Dear Sir/ Madam,

Sub: Transcript of Analysts / Investors Call pertaining to the Unaudited Financial Results of the Company conducted on 17 August 2022

Ref:

Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended from time to time (“Listing Regulations”) read with SEBI circular dated September 09, 2015, bearing reference no. CIR/ CFD/ CMD/ 4/ 2015 (“Disclosure Circular”).

Dear Sir,

In furtherance to our intimation dated 16 August 2022 and 18 August 2022, please find enclosed Transcript of the Analysts / Investors Call on Unaudited Financial Results (Standalone and Consolidated) of the Company for the quarter ended 30 June, 2022 held on 17 August, 2022.

The Information is being hosted on the company’s website www.jupiterwagons.com

Kindly take the same on your record.

Thanking You
Yours Faithfully

“Jupiter Wagons Limited
Q1 FY2023 Earnings Conference Call”

August 17, 2022

ANALYST: MR. JIGAR KAMDAR - SYSTEMATIX INSTITUTIONAL EQUITIES

MANAGEMENT : MR. VIVEK LOHIA - MANAGING DIRECTOR - JUPITER WAGONS LIMITED
MR. SANJIV KESHRI - CHIEF FINANCIAL OFFICER - JUPITER WAGONS LIMITED

 Moderator: Ladies and gentlemen, good day and welcome to the Jupiter Wagons Limited Q1 FY2023 Earnings Conference Call hosted by Systematix Institutional Equities. As a reminder all participant lines will be in the listen only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing ‘*’ then ‘0’ on your touchtone phone. Please note that this conference is being recorded. I now hand the conference over to Mr. Jigar Kamdar from Systematix Institutional Equities. Thank you and over to you Sir!

Jigar Kamdar : Thank you Renju. Good evening everyone. On behalf of Systematix Institutional Equities I welcome you all for the Q1 FY2023 earnings conference call of Jupiter Wagons Limited. From Jupiter Wagons management we have Mr. Vivek Lohia, Managing Director and Mr. Sanjiv Keshri, Chief Financial Officer. Now I request Mr. Vivek Lohia to give the opening remarks post which we will start the Q&A session. Over to you Mr. Vivek Lohia!

Vivek Lohia : Thank you. Mr. Jigar for your introduction. Good evening everybody and I would like to thank you for being a part of the investor call of Jupiter Wagons Limited. I would like to start the session by mentioning that we are today in a historical era when it comes to the entire logistics business in India and especially the railway business. I think with the vision of our Prime Minister and the Railway Ministry, today the growth which we are seeing in the railway sector is unprecedented and historic and Jupiter Wagons being one of the

forefront industries in the railway sector. We are in the cusp of showing historical growth numbers to our investors and taking the vision of the company forward in the next decade.
As we all aware that recently Jupiter Wagons and Cebbco both completed their merger and the company was listed in the stock exchange in the name of Jupiter Wagons Limited. This created a synergy in the operations of both the companies as it consolidated the business under one roof and in terms of both our financial strength as well as the infrastructure strength we could utilize it in a consolidated manner. Jupiter is today serving the railway sector in multiple ways; we are one of the leading manufacturers of railway wagons, high speed bogies, couplers, draft gears and cast manganese, steel crossings. Further under erstwhile Cebbco we were one of the leading suppliers of load bodies to the leading OEMs of commercial vehicles in India and also the leading manufacturers of ISO containers in the country.
Recently Jupiter bagged a historical order from Indian Railways and the private sector, currently our order book is close to Rs.4700 Crores of which Rs.4000 Crores is made up of railway wagons, the container business is about Rs.60 odd Crores and the order for design,
 fabrication and supply of flatbed trailers and (inaudible) 4:13 . Again the company has diversified into various sectors, we have done our tie-up with the leading manufacturer of brake systems in Europe, DAKO-CZ and we have already got approval for supply of railway brake systems for coaches and by the end of this year we are expecting the clearance from Indian Railways for manufacturing of brake systems for the freight wagons which are going to be supplied by Jupiter Wagons. This again gives us an edge over our peers as Jupiter becomes one of the most integrated manufacturers of railwa

y wagon and it
gives us both a sizeable backward integration which again is something which cannot be matched by our peers. Further we have also entered into a JV with a company called KOVIS to manufacture brake disc for the Indian Railways for which we have already got the approvals and also this unit will be used for exporting both brake discs and other castings to the European market, already Jupiter and the JV has bagged the order of 8000 lakhs this year and we expect the business to strengthen in the coming years.
Very recently, Jupiter along with his partner Talleres Alegria has got the order from Indian Railways to manufacture weldable CMS crossings which are again one of a historical order which is for close to 4000 sets of crossings valued at 12700 lakhs approximately. These crossings again transform railways from currently trains which are running at 120 kilometers can run at more than 200 kilometers because by supplying these weldable crossings we are welding the crossings to the rails directly and taking out the fresh plates so that the tracks are much more smoother and the trains can run in high speed which is in line with all tracks and the latest technology which is used in the European and the American market. Last quarter our revenue was Rs.295 Crores and we did EBITDA of close to Rs.30 Crores which was a jump over our performance for the same quarter last year. I would now give the line to Mr. Sanjiv Keshri, our CFO who will elaborate on the financial results.
Thank you.
Sanjiv Keshri : Thank you Vivekji. Good evening to all. This year revenue for the Q1 stands around Rs.295 Crores against which our EBITDA margin is 10.25% which comes to around Rs.30.27 Crores and the profit before tax is 6.71% which is around Rs.19.82 Crores. This year there is no cash outflow as the company has got losses from the erstwhile Cebbco we charge the deferred tax of around Rs.6.41 Crores which the tax is coming around 33%. The net profit after the comprehensive income is around Rs.13.74 Crores which is around Rs.3 Crores higher than the Q1 2021, last year Q1 2021 is around Rs.10.71 Crores profit margin. Mr. Vivek has already told you our order book. If you have any questions on these financials we will happy to give the reply.
 Moderator : Thank you. We will now begin the question and answer session. The first question comes from the line of Tushar from Kamayakya Wealth Management. Please go ahead.
Tushar R : Good evening Sir and thank you for the opportunity. My first question is on the OEM front, so what is the outlook for the OEM like the course in this business and going forward how do you see this OEM business, how it can look going two to three years down the line?
Vivek Lohia : Good evening Tushar. On the OEM side since Q1 2021 we did a business of 730 vehicles, last quarter we did a business of 2033 vehicles, so what my belief is that again if the country continues to grow at about 7% to 8% and with the infrastructure mobilization which is happening I expect and then the thrust of the government to bring the logistics cost down so we expect more and more new varieties of vehicles being introduced and for higher

payloads, so overall we expect the growth in this business to be very robust and continue over the next two years.
Tushar R : Fair enough. Sir, second question is on the JVs, so the brake disc with KOVIS and also the brake systems with DAKO and the railway crossing so what would be the market size and our shares in all three businesses?
Vivek Lohia : On the brake systems, first is our joint venture with DAKO, so this year railway wants to close to 6000 LHB coaches they want to manufacture, so in one LHB coach brake system costs approximately 22 lakhs so the market size is about 6000 into about close to 1200 closes the market size for the LHB brake systems. Now on the freight side given the order books which th

e industry has got railway expects supplies of at least 30000 wagons in the coming 12 months and again each brake system is roughly about Rs.1.5 lakh, so again it is about close to Rs.3500 Crores, so overall put together the brake business itself the market size is about Rs.5000 Crores this is for the brake system, again brake disc similarly the Indian market is about close to Rs.1000 Crores so all put to together I can fairly say that it is about Rs.6000 Crores market and on the CMS crossings again Jupiter has been one of the leading manufacturers of CMS crossings in India, we are already approved source by Indian Railways. The weldable crossings is a new design which has been introduced and which is now at par with the global standards so till now no firm has been given only I think six firms have been given trial orders by Indian Railways and none of the six firms has been certified, so we are the first firm to get such a sizable order and we expect our certification to happen by beginning of next year and again the market on an average railway is talking about buying close to 20000 crossings every year.
 Tushar R : Okay Sir and what would be our ideal EBITDA margin like any target EBITDA margin which we keep?
Vivek Lohia : For which business?
Tushar R : I presume like in this wagons business so they bid is on the L1 basis so whenever we bid any target of EBITDA margin we keep while bidding?
Vivek Lohia : In terms of any target I would not like to elaborate on specific numbers, but what you can well understand there are two things which has to in our favor again our capacity utilization now from Q2 onwards because most of the order book which came it came to us in Q1, so Q1 was really not a reflection of the capacity which we have built and our delivers to Indian Railways that numbers will start hitting from Q2, so given the order book you can expect that our capacity utilization will be very high and as I told you already that Jupiter being the most integrated manufacturer of wagons, our EBITDA margins historically has been higher than our peers and plus if you add past manufacturing our own brake system which is roughly about 10% the cost of a wagon so you can do the math, it will definitely have a strong impact on EBITDA margins.
Sanjiv Keshri : If you see our Q1 2021 EBITDA margin it was around 9.8% and this Q1 2022 our EBITDA margin has increased to 10.25% so we are increasing and see how the other quarters go.
Tushar R : Fair enough. I will get back in queue. Thank you.
Moderator : Thank you. Next question comes from the line of Ramesh Chedda from Spark Capital. Please go ahead.
Ramesh Chedda : Good evening Sir. Congrats on the great set of numbers. A few questions from my end on the consolidated basis what will be the breakup between the wagons revenue and the CV business?
Sanjiv Keshri : This quarter 75% from the wagons and 25% from the CV business and also we have revenue from the containers, so if we include the CV and container both it will be around Rs.90 Crores and the rest is the wagon.
Vivek Lohia : But you have to keep in mind historically for the CV business the third quarter and the fourth quarter are the strongest. First quarter is generally a weak quarter, so if you go to the
 third and fourth quarter then the contribution from CV will be higher than what you see right now.
Ramesh Chedda : For FY2022 what can be the breakup if I can get that?
Vivek Lohia : We cannot exactly project the breakup at the moment, but definitely it will be higher than the percentage, currently which you see in Q1.
Ramesh Chedda : Is it possible to share any ballpark numbers for FY2022 the historical year previous year?
Sanjiv Keshri : For the quarter you are asking or for the year?
Ramesh Chedda : For the financial year full year.
Sanjiv Keshri : Around Rs.800 Cr

ores from the wagons and from the other business, CV business it is
around Rs.300 Crores and rest is from the crossings and the containers.
Ramesh Chedda : Okay, so going forward because of the CV cycle turnaround what kind of growth do you
expect in each of the segments for next two to three years?
Vivek Lohia : Again as we have clearly mentioned our wagon order book is already very strong, we have
close to about Rs.4000 Crores of order book in the wagon segment, so similarly again in
CV better than us the OEMs will be able to give you better guidance of the expectation
because our CV business is dependent upon the business which the OEMs can generate
from the market, but as far as expanding from the OEMs we should do a business Rs.430
Crores, I think this year we expect to do a business of about Rs.430 Crores compared to
Rs.150 Crores which we did last year.
Ramesh Chedda : Compared to?
Vivek Lohia : (audio cut) 20:15 business which we did last year.
Ramesh Chedda : So almost one third, 33% growth is what you are expecting?
Vivek Lohia : Yes.
Ramesh Chedda : Okay that is good.

Vivek Lohia : I think which is in line with the growth forecast of the economy and the expectation in the
industry because last year you have to also understand the entire auto industry went through
a semiconductor crisis and plus there was also COVID months, so we expect this year the
business to be far robust.
Ramesh Chedda : Right and in terms of margins as we mentioned at around 10% will be your EBITDA
margin on a consolidated basis, can we get a further breakdown in terms of wagons and the
CV business and even the braking system what is the margins that you are expecting?
Vivek Lohia : In the braking system I think the margins will definitely be since it is a technology driven
product and again in India the only three approved sources for this product and given the
market size is about close to 6000 Crores we expect our EBITDA margins to be much
higher, but exact numbers I will not be able to tell you immediately and last year the
breakup between the CV and wagons.
Sanjiv Keshri : 800 Crores and 300 in terms of the percentage.
Vivek Lohia : I think that we do not have right now, but we can share that numbers with you.
Ramesh Chedda : Sure, we will connect offline for that that is okay, that is understandable and so as I was
going through one of the news articles before merger what you have mentioned is you are
also looking towards leasing of wagons is that a business model that you are thinking
about?
Vivek Lohia : Currently that is not our focus area, our focus area is in terms of executing our current order
book as well as now with railway encouraging the industry to produce new designs of
wagons and railways ready to give you the IP for those designs and with a strong partner
like Tatravagonka who is the leading manufacturer of wagons in Europe our main focus is
on the wagon business is on the execution as well as introduction of newer designs of
wagon, which will be in line for the requirement of the DFCC.
Ramesh Chedda : If I look at a bigger picture, so next five years or seven years or 10 years down the line
where do you see Jupiter Wagons as a business because I think this Rs.4000 Crores order
book is good enough for you to drive the business for the next two years and in a longer
term perspective where do you see Jupiter Wagons as a company?
Vivek Lohia : As you know if you look at our press release and our vision statement of the company we
always say that we are a complete mobility solution provider, so wagon is yes, one of our

core businesses and we expect this order book to become stronger because the railway has
projected a requirement of another close to 50000 wagons in the coming, we expect the
tenders to come out in the next six to eight months, so plus there is a

robust demand on the
private sector, but again as we have told you that the brake business is going to be a huge
focus business for us now with Vande Bharat being introduced and newer designs of brake
systems and more high-speed brake systems required for Indian Railways our partners can
contribute much more in terms of technology, we are thinking of setting up an R&D center
itself in India to cater to both the requirements for the Indian design as well as for
upgradation of the European design of brake systems, so that business we are looking
forward to that business and that takes us higher on the technology curve, so the focus is
more and more to go upward on the technology curve and to always be the best to give the
best quality at the lowest price so that can be achieved through backward integration where
you have control over your quality as well as you can produce compared to your peers at the
best price and finally again since we have about more than 20 years of experience in the

commercial vehicle business, doing bodybuilding for the OEMs and then also directly supplying vehicles, so now we have decided to move into manufacturing of electrical vehicles ourselves. We have recently tied up with a company called Green Power Electric Mobility, it is a company based out of US and Canada, it is listed on The NASDAQ stock exchange as one of the biggest manufacturers of EV commercial vehicles in the North American market I believe it has got order book of more than $600 million. They have vehicles ranging from 7 ton all the way up to 30 tons, so that business is something which we are looking forward to and hopefully beginning of next year we should be launching our first vehicle in India.
Ramesh Chedda : Okay, can you throw a bit more light on what is this tie up exactly about like is it a technology transfer tie-up or is it a JV in terms of manufacturing in India what exactly is the agreement between Green Power and Jupiter?
Vivek Lohia : So it will be a JV to manufacture vehicles in India for the Indian market.
Ramesh Chedda : Will it be a 50%-50% JV or it is yet to be negotiated?
Vivek Lohia : It is yet to be negotiated.
Ramesh Chedda : Got it. Thank you that is all from my side. I will join the queue eventually. Thank you so much. Thanks for your time Sir.
 Moderator : Thank you. Next question comes from the line of Anurag Jain from AART Ventures. Please go ahead.
Anurag Jain : Could you repeat give the breakup of the brake market again you mentioned brake disc was about Rs.1000 Crores if you can repeat for the other Rs.5000 Crores the breakup on that?
Vivek Lohia : Rs.5000 Crores market is for the brake systems for the LHB coaches which are the passenger coaches in India and the freight, the brake systems which goes into wagons that put together is about the 5000 Crore market and brake disc, so overall the market is about 6000 Crores which does not include the metro brake system markets and now the Vande Bharat train sets which Indian Railways is introducing.
Anurag Jain : LHB coaches you mentioned 22 lakhs per set and about 6000 coaches so that is Rs.1300 Crores and wagon would be the differential?
Vivek Lohia : Wagons would be the differential.
Anurag Jain : That is 150000 per..
Vivek Lohia : Roughly it is about Rs.160000 per wagon is the current price of brake systems and we expect as per the railways order book and the private orders which are there the expectation is that industry would be producing close to 30000 wagons annually.
Anurag Jain : Currently who are the market leaders in this segment and what is kind of market share do you think can we gain over the next three or four years time what is the aspiration on that segment?
Vivek Lohia : So I cannot tell you on specifics on the market share, so there are currently two main players in this industry one is Knorr-Bremse it is a German company and seco

nd it is a
company called (inaudible) 29:46 which is an American company, these are the two leading companies and again the entry barriers are huge in this segment, because you need UIC Certification means European Union Certification to be approved source to supply to Indian railways and plus the obligation cycle is about close to two to three years, so globally only about three to four firms are approved. One being Knorr, second (inaudible) 30:22, third DAKO with whom we have a JV now in India and I think the other significant player is Siemens in this business and if you look at the freight business as you know Jupiter (audio cut) 30:38 that becomes a captive business for the brake systems and again for the KOVIS JV again our focus is more it is on the Indian market, but greater focus is
 also on the European market because as you are aware that in Europe the production cost is already going up because due to the power crisis which they are facing, otherwise also historically now they have issues with regard to availability of labor plus the environmental costs are much higher than in India so we believe that with the design and the technology from KOVIS we can contribute greatly through exports to the European market.
Anurag Jain : Given that it is a technology product and given the barrier to entry would the margin be significantly higher versus the wagon businesses, can we do 18%, 20% margin on this?
Sanjiv Keshri : Honestly I cannot tell you on the exact numbers, but definitely again Knorre is a listed company, so you can go to the website and see the numbers, so you will get a flavor of the EBITDA margins, but definitely the margins are higher than the wagon business and the good thing for us is our accreditation has already done with Indian Railways so now I think from the last quarter of this year you will start seeing revenue in this operation.

Anurag Jain : Thank you so much. That is it from my side. All the very best.

Moderator : Thank you. Next question comes from the line of Tushar from Ratnavali Securities. Please go ahead.

Tushar: Good afternoon. Sir, could you please give the breakup of our wagon orders and some insights into how much is it from the Indian Railways and private order book and also if you could shine some light on what is the situation of your wheel sets like what kind of arrangements have you made to mitigate wheel set shortage in India?

Vivek Lohia : I will just give you the breakup, Rs.2400 Crores from Indian Railways and Rs.1600 Crores is from the private sector, so when it comes to Indian Railway, IR orders Indian Railways is committed to supply the wheel sets from RWF and RWF already ramped up its capacity so we do not see any shortage on the wheel set supplies from RWF as well as now they have given a huge order of importing axles from China, so axles was the bottleneck, which I think they are going to mitigate by importing axles from China. On the private order business we have already placed the orders for wheel sets on the Chinese players and we expect the wheel sets to start coming from October onwards, so there we are not dependent upon RWF or Indian Railways on the wheel set supplies for our private business and as of today on the private side our order books are completely covered with wheel sets from China.

Tushar: Sir just another followup question these orders, could you please shine some light on what is the raw material escalation clause built in or if it is not built in and how we have handled the volatility in raw material prices over the last let us say three, four quarters?

Vivek Lohia : All railway contracts, there is escalation clause which is already built in, so for us escalation or de-escalation in raw material is a pass-on, so that does not have any significant impact on EBITDA and on the private side

I am aware that when we take an order book we get 30% mobilization advance from the private player, so generally historically as a practice we book our raw material immediately on the receipt of the advances, so on that side also I would say that we are pretty much covered.

Tushar: Thank you.

Moderator : Thank you. Next question comes from the line of Ramesh Chedda from Spark Capital. Please go ahead.

Ramesh Chedda : Thanks for the opportunity once again. Sir, I had actually two questions together. What is your capex plans and how are you going to fund that capex plans for next three years and in what segments will your capex be?

Vivek Lohia : Capex funding will mainly be from internal accruals only because we expect our cash flows to be very robust and mainly for the existing business it will be just replacement capex because during the COVID years already we were anticipating these order books from Indian Railways and we have built capacities in anticipation and acquisition of Cebbco was one of the prime reasons for expansion in our wagon capacity, so the most of the capex which will go in will be towards our brake business as well as the metro business which we have now a JV with CAF.

Sanjiv Keshri : You can see our balance sheet also of the March 2022 where we have an operating cash inflow of around Rs.114 Crores so we have a sufficient cash internal accrual cash in hand to do all the capex.

Ramesh Chedda : I am sorry what will be the capex amount for each year?

Vivek Lohia : The planned capex amount you are asking?

Ramesh Chedda : Yes.

Vivek Lohia : In the Jupiter we do only the replacement or refurbishment which is around Rs.10 Crores to Rs.15 Crores a year and for the JV companies we are doing some capex and most of the capex on the JV side has already been incurred by the company and that too because since most of our JVs are 50:50 JVs, so again the capex is shared between both the partners and as Sanjiv told you that if you look at our last year numbers we have a surplus cash Rs.114 Crores of operating cash which we expect to become more robust as our numbers become stronger this year, so it will mainly all come from internal accruals.

Ramesh Chedda : Okay, so no fresh requirement of debt or anything or the fundraise will be required in near future right?

Vivek Lohia : Right now very difficult to predict but we do not foresee a very strong requirement.

Ramesh Chedda : On a steady state basis what are the ROEs and ROCEs that you expect from the business overall?

Vivek Lohia : The ROE of March 2022 was around 7.52 and we expect that it will be higher. As I keep on iterating order books I think if you look at over the last five years we have now one of the strongest order books and plus the company is much more diversified we are now in various other segments which are again historically the EBITDA margins are higher in those segments, so you would definitely expect those numbers to become better.

Ramesh Chedda : Guidance on that?

Vivek Lohia : Guidance?

Ramesh Chedda : Any guidance on what do you expect?

Vivek Lohia : Honestly it is very difficult to give any kind of guidance, but definitely we expect the numbers to be given the order book and our thrust towards backward integration and bringing our costs down plus entering into businesses with better EBITDA margins so definitely we expect the numbers to be much stronger.

Ramesh Chedda : Thank you so much Sir.

Moderator : Thank you. Next question comes from the line of Tushar from Ratnavali Securities. Please go ahead.

 Tushar: Sir, a couple questions on our JV and technology partners, so could you please tell us what kind of arrangements do you have with them, do we pay any kind of royalty to them or technology transfer fee apart from the profit sharing from the JV?

Vivek Lohia : When it comes to our JV with KOVIS there is no royalty or technology transfer fee which we are paying to them it is a pure 50:50 profit sharing and in case of DAKO the numbers have not been chosen as yet, but then again if there is no royalty and if there is some technology transfer fee also it will be very miniscule.

Sanjiv Keshri : And it will be a part of capex.

Tushar: Okay and what about for other companies Tatravagonka, Talleres?

Vivek Lohia : Tatravagonka is a promoter in Jupiter, they have a minority shareholding in Jupiter so there is no question of any royalty which they charge, again in case of Talleres also it is a pure 50:50 JV with profit sharing no royalty or any kind of transfer technology fee.

Tushar: Do we plan on banking on some of these partnerships to get deeper inroads like Tatravagonka into Europe?

Vivek Lohia : As I told that briefly in my call with KOVIS our focus is the European market, we already have an order book from them for about Rs.80 Crores for the next year, this is for the European market and we expect this order book to become much stronger over the years.

Tushar: Thank you Sir.

Moderator : Thank you. As there are no further questions we have reached the end of question and answer session. I would now like to hand the conference over to Mr. Jigar Kamdar for closing comments.

Jigar Kamdar : Thank you participants. Thank you management for your time and give us opportunity to host this call. Thank you everyone.

Vivek Lohia : Thank you Jigar.

Moderator : Thank you. On behalf of Systematix Institutional Equities that concludes this conference. Thank you for joining us. You may now disconnect your lines.

Dear Sir/ Madam,

Sub: Transcript of Analysts / Investors Call pertaining to the Unaudited Financial Results of the Company conducted on 14 November 2022

Ref: Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended from time to time (“Listing Regulations”) read with SEBI circular dated September 09, 2015, bearing reference no. CIR/ CFD/ CMD/ 4/ 2015 (“Disclosure Circular”).

Dear Sir,

In furtherance to our intimation dated 12 November 2022 and 15 November 2022, please find enclosed Transcript of the Analysts / Investors Call on Unaudited Financial Results (Standalone and Consolidated) of the Company for the quarter / half year ended 30 September, 2022 held on 14 November, 2022.

The Information is being hosted on the company’s website www.jupiterwagons.com

Kindly take the same on your record.

Thanking You
Yours Faithfully
For Jupiter Wagons Limited
(formerly Known as Commercial Engineers & Body Builders Co Limited)

“Jupiter Wagons Limited 2QFY23 Earnings Conference Call”

MANAGEMENT : MR. VIVEK LOHIA – MANAGING DIRECTOR, JUPITER
WAGONS LIMITED
MR. SANJIV KESHRI – CHIEF FINANCIAL OFFICER,
JUPITER WAGONS LIMITED
MODERATOR : MR. SIDDHARTH AGRAWAL – SYSTEMATIX
INSTITUTIONAL EQUITIES

Moderator: Ladies and gentlemen, good day and welcome to Q2 FY'23 Results Call of Jupiter Wagons Limited hosted by Systematix Institutional Equities. As a reminder, all participant lines will be in the listen-only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing '*' then '0' on your touchtone phone. Please note that this conference is being recorded. I now hand the conference over to Mr. Siddharth Agrawal from Systematix Institutional Equities. Thank you. And over to you, sir.

Siddharth Agrawal: Hello and good evening. On behalf of Systematics Group, I would like to welcome the management of Jupiter Wagons and all the participants on today's Q2 FY'23 Earnings Call of Jupiter Wagons.

The management will be represented by Mr. Vivek Lohia – Managing Director and Mr. Sanjiv Keshri – Chief Financial Officer.

Now, without any further delay, I would like to hand over the call to Mr. Lohia to make his opening remarks, post that, we will open the session for Q&A. Over to you, sir.

Vivek Lohia: Thank you. Good evening, everybody. I would like to begin the session by stating that Jupiter Wagons has achieved one of its strongest financial as well as in terms of the absolute quantity, our strongest numbers in any quarter. This is just the beginning of our growth story, and it is our endeavor to further consolidate our core business and also use our strong cash flows and establishing our new business especially the braking business.

For the first time, we have placed an order of close to 20,000 wheel sets on foreign buyers to ensure that our delivery of wheel sets does not hold up our momentum. This has been one of the biggest orders placed by any Indian manufacturers on foreign buyers. And this will also substantially reduce our dependency on Indian Railways for wheel sets and thus keeping us in a very strong position as you know wheel sets have been one of the biggest challenges in delivering the wagons to IR.

As you can see from the numbers, we have supplied more than 860 wagons to Indian Railways in this quarter. Last month itself, we did a production of close to 400-plus wagons and we expect the numbers to further strengthen over the coming months.

Similarly, in other segments also, our performance has been much stronger. We expect the numbers from our CV business to be much better in the next two quarters as the monsoon season is always one of the leanest seasons in the sector and we are seeing a huge demand coming from both the OEMs as well as from the general industry for the commercial vehicles.

In case of containers also, we are now working very closely with the companies such as GE and DP World. We are proud to announce that we have supplied containers to GE which in turn they

have exported out of India. This is one of the first time that GE has exported containers out of

India and we expect the business to grow further.
Now, coming to our newer verticals, I am happy to announce that both our joint ventures with Kovis for brake discs and DAKO is performing as per our expectation. When it comes to break this business, our plant has been certified by Indian Railways and we have started our commercial production there. We expect the plant to be fully operational by January or February of next year and we have already participated in tenders of about 40,000 brake discs and we expect to get substantial order from Indian Railways in the next two quarters on brake discs.
Similarly, when it comes to the brake system, again, we are expecting the certification from Indian Railways very shortly, and also we expect strong order books in the next two quarters.
Recently, the company has been shortlisted as the L1 bidder by the CoC

for the acquisition of
Stone India. And that will further strengthen our brake business as we can take advantage of the vast infrastructure of Stone India and a large number of licenses which is held by Stone India, thus accelerating our performance in the brake business.
Finally, for our electric vehicle business, again, it is in line with our expectation, and we are expecting to launch our first electric vehicle again in the first quarter of next year. And we are already seeing a huge demand on the electric vehicles side. I think in India, more than passenger vehicles, on the commercial side, electric vehicles are going to be the gamechanger. If you want to make a significant difference in terms of the fossil fuel consumption on the environmental side, the focus should be on the commercial vehicles. If you see the general run compared to passenger vehicles, the commercial vehicles run substantially more on Indian roads. So, we are very bullish on this venture and we expect it to be a game changer for the company.
I think from my side, this is it and then I leave the floor for the questions.
Moderator: We will now begin the question-and-answer session. We have the first question from the line of Siddharth Agrawal. Please go ahead.
Siddharth Agrawal: So, I and a couple of clients had a couple of questions. Sir, firstly, what kind of reception are you seeing from the Indian Railways right now and how have you seen they have changed over the last two years and what is your outlook over here?
Vivek Lohia: Can you repeat your first question?
Siddharth Agrawal: So, what kind of reception are we seeing from the Indian Railways? We have been hearing that they have got very aggressive. In the last two years what kind of change and what is the outlook on their demand flows from here?

Vivek Lohia: So, when it comes to Indian Railways, as we have stated earlier also, they are very bullish on the sector and currently their share of the entire logistics space is around 20-25% and there is a clear roadmap that by 2030 they want to take 40% of the market share. So, that I think it flows directly from the prime minister himself. Railways has earmarked under the Gati Shakti Program of Hon'ble Prime Minister. Railways has earmarked to spend about close to $750 billion in the next five years on the railways infrastructure. And I don't see any slow down in their offtake or in the growth in the coming years. When we compare to two years back, I think railways is now listening more to the industry because one of our main demands to Indian Railways has been to instead of coming out with annual contracts to come out with contracts for at least two years or three years of visibility as it will help the industry plan better and also will help us improve our supplies to Indian Railways. And it has happened for the first time and now you can see the results for yourself. Please go ahead with your next question.
Siddharth Agrawal: So, right now, what is your order book?
Vivek Lohia: Today, I think we have order book of close to Rs.4,000 crores and this quarter itself we have added another Rs.500 crores of new order book and we are in further discussions with various customers. So, when it comes to ordering books, we don't see any challenge. So for us, the main challenge is in terms of execution and in my introduction I said very clearly that today one of the biggest challenges when it comes to execution is the wheel set. So, we have placed today orders of close to 20,000-wheel sets which is I think biggest orders placed by any Indian manufacturers, and this is also translating into our performance. As a company, we never like to give excuses. So, our main focus is always on our execution. And I think over the next quarters, you will see our numbers to be much stronger.
Siddharth Agrawal: What is your split of order book between railways and p

rivate sector?
Vivek Lohia: I think it is close to 50:50 and I think as quarters progress the order from the private sector will increase further and these orders carry better margins. So, it will help the company also in the long term.
Siddharth Agrawal: Sir, you spoke about the electric business. So, would you be able to shed some light on what's happening on the ground… what kind of order inflows are we seeing? What's the status of our

trial run? Who would be our major customers in this space, because I think EV is the hot topic nowadays?
Vivek Lohia: Our focus is only on the commercial vehicles segment. We are not targeting the passenger vehicles. The vehicles right now which we are focusing on is up to 12-tons axle load vehicles.
Our focus on vehicles which can run within the city –
Sanjiv Keshri: Connect satellite towns.

Vivek Lohia: We are seeing a huge traction and interest of the market. So, till such time, we expect the vehicles to be on development on both the vehicles happening currently and we expect the vehicles to be ready by the first quarter of next year.
Siddharth Agrawal: When you say ready means commercial launch?
Vivek Lohia: Commercial launch may happen a little later. By the first quarter, we are expecting to give it to ERI for the homologation.
Siddharth Agrawal: Have we got any orders from here? What is the capacity that we are looking at?
Vivek Lohia: We have not yet started taking any order book, but definitely there is huge interest from the customers. Today, there is no vehicle in the market, in the segments which I am talking about.
So, in terms of overall capacity, we have not firmed-up our plans completely. So, we will be disclosing it over the next one or two quarters.
Siddharth Agrawal: In the meanwhile, I got another question from a client with respect to our wagons order. Over what time period, will our order book be executed?
Vivek Lohia: So, it's over the next three years. Indian Railways orders is supposed to be executed over the next three years. And as of now, we are one of the leaders in terms of the performance metrics in the Indian Railways. So, today, our run rate is much higher than what we are supposed to give to Indian Railways as per the contract. When it comes to the private order book, I think, as I have told you that we are taking new orders every quarter. So, this is going to be an ongoing thing.
Siddharth Agrawal: You mentioned that private orders are more margin accretive. So, would you be able to share the margins of both the segments?
Vivek Lohia: It is not possible for us to share at the moment, but I think from the numbers if you compared to our peers, the numbers you can get a picture on this.
Siddharth Agrawal: Would you be able to share what kind of incremental margins the private orders give you?
Vivek Lohia: As I have told you, this is company-specific information, so which cannot be shared with the margin engine.
Siddharth Agrawal: When we mentioned Rs.4,000 crores order book, so, are we able to give the number of wagons on order?
Vivek Lohia: Overall, it's close to about 12,000 wagons which we have currently.

Siddharth Agrawal: 50:50 between private and public?
Vivek Lohia: Yes.
Moderator: The next question is from the line of Vipul Sanghvi. Please go ahead.
Vipul Sanghvi: The question that I wanted to ask is that, if you can tell us a bit about the integration of CEBBCO facilities with JWL? And how are we kind of picking up on the utilization of the combined asset that we have?
Vivek Lohia: As of today, I would say that, today is Jupiter Wagons. CEBBCO in terms of the employees and overall, CEBBCO as an organization is no longer existent. I would say that in terms of integration, we have been fully able to absorb the entire CEBBCO infrastructure. If you look at our perform

ance, it is much higher than the erstwhile CEBBCO ever achieved. In our presentation, we have also highlighted in terms of the numbers. So, in erstwhile CEBBCO, the wagon facility was never utilized. So, today, we are rolling out close to about 200 wagons every months from that facility, as well as if you look at the commercial vehicles output also, it's one of the highest numbers which we did last year and we expect the numbers to be much better this year and plus we have also started the container business from that facility which is a new addition.
Vipul Sanghvi: Secondly, if you can tell us briefly about the funnel of orders which you are seeing most on the private and the railways side, what kind of ordering activity that you are expecting say over the next two, three quarters?
Vivek Lohia: We are seeing a lot of traction on the private sector…I will give you an example, if you look at the auto sector, as you all are aware over the last two years, the auto sector was not performing very well because of the chip shortages and supply chain constraint which they have, but

suddenly, there is a huge momentum there. So, now we are seeing a lot of demand coming from that sector, especially for the taller auto wagons, which is again a new design which we are currently working on, and we have already started the prototype for the same. So, we expect going forward a huge traction from there. Similar demand we are seeing a lot of enquiries from the cement sector… I think that is again one industry we are seeing newer demand. Also, from the logistics players, especially for the container wagons. If you look at the demand from the steel sector, that is where the main demand is coming from.

Vipul Sanghvi: Will it be possible to quantify that kind of ordering that you are expecting say over next six to nine months?

Vivek Lohia: Very difficult to quantify in terms of numbers, but I think the order books which we have currently, we expect the trend to continue over the next one year at least.

Vipul Sanghvi: Of course, there was a decent margin improvement in the current quarter. When do you see that we can be in the ballpark of 14-15% EBITDA margin you think we will exit at that kind of a number in Q4?

Vivek Lohia: I would not like to speculate on the EBITDA margin, but as I have told earlier also in this call, we expect the growth momentum to continue. So, as the revenues keep on increasing, obviously, it will have a positive impact on the EBITDA margins also. And I have told you earlier also that we have been able to consolidate the business very well now. Now, you are also seeing the fruits of the consolidation. Because of the consolidation of the CEBBCO and the Jupiter business, there is a lot of price advantages that the organization is able to get. And going forward, the brake business also will definitely be a contributor towards the EBITDA margin.

Moderator: The next question is from the line of Jay Naik as an individual investor. Please go ahead.

Jay Naik: I just wanted you to give us a brief overview on our braking business, when it would start and what kind of orders we are expecting and when the revenue would start kicking in and what is the opportunity size? I know you explained it in the last investor call, but I would request you to do it again. The second one was with the more orders and our capacity utilization going up, what kind of margin improvements probably we can expect in the quarters to come, sir?

Vivek Lohia: When it comes to the brake business, as I have said, we are very bullish on that. As India is now focusing more and more on IC trains and new designs of wagons, we believe that the brake systems are going to be very critical to the development of the railway infrastructure. So, as I have told you earlier in the call that for our brake discs facility, it has already now been approved by Indian Rail

ways and we have commenced our production from there. We are right now doing trial production and we expect that the plant to be fully commissioned by beginning of next year. Again, I have already stated in the call that we have already participated in the various tenders. The quantum is close to around 50,000 to 60,000 brake discs. So, we expect good order book from there. The revenues from the brake business, you will start seeing I think from beginning 2023. When it comes to our JV with DAKO, we are right now in the process of getting the final approvals from IR. And in that business also we expect good order books over the next one or two quarters. Also, in both the businesses, we are also looking at exporting to the European market from both these businesses. So, that order book also will start flowing in next year. Again, on the margin side, as I have said that, as our revenues increase and the company keeps on consolidating, you will definitely see better margins over the next quarters… but I would not like to speculate on the exact margins.

Jay Naik: In our annual report, you have mentioned about some partnership joint ventures for battery packs and the EV chargers. If you can give some update on that if possible?

Vivek Lohia: On the battery pack, we did not specifically mention any joint venture. On the EV chargers, yes, we have already started working. Right now, it is under development and we expect to launch the charger very shortly.

Moderator: Ladies and gentlemen, as there are no further questions from the participants, I now hand the conference back to Mr. Siddharth Agrawal for closing comments. Thank you and over to you, sir.

Siddharth Agrawal: I would like to thank Mr. Vivek Lohia and Mr. Sanjiv Keshri for your valuable inputs today. Trust me, sir, we all learnt more about Jupiter Wagons today and also thanks to my colleague at Systematix and all our clients for participating on the call. Thank you very much once again, sir. All the best to you.

Vivek Lohia: Thank you, Siddharth.

Sanjiv Keshri: Thank you.

Moderator: Ladies and gentlemen, on behalf of Systematix Institutional Equities, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Call: Feb 2023

"Jupiter Wagons Limited
Q3 FY2023 Conference Call"

February 17, 2023

MANAGEMENT : MR. VIVEK LOHIA – MANAGING DIRECTOR – JUPITER
WAGONS LIMITED
MR. SANJIV KESHRI – CHIEF FINANCIAL OFFICER – JUPITER
WAGONS LIMITED
 Moderator : Ladies and gentlemen, good day and welcome to Jupiter Wagons Limited Q3 FY2023 Conference Call hosted by Systematix Institutional Equities. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*" and then "0" on your touchtone phone. Please note that this conference is being recorded. I now hand the conference over to Mr. Jigar Kamdar from Systematix Institutional Equities. Thank you and over to you!

Jigar Kamdar : Thank you. Good afternoon and a warm welcome to everyone to the Q3 FY2023 results conference call of Jupiter Wagons Limited. The management of Jupiter Wagons will be represented by Mr. Vivek Lohia, Managing Director, and Mr. Sanjiv Keshri, Chief Financial Officer. I will now handover the line to the management for their opening commen

tary. Over to you.

Vivek Lohia: Thank you Jigar. Good evening, everyone and thank you for taking the time to join us for the Q3 earnings call. The results were declared earlier this week on Tuesday, and I hope that each one of you had the opportunity to review them.

All of you are familiar that we are a comprehensive mobility player with offerings across railways, roadways, and marine transportation. Even as we cater to multiple international customers, we see immense opportunity in addressing the large and growing market in India. The opportunity in India is scaling rapidly as the infrastructure outlay continues to be enhanced. In the Union Budget 2023 presented just a fortnight ago, the Government has proposed a record budgetary allocation of Rs.2.5 lakh Crores for the Indian Railways which is significantly higher than the previous year. This allocation is intended to help the railways develop world class infrastructure, significantly scale up freight operations, while meaningfully growing and transforming passenger services. This also will go a long way in achievement of railways target of loading a three billion tonnes of freight by 2040.

We see significant scope in each of our business lines encompassing wagons for freight transportation, coaches for passenger transportation as well as manufacturing of locomotives and braking systems as well as supply of railway infrastructure and components such as crossings, couplers, draft gears, and bogies. In the road segment, we provide commercial vehicle bodies and have announced the launch of electric LCVs at the auto expo last month. In marine transportation, we supply ISO Marine Containers to global and domestic customers.

In that backdrop, I will cover the Q3 FY2023 results. We are pleased to share that it was a strong quarter with improved contribution from all segments. Revenue for Q3 was Rs.645 Crores higher by 116% from Rs.298 Crores in Q3 last year. EBITDA for the quarter grew by 239% and the EBITDA margin improved to 12.8% from 8.1% in Q3 last year an improvement of 470 basis points. PAT for
 the quarter stood at Rs.46 Crores up by 407% from the same quarter last year. Our order book position for the quarter stands at Rs.5,700 Crores as on December 31, 2022. We are confident about continuing this growing trajectory given the high visibility across our business segments and the initiative to scale newer business verticals.

In Q3, we have delivered close to 1,500 wagons, which is an average of 475 wagons per month. This is substantial improvement in run rate compared to prior quarters and we seek to strengthen this even further. As we discussed during the last call, we had placed a large order for wheel sets, which has resulted in a bit of debottlenecking of the availability of wheel sets and is now aligned to the pace of our manufacturing. This has resulted in speedy and efficient delivery of wagons and the numbers are clearly reflecting that.

Similarly in other segments the performance of CV bodies and components have also improved. The overall prospect of the business remains favorable as demand for medium and heavy commercial vehicles is improving on back of better monsoons, macroeconomic conditions and the need for replacement and an uptake in infrastructure, mining, and construction activities. General manufacturing activity and consumption trends have also been a boost helping support for demand for trucks. As a result, the industry volumes are now back to the FY2019 recorded levels.

When it comes to the brake disc business, we are pleased to announce that we are making steady progress towards full commencement of the operations. The foundry is in final stages, and we are confident that we will start our trial productions by March 2023. The machining centres have already been commissioned resulting in commencement of machining production to me

et the demand of
existing orders from Indian Railways. Furthermore, our 3D coordinated measurement machine has also been commissioned to enable high-precision inspection. The plant will be fully operational by March, and we expect to be favorably positioned for the tenders, which are due to be finalized in the next one or two months.

The braking system business at DAKO is also making steady progress and we will share further updates in the next quarter. We are also hopeful to complete the acquisition of Stone India in the coming quarter.

We see that the potential of the EV is growing very fast in India, and I am happy to share our launch of the eLCVs JEM TEZ and EV STAR CC at the auto expo and both the vehicles were very well received. Jupiter Electric Mobility, the commercial electrical vehicle division of Jupiter Wagons, is working towards being the market leader in India's commercial electric vehicle category, thanks to strategic alliance and partnership with Green Power. With the launch of JEM TEZ and EV STAR CC, the company is poised to enter a new era at the Jupiter Group. The eLCVs are powered by batteries and have a range of 80 to 250 kilometers in a single charge. We envision having a full range of
 electric vehicles in future including buses, LCVs, MCVs and HCVs. We will start with commercial production in Q3 FY2024. With this, I would like to take any questions you may have. Thank you so much and over to you.

Moderator : Thank you. We will now begin the question-and-answer session. Ladies and gentlemen, we will wait for a moment while the question queue assembles. We have the first question from the line of Sarvesh Gupta from Maximal Capital. Please go ahead.

Sarvesh Gupta: Good evening and thanks a lot for taking my question. In terms of your margin profile this quarter, we have reached more than 12% and I believe we still have a lot of run rate to grow given the order book that we have and the large order from railways, so how do you see the gross margin percentage profile and EBITDA profile going forward?

Vivek Lohia: Thank you Sarvesh. As you rightly said that we have a considerable order book in hand. Fortunately, for us whatever orders we execute every quarter we are seeing that equal number of order books being added and on back of that we are constantly improving both backward integration as well as better management, so going forward we see a definite improvement in margins, but right now it will be very difficult to quantify the same.

Sarvesh Gupta: Okay. Any guidance on your gross profit like what kind of gross profit profile that is possible given the order book that you have from railways?

Vivek Lohia: Gross profits, you will see similar trends, but yes as I mentioned that our braking systems, the business is going to, the next year especially both the JVs will fully start the commercial production, so if you add the numbers from the JVs definitely there will be an impact on both EBITDA and on the gross profits.

Sanjiv Keshri: Sarvesh, when the revenue will increase, then the variable expenses are not increasing in the same proportion, so you will see that definitely there will be a good number of additions in the EBITDA margin also.

Sarvesh Gupta: Understood. From this large railway order what kind of working capital days is what we are looking at? Is it very different from the overall company's working capital day profile?

Vivek Lohia: No. Our working capital days have no significant changes.

Sanjiv Keshri: It will be as we have reported in the March 2022 because all the ratios and the requirements are given there, so it will be on the similar line.
 Sarvesh Gupta: Understood. Thank you and all the best.

Moderator: Thank you. We have the next question from the line of Komal Ladha from Yellow Jersey

Investment
Advisors. Please go ahead.
Komal Ladha: Thank you for the opportunity. I just wanted to ask that the order book that you have of Rs.5,700 Crores, when can we expect this to come in like in FY2024 or FY2025?
Vivek Lohia: Thank you Komal as we have always mentioned that the order books are for execution over the next two years so you will see majority of the execution, close to 60% of the execution should happen in FY2024 and the balance execution should go into the next year, but as I mentioned in the call every quarter we keep on building on new order books, so this will be as of now it will be a continuous trend.
Komal Ladha: Okay, and can you please give us the breakup of the order book like what part of it is coming from railways and private sector?
Vivek Lohia: 60% of our order book is from the private sector and about 40% of it is from the railways.
Komal Ladha: Okay, and the new EV vehicles that you launched in auto expo, what kind of revenue are we expecting from that and what can we expect the future demand of that?
Vivek Lohia: Revenues right now it will be very difficult to predict. Right now, our aim is to successfully start the commercial production of the vehicles. Our complete focus is towards that. In terms of demand as you know in the eLCV segment in India, annual sales are about close to 5 lakhs to 7 lakhs vehicles today if you look at both IC engines and CNG and all the variants. As per all the conservative market estimates also in the next five years, we expect that electric vehicles will command about at least 10% market share, so we are quite bullish on the segment.
Komal Ladha: Okay, thank you so much.
Moderator: Thank you. We have the next question from the line of Anik Mitra from Finarthaa Research. Please go ahead.
Anik Mitra: Good afternoon. Thank you for taking my questions. Can you give me the expense breakup segment and revenue breakup for this quarter?
Sanjiv Keshri: As per the requirements, we are not preparing any segment item because the segment reporting is not applicable on us, but for the better understanding we had given the numbers, means how many

 numbers of wagons and the vehicles are dispatched during this quarter and nine months, but the revenue numbers we are not disclosing anywhere as per the requirement also.
Anik Mitra: Can we assume like 70% to 80% contribution of the railway comes from wagon segment?
Vivek Lohia: Yes again Mr. Mitra as we said that we are not disclosing numbers but yes wagons so as of now it constitutes a significant percentage of the revenue.
Anik Mitra: Okay, Volume of CMS crossing, and containers has gone down in this particular quarter. Can you throw some light on this?
Vivek Lohia: You will again see an improvement in the numbers. It was just that the focus right now was to increase the wagon production so significant thrust and then our foundry was towards the wagon outturn, but now the company has realigned the foundry business, so I think from the next quarter you would see the numbers coming back.
Anik Mitra: Okay. The number of wagons you have delivered this quarter, what is the ratio of Indian Railways and private sector in this quarter?
Vivek Lohia: As I have told you today close to 60% of our order book is private, so you will find in terms and the deliveries also it will be a similar mix; 60% of what we supply would be private and the balance would be Indian Railways, but private business makes a bigger volume for us than the railway business.
Anik Mitra: What is current scenario of wheelsets because last quarter it seems you were referring some crisis in the market. What is the current scenario because last quarter also you had referred unavailability of wheelsets?
Vivek Lohia: No. We never referred to non-availability of wheel sets. We have said that for our non-railway, for the private business we

are focusing on importing wheelsets rather than banking on Indian Railways and the position remains the same. We have been getting steady supply of imported wheelsets and we have placed a significant order and that supply is going to improve going forward so that has remained our position and for our Indian Railway orders, we are getting wheel sets from Indian Railways, and we do not see any challenge in that.
Anik Mitra: Okay and final one. Regarding the margins like in the last three to four quarters, these have seen quite lot of margin improvements, so is it going to be the base going forward or like there might be some volatility because I am asking in terms of the impact of raw material costs.

 Vivek Lohia: No, you will not see any volatility as you may be aware that for us the raw material is a pass through,
so we are not significantly impacted if the raw material prices go down or go up so as I have told you we have been improving our efficiencies as well as significant backward integration is happening so

going forward and with other businesses contributing more towards the margins, you will see improvement in margins going forward.
Anik Mitra: Okay. Thank you. I will come back in the queue.
Moderator: Thank you. We have the next question from the line of Kush Tandon from Ananta Capital. Please go ahead.
Kush Tandon: Thanks for the opportunity and congratulations on outstanding numbers for the last three quarters. Just one trend that I have been observing is our material cost was 73%, 75% and 77% for the last three quarters, so that cost has gone up a little bit as a percentage of sales, but our margins have improved because of volume at an EBITDA level so was there some high-cost inventory in the last quarter that impacted this kind of gross margin profile?
Vivek Lohia: No, it is not that. It is only as I have maintained that we have been importing wheelsets so obviously and the imports have started coming in from the last quarter so what happens is the inventory levels because we have to maintain a significant stock of wheelsets given the uptick in production, so I think that could be a reason for that.
Sanjiv Keshri: The second reason is that as we mentioned that in the wagon sales where the government and the private both and the margin level in both are different, so it also depends what is the mix of the government and the private wagon sales so the gross margin will also vary 1% or 2% based on this mix.
Kush Tandon: Okay, got it and just on your order book of Rs.5,700 odd Crores, we understand that there is a large order from the Indian Railways, so how do we see this order book behaving because this order repeatability of such a large order; just wanted to understand your thoughts on how this order book can grow in the next few quarters and may be the next one and a half to two years?
Vivek Lohia: As you are aware that Indian Railways is now coming up with a global tender for anything between 50,000 to 60,000 wagons, which we are expecting to be finalized over the next one year that will have a significant impact on the order book and you can see a sizeable upside on the order book and in the interim as I have mentioned that every quarter, we have been adding a sizeable order book from the private sector and given that the kind of enquires, which we are seeing and that is not only the one type of wagon. Now we are seeing various sectors enquires coming in, so we do not see a challenge in the next one year in terms of any additional orders not coming in so that trend will continue and as
 and when this global tender comes out and gets finalized, we will see a significant jump in our order book.
Kush Tandon: Okay great. One last question from my end. Once we have the brake system being done in-house and if you not depe

nding on purchasing it from the third party, which you are doing right now, what kind of margin improvements can we look at? Will you be able to quantify that?
Vivek Lohia: At this moment, honestly, we have not looked at it from margin point of view, but definitely you will see a margin contribution coming in and there will be a reasonable impact on the margins because of that. Now, quantifying it would be very difficult, there will difficult be a reasonable impact.
Kush Tandon: Okay and if I just check one last question. We currently have a capacity of 600 wagons per month.
Vivek Lohia: Yes. Not a capacity. The target is to achieve on a steady state to achieve a target of rolling out 600 wagons per month, but then also it also depends on the mix. We are not only making one type, unlike some other players; we are making different and various kinds of wagons because lot of wagons are different margins inbuilt so may be the numbers the overall the top line numbers may be less, but on the margins there are a lot of wagons, which have definitely a lot of added margins to it so that mix so from month to month you will see some variation on the top line but there will be definitely positive impact on the margin side.
Kush Tandon: Okay thank you. All the best.
Moderator: Thank you. We have the next question from the line of Tushar Raghatate from Kamayakya Wealth Management Pvt. Ltd. Please go ahead.
Tushar Raghatate: Good afternoon and congratulations for your good set of numbers. I understand as per the national logistics policy and the railway policy, there will be a catalyst for the private player to do capex in the wagons. Now, I just want to understand in case there is any XYZ wagon manufacture, and we now have this braking system with us, so I just want to understand difference. If my understanding is correct each wagon cost is about Rs.32 lakh to Rs.35 lakhs, so what would be the difference which will be beneficial for us because we are having this braking system with us. You mentioned in the last con-call it is made up of 10% of the wagon cost, so I just want to understand the difference which we might get?
Vivek Lohia: Thank you for your question, but I am not very clear as to what exactly you wanted to understand, but what I have said earlier and I am reiterating is that as you rightly said that the brake constitutes about 10% of the cost of the wagon, so definitely it is a big contributor, if you look at wheel sets and steel that would be about close to 50% of a wagon price, so the balance of the balance 50% if you look at

Page 9 of 19 what is being supplied by the wagon builder out of that brake system constitute a significant part, so definitely as I have been reiterating it will have a sizeable impact on the margins.
Tushar Raghatate: Fair enough. In respect of our strategic partnership with Tatravagonka what is the opportunity we are seeing for exports as we can understand the energy prices are skyrocketing in Europe, what is the opportunity for Jupiter Wagon in the next two years in terms of exports and in terms of braking systems?
Vivek Lohia: As, I have already said that we are definitely looking at the export market at the component level and in the next year you will see a significant export numbers in our various verticals and on the wagon front also there are some opportunities at the export side and we are in discussions with Tatravagonka on the same and again their partnership we are looking forward in the significant strength, which they have in contributing towards the global tender, which is coming right now.
Tushar Raghatate: Fair enough. My last question in terms of our LCV business so any the order book we have for the same or any capex plan for the business going forward?
Vivek Lohia: Right now, there is no significant capex plan. As I have told you it is an ongoing order book because we ar

e a captive manufacturing facility for the OEMs both for Tata Motors as well as Eicher. Today honestly 60% to 70% of the load bodies, which they manufacture is done by us so and if you see an increase in the volumes, we will benefit from the same.
Tushar Raghatate: Fair enough. I will get back in the queue. Thank you.
Moderator: Thank you. We have the next question from the line of Komal Ladha from YellowJersey Investment Advisors. Please go ahead.
Komal Ladha: I just wanted to know, Sir you said that the margins in private and in railways differ. Can you please tell me how much does it differ?
Vivek Lohia: Thank you Komal. Definitely since railway places a huge volume orders and in bulk so they get a better pricing as compared to private sector and in private sector again the margin depends on the type of wagon, which we are executing so it will be very difficult for me to pinpoint any number but a lot you can make out from our EBITDA numbers as compared to our peers and you can understand the kind of the additional margins we get out of executing that business.
Komal Ladha: Okay and the order book that you said, can I get the breakup of like how much is it from brakes, wheels, and wagons?
Jupiter Wagons Limited
February 17, 2023

Page 10 of 19 Vivek Lohia: The brake today the order book is about close to Rs.50 Crores as we have just started that business,
but as I have already mentioned that in the coming financial year you will see a significant order book coming into the brake business. The wagon order book would be close to Rs.5,200 Crores.
Komal Ladha: There is brake of Rs.50 Crores is included in Rs.5,700 Crores?
Vivek Lohia: Yes.
Komal Ladha: And the rest is from wheels I assume?
Vivek Lohia: No. The rest order book is containers and CMS crossing and load bodies also.
Komal Ladha: Okay and you said that you are exporting wheelsets.
Vivek Lohia: We are not exporting wheel sets. We are going to be exporting the brake system and we are currently exporting CMS crossings.
Komal Ladha: Okay, so are you importing wheelsets?
Vivek Lohia: We are importing wheel sets yes.
Komal Ladha: From where?
Vivek Lohia: It is mainly from China as of now.
Komal Ladha: Okay thank you.
Moderator: Thank you. We have the next question from the line of Akshay Kothari from Envision Capital. Please go ahead.
Akshay Kothari: Thanks for the opportunity. Just wanted to understand since we have a sizeable order from private players also, why not backward integrate on the wheelsets part?
Vivek Lohia: Thank you. As you were aware that till now Indian Railways does not have any policy in terms of wheelset manufacturing, so again recently only they have come up because it was a flip-flop kind of a policy. Sometimes they were allowing use of private wheelsets and then certain points they were stopping that, but now I think they have come out with a tender for wheelsets and definitely going forward there is more consistency, so we are exploring that area as well.
Akshay Kothari: Okay. Currently we do not have any plans to backward integrate because we feel that.
Jupiter Wagons Limited
February 17, 2023

Page 11 of 19 Vivek Lohia: As of now no. We do not have any plans, but we are looking at it.
Akshaya Kothari: Alluding to previous participants and from the previous con-call I think Rs.33 lakhs is the one-off sale price of one wagon, which we have been awarded. What is the cost of manufacturing one wagon?

Vivek Lohia: This is a very difficult. I do not think we are able to answer that. Again, I have told you that there is a various mix of wagons, which we do.
Akshay Kothari: The IR order
Vivek Lohia: No, I do not think I can specify in terms of cost of manufacturing. It varies from quarter-to-quarter, so it is very difficult for us to pinpoint. We are mainly manufacturing for the IR order; our order book is mainly the stainless wagon.
Akshay Ko

thari: Okay, so just wanted to understand what the element is. I understand it is a fixed price contract so have we booked stainless steel on a back-to-back basis because nickel and ferro chrome prices are very volatile.
Vivek Lohia: So we have booked a significant amount of stainless steel, but as I have told you it is a pass through for us because then we have an escalation and de-escalation formula built into our order books and which captures this movement on prices pretty comprehensively and we have seen that over the past years, so I do not see a challenge in terms of movement in steel prices, however, we have a significant coverage on our stainless steel.
Akshay Kothari: Okay and hearing it from other players it seems that these contracts were fixed price contracts?
Vivek Lohia: No. They are fixed price contracts, but there is an escalation and de-escalation formula built into all the contracts for all players.
Sanjiv Keshri: Mr. Kothari the tender is the only public domain so you can go and check that what are the terms and conditions are there.
Akshay Kothari: Okay I will do that. Thanks a lot. That is, it from my side.
Moderator: Thank you. We have the next question from the line of Anik Mitra from Finarthaa Research. Please go ahead.
Anik Mitra: Thank you for the opportunity once again. What is the status of your metro rail and high-speed train manufacturing projects? Is there any progress over there?
 Vivek Lohia: As I have told you, we have participated in a few of tenders like Bengaluru Metro and other tenders,
so we are awaiting the outcome of those tenders. As and when we get a favorable outcome, you would immediately see announcements in that space.
Anik Mitra: Okay and high-speed train means, are your referring Vande Bharat?
Vivek Lohia: High speed yes, we are also referring to Vande Bharat where we are doing a lot at the component level in that train including the brake system and then there are other parts to that train.
Anik Mitra: Did you participate in this November 30th tender?
Vivek Lohia: No. We did not participate. At the fully built Vande Bharat rolling stock level, we did not participate, and we will have significant going-forward share in the component level in that.
Anik Mitra: Okay that means you will be supplying components to some of the participants?
Vivek Lohia: Yes, to whoever qualifies in that tender as well as IR itself. ICF also will continue to manufacture the Vande Bharat, so we will be supplying to both IR as well as whoever wins the bids in these tenders.
Anik Mitra: Lastly, you did mention regarding global tender of Indian Railways. Can you throw some light over there?
Vivek Lohia: Indian Railways is supposed to come out very shortly with a global tender for close to 50,000 to 60,000 wagons and this will be a tender, which unlike the previous tenders where we had to just supply the wagons, this will be a comprehensive tender in terms of, it will be a tender where you will manufacture as well as maintain the wagon over its life of 25 to 30 years whatever they are going to specify in the tender.
Anik Mitra: Why are you referring it as a global tender? Will train manufacture also participate?
Vivek Lohia: The reason I am referring as a global tender because it will be open to the global players as well as, but you must have manufacturing facilities in India.
Anik Mitra: Okay. I got it and that was from my side. Thank you so much.
Moderator: Thank you. We have the next question from the line of Rajiv Venkatesh an Individual Investor. Please go ahead.
 Rajiv Venkatesh: Congratulations on a good set of numbers. I have a couple of questions. What is the debt profile as of
now and the cash generation, are we going to reduce the debt?
Vivek Lohia: The debt profile.
Sanjiv Keshri:

There is a zero-term loan right now. It is around Rs.20 Crores to Rs.25 Crores against our cash balance and so it is a net zero and on the working capital, we are reducing our working capital utilization, but if you see in terms of this sanction limit so we are utilizing around 50% of our sanction

limit on the working capital so it is well managed right now.
Rajiv Venkatesh: Okay. Thank you and are we exporting wagons because when you say we cater to the private sector right? Now I am asking this because our competitors have done some JV with the European players, so that they have a good visibility on the order book, and all so how are we exploring these opportunities?
Vivek Lohia: Our competitors I do not know who you are referring tod, but we already have JVs. We are one of the major players who have JVs with European players, so right now we are focusing on the Indian market, but we have also participated in some tenders for selling it in the global market so as and when we win those bids we will definitely be exporting also wagons.
Rajiv Venkatesh: Okay, thank you.
Moderator: Thank you. We have the next question from the line of Hiten Boricha from Joindre Capital. Please go ahead.
Hiten Boricha: Thanks, you for the opportunity. I have a couple of questions. My first question is on the braking system, which you mentioned the JV is going to start next year and you referred we have a current order of Rs.50 Crores so this Rs.50 Crores is for the same JV, which is going to start in FY2024 just a clarity?
Vivek Lohia: No. Right now, that Rs.50 Crores order is on the brake disc JV where we have already started the commercial production.
Hiten Boricha: Okay and the new brake disc is going to start with another JV in FY2024 that is a different one, right?
Vivek Lohia: No. That is for the brakes. We have two JVs. One is with Kovis for the brake disc and the various other railway applications such as axle boxes and other items where we have started already the machining part of the business and the foundry is going to get commissioned in March, so we are expecting that full commercial production to start by end of March. In that we have a Rs.50 Crores
 order book right now and we also have some export order books and so in the next year we will see significant revenues from that business as well as on the other business we are very hopeful that we are going to start our commercial operations early next year so and when we start our commercial operations we will also add significant order books there. Both combined, you should see a definite up take in that business.
Hiten Boricha: Can you give the total investment in this book the JVs and what kind of revenue we expect from this?
Sanjiv Keshri: As Mr. Vivek told you, we have already Rs.50 Crores order and let us see when the commercial production of this brake system will be then we can give you the exact number what would be the revenue we are generating.
Hiten Boricha: Right now
Vivek Lohia: It is through tendering so to give any specific guidance would be wrong on our part, so it is too early.
Hiten Boricha: I am asking on the investments number, what kind of amount we have invested in this both JVs?
Vivek Lohia: Investments are right now ongoing so as and when we close the investments, we will again disclose those numbers, but right now as they are ongoing, so we are not at liberty to honestly disclose those numbers.
Hiten Boricha: Okay, no problem. For my second question is on the margins so currently we are roughly utilizing, at around 55% of utilization right and as you mentioned we are looking for strong orders from the railways, so our utilizations will go up and our cost will remain the same so any color on the margin is it going to improve may be 100 or 150 basis points for the next year and next two years like any color on the margin?

Are we anywhere going to surpass the 12% margin to 13.5% or 14%?
Vivek Lohia: On margins, you will see an improvement in margins but again to give color would be wrong on our part because it depends on how much the other businesses contribute to the revenues, so on the brake business, on the commercial vehicle business, and on the container business, there is a mix it is not only the wagon. There are a lot of other businesses so depending upon on that you can also see a significant improvement in margins, but again definitely right now be wrong for us to give any kind of guidance, but what I can say is that we see an improvement in our margins going forward.
Hiten Boricha: Okay, so this 12% to 12.5% kind of margin is base, and we are not expecting any decline in this margin? It is only the northwards.
 Vivek Lohia: As of now, we are not expecting any decline unless something significant happens, but we are not expecting any decline as of now. We definitely foresee an improvement in that.
Hiten Boricha: Okay I will get back in the queue. Thank you for the clarity.
Moderator: Thank you. We have the next question from the line of Tushar Raghatate from Kamayakya Wealth Management Private Limited. Please go ahead.
Tushar Raghatate: Thank you for the follow up opportunity. Now, you are looking for the acquisition of Stone India. I just want to understand what benefit it will bring on the table in terms of revenue, margins or in terms of the new product addition?

Vivek Lohia: Yes, thank you for the question so definitely Stone India will have an impact on the revenue as it has a significant manufacturing facility, so it will help us better in executing an order book better and also as you are aware that before the company closed they were doing a business of close to Rs.200 Crores, so they have a lot of products in their portfolio, which are still very significant both when you look at the freight business as well as the locomotive as well as the other rolling stock business, so definitely we will be adding a lot of products from Stone India, which will complement our existing portfolio. It will be a good complement to our existing portfolio, so it will improve our strength going forward.
Tushar Raghatate: Fair enough. Now, we are seeing the huge demand for the Vande Bharat train, I just want to understand post this acquisition in percentage terms how much Jupiter can contribute to the total sales of the Vande Bharat?
Vivek Lohia: In percentage terms honestly, I cannot give any figure because it depends on the OEM who will be manufacturing the Vande Bharat and what is the price they are going to manufacture it at. I do not have any visibility on the manufacturing price, but we are looking at various areas in the Vande Bharat in the braking system, in the coupling system and the other areas where we are looking to be a significant player.
Tushar Raghatate: Fair enough. Thank you and all the best.
Moderator: Thank you. We have the next question from the line of Ankur Kumar from Alpha Capital. Please go ahead.
Ankur Kumar: Congratulations for a very good set of numbers and thank you for taking my question. Just a clarification almost all my questions have been answered just one clarification. You said out of that
 Rs.5,700 Crores order book, 60% will be executed in FY2024 and the rest 40% will be done in FY2025 is it right?
Vivek Lohia: Yes. You are right, but it is an approximate number, which I have given and as we keep on adding order books that will keep on changing every quarter.
Ankur Kumar: On this order book 60% order book is from the private side?
Vivek Lohia: Yes.
Ankur Kumar: In our current mix which is like Q3 can you differentiate how much was private and how much was the government?
Vivek Lohia: I do not know the ex

act numbers, but it would be in similar lines.
Ankur Kumar: On the non-railway side, the CVs side, how are the things looking on that front.
Vivek Lohia: There is a lot of positivity as you are all aware that the vehicle business in India, you are seeing a significant up take in that and as the government is putting more and more investment on the infrastructure side, on roads, on building new metro lines and on the other infrastructure definitely the steel and the mining sector, the road and highway sector there is a lot of uptake in that in these sectors and as and when there is uptake in this sector the demand for commercial vehicles definitely go up. After COVID already on the commercial vehicle side, we are back to FY2019 numbers, and everybody is very bullish that in the next one or two years we will see a lot of growth in this sector.
Ankur Kumar: Next year would be like quite a good decent jump in the wagon side, so do we have enough capacity to manufacture all this and supply?
Vivek Lohia : Yes, right now we do not have any constraints in terms of capacity and one good advantage, which we have is that we have two facilities, and both the facilities are significant additional land banks, so doing any kind of brownfield facility will not be a challenge for us and it can happen very quickly, so in terms of infrastructure we do not see any bottleneck going forward.
Ankur Kumar : Last question, what is your current capacity utilization?
Vivek Lohia : I would not know the exact number, but I think it will be close to about 70%.
Ankur Kumar : Thank you and all the best.
 Moderator: We have the next question from the line of Arvind Singh Chaudhary from RMO House Investments LLP. Please go ahead.
Arvind Singh : Good evening. I just want to know that what is the status of your QIP and are you planning it on a premium or discounted rate from the current market price.
Vivek Lohia : On the QIP front, we will be starting to work on it. We will let you know as there is any development on that and again premium and discount are very difficult for us to tell you right now.
Moderator: We have the next question from the line of Akshay Kothari from Envision Capital. Please go ahead.
Akshay Kothari : Thanks for the opportunity again. Continuing the previous participants question what is the thought process behind raising these funds, where are we going to deploy it?
Vivek Lohia : The whole idea was that going forward we are wanting to add a lot of capacity in our existing business and there are other opportunities also, which we see and the QIP document is available as and when we will go for the QIP and you will get to know the exact details of the usage of the funds

because right now it Is a work in progress so very difficult for me to specify on those lines.
Akshay Kothari : Okay. This Jupiter Electric Mobility we are planning commercial launch by Q3 FY2024, so what is our go-to market strategy in this. Can you give any colour on that?
Vivek Lohia : Definitely as we have already mentioned initially, we will be launching the smaller vehicle and it will be both targeted towards the institutional customers and also the retail and that would be the strategy and also for us it is more the vehicles which we are going to launch as I have told earlier also, they are all going to be very connected vehicles. They will have a lot of tech-in-built to the vehicles. It is not only about selling the vehicle to the customers. We are giving them much higher warranties in terms of the battery life. We are giving them a lot of fast charge capabilities which are currently not there in the market and, we will do remote monitoring of the vehicles, so throughout the journey of the vehicle there will be a very significant interaction with the users of the vehicle. They can get the best use of the vehicle.
Akshay Kothari : Okay thanks.

Moderator: Thank you. We have the next question from the line of Anik Mitra from Finarthaa Research. Please go ahead.
 Anik Mitra : My last question is in eLCV what your rule would be like what exactly you are doing. I understood that we are doing some battery pack manufacturing; commercial body you are already manufacturing, so what else you are going to manufacture over there.
Vivek Lohia : I could not exactly understand your question but whatever I have understood is that when it comes to the electric vehicle, we will be manufacturing the entire vehicle ourselves because it is our product unless right now, we are working for the OEMs. We are doing the manufacturing for them, but when it comes to the both the ELCV that is our own product and the vehicle will be rolled out by us, so we will be doing the manufacturing of the entire vehicle.
Anik Mitra : Will that be under your brand name.
Vivek Lohia : Yes, it will be under our brand name.
Anik Mitra : Okay and that is from Q3 FY2024.
Vivek Lohia : Yes.
Anik Mitra : Any ballpark number, like what sort of revenue we can identify?
Vivek Lohia : As I have stated earlier right now our focus is towards launching of the vehicle and setting up our distribution and manufacturing infrastructure, so that is where our focus is in terms of ballpark numbers, again very difficult to say right now as I have told that this market is close to about 5 to 7 lakh vehicles are sold every year and we expect electric vehicles to make significant penetration given that huge price advantages, it has especially in this segment in terms of ownership of the vehicle and the per kilometer running cost, so definitely we are very bullish on the segment.
Anik Mitra : By what period you can expect some consistent revenue flow, any guidelines?
Vivek Lohia : Again, I am telling you it is too early right now. Today our sole focus is not the volumes; it is the customer experience that is to have the right product and to provide value to our customers and that is what we are focusing on right now and we believe that if we get that right revenues and numbers will follow.
Anik Mitra : Got it. Thank you so much. Best of luck.
Moderator: Thank you. Due to time constraints that was the last question. I would not like to hand it over to the management for closing comments.
 Vivek Lohia : I would like to thank the participants for their Q&A. Everybody was very forthcoming and I am hoping that we have been able to address everybody's queries to the best possible way and as I have reiterated earlier also the company is on a strong growth path and we are seeing a significant uptake in this sector and there is a railway tender also which is going to come very shortly close to about 50,000 to 60,000 wagons so going forward we are confident on maintaining our growth path and we are hopeful to continue this journey, thank you.
Moderator : Thank you. On behalf of Systematix Institutional Equities that concludes this conference. Thank you for joining us. You may now disconnect your lines.

“Jupiter Wagons Limited
Conference Call”
April 10, 2023

MANAGEMENT : MR. VIVEK LOHIA – MANAGING DIRECTOR – JUPITER WAGONS LIMITED

M R. SANJIV KESHRI – CHIEF FINANCIAL OFFICER –
JUPITER WAGONS LIMITED

MODERATOR : MR. SIDHARTH AGRAWAL – SYSTEMATIX
INSTITUTIONAL EQUITIES

Moderator: Ladies and gentlemen, good day and welcome to Jupiter Wagons Limited call for discussion on Indian Railways halting of new application for private sector rakes and its implications hosted by Systematix Institutional Equities. As a reminder, all participant lines will be in listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal the operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded. I now hand the conference over to Mr. Sidharth Agrawal from Systematix Institutional Equities. Thank you and over to you.

Sidharth Agrawal: Yes, good evening ladies and gentlemen. On behalf of Systematics, I would like to welcome Mr. Vivek Lohia, Managing Director and Mr. Sanjiv Keshri, Chief Financial Officer at Jupiter Wagons. Without much ado, I would like to hand over the call to Mr. Vivek Lohia to give his opening remarks on, the latest discussion on Indian Railways halting of new application for private sector rakes and its implications. Over to you, Vivekji.

Vivek Lohia: Thank you. Good evening everybody. So, we have organized this call with regard to the article which had appeared on Economic Times regarding the Indian Railways halting of private rakes. So, this call is regarding the clarification of the same. So, at the outset, I would like to state that that article is a little misleading. So this, the announcement from Railways, this announcement was made on 13th March itself and this is pertaining to mainly the GPISW scheme, which is specifically for the BOXNHL wagons.

Whereas all the other railway schemes such as the CTO, AFTO, LSFTO, rest of the schemes are running as usual and with regard to the GPISW scheme also, the basic intention with Railways was that they have already given approvals for about 300 rakes, which amounts to about 18,000 wagons for which the private industry has not yet procured those wagons.

Further, they have also clarified that the applications which have been submitted, which they say is close to about 400 rakes, which is another, say, 6000 wagons, which makes it about 24,000 wagons. The whole idea was that they wanted people, this whole backlog to get liquidated because they felt that already too much, too many applications have been cleared and then they want certain revisions to be done in the scheme. So that's why they have given this moratorium because they feel that there's enough clearances which they have already given. In the meantime, they can revise and come out with a newer scheme.

I think that was the whole idea behind this. So when it comes to Jupiter Wagons, this withdrawal of the scheme doesn't have any, I would say, financial repercussions on the company, both in terms of value wise as well as order wise. As you are all aware that currently we have more than 110 rakes which are from private customers, which includes about 60 odd rakes under the GPLW schemes and about 50 odd rakes under the various other schemes. Plus, we are also under discussions with a lot of customers. So right now, DP World has come out with a tender for 24 rakes of container wagons.

Plus, with other customers also we are under discussion. With regard to BOXNHL also, when the scheme was closed on 13-3, after that we have closed orders for about close to 16 odd rakes

and we are under further discussion. So today, if you look at our order books, I think for 2023-2024 financial year and 2024-2025, practically, there is not, we don't have much headroom to take any new orders.

Orders are, we are fully booked and so, and as I have told you that 24,000 wagons and this is just one scheme, okay, this does not include all the other types of wagons. This itself, on an average, if y

ou look BOXNHL wagons in particular, if you look at the private sector, they don't buy more than 4,000 to 5,000 wagons every year. So, if you look at the run rate, you are talking about at least 4 to 5 years of run rate with the permissions which are already in place.

I think from my end, I think I have covered, regarding this, the issue and then I open it to the forum if anybody has any questions. Thank you.

Moderator: Thank you very much. We have a first question from the line of Jigar Kamdar from Systematix Group. Please go ahead.

Jigar Kamdar: Thank you, sir, for hosting this call. Sir, I have a couple of questions now from my side. Sir, if you can say something regarding the demand mix from the private sector, from the various wagons, it will be really helpful. And also on the moratorium, can it be lifted earlier than as highlighted by the Indian railways of two years? If you can throw some light on it. Thank you very much.
Vivek Lohia: Thank you, Jigarji. Okay, so on first on the wagon mix, so, that mix keeps on changing from year to year. So it is very difficult to quantify in terms of percentage. But overall, if you look at the mix about 30, I would say 30% to 35% would be the box and wagons. Then another 30 would be the -- roughly these all rough numbers because it keeps on changing year-to-year. Another 30% would be your container wagons.
Then there is a sizable requirement for auto rigs. I think next year you will see a huge requirement coming in for auto rigs because there's a new Tolo auto carrier which we are working on and the industry is working on. So those will, the prototypes and the oscillation trials will all get completed this year. When that is done, you will find a sizable requirement coming in for auto rigs.
Plus there is a requirement for rigs for carrying loose fly ash cement, which is a constant requirement from the cement industry. And now, with the GPL, because the Supreme Court also coming down on the pollution caused by the open wagons. So especially for carrying fly ash and loose cement, you will find more and more of the BTPA, BTAP, BFNS kind of wagons getting inducted.
And then there are also those hopper wagons which are needed. With regard to the scheme getting, so the whatever indications which we are getting from the railway board is that definitely the scheme will get, maybe will get lifted earlier because again, there's a lot of also pressure from the industry, especially the steel industry. But definitely, there will be some changes in the new revised scheme. That is the indication which we are getting.
Moderator: We have a next question from the line of Pritam from Wealthyvia. Please go ahead.

Pritam: My question is regarding two things. One is the braking system, the plant that you had restarted, how that is shaping up? Second is from Tetra wagon, what kind of technology transfer or export market is getting open from the large stakeholders in the company? And third is about the green power motors, any rough estimates, ballpark figures for the capex and when it will be starting, what kind of pricing it will be on green vehicles? Thank you.
Vivek Lohia: Thank you. Okay. With regard to the brake systems, there are two, one is for the brake disc. You know, I'm happy to announce that now our plant is fully commissioned. We have already started delivering to Indian railways as well as now we have also going to be starting the exports very shortly in a couple of months. So in the financial year ’23, ‘24 on the brake disc side, we should, we are looking at a turnover of at least about INR100 odd crores, which I think next year should grow to INR200 crores to INR300 crores.
On the brake systems, again, we are happy to announce that now railway has cleared us for the LHB brake systems also. We got our approvals last week itself. So now we are going to be starting to bid for the tend

ers. So hopefully this year we should get an order book of at least again INR200 odd crores in this also. So next financial year, I think both the businesses combined should be at least a INR500 odd crores, should be the turnover and it is in line with whatever we have stated earlier also.
On the Stone India also, we are very hopeful that within April, we should complete the acquisition of Stone India, which will further strengthen our position in that business. So this is on the braking business and with regard to Tatravagonka, the cooperation has been very strong and we are already exploring with them orders for the African market. There are certain tenders also which we have participated in along with them. Then they are also looking to buy certain components from us for the European, for their own European requirements.
And most importantly, we are expecting the global tender of the Indian Railways very shortly in which Tatra will be an important and a very active participant in the Jupiter consortium for the tender.
Finally, on the EV side, again, the progress is in line with whatever we had announced earlier and as stated that by end of this year, we will be launching our vehicle right now. It is going through the obligation process. So by end of this year, we will be definitely launching our EV vehicle. In terms of the capex plan, right now, it is a work in progress as and when it is frozen, we will come back to you. Thank you.
Moderator: Mr. Pritam, are you through with the question?
Pritam: Yes, thank you. I will get back in the queue.
Moderator: We have a question from the line of Parvez Qazi from Nuvama Group. Please go ahead. Mr. Parvez Qazi, please go ahead with your question.

Parvez Qazi: Yes. Hi. Good evening. My question is regarding the global tender from Indian Railways that you just alluded to. So just wanted to check what could be the potential size of this order and when do you expect deliveries to start on this order considering that anyways the current order

book for most of the major players is already full. So by when can we start delivery on this global tender? Thank you.

Vivek Lohia: Thank you, Mr. Qazi. So with regard to the global tender, the tender quantity is going to be about 50,000 odd wagons and then besides that also, I think Railway will be procuring other wagons also. So in the next year, we expect tenders for at least 80,000 wagons from Indian Railways. For the global tender, I think average price could be anything between INR60 lakhs to INR80 lakhs.

Once the order is finalized, delivery is supposed to commence one year from the placement of orders. So yes, that is I think the timeline and maybe obviously for any, if Jupiter today wins the bid, we are looking to set up additional infrastructure to deliver these wagons because as you rightly said that at least for the next three years, we are our order books are very strong and capacities are more or less booked. Thank you.

Parvez Qazi: Thank you. So would it be fair to say that anyone who gets this order will have to set up a new facility?

Vivek Lohia: No, no. I am saying that Jupiter will definitely be setting up additional facility. So I cannot, for the rest of the industry, I cannot comment. But because in case of Jupiter, we will be setting up because as I said that our current order books which we have and what we are expecting should, more capacity is going to be more or less exhausted for the next three years. So we will be setting up additional capacity for these deliveries.

Parvez Qazi: My second question is when you mentioned that price could be INR60 lakhs to INR80 lakhs, is the higher price because of some change in design specifications or is it because of inclusion of the AMC business also?

Vivek Lohia: Both. Definitely there is, the design specifications are completely changing in this wagon. Railway has, tha

t is the primary reason for it to be a global tender. They want a 25 ton axle load; thus they want higher payloads in the wagon. So definitely the wagon will go through sizable design changes. Plus they want the AMC to be done for 30 years. So all that put together will definitely have a price impact on the wagon.

Parvez Qazi: Sure. Thanks. That's it from my side and all the best.

Vivek Lohia: Thank you.

Moderator: Thank you. We have a question from the line of Kush Tandon from Ananta Capital. Please go ahead.

Kush Tandon: Thank you for the opportunity, sir. So I just missed the earlier part of the question, but I got the answer from your previous comments. With this development of the recent news of the Indian Railway for which you have organized this call, I am assuming that our order book is absolutely not disturbed by this. Also, will it be possible for you to quantify how many wagons are you supplying to this particular development or this particular field for the next two years in terms of our order book?

Vivek Lohia: Okay. Yes. Thank you, Mr. Tandon, for your question. So again, I would like to state is that, the scheme railway has are basically saying is that they will not give any new licenses under the scheme. But already they have there about 300 odd licenses. This is railway numbers only which they have already issued for which those wagons have not been inducted. And plus they are issuing another 100 odd licenses of which applications are already are there in the pipeline when the scheme got closed.

So and despite the closure of the scheme, there is more than enough wagons which are in the pipeline. And right now, I think under the scheme, as I had stated at the beginning of the call, we have around 60 odd rakes which we are delivering right now under the scheme. And then there are also a large number of rakes which are under negotiations.

Kush Tandon: Thank you for this clarification. I am sorry. I joined the call a little late. That was my question. Thanks a lot, sir.

Vivek Lohia: No, no issues.

Moderator: Thank you. We have our next question from the line of Anurag Jain from AART Ventures. Please go ahead.

Anurag Jain: Hi. Sorry. My questions have been answered. Just one clarification on the rakes business. You mentioned INR100 crores of revenue on the break disk and INR200 crores on the brake system

for FY'24. Is that correct?
Vivek Lohia: Yes. So, on the break disk, INR100 crores of revenue, we have said on break system side, we have said that we expect INR200 crores of order books. Now, again, the order books, how much because we got the final clearances, as I mentioned last week itself. Now, again, those order books, how much are we able to execute this year? That is a little early for me to, give the correct figures. But we are expecting at least INR200 crores of order books on the break system side. But on the break disk side, since the approvals had come much earlier, so execution has started. So, we definitely will be doing business of about INR100 crores, out of which a sizable amount will be exports to the European market.
Anurag Jain: Sure. So, INR100 crores revenue expected on the disk side and INR200 crores order book on the break system, which will be…
Vivek Lohia: On the break system, I don't know how much of that we will be executing? Those figures, I think, later down the year, I'll be able to elaborate.
Anurag Jain: And when would the tenders open? I mean, is it on a rolling basis?
Vivek Lohia: Tenders on a rolling basis. So, we are participating in one tender in a couple of days itself. These are not like, wagon tenders, which are annualized. These are on a rolling basis. It keeps on coming out.
Anurag Jain: Sure, sure. That's it from my side. Thank you so much.

Moderator: Thank you. We have our next question fro

m the line of Mangesh Kulkarni from Almondz Global Securities Limited. Please go ahead.
Mangesh Kulkarni Sir, thanks for giving this clarification on the scheme. I just wanted to know about this Stone India acquisition and the progress and when the figures will start reflecting in our consolidated statement?
Vivek Lohia: So, first, the acquisition is not yet complete. So, we expect the courts to give the final order this month. So, I think once the acquisition is completed, it will take us at least a quarter to, to get things started in Stone India. So, hopefully, I think if the acquisition happens in the next couple of months, then before end of this year, we will operationalize the business.
Mangesh Kulkarni: Okay, sir. Okay. Thank you very much.
Moderator: Thank you. We have a next question from the line of Balasubramanian from Arihant Capital. Please go ahead.
Balasubramanian: Sir, I want to understand the demand side, like if you go to break in terms of percentage, which are the sectors we are experiencing more demand, like cement, steel, coal sectors and that would be really helpful. And another thing on that manufacturing sales volume side, we have increased from April to February, we have increased the production sales volume to 200 to around 600. And Jan, it's almost 2 to 3x of growth.
Vivek Lohia: Can you repeat the second part of your question with regard to the sales, your voice is… The first part I could get with regard to the scheme, the second part I could not follow at all.
Balasubramanian: Sales volume side, I am referring to that, April sales volume was 206.
Vivek Lohia: Sorry, your voice is breaking, I think if you could reconnect with some other phone because honestly, I am not able to understand your question.
Balasubramanian: Okay, fine, sir. I will come back.
Moderator: Thank you. We have a question from the line of Pritam from Wealthyvia. Please go ahead.
Pritam: So, my question is regarding the monthly volume. Right now, like we are doing around 300, 312 wagons per month, I think. Whereas Titagarh is doing around 630 and Texmaco is doing around 350 or so. So, post this order and participation and provided we participate well into the tender, what do you see? How much monthly volumes we will do and what will be the average cost shifting? The previous order as well as current order. Average wagon ASP basically will shift because of the new order, where it will go?
Vivek Lohia: Okay, Pritam, first I would like to clarify that we are not doing 350 wagons per month. Last month itself, we did about 600 plus wagons. So, on an average, we have always been doing more than 500 wagons and now we are doing close to 600 wagons every month. So, I think let me clarify that first. Second, I think on the execution side, I think you wanted to understand. I think we are today one of the best in terms of execution because if you know Texmaco, again the figures are much lower.

Titagarh is also only executing one kind of railway wagon. Whereas, if you look at our mix, we are doing since we are supplying mainly to the private sector as well as to Indian Railways. So, we have a very varied mix of wagons which we are supplying and that too at a higher quantity.

So, that way our entire production process is much more diversified and much more stronger.
So, we are ready for any challenges which comes in the future.
Pritam: Okay. Thank you so much. So, average value where it will shift? The previous one cost was around INR35 lakhs?
Vivek Lohia: Today, what we are executing, our average value is INR40 lakhs plus. So, because again we are executing more high value orders. So, our average price is INR40 lakhs plus.
Pritam: Okay. Which might shift little higher after this order?
Vivek Lohia: Yes. Going forward, obviously expectation is that it will shift higher.
Pritam: Okay. Thank you so much.
Vivek Lohia: Once the global

tender you get the order book, definitely the numbers will be much bigger.
Pritam: Right.
Moderator: Thank you. We have a next question from the line of Tushar Raghatate from Kamayakya Wealth Management. Please go ahead.
Tushar Raghatate: Good afternoon, sir. Sir, as you mentioned this global order, I was just calculating that you said the wagon order is in the quantum of 50,000 to 60,000. So, considering the INR30 lakhs-INR35 lakhs, it is coming about near to 2,000. Even if we get the 10% of that share, it is coming about 2,000. You know, 2,000 order book. So, I just want to understand till what extent we can get the orders from this upcoming global order.
Vivek Lohia: So, one is I think the wagon price or average price will be much higher than the 35 lakhs which you have mentioned. Secondly, you know now what kind of order book which we will get is very difficult to say. I think once the financial bids are open only, we will come to know. But what I can definitely say that we are in a very strong position when it comes to the tender as and when it comes out.
Because again we have a very strong partnership with Tata Wagon Car and whatever the design parameters railway is looking for, we are one of the strongest players you know right now in the industry who are in a position to deliver on the design parameters sought by Indian Railways.
So, definitely on the technical side, we are very strong when it comes to the wagon design railway is looking for. But however, again it's you know whether we win the order book or not, it is time will only tell.
Tushar Raghatate: So, on this Vande Bharat train like government has mentioned they are planning for 400 volt Vande Bharat train. So, I just want to understand what contribution from this big order we can get to Jupiter Wagon business in terms of the products we can supply to Vande Bharat train.

Vivek Lohia: So, it's a good question. So, you know Jupiter is not looking to directly bid for the Vande Bharat because we don't see any you know real profit opportunities there. If you look at you know historically in India last 10 years whoever has supplied rolling stock be it on the metro side, on the railway side, on the passenger side, nobody has really made any money and I think this right now it's very competitive and there is more on the supply side which is available than on the demand side.
But definitely you know already so a brake disc and the brake system, these are the two areas we are looking to supply on the Vande Bharat side. Then there are certain components also which we are already working on. So, we are working again very closely with people like Simmons, with the Russian consortium which just won the bid people. So, you know and as the private sector participation increases in the Vande Bharat so over the next few years you will see that Jupiter is participating in terms of on the component side a participation will definitely you will see a sizable participation from our side. But we are not looking to bid for the rolling stock.
Tushar Raghatate: Sir, on this DFC, the government has a target to complete this Western and Eastern DFC by June 2024 if I am not mistaken. Sir, I just want to understand the private wagon you know orders going forward after the completion of DFCs what sort of opportunity you are seeing in the private space?
Vivek Lohia: See on the private space as I said we feel that there is a huge opportunity and as and more the railway infrastructure improves and you will see the private requirement, the quantum will keep on increasing. I think again with the DFC you will find a huge increase I think on the requirements for container wagons. Again for the box and wagons and other specialized wagons.
And as and how railway keeps on improving its infrastructure I think that it is now a question of the--I think there is a very distinct advantage on transpo

rting goods through rail. That is an
undeniable fact. It is I think it is a question of infrastructure. As the railway infrastructure keeps on improving the demand will keep on rising.
Tushar Raghatate: Sir, one last question on your acquisition on the Stone India. I just want to understand what sort

of impact in good terms it will have on our margin going forward going two to three years down the line.
Vivek Lohia: As I have said you know Stone India will help us and expand the brake business and brake business by its nature since it is a very you know globally and as well as in India it is a high technology item and there are not many players in the segment and not very easy to enter the segment. So you know it is going and it will help us expand our capacities and they have also lot of you know licenses which are still very relevant. So definitely it will help improve the size of our brake business and I think in the next three to four years we expect our brake business to be anything close to about anything between an INR600 crores to an INR1,000 crores business. So it will definitely have a huge impact on our EBITDA margins.
Tushar Raghatate: Sir, enough sir. Thank you and all the best.

Moderator: Thank you. We have our next question from the line of Usha Parekh from UDP Investments. Please go ahead.
Usha Parekh: Thank you for your time today sir. Just one question on the export markets. You said you plan to start exports probably this year. So what is the kind of you know percentage targets or percentage expectations you have in terms of overall export revenues over the next two to three years sir?
Vivek Lohia: So on the brake disc side I think we are looking at least about 30% to 40% to be our export or whatever we manufacture. And on the brake system side I think it's little early but definitely again it's going to be sizable numbers only going ahead.
Usha Parekh: Okay. Thank you. And just one more thing to answer the prior question. In terms of you know the components that you are looking at near the newer opportunities, any specific big segment that you feel will help the company grow in the next two to three years apart from the wagons and the brakes on the railway side?
Vivek Lohia: So again, as I have told you that on Vande Bharat and other rolling stocks, the metro, there are lot of other components which we are working on which right now we cannot disclose. Those are all work in progress. So we expect sizable amount of business to come from those products also. But right now primarily our focus besides on the railway side primarily our focus is on our wagons and on the brake system which itself we see a huge potential in the next five years. And then I think the container business is also doing very well for us. Again we see a huge potential there. And then obviously the EV business which we have recently entered. So we are also exploring those on the passenger side and there is a lot of areas which we have already a lot of forward discussions. But as and when they materialize, we will announce the sales.
Usha Parekh: Thank you, sir. All the best.
Moderator: Thank you. We have a question from the line of Anurag Jain from AART Ventures. Please go ahead.
Anurag Jain: Hi. Since we wanted an update on the availability of wheel sets, I believe we had imported wheel sets in the last quarter to ensure consistent supply. Is the situation any better as of today? And secondly, given that Railways has awarded a contract to RK Forgings and Titagarh Wagons for wheel set supply for 20 years, what kind of benefits do we see for all the wagon manufacturers? Any comments on that?
Vivek Lohia: Okay. Yes. Thank you. So on the wheel sets, we are continuously, I think, there is a pipeline of imports which are coming in from the global market and I think those supplies are continuous. So we are not facing any challenges when i

t comes to supplying of private wagons. On the railway side, I think Indian Railway has done a very good job. So they are producing enough wheel sets right now. So again, on the railway order book, again, we don't face any challenges. So railway has decided not to give wheel sets for the private orders for which only we are importing. So on the railway side, we don't see any challenges. On the new allocation which has

been done to Titagarh, it's again to Ramkrishna Forgings, it's too early. I think initially as per the tender, they have to supply the wheel sets to Indian Railways. So it is again the decision of Indian Railways, how and what modus operandi they do to allocate those wheel sets. So I think it's too early to comment on that.
Anurag Jain: So as of now, there is no allocation for private supplies. Is that correct?
Vivek Lohia: Yes. There is no, Indian Railways is not allocating any wheel sets for the private supplies. But that's not a challenge for us because we have already, itself, a year back we had factored that in. And we have placed enough orders. So as I said earlier also, today we have about 30,000 wheel sets of orders which we have already placed. So those are all in the, they are coming continuously

and they are in the pipeline.
Anurag Jain: So some imports will still continue?
Vivek Lohia: Imports, yes. It's happening on a regular basis. It's an ongoing thing.
Anurag Jain: Sure. Thank you so much.
Moderator: Thank you. We have a question from the line of Pawan Kumar Roy, an individual investor. Please go ahead.
Pawan Kumar Roy: Good evening. I must compliment you for the excellent number which you have mentioned. About 600 plus wagons you have produced. And it is laterally going to have an impact on the revenue and the profitability of the company. My next question is in two parts. Firstly, on your borrowings. You have INR234 crores borrowings. How do you plan to reduce that? And secondly, on the capex. What are your plans for the new capex? Because you are visualizing the next two to three years, four years, you are likely to increase the revenue by another INR1,000 crores. I want to know your plans.
Vivek Lohia: Okay. Yes, thank you. So on the borrowing, it's mainly, we don't have any substantial term loan exposures or less than INR20 odd crores. It is mainly, I think, working capital. So it is a short term. These are all very short term borrowings and working capital related. So today if you look at balance sheet, we are a net debt free company. So and on future capex plans, as I have already mentioned on the breaking business side, most of the capex has been undertaken by us. And beyond that also, definitely, there is a capex which is, there are substantial capex which are going to happen. But again, since we are a net debt free company, we have very strong cash flows also coming in. So our cash flows, would be more than adequate right now to meet all our capital requirements. And in the near term, we don't visualize any additional bank borrowing for our capex requirements.
Pawan Kumar Roy: Thank you, sir.
Moderator: Thank you. I now hand the conference over to Mr. Sidharth Agrawal for closing comments. Over to you.

Sidharth Agrawal: Yes, on behalf of Systematix, I would like to thank Shri Vivek Lohiaji and Sanjiv Keshriji for the timely call today. Thanks a lot to all of you once again. Good evening.
Moderator: Thank you. On behalf of Systematix Institutional Equities, that concludes this conference. Thank you for joining us. And you may now disconnect your lines.

Call: Jun 2023

Deepesh Kedia
Company Secretary

"Jupiter Wagons Limited
Q4 FY23 Investors Conference Call"

May 26, 2023

MANAGEMENT : MR. VIVEK LOHIA – MANAGING DIRECTOR, JUPITER
WAGONS LIMITED
MR. SANJIV KESHRI – CHIEF FINANCIAL OFFICER,
JUPITER WAGONS LIMITED

Moderator: Ladies and gentlemen, good day and welcome to Jupiter Wagons Limited Q4 FY23 Investors Conference Call hosted by Systematix Institutional Equities. As a reminder, all participant lines will be in the listen only mode. And there will be an opportunity for you to ask questions after the presentation concludes.
Should you need assistance during the conference call, please signal an operator by pressing '*' then '0' on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Sidharth Agrawal from Systematix Institutional Equities. Thank you and over to you, Sir.
Sidharth Agrawal: Good evening, ladies and gentlemen. Thanks for joining us today on the Q4 and FY 23 Earnings Call of Jupiter Wagons Limited. On behalf of Systematix I would like to thank the management for giving us the opportunity to host this Earnings Call.
Today we have with us Mr. Vivek Lohia – Managing Director and Mr. Sanjiv Keshri – Chief Financial Officer. I will now hand over the call to the management to give their opening remarks and after that we can open it up for Q&A. Thanks and with that over to you, Sir.
Vivek Lohia: Thank you Sidharth for the introduction. Good evening, everyone and thank you for taking the time to join us for the Q4 FY23 Earning Call.
The Results were declared yesterday, and I hope that each one of you had the opportunity to review them.
FY23 has been the best year in the history of Jupiter Wagons Limited as we registered the highest ever annual Revenue, EBITDA, and Profit after tax. Importantly, we continue to witness strong growth momentum as the total income of Rs. 2,074 crores in FY23 was higher by 75% on a year-on-year basis. EBITDA of Rs. 259 crores was higher by 120% on a year-on-year basis and EBITDA margin has expanded 260 basis point from 9.9% in FY22 to 12.5% in FY23. I am sure all of you have noticed that we delivered an industry-leading EBITDA margin of 12.5%.
PAT was Rs. 125 crores and PAT grew 151% on a year-on-year basis. Recognizing this performance our Board of Directors has recommended the maiden dividend for the company of Re. 0.50 per share on a face value of Rs. 10.
A quick word on our quarterly performance:
Total income was Rs. 713 crore in Q4 quarter higher by 96% on a year-on-year basis. EBITDA was higher by 191% on a year-on-year basis at Rs. 94 crores. The EBITDA margin in Q4 was 13.2% higher than the full year margin of 12.5% indicating the direction in which we can further

improve upon our industry-leading margin profile. Profit after tax of Rs. 41 crore is nearly three times the PAT in Q4 last year.
A recent development that I wish to highlight is the successful fund raise of Rs. 125 crore through a QIP offering earlier this month. The QIP received an overwhelming response from marquee investors like Tata Mutual Fund, Ananta Capital, and ITI Mutual Fund to name a few. The funds raised through QIP will be utilized for the acquisition of Stone India, working capital optimization another corporate purpose thereby fueling our growth. We are highly excited about

our growth prospects given the unprecedented investment lined up across the country to address the shortfall in infrastructure and cater to the demand for more efficient and competitive mobility solutions.

I will now walk you through the outlook for each of our business lines:

The Indian Railway has made significant investments in its development including rail track, signaling systems, terminals and more. These investments are aimed at expanding capacity. However, to fully utilize the planned infrastructure the Indian Railways need to increase the wagon capacity. Currently, the wagon fleet size stands at about 3,00,000 units as of 2020. According to forecast by the National Rail Plan the total wagon fleet size required is estim

ated
to be around 5,50,000 units by 2031 and 1,000,000 units by 2051. This means that there is a projected incremental demand of approximately 2.5 lakh units by 2031 and 7.5 lakh units by 2051. The current capacity of wagon manufacturers in India is around 30,000 units per year. However, this capacity has been significantly underutilized as Indian railway has been procuring an average of 8,200 annually over the past six years. In the fiscal year 2022-23 Indian railways plan to procure 90,000 wagons over a period of 39 months which translates to approximately 30,000 wagons per year for the next three years. Thus, the visibility of government ordering is high as multiple tenders including a large global tender is likely to be launched in the next three to six months. These tenders are expected to amount to a requirement of around 60,000 to 80,000 wagons in aggregate. This aims to utilize the existing manufacturing capacity consistently and effectively. Following a prolonged period of slow growth, the wagon industry has experienced a revival driven by government emphasis on infrastructure development and expanding capacity. Currently, approximately 30% to 35% of our wagon order book consists of private sector orders. As a result, the freight wagon business continues to enjoy high visibility and will sustain at this level at momentum from the private sector is expected to continue for the next couple of years.

Our Brake discs business is expected to generate initial revenues in FY23- 24 as orders have already been received and execution has commenced. We expect to scale up order bookings and generate annual revenues of Rs. 200 to 250 crores within two years of commencement of business with equal contribution both from domestic as well as from the export markets.

We had discussed our braking system business last quarter. I am happy to inform you that in the braking system business orders have been received for the supply to manufacture of brakes for passenger coaches. The first order for freight brake system was also received from Indian Railways. We are looking on certification of brake systems for freight wagons which allow it to cater to requirements of Indian Railways freight division as well as our own captive requirements. We aspire to generate the revenue run rate of Rs. 250 to 300 crores per annum from this business by the end of FY24-25. Both the brake business, i.e., Break disc as well as the braking system have potential to scale to a combined revenue of about Rs. 500 crores over the next two years.

The electric vehicle market in India is experiencing rapid growth and with much of the focus on passenger vehicles, two and three wheelers. In January, at the Auto Expo in New Delhi we launched 2 Electric LCVs. These vehicles have received an overwhelming positive response. Jupiter Electric Mobility, the Commercial electric division of Jupiter wagons aims to establish itself as the leading player in India's commercial electric vehicle segment. Our strategic alliance and partnership with Green Power have played a pivotal role in our progress. With the introduction of JEM TEZ and EV Star CC Jupiter Group is entering a new era in the EV market. These E-LCVs are powered by batteries and offer range of 80 to 250 kilometers on a single charge. Our commercial production is scheduled to commence in the 4th Quarter of 2024 marking an important milestone for us.

Looking ahead:

We have a vision to develop a comprehensive range of electric vehicles and are evaluating partnerships in order to widen the range of products. For the near term, the focus will be to develop a portfolio of three to four vehicles with payload capacity between 1 to 5 tons. To summarize, our position in the order book continues to remain strong at about Rs. 6,000 crores as on March 31st, 2023. Currently we have a high visibility in terms of our growth at nearly

three times the annual revenue of Rs. 2,000 crores in FY23.

With this, I would like to take the opportunity to open the forum for any questions you may have. Thank you.

Moderator : Thank you very much. We will now begin with the question-and-answer session. We take the first question from the line of Ankur Kumar from Alpha Capital. Please go-ahead Sir.

Ankur Kumar : Sir, my first question is on the order book, so on Rs. 5,800 crore order books say Rs. 6,000 crores, can you please bifurcate it into various segments please?

Vivek Lohia: So, as I have told you the order book is about Rs. 6,000 crores out of which Rs. 5,000 crores are for wagons and the balance order book is mainly for our CV business as well as well the container business and as I have told we have already started getting some order books on the

brake systems also, but that would right now constitute a very small number which will increase in the subsequent quarters. This also includes an order book of about Rs. 200 crores for Weldable CMS Crossings.
Ankur Kumar: Sir on execution can you please explain how much timeline because in the last call I think we said that 60% of the order book will be executed in the next year FY24, so is that still holds?
Vivek Lohia: So, I do not know in terms of percentage, but right now we are supplying on an average last year we supplied about 450 to 500 wagons to the railways per month and now we have already scaled up our supplies to about close to 600 wagons. So, the target is that before end of the year we will go up to close to 700 wagons every month.
Moderator: Thank you sir. We take the next question from the line of Mr. Vasudev from Nuvama. Please go ahead.
Vasudev: So, in the presentation you have mentioned about the new wagon tender for 50,000 to 80,000 wagons, so my first question is whether it will come in Q2 or Q3 and after the tender is floated how much time will it take as in by when will the order get finalized?
Vivek Lohia: So, we expect the tenders to come out in the next three to four months and generally typically the government does not take very long to finalize the tenders within three to four months they tend to finalize the tenders. So, we expect the orders to come either in depending upon when the tender is out either in Q2 or Q3 we expect railways to give us the orders.
Vasudev: And my second question is on the private sector ordering, so how is your ordering scenario looking like from the private sector and if you can share your order intake from private players in FY23 and how does that compare with the previous three to four years?
Vivek Lohia: So, what we are seeing is that the order book from the private sector is being very consistent and there is a lot of visibility still. So, as we have already mentioned that for FY23 our order book capacity is fully utilized. So, now we have already started getting orders from the private sector for FY24 and we do not see much of slow down and on the contrary, I see a very strong uptake in order book for the next year.
Vasudev: So, like in FY23 our order intake was higher than what we had in FY20-21-22 from the private side?
Vivek Lohia: Yes, definitely.
Vasudev: And lastly sir on the General-Purpose Wagon Investment Scheme (GPWIS) scheme the government has halted this scheme, so what are your views on that, and do you expect the government to come out with a new scheme or how do you see it?

Vivek Lohia: Can you please repeat the question I could not follow it.
Vasudev: On the GPWIS scheme?
Vivek Lohia: See again the GPWIS scheme just pertains to one type of wagon that is in BOXNS wagon. So, there is a misconception that the government is banned private sector of placing orders for all the types of wagons that is not true. We are seeing a very robust demand which is coming for say container wagon

s, the automobile wagons for carrying wagons for coils wagon requirements from the cement sector and even when you look at the requirements under the GPWIS scheme, that is the BOXN wagon, the whole idea of the government is that there is a pending they have already given permissions about close to anything between 300 to 500 rakes that is the number which the railway ministry is saying. So, their idea is that for the next two years they want these rakes to be inducted. So, that is close to about 30,000 odd wagons, which is a substantial number. So, they want these wagons to be inducted before they give new permissions. So, it is not that they have banned these private sector wagons to be inducted. The whole idea is that there is a huge backlog which is there. So, they wanted that backlog to first get fulfilled before they give fresh permission.
Moderator: Thank you. We take the next question from the line of Mr. Naitik Mohata from Sequent Investments. Please go ahead, Sir.
Naitik Mohata : So, my first question is regarding our JV Dako which is for the brake system. So, we were under the impression that the brake system JV would ramp up pretty quickly as almost Rs. 250 crores of brake systems are needed by Jupiter Wagon for self-consumption as well and the opening remarks were probably like Rs. 200 crores to 250 crore run rate in a two-year, three-year period, so could you just explain more on that?

Vivek Lohia: No, it was not in the two-year, three-year period what we are talking about a Rs. 250 croresrun rate next year itself in FY 24 what I mean to say the financial year 24-25 we are saying that we will ramp up to Rs. 250 crores. What I said in my opening remark is that we have already got the certification for the passenger coach business where we will start now booking orders from Indian Railways and execution has already started this year itself, but then obviously since the orders will start coming this year majority of the executions you will see in the next financial year and on the freight side of the business as I have stated that we expect to get a final certification by the end of this year so you will start seeing the execution again happening next year where majority of the captive business will start getting reflected.
Naitik Mohata : So, sir what you are saying is we can expect somewhere around Rs. 200 crores, Rs. 250 crores of revenue out of this in FY24 itself?
Vivek Lohia: Financial Year ‘24-25.

Naitik Mohata : And sir in Financial Year ‘23-24?
Vivek Lohia: FY24 is as I have told you that we are basically this is the year where we will start getting the order books from railway. So, I cannot give you exact numbers, but from Quarter 3 onwards you will start seeing execution happening, but for the next financial year I can definitely give you indication in terms of our revenues because we will have order books in hand. So, you have to appreciate that we cannot predict exactly when the tenders will come out and when will the railway workshops finalize those tenders. So, we expect the tenders to start coming out from July and August and then as and when they finalize it then we will start our execution.
Naitik Mohata : Sir what is the kind of investment that we have undertaken for the brake systems JV and considering the capacity that we have put up, so what kind of peak revenues do you think can be generated from the segment?
Vivek Lohia: So, as I have told earlier also most of the investments which are needed in the JV has already been done. Incrementally we are looking at about from Jupiter side our incremental investment of about Rs. 50 odd crores because as you would appreciate it is a 50-50 JV so our partners will be quickly contributing in terms of investments and in the next two to three years, we are looking at the business of we have enough capacity built in for the revenues to go up to about Rs. 1,00

0
odd crores.
Naitik Mohata : Secondly sir regarding our acquisition of Stone India, so if you could give any updates what is the acquisition process is looking like and when can we start some production there?
Vivek Lohia: So, we are very hopeful that we will get the final orders very soon. So, again very difficult to predict the timeline when it comes to the judiciary, but I think we are very confident that in the next one, two months we will get the final order and our road map is also pretty clear. I think once we get the acquisition within two quarters, we will be in a position to start commercial production.
Moderator: Thank you. The next question is from the line of Mr. Jayesh Shah from OHM Portfolio. Please go ahead.
Jayesh Shah : I have never looked at this company before so I am really surprised at the EBITDA contribution margin of 12.5% which is industry leading and I see that all the peers are earning EBITDA of between 5% to 8% and secondly your asset turnover of ratio also looks very high, so could you please explain what is differentiating Jupiter wagons from the rest?
Vivek Lohia: One is that we have a very integrated operation when it comes to comparison between our peers and then secondly, I think in terms of our order book also we are very selective when it comes to our order book, and we have been very focused on execution. I think these are the things which separate us from our competition.

Jayesh Shah : But these are all tender orders so I thought that margins cannot be so different between.
Vivek Lohia: As I told you it is about the speed of execution and the integration. So, I think that is where the major difference in and then if you look at the order books we have a very strong order book from the private sector I think where we are making much more specialized kind of wagons and we have if you look at the range of wagons also which we produce compared to our peers we are producing same volume of wagons. We are producing one of the highest wagons in the industry, but we have a very vast range of wagons so that also helps us in our margins.
Jayesh Shah: So, does it imply that your private sector business is at say roughly around 15% to 20% margin in the government business would be at lower margin?
Vivek Lohia: No, I would not say that, so I am trying to say is that we have are making much more specialized wagons compared to when the government places orders for wagons they generally place orders

for very standardized kind of wagons whereas compared to our peers we make much more specialized wagons. So, that definitely helps in our margins and as I have told you very clearly that our integration is much stronger than our peers as well as our execution. So, that definitely contributes to our margin.
Jayesh Shah: And can you talk on the asset turn as well because your Gross block also is pretty low?
Vivek Lohia: I think that is the question you have to ask my competition rather than asking again as I have told you we run a very tight ship and for us execution is the key. So, maybe I think that is where we are differentiating ourselves, but I think you have to ask the competition this question more than us.
Jayesh Shah: And over next two, three years would your revenue mix look very different when the other businesses scale up?
Vivek Lohia: As I have told we are ramping a production capacity. So, obviously that will be commensurate in the revenue numbers also and as we are adding the brake business and obviously on the freight side the brake becomes captive for the wagon business. So, that will also reflect on the margins.
Moderator: Thank you. The next question is from the line of Mr. Ankur Kumar from Alpha Capital. Please go ahead.
Ankur Kumar: Sir in terms of last year's revenue Rs. 2000 odd crore, can you we say that wagon would be around Rs. 1,600 crores?
Vivek Lohia: Yes, I think that is

the right statement.

Ankur Kumar: And sir on tax rate can you comment last year was quite high, so is it like we had past losses and that is gone?
Sanjiv Keshri: This year our tax is coming at a 49%, but actually we have opted the 25% upon this year onwards and after the merger we filed the revised return of the earlier year also from the first October 2019 and opted the 25% rate of tax, so if you calculate the tax at 25% it would come to around Rs. 52 crores on our PBT and there are the deferred tax charges are charged this generally arise due to the prior year brought forward losses which we had adjusted against our old two years and second is due to change in the tax rate earlier last year when we close our books of accounts of March 2022, we considered the deferred tax at 33% and this year 25%. So, there is a charge of that 10% extra. So, around Rs. 25 crores are the deferred tax charge and again the Rs. 5 crores, Rs. 6 crores are the nondeductible expenses on which the deferred tax has been created. So, it comes to around Rs. 80 crores which coming around 49%, but onwards it will come to 25%.
Ankur Kumar: For FY24 it will be 25%?
Sanjiv Keshri: Yes.
Ankur Kumar: Sir one last question in railway wagon we did 1,532 wagons in Q4 so like 500 per month now we are saying we have moved to 600 monthly run rates in wagons, is it like from the April we just moved to 1,500 wagons or like we moved earlier?
Vivek Lohia: When I am talking about 600 odd wagons, we have already started executing that kind of numbers every month.
Ankur Kumar: And any commentary on margins because you earlier also mentioned that we are the best and we expect to stay the best, so any commentary on that front?
Vivek Lohia: So, I think the margin in FY24 will continue to remain the same and as I have told earlier that as and when the brake business starts contributing you will find some incremental increase in margins.
Moderator: Thank you. The next question is from the line of Alisha Mahawla from Envision Capital. Please go ahead.
Alisha Mahawla : Sir couple of questions one what is the total wagon capacity currently?
Vivek Lohia: It is about 7,400 wagons that is the annual capacity.
Alisha Mahawla : And are we looking at adding anymore capacity on the wagon side in the next two years?

Vivek Lohia: Yes, as I have told clearly that we are already in the process of adding additional capacity. So, last year if you see we were executing about on an average about 450-500 wagons per month which we are now ramped it up to about 600 wagons and the idea is that before end of the year, we want to take this to about 750 wagons.
Alisha Mahawla : And in the Rs. 4,300 - 4,400 crore wagon that we did for the current year in FY23 how much was for Indian airways and how much is private?
Vivek Lohia: So, I think about the last year about 60% was Indian Railways and about 40% was private.
Alisha Mahawla : And the capacity expansion that we are doing we are already a 600 talking of going to 750, is this largely because we are seeing demand in the Indian railway side, or do we expect this in

between Indian Railways in private to continue to be 60-40?
Vivek Lohia: No, obviously this is because we expect as I have told at the very beginning that we expect sizable order book coming from Indian Railways. So, we want to expand our capacity to meet those requirements and also, we are seeing huge traction from the private sector also. So, it is to cater to both the demands.
Alisha Mahawla : And is there any margin difference between the two?
Vivek Lohia: Nothing very significant, the only thing is that on the private side the wagons we do much more specialized wagons. So, definitely the more specialized wagons we execute so the margins are slightly better in those.
Alisha Mahawla : And what is the total CAPEX that we ar

e looking to do for FY24, is there any CAPEX left for brake systems or brake disc and you did mention the increased capacity for wagon, so what is the CAPEX plan?
Vivek Lohia: So, as stated earlier on the brake side we are looking at about a Rs. 50 odd crores of CAPEX going forward and besides that on Stone India the acquisition cost would be about Rs. 25 odd crores and we are looking at additional CAPEX of about Rs. 30 odd crores there to modernize the facilities and start operations. Beyond that, again on the wagon side definitely there will be an incremental CAPEX of about Rs. 100 to 200 crores.
Alisha Mahawla : And how we plan to fund this almost Rs. 350 crores of CAPEX that we plan to do in FY24?
Vivek Lohia: As you can see from a cash flow number in the next two years, we expect to generate idle cash flow and also, we have raised about Rs. 100 crores for my QIP. So, I think both put together would be sufficient.
Alisha Mahawla : You were not looking at any incremental debt?

Vivek Lohia: No, we are not looking at any incremental debt.
Alisha Mahawla : And you said the Indian Railways orders that we got from the brake disc side did it contribute to anything in Q4?
Vivek Lohia: So, we already have orders of brake disc of about Rs. 30 odd crores which we have started executing. On the brake systems as I have told you we recently about two months back got our final approval. So, we are waiting for the next tender cycle which we expect to start from July, August onwards. So, that's when we will start building on that order book and I think you will start seeing execution happening. So, as I told you on the CAPEX, we are not looking to raise any debt and we have quite strong cash flow as well as the money we have raised into QIP I think that would be sufficient for us to fund all our CAPEX requirements for the next two years.
Alisha Mahawla : I think what I could not hear was on the Brake disc and the Brake system side that brake disc contribute anything in Q4 and I think you explain that brake system this should only contribute in H2 of next year, so if you could just re-explain that part?
Vivek Lohia: Brake disc already the contribution is about around Rs. 7 odd crores and we have order book of about Rs. 30 crores already and which we are executing and next year we expect the order execution to be about close to Rs. 100 odd crores on the brake disc because we are continuously building on the order book. On the brake system as I have told you that we recently got our approvals, and we expect the tenders to start coming in around July and August. So, that is when we will start getting orders and execution will start either in the end of third quarter or beginning 4th Quarter.
Moderator: Thank you. We take the next question from the line of Anik Mitra from Finartha. Please go ahead.
Anik Mitra: Sir, according to your commentary your current run rate is 7,400 wagons per annum, and you are planning to extent it to around 8,400 per annum?
Vivek Lohia: So, what I was stating is that our rated capacity is 7,400, but last year we were on an average we executed between 450 to 500 wagons and this year we have now ramped it up to about 600 wagons we are executing every month and we are now building in further capacity and by end of this year we want to go up to 750 wagons.
Anik Mitra: Now if we consider 600 odd wagons in this year in FY24 so it will be around 7,200 wagons in FY24, so what is the timeline for execution of your current order book of Indian railways.
Vivek Lohia: So, the Indian Railway order book we are planning about 70% order book in this financial year itself.

Anik Mitra: I could not get you your voice is breaking the 50% in this financial year.
Vivek Lohia: About 70 odd percent of the Indian Railway order book, we plan to execute in this financial year itsel

f.
Anik Mitra: So, sir in that case, like with private order book and your current Indian railway order book is your facility totally occupied at least till end of this year am I correct?
Vivek Lohia: So, right now whatever order books which we have if we do not also add any further order books it keeps our facility occupied for the next about 18 months.
Anik Mitra: Now, sir based on the previous tender what Indian Railways floated. So, Indian Railway has given the order to both facilities who has the existing capacity now my question is as in next three to six months another global tender is expected to be floated by Indian Railways, so sir how you are poised to capture that opportunity?
Vivek Lohia: So, we already have sizes, so if you look at our capacity today our rated capacity is 7,400 wagons and if you look at generally the order cycle is for three years if you calculate on that basis today our capacity the Indian. Railway rated capacity is about 24,000 wagons and as I have told you compared to our peers, we are breaking most of our order book, so today if you look at our capacity, we have the maximum available capacity for Indian Railways to place orders. We have we have complete fix whereas if you look at a peer their order book to take another two years to execute. So, they do not have additional capacities which are there.
Anik Mitra: Do you have that additional capacities to capture the new tender?
Vivek Lohia: Yes, that is what I was trying to say at the very beginning that the new tenders which are coming and where we expect quite a sizable order book from the same.
Anik Mitra: Sir, my next question is what is the average differential of margin between government and private wagons?
Vivek Lohia: Again, it is a very difficult question to answer because it depends on the types of wagons which are there and there are a lot of other factors. So, it is a question which is very difficult for me to answer.
Anik Mitra: Sir another question is E-LCV sir in E-LCV business are you assembling the parts like whatever the components are required or let us say battery or are you manufacturing everything in house?
Vivek Lohia: No, so today nobody manufactures 100% in house obviously it is a combination lot of the part we outsource also and lot of the parts we manufacture ourselves also.

Anik Mitra: Which components you are manufacturing in house?
Vivek Lohia: So, right now I am not at liberty to disclose that, but if needed we will disclose that at a later time, but what I can tell you is that when a vehicle will be launched it will be with 90% localization.
Anik Mitra: 90% localization means from Indian vendor whether it is you or some other in in general?
Vivek Lohia: Yes.
Anik Mitra: And sir in terms of battery system if you disclose something if you do not have any limitation?
Vivek Lohia: Battery system also will be made in India only.
Moderator: Thank you. We take the next question from the line of Mr. Pankaj from Affluent Asset. Please go ahead.
Pankaj: Sir, wanted to understand have a better understanding about braking system, so as you mentioned that we have an order book of Rs. 30 odd crores and if I am not wrong the Stone India acquisition which you are going to make that is also related to braking system, so where does the braking system is used in both passenger and freight wagons and who are the competitors we have what is the total addressable market, so do we supply to both Indian Railways and the makers of this metro coaches and Vande Bharat trains etc.?
Vivek Lohia: So, today the total market for brake systems is roughly at about Rs. 3,000 odd crores in which you would say about 80% of the market is catering to Indian Railways only and the market today is mainly dominated by two players one is Knorr-Bremse it is a German company and then there is a company called Faiveley Wabtec which is a is a

French American company. We are going to bring to the Indian Railways as well as the Vande Bharat business. We are currently not focusing on the metro business because it is a very small. So, they are the ones who are dominating and 80% of today if you look at the Indian market is catering to the Indian Railway requirement. The Metro segment is a very small segment right now in India. So, initially our focus is on the railway segment where we are going to be catering to the freight business the passenger coach business as well as the Vande Bharat business. Right now, we are not looking at the metro business once we consolidate ourselves in the railway business then maybe we will start looking at the Metro business.
Pankaj: So, as I understand the braking system is an imported item am I right?
Vivek Lohia: No, it is not an imported item. They are manufactured in India locally also, but yes surrounding are also imported.

Pankaj: Each wagon or a coach requires separate braking system, so as the number of wagons are secured, or number of forces secured by Indian Railways the number increases the demand for braking system will also increase?
Vivek Lohia: Yes, you are definitely correct because that is why we are anticipating that the market is going to expand further. If you look at the Vande Bharat which is a very new discussion so as and when the fleet of Vande Bharat increases, and the private sector starts manufacturing Vande Bharat you will find a substantial increase in the size of the brake system business and also as the wagon demand picks up you will see incremental increase there.
Pankaj: And sir roughly what is the content in value terms what would be the ticket size for the whole braking system of a train?
Vivek Lohia: So, when it comes to on a wagon it is roughly anything between 2,00,000 to 3,00,000 depending upon the wagon type. When it comes to LHB coaches it is roughly between Rs. 20 to 25 lakhs are the cost of a braking system and when it comes to Vande Bharat it is approximately around Rs. 60 odd lakhs.
Pankaj: And going forward with acquisition of Stone India, so what would be our capacity or what would be the potential revenues which we can garner as and when we ramp up the facilities including our capacity and India capacity.
Vivek Lohia: In the next two to three years, we are looking to this business we see a potential of at least Rs. 1,000 odd crores, but beyond that right now for me to predict in terms of revenues and all that it is very difficult, but as in how the businesses start ramping up in future quarters, I can give you better guidance on the same.
Pankaj: Rs. 1,000 odd crores per annum?
Vivek Lohia: Per annum yes.
Moderator: Thank you. The next question is from the line of Mr. Jay Naik Individual investor. Please go-ahead sir.
Jay Naik : Sir, I have got a couple of questions while you have provided ample information on your brakes in wagon business, would appreciate if you could throw more lights on your other businesses that is container business and commercial vehicle load body business and maybe the weldable crossing business how we are trying to scale these businesses up, how demand is looking and how we are ensuring the proper focus and management bandwidth to manage this non brake and non-wagon business?

Vivek Lohia: So, on the container business this year we expect to generate a revenue of close to about Rs. 100 odd crores and our focus is again there also it is on rather than to make standard containers the focus is on specialized containers. So, now we are adding a lot of GE type customer. GE is one of our marquee clients. Now we're adding clients like Schneider and other global clients, and these are now containers which were earlier not manufactured in India which now we have started manufacturing in India for these companies.

So, the whole idea is that to focus on specialized containers and that is how to expand the business and on the commercial vehicle business again CEBBCO has been traditionally very strong in that business, and we have a sizable infrastructure there and if you look at both Tata Motors and Eicher we are one of their biggest suppliers. So, as the commercial vehicle market keeps on growing, we expect our revenues to increase from that segment, but as I have told earlier also that the segment will continue to, the EBITDA margins would continue to remain around 8% to 10% kind of margins because the volume will go up, but the given the nature of the segment the margins will continue to remain the same.
Jay Naik : So, 8% to 10% you are saying margin profile for both container?
Vivek Lohia: Not for containers for the commercial vehicle business. For containers since we are making specialized containers the margins are much better.
Jay Naik: Sir in mid to long term since probably there may not be quite a synergy between wagon brake business and the commercial vehicle in container business would be think of hiving them of demerging them of at later point in future, is there anything which you can throw light on?
Vivek Lohia: I would not agree with the statement that these completely different businesses because at the end of the day they are all related to fabrication. So, immediately there is no such thought process in terms of having all these businesses in two separate entities.
Jay Naik: And if you could throw some lights on your new product initiatives, new programs on the passenger coach business Vande Bharat coaches for Metro's new products that you may be developing or in pipeline?
Vivek Lohia: So, as I have told that right now there is no intention of the company to get into manufacturing of Vande Bharat coaches. Our whole idea is to focus on the big systems for Vande Bharat as well as for passenger coaches and on the metro side as I already mentioned that we have a tie up

with CAF and CAF is bidding for a lot of metro tenders in India. So, as and when they win a metro bid then we will set up that business.
Jay Naik: Sir, one last question the recent news article came about the Porsche wheel manufacturing plant government putting on the block RINL plant, so do we have any plan to further backward integrate our wagon manufacturing by taking over or acquiring this Porsche wheel plant or any foray into the Porsche wheel plant business?

Vivek Lohia: So, what I was saying is that I am not aware of any disinvestment by the government, but as and when disinvestment happens by the government, we will definitely look into it and so that is when I can give you better guidance, but right now I am not aware of any such disinvestment.
Moderator: The next question is from the line of Mr. Pratik Rathi from Capital Advisors. Please go-ahead sir.
Pratik Rathi: So, I have a couple of questions like I just wanted to understand how many plants do you have in West Bengal?
Vivek Lohia: We have one facility in West Bengal and as and when acquires Stone India that will be our second plant.
Pratik Rathi: And after you acquire Stone India what would be the contribution from these plants to your revenue?
Vivek Lohia: So, what I am trying to say is Stone India we have not yet acquired. So, it is a very difficult question for me to answer in terms of what will be.
Pratik Rathi: Not keeping in mind Stone India not including that, so as of today how much is the West Bengal plant contributing to the revenue?
Vivek Lohia: So, today if you look at a wagon mix about 60% of our wagon is produced in a West Bengal facility and about 40% of our wagon is produced in our Madhya Pradesh facility.
Pratik Rathi: So, the blended contribution to revenue the percentage total if you are making would be that?
Vivek Lohia: Again, I do not have those numbers so I

would not like to.
Pratik Rathi: Can it be expected like 50%?
Vivek Lohia: Yes, you could say that it could be 50%.
Pratik Rathi: And just from getting an understanding like do you face any issues from operating out of West Bengal because you know we have had the history wherein West Bengal did not allow the Tata plan to operate well, so what kind of efficiency and like is it a good long term operational efficiency that can kick from West Bengal like just wanted to understand?
Vivek Lohia: Yes, I understand, but we do not face any challenges out of that facility, and we do not foresee any challenges also. So, I cannot comment on the Tata business, but we have no complaints, and we are very happy with our facilities there and even from the workforce point of view I think it is a very efficient operation which we run there.

Pratik Rathi: And on the commercial vehicle business that electric mobility like what is the mindset behind going into that kind of business when your core business is in the line of wagon manufacturing and all of that?
Vivek Lohia: So, I would slightly differ. So, as you are aware that we are also making load bodies for the commercial vehicles. So, we have substantial infrastructure dedicated, and we have about more than 20 years of experience in this segment. So, that is where we thought that we could leverage our infrastructure and our experience much better and then we saw good opportunity in this segment. So, we decided to enter that segment.
Pratik Rathi: And how would you reach out to the customers in terms of because it is already a very competitive market, is not it?
Vivek Lohia: Honestly, if you look at the eLCV segment right now and the four-wheeler segment especially there is no product which is available in the market. So, I would not say that it is a very competitive market, most of the competition is in the IC engine segment. So, we definitely see a huge opportunity in this segment.
Pratik Rathi: And in the previous answer you said that like to some other participant like the EBITDA in this area of business would be 8%?
Vivek Lohia: No, I was talking about the traditional load body business which we are doing it was not related to the eLCV business.
Pratik Rathi: So, eLCV business what would be the EBITDA?
Vivek Lohia: Again, it is right now honestly, I will not be in a position to comment on that.
Pratik Rathi: Can you answer this would this crack our margins by any chance, would we sustain on this margin or what would be impact on margin?

Vivek Lohia: No, I do not see the reason why we cannot sustain on these margins.
Pratik Rathi: So, there is a sustainability to this quarter margin?
Vivek Lohia: Yes definitely. I have also stated earlier that we do not see why we cannot sustain these margins.
Moderator: Thank you. Ladies and gentlemen that was the last question for the day. I would now like to hand the conference over to Mr. Sidharth Agrawal for closing comments.

Sidharth Agrawal : I would like to thank Mr. Vivek Lohia for giving us the opportunity to host the earnings call. Trust me sir we all learned a lot on Jupiter wagons and your sector today. Thanks a lot once again.
Moderator : Thank you, Ladies and Gentlemen on behalf of Systematix Institutional Equities that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Call: Aug 2023

Sub: Transcript of Analysts / Investors Call pertaining to the Un-Audited Financial Results of the Company for the quarter ended 30th June, 2023 conducted on 8th August, 2023

Ref: Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended from time to time ("Listing Regulations") read with SEBI circular dated September 09, 2015, bearing reference no. CIR/ CFD/ CMD/ 4/ 2015 ("Disclosure Circular").

Dear Sir,

Pursuant to regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed Transcript of the Analysts / Investors Call on Un-Audited Financial Results (Standalone and Consolidated) of the Company for the quarter ended 30th June, 2023 held on 8th August, 2023.

The Information is being hosted on the company's website www.jupiterwagons.com

Kindly take the same on your record.

Thanking You,

Yours Faithfully,
For Jupiter Wagons Limited
(Formerly Commercial Engineers & Body Builders Co Limited)

Ritesh Kumar Singh
Company Secretary and Compliance Officer

"Jupiter Wagons Limited
Q1 FY24 Earnings Conference call"
August 08, 2023

MANAGEMENT : MR. VIVEK LOHIA – MANAGING DIRECTOR – JUPITER WAGONS LIMITED
M R. SANJIV KESHRI – CHIEF FINANCIAL OFFICER – JUPITER WAGONS LIMITED

Moderator: Ladies and gentlemen, good day and welcome to the Jupiter Wagons Limited Q1 FY24 earnings conference call hosted by Systematix Institutional Equities. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.

I would now like to hand the conference over to Mrs. Sandeep Anand from Systematix Institutional Equities. Thank you and over to you, sir.

Sandeep Anand: Thank you and good evening, everyone. Thanks for joining us today for the Q1 FY24 earning calls of Jupiter Wagons Limited. On behalf of Systematix, I would like to thank the management for giving us the opportunity to host this earning call. Today we have with us Mr. Vivek Lohia, Managing Director, and Mr. Sanjeev Keshri, Chief Financial Officer. I'll now hand over the call to the management to give their opening remark, and after that we can open it for the Q&A. Thanks, and with that, over to you, Vivek sir.

Vivek Lohia: Yes, good evening, Sandeep, and thank you. Good evening, everyone, and thank you for joining us for the Q1 FY24 earning call. We are delighted to start FY24 on an exceptionally strong note, continuing the momentum from the prior year. We have reported triple digit growth rates in revenue, EBITDA, as well as profit after tax during the quarter as we continue to scale our various business lines as planned.

The order book has also risen further, providing high visibility of sustained growth. Getting into the quarterly performance, we reported total income of INR 7,554 crores in Q1 FY24, an increase of 155% on a year-to-year basis. EBITDA was INR 100 crores this quarter, more than double the base quarter as it grew by 217% on a year-on-year basis.

Moreover, the EBITDA margin expanded by about 260 basis points on a year-on-year basis, reaching 13.2% compared to 10.6% in Q1, FY23, maintaining the margin of Q4, which is seasonally the strongest quarter for the industry. Further solidifies our position as industry leaders in terms of EBITDA margin.

Profit after tax for the quarter was INR 63.5 crores, nearly 4x that of the base quarter as we reported a growth of 374% year on year basis. Additionally, we are pleased to report that our order book for the quarter stands at over INR 6,100 crores, a testament to our strong performance and promising outlook.

During the quarter, there were several exciting developments, the first of which pertains to Stone India. As we mentioned during a previous call, we have successfully obtained NCLT approvals and we are now in the process of securing the handover and control of the company. We plan to continue its position as an independent going concern and will focus our efforts on rapidly restoring the operational momentum.

A significant proportion of products manufactured by Stone India will be captively consumed by our group entities and Stone India will continue to sell its products to various esteemed entities, including the Indian Railways as well as private parties. We are confident that this development will create exciting opportunities and add significant value to operations.

We are thrilled to announce a significant milestone for Jupiter as we make a strategic entry into global markets. We recently signed a long-term MOU with RITES, a distinguished PSU associated with Indian Railways. This collaboration aims to explore the lucrative market globally for railway freight. Through this partnership with RITES Ltd, we are jointly participating in two tenders in Zimbabwe and Mozambique. These tenders involved approximately 620 freight wagons and are current

ly in final stages of completion.

Our intention is to uphold the MOU with RITES and capitalize on this exciting development to secure export orders in the near future. This move makes a significant step towards our goal of global expansion and we are enthusiastic about the opportunities it presents for Jupiter's growth and success in the international arena. The demand for wagons remains strong, with significant interest observed from private customers in the current quarter.

Private parties have placed orders for freight wagons totaling approximately INR1,000 crores. Additionally, the Indian Railway is preparing to launch a substantial global tender expected to encompass a large-scale procurement and include a multi-year maintenance commitment.

Our discussion with various industry participants as well as all indication points towards procurement of around 40,000 additional conventional wagons by Indian Railways. Our container business is experiencing a surge in demand for specialized products, attracting

significant interest from esteemed international clients, such as General Electric, Schneider, and others.
We have successfully secured a contract for 40 feet open top coil containers with a pilot order value of INR10 crores. Additionally, we have received a LOI from General Electric indicating the interest to purchase 1,000 units of special flex inverter containers for the fiscal year 2024-25.
Jupiter Electric Mobility has recently partnered with Siemens, as well as other leading manufacturers for supply of lithium-ion batteries for the Indian Railways flagship project of Vande Bharat train. In addition, we are currently conducting trials with RDSO to supply batteries to Indian Railways for their existing coaches. This collaboration and testing phase marks a significant milestone in our effort to provide sustainable and efficient mobility solutions to our customers in India.
Our joint venture with Talleres of Spain, JWL, Talegria India Ltd is set to launch a pilot batch of weldable CMS crossings in Q2, followed by field trials. We have already received a significant INR 200 crores orders from Indian Railways for this product. Given the high interest from both domestic and international markets, we expect a strong influx of orders over the next 18 months.

Simultaneously, our joint venture with JWL Kovis India Pvt Ltd has begun delivering brake discs to Indian railways during this quarter. We have secured export orders, the supplies for which we'll be starting from third quarter onwards of this financial year, as well as we are currently participating in significant tenders from Indian railways for brake discs. We are excited about our future prospects given the strategic entry into global markets, strong demands for wagon and containers and the significant milestones achieved in our mobility solutions ventures.
With a robust order book, promising collaboration and a focus on innovation and quality, we are confident of continuing to drive growth and success for Jupiter Wagons Ltd.
Thank you all for your unwavering support and confidence in our vision. We can now open the floor for questions.
Moderator: The first question is from the line of Akash from Dalal & Broacha. Please go ahead.
Akash: Congrats Sir on the great set of numbers. Thanks for the opportunity. So my first question would be, what is the current order book breakup?
Vivek Lohia: Good evening, Akash. So, as stated earlier, right now a majority of our order books is from the private sector. So, a tentative breakup would be about INR 4,000 odd crores of orders are from the private sector and about INR 1,050 odd crores is from Indian Railways.
Akash: Okay and the whole order book is around INR 6,100 odd crores, so the balance would be?
Vivek Lohia: So, balances for the commercial vehicles, containers and crossings the other products which we make.

So, the wagon order book would be roughly about INR 4,500 crores and the balance would be the other products which we manufacture.
Akash: Okay sir. Sir, so also one question was regarding the export order that we won. So the 620 wagon tender, have we already won along with rights or is it in the process?
Vivek Lohia: One correction I think the wagon order book is about INR 5,500 crores I wrongly said as INR 4,500 crores and the balance is the rest of the items and what was your second question could you repeat it again.
Akash: Yes. I'll repeat my second question do we have a breakup handy for the balance or the remaining businesses like the CB bodies and the containers?
Vivek Lohia: I won't have the breakup with me right now, but if you so desire it can be shared with you later.
Akash: No problem sir. Yes, my second question was for that 620 wagon tender that we have won along with the rights. So, have you already won that order or is it in process?
Vivek Lohia: No, no, we have not won the order. We are currently, we are L1 in that tender.
Akash: Got it. And the thousand further wagon order that we are expecting, so that will be closing that, sorry, I mean, we will be winning that by the end of this calendar year or by next year?

Vivek Lohia: So, we are participating in significant number of tenders which are happening globally and we have participated in a large number of tenders. So, we expect I think by this financial year to get order book close to those numbers.
Akash: Got it, got it sir. And the realization for these export wagons is similar to what we fetch in the private sector or is it even higher or something?
Vivek Lohia: It is, honestly it depends from tender-to-tender and even the global landscape is competitive. So, again it's a tender-to-tender it depends.

Akash: Got it, got it. My second question was regarding this brake systems that we are manufacturing along with the Stone India. So, when is that expected to commercialize?
Vivek Lohia: Our expectation is that by the end of this year we should be in a position to start commercial operations there.
Akash: Okay, so by December. And what is the current order book in hand for brake systems?
Vivek Lohia: So, currently, as we have mentioned that we have started operations in the brake business where we have an order book of roughly about INR 150 odd crores. On the brake system side, there are tenders which have recently opened which we have participated in. So, we expect the order books to come in the next quarter for them.
Akash: Got it. Also sir, our gross margins have seemed to be dropped in Q1 from around 25 to 22. Any significant reason why so?
Vivek Lohia: So see, this gross margin also depends on the mix of the products. So there is no specific reason that is only the mix of the product has changed.
Akash: Okay, okay. So, it's about the mix. So, I mean…
Moderator: So sorry to interrupt maybe I please request you to rejoin the queue for your follow up as we have people waiting for their turn.
Akash: No problem, no problem.
Moderator: Thank you. The next question is from the line of Balasubramanian from Arihant Capital. Please go ahead.
Balasubramanian: Good evening, Vivek sir. Congratulations for good setup numbers.
Moderator: Sir, we have just lost the line for the current participant. We proceed to the next question. The next question is from the line of Sanjaya from Amberson. Please go ahead.
Sanjaya: Yes, sir. Congratulations on a good set of numbers. So, my question is that in terms of your capacity you are planning to increase that. So, can you just share that what kind of capacity you have now and what will it be going forward?

Vivek Lohia: So currently, we have a capacity. So the capacity expansion as we have mentioned earlier is basically organic an

d it is a continuous process for us and we have been, as we had anticipated these kind of order books to come through. So, we have been -- at a continuous level, we have been focused on capacity enhancement.
So, we expect to by end of this year, we expect to reach a capacity of close to 800 wagons per month. And by next year, we are looking to manufacture about 1,000 wagons per month. But again, you know, this is subject to the kind of mix of wagons which we produce. So as you are aware that right now, our most of our orders is more on the private side than on the railway side. So, there at one time we produce a lot of different varieties of wagons. So, depending upon the mix of the wagon, the numbers may vary from one to one, but it will not be very significant.
Sanjaya: Yes, so just want to know whether this capacity has that was supposed to come up at the end of Q1 has happened and the last thing that I wanted to hear from you is on your EV bus plan like what are the status there?
Vivek Lohia: So as I told you earlier the capacity expansion is organic. So, the capacity expansion, it's a continuous. Our target is to reach a capacity of about 1,000 wagons a month. So, we are building our capacity towards that. So, it's a continuous process, the capacity expansion. And when it comes to EV, we will be launching not a bus, we will be launching our first EV truck as I maintain by end of the year EV truck will be launched. Currently the approval process for the same is being undertaken.
Moderator: Thank you. The next question is from the line of Sushil Prashar from Individual Investor. Please go ahead.
Sushil Prashar: Hi, Vivek. Congratulations for the great set of numbers and thanks for the opportunity. So, I heard that we have onboarded as a vendor sustenance for supply for lithium ion battery for Vande Bharat train. So, if you could elaborate more on this. And I also wanted to check if we are also exploring opportunities in other sectors apart from the railway sector for the batteries?
Vivek Lohia: Yes, so Jupiter, our focus is in the railway sector currently most of the batteries which are used are the traditional batteries which are again which carry a lot of weight so as well as you know they are not very environmental friendly and then the life cycles are also very less. So, idea is to replace them with smart batteries which are much more efficient which have a better life cycle and which carry less weight.
So, it makes the rolling stock much lighter so that is the whole idea behind it, So, yes so our focus is both on the -- all the kinds of rolling stock which railway has which includes the coaches the Vande Bharat and going forward maybe also the metro business. So that is our focus on the battery side. And I think that is right now that is what we are working on in the first step and later on we may explore other areas also. But right now that is what we are focusing on.
Sushil Prashar: Thank you.

Moderator: The next question is from the line of Balasubramanian from Arihant Capital. Please go ahead.

Balasubramanian: Good evening, Great sir. Congratulations on the good setup numbers. Sir, like we are majorly executing on the private wagon side, what would be the margin difference between railway wagons and private wagons? And how do we look at like railway wagons are majorly into same design, but private wagons are lots of designs are there. So how you are executing? Is there any execution challenges are there?
Vivek Lohia: Yes, so thank you again. So over the years, Jupiter has built a very strong design and R&D portfolio. So, we have a very strong team, both in terms of our design setup, as well as on the execution bit and that is the reason also we are the leading suppliers of private wagons. So, we don't see any kind of execution challenges which comes there.
Definitely with the economies

of scale and as we have mentioned earlier also given the each order book on the private side is significantly smaller than the railway and a lot of times the wagons are more much more complex. So the margin profile is definitely better than that of IR.
Balasubramanian: Okay, sir. So on that private wagons, so majorly we are importing deal sets from China or some other countries. Like earlier what went wrong on the execution side, like currently what are the things that improved and right now the industry talking about around 50,000 global vacant tenders as of now next three to four months so what is your thought process on that and the third thing this is the India is right now moving into passenger coaches side like Vande Bharat and metro side so like in future we have any plans to enter into these segments?
Vivek Lohia: So, one is on the wheel sets. I think we are in a very comfortable position because we have invested significantly in terms of procurement of wheel sets. So, we don't see any challenges generally we try to maintain an inventory of close to about one months to two months when it comes to wheel sets I don't see any challenge.
Going forward also we are Jupiter itself is exploring to set up its own wheel set manufacturing, but that is something which we are looking at. And immediately, again, our focus is more on the brake systems when it comes to Vande Bharat and metros. We are not looking to enter that business because we feel that already it is a very crowded portfolio as of now. So, but if some significant opportunity comes in the near future, we may review that decision.
Balasubramanian: Sir, on the global center side, any thought process on that because we also formed some JVs for on the export side also?
Vivek Lohia: When it comes to the global tender we are, Jupiter again is placed very strongly as you are aware that Uttara Wadgaonkar is a promoter in Jupiter and they are one of the biggest producers of freight cars in Europe and globally. So I have maintained that we have access to all the technology and designs and we are at an advantageous position. So as and when that tender comes, we are ready for the same.
Balasubramanian: Okay sir, okay, got it. Thank you sir.
Moderator: Thank you. The next question is from the line of Rajesh Vora from Jainmay Venture. Please go ahead.

Rajesh Vora: Good afternoon gentlemen. On a very strong set of number. Congratulations, Vivekji. My question is over the time, over the last couple of years, your number of wagons sold to Indian railways is coming down from 71% in FY ‘22 to 33% in the first quarter. So do you expect this kind of trend to continue? How are we positioned based on the current order backlog?
Vivek Lohia: So currently as you are aware, I've told earlier also, the order book from private sector is much higher than from Indian railways. So that is why you see more of the skew coming towards the private sector. But going forward, definitely with the new railway tenders which are in the offering as and when they are finalized, you will see a significant uptake from our side in terms of executing Indian railway orders. But then our private order book will continue to remain very strong and that is our forte and our focus also. So, it will be -- you will see parallel execution both in terms of the IR order book as well as the private order book.
Rajesh Vora: Okay, so going forward, if you do expect to win significant chunk of the upcoming order your IR proportion may continue to increase from a current number. Is that the right way to look at it?
Vivek Lohia: Yes, yes, that is the reason, we are increasing our capacity because we want to focus on both the IR business as well as the private business.
Rajesh Vora: Absolutely. On the joint venture side, Vivekji, you have done a wonderful job of picking the right product and finding the right partners g

lobally. Over the next three years, four years, as
they continue to scale up, if I look at non-wagon business portion of the revenue which is currently very small, where do you see that number going as a percentage of total revenue of the consolidated company over the next three four years, directionally?

Vivek Lohia: Again very difficult to give you any kind of forward numbers, but again, as I stated that the brake business will become a very significant business for us, as well as, and the market for the brake systems currently is around anything close to INR5,000 crores is the market. So we expect to get a significant portion of that market, plus we have been now focusing on the EV business. Again in India, if you look at the last mile connectivity that is the segment which we are focusing on which is vehicles with payload from 1 ton all the way up to say 3.5 tons to 4 tons. That market itself is close to about anything between 400,000 vehicles to 600,000 vehicles annually. So obviously, there is a significant market which we can tap. But again, the market potential is huge but as of now, very difficult to give you any kind of forward guidance.

Rajesh Vora: Sure, is it possible to sort of say roughly, when based on your current estimate, can EVs become, it will have its own fixed overheads and operating overheads, by when can we sort of expect it to contribute to your numbers, is it two three years away, longer?

Vivek Lohia: No as I have told you by December, we are launching a first vehicle, so you will see the numbers coming from next financial year onwards. And as -- and we are planning over the next year or so we are planning to launch at least another two different categories of vehicle, so you will see the numbers playing out by it from next financial year onwards.

Rajesh Vora: Okay, wonderful. All the very best. Thank you.

Vivek Lohia: Thank you.

Moderator: Thank you. The next question is from the line of Akash from Dalal & Broacha. Please go ahead.

Akash: Hi, thanks for the opportunity once again. My question was, what is the capacity we will be having in brake system once Stone India goes live?

Vivek Lohia: So Akash, again, the products which we have in Stone India is very different from the products in the JVs. So in Stone India again as I have told you our focus is on the freight break. One. And second is that they have lot of the break system and other accessories for locomotive as well as for the Pentograph. So these are the areas which we are going to focus in Stone India. And as and when, we start the operations, we will keep on building on capacity. But right now, it is very difficult at this stage for us to comment on the capacities.

Akash: Got it. So Stone India will be focusing on the freight brakes and the Vande Bharat brake systems and passenger systems…

Vivek Lohia: Stone India will be mainly focusing on the freight brakes on Vande Bharat and the locomotive.

Akash: Okay, got it. And sir, secondly, with regard to this lithium-ion batteries, for which we have been on boarded by Siemens as a vendor. So what kind of market size or opportunity are we seeing in that sector in let's say the next five years?

Vivek Lohia: There is a significant market size, the entire Vande Bharat portfolio is available to us now. And as I have told you, our trials have started on the existing rolling stock also of Indian railways. So that itself is again a significant market. So there is a tremendous market potential there.

Akash: So does every coach need one battery is it?

Vivek Lohia: Yes.

Akash: And there are no other competitors or there must be many?

Vivek Lohia: I am not aware of the competitive landscape now.

Akash: Okay. Got it, sir. And what would be the realization for battery or something like that? Any idea?

Vivek Lohia: Again, right now, it's too early for us to we are just conducting our trials and al

l that, that maybe
later we can get into that.

Akash: Got it, sir. Yes. thank you.

Moderator: Thank you. The next question is from the line of Tarun Sancheti from Sunshine Capital. Please go ahead.

Tarun Sancheti: Hi, good afternoon management team. Many congratulations for a fantastic set of number. Sir, my question is, see there is an all-round growth visibility both on the wagon line side of the

business. Also, there are few development in terms of the joint venture with Kovis and Talleres for Spain. Will it be helpful if you can provide a bit of detail on the presentation in terms of what is possible capex for the next two years? And how the order book is going to look like specifically, for these two JVs? If you can talk about that, that would be helpful.

Vivek Lohia: In terms of the capex, as I think I mentioned earlier also, we are looking when it comes to the

JVs and the existing business, we are looking our capex plans about close to about INR250-odd crores of capex, which we have envisaged. In terms of again the breakup of JV business, again as I have told, very difficult for us to give any forward numbers, but I have told you the break business is close to about, today the Indian market size is about close to INR5,000-odd crores. And when it comes to the JV with Talleres again our focus is on the weldable crossings. There itself today if you look at the crossing market India buys anything between 15,000 to 20,000 crossings annually.
And now with everything moving towards high speed and safety being a major concern, you will see a significant shift which will happen from the traditional fish bolted crossings which you have been supplying to move towards the weldable crossings. So we, in the next four to five years, we expect the market to this requirement, which is there for about 15,000 crossings, 20,000 crossings, to shift from the traditional crossing more towards the weldables.
Tarun Sancheti: Thank you for sharing that broader market perspective. Out of that bigger umbrella, what is the specific number or the market share that we are looking at? Say, for this big size, where is there is market share of 5,000 crores? What is the percentage share that we are eyeing for at this moment?
Vivek Lohia: Again, see we envisage to be a major player, definitely in this sector and we have a lot of strengths. We have our internal consumption itself. So there's a captive market. Plus we understand the railway business very well but again for us to give any kind of numbers right now, I think will be too early.
Tarun Sancheti: Okay. Is it fair to expect that say let's, follow up quarter etcetera, you would be in a position to give some guidance on that?
Vivek Lohia: Yes, I think once the businesses become fully operational, I think by next year I think, we would be in a much more comfortable position to give guidance in terms of market share because right now I think we are too early in the cycle to give any kind of numbers.
Tarun Sancheti: Much appreciated. Last question I have is related to the captive wagon business wherein again we have line of item, very large order book. To cater to that I do understand that we are ramping up capacity towards 1,000 wagon per month. Any further capex envision for this particular section of the business, within say, next one year?
Vivek Lohia: As of now, we are looking to ramp-u, ramp it up to about 1,000 wagons. And the way we see the market growing, I think we will be in a very comfortable position. But then again, these things are dynamic. If we see the growth numbers coming out much more strongly. And so it all depends on how the future numbers shape up. So again, this is a dynamic to retain a market share

and grow on the market share so that has been and help the government because as you have told me that if the if

the economy has to be if India has to become a 7 trillion, 10 trillion economy.
Then the railway has to play a very significant part, because not only is it environmental friendly, it's very cost effective. So if logistics cost has to come to single digits, I think it cannot happen without railway playing a significant part. So we are part of that journey and the government has been very, very, I think proactive when it comes to investing in the rail infrastructure and we see that investment growing over the next, they've already it is -- the railway is a significant part of the GDP spend. And we expect it to grow further. So again, it's very dynamic so we don't expect any growth slowdown definitely we expect the growth numbers to increase, but then depending upon how the landscape shapes up, we will take a call.
Tarun Sancheti: Sure, just a connected question and then I'll join back in the queue. So INR250 crore is the anticipated capex between the two JVs and on wagon business as of now, do we have any envision any additional capex or if you can give some number in terms of that.
Vivek Lohia: Talk about this INR250 crores number, it is including the wagon business as well as the JVs.
Tarun Sancheti: Okay, it is all inclusive, okay. Fair enough, thank you very much and looking forward to a bit of more detail in the coming presentation, etcetera. Thank you again.
Moderator: Thank you. The next question is from the line of Tushar Ranghate from Kamyaka Wealth. Please go ahead.
Tushar Ranghate: Yes, good afternoon sir and congratulations for your great set of numbers. Sorry sir if this might be a repetitive question. I just want to understand the MOU which you did with the RITES. What sort of growth you are seeing on that? Your future prospects on that? Yes, that would be my first question, sir.
Vivek Lohia: Which MOU? I could not understand. The RITES, MOU you are talking about?
Tushar Ranghate: Yes.
Vivek Lohia: Okay. I think I mentioned earlier also in the call that with RITES, it is the MOU where we are looking to do -- participate in collaboration with them in any global tenders which are there for rolling stock. That is the primary aim of that tender and we are seeing considerable demand coming from globally for rolling stock, so that is primarily the aim in that tender and we

emphasize ourselves to be very competitive in that segment and we expect decent order books from that.

Tushar Ranghate: Fair, enough, sir. Last question would be on the Stone India. Now we are on the final stage in order to get the asset of Stone India. I just wanted to understand, what sort of revenues can we get from the capacities of Stone India?

Management: Again, as we have the NCLT process just got completed and it's not been a month also since we have acquired that company. So right now, it will be too early for us to give any guidance on Stone India. What we can clearly mention is that for us in terms of our freight business, again it

is a completely capital business for us. So that itself is a significant business there and again forward guidance we can, right now, it's too early for that.

Tushar Ranghate: Okay, sir. In terms of Stone India, do you feel you need to do any incremental capex in order to get the facility to our Jupiter Wagon standard?

Management: Yes, definitely we will be doing capex there and we will be doing significant capex in Stone India. But again, right now, it's too early for us to give any kind of guidance on that. We want it to be as per, we are looking to manufacture rakes for Vande Bharat for locomotives there as well as for freight. So we want it as per global standards, the facility.

Tushar Ranghate: Got it, sir. Thank you.

Moderator: Thank you. The next question is from the line of Abhinav Bhandari from Soham Asset Management. Please go ahead.

Abhinav Bhandari: Yes, thanks for the opportunity and super

quarter, sir. Many congratulations for that. Two questions. One is any color of working capital and borrowings that you can give for the quarter? And the second question is, the new order which you have got from the private sector, 2,100 wagons for INR1,060 crores, pricing looks to be fairly attractive. So is this the new normal on pricing or there are some higher specifications here for these wagons? Also, what is the expectation period for this?

Management: So in terms of the working capital requirements, it will remain at similar numbers. We don't see any significant increase in terms of working capital requirements. So yes, as and when the revenues keep on increasing, definitely proportionately you may have, because you have to maintain larger inventories, so you may find working capital and to increase but not significantly. And if you look at our current ratios, it has improved significantly.
Currently we are at from 1.42 we have gone up to 1.57, so I don't see any challenges there. In terms of see the realization again, it's a very dynamic thing. It depends on the competitive landscape, which kind of wagon orders are there. So currently a lot of the order books, which new order books, which we have got, include wagons, which are very, it's not, they are very specialized wagons. So again, depends on the kind of order books which we get and on the competitive landscape. So it's a very dynamic thing. So very difficult to give a straight forward answer to that.

Abhinav Bhandari: And what would be the net borrowing number at the end of the ‘22?

Management: See on the term loan side, the around INR17 crores is the term loan borrowing and on the current on a working capital side, it is around INR275 crores.

Abhinav Bhandari: Is it net cash? This is a net of cash, is it?

Management: No, it is not a net of cash. Net of cash is that we are a net zero debt company.

Abhinav Bhandari: And just one last question. The execution period on this private or wagon product with your…

Management: So we are looking at an order book. We are looking to execute it over the next 18 months.

Abhinav Bhandari: Thank you so much.

Moderator: Thank you. The next question is from the line of Rajesh Vora from JNM Ventures. Please go ahead.

Rajesh Vohra: Yes, Vivekji, would you be able to give us what percentage of this current quarter's revenue is from the Wagon segment and for the FY 23?

Vivek Lohia: Just one second. Hold on. So for the current quarter, it is INR655 crores from the Wagon business and INR100 crores is from the other businesses. But this does not include numbers from the rake business because those are 50-50 JVs, so the top line doesn't get captured. It is only on the EBITDA side that those numbers get captured.

Rajesh Vohra: Sure. And for the FY ’23, what is this number? Wagon revenue number for FY ’23?

Vivek Lohia: It was around 75% from the wagon and 25% from the other business.

Rajesh Vohra: Okay. Wonderful. That’s very useful. This quarter Vivekji, you have done 1,700 plus number of wagons are sold and that implies around 570 odd wagons per month. Your capacity of I think

what 700 currently?
Vivek Lohia: So as I have told you very clearly, again it all depends on the wagon mix and the kind of wagons which we manufacture. So if we see, you have to realize that on the private side, a lot of times they are very specialized wagons and we have to do different designs of wagons. So you will find some kind of changes in the number from month to month. So again, very difficult to predict in terms of, but yes, going forward as I've clearly told that, this year we target to produce, by end of this year, we want to increase our capacity to about 800 wagons per month.
Rajesh Vohra: Okay, so I completely agree with you, quarter to quarter it can be very very different, but on a yearly basis, what sort of capacity utilization we sho

uld expect for this year broadly?
Vivek Lohia: Very difficult again for us to comment but definitely it will be about 80% plus.
Rajesh Vohra: Okay, wonderful. Thank you so much and all the very best.
Moderator: Thank you. The next question is from the line of Parvez Kazi from Nuvama, please go ahead.
Parvez Kazi: Hi, good afternoon and congratulations for a great set of numbers. Sir, my first question is regarding the split, which you had given earlier of the wagon order book, did you say we have about INR4,500 crores orders from private sector and about INR1,050 crores from Indian railways, are these numbers correct?
Vivek Lohia: Yes.
Parvez Kazi: Great. And second, when we talk about the private sector wagon orders, from which segments or of customers are we getting these orders?

Vivek Lohia: It is across the board. It includes your steel companies, cement companies, your container operators, as well as from the auto sector, as well as the shipping, the ports?
Parvez Kazi: Broadly, what would be, the current, let's say, demand from private sector on an annual basis? I know these numbers would have been very different historically, but currently, wouldn't it be fair to say, the total market size on private sector would be let's say anywhere between 150 to 200 rakes?
Vivek Lohia: You're talking monthly or annually?
Parvez Kazi: Annually. The market size itself.
Vivek Lohia: Again, as I have told you we are seeing a very difficult to predict the market because we are seeing a significant offtake, which is happening in the market. Since, after a long time, there is a lot of private capital which is now being deployed in the country. Because initially most of the growth was coming through government spending. But now there is a lot of private capital coming and since we are -- it is a capital good, we are in a capital good industry. So these numbers are, these are very dynamic month on month, we are seeing the demand increasing. So yes, but yes, what the numbers you have said, definitely those are the numbers. We are seeing those numbers happening and it may be bigger than that.
Moderator: Thank you. The next question is from the line of Nitin Raheja from Prapu Das Liradhar. Please go ahead.
Parvez Kazi: Hi. Thanks for the opportunity. I just wanted to understand how much of steel is required to make one wagon?
Management: You know, it all depends on the type of wagons which you are making because each wagon has a different varieties of steel and different quantities of steel. So you know honestly I cannot comment on that.
Moderator: Thank you. The next question is from the line of Akash from Dalalan Broadshop. Please go ahead.
Akash: Sir, going ahead, do we see, due to the increasing wagon production, do we see any, are margins increasing due to operating leverage from year on, the 13% levels?
Management: Akash, as I have told you also, we are, I think, going forward also our margins will be between 12% to 13% and we are pretty confident on those numbers. Definitely you do enjoy operating leverages and as and when other businesses grow they will keep on contributing to the margins. But I think 12 to, on a long term and on a sustainable basis, I think a 12% to 13% margin is what you should look at. And we are very confident on those numbers.
Akash: Okay, sir. And in terms of exports, which countries are we participating in, broadly?
Management: Mainly, it's across the board we have participated in tenders for the African continent in Asia we are in discussions for an order book in Australia so it's across the board.

Akash: Okay and sir there's one earlier in this con call you gave a INR250 crore number so I just missed you gave that for what?
Management: For the capex those were tentatively our capex plans for the break business and our existing

busine

ss.
Moderator: Thank you. The next question is from the line of Tushar Raghatate from Kamayakya Wealth.
Please go ahead.
Tushar Ranghate: Yes, thank you for the follow up. Sir, in the interview you mentioned about the global tender
from the Government, any update on that sir?
Management: Very difficult to give you any kind of update but we expect, we are aware that it is under
deliberation and we expect it to come out any time shortly.
Tushar Ranghate: Got it. Sir, in terms of the container business?
Management: Yes, about the tender, that much I can say.
Tushar Ranghate: Sir, in terms of the container business, in terms of the container production manufacturing, do
you see any growth going forward? Because if you see in the last year, I think the numbers were
high compared to FY '23. In FY '23, the numbers were pretty good in the container?
Management: So container business in India is going to keep on growing. We are very confident about that.
And as the market matures, the Indian manufacturers are going to get more and more competitive
when compared to, because it's you have to understand that it's a pretty new business right now
in India people are still learning.
The steel industry because majority of the inputs come from the steel industry cotton steel again
which is primarily used in containers, is again something which is newly being developed in
India. So as the volumes increase, we will get more and more competitive and the domestic
demand again is very strong.
And as I have told you, it's not only marine containers, we are now making very, very specialized
containers. So, yes, I see a very strong future. So we are also investing. Right now, Jupiter is
investing in a complete robotic line for manufacturing of the container, which will, again,
contribute towards not only quality, but reduction in cost. So I think you'll have more and more
people investing capex towards this.
Tushar Ranghate: Sir my last question in terms of your EV business, when can we expect the revenue coming from
the EVs?
Management: As I said in the next year you will start seeing the revenues coming in.
Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand
the conference back to the management for their closing comments.

Management: I would like to thank all the participants to be part of our call today and to share our growth
story. And as mentioned that we see a very strong outlook in this year as well as in the coming
years. The government is, as stated earlier, that the government is committed towards bringing
the logistics costs in India to single digits and that is again very, going to play a very important
role towards meeting our economic goals making India a 10 trillion dollar economy and the
railway is going to continue to play a significant part in that journey there's a lot of infrastructure
push which is coming as well as capital which is happening from the government as well as from
the private side.
So this is going to give a huge momentum to this sector and beyond this as I have told you we
are adding a lot of value added products which are at global scale. So they are not only for the
Indian market but which will help us compete globally itself. We are also very bullish on the EV
business because we see that to be the way forward especially when it comes to the last mile
vehicles. So I think we are to summit I think we are quite bullish on our current trajectory which
the company is taking and for the near future. Thank you.
Moderator: Thank you. On behalf of Systematix Institutional Equities, we conclude today's conference.
Thank you all for joining. You may now disconnect your lines. Thank you.

Call: Nov 2023

Sub: Transcript of Investor /Analyst Meet call pertaining to the Un -audited Financial Results of the Company for the Q2 -FY 2023 -2024
Ref: Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended ("SEBI Listing Regulations").

Dear Sir/ Madam,

Pursuant to R egulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed the Transcript of the Analysts / Investors Call on Un -Audited Financial Results (Standalone and Consolidated) of the Company for the quarter and half year ended 30th September , 2023 held on 30th October , 2023.

The Information is being hosted on the company's website www.jupiterwagons.com .

Kindly take th e same on your record.

Thanking You ,

Yours Faithfully ,
For Jupiter Wagons Limited
(formerly Commercial Engineers & Body Builders Co Limited)

Ritesh K umar Singh
Company Secretary and Compliance Officer

"Jupiter Wagons Limited
Q2 & H1 FY2024 Earnings Conference Call "

October 30 , 2023

MANAGEMENT : MR. VIVEK LOHIA – MANAGING DIRECTOR – JUPITER WAGONS LIMITED
MR. SANJIV KESHRI – CHIEF FINANCIAL OFFICER – JUPITER WAGONS LIMITED
Jupiter Wagons Limited

 Moderator : Ladies and gentlemen, good day and welcome to Jupiter Wagons Limited 's Q2 & H1 FY2024 earnings conference call hosted by Systematix Institutional Equities. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal the operator by pressing "*" then "0" on your touchtone phone. Please note that this conference is being recorded. I now hand th e conference over to Mr. S udeep Anand from Systematix Institutional Equities. Thank you and over to you Sir!

Sudeep Anand : Thank you Lizaan. Good evening, everyone, and thanks for joining us today for the Q2 & H1 FY2024 earning s call of Jupiter Wagons and on behalf of Systematix I welcome you all. From the management team today we have Mr. Vivek Lohia, Managing Director, and Mr. Sanjeev Keshri, Chief Financial Officer. I will now hand over the call to the management for the opening remark s and then we can o pen the forum for Q&A. Over to you Vivek Sir!

Vivek Lohia : Thank you for the introduction. Good evening, everyone and welcome to the Q2 & H1 FY2024 Earnings Call . We are delighted to share that we have maintained a strong momentum in both operational and f inancial performance. Once again, we have achieved triple digit growth in revenue, EBITDA, and profit after tax for the quarter and the first half ending September 30 , 2023. The growth aligns with our strategic plans as we continue to expand our diverse bu siness lines.

In Q2 FY 2024 we reported revenues of Rs.87,930 lakhs, up 111% year -on-year, EBITDA for the quarter stood at Rs.12,117 lakhs, up 143% year -on-year. The EBITDA margin has improved by 180 basis points from 12% in Q2 FY 2023 to 13.8% in Q2 FY20 24. This has been driven by enriched product mix and economies of scale. We continue to report industry -leading EBITDA margins. Profit after tax for the quarter stood at Rs.8,150 lakhs, up 229% year -on-year.

For the first six months we reported revenue fro m operations of Rs.1,63,248 lakhs, up 129% year-on-year. E BITDA for the quarter

stood at Rs.21,815 lakhs, up 172% year -on-year. The

EBITDA margin has improved by 210 basis points from 11.3% in Q2 FY2023 to 13.4% in Q2 FY2024. Profit after tax for the quart er stood at Rs.14,510 lakhs, up by 280% year -on-year. The momentum remain s strong in the wagon business, and we continue to execute production at hi gh levels as indicated earlier.

We exited Q2 with a production run rate of nearly 700 wagons per month and as we increase the capacity of our foundry, we will see a further scale up in wagon production to

 around 800 units per month by the end of this financial year. The existing foundry at our Kolkata unit will see an enhancement of capacity from 2 ,500 metric t ons at present to 3 ,000 metric tons by the end of financial year. Further we will also set up a found ry at Jabalpur with a capacity of 2 ,000 metric tons. The execution period is around 18 to 24 months. Thus, overall foundry capacity will double from 2 ,500 metric tons at a single location at present to 5,000 metric tons in aggregate at two locations. We are also working on initiatives to improve the scope of backward integration by adding wheel set manufacturing capacities. The addition of the foundry in Jabalpur unit will result in saving in freight costs for the back -end products which we are currently being transported from Kolkata foundry to the Jabalpur manufacturing unit. The enhancement of backward integration, saving in trade and other production effi ciencies being worked upon will contribute towards greater efficiencies and enhanced profitability across the business.

In terms of outlook for the business, the momentum in ordering of private wagons remain unabated where Indian Railway has floated a te nder for supply of 20 ,000 wagons and the subm issions are due by mid November. Our present order book of R s.5,952 Crores includes Rs.5,355 Crores of order from wagons, and we are confident that this is set to enhance further.

Coming to the braking side of the business. The handover and integration of Stone India are nearing completion and pre -production activities are underway. We expect to commence operations in Q4. For the Dako JV we are anticipating 2 to 3 tenders to be launched in the next few months fr om which we anticipate orders of around Rs.200 Crores for braki ng systems for LHB coaches . We are working on an order for around 1,000 brake systems for which we anticipat e finalization by the end of December.

In brake disc business we are on course to re gister about Rs.50 Crores of topline in the current financial year, having launched the business only a few months ago. Next year w e will ramp up this business to around Rs.150 Crores in turnover of which Rs.50 to 60 Crores will come from the export market .

In our electric mobility business, the vehicles are in an advanced stage and are set to
undergo comprehensive testing in November. We are confident that the offering s are
scheduled for a commercial launch in the fourth quarter of the financial year as guided
earlier .
Our optimism for the future is fueled by our strategic expansion into international markets ,
the high demand for wagons and containers and the remarkable milestones attained in our
 mobility solution ventures, backed by a solid order book, promising partnerships and
unwavering commit ment to innovation and quality, w e have every reason to believe that
Jupiter Wagons will persist in its trajectory of growth and success. With this I would like to
open the floor for Q&A. Than k you.
Moderator : Thank you. The first question is from the line of Balasubramanian from Ar ihant Capital.
Please go ahead.
Balasubramanian : Thank you so much for the opportunity, Sir. M y first question regarding the c apex part, we
are doing expansion on the foundry side could

you please share the breakup in Kolkata and
Jabalpur for foundry capex and what kind of cost savings we can expect in terms of freight
and the other kind of things?
Vivek Lohia : In terms of c apex allocation at this moment we are n ot at liberty to share si nce it i s in the
finalization stage, b ut as I have mentioned in my opening remarks that in Kolkata currently
as it is about 2 ,500 metric tons, which will go up to about 3 ,000 metric tons and in Jabalpur
we are setting up an additional capacity of about 2 ,000 metric tons , which will not only
cater to our own requirements but also to the export ma rket.
Balasubramanian : As a group broadly mention about the overall capex for the year and next year ?
Vivek Lohia : I think on overall capex we are looking at roughly about Rs.700 Crores of incremental
capex by the end of next financial year.
Balasubramanian : On the v olume side we have seen decline on CMS crossing and container s like what are the
challenges we are facing in those business , if you could throw m ore light on that ?
Vivek Lohia : In the CMS cross ing there is no decline in volumes, w e have considerable order book . The
only challenge is because we have certain restrictions on foundry capacities, which we are
now enhancing the capacities . So, from next quarter o nwards you will see the volumes
increasing. As you are aware, we also have orders for the weldable crossings for which right
now we are undergoing the trials and execution will start from next financial year. So again,
foundry capacity enhancement is again very crucial for that business itself. On the container
side we have a very strong order book and in the coming quarters you will hear siz eable
both i n terms of revenues and EBITDA margins and you will see a lot of offtakes in that
business.
Balasubramani an: Sir on that 20,000-wagon order like how much we are targeting 20% or 25% of the business
if you could throw some light on that?
 Vivek Lohia : First u nderstand from wagon orders the last part of your qu estion I did not understand.
Balasubramanian : No Sir like out of 20,000 wagons order like how much we are targeting ?
Vivek Lohia : Again, it is very difficult to give any kind of specific numbers because as you are aware the
tender pricings are very dynamic. So currently as I have mentioned we have quite a s izeable
private order book and we are continuing to add on the private order book and that is our
priority and definitely we are looking at siz eable order books from the wagon tender itself
and we are expecting post this tender, the global tender to also c ome. So right now, to give
any specific numbers would be very difficult , but yes, generally Jupiter enjoys a market
share of around 25 %-30% so it could be in line with those numbers.
Balasubramanian : Got it. Thank you so much and I will come back in the qu eue.
Moderator : Thank you. The next question is from the line of Senthilkumar from Joindre Capital
Services Pr ivate Limited. Please go ahead.
Senthilkumar : Thanks for the opportunity . Sir, these commodity prices are softening over a period of time
but why the raw material costs as a percentage of sales is still higher on both sequential as
well as year -on-year basis?
Sanjiv Keshri : This is generally the mix of the products which we are offering. The company is not only in
the wagon s we are also producing th e load bodies, the CMS crossings, containers , so gross
margin is mix of all these things. You can see from our result also that the number of load
bodies and the revenue from the load bodies also increased so this is one of th e reason s.
Moderator : Ladies a nd gentlemen, we seem to have lost the audio from th e line of Mr. Senthil Kumar.
We will move o n to the next question that is from the line of Akash from Dalal & Broacha
Stock broking Limited. Please go ahead.

Akash : Thanks for the opportunity . I would lik e to congratulate the management on the superb set of numbers . Sir, firstly I would like some help from your side in terms of numbers so what would be the realization pe r wagon for this quarter ?
Vivek Lohia : It is around Rs.40 lakh.
Akash : Sorry Sir, can you come back again?
Vivek Lohia : On average it i s Rs.40 lakh.

 Akash : When it comes to export wagon will it be the same ?
Vivek Lohia : Again it depends on the kind of, see if it is a flat wagon then the pricing is different depends on the kind of wagon order books which we are going to get, s o currently we are expecting in the coming quarter orders for meter gauge wagons and the pricing will be very similar , but then in terms of the overall raw material and the steel which you required in those wagons are muc h less than what is required in our current set of wagons.
Akash : Also, Sir would want the order book split of the current Rs. 5,950 Crores order book that we have in total could you do this s plit across business verticals?
Vivek Lohia : Yes. So, wagon orde r book is as I mentioned it is about Rs.5,300 Crores , which translates into roughly about 13 ,500 wagons , load bodies order book is about Rs.270 odd Crores and the rest of the order books make up of the CMS crossing agai n is about close to Rs.190 Crores.
Akash: Sir, Rs. 270 Crore s was for.
Vivek Lohia : The load bodies, Rs.190 Crores is for the CMS crossing.
Akash : Sir one of my colleagues had earlier asked about the 20,000-wagon order for that because those are government orders , so if they are a bi t margin d ilutive would we still be going ahead with those kinds of orders ?
Vivek Lohia : As I ha ve told you it is a very dynamic kind of situation . We have very strong order books on the private side, and we are further adding to them. So, at this present moment it will be very difficult to comment on our strategy for the tender , but obviously the railway is, government orders are very crucial to our business, and we will be looking to get order books from that tender.
Akash : Got it Sir a nd just talking about the gen eral order inflow this quarter if we see, if we just see sequentially on a quarter -on-quarter basis our order book has dropped down a bit and even if we compare it on Y -o-Y basis it must be 1% or 2% up from what it was in the last quarter in the previous y ear, so has the order in flow or order intake for wagons slowed down or how is it in the private sect or as well as the public sector ?
Vivek Lohia : Our In take as gone up rather than slowing down because you have to also understand that our execution rates ha ve gone up significantly. Last year on an average we did about 40 0-450 wagons, which are now we are doing close to about 700 wagons a month. So, there is a

 significant execution which is happening and still we are maintaining the same kind of order books. So, on the other hand there is a significant increase in order books which have been happening from last year.
Akash : Got it Sir .
Moderator : Thank you. The next question is on the line of Rahul Jain from JM Financial PMS.
Rahul Jain : Hi, Sir. Congratulatio ns on the good s et of numbers. My first question will be that the wheel set manufacturing what you mentioned as part of our backward integration so will it be done through a JV with some partner, or will it be done alone?
Vivek Lohia : Again, it is somethin g which we cannot give our strategy out right now . I think in the next one or two months you will get a very clear picture of that.
Rahul Jain : I wanted the order book break up on the wa gon side, so you mentioned Rs.5,355 Crore s of wagon order book so what is the breakup between that in terms of priva te and Indian Railways?
Vivek Lohia : Private orders

would be out of that is 4,200 Crores roughly would be the private order book , so 80% of that order book is private right now roughly.
Rahul Jain : How is the br ake systems ord er book looking right now?
Vivek Lohia : Same y ou mean to say from the private sector ?
Rahul Jain : Brake system Sir.
Vivek Lohia : As I have told you on the braking side on the coaches from all the three workshops, the tender is currently unde r finalization. Overall, there is a tender close to about 5 ,000 brak e systems which are currently under finalization and out of that we expect at least to win tenders for about 1 ,000 brak e systems. So, it takes care of our capaciti es for the next financial year.

Rahul Jain : Done. Thanks a lot Sir.
Moderator : Thank you. The next question is from the line of Parvez Qazi from Nuvama Group. Please go ahead.
 Parvez Qazi : Hi, good evening, Sir, and thanks for taking my question. Congratulations on a great set of numbers. My first question is during the second quarter what w ould have been a rough cut let us say order intake from the private sec tor side on the wagon business?
Sanjiv Keshri : Around 60% from the private sector and around 40% we have allocated to the r ailway sector. The exact number is n ot right now available to us.
Parvez Qazi : This we are talking about wagon order s that we won during Q2?
Vivek Lohia : The wagon orders which we won during Q2 are 100% from the private industry only; we did not get any ne w orders from the Indian Railways . So roughly I think the new order book I do not know the exact numbers, but it will be similar to what we have executed since the order book has remain ed the same from last quarter , so if you look at the execution number it will be roughly similar to that as the new order book which we have generated.
Parvez Qazi : In terms of debt number, you mentioned the number of about Rs.700 Crores by FY 2025 an d did I get that correctly ?
Vivek Lohia : That is not the debt, that is what w e are saying is going to be our c apex investment Rs.700 Crores .
Parvez Qazi : What was our d ebt at the end of this quarter?
Sanjiv Keshri : The term loan side is around Rs.12 Crores and on the working capital around Rs.350 Crores and against that we have aro und Rs.150 Crores cash available in our account.
Parvez Qazi : Got it. Thank y ou and all the best for the future .
Moderator : Thank you. The next question is from the line of Sand esh from HSBC. Please go ahead.
Sandesh : Hi, good evening. I wanted to ask on, you mentioned about product portfolio expansion on the wagon side both in the Kolkata and Jabalpur with that what would be the wagon capacity once these capacity comes in like you mentioned that you are currently having a run rate of around 700 wagons so post this expansion what could be the run rate of wagons per month if you can share that?
Vivek Lohia : Post the expansion in the Kolkata facility we are looking at about 800 wagons every month and once Kolkata and Jabalpur both t he foundry capacity is onlin e it will be around close to about 1 ,000 wagons a month.
 Sandesh : You mentioned ab out EV product that you wi ll be launching by the end of this year so what will be the product like and what kind of investment has already gone into it and what kind of retur ns are y ou expecting from this project because it is a new area for you ?
Vivek Lohia : The product is a 1.2 -ton payload vehicle, and we expect this by the end of this current financial year. In terms of payback, and it is too early right now, I think once t he launch happens, and we see the momentum which we generate in the market then we will be in a much stronger position to c omment on it. In response, as I ha ve also mentioned earlier, we are looking at overall investments will be close

to about Rs.50 odd C rores in this business.
Sandesh : Thank you, Sir . That was it.
Moderator : Thank you. The next question is from the line of Devesh Kasliwal from Antique Stock Broking . Please go ahead.
Devesh Kasliwal : Congratulations Sir on a good set of numbers. I actually wanted to understand about the Stone India the a cquisition that will happen , so in that majority of the product portfolio is going to be consumed by us, but then apart from that t he product that they a re going to supply to Indian Railways , so what is the total addressable market for that and what type of revenue generation are we looking a t for the next couple of years ?
Vivek Lohia : So initially in the next financial year ou r focus is to start the freight brake business in Stone India because that is somet hing which is crucial to our co -business and that would be a backward integration for us. Beyond that Stone India has a lot of capabilities in manufacturing brak es for locomotives, then High -Reach Pantograph and various kind of valves for the locomotive bu siness. So that business also paralle lly the idea is to get that started that business again has a potential of I do not know the exact number but should be about close to Rs.1,000 odd Crores should be the overall market size for that business.
Devesh Kasl iwal: What is the approximate revenue we are expecting out of that Rs.1,000 Crores?
Vivek Lohia : Again, as I have told you next financial year our focus is to start the brake business first because that is the low hanging fruit and that is where it is very integral to our core business. So again, right now to comment on what kind of market share wh ich we are looking from the non -freight business would be too early.

Devesh Kasliwal : Thanks a lot Sir.
 Moderator : Thank you. The next question is from the line o f Senthilkumar from Joindre Capital Services Private Lim ited. Please go ahead.
Senthilkumar : I am sorry , my line disconnect ed. I was asking about a raw material cost increase as a percentage of sales I missed your answer.
Sanjiv Keshri : In the raw material side, you have asked earlier about the gross margin . So, the reason for the gross margin one is that we are manuf acturing the wagon again the load bodies , containers, there are a lot of the products are there and all the products have different raw materi al, and their gross margin are there. So, on a consolidated basis the gross margin is coming to around 23 % or 24% but in the wagon, it is more than this figure. This quarter we have also done a good number for the lo ad bodies and that is the reason that th e gross margin from the last quarter is 1% lower than the last quarter.
Senthilkumar : My second question in the consolidated cash flow statement I could see a big jump in trade receivables, can yo u throw some light on that ?
Sanjiv Keshri : If you see the nu mbers of the days in the trade receivable it is slightly increased just because that as I told that we increase the load bodies revenue also , so there are some increase on incremental debtors on that side and again you can see that our turnover is also inc reasing very rap idly, s o there is a slightly increas e in 4-5 numbers in the receivable side.
Senthilkumar : So how much receivable from the government order as of September 2023?
Vivek Lohia : That number right now is not available, but it is very insignific ant. The government receivables are not much, but again those numbers are not readily available that we can share it , but it is very insignificant.
Senthilkumar : Thanks Sir. That is, it from my side.
Vivek Lohia : Thank you. The next question is from the li ne of Indrajit Chakravarty from Scrip Tradin g Corporation. Please go ahead.
Indrajit Chakravarty : My question is that I heard from an interview of Mr. Sanjiv that the railways is coming with

an order of 50 ,000 wagon s this year , now in your report this time you are saying the tender of 20 ,000 wagons has been tendered so that lea ves some another 30 ,000 odd wagons to be tendered in the future am I right in my thinking?
 Vivek Lohia : Yes, you are right in your thinking. Those are the numbers which we have also g ot from the railway s. So, there is out of that balance 30 ,000 there is a global tender also which is there for roughly about 10 ,000 wagons, which will shortly to come out.
Indrajit Chakravarty : I have one more question Sir, which is that recently you raise d your funding for Rs.700 Crores funding , now the question is will this led to equity dilution once you exercise that option ?
Vivek Lohia : Yes, it will lead to equity dilution because money is being raised in the company, so it is primarily raise d, which w e are doing.
Indrajit Chakravarty : So, when by which time this equity will be raised , is there any timeline kind of?
Sanjiv Keshri : See we have got the share holder s approval recently and we are working on that as per the SEBI regulation there are 12 month s timeline for raising this QIP, so let u s see, but hopefully within two or three months there will be some announce ment.
Indrajit Chakravarty : Percentage of equity dilution can you please tell Sir something like that would be to what kind of percentage equ ity dilution ?
Sanjiv Keshri : It is very difficult because the QIP or number of the rate will be derived from the Stock Exchange closing prices of the last two weeks when we launch the QIP, so it is very difficult to tell you the percentage dilution.
Indraj it Chakravarty : Thank you.
Moderator : Thank you. The next question is from the line of Akash from Dalal & Broacha Stock Broking . Please go ahead.
Akash : Thanks for the opportunity again. My question is from the EBITDA margin point of view , so this quarter in spite of the dip in the gross margins we have increased our EBITDA margins to 13.7%, s o going forward do we have scope to increase this further and touch around 14 %-15% levels ?
Vivek Lohia : Currently I think as we go through our further backward integra tion cycle. As I mentioned that next year, we are looking to completely integrate our own freight br akes once Stone India is fully operational and then once the Jabalpur foundry starts, whatever bought out, which we are now doing on the foundry side will s top and then we will be making a considerable saving on the freights also and then down the line we have also plans for our

 own wheel set production. So definitely as and when these backward integration steps keep on kicking in you will see an incremental increase in EBITDA margins.
Akash : One question for the export wagons , so last quarter in the PP T you had mentioned that for a 620-wagon tender you were L1 bidder also in the process of a 1,000 -wagon order in some export tender , so where are we on that and how many export wagon s in this quarter ?
Vivek Lohia : To come in the current quarter that is the indication which we are getting as you are aware that it is not in our hands, whoever is the tender authority, it is on their distribution as to when they rele ase the order s, but the indications which we are getting is that we will get some orders in the coming quarter and then once these orders come I think every quarter you will see new order books coming in on the export side.
Akash : Approximately how many wagons do you expect for FY20 24-2025 from export?
Vivek Lohia : Very difficult to say that, but whatever indication which we are getting is that we will definitely get the ord er books in the coming quarter, b ut I would not like to give any kind of speculative numbers, but we will definitely get some ord er books in the coming quarter.
Akash : Go

t it Sir. Thanks a lot.
Moderator : Thank you. The next question is from the line of Balasubramanian from Arihant Capital. Please go ahead.
Balasubramanian : Thank you so m uch Sir for the follow -up questions. Sir, on that EV side we are launching in Q4 could you please share and differentiate between our product and our competitor products on the EV side ?
Vivek Lohia : Again, it is I would say it is very superior i n terms of one is the battery capacity and also in terms of the payload which it can carry and thirdly the range , I think in all these three parameters our product will be far superior t o today whatever is available in the market.
Balasubramanian : I got it. Thank you .
Moderator : Thank you. The next question is from the line of Arvind Singh Choudhary from RM O House Investments L LP. Please go ahead.
Arvind S Choudhary : Thanks, and good evening. So basically, I am the shareholder from the company IPO which is from 2011 and I got two questions the first one is regarding the Jupiter EV mobility joint

 venture that do you have a partner in this venture and what is the equ ity percentage of that partner?
Vivek Lohia : We do have a partnership with regard to not the current vehic le which we are launching, but down the road when we are offering the higher payload vehicle, we do have a partner in terms of green power but right now there is no equity arrangement whi ch has been reached between us.
Arvind S Choudhary : The second questi on is regarding your drone project, what is the status of that project?
Vivek Lohia : So that is also it is in advanced stages and again in the next coming few quarters you will get further updates and announcements on that , but it is again progressing as p er our timelines.
Arvind S Choudhary : Thank you so much.
Moderator : Thank you. The next question is from the line of Akash from Dalal & Broacha Stock broking . Plea se go ahead.
Akash : A follow -up question. We have already reached the 700 wagons per month ca r production rate so just to understand the milestones how do you perceive the production rate to ramp up in the next let u s say one to two quarters and also in the longer -term let u s say in FY20 25 and 2026?
Vivek Lohia : We have mentioned clearly that we a re expecting by end of this financial year. We expect that our capacities of existing foundry we want it will go up from 2 ,500 metric tons today to about 3 ,000 tons and that will also resul t in incremental wagon capacity and by the end of this financial ye ar we are looking at close to 800 wagons per month, we are looking to produce and once the Jabalpur capacity becomes online that has a higher timeline because it is going to be a completely new brownfield capacity. So as and when that is online the capacit y will go up to about 1 ,000 wagons.
Akash : The current order book how does you expect it to execute the current order book and how do you expect it to scale up in the next couple of years l ike how much time would it take to execute the current order book?
Vivek Lohia : End of next financial year we are looking to go up to about 1 ,000 wagons as and when the new foundry becomes online so the scaling up timeframe is very clear to you.

 Akash : Got it. So, this order book the current one which you have of around 6 ,000 odd Crores that should get executed by around April 2025 end itself ?
Vivek Lohia : Yes, that is the plan that within FY20 25 we want to execute, but as I mentioned that we keep on adding additional order book , it is very dynamic, since most of our order books are from the private sector and it is not from government tendering , so again it is a very dynamic situation when it comes to those ord er books.
Akash : So, we do not perceive any concerns in terms of order visibility eve

n post FY 2025 itself like the ordering will continue at the same flow ?
Vivek Lohia : Now whatever indications which we are getting from the market we do not see any concer ns.
Akash : So even post FY2025 -FY20 26 and all we are hopeful, and we are optimistic right?
Vivek Lohia : Because as you are aware there is already a 20 ,000 railway order book which is tender, which is due and then another 10 ,000 global tender which is also we are very hopeful will come out shortly, s o I do not think there is any chal lenges in terms of order books, s o it is more on the execution going forward that we are more focused and obviously on the backward integration part of it so that we can solidify the business as well as better our margins.
Akash : Got it Sir a nd on the container front how do you expect to scale up in terms of revenue now that we are getting a lot of orders?
Vivek Lohia : This financial year we are looking to do business of close to about Rs.100 odd Crores and again we have added capacity there and we are now doing a lot of automation there. We a re adding a new robotic line which will further keep on expanding on that and then there itself also we are doing a lot of value additions. So, we expect again going forward numbers very difficult to say, but you will definitely see an increase in revenues as well as an increase in margins as we produce more value -added products, and we do better economies of scale there.
Akash : Last question from my end Sir, that 10 ,000 wagon global tender would be aluminum wagons , right ?
Vivek Lohia : No, I do not think it will be aluminum wagons.

 Akash : We will need a normal steel wagon, is it?
Vivek Lohia : Yes, as of now whatever we have indication which we have got is going to be the normal steel wagons.
Akash : I think a couple of quarters back you had also guided us for something some aluminum wagon orders like to come.
Vivek Lohia : I think w e had not mentioned anything on aluminium wagons, in none of our calls we mentioned anything regarding aluminium wagons.
Akash : So that wo uld not be taking place, you do not expect g overnment to launch .
Vivek Lohia : I am not aware of it.
Akash : Got it Sir. Thanks a lot.
Moderator : Thank you. Ladies and gentlemen, as the re are no further questions, I now hand the conference over to the management for the ir closing comments.
Vivek Lohia : Thank you everyone for joining the call today. We continue to benefit from tailwinds of infrastructure creation across the country. The outlook for business remains robust with a solid order book and all our business lines set for further scaling up give n the high visibility of ordering. We are very excited about our prospects. I would like to take this opportunity to wish all of you a happy Diwali and a prosperous New Year. We look forward to interacting once again next quarter. Thank you.
Moderator : Thank you, members of the management team. Ladies and gentlemen, on behalf of Systematix Institutional Equities that concludes this conference call. We thank you for joining us . You may now disconnect your lines.

Call: Feb 2024

Company Secretary and Compliance Officer

Jupiter Wagons Limited
Q3 & 9M FY24 Earnings Conference Call
February 02, 202 4

MANAGEMENT : MR. VIVEK LOHI A – MANAGING DIRECTOR – JUPITER WAGONS LIMITED

MR. SANJIV KESHRI – CHIEF FINANCIAL OFFICER – JUPITER WAGONS LIMITED

Moderator: Ladies and gentlemen, good day and welcome to the Jupiter Wagons Limited Q3 and 9 months FY24 Earnings Conference Call hosted by Systematix Institutional Equities. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone.
Please note that this conference is being recorded. I now hand the conference over to Mr. Sudeep Anand from Systematix Institutional Equities. Thank you and over to you, sir.
Sudeep Anand: Thank you and good evening, ladies, and gentlemen. Thanks for joining us today in the 9 months and Q3 FY24 earnings call of Jupiter Wagons Limited. On behalf of Systematix , I would like to thank the management for giving us the opportunity to host this earnings call.
Today we have with us Mr. Vivek Lohia, Mana ging Director and Mr. Sanjiv Keshri , Chief Financial Officer. I'll now hand over the call to the management for their opening remarks and after that, we can open up for the Q&A. Thanks and over to you, Vivek sir.
Vivek Lohia: Thank you, Sudeep, for the introduction. Good evening, everyone and thank you for joining us on this call to discuss the earnings for the third quarter and nine months of FY24. We are pleased to announce that we have sustained robust momentum in our perfor mance with stellar growth in revenue, EBITDA, and profit after tax for the quarter and the nine months ending December 31st, 2023.
This performance validates the progress in execution of our strategic objectives as we continue to scale our diverse business lines, encompassing mobility solutions. In Q3 FY24, we reported total income of INR 90,081 lakhs up 39.4% year -on-year, EBITDA for the quarter stood at INR 12,480 lakhs up 54.7% y -o-y. The EBITDA margin has improved by 140 basis points from 12.5 in Q3 FY23 to 13.9 in Q3 FY24. This has been driven by enhanced product mix and economies of scale.
We continue to report an industry -leading EBITDA margin. Profit after tax for the quarter stood at INR 8,340 lakhs higher by 79.8% y-o-y. For the first nine months, we reported total income of INR 2,54,090 lakhs up 86.7% y-o-y, EBITDA for the period stood at INR 34,331 lakhs up 113.4% y-o-y. The EBITDA margin has improved by 170 basis points from 11.9% in nine months FY23 to 13.6% in nine months FY24. Profit after tax for the period stood at INR 22,858 lakhs higher by 170.2% year -on-year.
The wagon business has sustained strong performance, enabling us to surpass the milestone of INR 90,000 lakhs in total income this quarter, despite losing 10 days of production due to Pooja and other festivities in West Bengal. As you can see from our presentation, wagon volumes have increased further this quarter, averaging nearly 850 wagons a month.
The expansion of Kolkata foundry and establishment of a greenfield foundry at our unit in Jabalpur will result in doubling of overall foundry capacity to 5,000 metric tons. The new

foundry at Jabalpur is expected to take around 18 months to set up and combined with the brownfield expansion at Kolkata will enable us to enhance wagon production to approximately 1,000 units per month. The addition of the Jabalpur unit is expected to result in significant cost savings, especially in freight expenses.
Our strategic focus on improving backward integration, reducing freight costs, and implementing production efficiency measures are designed to further enhance operational efficiencies, laying the ground for an enriched margin profile. We also witnessed increasing volumes of CV bodies and our JV company JWL KOVIS has witnessed a ramp up of hubs to the export market. In an eve

ntful quarter from the perspective of order wins, the wagon business
won orders of over INR 2,200 crores from Government of India as well as private customers. This includes a substantial INR 1,617 crores order from Indian Railways, an INR 473 crores order from Defence Ministry and an INR 100 crores order from an Automotive Major for four sets of double -decker automotive carrier wagons. Aided by our global partnership s, we continue to introduce pioneering technologies to the mobility sector in India.
Additionally, we received an order value d at INR 112 crores for axle -mounted brake disc system s in our JV company JWL DAKO CZ India, reflecting our strength and expertise in wagon and associated component manufacturing. With these wins, the aggregate order backlog now stands at INR 7,076 crores.
Another meaningful development during this quarter was the successful conclusion of our second round of Qualified Institutional Placement amounting to INR 403 crores by issuing 1,28,06,595 new equity shares to Qualified Institutional Buyers, which includes prominen t investors like Tata Mutual Fund, HSBC Mutual Fund, Bandhan Equity Fund and FIIs like Societ e General and Copthall Mauritius Investment Limited .
Our business of braking systems and brake discs are scaling as expected with anticipation of a

significant uptick in execution and performance through FY 2025, instilling confidence in the brake business. In electric mobility, we await AR AI (Automotive Research Association of Indi a) certification for our E -LCVs with scheduled commercial launch in the fourth quarter of this financial year. In December 2023, ACU ITE upgraded our long -term and short -term bank rating to AA - and A1+, respect ively, indicating enhanced credit quality and reduced default risk. This positive assessment reflects improved financial standing, providing a stable outlook. The tailwinds for our business are likely to sustain expanding on infrastructure in the vote of account presented yesterday.

Honourable Finance Minister has indicated plans to establish three significant corridors aimed at addressing congestion issues in existing rail lines, primarily in the eastern part of the country. These commodity -specific economic rail corridors are designed to facilitate f aster freight movement, reduce turnaround time, and lower logistic costs for mineral and cement corridors and a high traffic density corridor. This will be in addition to the eastern dedicated freight corridor which was completed during the quarter and undertook its first commercial service on

November 1. In addition to this initiative, the finance minister revealed plans to convert 40,000 normal rail bogies into Vande Bharat to enhance the safety, convenience, and comfort of passengers. Furthermore, key rail infrastructure projects such as Metro Rail and Namo Bharat will see expansion into more cities, contributing to the overall development of the country's rail network.

We anticipate a sustained growth momentum in the demand for wagon, passenger coaches and metro coaches. This continued thrust by the Government, supported by greater investments and participation by the private sector, is leading to accelerated investment into the rail sector and rapid scale -up of demand for wagons and accessories. We are well poised to capitalize on this opportunity and our optimism is grounded in an impactful partnership, cutting -edge technology, strategic global expansion, and a solid order book.

We can now take up your queries.

Moderator: Thank you. The first question is from the line of CA Garvit Goyal from Invest Analytics. Please go ahead.

Garvit Goyal: Good evening, sir. Congrats for a good set of numbers. My first question is on the commercial EV side. So, whether the testing has happened for the same? I think you mentioned some delays have happened on t

his side. So, what is the reason for the delay that is done? And secondly, are we still intact on selling 5 ,000 to 6 ,000 vehicles in FY25 with an app roximate revenue of INR 300 crores to INR 400 crores ?

Vivek Lohia: Yes, thank you. So, there is no delay in our rollout plan. We have always mentioned that it will be in the last quarter of this financial year, and it is as per our targets. The vehicle is currently under final certification by ARAI, and we are expecting the certification very shortly. So, in terms of the rollout, there is no delay at all. In t erms of volumes, I don't think we have given any forward -looking projections on volumes. So, I think just after post -rollout only, we will be able to give any indicative volume. But right now, we have not given any volume projections.

Garvit Goyal: So, do we expect any kind of revenues from EVs in FY25 or it will not be there?

Vivek Lohia: No. If we are launching the vehicle by end of FY24, FY25 will see a good set of revenues coming in from the EV business. But however, we have not given any kind of indication on the revenue numbers.

Garvit Goyal: So, will it be profitable in the initial year?

Vivek Lohia: I think, you know, it's two forward -looking questions. I think once the rollout happens, then we will take it from there.

Garvit Goyal: Understood, sir. Coming to your brake system part, we are doing it via JV called DAKO and subsidiary Stone India. Can you share the ballpark order book that Stone India is having right now? What are the developments happening in their own and what is the outlook for FY25 brake system segment?

Vivek Lohia: So, again FY25 outlook is very strong. As I had mentioned in my last call, we were expecting sizable order books for the LHB brake systems. We already have got an order book of about INR 115 crores from Indian Railways. And we are going to be starting the execution in the coming quarter. Again, as I have projected, the brake business in FY25, we should see revenues of anything between INR 400 to INR 500 crores.

Garvit Goyal: Understood. That is from Stone India . And the JV, I think it will contribute to your work online, right?

Vivek Lohia: No, I am talking about the brake business all put together. We are looking at a revenue of INR400 to INR500 crores in FY24. And as we have mentioned that over the next three years, we expect the business to be about INR 1,000 crores.
Garvit Goyal: Understood, sir. And one last question on the order book. So, we are having INR7 ,000 crores kind of orders. So, can you give a breakup in terms of what portion is.
Moderator: Mr. Goyal, may we please request you to return to the question queue for any follow -up?
Garvit Goyal: Just last question. I think it is almost completed. So, we are having order book 7 ,000. So, I just need the breakup in terms of wagons, commercial bodies , and CMS.
Sanjiv Keshri: Garvit , we would like that you send the email to us, then we will provide that. right now, we are not carrying the breakup of the order books.
Garvit Goyal: Okay, sir.
Moderator: Thank you. The next question is from the line of Mr. Balasubramanian . Please go ahead.
Balasubramanian: Good evening, sir. Thank you so much for taking my questions. Sir, we have raised the QIP of INR 403 crores. How much we have utilized till now and what are the plans for that? And on the capex side, how much we have spent in this quarter and how much we are focusing in the next 2 to 3 years? And we are doing capex specifically for this Jabalpur plant on the foundry side. And how much cost benefits we can expect in the next 2 to 3 years?
Sanjiv Keshri: Hi, Bala. We have raised the QIP around INR 403 crores and the bifurcation is already given in the PD. On the utilization side, around INR 90 crores has been utilized against this QIP amount.
On the capex side, t

he capex is going on. But on the payment side, it has not been done to the parties because the work is under the progress.
So, in next quarter, we will give you the exact number what the against the capex we have done.
However, as per the regulation, the utilization certificate will be get uploaded within 2 or 3 days.
So, you will get the details from there itself.
Vivek Lohia: And in terms of our capex plan, we have already mentioned that in the next 2 to 3 years, we plan to do over INR 1,000 crores of capex . And as mentioned, that will result in additional capacity of wagons. So right now, we are doing approximately 800 wagons a month.

And our target is that with the additional capex , we will go up to about 1000 wagons. And on the brake system side also, we are expanding the brake business. So , we will be doing additional capex there.
Balasubramanian: Okay, Sir, on that CM S side, earlier the volumes have been restricted because of the foundry side. How can we expect an improvement on CM S side because we are doing capex on foundry side also?
Vivek Lohia: Yes, so as we mentioned earlier in the call, we have already undertaken a brownfield expansion on the existing foundry, which we expect to be completed in the next 3 to 4 months. I think post that expansion; you will see volumes of the CMS crossing improving significantly. Already the volumes are better, but still we are constrained on the foundry capacity.
But I think by quarter 2 FY25, you will see a significant jump in those numbers.
Balasubramanian: Okay, sir. Sir, what will be the railway and private mix in this quarter on the wagon side?
Vivek Lohia: So right now, order book is about 60 -40. 40% is Indian Railways and 60% is the private order book.
Balasubramanian: Thank you, sir. I'll come back again.
Moderator: Thank you. The next question is from the line of Mohit Kumar from ICICI Securities. Please go ahead, sir.
Mohit Kumar: Yes, good evening, sir. Congrats on a very good set of numbers, sir. My first question is on the recent tender which was put by Indian Railways and where we have got around 4,000 wagons.
So, my question is why the recent tender was undersubscribed? And any comment on the competitive intensity in the tender?
Vivek Lohia: So honestly, we cannot speak for our competitors. So, we had bid for in the tender given the capacity which we had available since the supply had to be done in a very short period. So, we had bid for 4,000 wagons and we got that order book from Indian Railways.
Mohit Kumar: And any comment on the pricing?
Vivek Lohia: The pricing is as per our expectations, and we will continue to maintain the margins what we have projected on the pricing.
Mohit Kumar: Understood, sir. My second question is, sir, how do you think about the opportunities from Indian Railways, especially for the wagons for the next 6 to 12 months? And I do understand that there is one tender which is supported by the Indian Railways for the modern wagons, and which is supposed to be conducted in the month of March. Do we have the capacity to produce the modern wagons?

Vivek Lohia: Definitely, we have the capacity to produce the modern wagons and we are a serious bidder in that tender. As you are aware that Tatravagonka Poprad , the leading producer of freight cars in Europe, is already our partner and a promoter in Jupiter Wagons . So, they have all the requisite technologies available. So , we are looking forward to that. And besides that, we see quite a robust demand from Indian Railways. There are two tenders right now in the pipeline for about 30,000 wagons which are ongoing.
Besides that, our expectation is that Indian Railways would require, as per their projections, would require anything between 20,000 to 30,000 additional wagons i

n the coming one year.
Mohit Kumar: Understood, sir. My last question is on the private wagon enquiry side, sir. How is the enquiry from private wagon compared to, let's say, a few quarters? I'm asking this question because the election is coming up. Is it slowing down some kind of enquiry from the private wagon side?
Vivek Lohia: No, we see a very robust demand from the private sector itself. And I think quarter on quarter we are seeing the demand to become more robust and our private order books have not slowed down. So, I don't think elections will have any impact on this because everybody has long term capex plans and elections will not have any impact.
And as our Honourable Prime Minister has already said that we are seeing private capital coming back in a big way. So, we don't foresee any let up on the demand.
Mohit Kumar: Is it right to say that the GPWI scheme contributes maximum to this private wagon order as of now?
Vivek Lohia: Again, I would not say it contributes maximum. But yes, there was a sizable inflow from that scheme . But besides that, also, there is a sizable demand from non -GPWI wagons.
Mohit Kumar: Understood, sir. Thank you and all the best, sir.
Moderator: Thank you. The next question is from the line of Nishant Parikh, who is an individual investor. Please go ahead.
Nishant Parikh: Sir congratulations on a great set of numbers. My question is regarding the 10,000 new global tender wagons that we're going to be bidding for. So, you had said in the annual report that these wagons will be more specialized in advanced nature and the average price will be higher.
I just wanted to understand what is the average utilization you're looking at and do we have any prototype of such wagons ready? That's my first question.
Vivek Lohia: So, yes, as I have said that these are completely different designs from what right now is flying on the Indian railways. And definitely they will have in terms of loading capacity, they will have better loading capacity. The bogies also are going to be much more modern on these wagons.

So, as I mentioned that we are looking at being new designs and qualitative products. So, we are expecting good margins out of that order book. And again, to give any kind of margin, any further details right now on the tender would be very difficult.
Nishant Parikh: Correct. And one more question, sir. this order, this tender of 10,000 wagons will be given to only one player or it will be distributed among multiple players like how it happens?
Vivek Lohia: No, it will be given to one player, and it must be executed over five years.
Nishant Parikh: Okay, great. All the best for this upcoming tender.
Moderator: The next qu estion is from the line of Ati v Shah, who is an individual investor. Please go ahead.
Ativ Shah : Hi, sir. Congratulations on a great set of numbers and thank you for the opportunity. So, I just had two questions. One is on the expansion of our wagon capacity to 1,000 wagons a month.
Are we going to reach 8,000 wagons a month by the end of this financial year or is it only possible when the Jabalpur foundry comes online?
Vivek Lohia: No, we are going to, our target is to achieve before the Jabalpur foundry comes online. We are looking to do that. Once the Jabalpur foundry comes into line, then it can be more entrenched and then we can have much better backward integration on it.
Ativ Shah : And my second question was regarding wheelset manufacturing. Like you had mentioned earlier, we are seriously looking into it. So, do we have any timelines, capex plans or anything in place or is it still under strategizing phase?
Vivek Lohia: No, it is still under strategizing and as and when we finalize on our plans, we will announce the same.
Ativ Shah : That's it from my side. Best of luck.
Moderator: Thank you. The next question is f

rom the line of Vikash Vijayvargiya from Acorn tree . Please go ahead.
Vikash Vijayvargiya: Thank you. Good evening.
Moderator: Yes, please.

Vikash Vijayvargiya: In Q2 Conc all, in Kolkata, foundry capacity has increased from 2500 to 3000 metric tons and simultaneously our wagon capacity is 700 to 800 wagons. Correct?
Vivek Lohia: No, we are already doing 800 wagons. The idea is that we want to further enhance capacity and as I mentioned that before the end of this year, we are targeting to reach about 1 ,000 wagons.
Vikash Vijayvargiya: On the same foundry capacity of 3 ,000 metric tons in Kolkata?
Vivek Lohia: Yes.

Vikash Vijayvargiya: And in the foundry in Jabalpur, is it 2 ,000 metric tons? Which is com ing onstream in, might be 15 to 18 months. Correct?
Vivek Lohia: Yes.
Vikash Vijayvargiya: And regarding this one, EV mobility, you last time mentioned about this one is a testing schedule is a November 23. Whether it's done, sir?
Vivek Lohia: No, we had not mentioned November 2 3. We had always mentioned that the vehicle will be launched by the fourth quarter.
Vikash Vijayvargiya: Commercially launching is a Q4, FY24, but the testing side is a November 23.
Vivek Lohia: Yes, so that is as per schedule. As we have mentioned that we are awaiting final certifications from ARAI .
Vikash Vijayvargiya: But testing means certification is not completed? Yes, okay , testing is done at our end?
Vivek Lohia: Yes.
Vikash Vijayvargiya: And we expect a commercial launch in this quarter itself? Yes, by the end of this financial year. If it is a certification and everything goes well? Yes.
Moderator: Thank you. The next question is from the line of Gagan deep from Invest Analytics Advisory LLP. Please go ahead.
Gagan deep: Hello. Am I on?
Gagan deep: We are reaching a capacity of 1 ,000 wagons per month by FY24. That will take care for our order book in FY25. So, what after FY26? Do we have any plans related to further expansion of the wagon's capacity?
Vivek Lohia: Again, it is very difficult for us to comment right now, but we are enhancing our foundry capacity substantially , we are creating the pipeline for the same. So , beyond our 1 ,000 number, it will depend on the order flows which come in the next 2 to 3 quarters.
Gagan Deep: And sir, in our J V KOVIS, we did something called Hubs. Can you put some colour on it? What is the product exactly is? And how much JWL KOVIS did in the first 9 months FY24 in revenue terms in fact?
Vivek Lohia: Again, I don't have the numbers readily available with me. So, Hubs is part of the br ake disc which we are exporting, and I think in the coming quarters we have now got substantial export order books. And the export business in the J V will see a substantial increase. And further new set of castings we will see much bigger and much more complex castings being exported out of it.

Gagan deep: So, when you mentioned we are having some export orders of Hubs, so are these figures included in 7,000 order book or it is a separate figure?
Vivek Lohia: It is included in the 7,000-order book.
Gagan Deep: Okay sir. And the brake system order of INR 115 crores , that is also included in 7 ,000 order book?
Vivek Lohia: Yes, it is included.
Gagan deep: Thank you sir and all the best for the future.
Moderator: Thank you. The next question is from the line of Pankaj from Affluent Assets. Please go ahead.
Pankaj : Sir, in answer to one of the participants earlier, you mentioned that we are increasing our capacity from 100 wagons to 1 ,000 wagons. Did I hear it right?
Gagan Deep: No, from 800 wagons which we are doing currently, I said 1,000 wagons.
Pankaj : Okay, does it mean that our revenue potential increases by around 25% from here?
Vivek Lohia: Definitely, as the

wagon production goes up, it will have an impact on the revenue.
Pankaj : Okay, secondly sir, just wanted to understand how sustainable our margins are , given that we are drawing around mid -teens of margins, whereas our competitors are struggling to reach even double -digit margins. So, where do we get these differential margins and that's from my side?
Vivek Lohia: I think that is a mix, sir. See, as you mentioned earlier, one is that we are very focused on our backward integration and efficiencies of operation. I think that's where our focus is and that's where we stand out from our competitors.
And secondly, if you look at our order books on a continuous basis, the private order books are

much bigger, and we do more specialized wagons which have higher margin profiles. And then, obviously, now we are adding much more higher technology products such as brake systems which again carry better margins in our profile. I think it's a mix of all these aspects .
Pankaj : And lastly, if I could squeeze in, what are other than this chapte r.
Moderator: Sorry to interrupt. Pankaj sir, could you please return to the question queue for the follow -up question? Thank you. The next question is from the line of Parvez Qazi from Nu vama Group. Please go ahead.
Parvez Qazi : Hi, good evening and congratulations for a great set of numbers. So, two questions from my side. You said that on the wagon side, there are two tenders in pipeline from Indian Railways for 13,000 wagons. Did I get that number correct?
Vivek Lohia: Yes, P arvez , you got it absolutely right.

Parvez Qazi : So, one tender is for the new -age wagons of 10,000 wagons.
Vivek Lohia: This is besides that. If you include that, it is about 23,000 wagons.
Parvez Qazi : Okay. So, the second tender of 13,000 wagons. I mean, is it like the 11,000 -odd wagons which Railways awarded recently?
Vivek Lohia: It is a completely new design of wagons. The designs are separate. So, there is a tender for 12,000 wagons of that design and there are two small tenders of 500 each.
Parvez Qazi : And then there is obviously the new -age wagon tender of 10,000. That is in addition to these. That is in addition.
Great. The second question is, just wanted to get some update about Stone India. How are things progressing there?
Vivek Lohia: So, the progress on Stone India is as per our expectations. And as we have mentioned that by the beginning of FY25, we will be commencing commercial operations in that company.
Parvez Qazi : Thanks. And last question for Sanjiv ji. Sir, would it be possible to get the gross debt and the cash numbers at the end of Q3? Gross debt and cash numbers at the end of Q3?
Sanjiv Keshri: The gross debt, if you see, we are net debt -free because the around INR 300 crores is the short - term borrowings we have right now in books. Against that, around INR 500 crores is lying on the liquid cash we have. And this is the number. So, we are net debt -free. Sure.
Parvez Qazi : Thanks, and all the best for future.
Moderator: Thank you. The next question is from the line of Anay Mittal from Invest Research. Please go ahead.
Anay Mittal: Sir, I will ask only one question, sir, but I would request you to spend some more time on explaining this question. See, we are not, as investors, long -term investors, we are not seeing you as a wagon manufacturer, right? As you rightly pointed out some time back that you are a mobility player, correct?
You are transforming yourself from being a wagon manufacturer to a mobility player, right? So, I am coming from the point of de -risking your revenue model from depending on railway orders or orders from railways, to being a consistent company churning out revenue and growth on a year-over-year basis. So, what is your strategy on that, sir?
We can see that you are entering defence, you are getting i

nto LC V on EV side, right? So, if you can spend some time explaining how we can see you as a mobility player rather than a wagon manufacturer. Thanks.

Vivek Lohia: Thank you. I think you have highlighted most of the products. So, right now, primarily, wagon is one of our key focus areas and we see a lot of opportunity in this segment in the next 3 -4 years.
We see a lot of robust demand and this segment growing year -on-year. However, on the other side, we are already into manufacturing of commercial vehicles, into manufacturing of containers and our idea is to take that business forward. So, we are launching our first line of E - LCVs, and the idea is that in the coming 1 or 2 years, we will have at least 3 -4 vehicles from 1 ton payload all the way up to 5-ton payload.
So, that will give us a substantial presence in that segment and the E -LCV segment is growing at a very rapid pace. Even if you heard Honourable Finance Minister mention in the budget, it is one of the priority sectors again for the Government of India and they are very focused on developing this segment. Besides that, again, as I mentioned earlier that right now focus is to add products which have a high level of technology, and the b rake business is one of the ways through which we are introducing these products.
They are not only meant for the Indian market, but they will be also exported to the global

market, and we have already started that process and you will see over the next year or 2 years that a substantial part of the revenue of the company will be coming out of exports. We already have a MOU with RITES where we are already working on a lot of export tenders, and we expect results very shortly. So, the idea is that obviously it will take some time for you to see the results but in the coming year or 2 years, we expect that more than 50% of our revenues come out of non-wagon business. That is how we are strategizing ourselves as a company.
Moderator: The nex t question is from the line of Devesh Kasliwal from Antique Stock Broking. Please go ahead.
Devesh Kasliwal Sir, in the last quarter that you had mentioned that you were L1 in an export wagon order of around 600 wagons if I am not wrong and you were expecting it in this quarter. Just a follow up on that. Have you got that order and the opportunities going forward in the export business in terms of number of wagons every year or a percentage of the book?
Vivek Lohia: No, we have not got that order yet but what we can understand is that it is in the final stages of deliberation. So, we expect it very shortly. Again, right now we have participated in tenders for about close to 3 ,000 wagon order books. So, these numbers you will see some export order books flowing soon.
Devesh Kasliwal: The second question was on the container business. It has seen a regrowth in this 9-month period. If I am not wrong, you are planning to focus on other businesses. Even then how do we look at this business going forward for the next 2 years?
Vivek Lohia: As I mentioned, our focus is now on specialized and high -end containers. So, that is why you see the revenues coming down, but the margins have improved. Now, it took us some time to get the prototypes approved and get the infrastructure ready for these containers.

These are containers which are being produced in India for the first time. So, over the next financial year you will see substantial growth in this segment and now we have quite strong and robust order books. So, you will see growth as well as good margins .
Moderator: The next question is from the line of Inderjeet Chakraborty from Script Trading Corporation. Please go ahead.
Inderjeet Chakraborty : Namaste Mr. Lohia and everybody present. I just have a small clarificatio

n question which is
you said that you are having this 10,000 global wagon tender. So , when would we expect that thing to be finalized? Can you please tell that? That's all.
Vivek Lohia: When it will be finalized, honestly you must go back to Indian Railways for that. But the tender is supposed to open sometime in February. The global tender is only supposed to open in February, but finalization is honestly not enough.
That is something which you must ask Indian Railways.
Inderjeet Chakraborty : I thought it was already getting finalized or something like that. No, no.
Vivek Lohia : It is supposed to open in February. Okay. Thank you very much.
Moderator: Thank you. The next question is from the line of Mehul Mehta from Nuv ama PCG. Please go ahead.
Mehul Mehta : Good evening team. Thanks for the opportunity. My question is in earlier response to question you answered that in terms of non -wagons business, we should be looking at about 50% of business from non -wagon business going ahead. So, is there any planning on that part to enter passenger trains as well?
Vivek Lohia: Definitely, that is one segment which we are looking at and we are in discussions with couple of global players. And as and when something materializes, we will be announcing that.
Mehul Mehta And will it be in terms of like a JV with any player to enter passenger trains or in terms of passenger train components or it would be on both sides we can look at?
Vivek Lohia: So, components we are already in the component business as your aware brake system we are already supplying. We are doing certain other components such as couplers, the brake disc. So, we are looking at supplying complete train sets.
Mehul Mehta Right. Okay. Thank you. And one more question last is that in terms of working capital cycle at December end, could you share like you know, d ebtors , creditors, and inventory numbers?
Sanjiv Keshri: Mr. Mehul, if you could please send the email, we will share that because this is not in the result. So, I am not carrying that number with me.
Mehul Mehta Got it. Thank you. I am done.

Moderator: The next question is from the line of Akash from D alal and Broacha . Please go ahead.
Akash : Hello. Yes, thanks for the opportunity, sir. My question is more on our focus on our brake disc and brake system business. So, initially, you know, we had guided that, you know, both

businesses combined will be generating a top line of around INR100 crores this year and will
scale up to as good as INR250 odd crores next year. So, how well have we done on that front?
And if you could share some colour on how these businesses will be shaping up in the coming
next two years .
Vivek Lohia: So, what I had mentioned was that on the brake disc, we expect to do a revenue of INR100 odd
crores this year and we are in lines for the same. On the brake system business, I clearly
mentioned that we will be getting orders in this financial year, and which will be executing over
the next financial year. And as you can see that we have already won an order book of INR100
crores. So, as I have mentioned earlier in my call, in next financial year, overall, on the brake
business, we are looking at revenues of anything between INR400 crores to INR500 odd crores,
of which exports also will form a sizable part.
Akash : Got it, sir. And the second question was relating to the new impetus that yesterday's budget gave
for replacing all the normal bogies with Vande Bharat bogies. Will we benefit out of that in some
way?
Vivek Lohia: Definitely, because we are supplying a lot of critical components as brake systems and couplers
and other such components. So, it is something which we are going to benefit substantially from,
and we are looking ahead for the tenders to come out for these conversions.
Akash : Got it. So, is our current order boo

k on brake system pertaining to Vande Bharat?
Vivek Lohia: No, the current order on brake system is pertaining to the LHB coaches, but in brake disc, we
already have orders for Vande Bharat. And on the brake system, our prototype is on the process
of getting ready and we will be getting into that segment very shor tly.
Akash : Got it, sir. Any guidance on how these two businesses will shape up?
Vivek Lohia: As I told you, in the next 3 to 4 years, we are looking at the brake business to be about a INR1,000
crores business for us. So, we are very, very bullish on this segment and again, as the rolling
stock population goes up, not only the OEM business, but the replacement business as well as
the maintenance business, you will see a substantial contribution coming from all these
segments.
Akash : That's great to hear, sir. Thanks.
Moderator: Thank you. Ladies and gentlemen, we will take that as our last question for today. I would now
like to hand the conference over to the management for closing comments.
Vivek Lohia: Thank you. I appreciate everyone's participation in today's call. The ongoing momentum in
infrastructure development nationwide continues to provide a strong tailwind. The business

outlook remains strong with a large backlog of orders for wagons supported by increasing
traction in new areas. We anticipate further scaling up across business lines of brake discs and
braking systems too. We look forward to interacting in the next quarte r. Thank you. Thank you.
Moderator: On behalf of Systemati x Institutional Equities, that concludes this conference. Thank you for
joining us. You may now disconnect your lines.

Call: May 2024

14th May , 2024

"Jupiter Wagons Limited
Q4 FY '24 and FY '24 Earnings Conference call "
May 08, 202 4

M
ANAGEMENT : MR. VIVEK LOHIA – MANAGING DIRECTOR – JUPITER
WAGONS LIMITED

MR. SANJIV KESHRI – CHIEF FINANCIAL OFFICER –
JUPITER WAGONS LIMITED

Moderator: Ladies and gentlemen, good day, and welcome to Q4 FY '24 and FY '24 Jupiter Wagon Limited
Conference Call hosted by Systematix Institutional Equities. As a reminder, all participant lines will be in the listen -only mode, and there will be an opportunity for you to ask questions after

the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing s tar then zero on your touchtone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Sudeep Anand from Systematix Institutional Equities. Thank you, and over to you, sir.

Sudeep Anand: Thank you, and good evening, ladies, and gentlemen. Thanks for joining us today in the Q4 FY '24 and FY '24 Earnings Conference Call of Jupiter Wagons. On behalf of Systematix, I would like to thank the management for giving us the opportunity to host this call. Today, we have with us; Mr. Vivek Lohia, Managing Director and Mr. Sanjiv Keshri, Chief Financial Officer.

I'll now hand over the call to the management for their opening remarks. And after that we can open for the Q&A. Thanks, and over to you, sir.

Vivek Lohia: Thank you, Sudeep for the introduction. Good evening, everyone, and thank you for joining us on this call to discuss the earnings for the fourth quarter and financial year 2023-'24. We have sustained robust momentum in our performance with stellar growth in revenue, EBITDA, and profit after tax, both for the quarter and the full year. This performance validates the strong execution across core operations, as well as the scaling up of new er business lines. There are strong tailwinds at present for our sector due to several years of underinvestment, and we are pleased to be at the forefront of this exciting opportunity.

We are delighted to announce that the total income amounted to INR 1,100 crore plus in Q4FY24 , marking an impressive year -on-year increase of 57%. EBITDA has shown remarkable growth soaring to INR 14,772 lakhs, reflecting a substantial 59% year -on-year increase. The EBITDA margin was 13.3% in Q4 FY '24, highlighting our focused execution strategy as we continue to report industry-leading margins. Notably, profit after tax has surged by 156% year - on-year, reaching INR 10,422 lakh. We are proud to have achieved the significant milestone of surpassing INR 1,10,000 of revenue in a single quarter for the first time ever.

This exceptional performance in the fourth quarter caps of f a remarkable financial year for Jupiter Wagons Limited, characterized by record -breaking revenues of over INR 36,00,000 lakhs and a profit after tax of INR 33,279 lakhs in FY 2023-'24. Given the strong performance, the Board of Directors has recommended a final dividend of INR 0.30 per share, accompanied by the interim dividend of INR 0.30 per share, the combined dividend for financial year 2023- '24 amounts to INR 0.60 per share, resulting in a meaningfully higher payout to shareholders.

Let me first start with railways. We continue to see robust demand from both the public and private sectors. Over recent years, there has been a notable increase in government funding directed towards the railway sector, accompanied by a marked rise in actual spending. Notably,

3 new railway corridors are presently under construction, promising significant relief from congestion within India's rail network. Moreover, over the past 12 to 18 months, numerous substantial contracts have been awarded, spanning bullet trains, Vande Bha rat trainsets, high - power locomotives, freight wagons, forge wheels and more.

Railway authorities have implemented various strategies to bolster their share in the freight transportation mix. Projections indicate a rise in the rail freight modal mix from 29% in fiscal year 2024

to 35% by fiscal year 2031, driven by factors such as c ost and efficiency of rail over road, GDP growth , improved infrastructure and connectivity supported by increased government focus on rail freight.

In the Freight segment, private sector enrolment and wagon procurement has surged significantly, buoyed by government initiatives like liberalized wagon investment scheme, automobile freight train operator scheme and wagon leasing scheme. As a result, demand for freight wagons is expected to witness substantial and sustained growth. Passenger services to o remain a focal point with capacity being expanded for passenger rail as well and development through metro rail projects in several Indian cities.

In terms of outlook, we are pleased to report an order backlog of INR 7,10,166 lakh our highest ever. This has been aided by order wins from both public and private sector customers, including Ministry of Railways, Ministry of Defence and a leading auto manufacturer. These contracts involve the manufacturing and supply of various types of wagons, bolstering our order backlog and providing strong visibility for the future. Jupiter continues to maintain its position as a leading provider of private wagons in the industry.

During the quarter, we acquired Bonatrans India Private Limited which further solidifies our integrated business model. It empowers us with the critical ability to manufacture wheel sets in - house, thus enhancing our vertical integration and overall product ion efficiency.

This strategic move underscores our commitment to bolstering our capabilities and ensuring a more streamlined and cohesive production process. By bringing wheel set manufacturing under our umbrella, we are poised to achieve greater control over quality, timelines and cost effectiveness, thereby solidifying our position in the market and driving sustained growth. This development marks a

significant milestone in our journey towards excellence and underscores
our relentless pursuit of innovation and operational excellence. F urther as part of Make In India initiative and to reduce import dependency, we would set up manufacturing facilities for complete backward integration of wheel set manufacturing. Further, the integration process following the acquisition of Stone India is progressing smoothly and remains on track.
Looking ahead to fiscal year 2025, we are optimistic about our prospects, particularly with eminent launch of our eLCVs. Additionally, plans are underway to expand our brake system and braking business, further enhancing our outlook for the coming year. In our braking system and brake disc segment, we are witnessing encouraging progress in line with our expectations. We anticipate a significant increase in execution and performance throughout fiscal year 2025 and remain confident in the growth trajectory of these businesses. With that, we are ready to take questions.

Moderator: Thank you very much. We will now begin the question-and -answer session. First question is from the line of Mohit Kumar from ICICI Securities.

Mohit Kumar: Congratulations on a very good set of numbers. So my first question is, what would happen the private wagon ordering for FY '24? And is it possible to give us a sense of market share and the outlook for FY '25?

Vivek Lohia: Yes. Good evening, Mohit, and thank you. Private, again, Jupiter continues to dominate the private segment. So if you look at the private order books, I think Jupiter share would be more than 60% to 70% in this segment. This year, we have delivered the max imum number of private rakes. I think over 100 rakes have been delivered by Jupiter, which is by far the -- if you compared to the rest of the industry, there's a significant difference between us and our next competitor.

Going forward also, our private order book remains very robust. I think 40% of our order b

ook
is still private, and we continue to see the momentum. And this year, we will be manufacturing a very -- I think more of our order book will be much more specialized wagons, both in the steel, cement as well as the auto segment and which will continue to be industry-leading designs.

Mohit Kumar: Sir, last year, we had a very good opportunity from the government side from the Indian Railways side directly. Sir, is there any color you can think about, think about the opportunity from the Indian Railway this particular year? And is there any tender w hich are awaiting to be closed as of now?

Vivek Lohia: Yes. Already, there is one tender. I don't remember that I think it's close to about 6,000 wagons, which is going to be finalized very shortly. But beyond that also we see the growth momentum to continue, and the freight loading numbers have been increasing substantially, which we can see, as well as the core sector, especially the demand for the coal for the steel and other core sectors remain very strong. And we expect the growth momentum to continue. I think post elections, we should see sig nificant tenders coming up.

Mohit Kumar: My last question is what is our plan for Bonatrans India? Can you please help us with a medium - term outlook? What is the kind of capacity you're looking at or the kind of Cape x you require to achieve this capacity?

Vivek Lohia: So this year, we are looking to produce about close to 14,000-to -18,000 -wheel sets in Bonatrans and we are looking at revenues of about INR 400-odd crores. This will, I think, significantly help us as this -- a lot of the production will be captive, and that will definitely help Jupiter in terms of our own freight production, as well as our margins. Beyond that, I think our focus is to complet ely backward integrate this facility. We plan to do it over the next 18 to 24 months. There will be a si zable investment there. And we already have the technology lined up through our foreign -- our partnerships in Europe.

Further, I think there's a significant export potential because one of our significant partners and promoters in Jupiter Wagon, which is Tatravagonka, they are again, very keen to acquire wheel sets from India. And right now, they are facing a challenge be cause of the Russia and Ukraine conflict. So yes, so we are very bullish about that business.

Moderator: Thank you very much . The next question is from the line of Rishabh Parekh from Sunidhi Securities.

Rishabh Parekh: Just a couple of questions. One is on Bonatrans. Can you all give some more color on the kind of capacity expansion that we will be doing in terms of how many wheels sets you will be able to manufacture once the full capacity is on stream and revenue and margin impact on that? And what would be the amount of the Cape x spend?

Vivek Lohia: So in terms of capacity, I think we are looking to produce around ~200,000 wheels, which is about ~100,000-wheel sets. So that is the capacity plans which we have, out of which a

significant portion definitely will be earmarked for exports. As you're aware that Bonatrans already has all the necessary certifications, both in India for supplying to the metro, as well as for Vande Bharat. Today, Bonatrans is a significant supplier to Siemens, Alstom, BEML for the Vande Bharat as well as the LHB co aches, we are supplying wheel sets. So all the necessary Indian -- as well as freight. So all the Indian accreditation is there. Further, it is accredited to supply to Europe as well as to North America.
So the idea is to build capacity so that we can play a significant role in these markets. In terms of investments, I think our Cape x in this business will be anything between INR 1,000 crores to INR1,500 crores of Cape x, which we are looking to invest in this business. And margins, again, I would not like to comment on margins right now, bu

t definitely, compared to the wagon business, the margins are higher in the wheel set segment.
Rishabh Parekh: And just a follow -up question on this. So that we are going to do ~ 15,000-to -18,000 -wheel sets in FY '25. So, what could be the improvement in our margin because a lot of this would be for Capex. So how much margin expansion can we see in FY '25 because of integrated wheel sets?
Vivek Lohia: So again -- but I will not comment on the overall -- in terms of numbers. But what I would say is that definitely compared to FY '24 and FY '25, not only because of wheel sets, but because of the braking business and the other new segments which the company has entered, there will be improvement in margins, and it will be a very visible improvement in margins. It will not be something marginal, but there'll be a visible improvement in margins.
Rishabh Parekh: Sure. And can you give us some color on Kovis and DAKO for '25?
Vivek Lohia: So as I've been telling in all my earlier calls that this year, you will see the execution in both the businesses. I think combined in both the businesses, we have order books of more than INR 300 crores plus, and there is going to be significant exports also happening. So I think FY '25 is when we are going to start seeing revenues and profits being accreted in both the businesses.
Rishabh Parekh: And the ballpark revenue number can it be about INR 500-odd crores?
Vivek Lohia: We are looking at least about INR 300 crores of revenue at least in both the businesses.
Rishabh Parekh: Sure. And sir, last question on our net debt. So post -acquisition and QIP, what is our net debt position?

Sanjeev Keshri : Net debt is around 0 because the long -term borrowing we don't have, and we have the sufficient cash available. And if you take the short -term borrowing also, so it is around 0.
Moderator: The next question is from the line of CA Garvit Goyal from Nvest Analysis Advisors, LLP.
CA Garvit Goyal: Congrats for a good set of numbers. My question is on the Bonatrans only. Just a clarification on, like you mentioned in this year, we will close to around INR 300 crores kind of top line. So just to understand a bit like are we going to produce for the outside players? Or are we going to the captive consumption? Because you mentioned 2 things there. So can you clarify the same?
Vivek Lohia: Yes, no, as I mentioned in Bonatrans it will be both captive as well as the outward market because that is again a significant business for us. As I mentioned that we are already a primary supplier for most of the metro projects in India as well as for the Vande Bharat and LHB passenger coaches. So that business is going to continue to remain a significant business for us. Compared to freight per wheel set, both in terms of the pricing and definitely in terms of margins because these are more complicated wheel sets. So it's much better than on the freight business. So, it will be a mix of both captive as well as outward business.
CA Garvit Goyal: So INR 300 crores is from the outward business. Is that understanding, correct?
Vivek Lohia: No, no, INR300 crores , basically -- I said, it will be between INR 300 crores to INR 400 crores. It will be -- that includes both the captive as well as the outward business.
CA Garvit Goyal: No. If it is captive consumption, then how it will be there in the top line? It can't be there in the topline, right?
Vivek Lohia: So the total revenue, which we are expecting from Bonatrans in FY '25 is around INR 400 crores. This INR 400 crores will include both the captive business as well as the outward business. But in terms of the breakup, specific numbers right now, we are not in a position to share.
CA Garvit Goyal: Okay, sir. Okay, fine. And sir, Board approved INR 1,000 crores QIP. So can you please put some color on the purpose of raising those f

unds like what are the exact plan for the utilization of these funds? Like you mentioned about the new products, including those automated doors and the vacuum toilets as well. So, can you please elaborate on your plans on it like what is the expected Cap ex for it and how the funds are going to be utilized?
Vivek Lohia: I think for us, right now, the most significant and the major Cape x is towards the wheel business, where we see a very assured road map and a market which is there. And as I mentioned that it is a very margin positive business. So, most of the I think whenever we do the fund raise will be towards the Cap ex requirement of the wheel business. And definitely, some portion of it will be

used for other businesses, but the significant investments will go towards the wheel growth.
CA Garvit Goyal: Right, sir. And sir, in this quarter, we did a run rate of -- in this quarter, we did a run rate of 840 per month for the railway wagon. So considering that we are currently at 900 capacity, right? And with significant orders to be executed in the next 12 months, like you mentioned, and the order book is also reflecting the same, so do you see any slowdown in ramping up these orders

or upcoming order inflows? And if not then, so what are your plans to further expand on the capacity on the wagon side beyond 1,000 wagons per month?
Vivek Lohia: So as I mentioned, we are -- right now, our target is to achieve 1,000 wagons. We are not looking to expand beyond that as of now. But then again, that is also subject to how the order book flows over the coming years. We don't see any significant slowdown in the order books. I think on the delivery, post elections, you will see whatever indications which we have, there will be an uptick in terms of the demand. So again, our first target is to achieve a consistent run rate of about 1,000 wagons . From thereon, we will decide as to how to move forward.
CA Garvit Goyal: So by when it is expected, sir?
Vivek Lohia: By I think quarter 2 is what we are looking at.
Moderator: The next question is from the line of Mahesh Bendre from LIC Mutual Fund.
Mahesh Bendre: Sir, on wagon side, the incremental orders that are expected to come up maybe during the year. Given the current order book of all the wagon manufacturers, do you think there is a scope for us to improve our realizations in those new orders of wagons and m argins could be much higher in those?
Vivek Lohia: Yes, Mahesh, definitely, as I mentioned in my call that we are right now focusing on a lot on the private order book. And there also, there are certain new designs of wagons, which we are currently in the process of executing which those are very complicat ed designs and most of the industry is not producing those wagons. I think Jupiter is the only producer of those wagons. So that definitely, we expect the margins to improve. And combined with brakes getting produced in-house and wheel sets ag ain becoming captive, so definitely there will be an impact on the margins.
Mahesh Bendre: Sir, is it also true for the Railway wagons?
Vivek Lohia: So, on the railway side the, I think the margins are consistent, and they're going to remain like that. But definitely, you -- going forward, you will not see any significant uptick in margins. The uptick in margins in the railway business will happen through the efficiencies which w e bring into the business.
Moderator: The next question is from the line of Bharat Shah from ASK Investment Managers.
Bharat Shah: I wanted to understand the cash flows for the year, operating and the financing and investment cash flows.
Vivek Lohia: I will give the line to Mr. Sanjiv, the CFO, he will guide you on that.
Sanjiv Keshri: Yes, the operating cash flow this year, we have generated the cash of around INR 100 crores. And after the payment of the income tax, there is a

use of the -- actually in the operating around INR 6 crores only. But that actually increased due to -- we increased our sales revenue from INR 2,000 crores to INR 3,600 crores. And consequently, that inventory has increased by around INR

400 crores. So this is the reason that you are finding that there is a cash used around INR 6 crores in the operating cash flow.
Bharat Shah: I don't get all the breakup of the cash, operating, finance, investment cash flow for the year.
Sanjiv Keshri: Yes, it is available. Yesterday, as per the LODR requirement, the cash flow is already given to the stock exchange. So you will find that detailed cash flow there.
Bharat Shah: I'll check that out. Sorry, I missed that. And on the order book, what I heard was about INR 7,100 crores, right?
Vivek Lohia : Yes, you are right.
Bharat Shah: And what is the breakup of that? And what kind of execution cycles do we see?
Vivek Lohia: So I think of the 7,000 majority of it is related to our wagon order book. I think, close to about 75% would be wagon, and I think these order books have to be executed over the next 18 months.
Bharat Shah: And the balance?
Vivek Lohia: Balance would be related to the CV business, the commercial vehicle business, which we have. The containers and the brake system also.
Bharat Shah: And that would be fulfilled by what time?
Vivek Lohia: In this financial year FY '25.
Bharat Shah: Entire remaining almost about INR 1,700 crores , INR 1,800 crores of CV business would be

executed in the current year.
Vivek Lohia: Yes, correct. Absolutely.
Bharat Shah: And from the wagon business, I presume in the year maybe 2/3 of the order book will get utilized.
Vivek Lohia: As I've told you, 18 months is the execution timeline and every quarter, we keep on adding significant order books. So, it there will be a rollover which will happen on the order book side.
So, and as you've seen over the last year, 1.5 years, though our execution has increased significantly, but our order book keeps on increasing quarter -on-quarter. So, I think it will you'll continue to see those trends going forward.
Bharat Shah: So, INR 1,700 crores of CV, about INR 3,600 crores of wagon. So that means INR 5,300 crores and maybe some amount of the current year order book executed. So, about INR 5,500 crores , INR 5,600 crores turnover is a reasonable possibility, right? For the current year?
Vivek Lohia: Again, specific numbers, we are not in the habit of disclosing, but yes, if you look at the breakups something in the similar vicinity is what we are looking at.
Moderator: The next question is from the line of Parve z Qazi from Nuvama Group.

Parvez Qazi: Congrats on a good set of numbers. So, 2 questions from my side. One would be great if you could discuss how are we seeing the private sector ordering as far as the wagon business is concerned? And second, also on our brake business, how has the ordering and tendering been in FY '24? And what is -- how do we see FY '25 mapped out?
Vivek Lohia: Yes. Thank you, Parvez. So, in terms of the private order book, I don't -- as I mentioned that the order inflow is very strong. And this is even though currently wagons under General Purpose Wagon Investment Scheme (GPWIS), basically, the BOXN wagons, there is still the railway has not lifted they had put a temporary hold on that, which we also expected to get lifted post elections. But despite that I think the order book has remained very significant. And we are now executing a lot of designs which are very unique and are being done for the first time.
And where Jupiter is maybe one or very few of the wagon riders who are executing these designs. So this gives us a significant chance to improve our margins, as well as to further build on these order books. And

I think as and when the requirement for the BOXN wagon comes up, I think that will be significant because whatever we can understand from the industry is that still there is a huge requirement for these wagons. So as and when railway clears the same, you will see a substantial jump in terms of the ordering, which is going to happen in those.
Parvez Qazi: And similar outlook on the brakes business?
Vivek Lohia: On the braking side, I think the demand continues to be very robust. As you know, the Rolling Stock program of the Railways is very significant. So, as well as now you're seeing a lot of replacement demand coming in because both in terms of the passenger as well as on the freight side, the fleet utilization has gone up significantly. So, I think you're going to as I've been mentioning, I think year -on-year, you're going to see significant increase in terms of the total requirements for braking -- from the braking business.
Moderator: The next question is from the line of Rishabh Parekh from Sunidhi Securities.
Rishabh Parekh: Can you just throw some light on the container business?
Vivek Lohia: Yes, Rishabh, so the container, we are very bullish on the container business. This year, I think has been a transitional year for us with regard to that business. We have moved from -- earlier, we were making the very generic marine containers. But this y ear, we have moved on to manufacture very specialized containers, especially related to Battery energy storage container (BESS) and data centers. So that has been our core focus.
We are now working with a lot of marquee names global names, such as GE, Schneider, Toshiba, Tata Solar. So these are the kind of names which we are now working with, and the certain containers that we are producing, which have been produced for the first time in India. And I think going forward, we will continue to focus on these segments. And I think the next step this year, which we are moving towards is providing the complete integrated solutions -- both for BESS as well as for data centers. And given government's focus in both the segments and especially for power storage in the solar sector that has been a key challenge. So we see significant order books coming in this segment.

Rishabh Parekh: And just wanted to understand your capacity expansion plan because in your presentation, it mentions that 1,000 wagons per month will come on stream once the 2,000- ton foundry is started, which will take 18 months. But to the previous participant, you mentioned that it will start in Q2, the run rate 1,000 wagons per month. So I was just a little confused.
Vivek Lohia: No 1,000 wagon will come see we are doing 2 foundry capacity expansion. One is on the existing foundry and one we are looking at a new foundry in Jabalpur. So the 1,000 will come in as soon

as the expansion, which takes place in the existing foundry, which we are expecting in Q2, before end of Q2, that capacity will come online. So that is when -- around that time is when also we are seeing -- going to see an increase in our wagon numbers happening.
Rishabh Parekh: And the additional 2,000 -ton foundry will add on how much capacity?
Vivek Lohia: So there given that, one, which will definitely help us in terms of margins because again, in Jabalpur if we have a captive capacity, we'll save a lot on the transport cost. And secondly, we are looking I think one business which we are very focused on is on the weldable crossing side, where we have significant orders, and the outlook is very strong. Because I think in the next 3 to 4 years, what we can understand is the railway looking to buy more than 100,000 of these crossings. So today, our main constraint is on the capacity. So we are now looking to bring -- build significant capacity for this business. So I think a lot of that capacity, which will get freed up will go t

owards that business.
Rishabh Parekh: Understood. And sir, can you just throw some light on our RITES JV?
Vivek Lohia: There is no JV. We have a MOU with RITES where we participate together in a lot of the -- most of the global tenders. So that is in , that MOU continues, and we are regularly participating in tenders. I think the global tenders take time to convert into order books, and we expect , I think in FY '25, we should see significant order books coming out from these tenders.
Moderator: The next question is from the line of Aakash from Dalal & Broacha.
Aakash Bohra : First of all congrats to the management on great set of numbers. Sir, I would request a breakup for the complete full year FY '24 revenue that we did of INR 3,640 odd crores. If you could give a breakup for that product segment wise?
Vivek Lohia: Okay. Thank you, Aakash. And I'll pass on the line to Sanjiv. I think he can share.
Sanjiv Keshri: Aakash, you can mail to us. We will give the detailed breakup. Right now, I'm not carrying that breakup. But on a broad way, around 76% or 77% is from the wagon and balance is from the other CV business and containers.
Aakash Bohra : Okay, sir. No worries, we'll take it offline . My second question was on the brake system and the brake disc side S ir wherein, you all said that both businesses combined, you should be able to manage around INR 300 crores plus of revenue, right? So what kind of margins are you expecting there?

Vivek Lohia: Again, as I've mentioned earlier, these the margin profiles are much better than in terms of our existing business. So you will see margins upward of definitely upward of 14%, 15%.
Aakash Bohra : For KOVIS and DAKO, right?
Vivek Lohia: Yes.
Aakash Bohra : Or company level as a whole.
Vivek Lohia: In these 2 businesses, at that business levels.
Aakash Bohra : Okay. Got it, sir. Secondly, we had some interesting orders in this year, especially we won that special military wagons wherein -- there will be higher value margins. Also the double -decker wagons for automobile. If you could just let us know what is the delivery schedule for those kinds of the orders that we won, this year from Indian Railways?
Vivek Lohia: So we are continuing to supply the military wagon, those that is ongoing. For the double -decker wagons, our prototypes are going to go for approvals this month itself. And I think August or September is when we are looking to start supplying those items.
Moderator: The next question is from the line of Rahil Dasani from Mittal Analytics.
Rahil Dasani: I had a question around the Vande Bharat. So we can see a lot of Vande Bharat tenders coming in right now. The bidding year is quite competitive from the international players like TMH who recently won the 120 trains tender and the next in line are Alstom, Stadler, and Titagarh JV, so what sort of participation do we expect from our side, excluding the wheel sets and any upcoming tenders where we are taking part?
Vivek Lohia: So excluding wheel set, I think on the braking side, we have significant participation in these. where you will see Jupiter coming in, along with that, I think from Siemens, we have received an order for supply of battery systems which is part of the EV si de of our business for the Vande Bharat. So yes, definitely, I think on wheel set is something, again, I think as for the wheelset as I mentioned that we are a significant supplier for wheelsets for the Vande Bharat. So all these, I think if y ou look at these 2, 3 businesses, which I'm talking about here, if you look at the coach, the value of ours would be about anything between 30% to 40% of the total overall value of a coach.
Rahil Dasani: Okay. And lastly, like I said, these 3, 4 entities who are dominating the tenders right now. So are we partnered with any of these entities and how do we see the comp

etition between the Indian JVs in comparison to these international entities.

Vivek Lohia: So right now, see, we are -- as I've told you, we are working closely with the likes of say Siemens. But definitely, we are not partnering with them to -- partnering with anybody to bid for the tenders because, again, which we feel that these are very margin negative right now, the pricing is very margin negative, and we build -- and in future also, we don't see many significant tenders for Vande Bharat for the complete supply of Vande Bharat co ming because most of the railway workshops are now manufacturing it.

But there is a significant demand for the component levels, such as the brake systems, the wheelsets, the battery systems -- and that's where these are very high -technology items. So it's -- again, the competition is very limited because it requires a lot of accreditation and technology. So these are the areas where we are focused on, and I think we are in a very strong position. So that is where we will continue to focus on.

The next question is from the line of Ankita Rathi from Rainbow Securities Private Limited.

Ankita Rathi: I have a question that in your PPT presentation, and in investor presentation, you have mentioned the JWL KOVIS numbers. So the numbers in brake disc assemblies are 0 in quarter 4 FY '24. Can you just give me the reason for it.

Vivek Lohia: Ankita, honestly, I have not looked at those. I have to revert back to it. But yes, I think -- the reason could be that we were focusing on the export business, I think quarter 4 is where we were looking at -- we had a lot of export orders. Our focus was on the exports. So the assemblies, I think we started -- we have already started from FY '25. And what I can understand is that at that time, we had all the old orders which we had, those deliveries we had completed. And for the new orders for about we have currently orders for about 12,000 brake disc supplies, the deliveries were all commencing from Q1 FY '25. I think this was the only reason.

Ankita Rathi: Okay. About the exports, like the export numbers are also not very high. It's only 606 numbers in quarter 4 FY '24 rather than it was 2,194 numbers in quarter 3 FY '24.

Vivek Lohia: No. If you look at the other components, 4,199, that is also part of the export numbers. And I think in that last quarter, as I told you, the production was going on, all the revenues, you will see the revenue booking happening in Q1. So, I think once the Q1 results come out, you can -- you will get a very clear picture of the trend.

Ankita Rathi: Okay. And also, one more question. The CMS crossing numbers...

Vivek Lohia: So that's why you'll see that drop which has happened.

Ankita Rathi: One last question. The CMS crossing numbers have also declined from the last year.

Vivek Lohia: So, to answer your last -- as I mentioned that we are right now in terms of the foundry capacity is a constraint for us because as you have seen that our wagon numbers have increased significantly. So, a lot of the capacity was towards wagons. And that's why there's a drop in the CMS numbers , as I mentioned earlier that as we keep on adding more capacity, you will see a renewed focus in that business.

Moderator: The next question is from the line of Bharat Shah from ASK Investment Managers.

Bharat Shah: We did about INR 3,600 crore turnover in the year gone by. When do you think we can be INR 10,000 crore business, saying 3 to 4x? Would it be outlandish to think that in 3 to 4 years, we can be that size?

Vivek Lohia: So, Bharat ji, definitely not. As I mentioned that -- on the wheelset, I think all the Cap ex is done, that is going to be a significant contributor if we produce about 100,000 wheelsets, we are looking at revenues of upwards of INR 3

,000 crore there. Brakes, as I mentioned in the next 3 years, we are looking back to be a INR 1,000 crore business for us. So, we are very, very bullish on our numbers. And so no, I think 3 to 4 years, it could overall at the company level, definitely is something which is within o ur target limits.

Bharat Shah: Which means less than INR 1,000 crores turnover in fiscal '22, financial year '22, say by '28, we can be more than 10x the business that we did in financial year '22.

Vivek Lohia: Yes, definitely

Moderator: Thank you. The next question is from the line of Mahesh Atal from Atal & Association.

Mahesh Atal: Yes, my first question would be on the foundry thing that we are going to come up in Jabalpur, what would be the capital outlay for that.

Vivek Lohia: About close to INR 200 crores, if I am not wrong for...

Mahesh Atal: Yes. But my follow -up on that would be why we are looking to do it on a greenfield thing when the other foundries and there are inorganic opportunities? Are you also looking in that direction to acquire any foundry or something like that rather than waitin g for 18 months and because there are RDSO approved foundries, right?

Vivek Lohia: So on that -- as and when if there is some opportunity comes up, definitely, we will look at it.
But as far as I know, there's given the buoyancy in the sector right now, there is no capacity which is available in the industry.
Sanjeev Keshri In the Deori, Jabalpur, we have a huge land bank available with us. So, we are just utilizing that land bank.
Mahesh Atal: No, that's okay. But I was more referring on the time because it will take 18 months' time for you to do that, right?
Vivek Lohia: But however, I don't think there is any capacity today, which is available in the industry.
Mahesh Atal: All right. And one more thing, sir, regarding any -- right now, we are having under testing approvals, which could add significantly to our top line, which is under RDSO approval or something like that?
Vivek Lohia: I think one of the most significant products is the weldable crossing, which is -- I think we are going to get the final approval in a couple of months. And that, as I mentioned, again, in terms of the approved sources, there are only 3 to 4 approved sourc es in that segment. And the indication is that in the next 2 to 3 years because, again, Indian Railway is moving towards high speed. So most of the traditional crossings will be replaced by weldable and all the new lines which are coming up wi ll be all -- will have all weldable crossing only.
Mahesh Atal: You are on the approved sources under these weldable crossing, any names on there?

Vivek Lohia: No. So, whatever the interactions, which we've had in the Indian Railways. They are very clear that the other sources, which are there. Mainly global players like Vossloh is there then Voestalpine is there. I think it's mainly the global players who are the approved sources.
Mahesh Atal: So, we will be the first indigenous players who will be doing that, right?
Vivek Lohia: One of the first -- yes. So, we have a foreign partnership already. We have a partnership with the Spanish firm called Talleres. They are one of the main producers in Europe. So, they are helping us with the technology.
Mahesh Atal: Any revenue guidance on this particular business? I mean if we actually get the approval and what could be the revenue potential of this particular thing.
Vivek Lohia: So, revenue potential is significant, but again, as I've told you, I think as and when we have the capacities available, you will start -- so again, very -- I think I would not like to give any kind of revenue guidance...
Mahesh Atal: The current market size, at least Indian perspective.
Vivek Lohia: So, it is about -- the market is about INR 4,000 crores to INR 5,000 crores is t

he market size.
Mahesh Atal: And we'll be the only Indian player there. So we may expect a sizable opportunity there?
Vivek Lohia: Yes. India n player with a sizable capacity.
Moderator: The next question is from the line of Senthilkumar Natarajan from Joindre Capital.
Senthilkumar Natarajan: I have 2 questions. First one is, for the additional capital requirements for expansion, will the Board resort to equity dilution or preferably Board will go for a debt, sir?
Vivek Lohia: So Senthil, it will be a mix of equity as well as debt. The Board, I think, has cleared fresh set of, I think, INR 1,000 crores of new capital fundraise the Board has cleared. So it will be a mix of both debt as well as equity.
Senthilkumar Natarajan: So what will be the mix?
Vivek Lohia: Again, I think we have not firmed up our plans as once we have firmed it up, we will definitely appraise you on the same.
Senthilkumar Natarajan: Okay. Understood. And my second question is now that order shares from the government is increasing, will this d ebtor period correspondingly go up in the future? We have noticed that our FY '24 debtor days increased from 37 days to 49 days. So what will be the debtor days in FY '25.
Vivek Lohia: No, I think it will -- the debtor position, you will not see any kind of significant increase in the debtor position that is going to remain between debtor position, I think, is going to be consistent.

Moderator: The next question is from the line of CA Garvit Goyal from Nvest Analysis Advisors LLP. Please go ahead.
CA Garvit Goyal: Sir, just on the electric LCV side, why are we getting delayed in terms of getting the approval from the regulatory authority?
Vivek Lohia: So there is no delay. We are expecting the approval. All our testing is now complete. So we are expecting the approval to come any day, I think, in the next week or 10 days, I think we expect approvals to be there. And I've maintained that July, we are goi ng to be launching a vehicle and we are -- and those timelines are pretty concrete.
CA Garvit Goyal: Understood. And just on the technology part, I missed that. Can you please put some color -- put

some more color on that, like you mentioned the new products that you are launching about market size of INR 4,000 crores to INR 5,000 crores ?

Vivek Lohia: No. I have only talked about the weldable crossing, which we had got a significant order from Railways, and we are going to get our final approval very shortly. So I think the question was that what is the market size for that business? So I highlighted the market size for that business. But in terms of how our revenues will pan out, I think it is too early for us to comment because a lot will depend on how -- how and when our foundry capacities come online.
So depending on that I think in quarter -- by end of quarter 2 or quarter 3 will be in a more realistic position to give guidelines on the same.

Moderator: The next question is from the line of Priyesh Babariya from Max Life Insurance.

Priyesh Babariya: Congratulations for a good set of numbers. My first question is on E -LCV. So what are our targets in terms of production for FY '25 and FY '26? And what kind of a revenue and margin are you expecting on the same -- or can you give some color on this business?

Vivek Lohia: So again, in terms of margins, I think it is too early for us to comment. I think post the launch and when we have -- once we start supplies will get a better feel on the margins. But one thing I can be -- I can assure you that we are going to be -- from d ay 1, we are going to be margin positive on that business. Secondly, in terms of numbers, again, I think first year, we are looking to do upward of 500 vehicles. I think if we can manage that, we will be very happy with the business.

Priyesh Babariya: Sure. And my second question is on the JV which

we had actually executed with the CAF which is based in France and major players in the passenger mobility sector. Are there any updates on the same? Or because we are seeing a lot of metro coaches, which are actually coming across India. So can you give some updates on that the same JV?

Vivek Lohia: So yes. So it's -- right now, we had an MOU with them, and we are working on, as you have said, there are a lot of tenders coming up. So we are working on the metro tenders we have with them. I think as and when we win a significant bid along with them, you will see further updates on that on our partnership with them.

Priyesh Babariya: Okay. So are we expecting any kind of a win in this JV as such?

Vivek Lohia: Again, as you know, these are very speculative. We whether we can expect a win or not very difficult to say. But definitely that is a business which we are looking at.

Priyesh Babariya: Sure. And what was the working capital in FY '24 in terms of number of days? And how much we can expect in FY '25 and '26?

Sanjeev Keshri : The working capital is around 75 days. And I think that will remain in FY '25 also.

Moderator: The next question is from the line of Rajesh Vora from Jainmay Venture.

Rajesh Vora: Congrats on super set of numbers, as well as the acquisition of Bonatrans. Vivek, you have consistently tried to backward integrate and Bonatrans is a big investment in that direction. So the journey of Jupiter Wagons in backward integration direction, how are we after this are we done or is there still missing pieces.

Vivek Lohia: I think right now, we are looking to consolidate all the new segments which we have entered into. I think that is our focus -- in terms of whether we are done or not, I think this is a question which is very difficult to answer. If certain very strong opportunities come in future, definitely, we will look into it. But I think today, if you look at the kind of products which we have already established, I think we have now the beside steel, which I don't -- we have no intentions of getting into the steel business. I think we are pretty much -- we have covered all the major products, which we used to -- which are bought out for us.

Rajesh Vora: Wonderful. And one side point, Bonatrans you paid around INR 270 odd crores for acquiring the company. So what -- currently, the capacity is 100,000 wheelsets per annum. So is it being poorly utilised -- what is the state of the plant? Why do we need to invest such a high amount of INR 1,000 to INR 1,500 crores. And what would have been the cost if you had to put a greenfield plant of a 1 lakh wheelsets per annum?

Vivek Lohia: So currently, the capacity is not 100,000. What we are saying is that post expansion, it will be 100,000. And currently, it's not a completely -- the plant doesn't have the complete backward integration. But today, we have to buy black materials from outsi de. And then we do the assembly and the machining and everything all those operations are done. So what we are -- our focus is to post acquisition to completely integrate the facility, and again further increase the capacity to 100,000 wheelse ts. Right now, as I mentioned, the capacity is about close to 15,000 to 20,000 wheelsets.

Rajesh Vora: Wish you all the very best for INR 10,000 crore revenue growth.

Moderator: The next question is from the line of Kaushal Kedia from Wallfort.

Kaushal Kedia: Just wanted to understand what is the update on the global tender that was supposed to happen in February.

Vivek Lohia: So as of now, we don't have any specific update on the tender. I think it's because of the election process. I think you will see movement, I think, post elections, you will see -- I think we'll start

hearing from the Railways. But what I can understand is that Railway is st

ill pretty serious on getting global designs.

Kaushal Kedia: So sir, is this like the global tender is like, of course, moving towards own design, right? Like the wagon manufacturer will give his own design instead of the RDS O who are giving their own designs.

Vivek Lohia: Yes, it is. But we are already -- if you look at the private wagons which we are doing right now, especially the new design wagons, which is coming from the private manufacturers, RDSO is not making designs. Those designs are being done by private manufacturers.

Kaushal Kedia: Okay. So sir, earlier in your conversation, you mentioned that there's a tender of 6,000 wagons which will be finalized shortly. So this was not -- you are not referring to the global tender that is separate.

Vivek Lohia: No, I was not referring to the global tender. There is a separate tender which is under finalization.

Kaushal Kedia: So what I understand is because of decision-making or with the election nothing moving, we should expect some movement maybe from August onwards.

Vivek Lohia: No from July onwards. In June, the government will get formed -- in July onwards.

Moderator: Thank you. Due to time constraints, that will be the last question for the day. I would now like to hand the conference over to the management for closing comments. Over to you, sir.

Vivek Lohia: Yes. Thank you. I want to extend my gratitude to everyone for joining today's call. The sustained momentum in infrastructure development across the nation continues to propel us forward. Our business outlook remains robust, buoyed by a sustainable backlog of wagon orders. With growing traction in emerging sectors, we expect to further expand our presence across various business lines, including brake disc and braking system. We look forward to speaking again in the next quarter. Thank you for a ll your participation.

Moderator: On behalf of Systematix Institutional Equities, that concludes this conference. Thank you for joining us, and you may now disconnect your lines. Thank you.

Call: Jul 2024

Sub: Transcript of Investor/Analyst Meet call pertaining to the Financial Results of the Company for the Q1- FY2025
Ref: Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended ("SEBI Listing Regulations").
Dear Sir/ Madam,
Pursuant to Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed the Transcript of the Analysts / Investors Call on Financial Results (Standalone and Consolida ted) of the Company for the quarter ended June 30, 2024 held on Jul y 26, 2024.
The Information is being hosted on the company's website www.jupiterwagons.com .
Kindly take the same on your record.
Thanking You,
Yours Faithfully,
For Jupiter Wagons Limited
Ritesh Kumar Singh
Company Secretary and Compliance Officer

"Jupiter Wagons Limited
Q1 FY2 5 Earnings Conference Call"
July 26, 2024

MANAGEMENT : MR. VIVEK LOHIA – MANAGING DIRECTOR – JUPITER WAGONS LIMITED
MR. PUNEET SABOO – VICE PRESIDENT FINANCE – JUPITER WAGONS LIMITED

Moderator: Ladies and gentlemen, good day, and welcome to Jupiter Wagons Limited Q1 FY '25 Conference Call hosted by Systematix Institutional Equities. As a reminder, all participant lines will be in the listen -only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing s tar then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Sudeep Anand from Systematix Institutional Equities. Thank you and over to you, sir.
Sudeep Anand: Thank you, and good afternoon, everyone. Thanks for joining us today for the Q1 FY '25 earnings call of Jupiter Wagons. On behalf of Systematix, I would like to thank the management for giving us the opportunity to host this call. Today, we had us Mr. Vive k Lohia, Managing Director; and Mr. Puneet Saboo , Vice President Finance.
Now I would like to hand over the call to the management for the opening remarks, and then we can open for the Q&A. Thanks, and over to you, sir.

Vivek Lohia: Thank you, S udeep, and welcoming to all our investors and analysts us joining for the Q1 FY '25 Earnings Conference Call. I am thrilled to share the progress and achievement of Jupiter Wagons Limited and our subsidiaries over the past quarter. Our unwavering dedication to revolutionizing mobility solutions has driven us to new heights, and I am excited to present key milestones and strong financial performance in Q1 FY '25.

In Q1 FY '25, the company reported a total income of INR 90,219 lakhs, marking a 19% year - over-year increase. EBITDA surged to INR 12,886, a 32% rise with EBITDA margins improving to 14.4%, up from 12.9% in Q1 FY '24. PAT reached INR 8,923 lakh, a 40% increase, and PAT margin grew to 9.9%. Despite challenges from the general elections and peak summer impact of our multi -location plant s, we achieved a robust consolidated EBITDA margin of 15.5%. Our order book stood at INR 7,02,834 as of June 30, 2024.

Jupiter is at the forefront of the mobility revolution, offering comprehensive solutions across rail, road, and marine transportation. Our focus on sustainability, efficiency and innovation positions us as a key player in reshaping product mobility. We integrate various transportation modes to ensure smooth, efficient, and eco -friendly environment. During the quarter, we advanced into energy-efficient battery solutions for rail coaches through our collaboration with Log9 Materials Private Limited.

Our commitment to an energy efficient logistics is evident in our role in developing critical infrastructure at every stage. Jupiter Electric Mobility, our subsidiary, has achieved a major milestone by completing 6 -month trials of 11.2-kilowatt lithium -ion LFP pack for rail coaches.

We are first to receive certification from RDSO. Additionally, we secured a purchase order for LFP auxiliary batteries for Vande Bharat trainset from Siemens and have technically qualified for rail tenders . Further, the company is in the process of developing the next -generation battery packs for Indian railways.

This accomplishment underscores our leadership in advancing battery technology for Indian Railways. Jupiter Electric Mobility has receiv ed approvals from the Automotive Research Association, ARAI, for commercial production of our one ton 4-Wheel electric light commercial vehicle. JEM TEZ. This vehicle features advanced forging technology, enabling full charge in approximately 20 minutes and offering a certified range of 127 kilometers. Production is set to begin in October Q3 FY '25 with the initial plan t o manufacture 500 vehicles in the inaugural year.

In March '24, we acquired a majority stake in Bonatrans In

dia Private Limited (BIPL) to enhance backward integration and create additional synergies. For Q1 FY25 , Bonatrans reported a fivefold increase in revenues to INR 7,436 lakhs. EBITDA rose to INR 930,000 lakh with a 12.5% margin and PAT reached INR 702 lakhs.

We aim for a turnover of INR 400 crores from BIPL for FY '24 -'25. In the short, medium term, we plan to expand BIPL capacity to machine 28,000 wheelsets in FY '25 and up to 40 ,000 to 50,000 wheelsets by FY '26. These wheelsets will support JWL freight car orders and we used to export to Tatravagonka and other international players.

Further we are also selling wheel sets to Indian railways for the LH B and Vande Bharat applications and to the various leading metro players in India such as Siemens, Alstom, and Bengaluru Metro Rail (BMS). We are also in advanced discussion to establish our fully integrated forging line for wheels axles in India with a target to manufacture around 1 lakh wheelsets annually and expect it to be commissioned and completed by 2027. This facility will not only ca ter to the demand of the growing Indian demand for wheelsets, but also this will be a significant exporter of wheelsets the European Union and all other major wheel, wagon, freight, and rail manufacturers in the world.

We are pleased to announce the successful completion of our qualified institution placement, raising INR 800 crores. The QIP received an overwhelming response with total demand reaching approximately INR 2,800 crores reflecting strong institutional confidence. The raised capital will be primarily used to establish a full wheel and axle manufacturing plants, enhancing our pipeline integration and supporting long -term growth. This initiative will create opportunities to expand into the export market, further strengthening our growth and market presence.

With that, I conclude my remarks, and we can open the floor for Q&A. Thank you.

Moderator: Our first question is from the line of Nidhi Shah from ICICI Securities.

Nidhi Shah: So firstly, with the budget announcement and with prior budget also that the production for this year of locomotives and wagons will increase for this year and next year. So, what do you think is your order pipeline looking like for this year?

Vivek Lohia: So as already mentioned in the opening remarks, today our order book is strong . It stands close to INR 10,000 crores a nd as in the budget announcement itself, Indian Railway (IR) is in the process of undertaking a major expansion of its track network. As you have seen over the last year, the railway freight traffic has grown over 4% - 5%, and now it is close to 1,600 million tons. And by 2040, they want to take it to 500 0 million tons . So again, we expect a strong wagon demand from IR , the expectations anything above 30,000 wagons is what we are expecting. Further, the private sector demand continues to be very robust . Again, every month, we continue to add significantly to our order book. And from last month , we have also started our supplies for the new wagons such as the fly ash wagon as well as the auto rake. So, we are in the process of developing further innovative designs . So, I think with the addition of the specialized wagon, we expect the demand flow to be strong and our margins to improve further.

Nidhi Shah: All right. And as you mentioned, it was a specialized wagon, the order pipeline looking good. So, what do you think about the competitive intensity in this market?

Vivek Lohia: So obviously, there is competition. But we believe we have a significant edge because of forward integration in terms of the design capabilities, which we have and the kind of partnerships we have with people like GATX and the design feedback which we get from Tat ravagonka , them being a significant partner. And the kind of backward integration which we have undertaken.

So, we will continue to have the edge when it comes to these new designs, and we are significantly ahead of competition in terms of the design capabilities and the new designs which we have already introduced in the market.

Nidhi Shah: All right. And my last question would be, if the EBITDA margin this time is nearly 2% higher than what it was for the full year last year. So, could you give some color on that? And are these margins sustainable? And what would the full year margins look like?

Vivek Lohia: Definitely , these margins are sustainable, and I had mentioned in my previous calls also, this year, you will see the wheel business contributing significantly as well as the braking business. As contributions from these businesses go up, definitely, they will have an impact on the margins. Plus, on the wagon side, also, as I mentioned that now we have started deliveries of our specialized wagons. So there also, we expect better margins going forward.

So yes, so overall, we are confident that our margins are going to be sustainable. And we are increasing our wheel capacities also significantly in Bonatrans. So, quarter -on-quarter, you will see the revenue numbers going up. And further, we are doing a substantial backward integration. I think in a year or two , the impact of that also will be significant.

Moderator: Our next question is from the line of CA Garvit Goyal from Nvest Analytics .

Garvit Goyal: Congrats for a good set of numbers. My first question is it seems like the order inflows got hampered in this quarter due to political event that you mention ed in the PPT a lso. For the upcoming nine months, what factors give you confidence that the order book will be executed and expanded as anticipated at the beginning of the year? Are there any slowdowns or delay being faced in our order book execution? And additionally, how do you foresee the orde r inflow for this quarter, sir?

Vivek Lohia: So, in terms of execution, we are confident . Already, I think, post -election execution numbers have gone up. And as we had guided that this year, we are targeting to achieve a sale of 10,000 wagons plus, and we are completely on track. And we are confident to achieve those numbers.

As I have told you again from the private sector, we are continuously adding incremental order books.

And we expect Indian Railways also to come out with significant tenders in the coming months. So, order inflow will continue to remain strong. We are more focused on increasing our capacity, especially our foundry capacity and on the backward integration side in terms of the braking business as well as the wheelset business. I think going forward, they will play a critical role.

Garvit Goyal: Sir when you mentioned we are increasing foundry capacity. So, what is our existing capacity? Like we were targeting 1,000 wagons per month, right? So, what is our new target? Are we looking to further expand it or how it is going to be?

Vivek Lohia: See, as I mentioned by the beginning of fourth quarter, we will be adding another 1,000 tons of foundry capacity, and we are on track towards that. And I think that will help us. So, once we add back capacity, we will be able to achieve our target of 1,000 wagons.

Garvit Goyal: So, by then, you mean '25?

Vivek Lohia: Before end of Q3 FY25 as I had mentioned.

Garvit Goyal: Why it is getting delayed, like that? Earlier, we were looking at by the end of '24 only and now three-quarter delay there.

Vivek Lohia: No. I said Q3 FY25 always It will be completed in calendar year 2024 . We are not going to go to '25. There are no delays, whatever. Guidance which I have given, we stand by it. So, we had earlier also mentioned, by October, we will be completing our expansion, and we are on track

for that.
Garvit Goyal: And sir, secondly, could you also elaborate on th

e company's plans regarding lithium -ion
batteries . Are there any significant capex plans in place to support this initiative? And what is
the expected timeline for the implementation? Additionally, like does the company have any
plan to set up a dedicated plant for it? Or how it is going to be, sir?
Vivek Lohia: Dedicated plan t for what? I could not follow you.
Garvit Goyal: Lithium -ion battery technology that we are talking about in the PPT?
Vivek Lohia: Okay. Yes, we have a plan to backward integrate, and we are in the process of finalizing the
same. So right now, we are focusing on developing the right technology and getting ourselves
certified. So as and when we firm up the plans, we will let you know.
Garvit Goyal: Understood, sir.
Moderator: Our next question is from the line of Shrinidhi Karlekar from HSBC.
Shrinidhi Karlekar : Congratulations on a good set of numbers. So just a little bit more on your incremental
investment that are going into the wheelset business. So, can you give us like a broad landscape,
like how much is the Indian market demand or the wheelset? How is the split between c ast and

forging where does th is Bonatrans comes into the picture? And how much likely to be
incremental demand that you see in the domestic market? So, some color on this whole
opportunity that you have under wheelset side.
Vivek Lohia: Yes. Thank you. So, as you are aware that today already in India if you get the entire rolling
stock population in the country is close to 500,000. And we expect by 2030 that the entire rolling
stock population will be close to about 800,000. So, wheelsets must be replaced in around 7
years. So, every year, you are looking at a replacement demand of at least 5 lakh wheelsets plus
the OEM demand which is there. So, we expect annual demand to be nothing less about 6 lakh
wheelsets. And today, if you look at the manufacturing capacity in the country, it is close to
about 1- 1.5 wheelsets in the maximum . And Rail W heel Factory is the major manufacturer, and
they produce, I think, close to about 1 lakh wheelsets . So, there is a significant gap and India is
a major importer of wheelsets .
And if you look at our own wagon capacity, we are looking to produce at least anything between
12,000 to 15,000 wagons annually. So, our internal demand is itself close to about 60,000
wheelsets . And plus, for us, Europe is a big opportunity. Our partner, Tatravagonka, they
themselves require about close to 50,000 wheelsets annually.
And plus, we are already in discussions with other European players who themselves are looking
at alternative sources for wheel set procurement. We are setting up facilities initially to produce
about close to 1 lakh wheelsets , but we are confident that given the kind of demand, which is
there, we will have to further enhance the capacities in future.
Shrinidhi Karlekar : Right. Sir, this is both cast and forged wheels that Bonatrans can do, or it is only the forged
wheel?
Vivek Lohia: No, we can assemble and machine both cast and forged wheels. But the backward integration,
which we are doing, we are focusing on forged wheels because that is the future technology, and
all high -speed applications will require forged wheel s only. So cast wheels cannot be use d for
any high -speed application. And if you look at Europe, it is all forged wheel only.
Shrinidhi Karlekar : And sir, currently, in Bonatrans is on more machining at this moment?
Vivek Lohia: So right now, we do not have any foundry facilities. We are doing the machining and assembly
of wheelsets .
Shrinidhi Karlekar : And sir, last one, if I may. Sir, currently, what Jupiter Wagons produces for the Indian Railways
and the private customer on the wagon side? Where do you procure wheels for that? Is it railway
factory or can that be backward integrated and source it from Bo

natrans?
Vivek Lohia: So right now, we are sourcing from Bonatrans and other suppliers. But the idea is that over the
next two years, we are setting up our whole wheel plant ourselves, we are doing our complete
backward integration.
Moderator: Our next question is from the line of Devesh from Antique Stock Broking.

Devesh: Just if I might have missed, I just wanted to know what is the average selling price for wheelsets
currently for Vande Bharat and for freight?
Vivek Lohia: So, freight is around anything between INR 2.7 lakh to INR 3 lakhs. It depends on the raw
material prices. And for Vande Bharat , it is I do not know again the exact numbers. But I would

assume that it is anything between INR 6 lakh to INR 8 lakhs it is somewhere in that ballpark.
Devesh: And margins are same for both?
Vivek Lohia: No, as you go into more high-speed applications, because the intricacies and machining and everything and the demands are much higher. So, in high-speed applications, the margins are more than freight.
Devesh: Okay. And one another update I wanted on the commercial vehicle volumes. If you see the volume numbers of like Y -o-Y, they are stable, but then Q -o-Q, they have fallen . So, are we expecting some slowdown in that side? Or are we not focused on that business yet? There was one-time and you had mentioned that we want to be focused on containers .
Vivek Lohia: So, there is no significant -- this was a legacy business for us . it is not that we are not focused, and we want to continuously grow this business. But as you see , there is no significant drop in numbers. The numbers are similar . And we expect before end of this compared to last year, we expect the numbers to go up only by end of this year. Again, you must understand that being an election year, election quarter, even in the Commercial Vehicle segment also, there was an impact because of that. And I think post the monsoon season, you will see an increase in terms of demand.
Moderator: Our next question is from the line of Parvez Qazi from Nuvama Group.
Parvez Qazi: So, a couple of questions from my side. First, it would be great to get an update about the EV business and also the brake regarding Stone India , what are the developments, let's say, which have happened over the last you could say couple of months in terms of future tenders and scaling up our product portfolio there?
Vivek Lohia: So, on the EV business, as I mentioned that we have already got approvals from ARAI. We are in the process of now starting our commercial production. And by end of October, we are confident that we will start rolling out our vehicles. We are, I think, in the last mile of that journey. Again, we are starting with more than 80% localization and our vehicles will be eligible for FAME subsidy. Further on Stone India, again we expect railways to grant us licenses very shortly. We have already upgraded our infrastructure, and we expect commercial production to start in the next couple of months.
Parvez Qazi: Great. And what is our net debt figure currently?
Vivek Lohia: I will just hand over to Puneet.
Puneet Saboo : Our gross debt in consol basis is around INR 450 Crore and the net debt will be around INR 300 Crore .

Moderator: Our next question is from the line of Gagan Deep from Nvest Analytics Advisory LLP .
Gagan Deep : Sir, my question is on the brake segment side. Like the company had a target of achieving INR 300 crores to INR 400 crores in revenue for brake in this segment in FY'25. So how ever, if we look at the Kovis and Dako order book numbers that shows only INR 35 crores execution in this quarter. So, with no incremental order book observed in this quarter. So, are you in line with achieving the target for FY'25? And why th

ere are no incremental orders for this segment, sir?
Vivek Lohia: No, we are adding incremental for, I think, the Dako business already we have orders of close to approx. INR 100 crores , and Indian Railways is now coming out with new tenders. So already, they have come out with the tenders. They are going to award further orders, I think, in the next couple of months.
And even on the Kovis business, we are adding incremental orders every month. So, I do not know exactly from where you have the numbers. And when we talked about INR 200 crores, INR250 crores, we also included Stone India. And as I have just mentioned that in the next couple of months, we will be starting commercial production there. So, we are in line to achieving the numbers which we have disclosed.
Gagan Deep : So, it will be INR300 crores to INR 400 crores or INR200 crores to INR 250 crores?
Vivek Lohia: No. I never mentioned INR 300 crores. I mentioned INR 200 crores to INR 250 crores in FY'2 4-'25.
Moderator: Our next question is from the line of Akash from Dalal & Broacha Stock Broking .
Akash: Yes. First, congrats on a great set of numbers. So, my question is on Bonatrans, wherein I wanted to understand whether all the wheels that we have produced in this quarter have been used for captive focus or how is it?
Vivek Lohia: Thank you, Akash. No, it is not being all used for captive. Bonatrans has supplied for captive, but we have supplied to Indian Railways for the LHB applications. We have supp lied to the metro players also and we have supplied to other wagon manufacturers also. So, it has been Bonatrans supplying wheelsets across the various segments and not only to Jupiter, but to all the major players.
Akash: Okay. So, this is like you said sir our own wagon production we are planning somewhere between 20,000 to 15,000. So that works out to 50,000 - 60,000 wheelsets requirements for our

own purpose . So how do you plan to scale the wheelsets that are going to produce in Bonatrans how much will be using for captive, how much of the catering to other players ?
Vivek Lohia: So, as I mentioned that we are by this year we will be scaling the production to about 30,000 wheelsets and by next year we will be close to about 50,000 wheelsets and then I think then onwards with our complete integration happening we will be close to about 1 lakh wheelsets by
'27 end. So, as we keep on scaling up it will be the production will be used for our captive production as well as for supplies to others.

So initially I think for our captive production Bonatrans will be supplying close to about 22%, 25% of our demand. And as it keeps on scaling up definitely, we will be using more of that capacity, b ut again we are looking at the market opportunity in a big way. So, to serve the requirements for LHB as well as the metro and Vande Bharat . So, it will be a mix of everything for us.
Akash: Got it, sir. And I would also like to understand how do you foresee the margins going ahead? So, we get a gross volume of around 25% and EBITDA of 15.5% at the consol e level . So, for this year is it a sustainable gross margin and even EBITDA margin of 15% plus are sustainable and how do you take it for ward from here in the next 1-2 years?
Vivek Lohia: Definitely we are confident that these margins are sustainable. It will be around the 15% kind of margins because as I mentioned that as the other businesses start contributing significantly, so they will start having a positive impact on the margins. And going forward again as we achieve better backward integration, we -- as I have mentioned that as the wheel business becomes bigger, as the b raking business becomes bigger, they start contributing. We expect the margin profile s to improve.
Akash: Got it sir. One last question from my side. ,
Moderator: Sorry to interrupt sir.
Akas

h: Just one last question. Yes. So, last year in FY '24 the industry I think the railway industry, including private and public railway demand, there was around 35,000 wagons, so -- if I am not wrong. So then how do you project this number going ahead like where it can reach in the next couple of years considering '25, '26 and '27?
Vivek Lohia: So, I am not sure about that number I must cross check, b ut as you are aware that today industry has si gnificant order books. So be in terms of the demand I don't think we see that to be any kind of challenge and if you see the national rail plan from Indian Railways in the next 5 years they are looking to buy at least close to I think 400,000 rolling stock – wagons in terms of wagon demand is close to 400,000 of which they have procured I think around 150,000. So, there is still a huge gap in terms of their projections which they have done and the procurement which they have done.
So we don't see a challenge in the kind of investment which is happening in infrastructure especially on the track infrastructure and the signalling and in terms of the last mile connectivity which is there and the company is very committed towards the infrastructure as you have seen in this budget itself the Finance Minister has reiterated that the infras tructure is now above 3% and they will continue and the government will continue in that path. So, I do not see any challenge in terms of the demand going forward.
Akash: Got it Vivek. Thanks.
Moderator: Thank you. O ur next question is from the line of Suman Kumar an Individual Investor. Please go ahead.

Suman Kumar: Sir while going to the presentation what I figure d out is the volume that we have been able to generate far as railways wagons is concerned has dropped to a level of around last quarter. Given the kind of order size that we have, what would be the reason for this?
Vivek Lohia: So, as I mentioned very clearly, see if you look , from Q1 FY '24 there has been a significant jump. But yes, from the last quarter there has been a drop and I have mentioned very clearly that this is because of the disturbances because of elections. As you are aware that the election is over seven phases, and we are not only in one location. O ur plants are in various locations.
So, there was a lot of disruption due to that. And further typically in the extreme summer the production do drop because of the weather -related issues, b ut already productions have picked up significantly a nd we expect that in the coming quarter production numbers are going to be very strong and we are very confident to achieve our targeted production of 10,000 wagons for the year which we have projected.
Suman Kumar: Appreciate. Second question sir around the EV. So while you understand that we must be doing

some kind of pilot exercise by testing the EV, have you also started in marketing of it a nd while
the production is going to start towards October that you have given an indication of, do you --
what is the kind of order book expectation that you have going into the next quarter or the quarter
that we are already in to?
Vivek Lohia: So, in terms of the market demand, we are seeing a significant demand from the market and
there is a lot of -- demand is going to keep on picking up. As you are aware that our vehicle is
for our mile connectivity and there is a significant p rice advantage which we offer. Initially
definitely we are looking at the B2B segment and the aggregator that we are seeing a strong
interest from them.
We are confident that we have -- that once we launch, we'll immediately fill up all our order
books. So, we do not see any challenge in terms of the demand. And today if you look at
competition there is -- in this segment there is hardly any competition which is there. So, we
have extremely high expectations from

the segment.
Suman Kumar: And when do you intend to start going and taking the orders for the product?
Vivek Lohia: We are already in discussions, and we ex pect to build our order book very shortly.
Suman Kumar: Thank you, sir .
Moderator: Thank you. O ur next question is from the line of Sachin an I ndividual Investor. Please go-ahead
sir.
Sachin: Okay. Thank you for the opportunity and congratulations on particularly good set of results. My
first question was around the EV. So, you are talking about 500 units in the initial year. So, is
this December or March? What is the timeline that you are looking at for 500 units?
Vivek Lohia: So, when we talk about 500 units we are talking about this financial year.

Sachin: This fiscal year okay. And what is the strategy s o if a customer wants to acquire these vehicles,
do they need to go to a dealer or do they need to com e to the company a nd ho w do we service
these products and so on. I'm asking because service itself is another line.
Vivek Lohia: So, we will be rolling our strategy very shortly. I think it is going to be a mixed channel, but we
will be rolling it very shortly.
Sachin: Okay. And my next question was around I saw that one of the subsidiaries that you have invested
is into drones. So, is that something that you can actually tell us about? What is the business
here? And what are we looking at?
Vivek Lohia: So that is just a small offset of the electric mobility business. So again, that is something which
is a work in progress. I think again, right now, there is nothing significant which I can elaborate
on that. But yes, down the road, we can speak a little bit more.
Moderator: Our next question is from the line of Bala subramanian from Arihant Capital
Bala subramanian: Sir, on the container side, we are making special containers for data centers. And if you could
throw some light on what kind of demand we are experiencing in those side because a lot of
development is happening on data center. And what are the realization s for these containers?
And if you could share, what is the margin difference between these marine containers, normal
containers, and the special containers. And we also have a tie- up with Log9 Materials. We are
only supplying these contai ners, or we are supplying the complete packages. These are my first
question.
Vivek Lohia: So today, we are seeing a significant demand on the container side. Today, we are looking to
now enhance our capacities because I think for the year, our capacities are fully utilized. So again, we are supplying the mix
of integrated containers, which we will start su pplying shortly
and just containers for both data centers as well as for battery applications.
Right now, we are not in the business of marine containers because we have already migrated to
the more value-added containers. So, we are not taking any new order book for marine
containers. In terms of margin in terms of realization per container and margin, also there is a
significant difference between marine container and data centre container. Again, right now, I
will not be able to tell you in terms of the exact numbers, but there is a significant difference in
terms of margins.
Bala subramanian: Okay. Got it, sir. Sir, on the EV side , if you look at some big players like Ashok Leyland and
Tata, these players have small trucks around 1 to 3 tons in that range. And these are like a diesel
and diesel petrol and C NG variants. The ranges realization is between base model around 4 lakh
to 5 lakh and the maximum can go to 7 lakh to 8 lakh kind of ranges on the realization side. So,
are we also margin in those range only 2 to 3x?
And I just want to understand what kind of realization we are pricing in our EV vehicles. And where we are witnessing
demand, and you are talking about some of the orders, whe

ther we are
in discussions with like logistics players o r are any specific areas we are focu sing on it? Because

recently I have attended one of the logistics company, they are significantly increased the EV rates . I just want to understand the overall perspective of the new business?
Vivek Lohia: So, we are in talks with all logistics companies and all the players in the, sector and we see a significant demand from them. As I have told you, we have no concerns in terms of order book. Again, we cannot reveal the price point right now. I think shortly, we will reveal our price point. But I think if you look at Tata has rolled out a vehicle in this segment, and they are priced I think it is close to INR1 4 to INR16 lakhs is the price of the vehicle, depending on the type of vehicle. So agai n, for us to give numbers right now, I think it is a little early. You will see the numbers shortly.
Moderator: Our next question is from the line of CA Garvit Goyal from Nvest Analytics . Please go ahead.
Garvit Goyal: Just one question on the outlook. So, we are looking for 30% plus volume growth this year in wagon side, right? And I think we did approve INR 3,000 crores in '24. and considering that, we will get around INR 250 to INR 300 crores from brake segment as well, coupled with our other segments of commercial bodies, et cetera, that contributed around INR 500 crores in FY '24. and you are also seeing EV coming in Q3, 500 units you are saying thing. So, considering all these things, all these areas, can we close INR 5,000 crores this year? Or do you see any challenge to this?
Vivek Lohia: No. as I have told you, our wagon numbers will be around 10,000, and we are confident of achieving that. So again, in terms of all the other numbers put together, again, right off hand, I cannot say that whether we will in terms of revenue, what will be the final number. But yes, I think on a group level, accounting for all the businesses, I think it will be close to those kind of numbers, about which you have talked. But again, off hand, I cannot give you the breakup on any numbers.
Garvit Goyal: Understood, sir. And just last question on the wheelset, like you mentioned, we will do 30,000 wheelsets. Is that number correct for this year?
Vivek Lohia: Not this year. We are going to ramp up our capacity to 30,000 wheelsets before end of this year.
Garvit Goyal: So, will we do any number in exports, or it will be entirely captive consumption initially?
Vivek Lohia: I think, captive -- but I think in the first year, we are looking at the domestic market. We want to establish ourselves in the domestic market. as I mentioned that it will not only be for captive, but it will also be to all the major buyers, including Indian Railways, all the major metro players, the other wagon manufacturers. So, it will be across the board. And initially, we are looking to establish the domestic market. And I think you will start seeing export shortly.
Garvit Goyal: Will there be any sale in this segment?
Vivek Lohia: Only happen once we are fully integrated.
Garvit Goyal: Got it. So will there be any sale in this year from...

Vivek Lohia: Yes, we have already started. In the first quarter itself, we had revenues of around INR 70-odd crores. And we expect to close this year with anything between INR 300 crores to INR 400 crores of revenue.
Garvit Goyal: Understood. This is after consolidation of the new entity that we acquired, right?
Vivek Lohia: Yes
Moderator: Our next question is from the line of Anup Goswami from SUD Life.
Anup Goswami : Sir, if I understand your wheelset exports would fetch a higher realization and higher margin and backed by our promoters. Then why are we not going first to the export and then going for domestic first? That is m

y first question.
Vivek Lohia: So, as I have told you, exports, we can target once we achieve on backward integration, which will happen in the next 2 years. I think once we have the backward integration, then only we want to focus on the exports. So initially, our focus is going to be the Indian ma rkets. But yes, as we progress, we will start seeing exports also happening from the business.
Anup Goswami : So once from forging, when we start that, then only we can export. Is that to understand?
Vivek Lohia: Yes, most of the exports will start happening once we set up the forging facility.
Anup Goswami : Okay. now that we are doing machining and assembling, what should be the incremental revenue once we achieve the forging backward integration? And what sort of margin we can look at?
Vivek Lohia: So, once we have the complete backward integration, I have already mentioned that the revenues will be anything between INR 3,000 crores to INR 4,000 crores of revenue we are expecting. And margins, obviously, will improve . It will be plus 15% EBITDA margin, what we are looking at once we are fully integrated.
Moderator: Our next question is from the line of Rupali, an individual investor. Please go ahead.

Rupali: Congratulations on good numbers. My question is regarding commercial vehicle perspective. In the last call, you said that the government scrapping policy has been implemented from April '23. So, this policy will create a potential of around 9 lakh vehicles. So, can you throw some color, what progress has been made in that or any order which has contributed in our order book?
Vivek Lohia: So again, it's not only the scrapping. Obviously, that will play a significant part. But the overall move towards cleaner vehicles, especially in the metros and the major cities, and that is where we are targeting. And if you look at the market, this segment, which we are focusing on, that 1 -to-3-ton vehicle, that itself, the market size is around 600,000 vehicles.
So, our assumption is that even if there is a 20% conversion which happens in the next couple of years, the demand will be close to about 100,000 vehicles in this segment, which is a very significant demand. And today, the industry has a very small capacity. So, we see a big opportunity in this segment.

Rupali: So currently, are any numbers showing in our order book?
Vivek Lohia: No. So, as I've mentioned, we are launching the vehicle in October. We are going to start building our order books. So, with the demand, we are seeing huge traction and demand in this segment.
In terms of the demand side, we don't see any challenges.
Rupali: Okay. And which competitors are you looking for in this category?
Vivek Lohia: So, I think we are going to be competing mainly with the major OEMs, such as I think Tata Motors, again, the likes of -- today, I think the only vehicle in the market is from Tata Motors in this segment. There is no other vehicle which is launched. But we bel ieve that switch mobility is going to launch the vehicle shortly.
Rupali: Thank you.
Moderator: Thank you. The next question is from the line of Arjun Agrawal and individual investor. Please go ahead.
Arjun Agrawal: Sir, most of the questions have been answered. But sir, regarding the container business. Can you just elaborate a bit more on the cost of the total, that’s the cost of the single container in the BESS segment? And what are the inquiries from the market currently?
Vivek Lohia: So again, completely integrated containers can be anything depending upon the size and the type of battery capacity, can range between INR60 lakh up to INR2 crores. And so, the price ranges vary depending on the kind of demand, which is the product which is needed. In terms of now working with all the major players in this segment, be it Schneider, Tata Solar, Reliance any maj

or player, we are now working. We have already started exports to North America. So, I think this is a business for whic h we have very strong expectations .
Arjun Agrawal: Sir, in continuation, I just want to ask what's our role in this business means what we are doing. Are we making just a simple container?
Vivek Lohia: Currently, we are making containers . But as I mentioned I think before the end of the year, we will start making the integrated solutions also.
Arjun Agrawal: With the help of Log9, that's our JV, which means we have a collaboration with Log9.
Vivek Lohia: Yes. Right.
Arjun Agrawal: Okay sir and the last question are I just want to make I understand better that we will be supplying the whole package as a BESS system.
Vivek Lohia: Yes, we will be supplying individual containers as well as the whole package. It will be a mix depending upon the demand from the customers.
Arjun Agrawal: Okay. So, it might be very costly...
Vivek Lohia: Exporting the same also to the North American and European markets.

Vivek Lohia: And we have another 5 minutes because we have a hard stop at 1 :30 PM .
Arjun Agrawal: Okay, sir. GE order that we have received, and we are working on it. So, if you just elaborate what kind of work we are doing over there in the container business, BESS segment?
Vivek Lohia: I think right now, we cannot elaborate further because a lot of it is also proprietary information. Again, we have a lot of NDAs with all our customers. It's very difficult for us to elaborate anything on this.
Arjun Agrawal: Thank you.
Moderator: Thank you. Our next question is from the line of Aakash from Dalal & Broacha Stock broking . Please go ahead.
Aakash: So, my question is more from -- for the container business, sir, what is the time you're looking at? I mean, what is the total addressable market for -- let's say, from, if we look at the business

from 2 years to 3 years standpoint?
Vivek Lohia: So overall, I think globally today, it is a business of more than 5 gigawatts, and it will be -- I think it's projected in the next 3 years to be about a 10 -gigawatt business. Again, in terms of size, I think it runs into $1 billion. Right now, China is one of the most significant players. So, I think the government of India is now pushing from India to develop the capacities.
Think in the coming year, India is going to play a significant part and a lot of major Indian players are now entering the segment. So, we see a big opportunity in this segment. So, I think the sky is the limit. It's how fast you can develop capabilities and capacities that are now cost effective we are going in the future.
Aakash: So, if I were to look for Jupiter, we did around INR130 crores to INR140 crores in container revenue last year. So, do you think this number can go to, let's say, by FY'26, FY'27?
Vivek Lohia: Again, to give a number right now will not do justice. But as I've told you, it is our focus area. And we expect that this business will contribute significantly to our revenues. But honestly, right now, we will not do any justice to give any kind of numbe rs.
Aakash: So, in general, sir, if I speak about the non-Wagon revenue that we have currently, that is all combined, let's say, from brake system, from wheels, you explained that apart from wagon, can we expect the business to grow at a 20%, 25% CAGR? Should that be com fortable?
Vivek Lohia: See, as I've mentioned that by '28, we expect at least more than 50% of our revenues to come from our non-Wagon business. And again, I stand by that. So, the non-Wagon business is going to produce significantly towards our revenues.
Aakash: And that will include wheels?
Vivek Lohia: Yes.

Aakash: Thank you.
Vivek Lohia: And I can just take one more caller now be

cause I have a 1.30 hard stop. So, one more caller.
Moderator: Ladies and gentlemen, that was the last question of the day. And now hand the conference over to management for closing comments.
Vivek Lohia: Yes. Thank you. In closing, I extend my sincere gratitude to our dedicated team, Partners and Shareholders for their steadfast support . Our achievements in Q1 FY'25 reflect our commitment to innovation, sustainability and excellence. As we move forward, we are excited about the future and remain committed to driving transformation in the mobility sector delivering cutting - edge solutions that meet the evolving needs of our customers and stakeholders. Thank you for your time and attention. We loo k forward to interacting in the next quarter.
Moderator: Thank you. On behalf of Systematix Institutional Equities, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Call: Nov 2024

Sub: Transcript of Investor/Analyst Meet call pertaining to the Financial Results of the Company for the Q 2H1-FY2025
Ref: Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended ("SEBI Listing Regulations").
Dear Sir/ Madam,
Pursuant to Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed the Transcript of the Analysts / Investors Call on Financial Results (Standalone and Consolida ted) of the Company for the quarter and half year ended September 30, 2024 held on November 11, 2024.
The Information is being hosted on the company's website www.jupiterwagons.com .
Kindly take the same on your record.
Thanking You,
Yours Faithfully,
For Jupiter Wagons Limited
Ritesh Kumar Singh
Company Secretary and Compliance Officer

"Jupiter Wagons Limited
Q2 and H1 FY '25 Earnings Conference Call "
November 11 , 202 4

MANAGEMENT : MR. VIVEK LOHIA – MANAGING DIRECTOR – JUPITER WAGONS LIMITED

MR. SANJIV KESHRI – CHIEF FINANCIAL OFFICER – JUPITER WAGONS LIMITED

Moderator: Ladies and gentlemen, good day, and welcome to Jupiter Wagons Limited Q2 and H1 FY '25 Earnings Conference Call hosted by Systematix Institutional Equities. As a reminder, all participant lines will be in the listen only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference

call, please signal an operator by pressing st ar, then zero on your touch -tone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Sudeep Anand, Systematix Institutional Equities. Thank you, and over to you, Mr. Anand.
Sudeep Anand: Thank you, and good evening, everyone. Thanks for joining us today for Q2 and H1 FY '25 Earnings Call of Jupiter Wagons. On behalf of Systematix, I would like to thank the management for giving us the opportunity to host this call. Today, we have with us Mr. Vivek Lohia, Managing Direct or; and Mr. Sanjiv Keshri, CFO.
Now I will hand over the call to the management for their opening remarks. And after that, we can open it up for Q&A. Thanks, and over to you, sir.
Vivek Lohia: Thank you, Sudeep, for the introduction. Good evening, everyone. Thank you for taking the time to join this earnings call. I trust you have had a chance to review the materials that we shared on Friday.
Jupiter Wagons Limited continues to make progress in strengthening its leadership position, guided by innovation, strategic expansion, and a steadfast commitment to enhancing value for all our stakeholders. This quarter has been marked by some meaningful achievements that affirm our vision of growth and diversification across our businesses.
On a consolidated basis for Q2 FY '25, our revenue from operation reached INR1,00,904 lakhs, reflecting a year -on-year growth of 14.8%. EBITDA for Q2 FY '25 stood at INR13,945 lakhs, marking a 15.5% increase year -on-year with an EBITDA margin of 13.8%. Our profit after tax or PAT reached INR8,936 lakhs, reflecting an 8.9% increase year -on-year with a PAT margin of 8.8%. Revenue from operations for H1 FY '25 came in at INR1,88,890 lakhs, which marks a year-on-year increase of 15.7%. EBITDA for the first hal f of FY '25 reached INR27,613 lakhs, a significant increase of 27% compared to the same period last year.
This has resulted in an improved EBITDA margin of 14.8%, up from 13.3% in H1 FY '24. Our profit after tax or PAT stood at INR18,125 lakhs, marking an impressive 25% year -on-year increase. Our PAT margin also improved to 9.5%. As of September 30, 2024, our order book stands robust at INR6,64,336.

In line with Jupiter Wagons strategic road map, we have taken several steps during the quarter that will not only broaden our offerings, but also position us at the forefront of some of the more exciting growth sectors within the mobility landscape. Allow me to take you through some of the key developments.
Firstly, through our wholly owned subsidiary, Jupiter Electric Mobility, we completed the acquisition of Log9's advanced battery assets, which specializes in innovative battery technologies, tailored for electric trucks and railway battery solutions.
This acquisition is beyond expansion of our portfolio. It means ownership of the underlying technology which serves to strengthen our offerings. We first partnered with Log9 in 2022 to increase the technology for our electric LCVs offering, which unveiled at the Auto Expo in Jan 2023.
Thereafter, JEM and Log9 have already piloted battery products with Indian Railways, recently winning a Vande Bharat order in partnership with Siemens. This acquisition includes Log9's engineering teams and a state -of-the-art production facility in Bengaluru , positioning JEM to produce batteries in -house, especially to st

rengthen JEM's role in India's electric mobility
landscape and adds crucial battery solution to offerings aimed at the Indian Railway segment too.
In addition, our growth expertise in battery energy storage system, BESS, has unlocked new market opportunities, both within and across international borders. Demand is growing rapidly for these storage solutions, particularly in storage energy application s where they play a crucial role in managing power storage and distribution and in data centers where relia ble backup power is essential.
We have strategically positioned ourselves to meet this demand by continuously investing in best capabilities, allowing us to offer advanced sustainable energy storage solutions to our clients and support India's clean energy goals. Our commitment to rail infrastructure, a sector foundational to our heritage remains steadfast. Reflect our enhanced focus on domestic production, we have rebranded Bonatrans India Private Limit ed as Jupiter Tatravagonka Railwheel Factory Priv ate Limited.
This rebranding marks a significant milestone, aligning with the ambition to become a leader in India's rail wheel manufacturing industry. We will invest a substantial INR250,000 lakhs to establish a new state -of-the-art facility in Odisha , which will expand the annual capacity from INR20,000 to a projected INR100,000 forged wheelsets.

This expansion not only supports India's ambitious rail infrastructure projects, but also strengthens our ability to supply quality domestically produced rail components, reducing the reliance on imports. We are making strategic investments in developing n ew foundry to support our wagon manufacturing business. The demand for freight wagon is increasing, and our foundry will bolster our production capacity, ensuring we can meet the market needs.
Importantly, this will also help us to scale up non -wagon segments, which include safety systems, track components, electric commercial vehicles, and high -speed brake systems. These

complementary segments are on track to become a core part of our business, and we anticipate that non -wagon revenue will contribute approximately 50% of our revenue within the next 4 years. This balanced diversified approach is a testament to our strategic vision for sustainable and profitable growth. Thank you for your unwavering support, as we build a stronger, more sustainable Jupiter Wagons for the future.
Now we can open the floor for Q&A.
Moderator: Our first question comes from the line of CA Garvit Goyal from Nvest Analytics Advisory, LLP .
Garvit Goyal: Sir, can you clarify the number of wagons sold during the first half of FY '25? Is the company on track to meet the annual target of selling over 10,000 wagons? Or has this target has been impacted?
Vivek Lohia: Yes. So, in the first 2 quarters, we produced about close to 4,100 wagons. And we are confident of achieving our target we have given a target of about 10,000 wagons. So, we are confident that we will achieve a number which is close to the 10,000 which we have targeted.
Garvit Goyal: Understood. sir, further considering one of our peers like Texmaco, they had some lower wagon sales than our company in FY '24. But if I am looking at H1 number, they sold almost 5,300 wagons. So, is there any indication like we are losing on our market share to them?
Vivek Lohia: Not really, Texmaco recently acquired Jindal Rail so that number which you are seeing is addition of the Jindal Rail numbers on the Texmaco numbers and it is two quarter numbers which they have added together. So as such, there is no major impact. And on the contrar y, if you look at the private market, we are gaining strength every quarter. So, we are, by far, the leaders in that segment and continue to maintain our market share. And whatever projections, which we have made, we are confid

ent that we will achieve the same.
Garvit Goyal: Understood. Sir, secondly, could you also provide an update on the commercial vehicle segment? Like earlier, we were saying production will begin in Q3, and we will be able to sell 500 vehicles this year. So, is that timeline aligned?
Vivek Lohia: Yes. As I mentioned earlier, we had mentioned Q3 end. So, we are confident that we will be launching the vehicle by Q3 end. If there is a slippage, it will be maximum by a week or 2 weeks. Beyond that, we do not expect any kind of slippage . and we are again greatly confident that in the calendar year, we will be selling ~ above 1,000 vehicles.
Garvit Goyal: All right. That means it will be not 500, it will be 1,000 vehicles, right?
Vivek Lohia: Yes, for the calendar year.
Garvit Goyal: For the calendar? Okay. Fine. Got it. And sir, lastly, considering that the company mentioned to achieve the revenue target in line with INR4,500 crores to INR5,000 crores in earlier con calls. So, is that number intact considering the kind of number we reported in H1, like it is close to INR1,800 crores revenue in H1? So, are we in line to achieve somewhere between INR4,500 crores to INR5,000 crores this full year?

Vivek Lohia: I honestly, we are clear in terms of the number of wagons, and we are confident that whatever projections which we have given in terms of wagon sales and for the other products, we will achieve our target. Now how much does it convert to revenues? Honestly, I cannot give you a concret e number right now. But whatever we have projected, the company will be achieving its targets.
Garvit Goyal: Can we say like H2 is going to be better than H1?
Vivek Lohia: Yes. And that is the trend because H2 -- not only in the railway, across all industries that we look, H2, because of less disruption due to monsoons and then H1, there was also elections. So, none of those challenges will be in H2. So, H2 , we expect numbers to be much, much stronger.
Moderator: Next question comes from the line of Kartik Patel an Individual Investor .
Kartik Patel: Congratulations and well done, sir, for giving us particularly good numbers this quarter as well. Sir, a couple of two questions I got to ask you. Sir, this time, company shows a little bit extra

expense. So, can you please focus a little bit on that? Like what type of expenses are these being it because of the Log9 acquisition or something like that, sir? And how much production we can start from this quarter, Q3, for the wheel business?

Vivek Lohia: Yes. So Mr. Patel wheel business, as I have told, we are ready the business is up and running. What we are now setting up is the complete forge d line for full backward integration and increasing capacity. That is a 3 -year project . but however, we continue to expand the existing business. So, if you see our results every quarter on the wheel business, the numbers are growing, and we are confident about that business.

And you will see a quarter -on-quarter increase in the wheel production as our capacities go up. Our order books there are very robust, not only from Jupiter Wagons, but from Indian Railways also and other metro players. Regarding the expenses, honestly, right now, I did not understand in terms of what expenses are you talking about.

So difficult for me to elaborate on the same. But per se, we do not see any extraordinary increase in any kind of expenses, but you can write to us substantiating what you are exactly looking for, and then we will reply to you.

Moderator: Next question comes from the line of Parvez Qazi of Nuvama Group.

Parvez Qazi: So, a couple of questions from my side. First, with regards to the brake business, what would be the current order book of that business? And how do we see the prospects of that business going ahead, especially with regards to Stone Indi

a?

Vivek Lohia: Thank you, Mr. Qazi. So, regarding Stone India, our pantograph has now been approved by Indian Railways, and we expect to deliver the prototypes by early next year. Besides that, our brake systems for freight in Stone India, we are expecting licenses to be renewed before end of this year . And next year, we expect very strong numbers starting -- because as you are aware, that we have a huge captive order, plus the demand from railways is also strong for the brake system s.

So, we are looking to supply at least anything between 8,000 to 10,000 brake systems in the next fiscal year . But again, it depends on how fast we can ramp up production. So that is the target with which we are going ahead. Again, it is subject to how fast we can ramp up production. I think once the approval comes, we will be able to give you -- by beginning of next year, we will be able to give a much more concrete numbers in terms of the production capacities.

Again, in our Kovis and Dako JVs, we have strong order books. In Kovis , we have order books of brake discs of more than 16,000 brake discs which we must supply to Indian Railways, and we are constantly ramping up production. Also, we have a good order book for supply of axle boxe s to the European market there.

And on the Dako side, we had an order for about 350 brake systems from Indian Railways, out of which we expect to complete that order in the current fiscal year . And next fiscal year , also, we have placed very strongly in the tenders. So, we expect orders of 500 -plus brake systems for the next fiscal year . This is for the LHB passenger coache s.

Parvez Qazi: My second question is with regards to the wagon business. So, while obviously, the production has ramped up, but overall, for Indian Railways, we have not really seen too many orders in H1. So, based on our discussion with railways, how does the pipeline look? Do we expect substantial ordering in H2? Or do you think ordering will come only in FY '26? And the second part of the question is also if you could give some details on how is the wagon order from the private sector?

Vivek Lohia: So, see as far as we are aware, railway has a very strong order pipeline for wagons. Now again, we do not know whether those tenders will come in this quarter or the next -- in H1 of next fiscal year. Again, we are not purview to that. But railway , as whatever we can understand, there is a strong demand from Indian Railways, and they are proposing to order a substantial number of wagons.

As I have told you, our private order book remains strong . I think last week itself , we cannot disclose the customer as of now , we have received an order for about 10 r akes from a single customer . I think compared to last year, our order book for private rakes have increased from last fiscal year , if you look at the numbers. But honestly, final the exact numbers, I am not familiar with right now, so it w ill be difficult for me to comment.

Moderator: Next question comes from the line Akash with Dalal & Broacha.

Akash: Vivek, sir, my question was on the order book wherein for the last past 6 -7 quarters, we have seen that it is in the range of INR6,000 crores to INR7,000 -odd crores. So, if you could guide us a bit on the pipeline, right, from wagons to brakes to wheelsets, how it can pan out? And where do you see the order book going in, let us say, next 2 years, let us say, FY '26 and '27 as well?

Vivek Lohia: So, we are extremely comfortable with the current order book because right now, order book is, if you look at it forward going, it's about 18 months of execution. So again, we are not looking

to pile up higher wagon order books beyond that because then that will be subject to a lot of LDs
and things. So, we expect the private whatever we supply, as I have told you, we are getting t

he
replacement orders on the private side.

Railway side, we expect a large tender to come up very shortly in the next 4 to 5 months. And that is as per our expectations because I think ours and the industry's expectation as we do not want because there are now substantial orders from Indian Railways also, which we are now delivering. So, from our side also, if any order comes -- any tender which comes late this year or beginning next year, that will be, I think, more welcomed by the industry. So, we do not see a challenge.
As I have told you, for FY '25, our order books are completely full. And FY '26 also, honestly, we do not see any challenge, as we are confident on railway coming out with a substantial order book. On the brake side, as I have clearly mentioned that for Stone India, we are expecting approvals in the next 1 or 2 months for the freight brake systems. And in terms of order books, it is not a challenge. There is a substantial demand both from Indian Railways as well as we ourselves are looking at producing mor e than 10,000 wagons in FY '25.
So, we do not see a challenge in terms of order books. Now we are focusing on ramping up production there. Similarly, as I have already mentioned in the Dako JV itself, our focus is right now to again to strengthen the supply systems. Again, railway has projected a demand for close to 6,000 LHB coaches in all the 3 of their production facilities. They will be manufacturing in FY '26 and FY '25.
So, we do not see any challenges in terms of demand there. It is a question of how fast we can ramp up our supply chains. So, all the 3 JVs combined in FY '25, we are looking at turnover as I've already mentioned earlier, our numbers will be about anything between INR300 crores to INR500 crores of revenues we expect from all the 3 JVs.
Akash: That is for next year, sir?
Vivek Lohia: Yes, in FY '25, I am talking about.
Akash: In FY '25, we will be doing somewhere between INR300 crores to INR500 crores.
Vivek Lohia: In FY '26 , these numbers will be there.
Akash: Okay. And sir, is it safe to say that from here, I mean, like you said, the order pipeline on all components and wagons as well remains strong. So, from here for the next 2 years, can we grow comfortably at a 20% -25% CAGR?
Vivek Lohia: Yes, our target next year, as I have told you, we are focusing on supplying close to 10,000 cars. And next year, we are looking to ramp it up to about 12,000 cars. So yes, I do not think and our wheel businesses, we are increasing capacity. So, by FY '25 end, our capacity will be close to about 25,000 wheelsets. When we took over the company, it was close to about 10,000 wheelsets. So, from there, we are ramping it up to 25,000. So, yes, I do not see a challenge in delivering on the growth numbers.
Akash: Got you, sir. Just one last question on -- why is this Stone India approval taking so much time because you were expecting it somewhere in the start of this financial year, right, in April?

Vivek Lohia: So, we were not expecting in the start of year . We have already mentioned that it will be by end of FY '25. We have clearly mentioned because you must understand that we took over a company from NCLT. We had to complete infrastructure had to be revamped. We had to order all the machineries afresh and then apply for the licenses.
Moderator: Next qu estion comes from the line of Karandeep with Nvest Analytics Advisory LLP.
Karandeep : We grew by 15% top line in H1. I want to understand from you how this full year looks like in terms of revenue growth?
Vivek Lohia: As I have told you, we are expecting to do wagon numbers of close to 10,000 this year. Last year, our numbers were 8,000. And plus, this year, again, revenue will come from the wheel business,

which was not there last year. The brake business in both the Dako and the Kovis JV, we have started delivering. So, this year, the overall revenue numbers will be higher than last year numbers.
Moderator: Next question comes from the line of Anoushka Roy with Trade Brains.
Anoushka Roy: So, my question is that in your presentation, I read that the company is expecting a robust growth

in the non -wagon business. So, I just want to understand what are the plans of the company to scale and integrate this segment? And secondly, what kind of revenue growth can we see from these segments?
Vivek Lohia: Yes, thank you. So, the Log9 acquisition, again, was one of the strategic investments for the same purpose. We are very bullish on the auto segment. Post launch of our commercial EV, I think this year, we -- as I have told you, we expect strong numbers there. We are launching with the 1 -ton payload truck with a 2.5 -ton GVW. And we expect to launch 2 other trucks in higher payload, 2 tons and 3 -ton payload within FY '26.
So, that business is going to be strong for us. And the battery business was a very, key strategic acquisition because, as you know, in any electric car battery makes up close to about 50% of the cost of the vehicle. So, from that end and the technology end, that was a key acquisition. Again, our container business continues to grow very strongly. We have started even exports to North America.
The railway and the battery segment, as I have told you, we have orders from -- for Vande Bharat. We expect further order books from Vande Bharat this year itself. Beyond that, we are the only company, who have undertaken trials on the passenger coaches. So there, we expect order books to come in FY '26. Our brake busi ness, I have elaborated in terms of the kind of performance which we are looking in FY '26. We expect numbers from anything between INR300 crores to INR500 crores of revenues from that busine ss.
Our wheel business, as I have told you, from 10,000 wheelsets, will be ramping up to close to 25,000 wheelsets in this fiscal year . So, the entire impact of that capacity will be visible in FY '26. And I think by FY '27, our complete wheel forging line will start production, especially in the axle line, which wi ll be followed by the wheelset.

So, I think again, those revenues will also get added up plus exports are going to start to the European market. So, definitely the growth map is very strong . By FY '27 end, as we have clearly mentioned that we expect our non -wagon revenues to be close to as much as about 50% of our total revenue book.
Anoushka Roy: All right. And sir, one more question I had. So, could you just give us some kind of guidance in terms of I think revenue you have already mentioned that what kind of EBITDA numbers are we looking at in H2 FY '25 or '26? And if there is any guidance on the capex ...
Vivek Lohia: So, the capex guidance is, I think, very clear , we have already mentioned that going forward, I think the majority the substantial capex is going to happen on the wheel capacity. We have mentioned that that will be INR35 crores to INR100 crores capex out of -- including GST. So, I think beyond that, we do not expect any substantial capex in any other businesses.
Most of the other capex is going forward is to be the replacement capex because on the foundry side, we have already invested in the incremental capacity , which will get commissioned by end of this year. So yes, beyond that, we are not looking at any kind of substantial capex from the company.
Anoushka Roy: And sir, what about the EBITDA margins, if you could give some kind of guidance on that, what you are expecting?
Vivek Lohia: So again, very difficult for us to give forward numbers, but what I can assure you that EBITDA margins will continue to remain strong. And as revenues come f

rom non -wagon businesses, you
will see some improvement in those margins. But again, we will not be in a position to substantiate on the same.
Moderator: Next question comes from the line of Khush Nahar with Electrum Portfolio Manager.
Khush Nahar: So just two questions. Sir, what was the amount that we paid for the acquisition of Log9 assets? And what kind of revenue potential do we see from there from that segment?
Vivek Lohia: We have paid about close to INR40 crores for the acquisition of that asset. In terms of revenue potential, honestly, a lot of it will be captive as it will be used for the battery systems for our trucks, which on -- if we had not bought Log9, it would have been a bought out item for us. And again, the margins would have gone to the industry now, which is captured in -house, as I mentioned, that battery systems are close to about 50% of the value of the trucks.
And it is a critical component, so which is the core technology for any electric vehicle. So, it was a critical acquisition for us. Beyond that this acquisition helps us in the railway business where we see immense potential . So, railway buys, I think, close to about anything between INR1,000 crores to INR1,500 crores of batteries every year, which is the non -lithium -ion batteries. And we expect in the next 4 to 6 years that this will get transitioned to lithium -ion battery packs.
So, the market is quite substantial. And as I mentioned for Vande Bharat, we are already -- we already have a strong order book from Siemens, and we expect that order book to further

strengthen. And we are also focusing on other businesses with Indian Railways where we expect good o rder books on the battery side.
And again, finally, for the container remains to be a strong segment for us and now we are focusing on integrated containers battery energy storage solution containers. So, I think there also, this acquisition will play a crucial part.
Khush Nahar: Okay, sir. And for the capex that you just mentioned on the wheel capacity, so going ahead, do we plan to take more debt? Or how will that be funded?
Vivek Lohia: No. Honestly, we do not need to take -- so we have already mentioned the debt, which we will be taking for that business. It remains the same. We do not expect any incremental debt beyond what we have mentioned earlier.
Moderator: Next question comes from the line of Om Prakash with Infosys .
Om Prakash: Recently, there is a maritime infrastructure news about the shipping containers. Are you expecting any kind of container orders from Indian maritime portfolio?
Vivek Lohia: Can you please repeat your question regarding -- I understood you are asking regarding container orders, but I could not understand the first part of it.
Om Prakash: About the Indian Government , I see, they are doubling the capacity of shipping containers. Like did you receive any orders from Indian Government ?
Vivek Lohia: As a company, we are not focused on shipping containers because that is much lower on the value chain. We are focused on battery energy and data center containers, which are very specialized containers, and which require a lot of engineering design and certifications. So marine is the area which we are not present in that segment.
Om Prakash: Okay. So, my second question, sir, like 1,000 EV vehicles you are selling by this calendar year. It is still this December, right, like whether you are selling the vehicles in domestic or exporting to international markets?
Vivek Lohia: It will be domestic , and it is FY '26 is when we have mentioned the 1,000 vehicles.
Moderator: Next question comes from the line of Rajesh Vora with Jainmay Ventures.

Rajesh Vora Vivek ji, from the wheels segment, what are the revenue percentage in the first half of this fiscal year? And what are the expectations for next

year roughly?
Vivek Lohia: So, first half, we did revenues of about INR160 crores. Again, as I have told you, we are adding capacity. And so, in the second half these numbers will go up. And this year, we expect to do about close to anything between INR300 crores to INR400 crores of revenue. And next fiscal year, those numbers are going to go up to about close to INR700 crores.

Rajesh Vora Wonderful. And I think in the beginning in your opening remarks, you mentioned that 4 years out, you expect half of the revenue from wheels business. Is that correct what I understood?
Sanjiv Keshri : It was for non-wagon revenues .
Vivek Lohia: Non-wagon revenue about which we are talking . And this number we are talking about because now we are doing the capex for the backward integration and taking the capacity to about 1 lakh wheelsets. So, this is -- the whole capacity it is about a 3 -year journey till the time we can set up that complete capacity. I think those numbers you will start seeing from end of FY '27.
Rajesh Vora Okay. Got it. And at what point -- what number of EV vehicles that you must sell to breakeven at Jupiter Mobility?
Vivek Lohia: Again, these numbers, honestly, we are not in a position, and these are sensitive information, which at this moment, we cannot reveal in terms of what our strategy is.
Rajesh Vora Sure. No, I understand. I understand. Is there a way to say that can it be profitable in 3 years? Is that a possible to comment?
Vivek Lohia: See, with the -- it is not only EVs, there we are also focusing on batteries and other businesses. I think if you take all the businesses combined, we expect to become profitable very soon in that business.
Moderator: Next question comes from the line of Akash with Dalal & Broacha.
Akash: Sir, I would just like to take your view on the recent acquisition in the industry between Texmaco and Jindal. So, would you perceive any impact from that on the industry and on our business as a whole?
Vivek Lohia: No, I do not see any impact because Jindal was already manufacturing wagon s. It is not a new business, which has come up. So, I do not see any major impact in terms , its just that instead of

2 separate companies, the numbers are just got consolidated. Beyond that, honestly, we do not see any kind of competition. Jindal was already competing with us I think after Jupiter, they were the one of the strong contenders on the private side, but we do not see much of impact from this acquisition.
Akash: Understood. So, we will not be losing any market share?
Vivek Lohia: No
Akash: Second sir, if you could broadly highlight what kind of a yearly capex we are planning? So INR2,500 crores are something that we are planning for the Odisha plant. But on a yearly basis, if I must bifurcate the capex , how will it go from FY '25 till FY '27?
Vivek Lohia: Again, honestly, exceedingly subjective question to answer. It depends on how the project is going to -- how fast the project progresses. So, it depends. We have payments on milestones. So, it is too early right now. once the work on the ground starts, by middle of next year or third quarter of next year, I will be in a better position to answer that question for you.

Akash: Got it. So, any ballpark projections for this year, at least how much capex we will be doing this year?
Vivek Lohia: This year will be about all businesses put together will be about INR500 crores.
Akash: INR500 crores? Okay. Got it. And sir, you were speaking about on the export front. So, you have exports to Europe of wagons or what is it, which kind of components?
Vivek Lohia: No, we are talking about brake equipment's , which we have already started exports to Europe. Containers, we are exporting to the North American market. And

once our wheel facility comes up in Odisha , as we have already mentioned that a substantial capacity will be exported to Europe, to our partners there, Tatravagonka. They are going to be the major consumers for those wheelsets, as they themselves buy close to about 60,000 wheelsets annually.
Moderator: Next qu estion comes from the line of Kartikeya Kumar Pandey with Ashika Broking .
Kartikeya Pandey: Sir, you mentioned that your electric mobility business, which has just acquired Log9, when is it going to breakeven? You mentioned some timelines .
Vivek Lohia: No, I did not give any timelines . What I said that we expect -- the question was that will it breakeven in 3 years, to which I answered that we expect the breakeven to be much earlier than that. As it is not only vehicles, but there are also a lot of other businesses in that, including BESS, data center, then our vehicle business plus the battery supplies to Indian Railways. So, the question was that whether we will be breakeven in 3 years, our answer was that we expect the breakeven to be much earlier, but again, we cannot substantiate right now in terms of the timelines .
Moderator: Thank you. Ladies and gentlemen, due to time constraints, we have reached the end of question - and-answer session. I would now like to hand the conference over to the management for closing comments.
Vivek Lohia: Thank you. Jupiter Wagons is building a legacy of reliance and forward thinking by committing to substantial practices and continuously adapting to market trends. We are positioning ourselves as a leader not only in railway manufacturing, but also in electric mobility and energy solutions. As we forge ahead, we ar e committed to delivering excellence for our stakeholders, our clients, and the community we serve. Creating a positive lasting impact that will propel Jupiter Wagons into a new era of growth and leadership in our industry.
And again, I would like to thank all the participa nts. And again, my apologies for any further questions which you had. But if you mail us your questions, I assure you that we will revert to you with all our answers. Thank you again.
Moderator: Thank you. On behalf of Systematix Institutional Equities, which concludes this conference. Thank you for joining us. You may now disconnect your lines.

Call: Feb 2025

Sub: Transcript of Investor/Analyst Meet call pertaining to the Financial Results of the Company for the Q 39M -FY2025
Ref: Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and
Disclosure Requirements) Regulations, 2015, as amended ("SEBI Listing Regulations").
Dear Madam /Sir,
Pursuant to Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed the Transcript of the Analysts / Investors Call on Financial Results (Standalone and Consolida ted) of the Company for the quarter
and nine months ended December 31 , 2024 held on January 30, 2025.
The Information is being hosted on the company's website www.jupiterwagons.com .
Kindly take the same on your record.
Thanking You,
Yours Faithfully,
For Jupiter Wagons Limited
Ritesh Kumar Singh
Company Secretary and Compliance Officer

Jupiter Wagons Limited Q3 and 9 M FY25 Earnings
Conference Call

January 30, 2025

MANAGEMENT :
MR. VIVEK LOHIA - MANAGING DIRECTOR
MR. SANJIV KESHRI - CFO

Moderator : Ladies and gentlemen, good day and welcome to the Q3 and 9 -month FY25 Earnings Conference
Call of Jupiter Wagons Limited hosted by Systemati x Group.
As a reminder, all participant clients will be in the listen only mode and there will be an
opportunity for you to ask questions after the presentation concludes. Should you need assistance
during the call, please signal an operator by pressing "*" then "0" on your touchtone phone .
Please note that this conference is being recorded. I now hand the conference over to Mr. Sudeep

Anand of Systemat ix Group. Thank you and over to you, sir.
Sudeep Anand: Thank you and good evening, everyone. Thanks for joining us today for Q3 and Nine Months FY25 Earnings Call of Jupiter Wagon s.
On behalf of Systemati x, I would like to thank the Management for giving us the opportunity to host this call. Today we have with us Mr. Vivek Lohia – Managing Director, and Mr. Sanj iv Keshri – CFO.
Now I will hand over the call to the Management for their Opening Remarks followed up by the Q&A session. Thank you, and over to you, sir.
Vivek Lohia: Thank you, Sudeep. Good evening, everyone. Thank you for joining us on this Earnings call. It is my pleasure to share our performance for Q3 and 9M FY25 and discuss our outlook on the sector and the opportunities ahead.
We are pleased to report strong Operational and Financial Performance for the quarter, driven by consistent revenue growth, improved profitability and a healthy order book. For Q3 FY25, our revenue from operations stood at Rs. 1 ,029 crore reflecting a 15% year -on-year increase. EBITDA grew by 19.5% year -on-year to Rs. 148 crore with an EBITDA margin expansion to 14.4% from 13.9% in Q3 FY24. PAT increased 18.4% year -on-year to approximately Rs. 97 crore with a PAT margin of 9.2% while EPS stood at 2.29 per share.
Since acquiring Bonatrans India, now renamed Jupiter Tatravagonka Railwheel Factory , we have successfully commercialized the asset and would be doubling the revenue vis-à-vis the previous year.
In the current nine months of F Y25, our strategic initiatives in key segments such as brake discs, axle boxes, specialized containers, axles, CMS crossing and brake systems have paid rich dividends. We have delivered 13,000 brake discs to Indian Railways and exported close to 10,000 axle boxes. We have supplied 230 brake systems to Indian Railways for their passenger coaches. This precision driven approach has fueled steady growth and operational excellence, strengthened our market position and ensured alig nment with our long -term goals. The JVs will start to earn profit from next year onwards on account of sustainable localization of manufacturing processes.

Our order book stood at Rs 6,320 crore as of December 31st, 2024, reinforcing our growth potential and providing strong revenue visibility for the coming quarter. With a solid financial foundation and a robust execution pipeline, we can capitalize on future opportunities and drive long-term value for all our stakeholders.
The outlook for the sector remains bright, particularly with expectations that the 2025 -2026 Union budget will drive a transformative leap for Indian railways. Capital expenditure expected to surpass Rs. 3 lakh crore, making a significant 15 %-20% increase over the current fiscal. A major focus will be on infrastructure modernization including upgrading railway stations and introducing modern trains like the Vande sleeper to transform long distance travel. To support capacity expansion and efficiency, Indian Railway is set to make significant investments in equipment procurement including railway locomotives, coaches and wagons. With a forward looking vision, Indian Railway is poised to deliver and drive economic growth , enhance passenger experience and rei

nforce its role as the backbone of India's transport network.
During the quarter, we took significant strides in expanding our presence in electric mobility. We increased our stake in our subsidiary Jupiter Electric Mobility from 60 % to 75%, strengthening our commitment to sustainable transportation solutions.
In October , JEM strengthened its leadership in electric mobility by acquiring Log9 Technology and business assets for the railway and electric truck battery division. This acquisition grants us full control over proprietary battery technology, positioni ng us at the forefront of India's transformation to electric trucks and railways , while driving efficiency, sustainability and innovation. We have onboarded large number of dealers and have secured multiple financial partnerships, including leasing companies for e-LCVs. To enhance accessibility, we are introducing Battery -as-a-Service for TEZ, offering a per kilometer battery leasing model that ensures cost parity with ICE vehicles.
Additionally, the JEM Udaan program has been launched in collaboration with Porter, one of the largest business facilitators for driver cum owners to accelerate TEZ adaptation and also reiterating our commitment to the community. Commercial launch of the product scheduled on 26th February 2025 and w e are proud to say that we already have order confirmations for over 500 T EZ vehicles. More product variants on the T EZ platform will be introduced soon.
Meanwhile, in the battery segment, we have received initial orders for lithium -ion bat tery systems for railways and other BESS operations and continue to actively pursue further opportunities in this space. Overall, with strong performance, across both wagon and non -wagon segment, we are on track for balanced revenue mix and further growth driven by our focus on

innovation, operational excellence and market leadership.
With this, I would like to open the floor for Q&A. Thank you and over to the moderator.

Moderator: Thank you very much. We will now begin the question and answer session. The first question is from Darshil Pandya from FinTerest Capital . Please go ahead.
Darshil Pandya: Hello Sir, just wanted to understand the Rs. 3,000 crore QIP that we have approved. So, what will be that used for?
Vivek Lohia: So, Darsh il, see honestly, this is basic. It's just an enabling resolution. So, there is nothing, it's not that we are going to go for any kind of fund raise. As you are aware that this time we expect the railway budget to be very substantial and very growth oriented. So, it is just a resolution the company has taken in case, post budget there are major growth opportunities which come about. So, I would say that no immediate real position we have in terms of fund raise but just enabling resolution which we have.
Darshil Pandya: Got it. And sir, about the earlier QIP that we had done of around Rs. 800 crore.
Vivek Lohia: And I would also like to reiterate that, on the existing business the company is very well funded. So, this is, we anticipate the budget to be quite substantial. And if any growth opportunity which comes out of the budget, basically the company wants to be in a position to take that opportunity .
Darshil Pandya: Got it. And sir, I was just asking about the earlier fundraise that we've done of Rs. 800 crores . How well have we utilized that funds for this? If you have fully utilized it, can you let us know the status about it?
Vivek Lohia: The fundraise was specifically for our wheel project and the project is going on track. I think the deadline, so we have released, out of that we have released the advance out of which we had to release to the EPC contractor. And as per the remaining schedule, as and when the funds are going to be required in the project, it will be utilized.
Darshil Pandya: And sir, on a 9 -month basis, w hat i

s the kind of revenue that Jupiter Tatravagonka has done?
Sanjiv Keshri : On the wheel business, it's at Rs. 225 crore turnover we have already.
Vivek Lohia: So, we have achieved Rs. 225 crore of turnover as against, when we had acquired the company that done a business of about Rs. 120 odd crore and I think they had some losses also that year. So, it's a substantial turnaround for us and we expect to close this year close to about Rs. 300 crore.
Darshil Pandya: Is it profitable now?
Vivek Lohia: Yes, we are reporting EBIT DA of over 12%. And I think next year we are looking to double this revenue and once the Orissa project for the backward integration kicks in, then as I have already mentioned that this would be a more than Rs. 2,000 crore opportunity for us with substantial exports to the European market.

Darshil Pandya: Got it. Yes. And final question would be on the last previous call, you did mention about wagons, you would be selling around 10,000 odd wagons for the full year. It seems a bit difficult. So, your thoughts on that?
Vivek Lohia: No, what we had said was that we have increased our capacity to about 10,000 wagons . But I was very clear that we would be doing close to 9 ,000 odd wagons in this financial year and I am very confident that we will be achieving those numbers. And for the next financial year I had mentioned that yes our target is to go to up to 10,000 wagons and again we are very confident on those numbers also and we have the necessary order books also to execute that.
Darshil Pandya: Got it. I have some more questions, I will get back into the queue. Thank you . All the best you.
Moderator: Thank you. The next question is from CA Garvi t Goyal from Nvest Analytics. Please go ahead .
Garvit Goyal: Sir, you just mentioned like 10,00 0 for FY26. Have I heard it right?
Vivek Lohia: Yes.
Garvit Goyal: But earlier in a couple of con calls, I am pretty sure you mentioned 10,000 wagons for this year only.
Vivek Lohia: No, I am not sure because we had always mentioned that the capacity we had mentioned this year would be about 10,000. And next year we said that we will increase with our new foundry coming online, we'll increase the capacity to 12,000. In terms of the execution numbers, no, we have never mentioned 10,000.
Garvit Goyal: That means for FY26 we are looking for just 10 % of growth, right?
Vivek Lohia: Yeah, F Y26 on the wagon business, yes, a 10 % to 15% kind of a growth, but the growth is going to come from, as I mentioned, from the other businesses. The wheel business is going to, it will be a more than 100% growth there. The brake business is going to see a substantial growth because as I had committed in this year we have started our supplies. The Kovis business is

already doing quite well. It's already profitable. We are going to be launching our ELCVs very shortly.
As I mentioned in my opening remarks, there's a substantial demand. I think the demand has been quite overwhelming for us. We have done very good partnerships , very good financial partnerships. For the first time in this segment, we are introducing battery as a rentable product, which has never been done, which lowers the acquisition cost of the vehicle. We have introduced programs with players such as Porter, which help the drivers to get immediate work on buying vehicles. So, there's a lot of community re lated things which we are doing. We have appointed now dealers in more than 8 to 10 cities and that's also expanding. So, that is, I think, going to be a huge growth driver for us.

Besides that, our container business is doing quite well. We have already started exporting containers to the North American market as well as the European market. So, there will be a growt h from this year, but as I have always m aintai

ned that by ‘27-‘28, we want wagons to be
less than 50% of our revenues, and I think that is where we are working towards.
Garvit Goyal: In earlier calls, you also mentioned a target of 8,000 -10,000 C r. by FY28, so is that target intact?
Vivek Lohia: Yes, definitely that target is completely intact. And that's what I was coming to where in terms of the wheel business, the container business, the auto business, the brake business will constitute a substantial part of those revenues.
Garvit Goyal: These businesses are going to contribute significantly in FY26. So, what kind of overall growth in top line are we looking to in FY26, over and above what we do in FY25?
Vivek Lohia: So, in FY26, we are looking at revenue of close to Rs. 5,000 crore. I think that is what we have targeted.
Moderator: Thank you. Next question is from Rajesh Bhandari from the Nakoda Engineers. Please go ahead.
Rajesh Bhandari: Good evening, sir. And congratulations for the good numbers.
Vivek Lohia: Thank you, Rajeshji .
Rajesh Bhandari: What I am seeing is that quarterly turnover is more or less by Rs. 20 cror e -Rs. 25 crore -Rs. 50 crore, the rest of all seem the same. P rofit also more or less same though our operating profit margin and net profit margin percentage is good but because of the very high equity that EPS that is coming down to around 2 or so, not even 10 EPS is coming in per year basis. Any way that how this can be improved ?
Vivek Lohia: Rajeshji, you have to also understand that the company is in a growth phase where as I have told you, we are starting to invest in, especially on the wheel side or wheel business, we are making some major investments and that investment will take about 2 years -2.5 years to play out. I think once that investment plays out and you start seeing the revenue from that business, you will see a substantial growth also happening and the earnings per share also will increase considerably.
As the company touches revenues of close to Rs. 8,000 crore to Rs. 10,000 crore and we expect the EBITDA margins to remain strong, so you will see that plays out.
Rajesh Bhandari: Rs. 8,000 crore to Rs. 10,000 crore which year sir you are expecting?
Vivek Lohia: As I mentioned, FY27-28 is when we are expecting.
Rajesh Bhandari: And these containers, you are the only company in India, for containers?

Vivek Lohia: No, there are others , but I think in terms of how we are specializing and especially in battery storage containers there I think we have quite a substantial lead in the country because , again, maybe we are the only one who is exporting also in a substantial manner.
Rajesh Bhandari: Okay. Our Double Decker Wagon Tipler is enough . Is there anything about any mood on that ? Double Decker? Like, is Texmaco planning?
Vivek Lohia: No, I am not aware of any. The only Double Decker Wagon which is there is for Autocars and I think we are the only ones today in the country who are making auto wagons which can carry SUVs on both the decks. And recently we have got the approval also from RDSO and we have a huge order books from companies like Maruti on that. So, we are very gung ho on that business, and we expect it to be a strong contr ibutor.
Moderator: Thank you. The next question is from Surabhi Sar aogi from SMI FS Capital Market s. Please go ahead.
Surabhi Saraogi: Sir, I just need clarification . In your opening remarks, you said that with the acquisition of Jupiter Tatravagonka , your revenue is set to double.
Vivek Lohia: No, I did not say it will double. I said the revenues of the business, when the business which you have acquired will double this year and next year , we expect a further doubling of the revenues.
Surabhi Saraogi: Okay, so the revenue of Jupiter Tatravagonka will double ?

Vivek Lohia: Yes. And next year we are looking to further doubling those reven

ues.
Surabhi Saraogi: Okay, sir. Got it. And one last question regarding the electric mobility segment. What was the order confirmation that you paid for the vehicles and lithium ion battery systems? If you can repeat that point ?
Vivek Lohia: So, we are going to be launching a vehicle on February end, so we have a n order book of more than 500 vehicles which is there with us, which post launch we will be delivering those vehicles. And on the lithium space, what we have said is that now we have already got orders from Indian Railways to supply BESS batteries to them. And we expect that because Indian Railways again has taken an initiative now to go green and I think that business is going to grow in a substantial manner in the next 2 to 3 years.
Surabhi Saraogi: Okay sir. T hank you.
Moderator: Thank you. Next question is from Swanand Samant from Clay Group. Please go ahead.
Swanand Samant: Hi, sir. Thank you for taking my question. So, my question is again on the order book. So, our order book kind of peaked out in March, right? From there it's quarter -to-quarter decreasing

because of the kind of excellent execution that we have. So, again on the wagon order book, which we have, which would be the majority of the order book , now the mega order which came in 2022, correct me if I am wrong, so that would be at the fag -end of execution cycle, right? So, with your conversations with the Railway s, how confident are you for having such a mega order in this year? That would be my first question.
Vivek Lohia: Okay, as you must be aware that more than 50% of our execution is our private orders, railway orders are also very critical to that. We have been adding private orders at a very fast pace and as you have seen that most, as you rightly mentioned that about a year and a half back is when the railway issued their substantial order book. So, after that if you look at our growth in the order book it is mainly on account of the private order books and we continue to see a lot of momentum there , so that order book will keep on building. On the railway side we are very confident that in the next 3 to 4 months railway will come out with a strong tender. In terms of the quantity again I cannot tell you how much the quantity will be but we anticipate it to be substantial but obviously it will not be on account , it will not be as high as those 70 -80 thousand numbers because that was on a certain, that time the base was very low so the railway had given those kind of orders and you can also understand that the industry i s today also has close to about 18 months of order books in hand. So, again the numbers will be substantial, but very difficult for right now to tell you exactly what kind of numbers this would be.
Swanand Samant: Okay, got it. And second, again, so for past few quarters, we had that stance that we won't be kind of getting into manufacturing of the Metro or the Vande Bharat coaches as such, because the competition there is aggressive and it doesn't match our company profile margin on the margin side. So , do you still have the same stance or do you want to kind of get into that?
Vivek Lohia: No, Vande Bharat is something as I have clearly mentioned that it is not in our immediate scope and we also don't see a lot of any kind of Vande Bharat orders going to the private sector. So, as I have mentioned clearly that majority of the order books are going to come on the component side where we are very strong as we have seen that we have started supplying brake systems, brake discs to the Indian Railways. Brake discs we are the biggest today, right now we are one of the biggest suppliers . Brake systems also, I think now we are supplying, we have increased our supplies and next year we expect that business to also do very well. Beyond that, again in couplers, we are again a major supplier of c

ouplers for the passenger business for the Indi an
Railways. So, I think on the component side you will see a lot of growth which is going to happen because the railway refurbishment is going to happen for those 40,000 coaches plus Railways Their internal coaching program is quite substantial which the railway workshops are going to manufacture . So, yes, we are very clear on that . On the metro side we have already mentioned that we have a MoU with CAF and we are participating in certain tenders with them . So, as and when one of those tenders f ructifies , so Metro is something definitely in partnership with CA F we are looking to enter.

Swanand Samant: Okay, got it. I had one more question. So, we have the European partner a s our shareholder as well. So, we always talk about when the wheel manufacturing will come in in FY27-FY28, we would also supply to them. But on the other products which we have, brakes, coupler, gears, and everything, do we have an opportunity also to kind of supply to them as well, because right now

I think we are not supplying to these European partners, right?
Vivek Lohia: No, we are , the brake disc, axle boxes are going to Europe. We are supplying to them So, it's not that we are not supplying to them. I think but the biggest opportunity is definitely on the wheel sets and axles and again you can see from the name of that business , it's a very strong partnership there . So, that is I think going to be the biggest opportunity and we are really looking forward to that.
Moderator: Thank you. Next question is from Devesh Kasliwal from Antique Stock Broking . Please go ahead.
Devesh Kasliwal: Congratulations sir on a good set of numbers. I have two questions. The first one was what is the pipeline currently for the wagon orders over this current year? And the second one was in the Electric Mobility, what is the overall execution that we are expecting? Competitive intensity there as well as the margin profile that we have on that?
Vivek Lohia: Repeat the second question, I could not hear you properly.
Devesh Kasliwal: Electric Mobility, I wanted to understand the competitive intensity, the margin profile as well as the execution, like the delivery schedule over there ? Like from the time you are getting an order, what is the overall schedule that we are getting?
Vivek Lohia: Okay. So, on the electric mobility, right now I think the only vehicle which is available in the market is in the segment which we are launchin g is Tata has a vehicle that is the only vehicle which is available. So, honestly , I don't know what vehicles are going to come in future. So, yes, competitors, we have just one competitor in that segment right now. In terms of the capacities, I think we have set up a plant to manufacture close to 10,000 vehicles annually. I think that is the plant capacity which we have. In terms of I think the margins and other things , I think it's too early. Let us I think once we start delivering our products , I think that will become more clear . But definitely it is , I would say the margins are positive in that business for us. In terms of the wagon order book ….
Vivek Lohia : Are you asking total order book which we got?
Devesh Kasliwal: No, I am asking what is the pipeline going ahead for this financial ?
Vivek Lohia: On the wagon side , the total order book is close to about Rs. 5,500 crore private order book.

Devesh Kasliwal: Sorry, I was asking going ahead what are the tenders, like how many wagon tenders are there. in 2025.
Vivek Lohia: As I said, we expect a substantial tender to come from Indian Railways for the next financial year, the requirements for the next financial year. Again to give numbers is very difficult but we expect it to be, the numbers to be decent. As I ment

ioned the private order b ook continues to be strong for us. So, w e expect at least close to more than Rs. 2,000 crore of private order book which we are going to add. And again, the Indian Railway is very difficult for me to project numbers.
Devesh Kasliwal: Okay . Thank you so much , sir.
Moderator: Thank you. The next question is from Akash from the Dalal & Bro acha Stock Broking. Please go ahead.
Akash: Thanks for the opportunity. First of all, congrats, Vivek sir, on a decent set of numbers. So, my question would mainly be on F Y26, sir. We are projecting a Rs. 5,000 crore of topline there. So, what kind of consolidated margins do we plan to achieve in the next year considering that electric vehicle sales would also be embedded in that topline , right?
Vivek Lohia: Yes, definitely and that will be . I think our margins , again I will not give out any definite numbers , but what I can very confidently say is that the margins profile will be better than th is financial year.
Akash: On a consolidated basis is it? So, if you're doing around 14.5 this year, so next time it will be better than that next year ?
Vivek Lohia: Expect it to be better than that .
Akash: Understood. Okay. Just wanted to understand any EV sales we are expecting this year for F Y25?
Vivek Lohia: Yes, we will be because as I have told you February end is when we are launching the vehicle. So, our delivery will start from March onwards.
Akash: Understood . And sir, what have been the order inflows this quarter and for the full nine months this year?
Vivek Lohia: Order inflows in terms of which segment?
Akash: Wagons.
Vivek Lohia: Again those numbers we don't have readily available, but we can share with you. But readily it's honestly it's not available with me right now.

Akash: Understood. Just one last question from my side. So, I think you have estimated around the Jupiter Tatravagonka revenue to double next year. So, we are doing around Rs. 300 crore by this year, Rs. 600 crore by next year. So, out of that how much would be captive and how much would be for third party?
Vivek Lohia: See, again I cannot give you any accurate estimation but we expect it to be about 50 -50. 50% would be captive and 50% would be to Indian Railways and other players.
Moderator: Thank you. The next question is from Sachin, who's an Individual Investor. Please go ahead.
Sachin: Okay . Hi, thank you for the opportunity and congratulations on a good set of results, Mr. Lohia. Just wanted to ask , what were the challenges that we faced in the launch of the EV? We've seen the timelines move a number of times and we were actually expecting by second week of January we would see the vehicles launch , but now we're talking about February and only a month worth of sales . What were the challenges and are they like really ironed out or are we expecting more challenges in terms of production, supply and vendors and all of that?
Vivek Lohia: So, no, the challenges are ironed out. I don't think in terms of the launch right now we have any further challenges. I think even in terms of the delay, it's not been substantial, it's very minor delays. So, I think more than the timelines, I think we wanted the launch to be around from Jan to Feb because there was a certain change in the battery technology, and we wanted to launch the vehicle with the upgraded battery technology rather than with the earlier battery technology. So, that is what caused this delay of a month and a half. Otherwise, I think we were on track.
Sachin : Okay, so the battery as a service , isn't it going to be heavy on our balance sheet that we need to start funding the usage or we actually have someone to pick up?
Vivek Lohia: No, it's not going to be funded on a balance sheet. It is as I have mentioned in my opening remarks that we have g ot into a partnership for t

hat.
Sachin : Okay .
Vivek Lohia: We have onboarded partners who are going to be providing both in terms of financing also, we have onboarded large number of partners and for the battery as a service also we have onboarded partners.
Sachin : Okay, and my second question was with regards to the enabling provision, right? We've once again gone for equity. And I don't know if you noticed, but I don't think your existing investors really give thumbs up for dilution of equity when the revenues and profitability is not going up in the same scale, right? We're looking at 20% dilution at a time when we are growing at around 17%, 18% ? Why do we keep choosing equity? Debt is also possible. Do we really need to reduce the value for the sharehold ers? Because every time you're -

Vivek Lohia: No, so as you mentioned, it's just enabling provision. So, this doesn't mean that we are going to raise money to the amount which we have taken. We expect post tender, a lot of growth opportunities may arise. So, it is, as I mentioned very clearly, that it is just enabling resolution. And definitely, if and when, and this is just for the future growth prospects. As I have also mentioned that we don't need any equity right now to fund any of our existing businesses or the businesses that you hav e already announced. It is enabling resolution and as and when if any growth opportunity arises , definitely we will be also looking both a mix of debt and equity to fund that. It will not be a purely debt kind of funding.
Moderator: Thank you. Next question is from Lakshmi Narayanan from Ksema Wealth Pr ivate Limited. Please go ahead.
Lakshmi Narayanan: Yes, sir, I just wanted to know the expected revenue for the brake business for the full year.
Vivek Lohia: About 250 odd crore , I think that's what we had projected also for this financial year. We'll be achieving that.
Lakshmi Narayanan: Okay, sir . My next question is on this battery as a service. Could you just make me know the cost per ki lometer is how much it will be?
Vivek Lohia: I think that will be announced closer to the launch. I think that's proprietary information, which right now we cannot disclose.
Moderator: Thank you. The next question is from Jyot hi Ranjan Pandey, who is an individual investor. Please go ahead.
Jyothi Ranjan Pandey: First of all, congratulations, sir, for another fan tastic number, both basically Y -on-Y and Q -on-Q. So, I think a couple of questions what I have got. Do we see any potential risk especially like this global tariff or what's basically being called out by Trump, especially to the overseas market where we have got exposure? And additionally, sir, I mean, my follow up question was around this QIP only, where we said that you mentioned that there is a provision for Rs. 3,000 crore possibly by QIP route. Is there basically a timeline where we could be thinking to utilize these for any potential opportunities, any other further acquisitions, those are planned. If you could share some details that will be very helpful. Thank you.
Vivek Lohia: On the QIP , as I have already mentioned there is just an enabling resolution. Honestly, I cannot

pinpoint it is again, we have just taken an enabling resolution because we expect just keeping in mind the budget and there is very strong indications from the government that it is going to be a very growth oriented budget with lot of railway CAPEX which is going to be announced. Beyond that, we keep on evaluating opportunities. So, if anything, if we find that anything which is lucrative and which adds substantial value to the company, that is something we can also look at. But yes, and as I mentioned, it's an enabling resolution. So, nothing specific out of the firm in terms of any kind of plans that we have. And what was your second question? Sorry.

Vivek Lohia: Yes, see as we don't have much exposure to the North American market , lot of our sales is domestic and otherwise also exposure is mainly to the European market . So, we don't see any kind of challenges in the European market with regard to a ny action with Mr. Trump take s.

Moderator: Thank you. Next question is from C A Garvit G oyal from Nvest Analy tics Advisory. Please go ahead.

CA Garvit Goyal: Sir, I just want one more question and continuation is by earlier questions only. At the one time you are saying railway is very much positive in the upcoming budget. Like you are looking for fundraise also if the opportunities comes in the budget ? At another point of time you are saying we are going to just grow by a percentage of like 17 % to 18 %. So, these two things are not getting matched. So, can you help me to understand like what kind of growth trajectory we are targeting? Like what is the current outlook? What challenges are you seeing in the industry?

Vivek Lohia: No see, right now what we are projecting is in terms of the current order books we have and the way we expect the businesses to grow. So, today in terms of what the budget throws u p, obviously we cannot capture that till we get to know the announcements from the budget. But we are very, very hopeful that it will be a very strong budget, and it will lead to a lot of substantial growth opportunities. But honestly till we are not fortune tellers , so unless specific announcements are made, very difficult for us to capture that. And in terms of the growth, in the next 3 years , we are looking to double our revenues. So, I don't see how you are talking about 15% to 18 % because by FY28 we are talking about revenues of close to Rs. 8,000 to Rs. 10,000 crore. So, it's basically doubling o ur revenues from this financial year.

Moderator: Thank you. Next question is from Abhijeet Singh from ICICI Securities. Please go ahead.

Abhijeet Singh: Yes, thank you for the opportunity, sir. So, my question is, we've been talking about pretty strong demand coming in from the wagon segment, both the Indian railways and the private side. What could be a key risk that these orders, the demand that we anticipate of around 35 to 45k per annum? That is the risk of this number not coming through or getting delayed beyond a point because as I understand all these orders are quite lumpy. The last huge order we got was about two years back. So, I mean there is no regularity in terms of the ordering from both these pockets. So, what could be a key risk that could lead to a delay in orders or maybe orders not meeting our expectation of this kind of huge demand ?

Vivek Lohia: I think it's a very valid question which you've asked. On the private side, the order books are not lumpy, so we get regular order books. So, there, as I have told you, we expect the order books to remain strong. On the Indian Railways side, you have to also realize that they had released an order book for three years of execution. So, we had built capacities, and we were executing those orders, and I think those orders will get executed by the coming financial year. So, we expect railways to come up with substantial tenders , but obviously it will not be on, we don't expect those 70,000, 80,000 numbers to repeat because those were a three -year order book. I think now

we expect them to be more of an annualized kind of order books which Railway will release. So, definitely I think there will be orders coming from Indian Railways because they have been growing their infrastructure substantially. They have been making a lot of investments in the infrastructure, especially also on the freight infrastructure. They have already in the last budget they have announced three more freight corridors for which I believe work has already started. So, we don't see t

hose a lot of challenges in terms of those order books not coming through .

Abhijeet Singh: Right. So, you're saying that by FY26 end we will be able to execute the previous cycle of orders that we got?

Vivek Lohia: Yes. And the order obvio usly will get executed in FY27.

Abhijeet Singh: Right. And what will be a typical time from the bidding start to the time when we get the orders finally?

Vivek Lohia: If you stretch it also, it's about a 4 to 6 mon ths kind of a cycle.

Abhijeet Singh: So, it's not that long, right?
Vivek Lohia: No, not very long.
Abhijeet Singh: Alright sir, so that is my question. Thank you so much.
Moderator: Thank you. The next question is from Richa from Equity Master. Please go ahead.
Richa: Thank you for the opportunity. My question is what would be the mix of non -wagon revenue and what is the delta margin difference between wagon and non -wagon segment of revenue?
Vivek Lohia: So, again, I think it's again very product specific. On the braking business, we expect the margins to be better than the wagon revenues. I think on our container business, as the CV business is a new business for us, so right now I don't think I will be in a position to comment on that. The wheel business, I think right now the margin profile is going to be very similar. I think once we are able to set up our integrated facilities, we expect the wheel margins to improve considerably. And that is why I am very confident that going forward our margin profile of t he company is going to improve.
Richa: And now, wagon , what kind of margins do we make?
Vivek Lohia: I think about close to, again, it depends from order to order. So, readily that number is not available with me, but we can share the same with you .
Richa: And is there any kind of mix within the wagon order book? What kind of share do you expect from the private versus, or what is the current mix between the private and (IR) Indian railways

Vivek Lohia: I have mentioned that right now it's close to 50%. 50% of our order book is private and the rest is Indian railways. And again, I think on a long -term basis, we expect it to remain the same because we have a lot of private order books right now which have very long term visibility.
Richa: Okay . And sir in the CV segment, I know it's too early, but you would have some kind of number in your mind that this should be the margin that we should be making . So, what that number would be?
Vivek Lohia: I think right now our focus is to launch the vehicle, establish our dealer network, our service network. I think margins are something which I think is not something which we are currently focused on. So, this is where we are working. But as I mentioned that definitely it is going, margins are going to be positive for us .
Richa: Okay, thank you and all the best.
Moderator: Thank you very much. We'll take that as the last question. I would now like to hand the conference back to the management team for closing comments.
Vivek Lohia: Thank you everyone for your set of questions. We are very excited about the opportunities ahead and remain committed to driving substantial growth, operational excellence and innovation. With a strong financial foundation, a robust order book and a steady build out of capacities and capabilities we are well positioned to capitalize on the sector's growth momentum. Thank you for taking the time to join our earnings call and we look forward to interacting again next quarter .
Moderator: Thank you very much. O n behalf of Jupiter Wagon s Limited that concludes the conference. Thank you for joining us, ladies and gentlemen. You may now disconnect your lines.

Call: May 2025

Sub: Transcript of Investor/Analyst Meet call pertaining to the Financial Results of the Company for the Q 4 & FY2025
Ref: Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended ("SEBI Listing Regulations").
Dear Madam /Sir,
Pursuant to Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed the Transcript of the Analysts / Investors Call on Financial Results (Standalone and Consolida ted) of the Company for the quarter and year ended March 31, 2025 held on May 19, 2025.
The i nformation is being hosted on the company's website www.jupiterwagons.com .
Kindly take the same on your record.
Thanking You,
Yours Faithfully,
For Jupiter Wagons Limited
Ritesh Kumar Singh
Company Secretary and Compliance Officer

Jupiter Wagons Limited
Q4 & FY25 Earnings Conference Call

May 19 , 2025

MANAGEMENT :
MR. VIVEK LOHIA – MANAGING DIRECTOR
MR. SANJIV KESHRI – CHIEF FINANCIAL OFFICER

Moderator: Ladies and Gentlemen, Good Day and Welcome to Jupiter Wagons Limited Q4 FY25 and FY25 Earnings Conference Call hosted by Systemati x Group.
As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity

for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "* ," then "0" on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Sudeep Anand. Thank you and over to you, sir.
Sudeep Anand: Thank you, Virat, and good evening, everyone. Thanks for joining us today in the Q4 FY25 and FY25 Earnings Conference Call of Jupiter Wagons Limited.
On behalf of Systemati x, I would like to thank the management for giving us the opportunity to host this call.
Today, we have with us Mr. Vivek Lohia – Managing Director and Mr. Sanj iv Kes hri – Chief Financial Officer.
I will now hand over the call to the Management for their Opening Remarks , followed by the Q&A.
Over to you, Vivek ji.
Vivek Lohia : Thank you, Sudeep. Good evening, everyone. Thank you for joining the call to d iscuss our Performance for the Financial Year ended March 31st, 2025. I hope you have reviewed the financial documents that were shared earlier today.
FY25 has been a pivotal year for JWL, marked by solid financial performance and continued progress across our diversified business segments, driving the evolution of JWL into a more comprehensive mobility solution s provider.
On a standalone basis, total income was Rs.3,905 crores in FY25, registering a growth of 6.6% year -on-year. EBITDA for the year was higher by 11.6% to Rs.548 crores. Importantly, as we have guided earlier, we have increased the EBITDA margin to 14.2% , up from 13.5% last year and we maintained our position of industry-leading margin. Profit after tax has increased by 12% year -on-year to Rs.373 crores with a PAT margin of 9.6%.
On a consolidated basis, we got a total income of Rs.4,008 crores, an increase of 9.3% year -on-year with EBITDA of Rs.578 crores, higher by 18% year -on-year. The consolidated EBITDA margin has improved to 14.6% while profit after tax was higher by 15% to Rs.380 crores.

Turning now to our broader business performance - FY25 has been a year marked by strategic progress and operational momentum across all verticals of Jupiter Wagons Limited.
We successfully launched commercial production of the JEM Tez eLCV in Indore , marking our entry into India's electric logistics segment. This was accompanied by the Inauguration of a S tate-of-the-Art Vehicle Manufacturing Facility at Pithampur . The facility , built for high localization, supports ground -up EV manufacturing with the annual production capacity of 8,000 vehicles. The JEM TEZ, a fully Indigenous One -Tonne Electric vehicle has been engineered for high performance and reliability, backed by deep industry expertise . A phase d rollout across key metro like Delhi, Mumbai and Bengaluru is already underway s upported by strategic partnerships.
In line with our focus on Clean and Sustainable Energy Solutions , we commenced the production and supply of advanced battery systems to both Indian railways and private clients. S trengthen ing our position further in this space , we have secured battery energy storage system orders a s well as orders from leading players in the forklift segment, such as Godr ej and T ruckCraft which reinforce our participation in India's evolving energy infrastructure .
In our core railway segment, we continue to demonstrate strength and market leadership. We have secured a Rs.600 crore s order from Ambuja Cement and AC C Limited for manufacture and supply of BCFC M Rake Wagons.
Our subsidiary, Jupiter Tatra vagonka Rai

lw heel Factory P vt Limited, has also won a Rs. 255 crore s order from Braithwaite & Co. We are forming a reputation for delivering high-quality and reliab le products .
Our brake system division also delivered a strong performance with key wins including a Rs. 65 crores order for brak e disc and Rs. 150 crore s order for passenger segments brake systems.
Among the key highlights of the year is the progress of our O disha Project , a transformational initiative in our expansion strategy. T hrough our subsidiary, Jupiter Tatra vagonka Railwheel factory , we have acquired land in Kh ordha, Odisha to set up a rail wheel and axle forging facility , the first private sector heavy engineering plant of its kind in the state. We have already awarded contracts for both the main equipment and civil work and site development is progressing rapidly. With the planned investment of Rs. 3,500 c rores, the project has achieved financial closure with the funding structure of 35% equity and 65% debt t hrough a consortium of PSU bank led by S BI.

We have already invested a pproximately 50% of our equity investment and advance payments have been made for critical equipment and construction packages. Once operational, the facility will produce 100,00 0 forge wheel sets annually, serving both domestic and international markets.
These milestones from electric vehicles and energy storage to core rail infrastructure and heavy engineering underscore our long-term strategic vision , our commitment to innovation and an unwavering focus on execution e xcellence. A s we move forward, we remain deeply committed to sustainable future -ready growth while capitalizing on emerging opportunities across mobility, clean energy, and infrastructure to create lasting value for all our stakeholders.
We can now open the forum for questions.
Moderator: Thank you very much. We will now begin the question-and -answer session. The first question is from the line of Mohit Kumar from ICICI Securities. Please go ahead.
Mohit Kumar: Yes. Good evening, Sir, and thanks for the opportunity. My first question is on the execution for the Q4. Is the constraint on wheels easing out as we enter FY 26 or has the wheel situation impacted our Q4 execution?
Vivek Lohia: Yes. So, thank you for your question. So definitely the availability of wheels was a constraint which we faced in Q4 and even Q1 of this financial year, but t he expectation is that railways s hould be in a position by the middle of next month to regularize supplies as they have placed orders on global firms for supply of a xles and they expect to receive the same b y the beginning of next month. So, we are hopeful that the situation will stabilize. We have been focusing on execution of our private order books, which fortunately for us, because of our subsidiary Jupiter Tatra vagonka , we have been able to supply the necessary sets.
Mohit Kumar: Understood. The second question is, of course, given that the wheel situation is still taking us, what kind of wagon manufacturing one can expect in F Y26?
Vivek Lohia: So for FY26, as I mentioned earlier, we have set ou t a target to manufacture about 10,000 wagons and we are confident given that railways have committed to regularize supplies of wheel sets from mid-June onwards, we will be able to achieve those commitments in the numbers. So hopefully I don't see a challenge in terms of execution , but if the wheel set position in the future also continues to deteriorate, then there could be some revision in terms of execution numbers .
Moderator: The next question is from the line of Devar sh Shah from Sunidhi Securities. Please go ahead.

Devarsh Shah: Yes. So I had a question like regarding t he wheel set issue. So in the past also we have faced the wheel set shortage issue. So how is the in

dustry order trying to overcome it?
Vivek Lohia: We have a very strong order book from the private sector . So Jupiter has been able to execute those order books without constraint. But when it comes to for the railway wagons , unfortunately the order is such that it complies us to use the wheel supplied by the rail wheel factory. So that is how the orders are structured. That is because of which we are dependent upon them for wheel set supplies. So till that is regularized, we will continue to have some constraints o n that. But whatever we hav e given to understand from railways is that the position will improve very shortly.
Devarsh Shah: Okay, sir. But just I had a question like regarding the infra like in manufacturing the wheel set. So how is Indian Railway s or the private sector trying to capitalize upon the situation if we face such issue in the future?
Vivek Lohia: So it's a very good question and that is the reason why you are now seeing investments happening in the private sector to set up wheel manufacturing capacities. As you are aware that we are embarking on a substantial investment for wheel manufacturing capacity for 100,000 wheels. India t oday does import a lot of its requirement for wheel sets and especially it doesn't have a ny substantial capacity . So there is a big gap today between demand and supply a nd I think once our project comes online, I think we will be able to fill up this gap to a large extent.
Moderator: Thank you. The next question is from the line of Rohit Singh from Invest Analytics Advisory LLP. Please go ahead.
Rohit Singh: Good evening, s ir. My first question is on the CAPEX that we are doing on the wheel set approximately Rs.200 crores investment. So can you tell us like what kind of ROC we are expecting from this investment over the years , and can you compare it with the existing ROC that we a re doing ? So that is my first question .
Vivek Lohia: So we are expecting an ROC of above 20% from the project and –
Rohit Singh: I missed the number ; about 20% or 25% you said?
Vivek Lohia: Above 20%.
Rohit Singh: Okay. And I think our current ROC in FY24 was about 30%, right?
Vivek Lohia: It was about 17.5 % roughly and here it's going to be higher than the current ROC we have been delivering.

Rohit Singh: We are expecting the additional ROC from this project, right?
Vivek Lohia: Yes, definitely. And typically these projects are very high ROC projects , and as the exports keep on picking up in the future, the ROC position will definitely keep on improving.
Rohit Singh: Got it. And secondly , on the outlook for FY 26 this year, we lag behind our own sales guidance, particularly in the wagon side. So for the next year, how do you see the outlook, segment wise if you can share with us like particularly focusing on wheel set, brake systems and our new initiative in the EV segment where we got delayed over the quarter . In fact, our peers have been able to start supplying the things in the LC Vs opportunity. So considering all these segments that we are targeting since last three-four quarters and particularly you have mentioned in the presentation as well we started supplying the batteries as well. So all these initiatives collectively, what is the outlook, what is the revenue t arget would you like to give for FY26 along with the margins?
Vivek Lohia: So see , to start with the railway s wagon segment again this year i n terms of the capacity and in terms of execution, we were completely on track to deliver the numbers which we had committed. But unfortunately the wheel situation came out of the blue and which w as something which was beyond our control. However, given that the railways is saying that the situation will be rectified sometime next month, we are pretty confident that the wheel situation rectifies , we will be able to achieve the targets which

we have set for the current financial year . However , if there is any future challenges on wheel set s, definitely going forward, we may have to revise those numbers because as I have told you, that is something which is beyond our control. But we don't expect any future challenges in that front. On our own production of wheel sets, as you have seen that this year our numbers have been higher than what we had projected. So we have done revenues of above Rs. 300 crores , and in the coming year we exp ect this numbers to double , we are increasing capacities there substantially and as you have seen that our order books plus our internal requirements are very strong and it is a question of execution for us. So, we expect that business to do quite well , and in the years to come definitely it will be one of the most significant contributors to the revenues. Beyond that, on the brake business, as I mentioned that we have already secured an order of about Rs. 150 crores for our J V with Dako and about Rs. 60 cror es for a JV with KOVIS. Also, a large number of tenders which are due in this financial year and it's expected in the next two to three months. So, we expect th ese order books to become much stronger. So this year we expect that on the brake business, revenues will be fairly strong . On the e LCV segment , we have already started delivering our vehicles . The response from the market has been very positive and in the next three to four months w e expect to achieve average sales of above 1 00 eLCV month-on -month basis. And again on the batter y side, as I mentioned in my call that we are already working on the battery storage solution where again we expect the market to be very strong for that segment. We are working with leading players there. We are supplying batteries for the Vande Bharat. We have secured orders from players like Godrej , from

players like T uckK raft and there are other major players which we have already in discussions with. So the battery business also looks very positive for us.
Moderator: Thank you. The next question is from the line of Ja inam Jain from ICI CI Securities. Please go ahead.
Jainam Jain: Good evening, management . So my first question is, are you expecting any large railways orders in this year given that FY25 has been devoid of any s uch orders?
Vivek Lohia: So definitely we are expecting large tenders to come from railways I think this year. But still there is a substantial order book which is there to be supplied to Indian railways from the various players. So we expect the tenders to come on the lat ter half of the year.
Jainam Jain: And on the private side, how are we seeing the demand from e nquiries?
Vivek Lohia: So private side, the demand continues to be very robust and strong. We have recently secured a very strong order book for c ontainer rakes and if you've seen some order book numbers despite s upplies being consistent and railways not giving any new orders , still our order book continues to remain strong and most of it is coming from the private side only. So private side, we don't see any challenges in terms of order books and once the railways tender comes this year I think till F Y28 we expect numbers to be very strong and beyond that it's very difficult to right now give any kind of forecast .
Jainam Jain: Okay. Sir, what is the market share in the private side?
Vivek Lohia: On the private side, we enjoy a very strong market share. I think again very difficult to quantify in terms of percentage, b ut what I can say is that we are the dominant player in that segment.
Jainam Jain: Alright, sir. That answer s my question. Thank you. All the best .
Moderator: Thank you. The next question is from the line of Gar vit Goyal from Invest Analytics Advisory LLP. Go ahead.
Garvit Goyal: Hi, thanks for the opportunity. S ir, you mentioned a fair outlook for

throughout the segment s covering
the wheels , the brake systems and wa gon side subject to the supply spike and issue. So can you put
a number on an overall basis what kind of growth are we expecting over FY25 for revenues and what
kind of EBITDA margin we are expecting ? So that is my first question.
Vivek Lohia: So as I mentioned to you that in terms of the wagon production we are looking at a target of close to about
10,000 wagons this year. But obviously it's subject to the availability of wheel sets . And on the
EV business for me to give any kind of numbers right now it's too early. I think maybe a quarter

down the line it will be I think more prudent for us to give any numbers. A s I've already mentioned
on the brake business and on the w heel set business, definitely we are looking to double our revenues.
Garvit Goyal: But s ir, I think if I remember correctly we are looking for Rs. 8,000 crores to Rs.10,000 crores kind
of top line by FY 28 and to achieve that we must be having at least a plan like what kind of -
Vivek Lohia: Rs.10,000 crores will come in once our wheel project in Od isha is com missioned, because that itself
is going to bring in revenues of close to Rs. 3,000-odd crores. So if you look at our projections, a lot
of that growth is coming through the O disha project.
Garvit Goyal: And what kind of revenue did we get in FY25 for brake system s?
Vivek Lohia: It was above Rs. 100 crores and we are definitely looking to double the same . So between -
Garvit Goyal: Sorry, I missed the number . Above what?
Vivek Lohia: It's Rs.100 crores -plus. I don't know the exact number, but it was above Rs. 100 crores and we expect
to double that figure in this financial year. So between brake and wheel sets, I think the revenues will
be above Rs. 800 crores.
Garvit Goyal: So you released an announcement regarding some labor unrest in one of your plant s. So can you give
the financial impact which we will be incurring in Q 1?
Vivek Lohia: Yes. So unfortunately there was some dispute regarding wages for which we had to temporarily close
the facility. However, now the same has been resolved and the plant is now working on full capacity.
Again, in terms of the impact, I would say because that was also a period where the wheel set supplies
were very poor , so even if the plant was operational, our production would have been quite muted
during that period, a nd also there were certain a nnual maintenance which we needed to do urgently,
for which we would have taken a shutdown of about a week. So we use that opportunity to do the annual maintenance. But as
we have maintained and I am very confident that the wheel set suppli es
resume and if it is consistent from Indian railways, we can easily make up on the l oss of production.
Garvit Goyal: Perfect, sir. Thank you very much. All the best .
Moderator: Thank you. The next question is from the line of Sahil Patani from Strokes Capital. Please go ahead.
Sahil Patani: Hi, thanks for the opportunity. So I had a couple of questions. So by when are we expecting this new Odisha
facility to be fully commissioned and operational?

Vivek Lohia: So the axle line would be commissioned by the middle of next year and early ' 27 is when we are
expecting a wheel line to get commissioned.
Sahil Patani: Okay. So my second question is that we've set an ambitious target of having revenues of Rs. 10,000
crores by FY 28 and this year our revenue grew by 9.3% over FY24. So are we going to maintain like
a really high growth for the next three years which is 35 %, 40% or are we saying that t his particular
financial year FY26 would also be in a similar 10 % to 15% range , and then once the facility is fully
operational, we then are going to have like a vertical growth after that ?
Sanjiv Keshri: I think the majorit

y of the growth as you can see will come once this facility is operational because
this will la nd up being close to about 30 % to 40% of our entire revenues. So definitely I think w e
will maintain a growth rate of a bout 10 % to 15% , and once the wheel business is operational, then
you will see a definite upsurge in growth and that is if you look to my earlier call the projections
which we have made and it is in consistent with that.
Sahil Patani: Got it. On the EBITDA margins, since we've clocked about 14 .5% for FY25, do we see the margins
normalizing in this range or is there room for improvement?
Vivek Lohia: So there is definitely room for improvement with new businesses kicking in, especially the brake business and
the wheel s et business. But yes, we don't see any kind of substantial j ump over this
EBITDA margins , I think that will only happen once the O disha facility is fully commissioned.
Sahil Patani: Okay. Thank you so much, sir a nd all the best.
Moderator: Thank you. The next question is from the line of Swanand Samant from K lay Group. Please go ahead.
Swanand Samant: Hey, Thanks for the opportunity. So, I just want to understand from you your company's relationship
with your European partner, T atravagonka. The question is, I just wanted to understand right now
they being largest invest ed in you, they don't act as a strategic investor, right , they are pretty passive,

there is no technology transfer agreement between us , we are not a very big supplier to them right now, plus, being at 19% shareholding, they don't have a representative on our B oard as such. So in future, in context with the Odisha plant, which is coming in, w e expect that majority or good part of that revenue would come from the exports to them. Just wanted to understand we don't have a formal agreement to that as such . Do we think that right now the relationship with them seems to be a very passive investor type. But that to change to a strategic investor when we kind of come up with the Odisha plant in maybe in ' 27-end. Just wanted to kind of get your understanding on that?

Vivek Lohia: So first of all, they are not passi ve, they are classified as a promoter itself in Jupiter along with my family , so they are not just a n investor, they are also a promoter in Jupiter. So that itself is a statement by itself. Secondly, we do have an agreement with them in place when it comes to of ftake from t he Odisha facility once that plant is commissioned . They are very actively participating in the entire construction phase and the technology phase of the project. Earlier , the exports to the m were very minimal because as you are aware that in Europe t he wagons which are produced , most of the b ogies and couple ts and other items which go into the wagon are fabricated u nlike in India, which are cars. So there is a substantial difference in technology , so for us to do any substantive exports was just not possible. They have been helping us with a lot of designs on the private side. So it is not that they are not very active in the company, they are very act ive. And now there is an opportunity wher e we have a lot of synergies which will arise because of the wheel project, and they are very g ung-ho on the project and so are we. So you will see their participation also go up significantly and definitely in Europe today there is a shortage of wheel sets, they are looking at having a s ecured source of supplies. And so yes, this I think is going to be a win-win for both of us.

Swanand Samant: Just a follow up on that. Any particular reason why they don't have a representative on our Board being got 19 %, 20% kind of invested in us?

Vivek Lohia: No, not a specific reason , I don't see any reason , I think it's just the confidence they have and in all probability in future something joining t he Board very soon.

Swanan

d Samant: O kay. The second question is on the kind of availability or problem of availability of wheel set s which you're facing right now. So I guess Q3 also some of your peers faced the same problem, it's not been resolved , I guess if I am not wrong somewhere in the last year also there was a similar problem as such . So kind of wanted to understand what is the pain point here i n terms of procurement of these by the Indian railways -- is it that only India is facing this problem or is it a kind of something like a BIS problem o r is it a vendor problems , if you want to kind of pinpoint on one particular re ason, what would it be?

Vivek Lohia: Again, for me it would be wrong to comment on the challenges which Indian Railways is facing in terms of wheel sets and not be very prudent to do that. I think i t's the question best asked to Indian Railways. But what I can a ssure you is that we have been told by them that the situation will normalize very short ly. I think that is the best I can tell you . In terms of the reason why they are facing those challenges I think it is better to speak to Indian Railways directly on the same.

Swanand Samant: Sure. Thanks. Thanks for answering my question.

Moderator: Thank you. The next question is from the line of Akash Vora from Dalal & Broacha. Please go ahead.

Akash Vora: Thanks for giving me the opportunity. So, firstly my question would be, sir, what would be the consolidated margin outlook for FY 26 and FY27 -- will be in the similar range or can we do higher?

Vivek Lohia: As I m entioned that it will continue to be in a similar range, there could be slight improvement, however , we don't expect any substantial improvement from this year , but as revenues go up, obviously, absolute numbers will definitely improve.

Akash Vora: Understood. But once the eLCV business starts, our margins won't start depleting , are we sure like or we'll be able to maintain the current levels?

Vivek Lohia: Yes, definitely because it's not the e LCV business alone , we are also there, the battery business itself has a substantial potential and we are doing quite well in that segment also and that business because we are doing very s pecialized high voltage applications, so margins are very robust in that segment. So definitely I think we are confident to maintain the margins.

Akash Vora: And sir, secondly, my question was on JV entity, sir. I think most of our group business is held up with the JV entities . So s ir, we are constantly incurring losses in these JVs. So every quarter -after - quarter we are posting a loss and in spite of having healthy order books and posting good revenues , why is that the case, sir?

Vivek Lohia: No, I think the only joint venture we have posted losses is on the DA KO JV. Rest of the JVs we have

shown profits and that is also because last year we had mentioned also that we are in the process of doing the localization , but because we didn't want to lose out on order books and get to from a development to a Part -I status parallelly where we achieve the localization. So this year I think we are now very much ahead in terms of our localization. So going forward there also you will see change in terms of our profitability profile.
Akash Vora: Sir, what do you mean by localization here , I mean -?
Vivek Lohia: So in this I can mention , localization means that because these are very specialized brake systems , so lot of the critical parts we were importing from Europe for the brake systems and now we have localized a lot of these c omponents. So once we localize the cost , definitely goes down, p lus we save on the import duties also . So that itself will have a huge impact in terms of our margin profile. And the rest of the JV s or the subsidiaries are all profitable for us.
Akash Vora: Understood, sir. Thank you.
Moderator: Thank you. T

he next question is from the line of Sailesh Moh ta from S CP. Please go ahead.

Sailesh Mohta: I've got two questions. One is on the rail being an a xle project and another is on consolidated cash flow statement which could be a housekeeping question. I heard you are saying that this project would be completely commissioned by Financial Year '2 7 and you expect a turnover of Rs. 3,000 crores from this particular Khordha plant. So, just a question on this as to when do we expect Rs. 3,000 crores turnover from this plant and at what capacity utilization level ?
Vivek Lohia: So we expect the same to happen in FY28 -29. I think that h as been a p rojection when we reach the capacity and we are looking to close to about 80% of plant utilization.
Sailesh Mohta: That 80% we will get Rs. 3,000 crores and this Rs.3,000 crores will come roughly one and a half years after the project is commissioned, correct?
Sailesh Mohta: About a year after the project is com missioned .
Sailesh Mohta: All right. Now question is on consolidated cash flow statement. I was looking at this segment called cash flow from financial activity where I find that the proceeds from long-term borrowing and the repayment of long-term borrowings both are positive figures , whereas I believe that repayment of long-term borrowing should be a negative figure which was there last year. Could you please explain that or maybe I am missing something here?
Vivek Lohia: So we will revert back to you on this in a couple of days.
Sailesh Mohta: Is the question correct , I mean you will be reverting back , because I've seen the total of -
Vivek Lohia: From the face of it looks correct, but we have to understand exactly what is the reason behind it , we have to revert back.
Sailesh Mohta: I have a few more questions, but in the interest of time and giving opportunity to others and not asking them , how do I ask a question, do I write to Mr. Kes hri or secretarial department or what?
Vivek Lohia: Yes, definitely. You can write to Mr. Kes hri or the secretarial department. I assure y ou we will revert back to you.
Sailesh Mohta: No worries. Thank you very much and all the best for the future and also for your plant expansion.
Vivek Lohia: Thank you.
Moderator: Thank you. The next question is from the line of Sachin , an individual investor. Please go ahead.

Sachin: Hi, good evening. I had a question with regards to the debt that we are taking 60 to 65% of debt for the new factory. I am just wondering with this new debt servicing that we have to do , are we confident that there won't be too much dilution for shareholder value in terms of profits, which is at the end of the day, we have to service it and we are not seeing the growth that we probably anticipate to service a project like that , do w e really see the PAT coming down in the coming years ? That's the que stion.
Vivek Lohia: No, on the contrary, if we had taken more equity the shareholder returns would have come down and then plus the debt is on the subsidiary. So JWL has no direct obligation on the d ebt, the debt is taken at the subsidiary. So I don't see a reason why there will be any impact first of all on JWL . Second ly, we are very confident on this project and as you have seen that there is a substantial demand /supply gap and our own captive demand for w heel set itself is so strong. I think about half of the capacity will just go towards fulfilling our captive demand a nd plus with the strength which we have in terms of our European p artnerships as well as the demand which is there from IR, and other players in the market, honestly I don't see a reason why we would have a ny challenges in terms of supplying.
Sachin: Okay. Thank you. And my next question is, I am not sure if I heard that right , you said we are deliveri

ng around 100 vehicles per month in the eL CV segment, is that right?
Vivek Lohia: No, I am saying that we expect to achieve that number very shortly. T he response on the market has been very, very positive and we are now working towards consolidating our supply chain. So, we expect very shortly in the next six to eight months to achieve t he number of about 100 vehicles.
Sachin: Okay. So the previous guidance I am not sure if we are actually meeting that with the 8 ,000 vehicle delivery capacity , we are still doing 100 in a few m onths , would we be able to achieve the previous guidance given in vehicle manufacturing?
Vivek Lohia: You are confusing with capacity and about deliveries. We have never mentioned that we will be doing 8, 000 vehicles. We have mentioned that that would be a capacity. None of our guidance I think I've ever mentioned 8 ,000 vehicles. So you are confusing between the capacity and in terms of the deliveries.
Sachin: So after six months we'll be doing 100 vehicles per month.
Vivek Lohia: Yes, that is what numbers which we are targeting, and we are fairly confident on the same, but however , please don't confuse with capacity.
Sachin: Okay, sir. I will rejoin the queue. Thank you.

Moderator: Thank you. The next question is from the line of J anvi Patel, an individual investor. Please go ahead.
Janvi Patel: Hello. Yes. Sir, my question was related to a shareholder perspective. Actually, I am seeing a lot of value loss in your company and in my personal s hareholder money also. So , are you planning to do something for the shareholders at least?
Vivek Lohia: But Janvi, honestly, the company has been fairly robust in terms of our performance and our guidance and we have been issuing dividends also at a regular basis. Beyond that, all the projects which we have undertaken and we have been very consistent with the execution also on those projects. So I think in terms of shareholder value, it all depends on a lot of external factors which are beyond our control. So it will not be fair for me to even comment on that , but however, we will continue to m eet the targets which have been set by us and I can assure you that the company both in terms of revenues and profitability is on a very strong digit.
Janvi Patel: Thank you, s ir. I appreciate it.
Moderator: Thank you. The next question is from the line of Rajesh Vora from Ja inmay Venture. Please go ahead.
Rajesh Vora: Good evening. Vivek. You mentioned battery b usiness is a very good opportunity. So what's the two, three-year road map for battery business?
Vivek Lohia: Could you please repeat the question? Your voice I could not get you exactly.
Rajesh Vora: Yes. In your mobility subsidiary, battery business is one of the good opportunit ies you were talking about earlier in the call. So could you give us some sense on the two, three-year road map about how you plan to exploit that opportunity?
Vivek Lohia: Again , to give right now road map is very premature, but what I can say is that the market is growing close to about 200% year -on-year right now. If you look at the battery storage segment, as you're aware that now the government is mandating all solar parks to have substantial capacities which they would require to store that for evening use. So that market itself I think in India by 2030 is projected to be about close to 10 GW . So you can imagine the size of that market . Right now more than I would say 9% of that demand is met from China directly. But always definitely there is a huge push for localization of the same and which is also going to happen i n a very rapid manner. So that itself I think is a huge addressable market , plus as we reach scale in India, as you're aware that Jupiter has been exporting also these solutions and that will also keep on growing, the railway s segment itself right no

w we have already started with the Vande Bharat, but on the passenger coach si de also , we

expect a lot of orders to come for these batteries and for the railway applications. So , I think overall definitely there is a huge opportunity in this segment.
Rajesh Vora: Interesting. And my second question is on the wheel set business. You mentioned that FY29 when company operates at 80% , utilization will be around roughly Rs. 3,000-odd crores of revenues. What sort of margin we could expect from that in that year roughly? And what is the payback period for this Rs.2,500 crore project s in terms of number of years?
Vivek Lohia: We expect margins of over 20% as I mentioned and I think the debt repayment is over 10- years.
Rajesh Vora: Okay. And we'll get our money back, Rs. 2,500 crore s in terms of profits would be about four years, five years, six years ?
Vivek Lohia: Around five years roughly.
Rajesh Vora: Okay, great. Thank you. A ll the very best , Vivek .

Moderator: Thank you. The next question is from the line of Devar sh Shah from Sunidhi Securities. Please go ahead.
Devarsh Shah: Yes, hello s ir. So basically I was seeing the figures of a xle. So in this quarter it was 24 against the previous quarter of 1, 498. So what is the reason behind it?
Vivek Lohia: See, the reason being is in the previous quarter we must have sold loo se axle s to Indian Railways and this quarter the sale has been more on wheel si des rather than the axles. So the axles was part of the wheel sets and that time loose axles must have got delivered. It depends on which order book is getting executed in which quarter. So I think it's because of that.
Devarsh Shah: Okay. Understood, s ir. And the second question is like there is a speculation like because of the wheel set shortage issue , this time the government had kept a flat budget for railways. So, if we see the recovery in the second half then can we expect a raise in the Indian budget for railways ?
Vivek Lohia: This is the question I think to be asked to the policymakers, but definitely the budget was not kept flat for shortage of wheel sets, I can assure you that . The government is very, very positive on the railway s sector. The fr eight business has been growing consistently. They expect the freight business to grow further and that is one of the focus areas. A nd the government is investing a lot on the track infrastructure itself. So definitely in future we will see a strong momentum i n the sector.
Devarsh Shah: Okay, sir. Thank you for answering the questions.

Moderator: Thank you. The next question is from the line of Ja inam Jain from ICI CI Securities. Please go ahead.
Jainam Jain: Thank you for the opportunity again. S ir, my first question is out of 8, 700 wago ns we supplied during FY25, how much was supplied to private segment?
Vivek Lohia: Unfortunately, that number is not readily available with us, but if you write a mail, we'll share the same with you.
Jainam Jain: Okay, sir. And sir, actually that I missed out the answer to the earlier question asked by one of the participants like what is the guidance we have for FY 26 in terms of revenues and margins ?
Vivek Lohia: So again, as I have told you, there will be some slight improvement in margin, but nothing substantial. Already I think our margins are leading in our segment. In terms of revenue guidance, again, as I mentioned that we are targeting to achieve close to 10,000 wagons in terms of revenues. But that all depends on the improvement of supplies from Indian Railways for wheels which we are fairly confident will happen . So again, it is subject to that. I think guidance would be better , I think next quarter we'll be in a fairer position once the supplies improve to give substantive guidance in terms of revenues, but definitely w

e expect the revenues to improve over next year.
Jainam Jain: All right, s ir. That answers my question. Thank you so much. And all the b est.
Moderator: Thank you. Ladies and gentlemen, due to time constraints, that was the last question. I now hand the conference over to the management for closing comments.
Vivek Lohia: To conclude, FY25 has been a year of solid progress and execution across all fronts. With a firm foundation firmly in place , the start of FY26 is already looking brighter. We look to build upon this momentum and deliver sustained growth through the rest of the year. Thank you for your continued trust and support. We look forward to updating you in the coming quarters. Thank you.
Moderator: Thank you. On behalf of Systemati x Group, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Call: Aug 2025

Sub: Transcript of Investor/Analyst Meet call pertaining to the Financial Results of the Company for the Q 1 FY2026
Ref: Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended ("SEBI Listing Regulations").
Dear Madam /Sir,
Pursuant to Regulation 30 of the SEBI Listing Regulations, please find enclosed the Transcript of the Analysts / Investors Meet Call on Financial Results (Standalone and Consolidated) of the Company for the quarter ended June 30, 2025 held on August 13, 2025. The i nformation is being hosted on the company's website www.jupiterwagons.com .
Kindly take the same on your record.
Thanking You,
Yours Faithfully,
For Jupiter Wagons Limited
Ritesh Kumar Singh
Company Secretary and Compliance Officer

Jupiter Wagons Limited
Q1 FY26 Earnings Conference Call
August 13, 202 5

MANAGEMENT:

MR.
VIVEK LOHIA – MANAGING DIRECTOR
MR. RITESH KUMAR SINGH– COMPANY SECRETARY

Moderator: Ladies and gentlemen, good day, and welcome to the Q1 FY26 Earnings Conference Call of Jupiter Wagons Limited. As a reminder, all participant lines will be in the listen -only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Please note that this conference is being recorded.
I now hand the conference over to Mr. Prathmesh Kamath from Systematix Group. Thank you, and over to you, sir.
Prathmesh Kamath : Thank you, and good afternoon, everyone. Thanks for joining us today for the Q1 FY26 earnings

call of Jupiter Wagons Limited. On behalf of Systematix, I would like to thank the management for giving us the opportunity to host this call. Today, we have with us Mr. Vivek Lohia, Managing Director; and Mr. Ritesh Kumar Singh, Company Secretary.

Now I would like to hand over the call to the management for their opening remarks, and then we can open for Q&A. Thank you, and over to you, Vivek, sir.

Vivek Lohia : Thank you, Prathmesh. Good afternoon everyone. Thank you for joining the call to discuss our performance for the first quarter ended June 30, 2025.

During the first quarter, we faced challenges from continued short supply of wheelsets from Indian Railways. This has resulted in sub-optimal plant utilization and consequently, production volumes during the quarter were substantially down. However, all other business segments and verticals have reported stable to increasing volumes.

As a result of the reduced volume of wagons on a standalone basis, Jupiter Wagons reported a total income of INR 425 crore for Q1 FY26 compared to INR 902 crore in Q1 FY25, making a 53% decline. EBITDA stood at INR 51 crore, while profit after tax was INR 33 crore.

On a consolidated basis, total income reached INR 476 crore with EBITDA at INR 60 crore and PAT at INR 31 crore. The supply of wheelsets has since got normalized and the company expects to recover lost production in the coming quarters. Even with these temporary challenges, our core railway business and emerging verticals continue to demonstrate resilience, supported by strong fundamental and consistent strategic execution.

A key highlight for this quarter has been the progress of Jupiter Electric Mobility with production and sales having commenced. In June, we opened our first dedicated showroom in Bengaluru marking the start of our national retail footprint. We plan to open another 4 to 6 showrooms by September 2025. We have recently reached significant milestone of having completed dispatch of 50 vehicles and are looking to accelerate the production and deliveries. Further strengthening this effort, we signed an MOU with Pi ckkup, a fast -growing logistics platform to deploy 300 JEM TEZ vehicles by the end of the year. This partnership aligned with the Government of India's PM E -Drive initiative reflects our ambition to accelerate EV production in the logistics ecosystem and s upport India's broader clean mobility goals through real -world scalable

applications. With commercial EV demand rising sharply, projected to grow at a CAGR of over 40% through FY30, driven by last mile and urban freight applications. This initiative strategically positions us in a high -growth policy-supported sector.

Our battery division is generating 100% month- on-month growth. We have commenced supply to Siemens for Vande Bharat and other products have gone into development for other railway applications.

JEM has developed BES (S) systems for solar and mobile BES S applications right from battery to container and irrigation. We already have early orders for some domestic customers and export orders for Africa for renewable applications. In the first phase, we are targeting DG replacement, energy shifting for peak demand usage for industrial and mobile BES S for of

f- grid

applications with the technology developed internally of which we already have pilot orders in hand from multiple well -known channels. The DG m arket in India is approximately INR 10,000 crore annually, which we feel will shift in 1 to 2 our backup segments to BES S. All the limitations being put on net metering will further create opportunities in solar plus BES S markets in this segment. In the second phase, we are looking on utility scale BES S for increasing market in India, which is foreseen to be growing to 10 gigawatts of annual volume with approximately INR8,000 crore to INR10,000 crore coming out via utility players with delivery time lines of 2 years approximately.

Currently, everything even assembl y systems are getting imported from China, and we foresee with our battery and container joint capabilities to be well placed strategically to be a leading integrated manufacturing player in India. To support the above 2, we are installing and commissioning our battery module line in Indore in late September besides our already established Bangalore facility.

In the wheelset business, we are witnessing quarter -on-quarter growth from Aurangabad unit and with capacity enhancement underway, we expect to achieve revenue of approximately INR550 crore in the current financial year, which would further increase to around INR 1,000 crore next year.

Regarding our wheel and axle project at Orissa, we have finalized procurement of all critical equipment and construction contracts. Work has commenced at the site and is progressing as per planned schedule. With the planned investment of INR 2,500 crore in phases, the facility will boost domestic manufacturing and support export capabilities. We are also implementing smart automation, including robotic welding, advanced NDT systems and real -time process analytics to ensure higher productivity and reliability across all our facilities.

In terms of financial credibility, we are pleased to receive an upgrade in our long -term credit
rating to ACUITE AA with stable outlook, which reflects our strong balance sheet and prudent
capital management.

Our c onfirmed order book stood at INR5,972 crore, offering continued visibility for the coming
quarters. Looking ahead, our focus remains on disciplined execution, market diversification and
innovation across rail and mobility segments. The Indian logistics sector is expected to grow to
USD 5 00 billion by 2030, with rail modal share targeted to increase from current 27% to 40%
under Gati Shakti.
This structural shift represents a major opportunity for integrated solution providers like Jupiter Wagon. With a healthy order pipeline, expanded product capabilities and strong macro tailwinds in infrastructure and clean mobility, Jupiter Wagons is well positioned to deliver sustainable
growth and value creation over the long term. We thank all our stakeholders for their continued
trust and support.
On that note, I would like to request the moderator to open the forum for any questions or
suggestions you may have. Thank you.
Moderator: Thank you very much. We will now begin the question-and -answer session. The first question
is from the line of Sahil Patani from Strokes Capital.
Sahil Patani : Two-part question. So, I think in the previous con call, we had given a full year guidance of
about 10% to 15% top line growth with EBITDA margins in the range of 14% to 15%. So, I wanted to understand if we'll still be able to meet that kind of a projection because our margins
have kind of contracted this quarter. So, if you could just provide some more highlights around that.
Vivek Lohia : Thank you. So, we still maintain our guidelines, and as I've already mentioned that July onwards, the wheel supplies have stabilized. So, we expect that in the last 2 quarters, we'll make up a lot of the lost ground, which we had in the first qu

arter. If you see that our overall margin per wagon
sold has improved because we are supplying more on the private side now than to the railways.
So, we don't see any challenges in terms of maintaining EBITDA margins. And also, as I
mentioned in my call that the other business segments are now showing substantial revenues, so especially the wheel business, so that will also have an impact on both the revenues as well as the bottom line. So, I don't see a challenge in terms of maintaining the margins. This time, there
was a contraction in the margins just on account of the reduced revenue. Otherwise, the overall
margin per wagon, there has been an increase. There has not been a decline. So as soon as the numbers catch up, you will find increase in margins.
Sahil Patani: Understood. Thank you. That helps. And my second question is, in terms of the order book and
the order pipeline, are you seeing any more orders coming in from the Indian Railways? Like what's the outlook looking like? Because I recall in the previous concall, you had mentioned t hat
we should see some more interest, some more order bid pipelines coming in over the next few months. So just wanted to get a broader picture on that.

Vivek Lohia : So from the private sector, we continue to receive sizable orders. We recently announced the
orders which we received from GATX. So there, we see a continued pipeline. On the Indian
Railway side, as I mentioned earlier also in the third, fourth quarter, we expect railways to come
up with new tenders because still there is a lot of previous supplies which are pending with
Indian Railways. And so, we definitely expect substantial tenders coming in the third or the
fourth quarter from the railways .
Sahil Patani: Okay. So we are expecting them to come in over the next couple of quarters?
Vivek Lohia : Yes. That is the expectation given the way the demand and the growth in the sector is shaping
up.
Moderator: The next question is from the line of Akash D. Vora from Dalal & Broacha.
Akash Vora : Yes, thanks for the opportunity. So I have two, three questions. Firstly, Vivek sir, what are the
total wagons in our order book currently?
Vivek Lohia : The total number of wagons is approximately 11,500.
Akash Vora : 11,500, okay. And so, the order book that we have reported of 5,900 approx. It includes the
INR242 crore order that we received recently?
Vivek Lohia : Yes, it includes the INR242 crore orders.
Akash Vora : Okay, sir. And sir, since you are saying that we are holding on to our guidance of almost around 10,000 wagons by the year -end. So that probably works out to almost from Q2 onwards it has

to work out to around 1,000 wagons per month. I don't think we have operating at that scale
earlier. So, sir, do we have the capacity in our foundry and our plant to be able to run at that
scale, at that pace?
Vivek Lohia : No, we definitely have the capacity to go up to that scale. As I've told you our target this year
was to scale up production, and we are already focused on that. The challenge is that the supply of wheelsets from Indian Railway has not been at par with our internal targets. But as I have told
you from July onwards, things have improved, and we expect them to improve further. So as the
wheel supplies improve, you will see that we are closer to achieving our targets.
Akash Vora : So, sir, will we be able to do more wagons than we did last year? I mean, do you have that
positive view sitting today?
Vivek Lohia : Definitely . That is what we are striving towards to achieve a higher growth rate compared to last
year. And we have been supporting by our own production itself because though most of our production goes towards our own private requirement and requirement of others. But even
during the last quarter, we have used more than 4,000 wheelsets from our own capacities to

support our railway supplies. So, I think from the railway side, if the supplies improve, I don't
see a challenge why we should not surpass last year's numbers.
Akash Vora : Understood. And, sir, since we are doing a lot of capex of almost around INR2,500 crore and
we also have debt on our books, what is our internal estimates of the total interest cost , that is
finance cost and total depreciation that we'll be having on our books for FY26 and FY 27?
Ballpark estimates will do, sir.
Vivek Lohia : See, as of right now if you look, we are still a net debt -free company. So, this , in FY26, you will
have no major impact. See most of the capex expenditure will happen in FY27 and interest is
going to get capitalized because the repayment starts 2 years , from start of production. So, the
impact will be much later on. So immediately in the next two financial years, you will not see
any kind of impact in terms of the INR2,500 crore – T he debt which we'll be taking towards the
new expansion.
Akash Vora : So, sir the interest and depreciation level will remain more or less similar to FY25 level? Is it what you mean?
Vivek Lohia : So the depreciation would slightly go up, but interest I wouldn't see an increase. In both cases,
you will not find any substantial kind of changes from last year.
Akash Vora : Understood. And sir, last two questions from my side. Firstly, on the eLCV s that we do. So how
many eLCV s we sold in Q1? And how has the response been at the new dealer showroom that
we have opened? And secondly, I wanted to understand on the brake systems part , I think we
have reported around nine brake systems that we have manufactured this quarter. So, I think
now that Stone India and all of them are fully operational, why doesn't this part of our business
grow as fast is what I'm trying to understand.
Vivek Lohia : In terms of the eLCV , we started supplies from June onwards. As I mentioned that we have
already supplied more than 50 vehicles. We expect in the next 2 months further dealerships to
open. So, by September end, we expect at least six dealerships across the country. We are now
already in the process of getting all the financial tie -ups with all the major NBFCs as well as the
banking institutions. So, we expect the growth numbers to be very strong on the eLCV side. As
I mentioned earlier also, we are in the process of launching two other vehicles, a 2-ton payload
vehicle as well as in the 1 -ton segment, another vehicle in the current financial year itself. So,
with all these developments and with a strong dealer network, we expect the numbers to be very strong this year.
Akash Vora : So, sir, in the first month itself you have sold 50, is it? You started only in June?
Vivek Lohia : June, yes. The suppl ies started in June.
Akash Vora : Okay. And if you could just clarify on the brake systems part.

Vivek Lohia : So on the brake system, including our Kovis JV as well as the Dako JV this year, we should do
a business of more than INR250 crore, as I've mentioned earlier. On the brake systems, where
the tenders were placed is that the supplies are going to be starting from next quarter onwards
because most of our supplies are skewed towards end of the year. So that's how the tenders were put. On the brake disc, we have been supplying the brake disc regularly. On Stone India, as I've
mentioned earlier also, the final certifications are ongoing, and we expect production to start in the last quarter of this financial year.
Moderator: The next question is from the lin e of Rajesh Bhandari from Nakoda Engineers .
Rajesh Bhandari : Sir, I was seeing that the turnover of this quarter is approximately INR 470 crore. In which

approximately INR240 crore is for the wagon and approximately INR 100 crore is for the wheel. The rest of the items are wi

thin INR 130 crore. And you have shown in the operating highlight, railway wagons is 826 and wheelset is 4,811. So what are these? Are these quantities that were manufactured in Q1 ?
Vivek Lohia: Yes, what you are seeing are the sales quantity that we have supplied.
Rajesh Bhandari: Yes, the quantity that has been supplied, which has come in the turnover.
Vivek Lohia: Yes.
Rajesh Bhandari: So apart from these two items, wagon and wheels, the other items are of very low value, sir ?
Vivek Lohia: See, if you remove these two, then the other components, apart from this, the main thing that remains is the brake system. Like we have said that from the last quarter of the brake system, the earnings will start to reflect. So by the fourth quarter, you will see that the revenue contributions of the brake system are increasing significantly.
Rajesh Bhandari: Yes, but normally if it comes in high value, like if we start making metro cars or double -decker wagon loaders.
Vivek Lohia: We have started making it, but it is being captured in the part of wagon revenues .
Rajesh Bhandari: Yes, double -decker, what I mean to say is that it is not open, it is closed type.
Vivek Lohia: Closed type we are already making it, we have a substantial order book, but that is part of our wagon revenues. So those wagons are already included.
Rajesh Bhandari: Are you thinking of making a metro car or a Nav Bharat or a Vande Bharat car in your plan?
Vivek Lohia: Right now, it is not in our plan immediately, but in the future, it is definitely something which we may consider.

Rajesh Bhandari: So for our FY26 , FY27 and FY 28, what is the expected turnover?
Vivek Lohia: As I have said earlier that the wheel business will be quite significant at that time. Next year, our project revenue is going to be about INR1,000 crore, which will come from the wheel. And after that, our Odisha facility should be online by the end of next year. So from FY27 , FY28, I think wheels should be close to about INR 3,000 crore in terms of revenue. So that would be as significant as the wagon revenues and also export also would be quite substantial. Then we expect in the next 2 to 3 years the vehicle business which we have just started as well as the battery business, that should be a significant business. So that we are expecting that business to be upward of anything between INR500 crore to INR1,000 crore business for us by that time.
Rajesh Bhandari : Meaning battery itself INR 500 crore to INR 1,000 crore and vehicle also INR 500 crore to INR 1,000 crore ?
Vivek Lohia: Battery and vehicle included, that entire segment would be anything between INR500 crore to INR1,000 crore.
Rajesh Bhandari : Okay. And the value addition is better here. Margins also better?
Vivek Lohia : Yes, definitely especially on the battery side, month -on-month we are seeing about more than 100% growth. And even the margins on the battery side is very, very strong for us.
Rajesh Bhandari : Sir I have one more question , like you mentioned in wheel by FY27, FY 28 INR3,000 crore is expected and all the Companies in this sector be it Texmaco, Titagarh or even Jupiter , everybody has been suffering because of the wheel supply and everybody is starting the wheel manufacturing process which will be in next year full fledged. Sir I hope it is not like the semiconductor chip the market is over. So wheel supply will be more or it will run in the international market?
Vivek Lohia : No, there is one Titagarh project and our project is coming and in the Titagarh project it is no t an integrated plant because they are only putting the wheel line and they are not putting the axle line.
Rajesh Bhandari: So yours is integrated?
Vivek Lohia: Ours is i ntegrated and we have a partner in Europe who themselves have a significant wheel consumption , which is plenty ar

ound 50,000 wheelset they consume in the year.
Rajesh Bhandari: And one wheel side would be around approximately INR4 lakh approximately?
Vivek Lohia: INR3 lakh to INR4 lakh depending upon the type.
Moderator: The next question is from the line of Vasudev Ganatra from Nuvama Wealth Management .

Vasudev Ganatra : Sir, since we had this issue regarding wheelset availability, so was there an option open for us to import from China?

Vivek Lohia : So, see, for the private supplies which we do, we have enough capacity. And now for the railway orders, Indian Railway does not permit us to use wheelsets because as per the contract, they are supposed to supply the wheelsets. And there is also a pricing differential from the Chinese prices
and the Indian prices. So, for the railway contracts, we have to depend upon Indian Railways.
However, for the private demand, we have enough capacity and that's not a challenge. The
challenge is on the rail way side, which I think now Indian Railway is assuring us that henceforth
things will be much better.

Vasudev Ganatra : Okay. Because I think in Q4, government had allowed us to import from China for the railway orders as well.

Vivek Lohia : You are right, but those were for limited quantities and as I've told you the price differential is
also substantial. And they are not reimbursing for the price difference. So, it does not even make
financial sense for us to import and use those wheels.

Vasudev Ganatra : Yes, sir. That is helpful. And sir, just a bookkeeping related question. Can you give the order
book split between private and Indian Railways and also, what is our gross debt and net debt by
the end of the quarter?

Vivek Lohia : In terms of the split, I think Indian Railway order book is right now close to about INR 4,000
crore and private is about INR 7,000 crore for us. The borrowing right now is around INR496
crore and the cash is about INR426 crore.

Moderator: The next question is from the line of Hardik Gandhi from HPMG Shares and Securities.

Hardik Gandhi : So just wanted to know a few things on the battery side that there are a lot of people who are coming into battery manufacturing. A lot of people have purchased the technology from the U.S.
or China or somewhere else. And in our case, we've developed it indigenously. So just want ed
to know on the competitive front, what does the landscape look like? Just wanted to know some
insights from you?

Vivek Lohia : So first, the growth in the market is going to be quite substantial. As I mentioned that just on the BESS side, the overall demand is going to be close to 10 gigawatts. That's on the BES S. If you
look at the overall market, the demand is going to be quite substantial. A nd India right now has
very little capacity. If you look at the Indian market, more than 80% of our requirements right now, we are importing it from China. So, there is enough opportunity for other players to grow.
However, in th at we have a very, very strong ecosystem because we are one of the most
integrated players right now . Besides cell, I think most of the other processes which go into
manufacturing of batteries is all in -house. On the BES S side for us, even the containers, we are
manufacturing in -house. And we are working with all the major global clients today . If you look

at our portfolio, we have clients like General Electric, we have clients like Delta. We have
Mitsubishi with us. And just to name a few, we have people like Schneider on our portfolio. In
terms of technology, I think we are far ahead on the curve. As I mentioned that we have already
started supplying the BES systems. And in a couple of months, we'll be, I think, one of the first
players in India to be ready with the liquid cooled solution for solar applications on the BES S
side. So gi

ven the head start and the technology adoption, which we have made, I think we have a very, very strong portfolio. On the industrial side , we have NDAs, so we cannot name our
clients, but we have a very, very strong portfolio when it comes to the clients which we have on
our portfolio. And beyond that also it is just not that we are offering battery as a solution in terms
of the service networks which we have set up in terms of the softwares, which we provide to our
clients as value additions with regard to diagnostic and other f eatures on the battery side. So, I
think we are building a very strong ecosystem. We have a very strong head start. And then a huge advantage is that we have our own captive requirement as well with our own vehicles. So,
we expect the growth to remain very, very strong in the coming f ew years. And that is the reason
we are also set ting up another line in Indore itself which we will see by the end of this year, our
Bangalore line will be fully utilized.

Hardik Gandhi : Understood. So, sir, just on the cell front which we are probably importing, where are we
importing it from?

Vivek Lohia : So it's mainly from China and Korea right now, which we are importing ourselves.

Hardik Gandhi : Okay. Understood. And given that this year, we fully utilize our battery line in Bangalore, what would be the peak revenue from that? And how much are we planning to put additionally in Indore?

Vivek Lohia : So, Indore, I would not know how much exactly, unfortunately, I don't have the capacity
numbers with me off hand. We can share with you later. But by FY27, we expect the battery
business to be anything between INR200 crore to INR300 crore of business for us.

Hardik Gandhi : Okay. So, like in one and a half years time

Vivek Lohia : Yes, one and a half years to two years, we expect it to be anything between INR200 crore to
INR300 crore business for us.

Moderator: The next question is from the line of Sandeep Mukherjee from SKP Securities Limited.
Sandeep Mukherjee : Sir, what would be the capex for FY26 and FY27? If you can bifurcate also?
Vivek Lohia : So very difficult to bifurcate. But as I've told you between FY26 and FY 27, overall, we'll be spending about INR2,500 crore on the Orissa project. So just to give you a bifurcation like that, it's very difficult because as I've told you, the project has already started. So it's an ongoing

projec t. Besides there is most of the other capex which we have already incurred. So we don't see any substantial capex beyond the Orissa project right now.
Moderator: The next question is from the line of Om Prakash from Infosys Technology.
Om Prakash: Are you planning for any QIP now? Earlier, I heard the news there is a INR3,000 crore QIP. Is it still in place?
Vivek Lohia : No plans. T hat was just a Board approval, which we had taken, but there is no plan in the foreseeable future.
Om Prakash: Okay. Since you mentioned you have started wheelsets from July, can we see those numbers in the coming quarter results?
Vivek Lohia : So the existing facility already the numbers are showing and those numbers will increase only quarter -on-quarter. But the Orissa project is going to be on stream by end of next year only. So before that, you will not see the numbers coming out of that proj ect. This year, we have given the guidelines from our Orissa business to be INR500 cror e plus the revenues, which will go up to about INR1,000 crore next year.
Om Prakash: Okay , next financial year or next calendar year?
Vivek Lohia : Next financial year. It will be next financial year will be INR1,000 crore from our existing facility. And this year, it's going to be INR500 crore plus.
Moderator: The next question is follow up from the line of Akash D. Vora from Dalal & Broacha.
Akash Vora : Just trying to confirm the guidance for FY27, FY28. So I believe

wagon revenue will continue
to be there around INR4,000 crore, INR4,500 crore. Wheelsets you are saying that by FY 27 will be INR1,000 crore and by FY28 when the new plant is live, the Orissa plant capex is complete, I think it will be INR2,000 crore or INR3,000 crore, right, full business?
Vivek Lohia : Yes, between INR 2,000 crore to INR 3,000 crore depending upon the pricing because it's too early to predict the pricing right now.
Akash Vora : Correct. And the battery business that is inclusive of all the eLCV s, that will again be INR 500 crore to INR 1,000 crore by FY28 , right?
Vivek Lohia : By FY28, we expect, yes, anything between INR 500 crore to INR 1,000 crore , definitely.
Akash Vora : Understood, sir. Just last two questions from my side. One is, on the brake business, what kind of margins we will do? Because from the last several quarters, we are just reporting a loss from the JV and associate side. So hence, I'm asking.

Vivek Lohia : See, on the brake business, there is no losses. We have already started showing positive margins. And I think by the end of the year, we expect very strong EBITDA margins on that business. As I have told you, the brake system business, unfortunately, the w ay we have got the orders, our real order supplies are going to only start from the last quarter. So from next year onwards , both on the Dako JV as well as Stone India , you are going to see very strong EBITDA margins in the next financial year . But unfortunately, the way the orders were structured in this financial year, you will not see strong margins from those businesses. But from next year in terms of both revenues and margins, you will see very strong numbers happening. So all put together, brake disc and brake business, I think from next financial year, I'm expecting anything between INR300 crore to INR 500 crore revenues coming out from that business.
Akash Vora : Understood. And my last question on order book, sir. Basically, in our order book we are seeing a continuous decline on that front from INR 7,000 crore, let's say, a year back, and now we are sitting below INR6,000 crore. So how do we expect this to shape up in the immediate and medium -term future?
Vivek Lohia : So see, in terms of the private order books, it remains steady. The decline which you are seeing is because, obviously, railway, we are expecting the next big round of tenders. The next big round of tenders would come from the Indian railways, you will see a substantial jump in terms of the order book. But if you look at our private order book, that has been, I think, very, very steady and that has been growing.
Moderator: The next question is from the line of Pawan Roy, an individual investor.
Pawan Roy: My question was on BES S side, how do you see the revenues from BES S in the next two years?

Vivek Lohia : So as I already mentioned, I think we are very, very bullish on this segment. We have an advantage in terms of that , I think we are the very few companies in India who have now developed their own systems. This month we'll be supplying our first integrated BES system. We'll start exports next month to the African market. So, we expect it to be a very, very strong performer for us. Overall battery business, as I mentioned that we expect in the next two years, that would be at least INR 300 crore business for us.

Moderator: The next participant is a follow -up from the line of Rajesh Bhandari from Nakoda Engineers.

Rajesh Bhandari : Sir, my question is on battery. As you have said that you have supplied battery to Siemens for their metro and for their cars. In fact to supply to Siemens is really something great. And if we connect this to railways: there are many uses of batteries in railways. Do you think that, going forward, these railway batteries will all be lithium -based ?

Vivek Lohia : Railways right now is u

sing more of nickel cadmium applications, the demand is very huge . We are already working with the railways and we expect and just as you said the demand is more, so we are expecting – railway is getting more specifications for lithium ion. So next year we are

expecting that the railway demand will increase substantially. Until that is not translated in numbers, we are not doing any kind of projections on that demand. Definitely we expect numbers to be much better in the next two years.

Rajesh Bhandari: And you don’t want to come in the Kavach system program.

Vivek Lohia: Not in Kavach. As of now, because we have already taken two, three big projects, especially on the wheel set and we are seeing and expecting a growth opportunity in the EV business.

Moderator: The next question is a follow -up from the line of Hardik Gandhi from HPMG Shares & Securities .

Hardik Gandhi: Just two questions from my end. The first one being that given that there is a bottleneck in the wheel supply for this year, at least there was in Q1. So how can we see it for the rest of the year? Are we seeing the normalization in there and can we ramp u p our production back to normalized levels or what's your thoughts?

Vivek Lohia: So already, as I've mentioned that supplies have normalized to a large extent and we expect it to improve further. A nd that is the reason in terms of the confidence for the coming quarter numbers. But going forward, whether there will be any disruption or not, again, very difficult for us to predict as of now. D efinitely supplies have normalized considerably. And as per our knowledge, it should improve going forward.

Hardik Gandhi: So are we expecting the year to end at approximately INR3,500 crore this year or a lower number than that?

Vivek Lohia: For the wagon business, as I have mentioned that if the supplies remain to be consistent, we expect to achieve our projected targets. Maybe if there's a shortfall, it will not be very substantial, because in last two quarters, we expect to make up some gro und for the first quarter. But however, it again, all depends on the supply. However, the positive side is that, we have a substantial private order book where we are not dependent upon Indian Railways. So there, we don't see any challenge in terms of supp lies.

Hardik Gandhi: Understood. And that since we are seeing so much traction in the BESS front, right, why not go a little more aggressive, INR300 crore business from the landscape of renewable, as well as clean energy and the amount of BESS required in the market right now, INR300 crore is in two years' time, doing a revenue of INR300 crore is not meaningfully adding to the ecosystem as per my knowledge. So why not go more aggressive?

Vivek Lohia: No. I understand. W e are very aggressive, see, whenever you give numbers, you have to be very, very conservative. As I have told you, there is a huge opportunity which is there in the market. So, what I'm saying is, in terms of the growth potential, it is very huge. But toda y, it would not be right on our part to give a very strong guidance. So as and when how the market evolves and

our order book evolves, then we can keep on changing the guidance. But we are very, very aggressive on that segment. It's not that we are not aggressive. And we see a lot of opportunity, because today, if you look at the BESS segment, it's 100% imported. And now with all major tenders, which Indian Government is floating, they are bringing in the Make in India component, as well as now with restrictions on net metering, as well as the entire energy demand equilibrium, people have to invest in battery storage. It is not possible for the solar ecosystem in India to sustain or grow without investment in the battery ecosystem.

Moderator: The next question

is from the line of Parthiv Shah , an individual investor.
Parthiv Shah: I had a question regarding our FY27 target. I mean, I know it's too early to say, but you had mentioned possibly reaching a INR10,000 crore top line. So I just wanted to understand if you take out the eLCV part from it, although we are bullish on it, it's big question mark. What are we kind of looking at without the eLCV? Like so for example, if you said INR10,000 crore and you are expecting INR2,000 crore from eLCV, for example, then that leaves us with INR8,000 crore. So for our core business, excluding the eLCV, what do we expect?
Vivek Lohia: First of all, I've never projected INR2,000 crore for eLCV. I'm talking about anything between INR300 crore to INR500 crore by FY28.
Parthiv Shah: No. I mean I was just giving an example.
Vivek Lohia: There is a big gap in what you have. So eLCV is not going to be a nd it's not only eLCV , it includes also the battery business. In terms of that revenue number, it's not very significant if you look at the overall revenue numbers. And I've talked about INR8,000 crore to INR10,000 crore, I'm talking about FY28 once our Orissa plant comes onli ne.
Parthiv Shah: Okay. FY28.
Vivek Lohia: Yes. I continue to maintain that guideline because that business itself will add to anything between INR2,000 crore to INR3,000 crore in terms of top line revenue. I continue to maintain that guideline.
Parthiv Shah: Understood. Okay. That's all. That was the only question. Thank you.
Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I now hand the conference over to the management for closing comments. Over to you, sir.
Vivek Lohia: Thank you. While we have started off FY26 with a few challenges, we are very confident of making up the shortfall through the rest of the year. With a strong foundation, strong order book and a future -ready portfolio, we have multiple levers for growth. Our focus remains on scaling efficiency, innovating substantially, and delivering consistent value to all our stakeholders.

Thank you for your continued trust and support. We look forward to updating you in the coming quarters. Thank you.
Moderator: Thank you. On behalf of Systematix Group, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Sub: Transcript of Investor/Analyst Meet call pertaining to the Unaudited Financial Results
of the Company for the Q2/HY1 FY 2026 Ref: Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and
Disclosure Requirements) Regulations, 2015, as amended ("SEBI Listing Regulations").

Dear Sir/ Madam,

Pursuant to Regulation 30 of the SEBI Listing Regulations, please find enclosed the Transcript of the Analysts / Investors Meet Call on Financial Results (Standalone and Consolidated) of the Company for the quarter ended September 30, 2025 held on November 12, 2025.
The information is being hosted on the company's website www.jupiterwagons.com .

Kindly take the same on your record.

Yours Faithfully,
For Jupiter Wagons Limited

Ritesh Kumar Singh
Company Secretary

Jupiter Wagons Limited
Q2 & H1 FY26 Earnings Conference Call

November 12, 2025

MANAGEMENT :

MR. VIVEK LOHIA – MANAGING DIRECTOR
MR. VINOD KUMAR AGARWAL – CHIEF FINANCIAL OFFICER

Moderator : Ladies and gentlemen , good day and welcome to the Jupiter Wagons Limited Q2 and H1 FY26 Earnings Conference Call hosted by Systematix Institutional Equities .
As a reminder , all participant lines will be in the listen -only mode , and t here will be an opportunity for you to ask questions a fter the presentation concludes . Please note that this conference is being recorded.
I now hand the conference over to Mr. Sudeep Anand from Systematix Institutional Equities. Thank you, and over to you, sir.
Sudeep Anand: Thank you and good evening everyone. Thanks for joining us today for the Q2 and H1 FY26 Earnings Call of Jupiter Wagons. On behalf of Systemati x, I would like to thank the management for giving us the opportunity to host the call.
Today we have with us Mr. Vivek Lohia – Managing Director, and Mr. Vinod Kumar Agarwal – CFO.
Now I would like to hand over the call to the Management for the Opening Remarks , and then we can open for the Q&A. Thank you, and over to you, sir.
Vivek Lohia: Thank you, Sudeep. Good evening everyone and thank you for joining us to discuss our performance for the quarter and half year ended September 30, 2025. I trust you had the opportunity to review our financial results and presentation shared earlier.
We beg an this financial year navigating supply -side disruptions, particularly in wheelsets, which affected Q1 and extended into July. I am pleased to share that supply conditions improved meaningfully from late July onwards, resulting in strong sequential recovery in Q2 FY26.
In Q2 FY26, on a consolidated basis, revenue from operations stood at INR 786 crore , a strong 71% sequential growth, primarily driven by normalization of wheelset supplies in our wagon division. EBITDA rose 73% quarter -on-quarter to INR 104 crore , and we reported an EBITDA margin of 13.2%, while profit after tax reached INR 45 crore , reflecting a PAT margin of 5.8%.
For H1 FY26, our consolidated revenue was INR 1,245 crore, with EBITDA at INR 163 crore and PAT at INR 76 crore. I am also pleased to share that even as we strive to restore the pace of revenue and EBITDA from our wagon business to a peak disruption level, our business verticals continue to scale up performance.
During the quarter, we saw encouraging traction in volumes of brake disc , containers, wheelsets, even as volumes of CMS Crossing and CV Bodies remained resilient. This has helped us demonstrate renewed operational strength, disciplined execution, and an improved financial performance.

Our order book of INR 5,538 crore provides strong visibility for the coming quarters. Our immediate goal is to regain our past performance benchmarks and then build upon them through continued growth and diversification.
We have witnessed several positive operational developments this quarter. Our subsidiary, Jupiter Tatravagonka Railwheel Factory , secured significant orders, including an INR 113 crore contract from Ministry of Railways for 9,000 LHB Axles , and an order for INR 215 crore for 5,376 wheelsets for the Vande Bharat high -speed train project .
At Jupiter Electric Mobility, we continue to drive the clean energy transition through innovation. This quarter, we launched 10 -foot and 20 -foot containerized battery energy storage systems with modular air -cooled architecture ranging from 241 Kilowatt to 3 Megawatt , suitable for applications for DG replacement to solar energy storage.
We delivered our first 10 -feet BESS unit to Greenlit in partnership with GMMCO and are preparing our first 20 -feet system for export. Development is also progressing on our liquid - cooled grid -scale BESS , which will further reinforce our leadership in India's energy storage market.
Following the success of our first showroom in Bengaluru, we have expanded our networ

k with
six new dealerships across Hyderabad, Delhi, Ghaziabad, Pune, Ahmedabad, and Trivandrum, enhancing our national presence.

Moving to updates across our expansion plans, sustainability initiatives, and leadership transitions. We are making rapid progress on our forged wheel and axle facility in Odisha . An INR 2,500 crore investment that will, upon commissioning in 2027, to produce 100,000 wheelsets annually.
Jupiter Wagons Limited has been independently assigned an ESG rating of 45 by ESG Risk Assessments and Insight s Limited based on FY 2024 -2025 data, a recognition of our ongoing commitment to responsible and sustainable business practices.
We are also pleased to welcome Mr. Vinod Kumar Agrawal as our Chief Financial Officer and a key managerial personnel. His financial expertise and strategic insight will further strengthen our leadership team as we enter the next phase of growth.
As we step into the second half of FY26, our priorities remain clear , to scale responsibly, innovate continuously, and create enduring values for all our stakeholders. With strong momentum in our performance, headroom to optimize capacity, and progress in expansion plans, Jupiter Wagons Limited is well -positioned to sustain its growth trajectory and lead the next phase of transformation.

On that note, I would like to request the moderator to open the forum for any questions or suggestions you may have. Thank you.
Moderator: Thank you very much. We will now begin the question -and-answer session. Our first question comes from the line of Balasubramanian A. from Arihant Capital.
Balasubramanian A.: Sir, my first question regarding th e tender, I think earlier it was mentioned that it is expected in Q3 or Q4. Could you please quantify th e tender size and specify the wagon types and what kind of opportunities we have and why the tender has been delayed for a long time?
Vivek Lohia: Look, regards to the tender, honestly, it is an Indian Railways decision as to when they come out with the tender. It is not something which we control. What is very clear is that if you look at the stated position of Indian Railways, is that they require close to about 50,000 wagons to achieve the ir revenue forecast. So, we expect the tenders to come out anytime. I think one of the reasons for the delay was because of the wheelset position. The outstanding order book was substantial. So, I think Railways is looking for the existing order books to reduce before they come out with the new tender.
Balasubramanian A.: Sir, on the BESS side, beyond in -house assembly, what is the strategy for localizing the supply of key components like battery management systems and power conversion systems to reduce reliance on Chinese imports and create a durable cost advantage?
Vivek Lohia: So, see, the BMS as well as EMS for us is local only. EMS, Jupiter is already doing, I think, our own EMS, and we should be ready with our EMS very shortly. From China, we are mainly dependent on the battery cells. Besides that, I think the entire design , all BESS and the entire system is in-house for us. And w e are in a very strong position today because we are one of the few companies in India who have successfully delivered as well as commissioned BESS systems. Today, already we have a very strong order book on the BESS side, and we are continuously building on that order book, and we expect this business to be quite significant for us.
Balasubramanian A.: Sir, my last question regarding the wheelsets, how the lead time has improved from Indian Railways for supplying wheelsets. And s econdly, on that EV side, I think we have dispatched nearly 50 LCVs since launch. What is the volume and margin threshold required for this division to break even? And g iven the highly competitive landscape, what kind of value propositions are we able to scale?
Vivek Lohi

a: So, the wheelsets, as I said, that the supply disruption is no longer there . Wheelsets are now available , so that is very good news for us , that is not a challenge anymore. On the EV vehicle side, definitely, with the opening up of the dealerships now, we have close to about 10 dealerships across the country, and we plan to open another four to five before the end of this financial year. If you look at our numbers, it is growing very significantly every month. Our

vehicle sale numbers are growing by close to 20% to 30%. And e ven overall, the non -BESS business also on the battery, our volumes are growing significantly. So, we are very confident that by end of this financial year, this business will break even. And i n FY27, we expect it to be EBITDA positive, and EBITDA margins will be similar to the other existing business.
Moderator: The next question is from the line of Sahil Patani from Strokes Capital.
Sahil Patani: A couple of questions. One is, could you shed some more light on the container business? Because we can see the volume has more than doubled over Q2 of last year. So, w hat has really

propelled this growth?
Vivek Lohia: So, see, again, the container business in itself, by itself in India, is growing significantly. And Jupiter as a company is focused on the specialized segments, mainly for the battery storage as well as for the containers which are required for the data center. And w e are now working with very marquee clients such as General Electric, with TMEIC – Toshiba, Mitsubishi, with people like Tata Solar, with Reliance, with Delta. So, we have a very strong Indian as well as a global presence. And t oday, we are expanding our capacity also significantly because the demand for these kinds of containers are not only growing in India, but the global demand is also increasing significantly. So, w e expect this business to show significant growth, at least in the foreseeable future.
Sahil Patani: And my second question is on the EV side , the LCV that we launched. And we also did a partnership with Porter earlier in the year. So, just was wondering, how is that partnership, has that been in any way fruitful? A nd are we on track? Because I think we guided for about INR 100 crore of revenue from the eLCV segment. So, a re we on track to achieve that?
Vivek Lohia: Definitely , we are on track. And this year, our JEM , Electric Mobility revenues , we will be very close to our INR 100 crore target. And next year, we are looking to double the revenues in FY27. And o ur partnerships, not only with Porter, but with other significant players like Pic kkup and others, which I cannot mention names right now, but all our partnerships are doing very well, and we are seeing a lot of strong traction in th is sector. If you look at the segment itself, it is growing month -on-month. The segment itself is showing a growth rate of close to 100%. So, we are very, very bullish on this sector, and we expect significant growth. And n ext year, as I mentioned earlier also, we will be launch ing another variation of our 1-tonne truck, which will be a much lighter truck and at a lower cost , and as well as we are launching a 2-tonne payload truck also. I think with the expansion of the entire range and the way the market is growing, and our dealerships are growing and overall, with the partnerships which we are able to forge, we are very, very bullish, and the volumes will keep on increasing significantly for us. A nd as I mentioned earlier, that next year, we expect this business to definitely break even and turn EBITDA positive.
Moderator: The next question is from the line of Rajesh Bhandari from Nakoda Engineers.

Rajesh Bhandari: Congratulations for better results than compared to Q1. Sir, our Q1 FY25 result was very good. Can

we expect that our second half to be good, will we be on the similar lines or better than before?
Vivek Lohia: So, Rajesh, definitely , second half, we expect to be on similar trajectories. So, d efinitely, the revenues will improve, and margins will improve. But overall , wagon numbers, I think, because right now, if you look at our execution, we are doing a lot of private order books and very complex wagons like auto cars where definitely the margins are better. You will see margin improvements in the last two quarters. But the numbers may not be that high, but once the railway order book kicks in, in FY27, you will see again a significan t expansion in the overall numbers.
Rajesh Bhandari: Right now, w e don't have a problem in the wheels ets, right ?
Vivek Lohia: Right now, there is no issue with the wheels, and our expectation is that going forward also at least in the recent, in the next six months to a year there will not be any problem .
Rajesh Bhandari: We have two factories of wheels , one is for LH B, which is already in production , right?
Vivek Lohia: Yes. There is a plant in Aurangabad which is in productio n. That capacity is limited but it is used for wheelsets which supplies to LHB and we use it for our private order books.
Rajesh Bhandari: What is LHB?
Vivek Lohia: LHB is the passenger coaches for the Indian Railways . We supply for both LHB and Vande Bharat .
Rajesh Bhandari: If I'm not mistaken, the cost of one wheelset for Vande Bharat is around INR 4 lakh, whereas for LHB a set costs about INR 1.2 lakh .
Vivek Lohia: No, I think your numbers are wron g. No wheelset can be sold at INR 1.2 lakhs. I don't know the exact number as of now.
Rajesh Bhandari: I'm talking of the order which you have received of INR 130 crore .
Vivek Lohia: The INR 1.2 lakh you mentioned pertains to the axle order we received. This price is solely for the axle and does not include the wheel.
Rajesh Bhandari: Okay. Since Titagarh is also setting up their wheel manufacturing facility, won't that lead to intense competition ?
Vivek Lohia: Regarding competitors, I cannot comment. However, we do have a few differentiators. First and foremost, our facility is fully integrated, enabling us to produce both wheels and axles, with all

machining done in -house —something competitors may not offer. Secondly, we are in a strong position because our partners have significant wheelset requirements in Europe, and a sizable part of our capacity is already earmarked for exports. As a result, our dependence on the domestic market is relatively lower compare d to our competitors .
Rajesh Bhandari: When will the Odisha factory be operational for production?
Vivek Lohia: Next year our axle line will be open , and in 2027 we expect wheel line to be fully commissioned.
Rajesh Bhandari: 2027 means financial or calendar year?
Vivek Lohia: Calendar Year 2027 wheel -line will start, and Calendar year 2026 the axle line will start.
Moderator: The next question is from the line of Ashit Kothi , an individual investor.
Ashit Kothi: I was just going through the presentation where we have provided operating highlights product - wise. Where we have given the numbers, is it possible to get this breakup in value terms and in terms of margins? And w hich of these nine products have got the highest operating and EBITDA margin?
Vivek Lohia: See, right now , offhand to give you data in terms of value or revenue would be very difficult. If you can share your email, we can share those numbers with you. In terms of what I can definitely say is that obviously wagon constitutes a significant part. That would be close to 60% to 70% of the order book. In terms of margins, definitely our wheel business and container business along with the crossing business would have the maximum margins.
Ashit Kothi: So, s hould we be sa

ying that over a period of time, we should be reducing our dependence on wagons and move on to other products? Because if I look at net profit margin of 5% or so with so much of efforts you all put in, do you feel that margin should be higher?
Vivek Lohia: See, margin expansion is definitely which we all strive to do, and that is why we are doing business, that is the key indicator. And t hat is the reason we are doing so much of product expansion and integration. So, t he whole idea is that, as is the stated position of the company, that by FY28, wagon revenues would constitute close to about 50% of the overall revenues. And from the other businesses, the revenues would significantly increase. That is our stated position, and definitely that is wh ere we strive to go. And in the wagon part itself, because we are doing so much of integration , both forward and backward, so we continuously strive to even improve our wagon margins. So, b y FY28, we expect the revenues to also expand, and we expect margin expansion also.
Ashit Kothi: With regards to railway wagons, are we also exploring or already into aluminum wagons?

Vivek Lohia: No, we are already into aluminum wagons, but the market for aluminum wagons is very small. I think where our focus is that we are now getting into very specialized wagons where there is a significant market opportunity, and which requires a lot of investments and designs and other technologies. And t hat is where we are focusing on, and that is what is going to lead to margin expansion. So, I think that is where we are more focusing rather than on the aluminum side because there the market, it is a very, very small market right now.
Ashit Kothi: And are we also into Vande Bharat ?
Vivek Lohia: We are in talks with a lot of global players, and definitely the company is looking to enter the passenger side of the business also. And m aybe by FY27, we could announce a foray into that business.
Ashit Kothi: And that is a better margin than wagons, per se, or is it vice versa?
Vivek Lohia: No, I would not say that business has better margins. That is also a very, very competitive business, but definitely that will expand the product base as well as the revenue profile because we are already into brake systems, wheelsets, brake discs, and other products which we are already supplying for Vande Bharat, Metro, and other businesses. So, b y directly getting into manufacturing, we can utilize our skills which we have developed. So, that is how we are looking at that expansion.
Ashit Kothi: And all in all, if you look at overall sales numbers, what is the contribution from railways and what is the contribution from private?
Vivek Lohia: So, I would say th at from the overall private would be about 60% of our contribution, and railway would be about 40% of our contribution. Definitely the private side of our business has a larger contribution right now than the railway.
Ashit Kothi: But then s till our margins are lower.
Vivek Lohia: No, but compared to the competition, the margins are much higher. See, the first two quarters we were also constrained by the availability of wheelsets. That had a huge impact on us because the revenues were reduced. But a s the revenues normalize, the margins also will improve. And compared to competition, if you look at our competitors, our margin profiles are significantly better.

Moderator: The next question is from the line of Sarang Joglekar from Vimana Capital.
Sarang Joglekar : So, o n the BESS side, how much is your capacity ? And how much have you invested for it?

Vivek Lohia: See, on the BESS side, in terms of capacities, we have built significant capacities. So, we are looking in terms of capacity, we can easily do about close to 40 to 50 Megawatts of BESS systems on

a monthly basis. So, c apacity is not a constraint right now for us, and we continue to invest in the same. But c urrently, since the whole business is at an infancy stage and the technology also is relatively new in India , because most of the BESS systems, if you look in India, are still getting import ed from China and other parts of the world. But i n the next six to eight months, definitely our volumes on the BESS supplies will improve significantly. But w e have enough capacities to take care of the order books which we expect.
Sarang Joglekar : And t he investment that you have made for that capacity?
Vivek Lohia: So, in terms of the investment numbers, again, very difficult for us to say , because it is part of the complete integrated capacities which we have because a lot of the capacities are shared capacities. So, it would be very difficult for me to pinpoint any kind of investment numbers for that.
Sarang Joglekar : And c urrently, what is the realization for these BESS containers per megawatt, per se ? And compared to China, how is it? Are you competitive compared to China?
Vivek Lohia: Yes, we are definitely competitive, and that is the reason we are getting significant order books. Not only in India, right now we are executing export order books also, and which is also growing. So, definitely we are competitive. A nd as our volumes increase and we get better integrated in the next three to six months, as I mentioned, that we are developing both our own BMS as well as our EMS, which is again a significant step for us. So, a s we get more integrated, our volumes increase, we wil l keep on getting more and more competitive.
Sarang Joglekar : And the realization on BESS per megawatt or per container, how much is it currently?
Vivek Lohia: So, we do expect to enjoy decent margins. However, at this stage, we would not like to comment specifically on the margins, because as I mentioned, this is a business that has only just started . And so m aybe in the next three to six months, we will be able to give you a clear view on the margins. But d efinitely I can say that it is a margin accretive business, and the margins are going to be as compared to the margins we enjoy in the other businesses.
Sarang Joglekar : And j ust one last question. Are you currently focusing on the utility scale energy storage or more on the C&I where your product will be used to replace the diesel generator or power backup?
Vivek Lohia: So, we are focusing on both the segments, C&I as well as the utility scale, but definitely to start with, our focus is more on the C&I segment. And i n the C&I itself, the market opportunity is huge, and so we see a big opportunity there. On grid scale also, we are focused, but I think only when we are much mature in terms of the technology and size, that is when we are going to start focusing on the grid scale BESS opportunity. But i nitially, our main focus is on the C &I.

Sarang Joglekar : But i s there enough interest because what I have heard from a few small businesses is that diesel generator is much more flexible, is much more reliable than batteries. So, there was some kind of acceptance or knowledge related, like people don 't know yet about the batteries. So, is there any challenge or is there ready acceptance of battery storage over diesel generator?
Vivek Lohia: No, no. I think that is not the case right now. Acceptance is very strong, and it is not just diesel generator. There are other significant opportunities which we are there, which I cannot divulge right now, which we are already working on, and it's not that BESS is the only solution which is available. And w e don 't see any kind of challenge. Adaptability is very strong, and I think this business in the next two to three years is going to scale up very, very strongly. And w e have a huge

advantage because today, I think , in India, we are one of the first companies who have delivered and proven BESS systems. A lot of people have announced, but till now, nobody has been able to deliver and prove their systems.
Sarang Joglekar : So, t he other ancillaries in the BESS container, PCS, power conversion inverter, and HVAC, that you are sourcing from the other Indian suppliers, right? You are assembling the cells into battery packs.
Vivek Lohia: Where we are importing is mainly on the cells, but besides the cells, everything else for us is mainly all indigenous, and a lot of it is also in -house for us. So, it is a mix of everything.
Moderator: The next question is a follow -up from the line of Sahil Patani from Strokes Capital.
Sahil Patani: Sir, just wanted to kind of go over the guidance that we had given in one of our previous con -

calls, I think Q3 FY25. We said that we woul d be doing INR 5,000 crore of top line by FY26. Do you think we will still be able to meet that?
Vivek Lohia: So, I am sorry, Sahil. I don't think we will be able to do it because in Q1, we faced significant headwinds because of the wheelset issue. Q2, definitely, as you could see, there is an improvement, but the first month of Q2, again, there was a challenge. So, we will try to make up a lot of ground . But again, if you ask me what our revenue numbers by end of this year will be, I think very difficult for me to give you a very clear picture. But definitely we will try to make up significant ground, but definitely INR 5,000 crore is something, unfortunately, I don't think we will be able to reach those numbers. Overall we are looking to maintain the margin guidance which we have given. So , we are still very hopeful that we will be able to achieve the margin guidance.
Sahil Patani: And w hat would be our wagon number for this entire financial year? Was it 1,000?
Vivek Lohia: Again, as I have told you, right now, that is very difficult for me to give because we are already striving to improve our deliveries and try and achieve the revenue guidance which we have

given. So, maybe by end of next quarter, I will be in a better position to give you in terms of the guidance for the entire year.
Sahil Patani: And just in terms of the order book pipeline, are there any tenders floating by the Indian Railways, or what is that pipeline looking like for this financial year?
Vivek Lohia: There are tenders which Indian Railways keeps on floating. So, this year itself, Indian Railways has floated tenders , I don ’t know the exact numbers, but maybe close to 5,000 to 6,000 wagons. And d efinitely, we expect the big tender to come from Indian Railways any time. I think it got delayed because, again, the outstanding order book, if you look at the industry level, is still significant. So, I think when th ose order books get executed, which we expect by early next year, a substantial port ion of that order book will get executed. I think that is when we expect the tenders to also come out.
Moderator: The next question is a follow -up from the line of Ashit Kothi , an individual investor.
Ashit Kothi: Sir, one small question. I mean, while we are having multiple JVs and new products and everything, which is the most exciting business part which the company, as well as a person who is running the whole show, which part of the business is really looking very, very exciting?
Vivek Lohia: See, for me, they are all my baby, so you cannot distinguish which is a better baby for you. All the businesses are very exciting, and we would not be in a business if we did not find it to be very exciting. So, definitely , I think all the businesses which we are into are showing very, very significant growth momentum, and there is a lot of opportunities which are there. Some businesses, such as our wagons business, definitely,

or the commercial vehicle business, they are much more mature. In terms of the other businesses, such as the wheelsets, containers, where we see a lot of revenue opportunities because we have now become significant players there, and we are putting up substantial capacities also. And d efinitely, on the electric vehicle side, as well as the battery business, I think there in India as well as globally, the growth opportunity is very, very significant. I think in the next two to three years, especially in India itself, you will see about a 2,000 %, 3,000% growth in those businesses because today itself, also, a significant amount we are importing. So, as you saw the inflection happening on the solar side, where three or four years back most of the solar panels were imported, today if you loo k at it, it is mainly all domesticated, and all the solar companies have gone through a huge transition . So, similarly, you will see this happening on the battery business also. And we have a very, very strong head start in that business. We have built in significant resources, talent. We are now scaling up those businesses. So, definitely , I think next two to three years, there will be a huge opportunity in all these segments.
Ashit Kothi: So, in a way, you mean to say, sir, Jupiter Electric Mobility could possibly, even in terms of growth, surpass other divisions with a big margin?

Vivek Lohia: Yes, definitely. Going forward, the way the sector is panning out, you could definitely see a lot of expansion in that sector because, if you look at significant players like Reliance, Adani, and Tata, they are all now entering that business . So, you can understand the kind of scale which is going to happen in that business. And t here is enough opportunity for everybody because that business is in its infancy in India.
Ashit Kothi: Wish you all the best for coming quarters, and we hope we achieve a greater capacity utilization vis-à-vis our installed capacity.
Moderator: The next question is from the line of Sandeep Mukherjee from SKP Securities Limited.

Sandeep Mukherjee: What would be the wagon order book backlog — wagons to be executed currently and for Q2 FY26 ?
Vivek Lohia: So, in terms of numbers, the wagon order book, I think it stands close to about 11,000 to 12,000 wagons, roughly. I cannot tell you the exact number of wagons, but close to about 12,000 wagons. In terms of size, it is close to about INR 4,000 crore.
Moderator: The next question is from the line of Athif , an individual investor.
Athif: Just had kind of a philosophical questions. Just wanted to get your view on something. We have the National Rail Plan, the National Electricity Plan. We have had an unprecedented push in railways in the last two, three years . And as you have stated, our company policy statement is that we will try to get 50% of our revenues from non -wagon businesses going ahead. But f or that 50% revenue, which we still want to do from the wagon business, I know we have a very strong order book on the private side. I mean, how is the industry pulse? I know new tenders are coming out, but do we see this push tapering off any time in the near future, like by the time maybe our wheelset plant comes online? And then i f that happens, do we have optionalities to export our wagons? I know we are going to export wheels ets, but just thinking ahead, I know you can't predict the government, obviously, but just wanted to get your thoughts on kind of the whole way we are thinking about this.
Vivek Lohia: See, honestly, for us to predict ahead, as you rightly said, is very difficult. But i f you see not only the National Rail Plan, but overall the National Growth Plan, and so the government is pushing infrastructure a lot. You are looking at a lot of core capacity build -up, which is happening, especially on the steel side, on c

ement. In terms of now, there is again a concerted push towards building up more thermal power plants also, which was not there earlier. So, I think , if you look into the future, definitely, I don't see any lack of opportunity because, again, by 2030, government's stated position is that we would be a $5 trillion -plus economy. So, we are looking at significant growth rates. To achieve those growth rates, definitely, the logistics sector is going to play a very, very critical role, and the logistics sector has to expand dramatically to achieve those growth targets. And from Indian Railways as well, we are seeing

that it continues to expand and modernize its railway network . There are significant investments which are happening. This year itself, Railways has announced more than, I think, INR 70,000 crore, INR 80,000 crore of investments in new railway lines and in modernization. So, i f you look into the future, I think the opportunity is huge. There is no question about that. So, we don’t see any challenge in terms of the future opportunities because otherwise, we don ’t see the country growing the way it is stated to or projected to grow because logistics has to play a crucial role there. There could be small hiccups, six months, one -year hiccup, which could happen in this growth rate story , but o therwise, we don't see much of a challenge.
Athif: And l ike I said, have we considered the optionality of doing wagons for Europe instead of just wheelsets and a lso the metro side?
Vivek Lohia: See, again, complete wagon exporting is not possible because of the entire sh eer size and the volume of a wagon is considered. But t he opportunity always lies on the component side, and that is what we are focusing on. So, you don’t need to export a complete wagon, but if you focus more on the components, such as the brake systems, the wheelsets, and other components, which we are focusing on, I think that itself will be a big opportunity and will be both revenue as well as margin a ccretive to the business.
Athif: That makes sense. And just a word on the metros, are we doing anything? Have we pushed further?
Vivek Lohia: We are focusing on that segment, and maybe before end of this financial year, we may make some announcements on the same.
Moderator: The next question is from the line of Sudeep Anand from Systematix .
Sudeep Anand: Sir, in the wagon segment, though we are waiting for the big order from Indian Railways, but how is the scenario and the ordering trend from the private players this quarter? Are we seeing any slowdown, or the uptrend is still intact?
Vivek Lohia: So, on the private side, I don't see a slowdown. I think, as you see from our numbers also , that our private execution is quite strong. And i f you see the announcements also, we make, and if you see, we keep on adding private order books to our portfolio. So, we don't see a slowdown, but definitely, Indian Railway tenders are very, very critical because that provides the main volume. So, t hat is definitely needed. But o n the private side, the outlook remains to be quite positive. But definitely it has to be matched with significant numbers from Indian Railways.
Sudeep Anand: And sir, secondly, what is the current status of Stone India and when are you expecting it to commission?

Vivek Lohia: I think by the last quarter of FY26 , Stone India, we expect the commissioning to happen because our final trials are going on, and we are in the process of getting the final certification also done from Indian Railways. So, next year, you will see significant revenues coming from Stone India. Next year, definitely, Stone India is also going to become even PAT positive. I am very confident on that.
Sudeep Anand: And s ir, lastly, on the JV side, so still we are seeing margi

nal negative contribution from all the JVs. So, a ny thought on that, when are we expecting it to turn around and see a positive contribution at PAT levels ?
Vivek Lohia: So, I think right now, the only JV which is negative in terms of contribution is Dako . I think rest all the JVs are positive in terms of contribution. In terms of the subsidiary, as I mentioned, that the electric mobility business, next year, we are going to definitely be EBITDA positive and maybe PAT positive also. As I mentioned, Stone India also would be similar. Our wheel business is already showing quite good revenues and margins. So, I think Da ko is the only business, and that also, next year, we expect that to also turn positive. So, I don 't see any challenges on the subsidiary side. Obviously, these are all new subsidiaries. You had to give them some time. Now they have all matured. I think FY27 onwards, these will start showing quite good traction.
Moderator: Thank you. Ladies and gentlemen, as there are no further questions. I would now like to hand the conference over to the management for closing comments. Over to you, sir.
Vivek Lohia: Thank you. While we have started off FY26 with a few challenges, especially with wheelset supplies, we have regained momentum and are confident of our performance through the rest of the year. With a strong foundation, strong order book, and a future -ready portfolio, we have multiple leve rs for growth. Our focus remains on scaling efficiently, innovating, and delivering consistent value to all our stakeholders. Thank you for your continued trust and support. We look forward to updating you in t he coming quarters. Thank you.
Moderator: Thank you. On behalf of Systematix Institutional Equities , that concludes this conference. Thank you all for joining us. You may now disconnect your lines.

Sub: Transcript of Investor/Analyst Meet call pertaining to the Unaudited Financial Results of the Company for the Q 3/9M FY 2026
Ref: Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended ("SEBI Listing Regulations").

Dear Sir/ Madam,

Pursuant to Regulation 30 of the SEBI Listing Regulations, please find enclosed the Transcript of the Analysts / Investors Meet Call on Financial Results (Standalone and Consolidated) of the Company for the quarter and nine months ended December 31, 2025 held on February 13, 2026.
The information is being hosted on the company's website www.jupiterwagons.com .

Kindly take the same on your record.

Yours Faithfully,
For Jupiter Wagons Limited

Ritesh Kumar Singh
Company Secretary

Jupiter Wagons Limited
Q3 & 9M FY26 Earnings Conference Call
February 13, 2026

MANAGEMENT :

MR. VIVEK LOHIA – MANAGING DIRECTOR
MR. VINOD KUMAR AGARWAL – CHIEF FINANCIAL OFFICER

Jupiter Wagons Limited
February 13, 2026

Moderator: Ladies and gentlemen, good day, and welcome to the Q3 and nine month s FY26 Earnings Conference Call of Jupiter Wagons Limited hosted by Systematix Institutional Equities. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Please note that this conference is being recorded.
I now hand the conference over to Mr. Prathmesh Kamath of Systematix Institutional Equities. Thank you and over to you, sir.
Prathmesh Kamath : Thank you and good evening everyone. Thanks for joining us today for Q3 and nine months FY26 Earnings Call of Jupiter Wagons Limited. On behalf of Systematix, I would like to thank the management for giving us the opportunity to host this call. Today, we have with us Mr. Vivek Lohia, Managing Director and Mr. Vinod Kumar Agarwal, CFO.
Now I will hand over the call to the management for their opening remarks, followed by the Q&A session. Thank you and over to you, Vivek, sir.
Vivek Lohia : Thank you, Prathmesh. Good evening, everyone, and thank you for taking the time to join our earnings call. It is my pleasure to walk you through Jupiter Wagons' performance for the quarter and nine months ended December 31, 2025. I trust you have had the opportunity to review our financial results and the investor presentation shared earlier.
During the third quarter, we continued with improvement in performance, overcoming the severe supply side constraints faced during the start of the year and delivered a clear sequential improvement in performance. Total consolidated income for the quarter stood at INR890 crore reflecting a healthy 13% quarter -on-quarter growth. EBITDA for the quarter was INR116 crore , up 12% from Q2, with EBITDA margins sustained at a healthy 13%. Profit after tax came in at INR62 crore , registering a strong 3 8% quarter -on-quarter growth, while PAT margin expanded to 7%. This performance underscores the resilience of our operations, disciplined execution and the inherent strength of our diversified business model.
Our order book remains robust, providing strong visibility for the quarters ahead. As of 31st December 2025, the consolidated order book stood at INR5,041 crore , covering diversified products across wagons, wheelsets, braking systems and containers, reinforcing sustained customer confidence and demand strengths across both public and private sector clients.
From an operational standpoint, wheelsets supplies constraints have eased compared to the acute shortages experienced earlier in the year. However, supplies are yet to return to the optimum required levels and therefore, continue to impact wagon production across the broader industry.
To structurally address this challenge and secure long -term supply chain resilience, our Odisha greenfield project for the fully integrated wheelsets manufacturing is progressing as planned. Orders for all critical equipment ha ve been placed and construction activities are advancing at

full pace. The facility is expected to commence production by year -end, which will materially enhance wheelset availability and support higher throughput across our wagon and component businesses.
Our existing wheelsets and axle business has gained further momentum supported by a healthy order book across multiple end user applications, including freight wagons , LHB coaches , metro systems and Vande Bharat trains. We have also secured orders for the machining and assembly of LHB wheelsets, centering our position within the railway components ecosystem and expanding our participation in higher value segments.
Jupiter Electric Mobility made significant progress during the period. The successful implementation of auxiliary battery systems for Vande Bharat train

s, underscores our growing capability in advanced energy storage solutions for railway sector. In parall el, we secured orders from marquee customers across the material handling and specialized equipment segments, validating both our product performance and market acceptance.
Our operational capabilities are further strengthened with the commissioning of a cell -to-battery manufacturing line in Indore, enhancing both capacity and vertical integration. Additionally, our modular battery energy storage systems developed in containe rized formats are gaining traction across high -value applications, such as diesel generator replacement, mobile energy storage and renewable energy integration. Collectively, these developments position Jupiter strongly within the rapidly evolving energy t ransition landscape.
Our commercial vehicle and container business recorded healthy growth during the year,

supported by recent policy initiatives, including production -linked incentives, and increased budgetary allocations, this segment is well positioned for accelerated expa nsion. As one of India's leading container manufacturers, Jupiter Wagons stands to benefit meaningfully from these structural growth drivers.
The broader policy and industry environment remains supportive. The announcement of a new freight corridor further expands the addressable opportunity size in the domestic market. In addition, the Railway Ministry has maintained procurement estimates at approximately 32,000 wagons reinforcing long -term demand visibility for rolling stock and associated components.
Beyond freight wagons, we continue to see steady growth across produc ts such as brake disc, CMS crossings, braking systems and other engineered s olutions.
At the same time, we are actively pursuing opportunities to enhance our participation in the passenger rolling stock segment and are currently at an advanced stage of engagement with a leading European partner. This strategic initiative aligns with our lon g-term vision of becoming a comprehensive mobility and railway engineering solution provider and we will share further details at appropriate time.

In addition to the exciting opportunities in the domestic market, recent positive developments towards strengthening trade agreements with the E .U. and the U.S. are expected to open up sizable export opportunities for Indian railway engineering products. This is particularly relevant for high -value components such as wheelsets, brake discs and allied systems where we are well positioned to access Eur opean and other international markets through our joint venture, subsidiaries and global partnerships.
Turning to a couple of corporate developments during the quarter. We continue to strengthen our leadership and governance framework with the appointment of Mr. Mark Damian Stevenson as Additional Director. Mr. Stevenson brings over 3 decades of international rail industry experience, spanning freight railcar leasing, financials stewardship and large -scale operational transformation. His global perspective and industry expertise will further enhance Jupiter's strategic capabilities as we expand across domest ic and international markets.
Additionally, on December 19, 2025 Jupiter Wagons Limited allotted 28,72,340 equity shares pursuant to the conversion of warrants by Tatravagonka upon receipt of the balance subscription amount of INR101.25 crore . This resulted in an increase in promoter shareholding from 68.09% to 68.31%, reflecting continued promoter confidence and long -term commitment to company's growth strategy.
Despite near -term challenges arising from supply chain constraints, our fundamentals remain strong. A robust order book, diversified portfolio, supportive policy environment and ongoing strategic capacity expansions provide confidence in our sustained long -term growth trajectory.

We remain committed to operational excellence, innovation and delivering sustainable value for all our stakeholders.
Thank you for your continued trust and support. I now request the moderator to open the floor for questions.
Moderator: Thank you very much. We will now begin the question -and-answer session. Our first question comes from the line of Balasubramanian A. from Arihant Capital .
Balasubramanian A.: My first question is regarding wheelsets. The industry is currently facing a shortage of nearly 32% to 35%. By next year, the Titagarh and RK Forgings JV is expected to commence wheelset production, and we are also progressing with the Odisha project, part icularly for wheelsets. I am trying to understand how wheelset supplies are likely to improve by the next financial year.
Additionally, will we need any special approvals to supply wheelsets to Indian Railways? For example, if we manufacture wheelsets, can we directly supply them to Indian Railways, or can they be used more broadly? Further, since we are also targeting export orders, could you please indicate which geographies currently have strong demand? Lastly, I would like to understand whether wheelset pricing in the range of INR 2.5 lakh to INR 3 lakh is viable for exports. ?

Vivek Lohia : Thank you for your questions. First, on the wheelsets, as you rightly said, capacities are coming online by end of this year or by next year. So I think once th ese private capacities come online, I don't think there should be any challenges on the availability of wheelsets. As we've already mentioned, and we have also given notifications from time to time that we're already supplying to Indian Railways for LHB and other applications. So in terms of approvals from Indian Railways, we don't see any challenge. So the facility ha s been designed with the approval standards of Indian Railways in mind. So we don't perceive any kind of challenges with regard to getting the approvals. And definitely, once the facility is approved, as the wheelsets they completely fall under Make in Ind ia policy, we can use those wheelsets for our own production. So we don't see a challenge in that regard also. With regard to the export market, as you are aware that Tatravagonka is a very active participant in this project and they themselves have a sizable demand for wheelsets. They buy close to about 50,000 wheelsets annually. So for us, they would form our biggest buyer category. And since it's captive, so we don't see that to be a challenge. In terms of pricing, we have already reviewed the pricing. A nd we are very confident that w e will be able to meet the pricing targets, which Tatravagonka has given us.

Balasubramanian A.: My second question, is on that private wagon side, if you could quantify the market size of the private wagons segment, that would be helpful. Additionally, are we receiving repeat orders from the same customers, or could you highlight some of the industries from which we are consistently getting orders for private wagons? Further, could you also elaborate on the types of wagons for which we are currently receiving inquiries or that form part of our order book ?

Vivek Lohia : So see, the demand in the private segment continues to be very robust. It is across all segments. I think , steel, cement , the container and the auto segment, I think these four segments form the bulk of the demand. Our major customers, I think, continue to remain the same. And they are the biggest buyers, and we keep on getting repetitive orders from them. I cannot disclose very specifics of the order books right now. But this year, most of our orders have been from our existing customers only, and they have been repeat orders. So again, we are continuously in the process of developing new cars. We have recently developed the double -deck auto car, which we'll be rollin

g out the first rake, our first rake is completely ready, and it will be rolled out any time. We are very confident on that segment, and we expect a lot of traction in that segment in calendar year 2026 and 2027, both years, we expect very strong traction. We have a very strong order book on the cement wagons. We have got new inquir ies on those wagons where we continue to pursue the lead. On the container wagons itself, I think the demand is very strong. And now with the trade agreement, which has been signed, I think the demand is going to become more robust. Indian Railways is also working on it , again, reviewing the container policy. They are making it much more user -friendly. There's a lot of infrastructure work, which is happening. We believe that the JNPT connection will happen sometime very soon. I think once that happens, it w ill be a huge fill ip to the segment. And steel also, now we are seeing new demand coming in, and we expect that demand to whatever understanding, which we have had and discussion which we had with the steel industry, we expect this year the demand to be quite

robust because there's been a lot of expansion in capacity, which has happened. So yes, so I think the private sector, we expect the demand momentum to continue.

Balasubramanian A.: Yes, a follow -up, in the wagon industry, between railway and private wagons, what is the current mix? Earlier, it used to be 80:20 .

Vivek Lohia : So it never used to be 80 -20, it used to be 60 -40 or 50 -50. And the mix used to remain the same. Our private order book continues to be very, very robust. So the mix right now, I think our private order book is about 70% and the balance is the Indian Railways order book.

Balasubramanian A.: Okay, my next question, we are supplying high -value components for Vande Bharat and Metros. So what are the new product lines and strategies to moving up the value chain? Especially in the passenger coaches side?

Vivek Lohia : See, this year itself in 2026, we will be entering the passenger rolling stock business and in the next few months, you will get to hear our announcements coming on that, our partnerships. So one is that we're entering that segment as an OEM. On the component side, we have very strong joint ventures with Kovis , DAKO and Stone India, we are expecting our licenses to come in this coming quarter. So Stone India, I think by the third quarter will become operationalize. So across, we are in the final stages of developing couplers , we have couplers for the LHB passenger coaches, we're in the final stages of developing the same for the Vande Bharat. We have got orders from railways to develop the buffer system for Vande Bharat and high -speed trains, and we are in the process of doing the trials for the same. So there are a lot of components which we are working on. And as you have seen that our non -wagon business continues to grow. So over the next 2, 3 years, you will see a definite i ncrease in the non -wagon business and addition of more portfolios in that segment.

Balasubramanian A.: Okay. And my last question, on the EV side, we are targeting INR200 crore revenue by FY27. And what is the current month -on-month volume growth rate on the EV mobility side?

Vivek Lohia : Month -on-month, I think we are growing at close to about 20% to 30% in that segment. And by April or May, we expect to hit our run rate of about close to INR20-odd crore of revenue per month. And that is why we are very bullish on the revenue targets of INR200 crore , which we have set. And that will be mainly led by the battery storage business, which is growing around close to 100% month -on-month. We are expanding our capabilities and capacities there. Plus on the industry side, also the battery system, which we supply, that business is also continuing to show a lot of momentum. On the truck segment,

we are launching another truck variant in the next quarter. That will also give a lot of momentum in the market. We have recently invested in a new battery line in Indore, which will enhance our battery capacities and capabilities. Indian Railway s is in the final stages of finalization of their policy fo r buying lithium -ion batteries. I think once that policy guidelines are finalized, it will give a very, very strong momentum and

push in terms of adoption of these batteries in Indian Railways. I think that itself will give a huge boost to the segment.

Moderator: Our next question comes from the line of Sahil Patani from Strokes Capital.

Sahil Patani : Couple of questions, Vivek. I wanted to understand now as a part of the U.S. trade deal as well as the European trade deal, what kind of opportunities are you seeing? And obviously, this is more long term, but what kind of products are we targeting, and what would the product mix look like going forward as we open up these export markets ?

Vivek Lohia : So in both markets, I think there is a big opportunity. In the European market, definitely our major focus is on our wheelsets. I think once the plant is operational, we expect sizable business to come from the European and the global market. And besides Tatravagonka also, we are in discussions and with other customers. But however, at this stage we cannot reveal our discussions. But in the next 1 or 2 quarters, we will be revealing on the other potential opportunities in that segment. We have already started working on CBAM be cause we are very serious on the export side. I think in Europe, the biggest challenge in the Indian industry is going to face on the CBAM and which, I think, unless people are already up preparing themselves and gearing themselves up, Europe is going to b e a major challenge. On the U.S. market, again, we do export crossings. That supply has got little disrupted because of the tariffs. But after those supplies , both crossing as well as containers we were supplying. I think that business is going to pick up. We are in very strong discussions with an American supplier to supply complete integrated battery storage systems to the American market. I think that is a huge opportunity for us, especially given the fact that China has a much higher tariff than India, so the price differential is there . One is that the customers want alternative supply chain. And secondly, because of the tariff, the price differential is now working in our favour .

Sahil Patani : Understood. Okay. And my second question is, I think last year, we gave like a very conservative revenue guidance of 10% to 15%, right? But obviously, it seems like we'll be closing below that. Now given the trends and the disruption in wheelsets from Indi an Railways, how do you kind of foresee FY27 to pan out?

Vivek Lohia : I believe FY27 is likely to remain muted. While the disruption has eased significantly, we do not expect it to be fully resolved . And whatever, our wheel capacities we had in Aurangabad, they're already fully utilized for the order book we have from Indian Railways and for our demand on the private side. So though we have expanded capacities there, but still with the expanded capaciti es also, I think that facility is working close to 100% of its capacity. So this year, definitely, on the freigh t car side, we expect our numbers to be muted. Also, I think we are expecting tenders from Indian Railways also , either in the next quarter or the quarter after that. I think that gave a huge fill -up to order book. But then with the new tendering from Indian Railways and the momentum we are seeing in the private side, and with our wheelset capacities

coming online, we expect 2027, 2028 to be a very, very strong year. Because I believe our base has

now been prepared very well, and we are fully prepped for 2027 and 2028 .

Moderator: Our next question comes from the line of Sandeep Mukherjee from SKP Securities Limited.

Sandeep Mukherjee : My only question is , what is the pending number of wagons in Q3 FY26?

Vivek Lohia : It's close to about 8,000 wagons which we have pending right now.
Sandeep Mukherjee : Okay. Out of this 70% will be private, sir?
Vivek Lohia : Yes. Yes.
Moderator: Our next question comes from the line of Parvez Qazi from Nuvama Group.
Parvez Qazi : I'm sorry if you've answered this question earlier, but just wanted to get your views on any potential wagon tender from the Indian Railways? What could be timing of such a tender, if any?
Vivek Lohia : Honestly, it is very difficult to predict the timing. If you look at the Indian Railways budget, they have mentioned around 32,000 wagons. We expect this to materialise at some point during the year.
Moderator: Our next question comes from the line of Rajesh Bhandari from Nakoda Engineers.
Rajesh Bhandari : Sir, there are many people now into leasing, wagon leasing. So people who used to buy wagons earlier, if they lease instead, will that affect business?
Vivek Lohia : See, definitely it will not affect business because we already have a very strong partnership with GATX in this segment. We currently do not see adequate value addition to justify entering this business. Given that Jupiter is already qualified for a leasing license, licensing is not a constraint. Our present focus remains on maintenance, which is entirely managed by Indian R ailways . But on that also policy guidelines are changing and Indian Railways is privatizing maintenance to some extent. S o we are more interested in that. I think , that is going to be more critical than the leasing. Leasing is not going to be a challenge at all.
Rajesh Bhandari : Yes, yes, that maintenance probably will be more paying also.
Vivek Lohia : Yes. And that is what is our code and we can give better value to our customers. So I think maintenance is something which we are very focused on.
Rajesh Bhandari : You indicated that the pending order book stands at 8,000 wagons, largely from private players. We also understand that a government inquiry for approximately 32,000 wagons is likely .
Vivek Lohia : Now this 32,000 will be more or less, it is difficult to say .

Rajesh Bhandari : Out of the 32,000 wagons, could the number vary between 30,000 and 40,000? And with so many wagon manufacturers, would each player get about 7,000 to 10,000 wagons ?
Vivek Lohia : Honestly, the allocation of orders depends on several factors, including past execution, available capacity, and overall performance. It is not as though any new entrant can simply secure a large order book. In most tenders, the performance criteria remain very stringent .
Rajesh Bhandari : What is our per month capacity?
Vivek Lohia : Today we can make minimum 1 ,000 wagons if there is no wheel constraint. If order book remains strong, we can make up to 1 ,000 wagons.
Rajesh Bhandari : In the last meeting, I recall you mentioning that the wheel -related issues had largely been resolved. However, this time as well, our turnover and the ultimate PAT have remained relatively low. When can we expect this to improve ?
Vivek Lohia : What I said is correct that if you compare from last quarter, this quarter our performance has been much better. I think in revenue there has improve considerably .
Rajesh Bhandari : No, I agree, this quarter was better than last quarter. But if you take last nine months and this nine months, then t here is a lot of difference?
Vivek Lohia: See last nine months , as I mentioned earlier, wheel supplies were not a challenge last year. My expectation is that, although the disruption has improved considerably, it is likely to persist. Our inc

remental capacities are expected to come on stream by the end of this year or at the beginning of next year. Once these new capacities are operational, and as we anticipate additional orders from Indian Railways, we expect that 2027 and 2028 will be very strong years .
Rajesh Bhandari: That means FY 26 -27 will go a bit slow?
Vivek Lohia: Yes, yes, definitely.
Rajesh Bhandari: One very positive aspect I observed in Jupiter is the level of profit — around INR 300 to 400 crore. In comparison, others are reporting profits in the range of INR 100 to 150 crore. This has been a key strength for us. However, it now appears to be modera ting. Could you comment on this?
Vivek Lohia: Sir see even now if you look our EBITDA margin if you compare to industry peers our EBITDA margin is quite strong. And if you see the decline in EBITDA margin is minimal. Last year I think we were around 14% and this year we are maintaining close to about 13%. So that is not a very big differential given the disruption which we have faced. So EBITDA margins will improve and the biggest plus is that our other businesses, especially wheel business , the commercial vehicle business and the containe r business, those businesses are doing very well

and their numbers if you see compared to last year, those numbers have improved significantly and we expect this momentum to become stronger and stronger.
Rajesh Bhandari: So overall 2026-27 turnover and profitability , that will be better than 2025-26?
Vivek Lohia: Next 2027 and 2028 definitely , as per our anticipation, I think that will be one of the best years for Jupiter.
Rajesh Bhandari: I want one clarification. You said 2027 and 2028 meaning FY26 -27 and FY27 -28?
Vivek Lohia: FY27 -28.
Rajesh Bhandari: Okay, meaning not 2026-27, it is 2027-28. Right now we are in 2025-26.
Vivek Lohia: This year as we said that our wheel new capacity will come in 2026 end or 2027 beginning. So till that capacity doesn't come, this disruption will remain. So next two or three quarters we expect that the disruption will continue. But post that we are very confident that there we will have a very strong growth momentum. It's not just wagons — our other businesses are also growing well, and we expect that growth to increase . Plus passenger business also we are now foraying into. So quite a lot of new opportunities will emerge.
Rajesh Bhandari: But government approval is done? For y our passenger coach , metro and Vande Bharat?
Vivek Lohia: No, there is no government approval in this. We are a global player who has already all certifications available. We are entering into a partnership with them , so they already have all our certifications and qualifications available.
Rajesh Bhandari: Because going forward, there will be tremendous demand from metros and projects like Vande Bharat, as there are many such developments underway .
Vivek Lohia: There is a strong policy push from the government in that area, which is why we are also focusing on it. At the component level, we are very strong in this segment .
Rajesh Bhandari: And you mentioned there is some trade problem with EU?
Vivek Lohia: No, there is no trade problem with the EU. We currently have a trade agreement in place, and we expect trade with the EU to remain robust. What I was referring to is CBAM, the Carbon Border Adjustment Mechanism introduced by the European Union. Earlier, th ere was an exemption, but it has now been implemented. Companies are required to be compliant, and we are already working towards meeting those requirements. CBAM could act as a trade barrier for companies that are not prepared for compliance .
Rajesh Bhandari: What is that thing? I didn't get it.

Vivek Lohia: The European Union has introduced a requirement that, for any pr

oducts supplied to the EU,
companies must declare the associated carbon content .
Rajesh Bhandari: Okay , carbon policy.
Vivek Lohia: Yes, we are referring to the carbon policy, as there are tariffs associated with it. If you do not declare, or if you exceed the prescribed limits, tariffs will apply.
Rajesh Bhandari: Yes, correct. Okay, sir, I would like to understand this in a little more detail. Regarding the carbon policy — if the steel you procure has a lower carbon footprint, would you benefit from that?
Vivek Lohia: Yes, definitely. Steel is just one part of it. It also depends significantly on the processes we follow and the extent of green initiatives we undertake .
Moderator: Our next follow -up question comes from the line of Sahil Patani from Strokes Capital.
Sahil Patani : Vivek, so I think as you mentioned, right, I think FY28 is going to be pretty good for the company. And previously, we've also given a guidance of INR8,000 crore to INR10,000 crore in FY28. So given this financial year, which is 2027 will be like more or less flat for us. Are we saying that by FY28, over the next couple of years, we will more than double our revenues?
Vivek Lohia : Definitely, and that is what we are targeting, and that is how we have built our product portfolio also. So if you look at all our other segments, say, if you look at the battery segment or the battery container storage. These are segments where India has just started localizing. So as you saw in case of solar, the initial momentum was very small. And as the industrial base was established in India, the government introduced significant tariff barriers . And then you saw a huge momentum in that segment. Simi larly, the battery segment is well positioned for strong growth, driven by robust demand from both industrial and solar applications. In addition, the government is introducing a PLI scheme for the container segment. As you are aware, we are one of the largest container producers in the country, and these PLI incentives will significantly enhance India's competitiveness in the global lan dscape, particularly vis -à-vis China. Currently,

China accounts for nearly 90% of global container production, which prese nts a substantial opportunity for us. Regarding wheelsets, as I mentioned earlier, at full production, this business has a revenue potential of approximately INR 2,000 crore to INR 2,500 crore annually. This will represent a significant source of incremental revenue. Furthermore, our other segments, including the Commercial Vehicle business, are also demonstrating healthy month -on-month growth. Overall, our expectations remain very positive going forward. .

Sahil Patani : Okay. Understood. Got it. And when you kind of thought of that number INR8,000 cores to INR10,000 crore with last year, there were a couple of unknowns. We didn't know if the European deal would go through. We didn't know about the U.S. India trade deal or those things

were like a bit unknown, which you have clarity on. So does that kind of give you a bit of like enhanced confidence to do better or even surpass that kind of a number?

Vivek Lohia : Definitely, it gives us a lot of confidence and clarity because all the ambiguity has now been removed. In terms of the business landscape or I would say, the regulatory landscape, the picture is very clear. The government is very keen to push exports out o f India, and we have the right partnerships to enable that. So definitely, we are very, very positive. Again, in terms of numbers, I would not like to comment right now. I think as and when we start delivering, and that is when we are going t o talk about the numbers.

Moderator: Our next follow -up question comes from the line of Rajesh Bhandari from Nakoda Engineers.

Rajesh Bhandari: Just one question, you mentioned that wagon deliveries would improve once yo

ur wheelset
production becomes fully in -house. However, sir, wagon wheels are supplied by Indian Railways .

Vivek Lohia: No, see, Indian Railways supplies wheels to us at a specified price. If we are able to source Make in India wheels at that same price, we can use them in our wagons .

Rajesh Bhandari: Oh, okay. So we can use our own wheels — it is not necessary or compulsory to source them only from Indian Railways .

Vivek Lohia: Yes, provided the wheels are approved under the Make in India policy .

Rajesh Bhandari: I was under the impression that only Indian Railways would supply the wheels. Understood .

Moderator: Thank you. As there are no further questions, I would now like to hand the conference back to the management for closing comments.

Vivek Lohia : Thank you for the same. As we move forward, we remain encouraged by the strong momentum across our businesses and the continued strength of our execution. With wheelsets supplies improving, our freight wagon business has meaningfully regained operational m omentum, while the excellent visibility across our other business lines positions us well for sustained and profitable growth. We are excited by the abundant opportunity set across both domestic and export markets. Our focus remains firmly on execution excellence, disciplined capital deployment and the continued strengthening of our manufacturing and integration capabilities as we work towards delivering long -term sustainable value for our stakeholders. Thank you for your continued trust and su pport. We look forward to updating you on our progress in the next quarter.

Moderator: Thank you. On behalf of Systematix Institutional Equities, that concludes this conference. Thank you for joining us, and you may now disconnect your lines. Thank you.

Jupiter Wagons Limited
Q4 & FY26 Earnings Conference Call
June 01, 202 6

MANAGEMENT :

MR.
VIVEK LOHIA – MANAGING DIRECTOR
MR. VINOD KUMAR AGARWAL – CHIEF FINANCIAL OFFICER
MR. PUNEET SABOO – VICE PRESIDENT

Moderator: Ladies and gentlemen, good day, and welcome to the Q4 FY26 Earnings Conference Call of
Jupiter Wagons Limited hosted by Systematix Group. As a reminder, all participant lines will be in the listen -only mode. There will be an opportunity for you to ask questions after the
presentation concludes. Please note that this conference is being recorded.
I now hand the conference over to Mr. Sudeep Anand from Systematix Group. Thank you, and
over to you, sir.
Sudeep Anand: Good evening everyone. Thanks for joining us today for Q4 and FY26 Earnings Call of Jupiter
Wagons Limited. On behalf of Systematix, I would like to thank the management for giving us the opportunity to host this call. Today, we have with us Mr. Vivek Lohia, Managing Director;
and Mr. Vinod Kumar Agarwal, CFO; and Mr. Puneet Saboo, Vice President.
Now, I'll hand over the call to the management for their opening remarks, followed by the Q&A
session. Thank you, and over to you, Vivek.

Vivek Lohia: Thank you, Sudeep. Good evening, everyone, and welcome to Jupiter Wagons earnings call for the fourth quarter and full year ended 31st March 2026. We hope you've had an opportunity to review our financial results and investor presentation shared earlier.

FY26 was a year that tested the resilience of the entire rail and mobility ecosystem. The industry faced significant challenges, beginning with a prolonged shortage of wheelsets that constrained wagon production across the sector during the first half of the year. As these supply constraints gradually eased, fresh challenges emerged in the fourth quarter through global supply chain pressures, especially the LPG availability disruptions arising from geopolitical developments.

Despite these headwinds, Jupiter Wagons demonstrated resilience, agility and disciplined execution. While our financial performance was impacted by external factors, the year was marked by several strategic milestones that strengthened our long -term growth platform and positioned us to capitalize on opportunities across rail, mobility, logistics and clean energy.

For FY26, we reported a consolidated total income of INR2,961 crore and a profit after tax of INR166 crore . EBITDA stood at INR363 crore , translating into a margin of 12.4%. During the fourth quarter, total income was INR 790 crore , EBITDA was INR 83 crore and PAT stood at INR27 crore . While these numbers reflect the operational challenges experienced during the year, they do not fully capture the significant progress achieved in strengthening our business portfolio and future growth capabilities.

We enter FY27 with an order book of INR4,675 crore , providing healthy revenue visibility and reaffirming customer confidence in our capabilities and execution. Our financial position remains robust, supported by the reaffirmation of our credit rating by CRISIL at AA(-)/Stable for the long-term debt and A1 (+) for short -term debt.

A major highlight of FY26 was the performance of our wheelset business through Jupiter Tatravagonka Railwheel Factory. The business crossed INR 500 crore in revenue during the year

while maintaining a healthy EBITDA margin of around 1 7%. We secured a strong order pipeline across freight wagons, LHB coaches, metro applications and Vande Bharat trains. Key wins included the Ministry of Railway order for 9,000 LHB axles, a Letter of Intent for 5,376 Vande Bharat wheelsets and multiple wheelset machining and assembly contracts. These achievements reinforce our growing presence in one of the most strategically important segments of the rail value chain.

Moreover, we also signed a long- term supply arrangement with Tatravagonka, one of Europe's leading wagon manufacturers under which we will supply wheelsets for their requirements from our upcoming Odisha facility. This pa

rtnership represents a significant step in building our export business and validates our manufacturing capabilities. We are actively engaging with additional global partners to expand our international footprint and create long-t erm value for our shareholders.

The Odisha Greenfield wheelset project continues to progress as planned. O rders have been placed for all critical equipment, deliveries have commenced and civil construction is at an advanced stage. Partial production is expected by end of the current financial year , with full commissioning targeted by end of FY28. The facility will significantly enhance our manufacturing scale while supporting both domestic and export demand.

Our clean energy business under Jupiter Electric Mobility also recorded meaningful progress during the year. India's energy transition is creating a substantial opportunity in battery energy storage, and we have invested strategically to build capabilities in this segment. During FY26, we successfully developed and deployed modular Battery Energy Storage Systems (BESS) in both 10-feet and 20 -feet container formats for applications including renewable energy integration, diesel generator replacement and mobile energy storage. To strengthen vertical integration and manufacturing efficiency, we commissioned a cell to battery manufacturing line in Indore, enhancing our ability to scale as demand grows.

We are also pleased to sign MoAs with Chalukya Power and Pickrenew Energy, resulting in 110 megawatts of BESS business being added to our FY27 order book. These partnerships validate the strength of our technology and reinforce customer confidence in our capabilities. Looking ahead, we aspire to build a INR 1,000 crore revenue business in batteries and energy storage over the next 3 to 4 years, supported by a growing order pipeline and favourable industry dynamics.

Our container manufacturing business delivered healthy growth during FY26. The G overnment of India ’s recently announced Production-L inked Incentive scheme for container manufacturing supported by a INR10,000 crore budgetary allocation, provides a strong policy tailwind for the sector. Given our established capabilities and market position, we believe Jupiter is well positioned to benefit from this opportunity.

Another important milestone was achieved through our subsidiary, Stone India Limited, which received RDSO approval for its freight brake system. Commercial production is expected to commence in July 2026. With this achievement, Jupiter Wagons has attained full backward integration across its core railroad product portfolio. This strategic milestone strengthens our control over quality, cost and delivery schedules, reduces dependence on external supplies and enhances our ability to navigate supply chain disruptions while supporting long-term margin improvement.

Looking ahead, we remain optimistic about the opportunities before us. The Government of India's continuous focus on rail -led freight transportation and infrastructure expansion is expected to drive sustained demand across the rail ecosystem. With our inte grated product portfolio, manufacturing capabilities, technology partnerships and execution track record, Jupiter Wagons is well positioned to capitalize on these opportunities. Passenger mobility is a strategic portfolio and priority for Jupiter Wagons, and we are preparing to enter the passenger mobility segment in FY27, backed by our deep manufacturing capabilities and technology partnerships, thus creating an important new avenue for growth and diversification.

Today, Jupiter Wagons is evolving into a diversified mobility and infrastructure solutions company with a growing presence across rail, mobility, logistics and clean energy. Supported by a strong order book, expanding capabilities and a clear growth road m ap, we enter FY27 with confide

nce and remain committed to creating sustainable long -term value for all our stakeholders. Thank you for your continued trust and support.

I now request the moderator to open the floor for questions.

Moderator: Thank you very much, sir. We will now begin the question -and-answer session. The first question is from the line of Balasubramanian A. from Arihant Capital.

Balasubramanian A.: Sir, in the Odisha wheelset plant earlier, it was planned by Q2, I think Q2 FY27. But right now, it's been extend ed to Q4 FY27. So, if that production starts by Q4, for example, March 2027, what would be the ramp-up curve for wheelsets in that financial year, for example, FY28? And secondly, if you could talk about wagon tenders, I think recently, we got information about 1 lakh wagons over the next 3 to 4 years' time frame, which is approximately 30,000 to 40,000 wagons per annum. And when it's likely to be rolled out by the Indian Railway?

Vivek Lohia: So regarding the Odisha project, the final commencement of the project is as per the timelines only which we had earlier mentioned. So, we were always very clear that it will commence in FY28. There was a partial commencement, we had projected it to be about 2 quarters earlier. But due to the global supply disruptions, there were delays in the shipments arriving. And because of that, there were certain delays. But now, however, we received most of our shipments, so we do not for esee any further delays. With regard to the wagon orders, to exactly quantify the amount of order as well as exact timelines, again, it's very difficult. But however, we expect the

orders very shortly. And within the next 2 quarters, we expect the order books to come out. And given Jupiter's strength and market share, definitely, we expect sizable order book a nd our expectation is that the orders which would come out would be at least for Railways' requirements for the next 3 years. So given that, definitely, we expect it to be sizable, and we expect a strong market share in that.

Balasubramanian A.: My second question is , we are entering into passenger rolling stock in this year. What is the specific scope in this space, whether manufacturing complete LHB or Vande Bharat coaches or only Bogies or shells. If you could talk about the capex and timeline of this process, whether it will be a separate JV or we have a strategic partnership? And how do we understand in this business over the long time?

Vivek Lohia: So we are in the process of entering into a strategic partnership. However, at the current moment, it is very difficult for us to divulge specific details on that. So, whether it will be part of Jupiter Wagons or a separate JV, again, I cannot spell out right now. Our focus will be specifically the metro segment, the new train orders, which Indian Railway comes out with and definitely also the export market. I think these are the specific segments which we are targeting. However, specific detai ls, we will not be able to share that right now.

Balasubramanian A.: Fine, sir. O n the bookkeeping side, I think inventories increased to INR769 crore to INR1,079 crore , almost 40% jump. So what was the reason? And like, when we can expect a normalized

inventory days?
Vivek Lohia: So there will be a rationalization in the inventory days. It was a short -term challenge, as I've told you because of certain disruptions, which we did not anticipate. So, the production timelines we had anticipated did not follow. So, there was a mismatch in inventory, but I think the first quarter, there will be some disruptions but now things have stabilized. I think in FY27 from second quarter onwards, you will find much more stability.
Moderator: The next question is from the line of Sandeep Mukherjee from SKP Securities.
Sandeep Mukherjee: Sir, what is the pending number of wagons? And what is the number of pr

ivate wagons executed for the quarter and FY26?
Vivek Lohia: The pending number of wagon is right now around 2,000 wagons is Indian Railways and about 5,400 wagons, roughly, is the non-Indian Railway order book, which is totalling close to about INR3,100 crore .
Sandeep Mukherjee: And the Private wagon executed for the quarter?
Vivek Lohia: For the last quarter ?
Sandeep Mukherjee: I'm asking for quarter four and the whole year FY26.

Vivek Lohia: 1,347 is the total executed in the last quarter.
Moderator: The next question is from the line of Vikram Suryavanshi from Phillip Capital.
Vikram Suryavanshi: You talked about the container manufacturing subsidy from the Government, the INR10,000 crore . Can you share what is the percentage of subsidy we get? Is it like a value of the container or some scope of this subsidy? And what is our annual capacity in container manufacturing or any plans to increase further?
Vivek Lohia: Okay. So the G overnment has announced the policy, but they have not come out with the specifics. So unless the specific comes out, it is very difficult to say how the subsidies are going to be in what nature. But what we can understand that it's quite substantial, and it could be in the range of 8% to 10% is what we are believe to understand. But however, unless specifics come out, it is very difficult for us to mention. Yes. And definitely, as and when the PLI policy comes out, we will be expa nding our capacities because as of now, we are only focusing on specialized containers and which will be definitely be expanded to marine containers also because that will bridge the gap between Indian and Chinese container prices. Because the PLI will help us bridging the gap. So, definitely, and we are already in talks with certain shipping lines. So, as and when the policy comes out and if it is as per the industry demands and the benchmarking which we have, definitely, we are look ing at a major expansion in the business.
Vikram Suryavanshi: So, you said that , focus is on specialized , once the clarity on policy come, we can scale up the capacity. Is that right understanding?
Vivek Lohia: Yes. It is very clear. We are already expanding our capacity, but we have already planned for a major scale up. But obviously, that is subject to the policy being in line as per expectations. And as I've already mentioned that we are already in talks with a few shipping lines, and these are advanced talks. So, as and when the policy comes out and if it is in line with our expectations, definitely, it is something which we are looking forward to. However, the business continues to grow in FY27, our expectation is that we'll be doubling our container revenues from last year.
Vikram Suryavanshi: Okay. And just to clarify, when you say in line with our expectation, so around 8% to 10% is something difference between China and India in terms of cost and which should be able to compensate with the 8% to 10% range?
Vivek Lohia: Yes, definitely. If it's around in that ballpark, definitely, it is something which will go a long way in compensating the gap.
Vikram Suryavanshi: Got it. But I guess even CONCOR is also planning to buy from domestic players for a couple of years, and they are highlighting that there is a shortage of capacity. So are we also open to bid for CONCOR's orders or if there is any concern in that?

Vivek Lohia: No, no, there is no concern. If CONCOR comes out with substantial tenders, definitely, we are going to bid for that. So definitely, there is no concerns on that. And we do participate , so right now, our capacities are quite full. So it is not that we are struggling because we are doubling our businesses. So we are very, very bullish on the sector, and we have a very, very long-term view on the sector.
Vikram Sur

yavanshi: Got it. And last, just a clarification. You talked about marine containers and I guess , you require
Corten steel for the same. So , is there availability of that particular steel grade in India? Can you
comment on that?
Vivek Lohia: There's definitely not a challenge. There are now enough steel producers producing Corten steel. The challenge is in respect to the pricing compared to China, pricing in India is not sustainable for large -scale production to match the international prices. So definitely, that is where we are
looking at the PLI scheme to bridge the gap.
Moderator: The next question is from the line of Virat Jain, an individual investor.
Virat Jain: My question, is regarding this delay in the wagon tender. So most of the major manufacturers
now have less than 1 year of order left , for example, to supply to Indian Railway. But even now,
we don't see fast movement on the tender. So is there some other discussion or policy discussion or some other thinking going on, which is delaying this tender? Or you feel it is just business as
usual?
Vivek Lohia: No. So we are confident that the tender should come out anytime this year. Railway as a sector, the Government of India as well as Indian Railway is very, very bullish. You have seen regularly
Railway making sizable announcements in terms of capacity expansions and especially when it
comes to the track infrastructure and infrastructure related to freight movement. And there is a
clear policy guideline from the G overnment where they want to shift the freight transport from
road to rail. And I think especiall y in view of the current geopolitical crisis, it has also become
paramount for national interest that rail plays a much important role in the freight movement.
So, in terms of the long-term demand or long-term visibility, there is no challenge. I think it is
just a small hiccup, which is there. But again, I think we expect the course correction to happen this year.
Virat Jain: Okay. Just a follow -up, recently, wagon leasing policy document was updated maybe a year ago.
One of your competitor has gotten a leasing license. So is that just an experiment at Indian
Railways level? Or is there something more we should read into it?
Vivek Lohia: So see, this is something you need to ask our competitors. So we have a very strong long- term
partnership with GATX. And so for us, Jupiter Wagons, directly getting into leasing is not
something which we are considering. And we don't see in the near future or in the next 5 years,
at least that Indian railway would procure wagons through the leasing route. So leasing will be,

I think, more on the private side of wagon procurement where we already have a strong
partnership. And GATX is the leading leasing company not only in India, but globally. A nd they
have very strong legacy as well as experience. So, where we already have a strong partnership,
we don't want to bring that leasing part on our balance sheet because for us to replicate that kind
of business legacy again and the knowledge would take time, and it would not make any sense.
Our aim is to focus on our core competence, which is wagon manufacturing and the leasing part
for the time being, it should be taken care by the experts.
Virat Jain: Okay. That's very helpful. Sir, the final question is any pre -discussion whether it will be one -
time big tender or it will be split into several smaller tenders? Any idea around that, if you can give?
Vivek Lohia: Honestly, this is something you should take it up with Indian Railways because as a participant
in the tendering, I don't think we are not privy to that details .
Moderator: The next question is from the line of Koundinya Nimmagadda from Jefferies.
Koundinya
Nimmagadda: Couple of questions from my end. First one on the passenger side of things, you did speak about entering into

metro, et c. So, can you help us understand how do you intend to qualify for these
projects? Because what we understand is the technical criteria here are stringent. W hat about the
propulsion technology, et c, how do you intend to qualify on those parameters? That's the first
question.
Vivek Lohia: So as you rightly said, you need prior experience in supplying passenger rolling stock to qualify. And though we are very strong on infrastructure, we don't have that prior experience. And that
is the precise reason where we are finalizing a strategic tie-up with the global rolling stock
manufacturer who has the necessary experience. So as I mentioned that we will be firming up
the tie -up very shortly a nd our intent is that in this financial year to enter that segment.
Koundinya Nimmagadda : Understood, so you will kind of persuade a partnership for that, got it. Sir, my second question, sorry, I missed it. I think you would have spelled it in the opening remarks. Is there a delay in commissioning of interim operations at the wheel manufacturing plant?
Vivek Lohia: Again, as I've reiterated, we had expected the interim operations to start about 2 quarters earlier.
However, because of the geopolitical disruption, there were certain delays in the shipping of the
equipment. So because of the shipping disruptions, the project got slightly delayed. But now,
however, most of the equipments have reached and the other equipments are in transit. So, as of
now, we don't see any kind of further delays. So, the final commissioning timelines, there is no
delay. It is still on schedule. Only interim , because the project we started earlier than our

projected timeline, we expected that to commence about 2 quarters earlier, but unfortunately, it could not happen.

Koundinya Nimmagadda : So, what are the timelines now? December 2028 for final commissioning and June 20 28 for interim, is that the way it works? Or can it be a little earlier?
Vivek Lohia: March 2027 is what we are saying for the interim and March 2028 is for the final commissioning.
Koundinya Nimmagadda : Understood. Sir, if I may ask one bookkeeping question. It appears that the subsidiary level EBITDA margins are lower in this quarter, even the gross margins have come off on a quarter-to-quarter basis. Is it that the wheel manufacturing margins have come off?
Vivek Lohia: No. See, our major subsidiary today is the Railwheel factory. There, as we have reported, we have achieved a significant higher EBITDA margins. We achieved 17% EBITDA margins as compared to 12% last financial year. Even in terms of revenue, the revenues have substantially increased from INR 343 crore to INR528 crore . I think where you see a slight thing is , one is in Stone India, where we have just completed our licensing certifications, and we are going to commence operations in this financial year. So last year, it was more on account of capex and there was an exceptional expense, which was incurred because the land in which the facility is located, it belongs to Port Trust. Since it was an older land license, which was there with Port Trust, we had to renew the license, and that required us to pay an additional fee. So, that was a onetime expense, which we had to incur. It was mainly account of that. And also in case of Jupiter Electric Mobility, again, since we are expanding the business subst antially, so last year, there were certain additional expenses, which was there. So this year, I think both Jupiter Electric Mobility and Stone India will show much better, stronger results. And as well as the Railwheel factory, we expect further improvements in both the EBITDA numbers as well as revenue numbers.
Moderator: The next question is a follow -up from the line of Balasubramanian A. from Arihant Capital.
Balasubramanian A.: Sir, Stone India received RDSO approval for freight brake systems. Earlier, it was mentioned the production will start from July 2026 , are we on track ? And whether we are also capable of supply to passenger OEMs, especially for brake systems, whether we would need to get a separate approval for that, if you could share some light on that?
Vivek Lohia: So on Stone India, we are on track to start commercial operations from July. A nd this year, we expect the business to turn profitable. So we are quite confident that the business will turn profitable this year. Stone India, currently, the license which we have got is basically for the freight brake systems, which itself is a very, very substantial market. On the passenger side of the brake system, we already have a JV with Dako through which we are supplying to Indian Railways for the passenger brakes. So we don't want cannibalization and a conflict. So Stone India will be focusing on the freight side of the brake market and the JV with Dako will be focusing on the passenger side.
Moderator: The next question is from the line of Amit Kumar from Determined Investments.

Amit Kumar : I'm just sort of circling back to the core wagon manufacturing business and if I heard it right, I think you mentioned that your order book is more sort of skewed towards the non-Railway business. I think on the Railway side, there has been some challenge in terms of wheelsets and supply chain. Are you sort of facing similar challenges on the non -Railway business side as well? I mean the wagon manufacturing on a year -on-year basis is down almost by about a 1,000 number basically. So could you sort of clarif y, I mean, which are the parts in which you are sort of facing these kind of supply chain challenges on a fairly consistent basis?
Vivek Lohia: So I think the main challenges was on the account of the Indian Railway supplies more than the non-Indian Railway supplies. So that was our main challenge. And the drop in the numbers are one of the reasons, as I mentioned. The last quarter, it wasn't on account of wheelsets so much, but on account of availability of other raw materials, mainly consumables, which caused the disruption. However, going forward, I think from Q2 of FY27, we expect things to turn around. And we expect the company to be back on the production targets. As and when the new order book comes, you'll see a substantial jump in the wagon execution. So we ’ve had to keep the wagon execution also moderated to the current levels because until such time as we get the new order books, we don't want to expand the production capacities further and then going forward,

have a shortage in terms of order execution.
Amit Kumar : This is not an issue of production capacity any which way, right? Because of your wagon manufacturing number, I get the point on the Indian Railway side. But if I look at the non-Railway side of the business also, you have a fairly strong, I think 5000- plus wagon at 5,300 or 5,400 something .
Vivek Lohia: As I mentioned that now going forward, you will see a strong execution on that side of the order book and the bigger numbers coming out of that. W e expected the numbers to jump up in this quarter itself, but because of certain disruptions, it was beyond our control. However, as I mentioned, you will see a good turnaround. And here also, you have to understand that the customers have certain delivery timelines. So we cannot jump the timelines and start delivering. We have to maintain the timelines which have been given by our customers.
Moderator: The next question is from the line of Mohit Yadav , individual investor.
Mohit Yadav : I just wanted to understand, what is your outlook for this year? I know we did close to like INR3,000 crore this financial year and before that, we were close to like INR 4,000 crore . So I'm not expecting a number, but are we expecting a number close to the previous financial year this time?
Vivek Lohia: So definitely, we are expecting the numbers to be much better than the previous financial year. And especially, the non -wagon businesses are showing significant growth rates and we expect that momentum to continue. Wagon, definitely on the wagon side, the execution will be better than last financial year, but substantial jump on the wagon side will happen as and when the

Railway order book is released to us. Beyond that, you will not see a substantial jump in wagon order book executions. However, the non-wagon business is going to continue to grow significantly. And as I mentioned, long term, by 2030, we expect the company to be at about INR10,000 crore of revenue with at least minimum 15% EBITDA margins. And I'm again very bullish on the same , given how our wheel business is shaping up and all the other businesses are shaping up. And on the wagon business itself also, I'm very, very bullish. And as I mentioned that this is a small blip, which is there. However, the long -term projections is both from Indian Railways as well as, in general, the policy of the G overnment of India is very much focused on Indian Railways and shifting of freight from road to rail. So, that is a long-term policy, and there is a very strong visibility on that.
Mohit Yadav: Got it, sir. So, my second question is that I know you've been very bullish on BESS segment and with the recent war and oil being so precious , you've been bullish on renewables. So have you seen like your customers changing inquiries regarding your products? And the second part is , you launched JEM TEZ in March of last year. So there was talk of you might be sort of launching the passenger variant of JEM TEZ and probably a 2-ton and a 3-ton truck in the near future , has there been any follow -ups regarding launching different products after that? Just wanted to understand how that is?
Vivek Lohia: Understood. So first, on the BESS, I think we are, again, very, very bullish and we are seeing a huge changeover, and as the customers are getting more educated and they are seeing the real -time benefit, we are seeing also in the industrial and the consumer segment also, there's a huge switch from traditional gensets to lithium -ion battery systems. And that change is going to continue to compound going forward, both because it makes very strong economical sense as well as because of the environ mental policies. On the EPC side, definitely, there is a huge push from the G overnment of India with regard to solar -cum -BESS policy, where we are again going to see a huge push then again on account of data centers itself that will happen. So definitely, the long -term view is very, very positive and very, very bullish on the segment. Today, I think in terms of the demand, which is needed and the capacities, there's a mismatched capacities that are much smaller than the demand, and there's still a lot of im ports which are happening, especially from China. So, I think going forward, as you saw in the solar -cell segment where the Government policies basically ensured that people switch to local production rather than imports. So, similarly, you will find shifts here also happening in future. Beyond that, cell prices are coming down considerably, and the move is happening from LFP to sodium, which will make it much more stable also, cells as a commodity. You will see a lot of investment happening in the cell line in future. We are also contempl ating the same going forward. So definitely, this is one segment I expect the growth to be very, very strong. And it's not only the BESS, the other products which we are doing with regard to batteries. So those segments, Railway being one, those segments are also seeing a lot of growth there. So definitely, this is a segment to look forward to. On the truck side, we never had any intentions

of entering the passenger segment.
What we had mentioned that we will enter the 2 -ton truck. So we are already in the process , right

now, a vehicle is under design, and it will go for certification also shortly. So we expect to launch 1 or 2 variants this year.
Mohit Yadav: Got it, sir. So last thing is, can I ask what is the run rate of TE Z, right now? Like how many units are you selling per month?
Vivek Lohia: Honestly, I don't have the exact numbers with me, but I will share it with you. But what we are seeing is that month -on-month, we are seeing the numbers improving. But I will share the numbers. I don't have it offhand with me.
Moderator: As there are no further questions from participants, I now hand the conference over to the management for closing comments.
Vivek Lohia: Thank you. As we move forward, we remain encouraged by the strong momentum across our businesses and the continued strength of our execution. With wheelsets supply stabilizing and with the Government ’s continued focus on the sector's development, we expect the freight wagon business to regain operational momentum soon. At the same time, the strong visibility across our other business lines positions us well for sustained and profitable growth. We are excited by the abundant opportunit ies set across both domestic and export markets. Our focus remains firmly on execution excellence, disciplined capital deployment and the continued strengthening of our manufacturing and integration capabilit ies as we work towards developing long-term sustainable value for all our stakeholders. Thank you for your continued trust and support. We look forward to updating you on our progress in the next quarter.
Moderator: Thank you very much. On behalf of Systematix Group, that concludes this conference. Thank you for joining us, and you may now disconnect your lines. Thank you.
