HARMAN brings in both design to manufacturing capabilities and AI -powered product innovation. In that context, clearly, the sweet spot for a combined unit is, especially the engineering global business plan that we have, is the Tech and Com sector. That's, I thi nk, primarily the one where we see a significant opportunity. And the other three sectors I would pick are Health, Consumer and EMR.

Moderator: We will take our next question from the line of Sandeep Shah from Equirus Securities.

Sandeep Shah: The first question is, because of delay in ramp -up of deal wins of the last 2- 3 Quarters, is it fair to assume if those ramps up in the 1st Quarter next year, then the seasonal softness which generally comes in the 1st Quarter may not be true next year?

Aparna Iyer: Sandeep, yes, in some sense, that will be the objective that we

ramp up enough so that we can offset for some of the weakness that could arise. That said, we don't guide for Q1. But we would like to
clarify that it's just delayed and some of this do take time to ramp up and confident that it will ramp
up and we will keep you posted.
Sandeep Shah: Aparna , I wanted to understand the guidance on the margins which you said narrow band. Narrow band compared to Q3 margins or earlier range?
Aparna Iyer: Again, no, we don't guide for margins. You've seen our performance over the last 8 Quarters. We've consistently improved. I think, you know, all credit to the team, we have been fairly resilient on margins, and we will continue our endeavor to keep it. But that said, we will have to invest for growth and that's the number one priority. We've acquired DTS HARMAN and that will mean an incremental dilution to our margins that we will have to absorb. Two, we continue to chase and win large deals, and they come with a different margin profile. And these are very important investments we have to make and there will also be decisions that will have to be made on wage increases that Saurabh spoke of. A lot of moving parts. Our endeavor is going to be to make sure that we keep it in that band of 17% to 17.5%. If you recall, we had said that while we've stated that band with the acquisition, we will see pressure to that. Right now, we are continuing to hold that band, which itself is a positive. But like I said, we will have to take it quarter -to-quarter. There will be some quarters where we will have to invest in our people, in our deals, in our clients and for growth. So, we will make those trade - offs.
Sandeep Shah: Last couple of questions. The deal TCV in this quarter, both on large deal and total has been slightly softer versus very strong momentum in the earlier 3 Quarters. So, any reason where is it the client

Public decision making being slowed down or it is the intense competitive pressure which has led to some decline in the win ratio?
Aparna Iyer: Typically, like I said, some of these deals, they tend to club. We are contesting a lot of large deals. They are in the cycle. We are hopeful of closing them. You will continue to see the momentum on large deal win at $1 billion or maybe, we are just shy of $100 million that has been the normal trajectory, obviously, in the first half, we had a few mega deal win. So, to be specific, we hope to win more. So, I wouldn't read into it in terms of slower decision-making cycle or competitive pressure. I would just say that they tend to lump up. We have a lot of good deals, and we will see the momentum pick up.
Sandeep Shah: A last question, Aparna, with a war chest of $ 6.1 billion, though we are distributing dividend. But is it fair to assume that buyback continues to remain one of the options in the mind to give this excess cash back to the shareholders?
Aparna Iyer: We have said that buyback will continue to be a means by which we will return cash to our shareholders. It's certainly an option on the table and we will consider it at an appropriate time.
Moderator: Next question is from the line of Kumar Rakesh from BNP Paribas.
Kumar Rakesh: I have just one question. Do you think given the kind of mix which you have both of vertical and the capability at Wipro, you would be able to get back in line with the industry average revenue growth or would it make sense to just slow down your margin, get to mid -teen sort of a margin, be able to better compete with some of your peers , may be mid -cap peer s as well, or maybe acquire some of the companies to reset the mix? What's your thought on that?
Srini Pallia: Kumar, clearly, first, if you look at our inorganic strategy, it's very clearly aligned to the strategic priorities we called out. We constantly look for sectors and the market combination in terms of where we need to invest, where we need to acquire ne

w capabilities. And if you look at specifically HARMAN DTS, clearly, it is giving us a combination of both, what I would call as capabilities and also a few new markets that they are already in. So we continue to look at opportunities for us, Kumar, as we continue to move forward.
Our strategy is both, growing our organic and inorganic and continue to invest in organic. And you are right, we do have cash. And as far as that is concerned, it is an opportunity for us to look at the market, scan the market and do the right investment that makes it a win -win for us.
Kumar Rakesh: Got it. Thanks a lot for that.

Public Moderator : Thank you. Next question is from the line of Rishi Jhunjhunwala from IIFL. Please go ahead.
Rishi Jhunjhunwala : Yes, thanks for the opportunity. Just wanted to understand, ex of HARMAN does not look like there would be much of a sequential growth in 4Q and 1Q . As we were discussing earlier in the call, historically has had some weak seasonality. I noticed a pretty sharp increase in our overall headcount

in this quarter. So, just wanted to understand, given the outlook for the next couple of quarters, what is driving this? And how do we read that?
Srini Pallia : Headcount for this quarter is primarily driven from two things. One is the acquisition, DTS acquisition. And second is one of the large deals , Phoenix we had done, as well as rebadging , so, I think when we ramped -up the deal. So, that has been the reason for seeing the ramp -up in this quarter. Otherwise, from a hiring standpoint and supply side, I do not see a challenge. Attrition has been at 2% low for the quarter. It is trending the same in the next quarter.
We are going to go to the campuses again. We have taken a bit of a hiatus in this quarter, next quarter. So, from a supply side, relation is looking up. The net of the furlough, which we are, the net of the leave people have taken. So, we are fairly confident in the headcount supply side to manage the demand.
Rishi Jhunjhunwala : Understood, sir. The second question is, I just wanted to understand this restructuring cost that we have booked in our financials. Is it in the same nature as what we did in 1Q? And if not, if you can give some color around that ?
Srini Pallia : The restructuring basically has pivoted on obsolete skillsets and family in two areas. One is in Europe, where we have tough labor la ws and second is in Capco. These are the two big areas where we did that. Similar to what we have done in Q1.
Rishi Jhunjhunwala : Understood. And just last thing, there was a bookkeeping question. There is a spike in D& A in this quarter , any particular reason? And is that a normalized level going forward as well? Thank you.
Aparna Iyer : We have taken a provision for about full debt charge, and I think that has the line item that will show an increase that has in the usual course of business , you should see that go off starting next quarter.
Rishi Jhunjhunwala : Aparna, I was asking about depreciation and amortization .
Aparna Iyer : Okay. And typically, we do assess the intangibles every year. And based on the expected forecast, etc., sometimes we tend to accelerate such a amortization . In this quarter, we did accelerate some amortization towards one of the earlier acquisitions and that has reflected. And that should also

 normalize. However, we will have an increase of amortization charge coming in for the DTS HARMAN. So, yes, you should wait for the next quarter to get that more normalized in.
Rishi Jhunjhunwala : Sure. Got it. Thank you so much.
Aparna Iyer : Thank you.
Moderator : Thank you. Next question is from the line of Kawaljeet Saluja from Kotak Securit ies. Please go ahead.
Kawaljeet Saluja : Hi, Aparna. I have just a couple of questions for you. First is that at $6.5 billion, it seems tha

t you
have plenty of excess cash. So how do you intend to flush this excess cash out? Would it be through dividends or is buyback on the cards? If buyback is on the cards, then what are the considerations set required to move towards that path? That is the first question.
Aparna Iyer : Okay. You are right. We did note that we have been having excess cash and as a result of that , last year we had increased our capital allocation, and we had said that we would start increasing our dividend payouts. We did that , we paid out INR 6 in the last financial year. This year, we have almost paid INR 11 per share, which is about $1.3 billion, which n early , account for like, if I had to just analyze our Y -T-D EPS, it was about 88 % - 89% of that.
So at least what the increased dividend is doing is we are not adding to the excess cash and leaving enough for watches for whatever acquisitions and organic investments we need to make. Is buyback an option to still consider in terms of returning excess cash to shareholders? Indeed it is. And what are the considerations for that? We will have a discussion with the board on that and we will come back. Typically , considerations include, whether we have enough net cash available in order to pursue the invest ment we need. And we will keep the market posted , Kawal . But other statutory considerations are quite in the play for buyback.
Kawaljeet Saluja : Sorry, can you repeat that last part again? I missed it.
Aparna Iyer : So, I said, there are some statutory considerations that you cannot do a buyback within 12 months. If you cannot do it if there is a merger pending for NCLT, etc. None of that is, I mean, all of that is conducive , covered for us .
Kawaljeet Saluja : Okay. So let us say if you had to theoretically decide to do a buyback today, you could do that. Whereas in the past, there was an NCLT process or merger, which would have acted as an impediment.

 Aparna Iyer : Yes.
Kawaljeet Saluja : There is no such impediment. I mean, you can do that as in when you feel, it is the right time. Is that the way to look at it?

Aparna Iyer : Yes. Absolutely , absolutely .
Kawaljeet Saluja : Noted. The second question is for you and Srini . Let us say , if those two mega deals ramp -ups were not delayed, then what would the guidance have been for the March quarter? Any way to detail it out, either quantitatively, which may be difficult or even qualitatively, that would be very helpful to understand the growth trajectory, yes .
Aparna Iyer : Obviously, we cannot talk about it quantitatively , Kawal . And qualitatively, like I have said, it is only delayed. These ramp -ups should happen, and each deal is different in its nature, right . For example, something like Phoenix, which was entirely net new and fully where there was a clear go -live date and readiness, we have been able to do that and that is fully into our revenue starting Q3. So that has played out perfectly to plan.
Right now, in some of the other larger deals, that mega deals that we could be winning in terms of vendor consolidation, these deals typically have both an element of renewal and new. Obviously, the renewal is fully in, and that continues. And we are not seeing any changes in terms of expectations .
In case of the new, the element of new, some of these things are taking longer, either due to client situations where there could be some changes in the client environment that they are going through.
And theref ore, there is a little bit of a delay in terms of the timing of the ramp -up.
Or it could just be the nature of how it is going to play out, right? Because it will take six quarters , that is what I alluded to. So it is going to take that time. And we are hopeful that this will flow through in the coming quarters.
Kawaljeet Saluja : Noted. And thank you so much. All the best.
Aparna Iyer : Than

k you. Thank you, Ka wal.
Moderator : Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand the conference back to Mr. Abhishek Jain for closing comments. Over to you, sir.
Abhishek Jain: Yes. Thank you all for joining the call. Have a nice day. Thank you.
Wipro Limited
January 16, 2026

Public Moderator : Thank you, members of the management team. On behalf of Wipro Limited, that concludes this conference. Thank you for joining us. And you may now disconnect your lines.

Company Secretary

ENCL: As above

 “Wipro Limited
Q4 FY '2 6 Earnings Conference Call ”
April 16, 202 6
MANAGEMENT : MR. SRINI PALLIA – CHIEF EXECUTIVE OFFICER AND MANAGING DIRECTOR – WIPRO LIMITED
MS. APARNA IYER – CHIEF FINANCIAL OFFICER – WIPRO LIMITED
MR. SAURABH GOVIL – CHIEF HUMAN RESOURCES OFFICER – WIPRO LIMITED
MR. HARI SHETTY – CHIEF STRATEGIST AND TECHNOLOGY OFFICER – WIPRO LIMITED
MR. ABHISHEK JAIN – VICE PRESIDENT , CORPORATE TREASURER AND HEAD, INVESTOR RELATIONS – WIPRO LIMITED

Moderator: Ladies and gentlemen, good day, and welcome to Wipro Limited Q4 FY '26 Earnings Conference Call. As a reminder, all participant lines will be in the listen -only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded and the duration for today's call will be for 45 minutes.
I now hand the conference over to Mr. Abhishek Jain, Vice President, Corporate Treasurer and Head of Investor Relations. Thank you, and over to you.
Abhishek Jain: Yashashri. Thank you. Warm welcome to our Q4 FY '26 Earnings Call. We'll begin the call with business highlights and overview by Srinivas Pallia, our Chief Executive Officer and Managing Director, followed by updates on financial overview by our CFO, Aparna Iyer; we also have our CHRO, Saurabh Govil; and our Chief Strategist and Technology Officer, Hari Shetty on this call. Afterwards, the operator will open bridge for Q&A with our management team.
Before Srini starts, let me draw your attention to the fact that during this call, we may make certain forward -looking statements within the meaning of the Private Securities Litigation Reforms at 1995. These statements are based on management's current expectations and are associated with uncertainties and risks, which may cause the actual results to differ materially from those expected.
The uncertainty and risk factors are explained in our detailed filings with the SEC. Wipro does not undertake any obligation to update the forward -looking statements to reflect events and circumstances after the date of filing. The conference call will be archived, and a transcript will be available on our website.
With that, I would like to turn over the call to Srini. Srini, Over to you.

Srini Pallia: Thanks, Abhishek. Hello, everyone. Thank you for joining us today. Geopolitical and policy disruptions have become the new normal. Despite these headwinds, IT spending has shown resilience. Cloud, data and AI continue to attract investments as they provide infrastructure for future growth. Client priorities are shifting with spending decisions increasingly tied to outcomes. And at Wipro, we continue to make decisive investments to navigate the AI -first world.

With that context, let me now turn to our performance in quarter 4 and for the full year FY 2025 '26. All growth numbers I shared will be in constant currency. Our IT Services revenue for quarter 4 was $2.65 billion, reflecting a sequential growth of 0.2% and degrowth of 0.2% on a YoY basis. Our operating margin came in at 17.3%, a contraction of 30 basis points sequentially. The order booking for quarter 4 was at $3.5 billion, which is a growth of 3.2%

sequentially and a degrowth of 13.9% on a YoY basis. We had 14 large deals tota ling $1.4 billion this quarter.

For the full year, IT Services revenue were $10.5 billion, reflecting a YoY degrowth of 1.6%. Our operating margin was at 17.2%, an expansion of almost 15 basis points as compared to FY '25. Now to our strategic market unit performance in quarter 4. Americas 1 delivered sequential and YoY growth, driven by strong performance in consumer, technology and communications. The health care sector was impacted by seasonality and policy changes. Americas 2 decline sequentially and on a YoY basis. The BFSI sector was impacted by delayed ramp -ups on some large deals that were closed earlier this year and by certain client -specific issues. Europe grew sequentially and has remained flat on a YoY basis.

We see good traction in the U.K., specifically in the BFSI sector. We also see strong deal momentum in Germany. APMEA grew sequentially and on a YoY basis. Gr

owth driven by

Southeast Asia. We are seeing traction in the BFSI, technology and communication sectors. We are encouraged by the momentum we are seeing in the APMEA region both in performing and bets we continue to make there. A strong example is the strategic deal we announced recently with the Olam Group , expected to exceed $1 billion in contract value with a committed spend of $800 million. This is one of our largest engagements to date in APMEA.

In this quarter, we also closed several strategic engagements. Let me highlight two examples with global technology leaders to drive AI at scale and how Wipro is partnering with them. In my first example, a leading global technology company has engaged Wipro to help run and improve its frontier AI models.

Wipro will manage the end -to-end operation of these AI models from training, governance and evaluation to domain -specific validation. In fact, this engagement will be done to a specialized global delivery platform. We will make these models more accurate, reliable and safe while ensuring they can be deployed and managed at scale.

In my second example, we have been selected by a leading global semiconductor company to provide engineering services that accelerate product development and manufacturing across its complex hardware platforms at locations distributed globally. We will support the entire engineering life cycle from product development to performance testing analysis. Before final shipment is made by our clients to their end clients. This will help our clients achieve faster resolution management, higher yield and improved governance with AI -driven analytics and automation.

As intelligence becomes in dustrialized and widely accessible , we are making a deliberate strategic pivot to stay ahead. As you might be aware, we have launched a dedicated AI -native business and platforms unit to expand beyond a services -only model to a services -as-a-software approach. This unit will operate with dedicated leadership, focus investments and a distinct operating model to accelerate enterprise -grade agentic AI solutions.

This unit will also incubate new AI -led businesses through an invest build partner approach in addition to collaborating with Wipro Ventures and our partner ecosystems. Together with core services, this creates a dual engine model, driving transformation at scale while building AI -native platforms that differentiate services enable repeatable deployments and unlock nonlinear growth.

With that, let me move on to our guidance for the next quarter. In Q1, we are guiding for a sequential growth of minus 2% to 0% in constant currency terms.

Thank you. I'll now hand it over to Aparna, our CFO.

Aparna Iyer: Good evening, everyone. Let me share a quick update, and then we can open it up for Q&A. Our IT services revenue for Q4 grew 0.2% sequentially in constant currency terms, and 0.6% in reported currency. Our revenues declined 0.2% on a YoY basis in constant currency terms.

For the full year FY26, IT Services revenues declined by 1.6% in constant currency. Our operating margin for the quarter was at 17.3%, a contraction of 0.3% over Q3 '26, and a 0.2% contraction on YoY basis.
With this, our full year operating margin stands at 17.2% and expansion of 15 basis points YoY . We maintained the margins within a narrow band even after absorbing two incremental months of DTS HARMAN . And we also rolled out salary increases effective first March. As we move into Q1, we will have the headwinds of two months of salary increase and a few large deals that we've won, and the volatility could be there in our quarterly performance. Having said that, our endeavour would be to maintain these margins in a narrow band in the medium term. Net income for the quarter was at INR35 billion. Adjusted for the impact of labour code changes, our net income increased 3.7% seq

uentially. For the full year, our net
income increased 2.2% YoY . This was after absorbing the impact of restructuring charges in both Q1 and Q3 of last year. EPS for the quarter was at INR3.3 and INR12.6 for the full year.
Moving on to our strategic market unit and sector performance. All the growth numbers that I will be sharing will be in constant currency. Americas 1 grew 0.3% sequentially and grew 2.9% on a YoY basis. Americas 2 declined 2.6% sequentially and 6.7% on a YoY basis. Europe grew 2% sequentially and was flat on a YoY basis. APMEA grew 3.1% sequentially and 0.8% on a YoY basis.
Moving on to sector performance. BFSI declined 1.3% sequentially and 0.5% YoY , Health declined 4.4% sequentially and was flat YoY . Consumer grew 1.7% sequentially and declined 2.9% YoY . Technology and Communication grew 5.3% sequentially 10.4% YoY . EMR grew 1.1% sequentially and declined 5.9% YoY .
Let me share some other key financial metrics. Our operating cash flow continues to be higher than the net income and stood at 112.6% of net income for FY26 . Our gross cash including investments was at 5.9 billion. Accounting yield on average investment held in India was at

7.3%. Our ETR was at 23.5%. In terms of guidance to reiterate what Srini said, we expect our revenue from IT Services business segment to be in the range of $2.597 billion to $2.6 51 billion. This translates a sequential guidance of minus 2 to zero in constant currency terms.
Lastly, I'd like to share that in our recently concluded Board meeting, the Board of Directors have announced and approved a buyback of INR 15,000 crores at a price of INR 250 per share. This is the largest buyback that Wipro has announced, and we expect to buy back 5.7% of the paid-up capital. The buyback is expected to complete in Q1 '27 subject to shareholder approval.
Our endeavor has always been to return a substantial portion of the cash generated in our -- through our operations back to our shareholders in FY26 alone, we distributed dividends of $1.3 billion, taking our total payout ratio for 3 -year block ending FY26 to about 88%, which is significantly higher than the minimum threshold of 70% that we have as per our capital allocation policy.
With that, I will hand it over for Q&A.
Moderator: We'll take our first question from the line of Prateek Maheshwari, from HSBC Securities. Sorry, his line is disconnected. We'll go on to the next question from the line of Sandeep Shah from Equirus Securities.
Sandeep Shah : Sir, the first question is, there has been a good large deal wins, which has happened early H’1 as well as fourth quarter of last year. And we kept on telling about delay in these large deals, which was expected to come in Q3, then we said Q4, then we said it will come 1Q, but the guidance does not show that . Despite the nature of the deal being cost takeout , vendor consolidation. Why is this delays hap pening?
Srini Pallia: This is Srini here. Thanks for your question. Let me just talk about the quarter 4 performance in the context of the 4 SMUs we had. Three out of the 4 SMUs, Americas, as well as Europe and APMEA have grown sequentially. Having said that, specifically Americas 2, we saw significant softness. And this is specific to the BFSI sector there.
This has been a combination of both client -specific issue and delayed ramp -up that that you're talking about. The reason for the delay is a very client specific, but we see opportunity coming up sooner than later, and that will give us the growth in that particular account and that particular sector.
Sandeep Shah: Okay. And do you believe second quarter onwards, there could be a delayed ramp -up can actually pull up the growth? Or you believe client -specific issue because of the geopolitical issue and macro may continue?
Srini Pallia: So as far as this particular client is concerned, it will end in

quarter 1, Sandeep, and there is no
further impact for us materially. That's number one. Number two, as far as geopolitics is

concerned and we have not seen any clients at this point in time, demonstrating any specific behavior. And also, if you reflect on the pipeline that we have across the market, including countries and across the market, including countries and across the sectors, a very strong pipeline. Of course, it's a very competitive landscape, and t he competition is very intense. And the way we have gone ahead with the Olam deal, which is a very transformational deal, long-term deal also taking their entire IT into Wipro we lcoming them into Wipro family. The second one that we announced yesterday, which was part of the vendor consolidation, the kind of deals that are coming off are very different but very strategic, and we are staying focused on execution for us, which will help us quarters ahead.

Sandeep Shah : Okay. And just last two, there has been a notable decline in our top clients . What is the reason for the same? And second, can you give us the inorganic growth contribution you were factored in the first quarter growth guidance?

Aparna Iyer : So these two deals that we've announced in this month, Sandeep, are a part of our guidance. At the midpoint, we've assumed both these deals to start yielding revenues for 1.5 months, halfway through the quarter.

To your point on the top account growth, it's a sequential decline. But from a YoY standpoint, it continues to have grown. And we are very confident that it will continue to come back as we go through the quarters.

Sandeep Shah : Okay. Okay. Is it possible to quantify inorganic growth in the guidance?

Aparna Iyer : They are not inorganic. They are actually strategic deal wins. If you look at it, Olam is a strategic deal win with -- it's a relationship that is -- has committed revenue. So -- and even the other one that we announced was part of the vendor consolidation strategy, for one of our top clients, and we continue to participate in these kind of deals. And both will be a part of our numbers and our guided range.

Sandeep Shah : Okay. We'll come in the follow -up. Thanks. All the best.

Moderator: Thank you.

Aparna Iyer : Thank you, Sandeep.

Moderator: Next question is from the line of Ravi Menon from Axis Capital. Please go ahead.

Ravi Menon : Hi, thanks for the opportunity. It's beyond the top customers where we've seen a sharp decline . We've also seen top two to five customers also declined slightly. The top customer decline although you said it's temporary. It's a very sharp decline. Can you talk a bit about what led to this? And why -- what gives you confidence that this will be temporary.

Aparna Iyer : Ravi, if you look at it, our top client has been producing a healthy growth for us a fairly long time, right? This kind of one -off quarter volatility is not something that we are unduly concerned about. The relationship remains very strong, and you should continue to see it bounce back.

Ravi Menon : And the unbilled revenue has grown this quarter for more than $80 million. And then we also see some long -term unbilled revenue. C an you talk a bit about what's led to th is and how should we see that trend?

Aparna Iyer : No. So I don't think -- see, the unbilled revenue that has gone up is more a quarterly aberration. It should correct itself from a quarter on. I mean, from a YoY standpoint, actually, our DSO has remained flattish.

Like I said, our operating cash flow has remained 112% of net income . We are not seeing any large exposures or pile up of unbilled in our balance sheet. From a long -term unbilled standpoint as well, I think it's fairly contained, and we have some consistent improvement. Yes, some of the larger deals as they pick up, we are open to -- they will come with som

e

amount of balance sheet leverage, but nothing that's unduly different than what we do as business usual, Ravi.

Ravi Menon : All right. Thanks a lot. Best of luck.

Moderator: Thank you. Next question is from the line of Dipesh Mehta from Emkay Global. Please go ahead.

Dipesh Mehta : Yes, thanks for the opportunity. A couple of questions. First on the clarification part, you said BFSI weakness was because of two factors. One is client specific and second is delay in ramp - up. And one of the questio ns answer ed, you indicated about some of the issue is likely to be ending by quarter 1, which part you are indicating by Q1?

Aparna Iyer: We have said that the client -specific issue that we have seen in one of our clients in Americas too has had an impact on both Q4 and Q1 , and there won't be a continuing impact of that going forward.

Dipesh Mehta: And what about the delay in ramp -up part?

Aparna Iyer : Yes. So if I have to characterize, we've had several large deal bookings, right? Now the one that we announced on Phoenix, it is fully ramped up to plan . There's no delay in that , right? If you look at the other 3 mega deals that we spoke of, one of them is on plan, an d we are continuing to ramp up.

We are seeing challenging , one of those large deal s that we spoke about, where we are seeing a delayed ramp -up, which is, in particular, impacting the growth rate of that particular sector in that particular market unit. Outside of that, BFSI growth rate s are pretty good in Europe and

APMEA. As that client comes back and we start to ramp up, you will see those growth rates improv ing. That is our job.

Dipesh Mehta: And can you give some sense about that ? What factor is leading to delay in ramp up , whether -- so if you can provide some details around it, qualitatively, what is l eading to some of those delays? Second question which I have is, if I look, let's say, the couple of transactions which we close d or in the process of closing, we included in the guidance . If, let's say, any delay in some of those closures, do you see risk to that guidance kind of thing?

Aparna Iyer: We guide in a range. There is -- like I said, we guided a range and there is a midpoint, and we have some cushion, both on the downside and on the upside. And for now, we are comfortable within that guidance range. On the first point, Srini…

Srini Pallia: Yes. Dipesh, Srini here. On the first point, this is a very client -specific issue, where they have changed a little bit of the strategy around some of the things as part of the business because of which they have delayed it. But having said that, we have the clear visibility going forward. It's about the matter of timing, when and how much, and that should help us going forward, Dipesh.

Dipesh Mehta: Understood. And last question from my side. I just want to get some sense about how Capco is playing out.

Srini Pallia: So Dipesh, as you know, Capco is a tip of the spear for the consulting piece on the paper side. They are definitely doing well. And if you look at sequentially, Capco is performing very well and also on the YoY , both have been very positive. And in fact, Capco had one of the highest revenues in the last several quarters. So Capco is making a big difference in terms of the whole AI advisory and consulting. And the way they are being proactively shaping the clients thought process in terms of the whole geopolitics and in terms of the trade and tariff and the technology transition has been really good.

Dipesh Mehta: Thank you.

Moderator: Thank you. Next question is from the line of Vibhor Singhal from Nuvama Equities. Please go ahead.

Vibhor Singhal: Hi. Thanks for taking my questions. C ongrats , Srini and Aparna for the buyback announcement finally. I know the market participants have been waiting for this one for quite a while. Two questions from my side . O

ne is, Srini …

Moderator: Vibhor, I’m s orry, you're sounding muffled .

Vibhor Singhal: I'm so sorry . Just give me a second.

Moderator: Are you on your handset mode? Can you use your handset mode?

Vibhor Singhal : Switch ed to the handset now?

Moderator: Yes, it is clear now. Please go ahead.

Vibhor Singhal: Okay. Sorry for that. Yes. So a couple of questions from my side. Srini, on the energy and the utility verticals , this has been a vertical in which we've been very strong for quite a while. Just wanted to pick as to what are the conversations that you're having with the clients at this point of time because of the Gulf war that is going around, will the crude prices and the volatility in it impact our business in this vertical, either positive or negative? Any conversations that have already started on that regard or is it too early to call out any impact of that on the segment?

Srini Pallia: So Vibhor, from our perspective, if you look at the quarter 4, we have seen a sequential growth and both manufacturing, particularly auto and industrial has seen impact otherwise on the reason for tariffs. Now coming specifically in the context of geopolitics , Vibhor I think there is -- some of the clients are waiting and watching.

But having said that they have not dramatically changed their strategy. For exam ple, what they're trying to do is especially in the manufacturing secto r if you will, they're looking at how do you secure the supply chain to make it more visible and more dynamic going forward. And that's some of the opportunities that we are looking at in the context of AI that can actually help. So that's the trend that we are seeing.

Auto industry. Obviously, they're also looking at how the markets are going and it varies from country to country in in terms of how the business is going. And the third is terms of overall manufacturing, we have not seen any clear change, but they have been constantly under pressure because of tariff flood disruptions that they're going through. And they're also looking at what kind of consumer demand they can have. And also they are keeping a close watch on the input cost because that will also impact their final product cost. So they are trying to sharpen their budgeting, I would say, tightening at this point in time.

Vibhor Singhal: Got it. My second question, Srini, was basi cally on -- again, sorry to harp on the Q1 guidance, once again, as Aparna mentioned, we are taking around half -- 1.5 months of contribution from the new deal that would approximately come to around 0.7%, 0.8% of revenue. Then another 0.7%, 0.8% from the 1 -month integral of HARMAN integration. That leads almost …

Moderator: I'm sorry, Vibhor, you're sounding muffled again. Can you repeat the last part please?

Vibhor Singhal: Okay. [inaudible 0:31:52] around 1.5 months.

Moderator: Okay. Now it's fine. Please go ahead.

Vibhor Singhal: Yes. I'm so sorry for the p oor connectivity. Yes. So as Aparna said I think the two deals will contribute 1.5 months of revenue, that's around 0.7%, 0.8% of revenue. HARMAN ac quisition, one incremental month in Q1 again, that's another maybe 0.7%, 0.8%. So around 1. 5% growth

is coming from these three factors. So these aside, I think the remaining business seems to be quite a sharp decline in Q1.

You mentioned one of the client -specific issues, which you will continue to face in Q1. But are there any other significant client ramp -downs or any other delays that we are seeing because of which this Q1 growth -- organic growth or if I ca n call the growth beyond these three seems to be so weak?

Aparna Iyer: You know DTS HARMAN is fully in our Q4 numbers...

Vibhor Singhal: But Aparna in Q4 t hat was only 2 months. So on Q -o-Q this will add another month in Q1?

Aparna Iyer: No. Q4 was all 3 months. In Q3

we have this.

Vibhor Singhal: Okay.

Aparna Iyer: Yes. So that is not -- that is the only inorganic piece and our growth for Q1 is -- yes, there are these two deals that we've spoken about, which will be there and it will add to our revenues in Q1. And we've assumed that they will start yielding revenues mid -quarter.

Vibhor Singhal: Mid-quarter. Got it.

Aparna Iyer: Yes. If you look at it as a organic growth, these are strategi c deals we have taken. Yes.

Vibhor Singhal: Very much point taken. Just my last question Aparna on the margins. I think very strong performance on the margins in this quarter despite wage hike and HARMAN integration as well. Do we believe these margins are sustainable in the coming quarters as well, given that we'll have a couple of these deals, cost recoveries also that we will be factoring in. Do you believe you will be able to maintain their margins at around the current levels as we have always maintained. As we've always stated that this is our target range?

Aparna Iyer: Yes, there are three areas where we are going to be investing in. We've already rolled out the wage hike effective first March. So we will have 2 months incremental impact, which will have to be absorbed, right, in Q1. Two, we are winning some of these large deals and they are one in a competitive environment. The y will come with their share of lower margins, especially as we start these deals, right?

Second, there is certainly around capabilities. We've acquired the DTS HARMAN connected services fees, which is also putting pressure on margins. And as I look ahead, we will continue to actually accelerate investments, especially around Wipro Intelligence, the platform unit that we have announced. And it will need a lot of investment that we will work through and share with you transparently as we go through the process as we form our strategy around it, that will also be an area of focus for investment.

Given all this, we will have to drive operational improvement that is a continuous process, as you know. And like I said, maybe we see some quarter -on-quarter volatility, but our endeavour is going to be that in medium term, we continue to drive that productivity and cost takeout and deliver on the promise of actually AI helping us to deliver our fixed price programs better . And we continue to optimize all other overheads. And as we do that, hopefully we are able to keep our margins on a medium term and narrow ba nd.

Vibhor Singhal: Got it. Great. Thank you so much for taking my questions and wish you all the best.

Moderator: Thank you. We'll take our next question from the line of Prateek Maheshwari from HSBC Securities. Please go ahead.

Prateek Maheshwari: Thank you for the opportunity. So Srini, I've got a couple of questions. So I'm sorry for harping again on Americas 2. Just wanted to understand that, there are the client specific issue that you guys have faced in the fourth quarter, and you are facing in the first quarter spend.

However, if I look at Americas 2 over a one year period or a three year period, it seems that there's been a consistent, there's been multiple clients specific issues that have happened. So just wondering to understand your thoughts on this if it is a mere coincidence or what are your thoughts on this?

And just second question around the AI partnerships. So we are seeing your larger peers have announced their partnership with probably frontier models like Anthropic, Mistral AI, Open AI, but we haven't heard a lot from you. So just wanted to understand how you guys are planning around this. And if you guys are planning for GTM around these models as well. Thank you.

Srini Pallia: Thanks, Prateek. You're right, AI is a central strategy for Wipro. Two quarters back, we had launched Wipro Intelligence, which is a combination of industry and cross industry and functional platforms and

solutions. And this quarter, rather the last quarter, we announced the formation of AI native business and platform unit.

The reason why we are doing it is, in the last two quarters based on our experience, both in terms of industry platforms and the delivery platforms, which is WINGS for run and operate and WEGA for our SDLC life cycle, which is more on the change in transform side. We have seen a very good traction. The clients feel very comfortable with the way we have put the guardrails making sure we align technology to what they are actually using, making sure it is secure, reliable and responsible as well.

Also, in terms of the productivity benefits that we can offer to them, both in the existing engagement and also the new engagements we plan to do. And we will continue to invest in this. And I think Aparna called out as well that Wipro Intelligence and the new AI -native business and platform unit is going to pivot us into our services as a software industry. So while we continue to deliver the services to our clients, this should help us to actually create a software -as-a-service through our platform model.

We already saw some success with our platforms be it in Health Care, Banking, Insurance, Telecom. So we want to see that because the clients are actually feeling very comfortable with the fact that whole platform is AI native, which is AI powered and it's able to well integrate into their domain with the kind of agent and agentic operations we're trying to bring in. So that investment will continue, Prateek.

Prateek Maheshwari: First question, if you could share also -- so the question was that there's been multiple client issues over the years. Just wanted to understand what your thoughts on that?

Srini Pallia: Yes. I think this quarter, as well as last quarter, it was something that we called out as well, very specifically for the two reasons like you mentioned in your question itself. But 1 is the specific client ramp -up that has not happened upon I talked in detail about that. But we feel -- and I also answered that question, we feel fairly confident that clients come back because there was some directional change, and they wanted to pause before they had the clarity around that.

The second 1 was something that the account -specific issue that happened, which impacted for us in quarter 1 and in addition to quarter 4. Having said that, if you look at our top accounts, we continue to stay focused on our top accounts with a very clear account management strategy.

And in fact, many of our clients are asking us to come back and help them in terms of in terms of AI advisory and consulting in terms of how to navigate in the AI world. So what's important for our accounts team is to be very proactive and leverage Wipro intelligence , platforms and solutions and kind of help the client through this disruption process.

Prateek Maheshwari: Srini, If you could allow me to squeeze 1 more question. I just wanted to ask, you said that you have a positive view on BFSI in APMEA and also in Europe. So just wanted to ask outside of the client -specific issue that you may face in the first quarter, do you have a positive view on the U S BFSI as well?

Srini Pallia: So I think from an overall -- see I think the best way for me to reflect, Prateek, in your question is the kind of pipeline that we have. And I need to talk about having a very secular pipeline across industries and across markets. And your question specifically to BFSI, if you were to look at Americas and Europe and APMEA. And also the Capco question that came up. We continue to see very good traction. We continue to see a very good pipeline.

And some of this -- what the kind of work that Capco does is very consulting -led and advisory -led. And we also want to see how those implementations for the clients can happen. And for me, clearly, from a BFSI perspect

ive, right, very clearly, the client wants to invest in AI around data platforms and agentic workflows and security. And while they are continuing to optimize but the spend in this specific area around AI, data and cloud continues.

Moderator: We'll take our next question from the line of Abhishek Shindadkar from Incred Research.

Abhishek Shindadkar: The first question is regarding the contribution for HARMAN. So when we gave the guidance last time, in the third quarter, the 0.8% was the contribution. And incrementally, 2 months was assumed when we gave the fourth quarter guidance. Can you just quantify what would have been the contribution for this quarter? Or if you can just quantify the organic growth for us? That's the first question. And I'll just ask the second 1 later?

Aparna Iyer: So your question is around how much did the HARMAN acquisition contribute in Q4? Is that your question?

Abhishek Shindadkar: Yes.

Aparna Iyer: So we actually made a stock exchange filing around the revenues of the organization. You can assume the quarterly run rate around that much.

Abhishek Shindadkar: Understood. That's helpful. The second thing is on the top client and maybe it has been asked, but not just the top, but if I look at top 5. And if I look at the client metric and the attrition across some of the larger accounts, do you foresee this kind of stopping or halting in the next quarter? Or we may continue to see some challenges in the accounts, larger accounts even in the next quarter? Thank you for taking my question.

Aparna Iyer: I think our overall growth rate also tend to reflect in our top client metric growth rates as well, right? That said, if you -- like if you had to look at the YoY performance of our top client and it's been largely flattish YoY constant currency.

Top five actually has grown on a YoY constant currency by 0.2%. And top 10 have grown a positive 1.5% on YoY constant currency. And therefore, are we unduly worried about the top relationships that we have, no, we're not worried about it.

That said, our constant endeavor is to continue to win with our largest client in the market. And some of the wins that we have announced even this month are towards that. So you will continue to see us growing and expanding this, because is the way in which our growth will come from. It's our number 1 strategic priority. We will work with large clients, and that is the endeavor.

Abhishek Shindadkar: Thank you. Super helpful. Thank you for taking my questions.

Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand the conference back to Mr. Abhishek Jain for closing comments. Over to you, sir.

Abhishek Jain: Thank you all for joining us. In case we could not take any questions due to time constraints, please feel free to reach out to the Investor Relations. Have a nice day. Thank you.

Moderator: Thank you. On behalf of Wipro Limited, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Company Secretary

ENCL: As above

 “Wipro Limited
Q1 FY '2 7 Earnings Conference Call ”
July 16, 202 6
MANAGEMENT : MR. SRINI PALLIA – CHIEF EXECUTIVE OFFICER AND MANAGING DIRECTOR – WIPRO LIMITED
MS. APARNA IYER – CHIEF FINANCIAL OFFICER – WIPRO LIMITED
MR. SAURABH GOVIL – CHIEF HUMAN RESOURCES OFFICER – WIPRO LIMITED
MR. HARI SHETTY – CHIEF STRATEGIST AND TECHNOLOGY OFFICER – WIPRO LIMITED
MR. ABHISHEK JAIN – VICE PRESIDENT , CORPORATE TREASURER AND HEAD, INVESTOR RELATIONS – WIPRO LIMITED

Moderator: Ladies and gentlemen, good day and welcome to Wipro Limited Q1 FY27 Earnings Conference Call. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star and then zero on your touchtone phone. Please note that this conference is being recorded and the duration for today 's call will be for 45 minutes.
I now hand the conference over to Mr. Abhishek Jain, Vice President, Corporate Treasurer and Head of Investor Relations. Thank you and over to you.
Abhishek Jain: Thank you, Yashas hri. Good evening and warm welcome to our Q1 FY27 earnings call. We will begin the call with the business highlights and overview by Srini vas Pallia, our Chief Executive Officer and Managing Director, followed by updates on financial overview by our CFO, Aparna Iyer. We also have our CHRO, Saurabh Govil, and the Chief Strategist and Technology Officer, Hari Shetty, on this call. Afterwards, the operator will open the bridge for Q&A with our management team. Before Srini start s, let me draw your attention to the fact that during this call, we may make certain forward -looking statements within the meaning of Private Securit ies Litigation Reform Act 1995.
These statements are based on management's current expectations and are associated with uncertainties and risks, which may cause the actual results to differ materially from those

expected. The uncertainties and risk factors are explained in our detailed f ilings with the SEC. Wipro does not undertake any obligation to update the forward -looking statements to reflect events and circumstances after the date of filing. The conference call will be archived and a transcript will be available on our website. Wit h that, I would like to turn over the call to Srini.

Srini Pallia: Thank you, Abhishek. Good evening, everyone. Thank you for joining us today. Let me start with a quick view of the broader market. The macro environment remains resilient, but uncertainty continues to shape decision making. Technology investment has not sl owed. They have become more focused. Clients continue to invest in AI, data, cloud, modernization, cybersecurity, and productivity -led transformation.

Spending today is measured with more rigor and longer decision cycles. The AI disruption is expanding the market, not shrinking it. At the same time, conversations around AI are becoming more intense. As the tokenization landscape evolves, clients are focu sed on net productivity and require a tighter linkage between investment and outcomes. Despite selective client spending, our pipeline remains healthy. We continue to see strong engagement across our markets and industries. We are executing a consulting -led AI -powered strategy to help our clients reimagine and redesign their enterprise around intelligence.

With that, I'll now share our financial performance. All numbers are in constant currency. Our IT services revenue for quarter one was $2.61 billion, up 0.9% year -on-year and down 1.2%

sequentially. Our IT services margin was 16%, a 1.2% decline year -on-year. In our markets, Americas remain soft, declining both sequentially and on a year -on-year basis.

We continue to see momentum in technology and communication sector and some good wins in the consumer sector. As we move into quarter two, we're also seeing momentum build up in BFSI. APMEA revenue grew sequentially and on a year -on-year basis.

We are encouraged by the momentum we continue to see in this market, particularly in the BFSI and consumer sectors. Our Europe SMU grew year -on-year with strong traction in BFSI, technology and communication. However, energy, manufacturing and resources re mains soft. We se

e a healthy pipeline across various regions in Europe such as UK and Nordics. During the quarter, order booking totaled $3.4 billion and large deal bookings totaled $1.6 billion. Our order booking includes 13 large deals this quarter.

Let me highlight two of these deal wins. A leading global animal healthcare provider selected us to modernize and manage digital operations across their global network of hospitals and clinics. Using Wipro Intelligence, we will help transform service opera tions, improve productivity and enable predictive issue prevention.

We are helping the client create a more autonomous technology environment. The goal is to improve experiences for clinical teams, employees and customers , while increasing operational rigor. In our second deal win, a leading European specialty chemicals company chose us to run and transform their complex application landscape.

Leveraging AI -led capabilities through WINGS, part of our Wipro Intelligence -- excuse me, we will automate operations, improve delivery efficiency and provide greater visibility through an AI-powered digital command center. The outcome here will be elevated service quality, higher productivity and lower operating costs.

Across markets and industries, we are helping clients reimagine operations by embedding AI at the core of their business, spanning both physical and digital worlds. In this context, let me share some examples of the work we are already doing with clients. One, for a global industrial manufacturer, we are reimagining finance and procurement through our WINGS platform, combining Agentic AI, intelligent orchestration, real -time analytics and AI -powered knowledge management to create a highly automated operatin g model.

In my second example, with one of our healthcare clients, we are deploying multi -agent AI systems, reducing provider enrollment processing times up to 70% while automating their manual effort up to 90%. Three, for a leading global technology company, we ar e improving the quality, reasoning and safety of their next -generation AI models through expert -led data creation and AI evaluations. This is delivering significant gains in model accuracy and reasoning capability.

With a life sciences client, our WINGS platform is transforming pharma -covigilance from a document -centric, labor -intensive process into an AI -native safety operation. This is powered

by autonomous agents and regulatory -grade workflows. For a global energy leader, we are defining their enterprise robotics strategy and roadmap for physical AI -enabled autonomous operations.

Collectively, these engagements demonstrate the breadth of Wipro's AI capabilities from strategy and advisory to domain -specific solutions. And the wins that I talked about also reflect a broader shift in enterprise priorities. In fact, interestingly today , clients are looking beyond technology modernization alone.

The focus is moving towards AI -enabled operating models that improve service quality, reduce operational complexity, strengthen resilience and unlock sustainable productivity gains. And this is where we are well positioned.

Let me now share a few additional updates. During the quarter, we closed the acquisition of Mindsprint and quickly transitioned from integration planning to execution. While we continue to deepen our relationship with Olam Group, we have also started to see good opportunities in the food and agriculture sector.

You may recall last quarter, we launched AI -native business and platforms unit. Since then, we have moved decisively from strategy to execution. We are building multiple AI -powered industry platforms, developing new AI -native business models and forging st rong partne rships across our AI ecosystem.

We have laid the foundation, strengthened the team with specialized AI -native leadership talent and defined our roadmap to establish cle

ar priorities for the next phase of growth. As you would

have been aware, we recently launched Applied AI Center of Exce llence for Claude models powe red by Anthropic.

This strengthens our ability to help clients rapidly adopt frontier AI capabilities while maintaining enterprise -grade controls and governance. Capco, our BFSI consulting arm, won the AI Governance and Risk Excellence Award at the OpenAI Partner Summit. An d our UK AI Lab won the OpenAI Codex Hackathon for an AI -powered banking solution.

With that, let me shift focus to the next quarter. In quarter 2, we are guiding for a sequential growth of -1.5% to +0.5% in constant currency terms. As we continue to navigate macro uncertainty and geopolitical instability, our priority is to remain disciplined in execution, helping clients navigate complexity and cr eating sustainable value for all our stakeholders.

With that, let me hand it over to Aparna to share financial performance in more detail. Thank you.

Aparna Iyer: Thank you, Srini. Good evening, everybody and thank you for joining us. Let me share a quick update on the financial performance and then we can open up the Q ueue for questions. Our IT services revenues grew 0.9% year -on-year in constant currency while declining 1.2% sequentially. This i s well within our guided range.

Our operating margins for the quarter was 16%. We declined 1.2% year -on-year. The reasons are because of the incremental impact of salary increase, ramp up of large deals won earlier and our ongoing investments in AI. This was partially offset by the rupee depreciation benefits and the other operational efficiencies.

We remain focused on returning back to our previously stated narrow band. Net income for the quarter was INR33.6 billion. Our EPS for the quarter was INR3.2, both grew 0.6% year -on-year.

Moving on to our SMU and sector performance, all the growth numbers that I will share will be on constant currency. Americas 1 was flattish year -on-year while declining 2.3% sequentially. Americas 2 declined 7.3% year -on-year and 2.5% decline sequentially. Europe grew 6% on a year-on-year basis whi le declining 0.9% sequentially. APMEA grew 13.5% on a year -on-year basis and gr ew 4.4% sequentially.

Moving on to sector performance, BFSI grew 2.6% on a year -on-year basis while declining 1.2% sequentially. Consumer grew 1.9% year -on-year and 0.7% growth sequentially. Technology and communication grew 10.8% on a year -on-year basis and grew 0.2% sequentia lly. Health declined 2.6% sequentially and 3.0% year -on-year. EMR also declined 3.6% sequentially and 8.9% year -on-year.

Our operating cash flows stood at 98% of net income for quarter 1. Our gross cash including investments was at $4.3 billion. Accounting yield for the average investments held in India was stable at 7.2%. Our ETR was at 22.6% for quarter 1 versus 21 .6% in the same time last year.

In our terms of the guidance, to reiterate what was stated by Srini, our IT services business segment is expected to be in the range of $2.574 billion to $2.627 billion. This translates to a sequential guidance of -1.5% to +0 .5% in constant currency terms.

Lastly, in the recently concluded Board meeting, our Board of Directors have declared an interim dividend of INR2. Including this dividend, our payouts in the last 1 year, we would be returning in excess of $3 billion in terms of the cash back to shareholders.

With this, we can open up for Q&A.

Moderator : Thank you very much. We will now begin the question and answer session. We'll take our first question from the line of Ravi Menon from Axis Capital. Please go ahead.

Ravi Menon: Hi, thank you for the opportunity. Little surprised that you have added head count despite, the guidance that implies sequential decline. Attrition still seems to be well under control.

Utilization has also come off slightly quarter -on-quarter

. So why add head count now when
you're still loo king at a decline in revenue next quarter?
Aparna Iyer: Our head count also includes the people who joined us from the Mindsprint team, Ravi. If you exclude that, our head count has actually gone down quarter -on-quarter. And our guidance, of course, includes the revenues from Mindsprint completely in quarter 2.

Srini Pallia: Just to add, outside of Mindsprint , the head count has actu ally gone down by 2,500 people.
Aparna Iyer: 2,500 people, that's correct.
Ravi Menon: Fine, thank you. And Srini, in BFSI, most of the peers seem to be doing well and you also spoke of how things seem to be looking up there. But this quarter then we had a decline. Is this a client -specific issue and, is this something that you expect to may be hold us back a little bit in Q2 as well or do you think BFSI comes back to growth?
Srini Pallia: Hi Ravi, Srini here. So as far as the BFSI sector is concerned, specifically for us, Ravi, if you have seen, we did see a year -on-year growth of 2.6% in constant terms. However, the sector declined 1.2% sequentially. Now, if I were to give a little bit of a color in terms of h ow the sector is performed, Europe and APMEA, Ravi, actually year -on-year we have seen a growth.
In fact, Europe BFSI growth was led by ramp up of the large deals we had announced earlier.
And if I were to look at APMEA, we continue to see very good traction with both in terms of ramp ups and also existing deals and the new deal wins that we have seen. I also want to call out that we s ee good momentum in the BFSI in Americas as well. So net -net, yes, I agree with your comment and having said that, we are also seeing good traction for us as well, Ravi.
Ravi Menon: Thanks Srini, appreciate that. So we can look at this as maybe, a one -off client incident, something like that. Is there any cutback or -- did you lose out on any vendor consolidation?
Could you comment on what caused the decline this quarter?
Srini Pallia: So there are two aspects, Ravi. One is, clearly some of the large deals that we have won have taken a lot more time for us to scale, ramp up. I think now the clients are moving, that's the reason why I said BFSI Americas , because we have won a couple of deals out there, large deals out there , some of them are coming back.
The second one is the nature of the demand. Discretionary spend has been slower and some of the decision making has been slower, but we think it will come back. One thing that we are seeing while, from our customer perspective in the BFSI sector, there are a couple of opportunities that we see, Ravi.
One is on the cost optimization and vendor consolidation. That remains the key drivers for our clients, right? And, this is very similar to the commentary that we gave in the last few quarters.
However, Ravi, what we are now seeing is that these savings ar e getting reinvested by some of our clients into AI capabilities. And that's where I think, the new transformation projects and discretionary spend will come back. That's how we see it, Ravi.
Ravi Menon: Thank you, Srini. One last one from me. On AI, your couple of peers have announced very differe nt strategies, one setting up a very large data centers, someone else is looking at a small capacity data center which they think, they will -- but they will own the entire hardware stack.
Anything that you're thinking along those lines?

Srini Pallia: So, Ravi, one is I think let's at a macro level, the way we see is that AI is a structural opportunity for us and for the industry in general, Ravi. Having said that, the success in AI, to be honest, is not just driven by models, right? For us, having the client context, understanding the domain and the industry aspect of it, understanding the process, right, and the priming the data for an AI implem en

tation becomes very critical.
And also, clients are looking at security and change management, organizational change management in this context. So that is where I would say that, the direction that AI is moving on. And for us, Ravi, very clearly we have pivoted to AI and in -- we are doing an AI -first approach and our consulting -led, AI -powe red strategy is all about that.
So when you are doing a run aspect of it, which is application management, infrastructure or process, we are doing with AI -first approach and we have clearly built a strong platform around WINGS , which we are gaining very good traction, which is our delivery platform.
And the second thing, Ravi, obviously you would be, listening to a lot of commentary around that, the software development life cycle, there's a dramatic improvement in productivity. Now, that's -- we have to have the context of -- if it's a pure play greenfield project, which is like a tool like, let's say Python, the produc tivity is significantly higher.
But on the other end of the spectrum, it is a complex code and if you don't have the right, target

environment, which is lot more legacy, deployment and production also becomes difficult. There the productivity, comes down significantly. And so that's how we see it. But for us, the biggest opportunity is all the new AI services th at we are seeing in the market.
Now we call that as Reimagine AI. Now, I think it's very important also, what we are trying to do, maybe I'll double click later, but we have clearly created the AI -native unit which I talked about, where we are building the industry and cross -industry pla tforms. In fact, some of the margin dilution that you talk -- the question that was a sked, we are investing in this.
I think it's very important for us to invest for the future. So tha t's number one, AI -native unit. Second, you know, we have the half a billion dollar Wipro Ventures and now we are very specifically, focusedly targeting those AI and data and, you know, security startups which will also enhance our overall Wipro Intelligence platform. Three, we invested in our Wipro Innovation Network.
We actually launched 10 innovation networks for our clients and that's actually picking up, the clients are co -innovating with us in those innovation networks. And finally, you know, ecosystem partnering with the frontier AI companies. So this is how we ar e driving AI across our industries and each industry are different in terms of adoption, but everyone wants to be, you know, in the AI journey, Ravi.
Ravi Menon: Srini, I'm very sorry, but I have one more thing. When you said that there's not much productivity benefit in the, you know, the old complex code. So then can we say that there is -- all of the

investor concern about significant, you know, erosion in the existing book of business, can we say that this is really unfounded?
Srini Pallia: So, the way I see it, Ravi, is that, I'm looking at for the industry and for Wipro, right? What are the -- like I said structural -- what are the structural opportunities? Today, if you look at the traction that we have on the Reimagine AI services, that's how I call the, you know, new AI services. One, AI advisory and change management. That's something that, you know, for example, Cap co is leading it, OpenA I gave us an award around that.
Second is, you know, data priming for AI, right? You know, if you don't have the right -- and enterprises are struggling with data, we have to be honest about that. Some enterprises have told us we've got too much of data, we don't know whether it's -- do we need all this data to get the AI right? Third is, you know, agent impl ementation and managing agents.
Every organization is building tremendous number of agents. How do you deploy them? How do you orchestrate, deploy and manage them? And Ravi, you know, the tokenization, token

economics, whatever you call it, it's going -- it's actually skyrocketing right now. So the -- especially the CFOs are saying, you know, "Hey, you know, what's the -- what's my ROI? So do I use a high -end LLM for a particular process or a workflow? Do I use a, you know, open source model?"
So that's a conversation that's going on. We having the deep tech, we're able to actually have that conversation with the client. So there are multiple new opportunities, whether it's ModelOps, you know, AI -DC is something that's picking up with an enterpr ises. You would have heard of Sovereign AI, so that's another one picking up. And finally, every client wants us to make their AI sec ure and, you know, responsible.
So to me, net -net is a positive, you know, in terms of new services that are coming in. Yes, short term, SDLC life cycle will continue to bring in higher productivity and shorter development life cycle. But I just want to call out, even there, human -- it is going to be human plus AI always. Because in a software development life cycle, the business requirement, user stories, you need humans. At the same time, when you're deploying and a productivity, you know, and taking into production, you need human intervention. Of course, you know, AI can throw millions lines of code, but we need to make sure that code is optimized. So that's how I see it, Ravi.
Ravi Menon: Thanks so much for the detailed explanation. Appreciate it. Thank you.
Moderator : Thank you. Next question is from the line of Nitin Padmanabhan from Investec. Please go ahead.
Nitin Padmanabhan: Yes, hi, good evening. Thank you for the opportunity. First, wanted your thoughts on how should we see margins recovering to the band that we stated? Do you think it'll be gradual through the year or do you think there's any element that can help a faster sor t of recovery considering we don't have wage increases and that's done and behind? The second is from an overall business perspective, when do you think the headwinds sort of recede where we can start showing some

level of growth as a business? And do you think these headwinds are largely over in Q2 or do you see any specific things that could linger? Yes, thank you.
Srini Pallia: Hi Nitin, Srini here. On the margins aspect, Nitin, you know, Aparna talked about it as well in our commentary. The reason why we had a drop of 120 basis points is number one, you know,

the impact of MSI we had, it's coming into this quarter. Second, the i nvestments that we are making, you know, in AI and in deals, that's the second part. Third is, you know, the acquisition, some of the acquisitions that we made, they're actually coming to, you know, into execution mode right now.

So that's the impact of the -- impact we had on the margins. Having said that, Nitin, our mission is clearly to go back to the narrow band that we've been talking about, 17% to 17.5%. Now, the question that you're asking is what is the time frame? Right now, in the context of the volati lity that we see, in the context of the revenue situation that we see, right, I do not want to predict exactly where, yo u know, when we will get there.

But the point is that we want to get there. If you've noticed in the last two years also, Nitin, you know, despite the challenges with the revenue, we continue to stay focused on margin improvements. You can be rest assured we will continue that path. Howe ver, I, you know, I want to clearly articulate that we want to invest in our new AI -native business. We want to -- because when you're doing an AI -native business, you also need to have the right talent, you need to have the right infrastructure to build the new products, new platforms and solutions as well. So it's a combination of all these, Nitin.

Nitin Padmanabhan: Yes, qualitatively, do you think it's fair to assume that it's gradual rather than quicker? Just a qualitative thought process is fine?

Srini Pallia: The endeavor is to reach where we want to reach. And if you look at, Nitin, there are, you know, multiple levers for us from an operational perspective, whether it's how you can take the cost out and FPP, both in terms of automation, AI and productivity. Y ou know, we have other levers including, you know, G&A and so on and so forth, you know, the bench utilization has been higher, that's another lever that we have.

How do you restructure the pyramid, right, in the context of AI and how much of the projects and programs you can, you know, run it through agents and how many of our current existing programs we can agentify. So these are all the levers that we are lookin g at, Nitin, and we'll stay focused on that. But the point, the message I wanted to give you is that despite all this, we will also want to continue to invest in our future, which is very, very critical because the world is pivoting to AI and we have alre ady pivoted to AI.

And we will continue our journey around consulting -led and AI -powered and we will stay focused on that. Wipro Intelligence platform, both delivery platforms and the industry cross - industry platforms, we are seeing good traction, Nitin. And in the future, t he consumption will be platform plus service, not just pure play service.

Nitin Padmanabhan: Sure. And from a growth perspective, when do you think the headwinds that you're seeing sort of recede?

Srini Pallia: Yes. So if you look at from a growth perspective, Nitin, typically we give just a one -quarter view of our guidance, right? Like I said, the demand environment remains soft and that has reflected in our quarter two guidance. Having said that, Nitin, I just want to call out the points that I made, that we are seeing good traction building up in Americas in the BFSI segment, rig ht, you know, which was the question that Ravi had asked.

Second, EMR, which is energy, manufacturing resources sector, which was very soft in Europe and APMEA, we have won a couple of deals in Europe in this segment. We will see that coming into delivery, right? So to me, also the way the customer takes the cost out, then they start shifting their budgets to AI, we are ready for that. That's how I see it. So , I can't give a commentary in terms of how our quarters will go because I want to stay within our -- the quarter two guidance.

Nitin Padmanabhan: Sure, fair enough. Thank you, Srini, and all the very best.

Moderator : Thank you. Next question is from the line of Vibhor Singhal from Nuvama Institutional Equities. Please go ahead.

Vibhor Singhal: Yes, hi. Thanks for taking my question. So Srini, a couple of questions from my side. I think two verticals kind of dragged the growth this quarter, Energy and Healthcare. You mentioned about Energy that the softness in the European markets and we've won a couple of deals, so good to hear that we'll probably have recovery there soon.

What's our take on the Healthcare segment? As this segment has been one of the key s egments in which we were one of the early pioneers . And at this point of time ...

Srini Pallia: Vibhor, Vibhor, sorry to interrupt you . We could not hear you properly. I'm sorry, could you just repeat the question? Thank you.

Vibhor Singhal: Yes, sure, please.

Srini Pallia: Go ahead, Vibhor .

Vibhor Singhal: Yes, I hope I'm audible now?

Srini Pallia: Yes.

Vibhor Singhal: Yes, sorry for that, Srini. Yes, so my question was basically on the -- that there were two verticals which dragged the growth this time . One was the E&U, which you mentioned that it was because of and good to hear that there are deals that we have won will ramp up in the coming quarters.

On the Healthcare vertical, what is the view that we are looking at? I mean, this we used to be, I mean, we were one of the pioneers of this industry and from the pee

rs we hear a lot of comment,

a lot of companies are kind of incubating their Healthcare vertical because of strong demand that they are seeing, especially from the payer side and some of course in the provider side as well. So what is the outlook on that vertical in terms of deals that we might have won and when do you think that vertical kind of comes back to growth? I'll have a couple of follow -up, if you can answer this please.

Srini Pallia: Sure, Vibhor. I think, your observation is very valid. For us, the Healthcare sector has degrown by 2.6% sequentially and if you look at from a year -on-year basis, 3%. See, what has happened is especially when I say Healthcare, we have multiple segments. W e've got payers, we've got providers, we've got life sciences and we've got medical device companies. These are the four industry segments within the Healthcare sector.

Vibhor Singhal: Right.

Srini Pallia: We have a huge presence in payers and providers in the US. The impact that we had is because of the US Healthcare ecosystem, right, which is facing sustained pressure both from structural and demographic forces due to the situation which is very much withi n the -- in the US context, right?

So, what we have seen in some of these companies are, you know, because of the pressures that they have from the whole government and so on and so forth, right, there -- they have been -- their budgets have been flattish for us and some places we have seen the negative growth. There also there's a lot of pressure around in terms of taking the cost out and also most of the budgets right now have kind of being reallocated to some kind of disc retionary spend , but towards AI and big portion of it is on the compliance, Vibhor.

So to me, the more they use AI and the automation aggressively and offset the cost pressures, I think that would help us going forward. So we are staying focused on the regulatory mandates like I talked about, like, both Medicare, Medicaid and ACA. If you recollect, we have a huge platform that supports these aspects.

So the member onboarding in terms of member services that we need to do, how that has evolved for us in the last one to two quarters also had an impact on the numbers that you see. Having said that, if I look at the opportunities that we see, right, especially reimagining their -- some of their processes with AI, so Vibhor, the claims is one important thing.

Clients are looking at taking the cost out on contact centers, right? Also, now more and more with the HIPAA compliance and the regulatory compliance coming into picture, they are able to do -- deploy AI more confidently into clinical operations, including regulatory processes. So I see these as our new opportunities that are coming in. We are staying focused on that, Vibhor.

Vibhor Singhal: Got it, got it. Any timeline that you would be able to provide that you think our Healthcare vertical should see some recovery?

Srini Pallia: So, Vibhor, like I said, I don't want to forecast beyond quarter two. So quarter two is, all this that I talked to you about is baked in. Having said that, AI, you know, like I said, AI is a structural opportunity. I see this opportunity in every industry verticals within the Healthcare system, Vibhor. Including for providers, because they also want to improve their efficiency.

Let's look at providers today . They depend a lot on these products like Epic, who are also making it more AI, they are actually integrating their provider systems into payer systems and so that and employee -- the members and the patients, they can actually have a end -to-end view of how the Medicare medical systems work as well. So these are the opportunities that are coming in. We are having the conversations around that as well, Vibhor. But I'm not giving you a specific timeline at this poi

nt in time.

Vibhor Singhal: Got it, got it. This is helpful, Srini. Just my second question on the deal wins. The total deal wins and the large deal wins were down quite sharply on a Y -o-Y basis. I would assume it is just a timing kind of a thing because you mentioned the pipeline remains quite strong. So maybe some deals got pushed into Q2 or something like that. Is that the correct, Srini?

Srini Pallia: So absolutely, Vibhor. If you look at our quarter one, right, we clearly had, like I said, $3.3 billion worth of bookings, out of which $1.6 billion were 13 large deals that contributed to that. Having said that, your point is valid. Some of the decisions on some of these deals have actually slipped to quarter two.

And I always tell my team, when it slips, you've got to really hold on, don't let it slip because and try and close it in M1, M2 rather than wait for the M3. So that's the work that we are doing

right now. But your point is v alid, the observation is valid. The pipeline is healthy and also there are deals around cost optimization and vendor consolidation.
But I also want to call out, Vibhor, that I want to give a little bit of color in terms of the kind of pipeline we have. So the pipeline one -- let me give you a one color, Vibhor. One is sectors, let me also give you the type of deals outside of these lar ge and mega deals. So I called out BFSI, if you remember.
Americas and Europe, the pipeline is strong, Vibhor. But if I look at from a consumer we just won a couple of deals in Americas, but it is --- I wouldn't want to say that it is big piece, but it's definitely modest in Americas and Europe. In APMEA, consume r is weak. That's how I see it, Vibhor.
Tech and comms very strong in Americas. I think that's one place you've seen double -digit growth that I talked about and I think it will continue we see continue to see strong momentum there. EMR which you also called out after I said it, right now it's st rong in Europe because we come on a back of two wins and also it's strong in Americas including our LATAM.
But little bit modest in APMEA, I think based on what's going on. Healthcare now I did talk about it. I want to say overall it's strong, but I want to be careful in terms of what we call out. So

that's the color from a sector perspective, Vibhor. But if I look at from a opportunities perspective, there are new opportunities also coming in like I talked about.
There are clients who are talking to us on Sovereign AI, there are clients who want to build AI -DCs. So those opportunities are also coming in. The size and scale depends upon how much, for example, if I look at AI -DC, how much of design and architecture y ou do, how much of implementation and management that you do, depends on which part of the project and program that we are involved and the size and scale and complexity depends on that, Vibhor. But overall your point our pipeline is healthy.
Vibhor Singhal: Got it. Thanks for taking my question. Srini just one follow -up for Aparna if I may. Aparna, just wanted to get some color on how to look at the margins in the wake of the AI -driven deals that we are seeing at this point of time. I mean I know it's difficu lt to take a -- one make a one statement analysis that okay the margins -- the deals will be margin accretive or dilutive.
But from an overall point of view, I mean, let's say we are also building SLMs for the client or let's say the application layers for them, then there is a token cost involved. So overall, where does the math sit for these large AI -driven deals that we are chasing and we are winning in terms of margin vis -a-vis our current portfolio?
Aparna Iyer: So clearly, Vibhor, I think like you rightly said one size doesn't fit all. It'll depend deal to deal. Wherever the intention is to use AI for you to be able to drive higher productivity and take costs out for a larg

e operations for a client where the cos t take -out is priority, you will see that, there will be a lot of productivity, forward productivity that gets baked into deals.
The Reimagine AI that Srini spoke about, the parts which are newer, where you are going to be seeing newer spends on account of AI, there we are very confident we will drive a premium in rate realization. Similarly, service offerings around data, AI adviso ry they'll all be very incrementally net positive to the realizations and margins.
So it'll depend on what we are using the AI for and how we are structuring the deal. So large deals will remain competitive, you will have some amount of forward productivity that gets baked in. When you're looking at AI over smaller programs where you're looking at things like data modernization, when you're looking at smaller pockets and you're looking at newer areas, they will be accretive. And that's been our experience thus far and yes.
Vibhor Singhal: Got it. Great. Thanks, Aparna, for the clarification. And thanks a lot, guys for taking my questions. Wish you all the best.
Moderator: Thank you. We'll take our next question from the line of Rajiv Berlia from JM Financial. Please go ahead.
Rajiv Berlia: Yes, thank you for the opportunity. Can you break the 2Q revenue guidance into organic and incremental contribution from inorganic?

Aparna Iyer: We're not doing that, Rajiv. We're not breaking our guidance out. And if you look at it, last quarter we had said that Mindsprint was coming in and we had in the guidance baked in 45 days, whereas in our actual Q1 results, we've had 2 months of it, of the revenues being consolidated.
You can do the math, but like we typically do, we only disclose in the first quarter and after that it's -- we don't make further disclosure.
Rajiv Berlia: And the second part of the question is if you see in the last earnings calls, you mentioned about client insourcing impacting BFSI. Is that fully behind in this quarter or do we see some impact from a going forward perspective as well?

Aparna Iyer: No, I think that is behind us, Rajiv.

Rajiv Berlia: Yes, thank you. That's all from my side.

Moderator: Thank you. We'll take our last question from the line of Abhishek Bhandari from Nomura. Please go ahead.

Abhishek Bhandari: Yes, thank you for the opportunity. Srini, all through the call you guys have mentioned that the large deal environment remains very competitive. I was curious to understand has the degree of competition increased, decreased or is it stable? And a related que stion is how are you future -proofing your margins in the wake of such competitive pressures? We already saw some glimpse of margin headwinds in Q1, which of course you will recoup through the year, but if the market remains like this, how do you ensure that we don't trade off the margin for chasing growth?

Srini Pallia: Yes, Abhishek coming to the first point, first question on the competitive landscape. From a broader industry perspective, Abhishek, if I look at it, AI is reshaping most of the spend allocations. So what that means is from a client perspective, the tradition al IT, the traditional BPO that we do and the support aspects of it, those budgets are getting compressed.

So the clients want us to deploy more AI, the clients want us to kind of disrupt that aspect of the whole process to bring in agentic aspect of it. So that is a lever for our clients to improve their budgets for new spend, spend pools around AI. So what -- so the clients are also driving that, which is not just competition, but also client wants to take the cost out on that.

And we do have opportunities for us to go and talk to our clients in terms of, for example, how we can deploy Wings and bring in a end -to-end productivity benefits and make it more agentic. And, of course, the clients are also looking at the experience asp ect of

it, velocity aspect of it

and so on and so forth.

Now, coming to the -- so if that is the place where there is compression, there is definitely competition, Abhishek. Now, the reason I'm saying is that sometimes we will have to look at client -to-client in terms of their ability and propensity to implement AI. We have seen certain clients, who want to do it in a lot more faster way and some of them are saying that we want to spread it out.

So in that context, the pricing aspects also changes and we have to relook at how the solutioning happens. Because when you deploy AI quickly, the token costs also increases for our client. So they are looking at total cost of ownership. And that is someth ing that we've been carefully working on, Abhishek, and this is something that I think as an industry, as Wipro, we will all continue to evolve.

Now, coming to the margin pressure, it's actually related to that. So if you look at large traditional deals, cost optimization, vendor consolidation, there will be margin pressures because sometimes you want to invest into the deals for now to, you know, to make it more long -term as well, Abhishek. So if it is a net new reimagine AI kind of projects and programs, the margins are much better. But if it's a traditional work where you have to bring in the productivity through AI at the same time help the clie nts to shift the budgets, there are competitive pressures.

Abhishek Bhandari: Got it. Thanks, Srini and all the best for the year.

Srini Pallia: Thanks, Abhishek.

Moderator: Thank you. I would now like to hand the conference back to Mr. Abhishek Jain for closing comments. Over to you, sir.

Abhishek Jain: Yes. Thank you all for joining the call. In case we could not take any questions due to time constraints, please feel free to reach out to the Investor Relations team. Have a nice day. Thank you.

Moderator: Thank you. On behalf of Wipro Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.
