“Engineers India Limited
Q4 FY’23 Earnings Conference Call”
May 29, 2023

MANAGEMENT : M R. SANJAY JINDAL – DIRECTOR -FINANCE –
ENGINEERS INDIA LIMITED
M R. SUVENDU PADHI – COMPANY SECRETARY &
INVESTOR RELATIONS – ENGINEERS INDIA LIMITED
M R. R.P BATRA –EXECUTIVE DIRECTOR , FINANCE &
ACCOUNTS & INVESTOR RELATIONS – ENGINEERS
INDIA LIMITED
M R. SUNIL SAXENA – EXECUTIVE DIRECTOR ,
TECHNICAL AND INVESTOR RELATIONS – ENGINEERS

INDIA LIMITED
M R. AMANPREET SINGH CHOPRA – GENERAL
MANAGER , CMD OFFICE & INVESTOR RELATIONS –
ENGINEERS INDIA LIMITED
M R. VIVEK MIDHA – GENERAL MANAGER ,
MARKETING BUSINESS DEVELOPMENT AND INVESTOR
RELATIONS – ENGINEERS INDIA LIMITED
M S. NEHA NARULA – SENIOR MANAGER , COMPANY
SECRETARY & INVESTOR RELATIONS – ENGINEERS
INDIA LIMITED

MODERATOR : M S. BHOOMIKA NAIR – DAM CAPITAL

Moderator: Ladies and gentlemen, good day, and welcome to the Engineers I ndia Limited Q4 FY '23 Earnings Conference Call hosted by DAM Capital. As a reminder, all participant lines will be in the listen only mode and there will be an opportunity for yo u to ask questions after the presentation concludes. Should you need assistance during the c onference call, please signal an operator by pressing star then zero on a touchstone phone. Plea se note that this conference is being recorded.

I now hand the conference over to Ms. Bhoomika Nair from DAM Ca pital. Thank you, and over to you, ma'am.

Bhoomika Nair: Yes. Good evening, everyone, and welcome to the Q4 FY '23 Earni ngs Call of Engineers India Limited. We have the management today being represented by Mr. Sanjay Jindal, Director of Finance; Mr. Suvendu Padhi, Compa ny Secretary and Investor Rela tions; Mr. R.P. Batra, Executive Director, Finance and Accounts and Investor Relations ; Mr. Sunil Saxena, Executive Director of Technical and Invest or Relations; Mr. Amanpreet Sin gh Chopra, General Manager, CMD Office and IR; Mr. Vivek Midha, General Manager of Marketin g Business Development IR; Ms. Neha Narula, Senior Manager, Company Secretary; and IR.

I'll now hand over the call to Mr. Jindal for his initial remar ks, post which we'll open up the floor for Q&A. Over to you, sir.

Sanjay Jindal: And good evening, everybody, and a warm welcome to all. Recentl y, we have declared our annual results for the financial year '22-'23 and the informati ons are with respect to standalone and for stand-alone results. With respect to financial performa nce for the year ended 31 March 2023, on a standalone basis the company has registered a turnou t of INR3,284 crores in comparison to INR2,870 crores in the last year ended 31 March 2 022, which is the highest in the last 10 years.

With respect to last year, there is increase of around 14.5% in turnover of financial year '22-'23 in comparison to financial year '21-'22. The turnover from the Consultancy and Engineering segments stood at INR1,418 crore s and from Turnkey segment was INR1,866 crores. Total turnover is INR3,284 crores.

In the fourth quarter, the company has achieved a turnover of I NR866 crores in comparison to INR831 crores in the quarter end ed December 2022, showing an in crease of around 4% on a quarter-on-quarter basis, with t urnover from Consultancy and En gineering segment amounting to INR371 crores and INR495 crores in the Turnkey segment. Howe ver, our margins are up by several folds that is 3.3x. There is increase of 230%.

During the fourth quarter ended 31 March 2023, the company earn ed a profit of INR159 crores in comparison to INR48 crores earned in the previous quarter en ded 31 December 2022. During the year ended 31 March 2023, the company earned a profit after tax of INR342.15 crores in comparison to similar profit of INR344 crores in the last year.

The company is having a healthy earning per share of INR6.09. O n a consolidated basis, the company earned a profit of INR346 crores for the year ended 31 March 2023 in comparison to INR140 crores earned during the last financial year '21-'22. Th erefore, there is an increase of

147% in the consolidated profit on year-on-year basis. Overall, in the RFCL project, this unit is operating at the full capacity and excellent energy numbers, an d we are expecting more and more profit in the coming time. and som e of the other highlights are as follows. Our cash flows are very positive and leanness is visible on trade receivables.

ER trade receivables reduced con siderably during the year '22-' 23. Our debtor stood at INR353 crores during the year as compared to INR371 crores. The number of days of turnover has declined to 39 days during the financial year '22-'23 from 47 d ays during the financ

ial year '21-
'22, which is the lowest in the last 10 years.
During the year, the company earned a total dividend of INR62.3 9 crores as against INR41.78 crores during the financial '21- '22. And in the current financi al year, we have earned a dividend of INR55 crores from the NRL investment.
And in the -- as on date, we have the order book status. In the current year, order inflow in increased significantly to INR4,708 crores in the financial yea r '22-'23 as compared to order inflow of INR1,687 crores in the last financial year.
Recently, the company has received the following major foreign jobs order: USD 22.14 million for supervision of Guyana integr ated NGL plant i n the Guyana, S outh Africa -- South America.
EPCM job of USD 39.04 million for the greenfield 400 TPD urea a nd 2300 TPD ammonia complex in Nigeria.
Above order inflows, increases the international footprint as p art of vision of the company for the geographical diversification. And this is the highlight of the annual financial period.
Bhoomika, now I hand over to you.
Moderator: We take our first question from the line of Venkatesh Subramani an from LogicTre e Investment Advisers.
Venkatesh Subramanian: Congratulations on a good perform ance. And I've been recently r eading up quite a bit of media releases and is on part to furthe r growth in the next few years . So 2 questions, sir. One is, I understand oil and gas continues to be a primary source of reve nue for the company and you're also planning to increase your order book in the Middle East fo r that, but I'm more interested, while that goes on at a particular growth rate, if you can indi cate some sort of a growth in top line over the next 5 years fro m the oil and gas segment?
And number two, from the new ar eas that you've been pointing ou t , w h i c h i s i n t e r m s o f renewables or nuclear power or anything else where Engineers In dia is now foraying into, what is the kind of vision that you have over a 5-year period that w e can look forward to for the company?
Vivek Midha: Good morning -- good afternoon. This is Vivek from EIL. Regardi ng this growth, you are correct that our core area and core focus would be oil and gas because they are the business lies right now, and it's going to be there. Specifically, we see there's a lot of growth in the petrochemical sector. So all the refineries ar e going towards the petrochemic als.

Many crude chemical complexes are being planned, and we are inv olved in various studies. So we see a lot of perspectives out there. And defi nitely, these p rojects are going to be there in the next 4 to 5 years because they are right now in the book, like in the conceptual stage. So when these gets realized, it will be actually next 2 to 3 years, 4 y ears because you must have seen that we have a few opportunities that have been published in the inf ormation that's been given in the media also with regard to the ref inery compared to chemical It' s petrochemical complex, which is INR61,000 crores as well as the is also going for the refine ry expansion and petrochemical complex.
So in similar ways, all the companies are moving towards it. So that's actually a very lucrative sector for all of us and it's a core for us. So we'll be target ing that. With regard to the other sectors, we have already moved into the other sectors like gree n hydrogen, bioethanol, biofuels, coal gasification, and then fertilizer is also growing. We are going into that. And then also growing. We are also entering in to defense nowadays. So these a re the sectors we have targeted now and we are working towards it.
Like -- sectors like green hydrogen or green ammonia or the gre en areas, these are the new sector -- coal gasification are the new areas. So most of the activity is happening right now is in the conceptual stage, means like studies are being conducted. And w e se

e that it is going to increase
-- it is when the project viability is established, the project will be established.
So we see that opportunity out the re. So this is the perspectiv e we are looking at it. And like going with the international. Int ernational is the another area now we are going to focus. You must have seen that this year, i nternational has given a very g ood contribution in our business. So we have also changed our strategy, and we have started focus ing on the international market. So we are strengthening our Middle East office, which is locate d in Abu Dhabi. So that is going to take care of the Middle East market business as well as we s aid more manpower, more projects have been targeted. We have also gone into -- you must have see n that this time, we have gone into the South America and we secured one of the assignments. S o we are also targeting nearby

countries wherein we can have mo re business opportunities of si milar types.
Then another area which is coming up very -- which is very prod uctive for all of us and it's a new area is the Africa. Africa, we are already there, and we ha ve the substantial experience of working in Nigeria, wherein we are -- that we are constructing a refinery.
So using that experience, we have been able to secure projects for the fertilizer and now you'll be -- we are very pleased to tell you that we have received ano ther order from the same client for the in this year, which will be reflected in this year's bu siness. We have already signed this order recently in last week.
So we are also thinking about hav ing some petrochemical complex . We are talking to some clients with respect to the petr ochemical complex in Nigeria as well as we are focusing towards the other African countries, wherein there are prospects of lik e LNG are there or fertilizer is there on oil and gas is there. S o we are targeti ng those countr ies also.

So that's how we are focusing -- shifting our focus from purely being the domestic company to overseas companies . So that's one of the areas. And another foc us has been given from the core sectors to infrastructure. You m ust see that at the recent resu lts also. Our core infrastructure contribution in our business is increasing nowadays. We have be en doing various projects.
Earlier, we have been -- we hav e done various institutional bui lding works, our data centre projects.
Now recently, we have got one -- this year, we have secured one assignment in EPC -- on EPC basis from -- in the infrastructure segment also. So we are als o focusing on the infrastructure part of it.
Venkatesh Subramanian: Perfect. Okay. Great, sir. I think it's probably too early to t alk about numbers, but is it fair to assume that we have enough opport unities to probably grow at 15 %, 20% top line over the next 3 to 5 years?
Vivek Midha: Exactly. So now talking about the numbers is difficult because we have to target a lot of projects. Many of the projects are in the anvil, but saying that this num ber would be there, we cannot say that with surety. But definitely, we have a target in mind we'l l be securing that much business at least in this financial year. So to maintain our business what we have secured this year. So we'll be at least trying to reach to that level and try to improve ov er the results and all the efforts are being on. So you must have seen in the progress in the business and the like visibility of you must have seen that, so that f ocus will conti nue to happen.
Moderator: We take our next question from th e line of Ashwani Sharma from ICICI Securities.
Ashwani Sharma: Yes. Sir, my first question is on the clarification. The change order that you had received during March from HRRL, is it totally implemented or still it has got something included in the backlog, current backlog?
Sanjay Jindal: It is yet to be implemen ted. It is unde

rgoing.
Ashwani Sharma: Yet to be implemented. Okay.
Sanjay Jindal: This work we're doing already, and this is change order by way of increase in scope of work and that is to be executed in the coming time.
Ashwani Sharma: All right. Sir, my second question is on the that we have recei ved worth INR1,600 crores, what is the breakup of that in terms of consulta ncy and the turnkey projects?
Sanjay Jindal: Sorry, I could not get you . Your voice is not clear.
Ashwani Sharma: I'm sorry, sir. I'm saying that the INR1,600 crores of orders t hat we have received, which you have mentioned in t he press release...
Sanjay Jindal: You are talking about the orders?
Ashwani Sharma: I'll just come back. I'll come back in the queue.

Sanjay Jindal: Okay.
Moderator: We'll take our next question from the line of Dikshit Doshi fro m Whitestone Financial Advisors.
Dikshit Doshi: First question is a clarification. So if I see the Q3 end, our order book was around INR7,865 crores. This quarter, we received in new fresh orders of INR3,9 00 crores. And if I remove the execution of INR865 crores, the order book should have been INR 10,900 crores, but it is reported around INR7,695 crores. So there is a difference of IN R3,200 crores. So is it related to this change order?
Management: Yes. This is basically related to the change order, which we ha ve received and accepted during the current quarter. That is already reflected in our order boo k as of 31 De cember '22.

Dikshit Doshi: Okay. That was already there in 31 December...
Management: Order book.
Dikshit Doshi: So this INR3,200 difference, how -- I mean, where it has gone?
Management: This is basically from the 2 ma jor projects we are executing fo r the Turnkey segment.
Dikshit Doshi: So that INR3,200 crores is yet to be executed, right?
Management: Some part of it is being executed and the other pa rt will be ex ecuted over a period of time.
Dikshit Doshi: So how much is...
Management: Basically, these projects are spread over a period of 3 to 3.5 years. So revenue is recognized over a period of time. Some of it is being executed and balance will be executed over a period of time.
Dikshit Doshi: Okay. So this change order basically is not entirely reflected in this INR7,695 crores order book?
Management: No, that is totally reflected in INR7,695. I told you that as o f 31 December '22, we have taken that into consideration while ca lculating the order book status , but that was not coming in the order inflow.
Dikshit Doshi: Okay. Okay. Okay. Now secondly, can you just help me to underst and the INR78 crores write-back in the other expenses?
Management: Yes. Basically, you are aware that we are executing some major projects, and we are creating provisions for contractual oblig ation in our financial books wh en the job over in case no liability comes. So whatever provision we have created over a period of t ime that is being written back.
So we have a settlement for one of the major orders in this qua rter and the write-back on account of that particular order, majorly on account of that particular order.
Dikshit Doshi: Okay. Okay. And that is also part of both the segmental profit like consultancy and turnkey?
Management: So that is a part of the c onsultancy segment profit.

Dikshit Doshi: Consultancy segment profit. Okay. So assuming that every year, we have some change order, the annualized basis, we can e xpect consultancy to post 27% to 30% range of margin and EPC at around 4%?
Management: We target for that, but that depends on the basically completio n of that particular project when the going to be write back. So that depends on the basically se ttlement of change order and completion of job. The margin may vary from quarter-to-quarter, but our aim is to maintain the range.
Dikshit Doshi: Okay. And you mentioned

that the technical execution cycle is a round 3, 3.5 years. So that is for the both the outstanding order book current consultancy in Turk ey?
Management: Yes, both -- for the both basically. Major order in the Consult ancy and Turkey segment are between 3 to 3.5 years, plus there are certain small orders als o which are executed maybe between 1 year or 6 months also. But on an average, you can see that our order book is being executed in a period of 3 years, 3 to 3.5 years.
Dikshit Doshi: Okay.
Sanjay Jindal: Finally, all the mega projects and midsized projects range is f rom 3 to 4 years.
Dikshit Doshi: Okay. Okay. And lastly, on all the opportunities you have menti oned, the upcoming opportunities on the hydrocarbon side or even infra side or eve n ammonia side. So considering all this, do you expect that -- I mean the non-hydrocarbon busi ness can be 30%, 40% over of the overall EIL business over the next 3 to 5 years or still you fe el that hydrocarbon will remain dominant?
Management: Actually, hydrocarbon will always lead because we have mega pro jects and their values are high. So they are at least next 5 years, they are going to lead proba bly in times to come when all these green initiatives and all get more frequent and projects are im plemented right now, most of the things are on the paper. When th ese projects are implemented -- right now, many of the projects have been implemented unde r the government pressure.
So they have to establish the commercialization of it and gradu ally when the project becomes more viable, then definitely, our segment will also increase. I n fact, we are also changing -- we are moving towards it. This year, in the Energy Transition segm ent, we have almost secured business worth 10% of the overall business. So that percentage has increased drastically, which never used to be there in the earlier segment -- last year.
Sanjay Jindal: And moreover, EIL is known for th eir technical capability. So w e are targeting high-end engineering projects. And as on date, high-end engineering proj ects are oil and gas sector. And that's why we are having 27% segment profit in the consultancy job. And in the infrastructure of you cannot think of even double-digit figure. So in the inte rest of bottom line, definitely, we are targeting oil and gas sector at this time.
Moderator: We take our next question from the line of Charanjit Singh from DSP Mutual Fund.

Charanjit Singh: Congratulations on good set of num bers. Sir, my first question is in terms of the order inflow outlook, if you can give a guidance in terms of what is our exp ectation for this financial year. And which would be the large pro jects in the petrochemical side or the refinery side, which would be targeting? That's my first question, sir.
Vivek Midha: First is that we will try to match what we have secured this ye ar. We will try to improve upon that. We won't be right to give the figure right now, but this is just a start up, right? And at least we are going to meet that, and we are going to improve on that. And with respect to the pet chem and other projects, you must be aware that we have talked about the BORL way which is going for the refinery expansion as well as the petchem. So that's de finitely on the card.
Then we have a expansion project, which is going to come in fut ure. Then many of the other refineries like in also, we are thinking of chemicals. We are w orking with them. We are preparing a feasibility report for them.
Then another private sector lik e we are already involved in the project, they are also thinking of specialty chemicals. So we are also working for them. IOCL is a lso thinking of a few petrochemical facilities in Gujarat. In times to come, they'll be floating a tender, so we'll be also participating there. This would come in this financial year, la rgely in this financial year. So these prospects are definitely there.
Charanjit Singh: And sir, from a mix perspective, between Turnkey and Consultanc y, what would the mix we can expect in the order inflow?
Vivek Midha: It would be primarily the purses. You know that traditionally, we will be going for the only on the mode, wherein we are more s ecure. So consultancy, and EPCM would be leading. This year, LSTK has show -- it's already 57%. Naturally, we'll try to main tain the same ratio next year also because we are also focusing on the OB kind of projects from ri ght now from the oil and gas sector as well as in the other different sectors also, we are t rying to get into that kind of mode. So let's hope for the best.
If we keep our fingers crossed, w e should be able to get more i nto OB. And selecting definitely, we will be targeting them. And we see that it could be approxim ately 50-50 in times to come. So 50% Consultancy and 50% Turnke y that is what we are expectin g.
Management: It would be there.
Charanjit Singh: Okay. Sir, and...
Management: It is ideal choice...
Vivek Midha: Ideal choice, but...
Management: That depending on the business, definitely will not be refusing any business. So ideally, we want to look like this.

Sanjay Jindal: Basically, our consultancy busin ess depends on the mega project in India because all the oil and gas -- all the projects in oil and gas sector are driven by the government schemes and government approvals. So there are so many factors for the consultancy job .
Charanjit Singh: Got it, sir. Sir, if I may, just add another 1 question. So in terms of the defense and some of the new segments while you have touched upon, but if you can just a lso give some more colour in terms of what is the area which we are targeting in the defense ? And you also touched on coal gasification where we have already seen a coal gasification pol icy and Coal India looking to get into that opportunity. So that's a totally new area. So these 2 segments, if you can highlight more, sir?
Management: The defense we will be working with the -- we are trying to ent er into the ordinance for modernization of their plants. W e have some projects online, an d we are discussing with them. And -- so it's not going to be appropriate to tell the name at this point of time. And with regard to the gasification, we are working with the Corporation. We ha ve already done the Phase 1 of their preproject activities part. So we are likely to see the i mplementation of the second phase. Apart from that, we are also engaged with a few of the other pr ivate constants who are right now in the feasibility stage itself, but we are working with them t o see that whether that project fees and that's from the coal to chemical projects, we are working o n that with few private sector clients. Those are mostly in the feasibility stages.
Moderator: We'll take our next question from the line of Jonas Bhutta from Birla Mutual Fund.
Jonas Bhutta: Just a question on the oil and ga s sector. We were also targeti ng jobs in upstream. Any updates there, what seems to be happening there? There was a few jobs t hat we were expecting -- projects, sorry, we were expec ting from the upstream sector?
Second one was a couple of years ago and for quite some time no w, we've stopped discussing the mega refinery now off-rated the team in the news, but any u pdate there in terms of the

possibility that this project goes through?
Management: In the upstream sector in India, primarily we're engaged with O NGC, and we have agreement -- and mostly, we are focusing on the consultancy assignments. A nd these projects are not in the exact exploration types. They ar e mostly linked with the proces sing of the crude oil, okay? Processing basically subsequent to when it is taken out and the processing facilities are they, pipelines facilities are there. So all those kind of projects w e

are involved in. So that is the focus on the oil and ga s projects. We...
Jonas Bhutta: But is this something that is going to yield us significantly l arge projects in the next financial for the following years, sir?
Management: Not large project. They are going to be consultants. Some of th em are going to the LSTK projects, which we have secured, the OB projects which are comi ng under that are from that segment only because we have thos e projects on OB basis. So in LSTK segment, those will be there.

Apart from that, in Consultancy also, we are getting a lot of a ssignments under same segment -- from the same segment and same kind of modernization of the f acilities and all, so we are targeting those projects. Apart from that, we are also there in the international and international marketing, we are working with t hat now. We are carrying out a lot of feed and an engineering assignments with them in the Upstream segment.
Jonas Bhutta: Got it. And any update on the mega refinery?
Management: Mega refinery, which is the is still on the cards, but you know that its location has been changed 3 times. So nobody can say when it 's going to come. But still t he work is on, we are engaged in the environmental services -- co nsultancy services for that pro ject. So we don't see that. Hope is dying, but it's still there on the cards. The spl it, it is poss ible. Yes.
Jonas Bhutta: Got it. And you laid out certain projects that you're looking a t, say, BORL, etcetera, for this financial year, are these all projects now open for competitive bidding in the sense that these are competitively bid projects that these are on nation as of now?
Management: Basically, all these projects goes on competition basis only. T hese days, most of the projects we secure are on competition against -- we have to face the compet ition, and we have been facing it.
Jonas Bhutta: Unless it's a change order, right?
Management: Unless it is a change order. Yes.
Jonas Bhutta: Okay. And if Batraji can help explain this entire change order thing? Because it formed part of our backlog in FY -- in Q3. And then in Q4, it's not. So if -- I just missed that part if he can help me understand that.
R.P. Batra: Yes. I told you basically in the order book, that was reflected as of 31 December '22. In the inflow, we have shown that durin g the current quarter because t hat particular thing is accepted by EIL in the current quarter.
Jonas Bhutta: Okay. But this is something that will add to our revenue or thi s has already been executed and we had just put up pending bills?
R.P. Batra: Some part of it has already been executed and ba lance is to be executed.
Jonas Bhutta: How much of it is unexecuted, sir?
R.P. Batra: Right now, I don't have any figure regarding how much it is exe cuted, but maybe 50% is executed and 50% has to be executed. So basically given the I d on't have exact figure right now.
Jonas Bhutta: Sure. And what is the provisions pending? So as of 31 March, th e provision schedule that you have in the balance sheet, so to account of how much -- what is -- at 1 point in time, it is to be about INR400 crores, what is it currently?
R.P. Batra: Cumulative provision may be more than INR500 crores.

Moderator: We take our next question from th e line of Himanshu Upadhyay fr om O3 PMS.
Himanshu Upadhyay: I had a question on, we said about for growth, we want to diver sify into various segments, okay? And some of them are urban infrastructure, ports and harbours a nd defense and biofuels and -- see, what are the areas where we don't want to focus on? Means, because we are seeing infrastructure growth happening across the board. What would be the metrics which you will be using to select which businesses you think can be really sizabl e, sustainable business and profitable business ov

er a longer period of time? And hence, th ose would be the areas where
primarily you will be focusing on?
Vivek Midha: Let's talk about the infrastructur e part. Infrastructure part i f you see that we are primarily focused on the institutional buildings. We're not into general construc tion project. We work as a project management consultant. We go into the institutional buildings, we go for the data centres or kind of airports, we work for. Then other -- we have also been invol ved in the -- this bullet train project.
In some of the case, we have bee n -- we were working as a const ruction supervision consultant for one of that. So these kind of projects, niche products are targeted. We don't compete with the consultants wherein -- in those se gments where -- which are low value segments and where the competition is very high and we are not likely to get the busin ess.
Similarly, in the other segments like the biofuel, biofuels is going to be a new area. We are already executing one of the first refinery in India, which is the bamboo-based refinery. So this is a highly technology sensitiv e -- technology intensive. We ha ve entered into an agreement with 1 of the licenses to get the technology and we are implementing .
So this is adding niche to us. Similarly, in the hydrogen. Hydr ogen is going to be a new area. So hydrogen we are getting into electrolyzers, we are setting up h ydrogen plants in the refineries from the brown hydrogen to green hydrogen, we are converting. W e are working into the green ammonia segment wherein the green hydrogen is also going to wor k and this -- so now if you see that renewable, we are not going into renewable because ren ewable in the basically solar in all these segments, there are a lot of players that are already available who are very low-cost players.
So we do not find any value for us to be in that segment and we cannot compete with those people. So that is the kind of area we pick up, wherein some te chnology intensity is there and we are capable of this. We can get certain assignments on a neg otiation basis.
Like in infrastructure, we most ly get the projects on a negotia tion basis from vari ous clients. So this way we segregate the and where their substantial engineeri ng work is involved and we get the value and good -- I can book more engineering manhours, tha t will be our focus for selecting any of the area.
Himanshu Upadhyay: Okay. And in terms of profitability, any views you want to have that below this type of margins is not conducive for us because even in some of these fields, - - we see some of the global players having very low margins, okay? S o what will be t he threshold...

Vivek Midha: [inaudible 0:34:31] wherein we wa nt to enter. If it's a niche a rea. It's a very specific area, which is going to add value to us then one can think about it. Otherw ise, we will be very cautious by taking decisions. So every due diligence is done before bidding for any kind of project to -- we take a call on what basis we have to choose. So there's no gene ric written policy that what should we do and what should not do. It depends on the case to get bus iness.
Moderator: We take our next question from th e line of Mohit Kumar from ICI CI Securities.
Mohit Kumar: Sir, my question is what is the o rder left from the PCM service for Kaveri basin at Panipat? And what kind of revenues have put in these projects in last fiscal ? And you think the ordering for Kaveri basin and Panipat -- so expect it to pick up in FY '24?
Management: I think you have to check whether -- you talking about Kaveri b asin or P25...
Mohit Kumar: Both, both, both. Yes.
R.P. Batra: Yes, we are recognizing the reve nue of the progress. So right n ow, we don't have the figures. For P25, the work is being executed at a fast pace and the reve nue is being recognized. In the Kaveri basin also few thin

gs are being done and accordingly, th e revenue is being recognized.
Right now, we don't have the exact ly the figure how much revenu e we have recognized...
Mohit Kumar: No, sir, my question is the progress slow in this to because I don't see a lot of tender activities are very slow.
R.P. Batra: In the Kaveri basin...
Management: In the Kaveri basin, there were certain political issues. Those will be resolved. I believe that we have seen certain articles and also things are being realized, and it hopes to come back on track in the course of time.
Mohit Kumar: Okay. And so on the crude to chemicals business, which you talk ed about both the OICL BPCL, do you think that we did these 2 contracts, the contract can be finalized in H1 FY '24 or do you think it will take a longer time?
Management: No, it is going to take -- it'll not in the financial -- in the Q1. It will be coming towards the end of the financial year or midway somewhere in the financial year . They might do for certain early services like services going for the licenses selection, those kinds of activiti es may start.
Mohit Kumar: My last question on the coal gasification, I think I missed out . Are you expecting anything other from coal gasification apart from the projects, which you have? Do you think Coal India will

award some of the orders and whe re we can have some large role to play?
Management: Coal -- with coal gasification, we are working with one of thei r subsidiaries for western coal field for a DTR for setting up c oal to methanol project. And we have done the feasibility study and it is in the process, then it will be realized.
Similar way, another study is also being carried out. So still in the cards, but the faster pace is wherein the project activities h ave been done and tendering has been done.

Moderator: We take the next question from the line of Sake t Kapoor from Ka poor & Company.
Saket Kapoor: Sir, firstly, just correct me he re, it is the INR70 crores -- h ello? Sir, I'm audible, sir?
Management: Yes.
Saket Kapoor: Yes. Sir, firstly, in the for the consultancy and the engineeri ng project business, there is a write-back of INR70 crores in this quarter?
Management: Hello?
Saket Kapoor: Yes, sir.
Management: Can you repeat your que stion, your voice is...
Saket Kapoor: Yes, sir. Sir, I was just mentioning about that INR70 crores fi gure. That INR70 crores is added back to the profits to the consul tancy and engineering project segment?
Management: Yes, yes.
Saket Kapoor: Okay. And sir, what is the total provision cumulative provision you have mentioned is about INR500 crores, that is...
Management: Yes, yes.
Saket Kapoor: So going ahead, keeping the contingency aside, we can see write -back of INR500 crores...
Management: That will be written back over a period of time in case -- that will be written back over a period of time and the project is being completed and no liability ari ses, at that point of time, that particular thing will be written back. In case some liability w ill come, that will be from that particular project. So that wi ll be spread over a period of tim e, not in the next financial year or that will be spread over a period of time and that particular p roject will be completed.
Saket Kapoor: Sir, what was this write-bac k figure for 31 March '22?
Management: 31 March '22, right now , I don't have figure.
Saket Kapoor: Okay. Sir, if we look at our numbers in terms of about our year ly numbers, the PBT numbers have remained flat...
Management: Yes. PBT are almost flat.
Saket Kapoor: And it is, I think, so the fertilizer RSFL contribution that wa s negative last year, and we have been able to lower the losses that has contributed to the profi tability in the consolidation. That is what should be the -- so what is the likelihood from this Ra magundam Fertilizer going ahead? Sir, if you could give us s

ome understanding on how the operati ons have been. And other than the Ramagundam, the other investm ent which we have made, I thin k so for the refinery project, what have been the dividend amount that we have received? And w hat is the growth plan for these 2 investments? How are they likely to accrue to the compa ny going ahead, sir?

Sanjay Jindal: First of all, we have investment in Limited. And we have invest ment of around INR700 crores in the refinery. And as on date, we have fair value of INR766 c rores itself. And in the current year, we have received a dividend of INR55 crores on the invest ment of INR700 crores in the refinery. Then we have subsidia ry -- 100% subsid iary certificat ion in India Limited.
And we have received dividend of INR7.7 crores from the EIL. An d in addition to that, we have investment in Ramagunda m Fertilizer and Chemicals. We have 26% stake. And as I have already told this, in this year, at this moment, RSL is operating at 10 0% capacity. And even sometimes it is running even more than 100% capacity. And this is the fir st year where RSL has made a profit of INR8 crores on the annu al basis since i t was having l osses in the -- up to third quarter. And in the fourth quarter, plant was stabilized and it was runn ing at 100%. So it could make profit on an overall basis. And we -- in the coming year, we ar e expecting good profit from the RL investment also.
Saket Kapoor: Sir, in the Ramagundam Fertilizer , what is our investment for 2 6% stake?
Management: INR491 crores.
Saket Kapoor: And what is the fair value today, sir?
Management: It is not listed.
Saket Kapoor: Sir, for unlisted also, we are not evaluating it as the numbers the book value?

R.P. Batra: No, no. It's not required as per...
Management: Fair value is not required.
R.P. Batra: It's basically investment at cost basically in the JV. So no fa re is required to be for that particular...
Saket Kapoor: Correct, sir. And sir, for the other income component, other in come includes the dividend part also. Out of the INR164 crores t hat we have booked for FY '23?
Management: In the other income, we have received more dividend from the NR L as well as we have received more interest on the fixed deposits also. So therefore, there i s increase in the other income also.
Saket Kapoor: Okay, sir. And lastly, sir, wha t is the cash on the books as on 31 March?
Management: Total cash and bank balance?
Saket Kapoor: Yes, sir.
Management: It is around INR1,100 crores.
Saket Kapoor: Okay. And this is also the advances that we have received from -- for the content...
Management: INR10 crores advances also -- INR10 crores cash advances also. Yes.

Saket Kapoor: So if you could segregate that amount, sir, what is our own fun d and cash fund here and the advances?
R.P. Batra: Yes. Its advances around INR100 crores, So it's around INR950 c rores, INR1,000 crores of cash.
Saket Kapoor: We hope that this year should be b etter in terms of top line an d also the contribution from the subsidies would be positive. So that shoul d be the substance go ing ahead.
Management: Definitely. Definitely.
Moderator: We take the next question from the line of Ashwani Sharma from ICICI Securities.
Ashwani Sharma: Pardon me if it is -- if I'm repeating the question. So the fir st question is, is that go ahead letter orders at INR1,600, I just wonde red the breakup of that number in terms of consultancy in the Turnkey?
R.P. Batra: That all belong to the Turney segment.
Management: Primarily belongs Turnkey.
Ashwani Sharma: It's all gone into Turnkey. Okay. Sir, second question is on th e -- if I look at the order book of Consultancy segment, it has b een flat at around INR4,800 crores in the last 2 years, '23 and '22.
How do you see this number improving going ahead, sir?
Management: With respect

to the order book in the Consultancy segment, now you see that order book is going to -- we are targeting that more and more consultancy assignmen ts. We have gone into international markets. So we see that more and more projects ar e coming towards it. And definitely, LSTK is going to be there.
A n d L S C K , w e a r e h a v i n g - - t h i s y e a r , w e h a d a 5 0 % o f - - a l m o s t 50% of the stake and consultancy was also 50%. So this consultancy business, we are going to increase as soon as -- because we are targeting that around same kind of margin can be achieved from this. And with the addition of some of the old projects that going on in the p rojects, so that's how the OB is going to be flat.
Now with the addition of the new projects which we have secured in the current year, you will see the implication of that on t he order book in the mix times to come. And we are working towards it and let's hope for the best.
Ashwani Sharma: Okay. Sir, on guidance, if I -- in the last few quarters, you h ad mentioned that there will be around INR4,000 crores to INR5,000 crores of order inflow in '2 3 and going ahead as well. Do you still hold that guidance?
Management: Yes. We will try to maintain that.
Ashwani Sharma: Okay. And lastly, sir, just a bookkeeping question on the Ramag undam. What was the sales and EBITDA number, sales, EBITDA, PBD number fo r Ramagundam in FY ' 23?

R.P. Batra: It will be around INR4,500 crores.
Management: Total turnover...
R.P. Batra: Total turnover.
Ashwani Sharma: And EBITDA, sir?
R.P. Batra: EBITDA, add depreciation on INR8 c rores. If the PAT is INR8 cro res…
Management: Right now, exact figure is...
R.P. Batra: Exact figure is not available with us. So...
Moderator: We take the next question from the line of Viraj Mithani from J upiter Financial.

Viraj Mithani: I have 2 questions. One, the new areas which we are talking of going into, would it be on the [inaudible 0:048:04] or the consu ltancy side more? Like what wo uld be the mix in those area days to come?
Vivek Midha: Can you repeat the question, please? Just again.
Management: [inaudible 0:48:15]
Vivek Midha: See, we put all the new areas will be going into consultancy on ly because this is being a new area, so we can't take much of a risk in that. So we have to be very -- first very sure about those segments. And thereafter, in the course time -- in the course o f time, we might go into the EPC in the -- later in the stages, not in the recent year, but in - - later in the year.
Viraj Mithani: So the fruits of this would take around, I guess, is it fair to say it will take around 3 to 4 years to materialize, like the numbers from these new areas to start com ing in a meaningful way, it should be at least 3 to 4 years away?
Management: Should be. Should be.
Viraj Mithani: Okay. And sir, my last question is looking at the last numbers, is it fair to think that we can grow at double-digit top line and double-digit net profit margin? Wi ll this margin could be maintained at least for next 2 years?
Management: That is our risk. We are worki ng towards it. But the competitio n at the same time is increasing. You should also appreciate that market conditions are changing. Earlier, we were the only ones, but there are a lot of people ar ound. We have to work hard and read them and then get the jobs. Now nothing is comi ng on the platter.
Moderator: We take the next question from th e line of Dikshit Doshi from W hitestone Financial Advisors.
Dikshit Doshi: Sir, my question was regarding the growth. As you rightly menti oned that we will be targeting a double-digit growth -- but contacting the order book of INR7, 600 crores with 3-year execution

and we are also targeting INR4,0 00 crores, INR5,000 crores orde r win. So I mean even if we'll ac

hieve double digit, it will b e low double digit. Is it fair t o assume?
Management: What we have said is we will try to maintain this. We will not say it will go below this. We'll try to improve upon this. At least th is much, we will try to secure because it's a future, and we cannot predict when -- but we are working towards the -- towards it, t hat we have to increase our top scale, and we have to reach to do ublet-digit growth. That is ou r aim. But for the time being, at least we will maintain this kind of tempo that we have created.
Moderator: We take our next question from th e line of Saket Kapoor from Ka poor & Company.
Saket Kapoor: Yes, sir. Just a continuation to the question, sir. So for this year, we are looking at a revenue g r o w t h o f 2 0 % o f w h a t w e c l o s e d f o r F Y ' 2 3 . A n d i f w e l o o k a t t he bifurcation between Consultancy and Turnkey, how the growth would be distributed am ong the 2 verticals, sir?
R.P. Batra: We are not giving any number, but definitely, we will try to im prove whatever we have achieved during the current financial year. And definitely, there will b e -- we are basically anticipating growth in both the segments. But exact figure, right now, we ca nnot...
Saket Kapoor: Only the part number, the business plan must are done. Now we h ave the execution. So we know what the visibility is. So any ba llpark number would help us un derstand because we were flat year-on-year last year. So ta king into account -- yes, sir.
Management: We can only say that we'll try to improve whatever we have achi eved during the current financial year.
Saket Kapoor: Correct, sir. Okay. And on the margin profile, sir, how will th ose numbers look like? Because on the Turnkey project, the margi ns are lower, so if you could give us the bandwidth -- the band for both the segments that would be very helpful.
Management: So far, we are maintaining our segment profit in the Engineerin g Consultancy segment in the range of 27%. And definitely, in t he LSTK jobs, we are able to achieve the rate of around 3%. So we are targeting these marg ins in the current year also.
Saket Kapoor: Sir, earlier due to some -- because of some in the value for, I think, for the pension part, there were some extra provisions 2 years down earlier on employee cos t. So are we done and dusted with all those factor s? Or how is that that line item looked in to the employee benefit expenses?
R.P. Batra: Yes, maximum provision is being made basically...
Management: No further provisioning is required on that account. We have al ready made sufficient provision in the financial year 2021, and no further provision is require d on that account.
Saket Kapoor: Okay. But we are working on the same line in the same way has b een earlier we will take the hit -- the company is going to take the rate in case of any shortfa ll?

Management: No, no that is a legal provision that we have to provide abide, everybody has to abide in case there is a shortfall that has to be compensated by the employer . That is the legal provision, you cannot avoid that possibility.
Saket Kapoor: But in some PSU, sir, that have been -- that has been taken off . I think so, some Gujarat state PSUs have already gone up -- cha nged the policy. S o that was th e reason why I was...
Management: No, no. It is -- it does not depend upon this state. It is the effect which state that in case there is any loss of thefts, the employer has to make good loss. So that 's why we have made a provision. And this does not depend upon the central or state. It is appli cable for all.
Saket Kapoor: Correct, sir. And what is our tax rate currently, sir? Have we moved to the new regime or...
R.P. Batra: Yes, yes. 25.168%.
Saket Kapoor: Okay. And for the dividend distribution, sir, what is the polic y we are adhering to, sir, 30% of the profit...
M

anagement: We are paying more than that right now. We have around 49% duri ng the current financial year.
Moderator: We take the next question from the line of Raj Rishi, an invest or.
Raj Rishi: How do you place yourself with respect to competition, both dom estic and international? What's the edge, which EIL has?
Management: With respect to international, we are quite comfortable because technically, we are strong. Our experience and core experience a nd that helps us out in qualify ing there. And in the international market, it's primarily focused -- most of the international com panies give focus on the quality of the services, quality of the service, less on the price as well as the price-wise, we are competitive in that market because we are from India and quality is also th ere. So we are comfortable there. In India, competition is increas ing because a lot of people do rate. A lot of companies are hiring locals only and we face competition from the companies who hire people for short duration and fire them but the quality of the people is not insured, but it' s their competition is there in India. But still, we are surviving, and we are able to get the assignm ents and get the business what you have seen.
Raj Rishi: So international business is pre sently how much around 14%, rig ht, of the order book?
Management: In the -- with respect to the c onsultancy, it is almost 50%. In the if you talk about the business is the secure terms, it's almost 50% this time.
Raj Rishi: Okay. And how do you see the trend over the last -- over the ne xt 2 to 3 years? In consultancy, what percentage can be international?
Management: We will try to maintain the same kind of percentage because we have increased the focus on the international market, and we have done a lot of changes within the organization itself, like more so that has been put in on the - - our Middle East office to tak e care of the business around that

area and more strengthening of the people in that office. Simil arly, we are focusing on the South America. We have started focusing on Africa market, apart from Nigeria, which we were working earlier. So those activities have started, and we are d oing it. And the results have -- we have got the results of that in this year. So we hope that more of this sort business can be s ecured from there.
Raj Rishi: And do you think majo rly it will be consultancy only, not the.. .
Management: It would be -- international ma rket will -- right now, we will not be going for LSTK, it's going to be purely consultancy.
Raj Rishi: Purely consultancy. And in the government sector, are you facin g competition more than earlier even in the government sector in domestic?
Management: Government sector, yes, we are c ompeting in the companies like IOCL, we are beating and beating the private consultants and able to secure the jobs. Co mpetition is there because everywhere they are now tendering there, it's been awarded -- w o r k s a r e b e i n g a w a r d e d o n tending basis.
Raj Rishi: Okay. And what's your capital allo cation strategy, if you can e laborate?
Management: What is that?
Raj Rishi: What is your capital...
Management: Y e s . B a s i c a l l y , w e h a v e t o a b i d e t h e D P g u i d e l i n e . S o d i v i d e n d is 30% of PAT or 5% of networth, which are very high, plus, they are basically provisi oned for the buyback and bonus and splitting of shares that we are up basically. As per guidel ine we are following the capital allocation policy.
Raj Rishi: That's the minimum crite ria, right? You can...
Management: Yes, we are more than that basically. As per guideline 30% of P AT has to be distributed, we have distributed around 49%.
Raj Rishi: Yes. But sir, in EIL's case, y ou don't need cash to -- capital to grow, right? Because it's...

Management: See, we need cash also, basically. We are

having certain invest ments also. So for that, we need
the cash also.
Raj Rishi: You think you'll be going in for more investments like refinery and fertilizers, which you have done earlier?
R.P. Batra: Material investment envi sage right now. But we are having a...
Raj Rishi: I didn't get you. Can you just repeat it?
R.P. Batra: No material investment i s envisaged as of now.

Moderator: We'll take your next question fro m the line of M ilind Karmarkar from Dalal & Broacha.
Milind Karmarkar: Just wanted to sort of reaffirm that Turkey and Consistency, ro ughly you have 50%, 50%, right? Am I right on that, in terms of the projects in hand or the ord er book?
Management: Yes. You're audible, and it's al most -- yes, 50%, 50% as of now .
Milind Karmarkar: Okay. And if I say that there is a looking at the current -- we have 27% margin in Consultancy and 3% margin in Turkey, then effectively, on a steady state, o ur margin should be segment profit should be around 15%, right? If both are 50%, 50% then i t should translate into a 15% combined margin, am I right on that?
Management: Yes, it's about 15%.
R.P. Batra: During the current financial year?
Milind Karmarkar: No, overall, if I consid er the order book at...
R.P. Batra: That depends on revenue recognition basically...
Milind Karmarkar: No, no. Fair enough. But assuming that in next -- so if we have 3-year period or a 4-year period overall, if I add back on the profits and add back all the -- a dd the top line, then the results should be at around 15%. Am I right on that?
Management: You are right, in case the -- basically, the segment remains at 50-50. You're right, very right. But the segment will not remain in 50-50. It will change, basically , revenue recognition change depending on the progress of t hat particular project...
Sanjay Jindal: Basically, boss, you are saying our segment profit is 27%. And in case our LSTK segment profit is 3% and you are averaging at 15%, but does not follow as beca use segment profit is different from the PBT or PAT. Segment -- after segment profit, we have c ertain unallocated expenses also, which are to be deducted to come at profit after tax. can not be 15%.
Milind Karmarkar: I'm not talking of the PAT. I'm t alking of the segmented result s.
Sanjay Jindal: Boss, it is 27% is right. 27% is on the consultancy figure and 3% or 2.5% on the LSTK figure. It is right. And in the current year, we have 57% turnover from the LSTK and 43% from the consultancy job.
Milind Karmarkar: Correct. So my second question was that if I look at turnkey pr ojects, -- most of the private companies typically have margins which are slightly higher than this. So what are we doing to improve our efficiency in the turnkey projects?
R.P. Batra: Yes. In our case, these are basically not the LSTK projects. Th ese are the [inaudible 1:02:10] projects. So basically evenly di stributed between the client an d consultant and the contractor. So as such, there is no risk for the increase in the plant and mac hinery So that's why the margins are low. In case of the LSTK, it can be reverse case also. In c ase machinery pass on to you, the

margin can be negative also. In this case, we are getting the p ositive contribution always because our risk is basically limited. S o that's why we are doing these type of jobs.
Milind Karmarkar: Okay. Got it. And my last ques tion was on -- besides the cash a nd bank balance, are there any investments which are not invest ments for business, which we ha ve like investments in mutual funds or -- these type of invest ments do we have in addition to cash...
R.P. Batra: Yes, yes. We are having a tempor ary investment for 15 days or 1 month basically to meet our immediate working capital requirement. They have to vary betwee n INR50 crores to INR100 crores.
Manage

ment: Liquid mutual funds.
Moderator: Ladies and gentlemen, we have reached the end of the question-a nd-answer session. I'd now like to hand the conference back over to Ms. Bhoomika Nair from DAM Capital for closing comments. Over to you, ma'am.
Bhoomika Nair: Yes. Thank you, everyone, for bei ng on the call, and thanks to the management f or giving us an

opportunity to host the call, sir , and answering all the querie s quite well. Really appreciate it.
And wishing you all the very best, sir.
Sanjay Jindal: Thank you, Bhoomika. T hank you very much.
Management: Thank you, Bhoomikaji.
R.P. Batra: Thank you all.
Moderator: Members of the management, thank you. Ladies and gentlemen, on behalf of DAM Capital Advisors Limited, that concludes this conference call. Thank yo u for joining with us. You may now disconnect your lines.

Call: Aug 2023

“Engineers India Ltd
Q1 FY’24 Earnings Conference Call”
August 08, 2023

MANAGEMENT : M R. SANJAY JINDAL – DIRECTOR -FINANCE – ENGINEERS INDIA LTD
M R. SUVENDU PADHI – COMPANY SECRETARY AND INVESTOR RELATIONS – ENGINEERS INDIA LTD
M R. R.P BATRA –EXECUTIVE DIRECTOR , FINANCE AND INVESTOR RELATIONS – ENGINEERS INDIA LTD
M R. SUNIL SAXENA – EXECUTIVE DIRECTOR - TECHNICAL AND INVESTOR RELATIONS – ENGINEERS INDIA LTD

M R. AMANPREET SINGH CHOPRA – SENIOR GENERAL MANAGER , CMD OFFICER AND INVESTOR RELATIONS – ENGINEERS INDIA LTD
M R. VIVEK MIDHA – GENERAL MANAGER MARKETING , BUSINESS DEVELOPMENT AND INVESTOR RELATIONS – ENGINEERS INDIA LTD
M S. NEHA NARULA – SENIOR MANAGER , COMPANY SECRETARY & INVESTOR RELATIONS – ENGINEERS INDIA LTD

MODERATOR : M S. BHOOMIKA NAIR – DAM CAPITAL

Moderator: Ladies and gentlemen, good day, and welcome to the Engineers I ndia Limited Q1 FY '24 Earnings Conference Call hosted b y D A M C a p i t a l A d v i s o r s L i m i t e d . A s a r e m i n d e r , a l l participant lines will be in the listen-only mode, and there wi ll be an opportunity for you to ask questions after the presentati on concludes. Should you need ass istance during the conference call, please signal an operator by pressing star then zero on y our touchtone phone. Please note that this conference is being recorded. I would now like to han d the conference over to Ms. Bhoomika Nair from DAM Capital. T hank you, and over to you, ma' am.
Bhoomika Nair: Thank you. Warm good afternoon to everyone to the 1Q FY '24 Ear nings Call of Engineers India. We have the management today being represented by Mr. Sa njay Jindal, Director of Finance; Mr. Suvendu Padhi, Compan y Secretary and IR; Mr. R.P. Batra, Executive Director, Finance and Investor Relations; Mr. Sunil Saxena, Executive Dir ector, Technical and Investor Relations; Mr. Amanpreet Singh C hopra, Senior General Manager, CMD Officer and Investor Relations; Mr. Vivek Midha, Gene ral Manager of Marketing, BD an d IR; and Ms. Neha Narula, Senior Manager, Company Secretary and IR.
I'll now hand over the call to Mr. Sanjay Jindal for his initia l remarks, post which we'll open up the floor for Q&A. Over to you, sir.
Sanjay Jindal: Thank you, Ms. Bhoomika. Good afternoon, everybody. We have dec lared results of first quarter of financial year '23 '24 on 2nd August, '23. As regards to fin ancial performance for 3 months ended June '23, the company has raised a turnover of INR800 cro res -- INR808 crores, vis-a-vis INR805 crores during the first quarter of the preceding financi al year. Turnover from consultancy and engineering segment stood at INR345 crores from 20 segments, it is INR463 crores.
Other income during current year ended June 23 is INR93 crores as compared to INR27 crores during the first quarter of the preceding financial year. There is increase in other income, primarily due to settlement with one of the clients in consulta ncy and engineering project segment for an amount of INR56 crores.
During the current quarter, the company has recorded profit bef ore tax of INR153 crores and PAT of INR114 crores in comparison to INR68 crores and INR51 cr ores, respectively, during the first quarter of the preced ing financial year, showing an i ncrease of 125% in PBT and 124% in PAT.
And on the RFCL front, during this quarter, the EIL profit sha re is INR22.49 crores as compared to INR13.5 -- INR13.85 crores in the first quarter of preceding financial year. On the consolidated basis, our PAT is INR138.93 crores as compared to INR64.81 crores in the first quarter of the preceding financial year. Notably, EPS for the c urrent quarter has more than doubled to INR2.02 vis-a-vis quart er ended June 22 of INR0.90 p aisa.
The company has unexecuted order worth of INR81.02 crores, comp rising under consultancy segment of INR4,979 crores and under EPC segment of INR3,123 cr ores. In the first quarter, we have secured orders of INR1,265 crores. And this is the financi al summary, which we have declared on the 02 August. Thank you. I hand it over to Ms. Bho omika.

Moderator: Thank you very much. The first question is from the line of Mo hit Kumar from ICICI Securities.
Mohit Kuma: My first question is, sir, how do you see about the order infl ow opportunity for the balance of the year? Are we seeing any traction in few of the refinery and Petcam consulta ncy projects?
Management: Okay. Vivek Midha will reply.
Vivek Midha: We [inaudible 0:05:29] that we are bidding for it. We see one of the private refinery is going for the another expansion. So we are initially involved in the stud y

stage. We see another -- if it is
to get realized, it is cleared by the Board. They might go for the implementation of the same. So we see that opportunity coming towards the end of this year. Th en there are many petrochemical complex you must have seen that ONGC also going for the crude t o chemical complex. It has been recently been published. We have been involved in the init ial DFRs for that. So we see that also coming on the way.

And BORL is also going for the petchem complex. So we have been involved in initial stages. So they are also going to come with their tendering activities in the course to come in this financial year. Then IOCL is also going for a Paradeep petroche mical complex, which we see that their tender is inbound to co me in future. So all these op portunities are underway where we are targeting. And there are man y more which we are working. So this is there on the way.

Mohit Kumar: You say a tender which is floated -- footed by all the petchem companies and where we have already put in our bids?

Management: No. In some of them, tender are expected in the course of the t ime. And in some of them, we are involved at this stage in the final stages of the study, which will in a few months' time, it will take a shape and go in to a tendering proce ss or with negotiated process.

Mohit Kumar: My second question is on the CPC and [Nagapatti number 0:07:01]. Is the project going way slow right now? Is my understandi ng correct? Does it mean that the revenue booking will be slightly lower in this particular financial year?

Management: I think they had some land issues at their end. Those have been , I believe, resolved. And now the work is on. And tendering has started again. They have put it on hold because of some land issues and clearances. Now those things have sorted out and wor k has already started and people, our teams are working on that.

Mohit Kumar: Understood, sir. Thank you and all the best, sir. Thank you.

Moderator: Thank you. The next question is from the line of Raj Rishi fro m DCPL. Please go ahead.

Raj Rishi: Yeah, hi. Can you explain your, elaborate on your competencies for new age business like you talked about, Ms. Shukla has talked about 4A into 1.

Management: Can you speak a bi t louder please?

Raj Rishi: Yeah. Could you elaborate on your competencies to back project s in new age areas like one green hydrogen and renewable energy. Ms. Shukla has talked abou t, Ms. Vartika Shukla has

talked about, for your engineers in India into these high growt h areas. So what kind of edge do you see in Engineers India to back the projects?

Management: So our Mr. Amanpreet is there. He is going to take that questio n. He is going to respond on that, please.

Amanpreet Chopra: In case of renewables, if you talk, or alternative fuels, if y ou talk, one of the major things we have been involved with this alte rnate fuel segment since it be gan.

Raj Rishi: Sir, I am not able to hear you. It is very, lot of…

Amanpreet Chopra: Yeah. So, there are three broad areas which we are looking at. One is on the alternative fuel segment. Alternative fuel segme nt we have been involved in the DFRs of the nine bio-refineries that was initially done during the, at the time of the biofuel policy. So we have been involved since beginning in this particular area and moving forward we a re executing, as you are aware, we are executing the bamboo-based refinery project, the biofuel refinery for AVPRL in Numaligarh. So that is where, as a technical company, we have b een able to raise the level of, like from lab scale, we are going directly into the commercial scale. So that's the level of competencies that EIL possesses.

Raj Rishi: Can you repeat the last bit? I d idn't hear. From what to what you are going?

Management: So see that particular refinery is going into commercial scale right from the lab s

cale. From lab
scale to commercial scale that's the leapfrog that the refinery has taken up. So all those technical aspects are being covered by EIL, taking it from the technology readiness level of 2 to right now it is going at 8 and 9.

Management: So another thing I would like to add on this is like right no w we are doing various other projects in bio-refinery like feasibility studies. We are right now exec uting one assignment as a project management consultant for HMEL fo r their rooftop solar projects and then we have recently been appointed as a consultant for by NTPC for one of their pro jects where they are capturing carbon and to convert it into ethanol and earlier we were invol ved in their methanol project. So all these projects are there, we have been involved. So you can see that the changes are happening.

We earlier had done a few hydrogen, one hydrogen plant for the BORL as well as for Adani's we had done hydrogen pipeline. So all these areas we are focusi ng and for your information in last year's business we had con tributed around 8% from the new areas. The energy transition areas which included coal gasifi cation, hydrogen and all other areas and 63 crores was the business which had come from this area which included biomass, bamboos, polysilicon, bio ETF. All these areas were there, the new areas. We are keeping a special focus on that separately.

Raj Rishi: And sir, from this 8% which you talked about from new age area s last year, in 2-3 years, what kind of percentage contribution would you just hazard a guess?

Amanpreet Chopra: See, what we meant to say that, during the last financial year, the revenue that was generated from the energy transition jobs w as around INR63 crores. So out of the revenue that we earned,

INR63 crores from energy transi tion was, around 5% of the consu lting job and the similar jobs, we are getting continuously in th is financial year, if we get t hem definitely, this particular proportion is going to r ise substantially.

Another aspect that, we have cov ered that, you have seen in our disclosures also that, we have entered into a strategic alliance with Solar CSP group, that’s an Australian group. So would be signing an MOU shortly with them, and we'll be kicking up this solar CSP projects in various segments in India and ove rseas along with them.

Raj Rishi: And how big can this tie-up be f or you for Engineers India?

Amanpreet Chopra: See, if we see that the Solar CS P particular module, if you see , then around 35% of the total project cost is for a balance of plant for which services will be provided by EIL.

Raj Rishi: Okay. So it can be a major contributor to your revenues?

Amanpreet Chopra: This is an evolving technology. So the very niche technology is evolving. So we have to pitch this particular trend along with the technology providers with our clients because everybody is moving towards net zero and carb on neutrality. So, this particu lar new technologies are going to come in future as one of the pathways to the energy transition. So having the right methodology, having the right approach to pitching to the clients will defin itely -- we can able to secure some projects in this area.

Raj Rishi: And you foresee more such tie-ups in other areas in energy tran sition, like the one you recently...

Amanpreet Chopra: There are a few that are going on, but it's not the right time to declare them. So as and when they are getting mature, we will definitely let you know.

Raj Rishi: And sir, another -- just one more point. This -- you talked abo ut some defence foray also. Is there any movement in that regard?

Sanjay Jindal: We are working with one of the companies for their modernizatio n projects. These are still in the initial stages and let us s ee if it finalizes, we will decl are it, but we are working on that.

Raj Rishi: Okay. Thanks a lot.

Mode

rator: Thank you. The next question is from the line of Dixit Doshi from Whitesto ne Financial. Please go ahead.

Dixit Doshi: Thanks for the opportunity. My first question is, if you can give a broad timeline for the current order book execution, both consultancy and turn key?

Amanpreet Chopra: Yes, between the period of three years, 3.5 years.

Vartika Shukla: Generally, a project took 36 to 42 months for the completion fr om the date of LOI, for the mega projects, mega and big-sized projects.

Dixit Doshi: Okay. Now my second question was regarding -- so let's say, so I wanted to understand the opportunity size of, let's say, a ll the OMCs are raising funds, right issue and planning a big capex over the next two years, three yea rs, be it petchem or hydrogen or any new age businesses. So according to your estimate, what would be the opportunity size for Engineers India? And let's say, what kind of success rate, w e can have in terms of order?

Sanjay Jindal: There are a number of projects which are on the anvil and there are a lot of investments as you have already said, we are targeting all of them, and there is d efinitely a competition, and we have been striving to work out and hav e been able to secure many of the assignments.

Many of the projects, we are a lready involved in the initial st ages as the consultant, as the feasibility consultant or study consultant. So we are working t owards them. So saying that, what would be the success, it depends on the market and how it is go ing to work and how many builders are going to be. Some of them, we can even realize on a negotiated basis. It all depends. We always work in various methodologies. So nothing can be conc rete said that, this means how much we can secure and what percentage will be the success rate . So that would be the, we'll have the target all the projects , and we'll definitely be able to secure many of them. You could have seen the results earlier also and the improvement in the r esults. So, we are adopting a regressive strategy on this.

Amanpreet Chopra: But we can say that the opportuni ty size is quite significant, yes.
Dixit Doshi: So let's say, it's not the succe ss rate, let's see if some -- l et's say, INR50,000 crores of capex happens in petchem or somewhere, then how much could be the opp ortunity for Engineers India?
Sanjay Jindal: Any of the petchem the number of petchem are there. Most of the petchem starts from INR25,000 crores to INR40,000 crores, INR50,000 crores. So you can see four or five projects coming on the way. These are the m ega investments in the petche m and primarily , it is going to be in the petchem only. Refinery could be there, some investmen t could be there in the refinery. But mostly, it would be either pet chems or crude to chemicals.
Dixit Doshi: Okay. So yes, so what I was as king is, let's say, INR25,000 cro res of petchem capex happens, then how much would be opportunity for us in turnkey and how mu ch opportunity in consultancy?
Sanjay Jindal: We are very specific in the turnkey. We don't go for all these projects on a turnkey basis, primarily, we focus on the cons ultancy. Turnkey, we generally g row on the OB basis, and that's a specific area. It all depends, where we can negotiate the OB contracts. So this is the opportunity, I can see telling you at this stage, it will be ve ry difficult. Three four projects coming this years…
Dixit Doshi: What I was asking, say out of INR25,000 crores of capex, consul tancy opportunity would be, what, 20% of that entire...?
Sanjay Jindal: No, not at all. It is for this ki nd of project, it would be 2% to 3%.

Dixit Doshi: 2% to 3% understand that. Okay.
Sanjay Jindal: It's a competition. You never know what market you are going to .
Dixit Doshi: Okay, Understood. Thank you.
Moderator: Thank you. The nex

t question is from the line of Anik Mitra from Finarthaa Research. Please go ahead.
Anik Mitra: Thanks for taking my question. Sir, my first question is, what is the order expectation from ONGC in FY '24 and FY '25?
Sanjay Jindal: We cannot tell you on that ground . We are targeting a few of th e projects. What is the target? It depends what projects we are going to have. We are bidding, wha tever the business which is coming from them, we will be targeting. Specific target giving target for ONGC is very difficult. It's a competitive world altogether.
And since we have the MOU with ONGC, so whatever is their plann ing, we will keep getting something or other assignments t o that through. Some smaller as signments keep on coming on a real basis. So we have already started and some more will con tinue to flow in, in our kitty.
Anik Mitra: Okay, sir. Sir, my next question is hydrogen gas opportunity so unds to be a big opportunity going forward. So sir, can you q uantify, what sort of hydrogen opportunity, we can like may be possible in upcoming maybe two years, three years?
Sanjay Jindal: That's very difficult to say be cause the hydrogen thing is stil l evolving. It has not matured so far. So there are a lot of developments happening. So it all depends on the time, we can't quantify right now, give our biggest oppo rtunity. So this definitely is a emerging area and a lot of work is being done by many companies i n this area. So in the years t o come, things are going to emerge clearly, and then we will -- we see a big market in that area a lso.
Anik Mitra: Okay. And sir, so far, what amount of order has been booked by Engineers India in this particular segment, hydrogen gas? Green hydrogen.
Amanpreet Chopra: Green hydrogen, there earlier also, we did assignments for GAIL . And currently, we are doing an assignment for BORL for the electrolyzer implementation in t heir refinery. And there are certain other segments in the green hydrogen part because see g reen hydrogen is not a very different thing from what we do.
Yes, in the last 35, 40 years of working in the refinery sector , we are very well aware of that hydrogen part. So, it is just the renewables that are feeding t he hydrogen that we are going to take up the process plant. So we have very well positioned ours elves in this area. But technically, we know what goes into it.
So you see the competitiveness, I think EIL has a very good com petitive advantage in this particular area because we are very well connected with our ref ineries, we know the process flows and how this hydrogen is going to be generated and how it 's going to be used. So, we stand

a good chance, and we are in a good position to leverage our pa st experience in this particular

area.
Anik Mitra: Okay, sir. And my final question is, sir, what was the revenue from the airport division in Q1 FY '24?
Vartika Shukla: From which division?
Sanjay Jindal: Division means we have two busin ess segments. One is consultanc y, engineering and consultancy in...
Amanpreet Chopra: Right now, we don't have the fi gure for that particular airport , that is part of the consultancy segment.
Sanjay Jindal: Part of the infrastructure business, and it is a few assignment s, we are doing. There is no specific segregation for the airport segm ent. It's considered as part of infrastructure segment.
Anik Mitra: Thank you. Okay, sir.
Moderator: Thank you. The next question is from the line of Venkatesh Subr amanian from Logictree. Please go ahead.
Venkatesh Subramanian: Sir, Thank you for the opportunity. Sir, I just wanted to chec k with you on the Ramagundam f e r t i l i z e r p r o j e c t , w h e r e w e i n v e s t e d s o m e f u n d s . H o w i s t h e p r oject doing? Is it making operating profit, sir, at the moment?
Sanjay Jindal: Yes. As I have already told in th is quarter, EIL has 26% share,

and we had a profit of INR22.49
crores in comparison to INR13.85 crores in the first quarter an d in the first quarter of preceding financial year. So plant is already operating at 100% capacity and doing well.
Venkatesh Subramanian: Right, sir. So second question is on operating margins. So just looking at the last few years of the thing. And our -- in terms of revenue to operating margins, we are at about 9%, 10% now.
Do you see a scope for improveme nt here over the next few years ?
Sanjay Jindal: Definitely, we are trying to imp rove our operating margins also . And if you see, we have already a segment margin of 25% in the consultancy segment, and we are able to retain it. But we are trying hard to increase our EPC m argins, so that our operating margin could move further.
Venkatesh Subramanian: Okay, sir. And the latest joint venture with concentrated solar , what is the size of the opportunities there? What does is that intent, how big can this be?
Amanpreet Chopra: First of all, it's not a joint venture. It's a strategic allian ce that we have entered into. Clearly, we are in the solar CSP would be providing the patented technology and EIL will be doing the engineering and project manageme nt services for the balance of plant. So it's a static alliance.
It's not a joint venture. In terms of the opportunities, see th at like I said earlier that because everybody wants a renewable to be part of their portfolio.

So going forward, we are – Board have just approved that partic ular strategic alliance. So, we are in the process of mapping all the industries, right from oi l and gas industry and other sectors.
And as part of the strategic alliance, we got some exclusive te rritorial rights and sectoral rights from the technology partner.
So, like in India, for all the oil and gas sectors, EIL will be the partner. It's exclusively they will come to EIL. And similar thing that we have secured the exclusi ve right for other sectors as well.
So right now we are started mappi ng all the sectors and prima f acie it looks that it offers a huge opportunity not only in oil and g as but in other economic secto rs as well
Venkatesh Subramanian: Okay. Great. And this polysilicon opportunity, I know that we a re executing a project for the Adani Group and a lot of news on semiconductors, fabs, a lot of things being set up in the country today. So would we have a chance to participate in some of thes e projects?
Amanpreet Chopra: So not at this juncture, but we are definitely studying all the se opportunities as part of our research and development and technical group. So as and when, a nd we are at a very initial stage of studying these opportunities. A nd definitely, if something c omes up, it will definitely be a part of this particular evolving sector as well.
Venkatesh Subramanian: Sir. My last question is on the financials. Compared with last quarter of last year, we obviously have shown a higher revenue, but a lot of contribution from the other income side. How does the -- where does it co me from, so the money, the other income, basically?
Sanjay Jindal: Sir, as already told in my earlier statement, we have done sett lement with one of the clients, and this total settlement was about INR71 crores. And out of that, INR55 crores is towards seeing interest on the claim side and balance 16% has gone to consulta ncy business segment.
Moderator: The next question is from the li ne of Bajrang Bafna from Sunidh i Securities.
Bajrang Bafna: Sir, congrats for a good set of numbers. Sir, just if you could guide us, I have joined a little bit late, so pardon me if my question is repetitive. If we see the consultancy part, which is the major margin driver for the company , we have an order book of close t o INR4,000 crores.
So how do you see that order book kind of intake in FY '24 and '25 because there are a lot of opportunities

which are coming up with a lot of participants ha ve already asked about hydrogen
and all and the new energy segment. And the execution also we h ave done close to, I think,
INR1,400 crores kind of revenue and consultancy. So both on the order intake side and the
execution side maybe for FY '24 and FY '25 will be really helpf ul, sir?
Sanjay Jindal: This is like you must have seen that last year, we had the orde r book of INR9080 crores. We are
definitely going to either achieve that or improve upon that. T hat is the target for order book
position. With respect to the orde r inflow, it was around INR4, 400 last year, INR4,500. We try
to meet that and we'll try to secure more than that.
Amanpreet Chopra: We are targeting around INR4,000 c rores in this financial year also, more than that...
Bajrang Bafna: Yes. On the consultancy si de, sir, this INR,000 crores?

Amanpreet Chopra: This is overall -- this is overall.
Bajrang Bafna: Yes. So if you could just give us some sense on t he consultancy side will be helpful, sir?
Sanjay Jindal: The ratio will remain the same ratios are available. It's norma lly 50-50, it's almost 40 to 43 50.
It remains in th is range only.
Amanpreet Chopra: Now we'll be targeting between IN R1,500 crores to INR2,000 cror es, minimum there.
Bajrang Bafna: Got it, sir. And the growth on th e execution side on the consul tancy book?
Amanpreet Chopra: We are expecting a total growth o f between 5% to 10% in the nex t financial year.
Moderator: The next question is from the li ne of Arvind Joshi from Bataleu r Advisors.
Arvind Joshi: I had a very specific question on potential in coal bed methane . Hydrogen you just explained
and we were delighted to hear that this is what you have been d oing all along. So it is a kickoff
for you. So with the increasing emphasis on the energy security of the government, I am
reasonably certain that you will be getting your fair share of hydrogen.
Any other newer initiatives? Eve n coal bed methane, I'm going t o understand with your skills
and perhaps one other project under your bag. What are the pros pects of getting the other projects
of coal-bed methane and what can be the potential size of this? My question, the first question
is this.
Amanpreet Chopra: So one project that we are exe cuting on Neyveli Lignite is coal to ethanol. That means converting
coal into value-added chemicals. And that sort of projects, tha t is the first project that we are
doing and we are expecting the si milar type of projects from th e other clients as well.
Regarding the coal bed methane, so you are talking about coal b ed methane specifically. So that
is a, right now it is a very high capex intensive area where th ere's still a lot of research and
development efforts are required because it again depends on th e quality of the coal that is going
into that particular convergent t o gas. So being a capital inte nsive and being a research oriented
area right now the clients are looking at it but at a very init ial stage.
So EIL definitely is well positioned to be part of this particu lar CDM initiative and in case the
future this type of open shell linkage arises then we will be h appy to take it up.
Sanjay Jindal: Right now we are focusing more on a very promising opportunity work what Amanpreet had
said, that the coal to ethanol and methanol derivatives which d irectly opens up scope for many
petrochemical feedstocks. So, a lot of work has been done with one of the clients and we foresee
that many more such projec ts will be coming to us.
Arvind Joshi: Okay. And what shall be the time frame for this?
Amanpreet Chopra: So right now, one project, as you are aware, we are executing. The rest of the projects, it's at a
very different stage of their initial life cycle. So some are a t a very discussion stage and some
are at a very preliminary feasibility stage. So once those par

t icular things will be formed up like

on a feasibility path, then the d ecision will be taken by the c lient to implement those projects.
So right now it's at a very initial stage to say as so.
Arvind Joshi: Okay. And in case of a related question is the overall size of the coal-related energy, the thing
which you could be executing or which is available as the oppor tunity size? Can you throw some
light on that?
Sanjay Jindal: You can't exactly can...
Arvind Joshi: Very roughly.
Sanjay Jindal: Yes, I can say is that it is a huge potential exist only that o nce this the project, what we are doing
is comes into a real success story. There will be a chain of su ch projects. But we cannot right
now quantify how much opportunity sizes there.
Arvind Joshi: Is that the point? And huge would be the size of your current o rder book?
Sanjay Jindal: No, no, not this potential becau se you know India has abundance of all available. And

considering that the Ministry of Environment and Concerns for t he environmental pollution etcetera people are trying to fin d out the better use of the co al. So the project what we are doing actually opens up an opportunity to really convert it meaningfu lly into more value added projects instead of really generating more pollution. So that creates a big success, I mean, can open up a very big success story for us.
Arvind Joshi: And I'm really delighted to hear about that, both in terms of e nvironmental benefits and the potential. And a very simple question is, recently, Mr. Puri ha s been -- has talked about revival of West Coast refinery . Any update on that?
Sanjay Jindal: With regard to the refinery, nothing much has been heard as of now. We are involved in that in the site selections as a consultant. We are still there. But we have not seen anything coming as of now. Let's see, it must have flown from the government side, b u t i t w i l l t a k e s o m e t i m e because they will have to find the investments in all and then realize because it's been going on for a long time.
Arvind Joshi: I know. And then just a related question . He's also talking about the s maller refineries -- instead of mega ones, but several of th em. So you would be as monopolis tic in executing them? Or will it be only restricted f or the large ones?
Sanjay Jindal: We are a consultant, we would like to go for any kind of projec ts, the small size, bigger size anywhere we would like to be involved. There are no restriction s, we don't work on the restrictions, we don't have res trictions for that. You know tha t we do smaller jobs also, we do mega jobs also. All kinds of jobs are in our portfolio. For exa mple, right now we are doing one of the smallest refinery in Mongolia, which is only 1.5 million people. So we have no restriction or no such issues in executing.

Arvind Joshi: No, no, and in this case, together they constitute a very signi ficant, it's a very smart thing that instead of really getting involved with one and so many other h azardous land acquisition to all other clearances, if you go for the smaller ones, perhaps the e xecution is faster.
Sanjay Jindal: Yes. Absolutely right…
Arvind Joshi: We hold you as our leading Navratna company and truly believe that you would be path breaking. It is very heartening to hear that hydrogen is like t he peak of steel. Wonderful.
Moderator: Thank you. The next question is from the line Amit Anwani from Prabhudas Lilladher. Please go ahead.
Amit Anwani: Hi, sir. Thanks for taking my question. So, my question, again , is on hydrogen. So, you have already highlighted your progress on hydrogen side, but would l ike to be -- to understand more specific what exactly our scope of work will be, will be consul ting, will it be turnkey, are we planning to explore the electrol yzer manufacturing

also or are we trying to a technology tie-up
since this is pretty initial stage in India on green hydrogen a nd so many companies are exploring technological tie-ups. And how we are exploring with respect to progress, are we going to see meaningful contribution in FY'25 FY'26 if you could highlight m ore on this?
Sanjay Jindal: First is with respect to the role of EIL, we are very clear th at we would only be working on -- this is just a new area. We'll be working only as a consultant. Right now, we are doing various studies on this, and we are also involved in the implementation of few of the projects, which is not directly hydrogen. It has ba sically you read the green ammo nia UDIs, these kind of are there [inaudible 0:37:33] hydrogen is a lso used for the green resourc es. So, these kind of projects will be involved as a cons ultant. So, this is t he opportunity we see .
Amanpreet Chopra: And in fact, we would like to be associated in every section o f the hydrogen utilization in protection, whether it's the balance of the plant or whether it is the hydro generation or the applicability of the green hydro gen into the refinery or any ot her sector. So, considering our engineering strength and past exp erience, as my colleague has a lready told you, we have already positioned ourselves to really giv e the consultanc y in all sect ions, except for the hydrogen manufacturing, hydrolyzer manuf acturing, what you told, we have not still t hought about it.
Amit Anwani: Right, so if any projects comes in, our role right now would be consulting, so maybe we will be earning maybe 2%, 3% is my understanding, right?
Amanpreet Chopra: No, we can't say that.
Management: Right now we are not able to qua ntify that basically depending on the opportunity, depending on the size of the project, we'll be able to arrive at that poi nt of time.
Vartika Shukla: Number of times, it happens tha t in what mode of execution cli ents goes for that project. So, that also defines how much percentage of revenue will be getting fro m that. So, as these things are in a very preliminary stage, but as opportunities [inaudible 0: 38:54] come, not only in the process plant and in other standalone also, so we'll be taking up those opportunities in any mode of execution that are preferable to the plant.

Amit Anwani: All right. Sir, second question on margins, we did about 2% and 27% Turnkey and consulting. Any outlook for FY'24? Are we looking forward to improve furthe r or will it remain the similar rate?
Sanjay Jindal: We are already maintaining our segment in the consultancy segm ent that is about 25% to 27%. And definitely, we are working with our clients for the issue o f change orders to improve our profit segment in the EPC business segment because some of the change orders are under process with our clients, and we are working hard on that part to impro ve our margin in this segment. And we are definitely -- we are sure that we will get the chang e order from our clients.
Amit Anwani: Right. Sir, my last question on the order intake. We announced around INR1,265, but if we add the orders announced by the company from June first week, the t otal comes to more than 3,000. Would you like to clarify on that?
Sanjay Jindal: We could not get your question what actually you are asking?
Amit Anwani: I think that my order intake which is announced is around INR1, 265 and our BSE filing starting from June which I checked my total was coming to more than INR3 ,000 crores for order intake. So, as of now what we are sittin g today it is around 2200. Some of the projects more are in the process. 2200 have been booked. And then you suggested that 180 0 to 2000 more can come in H2
Sanjay Jindal: So, as of now what we are sitting today it is around 2,200. So me of the projects more are in the process. 2,200 have been booked as of today.
Amit

Anwani: And then you suggested that 1,80 0 to 2,000 more can come in H2?
Sanjay Jindal: It has been realized, which was shown earlier has been now rea lized. So, now a little amount more is there. So, as of now it is 2,200 and some more some mor e orders would be in the advanced stage of like awarded. So, we will be considering that value later on. So as of now you can consider it's INR2,200 whic h is booked in the business.
Amit Anwani: Okay. Thank you sir. All the best.
Moderator: Thank you. The next question is from the line of Bharat Jain f rom ICICI Securities. Please go ahead. Mr. Jain you may please go ahead with your question. As there is no response from the current participant. We take the next question from the line of Saket Kapoor from Kapoor and Company. Please go ahead.
Saket Kapoor: Thank you for this opportunity. Sir, if we net off the other i ncome component for this quarter, which was the settlement part, so our margins were lower. So, w as there any one-off item or any increase in provision that we do systematically as a prudent wa y, what has led to then the lower margins is the net of the other income that is not going to be a -- it's a non-recurring item?
Amanpreet Chopra: No, no, margins are more in comparison to the June quarter, Jun e 22 quarter. In the June 22 quarter, the margin was 5.1% and now we are operating margin of 7.4%. So, there is a substantial increase in the margin in comparison to the June 22 quarter. Re garding the March 23 quarter,

we had a settlement with one of our clients and that had contri buted to the additional margins in the March 23 quarter.
Saket Kapoor: If we take the net off of other income also if you take the Ju ne versus June, there is also in the line item other expenses. Last y ear in the June '22, it was INR 91 crores and here we are at INR57 crores with almost the same top line. So what...
Amanpreet Chopra: No, no, no. Operating margin is sales minus cost. So, during t he current quarter the operating margin is INR59.97 crores. During the June 22 quarter it was IN R40.79 crores.
Saket Kapoor: Come again... If you can...
Amanpreet Chopra: During the June 22 quarter, we have the operating margin of 5. 1% in the absolute term, it was INR40.8 crores.
Saket Kapoor: Sir, but when we are comparing your revenue in both the segmen ts, consultancy as well as turnkey projects on a year-on-y ear basis, they are almost at th e similar level. But the other expenses line item has changed si gnificantly. We have expenses of INR91 crores for June '22 and for June '23 to INR57 crores . So what led to this reduction in the…
Amanpreet Chopra: You are talking about the expenditure basically.
Saket Kapoor: Yes, sir. The other expenses, I think to that other expenses i s the one that has led to the [inaudible 0:44:32]
Amanpreet Chopra: Basically, we had certain write-back during the current quarte r. That has basically gave to the reduction in the expenditure that is the part and parcel of the operating activity. In every quarter, there are certain write back. In one quarter, there may be more write-back and another there may

be lesser write back. So, going forward, we are expecting that we'll be able to maintain these margins.
Saket Kapoor: So can you quantify the number, sir? How much has been the wri te-back?
Amanpreet Chopra: Right now, I don't have the figure, write-back. It's a part an d portion of every quarter, in some quarter it may be more in other it may be less.
Saket Kapoor: Okay. So sir, we have investment in two other verticals on fer tilizers as well as in the refinery. So fertilizer segment, you have said the contribution has been INR22 crores. How has the Numaligarh refinery contributed sir? How are the operations the re?
Sanjay Jindal: Sir, from the Numaligarh refinery, we are receiving dividends, and the dividend is also being counted

in the other income part. And in the first quarter, the re is no such dividend is declared by the NRL. And in the last year , we got the dividend of about INR55 crores on the investment of INR700 crores. So, it was more than 7.5%, which was tax-free also. Not tax fee, but it was in the hands of EIL it was tax free.

Saket Kapoor: And sir, any listing program for Numaligarh refinery going ahe ad unlocking the value or it will remain in the unlisted space also for the fertilizers and sir i n order to unlock the right value or to divest your stake because EIL i s a strategic partner here?
Amanpreet Chopra: Right now fertilizer plant is at initial stage. So, we will be able to capitalize the maximum opportunity and at the right time, the decision will be taken. Right now, there is no such thought.
Saket Kapoor: Thank you sir once again for answering.
Moderator: Thank you. The next question is from the line of Pritesh Chhed a from Lucky Investment Managers. Please go ahead.
Pritesh Chheda: Sir, what would be your market share in the refining and the m arketing company, capital expenditure that would have been i ncurred in the last 6 years, 7 years, any ballpark market share that you would have a number?
Sanjay Jindal: We cannot tell you on the market share, but our major contribu tion of our business comes from the hydrocarbon. So, you can see t hat whatever business we get, most of the like hydrocarbon has a good contribution [inaudible 0:47:16]
Pritesh Chheda: So that I understand. In the refining companies, capex that we have done, HB BP, Oil India ONGC whatever what would be our s hare of -- what would be your market share there in the engineering port?
Sanjay Jindal: That we can say that we'll try to get the maximum from that.
Pritesh Chheda: Okay. Okay. And any change in the competitive landscape in the past 7 years, 8 years, any new players would have come an d bid for those projects?
Sanjay Jindal: Yeah, competition has been there. You can see that we have -- there are many companies are there in the fray. So, we have been competing now and we have b een getting business out of it. And in the past, you would have noticed that we have maintained our position as a major player in that area. So we will like to continue our position in that. That's our key strength area.
Pritesh Chheda: And my last question is, sir, in terms of the project pipeline from these companies. What you see in the next two years, three years, how big it is versus th e last past five years that you have seen. So in past five years, you have seen a pipeline of, let's say, INR100 worth of projects. This next three years, do you see wh at is it 150, 200, 250, 300, if you could share a number.
Amanpreet Chopra: If you look at in a very different perspective, the Government of India has the target of increasing the refinery capacity from the current level to 430 MMTPA. So t hat is the maximum refinery capacity that would be added in th e times to come. So in a five years to seven years around 180 MMTPA to 190 MMTPA of refinery capacity is being added. So that 's a huge amount of business opportunities that is avai lable in coming four years t o five years for us.
Pritesh Chheda: So you're saying 150 million t ons to 170 million tons in the ne xt five years to six years.
Amanpreet Chopra:` That's the Government of I ndia is planning to do.

Pritesh Chheda: Can you tell me what this numbe r was in the past five years?
Sanjay Jindal: You can see it on the Government of India's MoPNG website, it's available. So what investments and what is their future plans . I do not have right away at thi s point of time
Pritesh Chheda: Okay. Thank you very much, sir. Thank you.
Moderator: Thank you. The next question is from the line of Viraj from Jup iter Financial. P lease go ahead.
Vir

aj: Yeah, good afternoon, sir, and congratulations on good sort of numbers. I have only one question. When I look at your 10 years data, sir, in March '12, you had the operating margin of 19%. Now with so many opportunities coming, we are diversifying . Can you give, will you be able to reach those operating margins in the next two, three, f our years? Do you th ink that? Is it possible to reach those numbers?
Amanpreet Chopra: Yes. At that point of time, basically, over a period of time, t here has been a substantial increase in the cost, and there is a com petition over a period of time. At that point of time, we were doing the process plants where the margins are very much in compariso n to the margin what we are getting. So over a period of time, a lot of water has flown. So going forward, we will try to maximize the margin. But I cannot say that we'll be able to ach ieve a margin of 20%. But definitely, we'll try to impr ove our margin going forward.
Viraj: And sir, how would you look -- how should I look Engineers Indi a three years from now in terms of growth and net margin?
Amanpreet Chopra: Definitely, improveme nt whatever we are doing right now, defini tely, there will be improvement. We have the vision to execute that particular thin k. Going forward, definitely, we see the improvement in our turn over as well as our margins.
Viraj: And you would have seen -- any b allpark number you can just say , this not to hold on to.
Amanpreet Chopra: That depends on the order book basically, on how much order we get and accordingly the orders are executed and profit is gene rated. So right now, I cannot gi ve the projection for the next three years to four years. We are havi ng basically a projection for a round one year that we are told that we are expecting an increase in the turnover of between 5% to 10%. Going forward whatever opportunity has been captured that will be reflect ed in the mar gins. We are working on that and definitely will be -- will succeed with the grace of the God.
Sanjay Jindal: And you would have noticed that we have increased our share of getting the international market. Many projects have been won in the past few months. So we are t rying to maintain our larger business in the international market so that will earn us more revenue and business in future. Besides whatever is…
Viraj: Is it fair to assume a top line of INR4,000 crores in FY -- nex t year FY, is it possible to achieve?
Sanjay Jindal: In the next year we are targeting around 10% or turnover may be 3,500 to3,600. And they are coming in this year.

Viraj: And in the -- try to assume that net margins, margins would be improving right? from more than 10%.
Sanjay Jindal: Sir, we are trying for that and we are working on that. And we are finalize in order for the clients to maintain and impr ove our margins, sir.
Viraj: Thank you and all the best t o you, sir. All the very best.
Sanjay Jindal: Thank you.
Moderator: Thank you. The next question is from the line of Bharat Jain from ICICI Se curities. Please go ahead.
Bharat Jain: Sir, can you give us an update on our gold gasification projec ts, specifically the one we are doing for NLC and Western coal, please?
Sanjay Jindal: The NLC 1 is still in the tendering process. I believe they are evaluating their bids. Some of the bids have been received. So that is a decision to be taken by N LC and thereafter, they will go for the second phase of implementation regarding the WCL study is almost in the process. I do not have the exact details of ri ght now what is going on. This is the broad dates I've got it a few days ago. So we can check and always update you on this.
Bharat Jain: Okay, sir. And what is the status of the Adani project, the pol ysilicon plant?
Sanjay Jindal: That is -- I think it's been put on hold for some time from the ir side. Let us see when they start.

Moderator: Thank you. The next question is from the line of Dixit Doshi fr om Whitestone Financial. Please go ahead.
Dixit Doshi: Sir, one question is out of the INR8,100 crores order book, how much would be export? International orders?
Sanjay Jindal: Out of INR8,100 crores, we have foreign consultancy job of INR1 ,587 crores. Near about INR1,600 crores order book is from the foreign territory.
Dixit Doshi: Okay. And how do you see the e xport market going forward? Are a ny big orders or anything in the pipeline?
Sanjay Jindal: With respect to the overseas, we are targeting overseas. We are expanding our overseas operations, and the last year you would have seen that we had g ot one of the projects in South America. This year, we had bought the job in Nigeria. Last year , basically, we got the job in Nigeria. We got the second train of that, we are targeting some more of the projects, Pet-chem projects, which is coming in Nigeria. We are targeting some of the projects in Algeria also. We are in one of the projects w e have already got the prelimina ry letter of award. So we see that the contract signing in few of the next few days and then we wi ll be officially declaring that and

then we see more projects in Algeria also. We are bidding for t hem. So these are few of the

countries we are targeting few c ountries in Africa. So that way we are expanding our global outreach. And the Middl e East, yes, would like to, Saxenaji wou ld like to update . Yes, please.

Sunil Saxena: So Middle East, we have already made our good progress in gett ing the projects and we are targeting to enhance, not in terms of getting the major project s there, but also to increase our outreach to many other Middle East countries. So efforts are on , we likely, we like to see more success rate there also.

Moderator: Thank you. The next question is from the line of Hiten Boricha from Sequent Investments. Please go ahead.

Hiten Boricha: First, I just missed the number you have given to the earlier participant. You mentioned currently, the capacity of the pe tro-chem is 430 MT. And we are like -- the industry is adding 150 MT to 170 MT in refinery, is that correct?

Amanpreet Chopra: That's the refinery capacity addition plans that government has put up and that's the plan right now.

Hiten Boricha: And what is the current capacity, sir? You mentioned somewhere around 400?

Amanpreet Chopra: No, no, no.

Sanjay Jindal: It is around 250 something. Around 250 MMTPA in next 10 years, likely to, it is likely to increase to 450 metric ton. That is what government target is.

Hiten Boricha: Okay. Thank you. And sir, I have one question. Just wanted to u nderstand as this capex cycle is going on, you mentioned the petro-chem and the refinery, the go vernment is ready, like, going to spend on this capex. Just want to understand when was this c apex cycle happened? Like, a couple of years back. Just want to understand if you can give t he year, after how many years this capex cycle is coming? I just wanted to understand that data.

Amanpreet Chopra: Sir, the capex cycle, if you see, every company has got their o wn annual and long -- short term and long term capex plans. So, on a yearly basis, they have the ir own capex plan which includes the capex in their existing projects also and for the future pr ojects also. So this is a continuous process for each and every process company that we deal with. S o going forward in next five to seven years, both in the hydrocarbon and both in the refinery a nd petrochemicals, they have their own set of plans which they are going to execute in that partic ular phase in next five to seven years. So that's what we are talking about.

Hiten Boricha: So let me reframe my question. I want to understand what is the difference between the last capex cycle which has happened and this capex cycle which is ha ppening?

Amanpreet

Chopra: See, the cycle if you want to say that starting from the feasib ility to the initialization of the project and to the execution of the project, it's around four y ears to five years that it's going to take.

Hiten Boricha: Okay. So you mean to say, this capex as the industry comes ever y four to five to seven years?

Amanpreet Chopra: It's a cyclic thing. See, some of the projects are already feas ibility being done and it's going to be on execution phase. For some o f the projects, the feasibilit y is under process. So it's a -- every project life cycle is at a diffe rent stage of project life cycl e.

Sanjay Jindal: So it depends on company-to-compa ny and their investments. Like many of the projects which are under execution, their capex cycle started earlier because they must have started two years, three years ago. So now they are in the process of execution. S o this is a cycle because initial study would be prepared, they will go for their board approval and they will take the investment decision and then they go for execution. Any execution will tak e 40 months to 45 months, 46 months depending on the size of the project. So it takes around four years to five years. That's what we are talking about.

Hiten Boricha: Understood. Yeah. Thank you.

Moderator: Thank you. The next question is from the line of Pritesh Chheda from Lucky Investment. Please go ahead.

Pritesh Chheda: Sir, I have one more question. From the free cash flow that yo u generate, would you continue to do these equity investments in the se projects just like you did in Numaligarh or one of the fertilizer projects?

Sanjay Jindal: As of date, we do not have any such proposal for further invest ment. Right now, we have received a right issue from the NRL, except that we do not have any such proposal for the investment.

Pritesh Chheda: But if you get a proposal, what i s usually the benchmark for in vestment or would you continue to divert this capital, the cash flow that you get in all these equities?
Sanjay Jindal: As on date, no such cap ital is under consideration by managemen t.
Pritesh Chheda: So it's as on date, right? It is not a stated process, stated p rocedure that you will not invest, right? If it comes on your table, you will invest.
Amanpreet Chopra: See, that statement we cannot m ake, it depends on the opportuni ty, in case the opportunity is very good, definitely will be going for that. But we have not - - as of date, we don't have any an upfront plan. So going forward, in case opportunity comes, we'l l review that -- management will review that and accordingly, decision will be taken.
Pritesh Chheda: But any earmarks like, whatever PAT you generate x-percent, y ou will pay out to minority y-percent, you will use for such projects, z-percent, you will ke ep it in cash any such process you have put in place or it's arbitrary?
Management: No, no, we don't have any policy like that basically, it depend s on the...
Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I would now like to hand the conference back to the management for closing comments.

Sanjay Jindal: Yeah. First, we would like to thank you everyone for participat ing in this. And we see that you m u s t h a v e s e e n t h e p e r f o r m a n c e h a s i m p r o v e d . A n d w e a r e w o r k i n g towards it and it will definitely improve further. In t he next calls, you will see tha t what all we are doing and the future results will show our efforts which we are doing. So we really thank everyone for this. Thank you very much.
Moderator: Thank you. On behalf of DAM Capital Advisors, we conclude today 's conference. Thank you for joining. You may now disconnect your lines.

MODERATOR : MS. BHOOMIKA NAIR – DAM CAPITAL

Moderator: Ladies and gentlemen, good day and welcome to the Engineers India Limited Q2 FY24 Earnings Conference Call hosted by DAM Capital Advisors Limited. As a reminder, all participant lines will be in the lesson only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Ms. Bhoomika Nair from DAM Capital. Thank you and over to you, ma'am.
Bhoomika Nair: Yes, good afternoon everyone and a warm welcome to Engineers India Q2 FY24 Earnings Call. We have the management today being represented by Mr. Sanjay Jindal, Director Finance, Mr. Suvendu Pad hi, Company Secretary and Investor Relations, Mr. R .P. Batra, Executive Director Finance and Accounts and Investor Relations, Mr. Sunil Saxena, Executive Director Technical and Investor Relations, Mr. Amanpreet Singh Chopra, Senior General Manager, CMD Office and IR, Mr. Vivek M idha, General Manager, Marketing BD and IR, Ms. Sne ha Narula, Senior Manager, Company Secretary and IR.
I'll now hand over the floor to Mr. Jindal for his initial remarks post which we'll open up the floor for Q&A. Over to you, sir.
Sanjay Jindal: Thank you, Ms. Bhoom ika. Good afternoon, everybody , a warm welcome to E IL's Earnings Call of Q2 of FY23 -24. We have declared results of quarter and half year ended September 2023 on 9th November 2023. As regard to financial performance for the quarter ended September 23, the company has registered turnover of INR777 crores vis-à-vis INR808 crores during first quarter of FY23 -24 and for the half year ended 30th September 2023.
The company has registered turnover of INR1586 crores vis-à-vis Rs.1 ,587 crores in the first half of the preceding financial year. Turnover from consultancy and engineering segment stood at INR361 crores and from the turnkey segment at INR416 crores during the quarter ended September 2023 and turnover from the consultancy and engineering segment stood at INR707 crores and from the turnkey segment at INR879 crores during the half year ended 30th September 2023. Other income during the half year ended September 2023 is INR139 crores as compared to INR94 crores during half year ended o f the preceding financial year.
During the half year ended, the company has recorded profit before tax of INR286 crores and profit after tax of INR216 crores in comparison to INR170 crores and INR136 crores respectively during the half year ended of the preceding financial year, showing an inc rease of 68% in PBT and 59% in P AT.
Notably, EPS for the half year ended September 2023 is INR3.84 vis -à-vis half year ended September 2023 is INR2.41. The company has order book of worth INR8,188 crores comprising under consultancy segment of INR4853 crores and under LSTK segment of INR3335 crores .
Now it is up to you ms. Bhoomika?

Moderator: The first question is from the line of Amit Anwani from Prabhudas Leeladhar. Please go ahead.

Amit Anwani: Hi, sir. Thank you for taking my question. My question pertains to the adjustments, the liquidity damage settlement which got accounted. So after adjusting this, what would have been our margins and revenue for this quarter?
Management: Yes, we have basically adjusted the price to the tune of around INR45 crores . So you have to decrease the turnover by INR45 crores and accordingly the profit has to be reduced by INR45 crores .
Amit Anwani: So that gives me 1.3% margin for the turnkey segment.
Management: Yes, for the turnkey segment, it's around 1.3% margin if you exclude that particular item from the…
Amit Anwani: Right, so my second q

uestion then is what was the reason for such a low margin this quarter for the turnkey segment?
Management: In the turnkey segment, basically margin varies quarter to quarter. Normally we are giving the guidance of around 3% for the turnkey segment. In some of the quarters, there may be a certain provision has to be accounted for as per the accounting principle and accordingly margin may reduce. Otherwise, our guidance remains the same that in the longer run, we expect around 3% margin in the turnkey segment. But in quarter, it may vary.
Sanjay Jindal: Basically, you will also appreciate the change order which we are talking about, the adjustment of liquidity damage. Adjustment of liquidity damage is nothing, it's a change order. In the past, in the earlier, client has not given time extension to us and accordingly we have applied for the same and it took a little bit longer time for the client to approve the same.
So basically, it's a change order and the company in the year like which is project implementing company, this is a common phenomenon that sometimes you incur cost first and then you get the change order. And that's why there is this type of change order. B ut these are not exceptional in nature.
This is part of our job and it is part of our operating income.
Amit Anwani: Sure. So second, I wanted to understand on the order pipeline. So as to now what we are expecting, what is in the pipeline for H2 and next year, if you would like to highlight the projects and the value ?
Sanjay Jindal: We are targeting the similar business line like what we have got last year. We are targeting the same business, same range of the business secured. So we are working towards it. There are a few of the oil and gas projects in petrochemical, in refinery, we are bidding in the process of bidding. Some projects are there in the mining sector. Some projects are there in the non -ferrous metallurgy sector, infrastructure segment, a lot of projects which we are bidding. And we see that we should be a ble to match the last year's business at least and we will try to improve upon that.

Amit Anwani: So sir, order intake, is it a fair assumption that we will cross 5000 for FY24?
Sanjay Jindal: We will at least meet the last year's business which was around 4700. So we will be able to meet that or we will try to improve upon that. We still have six months time. And we have booked recently in October a few of the business, new business also which will be reflected in the next quarter results. So we are also working towards that.
Amit Anwani: So just one last question on consulting margins also. This quarter we saw the consulting margin also suppressed. So any thoughts on that?
Sanjay Jindal: It is basically as we have already said, it is on quarterly basis only. And we are expecting some more chain order in our consultancy job also. So on year basis you will find that our margins are intact.
Moderator: Thank you. The next question is from the line of Vijayant Gupta from Bharti Axa. Please go ahead.
Vijayant Gupta: Hi sir. Sir, would it be possible to share when would we expect the PMT order for Petronet CDH project and what could be the order value? What is the PTH?
Sanjay Jindal: We have not booked it right now. No, no, no. Can you repeat the question?
Vijayant Gupta: Sir, when do you expect the PMT for the recently announced Petronet CDH project? INR20,000 crores.
Sanjay Jindal: No, no, it is yet to come. It is still under their management's consideration. It will come in due course of time.
Vijayant Gupta: Okay. And sir, what could be the order value?
Sanjay Jindal: We will be able to tell you the order value at this stage. Sir, competitive word.
Moderator: The next question is from the line of Kunal Seth from B&K. Please go ahead.
Kunal Sheth: Sir, if you can just talk about any initiative

s outside India in the international markets that we
are taking as a focus area or we will largely focus on the domestic market?
Sanjay Jindal: No, no, definitely we have increased our initiative in the international market. You will see that last year we added a new territory of Guyana in our business portfolio. This year we have re - established ourselves in Algeria. We have recently secured in, p robably it has not reflected in this business, in the month of September. It has been secured in October. So it will be reflected there. We have re -entered into Algeria and we have secured our business there. We are pursuing our business in Algeria. Again, we are strengthening our business in Nigeria and other African countries as well as in South America.
So that is there in our end will and we are working towards it. So that will be, in times to come, we would like to bring to the overseas business, will be in the almost similar ratio to the domestic business.

Kunal Sheth: Okay. And any, basically sir, any timelines of this you are targeting in the next 3 -4 years or?
Management: We have already started our initiatives and we are bidding for various projects. We hope for the best that by end of this year we should be able to get good results. You must have seen that last year's results, overseas had jumped from the previous financ ial year. So we are also focusing towards the more business from the overseas this year too. So we have 6 months to go and various projects in pipeline. So let's hope for the best.
Kunal Sheth: Sure. Sir, my second question is around our non -oil and gas initiative. Where do you see, you know, the most opportunity outside oil and gas for engineers in India? And also specifically if you can talk about, you know, your role and opportunity in the CBG and the green hydrogen projects, if any?
Sanjay Jindal: Green hydrogen, we are already there. We are already working in 3 or 4 projects. We are working in JN, we are working in BRL, we have worked with Adani. And we have initially, recently we have worked with one of the private sector clients for their green a mmonia project, which was based on the green hydrogen. We are working with one of the state companies for their lignite to diesel project, which is, sorry, that is lignite to diesel. And we are also working for their hydrogen project as well now, which is in the discussion and soon we will be realizing that.
So hydrogen is definitely added to our portfolio and we have done quite a good job in that and good studies. Now we are also looking for one of the projects, the implementation and times to come in few months' time, where we have prepared the DFR for that and that has been approved.
So that implementation is likely to come this year's time.
Management: To add on to that, recently we have signed a memorandum of agreement with NTBC, through which we will be working for all the green initiatives and energy transition projects that NTBC will be taking up. So that MOA has been signed and we are expecting tha t business will be benefiting from that particular MOA as well.
Kunal Sheth: Sure. And sir, any role in CBG that we will play?
Sanjay Jindal: CBG we have not been able to get into right now because we have a very low level of competition is there. So we are just looking into it. If it is viable for us, we will definitely enter into it.
Kunal Sheth: And sir, lastly, which is the area outside the oil and gas which you will be most gung -ho about in terms of opportunity from next 2 -3 years' perspective?
Sanjay Jindal: Next is decarbonization in the area, which includes biofuels, green hydrogen, solar CSP. All these are the new sectors which we are targeting. We are targeting non -ferrous metallurgy again for the upcoming smelter projects of the state oil companies as wel l as India as well as outside.
So all these thin

gs we are trying to do outside oil and gas. Infrastructure is another segment which we are doing pretty well. We have increased our business multiple in the infrastructure segment.

So that is one of the focus areas wherein we are going into the niche activities like data centers, going into the airport, going into the residential institutional buildings as project management consultant. We have recently been, last year we secured a j ob for horticulture center, which is an international horticulture center. We are working as a project management consultant. So similar kind of assignments wherein we have a niche, we will be entering into the other areas outside oil and gas.
Moderator: Thank you. Thank you. The next question is from the line of Mr. Sunil M. Kothari from Unique Portfolio Management Services. Please go ahead.

Sunil Kothari: So my question is for the last 3, 4, 5 years. Our revenue is almost in a range and profitability is also not improving. So where are the opportunity for next 3, 4, 5 years will change our trajectory which we are stuck up during last 5 years almost?
Management: Yes you are right. For the last 3 years our turnover is almost flat and our profits are also flat. But in the current year we are expecting 10% increase in the turnover and we are expecting 10% increase in the net profit also. So I think this is the predi ction about the current year and in the turnover you will definitely see increase in the coming years because we are having handsome order book and some other jobs are in pipeline which are sure to be matured in favor of EL and our turnover will rise from the current level definitely.
Sunil Kothari : And sir is there any this 3% profitability which we sometime we are in future expecting. Why we are in that business any logical correlation with our consulting business or what we are exactly -- why we want to be there? I could not understand the figure of 3%. Sir our turnkey business is just 3% profitability.
Management: In the turnkey segment, you are right. Our margins are within 2% to 3% and we are trying to improve it.
Sunil Kothari : But any reason for being in that business, being so much highly technologically capable consultant for the other segments and across the India, if you look at the investment is happening may be over a 5 year further there will be investment…
Management: No this is simply an extension of our business basically in the turnkey segment also. We are doing the same business basically but only the impact is that, the pipeline, the contract and the supply is a part of the expenditure as well as the turnover. Oth erwise we are doing the consultancy over there and 3% margin is basically sufficient, if you consider that the total -- the margins are on the total order value basically. In the consultancy, the margin are on our portion basically. So 3% margin s are good plus you just see during the current past quarter, we have received a change order or reduction in the LD that has contributed to the margins also. So over a period of time, definitely there will be improvement in the margins and we are providing certain provisions in our financial statement as per the accounting practice and on the completion of the contract, there will be substantial increase in the margin in case the LD and we get the change order. So you don't see the quarter -to-quarter but over a period of time definitely we are getting the good margins in the turnkey segment also. You just see our past record also.

So this is an extension of our business whatever we are doing in the consultancy, we are deploying that manpower for doing the turnkey business and it is adding to the profitability of the company and it is a risk free business. Basically the plant and mac hinery and subcontracting costs are

passed on to the client, in case there is an increase in the cost, that is passed on to the client.
Sanjay Jindal: Because we are doing these projects on open book estimate basis not on the EPC basis, so we are very selective in choosing the LSTK segment jobs wherein the risk is less and we are comfortable in working. As you can see generally we are having 2 -3% margin in the LSTK job but in this quarter we are having more than 12% margin in the LSTK job this is because we could get a change order from the client because this is a construction business where sometimes we have to incur cost first and then g et change order from the client. So in the past quarter, you have seen 2% -3% margin but in this quarter it is 12%.
Sunil Kothari : It it the nature of the business, right?
Management: Having always 2% - 3% margin. Correct.
Sunil Kothari : Sir, my last question is, we have invested roughly INR500 crores in this fertilizer project and around INR700 crores in refinery project. So what type of investment we will have to do during next one year or three years?
Management: At present, we are having majorly two investments, one is Ramagundam fertilizer and chemicals and second is Numaligarh refinery and at present, we do not have any other such major project where EIL is pursuing for the investment.
Sunil Kothari : Sir, any further investment will not be done in this fertilizer project or refinery, whatever we have done that's it?
Management: I think NRL is going for the expansion for the 3 mm TPA to 9 mm TPA, there we have to contribute equity capital of INR13,800 crores to maintain our 4.37% equity. So that will come by way of right issue.
Sunil Kothari : Thank you very much.
Management: One installment of, I think INR35 crores of instalment, we have already paid and balance installment will be paid as and when it is called by Numaligarh refinery.
Sunil Kothari : Thank you very much, sir. Thank you and wish you good luck.

Moderator: Thank you. Next q uestion is from the line of Venkatesh Subramanian from LogicTree Consultants Pvt. Ltd. Please go ahead.
Venkatesh Subramanian: Good afternoon sir. Thanks for the opportunity. I just wanted to know, what will be the opportunity size in terms of sustainable order books?
Sanjay Jindal: With respect to the opportunity size, the number of projects are coming, multiple projects like various petrochemical projects, various refinery projects are there. So opportunities are there to

meet that. So maybe we see that in the next six months. We see a project investment of around INR30,000 crores to INR40,000 crores at least on the [NWILL], wherein we are bidding for it. So that is there definitely.
Venkatesh Subramanian: Okay, sir. That's it from my side. Thank you.
Moderator: Thank you. The next question is from the line of Viraj Mithani from Jupiter Financial. Please go ahead.
Viraj Mithani: Yes. Thank you sir for the opportunity. Good afternoon and very happy Diwali to the Engineers India team. Sir, I have three questions. One, you talk about the green hydrogen. Can you give more color in terms of size of opportunity for Engineers India marg ins, we could be having in days to come?
Sanjay Jindal: In hydrogen, the problem is, this is a new segment and many of the projects are on the paper board right now in the designing phase. So implementation is going to take some time. We are targeting the consultancy business. More or less all these projects wo uld be somewhere in the range of INR4,000 crores or INR5,000 crores. So wherein we will be carrying out the consultancy services which is some amount of the job.
So that is the target we are saying. These are not going to be big jobs but they are going to be significant jobs. But in few years' time, maybe in a year or so, these kind, they will be part of these kind of projects because all these projects

from the fe asibility stage would come on the implementation side. So that is the advantage of being consistent in hydrogen at this point of time.
Viraj Mithani: So our size would be 10% of the project size or in terms of it can quantify our opportunity?
Sanjay Jindal: I cannot say that because it is the type of project and what mode we get involved. So it could be a good amount of work depending on the size and the mode, the client chooses to work.
Viraj Mithani: And is it fair to assume that, our margins would be on a higher side compared to a traditional business and new businesses?
Sanjay Jindal: It would be depending on the kind of competition we feel in the market. Because these are still in the initial stages. So definitely there would be competition and we will see, what best can be achieved. Definitely we would be able to earn some good profit out of it.
Viraj Mithani: And the next question is about your JV with NTPC. We do not have any JV?
Sanjay Jindal: I would like to clarify that, we have not formed any JV.
Viraj Mithani: MOU, sorry?
Sanjay Jindal: Any of the project they would be doing in their research and development facility, any pilot project or anything which they would be doing in decarbonization segment, they would like to take our services.

Viraj Mithani: So what will be the opportunity size there also? Some color on that.
Sanjay Jindal: The opportunity size is not going to be very large but it would be consistent and we see that, business can maybe extend it to their main line of business too, in future.
Viraj Mithani: And decarbonization is also the same thing which we talked about the hydrogen and something else should be doing more in the decarbonization front?
Sanjay Jindal: I said, primarily focused on decarbonization, green hydrogen, green ammonia, biofuels, these kind of projects they would be targeting and we will be supporting them in future. We are already doing two assignments for them in past also. One is for their gre en ammonia urea project, green urea project and earlier we had done it for their green ethanol project. So we have already done few assignments for them and we are working towards the new assignments which they would be taking over in future .
Viraj Mithani: Sir, would it be fair to assume that, all these things will start coming on from FY ‘26 onwards or earlier than that?
Sanjay Jindal: No, we cannot say that. It depends on their investment decisions actually.
Viraj Mithani: Okay, sir my final question is, you said this year we should be around INR4,700 crores of the

top line. So margins will be more or less the same, net margins will be around 10% -10.5%. Is it fair to assume?
Sanjay Jindal: No, we are expecting increase in net profit this year and we are targeting 10% of increase.
Viraj Mithani: So margin will be higher to 12% - 13% is what you are trying to say?
Sanjay Jindal: Increase in turnover, we are targeting 10% bottom line also.
Viraj Mithani: 10% bottom line also. Okay, that's it from my side. Thank you and all the best to you.
Moderator: Thank you. The next question is from the line of Mohit Kumar from ICICI Securities. Please go ahead.
Mohit Kumar: Good afternoon sir. So my first question on the coal gasification. Are you seeing some traction in those projects where we are working? And also are you seeing there something of Coal India which is expected to be known?
Sanjay Jindal: We are engaged in one of their projects wherein the DFR is being prepared for their western coal field. We have done the feasibility report. We are not engaged in any of the other projects but we are definitely engaged in Navili Lignite Corporation which i s carrying out Lignite to methanol project as well as they have recently gone into Lignite to diesel project. We are engaged with them in that segment. But Coal India definitel

y we are in touch and if any of the major assignment comes we wil l be engaged with them.
Mohit Kumar: Do you expect that Coal India project to be awarded in the next 12 -18 months especially consultancy?

Sanjay Jindal: It depends because they have not yet decided on any of the major projects to be implemented after DFR whereas at the same time Navili Lignite has gone ahead with the major implementation side of it. So they are still in the feasibility stage itself Coal In dia. So they are looking into the investment opportunities, how to go for the investment and what more it could be invested. So let's see it depends on them how they decide to invest in this project whether they would like to invest on their own or they would like to get the investment from outside. It all depends on them.
Mohit Kumar: Do you really think the coal to chemical which was showing such a great promise and the government has factored in three trillion number by FY'30. Is it happening or do you think there is a lot of huddle?
Sanjay Jindal: Sorry can you repeat the question please?
Mohit Kumar: So the government had a plan to invest three trillion for coal gasification especially coal to chemicals. Are you seeing huddle? Do you think this number is not possible? In your opinion what are the challenges?
Sanjay Jindal: One of the projects is already being implemented from coal to methanol. There is no challenge itself. There is one issue is there. We see that basically coal gasification technologies are limited and there is a limited parties available for that. So that s ometimes create a huddle. But otherwise one of the projects is going on.
Management: Most of the technologies are owned by the Chinese companies. So that's the one challenge that would always be there. But having said that there are technologies which are in Europe and US based technologies also. So that will be targeted for our projects in the future.
Mohit Kumar: So you are saying that the confidence on the domestic technology especially on the BHEN and Thermax is not there completely. Is that right? Because they are mostly pilot projects.
Sanjay Jindal: Actually we would not like to comment on that. We have not evaluated their technology and in none of their projects we are working. So we don't see anything has been implemented on that technology.
Mohit Kumar: Understood sir. My last questions are on the ONGC and BURL Petcom complex and IOCL. Is there a tender which has been floated and which can conclude in the next 12 months?
Sanjay Jindal: The IOCL tender is going to come probably next year itself not this year. They have floated one tender for PVC -ECM chemicals but not for the crafters. ONGC is expected to come. Again it's going to be a little bit late in next financial year only or early n ext year.
Mohit Kumar: And PVC ECM complex is for consultancy. Is that right?
Sanjay Jindal: Sorry?
Mohit Kumar: The IOCL PVC -ECM complex which you just mentioned is for consultancy, right?
Sanjay Jindal: This is for consultancy, yes. They have floated a tender for that.

Mohit Kumar: What is the size of that project sir?

Sanjay Jindal: This would be around 5 -6 thousand.
Mohit Kumar: Understood sir. Thank you and all the best sir.
Sanjay Jindal: Project costs I am talking about.
Mohit Kumar: Project costs are understood sir. Thank you and all the best sir. Thank you.
Moderator: The next question is from the line of Ms. Bhoomika Nair. Please go ahead.
Bhoomika Nair: Yes sir. Sir just wanted to understand our international business a little better. How are you seeing the ordering activity out there? Which areas are we seeing and is it on a competitive basis or is it through G2G kind of a thing which is driving our orde ring activity? If you can just talk a little

bit and how are the order sizes scaling up etc.?
Sanjay Jindal: Bhoomika, first is it is not all G2G basis in international market. It is only one of the projects in Mongolia which was on G2G basis but not even on the G2G basis. It was basically funded by government of India but was tendered by Ex -Im Bank and we had qu oted against the tendering. But in all other international areas whether we are working in Nigeria, Nigeria itself is the private line wherein you know that Dangote Refinery we are working. We are also working with a private investor there f or their LNG plant, for their fertilizer plant as well as their upcoming refinery project.
We are also bidding for their petrochemical complex which is in the bidding process. All these are the private investments and not on G2G basis. Then in Algeria we are bidding with the state oil companies, Sonatrax which is the main oil company there. So w e are bidding those projects. We have started targeting the South America. We are already there in Guyana and we are using that experience in working around that area. Puerto Rico is there. Then in other part of South America like Mexico and all those coun tries we are targeting.
In Africa itself we are targeting some other countries like Ghana as well as South America. So all these countries are there on the anvil so which we are exploring business and bidding for it. Competition is definitely there but the competition is little b it better there because they are more quality oriented so we have a good chance of winning. But it has to be a very good job and the client has to be very stable so we ensure the payment comes in time and we realize that job.
Bhoomika Nair: How large are the order sizes, project sizes that we could possibly get?
Sanjay Jindal: Are these like smaller orders or are they in that INR500 crores? No, it is in the INR700 crores. We have improved our qualifications in all the Middle East countries like Kuwait, Saudi Arabia and all these countries where we were earlier in Bangalore. We a re improving our qualification and targeting more of the bigger assignments.
So that is the work in progress. So we see the results have started coming. You must have seen the increase in last year and you will see this kind of increase this year also. We are working

towards it and we hope that we should be able to surpass the domestic business in international market.
Bhoomika Nair: Apart from Dangote, all the order sizes have been fairly small and I think the Mongolia order was the last larger one per se. The other orders have been fairly small in terms of the size and scale.
Sanjay Jindal: You must have seen this Nigeria order. It was quite big. It was around INR400 crores worth of the project. It was a fertilizer complex. We got two trails of the same project. Actually INR480 crores to be precise and INR180 crores was the Guyana project whi ch was a PMC for a power plant. So it was a fairly good amount of projects. Actually Dangote project was a long term project and it got increased with various expansion. The value has increased significantly and there are a lot of opportunit ies in Dangote itself in future. So we are also engaged with them. So let us see for the best.
Bhoomika Nair: Okay. So the other thing was this strategic alliance with the Sunrise Group of Australia for the concentrating solar technology, right? So where are we in the process? I know it is a very nascent stage and very early in the day but when do you think, what is the progress of that entire MOU etc.?
Sanjay Jindal: Initial engagements with Sunrise because we have to develop a business model around that niche technology. So that particular activity is in advanced stage and finally we are also having the seeding activities with the prospective clients as well. So most probably during this financial year we may get smaller a

ssignments with that to begin with.
Bhoomika Nair: Okay. And same would be the case with this defense space as well which we had kind of gotten into. I mean what are the order sizes?
Sanjay Jindal: We will see some results by the end of this financial year. We will get a good result from this financial year. We are working towards it. We have already bidded for various assignments and

we hope to realize few of them. So in this financial year we should be able to see some results.
Bhoomika Nair: So what is the project pipeline out here in terms of ordering pipeline? How large can the segment be? I mean not necessarily for the current year. I can understand it might be small.
Sanjay Jindal: Most of the projects could be less than INR1,000 crores because these are smaller projects but could be multiple.
Bhoomika Nair: Okay. And could this grow meaningfully in size over a period of time?
Sanjay Jindal: All the – of them coming this year, one or two may come, very true be, definitely, less than INR1,000 crores.
Bhoomika Nair: Okay. And could kind of meaningfully grow over a period of next two yars, three years?
Management: Yes, there is lot of opportunity there.
Bhoomika Nair: Okay. And these would be comparable to our current PMC margins or better off or worse off?

Management: Not less than that actually.
Sanjay Jindal: We are quite hopeful to maintain our margins in the EPSM job.
Bhoomika Nair: Right. I mean I assume this is more of a quarterly variation where we have actually seen this kind of a drop in the current quarter but average for the full year you would still be maintaining our 28%, 27%, 28% kind of a margin profile?
Sanjay Jindal: Surely.
Bhoomika Nair: Okay. I will come back in the question queue.
Moderator: Thank you. The next question is from the line of Shirom Kapur from Prabhudas Lilladher. Please go ahead.
Shirom Kapur: Hi sir. Thanks for the opportunity. Apologies if there is any repetition here but from what I understood you mentioned that you are bidding for about INR30,000 crores to INR40,000 crores of projects. Is that specifically in petrochemicals? Could you give a bit more color on this?
Sanjay Jindal: It's all mixed. I can say INR40,00 crores to INR50,000 crores worth of the project cost. It is not the fees. It is the project cost of the project investment. It's a minimum INR40,000 crores to INR50,000 crores project cost but it could be across the secto rs like in refinery, petrochemicals. It could be in energy as well as pipeline. So all these sectors. I am just giving you a rough figure. This is the kind of project and we will be getting some percentage of that as our fee to maintain the business solutions.
Shirom Kapur: This is across businesses and across domestic as well as overseas or specifically?
Sanjay Jindal: I am telling you this is the minimum across the business segments. You cannot tell how many projects. We are bidding a lot of projects. This is just a figure which came into my mind for the question. I am telling you it is at least this size of project.
Shirom Kapur: You mentioned that you are expecting to at least maintain the same level of order inflows as you got last year which is about INR4,700 crores. This year we already received about INR2,400 crores. So is this 30,000 to 40,000 rough figure that you have given , is this from what we are expecting the remaining INR2,400 crores of inflows to come in, is this for the next half of the year or is this 30,000 to 40,000 sort of a longer term pipeline?
Sanjay Jindal: We see some to maintain that this year's order book which is basically the business position of INR4,700 crores or INR5,000 crores. We will be able to secure jobs from this overall project cost only or little bit more than this project cost whichever we ar e bidding for. Sir, many projects are in bidding. We cannot tell

the name of the projects and the size of the projects because most of them are in the competition. So it is not right to tell.
Shirom Kapur: Sure sir, I understand. And sir, any kind of guidance or something that you are ready to give yet for FY ‘25? I know you have given for FY ‘24 10% top line growth but maybe anything for FY ‘25 yet?

Sanjay Jindal: Right now being a project oriented company, where business is cyclic in nature, we are able to predict this year only. For the next year, right now it is not justified to say anything.
Shirom Kapur: Okay, understood sir. Thank you so much and all the best.
Sanjay Jindal: Thank you.
Moderator: Thank you. The next question is from the line of P. Jha who is an individual investor. Please go ahead.
P. Jha: Thank you for taking my question. One relates to investment in Numaligarh Refinery. What is our expectation in terms of returns on our investment?
Sanjay Jindal: In the NRL we are getting dividend from the company and in the last year we have got handsome

dividend of INR54 crore on the investment of INR700 crore. So it is more than 7%.
P. Jha: Okay, and other than the dividend, do we get also significant work order from them?
Sanjay Jindal: Order wise yes, we have few consultancy orders from them but it is not on the basis of the nomination and all. These are competitive bidding. Even though we are the partners but we do not force them to give it to us on nomination and all. So it is a compet itive, we have got few of the assignments, not a major assignment but few of them. One is aqueous Ammonia project, which we have recently got around INR30 crores to INR40 crores worth of consultancy services from them.
P. Jha: Great. And one futuristic question because we have great expectations from the kind of skill set that you have, the kind of manpower that you have is in terms of de -carbonization, newer form of energy. Because at least personally it looks to me far nearer than wh at we are anticipating and stated objective of the government is the hydrogen is going to be the order of the day for the future requirement by 2030.
We are talking big numbers in terms of clean energy. How does Engineers India limited rate itself in terms of ranking in those technologies? Emerging technologies like hydrogen or coal -based methane better than in de -carbonization. In broad terms, if you c an lay down, what is your ranking in terms of the technology that you have?
Sanjay Jindal: In fact, if you talk about the technologies on de -carbonization, overall we don't own a specific technology for that. We are, as part of our growth strategy, we are growing inorganically as well. So we are looking for technology partners with which we can have a strategic alliance and we take up their technology and go for a project implementation.
One of these cases like Sunrise CSP has got a technology for solar concentrated. So that's Australian company. So we had a strategic alliance with them. So they are providing the technology and we are doing the implementation part. So that's the growth str ategy that we are taking up. Because developing a technology and the gestation period is long. So we have to move fast in this particular sector. So for that, we believe that collaboration is the right way to go forward. So that's what we are targeting in all these sectors.

P. Jha: A fair point, but in case of the size of the cake, which is going to be so large in coming years, do we see ourselves getting a significant part of it?
Sanjay Jindal: Yes. Why not? Because like I said, we already have on a skill development, on a development of manpower, because all these areas are not new to us. We have been working in these areas. Our teams are working from the process side, from the engineering side, in a similar area.

So we have a complete skill set to work in this area. And whenever the opportunities will be there, that will be leveraged. I mean, leverage our skill sets and our collaborative partnerships and the path track we got for that.
P. Jha: Fantastic. That's very reassuring and wishing you all the very best and a happy Diwali to the entire EIL.
Sanjay Jindal: Thank you.
Management: Thank you.
Moderator: Thank you. As there are no further questions, I would now like to hand the conference over to Ms. Bhoomika Nair for closing comments.
Bhoomika Nair: Yes, I would just like to thank everyone and particularly the management for giving us an opportunity to host the call. Thank you very much, sir, and wish you all the very best.
Sanjay Jindal: Thank you very much Ms. Bhoomika, and happy Diwali to you.
Bhoomika Nair: Happy Diwali to everyone. Thank you very much.
Moderator: Thank you. On behalf of DAM Capital Advisors Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

MS. NEHA NARULA – SENIOR MANAGER – COMPANY
SECRETARY – ENGINEERS INDIA LIMITED

MODERATOR : MS. BHOOMIKA NAIR – DAM CAPITAL

Moderator: Ladies and gentlemen, good day and welcome to Q3 FY '24 Earnings Conference Call of Engineers India Limited hosted by DAM Capital Advisors. As a reminder, all participant lines

will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Ms. Bhoomika Nair from DAM Capital Advisors Limited. Thank you, and over to you.
Bhoomika Nair: Yes. Good evening, everyone, and welcome to the Q3 FY '24 Earnings Call of Engineers India. We have the management today being represented by Mr. Sanjay Jindal, Director Finance; Mr. Suvendu Padhi, Company Secretary and Investor Relations; Mr. R.P. Batra, Executive Director of Finance and Accounts , Mr. Amanpreet Singh Chopra, Senior General Manager, C&MD Office, Mr. Vivek Midha, General Manager, Marketing Business Development; and Ms. Neha Narula, Senior Manager, Company Secretary and IR.
At this point, I'll hand over the floor to Mr. Jindal for his initial remarks, post which we'll open up the floor for Q&A. Over to you, sir.
Sanjay Jindal: Good evening, everybody, and a warm welcome to all the investors for the Earning Call for this meet. Today, we have declared our quarter 3 results and stand -alone information. In the third quarter, the company achieved a turnover of INR856 crores in comparison to INR777 crores in the quarter ended September '23, showing an increase of around 10% on quarter -to-quarter basis, with turnover from Consultancy and Engineering segment amounting to INR359 crores and INR497 crores in turnkey segment.
The turnover for the quarter 3 is INR856 crores compared to INR831 crores in the corresponding quarter of the previous year , i.e. December '22, showing an increase of around 3%. For the 9 months ended 31st December 2023, the company has registered a turnover of INR2,442 crores, vis-à-vis INR2,418 crores during the 9 months ended of the preceding financial year with turnover from Consultancy and Engineering segment amounting to INR1,066 crores and INR1,376 crores in the t urnkey segment during the 9 months en ded 31st December 2023.
The profit after tax for the quarter 3 is INR50 crores compared with INR48 crores in the corresponding quarter of the previous year , i.e. December '22, showing an increase of around 4%. During the 9 months ended, the company has recorded PBT of INR354 crores and PAT of INR266 crores in comparison to INR235 crores and INR183 crores respectively during the 9 months ended of the preceding financial year showing an increase of 51% in PBT and 45% in PAT.
Notably, the EPS for the 9 months ended December '23 is INR4.73 vis -à-vis 9 months ended December '22 is INR3.26. The company has unexecuted order value of INR7,990 crores comprising under Consultancy segment of INR4,751 crores and under LSTK segment of INR3,239 crores. Thank you. Bhoomika, my side is.. .
Bhoomika Nair: Should we begin the question -and-answer session, sir.
Sanjay Jindal: Yes.

Moderator: Ladies and gentlemen we will now begin the question and answer session. We have our first

question from the line of Mohit Kumar from ICICI Securities. Please go ahead.
Mohit Kumar: Sir my first question is on the order opportunity from the petchem side. The Consultancy income -- the Consultancy order inflow has been pretty weak, especially in the last quarter. How do you think about it in the next 10 to 12 months? And if you can just lay out the order opportunity, project wise, it will be helpful?
Sanjay Jindal: With respect to the petchem you're asking?
Mohit Kumar: I'm talking about Consultancy in general, the large orders, large packages, which...
Sanjay Jindal: Your voice was b reaking in between. No problem. Overall, Consultancy wise, we have bid for a few of the projects

. And we in the meantime in this time period between the December and January itself, we have booked some business and got three of the orders. There are three mega complexes are under negotiations.
One is in overseas and one is in India, as well as one is in the initial stage of a private segment in India itself. It is a charity chemical complex. We are expecting that these three would get materialized definitely before March 31st. Some more project Consultancy assignments are also on the anvil. We have also secured a few of the assignments, one of the assignments in IOCL for sustainable aviation fuel. We are L1 now, so it is expected to get awarded soon.
We are also bidding for another kind of chemical complex of IOCL, which is in the bidding process. Results are expected to be out shortly. We are hopeful that in some of the assignments, we will be able to make it and we should be able to get more busines s in the next two months' time.
Mohit Kumar: Are you referring to IOCL Paradip? Is that the right estimate?
Sanjay Jindal: No. Paradip is a bit away right now. It's not in the entry mode. It is going to take some time. It is expected to come somewhere in the next financial year. We are actually anticipating towards the bidding or the center in the beginning of th is financial year -- in the last quarter of this financial year, between January to March, but I think it is going to get late. They have not come out with tender as of now.
Mohit Kumar: Anything on the BPCL, pet chem, LNG or GAIL?
Sanjay Jindal: BPCL pet chem initial activities we are involved. We have been given some assignments with respect to the modification of the conceptualization because I think it was initially got approved, but they decided to go back on the consultation and they are reworking on that. So we are working in the initial stages of the project. And as soon as it is cleared from their management, it would come.
Mohit Kumar: PLNG and GAIL, any opportunity in the next few months?
Sanjay Jindal: We won't be able to, because some of them are under discussion.

Mohit Kumar: Understood. Sir, any comment you can -- maybe you can make on the coal gasification, of course we are hearing a lot of noise, but I don't see anything materializing on the ground. Are you seeing any tender which are coming for the consultancy?
Management : Every year the government announces certain benefits and even all these projects which are being named in the newspapers also are being discussed for the last 2 years. They have not yet come on to paper . The government is giving some grant in 3 categories, and one of the projects are on Coal India and GAIL is getting appro ved and therefore showing that.
But that has been -- MoU has been entered in 2022, '23, early '23, but it has not come on to the paper. So there is a lot of news in the papers, lots of discussions are there, but exactly nothing much is happening. It's all in the tendering or a feasibility stage. Some of them h ave gone into feasibility, but they could not get viable. They are going to go into again feasibility phase like in Coal India, WCL, the tender, the requisition companies did not bid. So it had to go back.
Some of these projects one projects in which Neyveli Lignite Corporation , we are doing one of the contracts, at economically high price. So I think it is in the initial stages only. Because the technology is an issue and the companies were going to execute is an issue. But there is a lot of discussion and a lot of studies are on definitely.
Moderator: We have our next question from the line of Amit Anwani from PL Capital. Please go ahead.
Amit Anwani: My first question is on the EBIT margin this time for turnkey, which shows a decent improvement. And at the same time, I would like to understand what is the trajectory developing for the turnkey business marg

ins?
Sanjay Jindal: There is improvement in the turnkey margin in comparison to the December '22 quarter. We are executing certain projects for ONGC. We have started that. And margins are primarily coming from that. We have already given the guidance that our margin will be in the range of between 3% to 5%. So it's around 5% during the current quarter.

Amit Anwani: Right, sir. And sir, I wanted to understand on the infra order. I can see this quarter, we got one INR350 crores order for the Intelligence Bureau building. So is this in the sense we are getting that we will be bidding for more stable building projects and the infra itself -- civil infra itself will become a vertical.
Sanjay Jindal: Yes, definitely. We just like to add on this. Infrastructure segment focus has been changed in our company. Last year, if you see the last year's business and today's business, it is much improved. We are more focusing on the infra niche kind of projects, not the regular kind of projects like this is the kind of easy.
You are seeing the Intelligence building, where we are getting into it more. Similarly, we are getting into other RBI's data center projects we are bidding as well as we are bidding for the airport developments . So we are focusing on all these kind of projects.
And actually, the focus is rather -- you focus on more on this segment, you get a lot of business.
But our role is primarily as a project management consultant and focus is on the clean projects.

So that is there. And we are going to definitely is going to contribute more, infrastructure is going to contribute more in our business segment now, that percentage is going to rise.
Amit Anwani: Sure, sir. My last question on -- just wanted to understand for any refinery capacity expansion, for example, INR30,000 -odd crores which the OMCs highlights. How much would be the EPC component in that? What has been our share within the EPC or turnkey component, which is arising out of any refinery capacity expansion?
Sanjay Jindal: We see one of the private refinery expansion because they are anticipating -- they are anticipating actually in 2 phases. One is we are thinking of going for petrochemical or for the refinery expansion. So they are in the decision phase. Normally, what we see is the refinery expans ions are going to be much. It should be more towards the petrochemicals.
So either the integration of the petrochemical complex or a little bit smaller expansions. So major expansion we have not seen. Because we have not seen any of the feasibility -- major feasibility happening in the recent stages. It's mostly the petchem.
We are doing the feasibility studies of petchem. Then the -- it is actually known when the feasibility is done. So there will be a number of feasibility with respect to the expansion in the refinery segment.
Amit Anwani: Sir, actually, I wanted to understand that typically, what would be the share of turnkey orders which can come out of the -- any refinery expansion? And then how much Engineers India would be getting out of that?
Sanjay Jindal: It depends on the company strategy. So generally, these states or companies going for the mix of the execution methodology, which is some of the units are executed on EPCM basis and some of the units are executed on the PMC . Mostly, utilities and offsites are generally executed on EPCM , but all the other process units have been executed on -- generally being executed on EPC mode.
It is very difficult, it just depends on the company -to-company, what strategy they want to adopt. Definitely, they have their own plus and minus EPCM and PMC have their own plus and minuses. The company which is capable of handling the -- they have good engineering strength and between their company, they would like to prefer EPCM, because that requires that definitely saves time and reduces th

e cost of the pr oject.
But at the same time EPC adds, there's a limited involvement of the client side. And -- but there always a risk and benefit also for the sa me. So it depends on the client -to-client. There is no specific segregation can be done that this should be the percentage of EPC or LSTK.
Amit Anwani: Lastly, sir, now we are at 3,000 for 9 months with respect to order intake. We have been guiding more than 3,500. Are we on track? And wanted to understand any guidance on order intake for next 2 years cumulatively or EOIs , if possible?

Sanjay Jindal: At least we are on the track for achieving the last year's target. We have some jobs in the discussions. If those gets mirrored, definitely we will cross the last year's business secured , it was around INR4,500 crores or INR4,700 crores. It is going to cross that definitely.
Amit Anwani: Sir, for next 2 years, cumulative, what is the expectations?
Sanjay Jindal: We cannot say that exactly. The market is very different. You never know. Definitely, we will -
- our aim would always be to improve upon the [EVCS] business and target that.
Amit Anwani: Do you have a fair visibility for doing continuous or more than INR5,000 crores or something?

Sanjay Jindal: We are targeting around INR4,500, crores INR4,700 crores, around INR5,000 crores. So it is approximately -- we are going to target at least minimum that much to sustain. But our focus is on increasing our presence across the world and for getting into the overseas business, getting into new segments. But all these new segments have some -- it will take some time to settle down because you see...
Management: Even we are targeting more than INR5,000 crores, but it depends on the market.
Sanjay Jindal: Our target is more.
Management: It depends on the market, how the project come in the market. And as you know, it is the winning strategy also. It depends on the L1 also. We have to come L1. So it is the market who determines who is going to win. But definitely, we are targeting more tha n INR5,000 crores.
Amit Anwani: Sure, sir. Thank you very much.
Moderator: Thank you. We have our next question from the line of Bhoomika Nair from DAM Capital Advisors. Please go ahead.
Bhoomika Nair: Yes, sir. Sir, I have a couple of questions. You initially mentioned in a previous question that we have three orders where we are L1 and finalization is pending, two in India and one in international markets. So how large are these projects...
Sanjay Jindal: First, we would like to clarify. We not L1 in those projects. We are negotiating those contracts as of now. L1, we are there in one of the projects bidded for IOCL, which is expected to be awarded shortly. We are L1 in that because that is on tendering bas is. Rest of them are being on the negotiation basis. In Nigeria and two are there in India itself. So they are handsome sized projects. They are the petrochemical complexes.
Bhoomika Nair: The IOCL one, which one is that, because you said it is not Paradip, so...
Sanjay Jindal: I will let you know the name. It's a synthetic sustainable aviation fuel project, which is coming up in Panipat refinery. It's just a smaller refinery, but it's a new area because our focus is on the sustainable aviation fuel. So it's a very competitive se gment. We face real competition in this and we could secure it because it's going to be the future of the country because the focus is on the alternative fuel. So this is one of the segments. And actually, this is going to be an implementati on. So it is going to add value to our experience and profile also.

Bhoomika Nair: Understood. One is IOCL and one is in Nigeria. And then there is another third one which...
Sanjay Jindal: Two other in India itself across various sites. So I will not tell you the names, because they are in negotiation, so we will see.
Bhoomika Nair: Okay. It's not the Bina one because you said…
Sanjay Jindal: That is expected to come next year only.
Bhoomika Nair: Okay. So these two clients and the one in Nigeria are all related to petchem or is the Nigeria one related to refinery?
Sanjay Jindal: No, Nigeria is related to petchem. All three are -- I am telling you, it's mostly the petchem now. We have limited refineries.
Bhoomika Nair: Okay. So sir, you spoke about these projects where we are already negotiations stage, etcetera, and in IOCL, we are L1. Now obviously, these will get finalized in the next two month or so. But as one moves beyond that into the next 2 years, how should we l ook at what are the potential petchem orders which can come through? You mentioned there is obviously BPCL Bina refinery, the petchem order, which is there, the IOCL Paradip petchem is there. Is there anything else that you can speak out in terms of IOCL or BPCL or HPCL or any others which are there in pipeline?
Sanjay Jindal: One of the GAIL is there. GAIL is also thinking of West Coast petchem complex complex. And there are a few more. One was the Bina and one is of the GAIL, which is thinking of setting up of complex in Kakinada and then Paradip is actually going to come. You are aware of that. Then a private -- there are two private companies who are going to set up the cracker complexes, which we were involved in the starting phase itself, feasibility studies. We have done the feasibility studies. We see that they are going to come. One is [Krutu Chemical] and another is a steam cracker project. So these are there on the anvil right now.
And one of the PVC -VCM complex is going to come next year in Gujarat. That is also there on the anvil. So there are some projects are there on the anvil wherein we are involved in the feasibility study. We, for sure, see that some of them get materialized. Like Bina, we were expecting this year, but it never happened. So you never know what will happen when they go after their Board's approval. But these are expected next year.
Bhoomika Nair: Sure. Sir, in the Maharashtra side, there was a refinery, which was planned and then obviously, it is delayed. Is there any alternate or any such further kind of consultation…?
Sanjay Jindal: There has been no consultation in that regard, because it's been there for the last five years, it has been going on. Even though we are involved in the relocation of that refinery project, it all

depends when will it happen because nobody can comment on that. It's been there for five, six years.

Bhoomika Nair: Sure. Just on the other part of it, we had this MoU, which we had one strategic alliance that we have gotten in with Sunrise CSP for the solar technology BOP. Any projects that we are getting,

given that there is so much activity that is happening in the solar aspect of it? Any kind of orders that we are expecting out here? And any progress on this ordering activity from this perspective?

Sanjay Jindal: On this solar CSP, we are talking to one of the public sector companies. Right now, it is going to be in the feasibility stage. It is going to materialize in the next one or two months. There will be feasibility for that. And then it could be -- maybe if i t will come up in the next financial year itself when the feasibility is done.

Because there we are studying various options. They're going to study various options of the size of the plant. So it will definitely come next year. But right now, in this year, we are going to get feasibility for that, because solar CSP is a relatively n ew area and it is going to take some time.

Bhoomika Nair: Okay.

Management: In the meantime, there are a lot of conceptualization studies that we are doing in -house with our alliance partner. So the concepts are on a

building stage. So from a conceptual stage going to an implementation stage, it will take some time. So probably by next year, we'll see good market openings up for these projects as well.

Bhoomika Nair: Okay. And just lastly on the -- for just the current nine months, if I look at it, the Consultancy revenues have more or less been flattish. So would it be fair to say that this year will end up being a little flattish year for Consultancy or can we look a t a 4%, 5% kind of growth for the full year?

Sanjay Jindal: So what projects we are talking about, all of them are the Consultancy now in the pipeline.

Bhoomika Nair: Okay. I was talking more from the revenue side, sir.

Sanjay Jindal: For the revenue side...

Management: For the current year, we are targeting more than INR3,500 crores turnover. And we are expecting at least a 10% increase in the next year if these projects materialize. But definitely, we are on the growth path.

Bhoomika Nair: Okay. From the m argin perspective, how should one look? Because obviously, quarterly variation do happen and there is provisions and write -backs, etcetera, which take place. So Consultancy, should we look at a steady, say, 25% to 30% range in terms of the EBIT margins?

Management: No, I'm not expecting the margins in the range of 28%, 30% because sometimes it depends on the change order. As you know, in the project -oriented companies, sometimes finalization of change order takes time with the client. And you have seen also in the first quarter, we have got the change order. In the second quarter also, we have got the change order. But in the third quarter, there was some shortage of change order because we could not materialize an d that is under still finalization with the client. And we are expecting some change orders in the quarter 4 or so on. So 28%, 30% is not the right figure, and we are expecting between 20% to 25%.

Bhoomika Nair: Okay, sir. Okay. Thank you. I will come back in the question queue. Thank you, sir.

Moderator: Thank you. We have our next question from the line of Jonas Bhutta from Birla Mutual Funds. Please go ahead.

Jonas Bhutta: Thank you, sir, for the opportunity. Just wanted to understand our initiatives on the international side, while I understand that we are close to negotiating an order in Nigeria. But at some point in time, we were also discussing on the MENA region in terms of you're trying to build up our capabilities. So can you talk ab out some initiatives that we've taken there, any prospect list that is there in the next one or two years that we can speak about?

Sanjay Jindal: First is, in the MENA region, talking about the Nigeria. Nigeria itself, this is the petchem project we are talking about. We have been pursuing one of the smelter projects with some of the clients as well as we are also discussing with one of the fertilizer projects, which is already there, fertilizer complex which is already there. They are having lot of problems in the plant. We are working with them to get the assignments with respect to the ramp of that project. So that is what we are do ing in the Nigeria site.

In Africa, we have reestablished ourselves in Nigeria. We are continuously bidding for those projects. We are right now executing one of the projects for a refinery project and bidding for

more projects in pipeline as well as in petchem in Nigeria. Becaus e these are the countries where we have fast work, and we know them are these markets.
Then secondly, in Africa, we are also going into the other countries and also studying the market wherein the oil and gas sector is active, which is a bit secure, and we should be able to get the money back from the country.
So we are studying these countries, and we are expected to enter into more of the countries like Egypt and all will be targeting in the future. And then in the Middl

e East segment, in the Middle
East we are trying to -- focusing on all the major markets l ike Kuwait and Oman as well as Abu Dhabi.
Abu Dhabi, which is the major hub. We already have an engineering office there. We are further strengthening and we have increased our business intake from there. And we're focusing on the major projects from the Middle East in Abu Dhabi office. Specifical ly in the UAE market, we're focusing on the bigger projects, and we are targeting major projects there, and we are expected to get more business, because this year's intake from that office has increased substantially.
And it is likely to increase next year because we're putting a lot of effort increasing our manpower. So all that focus has been on that market. At the same time, we are thinking of going into the Saudi business because we have in the past worked in Saudi Arabia. We are also looking into reentering into that market. We are working towards it. And hopefully, by next year, we should be able to enter in that market also. So we are doing it gradually wherein we have past experiences and there are future opport unities available like revival of this this Algeria market.
Similarly, we have gone into the -- you are aware that in South America, we had gone into Guyana , wherein we have a lot of resources. Oil and gas has been explored and it's a very small market, but it has the largest -- one of the largest resources and it is growing very fast. So we are

already involved in one of their power and projects and they are anticipating few refinery and fertilizer projects there.
So we are looking into that market also. We have put in our people there and they are working on that market because that is an English speaking market, so it is easy to work in that segment.
So that is the way we are expanding.
Jonas Bhutta: Thank you, sir, for that elaborate answer. But if I have to sort of summarize, other than this Nigerian order, which is on the anvil, would you believe that all these initiatives will yield to another such large order in the next 12 to 18 months? Or that i s still some time away?
Sanjay Jindal: It is going to give us more orders and larger orders we are anticipating from Abu Dhabi definitely in that region itself. We are going to get the business, more business from these markets.
Jonas Bhutta: Understood. My second question was on the non -oil and gas initiative. So we were doing -- trying to break into the defense sector with doing something for the ordinance factory boards, etcetera. Can you talk about a bit on that?
Sanjay Jindal: Lot of -- this segment, a lot of government orientation is there. So, a few of the proposals are under discussion with the ministry and all. They may get cleared because we've been working on this market for almost a year, and we have invested a lot, lot o f efforts in this segment and committed various projects in there, and they're in the stage of cadence. So we are hopeful that a few of them will get cleared, and we should be able to really take the benefit out of it.
Jonas Bhutta: And lastly, sir, what percentage of the Barmer refinery, which is part of our turnkey order book, has been completed? So I think there was a change order also there. So including the change order plus the original order, what is the balance pending work in our order book dedicated to the Barmer refinery, sir?
Sanjay Jindal: I have the progress of the project, I don't have the order wise progress. The planning progress is around 71.5%, which is completed.
Jonas Bhutta: Got it. Thank you, sir. And all the very best.
Moderator: Thank you. We have our next question from the line of Sujit Jain from Bajaj Life Insurance. Please go ahead.
Sujit Jain: Sir, I don't know if you covered this before in the call, but just wanted to check with you. Petronet LNG indicated a very large capex fo

r their Q2 results, I think close to INR17,000 crores,
INR18,000 crores. So any projects and on -- in the pipeline, whi ch you can tap in?
Sanjay Jindal: We are discussing a few projects with PNL. It will not be appropriate to declare the name of the sale. It is -- we are discussing something with them.
Sujit Jain: Right. And you mentioned new initiatives, including solar, which you just said that -- with your aligned partner probably next year there could be some traction? Are there any plans to…

Moderator: I'm sorry, you're sounding muffled. Mr. Jain? We'll move on to the next question from the line of Raj Rishi from DCPL. Please go ahead.
Raj Rishi: I just want to find out what are your initiatives regarding this supposed massive potential of energy transition, be it green hydrogen. Solar, the one tie -up which you have with Australia, the Australian company, is it like for EPC or what is it? And what other areas in this energy transition other than your traditional business, are you targeting?
That's point number one. Point number two, just to get a perspective to what percentage of the present revenue would come from these new areas presently? And what is the vision? I heard some interview of Ms. Shukla, Ms. Vartika Shukla and I could gather th at a lot of optimism was there that a huge chunk can come from here whether sustainable aviation fuel and green hydrogen and solar, etcetera.
So what percentage of your revenues say in three years' time, can we expect from this energy transition other than your additional areas of the LNG petrochemicals?
Sanjay Jindal: So on the first part, other alliance partner that is Solar CSP, we won't be doing the EPC part. We are having a line that they will be providing the technology part and we will be doing the balance of plant. So balance of plant in that solar CSP typically 25% to 30% of the total capacity that goes into it.
That's number one. And for balance of plant and the integration of this particular technology, the refineries is another step towards energy transition. So this is the one phase wise transition that will happen. So that's one. Another thing is on the energ y transition that you asked say only green hydrogen is alone is not a part of energy transition. It is one of the many initiatives that are there.
One is on the energy efficiency part. Second is on the alternate fuel that also goes into the transition part. Alternate fuels like ethanol blending, which is not -- we have at least 10% and government is targeting 20%. So we are expecting a good chunk of new bio refineries coming up across the country because the ethanol pricing that is from biofuel policy are very conducive and they are giving -- the margins are right now on a very positive side.
So one of the refineries that is under completion is the Bio Refinery of ABRPL. So we are expecting similar type of refineries coming up in the Northeast. And with our other fields we are expecting -- the technologies are there. So we are analysing the te chnologies which are the most appropriate technologies for other feedstock also.
So -- and on the revenue part, last financial year, if we see on the energy transition, what are other things we are doing in the field of green hydrogen, biofuels, energy efficiencies, it's around 7% to 8% of our revenue stream was from energy transition. And as this is a growing field we are definitely going to increase this percentage, which we are -- we should target to be around maybe next couple of years anywhere from 8% to 15% to 20% in the Consultancy business as well only.
Raj Rishi: This is only Consultancy, right?

Sanjay Jindal: Yes, it will be Consultancy.
Raj Rishi: So this tie up with this -- in this solar part, balance of part, that will come under Consultancy.
Sanjay Jindal

: Yes, if you can see that again, it depends upon the client that in which business -- in which mode they are going to execute the project. If it is going to be a complete EPCM then definitely, we will take part of our engineering services that we are going to provide for balance of plant and integration of that. So mostly, we are expecting the Consultancy business to begin with in this segment.
Raj Rishi: And sir, what is the -- like you must have done some study as to what is the market size and what kind of turnover we can generate from this particular tie up in say three years' time. Any comments on that?
Sanjay Jindal: Market size, like what we have seen in last few months of our study that there's an enormous size. The only thing is that we have to present a good case and a good business model to the client, which is viable, of course. So we are working on different con ceptualization. It going on, on different type of -- different type of operation model for this.
And we will be presenting this particular model to the client, whichever the viable model is there, that is going to click. So we are right now in a very conceptualization stage and under various models that we are going to get into our clients.
Raj Rishi: Okay. And another thing, sir, like Ms. Shukla in Davos had talked about a lot of tie -ups that in

Engineers India cannot create technologies on its own for everything, right? So talked about a lot of collaborations and even, I think, first January, the New Year addressed the employees of Engineers India, there's talk of a lot of collaboration, this year being a year of collaboration. Can you share with us what sort of collaboration and what kind of talk, etcetera, which area?
Sanjay Jindal: The collaboration are across our portfolio, so anything for early providers in the new areas as well like Solar CSP is one where we collaborated. There are a number of other collaboration, discussions are going on with our partners. So as and when they mat ure, we'll announce it.
Raj Rishi: Okay. And sir, another thing, just my last question. Like Engineers India versus your peer group both in domestic and globally. Globally, there must be a cost advantage, right? Indian engineers come with a cost advantage. So is that the only advantage you have versus your -- like why do you expect that you'll get a lot of international business? What's the edge, which this Engineers India would have over your competitors there?
Management: That is the case because the cost advantage is there. And the experience of EIL also speaks because in many of the cases, if we see this International market, it is mostly the quality based -- quality base correction. Many of the countries it is quality ba sed collection. Wherein the experience also show the kind of experience or the complex experience we have in the Indian market.
I don't think that it is being done anywhere because there you -- that the expansions and the capacity expansions have taken certain phases. So EIL has been involved in all kinds of

expansion, as well as modernization, revamps this kind of thing is not happening in many other countries. So that always plays with the company experience.
EIL engineers also has the experience as well as the price advantage is definitely there. So there's also competition from the East European companies and their prices are less, their competition is also less. So it all depends which market is there, what kind of companies are bidding. So, that we have seen.
Raj Rishi: And sir, certain companies, I can get some con -calls, they also talked about this, India spearheading this global South on a political level. So that also might help in generating business, government -to-government putting in a good word, etcetera. So is i t there in your case or is it just direct company trying to solicit business?
Sanjay Jind

al: So we have a lot of interactions are going on with number of trade commissions and -- of various countries, not only from the global South that you are talking about, but whereas Oceanic countries also. So we are in constant touch with the trade commission s, and we look for the opportunities that we can gather from there.
Moderator: We'll take our next question from the line of Nikhil Abhyankar from ICICI Securities. Please go ahead.
Nikhil Abhyankar: Thank you, sir. Thanks for the opportunity. My first question is particularly on green hydrogen side. So recently, government has announced incentives to set up around 4.5 lakhs tons per annum of green hydrogen capacity. So are we in talks with all the winners of these bids to setup the capacity? An d what can be the size of this opportunity?
Management: See, we have to take it in a very phase -wise manner. So government has come up with their green hydrogen requirement policy. The draft is already in the market for the public consultation.
So, once the detailed procurement policy will be set up, so there w ill be a lot of aggregation that's going to happen in this particular space. And once aggregation happens, that gives the economy of scale to any operator or any manufacturer.
So definitely, with the policy initiatives and the decision and -- that government has taken and which is taking forward, we expect lot of business demand generation will be in the regional demand and acquisition will be at our national level. So we are ex pecting once it happens, lot of business would be there for us in green hydrogen space.
But definitely, like electrolysers, or maybe also coming up with PLI scheme for electrolyser, for green hydrogen manufacturing. So definitely, all these policy initiatives do support the businesses here. And we are expecting that within a year or so, you'll see a lot of movement in this particular space.
Nikhil Abhyankar: Sir, my question was particularly with regarding the incentives recently announced in the month of December. So they have allocated capacity of 4.5 lakh tons, and I think the capacities are to be commissioned in the next three years or four years.

Management: Yes. Basically the green hydrogen, if you see on the demand side, most of the demand side is from the refineries and the petrochemical. So these particular companies are going to set up the green hydrogen plant. You're right, in the next two to three years , when the studies will be done and then final financial closure and the project implementation would be there.
So it's going to take a couple of years to do this. But we do have all the capabilities, both on the technical side and both on the execution side to undertake these particular green hydrogen projects. Because hydrogen is nothing new, we have been dealing with hydrogen molecule for, since ages. So this is not a very technical incentive thing for us to crack.
Nikhil Abhyankar: Okay. So can we expect any order inflow next year from specifically green hydrogen?
Sanjay Jindal: One thing is that we have done the study of projects in last few years since it's a private company, which is setting green ammonia, green urea project. So that study is there. That is in their clearance in their board. And if that gets cleared, it's going to be a big complex somewhere in Orissa.
So let us see. Let's hope for the best. If it gets cleared from this, we are involved in the study of their projects. So that is going to be one of the large -scale projects, which would be there on the ground in the recent years for the green urea.
Nikhil Abhyankar: Understood. And my final question is on the overseas market. So recently, Aramco has capped their production at 12 million barrels per day. So do you expect this to be like some other OPEC countries might also join in and it might impact our prospects goin g ahead?
Sa

njay Jindal: I think we won't be able to answer that question because it will be more of companies like IOCL will be able to answer that question.
Nikhil Abhyankar: Oka, sir. Thank you. That's all from my side.
Moderator: Thank you. We have our next question from the line of Shirom Kapur from PL Capital. Please go ahead.
Shirom Kapur: Hi. Thanks for the opportunity. I have two questions. One is on those three mega pet chem projects that are under negotiation. Would you able to share what the total opportunity size this could be?
Management: We won't be. This is under the negotiation, so it won't be appropriate to share the details. Details of the same, you'll get to know in a few months' time. I think by 31st, we'll be able to get some news on this. At least some of them would materialize.
Shirom Kapur: Okay. And I saw in your presentation under the orders secured for the Intelligence Bureau that you've got a INR350 crores project. The service side is looking as Turnkeys. Is that's just an error because in your table, you've given your Turnkey order inflo w was zero this quarter? So I just want to...
Sanjay Jindal: It is a depository base project. It's not a turnkey project. It's a depository -based project.

Shirom Kapur: Okay. I see that now. Ye s. Okay. Thanks.
Moderator: Thank you. We have our next question from the line of Amit Anwani from PL Capital. Please go ahead.
Amit Anwani: Sir, just a follow -up on exports. You did highlight it overseas opportunities in the different markets you are looking for. Just wanted to understand, will there be more consulting orders or Turnkey orders? And second aspect, I would like to understand on the margin differential between domestic and overseas orders, which are going to look now in the international market?
Sanjay Jindal: First is it's mostly going to be the Consultancy orders. We are very specific about going for the EPC orders. So we generally give the EPC services in India itself. If we find something some good opportunity which is risk -free activity, we might decide to go in the international market for EPC, but primarily it would be Consultancy. And margin -wise, the international orders are good enough and they give good margins. And we are able to maintain our overall margins in that regard.
Amit Anwani: So like more than 5% difference?
Sanjay Jindal: That -- it depends on -- it depends on the order and the competition. In this market, we are in, very specific, it's very difficult to tell you. In some of the orders we get more than what you are telling, in others we get a little bit less, depending on t he what strategy we adopt whether we want to enter into that market, sustain our business there, and try to beat the competition or it's easy to get that business and there's limited competition, it may increase. It is on case -to-case basis we have to see.
Amit Anwani: And now with so much focus on international, the international, I think, was about INR500 - INR600 -odd crores last financial year. And I think 9 months also more than INR300 crores. Can we see the run rate substantially increasing in the next 2, 3 years?
Sanjay Jindal: It would be, it would be. Not substantially increasing. It will increase a bit. At least it will be -- I can say it should be substantial -- not very substantial, around 20%, 30%, at least it should

increase.
Amit Anwani: Sure, sir. thank you very much.
Moderator: Thank you. We have our next question from the line of Nirav Chudgar, an independent research analyst. Please go ahead.
Nirav Chudgar: Thanks for giving me the opportunity. My question is actually on the Vision 5K '25, which was outlined by your Managing Director, Vartika Shukla in the 56th AGM. So actually, I want to know from you, what would be the progress on that? And if you can give some qualitative color on this?
Because if I s

ee your results, right, from FY'20 to FY'23, the revenue has been in the range of INR3,000 crores to INR3,461 crores in that range. And even in this current financial year, in the 9 months FY'24, we have achieved the revenue target of INR2,44 1.89 crores. So I would like to

know qualitatively, are we planning to achieve our aspirational Vision of 5K '25 by next year? And if you can also outline what are the initiatives which we are taking in order to reach there? Thank you.
Management: Yes. I think we are making all our efforts to achieve our vision of -- and increasing our order book, which will in turn result into the increased revenue. So we are making all out efforts across the company to achieve this.
Moderator: Mr. Nirav, does that answer your question?
Nirav Chudgar: Yes. So could you quantify for me, whether we will be able to achieve that aspirational target? Or are you planning to release some another vision statement or a road map to guide the investors?
Sanjay Jindal: Vision statements are not changed very easily. We are working towards it, one has to work towards it, and we are totally wholeheartedly working towards it, entering into new areas, tie up with the new companies, entering into new projects, entering into ne w areas. All these things will take time.
And efforts should be visible in the market, that is the aspect. And we have to make efforts and we have to work towards it. The vision is always a target wherein we have to work towards it. Right now, we are working towards it. If it is unachievable then we will see at that point of time, but we are working towards it and we should be able to meet the objective.
Moderator: Thank you. We'll move to the next question from the line of Akshat Singhal, an Individual Investor. Please go ahead.
Akshat Singhal: Thank you for the opportunity. My first question, this is two book keeping questions. This is with respect 2020 and 2021 annual report. I was going through all the con calls, but couldn't find the question to the same. The first one is with respect to the note number 55 of annual report of 2021. It states that out of the investment made by PFS in the past, some issues of securities are defaulted in interest payment and/or principal repayments.
The amortized value of probable future principal default is amounting to INR193.7 crores as at 31st March 2021. My question is with respect to the financial year to which this provisioning of default in interest and principal repayment pertains to? Whether it is financial year 2021 or earlier financial years? As the same is not getting captured in the note.
Management: Actually, these PFS securities were downgraded during the financial year '18 -'19, '19 -'20 and '20-21. And to the tune of INR193 crores as you mentioned, and we are provisioned against that INR150 crores -- provision of INR150 crores was created in the fina ncial year 2021.
Akshat Singhal: But they were pertaining to previous last 3 years, right, sir?
Management: Securities were downgraded in the '18 -'19, '19 -'20 and '20 -'21.
Akshat Singhal: And sir, further, it is mentioned here that further the provisioning is done only for the amortized value of the probable future principal defaults and it is not mentioned that of the interest also.

So why we haven't provisioned for the interest and only we have provisioned only for the principal amount?
Management: Because all the interest due, we were paying continuously to the PF Trust on a yearly basis. And principal amount was not returned to PF Trust, that's why there was provision of INR150 crores. INR150 crores for the principal portion.
Akshat Singhal: Okay. And sir, has any actions been taken or initiated by EIL or government on the responsible officers on account of these defaults in the securitie

s, because -- since it was a 3 -year period, so
there has been some kind of a negligence and whether the sam e has been reported to the
appropriate statutory authority, including the exchange with respect to the same?
Management : Yes. We don't have such information. So that's why we have not reported to the stock exchange.
Akshat Singhal: Okay, that's it from us. Thank you, sir.
Moderator: Thank you. We have our next question from the line of Raj Rishi from DCPL. Please go ahead.
Raj Rishi: Actually my line got disconnected. I was talking about the Global south thing. Can you just share comments on that? The political government to government connect how much it helps a company like Engineers India? My line got disconnected at that time.
Sanjay Jindal: Yes. Okay. As we mentioned that we are making very dedicated efforts to come back with various trade commissioners of various countries. For example, that particular, the alliance that we have done with the Solar CSP, which has emerged from our B2G interac tion with the trade commissioners.
So a number of other initiatives -- this is a continuous process that we interact with all the embassies of the countries and look forward to the more partnership and more business in this area. So it definitely helps.
Raj Rishi: Okay. And another thing like main raw material for you is quality of talent, right. The personnel which you have. So what -- versus the market, you need to incentivize them. So are your incentives in place versus your peer group?
Sanjay Jindal: See being a public sector, we have to go as per the guidelines of the government on our pay packages. And which we believe that are quite lucrative with respect to attracting the new talent.
Number two is the retention of the talent that is also important. And if you see our attrition rate, it is less than 2% for last number of years. So with our policies, we are able to retain our talent as well.
Raj Rishi: Okay. Thanks a lot.
Moderator: Thank you. As there are no further questions, I now hand over the call to Ms. Bhoomika Nair from DAM Capital for closing comments. Over to you.

Bhoomika Nair: Yes. I would like to thank the management for giving us an opportunity to host the call. So wishing you all the very best, and thank you once again and to all the participants as well. Sir, any closing remarks from your side.
Sanjay Jindal: No, thanks, Bhoomika.
Management: I have the questions on the result part very low. So we thought investors are happy with the results. Okay. Thank you.
Moderator: On behalf of DAM Capital Advisors Limited, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Moderator: Ladies and gentlemen, good day and welcome to the Engineers India Limited Q4 FY '24 Earnings Conference Call hosted by DAM Capital Advisors Limited. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Ms. Bhoomika Nair from DAM Capital Advisors Limited. Thank you and over to you, ma'am.
Bhoomika Nair: Yes, good morning everyone and a warm welcome to the Q4 FY '24 and FY '24 Earnings Call of Engineers India Limited. We have the management today being represented by Mr. Sanjay Jindal, Director Finance, Mr. Suvendu Pa dhi, Company Secretary and Investor Relations, Mr. R P Batra, Executive Director, Finance and Accounts and Investor Relations, Mr. Sunil Saxena, Executive Director, Technical and Investor Relations, Mr. Amanpreet Singh Chopra, Senior General Manager, CMD Office and Investor Relations, Mr. Vivek M idha, General Manager, Marketing, Business Development and Investor Relations, and Ms. Neha Narula, Senior Manager, Company Secretary a nd IR.
I'll now hand over the floor to Mr. Jindal for his initial remarks, post which we'll open up the floor for Q&A. Thank you and over to you, sir.
Sanjay Jindal: Thank you, Ms. Bhoomika. Good morning everybody and a warm welcome. We have declared our annual results for the financial year '23-'24 on 28th May 2024. Our stand -alone information are as, with respect to financial performance for the year ended 31st March 2024, on stand -alone basis, the company has registered turnover of INR3,232 crores in comparison to INR3,284 crores in the last year ended 31st March 2023.
The turnover from consultancy and engineering segment stood at INR1,454 crores and from the tunkey segment was INR1,778 crores . In the fourth quarter, the company achieved a turnover of INR790 crores with turnover from consultancy and engineering segment amounting to INR388 crores and INR402 crores in the tunkey segment. During the fourth quarter ended 31st March 2024, the company earned a profit after tax of INR91 crores in comparison to INR50 crores earned in the previous quarter ended 31st December 2023.
During the year ended 31st March 2024, the company earned a profit after tax of INR357 crores in comparison to similar profit of INR342 crores in the last year. The company is having a healthy earning per share of INR6.37 as compared to last year of INR6.09. Other income during the financial year 2024 increased to INR225 crores as compared to INR169 crores during the last financial year.
On the consolidated front, the company earned a profit of INR445 crores for the year ended 31st March 2024 in comparison to INR346 crores earned during the last financial year '22-'23. Therefore, there is an increase of around 29% in the consolidated profit on year -on-year basis.
During the financial year '23-'24, the order inflow in the company amounted to INR3,406 crores .

The overall status of order book position as on 31st March '24 is INR7,823 crores in comparison to INR7,695 crores during the last year.
Further, during the current financial year up to 29th May '24, the order inflow is INR1,230 crores

and after including the go -ahead from our client, the same works out to be INR1,835 crores .
Further, in the current financial year, year -on-year receivable -- reduced considerably during the financial year 2024. The debtor stood at INR314 crores during the financial year and in the last year this was INR353 crores . The debtor as on number of days of turnover has declined to 35 days during t

he financial year '23-'24 from 39 days during the financial year '22-'23. Thank you.
Moderator: Thank you very much. We will now begin with the question -and-answer session. The first question is from the line of Noel Vaz from Union Asset Management. Please go ahead.
Noel Vaz: Yes, sir. Just one question. Regarding the expansion which is going on at the Numaligarh refinery, are we involved in that particular project from the expansion from 3 to 9 MMTPA ?
That is my only question. Thank you.
Sanjay Jindal: No. This expansion has been done by some consultant. We are not part of that expansion.
Management: Part of the expansion project, there is a pipeline that is being done by EIL and there is another unit which is not part of the expansion, there 's a coker , that is being done by EIL.
Noel Vaz: Sure. Just one follow -up. We currently have a small minority stake. Is there any plan to monetize this as such or some clarity on that? Thank you.
Management: There is no plan for monetizing as of now. It is a long -term investment.
Noel Vaz: Okay . That is all from my side. Thank you.
Moderator: Thank you. The next question is from the line of Amit Anwani from PL Capital. Please go ahead.
Amit Anwani: Hi, sir. Good morning. Thanks for the presentation. Sir, first question, we did guide -- used to guide about INR4,500 crores to INR5,000 crore s intake and we saw roughly about INR3,400 crore s and that too in consultancy, I can see INR500 crore s coming from overseas market this year. So just wanted to understand, was there any major slippage in order and also would like to understand what are the key orders in consultancy side and turnkey side which we are now considering as a pipeline for F Y'25, and if you could highlight the value also ?
Vivek Midha: Good morning. This is Vivek from Marketing and Business Development. I would like to answer that question. We were negotiating few of the contracts towards the closure of this financial year but those could not be concluded at that point of time and those exactly got concluded after the completion of the financial year. So that 's how you have seen that kind of impact.
For your information, as of today, we have reached almost INR1,800 crores worth of business which includes the awarded works as well as certain go -aheads that have already been given to us. So those orders got realized late. Most of them got realized in April itself. So that is the impact that we could not reach the earlier promised figure of around INR4,700 crores and

INR5,000 crores . So similar kind of figure we have already reached in one and a half month, in approximately two months you can say.
With respect to the future prospects, there are still major opportunities available. There are two major petrochemical complexes are in the bidding process. We are in the process of bidding for that. They are in the open market. Let 's see. Those would be realized in a couple of months' time.
Internationally also, we could partially close one of the petrochem complex and the balance part is still pending and it would be closed in a couple of months. It 's there.
So there are a lot of prospects out there in the market itself for the refinery and petrochemical.
A lot of projects are there on the [anvil 0:09:27]. So we see that we should be able to get good business out there. As far as this, at least the last time figure we should be able to meet unless there is any exigency happens. But we are on the good track right now.
Amit Anwani: Right. So apart from this INR1,800 crores you said YTD we already did , so can we expect INR3,000 to INR4,000 more in the remaining nine months?
Vivek Midha: Yes. If this pace continues, we have an opportunity for getting INR3000 to INR4000 .
Amit Anwani: And sir how is the expectation on mixed consultancy versus turnkey ?
Vivek Midha: It primarily rem

ains the same. It is always 50 %-50%. Sometimes LSTK goes more. This time LSTK has gone more and consultancy has got reduced. But it is going to be more or less in the same ratio, consultancy and LSTK. LSTK is specifically OBE. It is more of a kind of consultancy only. So we do not take the high -risk jobs. They are comfortable jobs.So we will be targeting OBE projects only in the LSTK segment also. So ratio is going to be similar as we were having earlier.
Amit Anwani: Right. Second on the revenue and margins, again the top line also did not gr ew too much, though we were expecting some growth for the full year. And second, so I wanted to understand what is the guidance now for FY ’25? And second on margins now, the turnkey margins appears to be on EBIT level of almost more than 4.85% for past two quarters. So what are the expectations of margins now? And on the top line, was there any slippage and what is the outlook for FY '25?

Sanjay Jindal: Basically, as you know, we are operating in the cyclic nature of industry and our turnover basically depends upon the orders in our hand. Though we have handsome order book of 7 ,800, but in the last year we were expecting some new orders and we were expecting some – we were expecting some turnover from that new jobs also. But these new jobs were shifted either in the late month of March or it is coming in the first quarter of this year.
So there is a 2% or 3% down in the turnover portion. But on the margin side, you may please see there is increase in the EPC business segment. Earlier our margins were in the range of 3% to 4%. Now it is more than 5%. And in the consultancy segment also we are maintaining our margins.
Amit Anwani: Sure, sir. Lastly, on the all the S unrise sectors which are highlighted and we saw a past couple of days, there was announcements on coal gasification, fast tracking . And there was

announcement a few months back on bio -related sectors , there could be policies coming in. Wanted to understand, are we expecting anything significant for EIL and F Y'25, whether it is clean hydrogen pilots, which we are already doing, compressed biogas, coal gasification. So just wanted to understand the opportunities here in 12 -24 months for us.
Vivek Midha: With respect to the sunrise sectors, we have secured the business worth, I think in the range of 8% of the total order value has come from 8% to 9% has come from the green area. So with respect to the coal gasification, we are in touch with -- we are already executing a few of the assignments in coal gasification. Some of the studies we are doing and we are also in touch with a few more private investors who are interested in developing coal gasification based on plant. One is in the steel industry which is a coal based -- coal gasification based project and they are thinking of going for the DRI plants. So we are in touch with a few of the private investors in this sector. Because mostly in coal gasification, it is coming from the private companies only. And also recently the Coal India and BHEL have also signed an agreement. They are also anticipating some major commercial projects. So we will be also pursuing that project too. And other projects of Coal India also which would be signed after this because they also have other -- two more projects in the pipeline in future wherein they would be investing and setting up those projects. So we will be pursuing those public sector projects also.
Amit Anwani: On compressed biogas, are we expecting orders this year? On compressed biogas, CBG?
Management : CBG, yes. On the CBG, actually the plants, all the OMCs are in the process of preparing the DFRs. So when the DFRs will be converting it to real investment that is what we are expecting during this year. So we are expecting the pie of the CBG plants as well. But once the OMCs will take an inves

tment decision, then it will go for the execution stage.
Amit Anwani: Thank you, sir. And all the best. Thank you.
Moderator: Thank you. The next question is from the line of Prathmesh Salunkhe from PL Capital. Please go ahead.
Prathmesh Salunkhe: Yes. Thank you so much for taking my question. I just had a simple question in our order intake. So in our presentation, we have said that one of the jobs awarded in Q3 was considered in consultancy and now and now it is considered in turnkey. Just wanted some more colo ur on it, which order was it exactly? And what was the value of it?
Sanjay Jindal : It was because consultancy assignment. It was actually a depository which was received from the Intelligence Bureau. It was the construction of their office facilities. It was worth INR350 crores. So initially, we were thinking of -- we were having a discussion with the client with respect to whose [PAN and TAN 15:56 PH] needs to be used. Initially, they were not agreeing. Later on, they agreed on the philosophy and we could convert that into a depository mode. So that's how it was shifted fr om the consultancy to further in the LSTK segment , because we could convert that into job into a depository mode.

Moderator: Thank you. The next question is from the line of Nidhi Shah from ICICI Securities. Please go ahead.
Nidhi Shah: Hi. So as you just mentioned about the project that moved from consultancy to turnkey, is there any change in value given that the project has now become a turnkey project?
Moderator : Sorry to interrupt, ma'am. May I request you to use your handset, please?
Sanjay Jindal: Voice is not clear.
Nidhi Shah: Okay. One second. Hello. Am I audible now?
Moderator: Yes, ma'am. Please go ahead. Thank you.

Nidhi Shah: Yes. So the project that you mentioned just now that has moved, is there any change in value since the project has now gone in depository mode?
Sanjay Jindal: No, there is no change in value at the moment.
Nidhi Shah: Okay. There is no change in value. A couple of other questions that I had was that this year's finance cost on the consolidated level is much higher than before and so is the other income. Could you just give me some color on that?
Sanjay Jindal: On the consolidated basis, definitely our profits have increased from INR346 crore s to INR445 crore s. This is mainly on account of our share in RFCL project. In this year, E IL share was INR85 crore s in comparison to last year's figure of INR2 crore s only.
Nidhi Shah: Okay. And what is the reason for the increase in interest cost?
Sanjay Jindal: Other income, ma'am, we have settled a change order with our client and some portion was in the fees portion and major portion was towards the interest on the outstanding payment. So that's why there is increase in the interest payment. So we have got arou nd INR55 crore s interest from our client in settlement of our change order.
Nidhi Shah: And lastly, could you give me some guidance for FY '25 in terms of revenues and margins?
Sanjay Jindal: Definitely, ma'am. As you know, we are in the cyclic nature of business. Though we are having a strong order book of INR7,800 crore s and we have good order flow in the first quarter itself and we are sure that there will be increase in the turnover as well as in the PA T. But right at this moment of time, we cannot quantify. But definitely, this will be better than this year.
Nidhi Shah: So revenue, can we expect single digit or low double digit growth? Is there some color that you could give possibly on that?
Sanjay Jindal: Because we are in the cyclic nature of business, it totally depends on the order inflow during the current year also. Therefore, it is difficult to quantify. But we assure you, our performance will continue to be better than last year.

Nidhi Shah: And my last question would be on JV profit. This year, JV profit has grown astronomically. And what is the outlook on that for the upcoming years? And also if you could give me a break up of the JV profit as to which JV is how much coming from?
Management: It is coming from our Ramagundam Fertilizer Corporation. We are expecting more than whatever we have achieved during the current financial year. We expect similar, rather more than that particular profit in the coming year also.
Sanjay Jindal: Madam, in the coming year, we are expecting more than INR100 crore s from the R FCL project.
Nidhi Shah: All right.
Sanjay Jindal: Because plant is running at around 85% capacity. And in the current year, it is expected that plant will run on 100% capacity and it will generate more and more profit. And our share will be more than INR100 crore s in the coming year.
Nidhi Shah: Thank you so much.
Moderator: Thank you. The next question is from the line of Bhoomika Nair from DAM Capital Advisors. Please go ahead.
Bhoomika Nair: Yes. Sir, just wanted to understand, you said about INR1,800 crores of order intake. Is it possible to get a break up between how much would have been consultancy versus LSTK of this INR1,800 crores?
Sanjay Jindal: It is approximately INR1,000 crore s is coming from the LSTK and balance is coming from the consultancy.
Bhoomika Nair: Sure. Thanks. The other question was regarding international orders. We were expecting one from Nigeria, some more in MENA region, including Saudi and Abu Dhabi. So if you can just give some -- what is the status out there? When do we expect these orders to come through? And how large can possibly the size be of these three large orders?
Vivek Midha : With respect to this order in Nigeria, actually we have closed the order which we have booked in this INR1,800 crores. We ha ve booked that order in this INR 1800 crores. It is a smaller value right now. It is to the tune of INR72 crores to INR 75 crores. But the major value is about to come in a couple of months' time because we are negotiating the contract with them and that bigger contract we will be able to close it in a few months time because the client side is also taking some time and the y want to do the initial phase one and then proceed with the next phase. So we will be shortly closing the other part of the contract which will be larger than this, much larger than this a nd with respect to the Saudi , right now we are in the initial stages of Saudi. We are setting up an office. So it is going to take some time from Saudi. However, we have done quite significantly in the Middle East market specifically with respect to the Abu Dhabi and UAE.
In UAE, we have been doing a lot of consultancy business. It has increased in a good way if you see that out of the total business what you have seen overseas 50% has been considered from

that market, Middle East market and 50% has come from the Nigeria market. So that kind of contribution is that Middle East region is doing and we are expecting it to grow further.
Bhoomika Nair: Okay. So are we expecting any larger sized orders from the international market from any of these?
Vivek Midha : We are expecting I have told you we will be concluding a major contract in Nigeria.
Bhoomika Nair: No, I meant Middle East, sir.
Vivek Midha : [inaudible 23:19] in Middle East are also in the process. If they are successful, then we will have good news for all of you.
Bhoomika Nair: Okay. And sir there was also this IOCL Paradi p order which was to be what do you say the petchem order?
Vivek Midha : It is a pending process, ma'am vendors are in the market.
Bhoomika Nair: And any other IOCL pet chem orders or refinery orders which are there in the pipeline which may come up?
Vivek Midha : Majorly, the Parad ip is there in the market. IOC

L only one project major project is right now continuing.
Bhoomika Nair: And from the Bina refinery sir what is the status out there? I mean when will that likely come?
Vivek Midha : It is also in the market, ma'am. There are four packages which are in the bidding process. We hope the results soon in a month or so you will get to know what will happen.
Bhoomika Nair: Okay. Got it. So from that perspective given that we win a couple of these orders, would it be fair to say that this year in consultancy we could probably see the order intake going towards INR2,000 crores , INR3,000 crore s kind of a number or do you think that will be a little difficult?
Vivek Midha : It would remain if we see the total order value towards as of the earlier perspective was around INR5,000 crores and out of which 50% came from the consultancy. So we at least can achieve that part, that kind of order value from there. If we get more it would be good for us and we are trying towards it m ore consultancy would be always beneficial.
Bhoomika Nair: And here how w hen you are bidding for all these projects whether be it IOCL, BPCL or others in the domestic market how is the competitive intensity and earlier we used to get a lot of orders on nomination basis, but now there is a lot of ordering and L1. So we have seen the consultancy margins which used to be around 26 %, 27% going down to 22, 23%.
Now, how should we think about margins? Is this one year anomaly and you should see margins going back to the 25% range or you think it will be closer to this 20, 22%?
Vivek Midha : I mean it depends on the project -to-project, wherever it is happening. It just depends on the geography. If it's outside India, geography, the margins would be more, because less competition

will be there. In India, there will be competiti on. Some would be negotiated. Shit on veers , varies. Today, also in the consultancy, we are around 22 %, 24% in that range itself.
So, that's a good margin, as far as the market is concerned, because there's a market, naturally, the times have changed, competition has increased, a lot of companies are there. So, we have to beat the competition and get the jobs. It's not the PSU market now. Even government doesn't support any PSU. They are asking us to fight the competition. So, we have to fight the competition and we are winning the jobs. At least, you can see the track record in the market.
Management : But despite of that, we are maintaining good margin around 22 %, 23%. And figure of 25% is not far away, because this may fluctuate on a year -on-year basis.
Bhoomika Nair: Understood. Sir, one last question.
Management : But we are very confident of 25%.
Bhoomika Nair: Sir, one last question. What was the dividend income booked from Numaligarh in this year? And anything from Ramagundam?
Management : Around INR30 crores. And RFCL Ramagundam have not paid dividends so far. And we are expecting dividend in this year, if possible.
Bhoomika Nair: Okay, sir. Thank you very much.
Moderator: Thank you. The next question is from the line of Nishit Master from Axis Securities . Please go ahead.
Nishit Master: Yes. Thanks, sir. So, my question was on two things. So, one, you mentioned that obviously Nigeria, a major part of the order is still pending. There were two other nomination -based big contracts, which we were expecting in India. If you could give us the status for that. And two, are we doing any projects for HPCL's Barmer refinery? Or you expect orders coming for Barmer

anytime soon this year?
Vivek Midha : Barmer is executing these projects. Barmer has two projects. One is as PMC, One is as OBE contractor. Those are almost on the verge of completion in times to come. The refinery is expected to be commissioned by the end of this year or early next year, just to be commissioned.
Nishit Master: Okay.

Any further orders which we can expect from Barmer on the downstream side if there are more?
Vivek Midha : Let the refinery start and let every refinery would go in expansions in future. And there would always be modifications. Those kind of assignments would keep on coming to us from there . It will not be large assignments but if in the future they try and think of expanding it, then naturally it would be a bigger assignment. But first, let them finally commission and then start operating. Then regular flow of income should be from there.
Nishit Master: And on the other two nomination -based contracts, which we were expecting…

Vivek Midha : Sir, number of contracts we are discussing. Some of them are nominations, some of them are on the competitive basis. Let them realize, because in one of the projects in which we were earlier thinking of nomination that went into competition. So, nothing is certain. So, in any case, those projects are there on the annual and we are bidding and we will get some results in a couple of months' time, in a month or so. We will get some good results.
Nishit Master: Okay. And on the fertilizer si de, are we seeing any traction?
Vivek Midha : Sorry, any?
Nishit Master: On the fertilizer industry. From the fertilizer industry, are we seeing further traction on ordering?
Vivek Midha : Fertilizer, specifically, any smaller works we can expect. We are talking to a few of the fertilizer companies like KRIBHCO , EPCO and Ramagundam . All these companies are there. Wherever there are smaller works, they are there. We will be part of that. Consultancy orders could be there.
There is no major anticipation of any major fertilizer complex other than what is expected in the green segment from a private investor. So, that we expect in future.
Management: Okay. Thank you so much.
Moderator: Thank you. The next question is from the line of Mohit Kumar from ICICI Securities. Please go ahead.
Mohit Kumar: Hi, sir. Thanks for the opportunity. So, my question is, do you see any tender from Petronet LNG or GAIL in the fiscal year?
Vivek Midha : There are a number of inquiries that are there from Petronet LNG .
Mohit Kumar: Something big. I think they announced INR20,000 crore worth of projects last year. Are they looking for some consulting packages in the fiscal?
Vivek Midha : They are still in the initial stages of the projects. We are doing some pre -project activities for their projects. Let us see when they take the investment decision and proceed with the tendering. They will let us know.
Mohit Kumar: Any last words from the GAIL , sir? From the GAIL ?
Vivek Midha : GAIL , yes. Some of the projects there, they are also carrying out some feasibility studies for Pet Chem plant in Madhya Pradesh and some of the assignments are there for PDHPP. We are in the process of that.
We are engaged with them for their projects. And regularly we get engaged with them for various engineering assignments from the GAIL because it is a day -to-day activity with them.

Mohit Kumar: Understood. My second question is on the coal gasification. Of course, I think there are a few more projects which look like they will come up. Are you hopeful that this year you can see some consulting packages again from coal gasification, especially from CIL, BHEL, JV?
Vivek Midha : We are right now in touch with a few of the private investors who are eyeing for the government viability gap funding. And they are taking funding. We are supporting them in their feasibility studies. They get the funding from the government. So, definitely they are going to execute. So, this kind of assignment is there. Already we are executing one of the projects in coal gasification for Neyveli Lignite. This phase II is yet to start. So, that is also the end goal .

Apart from that, Coal India has also set up a JV for the upcoming commercial project. So, they would be coming out with the tendering in those assignments. We will be also discussing with

them for the prospects in that project. That's going to be a commercial plant.
Mohit Kumar: Understood, sir. Thank you and all the best.
Moderator: Thank you . The next question is from the line of Anuj Sharma from M3 Investment. Please go ahead.
Anuj Sharma: Yes. Thank you for this opportunity. So, my first question is on capital allocation. Historically, dividend payout used to be upwards of 65 %-70% and gradually it has come down and this year it has been less than 40%. We have also seen that excess capital we have deployed in unrelated projects. So, how is the management now thinking about capital allocation? That is question number one.
Moderator: Yes, Mr. Sharma, may I request you to self -mute your lines once you are done? There is a lot of disturbance coming from the line.
Anuj Sharma: Sure.
Sanjay Jindal: Can you just repeat the question, please? Because there was a lot of disturbance in there.
Anuj Sharma: Yes, I am sorry. I was asking about capital allocation. Historically, we have seen that dividend payout used to be upwards of 65 %, 70% and gradually over a period of time it has come down. This year it is less than 40%. We have seen that excess capital we have deployed in unrelated projects. So, my question is how does the management and board think about capital allocation going forward?
Sanjay Jindal: In this year also, we have paid 60% dividend, INR3 on the face value of INR5 and we think that this is a good dividend comparing the industry and be sure EI L will always reward their shareholders by way of dividend.
Anuj Sharma: No, I was asking more about the allocation policy. So, we are looking at payout rather than the face value.
Sanjay Jindal: The allocation policy is 5% of network or 30% of PA T, whichever is higher. So, whatever we have paid, that is more than the policy.

Anuj Sharma: So, sir, in terms of NRL, historically, what has been our share of NRL projects and going forward, how much opportunity still remains in NRL and our wallet share expected in that? Thank you.
Management: Our share is 4.37% is our equity there and we are going to maintain that equity. And NREP expansion is going ahead and after NREP expansion, some modification jobs will be there.
Anuj Sharma: Okay. No, I was not talking about the equity share. I was trying to understand the share of the work which has been given by NR L?
Management : NRL is getting business. Right now, the expansion project has been done by us, but few of the units like DCU and one process unit, SRU has been done by us. And we are also eyeing for one of their upcoming polypropylene unit. They have planned for PP unit. We will be discussing and getting those units.
Last year, we got one aqueous ammonia project from them. So, the projects are also being discussed with them. It is not that they are giving it on nomination. We are bidding and getting those tenders against the competition.
Anuj Sharma: All right, sir. Thank you.
Moderator: Ladies and gentlemen, as there are no further questions, I would now like to hand the conference over to Ms. Bhoomika Nair from DAM Capital Advisors Limited. for closing comments.
Bhoomika Nair: Yes, I would like to thank all the participants for being on the call and particularly the management for giving us an opportunity to host the call. Thank you very much, sir, and wishing you all the best. Any closing remarks from your side, sir?
Management: No. Thank you, Bhoomika.
Bhoomika Nair: Thank you, sir.
Sanjay Jindal: Thank you.
Moderator: Thank you. On behalf of DAM Capital Advisors Limited, that concludes this conference. Thank you for joining us and you may now disconnect you

r lines.

MODERATOR : MS. BHOOMIKA NAIR – DAM CAPITAL

Moderator: Ladies and gentlemen, good day, and welcome to the EIL Q1 FY '25 Earnings Conference Call hosted by DAM Capital Advisors Limited. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing st ar then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Ms. Bhoomika Nair from DAM Capital Advisors Limited. Thank you, and over to you, ma'am.
Bhoomika Nair: Good afternoon, everyone, and welcome to the Q1 FY '25 Earnings Call of Engineers India Limited. We have the management today being represented by Mr. Sanjay Jindal, Director of Finance; Mr. Suvendu Padhi, Company Secretary and Investor Relations; Mr. R.P. Batra, Executive Director Finance and Accounts; Mr. Sunil Saxena, Executive Director, Technical; Mr. Amanpreet Singh Chopra, Senior General Manager, CMD Office; Mr. Vivek Midha, Senior General Manager of Marketing, Business Development and IR; and Ms. Neha Narula, Senior Manager, Company Secretariat and IR.
I'll now hand over the floor to Mr. Jindal for his initial remarks, post which, we'll open up the floor for Q&A. Thank you, and over to you, sir.
Sanjay Jindal: Thank you, Ms. Bhoomika. Good afternoon, everybody. A warm welcome to EIL's earning call of quarter 1 for financial year '24, '25. We have declared results of quarter 1 of financial year '24/'25 on 9th August '24. As regard to financial performance for the 3 months ended June '24, the company has registered turnover of INR 611 crores, we generate INR 808 crores during first quarter of the preceding financial year.
Turnover from Consultancy and Engineering segment stood at INR 347 crores and some Turnkey segment at INR 264 crores. A decline in turnover is due to Turnkey segment, whose major ongoing contracts are on the verge of progress. However, in the current financial year or late in the preceding financial year, we have received a number of Turnkey jobs, whose turnover will be reflected in the coming quarters.
Other income during the current quarter ended June '24 is INR 38 crores as compared to INR 93 crores during first quarter of the preceding financial year. Other income for the quarter ended 30th June '23 includes interest income to the tune of INR 56 crores, pursuant to settlement with one of the clients in Consultancy and Engineering Project segment.
During the current quarter of the company, has reported PBT of INR 74 crores and sight of INR 55 crores in comparison to INR 153 crores and INR114 crores respectively during the first quarter of the preceding financial year.
The company has an executed order north of INR 9,658 crores comprising under Consultancy segment of INR 5,522 crores and under LSTK segment of INR 4,136 crores as on 30/6/'24. However, if we consider the order inflow for the month of July and above, as on date 10 companies are having the order book opportunities around INR 11,000 crores.

So now, this is to Ms. Bhoomika.
Bhoomika Nair: Sagar, can you please open for Q&A.
Moderator: Thank you very much. We will now begin the question-and -answer session. Our first question is from the line of Mohit Kumar from ICICI Securities.
Mohit Kumar: Congratulations on an excellent order inflow for the quarter. My first question is on the, sir, you

mentioned that the order book has increased to INR 11,000 crores by the end of July. Can you just help us with the kind of order you received in July? Is it a Turnkey or Consultancy? Can you give some color?
Vivek Midha: Good afternoon. This is Vivek Midha from Marketing and Business Development. So primarily in this 2 months ga

p after the tune, we probably order from the Consultancy has been to the tune of around INR 1,400 crores, and as that the Consultancy has been approximately INR 1,000 crores is in LSTK segment and OBE basically -- segment. So that's the new addition which has taken place in the last 2 months after this quarter was ended.
Mohit Kumar: Is it possible to name those Consultancy projects, sir?
Vivek Midha: The Consultancy is primarily from the BPCL for the Bina refinery. And the OBEs and LSTK is from ONGC.
Mohit Kumar: Understood, sir. And sir, given the fact, of course, you received the BPCL refinery, you received the Petronet LNG order. But how is the auto prospect for the balance of this fiscal?
Vivek Midha: There is nothing balance from the BPCL, because it's already been awarded.
Mohit Kumar: My question is, yes, are there any large packages available for BPCL or IOCL or some other agencies, which you would tender in the next 8 months?
Vivek Midha: So the BPCL was the recent bidding and we started it in the last financial year, but it was concluded. But there are some biddings that are going on with the other state -owned companies, which are in the competitive mode. So they would be realized towards the end of this year. Those are in the bidding stage. So it's not appropriate to name them. There are many queries which are in the bidding stage still.
Mohit Kumar: Understood, sir. So my third question on the EBIT margin. EBIT margin for the quarter for Consultancy as very low. How should we think about this margin? Do you think that is the -- are there any one-off in this quarter? Should we expect a normalized margi n of 24% to 28% going forward?
Vivek Midha: As you know, in this project kind of industry, margins are always cyclic in nature. And definitely, since we have a strong order book, and that order book will be reflected in turnover in the coming quarters. And we are sure that margin will -- all margins in the Consultancy segment will be intact.

Moderator: Our next question is from the line of Manish Ostwal from Nirmal Bang Securities Private Limited.
Manish Ostwal: Sir, my question on the pipeline prospects for the order bookings in the coming quarters, and so can you take -- talk you about that thing? And secondly, in terms of margin of the Consultancy and the Turnkey, what is the sustainable margin on a yearly basi s for both the businesses, sir?
Vivek Midha: With respect to the upcoming orders, so we had anticipated last year that we will be at least matching the last year's order, but last year we could not -- we could not reach that 4,500 -- for ourselves. But now, till date -- today, itself, -- as of today, we have already reached 4,800 orders. So we are going to add a good amount of orders in time to come. At least --
Moderator: Sorry to interrupt, sir, we are losing your audio in between.
Sanjay Jindal: With respect to your margin in the LSTK segment, it is around 5% on sustainable basis.
Manish Ostwal: Okay and Consultancy?
Sanjay Jindal: Consultancy segment profit is around 20%.
Manish Ostwal: And secondly, sir, we are trying quite a long time to connect the Director of Finance for making -- taking appointment. So can you share the details the right person for the appointment? That would be great.
Sanjay Jindal: May I know which firm you are?
Manish Ostwal: My name is Manish Ostwal and I'm representing Nirmal Bang Securities, Mumbai.
Sanjay Jindal: Okay. You can write a mail to me, I will respond.
Moderator: We'll take the next question from the line of Ms. Bhoomika Nair. Sorry to interrupt Ms. Nair. The line for the management is dropped. Please stay connected while we reconnect the management back. Ladies and gentlemen, the line for the management has been reconnected. Sir, please go ahead. And we have the next question coming from the line of Ms. Bhoom

ika Nair
from DAM Capital.
Bhoomika Nair: Yes. Sir, if you can talk about the order prospects as the one moves ahead. What are the kind of, while we've gotten the BPCL order, but for the balance part of the year, what are the kinds of orders that are there? We were looking at some international orders from Nigeria, et cetera. So if you can just talk about both the domestic pipeline in terms of ordering activity and where you're seeing orders?
Moderator: Sorry to interrupt, ma'am. The line for the management again is disconnected. Please stay connected while I

reconnect them back. Thank you for patiently holding. Your line for the
management has been reconnected. Bhoomika ma'am, if you can please repeat your question once again?
Bhoomika Nair: Yes, sir. Sir, I don't know how much you've heard, but I was basically trying to...

Sanjay Jindal: I'm sorry, Bhoomika, please repeat your question because a lot of disturbance was there and we could not listen your question properly.
Bhoomika Nair: No worries, sir. Sir, the question was revolving around the order pipeline after a very healthy first half or kind of orders that we've seen right now till date, what is the outlook in terms of ordering activity, what more PETCHEM orders can possibly come through because there are a
lot of petrochemical orders in pipeline? And also, I understand we were looking at some international orders from Nigeria, et cetera, what is the status out there? What is the activity out
there? If you can just brief us about t he pipeline.
Vivek Midha: Bhoomika, this is Vivek. I just want to respond to on that question. Regarding the remaining orders, the initial stages of the first three months have gone -- I think, 4 months, 5 months have gone. But still various orders are in the bidding process. We are bidding for it. The results are expected to come towards the end of this financial year and towards the end of this calendar year.
So we anticipate something coming around towards the third quarter of this year. But the bidding process itself takes time and with orders in the system they would definitely be coming towards the end of this financial year because the first phase of the process is on. So, when it moves to the next phase...
Bhoomika Nair: Vivek, sorry, but just your voice is cracking. Can I please request you to come closer in...
Vivek Midha: Yes, ma'am. So what I'm saying is, it's like this, with respect to the orders in the Consultancy segment or OBE segment, we have already completed, I think, 3, 4, 5 months, wherein we have seen that this order book, which is around 4,000 -- the business se curity is around INR4,800 crores. We are anticipating some more orders, which are in the bidding process. So these are likely to be added towards the next quarter -- at least next quarter or the quarter -- the next quarter means quarter 3 -- towards the quarter 3, those things should get, which is the Consultancy orders, which we are in the bidding process.
Bidding process takes at least 2 to 3 months, and then results from an valuation comes, this takes time. So towards the end of this calendar year, we should be getting some orders. And with
respect to the international orders which have been discussing on the Nigerian part, this would be somewhere in the first financial -- first quarter of the next calendar year, means, that would be end of the -- this financial year.
So it should be concluded by them, because they are -- the project is under the execution on the initial stage and when the second stage comes then they will award ours. So we are likely to see positivity towards the end of this financial year.
Bhoomika Nair: Okay. Is there any other international orders apart from the Nigeria one where we're seeing some...
Vivek Midha: No. There were good orders, which is the regular one. Middle East is a regular one. We

have right now secured quite a good order from the Middle East. Middle East, but specifically from

the UAE. So we are likely to get more orders in the Consultancy segment from the UAE. It would be Engineering orders, Engineering and Consultancy assignments.
Bhoomika Nair: Okay. So given that this year already, we've got something like a INR 4,800 crores kind of an order intake, what is the outlook? And what is the target for the full year? And if you can please split it between Consultancy, what kind of order intake there can be and LSTK?
Vivek Midha: The ratio between the Consultancy and LSTK would almost remain -- did remain the same as it has been done earlier. Little bit -- it could be a little bit more on the LSTK side, OBE side, because this year our OBE business has been more. But OBE also has a Consultancy company, but that does not -- it works with me also.
So that is going to be there. And then the next question was the -- okay. The target, what is the target? So this -- initially, our target was around INR 4,000 crores to INR5,000 crores. So that we have almost reached. So we are likely to add some more in this because at least INR 2,000 crores to INR 3,000 crores we will be, on the conservative side, we'd like to try and get it. But hopefully, it should be more.
Moderator: The next question is from the line of Nidhi Shah from ICICI Securities.
Nidhi Shah: I actually have a couple of questions. The first one being that what is our revenue and PAT guidance for the U.S.?

Sanjay Jindal: And as far as revenue is concerned, we will be around in the range of INR 3,500 crores. Now, so already we have -- we are having handsome order book. And it will be translated into the norm in the coming next quarter. And I think our profit -- net profit also will be intact on yearly basis.
Nidhi Shah: Okay. So given that this quarter revenues have been extremely muted, we've not seen this kind of quarter in the last 2 or 3 financial years. So I understand that the business is cyclical, but one being that if you have to attribute one or two key reasons t o this, then what would that be? And second, given how low the revenues have been this quarter, how comfortable are we in achieving our -- the target of INR 3,500 crores that you mentioned.
Sanjay Jindal: Sorry, I could not understood the question. Will you repeat your first part and second part?
Nidhi Shah: Yes. So as I said, you've given a revenue target of INR 3,500 crores. And as we can see this quarter has been significantly lower. We've never -- we've not seen this kind of numbers, revenue numbers in a couple of years now, I think. So given that, is it -- I also understand the nature of business is cyclical, but what are the one or two key reasons that you could attribute to this quarter's lower revenue? That is number one. And two, is that given how low this quarter has been, how confident are we of achieving our full year guidance for revenues?
Sanjay Jindal: Let me answer your first part. In this quarter, our turnout from the Consultancy business segment is intact. It is in line with the previous quarter. But as I told in my this thing, in this quarter, there is a low turnover from -- Turnkey segment is on the lower side, because some of the projects are
on the verge of closure. But some of the new Turnkey projects have already started in the last

quarter and some of the projects have been started in the first quarter, and some of these projects are going to be started in the second or third quarter.
So on the yearly basis, there will be increase in turnover from the Turnkey segment in the coming quarters, because it is a continuous job for EIL, some projects gets closed and some projects gets started. And based on the order book, we are sure that we w ill meet our target figure of

turnover,
and our profit will be intact in the coming time, because we are full order book in Consultancy segment also.
Nidhi Shah: So given what you said, can we expect the ramp -up in revenues to be from quarter 2 or from quarter 3? What is your expectation on that?
Sanjay Jindal: I cannot commit right now, because, as you know, turnover depends on the cost progress. So it will be based on the time and the year.
Nidhi Shah: All right. All right. I also wanted to know what is the status of the IOCL Paradip project?
Vivek Midha : IOCL Paradip project?
Nidhi Shah: Yes.
Vivek Midha: About the Paradip project, that is in still in the bidding process. Hence, it's going to take some time.
Moderator: The next question is from the line of Shirom Kapur from Prabhudas Lilladher Capital. Please go ahead.
Shirom Kapur: My question is on your energy initiatives and on that side of things. What is -- how is the order pipeline shaping up? And how much contribution do you expect from your green businesses this year and next year?
Vivek Midha : Green business has been typically in the range of 8% to 10%. So we still expect the same thing. It's around 10% to 12%, could be less. But we are still in the initial stages, and not many business, many major products are there, because, mostly the studies are there. So that does not add to business value much. But they are a good prospects for the future. So it's going to be around 8% to 10%, 12%. It is still going to be in this range itself.
Shirom Kapur: Could you give maybe -- throw some more color on what kind of opportunities are in the pipeline? And what is EIL's addressable opportunity within that?
Vivek Midha : Yes, the opportunities are there. With respect to the green hydrogen projects within the having green ammonia facilities, and then green urea project is also there on the annual . There is a feed expected from the, again, green hydrogen project. So there are a number of projects which are in the bidding process. Some of them are for the private consultants, some of them are for the public sectors. So these are there in the concentr ation, so that we are working in the initial stages of those stud ies.
Moderator: Our next question is from the line of Naitik Mohata from Sequent Investments.

We'll move on to the next question as there is no response from the line of current participant.
The next question is from the line of Anuj Sharma from M3 Investment.

Anuj Sharma: My question pertains to the international pipeline, not specifically for us, but the general investment outlook in Africa and Middle East. How is that shaping up last year versus this year? And how is our investment win rate in the export market, in the national market shaping up?
How are we building competencies to possibly have a bet ter win rate there? That's question number one.
Vivek Midha : So with respect to the international market, specifically the Africa. Africa, definitely, there is a development taking place, a lot of investments are planning. But most of the projects which we see or which we did the inquiries are looking for the invest ment also. So we get to choose the projects specifically, because being an African market and we need to check the clients credentials. And definitely, we are not an investor, so w e cannot invest in the project.
So we have to target the clients which are well established, like the Dangote and the any other clients who -- wherein we are sure that we will get the payment, because that is a big problem in Africa, the reliability of the client and the reputation of th e person, that when you work there, you should be able to get the payment.
So that kind of portion, so we have to always choose when we are bidding for any of the projects in Africa. Outlook is very good, because you know that Africa has literally more in the carbon industry. But

at the same time, it's marked with a lot of corruption, all those things. So any project takes, it takes time -- it takes time and develo pment.
And a good part to identify a good project, wherein we can bid. So we were able to identify some of the [Inaudible 25:08] Gungte on. Similarly, another client is there, where we are working for PETCHEM and fertilizer as well as LNG. So we work on that very specific basis, wherein we are sure that we get the business and get the payment. So that kind of consideration we always take. Whereas outlook for the Africa is always very bright, because they have a lot of potential. But we have to be very careful in choosing in those markets.
And then Middle East, definitely is very good for us. We are focusing it -- very much focused on our UAE operations. We have been very successful in getting a lot of things getting in. It's a mid -- good amount of engineering assignments we are getting. An d likely to, in times to come, like the focus we have shifted on the Middle East, we're going to get a good amount of business, and our UAE will become a hub of the engineering activities in the Middle East market. So that's the strategy we have followed and that's we are following.
Anuj Sharma: And in terms of investments along with Consultancy, is this becoming a norm, our competitors are also doing the same? Or is it a few projects are demanding this? This type of...
Vivek Midha : It's -- a few of the projects which are demanding. If it's an established client, they would look for the consultants. But if it's not an established client, they would look for the investment first. So we always choose those projects which are either fund ed by a government institution. We are sure that they are good and they are reliable. So accordingly, we work.

Anuj Sharma: Okay. And in terms of your assessment, let's suppose 3 or 5 years down the line, what could be the share of international book versus India book, considering that you have good visibility as to how things are evolving for domestically and export.
Vivek Midha : The ultimate target is at least to bring it to the 50% of our revenue should come from the international, and that's a long-term target. Right now we are working, we are moving towards this around 20%, 30%, we should be able to get it. But long term, it's different. Consultancy segments.
Anuj Sharma: Sure, sure. And my last question is on Ramagundam. Can you just give some update as to how that project is shaping up in terms of utilization and expected profitability? And is it now fully matured or some more developments for it to become a completely pr oject as we envisaged?
Sanjay Jindal: Actually, it's already running at 90% capacity. And for the current year it's -- our share is INR 32 crores. Our percentage share is 26%. So our percentage is very good. On an overall basis, I think it is something -- around INR130 crores PAT was there and our 26% was around INR 32 crores.
Anuj Sharma: Okay. No, but is it achieving the -- so there were some delays. There were some IRR shortfall.
Sanjay Jindal: No. Now it is history. The project is running very good, and it is running at 90% capacity. And in the coming year, it will be 100% capacity and you will see the profit on that side also.
Anuj Sharma: All right. Within this project, specifically, Ramagundam, there is no further investments to be made from EIL? Is that correct guess?
Sanjay Jindal: That plant is already running and having good profit. And in the coming days, it will generate surplus also -- they will generate surplus also. In case there is any expansion, then management will take it all accordingly.
Moderator: Our next question is from the line of Poojan Modi from who's an Individual Investor. Please go ahead.
Poojan Modi: Congratulations, sir, for the numbers. My question is regarding Numaligarh Refiner

y. Sir, what
is the status of Numaligarh Refinery at present? Sir, what is its expansion amount and what income can we drive from it in future?

Amanpreet Chopra: This is Amanpreet. See, the Numaligarh refinery -- their estimates are have started -- under execution and close to commissioning. So probably by the end of thi s financial year, [inaudible 30:00]. And once the commissioning is there, then that revenue that we'll be generating from that extended capacity, that will be reflected in our book sales as well.

Moderator: The next question is from the line of Bhoomika Nair from DAM Capital.

Bhoomika Nair: Yes, sir. Sir, just wanted to understand the green initiatives in terms of, say, hydrogen, CBG, et cetera, how is that progressing? If you can please give some update on those, that part of the business?

Sanjay Jindal: Green hydrogen business, with respect to the updates, like we have formed a special group for handling this green hydrogen business. One team is staying and meeting various clients. And wherever the opportunities are available, they are meeting them. We ar e getting in -- we have involved -- we are right now involved in various kind of studies being done.

So because these projects are in the nascent stage, so studies are being done. So studies -- When the implementation comes, we will get involved in the implementation. So the work is going on.

So with respect to the target, Vivek has already explained in t he earlier communication around 10% to 12% should be coming from the green hydrogen business. So that's going to be there.

Bhoomika Nair: So sir, your exactly what are the pilot projects that we are working on in terms of the hydrogen, if you can elaborate a little better?

Vivek Midha : The pilot projects like we are working, you are aware that, we are working for Neyveli Lignite Corporation. It's basically lignite to methanol project. They have another project which is next - mile methanol to which is a diesel project. They have it's another client, which is talking about the -- I guess, hydrogen one. There is another project where we are carrying the feasibility studies for the upcoming green hydrogen project. So these are few of the studies which we are working on.

And one of the projects, for which we had done the feasibility studies for the private investor, they are in the initial stages of taking both approvals for the implementation of that project. So if that gets successful, then it's going to be a major green ammonia project and it's going to be a substantial project for us. So we are hoping for the best, because in fact, all these clients are also a little bit conscious, when you make the decisions. So, they have to shi ft very complicated past .

Bhoomika Nair: Sorry, sir, your voice is cracking.

Vivek Midha : What I was saying, we are also interacting with one of the clients for which we have prepared the feasibility study report in past. They are right now in the process of taking the Board approvals for implementation of the project. If successful, that's goi ng to be one of the major projects in the hydrocarbon segment -- in the green hydrogen segment. So that's a good opportunity available with us. So they are going to deal with it, and we'll be dealing with them directly. So these are some of th e opportunities which is there on able, and we are working on.

Bhoomika Nair: Okay. And the other part was the CBG part of it, sir.

Vivek Midha : CBG. The CBG, we are still pursuing -- we haven't done much in the CBG. Because CBG does require so much of technology-intensive or engineering-intensive work. So they are -- so we are not focusing on CBG, rather than we are focusing on the other segments of green hydrogen as well as the core segments.

Bhoomika Nair: Okay. Okay. So the other thing was also on solar. Anything out there that we are doing within the green aspect of

it?

Vivek Midha : In the renewable segment, we are doing one project for one of this company. It's in October, one old client, HMEL, they are doing the solar project. And we are doing other project for Neyveli

Lignite Corporation for their 5- megawatt green renewable projects from -- green hydrogen projects. This includes the renewable as well as that.

And there are certain other projects or certain other opportunities available, where we are still pursuing, whether it is possible. But as such solar is a very competitive market, and it's a very low-cost players available in the market. So we always go fo r the niche kind of work, wherein we have substantial work and engineering effort is involved. So that is what we are targeting.

So solar CSB is one of the markets which we have been marketing and we have been -- as the Consultancy, we are finding the opportunities wherein we can put in solar CSB projects, wherein there's a lot of engineering and technical skills is required and we -- that would create a niche

for us.
Bhoomika Nair: Okay. And sir, from a, any dividend that you are expecting from NRL this year? And anything that is booked in the first quarter?
Management: We are testing on the similar lines for dividend form we are having. Because keeping in view of expansion, we are expecting similar difference.
Moderator: The next question is from the line of Shirom Kapur from Prabhudas Lilladher Capital.
Shirom Kapur: To follow -up, I just had a question on your Turnkey business. This quarter, we had quite low execution. But of course, the total business revenue guidance for FY '25 is about INR 3,500 crores. So could you give us a mix of what you expect between Turnkey and Consultancy? Will it largely come -- the growth largely come from Consultancy? Or do we expect Turnkey to also eventually end higher in FY '25 versus FY '24 given the low execution this quarter?
Sanjay Jindal: I think specifically, our revenue from the Consultancy segment remains in the range of 50% to 60%. And sometimes, this figure become reverse and our LSTK revenue goes up to 50% to 60%. So it's a business level. And this time, we have good order book actual ly in the Consultancy segment also. So we are expecting around 50% to 60% turnover from the Consultancy segment and balance from the Turnkey segment. And we have a good order book on the LSTK segment also. So I think LSTK segment will be 40% to 45% this time.
Shirom Kapur: Okay. And given that you're expecting a long-term margin of, sort of, 5%. But in Q1, we had a margin of almost 8% in the LSTK segment. So does that mean the balance 9 months, we expect, fairly, lower margin to get to that average 5% for the rest of the yea r?
Sanjay Jindal: If you see, I have told you, 5% return is on sustainable basis. It is an average data. Sometimes I get change order from the client, then in that particular quarter, it goes beyond 10% also. So it depends upon the change order also.
Shirom Kapur: Okay. And so, was there any change order that was there this quarter which is why we got an 8% margin?

Sanjay Jindal: Yes. On a regular basis, we are pursuing with our clients about our change orders. That change order may be in terms of ex -item and in terms of time extension, because when our LTE becomes non-valuable by clients. So it's a continuous process for the year .
Shirom Kapur: Okay. So given that the change orders tend to happen sort of on a continuous basis, would it be possible -- and given that you might have some ongoing discussions with clients, is it possible to give a kind of a margin guidance for the next, at least for F Y '25 factored in, what potential change orders could be coming in? Is that possible to give that kind of value?
Sanjay Jindal: Change order also depends on the approval cycle and th

e decline. Some of the change orders goes to their board, and some of the change orders are approved by the directors. So as such, I cannot give any time line for the approval of change orders by client time. See, the client take up all our change order at the end of project, while during the closure of contract. But post we can order for here. If you see that history, we are getting change order from the clients also.
Moderator: Thank you. As there are no further questions from the participants, I now hand the conference over to Ms. Bhoomika Nair for closing comments.
Bhoomika Nair: Yes, I would like to thank all the participants and particularly the management for giving us an opportunity to host the call. Thank you very for your detailed responses and giving us an opportunity to host the call. Thank you very much, sir, and wish you all the best, sir.
Sanjay Jindal: Thank you, Bhoomika.
Moderator: On behalf of DAM Capital Advisors Limited, that concludes this conference. Thank you for joining us. You may now disconnect your lines now.

SECRETARIAT AND INVESTOR RELATIONS –
ENGINEERS INDIA LIMITED

MODERATOR : MS. BHOOMIKA NAIR – DAM CAPITAL

Moderator: Ladies and gentlemen, good day, and welcome to the Engineers India Limited Q2 FY '25 Earnings Conference Call , hosted by DAM Capital Advisors Limited. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Ms. Bhoomika Nair from DAM Capital Advisors Limited. Thank you, and over to you, ma'am.
Bhoomika Nair: Yes, thanks, Neha. Good afternoon, everyone, and a warm welcome on behalf of DAM Capital to the 2Q FY '25 earnings call of Engineers India Limited. We have the management today being represented by Mr. Sanjay Jindal, Director -Finance, Mr. Suvendu Padh i, Company Secretary and Investor Relations, Mr. R.P. Batra, Executive Director , Finance and Accounts and Investor Relations ; Mr. Sunil Saxena, Executive Director , Technical and Investor Relations ; Mr. Amanpreet Singh Chopra, Senior General Manager, C &MD Office and Investor Relations ; Mr. Vivek Midh a, Senior General Manager, Marketing, Business Development and IR ; and Ms. Neha Narula, Senior Manager, Company Secretary and IR.
At this point, I will hand over the floor to Mr. Sanjay Jindal for his initial remarks post which we'll open up the floor for Q&A. Thank you and over to you, sir.
Sanjay Jindal: Thank you, Ms. Bhoomika. Good afternoon, everybody, and very Happy Diwali to all of you. A warm welcome to EIL's earnings call of quarter 2 of financial year ' 24-'25. During the first half of financial year ' 24-'25, the order inflow in the company amounted to INR 5,137 crores, with an order inflow of INR3,400 crores in financial year ' 23-'24.
The order inflow in consultancy and engineering segment amounting to INR 2,863 crores and INR2,274 crores in Consultancy segment. This was the order inflow up to 30th September, and in case we consider the order inflow in the month of October also, then our total order inflow is INR6,866 crores.
The company has order book worth of INR 11,155 crores comprising under Consultancy segment of INR6,496 crores and under LSTK segment of INR 4,650 crores as on 30th September, 2024. However, if we consider the order inflow for the up to one month also, then our company is having order book of approximately INR12,000 crores. We have declared result of quarter and half year ended September ' 24 on 29th October, 2024.
As regards to financial performance, for three months ended September ' 24, the company has registered a turnover of INR676 crores vis -à-vis figure of INR 611 crores during first quarter of financial year ' 24-'25. The turnover from Consultancy and Engineering segment stood at INR 383 crores and from Turnkey segment at INR 293 crores. Other income during quarter ended September '24 is INR 53 crores as compared to INR 38 crores during first quarter of the current financial year .
During the current quarter , our company has recorded profit before tax of INR 100 crores and PAT of INR 79 crores in comparison to figure of INR 74 crores and INR 55 crores , respectively ,

during the first quarter of current financial year showing an increase of 36% in profit before tax and 44% in profit after tax. Notably, EPS for the quarter ended September ' 24 is INR 1.41, vis-

à-vis June quarter '24, it is INR0. 97. This is all, Bhoomika ji.
Moderator: Thank you very much. We will now begin the question-and -answer session. The first question is from the line of Mohit Kumar from ICICI Securities. Please go ahead.
Mohit Kumar : Sir, my first question is on the -- I think you mentioned that you received an order in

October,
right? Can you quantify the quantum and can you just let us know whether it is for Consultancy or Turnkey? And if you can just throw some light on the kind of, on the exact order received, the nature of order.
Sanjay Jindal: In the October month, quantum is INR 1,729 crores and most of the orders are towards OB E, LSTK jobs and rest are the Consultancies .
Mohit Kumar : Understood, sir. My second question is, sir, on the BPC refinery, I think the project has taken off. My question is, has all the packages for Consultancy been decided or do you still think there are still some packages are still to be tendered out?
Management: No, all the packages have been awarded. Work is already on , on those packages.
Mohit Kumar : Understoo d. My last question is on the IO CL, I think Paradip Petrochemical. Has the tender been floated? Can you expect the tenders to be finalized in the second half or do you think this will spill over to F Y '26?
Management: No, the tender has already been floated, opened. We have bidded for that and we have become eligible parties for both of those packages. So we are the L1 and we are likely to get this job in short time after their internal approvals.
Mohit Kumar: Is it two or three packages or is it one single package for the consultancy or the IOCL Paradip ?
Sanjay Jindal: There were two packages. There were only two tender packages. So both of them would be coming to us on consultancy basis.
Mohit Kumar: Understood. Thank you and all the best. Thank you.
Sanjay Jindal: Thank you very much.
Moderator: Thank you. The next question is from the line of Aditi Nawal from RSPN Ventures. Please go ahead.
Aditi Nawal: Yes. Hi. Thanks for taking my question. So I have a few questions around the top line. So, sir, you had guided for about INR 3,500 crores of revenue for FY '25. And looking at the current run rate, we are around INR 1,300 crores on the first half. So how are we looking for the remaining two quarters? How should we factor in for the revenue? That is one.

Second is, again, essentially in terms of turnkey revenue, how are we looking for any order getting concluded in the next two quarters which would be contributing to the top line? So these are the questions on revenue. I have two other questions which I will be taking after you answer.
Sanjay Jindal: Can you repeat the last one, please? What you said? Your voice is not very clear.
Aditi Nawal: So, Yes. So my question was, the turnkey revenue seems a little subdued in the first half of the year. So how are we looking at the turnkey revenue for the next two quarters? And are there any big contracts that are going to get concluded that could add to the top line so that we could meet that guidance of INR 3,500 crores of top line?
Sanjay Jindal: Okay. Let me answer point -wise. First of all, let us discuss about the turnover. As you know, we are getting business revenue from the two business segments. One is the C onsultancy segment and the second is the Turnkey segment. In the C onsultancy segment, there is an increase of revenue about 3%, but there is a down of around 19% in the Turnkey segment and 37% in the Turnkey segment.
This downfall was there because some of the major LSPK, OB E jobs were completed during the first and second quarter of this financial year. But on the other hand, we have also received some OBE LSPK projects also, which are under progress. And we expect that in the coming quarters, whatever is the shortfall of turnover, that will be compensated by the existing jobs which are in progress, as well as new jobs which we have received in the first half of the financial year.
And this is the turnover.
Aditi Nawal: Okay. So again, I just wanted to clarify. So you had mentioned that you'd be targeting about INR3,500 crores of revenue. So are we on track to achieving that?

Sanjay Jindal: We are targeting around this figure.
Aditi Nawal: Okay. Secondly, so I was just doing this calculation for turnkey. So this order book, just a second. So just to give you one example, let's say as of the beginning of quarter two FY '25, the turnkey order book is about INR3,364 crores. And the new orders that were received were around INR107 crores. When you add these two numbers and the new...
Sanjay Jindal: Let me correct. On 30th September 2024, my order book is INR 11,155 crores. And out of this, turnkey segment is INR 4,660 crores. Balance is C onsultancy segment. So I was saying that this

INR4,600 crores will contribute towards this turnover in the coming six months.
Aditi Nawal: No, I understand that. I was just doing this calculation of adding, opening order book as at the beginning of the quarter, adding the new orders that you received during the quarter and subtracting my revenue that I've recognized in the quarter. So I should be getting the closing order book for turnkey, which shoul d be around INR 3178 crores. But the turnkey cumulative figure as of 30th September is around INR 4,600 crores. So I just wanted to understand why is this dif ferent? I mean, is there so me -- Is it that I'm going wrong somewhere?

Sanjay Jindal: No, no. There is nothing wrong in that. Basically, you just go for the opening the order book of the turnkey segment at the end of the last financial year, add the new order, and then deduct the revenue recognized during the half year. You will be getting almost the order book, whatever we have. Same thing . Only the difference is basically to the extent of GST component. Only difference is GST component.
Aditi Nawal: Got it. So essentially from FY '24, I should be taking that number, opening number.
Sanjay Jindal: Yes.
Aditi Nawal: Okay. Got it. And so one last question in terms of RFCL. So again, I think previous calls we had mentioned that we'll be receiving about INR 100 crore plus kind of a share of income from RFCL. So this quarter it was a little subdued. So is there something that I should be reading into it or the run rate of around INR 50 crores , INR53 crores is maintained?
Sanjay Jindal: In this quarter, we have received our profit share is INR 22 crores and up to . Up to half year it's around INR54 crores , INR55 crores. So going forward also we expect that we'll be able to get the same share as a profit from the more than INR 100 crores.
Aditi Nawal: Got it. Thank you. Thank you so much.
Moderator: Thank you. The next question is from the line of Amit Anwani from Prabhudas Lilladher Capital. Please go ahead.
Amit Anwani : Yes. So first thing I wanted to understand, you did highlight it that the order book now is about 12,000 and we have received one more order. Just wanted to understand from you what is the total L1 pipeline if you could highlight the project and values? A nd apart from L1 pipeline, what is the perspective pipeline project -wise and value -wise for FY '25 and ' 26, next 18 months?
Management: With respect to the orders, which we have told you that the current business intake is already reached INR6,800 crores. So it's just a half year and we are very much hopeful that we'll be able to add more INR 1,000 crores or INR2,000 crores further. So let's say around INR 8,000 crores , INR8,500 crores , it should easily reach, should be able to reach with respect to the business to go.
Amit Anwani : Right. Any notable projects you would like to highlight?
Management: Sorry, what?
Amit Anwani : Any notable project nam es you would like to highlight?
Management: A number of projects are in the bidding process. And I think like the fall of like Paradip , which we have been talking about, that might come. There are some other projects in the OB segment, which we are negotiating at the client side. So those can be h

ighlighted. Telling the name would be difficult at this point of time because some of them are confidential and one -to-one discussion is taking p lace. So there are certain projects out there in the pip eline which should be realized.

Amit Anwani : Right. And now with respect to the business performance, since there's so much order book built up is happening, what is our internal assessment or ambition? What kind of, annual peak revenue we can do in next 3 years? Any number you have, because we have been seeing the previous years, the revenue has been kind of flat, but now past two years, the order book has built up significantly ? We just wanted to understand, can we expect 4,000, 5,000 kind of revenue in FY '27? Any thought you would like to give?
And same question on the margin. We have been seeing consulting margin has been low. So any assessment on the new orders and the EBIT margins for Atlantica and consulting and what kind of margins we can do in next 2, 3 years, because in the previous cycle, we did 20% plus margins also and very good growth also 10 years back. So just a thought, what is the 2, 3 years view since the order book has now built up?
Management: First of all, let us discuss about the margin. And in the consultancy segment, we are maintaining our segment profit of 20 % to 25% on a regular basis. And in the Atlantica business, it is around 5%. And we are sure to maintain in the coming years also this kind of margins. We are targeting

this margin.
Amit Anwani : Right. And top line, sir?
Management: And top line, as you have seen, our order book is all -time high. And we are expecting more orders to come. And we have corporate target of INR 5,000 crores per month within next 2 , 3 years.
Amit Anwani : INR5,000 crores turnover within next 2 years. So is it FY '27?
Management: Two years. Around two years. It will take two years.
Amit Anwani : Annual turnover of 5,000, right?
Management: Annual turnover of INR5,000 crores, backed with the good order and so on.
Amit Anwani : Right. So one more thought on the – there have been a lot of talks and you have been also highlighting in your PPTs , about the new initiatives, like green hydrogen, coal gasification, and biofuel. And there have been talks and policies from government also on various bioenergy-related stuff. So just wanted to understand, obviously, you have been highlighting over the past 1 year, any meaningful development there, any orders on the anvil in this space, anything wh ich has developed in this area?
Management: One of the recent achievements in this space was the biofuel refinery, biofuel project and the MRPS, which we have quoted on the OBE basis around INR 300 crores worth of that work is there. Apart from that, we have done a number of studies and kind of initial engineering assignments for that. And I think major implementation things have come as of now. But a lot of things are in pipeline and in discussion. So we are hoping to get them realized. For this – for the last two quarters, the major achi evement is that biofuel refinery of the MRPS.

Amit Anwani : So lastly, sir, just a clarification, all these orders which are in the pipeline and which have been won in the past 24 months, so largely all these orders are nominated. Any ballpark you can suggest? Is it cost plus certain percentage? And what is that percentage? Anything you would like to highligh t there with respect to orders?
Management: The same profitability what we receive. There's nothing specific we can highlight on what the cost percentage is there. So it's a competitive market . So we'll not comment on that. But as we are maintaining the consistency profitability of 20 % that would be the – 20% to 25 %, that would be the target. And the OBE percentage, 5 % to 6%, that

would remain the target. And whatever assignment we get, we'll aim towards the same.
Amit Anwani : Yes, sir. Thank you so much. All the best.
Moderator: Thank you. The next question is from the line -up. Shirom Kapur from Prabhudas Lilladher . Please go ahead.
Shirom Kapur: Hi. Thank you for the opportunity. And a lot of my questions have been answered. But one thing I wanted to ask is on your international business. You spoke about pickup in opportunities in Africa and specifically Nigeria and Algeria and as well as Middle East and some in Latin America as well. So could you highlight the, any developments in your international business?
Sanjay Jindal: Yes. So Abu Dhabi, our Middle East office, basically the Abu Dhabi office is doing very well. We have received this year highest order booking from that place. It's already reached INR 160 crores or INR170 crores , INR180 crores. We have already reached from that office. That has never been achieved.
So that office is on the tune and will be further progressing. And we are working with all the economic companies, which is the main straight oil companies. With respect to the Nigeria, Nigeria, we are still working on a pet camp project. And the First Phase is already on. The Second Phase is expected to come towards the end of this year. So if all goes well, then it will come our way.
Similarly, in Algeria also, we are bidding for a number of projects. So those are in the bidding process. Let's hope for the best. We'll get realized. It could be adding to our portfolio. So that's the whole thing which we are working. International is one of the focused areas for us. So we are working on that.
Shirom Kapur: Okay, thank you. And just another question now, moving to the domestic side, and with all the upcoming refinery and petrochemical capex that we have over the next 4 or 5 years. So do you have a – what kind of projects are you currently bidding for in the pipeline? For example, with IOC -- of course, Paradip , you mentioned. But any other ongoing projects, such as the Panipat Expansion and Barauni , etcetera, with HPCL?
Sanjay Jindal: Yes, Panipat Expansion is already we are executing. So that will be completed next 1.5 years or so. So other projects which we are on, the information, the projects which are in market, we are already on the toes of it, and we are bidding for it. Apart from that, there are a number of D1,

D3, we are discussing with some private investors. So those are also there on the anvil. So let's hope for the best.
Shirom Kapur: Right, okay. So Yes , just to clarify that even the ongoing expansions that are going, most all those packages have already been bid out. There's no further packages potentially right now to capture, right, in the ongoing expansions?
Sanjay Jindal: There's no package to be awarded. It is basically the physical progress of the project. Most of the packages are awarded by this time. And they are in the construction phase.
Shirom Kapur: Okay, understood. And if you could highlight anything on, I know you mentioned that you received the biofuel, bio-refinery order from [NRBL 23:03] , but anything on green hydrogen or coal gasification that you could mention, any projects that you have been, you're bidding for or what projects are in the pipeline? And if you could quantify them.
Sanjay Jindal: Yes. Many of the companies have floated these tenders for other boot bases or operation bases. So actually, we don't do that. So we prefer to go for the consultancy. So we are working on a few of the projects. One is of NRL, one is of [NLCL 23:32] with respect to the green hydrogen on the initial study phases. So we are work ing on those kinds of projects.
Shirom Kapur: Thank you so much. I really appreciate all the answers.
Moderator: Thank you. The next question is from the line of Nidhi Shah from ICC

S Securities Limited.
Please go ah ead.
Nidhi Shah: Hi, thank you so much for taking my question. I had a couple of questions on, full year margins. So last year, we saw margins at 8.8%. This is EBITDA margins. So this year, the first two quarters have been lower than that. Are we expecting margins to improve, that is on the entire sales? Are we expecting them to improve in the rest of the year?
Sanjay Jindal: Yes, we are expecting that margin will be in the same line as last year, over a period of time for the financial year.
Nidhi Shah: Okay. Also, the new orders that we have secured this quarter, is there potentially a higher upside on those orders than we have orders that are currently sitting in the order book that we are executing at this point in time?
Sanjay Jindal: Yes, over a period of time, definitely there will be some improvement in the margin due to operational efficiency as well as the new mega jobs which we have secured during the current financial year.
Nidhi Shah: Okay. And given that order inflow is really great this year , and the outlook for the next 1 to 2 years is also good, do we expect that given how much order flow is there in the market that margins would improve on these orders based on that itself?
Sanjay Jindal: Yes, margin will definitely improve on the basis of the operational efficiency as well as big ticket order we have received during the current financial year. In big ticket order, the margins

are low in comparison to the small order where there is intense competition in comparison to the big orders.
Nidhi Shah: All right. And lastly, just a couple of questions on RFCL. What is the revenue and EBITDA for H1 for RFCL and Numaligarh as well?
Sanjay Jindal: Profit after tax for our share is around INR 55 crores for the half year.
Nidhi Shah: Okay. And RFCL revenues for the first half?
Management: Revenue, just a second, I will give it to you. Revenue for the current half year for our share, for 46% share is INR 729 crores.
Nidhi Shah: Okay. And same if you could give me for Numaligarh and as well also in Q4 you had mentioned that Numaligarh is undergoing an expansion to be 9 MMTPA . So how is the expansion progressing at this point in time?
Sanjay Jindal: Expansion is going on but the revenue will be coming only after the expansion is completed. Right now, they are capitalizing whatever they are incurring. So over a period of time, they will be recognizing the revenue as well as the profitability. That will be coming i n the form of dividend to the EI L as a shareholder.
Nidhi Shah: Okay. By when can we expect the expansion to be completed?
Sanjay Jindal: Right now, I don't have the status of that particular thing. Maybe by the middle of the next year or the end of the next year.
Nidhi Shah: All right. Thank you so much.
Moderator: Thank you. The next question is from the line of Sanjay Shah from Pranishta . Please go ahead.
Sanjay Shah: So just one question. In your Annual Report, you had mentioned about the opportunities which might come up in the nuclear sector. And there were some discussions going on with NTPC and

NPCIL. So is there any progress on that?
Sanjay Jindal: Yes, I think discussions are on in the initial stages of it. So they are anticipating, NTPC is anticipating a power plant. It's a nuclear power plant in times to come. So we are working with them and we are trying to approach them so that we get involved in this project in the early stages. But nothing concrete has taken place up until now.
Sanjay Shah: And in the blueprint for the nuclear sector, would it be just a larger nuclear power plant or are you also possibly or likely to get involved in the initiative for the Bharat nuclear reactors also?
Management: No. So in fact, most of the assignments that we do is mostly on the balance of plant type of things , because

the core nuclear reactors we are not involved in because there is proprietary technologies that are involved in that. So again also for the NPCIL project we did the complete balance of plant for the nuclear power project. So similar type of assignments we are anticipating in the future.

Sanjay Shah: Okay. Thank you.
Moderator: Thank you. The next question is from the line of Shirom Kapur from Prabhudas Lilladher Capital. Please go ahead.
Shirom Kapur: Hi. Thanks for the follow -up. I just had a quick question on some of the projects that have recently been announced by some of the major oil and gas players. So for example, Gale has announced a INR 60,000 crore s project to set up an ethane gas cracker. Similarly, BPCL and ONGC have also announced proposed major projects for 10 to 12 million metric tons to find the capacity with investments of up to INR 1.5 lakh crores. So what is your view on these projects? When do you expect that some of thes e projects will come and the consultancy and the tenders will open for such projects?
Sanjay Jindal: All these projects are still in the feasibility stage right now. They have indicated the capex investment. But right now, these are in the study phase. After the study phase is done, they will go for their investment approval from the board. And then only anything concrete will come out on the platter because what way they will go, which location they are going to have. Work will start only after their in itial board approvals. So these are initially in the feasibility stages and we were invol ved in all these feasibility studies.
Shirom Kapur: So E IL has already participated in the feasibility or there is still potential feasibility study orders to come in from these projects?
Sanjay Jindal: Tomorrow if it comes and which way it will go, we will definitely participate.
Shirom Kapur: Okay, understood. Thank you so much.
Moderator: Thank you. The next question is from the line of Manoj Sah from LAX GOV Investments. Please go ahead.
Manoj Sah: Thank you for giving me an opportunity. I have some basic questions. If you can explain to me regarding the revenue booking cycle for the consultancy projects and Turnkey projects. Initially what happens for the consultancy, you have got more of expenses because you are in designing stage and so on kind of way. And then later part the revenue picks up. If you can explain this for the consultancy as well as for the Turnkey project tha t will be very helpful? Thank you.
Sanjay Jindal: Yes, basically we are having a long gestation project in the consultancy as well as the Turnkey segment. For the major project, the contract period is around 4 years. So revenue recognition is not linear. During the initial phases, maybe for the first 1.5 year, we are able to recognize revenue only around 10%. After that, in the second year and third year, it will be around between 30% to 35%. And balance revenue is recognized over the next year, fourth year and so on. So that is the revenue recognition cycle for the long gestation contracts.
Manoj Sah: And for the Turnkey?
Sanjay Jindal: Yes, similar for the Turnkey segment also. We are involving the engineering, procurement and construction activity for the project. So this span over a period of 4 years for the long project.

Manoj Sah: So what you are saying is, whether it is a consultancy project or it is a Turnkey project, your revenue cycle more or less remains the same. For the first 1.5 year, it will be 12%. Then in the next 3 to 4 years, it could be 30%, 35% of the revenues are booked and balance are booked in the fourth or fifth year. So it remains the same for both the Turnkey as well as for the consultancy.
Management: Also for the major project, right?
Manoj Sah: For the major project? Okay.

Thank you.
Management: Understanding how the margins will, you will have some expenses in that particular quarter. So margins will be lower in that particular quarter. But if you look at 6 months or years, then we will be able to have a better handle on the margin.
Manoj Sah: Thank you.
Moderator: Thank you. The next question is from the line of P . Jha, an individual investor . Please go ahead.
P. Jha: Thank you for taking my question. I have two simple questions. One is relating to Guyana. There was an article in which our company has been awarded the PMC services for power generation, first of its kind, to be done by natural gas. So far, they were doing it apparently by burning diesel. So I'm supremely confident that you would execute it in the most competitive way.
What is the possibility of getting more work from this oil rich country, which is quite favorable to our country now, nowadays? So one of that, more power generating capacities to come there and also in the consultancy in oil refinery offshore. And the sec ond question which I have is again relates to future possible work is offshore wind energy. Typically, they are much bigger than what is there on the land. So what is the expectation which the company has in these two respects? Your take on that.
Sanjay Jindal: Guyana, this is a project which includes the natural gas liquid project as well as the power plant. So that is 400 megawatt power plant is there. So right now, we are the project management consultant for this. Gas is coming from the ExxonMobil , who is actually the operator of the oil fields there. And he's supplying the gas and sending through a pipeline to the facility. We are working as a project management consultant, managing an equity contractor who has been appointed by the government.
And we have also been appointed by the government. So we are managing their project and trying to get it commissioned at the earliest because that's a major need for them. With respect to the anticipation in future, because they have ample oil. Right now, it's mostly being governed by the ExxonMobil . They are anticipating an oil refinery there. And they're also anticipating a fertilizer project in the country.
But it's going to take some time. Because actually, what they want is they don't wish to invest. They are looking for the investor to invest that project. So that is the hitch right now because it's far delayed. If the government would have invested, it would have been faster. So they are looking for the parties to invest in all these projects.

That is the current situation of these projects. And we also anticipate there will be an expansion in the existing power facility in time to come because they intend to supply that power across the countries, in the neighborhood countries also. So that is also their future direction towards that. And we are very much well -placed working with the government. So let's hope for the best. But actually, this job which we have got was under the competition. So there will be competition in the future too.
P. Jha: Yes. And how about this offshore wind energy possibilities?
Sanjay Jindal: The offshore wind energy, the thing is like offshore is very close to our heart because we have our own offshore team working on this. Because we have been working for all the ONGC projects and extensive experience in offshore fields. We have done more tha n 248 offshore platforms.
But primarily, we are in the offshore engineering, platform designing and all. We have not done any wins with right now getting involved in some of these projects. And as soon as these – a lot of opportunity comes, we will definitely like to target the off shore wind projects because we are looking into certain opportunities and we are discussing with all the clients.
So because we have the good strength of offshore design

ing, facility basically platform designing, so it very well gels with our capabilities. But all these are basically the wind mill would come as a package because we have not much to do in that one because those are OEM supplied items. So our primary focus will be only the offshore facility wherein we have the good…
P. Jha: It is true that. But since it is on a much bigger scale than what is there on the land and this would be perhaps among the first one. So the possibilities even of this being the bigger, larger chunk of this and our expertise in the offshore, what could be the possible market size in case of India is to achieve renewal of this thing of certain percentage by 2030, which is not very far away. So governments focus on that and what is your sense?
Sanjay Jindal: I have already told you strength -wise we have no issue with that. We can do those projects. Basically in all these projects you have HVDC on the offshore platform and your wind would be separate. It would be under floating and there would be an integration involved between all these facilities. So we are very good integrator as well as designer of the offshore facility.
Management: So we are very well equipped with all kind of skills. When these jobs are coming, will come in

the market, we will definitely be bidding for that. So that is our current thing and we are
developing our skills and asking our teams to be exposed with the offshore developments and
all. So we are getting ready fo r all these kind of opportunities in time to come.
P. Jha: Thank you so much and wish you a very Happy Diwali.
Moderator: Thank you. As there are no further questions from the participants, I now hand the conference over to Ms. Bhoomika Nair for closing comments.

Bhoomika Nair: Yes, thank you very much for giving us an opportunity to host the call , and wishing you all the very best and a very happy Diwali to you and also all the participants. Thank you very much, sir.
Sanjay Jindal: Thank you very much. Thank you, Bhoomika . And Happy Diwali to all of you.
Moderator: Thank you. On behalf of DAM Capital Advisors Limited, that concludes this conference. Thank you for joining us , and you may now disconnect your lines. Thank you.

Call: Nov 2024

INVESTOR RELATIONS – ENGINEERS INDIA LIMITED
MS. NEHA NARULA – SENIOR MANAGER , COMPANY
SECRETARIAT AND INVESTOR RELATIONS –
ENGINEERS INDIA LIMITED

MODERATOR : MS. BHOOMIKA NAIR – DAM CAPITAL

Moderator: Ladies and gentlemen, good day, and welcome to the Engineers India Limited Q2 FY '25 Earnings Conference Call , hosted by DAM Capital Advisors Limited. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Ms. Bhoomika Nair from DAM Capital Advisors Limited. Thank you, and over to you, ma'am.
Bhoomika Nair: Yes, thanks, Neha. Good afternoon, everyone, and a warm welcome on behalf of DAM Capital to the 2Q FY '25 earnings call of Engineers India Limited. We have the management today being represented by Mr. Sanjay Jindal, Director -Finance, Mr. Suvendu Padh i, Company Secretary and Investor Relations, Mr. R.P. Batra, Executive Director , Finance and Accounts and Investor Relations ; Mr. Sunil Saxena, Executive Director , Technical and Investor Relations ; Mr. Amanpreet Singh Chopra, Senior General Manager, C &MD Office and Investor Relations ; Mr. Vivek Midh a, Senior General Manager, Marketing, Business Development and IR ; and Ms. Neha Narula, Senior Manager, Company Secretary and IR.
At this point, I will hand over the floor to Mr. Sanjay Jindal for his initial remarks post which we'll open up the floor for Q&A. Thank you and over to you, sir.
Sanjay Jindal: Thank you, Ms. Bhoomika. Good afternoon, everybody, and very Happy Diwali to all of you. A warm welcome to EIL's earnings call of quarter 2 of financial year ' 24-'25. During the first half of financial year ' 24-'25, the order inflow in the company amounted to INR 5,137 crores, with an order inflow of INR3,400 crores in financial year ' 23-'24.
The order inflow in consultancy and engineering segment amounting to INR 2,863 crores and INR2,274 crores in Consultancy segment. This was the order inflow up to 30th September, and in case we consider the order inflow in the month of October also, then our total order inflow is INR6,866 crores.
The company has order book worth of INR 11,155 crores comprising under Consultancy segment of INR6,496 crores and under LSTK segment of INR 4,650 crores as on 30th September, 2024. However, if we consider the order inflow for the up to one month also, then our company is having order book of approximately INR12,000 crores. We have declared result of quarter and half year ended September ' 24 on 29th October, 2024.
As regards to financial performance, for three months ended September ' 24, the company has registered a turnover of INR676 crores vis -à-vis figure of INR 611 crores during first quarter of financial year ' 24-'25. The turnover from Consultancy and Engineering segment stood at INR 383 crores and from Turnkey segment at INR 293 crores. Other income during quarter ended September '24 is INR 53 crores as compared to INR 38 crores during first quarter of the current financial year .
During the current quarter , our company has recorded profit before tax of INR 100 crores and PAT of INR 79 crores in comparison to figure of INR 74 crores and INR 55 crores , respectively ,

during the first quarter of current financial year showing an increase of 36% in profit before tax and 44% in profit after tax. Notably, EPS for the quarter ended September ' 24 is INR 1.41, vis-

à-vis June quarter '24, it is INR0. 97. This is all, Bhoomika ji.
Moderator: Thank you very much. We will now begin the question-and -answer session. The first question is from the line of Mohit Kumar from ICICI Securities. Please go ahead.
Mohit Kumar : Sir, my first question is on the -- I think you mentioned that you received an order in

October,
right? Can you quantify the quantum and can you just let us know whether it is for Consultancy or Turnkey? And if you can just throw some light on the kind of, on the exact order received, the nature of order.
Sanjay Jindal: In the October month, quantum is INR 1,729 crores and most of the orders are towards OB E, LSTK jobs and rest are the Consultancies .
Mohit Kumar : Understood, sir. My second question is, sir, on the BPC refinery, I think the project has taken off. My question is, has all the packages for Consultancy been decided or do you still think there are still some packages are still to be tendered out?
Management: No, all the packages have been awarded. Work is already on , on those packages.
Mohit Kumar : Understoo d. My last question is on the IO CL, I think Paradip Petrochemical. Has the tender been floated? Can you expect the tenders to be finalized in the second half or do you think this will spill over to F Y '26?
Management: No, the tender has already been floated, opened. We have bidded for that and we have become eligible parties for both of those packages. So we are the L1 and we are likely to get this job in short time after their internal approvals.
Mohit Kumar: Is it two or three packages or is it one single package for the consultancy or the IOCL Paradip ?
Sanjay Jindal: There were two packages. There were only two tender packages. So both of them would be coming to us on consultancy basis.
Mohit Kumar: Understood. Thank you and all the best. Thank you.
Sanjay Jindal: Thank you very much.
Moderator: Thank you. The next question is from the line of Aditi Nawal from RSPN Ventures. Please go ahead.
Aditi Nawal: Yes. Hi. Thanks for taking my question. So I have a few questions around the top line. So, sir, you had guided for about INR 3,500 crores of revenue for FY '25. And looking at the current run rate, we are around INR 1,300 crores on the first half. So how are we looking for the remaining two quarters? How should we factor in for the revenue? That is one.

Second is, again, essentially in terms of turnkey revenue, how are we looking for any order getting concluded in the next two quarters which would be contributing to the top line? So these are the questions on revenue. I have two other questions which I will be taking after you answer.
Sanjay Jindal: Can you repeat the last one, please? What you said? Your voice is not very clear.
Aditi Nawal: So, Yes. So my question was, the turnkey revenue seems a little subdued in the first half of the year. So how are we looking at the turnkey revenue for the next two quarters? And are there any big contracts that are going to get concluded that could add to the top line so that we could meet that guidance of INR 3,500 crores of top line?
Sanjay Jindal: Okay. Let me answer point -wise. First of all, let us discuss about the turnover. As you know, we are getting business revenue from the two business segments. One is the C onsultancy segment and the second is the Turnkey segment. In the C onsultancy segment, there is an increase of revenue about 3%, but there is a down of around 19% in the Turnkey segment and 37% in the Turnkey segment.
This downfall was there because some of the major LSPK, OB E jobs were completed during the first and second quarter of this financial year. But on the other hand, we have also received some OBE LSPK projects also, which are under progress. And we expect that in the coming quarters, whatever is the shortfall of turnover, that will be compensated by the existing jobs which are in progress, as well as new jobs which we have received in the first half of the financial year.
And this is the turnover.
Aditi Nawal: Okay. So again, I just wanted to clarify. So you had mentioned that you'd be targeting about INR3,500 crores of revenue. So are we on track to achieving that?

Sanjay Jindal: We are targeting around this figure.
Aditi Nawal: Okay. Secondly, so I was just doing this calculation for turnkey. So this order book, just a second. So just to give you one example, let's say as of the beginning of quarter two FY '25, the turnkey order book is about INR3,364 crores. And the new orders that were received were around INR107 crores. When you add these two numbers and the new...
Sanjay Jindal: Let me correct. On 30th September 2024, my order book is INR 11,155 crores. And out of this, turnkey segment is INR 4,660 crores. Balance is C onsultancy segment. So I was saying that this

INR4,600 crores will contribute towards this turnover in the coming six months.
Aditi Nawal: No, I understand that. I was just doing this calculation of adding, opening order book as at the beginning of the quarter, adding the new orders that you received during the quarter and subtracting my revenue that I've recognized in the quarter. So I should be getting the closing order book for turnkey, which shoul d be around INR 3178 crores. But the turnkey cumulative figure as of 30th September is around INR 4,600 crores. So I just wanted to understand why is this dif ferent? I mean, is there so me -- Is it that I'm going wrong somewhere?

Sanjay Jindal: No, no. There is nothing wrong in that. Basically, you just go for the opening the order book of the turnkey segment at the end of the last financial year, add the new order, and then deduct the revenue recognized during the half year. You will be getting almost the order book, whatever we have. Same thing . Only the difference is basically to the extent of GST component. Only difference is GST component.
Aditi Nawal: Got it. So essentially from FY '24, I should be taking that number, opening number.
Sanjay Jindal: Yes.
Aditi Nawal: Okay. Got it. And so one last question in terms of RFCL. So again, I think previous calls we had mentioned that we'll be receiving about INR 100 crore plus kind of a share of income from RFCL. So this quarter it was a little subdued. So is there something that I should be reading into it or the run rate of around INR 50 crores , INR53 crores is maintained?
Sanjay Jindal: In this quarter, we have received our profit share is INR 22 crores and up to . Up to half year it's around INR54 crores , INR55 crores. So going forward also we expect that we'll be able to get the same share as a profit from the more than INR 100 crores.
Aditi Nawal: Got it. Thank you. Thank you so much.
Moderator: Thank you. The next question is from the line of Amit Anwani from Prabhudas Lilladher Capital. Please go ahead.
Amit Anwani : Yes. So first thing I wanted to understand, you did highlight it that the order book now is about 12,000 and we have received one more order. Just wanted to understand from you what is the total L1 pipeline if you could highlight the project and values? A nd apart from L1 pipeline, what is the perspective pipeline project -wise and value -wise for FY '25 and ' 26, next 18 months?
Management: With respect to the orders, which we have told you that the current business intake is already reached INR6,800 crores. So it's just a half year and we are very much hopeful that we'll be able to add more INR 1,000 crores or INR2,000 crores further. So let's say around INR 8,000 crores , INR8,500 crores , it should easily reach, should be able to reach with respect to the business to go.
Amit Anwani : Right. Any notable projects you would like to highlight?
Management: Sorry, what?
Amit Anwani : Any notable project nam es you would like to highlight?
Management: A number of projects are in the bidding process. And I think like the fall of like Paradip , which we have been talking about, that might come. There are some other projects in the OB segment, which we are negotiating at the client side. So those can be h

ighlighted. Telling the name would be difficult at this point of time because some of them are confidential and one -to-one discussion is taking p lace. So there are certain projects out there in the pip eline which should be realized.

Amit Anwani : Right. And now with respect to the business performance, since there's so much order book built up is happening, what is our internal assessment or ambition? What kind of, annual peak revenue we can do in next 3 years? Any number you have, because we have been seeing the previous years, the revenue has been kind of flat, but now past two years, the order book has built up significantly ? We just wanted to understand, can we expect 4,000, 5,000 kind of revenue in FY '27? Any thought you would like to give?
And same question on the margin. We have been seeing consulting margin has been low. So any assessment on the new orders and the EBIT margins for Atlantica and consulting and what kind of margins we can do in next 2, 3 years, because in the previous cycle, we did 20% plus margins also and very good growth also 10 years back. So just a thought, what is the 2, 3 years view since the order book has now built up?
Management: First of all, let us discuss about the margin. And in the consultancy segment, we are maintaining our segment profit of 20 % to 25% on a regular basis. And in the Atlantica business, it is around 5%. And we are sure to maintain in the coming years also this kind of margins. We are targeting

this margin.
Amit Anwani : Right. And top line, sir?
Management: And top line, as you have seen, our order book is all -time high. And we are expecting more orders to come. And we have corporate target of INR 5,000 crores per month within next 2 , 3 years.
Amit Anwani : INR5,000 crores turnover within next 2 years. So is it FY '27?
Management: Two years. Around two years. It will take two years.
Amit Anwani : Annual turnover of 5,000, right?
Management: Annual turnover of INR5,000 crores, backed with the good order and so on.
Amit Anwani : Right. So one more thought on the – there have been a lot of talks and you have been also highlighting in your PPTs , about the new initiatives, like green hydrogen, coal gasification, and biofuel. And there have been talks and policies from government also on various bioenergy-related stuff. So just wanted to understand, obviously, you have been highlighting over the past 1 year, any meaningful development there, any orders on the anvil in this space, anything wh ich has developed in this area?
Management: One of the recent achievements in this space was the biofuel refinery, biofuel project and the MRPS, which we have quoted on the OBE basis around INR 300 crores worth of that work is there. Apart from that, we have done a number of studies and kind of initial engineering assignments for that. And I think major implementation things have come as of now. But a lot of things are in pipeline and in discussion. So we are hoping to get them realized. For this – for the last two quarters, the major achi evement is that biofuel refinery of the MRPS.

Amit Anwani : So lastly, sir, just a clarification, all these orders which are in the pipeline and which have been won in the past 24 months, so largely all these orders are nominated. Any ballpark you can suggest? Is it cost plus certain percentage? And what is that percentage? Anything you would like to highligh t there with respect to orders?
Management: The same profitability what we receive. There's nothing specific we can highlight on what the cost percentage is there. So it's a competitive market . So we'll not comment on that. But as we are maintaining the consistency profitability of 20 % that would be the – 20% to 25 %, that would be the target. And the OBE percentage, 5 % to 6%, that

would remain the target. And whatever assignment we get, we'll aim towards the same.
Amit Anwani : Yes, sir. Thank you so much. All the best.
Moderator: Thank you. The next question is from the line -up. Shirom Kapur from Prabhudas Lilladher . Please go ahead.
Shirom Kapur: Hi. Thank you for the opportunity. And a lot of my questions have been answered. But one thing I wanted to ask is on your international business. You spoke about pickup in opportunities in Africa and specifically Nigeria and Algeria and as well as Middle East and some in Latin America as well. So could you highlight the, any developments in your international business?
Sanjay Jindal: Yes. So Abu Dhabi, our Middle East office, basically the Abu Dhabi office is doing very well. We have received this year highest order booking from that place. It's already reached INR 160 crores or INR170 crores , INR180 crores. We have already reached from that office. That has never been achieved.
So that office is on the tune and will be further progressing. And we are working with all the economic companies, which is the main straight oil companies. With respect to the Nigeria, Nigeria, we are still working on a pet camp project. And the First Phase is already on. The Second Phase is expected to come towards the end of this year. So if all goes well, then it will come our way.
Similarly, in Algeria also, we are bidding for a number of projects. So those are in the bidding process. Let's hope for the best. We'll get realized. It could be adding to our portfolio. So that's the whole thing which we are working. International is one of the focused areas for us. So we are working on that.
Shirom Kapur: Okay, thank you. And just another question now, moving to the domestic side, and with all the upcoming refinery and petrochemical capex that we have over the next 4 or 5 years. So do you have a – what kind of projects are you currently bidding for in the pipeline? For example, with IOC -- of course, Paradip , you mentioned. But any other ongoing projects, such as the Panipat Expansion and Barauni , etcetera, with HPCL?
Sanjay Jindal: Yes, Panipat Expansion is already we are executing. So that will be completed next 1.5 years or so. So other projects which we are on, the information, the projects which are in market, we are already on the toes of it, and we are bidding for it. Apart from that, there are a number of D1,

D3, we are discussing with some private investors. So those are also there on the anvil. So let's hope for the best.
Shirom Kapur: Right, okay. So Yes , just to clarify that even the ongoing expansions that are going, most all those packages have already been bid out. There's no further packages potentially right now to capture, right, in the ongoing expansions?
Sanjay Jindal: There's no package to be awarded. It is basically the physical progress of the project. Most of the packages are awarded by this time. And they are in the construction phase.
Shirom Kapur: Okay, understood. And if you could highlight anything on, I know you mentioned that you received the biofuel, bio-refinery order from [NRBL 23:03] , but anything on green hydrogen or coal gasification that you could mention, any projects that you have been, you're bidding for or what projects are in the pipeline? And if you could quantify them.
Sanjay Jindal: Yes. Many of the companies have floated these tenders for other boot bases or operation bases. So actually, we don't do that. So we prefer to go for the consultancy. So we are working on a few of the projects. One is of NRL, one is of [NLCL 23:32] with respect to the green hydrogen on the initial study phases. So we are work ing on those kinds of projects.
Shirom Kapur: Thank you so much. I really appreciate all the answers.
Moderator: Thank you. The next question is from the line of Nidhi Shah from ICC

S Securities Limited.
Please go ah ead.
Nidhi Shah: Hi, thank you so much for taking my question. I had a couple of questions on, full year margins. So last year, we saw margins at 8.8%. This is EBITDA margins. So this year, the first two quarters have been lower than that. Are we expecting margins to improve, that is on the entire sales? Are we expecting them to improve in the rest of the year?
Sanjay Jindal: Yes, we are expecting that margin will be in the same line as last year, over a period of time for the financial year.
Nidhi Shah: Okay. Also, the new orders that we have secured this quarter, is there potentially a higher upside on those orders than we have orders that are currently sitting in the order book that we are executing at this point in time?
Sanjay Jindal: Yes, over a period of time, definitely there will be some improvement in the margin due to operational efficiency as well as the new mega jobs which we have secured during the current financial year.
Nidhi Shah: Okay. And given that order inflow is really great this year , and the outlook for the next 1 to 2 years is also good, do we expect that given how much order flow is there in the market that margins would improve on these orders based on that itself?
Sanjay Jindal: Yes, margin will definitely improve on the basis of the operational efficiency as well as big ticket order we have received during the current financial year. In big ticket order, the margins

are low in comparison to the small order where there is intense competition in comparison to the big orders.
Nidhi Shah: All right. And lastly, just a couple of questions on RFCL. What is the revenue and EBITDA for H1 for RFCL and Numaligarh as well?
Sanjay Jindal: Profit after tax for our share is around INR 55 crores for the half year.
Nidhi Shah: Okay. And RFCL revenues for the first half?
Management: Revenue, just a second, I will give it to you. Revenue for the current half year for our share, for 46% share is INR 729 crores.
Nidhi Shah: Okay. And same if you could give me for Numaligarh and as well also in Q4 you had mentioned that Numaligarh is undergoing an expansion to be 9 MMTPA . So how is the expansion progressing at this point in time?
Sanjay Jindal: Expansion is going on but the revenue will be coming only after the expansion is completed. Right now, they are capitalizing whatever they are incurring. So over a period of time, they will be recognizing the revenue as well as the profitability. That will be coming i n the form of dividend to the EI L as a shareholder.
Nidhi Shah: Okay. By when can we expect the expansion to be completed?
Sanjay Jindal: Right now, I don't have the status of that particular thing. Maybe by the middle of the next year or the end of the next year.
Nidhi Shah: All right. Thank you so much.
Moderator: Thank you. The next question is from the line of Sanjay Shah from Pranishta . Please go ahead.
Sanjay Shah: So just one question. In your Annual Report, you had mentioned about the opportunities which might come up in the nuclear sector. And there were some discussions going on with NTPC and

NPCIL. So is there any progress on that?
Sanjay Jindal: Yes, I think discussions are on in the initial stages of it. So they are anticipating, NTPC is anticipating a power plant. It's a nuclear power plant in times to come. So we are working with them and we are trying to approach them so that we get involved in this project in the early stages. But nothing concrete has taken place up until now.
Sanjay Shah: And in the blueprint for the nuclear sector, would it be just a larger nuclear power plant or are you also possibly or likely to get involved in the initiative for the Bharat nuclear reactors also?
Management: No. So in fact, most of the assignments that we do is mostly on the balance of plant type of things , because

the core nuclear reactors we are not involved in because there is proprietary technologies that are involved in that. So again also for the NPCIL project we did the complete balance of plant for the nuclear power project. So similar type of assignments we are anticipating in the future.

Sanjay Shah: Okay. Thank you.
Moderator: Thank you. The next question is from the line of Shirom Kapur from Prabhudas Lilladher Capital. Please go ahead.
Shirom Kapur: Hi. Thanks for the follow -up. I just had a quick question on some of the projects that have recently been announced by some of the major oil and gas players. So for example, Gale has announced a INR 60,000 crore s project to set up an ethane gas cracker. Similarly, BPCL and ONGC have also announced proposed major projects for 10 to 12 million metric tons to find the capacity with investments of up to INR 1.5 lakh crores. So what is your view on these projects? When do you expect that some of thes e projects will come and the consultancy and the tenders will open for such projects?
Sanjay Jindal: All these projects are still in the feasibility stage right now. They have indicated the capex investment. But right now, these are in the study phase. After the study phase is done, they will go for their investment approval from the board. And then only anything concrete will come out on the platter because what way they will go, which location they are going to have. Work will start only after their in itial board approvals. So these are initially in the feasibility stages and we were invol ved in all these feasibility studies.
Shirom Kapur: So E IL has already participated in the feasibility or there is still potential feasibility study orders to come in from these projects?
Sanjay Jindal: Tomorrow if it comes and which way it will go, we will definitely participate.
Shirom Kapur: Okay, understood. Thank you so much.
Moderator: Thank you. The next question is from the line of Manoj Sah from LAX GOV Investments. Please go ahead.
Manoj Sah: Thank you for giving me an opportunity. I have some basic questions. If you can explain to me regarding the revenue booking cycle for the consultancy projects and Turnkey projects. Initially what happens for the consultancy, you have got more of expenses because you are in designing stage and so on kind of way. And then later part the revenue picks up. If you can explain this for the consultancy as well as for the Turnkey project tha t will be very helpful? Thank you.
Sanjay Jindal: Yes, basically we are having a long gestation project in the consultancy as well as the Turnkey segment. For the major project, the contract period is around 4 years. So revenue recognition is not linear. During the initial phases, maybe for the first 1.5 year, we are able to recognize revenue only around 10%. After that, in the second year and third year, it will be around between 30% to 35%. And balance revenue is recognized over the next year, fourth year and so on. So that is the revenue recognition cycle for the long gestation contracts.
Manoj Sah: And for the Turnkey?
Sanjay Jindal: Yes, similar for the Turnkey segment also. We are involving the engineering, procurement and construction activity for the project. So this span over a period of 4 years for the long project.

Manoj Sah: So what you are saying is, whether it is a consultancy project or it is a Turnkey project, your revenue cycle more or less remains the same. For the first 1.5 year, it will be 12%. Then in the next 3 to 4 years, it could be 30%, 35% of the revenues are booked and balance are booked in the fourth or fifth year. So it remains the same for both the Turnkey as well as for the consultancy.
Management: Also for the major project, right?
Manoj Sah: For the major project? Okay.

Thank you.
Management: Understanding how the margins will, you will have some expenses in that particular quarter. So margins will be lower in that particular quarter. But if you look at 6 months or years, then we will be able to have a better handle on the margin.
Manoj Sah: Thank you.
Moderator: Thank you. The next question is from the line of P . Jha, an individual investor . Please go ahead.
P. Jha: Thank you for taking my question. I have two simple questions. One is relating to Guyana. There was an article in which our company has been awarded the PMC services for power generation, first of its kind, to be done by natural gas. So far, they were doing it apparently by burning diesel. So I'm supremely confident that you would execute it in the most competitive way.
What is the possibility of getting more work from this oil rich country, which is quite favorable to our country now, nowadays? So one of that, more power generating capacities to come there and also in the consultancy in oil refinery offshore. And the sec ond question which I have is again relates to future possible work is offshore wind energy. Typically, they are much bigger than what is there on the land. So what is the expectation which the company has in these two respects? Your take on that.
Sanjay Jindal: Guyana, this is a project which includes the natural gas liquid project as well as the power plant. So that is 400 megawatt power plant is there. So right now, we are the project management consultant for this. Gas is coming from the ExxonMobil , who is actually the operator of the oil fields there. And he's supplying the gas and sending through a pipeline to the facility. We are working as a project management consultant, managing an equity contractor who has been appointed by the government.
And we have also been appointed by the government. So we are managing their project and trying to get it commissioned at the earliest because that's a major need for them. With respect to the anticipation in future, because they have ample oil. Right now, it's mostly being governed by the ExxonMobil . They are anticipating an oil refinery there. And they're also anticipating a fertilizer project in the country.
But it's going to take some time. Because actually, what they want is they don't wish to invest. They are looking for the investor to invest that project. So that is the hitch right now because it's far delayed. If the government would have invested, it would have been faster. So they are looking for the parties to invest in all these projects.

That is the current situation of these projects. And we also anticipate there will be an expansion in the existing power facility in time to come because they intend to supply that power across the countries, in the neighborhood countries also. So that is also their future direction towards that. And we are very much well -placed working with the government. So let's hope for the best. But actually, this job which we have got was under the competition. So there will be competition in the future too.
P. Jha: Yes. And how about this offshore wind energy possibilities?
Sanjay Jindal: The offshore wind energy, the thing is like offshore is very close to our heart because we have our own offshore team working on this. Because we have been working for all the ONGC projects and extensive experience in offshore fields. We have done more tha n 248 offshore platforms.
But primarily, we are in the offshore engineering, platform designing and all. We have not done any wins with right now getting involved in some of these projects. And as soon as these – a lot of opportunity comes, we will definitely like to target the off shore wind projects because we are looking into certain opportunities and we are discussing with all the clients.
So because we have the good strength of offshore design

ing, facility basically platform designing, so it very well gels with our capabilities. But all these are basically the wind mill would come as a package because we have not much to do in that one because those are OEM supplied items. So our primary focus will be only the offshore facility wherein we have the good…
P. Jha: It is true that. But since it is on a much bigger scale than what is there on the land and this would be perhaps among the first one. So the possibilities even of this being the bigger, larger chunk of this and our expertise in the offshore, what could be the possible market size in case of India is to achieve renewal of this thing of certain percentage by 2030, which is not very far away. So governments focus on that and what is your sense?
Sanjay Jindal: I have already told you strength -wise we have no issue with that. We can do those projects. Basically in all these projects you have HVDC on the offshore platform and your wind would be separate. It would be under floating and there would be an integration involved between all these facilities. So we are very good integrator as well as designer of the offshore facility.
Management: So we are very well equipped with all kind of skills. When these jobs are coming, will come in

the market, we will definitely be bidding for that. So that is our current thing and we are
developing our skills and asking our teams to be exposed with the offshore developments and
all. So we are getting ready fo r all these kind of opportunities in time to come.
P. Jha: Thank you so much and wish you a very Happy Diwali.
Moderator: Thank you. As there are no further questions from the participants, I now hand the conference over to Ms.
Bhoomika Nair for closing comments.

Bhoomika Nair: Yes, thank you very much for giving us an opportunity to host the call , and wishing you all the
very best and a very happy Diwali to you and also all the participants. Thank you very much,
sir.
Sanjay Jindal: Thank you very much. Thank you, Bhoomika . And Happy Diwali to all of you.
Moderator: Thank you. On behalf of DAM Capital Advisors Limited, that concludes this conference. Thank you for joining us ,
and you may now disconnect your lines. Thank you.

Call: Feb 2025

M
ODERATOR : MS. BHOOMIKA NAIR – DAM CAPITAL

Moderator: Ladies and gentlemen, good day, and welcome to the Engineers India Limited Q3 FY '25 Earnings Conference Call hosted by DAM Capital Advisors. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing st ar then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Ms. Bhoomika Nair from DAM Capital Advisors Limited. Thank you, and over to you, ma'am.
Bhoomika Nair: Thanks, Rajeeta. A warm welcome to everyone on the 3Q FY '25 Earnings Call of Engineers India. We have the management today being represented by Mr. Sanjay Jindal, Director of Finance; Mr. Suvendu Padhi, Company Secretary and Investor Relations; Mr. R.P. Batra, Executive Director of Finance and Accounts and Investor Relations; Mr. Amanpreet Singh Chopra, Senior General Manager, C &MD Office and IR; Mr. Vivek Midha, Senior General Manager, Marketing, Business Development and Investor Relations; and Ms. Neha Narula, Senior Manager, Company Secretariat and IR.
At this point, I'll hand over the floor to Mr. Jindal for his initial remarks, post which we'll open up the floor for Q&A. Thank you, and over to you, sir.
Sanjay Jindal: Thank you, Ms. Bhoomika. Good evening, everybody. A warm welcome to EIL earnings call of Q3 of financial year '24/'25. We have declared results of quarter and 9 months ended December '24 on 10th '25.
As regard to financial performance for the 3 months ended December '24, the company has registered turnover of INR 750 crores vis -a-vis INR676 crores during second quarter of the financial year '24/'25, showing an increase of 11% in turnover.
Turnover from the Consultancy and Engineering segment stood at INR 407 crores and from Turnkey segment at INR 343 crores. Other income during current quarter ended December '24 is INR37 crores as compared to INR 53 crores during the same quarter of current financial year.
During the current quarter, the company has re corded profit before tax of INR 118 crores and PAT of INR 88 crores in comparison to INR 100 crores and INR 79 crores, respectively, during the second quarter of the current financial year, showing an increase of 18% in PBT and 11% in PAT. Further, profit from operations for this quarter ended December '24 is INR 81 crores vis -a-vis INR47 crores during the second quarter of the financial year '24-'25 showing an increase of 72%. This resulted in operating margin incr eased to 11% in December '24 quarter from 7% in September '24 quarter.
In addition to that EBITDA for the quarter December ended is INR 128 crores vis -a-vis INR110 crores during the quarter ended September '24, showing an increase of 16%. Notably, EPS for the quarter ended December '24 is INR 1.57 vis -a-vis September '24 is INR 1.41.
On consolidated basis, profit after tax for the quarter ended December '24, INR 109 crores vis -a-vis INR100 crores during the second quarter ended September '24 of the financial year '24/'25,

showing an increase of 9%. The company has an all -time high order book of INR 11,353 crores, comprising under Consultancy segment of INR 5,554 crores and under LSTK segment of INR5,799 crores, as on 31st December 2024.
Thank you. Thank you, Bhoomika.
Moderator: The first question is from the line of Mohit Kumar from ICICI Securities.
Mohit Kumar: My first question is on what is the status of the IOCL tender where we were L1. Can we expect the finalization of the tender in the coming months?
Sanjay Jindal: Just to surprise -- which tender are you talking about?
Mohit Kumar: Sir, IOCL. I think one of the tenders we were L1 right? Las

t quarter, we announced that we -- I think we have mentioned that we are L1 in IOCL tenders, Panipat -- sorry, Paradip?
Sanjay Jindal: Yes. Paradip Petrochemical Complex, we are L1. We are L1. And one of these projects basically, they have the 2 projects, one is the Paradip PMC -1 package and other is package number two .
The package number two and one, both of them we are L1. The PM package 1 on has been awarded to us recently, I think last week, it has been awarded to us. And package number two is expected to be awarded in next couple of weeks.
Mohit Kumar: Understood, sir.
Sanjay Jindal: So, the results will be reflected in the next -- it's basically the next quarter, basically ending of this quarter, we will get the results of that.
Mohit Kumar: Understood. That's very helpful, sir. Secondly, has the BPC floated a tender for its Consultancy tender for its new refinery in Andhra Pradesh? Is there any progress out there?
Sanjay Jindal: Tender, I think it's not been floated as of now.
Mohit Kumar: So, we can expect in the coming quarter, right, this one?
Sanjay Jindal: It may come. It may come. Initially, it would be initial studies, pre-project activities and all those things activities will be there. Later on, it would be the major tender would come, but not in this quarter itself. It should come somewhere in the next financial year or towards the end of this quarter.
Mohit Kumar: Understood, sir. My last question, sir, how is the work on CPCL progressing? How are your booking revenues as of now? And do we expect the revenue booking to pick up in next fiscal year?
Sanjay Jindal: CPCL. CPCL, which projects you are talking about here?
Mohit Kumar: CPCL Nagapattinam, expansion.

Sanjay Jindal: It's -- I think the project is kind of on hold because of the land issues. So, we are yet to hear from them further decision on the project from the IOCL side and CPCL side.
Moderator: The next question is from the line of Nishit Master from Axis Securities.
Nishit Master: Congratulations on a good set of number. Sir, just needed one clarification. There is an order which we've got, which is development of IIT Jammu Phase B. It's on a depository basis. Now if you could just explain the difference between LSTK and depository basis, it would be helpful.
Sanjay Jindal: There is no difference in the depository and the LSTK. It's almost the same philosophy.
Nishit Master: Almost the same philosophy, right? And the margin profile also would be similar.
Sanjay Jindal: Almost similar, yes.
Moderator: The next question is from the line of Manish Ostwal from Nirmal Bang Securities.
Manish Ostwal: I have a couple of questions on the company's performance. First question on the order inflow, which we have received during the 9 months is close to INR 7,000 crores compared to -- which is almost 130% growth compared to 9-month period of last year. So, first is the current order inflow which we are getting, what is the margin profile on that? Can you explain? Because if I look at our mix of Consultancy versus Turnkey compared to December '23, that has changed from 59% to 49% in favor of -- in terms of Consultancy, and Turnkey moved from 41% to 51%. So that has an implication to the blended margin profile of the company.
So, can you guide us what is the sustainable margin Turnkey projects for our existing order book? And the Consultancy margin so that we can figure out blended margin look like for the current order book.
Sanjay Jindal: Segment profit. I think you are talking about the segment profit in the EPCM job and LSTK project. In the EPCM job, we are having a segment profit of around 20%. And in the LSTK jobs, our segment profit is around 5% to 6%.
Manish Ostwal: And the current order book, what is the margin profile of the blended margin profile order book, sir, current order book, INR11,352 crore

s.
Sanjay Jindal: At this moment, our current order book is INR 11,350 crores and we have Turnkey business of INR5,800 crores and balance is Consultancy job.

Manish Ostwal: And what is the time frame of executing this order book?
Sanjay Jindal: Timeline ? You're asking timeline ?
Manish Ostwal: Yes, sir. Timeline of executing this current order book INR 11,352 crores.
Sanjay Jindal: These projects are bigger in size. Generally, they are being executed in 3 to 4 years. Unless there is some short job, which may be completed in 1 year or so. Generally, bigger projects are completed 3 to 4 years.

Manish Ostwal: And the kind of growth we have shown the current year in terms of order inflow; can we sustain this kind of growth in the coming period?
Sanjay Jindal: Yes, definitely, we are sure. We are targeting all the projects which are coming in India. And we are very sure we will be technical consultant of all the clients, favorite consultant of all the clients in the future also.
Manish Ostwal: Okay. Sir, I have only one request. I was trying for the meeting from the CFO office, but still, I'm not getting the response. So, I request you to please revert to our mail, so that we can understand the business much more detail and advise our investors accordingly. Thanks.
Moderator: The next question is from the line of Ishita Lodha from SVAN Investment.
Ishita Lodha: My question is with respect to the previous participant's question with respect to the L1 package. So, can you quantify the second pack -- the quantum of that order of the second package?
Sanjay Jindal: Listen, the package, the PMC -2 is expected to be around INR 700 crores.
Ishita Lodha: Okay. And sir, in the previous conference call, you had said that the order book in Consultancy segment is expected to reach about INR 8,000 crores to INR 8,500 crores. So can you explain like the pipeline we have in Consultancy, what kind of orders are we expecting...
Sanjay Jindal: Our order book has already reached INR 11,000 crores.
Ishita Lodha: I'm talking about Consultancy order book. So, consistency order book is currently INR5,500 crores.
Sanjay Jindal: Order book would be -- with respect to the various upcoming orders, you must have seen that this IOCL is going to be added in this financial year. Then we are bidding for a few more projects in the petrochemical segment. Let's hope for the best that next year, we should be realizing those. There are some proposals are in competitive mode, and we are bidding for it. So, they are in the pipeline.
So, we anticipate those things to be realized soon. Apart from that, infrastructure is another segment which we have done wonderfully. So, we are likely to get some opportunities right there too. You must have seen the infrastructure has grown from earlier 25% to 44% in this segment. So, we're getting a lot of assignments in the infrastructure segment also. So, all the segments would be contributing in these efforts.
Ishita Lodha: Okay. And in this quarter, we had reported an improvement in Consultancy EBIT margins. So, is this linked to the stage of execution of a particular project? Is there any one -off in this margin because we have been guiding for only 20% of a sustainable margin. So, if you can throw some more light on this, would be helpful?
Sanjay Jindal: No, this quarter margin is from the routine business of EIL. As you know, EIL coming from the implementing of the project, which is cyclic in nature. This may be some more -- this may be more in this quarter and this may be less in next quarter because it is always cyclic in nature.

And increase in this quarter is only due to increase in normal business only from the implementation of project only. There is no onetime item is included.
Moderator: The next quest

ion is from the line of Sanjay Shah from Pranishta.
Sanjay Shah: I just wanted to check on what are the opportunities beyond -- I mean we are predominantly a hydrocarbon focused company. So are there opportunities beyond some of the conventional sectors into the newest sectors, be it nuclear or some of the others? I know you mentioned about nuclear as an opportunity in the past, but just wanted to try and see if there are opportunities opening up in the new edge space.
Sanjay Jindal: The opportunities are there, definitely. It's not only in the hydrocarbon sector. You know that we are focusing outside the hydrocarbon also, which includes the infrastructure, which includes the sunrise sectors, which includes the sectors like metallurgy and non -ferrous metallurgy. We have been doing various projects in now the steel sector. We have got various assignments. We have basically made the entry into the steel segment and doing a lot of engineering assignments out there. At the same time, we are again working for the ferrous/non -ferrous

metallurgy segment like smelter and alumina refinery projects, we are targeting them, and we are getting few assignments there. So, this is one of the segment.
Then we have the segment like coal gasification. We are bidding for the upcoming coal gasification projects wherein the government has given some -- approved the incentives for the upcoming coal gasification projects, which are there on the anvil. So, we'll be targeting those.
We are also working on the green hydrogen and green ammonia segment. We are already doing a few projects with NTPC, and then we'll be having the latest -- later part later implementation of those projects in the times to come.
We are working with NTPC on the engineering assignments, which is purely a power sector. We are doing various structural stability studies for them. Similar kind of assignments are expected to come in times to come. At the same time, we are there in the in frastructure.
Infrastructure, we have been doing pretty well. We've been doing with the data centers. We are doing for the basically institutional campus. We are working the projects on OBE basis. In fact, we have started working projects on OBE basis as well as on the depository basis in the infrastructure segment.
So, all these segments are beyond the hydrocarbon, and we are contributing significantly -- will be contributing significantly in our business apart from the oil and gas. But oil and gas is going to be the main market for us for business. So, we are not only relying only on the oil and gas.
We are also working on the other segments.
Sanjay Shah: Thank you. That's really useful to know. And then in light of this, do you have some kind of a 2-year or a 3 -year or a 3 - to 5-year growth map in terms of how much growth should as an investor we expect going ahead, just given your order book and the kind of visibility that you have in the pipeline?

Sanjay Jindal: You must have seen the order book right now, it's INR 11,000 crores. At least we are trying to -
- we'll be sustaining that much order book and we'll be at least increasing that order book. So that is a significant growth in the last couple of years. We have been working for last 3, 4 years consistently. Management has put in a lot of focus on the new sectors, new areas, improvement of efficiency of the working productivity of the employees.
All these segments, we have been focusing not only on the business, all the fronts, new technology initiatives, visibility of company as a brand in the market. You see that today, EIL is visible everywhere on the maybe intranet or maybe Internet or on the social media, everywhere.
So, brand improvement is also there. At the same time, we are working on the efficiency of our services and targeting the new projects.
We are very much competitive. We are bidding very --

despite being the -- facing various challenges being the Government of India -- company, but still, we are getting the jobs on competition basis and very successfully getting those assignments. So those endeavors are there from all sides. So, let's hope for the best.
Moderator: The next question is from the line of Arvind Joshi from Bateleur Advisors.
Arvind Joshi: Can you give us some updates on the West Coast Refinery, the progress, if any?
Sanjay Jindal: West Coast Refinery, we do not know the future of it because we have been hearing like it's always published in the paper that may not come. They might decide to go for two refineries at two different locations. So, we don't see any future at this point of time for this refinery. It's all government decision and political decisions. When it is taken, we'll get to know.
Arvind Joshi: Okay. And sir, any visibility on the new 2G ethanol plants and CBG plants that are there in the pipeline for us?
Sanjay Jindal: Primarily, we are targeting the oil and gas projects. CBG plants are also in the inland. We are looking for it, and we are doing some internal studies also on the CBG plant. So, we're not clear at this point of time how many projects we are going to be having those in our city. We are targeting those, and let's see what we do in the CBG.
Moderator: The next question is from the line of Bhoomika Nair from DAM Capital.
Bhoomika Nair: Yes, sir. Sir, just wanted to understand while we are L1 in the IOCL, but other petchem projects which are there in the pipeline whether be it in terms of other IOCL projects or BP , HP or any others, if you can give some color on what is the refining capacity expansion planned by all the OMCs where they could possibly be some opportunities for us to look at, both in terms of refiner ies as also in terms of petchem?
Sanjay Jindal: In terms of petchem Panipat and then Paradip plant is expected to come -- for which the Phase I has been awarded. PMC -1 has been awarded to us and PMC -2 is likely to be awarded this month or so. That's the major -- one of the weaker project, which is coming on the frame. Then you must have heard about the BPCL upcoming refinery -- upcoming petrochemical complex in

Andhra Pradesh, wherein the work has initially -- initial work and they have allocated some INR5,000 crores for the initial green project activities.
So that project is also on the anvil for the next year. There are a few studies which are already in place, which we are carrying out. These are for oil to chemical projects. One of them is for the private sector and 2 or 3 for the government sector at var ious areas, depending on how feasible these projects are. If they are viable, then they would be coming in the shorter -term period because the feasibility studies are about to be completed in the next couple of months, they will be making the decision.
So, let's hope for the best. The projects are there. There are 4, 5 such kind of projects and studies are on. At least 2 or 3 should realize, and 2 or 3 should be materialized in the times to come in a years' time. So those could be some of the projects. Ther e are certain refinery expansions. Existing refineries are also thinking of expanding, like Bina refinery has planned for expansion. Kochi refineries also have certain plans for expansion. And let's hope for the best, these are there in the initial sta ges. So, in times to come, they will be converted into the major projects as another boost this year.
Bhoomika Nair: Okay. But any sign of -- if not in terms of rupees crore s, in terms of possible refinery expansion where conversation is ongoing, which you think where ordering can possibly happen over the next 2 years. If you can talk about in terms of the capacity increase in terms of refinery or in terms of petchem?
Sanjay Jindal: There are two refineries who are s

ort of thinking of expanding -- thinking of going for the expansion in the times to come. So that would definitely happen within 1 year time. The Bina refinery and the Kochi refinery, both of them would be expanding.
And there are news basically chatters are there in the news also that these are getting expanded apart from that. I told you that petrochem, petchem complex is going to be there as a grassroot complex. So that would be integrating the refinery as well as the petrochemical complex within the plant in Andhra Pradesh. So, besides that, apart from that, oil to chemical projects are there. So those are also the refinery and petrochemical complexes. As such, alone refinery capacity additions would be limited.
Bhoomika Nair: Okay. And on petchem side, I mean, apart from the BPCL and the IOCL one?
Sanjay Jindal: Once the projects would be integrated with the refinery and those will be the petrochemical complex is integrated with the refinery apart from that -- in addition to the oil and gas, basically oil to chemical complexes, wherein the refinery and petrochemical are altogether within the one project. But focus of that plant is on the petchem -- its maximum output is petchem, but refinery is also there. So, they will not be focusing on the transportation route more on the petchem side.
Bhoomika Nair: Sure, sure. The other aspect is on the international business. We had put up our offices in Abu Dhabi, et cetera. We're seeing the order intake for the last 2 years being in that INR 500 crores, INR600 crores range also in the same kind of broad range for the current year as well. How do

you see that scaling up? What is the pipeline like? Any large orders government to government, EXIM Bank related, anything which can possibly come up? Anything in the pipeline that you can talk about out there?
Sanjay Jindal: With respect to the government to government, there are very limited number of -- we don't see any major discussions happening because it was only one major investment by Government of India in Mongolia. Thereafter, we have not seen any major investment by Government of India in any of the countries with respect to the oil and gas segment or any other major segment.
But definitely, with respect to the overseas business like our Abu Dhabi office is doing pretty well. They are doing a lot of assignments, engineering assignments. They have been getting a lot of projects, engineering -- midsized consultancy projects from the ADNOC group of companies in the Offshore segment and the Onshore oil and gas segment in the refinery and petrochemical segment. So that office is doing pretty well, and they are expected to grow well next year also because we are putting a lot of focu s and a lot of emphasis on this. We are increasing the manpower, so all focus is there.
Apart from that, we are anticipating some of the -- some minor projects may also come from the existing Nigeria segment, wherein the -- they might be going for certain -- one the existing client might go for the modification in the plant. They would be adding a few of the units there. So, we have been talking to them. So, some projects will come from there, too. We are also doing petchem complex. So, it's Phase 2, basically the implementation phase may come by the end of this year. So let us see. A lot of projects are there -- in there.

We are bidding for various consultancy assignments in Algeria, quite aggressively. So, some of the assignments are also expected to become. We have few smaller consultancy assignments in Algeria as of now, but we are anticipating more assignments from them. So, these are some of the segments we are going for a targeted approach. In Middle East, also Kuwait, we have been doing well. We have got various assignments from the KNPC and the other oil companies there. So, Bahrain is our consistent business --

giving consistent business to us. We have running agreements with them with the major oil refinery there. We get a lot of engineering assignments -- though we can sustain them, smaller engineering assignment, but we are continuously in getting business from all these companies. So, the focus is there, definitely on the Middle East too.

Bhoomika Nair: Okay. Okay. So, sir, I mean, in effect, what I'm trying to ask is the Consultancy part of it, if you see there has been a significant improvement in the order inflows in the current year. We are already at INR 3,000 crores plus we'll get some more orders in the fourth quarter. Can this run rate of INR 4,000 crores, INR 5,000 crores of Consultancy order intake be maintained given the pipeline that you're seeing for the next 1 or 2 years?

Sanjay Jindal: Yes. It's not difficult to get that to maintain the similar kind of what we have today achieved should be able to achieve the same kind of business next year too -- with the kind of focus we have shifted and the efforts we are making, we should be able to get.

Bhoomika Nair: Okay. Sir, lastly, just one thing on the NRL investment we're doing there expanding capacity. Now as of date, what is our total investment in NRL and what will be the likely increase that we will do because of their capital requirements?

Sanjay Jindal: We have made INR 700 crores plus INR 135 crores is the additional investment. Out of that, we have paid, I think INR 100 crores we already around INR 34 crores, INR 35 crores recently we paid.

Bhoomika Nair: So INR700 crores plus INR 135 crores, INR 835 crores total investment in NRL.

Sanjay Jindal: Yes.

Bhoomika Nair: Okay. And so far, we've done some 7 -- INR800-odd crores. So INR 35 crores is pending.

Sanjay Jindal: Yes, yes.

Moderator: Next question is from the line of Dhrushil Jhaveri from Canara Robeco .

Dhrushil Jhaveri : My question is on Consultancy execution. So, what kind of revenue can we expect over FY '26, '27, given the strong order book that we are sitting on?

Management: There will be definitely growth in the next financial year. And we are expecting some big orders in the current financial year and next financial year. Over a period of time, definitely, there will be growth.

Dhrushil Jhaveri: Yes, I understand. But if you can give us some directional -- I mean, how much execution improvement are you expecting next year over what we have seen in the current year?

Management: Normally. ..

Dhrushil Jhaveri: Especially in consultancy.

Management: Around 36 to 40 months. So, during the first year, the revenue recognition 5% to 7% and in the second and third year, the revenue recognition is around 35% . So going forward in the financial year '26, '27, there will be a substantial increase in the turnover. We are expecting an increase in the turnover.

Dhrushil Jhaveri: Got it, sir. And just one last one. This overseas big project that I think we had talked about earlier on the Consultancy side, again, I think this was Dangote. Is there any update on the expansion project and the status of us getting the order here?

Sanjay Jindal: Dangote, they are not anticipating any major expansion at this point of time because at this point of time, they are focusing on stabilizing the refinery and increasing their production because it's running at the lesser capacity because they had certain crude shortages within the country itself. So, they are trying and stabilize their refinery.

Thereafter, in years' time, they will be going for a lot of modifications in the existing plant, like they would be adding certain units and trying to improve the product quality and all those kind of revamps, as well as modernizations to come.

Almost maybe in years' time, they might go for the petchem. They have certain petc

hem projects on the anvil, but not in this financial year, probably by the end of next financial year as soon as

the refinery stabilizes, and they have the financial condition to me et -- to invest those projects.
So, they would definitely go for it. We have recently visited and met them, and they have shown
certain interest in that. So, let's hope for the best. As soon as the refinery gets stabilized, we'll
have more opportunity there.
Dhrushil Jhaveri: Got it. So, no other large order in the international -- in the Consultancy side that we are
expecting, right?
Sanjay Jindal: No, it's there in the Abu Dhabi segment, we are bidding for it. It's a fairly large segment, INR 30
crores, INR40 crores, INR 50 crores of worth of business is there. Many projects which we are
targeting, it's mostly the FEED, EPCM, PMC projects are there. We are bidding for them. And
those are -- those would be coming.
Dhrushil Jhaveri: Got it. So, what kind of order inflow from international and Consultancy can we expect? I mean,
ballpark, I'm just asking.
Sanjay Jindal: Around INR40 crores, INR 50 crores each. So, there will be many such projects accumulated
many such projects. It will be midsized projects, totally accumulated and they add to the book
business for -- apart from that, there are certain projects, major projects are also EPCM projects
are also in the bidding phase. Let's hope for the best because there's a lot of competition in that
segment. We are trying for that. So, we'll try and get those assignments. They are larger in size.
Moderator: Next question is from line of Varun Gupta from B&K Securities.
Varun Gupta: I just need one clarity. Earlier -- correct me if I'm wrong, earlier in your previous con call, you
had mentioned that for FY '25, we are looking to do a turnover of around INR 3,500 crores. Given
how we have performed in the first 9 months, are we likely to maintain that guidance? Or will there be any revision to that
number?
Sanjay Jindal: At this moment, we are working with our clients for some change orders. And till the time change orders are
finalized, we are expecting to remain same billing turnover of the last year, around
INR3,200 crores, INR 2,500 crores. And in case we are able to finalize our change order, then
definitely, we are going to hit the figure of INR 3,500 crores.
Moderator: The next question is from the line of Bhoomika Nair from DAM Capital Advisors.
Bhoomika Nair: Sir, just one small bookkeeping question on what is the cash on books right now at the end of
3Q?
Sanjay Jindal: Cash is around INR1000 crores.

Bhoomika Nair: Okay, sir. Okay. Understood. Fair point, sir. I think there are no more questions in the queue. I
thank all the participants and particularly to the management for giving us an opportunity to host
the call. Really appreciate it, sir, and I wish you all the very best. Thank you very much.
Sanjay Jindal: Okay, Bhoomika. Thank you.
Management: Thank you.
Moderator: Thank you. On behalf of DAM Capital Advisors, that concludes this conference. Thank you for
joining us, and you now disconnect your lines.

Call: Jun 2025

"Engineers India L imited
Q4 & FY'2 5 Earnings Conference Call "
June 03, 202 5

MANAGEMENT : MR. SANJAY JINDAL – DIRECTOR -FINANCE – ENGINEERS INDIA LIMITED
MR. SUVENDU PADHI – COMPANY SECRETARY AND INVESTOR RELATIONS – ENGINEERS INDIA LIMITED
MR. R.P BATRA –EXECUTIVE DIRECTOR , FINANCE AND ACCOUNTS AND INVESTOR RELATIONS – ENGINEERS INDIA LIMITED
MR. AMANPREET SINGH CHOPRA – SENIOR GENERAL MANAGER , C&MD OFFICE AND INVESTOR RELATIONS – ENGINEERS INDIA LIMITED
MR. VIVEK MIDHA – SENIOR GENERAL MANAGER MARKETING , BUSINESS DEVELOPMENT AND INVESTOR RELATIONS – ENGINEERS INDIA LIMITED
MS. NEHA NARULA – SENIOR MANAGER , COMPANY SECRETAR Y AND INVESTOR RELATIONS – ENGINEERS INDIA LIMITED

MODERATOR : MS. BHOOMIKA NAIR – DAM CAPITAL

Moderator: Ladies and gentlemen, good day, and welcome to the Engineers India Limited Q4 and FY '25 Earnings Conference Call, hosted by DAM Capital Advisors. As a reminder, all participant lines will be in the listen -only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star, then zero on your touchtone phone. Please note that this conference is being recorded.

I now hand the conference over to Ms. Bhoomika Nair from DAM Capital Advisors Limited. Thank you, and over to you, ma'am.

Bhoomika Nair : Thanks, Manav. Good afternoon, everyone and a very warm welcome to Engineers India Limited Q4 FY '25 Earnings Call, hosted by DAM Capital Advisors.

On the call today, we have the management represented by ; Mr. Sanjay Jindal , Director Finance; Mr. Suvendu Padhi, Company Secretary and Investor Relations; Mr. R.P. Batra, Executive Director, F&A and Investor Relations; Mr. Amanpreet Singh Chopra, Senior General Manager; C&MD Office and Investor Relations; Mr. Vivek Midha, Senior General Manager, Marketing Business Development and Investor Relations; and Ms. Neha Narula, Senior Manager, Company Secretary and Investor Relations.

At this point, I'll hand over the call to Mr. Jindal for his initial remarks, post which we'll open the floor for Q&A. Thank you, and over to you, sir.

EIL: Thank you, Bhoomika. Good evening, everybody, and a warm welcome to all the investors for this week. We have declared our annual results for the financial year '24, '25 on 29th May 2025. Company's order book position has reached its all -time high in financ ial year '24, '25 and stands at INR11,700 crores as on 31st March 2025 as compared to INR7,823 crores as on 31st March 2024. Order inflow in EIL has increased significantly to INR8,214 crores in financial year '24, '25 as compared to the order inflow of INR3,400 crores in financial year '23, '24.

In the stand -alone information in the fourth quarter, the company has achieved a turnover of INR991 crores in comparison to INR750 crores in quarter ended 31st December 2024, showing an increase of around 32% on quarter -on-quarter basis, which are not from consultancy and engineering segment amounting to INR522 crores and INR449 crores in Turnkey segment.

During the fourth quarter ended 31st March 2025, the company recorded profit before tax of INR325 crores and profit after tax of INR243 crores in comparison to INR118 crores and INR88 crores, respectively, during the previous quarter of financial year '24, '25, showing an increase of 175% increase in PBT and 170% -- 76% increase in PAT.

With respect to financial performance for the year ended 31st March 2025, on stand -alone basis, the company achieved the highest PAT in the last 10 years. The profit after tax increased by 30% to the INR465 crores to -- in comparison to profit of INR357 crores in the last year.

Operating margin during the financial year '24, '25 increased to 15% as against 8% in financial year '23, '24.

EBITDA of the company as on 31st March 2025 stood at INR659 crores in comparison to INR508 crores as on 31 March 2025. EBITDA have increased from 15% to 21%. During the year ended 31st March '25, the company had reached a turnover of INR3,028 crores. The turnover from consultancy and engineering segment stood at INR1,678 crores, and from Turnkey segment was INR1,350 crores.
During the year '24, '25, the foreign turnover increased by 32% to INR371 crores as against INR281 crores in financial year '23, '24 mainly from UAE, Nigeria and Kuwait regions. The company is maintaining a very healthy earning per share of INR8.28. Last year, it was INR6.35. On a consolidated basis, the company earned a profit o

f INR580 crores for the year ended 31st
March '25, in comparison to INR445 crores and during the last financial year '23, '24. Therefore, there is an increase of 130% in the consolidated profit on year -on-year basis. EIL share of property in RFCL has increased to INR108 crores in financial year '24, '25 from INR85 crores in financial year '23. '24. That is an increase in margin 27%.
The profit of EIL's subsidiary have increased to INR20 crores in financial year '24, '25 as against INR12 crores in financial year '23, '24. So this is some of the highlights from our side. Thank you, Bhoomika.
Moderator: Sir, should we begin the question -and-answer session?
EIL: Yes.
Moderator: Thank you. We have our first question from the line of Manish Ostwal from Nirmal Bang Securities.
Manish Ostwal: Thank you for the opportunity a nd very good set of numbers for the quarter and for the full year. I have a couple of questions on -- first, on the -- one of the slides where we mentioned that we foray into the defense space in the 2025 so what capability we have built there and what kin d of business we can see for Engineers India from F '26 over the medium term in that segment ?
EIL: With respect to the defense, first, you should know that as you are aware that we are an oil and gas company. We have extensive experience of core hydrocarbon and which is equally complex area. So scale -wise, we have no issues with us. So we had tied up with -- this year, we had tied up with Munitions India Limited, and we had signed an MOU with them. The reafter, we have got some assignment from them also. We are executing one of the T&T project for them.
We are eying for more projects in this segment, including we are exploring the private segment wherever this opportunity comes we'll be tying up with them. So experience wise, we are ready for this because engineering is our core experience, and we can -- we are fully capable of handling any of this time. So this is one of the segments which we are keeping it as a potential segment for expanding our business horizon.
Manish Ostwal: So can you secure some orders in current financial year, sir?

EIL: We will try. This financial year has started, we will be targeting a few of the projects -- that will be -- end of this and the last quarter.
Manish Ostwal: Yes. Now coming to the current financial performance. So sir, last year, we have INR7,800 crores of order book and the current year, we saw an order inflow of almost INR8,200 crores, and we delivered a revenue of INR3,200 crores for this year and the margin of both the segments have improved consultan cy as well as turnkey projects.
So the question is, one is based -- and compared to the last year order book, we have a 30% -- 38% execution of the opening order book. So given by the trend of the order book mix, what kind of execution we can anticipate for the current financial year?
And how we should think of the margin in both the categories like consultancy as well Turnkey because even Turnkey project margins during the quarter and the full year is much higher than what we guided to the market. So can you comment on, one is the grow th aspect? The second is the profitability trajectory based on the current order book that we have?
EIL: Order book. We have -- first thing is that the order book, you must have seen that we have currently booked an order book of INR11,717 crores. So now these are the new orders which have recently booked, and there was a little bit decline in the turnover because many of the old projects, which were under execution have been on the closure of it because given the mega projects, which have a typical time line of 4 to 5 years -- 3 to 4 years.
So now as you must have seen in the last year, we have got the 2 mega petrochemical complexes project and many other projects which are getting initiated. So

again, the time cycle is 3 to 4
years. The billing would start in this financial year. So naturally, we'll start earning and adding to the revenue and turnover would increase in that regards.

And with respect to the profit margins, we are going to maintain the similar profit margins so we are quite capable of.

EIL: As regard margin is concerned. Our margins in the consultancy segment, and LSTK segments are intact. Earlier, we have given the range of 5% to 7% in the LSTK, and in the consultancy business, it is 25%. And this year, we could achieve the higher margin bec ause of the -- some change orders, we could finalize with our clients for which expenses have been already booked our profit and loss.

So in the company like EIL, where revenue comes from the implementation of project change order is also important part and it depends when the change orders are finalized. So a lot of change orders have been finalized in this financial year.

Manish Ostwal: And lastly, sir, order inflow against INR8,200 crores of order inflow where -- what kind of order inflow we can anticipate given the outlook for various segments in your presentation. So whether we can sustain the current -- year order inflow or we can do better for current financial year?

EIL: We can assess to sustain the existing order value. We will -- the order inflow, what we have got in this financial year we will try to sustain the same and we'll further grow from the existing

order book -- sorry, order inflow. For your information, as of today, we have already booked INR1,300 crores worth of business. And then the second year is -- in the second market, sir. So we are working towards it. And hopefully, it will be -- our performance will be better than the past months.

Moderator: We have our next question from the line of Mohit Kumar from ICICI Securities.

Mohit Kumar: Sir, my question is a note #4 and note #5. I think you are -- you mentioned that there is this impact of INR112 crores for the variable consideration, right? And note #5 says that we have also retained INR82 crores write -back. My question is, for the quarter, is it fair to say that the total impact on the profit is around INR112 crores plus INR82 crores, which is closer to around INR214 crores -- sorry, INR194 crores?

EIL: Yes, INR112 crores is our change order we could finalize with our clients. And against this change order, we have already incurred expenditure -- since we have already incurred the expenditure, therefore, it was a part of -- it was something as part of the turnove r.

Like I have already told in the company like EIL, where projects are implemented, and some of the works are always done, which is beyond the scope for which change order is always finalized by the clients. And generally, it takes 3 times. Expenditure is in curred first and then the revenue comes. So under this scenario, we have got 2 major change orders, for which, change order value is INR112 crores.

And INR82 crores reversal is -- pertains to our guarantee and warranty. You know whenever a project is built, there is also a provision for the guarantee and warranty of the project. So we keep continuing to make provisions of the guarantee and warranty and whenever our d efect clarity period is over, and there is no guarantee and warranty is balance, then that provision is reversed. And this is the accounting procedure. So there is a reversal of INR82 crores, for which we have got this client permission to reverse there is no guarantee and warranty on this account.

Mohit Kumar: Understood, sir. My related question is, sir you just -- in the note of 4, you are saying profit from operations for the quarter and the year. Does it mean that this is an impact on the profit after tax or profit before tax?

EIL: Profit for operation is always profit before tax. It is excluding the...

Mohit Kumar: So the

re is taxation impact, right, which I need to consider...

EIL: It is excluding the other income.

Mohit Kumar: Okay. Understood, sir. My second question is on the consultancy. I think we had a very fabulous last year, which was INR4,000 crores, I think some INR4,000 -odd crores in the entire fiscal, which I think one of the best years in terms of the -- INR4,500 crores, I think, which is one of the best in the last several years. Do you think is it possible to replicate this in FY '26, especially of consultancy order inflow given what we see in the macro? Or do you think there was some dip in this order inflow in F '26?

EIL: With respect of the order inflow in the consultancy segment it would remain, it should be in the same range we should try that because we keep on bidding for the multiple projects altogether

which are our core consultancy and we have already, like the proj ects like Paradip and all which are under execution and the Phase 2 is expected to come in towards the end of this financial year. So we'll be able to -- which is a major component of the project. So this kind of many -- first is these will be awarded projects and another is like we are bidding for a number of the projects. So we hope that the consultancy would also be of the signific ant contribution in the total order book and the total order inflow.
Mohit Kumar: Of course, got it. How do you think about this international order pipeline in the consultancy? How is it shaping up compared to last year?
EIL: Like what you have seen it in last year that it is INR1,000 crores. So we are working towards it because earlier we were strengthening our Abu Dhabi office, which has done quite well. And it is improving its performance. We are targeting the large value project. So hopefully, this order inflow will further in crease or it will remain the same rate.
In fact, we already have in this financial year, we already booked INR380 crores worth of projects from Middle East from Kuwait. So you can see that we are moving ahead with the same pace. So we can reach to the target what has been said...
Moderator: We have our next question from the line of Nidhi Shah from ICICI Securities.
Nidhi Shah: So my first question is on the order inflow for Turnkey. So at Q3, we mentioned that the 9 -month order inflow is INR39 billion. And now for this quarter, we have mentioned that it is INR36 billion. So what is the order inflow for this quarter, has any order got canceled?
EIL: I think it was not the cancellation -- let me tell you what happened is there was one of the assignments which was awarded to us on a go ahead basis, go ahead basis is a kind of concept they will give you a letter to proceed with the work and then pending settlement of the order. So by the time the year -end closes, it was not a -- formal award was not received. So that's how we have to -- in books, we had to return it. But now it is about to be settled and then again, it will come back to the order inf low. So that's how you must have seen...
Nidhi Shah: Just sir, my understanding there is what is the order inflow for this quarter for Q4, sorry? And then in which quarter and how much adjustment would I have to make for this order that has...
EIL: We'll get to know, ma'am. We'll get to know about this when this would be settled. The order inflow as of now, I told you, around INR1,800 crores -- sorry, INR1,300 crores we have already received out of which LSTK is around -- LSTK segment is around INR800 crores, out of INR1,300 crores so quarter is still going on. So we will have to wait for...
Nidhi Shah: No, I meant, for Q4 turnkey...
EIL: Let me check. Q4 order inflow was something around -- sorry it was turnover. Checking it, it's not available in hand, we'll share it with you later, okay? You can get it separately...

Nidhi Shah: Okay. Just lastly, is the order that was delayed, what is the value of that one?
EIL: It was around INR300 or something crores. I don't have the exact value with me, around INR300 crores. The differential you would see is the same one, which will come back later on.
Moderator: We have our next question from the line of Majid Ahmed from Pinpoint Asset Management.
Majid Ahmed: Sir, I just want to understand that like going forward, what would be the mix for FY '26 and '27, sir for consulting and turnkey?
EIL: Order inflow could remain in the same range. Consultancy would be a little bit more than the LSTK so always remain in the range of 50%, 55%, 55%, 60% is consultancy and balance is LSTK. So prepare the -- we will keep the margin healthy in that range itself . Generally remains in the same range or so...
Majid Ahmed: So 55% in con sultancy and 45% in the turnkey?
EIL: But that does not mean that we restrict it. We have to get every business. It depends at the end what kind of number gets settled, depends. But there is no hard and fast rule for us. This is the trend generally. This is generally a trend we are talking abo ut.
Majid Ahmed: Okay, general trend. Okay, sir.
EIL: But this is the final outcome -- trend of final outcome.
Majid Ahmed: Okay. Sir, secondly, what type of capex are you looking for this coming year FY '25 to '26.
EIL: Capex is the routine in nature around the building for the renovations asset. So there is no major capex is in pipeline.
Majid Ahmed: Okay, sir. And going forward, how much is the orders are you bidding for like any order pipeline that you are bidding for -- going on...
EIL: Many bids are keep on going. So those are confidential in nature, cannot be disclosed. The end result would come towards the end of the financial year. We'll keep on updating you with respect to the business. I've already updated you that we have secured t his much business. We keep on updating in the every meeting.
Moderator: We have our next question from the line of Harsha from REDA Holdings.

Harsha: Congratulations on fantastic numbers. Sir, my question is, now if I look at the order inflows, the last 5 years, we have clearly seen a very strong uptick in terms of order inflow almost from INR1,500 crores in FY '21 to INR8,000 crores this year. But at the same time, when I look at the revenue, last 5 years, we have almost been stagnant at around INR3,000 crores, INR3,200 crores.

Now in some of the previous calls, we have reiterated that there is aspiration to grow to INR5,000 crores top line or maybe even INR7,000 crores over the next, say, maybe 4, 5, 6 years. So just

want to understand in terms of execution, what is going to change in the next 5 years that we are being optimistic in terms of, say, double -digit kind of a growth to grow from INR3,000 crores to maybe INR7,000 crores. So what is going to change in terms of execution?

EIL: Look, last -- for the last 4 years, our order book was in the range of INR7,000 crores to INR8,000 crores. And whenever a project is awarded to EIL, its turnover goes for 3 to 4 years. Suppose I get the project of INR100, then it comes ended turnover for the 3, 4 years. So therefore, with the INR7,000 crores to INR8,000 crores order book, our turnover was flat somewhere in the range of INR3,000 crores to INR3,500 crores.

So now it is the first time our order book has crossed the barrier of INR10,000 crores. Now it is INR11,700 crores, and we are sure that we will continue with this kind of order book. And definitely with this order book with the project execution, our turnovers will continue to rise. And we are expecting at least 15% -- 15% to 20% jump in the turnover of this year. But again, this depend upon the -- how the project execution goes.

Harsha: Okay. Okay. Understood. And sir, out of the INR11,700 crores order book

we have. Out of this,
how much would be our international order book? And also how much out of this INR11,000 - odd crores would be from nonoil and gas segment because they're also looking to enter a lot of new sunrise centers. So as of now, what is the orders from non -oil and gas sector? And how big you expect these to become over the next 3 to 5 years?

EIL: See order book from foreign consultancy is INR2,000. Around INR2,000 crores.

Harsha: Okay. Okay.

EIL: And non around 30%, 35% is from the non -oil and gas segment.

Harsha: Okay. And sir, in non -oil and gas, which would be the major contributor to the order book?

EIL: The major contributor then you have chemicals, you have non -ferrous metallurgy, you have power, you have clean energy, all those sources, we can get the business.

Harsha: And going ahead...

EIL: The hydrocarbon and the non -hydrocarbon.

Harsha: Okay. And the non -oil and gas, which is around 30% to 35%, will it continue to remain at same level going ahead? Or will that portion of business increase?

EIL: So the portion may increase because we are quite a bit focusing on the infrastructures. It has been increasing continuously. So we see that, that is also going to increase.

Harsha: Okay. And the margins are similar in non -oil and gas?

EIL: Yes. About the margins are on the basis of the -- on the type of bidding we have. It is on consultancy and LSTK. For the consultancy and LSTK would remain in the same range, which has been told to us like 24% and 26% depending on which mode we get the assi gnment.

Moderator: We have our next question from the line of Kaushal Sharma from Equinox Capital Ventures.

Kaushal Sharma: So my question is on your margin side, if we see your past performance. So we are in the range of 27% to 28% in the consultancy and Turnkey, we are 3% to 6%. And suddenly, we got a jump of around 30% in Consultancy and 8% in Turnkey. So what was the key gr owth drivers of such a good performance in the margin? And will this margin be sustainable in the future like 2 to 3 years?

And the second question is on working capital, like our debtor days have like improved around INR400 crores negative in our cash flow. So what is the normalized debtor days in our business? And how long will it take to realize these debtor days?

And my third question is on our industry side, sir, what kind of opportunity are we looking in our industry like the overall market? And what CAGRs are we expecting to grow in next 2 to 3 years in our industry?

EIL: First of all, let us talk about the margin. Our -- as we said, our normal margin is 25% in the Consultancy business segment profit and LSTK it is 5% to 7%. But this time, we could achieve

the higher margin because some of the long pending change orders we could finalize with our clients. And with the impact of these change orders, our margins are on higher side. But definitely, for the future, we are targeting in the normal range of 25% and 5% to 7% in LSTK business.
As regard your payment cycle, our payment terms with the clients are 30 days only, but we are able to receive within 1 to 2 months' time from our client. It is not more than 45 days generally.
Kaushal Sharma: Not more than 45 days, right sir?
EIL: Yes.
Kaushal Sharma: Not more than 45 days. It is the normal trade cycle, right sir? Yes. So I'm just saying that 45 days is the normal trade receivables cycle, right, in our business?
EIL: Generally, our payment terms are 30 days, and most of the payments we are receiving in 30 days. On an average, it comes to around 40 days.
Kaushal Sharma: 40 days. And sir, if you talk about it on the industry side , what is the market opportunity...
EIL: You can take 45 days safely. No issue.
Kaushal Sharma: Pardon, sir.
EIL: You can take 45 days safely.
Kaushal Sharma: No, I'm -- yes, so I got it, sir. My question is on ou

r industry side like Consultancy business and the Turnkey business, how much market size currently and how -- what CAGR are we expecting going forward 2 to 3 years down the line?

EIL: This was specific -- it's a very big market. Whichever segment you go, it's a big market, whether we are going in oil and gas, you're going infrastructure, you're going into the ferrous , non-ferrous metallurgy segment. So all these are the markets. So there is no specific size of the market as such. You can see the -- you can track the investments which are com ing in the hydrocarbon segment.
You can see the investments coming up in the infrastructure segment. You can see the investments in the steel segment, non -ferrous segment. All these segments, we have a lot of potential and government of India is putting a lot of focus and pushing growth in these segments so naturally, whenever there is a growth and new projects will come, we will also bid and we get the business. So that's the market for us.
Kaushal Sharma: And sir, what is our current order book pipeline in our book and our success ratio in that?
EIL: Success ratio, you can say around 25% to 30%, 35% competitive scenario.
Kaushal Sharma: And what is the current order pipeline?
EIL: We can't tell you the order pipeline. We already told you that the order which we have already received is around INR1,300 crores as of now, first 2 months. We reached the target of the existing business inflow, which we have received in this year and will be further growing in that segment.
Moderator: We have our next question from the line of Amit Anwani from PL Capital.
Amit Anwani: First of all, congratulations to the whole team for a very good set of numbers. And my first question is, sir, on the overseas consultancy, we have done a phenomenal job this year, roughly about INR1,000 -plus crores order intake, order book is sitting at about INR2,800 crores. I think all-time high if I see past 8, 9, 10 years. And you have been talking about setting up office in Kingdom of Saudi Arabia.
I wanted to understand, are we looking higher inflow numbers from overseas market in FY '26, '27, and by setting up office there, are we going to deal further, what is the addressable market, let's say, in Kingdom of Saudi Arabia and since a lot of enginee ring companies are talking big about capex happening in Kingdom. So I wanted to understand our outlook in overseas where we have been positive for FY '25? And are we targeting better number for FY '26? And what is the addressable market competition, win r ate? Any idea if you would like to give?
EIL: With respect to the international market targeting that our focus to international market has been increasing, this year it is around 13%. We are targeting towards it. We are trying to increase it to more on this segment, like the 13% we will try to cross that 13% segment, 13% of the total order inflow like to increase that.
And accordingly, we are focusing on the -- specifically, on the Middle East. Middle East, we are strengthening our Middle East office in Abu Dhabi, which is catering to the other terrains like Kuwait, Bahrain, Oman, and other nearby countries. At the same time, we are setting up the

Saudi office. The current major contribution has been from the Abu Dhabi office, which has done a wonderful job and increase their business from there.
So we are -- we have improved our categorization in those countries because these countries are very systematic in nature. You have to improve, you have to stay there for a long time, you have to perform. That's how you are upgraded in the categories and t hen you allowed to bi d for the large value projects.
So as of now, with the consistent focus on this, we have been able to go to the larger category project and we are continuous

ly bidding for this. So we are hopeful that in -- when we are bidding for the larger category projects, we are successful, then thi s order value will further grow.
With respect to the Saudi, Saudi is one of the biggest market in the Middle East. The maximum capex investment comes in Saudi. So there's huge potential for them. And there's a lot of demand for the good engineering company. However, this will take -- this is still in the nascent stage. We are setting up the office.
It takes some time to settle down, register yourselves, establish head office and panel with yourselves with all the companies and manage all the resources, then you will start getting the business. So there is a lead time in getting the business, but it will be a very good -- when it is established, we are start running, we will be targeting very good business from them. So that is our anticipation. So that's the answer from my side.
Amit Anwani: Sir, what is the win rate? And typically, if you're bidding the project in Saudi?
EIL: We can't -- Saudi, we are not working as of now. We are just entering...
Amit Anwani: Okay. Okay. The other Middle East geographies, what is the win rate?
EIL: Despite a good rate, it's very difficult to tell what is our win rate because the number of bids are there. You are there with the -- we are there as a panel consultant. We have a number of frame agreements going on into which we have competition with 3 or 4 major consultants. So win rate is good. Very difficult to tell the numbers as such.
Amit Anwani: Right. With respect to order inflow prospects, we have been highlighting that we got very good orders from past 2 financial years and focus is to have more than INR5,000 crores annual order intake run rate. So are we sticking to that for FY '26, '27?
EIL: Yes, very much.
Amit Anwani: Okay. Any, sir, orders which you would like to highlight where we are L1 or maybe past 12, 18 months order and order value if possible for you to highlight in oil and gas?
EIL: I mean, right now, many of the projects are in the bidding stage. So it's very difficult to tell you at this point of time because this is the competition time. So let's hope for the best, we will keep you updated in the subsequent meetings as far as the r esult comes. As of now, for your information, we have INR1,300 crores worth of business we have booked as of now, as of May.
So we're keeping the pace up. We'll keep you updated on this in the subsequent meeting.

Amit Anwani: Sure. Sir, one clarification on the change order. You said roughly about, I think, INR112 crores -- INR128 crores revenue and INR112 crores for FY '25. What is the change order you talked about, there is one more change order for FY '26 also. What is the value of that change order?
EIL: We have talked about the change order, which we have received in the financial year, '24, '25. And it is a continuous process because EIL is involved in the execution of a mega project for the scope of -- which is not part of scope of work, we get change o rder from our clients time to time. So in this financial year, we could get the change order of the INR112 crores, which have been accounted in the financial account. Change order plans increase in the contract value -- original awarded value.
Amit Anwani: So that largely flows through to the profits, right?
EIL: Largely flows through profit because expenditure has been already incurred by us. That's why it is mostly -- it represents the profit portion only in case work has been already executed.
Amit Anwani: Right. So lastly, on other income, which has been keeping roughly about INR160 crores from past 3 years. What is the dividend income from NRL? And outlook, why other income is keeping same? Will it be same for next financial year as well, for this financial year, I would say FY '26?
EIL: In this financial year, we go

t the dividend of INR12 crores to INR13 crores from the NRL, and we are expecting the same level of other income in the coming next year.
Moderator: We have our next question from the line of Patanjali Jha an Individual Investor.
Patanjali Jha: And in my view, very heartening results, looks like going back into the former self where the margins have improved dramatically. And hopefully, the gaining momentum along with your unprecedented order book. My questions are primarily 2. One, Aramco seems to have now shown it's very keen interest to come to India with a figure -- a realistic figure of INR25,000

crores investment with BPCL in Andhra and with ONGC in Gujarat, of which the Andhra one is gaining momentum and is at a higher stage of fruition.
So for us, any refinery within the country, especially with the public sector undertaking, we only think of Engineers India, not because it's a public sector undertaking, but very competent and with a certain degree of monopoly in the segment. So his take on that. That is the first question.
EIL: With respect to these 2 refineries, we understand that the Aramco is...
Patanjali Jha: Yes, yes, yes. The likelihood of...
EIL: This is likely -- this is a capex situation that both sides have to agree. We have no comments on that. We will only anticipate that this project should come fast and we'll have another 2 opportunities to bid for it, because nowadays when you are saying there is some monopoly, there is som e monopoly as of now because all these jobs we have won is under strict competition.
There is no advantage of being public -- we get the jobs now. So we are ready that these are the 2 big complexes and it would be a s izable job when they are realized, we will be very much keen in bidding for business times to come. Let's hope for the best it comes.

EIL: And I would like to add to this, we are getting job on nomination basis because, first, we are technical competitive -- technically competitive. Second, we are cost competitive also.
Patanjali Jha: That, in fact, you are competent and that is how you get it. There is nothing to do with the degree of monopoly in terms of -- agree with that. One more related question in the area of your core competence in the African continent.
Our country now has enormous goodwill, be it Guyana, Suriname, be it so much of that without naming the current this thing, the arrangement that they have, some of these companies, they found atrocious in terms of -- they found them with the wrong numbers, there have been inflated numbers in order to get their share of royalty. And to them, especially in the case of Guyana, the company had the audacity to say that it was a totally mistake, that ran into several million dollars.
EIL: What is it all about the company? We just want to understand that. You're not clear about your question...
Patanjali Jha: In Guyana, they have some agreement with the multinational company. I'll not name it. And they found that the profit -sharing royalty all that. That was a fantastic sign. And there, that company was inflating the numbers of expenditure and stuff like that. That's what I'm trying to say. And it ran into hundreds of millions of dollars -- totally mistake. Anyway, so this is to talk of the character and the integrity of the other company.
I guess that backdrop, when you are the entity of great integrity and our country having such a great relations with them. You have already some track and some of the projects going there in Nigeria and Guyana if I remember correctly, what is our -- if tha t is the future this thing which has the maximum fined, so that is my question.
EIL: They have their own ways of working, but we are very much clear what -- where we have to work and our dealings are very crystal clear.
Patanjali Jha: I'm saying that against that backdrop of -- people of doubtful

integrity and how a company being
so correct and confident so...
EIL: We have been able to make success in that because, again, Guyana proposed project fee, which we have got is under competition from the other company, international competition. In Nigeria again, it was again a competition even though the investor was priva te, but we had gone for the competition, and that's how we got the assignment and we have been engaged and we have completed -- and completed our commitment for the work.
Patanjali Jha: So going forward, what is your take that -- with such a massive fine and with our competence and what is the outlook and what is the outlook of the company...
EIL: We have already proven our mettle there. We have already proven our mettle there. We have been -- we are working in Nigeria for the other clients, also one of the LNG projects which we are doing. This is only on the basis of experience one another private sector, public petchem was coming.

So we are also involved in that initial stages of work. Similarly, in China also, we'll be targeting the future that they'll be having the future phase of that project and the other project -- the oil has come, they will further be utilized for processing of it and the downstream facility would come.
So being there, so we'll target those projects with our competence and the experience. So that's

the present outlook.
Patanjali Jha: Great to hear that. And we have great hopes that you would have as a company fair share of your work coming from...
EIL: Let's hope for the best.
Patanjali Jha: Also -- yes, a small question also of the renewals, which your C&MD talks about with great passion and it's about the tidal energy and the platform is being constructed over the nuclear or the 2G, especially the 2G, what is the progress in Numaligarh refin ery?
EIL: On the Numaligarh refinery, commissioning activity has started. So as you are aware this is the first bamboo based refinery in the country, which has been taken from black scale to a commercial scale. So that is going on well. For the -- on the renewable side and on the offshore wind sites that there is a conceptualization has already been taken place. And we're into process of making a business case for the clients to take it forward.
Patanjali Jha: Yes. And what is the addressable size of the business, which is on the land side, it's much smaller turbines. And there are companies with huge market share. So I'm told that the oceanic thing is 5x bigger than this. So if we are there and if it is the beg inning of -- size of the market.
EIL: Yes. Exactly because the market size is huge, and it's a nascent market that we are trying to enter. And once -- as we are aware of the offshore platforms, both process platforms and government platforms quite well. So once we enter the market, we are ente ring a good way and we hope to have a good pie of business in this market as well.
Patanjali Jha: So all the very best. I mean we have great hopes for you to perform even better and excellent set of numbers from the [inaudible 0:48:57] be intact.
Moderator: We have our next question from the line of Sumeet Rohra from Smartsun Capital.
Sumeet Rohra: Sir, I'll just keep it very brief. So with the order book visibility, which you have in hand today and with the robust order flow, which you're expecting like last financial year. So now can we basically say that we can basically expect this 15% to 20% rev enue growth which you expect for current year to be a recurring phenomenon? And can we now basically expect that Engineers India is now basically well on the growth path? That's my first part, sir.
And secondly, sir, the thing is that if revenue is going to grow 15% to 20%, our PAT margin has been about 18% the last financial year. So do you think that operating leverage can also kick in because of the fact

that revenue growth does kick in. So what's the PAT margin which you basically exp ect for current financial year?

Lastly, for my last question is basically this energy transition, which is basically getting momentum around the world and with the green energy not been as lucrative as earlier planned and peak oil being far ahead compared to what it was anticipated in the very short term.
What do you think could be the order momentum, particularly from the Middle East because of the fact that you're opening offices in Dubai and Saudi as well, which you've highlighted earlier?
So do you actually think that with green energy being stalled, et cetera, et cetera. Do you think that order momentum on this side of the conventional business can actually accelerate?
EIL: Let me tell me first about the order book position. As we have told earlier, our order book was ranging in the INR8,000 crores. Now it has increased to INR11,700 crores. And definitely, with the execution, our turnoff will rise, and we will put all efforts to take it increase -- by increase of 15% to 20%.
Definitely, we are also targeting. But how much PAT will be there, we cannot tell right now because we have already told our margins in the consultancy segment is around 25% business segment. And in the LSTK job, it is 5% to 7%. So definitely, our bottom l ine is also going to improve. But how much that we cannot tell you right now...
Sumeet Rohra: Okay. But sir, I mean I assume that basically, what you have reported in the last financial year should actually be kind of where we can build on from, correct? I mean, is that understanding correct?
EIL: Yes exactly. That we will put all of us to keep that base.
Sumeet Rohra: Okay. Wonderful. And sir, secondly, if you can now basically talk a bit about because a couple of years back, it was so anticipated that peak oil is basically very near. And all of it is not very true, right? So you will see good growth in the conventional business as well. So do you think that this INR8,000 cores, INR8,500 crores order inflow which we got actually can -- actually accelerate quite sharply from here?
EIL: This is going to be there because you see that many of the companies are again going back to the hydrocarbon or the coal or all that business. The recent trends, you must have seen the companies like many companies, you must have seen they're going away fr om the hydrocarbon, rig hydrogen and all those because the profitability in that segment and the cost competitiveness of those things. And hydrocarbon is being boosted internationally also.

In any case, that doesn't matter, India is going to have a tremendous demand for the hydrocarbon and with the kind of population we have. And definitely, there is clean energy has also been a good contributor. But the way we -- our demand is growing with respect to all these hydrocarbon actually you'll have to have those facilities till the time this is going to go, we will be also having projec ts of like the petrochemical segment and in the downstream segment. It will be less of a gasoline but more of a petchem segment.
So we don't see any major difference in the hydrocarbon business from all these segments. So that is going to be there for at least next decade or so.

Moderator: We have a follow -up question from the line of Manish Ostwal from Nirmal Bang Securities.
Manish Ostwal: Sir, I have one question on the JV profit, which we report on a consolidated level. So can you tell us the -- in terms of activity in that JV property and how we should think profitability trending for at a consolidated financial level?
EIL: Actually, that JV is Ramagundam Fertilizers and Chemicals Limited, that is engaged in the manufacturing of urea -- ammonia and urea. And in this financial year, our share for the pr

ofit
is INR107 crores against the previous year share of INR85 crores. Our share in the RFCL is 26%. So our 26% is INR107 crores. That is included in the bottom on consolidated basis.
Moderator: We have another follow -up question from the line of Amit Anwani from PL Capital.
Amit Anwani: Again, a question on consultancy overseas. Is it fair to assume that the consultancy overseas will have better margin than consultancy domestic?
EIL: Consultancy overseas, if you see an average of 24% to 25% will be maintained. But you can -- and one may say that consultancy in overseas will have a little bit more margin than the Indian segment. But it again depends on which territory we are working wit h the competition we have in that segment, it all depends.
Amit Anwani: Right. And second question is that 35% is non -oil and gas in the order book currently, if I heard it right. So cumulatively, if we see the order prospects for FY '26, '27, can we assume that this 35% non -oil and gas can become 40%, 50%, will it increase? T here's a much higher pipeline on non-oil and gas as well?
EIL: It would remain in the same range, 35%, 40%.
Moderator: We have our next question from line of Yash Hegde from DAM Capital.
Yash Hegde: And congratulations on a great set of results. So my only question was could you give a bit of an outlook on both NRL and RFCL and talk in terms of what kind of investments are we looking at in both of them for FY '26 and the dividend that we expect to rec eive from NRL and also when do we expect RFCL to start paying dividends?
EIL: As far as dividend is concerned, last year -- in the current year, we have got the dividend of INR12 crores from the NRL and RFCL is still to declare -- still to start declaring dividend, and we are expecting that in the current year, RFCL may declare some dividend for the investor.
Yash Hegde: As far as the investment...
EIL: NRL we have already completed the investment.
EIL: In the NRL, we have already completed all the investment cycle, and there is no further planned investment in the RFCL as well as NRL, we have already subscribed to the right issue of NRL that has been completed.
Moderator: The nex t question is from the line of Patanjali Jha an individual investor.

Patanjali Jha: Yes, this 2G bamboo -based clean energy in the Northeast, you would be perhaps the first in the world to be executing this?
EIL: That's fine. You are right.
Patanjali Jha: And I know. I follow that part of renewable energy my friend, I understand that very well. So that's a huge because you will be creating so much of employment for the farmers income, I really, really congratulate you on that. And if successful do you see participating in more such projects of 2G along wit h other partners.
EIL: We hope so sir because this is our first plant, and this is our pilot plant also, you can say which will be given a platform to quote further and to owners to put more plants like this.
Patanjali Jha: Because it is not only the income and profit for the company. It is one of the biggest service to humanity and to mother earth. I wish you to be very successful in this and set up many more such projects across the country along with partners, of course.
Moderator: We have our next question from the line of Janardhan Rao from Share Trend Research.

Janardhan Rao : Congratulations for sterling performance of company. But in the markets, there is lots to be improved because c ompanies like NBCC Limited and [inaudible 0:60:46] enjoying the PE ratio of above 55 and 56. Your company's stock is getting only around 22 PE ratio. What steps your company is taking t o improve the market perception?
EIL: Sir, we are giving good results to improve the concept of our investors, and through you we are requesting our customer to give PE of 55 to EIL also and that is all our request .
Janar

dhan Rao : No, no. Frequent media interactions are required sir to improve the perce ptions about the stock because public companies in the banking side, Canara bank doing wonders. In the PSU stable, your company is doing wonders on the results front, but market is not recognizing the performances. That is what I want to emphasize.
EIL: Definitely we are making awareness to our investors, mutual funds and other investors also that's why our company had done press meet also, so that our investor can be aware about our progress path because this is the first time where our order book is all time high. So definitely, this order book will help us to get more turnover in the future, more turnover and more bottom line profit. And we will continue to get the orders in the coming years also. So definitely EIL...
Moderator: Yes, sir. He got disconnected. That was the last question for today. And I now hand the conference over to the management for closing comments.
EIL: Thank you very much.
EIL: Thank you everyone for the participation.
Moderator: Thank you. On behalf of DAM Capital Advisors, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

INDIA LIMITED
MODERATOR : MS. BHOOMIKA NAIR – DAM C APITAL

Moderator : Ladies and gentlemen , good day, and welcome to the Engineers India Limited Q 1 FY '2 6 Earnings Conference Call, hosted by DAM Capital Advisors Limited .
As a reminder, all participant s' lines will remain in the listen -only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal the operator by pressing '*', then '0' on your touchtone telephone. Please note that this conference is being recorded.
I will now hand the conference over to Ms. Bhoomika Nair from DAM Capital Advisors Limited for opening remarks. Thank you, and over to you.
Bhoomika Nair: Thanks. Good morning, everyone , and a warm welcome to the Q1 FY '2 6 Earnings Call of Engineers India Limited.
From the Management today, we have Mr. Sanjay Jindal – Director (Finance); Mr. Suvendu Padhi – Company Secretary and Investor Relations , Mr. R.P. Batra – Executive Director (Finance & Accounts) and Investor Relations; Mr. Amanpreet Singh Chopra – Senior General Manager (CMD Office and IR), Mr. Vivek Midha – Senior General Manager (Marketing BD and IR), and Ms. Neha Narula – Senior Manager, Company Secretary and IR.
At this point, I will hand over the floor to Mr. Jindal for his initial remarks, post which we will open up the floor for Q&A. Thank you, and over to you, sir.
Management : Thank you, Ms. Bhoomika . Good morning, everybody. We have declared our Financial Results for the 1st Quarter ended 30 th June 2025, on 13 August 2025.
Company order book position has reached its all -time high and stands at Rs. 12,1 45 crores as on 30th June 2025 as compared to Rs. 11,717 crores as on 31st March 2025. Order inflow in EIL during the 1st Quarter of FINANCIAL YEAR '25-'26 stands at Rs. 1 ,430 crores , which comprises Rs. 609 crores in Consultancy segment and Rs. 821 crores in Turnkey segment.
In the 1st Quarter of Financial Year '25-'26, the company achieved a turnover of Rs. 857 crores in comparison to Rs. 611 crores in the 1st Quarter of Financial Year '24-'25, showing an increase of around 40% with turnover from Consultancy and Engineering segment amounting to Rs. 408 crores and 449 crores in Turnkey segment.
During the 1st Quarter ended 30 th June 2025, the company recorded profit before tax of Rs. 94 crores and profit after tax of Rs. 70 crores in comparison to Rs. 74 crores and Rs. 55 crores respectively during the 1st Quarter of Financial Year '24-'25, showing an increase of 27%, approximately, in the PBT and P AT.
Operating margin during the 1st Quarter of Financial Year '25-'26 stood at around 7%, that is, Rs. 59 crores , as compared to 6%, that is, Rs. 36 crore s during the quarter ended June 2024.

EBITDA of the company as on 30th June 2025 stood at Rs. 105 crores . EBITDA margin is 12%
in comparison to Rs. 85 crores as on 30th June 2024.
The company is maintaining a healthy earning per share of Rs. 1.25 during the quarter ended
June 2025 as compared to earnings per share of Rs. 0.97 during the June quarter 2024.
On a consolidated basis, the company earned a profit of Rs. 65 crores for the quarter ended 30 th
June 2025.
Now it is to Bhoomika Ji.
Moderator: Thank you. Ladies and gentlemen, we will now begin the question -and-answer session. The first
question comes from the line of Mohit Kumar from ICICI Securities. Please go ahead.
Mohit Kumar: Sir, first question is, in this particular quarter, we have reported losses on JV, joint venture. Can
you please help us explain the losses and the likelihood of returning to profit from next quarter?
Management : Yes, actually in this 1st Quarter , RFCL project was under shutdown for the normal shutdown of
the project. And it was shut down almost 45 days out of

90 days. And now this project is doing
well, and it is already working at more than 90% capacity. And we are sure that in this quarter,
we will have profit.
Mohit Kumar: My second question is, sir, on this particular quarter, we reported around 17% EBIT for the
consultancy. Is it fair to assume that we will report , we should bake in our model 22% EBIT
margin for F-to-F going forward? Is that a fair observation?
Management : I think this is a fair assumption on a year -to-year basis. We are having around 22% margin in
the EPCM business, consultancy job.
Mohit Kumar: And given this very strong o rder book on the consultancy, is it fair to expect a 20% growth in
the top line for consultancy for the next two, three years? Or do you think the growth will be
slightly lower?
Management : He is asking about the growth.
Mohit Kumar: Yes, sir, given very strong order book on the consultancy, around 4x, is it fair to assume a 20%
growth in the top line for the next few years?
Management : For the consultancy business, it will be in the range of 12 % to 15%.
Mohit Kumar: Not higher than that, sir, given this very strong order book?
Management : Some portion will come from the turnkey business also. So , overall basis , it is 20%. And out of
that 20%, around 12 % to 15% from the consultancy business because consultancy business is
more profitable to us.

Moderator: The next question comes from the line of Amit Anwani from PL Capital. Please go ahead.
Amit Anwani: Sir, first question again to the previous answer. You are saying 20% top -line growth , out of
which 12% to 15% consultancy. Does it mean that we are expecting more than 50% contribution
from turnkey for FY ’26?
Management: So, yes, normally , it remains in the same range. Consultancy would be around 60%, 55%, 60%,
and then 40%, 45%. It was around 52% in this quarter. LSTK was around 52% in this quarter.
And consultancy was around 48%. So, normally, it remains somewhere around the same figure.
I mean, it could be 55% consultancy and 40 %-45% turnkey. So normally, it remains in the same.
Management : Yes, b asically, overall growth, we are expecting around 15%. It will be coming from both the
segments, turnkey as well as the consultancy segments. This is our right now estimate. Going
forward, we can revise the estimate based on the execution.
Amit Anwani: And second question again on consultancy. We have been doing very good from past two
quarters and even the overseas consultancy is seeing good conversions. So, wanted to understand
are we expecting same run rate ? And we were talking about some setups in Middle East. So ,
what is the guidance? Will be continuing this run rate of order inflow from consultancy, which
we have done in the past two quarters for the remaining quarters?
Management : Yes, t hat's true , that i nternational has been giving good business to us, primarily from the Middle
East and Abu Dhabi. As of today, we have already reached Rs. 950 crores in the overseas
segment. As of today, we have secured business with Rs. 960 crores. So , we see more
opportunities in the international segment only. So , it is going to grow.
Amit Anwani: Sir, is it fair to assume since we saw consultancy margins kind of keeping low this quarter and
last year, we saw it is scaling up by the end of 4Q. So , are we expecting kind of 25% what we
did last year on margins for consultancy? That is my last question.
Management: Yes, in the last quarter, there were certain items, basically settlement of change orders and the
write back of provision. So , going forward, the margins, basically segment margins, shall be in
the range of around between 20 % to 25%. And in case a particular project is being completed,
in case there is some variation order, the quarter -to-quarter, there may be a variation. But on
overall basis, basically, we are expec

ting the consultancy segment margin in the range of
between 20 % to 25%.
Management : Basically, in the last quarter, there was impact of Rs. 195 crores due to change order. That is why our quarter performance was extraordinary.
Amit Anwani: So, is there any change order expected?

Management : Definitely, we are having change orders with our clients and that are under -processing with the clients. And it depends on the time when it m aterializes . And definitely, it materializes in this year also. It is a continuous process.
Moderator: We take the next question from the line of Vivek Gautam from GS Investment. Please go ahead.
Vivek Gautam: Sorry, I was late in joining the call, sir. Just wanted to know what was the reason for the downturn in the profit? Was it due to the losses in our JV, Ramagundam and other sort of things? What value are we getting by going in for such JVs? And is it government pressure?
Management : No, no. Actually, our RFCL project is going well. And as you have seen in the last year, there was good profit from the RFCL project. But in this quarter, the RFCL project was under planned shutdown. And out of 90 days, it was under shutdown for 45 days. That is why there is some figure of losses. But it will get covered in this quarter because the plant is already running on good capacity at good capacity. So , we are definitely sure in this year we will have good profit from the RFCL project.
Vivek Gautam: What about other JVs, sir?
Management : I am talking about the RFCL JV.
Vivek Gautam: Some other JVs also we are having.
Management : No, we don't have other JVs.
Vivek Gautam: Second thing is, Madam CMD, is she retiring this year? And by when? Because her tenure was...
Management : She is retiring on Feb ’25.
Vivek Gautam: February 25.
Management : in Feb. It is scheduled. It is superannuati ve.
Vivek Gautam: Superann uation. Yes, that is again another bane of PSU that you have to compulsively retire at the age of 60, unlike private sector. So , any chance of an extension or there has to be no pre cedent of that sort in the past for EIL CMD ?
Management : We can't say anything on this aspect.
Vivek Gautam: Basically, how is the future looking like for us? You know, for the first time, in the March quarter, there was good uptake in the top line and bottom line also. So, we had moved away from oil and gas sector to the other sector also. Was that the reason? S o, is that sustainable ? And is it margin accretive?

Management : Yes, the future is still bright and we are working towards it. If you see that we have already reached to the order book of Rs. 12,000 crores as of now in this quarter itself . So, we have added more orders to the tune of right now we have around Rs. 2,700 crores already as of today . So, we are hopeful that we get more orders , and we beat the last year's record and let's hope for the best.
Vivek Gautam: And in Guyana has been a major oil discovery and there is an Indian Diaspora , Indian politician, Mr. Ashraf Ali is the President . And have we been able to get any breakthrough in Guyana? And also any update on the Andaman prospects which can be good for us or the country also on the long term?
Management: With respect to Guyana, we are already in the power plant project as a project management consultant. Primarily, it is an exploration thing. When the oil will come out and they want to process it, then our role will initially come . So, let us hope for the best because what process they follow because ExxonMobil is the major contributor there and who is into the exploration . So, let us hope for the best. And with respect to the Andaman , this is still in the initial nascent stage. Let us hope when the actual reserves are there and explored and then processed . So, a

future is bright for India if we get this reserve from Anda man and some work from Guyana. Let us hope for the best.
Vivek Gautam: Indian sedimentary, this is as far as the oil discovery goes, not much of a success has been so far, sir. Anything changing which you are finding and as you being from the same sector, sir?
Management: I would not be able to comment because that is more of an exploration part . So, I think ONGC or OIL would be the best to respond on that.
Moderator: We take the next question from the line of Bhoomika Nair from DAM Capital Advisors Limited. Please go ahead.
Bhoomika Nair: Sir, you know , how you talked about the international pipeline. Can you please discuss and give some outlook in the domestic market? What is the outlook in terms of the ordering activity that

you are seeing? You know, if you can just highlight that for larger projects on both Pet Chem and refinery ?

Management : Ma'am, you are aware that this Andhra project is going to come . So, we are working on that. We have been given a work for selecting the licensor and finalization the configuration . So, that is one of the prospective projects which is going to come towards the end of this financial. That is one of the opportunities. As well as there are certain more projects under consideration which we are discussing.

A lot of opportunities are there in the infrastructure segment also, like we have got various assignments from the data center of institutional buildings, as well as various religious places modifications . So, those opportunities have also come to us in the domestic segment. Some work

has also come in the metallurgical segment, and we are anticipating some of the expansion projects which could come with respect to the state smelters .

Bhoomika Nair: On the IOC L side, any pet chem projects, anything which is anticipated?

Management: On the IOC L side, pet chem is already on. Paradeep Petrochemical is on. Its Phase -1 is already on. When the Phase -1 completes, they will go for the Phase -2. So, that is the major opportunity which will be coming to us because that is already awarded to us. But formally, Phase -2 would be awarded when the Phase -1 is complete . So, that is there. That is the major pet chem. project from the IOCL side as of now.

Bhoomika Nair: But when is the Phase -1 expected to be completed, sir?

Management: It will take a couple of more months. It is almost it was a 10 -month schedule . So, four, five, three, four months have expired . So, let us see.

Bhoomika Nair: And anything on the HPCL side? You spoke about BPCL, Andhra. Anything else on any other projects of BP or HP?

Management: With respect to HPCL , their LOBs was there. And some modification, the LOB project is there. And some of the projects are there on the anvil from their side. HPCL , I do not have much details immediately in my hand right now. So, I will get back to you on that.

Bhoomika Nair: Secondly, on this, in the presentation, you have spoken about the various orders that you got. Just wanted to clarify, what is the difference between depository and LSTK OBE that we typically used to give earlier? If you can just explain, sir. How is the order profile different in the working or in terms of cost pass through , etc.?

Management: No, it is exactly different. This is considered as part of LSTK. LSTK, we are completely responsible for execution of the project, and a ll the risks are taken under our purview because we work as an EPC contractor, and we are responsible for execution of the project and delivering the project. Whereas in the depository mode, it is a mode of execution where we take the cost part, ordering cost in our scope as a principal executor . So, that is the basically difference. Primarily, it is considered as part of consultancy only while LSTK depositary is considered as a

part of consultancy while LSTK is purely an execution work. So, that is considered under the different purview altogether.

Bhoomika Nair: Fair point. Lastly, sir, you mentioned that the international order intake is around Rs. 950 crores till day. And I see in 1Q, we have got Rs. 475 crores. So, where has the balance close to Rs. 475 crores kind of come from? If you can just highlight that ?

Management: It has come from Abu Dhabi. And few of the projects have come from Kuwait. It is Kuwait, Al-Khafji Joint Operations. So, we have got one assignment from there. And rest of them have come from the Abu Dhabi , UAE.

Bhoomika Nair: Fair point. This helps. Thanks so much. I will get back in the queue.

Moderator: The next question comes from the line of Nid hi Shah from ICICI Securities. Please go ahead.

Nidhi Shah: So, sir, you mentioned on the IO CL Paradip that the Phase -2 will be awarded after Phase -1. Is there anything remaining in Phase -1 to be awarded still?

Moderator: Nidhi, if you can please re -ask your question.

Nidhi Shah: So, my question is basically on the IOCL Paradip Phase -1. Is there anything that is pending to be awarded still?

Management: Ma'am, for the Phase -1, the Phase -1 part is already awarded. It is already under the execution. It is part of the Phase -1. We have to prepare a study report as well as a feed document for that so that they can proceed with the subsequent phases. So, that work is already on. The complete work for the Phase -1 is already awarded to us. Now, when this report is submitted, their management will take a decision to go ahead on the project and then Phase -2 will start.

Nidhi Shah: And so, is that fair to assume that Phase -2 will have a larger portion of EPC than the consultancy?

Management: No, it is like some portion is on EPCM and some of the portion is on the EPC basis. But for us, it is completely EPCM. It has already been awarded to us. Okay.
Nidhi Shah: Also, could you please help us with your L1 positions, you know, where it is still not in the order book , we are waiting for LOAs and some details on those tenders ?
Management: There are many of the projects which we keep on bidding and those remain in the process of finalization with the client . So, as soon as they are realized, these are considered as part of the order book, and they are cleared in the subsequent quarterly results . So, it will be declared. Many things remain in the pipeline. Till the time they are finalized, they cannot be declared because their competitive scenario is working there, no?
Nidhi Shah: But are there any L1s that are just pending to be only LOA is remaining in that sense, like the decision has been made, finalized, but only the official LOA is not yet to come out ? Or is it that the...
Management: Yes, t here could be certain smaller orders which are under negotiation and finalization of the contract, but till the time the contract is not signed. It is not necessarily that it is all the competitive tenders. There could be certain negotiated tenders are also there, which are in the process of negotiation and finalization of the concept . So, as soon as they are signed, this will be declared. There are few jobs are there, definitely.
Nidhi Shah: And on the pet chem side in the Middle East, are there some projects that you would like to call out that could possibly be tendered in the next nine months ?

Management: No, t here are a number of projects which are coming in Middle East, specifically in Saudi Arabia or in UAE or in Kuwait . So, we are bidding for those projects. But they have a lead time of five to six months as soon as the tender is placed . So, there is an evaluation time. It all depends how it goes. We have bid few of the ones . So, let us hope for the best.
M

oderator: We take the next question from the line of Saket Kapoor from Kapoor & Company. Please go ahead.
Saket Kapoor: Sir, firstly, this on 14th August we had given an announcement for Bharat Small Modular Reactor. If you could just elaborate, what kind of opportunity are we eyeing in this space ? And if you could give us some more color on this ?
Management: So, it is like we are working with the NPCIL to work on this conceptual design and engineering services for that project. This work is already awarded to us . So, this is going to be the first assignment . So, finally after execution of the same, this will open opportunity for the other kind of assignments because Government of India is planning for a lot of this kind of SMRs all across the India for generation of the electricity and increasing the nuclear reach . So, that is the good opportunity. But this assignment is awarded to us . It is somewhere aro und Rs. 30 crores. Rs. 29 crores, Rs. 30 crores.
Saket Kapoor: So, it is a one which will be a testimony for going ahead. Once we execute the same...
Management: Yes, you can say that is the starting point. It could be the starting point. And then based on the success of this or with this we can start for the other projects also, where ver NPC IL works.
Saket Kapoor: And when are we going to execute the same ? How long will it take?
Management: We are working on this. We have already started the study on this.
Saket Kapoor: Sir, in the presentation, there is a mention of business secured and order booking on Slide #10, 11, and 12 . So, what should investors read into this difference between business secured and order booking? How should one interpret these things?
Management: Business secured is the c urrent business which is secured in this financial year. An order book will include the orders which have already been executed in the past and they are under execution. Normally, a big order will have a cycle of three to four years. A big project will have a cycle of three to four years .
So, every financial year, some of the unexecuted value will be there in that financial year . So, this shows that this much of work is already there in our hand. Like suppose today, you see that Rs. 12,000 crores . So, Rs. 12,000 crores worth of work is under execution with us , while the business secure d tells the new business which we have secured in this financial year.

Saket Kapoor: Sir, in your opening remark and also to answer to some of the participants, you mentioned about 15% revenue growth on what we did for the last financial year should be what we are looking for this year. That should be the top -line growth that we can ex pect.
Management: Yes, we have told that it should be around, for consultan cy, it will be 12 % to 15%. It should be, yes. It is already told.
Saket Kapoor: 15% is what we should look at in overall ?

Management: Yes.
Saket Kapoor: And sir, for the margin profile , you mentioned that this 17% and 6% will hold going ahead , or can we look for further improvement of the same? Last year, sir, because of this changeover order, the margins for our consultancy was at 30% . So, that is historical only that to be taken into account or what should we ? Because the basis will be very high when we look at our consultancy profitability for the last fiscal.
Management : The consultan cy margin shall be in the range of 22%, which we are maintaining for the last long period . So, for the LS TK business, it is 5 % to 6%, 6% to 7%. In the range of 6 to 7%.
Saket Kapoor: So, going ahead, we will be experiencing with improved business turnover improvement in margin. Since we have clocked 17% for the cons ultancy this quarter, so there is a very likelihood of this moving up. And on average , we can look for 22%. That is what our trajectory should be.
Management : Definitely

all the margins will be retained and there will be a positive growth in the turnover top line.
Saket Kapoor: Sir, you mentioned about this Ramagundam unit being under, I think, some maintenance shutdown . So, can you quantify to us, sir, what was its impact in terms of the losses because of it? I think, s o, under the JV part, we have both losses to the tune of around Rs. 7.5 crores . So, in the likelihood of that one -off item, what should have been the normal profitability or for the year, what should we look at this segment, sir, in terms of the joint venture part? I think there is some different component also that goes into. So, if you catch last year's base of Rs. 108 crores , for this year, this exposure of JV and us on Numaligarh refinery , what can we estimate from that for the current year?
Management : JV you could keep the same, around Rs. 100 crores will be accretion to the E IL’s consolidated financial statements . And your Numaligarh refinery, basically, is not an associate. Whatever dividend comes in that, that is being recognized as an income.
Saket Kapoor: So, it will be added to other income.
Management : Yes, sir.

Saket Kapoor: Last year, w hat was the number , sir?
Management : Last year, around Rs. 20 crores in the last year.
Saket Kapoor: And JV aspect, sir, we have this only the Ramagundam part that goes into JV or th ere is going to be some contribution from upstream asset which is under the NELP ?
Management : Basically, majorly , it is of JV only.
Saket Kapoor: Because then last year’s performance for Ramagundam was at its peak, I think . So, Rs. 100 crores was the highest if you take into account.
Management: Rs. 107 crores, yes, to be very precise .
Saket Kapoor: So, this year also we can look forward for this number going ahead. I think it is only the urea base they are doing. And there I think so energy efficiency and lot of aspects also goes into . So, we can look forward for this kind of contribution to continue.
Management : We are sure we are going to get this kind of contribution from the RF CL in this year also.
Saket Kapoor: And s ir, for our MD ’s term to conclude, I missed your comment on Vartika ma'am term. It gets concluded when?
Management : She is superannuating in the month of Feb ’26.
Saket Kapoor: And lastly, sir, in the order booking part, I think so , domestically, major EPC companies are seeing a slackening in the order release, especially from the PSU segment, whether it is ONGC, Oil India and other state PSUs also . So, what is our understanding ? And what portion of our order booking or bid pipeline is inclined or related to the CapEx from either the center or the state P SUs?
Management: With respect to the major LSTK, you know that we bid only for the OBE LSTK projects, which are very specific . So, very straight oil clients like the ONGC is there. We have been associated with them. We have been doing a lot of modifications for their projects because a lot of their assets are old , and we are involved in the modification of that and those have been executed on OBE basis . So, exactly saying that they are awarding the EPCs. In the normal EPC, we don't bid. It's only specific, but they have discusse d and earmarked the OBE projects which we bid in the LSTK segment.
Saket Kapoor: And lastly, sir, I think so for this ...
Moderator: Saket, I would request you to please rejoin the queue.
Saket Kapoor: I will join.

Moderator: We take the next question from the line of Amit Anwani from PL Capital. Please go ahead.

Amit Anwani: Thanks for the opportunity again. One question on the non -oil and gas business, which is now 35% of order book, and we have been talking about that the non -oil and gas portion would be 30%, 35% of order intake this year as well. Wanted

to understand the nature of contracts, margin difference between oil and gas, non -oil and gas for us, whether it is turnkey or consultancy. And what is the conversion rate? Is it government contracts? Are we going to take private contracts also? So , some more color on the non -oil and gas business since it is becoming more prominent part of our order book and also the duration of these orders.

Management: Primarily, the major part of the non -oil and gas business is coming from the infrastructure segment s. This includes mostly the government clients as well as some of the private clients are also there. These are negotiated contracts. And these are very specialized kind of contracts. We are working for the institutions like IIT, I IMs, or for the Government of Jaipur. They have certain technology institutes. We are working for the data centers. We have worked with RBI data center. Similarly, Bhamashah data center . So, all these kind of work are there.

In fact, we also recently worked for Ram Janmabhoomi . We have been awarded project management assignment for them for monitoring their campus modification, means their wall, campus wall modification . So, all these kind of very specific assignments we are discussing and getting it from them .

So, normally these kind of projects have a period of execution of 24 to mostly two years ' time is there in these kind of projects. They are shorter duration contracts.

Amit Anwani: Sir, m argins?

Management: Margins are good. These are mostly , some of them are on the LSTK basis. So, LSTK margins are available, which are there in 5% to 6%. And some of them are in the consultancy. The consultancy remains in the range of 20% to 22%. That margin is maintained.

Amit Anwani: And is it like nominated? Are we competing? Who are the competitors in this space which you are working on?

Management: There are a number of competitors available in the market. Infrastructure companies are there . So, we compete against them. Some of them are negotiated and won. And some of them are on a competitive basis . So, all the companies are there in the market.

Amit Anwani: And this will be like 30 %, 35% or this can increase over the next two years, this portion?

Management: Right now it is around 40 %, 45%. So, it depends. It changes. It is tentative all in nature because by the time we reach last quarter, we can have other orders . So, percentage keeps on changing.

Amit Anwani: But this is more sustainable since you are winning quarter -on-quarter some portion.

Management: It is sustainable. You can see it. That is increasing for last, I think, two financial years.

Moderator: The next question comes from the line of Rohit from Tata AIG. Please go ahead.

Rohit: Thank you for giving the opportunity to ask a question . So, one thing is, if I see historically, lasts 4-5 years , your top line for the next year is 35 % to 38% of the opening order book. So, if I go by that number of your Rs. 11,700 crores order book, which was in the beginning of the year, and if I do the maths, then I am not able to understand why you are seeing a 15% growth projection as compared to your historically last 4 -5 years is showing a growth of 25 % to 28 % odd.

Management : Actually, this is the order book position. And you know, these are the long period projects. And generally, these projects are completed within the period of three to four years. And in the initial Phase -of project, there is less er progress, which contributes less to the top line . So, after expiry of one year, after getting the job, it stimulates. And we get the good top line also. Therefore, we have said, for this year, we are in the range of 15% growth. And definitely, we will try to get 20% growth, no doubt. But on the conservative side, it is 15%. And definitely, we are going to get the benefit of all -time high

order books in the coming years. In this year also and coming years also.

Amit Anwani: But sir, Vartika ma'am coming on an interview and she is saying that this year the projected growth will be between 30% to 35% in the top line. And you are saying a 15% growth . So, I don't know within the management team why such a misconnect is there. The MD is projecting a growth of 30 % to 35 %. And you are seeing a 15% growth on the conservative side . So, I don't understand.

Management : On the conservative side, we are 15 % to 20%. But definitely some of the change orders are under process with our clients. And we are expecting that these change orders will also finalize in the current year. But this is the routine process because change orders are a continuous process. So, in case our change orders are approved by the client, then definitely our growth will be 30% to 35%. But on the conservative side, we are 15% to 20% on the normal growth path.

Amit Anwani: That I understood, sir, what you are trying to say, that your projects are long gestation period .

So, the same had applied in the past also, yes. This year is nothing new as compared to the past. In the past, in the last five years, you take the data, you can check it. Your average execution as a percentage of opening order book has been between 33% to 35% odd. And this year, if I go with your 15% match, it will be historically low , whereas in the last year, you have gained order book of Rs. 8,000 crores .

This year, I guess you guys are on track to get Rs. 7,000 crores , Rs. 8,000 crores order book again, which you have already gained Rs. 2,700 crores, which you said in the call. So, it is not conservative. I think it is too conservative numbers. And why not, let's say, to give us proper

clarity to investor, I think that will be great. So, if you can work out your numbers in the next coming quarter, if you can give a proper clarity. And vis -a-vis, also, if you see, historically, Quarter 1 has been a weaker quarter for you. This year, you have posted your all -time high quarterly numbers. And then also, you are s aying a 15% growth.

Management : Let me tell you, whenever we get the job, generally in the first year, progress turnover comes only 10 % to 15%. And from the second year, it comes to 20 % to 25%. And then in the third year also, it is 25% . So, all the order which we have received recently, we are expecting only 10 % to 15% turnover from these projects.

That is why we are saying we are keeping a conservative approach of 20%. Otherwise, in case there is a good progress in that project, we can get more. But we are not making any promise on account of that because project progress depends on the many factors. But in the first year, project progress is only 10 % to 15%. That is why we are keeping a conservative approach. Otherwise, we will be happy to record more growth .

Amit Anwani: No, no, no. But, sir, if you are , I can take this in offline also. Because when you say 10% to 15%, you got Rs. 8,200 crores order book the last year. If I take a 15% of it, that is itself what come at Rs. 1,200 crores type of order inflow which should flow in this year from your last year order book. Last year order inflow. And in FY '2 4, you close d the order book at Rs. 7,800 crores. So, sir, Rs. 3,000 crores is of from the order book of FY'24 . And if I catch 15% of the order book which you have of FY'25 it comes to Rs. 1200. Last year's Rs. 1200 and is i n this year, you will get some Rs. 7,000 crores , Rs. 7,500 crores order . Whatever you get, there will be some order which needs to get executed in a shorter period of time. I mean, either I am not able to understand or I am taking the numbers wrong. But I don't think so that 15% numbers which you are saying is the correct number.

Management : No, no. Basically, we have arrived at a number o

n the basis of the order book. New order definitely will add further to it . So, that is why we are saying that as of date, we are expecting around 15% to 20% growth in the turnover. And going forward, we can definitely revise our numbers.

Amit Anwani: And so my second question is, in the current quarter, you had a lower your LTSK margin . So, on an annual basis, you will be achieving what you have achieved in the last years . So, it is not correct to see margins on a quarter -to-quarter basis . So, it is better to see on an annual basis, correct?

Management : Definitely. Because, you know, EIL is earning revenue from the implementation of project. And income from the implementation of project is always cyclic in nature . So, it is better to see on the annual basis rather than on quarter -to-quarter basis because it fluctuates from quarter -to-quarter .

Moderator: Rohit, I do apologize to interrupt you. Could you please rejoin the queue? We take the next question from the line of Kunal Sheth from B &K361. Please go ahead.

Kunal Sheth: So, just wanted to check, what is the order inflow run rate that you guys are building and we should work with for the next two, three years?

Management: Can you just repeat the question again, please?

Kunal Sheth: What is the order inflow run rate you guys are building in or what is the number that we should work it annually for the next two, three years? What is the plan that we are targeting given that now the spectrum of opportunities that EIL can participate in has gone up meaningfully?

Management: Yes, yes, exactly. The last year it was order inflow was in the range of Rs. 8,000 crores . So, we are expecting that there would be some rise in that. At least we will be able to match the Rs. 8,000 crores , which was this time for the first time we had achieved that kind of order book. The endeavor would be to meet the same kind of order book, but with increase that we are perceiving that it should be 10 % to 15 %, 20%. We should be able to get more. That is an internal target for us.

Kunal Sheth: But sir, do you think that this kind of run rate can be sustained for next two, three years or?
Management: It should be. It should be. If you see that the kind of CapEx investment and the focus by the government is there on the indigenization and Atmanirbhar Bharat, so a lot of these projects will be coming there. Infrastructure has a lot of boost . So, you see that our contribution of infrastructure in our business is increasing.
Similarly, w hen you are going towards the development of the internal product, suppose, yesterday, the new policy has been on deep sea exploration. More than the oil comes to the market, actually, there would be processing facilities . So, refining capacity and pet c hem capacity will also increase . So, there is a lot of investment and boost from the government side also. So, we see that there is a good opportunity for us . As soon as the projects are on, CapEx investments are there in the market, so it is an opportunity for EIL to be there, as a consultant.
Kunal Sheth: And lastly, we also spoke about the Rs. 5,000 crores turnover target. So, is that the target that we have kept for ourselves for FY '2 8, or should we be able to achieve it earlier as well?
Management: We should, I think by 2028, we should be able to achieve it because a s soon as the order book increases, we are moving towards the same aim . So, let us hope for the best.
Moderator: We take the next question from the line of Ajinkya Jadhav from Chris Portfolio PMS. Please go ahead.
Ajinkya Jadhav: My question again is on the B SMR. So, sir, if you can tell this Rs. 30 CR assignment that we have got , so, I expect this is for one project . So, how many such projects are expected to come from the government and in next, maybe say, two, three years?

Management: No, it is there in the articles also. The government is pushing for this. Many private companies like many other public sectors like NTPC, is also putting up the SMRs in future. They have also started studying . So, all power companies are also anticipating to go for it . So, there are a lot of opportunities all around India.
And you know that the government is thinking of nuclear mission. They are thinking of achieving under the Viksit Bharat opportunity , they are thinking of 100 Gigawatts from the nuclear . So, that can only be achieved from these smaller reactors, which are faster and easy to do it . So, let us hope for the best. A lot of projects are going to come for that. And all other companies will also be investing in this segment .
Ajinkya Jadhav: So, our scope will be around this Rs. 30 CR number or will we be adding more offerings?
Management: It is just starting. Actually, this is first of its own kind. We are just starting working on the conceptual design because even SMR is very new in the market now, in the segment . So, as soon as it is developed, our scope will always increase. Because we are a consultant, we can do all kinds of complete engineering, procurement , and construction management. Till the implementation, we can get involved . So, this is just the starting point. This is going to increase. It is time to come up.
Ajinkya Jadhav: And we have a fair chance of getting orders from the private VSMR players as well, right?
Management: Let us see. Yes. We are now getting a lot of business from the private segment in competition also. So, we are very much hopeful that private segment will be our potential clients in future too for the SMR also.
Moderator: The next question comes from the line of Saket Kapoor from Kapoor & Company. Please go ahead.
Saket Kapoor: Sir, w hat is the cash balance currently on books ? And any dividend distribution or cash distribution policy for the investors?
Management : Our cash condition is around Rs. 1,100 crores. Rs. 1,000 crores or Rs. 1,100 crores in the range of and what is the other question?
Saket Kapoor: What is our dividend distribution policy or sharing the cash with your investors?
Management : In this year, we have declared a dividend of Rs. 4 on the face value of Rs. 5. So, we are paying 80% dividend. And I think this is more than 50% payout. But our dividend policy is minimum 30% payout.
Saket Kapoor: And sir, just for a humble understanding and permission, one of the participants did mention about the variation in what things look like in terms of the execution and the growth trajectory for the current year, especially between 15 and 35 , the range looks a bit broader . So, just a request

and a humble suggestion from investors like us is that if Madam could also join the call and just allude to the premise on which her vision of achieving 30 %, 35%, and the team who is addressing us, giving us conservatively 15 % to 20%. So, that dilemma would have been cleared has she been also joined and have addressed her . So, I request to give the feedback so that on the

remaining tenure or the remaining calls which happen, if ma'am could join and she would have clarified there itself where the gap is buil ding up because t hat would have answered many questions.
Management : Basically, this is not the gap. This is the 1st Quarter for the ’25-’26. And in case our top line moves further towards 30 % to 35%, then definitely we will change our forecast. Based on the coming quarters, it is not that we are giving any wrong information to our investors.
Saket Kapoor: No, no, sir.
Management : In case I am giving more figures, then it may be I am giving a wrong figure to the investor. Already I am giving a conservative figure, then how can be I wrong?
Saket K

apoor: No, sir, this is not the question of going either right or wrong. It is only the gap which the participant …
Management : Sir, it is a question of forecasting. And I should not give any additional figure to my investor. And on the basis of first year, I am saying that the top line growth will be 20%. And in case it further improves, then definitely I will change my guidance in the coming quarters.
Saket Kapoor: You are right on it.
Management : It is 1st Quarter only.
Saket Kapoor: Sir, you are absolutely correct on your perception. But only when the MD speaks, there should be merit on what she is also alluding to . So, there should not be a difference.
Management : Sir, you can talk to her offline.
Saket Kapoor: If she would have joined the call , yes, sir. If she would have joined the call for this hour, it would have worked much better. That is only the suggestion, sir. Whether it is there or not, ye s.
Management : We don't have any issues.
Saket Kapoor: Thank you, sir. And all the best to th e team .
Management : Sir, you are already talking to Director Finance of the company.
Saket Kapoor: Yes, sir.
Management : And be assured we are on the right path.

Moderator: Thank you. Ladies and gentlemen, that was the last question. I now ha nd the conference over to Bhoomika Nair from DAM Capital Advisors for closing comments. Bhoomika ?
Bhoomika Nair: Yes, thank you to all the participants for participating and being on the call and the management for giving us an opportunity. Thank you very much and wish you all the very best. Any closing remarks from your end?
Management : No, Bhoomika . It is already done. Thank you.
Bhoomika Nair: Thank you.
Moderator: Thank you. On behalf of DAM Capital Advisors Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

MODERATOR : MS. BHOOMIKA NAIR – DAM CAPITAL ADVISORS
LIMITED

Moderator : Ladies and gentlemen good day, and welcome to the EIL Engineers India Limited Q2 FY '26 Earnings Conference Call hosted by DAM Capital Advisors Limited .
As a reminder , all participant lines will be in the listen -only mode , and t here will be an opportunity for you to ask questions a fter the presentation concludes . Should you need assistance during the conference call, please signal an operator by pressing '*' then '0' on your touchtone phone. Please note that this conference is being recorded .
I now hand the conference over to Ms. Bhoomika Nair. Thank you, and over to you, ma'am.
Bhoomika Nair: Good evening, everyone. On behalf of DAM Capital, I welcome you to the Q2 FY '26 Earnings Call of Engineers India Limited.
We have the call today being represented by Mr. Sanjay Jindal – Director (Finance); Mr. Suvendu Padhi – Company Secretary and Investor Relations, Mr. R.P. Batra – Executive Director (Finance & Accounts) and IR; Mr. Amanpreet Singh Chopra – Senior General Manager (CMD Office and IR), Mr. Vivek Midha – Senior General Manager (Marketing BD and IR), and Ms. Neha Narula – Senior Manager, Company Secretariat and IR.
At this point, I will hand over the floor to Mr. Jindal for his initial remarks, post which we will open up the floor for Q&A. Thank you, and over to you, sir.
Sanjay Jindal: Thank you, Ms. Bhoomika. Good evening, everybody, and a warm welcome to all the investors who are attending the investors' call.
We have declared our financial results for the 2nd Quarter ended 30 th September 2025 today.
Our order book status has reached its all -time high and stands at INR 13,131 crore as o n 30th September 2025, as compared to INR 12,145 crore as o n 30th June 2025.
Order inflow in EIL up to 2nd Quarter of Financial Year '25-'26 stands at INR 3,765 crore. We have declared results of quarter and half -year ended September 2025 on 14 th November 2025.
As regards to financial performance for three months ended September '25, the company has registered a turnover of INR 900 crore vis-à-vis INR 676 crore in the 2nd Quarter of the Financial Year '24-'25.
Turnover from consultancy and engineering segment stood at INR 411 crore, and from turnkey segment at INR 489 crore.
During the current quarter ended September '25, the company has recorded profit before tax of INR 150 crore and PAT of INR 115 crore in comparison to INR 100 crore and INR 79 crore, respectively, during the 2nd Quarter of Financial Year '24-'25, showing an increase of 50% in the profit before tax and around 45% in the PAT.

Notably, EPS for the quarter ended September '25 stood at INR 2.04, which is September '24 at INR 1.41.
Operating margin during the 2nd Quarter of Financial Year '25 -'256 stood at around INR 102 crore, that is 11.3% vis-a-vis INR 47 crore, that is 7%, during the 2nd Quarter of '24-'25.
EBITDA, including other income of the company during 2nd Quarter '25, stood at around INR 160 crore . EBITDA margin is 17% in comparison to INR 110 crore EBITDA margin 15% during the 2nd Quarter '24.
In the first half year of '25-'26, the company achieved a turnover of INR 1,757 crore in comparison to INR 1,287 crore in the first half year of '24-'25, showing an increase of around 37% with turnover from Consultancy and Engineering segment amounting to INR 819 crore and

INR 938 crore in Turnkey segment.
For the half -year ended 30th September 2025, the company recorded profit before tax of INR 243 crore and profit after tax of INR 185 crore in comparison to INR 174 crore and INR 134 crore, respectively, for the half -year ended 30th September 2024, showing an increase of 40% in PBT and around 38% in PAT.
Operating margin first half year of Financial Year '25 -'26 stood at around 9.3%. EBITDA, including other income of the company fo

r the first half year ended 30th September 2025 stood at around INR 265 crore. EBITDA margin is 14% in comparison to INR 194 crore for the first half year ended 30 th September 2024.
The company is maintaining a healthy EPS of INR 3.29 for the first half year ended 30 th September 2025.
On the consolidated front, the company earned a profit of INR 83 crore for the quarter ended 30th September 2025. For the Half-Year Ended September '25, the profit stood at INR 149 crore.
Thank you.
Now , it is over to Ms. Bhoomika. To you.
Moderator: Sir, we will start with the Q&A.
Sanjay Jindal: Yes.
Moderator: Thank you very much. We will now begin the question -and-answer session. We take the first question from the line of Amit Anwani from BL Capital. Please proceed.
Amit Anwani: Congratulations for the very strong execution which you have done. Sir, n ow my first question again on execution. We have already done kind of 33% growth for first half to first half, and I recollect you guiding about 20% plus for full year growth. Now are we changing then that stance

since the execution has been quite strong in H1 ? So, just first thing wanted to understand on the guidance.
And s econd, on the order prospects for next six months, we understand that you have won one international consulting order again in Africa, which you announced about INR 600 + crore odd. And H1 intake is roughly about INR 3,700 crore odd. What is the full year target now, and what are the prospective orders? On the execution, are we changing our guidance?
Sanjay Jindal: For the guidance purpose, in the turnover, we are giving guidance of 25% plus. And w e will stand by our margins, segment profit of around 25% in the consultancy business. And i n the LSTK, we will maintain 6 % to 7% segment profit. For the rest of the portion, Mr. Vivek Midha will answer to you .
Vivek Midha: Hi, Amit. This is Vivek.
Amit Anwani: Hi, Vivek.
Vivek Midha: Just to update you on the business prospects of it , as of today, we have already crossed INR 4,000 crore. Okay? And we are moving towards our last year's target, INR 8,000 crore. They are going to definitely cross that INR 8,000 crore mark and hope to get more than that.
Internationally, when you are talking about this project this year, we have been able to secure around INR 1,600 crore from overseas. So, this year, in the consultancy segment, overseas has contributed more. We are targeting a few major projects more. In months to come, you will hear more information on that. At the same time, we are working in the domestic market. So, prospects are good. We will definitely cross the last year's mark, and it will go beyond that, definitely.
Amit Anwani: That is great to hear. So, one thing is that you highlighted 1,600 out of 4,000. That is 40%. So, are we eyeing for 40%+ consultancy contribution in the 8,000+ order inflow, which you are going to have this year?
Sanjay Jindal: It would definitely be as part of consultancy. Normally, it remains around 40 % to 50% within the consultancy segment. Overall, it would be somewhere around 20 % to 25% in the overall.
Amit Anwani: Second question , I was just observing the revenue from consultancy overseas, which was kind of INR 85 crore to INR 1 00 crore last year, quarterly run rate. And now this year, it is about INR 70 crore to INR 75 crore quarterly run rate despite the overseas consultancy order book has been massive. We won massive orders last year also. So, any particular reason of this not picking up? In fact, it has declined, the overseas consultancy revenue this year.
Sanjay Jindal: Actually, till now, our major client was Dangote Refinery in Nigeria, and we were getting turnover from our Mongolia business also. Now these projects are going to be tapered because the work has been completed. But s ince we have got good order in '24-'

25 itself in the foreign

territory, so that business has started execution, taking on. So, we are confident that in the next quarter, you will see the results of massive order book in the foreign territory.
Amit Anwani: And are we targeting the similar 50 -50 mix, or since the turnkey was very strong this quarter, so what is the mix we are expecting for this year now?
Sanjay Jindal: On annual basis, it will be 50 -50 or 50 % to 48% at most.
Amit Anwani: Lastly, sir, on the losses from associates, I am assuming that this is because of the shutdown in Ramagundam. So , just an update on that, because I think H1 basis, the losses have been massive, and on the PAT level, the numbers are lower because of that, despite very strong performance. We just wanted to understand an update on Ramagundam.
Sanjay Jindal: In this quarter, Ramagundam project was under shutdown for 45 days out of 90 days. So, in this quarter also, we have loss of around INR 25 crore. But in the third quarter, that project plant is going well, and we are expecting profit in the third quarter. And we are definitely expecting the third quarter will give profits. There were some technical problems, so the plant was under shutdown for 45 days in the 2nd Quarter .
Amit Anwani: Thank you so much for answering the questions.
Moderator: We take the next question from the line of Mohit Kumar from ICICI Securities. Please proceed.
Mohit Kumar: Congratulations on a very good quarter. Sir, first question is on the EBIT margin for the consultancy. I think this quarter it was 28%. Is there any one -off which we should be aware of?
Sanjay Jindal: Sir, I could not understand, actually , your question .
Mohit Kumar: The EBIT margin on the consultancy is 28% during the quarter. Is there any one -off?
Sanjay Jindal: You are saying a bout the write back.
Mohit Kumar: No, no. The margin on the consultancy, EBIT margin.
Sanjay Jindal: Sir, actually, in this quarter, we have a profit segment of 28%. But i f on the half -yearly basis, it is around 25%. We are sure that we will be able to secure our margin of around 25% on overall basis in the consultancy segment. And i n the LSTK segment, we are maintaining the segment profit of 6 % to 7%.
Mohit Kumar: Sir, any outlook on the domestic consultancy order inflow or pipeline? There was an IOCL Paradip Phase -2 project. Is the tender out?
Sanjay Jindal: Mr. Vivek Midha will answer.

Vivek Midha: With respect to the IOCL Paradip, there is no tender is going to come out. We are in the Phase -1 of execution. As soon as the Phase -1 is completed, they will have their management approval, and they will proceed with the Phase -2. Now, both the phases have been awarded to us. It is that we will get the work order for the Phase -2 subsequently when the Phase -1 is completed. So, Phase -1 is progressing at this point of time. It is not in our hand.
Mohit Kumar: Is it right to say that Phase -1 was merely INR 100 crore worth of project, and Phase -2 will be much, much larger? If I am not wrong, it should be around INR 900 crore. Will it be booked in this fiscal year, the balance Phase -2, or next year, next fiscal?
Vivek Midha : It should come towards the end of this fiscal year. Towards the end, it should come. Because the Phase -1 is in progress, and we are going to submit the reports, the study reports, and then they will take the Board approval and then Board decide on the proceeding on the job. So, we are hopeful that by the end of this financial year, it should be done. Phase -1 should be done, and they should get the clearance. O r otherwise, it would be early next financial year it should be awarded.
Mohit Kumar: Sir, any other large domestic pipeline order, domestic ordering pipeline which we are looking at in H2 or FY '27?
Vivek Midha :

You have this Andhra refinery which is going on. We are working on this feasibility study. Hopefully, the second phase, if this study is accepted, then they will come with the implementation phase. Similarly, there is a petrochemical complex, AGCPL. They are thinking of expansion. Their tender could come. There could be some small specialty chemical projects. There are various studies that have been done by IOCL, and they are thinking of implementing the various speci alty chemical projects. So, those are expected to come in times too in this financial year.
Moderator: We take the next question from the line of Prateek from IntelSense, please proceed.
Prateek: My question was on the write -back that we have done. I think about INR 35 crores of write -back. Can you, sir, give a light on as to which project this was and when was the provision actually made in the past for this INR 35 crore amount?
Sanjay Jindal: Actually, this provision relates to one of our projects, Dangote Refinery in Nigeria. That provision is kept for our defect liability period. Whenever this defect liability period is over, client releases our bank guarantee, and then provision is reversed. So, client is reversing our bank guarantee in the piecemeal basis. So, in this quarter, we have got the provision reverse of

INR 35 crore based on the reduced liability on this project.
Prateek: And s ir, like you said, it is on a piecemeal basis , so i s there any other amount that you are expected to receive on this?

Sanjay Jindal: A small portion is balance. That will be released in the due course of time, maybe in this quarter or next quarter.
Prateek: Sir, one last question. Sir, in our last con call, you had mentioned that there were several projects which were in advance negotiation stage. So, in this quarter orders, have those materialized or still we are expecting those kind of orders?
Sanjay Jindal: You can see our order book of INR 13,000 crore. Definitely, some of the orders have been matured. And in this quarter, we have already got the order of INR 3,700 crore. So, definitely , our efforts are fruitful, and we have got some of the orders.
Moderator: We take the next question from the line of Saket Kapoor from Kapoor & Co. Please proceed.
Saket Kapoor: Firstly , sir, we were also looking for some diversification in terms of moving away from the oil refinery space and then looking for the hydrogen opportunity going ahead. So, sir, where are we? There is some work was also done earlier, which were informed in some for um by the MD. Correct me there, sir, if I am with the information.
Vivek Midha: With respect to the, see, diversification, definitely, we have done diversification in this segment. We have moved out of, basically, the hydrocarbon. Today, our infrastructure business is almost more than the hydrocarbon business. That is a major diversification.
With respect to the new areas, which we have talked about, like this hydrogen is done and coal gasification is done and bio refinery is done . So, bio refinery, you know that we have already done one bio refinery, bamboo -based bio refinery. Recently , we have been awarded one assignment for coal gasification from the coal to SNG by NTPC. That assignment we just got now which we are executing. We are anticipating this kind of assignments from other clients also. We are in the bidding process for various proje cts of this sort.
Saket Kapoor: Sir, when we look at our capital investment in the various JVs, Ramagundam Fertilizer is there. Then, sir, we have a small stake in the Numaligarh Refinery also. What has been the contribution, if any, in terms of any dividend and how is the performance there? I think so, our major investment is for this 4% stake to the tune of INR 83 0 crore .
R.P. Batra : Yes, it will be coming in the next quarter. NRL dividend will be coming

in the next quarter. So,
they are basically in the expansion phase. So, t hey are giving the limited dividend. In the last financial year, they have given the substantial dividend. But g oing forward, they are investing the money for their new project. So, whatever dividend they have declared for the last financial year, that will be coming in the next quarter.
Saket Kapoor: So, what was the amount, sir, last year? How much we have received?
R.P. Batra : In this year, around INR 20 crore will be coming.

Saket Kapoor: And, sir, any step, we will hold on to this minority stake of 4%. In the total real m of things, we are only holding 4% of the entity. Or we can also look forward for dives ting this stake?
Sanjay Jindal: Actually, at this moment, we have percentage of 4.37%. And w henever opportunity comes, we will review it.
Saket Kapoor: And also, sir, we have two upstream assets investment also under NELP IX. So, already, you have mentioned that during the bi dding stage, there was the project cost was envisaged at INR 300 crore, as mentioned in the presentation. So, we have not invested anything on these assets as of now .
Sanjay Jindal: No, we are not investing any further. Basically, whatever investment was done, is done. So, we are not anticipating any further investment in this block.
Saket Kapoor: And lastly, sir, with the reversal of this INR 35 crore because of the Nigerian no defect project, which you mentioned to the early participant, that means net of that has moved up the profit by that amount. So, we need to factor in that number in terms of the profit profitability. That is the ...
Sanjay Jindal: Actually, reversal of provision is a continuous process. Because provisions are reversed whenever defect liability period of the project s is over. So, it is a routine business for EIL. Some of the provisions are created and some of the provisions are reversed. So, this is not a cause of worry for EIL.
Saket Kapoor: What is the net of impact? How much provision we have made, if any, for this quarter or for the first term ? And how much have been reversed in totality?
Sanjay Jindal : For this quarter, it is reverse d on overall basis , I think it is minus 12. But in the last quarter, it was on positive side. S o, sometimes it is on positive side, sometimes it is on negative side.

Sanjay Jindal: As per contractual provision, we create the provision, and as per the contractual provision, we write back the provision. So, t his is a continuous process over the tenure of the project. The provisions are created when the project is completed, and in case any liability does not come, we reverse that. So, it is basically a continuous process.
Sanjay Jindal : In the coming time, some more projects are going to be closed or defect liability period is going to be over. So, it is a continuous process.
Saket Kapoor: And sir, lastly, on the cash, on the books, and what steps are we taking? How can we create value through that cash, through sharing with investors? Or what is the best possible way? What is the closing balance , the cash balance we have? And how are you looking forward to deploy the same ?
Sanjay Jindal: Currently, all the cash is being deployed as per DPE guidelines, and we are constantly looking for the investment opportunity where the CapEx are lower, and standalone facility. Whenever

we get a good opportunity, definitely, EIL management will consider for the investment of the same, like NRL and RFCL. And we are constantly looking for that.
Saket Kapoor: Closing balance, sir, can you confirm? Cash on cash and books?
Sanjay Jindal: It is between INR 900 crore to INR 1,000 crore.
Moderator: We take the next question from the line of S Ramesh, an individual. Please proceed .
S Ramesh: So, if you look at the split bet

ween the turnkey and the consulting income, so if your turnkey revenue share is higher, it is a drag on your margin s, right? You are talking about single -digit margin. So, a s a strategy, how do you view the split between the two revenue streams from consulting and turnkey? And how do you see your overall strategic objective of maintaining ROC E for the business based on this blend?
Sanjay Jindal: Actually, it is definitely, we have more segment profit in consultancy segment and less in LSTK business segment. But in the Indian economy, there is limitations on the consultancy business, because at one times, mega projects are not more than two or three. So, whenever we are having opportunity in India, in the consultancy business, definitely, we are grabbing it, and w e are expanding our footprints in international market also for the consultancy business. And with the balance manhour , we are doing the LSTK job, so that we can have a good turnover, as well as good bottom line also. And a s a strategy, we are trying to maintain consultancy business around minimum 50%.
S Ramesh: So, basically , you are saying that overall, you will be able to sustain your ROC E based on the top line growth and the cash flows. Is that the right way to understand ?
Sanjay Jindal: Basically, LSTK gives the top line, but consultancy gives the bottom line. So, we are striking a balance between the two.
S Ramesh: So, in terms of the accounting in turnkey projects, in terms of you book the income, is there any Ind AS impact? And what is the percentage booking you do in terms of the overall timeline for the turnkey revenue?
Sanjay Jindal: Actually, in the turnkey business, turnover is coming on cost progress basis. It is not based upon the timing or billing. Once we get the project, the whole turnover is booked within the three to four years, because a mega project takes minimum three to four years, and that is the timeline for the mega consultancy, as well as LSTK projects.
S Ramesh: So, in terms of your investment holding, you are getting about 12% return , if you look at the other income, the value of the investment in the standalone numbers . So, is there any strategic rationale for holding on to these investments in Ramagundam Fertilizers, for example, or the other companies? Even that the returns are not really what you would expect from equity investments. So, what is the management thought process on the equity investments? You expect

the returns to go up in future? Or is there a thought process in terms of exiting some of the investment s which may not be productive ?
Sanjay Jindal: Actually, I think Ramagundam project, Ramagundam is a very good investment, because India is filling short of urea, and Ramagundam is able to generate minimum profits of INR 500 crore on annual basis. But we are facing some technical problems . That's why project is going for the shutdown on time to time basis. But we have sorted out the issue, and in the next quarter itself, in this quarter itself, the plant will generate the profit. So, this is not a question of worry for EIL, because our investment is safe in the Ramagundam project.
Moderator: We take the next question from the line of Mohit Kumar from ICICI Securities. Please proceed.
Mohit Kumar: Sir, the question is, Ramagundam, I think, was making profit for last couple of years, right? So, what ha s happened in last two quarters? The losses have been in the first quarter was INR 8

crore , I think, 2nd Quarter is only widened, right? So, is it fair to expect that from Q3 onward s, you could start seeing a normal profit? Or do you think this will continue for some more time?
Sanjay Jindal: Actually, we are facing some problem in stabilization, and definitely, you are right, in the first quarter, there was shutdown, and in the 2nd Quarter , there was shutdown also for the 45 day

s.
But now, we have sorted out the problem, and now plant is running well . And definitely, we are going to get profit in this quarter.
Mohit Kumar: Second question is on the order intake guidance for the full year. I think we spoke, I think, we have guided for broadly INR 8,000 crore kind of order intake. Is it fair to assume that PMC will be close to INR 5,000 crore order inflow for the entire fiscal ? Or will it be a lower number?
Sanjay Jindal: You are talking about the order inflow for …
Mohit Kumar: Order inflow for the entire Fiscal Year ' 26. Out of INR 8,000 crore, how much could be the consultancy order inflow?
Sanjay Jindal: Out of INR 8,000 crore, it could be definitely, consultancy will be somewhere around 50%.
Mohit Kumar: INR 4,000 crore.
Sanjay Jindal: It is typically, we maintain will be balance of 50 -50. Sometimes, it is 40 %, 55%, 46%. It depends, but remains in this range itself.
Mohit Kumar: Sir, last year , consultancy was very good, I think, we did INR 4,500 crore. So, asking whether we can cross that number, or do you think it will be lower than that number?
Vivek Midha: We can.
Sanjay Jindal: We definitely can.

Mohit Kumar: And o n the international side, I think the size of orders are, I think, start getting slightly bigger. What is the size of orders, the large orders in the pipeline, in the inquiry pipeline, or in the tendering stage? Is the pipeline growing, or is the pipeline only small, small orders, orders will come in bits and pieces?
Vivek Midha: No, it is a mix of pipeline. We are working in Abu Dhabi. We are working as an engineering consultant with a number of companies. We have running long -term agreements with them. We get various smaller assignment jobs under that. We also get the bigger assignment job, bigger size jobs under that , means INR 300 crore, INR 400 crore.
It depends, but we cater to all kind of jobs. We want to grab maximum, so that our order is maintained. So, w e maintain the mix of that, because the smaller assignments have a smaller period, but it gives you good revenue. The bigger assignments have more execution. It is a longer execution period. So, that is one of the opportunity, but it is a mix of both.
Moderator: We take the next question from the line of Anupam Goswami from SUD Life . Please proceed.
Anupam Goswami: Sir, on the consultancy order that we won, the large order, what is our timeline of execution for that? On the whole overall order book, how do you take it on the margin front, and the execution timeline for the whole order book as well?
Vivek Midha: Typically, any bigger project will have a time schedule of 36 to 48 months. S o, specifically, this project, which we have won, it is around 36 months. So, t his turnover would be divided into, basically, the recovery would be in three years' time.
Sanjay Jindal: In the first year, any new project gives only 10 % to 15% turnover . And in the second and third year, it gives 25 % to 30% turnover . And in the fourth year, it gives 15 % to 20% turnover. This is the general trend.
Anupam Goswami: I will join back in th e queue .
Moderator: We take the next question from the line of Rajesh Agarwal, an individual investor. Please proceed.
Rajesh Agarwal: Sir, how much we have invested in Ramagundam project, and what can be the annual ized normal profits, if everything is okay?
Sanjay Jindal: We have invested around INR 491 crore in Ramagundam project. And w hen everything is okay, it will generate minimum INR 500 crore profit, and our share will be 26%.
Rajesh Agarwal: 26%. Okay. And now, things are normalized, sir , there?
Sanjay Jindal: Yes, things are normalized. Plant is running well.

Rajesh Agarwal: Sir, one question. I want to understand on the write -back. Suppose, this quarter, we have

written
back INR 35 crores . So, net-net, how do we understand that how much we have written back? Some provisions must have been made for the other orders also.
Sanjay Jindal: Actually, we have written back a figure of INR 35 crores . Actually, as per contract, provisions

are being made, and whenever our defect liability period is over, we reverse the provision for that particular project. So, in this quarter, we have reversed the one of the major project amount, INR 35 crore , and we have made some provisions also. But overall impact is negative.
Rajesh Agarwal: Negative mean negative of how much? INR 12 crores .
Sanjay Jindal: 12 crores.
Rajesh Agarwal: INR 12 crore less we have provided.
Sanjay Jindal: 12 crore we have reversed, because provision is made there.
Rajesh Agarwal: Okay, INR 12 crore .
Sanjay Jindal: Provision is reversed more. And sometimes, it is created, it is positive. Sometimes, it is negative. It depends upon the ...
Rajesh Agarwal: So, without reversal, what is the EBITDA in the consultancy business margin?
Sanjay Jindal: So, part of EBITDA, part of operating profit.
Rajesh Agarwal: Consultancy EBITDA will be how much, separately ? 25%?
R.P Batra : Basically, it's a segment result, we are publishing.
Sanjay Jindal: The segment profit is 28% in this quarter on the consultancy business.
Rajesh Agarwal: And how is the order outlook, sir? Future order outlook?
Vivek Midha: Order outlook is good. W e will be touching more than 8,000. We are working towards it. W e will meet the last year target, and order book has already exceeded with respect to the last month . So, it is further going to increase. Let's hope for the best.
Rajesh Agarwal: What can we annualized run rate in the turnover, including both turnkey and consultancy? INR 6,000 crore?
Sanjay Jindal: 8,000, annualized turnover? Our analyzed turnover for the last year is INR 3,000 crore, and we are expecting more than 25% growth in this year. So, it may be around INR 3,800 crore , INR 3,900 crore .

Moderator: The next question is from the line of Samarth Khandelwal from ICICI Securities. Please proceed.
Samarth Khandelwal: Sir, could you share some color on how our order inflow trajectory is from domestic markets and international market?
Sanjay Jindal: Domestic, we have told you that this year, as of now, we have booked the order worth of INR 4,000 crore, out of which approximately around INR 1,500 crore or INR 1, 800 crore is from the LSTK segment. Rest is from the consultancy . And consultancy, we have overseas, has contributed more than INR 1,680 crore.
Samarth Khandelwal: And going forward, how do you see it to be?
Sanjay Jindal: We will be going towards the last year 's figure of INR 8,000 crore. We should cross that. We are already on INR 4,000 crore as of now.
Samarth Khandelwal: Sir, I mean t, do we see more opportunit ies in the international versus domestic, or how is it? Is it balanced from both the …
Vivek Midha: International has lot of opportunities. We are focusing on the international market aggressively. At the same time, domestic market also has opportunities. We are working on them. It is like that, sometimes, the activities, some of the contracts, major con tracts, we were negotiating, has been concluded. Some more, we are discussing. It could get realized by the end of this financial year.
Samarth Khandelwal: That is very helpful.
Moderator: We take the next question from the line of Saket Kapoor from Kapoor & Co. Please proceed.
Saket Kapoor: Only a small clarification. Since we are having this equity investment in Ramagundam Fertilizers , so, these are only book entries that we have to pass through with respect to the equity holding we have. So, even if the company reports the estimated profits, which you have been explaining, we will be again booking only

book profits. It is only when they declare dividend.
Yes, please correct me, sir.
Sanjay Jindal: On the consolidated front, we are consolidating only bottom line figure. Turnover is not being included in the EIL turnover, and RFCL has not started the dividend yet. Whenever dividend will be declared, that will be taken into other income.
Saket Kapoor: Sir, my question was whatever losses of profit, which we are booking because of our equity investment, are only the book entries. There is no actual cash impact on that.
Sanjay Jindal : That is a part of our consolidated results. Whenever they will declare the dividend, that will come into the company and will be shown as other income in the standalone financial.

Saket Kapoor: As of now, there is, I mean, one can understand that whatever INR 491 crore we have invested, that is the equity as we hold in our stock market. There is no return as of now, till they start

releasing out any cash. That is what the understanding is.
Sanjay Jindal : Whatever loss in RFCL, that is being offset with our profit on the consolidated basis. Equity is intact.
Saket Kapoor: Sir, we are not getting any advantage from the losses. Are the tax liability on our consolidated number get reduced because of those, or they are only the book entry?
Sanjay Jindal: Nothing.
Saket Kapoor: Nothing. So, that is what my question is. Other than that, this is only a book entry. It has no other reference as such.
Sanjay Jindal : Yes, book entry for the consolidated financial. In the standalone, there is no entry, because it is a temporary loss. In case , if it was a permanent loss, then entry has to be provided.
Saket Kapoor: Sir, we have also participated in the rights issue for NRL also in the first quarter. So, we have retained our stake only, and is our stake diluted to what extent?
Sanjay Jindal: We are maintaining our percentage, and based upon that, whatever right issue is there, we have subscribed that.
Moderator: We take the next question from the line of Anupam Goswami from SUD Life . Please proceed.
Anupam Goswami: Sir, if you can give us a little color on the whole oil and gas CapEx in the near term, and how is it in the domestic, as well as in international, and where are we targeting in our outlook?
Vivek Midha: if you see that BPCL is investing in the refining and petrochemical complex . Investment is around INR 95,000 crore. Similarly, the Barmer Refinery , which was there, it is around INR 72,000 crore. IOCL in all has invested around INR 1.66 lakh crore in various projects, various refinery projects. MENA is investing INR 50,000 crore.
Similarly, you have this ONGC Gujarat Jamnagar. They are also investing. They are thinking of the Petchem project there. It is around INR 8 0,000 crore to INR 1,000 crore. Smaller various independent refineries could be there, somewhere around INR 1.25 lakh crore s and also.
So, there are a lot of opportunities are there. Many studies have been done in past, and those are still under consideration with the clients. So, if they get materialized, let's hope for the best. It should be implemented.
Also, there has been some issues with respect to this, the tariff issue, which is going on. S o, some of the private ventures were to set up the Petchem plants, based on the imported ethane, they

have got stalled. Until the time this tariff issue is resolved, it will take some time to settle. When this tariff issue is resolved, hopefully, it should get resolved. And t hen we should see those investment getting realized in times to come.
Moderator: We take the next question from the line of Mohit Kumar from ICICI Securities. Please proceed.
Mohit Kumar: My first question is on the, do you think there will be a dilution on the consultancy margin due to rising internatio

nal mix ? Or is it fair to expect that we will maintain that band of 22 % to 25% margin in the consultancy?
Sanjay Jindal: On overall basis, in the domestic as well as international projects, we are maintaining our margin of 22 %-25%, and we are expected to maintain it.
Mohit Kumar: Sir, will there be any impact of pay commission on next year consultancy margins?
Sanjay Jindal: That provision we are already taken in the account. So, as on the date, there will not be any impact on the financials of the company, but definitely, whenever it will be higher, then that will be looked into.
Mohit Kumar: Last question, Andhra BPCL project , has the location been zeroed in , and can we expect the next stage of tendering in the next fiscal?
Vivek Midha: It should be towards the end of this financial year, or early next year. The study is on, study we are doing it, so that at the point of time, they are deciding the configuration and some environmental impact assessment studies are being on. So, b y the end of that study, they will take a decision and take the management approval. This decision they will take to implement that project. So, i t should happen towards the end of this financial year or early next financial year.
Moderator: We take the next question from the line of Prateek Dugar from Intelsense . Please proceed.
Prateek Dugar: Sir, you mentioned about the oil and gas CapEx . And among this, sir, large figures that we hear, what would be the opportunity side that would be for EIL actually?
Vivek Midha: Everything, all the figures which we see are the opportunity for us. But it is a competitive world. We will be bidding for them, and we get some. But these are the started opportunity. They are not coming in one way, because it is a large investment. Many of the projects will come in the phases. So, w e are anticipating that we should be getting good business out of it.
Prateek Dugar: So, sir, my understanding is that, for these projects, whatever is like the construction, we are handling mostly the consultancy part, or when we take up the turnkey, how are we bidding for that, sir?

Vivek Midha: No, any of the projects, these, the figures, which we have told, is the total CapEx part, which includes the cost of the land and various other costs, including the cost of the plant. Consultancy is a very smaller part of it. So, we primarily focus on the consultancy services. We don 't get into the construction. We are the consultant. We get into the concept to commissioning of that project, starting from the studies to implementation of the same. We get the work done through the contractors.
So, w e work as basically owner's engineers or a project management consultant, whichever way you say. We are basically the extended arm of the client in implementing that project. But construction is done by somebody else, the specialized consultant or the EPC contractors. We are not into the business of construction.
Prateek Dugar: So, just like as a thumb rule, I mean, what would be the percentage of consultancy for a given, say, project cost? Can we get a guidance on like what would be the thumb rule for some percentage figure of the total cost of the project?
Sanjay Jindal: It all depends in which mode it is being executed, because it could be, if you see the larger project, it could be 2 %-3%. Our service could be 1 % or 2%, 3%, depending on the size of the project. These are the just overall cost, which are available in the market. If you talk about 1 lakh crore of the project, it is not actually the complete, the cost on which we will be getting the consultancy. We will be getting the consultancy services on the base, on the plant and machinery cost of it. So, if you see, the overall project cost will be 1 % or 2% or 3%. Depends.
Moderator: Thank you. As there are no further questions from the part

icipants, I would now like to hand the conference over to the management for closing comments. Over to you, sir.
Sanjay Jindal: Thank you.
Moderator: Thank you. On behalf of DAM Capital Advisors Limited , that concludes this conference. Thank you for joining us, and you may now just disconnect your lines.

Call: Feb 2026

“Engineers India L imited
Q3 and FY '26 Earnings Conference Call ”
February 13, 202 6

MANAGEMENT : MR. SANJAY JINDAL – DIRECTOR , FINANCE – ENGINEERS INDIA LIMITED
MR. SUVENDU PADHI – COMPANY SECRETARY – ENGINEERS INDIA LIMITED
MR. R.P BATRA –EXECUTIVE DIRECTOR – ENGINEERS INDIA LIMITED

MR. AMANPREET SINGH CHOPRA – SENIOR GENERAL MANAGER , C&MD OFFICE AND INVESTOR RELATIONS – ENGINEERS INDIA LIMITED
MR. VIVEK MIDHA – CHIEF GENERAL MANAGER , MARKETING AND BUSINESS DEVELOPMENT – ENGINEERS INDIA LIMITED
MR. AMANPREET CHOPRA – SENIOR GENERAL MANAGER – ENGINEERS INDIA LIMITED
MS. NEHA NARULA – SENIOR MANAGER – ENGINEERS INDIA LIMITED

MODERATOR : MR. KISHAN MUNDRA – DAM CAPITAL

Moderator: Ladies and gentlemen, good day, and welcome to Engineers India Limited Q3 and FY '26 Earnings Call , hosted by DAM Capital. As a reminder, all participant lines will be in the listen - only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing st ar then zero on your touch -tone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Kishan Mundra from DAM Capital. Thank you, and over to you, sir.

Kishan Mundra: Yes. Hi. Very good afternoon to all of you. We have with us the entire management team of Engineers India today to discuss the Q3 results and then -- which will be followed by question and answers. We have with us Mr. Sanjay Jindal, who is the Director of Finance; Mr. Suvendu Padhi, who is the Company Secretary; Mr. R.P. Batra, who is the Executive Director; Mr. Vivek Midha, Chief General Manager, Marketing and BD; Mr. Amanpreet Chopra, who is the Senior General Manager; and Ms. Neha Narula, who is the Senior Manager.

Without further ado, I'll hand the call over to management for the opening remarks. We'll follow that up with question and answers. Over to you.

Management : Thank you. Good afternoon, everybody, and a warm welcome to all the investors who are attending the investor call. We have declared our financial results for the third quarter ending 31st December 2025 yesterday. As on 31st December '25, company has unexec uted order worth of INR12,538 crores, comprising under Consultancy segment of INR7,500 crores and under Turnkey segment of INR5,000 crores approximate.

Order inflow in EIL up to third quarter of financial year '25 -'26 stands at INR4,267 crores. Further in January 2026, the company has bagged an order of around INR3,250 crores and the order inflow as on date stands around INR7,700 crores. Considering the above order inflow in January, the current order book stands at around INR15,670 crores. This is the highest order book position in the history of EIL. We have declared results of quarter and 9 months ended 31st December 2025 on 12th February 2026.

As regard to the financial performance for the 3 months ended December '25, the company has registered a turnover of INR1,194 crores vis -a-vis of INR900 crores in the second quarter of financial year '25 -'26, while it was INR750 crores in the third quarter of financial year '24 -'25. During the quarter ended December '25, turnover from Engineering and Consultancy segment stood at INR474 crores and from Turnkey segment at INR720 crores. During the current quarter ended December '25, the company has recorded profit before tax of INR395 crores in comparison to INR150 crores in quarter 2 of financial year '25 -'26 and profit after tax of INR302 crores vis -a-vis of INR115 crores in the second quarter of financial year 2025 -'26, showing an increase of 163% in PBT and PAT.

While comparing with the third quarter of financial year '24 -'25, during the quarter ended December '25, the company has recorded profit before tax of INR395 crores in comparison to INR118 crores in the quarter 3 of financial year '24 -'25 and PAT, profit after tax, of INR302 crores vis -a-vis INR88 crores in the quarter 3 of financial year '24 -'25, showing an increase of 235% in PBT and around 243% in profit after tax. Notably, EPS for the quarter ended December '25 stood at INR5.37 vis -a-vis September '25 at INR2.04.

Operating margin during the third quarter of financial year '25 -'26 stood at around INR337 crores vis-a-vis INR102 crores during the second quarter of '25 -'26. And operating margin is around

28% in the third quarter vis -a-vis 11% in the second quarter of '25 -'26. EBITDA of the company dur

ing the third quarter of the current year stood at around INR406 crores, EBITDA margin is 32%, in comparison to INR160 crores, EBITDA margin was 17% during the second quarter of the current year.

During the 9 months ended December 31, 2025, the company achieved a turnover of INR2,951 crores in comparison to INR2,037 crores during the 9 months ended 31st December 2024, showing an increase of around 45%, with turnover from Consultancy and Engineering segment amounting to INR1,293 crores and INR1,638 crores in the Turnkey segment.

Up to 31st December '25, the company recorded profit before tax of INR639 crores in comparison to INR292 crores and profit after tax of INR487 crores vis -a-vis of INR222 crores in the 9 months of financial year '24 -'25, showing an increase of 118% in the PBT and around 119% in PAT.

Operating margin for the 9 months ended December '25 stood at around 17%. EBITDA of the company for the 9 months ended 31st December 2025 stood at around INR670 crores, EBITDA margin is 22%, in comparison to INR322 crores, where EBITDA margin was 15% for the 9 months ended 31st December 2024. The company is maintaining a very healthy earnings per share of INR8.66 for the 9 months ended 31st December 2025.

On the consolidated basis, the company earned a profit of INR347 crores for the quarter ended 31st December 2025. For the 9 months ended December '25, the profit stood at INR496 crores.

Thank you. Now it is over to you.

Moderator: Shall we begin with the question -and-answer session?

Management : Sure.

Moderator: Our first question comes from the line of Manish Ostwal from Nirmal Bang Securities.

Manish Ostwal: Very good set of numbers for the 9 months. Sir, I have a question on the -- actually the volatility in the -- most of our key KPIs last so many years -- although we have improved our order book position, revenue growth, but there's a significant volatility in terms of margin, in terms of revenue execution. So on a yearly basis, can we anticipate, given our order book position of

INR15,670 crores, we should be ending the year with INR4,500 crores of revenue because fourth quarter any which case is a strong quarter.

And second, with respect to margin expectation of both the division, Consultancy and Turnkey, what sort of margin we should work with? Because it's very difficult to model some kind of margin in both the businesses and it's quite volatile, even more volati le than the gold and silver nowadays. So can you make some qualitative detailed comment about the margin expectation for both the business as well as the growth expectation for the full year? As well as the next year, what kind of growth rate we should as sume in terms of order inflow, revenue execution? That will be quite helpful to assess the company's performance in coming years.

Management : First of all, let me clear , EIL is having revenue from the implementation of the project, where revenues are always fluctuating in nature because it depends on the execution of project and the status of the projects. However, as we have already told, we are the highest order book of the -- more than INR15,000 crores in the EIL history. And definitely, with this order book, we will cross the figure of INR4,000 crores at the end of financial year.

And as regard the margins, EIL is successful in maintaining the segment profit of 20% to 25% on the Consultancy business, and on a routine basis, around 7% in the OB E job, LSTK OB E job. And we are maintaining operating profit of more than 10% on a regular basis.

Manish Ostwal: Okay. And secondly, sir, order inflow side, currently, we have INR7,700 crores of order inflow till January, right, that you made in initial comments. So can we anticipate, because quarter 4 generally tend to be a stronger quarter, both revenue as well as the order inflows. So we should end the year with INR10

,000 crore s order book given the run rate which we are seeing right now in our business?

Management : No. We have received order of around INR4,200 crores till December. Now another order of INR3,200 crores is received in the fourth quarter. So based upon this, we are giving target of more than INR4,000 crores at the end of financial year. And definitely, we will try to get more, but this we are expecting as a minimum target of INR4,000 crores. Because...

Manish Ostwal: INR4,000 crores for quarter 4?

Management : No, for the overall financial year. Because right now, our financial figure is around INR3,000 crores, and we are targeting more than INR4,000 crores on the annual basis.

Manish Ostwal: Okay. And any expectation you can guide us for the next year order inflow and the revenue estimate?

Management: Order inflow in this year, you have seen that it is reaching around INR7,700 crores as of today. And we'll be touching more -- we'll be crossing this -- we already have 1 more month to go, and we are anticipating a few more orders to come. So at least we'll be crossing the last year's mark. That is definitely sure. And next y ear also, we maintain the same kind of order book because we have 2 years we have consistently maintained.

And we will be next year also be maintaining at least this much, and we'll try to add 10% to 15% more in that figure. So this market is dynamic. A lot of projects are there and a lot of projects keep on discussing. So it depends on the -- how fast projects get finalized and settled during the negotiation with the clients. So it all depends, yes.

Manish Ostwal: And the last, like in terms of execution period of the current order book, what is the time period? Generally, we tend to complete 40% opening order book in terms of revenue. So that run rate should sustain?

Management : No, it is -- generally it ranges from 3 to 4 years. And in the first year, in some of the projects, it comes to 10% to 15% progress only because it depends on the timing when the order is received. If it is received in the month of April or May, then we ma y get around 15% to 20% progress. But if it is on the latter part, then only 10% is there. So on an average 10% to 15% progress is there for the current year orders.

Manish Ostwal: And last, on this data -- a bookkeeping question. Like, sir, this JV profit, which last year 9 months it was INR70 crores, now it is INR8.7 crores. Last quarter, you guided there is some shutdown and now the performance will improve quarter 3, and we have delivered on that thing INR42 crores of profit in JV. But how we should think? It is sustained going forward, that line item?

Management : Yes. We can expect more profit in the fourth quarter because at this time, that plant is running on full capacity. And from the first day of fourth quarter, it is running well. And we are sure that this quarter will be -- will generate more profits to EIL.

Moderator: Our next question comes from the line of Mohit Kumar from ICICI Securities.

Mohit Kumar: My first question would be what would be Consultancy order book after including the order for Dangote refinery? Just correct me if I'm -- the number will be around INR10,000 crores?

Management : Order book position is INR15,670 crores total. From Consultancy, it is around INR10,700 crores, and from the LSTK OB E, it is around INR5,000 crores.

Mohit Kumar: Understood, sir. And do you expect this Dangote order, which you won in January, to move into execution in F '27? Or do you think, in your opinion, the execution will go in F '28?

Management: It will go up till 2029, because 3 to 4 years of cycle is there of execution.

Mohit Kumar: The question is, sir, when do you think we start? Do you think we start...

Management: No, no. The execution has already started. Execution means Consultancy services have already started. W

e have already started working on this project. Engineering is on, on this project. So the typical -- I think project cycle is around 36 to 42 months exe cution cycle.

Mohit Kumar: Understood. My second question, sir, as per media article, I think, there is a Guyana refinery where we are in discussion. Is it -- can you just help us with how advanced discussion is? And what is the size of this refinery? Is it a smaller refinery or big refinery?

Management: What we understand from the published reports is this Guyana refinery is a very small refinery and that country is looking for the investment in this refinery from various investors. So that is the initial stages of discussion. We don't have much informati on on this as of this point of time. But this is one of the prospective refinery, but it's a smaller -- 30,000 -odd, 25,000 BPSD refinery that is sufficient for their country's requirement. But this is the initial conceptual stage. The governmen t of Guyana is yet to take decision on this, and we have yet to hear from the Guyana side.

Mohit Kumar: My last question on the status of IOCL Phase 2 order, I think which is -- which you said that once the Phase 1 is complete, most of Phase 2, you'll book this order. And do we still expect it to book in this fiscal? Or do you think this will go in next fisc al?

Management: I believe this would go in the next financial year because they are still to take the -- earlier project is almost complete. They have given the study. And I believe that is under their management decision to make the investment decision. That's the Phase 1. After they are done with the investment decision, then they will give the Phase 2 award.

Moderator: Our next question comes from the line of Amit Anwani from PL Capital.

Amit Anwani: Congratulations for very strong numbers. Sir, my first question pertains to clarification on order

inflow. Did I understood correctly that we are saying that this year will be INR8,000 -plus crores, and going forward also, it will be a growth on INR8,000 -plus crores in terms of annual inflow?
Management : Definitely, till time, we have received the order inflow of around INR7,700 crores, and time is available to add more business, so definitely, we will cross INR8,000 crores.
Amit Anwani: Sir, would you like kind of sustaining this number for F '27, F '28? Or any range there on? And also in terms of pipeline, if you could highlight for next financial year in terms of the overseas consultancy? Especially,, we wanted to set up office in Middl e East. How things are panning out there? And are we planning to sustain INR8,000 crores annual number for next year also?
Management: So just to answer your question, you have seen that we have already sustained. It's already -- we have already reached till INR7,700 crores. There's one more month to go. And there are many projects under discussion. Sometimes these gets materialized. Even we -- many PSUs would like to certainly rush before the March.
So we're hopeful that something would get realized and we'll cross that INR8,000 crores mark. So that means for the last 2 years, we have maintained around the INR8,000 crores -- 8,200 last year which was there. And it's almost the similar range we'll be reaching. So it will be a sustainable figure. So we'll try to work on this to increase it in the future years -- in the further years.
At the same time, with respect to the -- you're talking about the overseas? Overseas, we are putting a lot of focus. We are seeing that we've got major projects from Nigeria on this Dangote refinery. We also got the fertilizer projects. We're also targetin g many other projects in many

other zones, including the Middle East. And Abu Dhabi is there. We are also in the new stages of Saudi Arabia. Let's hope for the best. K

uwait, we are getting some assignments. Oman, we are getting. So all these areas we are working on. Overseas, you will get a good growth in future.
Amit Anwani: Right. Sir, second question, our current book of INR16,000 crores plus, you said more than INR10,000 crores is already Consultancy, which is 65% of total jobs you have in hand. Is it fair to assume that probably there would be a lot of operating leverage also and the mix would shift towards more Consultancy execution over next 24 months, and that w ould lead to good margin improvement?
Management: Like these projects have been awarded. The execution has just started. So next year would be the initial stages of the project. It will be a -- primarily the engineering phase would be there. So quite a good booking is expected, invoicing in that. It all d epends on the progress of the project. So we anticipate a good execution and as per the schedule what we have proposed and what we have considered. We are anticipating good invoicing and execution in that stage, unless there is an issue.
Amit Anwani: Right. Sir, what's the portion of infra orders in the book currently?
Management: Currently, it is around -- in the order inflow, it's around 25% to 30%.
Amit Anwani: And you expect that to continue, in fact, for the upcoming...
Management: Definitely. That would remain, yes.
Amit Anwani: Sure. Sir, lastly, for the quarter, after adjusting for this INR236 crores revenue and INR213 crores profits, which you have given, I think the EBIT margin for Turnkey is coming around 12%, if I'm not wrong. So is it the correct number? And if it is, was there any one -off benefit for this quarter for this kind of EBIT number?
Management: Yes, you are correct. Basically, after excluding that, the margins in the Turnkey segment comes out around 11%. As Director of Finance has already indicated, that in the near term, we are expecting a margin of around 7% in the Turnkey segment for a longer period and for the Consultancy between 22% to 25%.
Amit Anwani: Right. But this 11%, 12% was normalized margin. There's no one -off, right?
Management: No, it will be -- on a longer period, it will be around 7%. In one quarter, there may be -- basically, there may be more or less margin. But overall, it will be in the range of 6% to 7%.
Moderator: Our next question comes from the line of Kaushal Sharma from Equinix Capital Private Limited.
Kaushal Sharma: Just want to ask on our EBITDA margin in Turkey segment that I can see. In the 9 months financial year '26, margin shoot up from 6% to 19%. So what kind of the key growth drivers of the margin exploded in this level?

Management : Sir, can you repeat the question? And be a bit loud please and slow.
Kaushal Sharma: So my question is on what kind of key growth drivers in the margin that we achieved so that the

margin exploded from 6% to 19% in 9 months financial '25 -'26 in Turkey segment?
Management : In this 9 months, we have got a change order from our client. In one of the major project, we were keeping provision for the penalty for the delay or you can say liquidity damage, but we have completed the project within the extended time period given by t he client. So client have issued the mechanical completion -- mechanical completion certificate without levy of any sort of penalty to EIL. So we have reversed the provision. That's why there is an impact of around INR226 crores on the turnover and INR213 crores on profit side. But it is a routine business. It is a part of a routine business to EIL. We continue to get change order in the projects.
Kaushal Sharma: So are we expecting this kind of one -off in this project because we are having a historically high order book as of now...
Management : We are doing a lot of projects, and every time we are getting change order from the clients, and we are getting additional

price for the work done also. So it's a part of routine business to EIL.
Moderator: Our next question comes from the line of Nilesh Doshi from Prospero Tree.
Nilesh Doshi: Sir, my question is in connection to the earlier participant question. Sir, you mentioned that INR226 crores were recognized in the quarter 3 because of some non -penalty from the order. But sir, this is a routine practice you said. It has happened every quarter or sometime? Or if we -- have we executed the order and recognition happened in this quarter ? So what happened? Kindly explain this thing, sir.
Management : Sir, EIL is doing so many projects, and every projects have their deadlines. So whenever project starts to get delayed, we made a provision for the delay portion. In case -- as per terms of contract, in case any PRS or liquidity damage is there, we keep pr ovisions. But we try to complete the time within the extended period also, and then we apply for the time extension to the client. And in most of the cases, we get the time extension from the client. And whenever time extension is got, we reverse the provision for the penalty. So this is the routine business and as per acceptable accounting standard practice.
Nilesh Doshi: Sir, in which quarter the provision was made? And was it mentioned -- was it informed to the shareholder and was it -- because the -- I don't know whether it was informed that INR226 crores provision was made because of the late execution of the order.
Management : Sir, it is a part of our routine business, and it is shown to the statutory auditor and other auditors also. So it is not a question that that we show in the balance sheet which project is going delayed. It is part of our...
Nilesh Doshi: Sir, sir, sir -- sorry, sorry. I'm not asking for the name of the project, but whether the execution was done and the provision was made. So in that quarter, the particular quarter...

Management : Sir, I have told you it is not only for one quarter.
Nilesh Doshi: Though it's a positive surprise for the investor, but it's a shock for us because we can't predict the result...
Management : Sir, it is not a surprise for the investor. It is the routine practice of the company like EIL, where revenues are run from the implementation of the projects. Whenever contractual obligations are completed, any kind of provision which is made against the contractual obligation is always reversed. And it is a routine practice and it is done on quarter -to-quarter basis. Sometimes amount may be more, sometimes amount may be less. If amount is more, it is -- it gets noticed. Otherwise, it is done o n a routine basis.
Nilesh Doshi: So is there any provision made in the current quarter? Any project...
Management : Sir, how many times...
Nilesh Doshi: No, because there was a reversal -- when there was a material amount of the reverse, there the profit is inflated or -- it looks very high in comparison to the earlier quarter.
Management : Sir, that project was itself more than INR6,000 crores. So that's why amount is high. If the project was high, provision will be high.
Nilesh Doshi: Sir, with due respect, we are saying that whenever the provision is such a high amount, the provision is bad, please inform to the investor. And that's why the profit of that quarter was down. And this year, this quarter, the profit is higher than the earl ier quarter.
Management : Sir, if you try to listen, then you will get the answer. Sir, we have informed to the investor. You kindly see the notes to the accounts. In the notes to the accounts, it is clarified. I think you have not seen the notes to the accounts.
Nilesh Doshi: I'm not talking about the current quarter, but earlier quarter when the provision was made.
Management: Yes, provisions are made during the duration of the contract. Contract duration is from 36 to 42 months.

During that period, every quarter, the provisions are made. When the project is completed, no liquid damages are levied, that is being written back in the current quarter. So

provisions are created over a period of time, not in one quarter. It is created over a period of time. The contract duration is 36 to 42 months.
Management : And provisions are always shown in the financial results.
Nilesh Doshi: Thank you. But I'm not happy, sir.
Management : Sir, you should be happy with the -- this kind of results, sir.
Moderator: Participant has left the queue. Our next question comes from the line of Krushi Parekh from BugleRock PMS.

Krushi Parekh: Good set of numbers. So congratulations on that. And given the nature of the business, the execution is fairly decent this time. My question is that when we are just looking at it from a pretty longer -term perspective, we have a very healthy order book to be executed over next 3 to 4 years. But in terms of incremental order book, you also mentioned that we are looking at quite a healthy scene from the Middle East, especially now that we have office in the UAE, right? So what kind of traction are we seeing over there? And what kind of order booking are we looking at on an incremental basis? Is it something which is healthy and staying at a higher rate than what we have normally seen in the past? Or it's just pretty much normal what we see?
Management: Gentleman, it is like this. We're not saying that it is only from the Middle East. It is from the overseas we would be targeting more. We have shifted our focus from the domestic to the international market also as a strategic outreach of the international markets. So we are putting a lot of efforts on the international market to get more business. At the same time, we are working in the Indian market also. Wherever the projects are coming, we are just focusing on those projects and getting thos e projects.
So the approach is -- the aggressive approach has been adopted in both the segments. So we are working towards it. It's not only the Middle East. It would be Nigeria also, Africa specifically. In Nigeria, we have been very successful in this business. We'l l be targeting more projects in that zone and in that continent as well as -- in the Middle East region, it is -- Saudi, Oman, Kuwait, in all those regions we are working, as well as in the South America also we are working. So it is the continuous effort to increase our business and presence in these segments and try to get more business.
Krushi Parekh: Okay. And how are the project announcements or interest over there, I mean, considering the oil has been...
Management: Projects are always there. Like what happened is in the Middle East countries, there is a process of getting yourself empaneled with the organizations, with the oil refining companies or oil producing companies. So we have empaneled with majors like -- a simple example is ADNOC. ADNOC is a group of companies in Middle East and basically -- specifically, in UAE, which handles refining, petrochemicals, onshore oil and gas and all those segments.
So we are empaneled with them for providing engineering services. Then you get the competitive -- you get into the competitive bidding of their all kind of projects because all these companies are expanding their oil assets. And there will be a lot of proj ects. Some could be the grassroot facilities, some could be the revamp and some could be the modernization. It also includes the studies. These kind of assignments are the continuous activities which are going on. So we are very much focused on those, and we are invested with these countries and getting a lot of inquiries and working on this.
Krushi Parekh: Okay. And specifically, towards the international market, what kind of -- I mean, we have shifted some of our strategy to focus also on

the international side. What have we seen in those markets that we have now started to focus a bit more over there as we ll?

I know that -- I understand that we have always had presence outside of India, but it is just over the last couple of years that I am seeing more traction over there. So what are we seeing on the ground that is -- because of which we are focusing additiona lly into those markets as well?
Management: First is, if you talk about the Indian market, Indian market is mostly the public sector companies, which are mostly on the competitive basis and L1 basis. There's no focus on the quality. I mean, if you go into competitive environment, it is -- L1 always matters. But in the international market, quality also matters. So they will always give a preference to the quality, experience and capability of the company.
So wherein in these markets, this gives us an advantage. You know that we have the experience of working in India, almost 6 decades of experience, and we have worked on a lot of complex

projects. Maybe -- if you can see the Indian refining and hydrocarbon sector, we are involved since its inception and done a lot of projects and a lot of modernization, a lot of troubleshooting. So nobody has this kind of experience anywhere else.
So this experience always gives us an advantage in the international market, because there also, they have a lot of new projects as well as a lot of development projects. Specifically, in Indian conditions, the projects have been expanded in various phases . It's not in one go all the plants have come. So one refinery will be set up at 5 MTPA and it will be graduated from 5 to 15, 15 to 25. That's how they expand. So that kind of experience in the international market is very limited.
So this kind of experience and the nuances of working in these kind of plants and revamp projects gives us an advantage in international market. And the database we already have because of working on these projects and the experience of the people and the manpower which we have. We retain our own permanent manpower. That's the core of our business. So that's how we get the advantage in the international market, wherein your experience and capabilities are more preferred with respect to the price.
Krushi Parekh: Wonderful, wonderful. Great. My second question is, have we provided whatever is related to the pay commission for FY '26 and FY '27 wherever it is applicable? Or the impact that will be there in the FY '27?
Management : Yes, we are keeping the provision for the pay commission. Whenever it will come, we have sufficient provision in our...
Krushi Parekh: So it's already provided. And any major salary jump or something? What kind of margin on the -- I mean, impact on the margins it can have over, say, next 1 or 2 years at least?
Management : I think impact will be tell only when the exact details of pay commission is known. But based on past experience, we are keeping provision for the same.
Krushi Parekh: Okay. So we have already started to provide for it.

Management : We have already started.
Moderator: Our next question comes from the line of Darshika Khemka from AV Fincorp.
Darshika Khemka: I had a question regarding the Dangote order. I believe we had 2 press releases on this. One was in November regarding the Dangote fertilizer complex, and another was the Dangote expansion project in Nigeria in January. I just wanted to clarify that an amo unt was not written for the fertilizer complex. Is it included in this INR3,150 crores? Or is there a separate value for it?
Management: No, madam, that is a separate value, and that has been declared in the earlier -- I think in the earlier reporting also. So it's around $70 million, something around INR600 crores. And this is not included in IN

R3,200 crores, which is -- which we have just received. Because these are 2 separate projects. One is a fertilizer project and another one is a refining project.
Darshika Khemka: The expansion project, correct. So where is this INR600 crores included, sir? This is the part in Q2 FY '26 for the INR615 crores order, correct?
Management: Just let me check. Let me check.
Darshika Khemka: Which was received in September, if I'm not wrong.
Management: Just a sec. Just a sec. Just a sec. Ma'am, this has been indicated in Q2 '25 -'26.
Darshika Khemka: Yes, this is the INR600 crores project...
Management: No. Sorry, sorry, sorry. Just a sec. Just a sec. So sorry. It is -- yes, it's Q2 '25 -'26. In the overseas, you can see. It's INR615 crores.
Darshika Khemka: Yes, got it. Yes, correct, correct. Got it. Another question that I had was around the guidance for the revenue that you're giving for FY '27. I believe and I expect that the execution will be much stronger by '27?
Management : Definitely, ma'am, execution will be much stronger and our...
Darshika Khemka: If you could a gross number, it will be really helpful.
Management : Madam, that totally depends upon the progress of the projects achieved during the year. And definitely, based on the progress in the last month of this financial year, we will make -- we will give some guidance for the next year. But till now, we are givin g guidance for this current year only.
We will be reaching more than INR4,000 crores in terms of revenue. And definitely, INR4,000 crores will be the minimum target for the next year also. And we are sure that we will add some more figure to this. But we will be in a position to tell only after completion of this financial year.
Moderator: Our next question comes from the line of Amit Anwani from PL Capital.

Amit Anwani: Sir, one clarification on the higher other income. What was included here? And what -- was there any dividend from NRL? Just...
Management : So yes, we have received the dividend from the Numaligarh Refinery to the tune of INR24 crores. And that has been included in the third quarter.
Amit Anwani: And what's the steady state run rate for dividend income we should expect for next year for NRL?
Management : NRL is giving on the same pace because NRL is going into expansion and expansion is being carried out. So dividend income he's giving on a routine basis because he needs money to complete the project.
Amit Anwani: Right. Sir, second update on Ramagundam. I hope that plant is stabilized now. So what is the expectation for next year and 4Q in terms of performance in Ramagundam Fertilizer plant?
Management : At present, Ramagundam plant is running on full capacity. And till now, it is 13th Feb. Plant is running well, around 100% capacity. So we are sure that the profit will be realized. Profit will be continued to be realized in the fourth quarter also and nex t year so. Plant is almost stabilized.
Amit Anwani: All right. Sir, lastly, would like to understand more on the infra order inflow pipeline. I think in the past, you have highlighted taking some orders for IIT Jammu Kashmir and some training complex order from ONGC and I think there was some data center or der also. Just wanted to understand the infra pipeline in terms of are we going to get more data center orders?
Or how we select that where we want to be in terms of getting the infra orders? So some more color on this infra pie since this is becoming bigger in your order book, will give us much better understanding in terms of your addressable market and what's the potential here.
Management: So going on this year, in the last -- till this quarter, we have got various orders from the infrastructure segment on OB basis as well as depository basis. Some of them are from the IIM Jodhpur. One is from the IIT Jodhpur and one is from the IIM.

Another is from - you know that
was ONGC Convention Center which we are -- we have done, where in this India Energy Week has been done. Similarly, we are talking to -- recently, we got an order from NTPC for their township.
These kind of niche segments we are targeting. We don't go into the regular residential building construction. We go into the niche areas wherein the client wants to create a township, wants to create a research and development facility or wants to create a convention center. These kind of niche negotiated contracts we get into. Similarly, at the same time, the airport, like the airport -
- Leh airport we are doing, which is a green airport, which we have designed. At the same time, the airport which is com ing in the UP in Noida, we were involved in that.
So these are very niche areas wherein we work. Some of the data centers we have done in the past, like SBI, UIDAI -- SBI and RBI. So all these are the data centers wherein we have got

involved as a consultant, as a project management consultant. So these are the areas we have been working.
Apart from that, we are working into the -- like projects wherein green intelligent buildings are there, water and wastewater management projects are there. The agricultural facility, which has been created in Haryana, we were the consultant for that, desi gning that facility. So these kind of niche projects we have been involved in infrastructure segment.
Amit Anwani: Right. Sir, lastly, on the recently announced CCUS allocation in the budget for next 5 years, roughly about INR20,000 crores. And I understand that we had an MOU with NTPC to do some collaboration for carbon capture and storage systems. I wanted to understand your thought. After this policy, are you seeing any pipeline for you? And do we have the...
Management: Listen, NTPC, we have various -- NTPC, we have various agreements. One is for the engineering services, wherein we have to work for various development projects, like they have been working on the green urea, green ammonia projects. They have been working on the projects of their power plants, wherein they need some sort of engineering services like structural audit of their facility. These kind of projects we do.
We also signed another agreement with them for offering them inspection services. We are also in talks with one of their subsidiary for offering the inspection services to their client. Because there are a lot of projects they have and they needed our supp ort, and that's how we have entered into this agreement, and we are supporting each other. We've also got one of the assignment for a coal gasification project for them. They're setting up a coal gasification plant. So we are working on that as a consulta nt for them. So this kind of arrangement has been done under this MoU.
Amit Anwani: Right. So any carbon capture you're looking since this policy is in place? Will it be like viability

gap funding? Or what exactly -- any other funding or...
Management: So on the carbon capture, internal studies are going on and we are in talks with some of the technology providers to see how we can synergize our offerings with their technology. So it's at a -- right now, at a steady note, but definitely something will co me up from that also.
Amit Anwani: Right. Sir, lastly, on the inflow, is it fair to assume that consultancy still will be the dominant share in the order inflow for next year?
Management: I think it's always in the same range. Sometimes consultancy crosses the 50% limit and sometimes remains -- it almost remains in the same range. This year, it is expected to be a little bit more. That will get concluded only on 31st of March, because if so me order -- another order is realized from somewhere -- we'll see. It depends.
Amit Anwani: And sir, the current book, what is the duration for execution for Consu

ltancy orders and same
for the Turnkey orders for the INR16,000 crore s book?

Management : Generally, these projects are ranging from 3 to 4 years.
Amit Anwani: Both sides, Turnkey and Consultancy?
Management : For both the projects. So these are the long gestation projects and generally runs from 3 to 4 years.
Moderator: Our next question comes from the line of Prateek Dugar from Intelsense.
Prateek Dugar: Congratulations on a good set of numbers. Sir, this is not much of a question, but rather some suggestion that if you could provide some sort of a bidding pipeline. I'm not saying that we share the name of the projects, but something of the sort that some number of projects in the, say, INR100 crores to INR150 crores range or INR150 crores to INR300 crores that we are bidding for. That would actually help the analyst community. So could something of this sort be possible, sir?
Management: This kind of number is very difficult because we depend on the investment by the oil companies. Recently, the oil companies have indicated -- like IOCL has indicated their INR32,700 crores investment. ONGC has indicated INR30,000 crores. BPCL has INR25,000 crores. These are the upper investments which may come in the future from their side. This could be multiple projects. This could be multiple smaller projects. So it all depends. Whenever they come out with the -- any tender, any mega project, we'll be bidding for it. So it's very difficult to tell the exact number what we are bidding for.
Prateek Dugar: Okay, sir. And the other thing, sir, about -- I think last quarter also, we had seen some -- an exceptional income on account of some BG refund. And this time, we are seeing a very big impact on the profit of -- it's a good impact only, a positive surprise for the investors. But this is on account of some LD reversal you are seeing. So was this for some particular project? Or multiple projects we have recognized this time?
Management : This figure is for one project only.
Prateek Dugar: Okay. And so, sir, I was thinking that if you could -- like given -- any other projects where we have this sort of a major reversal that we may see coming? So that was my question, I think.
Management : It depends on client because we are doing a lot of projects for the client. And whenever schedule time is gone, we start keeping provision for the LD. And whenever project is completed, we apply for the time extension to our client. And most of the time, w e get the time extension from the client and we reverse the provision. This is the routine practice of EIL as per accepted accounting principles. So it is done for each and every project.
Prateek Dugar: Sir, on the bookkeeping side, I mean, where would this figure -- say, if you have made a provision, where would this figure be appearing on the bookkeeping side?
Management : In the provision guarantee and warranty. Provision for guarantee and warranty, it is for the contractual provisions.

Moderator: Our next question comes from the line of Palash Jain from ICICI Securities.
Palash Jain: So my first question is, has there been any initial discussion in the carbon capture opportunity post the budget? Or in your opinion, this will go in FY '27?
Management: Even before the budget announcement, we are working on carbon capture initiatives, and we are regularly in touch with some of the technology providers to see our service offerings in this domain.
Palash Jain: Okay. And my second question is, do you think that we have exhausted the Indian pipeline in petchem for refinery and consultancy in the near term?

Management: We have exhausted? No. Hello?
Palash Jain: Hello?
Management: What is your question?
Palash Jain: So do you think that we have currently exhausted the Indian pipeline in the

petchem for refinery
projects in the near term?
Management: No, no, no. Not at all, not at all. Not at all. You see the figures. Government has still -- there are a lot of capacity expansions, and petchem expansions has been lined up by government. Government has already indicated that they are going to increase th e refining capacity as well as the petchem capacity by 2030. So you have a lot of projects in pipeline. But these are the cyclical projects. When they get revised, it will be taken. Many projects are there on the anvil.
Palash Jain: So is it near -term visibility? Or this will come in future?
Management: No, no, it is maybe in the next year. You must have heard about Andhra refinery. There is a talk about Andhra refinery. So Andhra refinery from petchem, it could come in next year. These are the bigger projects. Paradip, we are already doing.
Management : By 2040, our energy demand is going to be doubled. And fossil fuel will be part of this energy mix in the 2040 also. So government is planning to increase the crude refining capacity and increasing the share of gas -- natural gas in the energy mix from 6% to 15%. So a lot of projects are there. And petrochemicals -- petrochem consumption is also increasing in India day by day. And it is very low in comparison to the developed countries. So a lot of scope is there.
Moderator: Our next question comes from the line of Manoj Sah from LaxGov Investments .
Manoj Sah : Just wanted to check with you, how do you see the revenue mix between Consultancy and Turnkey over the next 2, 3 years? If I remember a few years, you wanted to change the mix from when Turnkey was higher to Consultancy. And now what I'm seeing the trend i s, it's again Turnkey share is going up. So can you please guide a little bit how you want to -- where you want to focus over next 2, 3 years?

Management : Actually, we always try to keep our Consultancy business list in the range of 55% to 60%. But this is hovering 45% to 55%. So sometimes Consultancy business is 55% and sometimes LSTK business is 55%. This is the general range for the last 3 years. But we always keep to [inaudible 0:54:57] more segment profit is there.
Manoj Sah : See, if I remember a few years, you were saying that you normally use the EPC as a -- or Turnkey as a filler to utilize the resources if we don't have the Consultancy project. Is that the way you still work on?
Management : You see in the India, more and more consultancy business is also coming, more and more refinery projects are there, Petchem projects are there, a lot of pipelines are there. So as on date, we cannot say we are sitting idle and we should focus -- we are foc using on the LSTK business. So first of all, definitely, we are focusing on the Consultancy business, and we are getting it also, not only in India, but outside India also.
Manoj Sah : Fine. Fine. Because I know that it takes a lot of time to change the order book mix from Turnkey to Consultancy or Consultancy to Turnkey. It will take 3, 4 -year cycle normally, which is what I have observed...
Management : You can see our order book as on date is INR15,600 crores. And out of that, INR10,000 crores is from the Consultancy business only. So around 67% order book is from Consultancy business as on date.
Management: I would like to add that in the LSTK business, we don't go into the regular LSTK business. We only take the open book estimate, OB kind of projects, which are more secured, less risk and the returns are confirmed.
Manoj Sah : And have you worked on anything -- like in case of cost escalations, your margins are protected in these LSTK projects? Or because -- previously, we have suffered because of these cost escalations. So how it has changed over the years in the contract?
Management : Now we have changed the business model. As my colleague said, we are already tar

geting open
book estimate, which is cost plus contracts only. So whatever cost is incurred, client is reimbursing that. And upon the cost reimbursed, we are charging our fixed margin -- fixed markup. So our markup is intact, and there is no escalation from our -- in the cost because escalation in the cost is borne by the client. So we are on the safer side.
Manoj Sah : And with respect to one of the participant's query, you said that whenever there is a -- if my understanding is correct, you can just confirm it, that whenever there is -- a project is going behind the schedule, okay, you provide for the provision for a de lay or penalty for that project, okay? And if by the time of completion of the deadline, if the project is within the time line, you

reverse that provision. Is that correct?
Management : Yes.

Management: Gentleman, please try and appreciate that this is a provision of the contract, okay? Whenever a contract is awarded, this is a risk provision you always make in any of the pricing you quote. So you make a provision, you keep that money aside. And when the project is executed, you don't face any consequences, then it is released as part of the revenue and it is added to your profit. It's a risk provision which is always made in any of the contracts.
Management : That kind of provision is always made in the Consultancy as well as OBE projects. From a project point of view, there is no differentiation in the practice followed.
Manoj Sah : Okay. No, no, I'm saying that because the previous participant was -- one of the participants was saying -- you replied that you reverse the provision what you have made because the project is now getting completed on time. You have earlier made the provis ion because project was running behind the schedule.
Management : No, no. Whenever project starts get delayed, then we create the provision. And on the completion of project, we apply for the time extension to our client. And in most of the cases, we get the time extension from the client. And upon the receipt of same, t he provision is reversed.
Manoj Sah : Okay, okay. Fine. Yes, in project business, I understand that because some of the projects may have a penalty clause, so you provide for that. I understand.
Management : Sir, all the projects are having penalty clause, but it is not implemented by the client. Because when...
Manoj Sah : Yes, it depends on client. All right.
Management : Because EIL is not solely responsible for the delay of the project, sir. That's why client gives the...
Manoj Sah : [Inaudible 0:59:51] client also, yes.
Moderator: As there are no participants in the queue, I now hand the conference over to the management for the closing comments. Thank you, and over to you, sir.
Management: Thank you.
Management: Thank you so much.
Kishan Mundra: Thank you, team.
Management : Can we close now?
Moderator: Yes. Ladies and gentlemen, thank you so much for joining the conference call. On behalf of DAM Capital Advisors, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Call: May 2026

“Engineers India Limited Q4 FY26 Earning Conference Call ”

May 22 , 202 6

MANAGEMENT : MR. SANJAY JINDAL – DIRECTOR (FINANCE)
MR. SUVENDU PADHI – COMPANY SECRETARY AND
INVESTOR RELATIONS
MR. R.P BATRA –EXECUTIVE DIRECTOR
MR. VIVEK MIDHA – CHIEF GENERAL MANAGER ,
MARKETING & BUSINESS DEVELOPMENT
MR. AMANPREET CHOPRA – SENIOR GENERAL
MANAGER
MS. NEHA NARULA – SENIOR MANAGER
MODERATOR : MR. KISHAN MUNDHRA – DAM CAPITAL ADVISORS
LIMITED

Moderator: Ladies and Gentlemen, Good Day and Welcome to the Engineers India Limited Q4 FY26 Earning Conference Call.
As a reminder, all participants ' line will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*" then "0" on your touchtone phone. Please note that this conference has been recorded.
I now hand the conference over to Mr. Kishan Mundhra from DAM Capital Advisor s Limited. Thank you, and over to you, sir.
Kishan Mundhra: Yes, hi, thanks, Julius, and a very good afternoon to all of you. Thanks for joining in.
So, today we have with us the "Entire Management Team of Engineers India to Discuss the Q4 FY26 Results ," and then we will follow it up with the "Q&A. "
From the management, we have with us Mr. Sanjay Jindal, who is the Director , Finance ; Mr. Suvendu Padhi, who is the Company Secretary ; Mr. R.P. Batra, who is the Executive Director ; Mr. Vivek Midha – the Chief General Manager, Marketing and Business Development ; Mr. Amanpreet Chopra, who is the Senior General Manager ; and Ms. Neha Narula, who is the Senior Manager.
With that, I will hand over the call to the management for their opening remarks. Over to you, sir.
Management : Thank you, Mr. Kishan. Good afternoon, everybody, and a warm welcome to all to Investor Meet.
We have declared our Annual Results for the Financial Year '2 5-26 yesterday.
Company order book position has reached its all -time high and stands at Rs.15,109 crore s as on 31st March 2026, as compared to Rs.11,717 crore s as on 31st March 2025.
Order inflow during the Financial Year '2 5-26 stands at Rs.7,979 crore s against the previous year figure of Rs.8,214 crore s.
With respect to Financial Performance for the Year -ended as on 31st March 2026, on standalone basis, the company has achieved a turnover of Rs.3,849 crore s, which is the highest in the history of years. The turnover has increased by around 27% in comparison to the turnover of Rs.3,028 crore s during the last Financial Year '2 4-25.
The profit after tax increased by around 37% to Rs.638 crore s in comparison to the PAT of Rs.465 crore s in the last year.

The profit of Rs.638 crore s for the current year is the highest ever in the history of years.
Operating margin during the Financial Year '2 5-26 increased to 16.22% as against 14.76% in the Financial Year '2 4-25.
EBITDA of the company as on 31st March '26 stood at Rs.877 crore s in comparison to Rs.658.67 crore s with EBIT margin of 2 1.6% in comparison to Rs.658.67 crores, EBITDA margin of 20.6% as on 31st March 2025.
The turnover from consultancy and engineering segment during the Financial Year '2 5-26 stood at Rs.1,782 crore s and from t urnkey segment stood at Rs.2,067 crore s in comparison to Rs.1,678 crore s and Rs.1,349 crore s respectively during the last Financial Year '2 4-25.
The Company has achieved the highest ever earning per share of Rs.11.36 against the last year figure of Rs.8.28.
During the Financial Year '2 5-26, the company paid an interim dividend of Rs.2.5 per share , amounting to Rs.140 crore s. Further, the Company has proposed a final dividend of Rs.2.5 per share in addition to the interim dividend and against the face value of Rs.5. It means in this year we are giving 100% dividend to our shareholders.
In the 4th Quarter , the company achieved a turnover of Rs.899 crore s with turnover from consultancy and engineering segment , amounting to Rs.489 crore s and Rs.410 crore s in the t urnkey segment.
During the 4th Quarter -ended 31st March 2026, the company recorded profit before tax of Rs.195

crore s and profit after tax of Rs.152 crore s.
On consolidated basis, the company earned a p

rofit of Rs.691.59 crore s for the year -ended 31st March
2026 in comparison to Rs.579.77 crore s earned during the last financial year 202 4-25. Therefore, there is an increase of around 19% in the consolidated profit on year -on-year basis.
The profit of E IL Subsid iary, CEIL, has increased to Rs.24.71 crore s in Financial Year '2 5-26 as against Rs.20.62 crore s in Financial Year '2 4-25, increase in margin around 20%.
Now , some of the highlights are :
Highest order book position of Rs.15,109 crore s as on 31st March 2026, highest ever revenue from operation of Rs.3 ,849 crore s as on 31st March 2026, highest ever profit after tax of Rs.638 crore s with the P BT of Rs. 638 crore s against with the PBT of Rs.833 crores , highest ever EPS achieved of Rs.11.36 against the face value of Rs.5 .

Operating margin increased to 16.22% during the Financial Year '2 5-26 as against 14.76% in Financial Year '2 4-25.
EBITDA as on 31st March 2026 stood at Rs.877 crore s in comparison to Rs.658 crore s as on 31st March 2025.
Company paid an interim dividend of Rs.2.5 per share during the financial year, amounting to Rs.140 crore s. The board has further proposed a final dividend of Rs.2.5 per share with the face value of Rs.5 per share.
Moderator: We will now begin the question -and-answer session. The first question is from the line of Mohit Kumar from ICICI Securities.
Mohit Kumar: Yes, good afternoon and thanks for the opportunity. Congratulations for a very, very good year of order inflow especially for the consultancy. Last two years have been extremely good for consultancy order inflow. But h ow do you think about the opportunity landscape for FY27 for the order inflow for consultancy in domestic markets and the international markets?
Vivek Midha: Good afternoon. This is Vivek fr om marketing and business development. With respect to the last two years , we have seen that , we have sustained the business inflow at almost on the same rate. We are endeavoring to maintain the same kind of business inflow. But that there is a challenging situation out there in the market. As of now we are not seeing much of the impact coming. But in a couple of months it will be evident that which way it is going. If gets resolved in the Middle East then everything would be fine and we would be able to have control of it. But as of now we have to be very cautious about what is happening out there. In the Middle east part wherein we are serving there, we have seen a little bit of slowdown. The focus is more on the revamp of the facilities because of the damages what happened and the new projects are a little bit on the slower side. So exactly it is just two months. Let us hope for the worst, everything goes fine and we should be on the back track in tim es to come. But we have not seen in the domestic market anywhere any project being delayed or anything being done. Things are going like that. They are not cancelled or not folded up. No obvious information is available as of now. So we are hopeful that ev erything would be fine soon and we are going with that perspective.
Mohit Kumar: Do you think in your opinion that we can sustain these levels for the consultancy especially the domestic market?
Vivek Midha: The aim is to sustain that kind of business. We have a few opportunities available in future to come. But let us hope so everything gets resolved soon and then things go fine and go on track and let us see.

Mohit Kumar: Understood. We are sitting on a very large order book, especially 100 billion order book in the consultancy. Is it fair to expect consultancy to grow at 20 -25% CAGR over the next two to three years?
Vivek Midha: Consultancy, on t he conservative side should be 15 %-20%. We should accept that. It should be in the same range. Let us hope for t

he best. We get more business. We are targeting more of the
international and Africa part of it. So let us see we will be able to get something .
Mohit Kumar: On the IOCL Parad ip, I think there was a large order where we had booked part of the order and the part of the order was supposed to be booked in later. Is it fair to expect that the balance of the order of maybe 8 billion or 10 billion will get booked in this fiscal?
Vivek Midha: It is expected by the end of this financial year it should be able to be done because the first phase is about to be finished, because which is the feasibility phase , they will be going for the investment decision from the organization and then proceed with the second phase. So hopefully it should be

done by the last quarter and should be awarded then.
Mohit Kumar: Understood. Thank you and best of luck, sir.
Moderator: The next question is from the line of Amit An wani from PL Capital. Please go ahead.
Amit Anwani: Hi, sir, t hank you for the opportunity. My first question is on the Middle East. As you said, there is some slowdown and the GREENFIELD CAPEX is kind of seeing a challenge. I just wanted to understand what is the Middle East as a percentage of current order book? Is there w e wanted to grow a few markets, including probably Saudi, we wanted to get more orders for now, what is the thought process for the next 12 -18 months in terms of Middle East as a market and what is the current order book from Middle East?
Vivek Midha: So if we talk about the overseas business, around I think 30% has come from the Middle East side. I am talking about the business secur ed, not from the order book perspective. I am telling you that activities are going on like we have general services agreements with them and running agreements with them , a lot of engineering assignments are there, smaller and bigger. The big -ticket jobs are a bit on the slower side, which were to start immediately somewhere in April or May. The decision -making from the client side is delayed , because naturally, the focus has shifted on the revamping of the damaged facilities and awarding of the new projects is a little bit slower on the side. But , they have not publicly said anything about this that they are holding it off. They would be doing it. They are giving the positive hopes in this regard. And probably a little bit of delay may be there because it is a security concern out there. So , first focus has to be to protect the people and the facilities and then to start the new projects. So , there could be a delay of a couple of months. It looks like there is a silence as of now in the Middle East. So , let us hope it continues and the supplies and everything

is also starting. So , there is a positive outlook there. So let us hope in a month or so, if the resolution is achieved, we should be able to do so. And with respect to the Saudi, I would like to give you that information that the Saudi office has been established. We have recently signed a long -term agreement with Saud i Aramco for the in -kingdom services. We are about to sign another agreement with them for out -of-kingdom services, which will be signed because of this Bakr id time. So , after this, this will be signed. So , that is a long -term agreement going to be for five plus three years. So , we will be starting getting business enquiries from the client side and then start getting these jobs also in the times to come. So , that is the positive outlook we can share with you right now.
Amit Anwani: Right. But, sir, ex of Middle East, let us say, for example, Africa, where we are seeing very strong pipeline , so has anything changed in the past two, three months in terms of finalization? And how is the pipeline in the other overseas market s?
Vivek Midha: In Africa, in the month of last January, we have secured the biggest order fro

m the Dangote Refinery .
This expansion project is 3 ,000-plus crores , and a fertilizer project, which we have also secured from them. There are more opportunities around there in the same country. So , we are targeting them . Now, the focus is shifted into Africa because of this obstruction in Middle East, their alternatives would be developed in times to come. So , let us hope that Africa market will develop and more of the hydrocarbon would be explored and facilities would come up , and then this will open the opportunity for us.
Amit Anwani: Right. So , what is the timeline for this Rs.3,200 crore s order?
Vivek Midha: This is roughly around five years you can say.
Amit Anwani: Understood. So now, sir, in the current situation, what kind of guidance you would like to give for order inflow revenue for this year?
Management : Order inflow will stick to the existing numbers, which we have achieved around Rs.8,000 crores. We will try to maintain and sustain the same. Let us hope for the best for that.
Amit Anwani: So again, this year also it will be skewed towards overseas because the F26, we saw a very strong inflow, including Dangote from overseas , so this year also –?
Vivek Midha : Do not segregate between overseas and international, wherever you get a good opportunity, we will target. It may happen that you get a bigger project there, then that value becomes bigger, which specifically the aim is to achieve that target figure from whereve r it comes, whether it is domestic or international, our focus is on all the sides.

Amit Anwani: Right. So lastly, I wanted to ask, was there any revenue slippage , because we see relatively this quarter revenue versus expected was slightly lower , even on Q oQ basis, kind of not up to the mark ? And is there any impact of supplies or any other thing amid current situation to your kind of operations in terms of commodity cost impact or any other impact also ?
Management: On quarter -to-quarter basis, there is no slippage in the revenue because in the last quarter there was some chain orders that we received from the client and there was a chain order of more than Rs.200

crores, which we considered in the previous quarter. And that is why in the previous quarter, profits were so high. Otherwise, there is no slippage on the revenue part.
Amit Anwani: And sir, the current consultancy portion, what is the confidence in terms of margin? In 15,000, we have more than 10,000 consultancy now. So what is the steady state margin we can expect from consultancy and turnkey for F27, F28?
Management: We are continuously maintaining our consultancy margin in the range of 20% to 25% percent and in the LSTK business around 5% to 7%.
Amit Anwani: That should continue basis the current book?
Management: That will be continued.
Amit Anwani: Okay. Thank you so much.
Moderator: The next question is from the line of Vanshi G from Dalal & Broacha. Please go ahead.
Vanshi G: Thank you for taking my question. Could you please help me understand the order pipeline visibility over the next one to two years across your segments? Also, historically, what has been the conversion rate from identified pipeline opportunities into actu al order inflows? Like, for example, if the current pipeline is around Rs.10,000 crores, what proportion would typically translate into executable orders based on past trends?
Vivek Midha: The order opportunities are available in the market, even if you see the infrastructure, you see the hydrocarbon sector, there is enormous number of opportunities available. But all of them takes a long gestation period and in tendering cycle… most of them are the public sector and they take a long cycle of realization and tendering process is there. Any tendering process will take five to six months, seven months in awarding. So, those things are being followed.

And typically, a hit rate if we say that we generally hit it at the rate of 20 % to 25% of what we bid and what we see around. It is very difficult to say because the market is very broad. The end number of opportunities are there. So , that is how we go ahead on that.

Vanshi G: Okay, sir. Thank you.
Moderator: The next question is from the line of Nid hi Shah from ICICI Securities. Please go ahead.
Nidhi Shah: Thank you so much for taking my question. So , my first question is about the Middle East. What kind of opportunities do you think are available there? Are we expecting any orders from refinery or pet c hem in FY27? And is the scope going to be similar to what we have seen historically in India?
Vivek Midha: Yes, exactly , all the Middle East is primarily the hydrocarbon only, mostly the refinery, petrochemicals, onshore oil and gas , offshore. So what is the criteria in all these countries is , you have to empanel yourself with all the major clients there and you have running agreements with them, date contracts are there. So , there would be a competition with the limited number of companies and you bid for those. They keep on giving you assignments, could be a smaller engineering assignment like stu dy could be there, it could be field, it could be a major EMC project. So that way there are a number of types of assignments keep on coming and we keep on bidding for that and we keep on getting the assignments. So , primarily this is hydrocarbon only.
Nidhi Shah: Got it. And as you mentioned your long -term contract with Aramco, so this is basically your entry in and then bids will occur as they normally do. Is there some clause that there will be a certain amount of business that will be sent your way in these cont racts or is this just empaneling?
Vivek Midha: Nobody guarantees any minimum business. There is no retainership kind of arrangement in any of these kind of contracts. It is just that you are shortlisted, you do not have to go for open tendering, there would be limited number of parties you will be working around and you know that Saudi Aramco is pretty big and they have huge number of projects. So , they are always lacking in the number of consultants. So , that is the best part what we have opportunity ahead with us.
Nidhi Shah: Okay . And lastly , can we see that consultancy order inflow should be upward of Rs.6,000 crores in FY27 just like this previous year or do we believe that the number could be a little lower given how high the bas e is?
Vivek Midha: Nobody can predict at this point of time. Probably after one or two quarters we will be able to understand what is the situation like that. As of now the guiding factor is Rs.8,000 crore s around the total business including the LSTK as well as consultancy we are aiming to be there, try to achieve more than that. At this point of time this much we can say.
Nidhi Shah: All right . Thank you so much. I will get back in the queue for further questions.
Moderator: The next question is on the line of Ronak Chheda from A wriga Capital. Please go ahead.

Ronak Chheda: Yes, hi, thanks for the opportunity. My first question was in your 2025 annual report, it was mentioned that around 36% of your consultancy orders are won on competitive bidding. So , just wanted to check on the remaining orders which we win at the PSU customer, is it an L1 competitive

bidding or how is that? Is it a nomination business for us?
Vivek Midha: No, it is like this. Sometimes even if you say that competitive bidding could be with the number of companies, all the mostly PSUs go for the competitive bidding. Now , there is no nomination for them. They go on an open tender basis. You bid in that contract and you get the assignment.
Vivek Midha: It is kind of unwritten competitive analysis. Even thoug

h there is no formal tender, they float, but
they take bids from the number of parties and they negotiate with everyone. So, you can say, it is a negotiated contract, maybe a single negotiated becaus e you do not get to know that are they negotiating with others or not. So, now more or less it is a competitive world altogether. There is no nomination cases are coming from the public sector unless there is a very critical project or there is nobody in the industry who can do it or it is a very critical for these societies like suppose a Euro -VI project wherein you need immediate action by the instruction of the Supreme Court. So, that is how all the refineries came to us and we did that. Simi larly, the energy optimization project for all the refineries, because those were critical projects, that is how they came to us.
Ronak Chheda: Got it. And sir, you have won record orders in your consultancy business in F25 and F26. Given the maturity of the order book, should the next year, we should see a very strong growth given that 25% to 30% of the execution usually for these orders happen i n year -two and year -three, any thoughts?
Vivek Midha: These mega projects are mostly for the duration of three to four years. So right now, in this financial year it has been awarded. It is just in the initial stage. So next year, some of the projects will be going into peak and there will be peak of the exe cution.
Ronak Chheda: Understood. And sir, when the 8th Pay Commission kicks in, will you see an employee cost jump in let us say F27 and F28?
Vivek Midha: We do not see anything. That is for the central government as of now. Public sectors will come later.
Ronak Chheda: Okay. Understood. Thank you so much, sir.
Moderator: The next question is on the line of Kunal Bhatia from Dalal & Broacha Stock Broking Limited. Please go ahead.
Kunal Bhatia: Yes. Hi, sir. Thanks for the opportunity. Sir, I basically wanted to understand looking at the current scenario wherein due to the energy crisis, everybody is talking about getting more self -sufficient. So,

how about your consultancy order, especially from the India side? Are you all getting more enquiries? Are things fructifying on that end? Could you give some sense on that?
Vivek Midha: Okay. Primarily the focus of self -sufficiency is you buy the local manufacturing. That in the refining and hydrocarbon sector, we are one of the prime leaders. So, we have developed the market itself within India. So, a lot of manufacturing and a lot of v endors are within the country itself. So, that is how we contributed to the industry. With respect to the services part, in any case, we were available in the market and 100% of any kind of critical project of these hydrocarbons can be done in -house, we can do it, including a lot of technologies that are also being developed in -house. So, this has naturally boosted the utilization of the locally in -house developed technologies within India itself. So, that could be one of the opportunities for a ll the hydrocarbon organizations. So, that is what we see. But as far as the localization is concerned, vendors and all those are available in India. So, not much of an impact should happen from this side, because procurement is mostly from the Europe side or from the Southeast Asian side. So, let us see how it goes.
Kunal Bhatia: Okay. How about, say, the demand from ONGC like you got an order from IOC and also? But from these other oil and marketing companies and even on the refining end, are you getting any more traction or any more enquiries, anything which you would like to sh are?
Vivek Midha: These are the consultancy enquiries and there is no change. They keep on coming. Many of the ONGC facilities are getting revamped as a process. So, as a routine business, it comes to us as an enquiry. Similarly, the IOC will be floating the enquir

y. It wi ll be coming to us. So no specific, it
will be more . If you are talking about the A tmanirbhar Bharat , it will be more from the procurement side of it.
Kunal Bhatia: Okay. And s ir, also in terms of your business in consultancy, we did have this quarter, whether it be consultancy or the other business, did we have any kind of one-offs or any kind of write -backs which aided the margins , because even consultancy this Q4 time was a very high margin at 29%.
Management: No write -offs.
Kunal Bhatia: These were all the normalized numbers ?
Management: All the normalized numbers. In the last quarter, there was a ceiling order.
Kunal Bhatia: Right. In terms of Middle East, you did mention that the business was approximately 30% -odd, but how much of our current order book is Middle East -specific?
Vivek Midha: You can say 10% to 15%, around.

Kunal Bhatia: Okay, sir. Thank you.
Moderator: The next question is from the line of Mohit Kumar from ICICI Securities. Please go ahead.
Mohit Kumar: Yes, hi. Thanks for the opportunity once again. My question is on the coal gasification, sir. Of course, there is a second round of incentives government is looking to give to the players. Are you expecting few coal gasification projects to move to tend ering stage during the fiscal? And do you think given that the size of this incentive is much larger than the first round ? Do you think for us this could be a sizable opportunity?
Management: Yes, this is a good opportunity that government has increased the viability gap funding. The projects which were slowing down in between a s they were in the previous rounds, looks like the market is pushing for the coal gasification project. Few companies are going for the coal gasification. So , there would be opportunities , and one of the private companies is looking for a big coal to chemical project. So, there opportunities are now increasing. Let us hope for the best, it should come. Because more of our private ventures are coming in now.
Mohit Kumar: Yes, but with respect to some PSU project also to move more of the value chain and -?
Vivek Midha: Yes, PSUs are also moving. Yes, you have seen that Coal India has three JVs, those projects are also moving.
Mohit Kumar: For us, the opportunity size is how big is, do you think it is going to be sizeable opportunity for us?
Vivek Midha : It could be consultan cy, Rs.300, 400 crores, depends on what size of project and what services they want to take it and which mode they would like to take , because private sector would like to go on a different mode , the public sector companies, they go on a different mode altogether.
Mohit Kumar: Understood. My second question, sir, is on the profit from our associate . That income, of course, has become better in the last couple of quarters. The first Q1 and Q2 were bad, they think there are losses. But, is it fair to say that now they are stable and now they keep contributing at the current level of Rs.40-odd crore s per quarter?
Management: There was some problem, due to which plant was under shutdown or maintenance. But now the problem has been resolved. And in this quarter, the plant was running well. Therefore, the plant has generated a good profit. And we expect that plant will run on 100% capacity in this year.
Mohit Kumar: Understood, sir. Thank you.
Moderator: The next question is from the line of Maya nk Chaturvedi from HSBC. Please go ahead.

Mayank Chaturvedi: Thanks for the opportunity, sir. Sorry, I missed your revenue guidance for F Y27 and F Y28. If you can just repeat that for me, please.
Vivek Midha : That is too far right now. Let us hope for this year , then probably next quarter we will be able to tell you something.
Mayank Chaturvedi: Okay. I mean, I am just looking at it from

the perspective that our consultancy order book has more than doubled now in the last two years. So let us say if the Middle East conflict had not happened, then the projects that we have received in F Y24 and F Y25 could they be reaching those peak execution levels in F Y27 and F Y28, would that be a right understanding?
Vivek Midha: As of now, the jobs which are awarded, these are typically for three to four years, they would be like executed in three to four years , at the same time, we will be targeting the business. So if this war would not have happened, at least typically 15 %-20% increase would have been there in the business, or if it is market is open quite a bit or more projects come, we could land up in a bigger project s also depends on what kind of investments are coming in the market.
Mayank Chaturvedi: Okay, sure. The other piece would be, I am just curious to know if you have formulated any AI initiatives for your consultancy business ?
Vivek Midha: AI initiatives are generally used for our internal, like, engineering processes and costing purposes, not specifically for the selling purposes, but our internal processes, we are trying to improve like the costing system is there, we have generated AI utilizing this, we can extract the data quite fast. Similar, these kinds of initiatives we are doing for now . We have created a digitalization department within our company. So , to work on the new processes, we are bringing AI in the system itsel f.
Mayank Chaturvedi: Okay . So cost optimization in what aspect exactly?
Vivek Midha: What cost optimization is, I am just giving a reference, like we do for any of the projects, we do a lot of costing for that project , we take a cost of one of the projects, you need a lot of data, you need to access the historical data of your archive. So we have one of the example s I am giving you that we have started utilizing AI for accessing that data, analyzing and making the reports for that. So , just kind of things for improving processes, we are using the AI.
Mayank Chaturvedi: All right. Okay. Thanks for answering my questions.
Moderator: The next question is on the line of Amit An wani from PL Capital. Please go ahead.

Amit Anwani: Hi, sir. I have a question on infra business, which we have been highlighting that has been doing quite well in terms of inflow. So, just wanted to understand how much is the portion of infra business in inflow, order book and revenue for this year?
Vivek Midha: For this year, it is around 25% in the order inflow. In the order book, I do not have the figures right now, I will have to check specifically.
Amit Anwani: Okay. But what are the prospects you are looking here, like out of Rs.8,000 crores ?
Vivek Midha: Let me just tell you that we get engaged with the bigger institutions, like we are working with ONGC. You must have seen this. Goa is a convention center has been done and a training center has been developed. We are working on that project. And they are f urther developing their facilities. So , we are getting involved in that. We are working with NTPC in development of their township. We are working with a few government organizations, like Government of Rajasthan in development in their buildi ng institutes and facilities. We are working with certain IIMs or IITs for setting up of their hostels and the buildings and giving consultancy for that. So , these kinds of projects we are doing. Some of the data center projects are also we are doing right now. So , this kind of very niche projects we are targeting and with specific big organizations we are working.
Amit Anwani: Right. And now amid this crisis, I think the government is focusing a lot in terms of domestic energy production , consumption to reduce probably import and probably coal gasification , VGF was also a step. So , are you sensing any step whe

re you can benefit over the next 12 -to-18-months , some projects might be fast track ?
Vivek Midha: We are bidding for a few of the projects. Let us hope for the best because these are the new projects. Earlier all the coal gasification projects were on very slow pace and not much has been done in that. But now they are picking up the pace because of the government boost. So let us hope for the best. These projects get realized and see the light of the day. We are bidding for a couple of the projects, which we will get to know some of the time that what is the result out of it after the results.
Amit Anwani: Right. So anything you are sensing on biofuels, ethanol, biogas, where you might have any opportunity because you have been highlighting this ?
Vivek Midha: With respect to the biofuels, one sustainable SAP plant we are already setting up for MRPL. We are the O T consultant for that. We ourselves are also setting up CBG plant in Maharashtra with our own investment. So , these are the initiatives we are doing in this segment.
Amit Anwani: Okay. Thank you, sir.
Moderator: The next question is from the line of Aman from Astute Investment Management. Please go ahead.

Aman: Good afternoon, sir. A couple of questions from my side. First is on the Dangote side. So , can you give an update on both refinery as well as the fertilizer update , where are we in terms of different things?
Vivek Midha: These are contracts. These have been awarded to us. We are executing both of these projects.
Aman: Yes, I wanted to understand the timelines for the same.
Vivek Midha: It is around four years. Right now we are in the initial stage of engineering and ordering, supporting clients and ordering of the equipment s and facilities. Gradually, in a short period of time, initial site facilities would be started as well as retail engineering and other activities would start. Some supply would start coming. Document review would also start coming from the consultants. Li censor is going to give some documents. We will start reviewing those documents. So , it has started somewhere in January. So , it is just three, four months. And quite a good pace is there in the wor k. In fact, the owner itself is monitoring the progress and pushing the ordering and also we are working on a faster pace for these projects.
Aman: Can you tell me the amount also for us individually , what is the order for the fertilizer plants and what is for the refinery plants?
Vivek Midha: For refinery, w e were awarded for $360 million , and for fertilizer, we were given $70 million .
Aman: Okay, $70 million , was it for one line? There were I think four lines that was supposed to come up.
Vivek Midha: $70 million for four lines. It is a single contract.
Aman: Okay . And the execution for both do you think can start by the end of this year parallelly or do you think first refinery will start and fertilizer will be delayed to next year?
Vivek Midha: Too early. Our activities have started. They could be pre -started. Site activities would start a little bit. Engineering is in full progress , it is going on. Site would start early towards the end of this year or early next year. Three project activities will start at that time.
Aman: Okay . That is helpful. Sir, next is on Dangote only. I was reading there was plans of more such plants in Tanzania and other places also for b oth fertilizer as well as refinery. So, do you expect such kind of orders to be repeated? Obviously, not immediately but say FY28 or maybe FY29 and we are getting –
Vivek Midha: It all depends on the owner and negotiation, discussion. It is just in the preliminary stage on the news.

So, let it come onto the ground and we keep you updated in this progress .

Aman: Sure, that is helpful. Finally, on the domesti

c side, sir, a couple of big projects are coming up which
includes BPCL, Andhra , you have talked a little bit about the Parad ip project , but there are IOCL
different projects also and Haldia also. So, the initial feasibility I was reading, I think it is starting
now on the Andhra big project. Any timelines from where you can expect such things, FY27 and
almost it will be FY28?
Vivek Midha: Andhra feasibility study is on. There would be licens or selection to be done or it would start shortly.
And thereafter, probably towards the end of the financial year, they should be able to start the three
project activities and all. After the study is completed, they will have to go for the financial closure.
And we anticipate that they would start three project activities in this financial year itself. As I told,
the phase -1 is almost on the verge of completion , and towards the end of this year, they should be
able to start the phase -II of the project, that is the implementation and the second EPC award phase
and EPC execution phase, they may start.
Aman : And anything on Haldia or the IOCL, I think North, there is a Panipat or something is also coming
up?
Vivek Midha: There is nothing of IOCL , Haldia as of now. It is under discussion.
Aman: I am talking about the two different -- one is Haldia projects and one is IOCL, Panipat and all those
things.
Vivek Midha: No, Panipat P25 is going on. It is on the advan ces of construction and the commission soon. And
Haldia and all is probably in the initial stages … the study phase. We are not seeing the tender as of
now.
Aman : Sure, sir. On the Middle East side, how big do you think this business can be for Engineers India
over the next two, three years , not immediately, but given the opportunities that we are seeing, Middle
East and Africa both, if you can talk about for Engineers India ?
Vivek Midha: We have secured around Rs.300 crores and something.
Aman : That order we have secured. I am just trying to understand how big this can be for our company over
the next two, three years ?
Vivek Midha: So, it is going to be big. We have established officers. We are capturing those officers. So , around at
least we should be able to get Rs.1,000 crores or Rs.2,000 crores worth of projects there. We are
aiming to be big, but it takes time. And all this Middle East situation, let us see what will happen in
times to come.

Aman: Basically the inflection year for our company in terms of numbers and growth from Middle East and
Africa , do you think it will be FY28 or will it be more of FY29?
Vivek Midha: It should be towards the end of ‘27, ‘28, ‘29.
Aman: Sure, sir. These are my questions. Thank you for answering.
Moderator: The next question is from the line of Amitoj Singh from 36 0 ONE Capital. Please go ahead.
Amitoj Singh: Thank you so much, sir, for taking the question. I just have a query on what is the execution timelines
for a consultancy project versus our turnkey project? That is my first question. Thank you.
Vivek Midha: Both of them would be in the range of three to four years … any big project would take three to four
years. It is just the mood changes. It does not matter, but the time execution remains the same, three
to four years, depending on the size of the project. If a smaller consultancy assignment is there, it
could be on e year or so. But , a mega project … a good -sized project would take three to four years.
Amitoj Singh: Sir, I just wanted to understand that after this Middle East war, have we seen any uptick in enquiry
pipeline in the domestic market, both on the consultancy and the turnkey end?
Vivek Midha: We have not seen any change in domestic enquiries for us, at least, I have told earlier also. So, for
us, consultancy is a regular business. It is the same. Probably, supply side, there could be more
enquiries to the vendors and

contractors. For consultancy, it is same as usual , it is there. As a
consultant, all the Indian projects were to be executed by the Indian consultants also, whether it is
EIL or any other consultants.
Amitoj Singh: Okay. And any change that we have witnessed in the international enquiry pipeline?
Vivek Midha: International enquiry pipeline, I told you that Middle East is a little bit slow right now. Africa is
activating. Let us see. There is a lot of hype there in Africa. Because of this, maybe investments for
an alternative hub could be developed in Africa. So, there could be future opportunities there for all
of us.
Amitoj Singh: That is it. Thank you so much for taking the questions.

Moderator: The next question is from the line of Kunal Bhatia. Please go ahead.
Kunal Bhatia: Thanks for the opportunity again. Sir, in terms of this coal gasification, how much would be, say, the smallest or the largest of the order , so, what could be an average order size if coal gasification order was to be made?

Vivek Midha: Sir, these projects are in initial stage. I can tell you the rough project cost. Any regular project, the cost of the project would be around Rs.10,000 crore s and the bigger project which we are going for the multiple units and all, it could end up in Rs.35,000 crores to Rs.40,000 crores. It is very difficult to tell the consultancy fee at this point of time. I do not know what way they would be executing. It all depends.
Kunal Bhatia: Okay. But broadly speaking, what is the kind of opportunity that could open up for a company like Engineers India?
Vivek Midha: So, what I am saying is if the project size is around Rs.40,000 crores, so there is a big opportunity for us for consultancy services. It could be EMC, it could be EPCM , they could give some smaller assignments for the consultants. Basically, the study phase, the initial phase could be there, feasibility study could be there, or we could be part of as a consultant, be part of the detailed engineering process. So, those are very in the initial stages at this point of time. So, multiple ways we c an get associated with.
Kunal Bhatia: Okay. So, at the moment, there is no, say, sort of a minimum or an average size which we could share?
Vivek Midha: No, I am telling you the size of the project . I can not tell you the consultancy fee at this point of time.
Kunal Bhatia: Okay. Fine, sir. Thank you.
Moderator: Thank you. The next question is from the line of Nid hi Shah from ICICI Securities. Please go ahead.
Nidhi Shah: I just wanted to ask, in Q4, we have seen that the consultancy EBIT margins have been significantly higher than our guided 20 % to 25% range . And was there any one -off year, any specific project closing, something like that, or is that just the normal course of business the mix has changed for one quarter?
Management: In the current financial year, we have got the orders from our client, and in fact, that change order was Rs.221 crore s for which we have already incurred the expenditure. So, that was the major change.
Nidhi Shah: So, if we take out the impact of that, then what would EBIT margin for Q4 on the consultancy side be?
Management: No, in Q4, these are the normalized margins. Basically, there are no exceptional items , no change order. These are based on the execution carried out by the company, the margins are based.
Management: That I am talking about the whole financial year.

Nidhi Shah: Got it. Thank you.
Moderator: The next question is from the line of Saket Kapoor from Kapoor & Compan y. Please go ahead.
Saket Kapoor: Namaskar, sir. Sir, firstly, on the bid pipeline, if you could throw some light where we are L1 currently for both these segments ?
Vivek Midha: Sir, for the number of projects which we have bi d, some of

them are in the negotiation stage. It is very difficult to say that we are L1 or L2 because these are negotiated and resulted. But clear L1 which is available is the Parad ip. If it is awarded in this financial year , so, that would be coming to us. Otherwise, there are a number of projects where we have given the bid , we are in the negotiation process , we are discussing those. So, the result would tell that how we perform.
Saket Kapoor: And sir, then for this current year, how should our EBITDA blended margin profile should be or how should both the segment s margin profile we should factor in for the current financial year? And in terms of the revenue growth also, what should be the range that we should expect for this year ’s execution?
Management: For the current financial year, our segment profit in the consultancy segment will be around 20 % to 25%. That is already there and we will maintain that. And for the LSTK business, our business segment profit will be 5 % to 7%.
Saket Kapoor: And the revenue or the execution pace, what likelihood we should be doing on what we have done for FY25 -26?
Vivek Midha: Just now only two months have been passed and we are expecting minimum 10 % to 15% increase in the revenue.
Saket Kapoor: Okay. And sir, just one small casing point . When we see our results being uploaded at the stock exchanges, those numbers are not very clearly readable. So, we would request the secretarial team to take note of it so that going ahead steps are taken in verifying whatever had been uploaded is in the right manner. Is it readable or not? One can check it in the Bombay site also. We have to zoom in to

higher levels just to read out the numbers. Kindly take into consideration.
Management: Yes.
Moderator: Ladies and gentlemen, we take this as a last question. I now hand the conference over to the management for the closing comments.

Vivek Midha: Okay, thank you so much. Thank you , everyone for this participation. And it was wonderful talking to all of you. We will keep you updated in the next session and hopefully the market could stabilize and see the positive side of stopping the war completely and let us hope we do not get into the worst situation. So, let us hope for the best and we will talk next time and we will keep you updated on this.
Moderator: Thank you, sir. On behalf of DAM Capital Advisor s Limited, that concludes this conference. Thank you for joining us. You may now disconnect your line s.
