Subject: Transcript of the Earnings Call held for the quarter and year ended December 31, 2024

Dear Sir/ Madam,

With reference to our letter dated February 24, 2025 and February 27, 2025, informing you about the Earnings Conference Call for the quarter and year ended December 31, 2024, of International Gemmological Institute (India) Limited, held on February 28, 2025, please find attached the transcript of the aforesaid call.

This intimation will be made available on the Company's website at www.igi.org

This is for your information and record.

Thanking you,
Yours faithfully,
For International Gemmological Institute (India) Limited

Hardik Desai
Company Secretary and Compliance Officer
Membership No.: A35491

"International Gem mological Institute India Limited Q4
and CY '24 Earnings Conference Call "
February 28, 2025

MANAGEMENT : MR. TEHMASP PRINTER – MANAGING DIRECTOR AND
CHIEF EXECUTIVE OFFICER
MR. EASHWAR IYER – CHIEF FINANCIAL OFFICER

Moderator: Ladies and gentlemen, good day and welcome to the International Gem mological Institute India Limited Q4 and C Y '24 Earnings Conference Call.
As a reminder, all participant lines will be in listen -only mode . And there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing "*" and "0" on your touch tone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Bhavya Shah from MUFG Intime. You and over to you, sir.
Bhavya Shah: Good evening, ladies and gentlemen. From the Management Team we have Mr. Tehmasp Printer , MD and CEO, and Mr. Eashwar Iyer, CFO.
This conference call may contain forward -looking statements about the Company, which are based on beliefs, opinions and expectations as of today . The actual results may differ materially. These statements are not guarantees of future performance and involve risks and uncertainties that are difficult to predict. Our detailed safe harbor statement is given on Page 2 of investor presentation of the C ompany, which has been uploaded on the stock exchange .
Now, I would like to hand over the call to the management for Opening Remarks . Thank you and over to you , sir.
Tehmasp Printer: Thank you, Bhavya. Good evening, ladies and gentlemen. I would like to welcome all of you to the 4th Quarter and Full Year 2024 maiden Earnings Call .
I trust that every one of you have had a chance to review our Financial Results and Investor Presentations , which have been made available on both , the Stock Exchanges as well as our Company website. It's a pleasure to connect with all of you and share insights into our business , strategies and outlook.
Let me first start by saying that we are indeed grateful to have all our shareholders for making our IPO such a grand success. Thank you very much for that. We thank all of our shareholders for retaining their faith in us , just as our customers have done over the last five decades.
At IGI India, we take great pride in being a trusted name in the gem and jewelry certification industry, backed by the able guidance of Blackstone , the world's largest alternate investment manager, we have carved a niche and dominant marketing position in the jewelry certification market.
As the world's most trusted brand in jewelry certification, our mission is to ensure integrity, accuracy, and consistency in grading, e mpowering the jewelry ecosystem with confidence and transparency. We are the largest independent accreditation and certification service provider in India with over 50% of the market share , globally we have 33% of the market in the diamond

certification . And we are the leaders in certification of lab grown diamonds with over 65% of the global market share.
We serve in India nine out of the 10 top jewelry chains in India, and we service them , we certify for them . And we expect to continue this leverage to leverage this position , expand our global presence and establish IG I as the laboratory of choice to the large retailers and brands globally .
We are present across 10 countries. We have 31 laboratories, 12 in -factory lab setups, 18 gemological schools, and we serve over 7,500 customers globally. A nd are present across the entire jewelry value chain.
Our multiple services are in delivery formats such as the IGI laboratories , in-factory laboratories , mobile labs , strengthening our customer relationships and driving a distinct advantage for the Company. Our IGI S chool of Gemology provides us with distinct advantages that help us drive brand awareness , expand market opportunities and acquire new customers.
Le

t me now give you a brief understanding of the industry to help you comprehend the immense growth opportunities which lie ahead of us. The global diamond and jewelry gemstone industry is undergoing a significant transformation, driven by ever evolving customer preferences , technological advancements , and increasing demands for certification. The retail diamond jewelry market is poised for a steady growth fueled by rising disposable incomes, expanding middle class consumers, and the growing appeal of diamonds as an investment and luxury purchase.
One of the most prominent shifts in the industry is the rapid adoption of lab grown diamonds. Consumers today are more open to the alternatives that offer them accessibility, affordability ,

while maintaining their aspirational value s. Lab growns have seen increasing acceptance worldwide and their share in the overall diamond market is expected to rise substantially in the coming years. Advancing in production technology and changing perceptions around sustainability and ethical sourcing are further acceler ating this trend.

At the same time, certification is becoming an indispensable part of the jewelry ecosystem. A s buyers become more informed and conscious of the authenticity and the role of an independent certification body , has never been more critical than now. The demand for certified diamonds and gemstones and jewelry is expanding beyond the traditional markets, reinforcing the need for transparency and trust in industry . Beyond diamonds, the market is also witnessing a greater interest in colored stones and contempora ry jewelry styles. This is opening up new opportunities for certification and grading services.

The gems and jewelry certification market has a very high entry barrier, w ith only a select few operating at a scale. IGI has built a strong reputation through its technical expertise , highly skilled gemologist s, deep rooted industry relationships. India continues to play a dominant role in the global diamond industry with a significant share in diamond processing, certification and lab grown diamond production.

With the industry evolving at a rapid pace and certification becoming a keen key enabler for consumer trust, IG I is focused on strengthening its leadership position by expanding its presence , embracing innovations , and enhancing the overall customer experience. A s demand for both natural and lab grown diamonds continue to grow , IGI is strategically positioned to capture this immense growth opportunity ahead.

As we step into the 50th year of the IGI operations, I am very excited to lead the Company into its next phase of growth. We look forward to a long-term fruitful relationship with our investors and shareholders as we fo rge ahead in our goal of value creation in a responsible and sustainable manner. We believe that this objective will be achieved only through credibility and trust , both are the hallmark traits of IGI.

With these thoughts, I will conclude my discussion and hand over to call to IGI's CFO, Mr. Eashwar Iyer to discuss about the 2024 results. Thank you.

Eashwar Iyer: Thank you, Tehmasp. A nd good evening, everybody. Thanks for taking the call , and also taking the time out on a busy Friday evening. We are pleased to have this call making our first discussion on the financial results since the Company went public. As you may know, our company operates on a Jan to December reporting cycle, and we are excited to present the financial results for the calendar year 202 4.

In line with what was disclosed in the RHP, we are pleased to inform that IGI India has completed the acquisition of both the legal entities that was mentioned in the document , the IG I Belgium and the IG I Netherland entities have now become subsidiaries of the India entity for a consideration of Rs. 1,3

45 crores in December 20 24. This is in line with the conditions in the RHP on the utilization of the Rs. 1,300 crores of the primary proceeds towards this acquisition. We are , therefore , pleased to place on record that, for the first time, the Company will be placing the financial performance of the consolidated e ntity along with the standalone financials for India . We are happy to inform you that the Company is making significant progress towards meeting its strategic objectives of being the best in class certifying body for the gems and jewellery industry.

Coming to the consolidated performance, I am pleased to share some very exciting updates regarding our group's performance . On a consolidated basis , we have achieved a significant milestone of surpassing the Rs. 1, 000 crores barrier or Rs. 1,000 crores hurdle in revenues for the year. Specifically, the group reported revenue from operations of Rs. 1,053 crores and a total income of Rs. 1,088 crores, reflecting a robust 20% growth in revenues.

In alignment with our revenue performance and our commitment to efficient cost management, we are proud to announce a profit before tax of Rs. 585 crores , which marks an impressive 29% increase over the previous year. This has also led to notable improvements in our P BT margins which have risen from Rs. 55.6 in 2024, up from Rs. 50.7 crores in 2023, representing a 500 basis point s improvement.

Furthermore, our profit after tax for the year stands at Rs. 427 crores, also reflecting a 29% improvement over the same period last year. Our PAT margins have reached 40.6% compared to 36.8% , an improvement of nearly 400 basis points.

Finally, I am proud to report that the group has delivered extremely strong returns on capital employed, which stands at 48%, and a return on equity at 47% for the calendar year 2024, further solidifying our position in the market .

Our EPS stands at Rs. 10.74 as we end December 2024 versus Rs. 8.34 at the same time last year, an improvement of 29%.

Coming to standalone performance :

The India business has delivered remarkable results this year. We achieved revenues from operations of Rs. 785 crores, with the total income amounting to Rs. 817 crores, which is a significant jump of around 26% over the previous year.

Our PBT for the India business stood at Rs. 587 crores, representing a 31% increase over the same time last year. This has resulted in the PBT margins improving significantly, w e stand at 74.7% PBT margins, which is a 400 basis point improvement over 2023.

Our PAT stood at Rs. 439 crores, which is again a significant 33% growth over the PAT that we reported in 2023 , representing a 55.9% margin, which again is a close to 400 basis point s improvement from a PAT standpoint.

Finally, I am proud to report that India has delivered strong returns on capital employed at around 70% for India and a return on equity at 68% for the calendar year 2024. We are thankful to all our partners who ha ve enabled the Company to deliver such strong results . And we continue to be optimistic for the future.

Thanks for taking the time and we are now open for questions.

Moderator: Thank you very much. We will now begin with the question -and-answer session. We take the first question from the line of Kunal Sharma from SK Capital. Please go ahead.

Kunal Sharma : Yes, hi . I hope I am audible. So, first of all, c ongrats on a good set of numbers. So, sir, I wanted to ask on your acquisitions that how is the performance of these two entities, Belgium and Netherland? And what synergies are we getting in our consol basis ? And if we add both these acquisitions, then what it would be going forward be it in the FY ‘26 and beyond that ?

Eashwar Iyer: So, Belgium and Netherlands, both of them put together contribute to close to 25% of our group re

venues , okay. One of the important aspects is in terms of building a One IGI business, which is basically leveraging the strength of the India manufacturing and policing strength, coupled with the retail strength that IGI processes because of its presence is some of the key markets of China ,

US., or for that matter, in the Middle East. So put together, both these business es have been delivering exceptional results over the course of the last two years. The Netherlands business has actually delivered 20% revenue growth. Again, and profit after tax, again, we have seen some close to 100% growth in the Netherlands business. We have had some headwinds in the Belgium business , again, t hat's driven by the war that we are seeing in Europe, coupled with a little bit of macroeconomic slowdown. We are optimistic about both these businesses. We are hoping that the war settles down quickly enough for these businesses to bounce back.

Kunal Sharma : Okay . So, when it comes to lab grown diamond, so I just wanted to understand , in India how it's an emerging entity, so how is that performing out in India as well as in the opportunity that are we seeing in this export market as well?

Tehmasp Printer: Well, as far as lab grown diamonds is concerned , this is a new disruptor, and it's an emerging segment . And we have harnessed , IGI actually has today's 65% of the global market share of lab grown, o kay. And India is also the center of polishing, 90%, nine out of 10 diamonds are cut and polished in India. So , India is the polishing center. So, India, for the many last decades , have been doing 9 out of 10 or now 9.5 out of 10 polished and cut diamonds in India itself. So, we have taken a stronghold . And what lab ground offers today is a very affordability scale of diamonds. Both are diamonds and both are complementary and supplementary to each other. And lab grown gives you more affordability. So, diamonds are becoming more affordable, so the consumer base is fast expanding and new consumers are coming into the business. And depending on their economical conditions, they will go in for different diamonds.

Kunal Sharma : Okay . So, sir, just a follow -up on the lab grown side . See, a nyways, this entity is now emerging, but going forward, once it become s mature, would you really think the people who require the certification when it comes to a lab grown become a volume -oriented product , I would say ? So, would that be a threat to our business as well?

Tehmasp Printer: No. Good question. But in fact, certification becomes more important because the laboratory like IGI, identifies the origin of the diamond. It gives you the basic origin, which means whether it is earth mined or lab grown or man -made. S o that is the most important factor that is gaining grounds today . And if you see , around 1.5 % to 2% of the Earth's population buy diamonds and that is all natural . With the affordability and the sustainability factors of lab grown , this percentage over the next few years is expected to grow to 5% , even 10%. So , what's happening is , the consumer pie is

fast, exponentially expanding. And certification becomes a hallmark for a diamond. And I GI is very well factored into this position into this space.
Kunal Sharma : Right . And at what percentage we hold , we hold in the sense in the lab grown diamond in India what it would be, how much of the percentage , what percentage this particular sector is growing?
Tehmasp Printer: See, the lab grown diamond jewelry also is more readily accepted in the West, and India is fast gaining grounds on this. A nd we will see an uptick in the Indian industry also.

Kunal Sharma : Okay . And the last question from my side. So, s ince we are growing at 30 %,

35% of the earnings
growth, and the top line is quite good, and we have closed the calendar year . So, what are we targeting and what are our outlook on that particular front?
Eashwar Iyer: It is difficult to give any s tatement at this point in time. But what w e must all understand is , and just to add to what Tehmasp has just mentioned, that we are at an inflection point as far as lab grown diamond goes. Again, what Tehmasp did mention that in the initial phase of the last two, three years, there is a significant traction that the LG D segment has gained in the US market s. And over the last six, eight months we are starting to see a lot of customers in India starting to adopt or adapt to the changed environment as far as diamond goes. So , the lab g rown jewelry segment, which is very critical , considering the size of the middle class in India , coupled with its affordability factor , I think we are just at the tipping point as far as lab grown jewellery growth in India is concerned. So , we remain extremely optimistic for the future . And as Tehmasp mentioned, we are just at the beginning of what should be a very good run over the next three to five years.
Kunal Sharma : Okay . Thanks.
Moderator: Thank you. The next question is from the line of Sheila Rat hi from Morgan Stanley. Please go ahead.
Sheila Rathi : Thanks for taking my question. Hi , Tehmasp. Hi, Eashwar . Sir my first question was, just to understand the India business better this quarter. The growth rate seems to be at 3% on a year -on-year basis. So , if you could just give us a better understanding, how should we read this particular quarter in terms of numbers ? And some flavor on the segmental trend with respect to what was the demand with respect to certification of natural diamond s, lab grown diamonds? I think that would be helpful. That's my first question.
Eashwar Iyer: Yes. Hi, Sheila. Okay , very interesting question s, as always. So , yes, this was the Diwali quarter and we had a n extremely robust October where there's been a massive ramp up of certification and also inventory from a jewellery standpoint or from a loose store standpoint. So, our October performance was extremely strong. What followed in November, and it's normally the case, most manufacturers and growers actually shut shop f or 10 days, but we had an extended holiday this year in November, s o a lot of factories were shut for between 15 to 20 days this year. I think it's a good thing from a different perspective that the shutdown probably enabled the industry to therefore manage their inventory levels and therefore not build in further press ures o n pricing, etc. So, in that context, I think, we delivered again 6% growth on revenue for the quarter, which again is pretty strong but, again, it also puts in perspective that there is not u nnecessary build -up of inventory. So , we are seeing it from that standpoint in terms of how the quarter has panned out for us.
Sheila Rathi : Okay . And the segmental trends, Eashwar?
Eashwar Iyer: Sorry?

Sheila Rathi : The certificat ion trends with respect to natural diamond , lab grown diamond, h ow has the mix moved this p articular quarter ?
Eashwar Iyer: See, I wouldn't want to talk about the specific quarter . But again, the trend on the mix has been consistent across each of the quarters. So , what used to be close to 70 -odd-percent of jewelry certification , that’s d own to 58% . And the percentage on lab grown is , obviously, because of the growth rate at this lab grown is moving, that p ercentage which used to be around just over 20% is over 30% of our mix. So , it's been more or less consistent across quarters , Sheila .
Sheila Rathi : Sorry, lab grown 30% , is that stand alone number? I mean, sorry, lab grown revenues were about 50-odd-percent, right?
Eashwar

Iyer: No, I am talking from a number of certification standpoint , Sheila .
Sheila Rathi : Okay , so that number is now 30% versus earlier 20 %?

Eashwar Iyer: Yes, that's right.
Sheila Rathi : And from a revenue standpoint?
Eashwar Iyer: From a revenue standpoint, see , again, I wouldn't want to delve into giving the specific information across each of our revenue segments . In line with whatever's been stated in the financials, we are reporting overall revenues for the certification business as a whole.
Sheila Rathi : Okay . Understood. Again, just to follow -up on the first part of the question, how should we think of the quarters for you, because we are doing calendar year which is supposed to be the strong quarter for you? B ecause like you said at the outset that this was a festive period for us, b ut if we have to do a quarterly growth rate for your business, how should we build our numbers with a 4 Q which is October to December double digit kind of a growth quarter or how should it pan out, when is the se asonality in the business?
Eashwar Iyer: Yes, I was just coming to the same point , Sheila . Actually, our business is not very seasonal , okay. And I do not think we should expect a repi tation of the quarter four into quarter one or quarter two. I think quarter one, quarter two will continue to remain strong. So , our seasonality is pretty flat across all the quarters.
Tehmasp Printer: Except in Diwali time.
Eashwar Iyer: We can either compensate them, so y es.
Tehmasp Printer: Yes, which compensates in November , so basically , it's all round.
Sheila Rathi : Second question is –

Moderator: I am sorry to interrupt, m ay be requested to join the question queue as we have multiple participants waiting for their turn.
Sheila Rathi : Sure.
Moderator: The next question is from the line of Hari t Kapoor from Investec. Please go ahead.
Harit Kapoor: Yeah, hi. Good evening Tehmasp and Eashwar.
Tehmasp Printer: Hi.
Harit Kapoor: So, I just had one , my first question was on the volumes versus the pricing. It seems like if I just do a basic realization analysis, revenue divided by volume , there has been a bit of a dip on the realization for report . And this is at the same time that lab has done well and studded mix has fallen. So, could you just e xplain the interplay for the year, not for the quarter of course , for the year? And how do we kind of look at it, b ecause the volume growth is an extremely strong from a certificate perspective?
Tehmasp Printer: Yes, good question. See, t he thing is , I have good news for you. While the price has now stabilized over the last eight, nine months, now what has happened is that the growers and the polishers realize that they have to be sustainable on a long -term basis and they have huge Cap exes and opexes to deal with . So, they cannot go beyond an unsustainable level. So, today we see the stabilization of the prices over the last eight, nine months . And the volumes , of course , will grow exponentially be cause lab grown diamonds a re much more affordable, s o it's bringing in new consumers into the fold. So, from that point of view, more aspirational values are being taken care of, and hence we have more volumes . And the value is of course affordable so it's a little less. But otherwise, the way lab growns are taking on the market, I actually prefer to say that lab growns and natural diamonds are all both complementary and supplementary to each other.
Harit Kapoor: Okay, okay. So , the way to think about it is , volume growth will continue to outpace value growth, but value growth will still remain healthy . I think that is the way to think about outlook going forward ?
Tehmasp Printer: That's correct.
Harit Kapoor: Thank you. And the second thing is on , just in continuation to Sheila's quest

ion. So, if I look at this quarter in isolation, the way to think about it is that it is not representative of the growth outlook for the calendar year going forward, and maybe the calendar year CY ' 24 performance could be more representative of the outlook going forward. Is that the right way to think about as we look at your growth going forward?
Eashwar Iyer: Okay . Again, Harit, no forward -looking statements. But again, overall , the industry is seeing a lot of momentum , okay ? And again, what we are looking at from a five year standpoint is something in the 15 %, 20% CAGR range. So , from that standpoint , our discussions of the last six, seven

months on the road s hows, etc. c ontinue to remain consistent. We are very optimistic about the way the business is now moving ahead.

Harit Kapoor: Great. That's it from me. I will come back for more .
Tehmasp Printer: Thanks , Harit.
Moderator: Thank you. The next question is from the line of Srinivas Iyer , Individual Investor. Please go ahead. Srinivas, please go ahead with your question. Looks like the line is disconnected , we move on to the next participant , Jay Doshi from Kota k. Please go ahead.
Jay Doshi : Hi, thanks for the opportunity. My first question is , in your business the v isibility you have on revenue and volume at the beginning of the quarter or beginning of the year, and what percentage of revenues can you pretty much predict at the beginning of the year or quarter?
Eashwar Iyer: See, again , Jay, as I mentioned earlier, we do not actually have too much of a seasonality across quarters , okay. But if you were to just extrapolate what has been the behavior over the last four to six quarters , I think we reasonably can estimate close to 50 %, 60% of our revenues for the quarter because there's a lot of consistency that's got built in across segments, be it jewelry, be it natural diamonds or be it lab grown diamonds for that matter. So reasonably I think we can estimate aroun d 60%, 70% of our revenues for the quarter at the beginning of the quarter.
Jay Doshi : Understood. T he reason for asking this question is , on one side you are fairly comfortable and confident of growth trajectory continuing , that you have indicated over the past six months. But on the other side, I sense a lot of reluctance in giving some broad sense on the out look. So , the idea was that, at the beginning of the quarter generally you are not able to accurately predict, and hence you have chosen not to give a quarterly broad range or outlook on top line growth? Or is there some other reason?
Eashwar Iyer: No, I think it's just it's having --
Tehmasp Printer: That is not the case. I mean , IGI is growth story . And we have seen for the last quite a few years we have been consistently growing. We have kept our growth strategies and innovations in place , and we continue to grow. So that's the thing. A nd it's not that we are unaware of where the diamond market is going. W e can predict , we can see how it is swinging . And see , we are extremely strong on the manufacturing side , we have very strong relationships with all the manufacturers in India since last couple of de cades . And what we are now going to do is a consolidation of manufacturing to the retail at global level. So , we are in the process of bringing the manufacturers to the retailers and thereby completing the entire circle. So that is our basic strategy on which we have grown so far.
Jay Doshi : Sure. Thank you. And just one request, if you could, if not quarterly, at least on a six-monthly basis , share the segment al you know revenue disclosures that you had shared in the DRHP, it will help us understand the business a little better.

Eashwar Iyer: Sure. A ga

in, need to appreciate the fact that this is our first call, so we will also learn along the way. And some of these requirements are very critical for our investors , etc. we will explore in terms of how do you manage this process better going forward.
Jay Doshi : Sure. Thank you so much.
Moderator: Thank you. T he next question is from the line of Ankit K edia from PhillipCapital. Please go ahead.
Ankit Kedia : Sir, two questions from my side. First is on the realization , have we tinkered with the pricing in the quarter ? It is just that the mix towards lab grown has got the realization down across the board ?
Eashwar Iyer: Okay . So let me just take that question. See, as Tehmasp did mention, t he LGD is going to be a volume driver across the industry. A nd along with volume , obviously as we scale up, there are standard pricings, etc., t hat we have with our factory growers . And depending on the volume that they do with us in a particular month, there are certain volume -led discounts that we offer to our customers. So, that is going to be the context in which we have to look at these numbers. W ith significant ramp u p of volume , there are going to be some discounts that we will therefore have to see to some of our customers. So , I think that is the context in which you should look at the growth, which is , from a volume standpoint as well as the revenue standpoint . There is obviously a slight trailing of the revenue growth versus the volume growth , driven by the fact that we have seen exponential increase in volumes .
Tehmasp Printer: The other factor is the increasing demand for lab grown jewelry, which is right now in its nascent stage, and it will vector up very rapidly, because jewelry now becomes , diamond jewelry rather , becomes more affordable to the middle -class people across the globe, especially in India. A nd that will also ramp up our volumes as well as revenues.
Ankit Kedia : Sure. M y second question is, one side you mentioned that the growth to extended holiday because they wanted to control supply and maintain pricing , while at the same time you said over six months the prices have stabilized. So why did they take extended holiday in November if the prices have stabilized since last six months and they wanted to control supply?
Tehmasp Printer: See, the thing is, it's normal in the di amond industry to take a break depending between 15 to 20 days. It's normal , I mean, it's not abnormal. So, every year, while we have a bonanza during Diwali

time, the next 15 days are , I mean , where the factories are shut , there's a total slowdown. So, it sort of equates each other. So that quarter equates between November and October.
Ankit Kedia : My only question is that , in the initial remarks you mentioned that because they wanted to control supply and pricing, they took a n extended holiday, and last year it was only seven days, this time it's 15 -odd days, right , around 10 days extra. So, why the extended holiday this time?
Eashwar Iyer: I think it is more of what we are assessing internally in terms of probably an extended holiday to manage their inventory cycles , rather th an build it up unnecessarily. So that is our assessment in terms of why people have taken an extended holiday in November.

Tehmasp Printer: And what happens is, because of this there's a price stabilization. Because excess polished will like tend to lower the prices . So, I think all the manufacturers must have taken a decision to like, because the prices have been stabilized since the last several months , so I think they wanted to keep that into account.
Eashwar Iyer: Yes, keep that going.
Ankit Kedia : Sure. A nd my last question is, I saw some television ads targeted towards B2C customers for the retail what you spoke of , so I just wanted to understand that str

ategy of yours more in detail , why have you started ads towards consumers, s o they go and ask for IGI certification ? Is that so critical given the price where it is of IGI?
Tehmasp Printer: See, the thing is , we want to increase our brand salience and we have gone ahead with that. We have been largely marketing it in a B2B manner , business to business , and now we are going fought in marketing it to B 2C customers. See, t he lab grown is a new entity and we want to create enough awareness regarding the affordability as well as the different applications where you can buy.
Eashwar Iyer: And the origin as well .
Tehmasp Printer: And the origin, s o all these factors we thought that it would be nice to like create brand salience.
Eashwar Iyer: No, again, just to compliment whatever Tehmasp just mentioned. I think one of the key strategic pillars for the organization for the next three to five years is to make significant investments from a marketing brand salience, brand building standpoint . So, from that context, there's been infusion of talent within the organization at senior levels to therefore execute the strategy to improve the overall context in which IGI operates , and what purpose IGI serves and how are we therefore going to communicate this more effectively with the consumers at large. S o, it's a we ll thought out plan , it's a strategic imperative for us to therefore build on the legacy that we have created over the last 50 years to make this business far more scalable. And therefore, just improve the context in which we operate in this industry.
Tehmasp Printer: And thank you for your inputs on our advertisement, I will definitely let our advertising agency know that they have done quite a reasonable job.
Ankit Kedia : Sure, sir. Thank you.
Moderator: Thank you. The next question is from the line of Pratham Jain from Quantum AMC. Please go ahead.
Pratham Jain : Yes, my question is on risk assessment. So , what would be the impact on our business , so assuming that the prices of lab grown diamonds were to significantly drop in future ? So as far as my understanding is concerned 1 carat LGD is currently priced at around Rs. 70,000, so w hat would happen if the prices drop significantly in future ? And you also talked about the discounts that you

provide to the B 2B players , so how would this affect risk, how this affect s the pricing of certification and the margins of the business?
Eashwar Iyer: Yes, there are two or three aspects to what you a sked, Pratham . I think Tehmasp did talk about it. One is, when you are growing lab grown diamonds, it comes with significant investments , both from a capital standpoint and also from an opex standpoint. The manufacturing facility today employs close to 3,000, 4,000 people , and not to mention about the significant capital increases that is required to set up a facility. And there's an element of an industry analysis that we did during our pre -IPO days , and t here is a section specifically provided to assess in terms of what is the ROI that the growers currently enjoy, considering the fact that lab grown prices have actually dropped over the last two year. So that point is well made.
We all are aware of the impact of pricing that has gone into this industry in the last couple of. But what w e have to also understand is in the last six to nine months we have seen significant stability because we understand that anything lower than what prices people are offering today is not something that is sustainable in the long term. S o, from that context , that correction has probably

happened till April , May of this year.
Pratham Jain : Earlier you had mentioned that because of the restricted supply the prices have stabilized. So, what would happen if the supply comes into the market and the prices crash ?
Ea

shwar Iyer: No, I think we have miscommunicated there. What I tried to mention is , there was an extended period of shutdown in November , okay. I think that is just three or four, five days. I do not think we should look at the macro picture just because there was an extended holiday in the month of November by three or four days. So, that is our assessment in terms of probably correcting the massive ramp up that normally happens in this industry just before Diwali, the jewelry or loose stones for that matter . So normally, our office shuts down for 10 days post Diwali , its unheard of any other company that I have worked in the past. We all stay at home for 10 days post Diwali.
Pratham Jain : Okay sir. Thank you.
Moderator: Thank you. The next question is from the line of A rpit Shah from Stallion Asset. Please go ahead.
Arpit Shah: Yes. Just wanted to understand what kind of synergies we can get from our European acquisitions, that is Belgium and Netherlands ? Because i f I see employee expenses in Netherlands and in Belgium , they are typically very, very high compared to Indian operations. So, what kind of synergize benefit we could start seeing from our European operations ? Would we be outsourcing some of the employed cost to India ? How should we look at that in the next, let's say, two or three quarters?
Eashwar Iyer: Okay . Well, interesting question again. See, there are two or three elements here that we need to touch upon. One is , IGI is present in some of the very key markets across the globe. So, we have presence in over eight to 10 countries. We are sitting in India, which is the hub for manufacturing

and polishing, okay . So , we are therefore in a position of strength, considering that the manufacturing base sits in India . But the large retail market continues to be in the US, Europe and China . For example, US is over 50% of the retail market. So , because of the way we are currently structured, there is a lot of synergy already at play.
And as I mentioned earlier, obviously , we have had some headwinds in the US and the Europe market because of the war in Europe. But if things were to stabilize, what we are therefore intending to do, and again to link it up with the marketing campaign that we spoke about, all of our actions are, therefore, you would want to culminate each of our actions to providing that integration between the manufacturing strength that exists in India and the retail strength of the other markets . So, I guess , the synergies will play out over the next two, three years now that we have both of these organizations under the India umbrella. And it just further reinforces the one IGI philosophy that the organization has embarked on over the last 12 to 15 months.
Arpit Shah: Got it. And do you have any payout policy for the company ? What kind of dividend payouts could we see going ahead ? Given that we are a very high free cash flow company, do we have any stated policy in mind?
Eashwar Iyer: Yes. Again, s ee, we are completely governed by our Board of Directors. We have recently declared an interim dividend. And we will go as per the advice of the Board as we progress along this journey. N o denying the fact that we have very, very strong cash flows, etc. But again, we would be guided by the judgment of our board.
Arpit Shah: Got it. And any sense on what should be the brand expense in, let's say , CY ’25 - ’26? Do we have a percentage in mind or do we have an absolute number in mind that this is a number that we are going to spend for the next couple of years ? Yes.
Eashwar Iyer: This is something that we will continue to evaluate depending on the effectiveness of our brand spends . But the thing that we would like to communicate is that , if this is getting very, very effective, w e are able to connect with our retailer

s, our consumers and with our manufacturers effectively . We will try to invest as much as is needed to ensure that we scale up rapidly.
Arpit Shah: Got it. Sir just one last suggestion.
Moderator: Sorry to interrupt, Mr. Shah .
Arpit Shah: Only one last suggestion.
Moderator: The next question is from the line of Naitik from NV Alpha Fund. Please go ahead.
Naitik : Hello. Hi , sir. Thanks for taking my question. Sir my first question is, can you please give us a breakup for the full year between certification and other revenues for the full year ?

Eashwar Iyer: Okay. See, we actually have largely two segments in which our revenues flow in, w e have
certification business and then we have an education vertical. T he education vertical is our starting
point or our foundation before we enter new markets. It is not a revenue spinner, but it is very
critical for us to establish our presence as we get into newer geographies , okay . So, our education
business I think contributes within 2% to 3% of our revenues, but majority of our revenues comes
in from certif ication business.
Naitik : Right , okay. And the breakup in terms of certification for the full year between lab grown diamonds
and natural diamonds , and other gems ?
Eashwar Iyer: Again, in the interest of just being sensitive from a competitive standpoint, we must understand
that we are the only company in this space who are listed in the market. We would therefore want
to keep some of these information confidential in the interest of commercial expediency.
Naitik : Okay, sir . No problem. Also , sir, my another question is , you have seen your margins expand
because of your other expenses during the quarter reduce significantly versus last year same
quarter. So, where has th e savings come from , would you just allude to that ?
Eashwar Iyer: See, we have done a bit of restructuring in some of our markets , okay, and that is the reason why
we are seeing some efficiencies from a cost standpoint in this quarter . I think that is sustainable
into the future as well. We have taken some corrections from organization standpoint in some of our key markets. So that is
one of the reasons for the optimization of expenses that you see during
this quarter.
Naitik : Right. Sir my last question is, what sort of l osses is the Belgium entity making? Because if I see
your standalone profit versus your consol profit, there's a difference. So , if you could just put the
amount of losses that Belgian entity is making for the full year ?
Eashwar Iyer: Okay , our losses would be around close to $2 million w hen you look at the Belgium entity. And
again , that is driven by because of the headwinds that we had this year , specifically resultant of
the war in Europe.
Naitik : So, in the previous years it was profit making, are you alluding to that?
Eashwar Iyer: Sorry.
Naitik : If not for the war the e ntity was profitable?
Eashwar Iyer: This was extremely profitable. T he US market, as I mentioned, is the largest retail market in the
world. So, 50%, 55% of the world's business from a retail standpoint happens in the US. So, from
that context, these are extremely profitable businesses. And of course, hopefully things settled
down in the near future and we get back to the good old glory days.
Naitik : Okay, sir. That’s helpful. Thank you. That's it from my side .

Moderator: Thank you. We take the next question from the line of Angad Katd are from Sameeksha Capital.
Please go ahead.
Angad Katd are: Hi, thanks for the opportunity. My first question is a small book keeping question. Our other
financial liabilities and the financial assets has seen huge discrepancies over the last one year. Can
you just throw some light on the sa

me?
Eashwar Iyer: Can you just explain that to me , please?
Angad Katd are: So, the other financial liability has decreased from around Rs. 1,390 crores to around Rs. 170
crores , and the other financial assets have increased from Rs. 15 crores to Rs. 450 crores. So , can
you explain this , can you just throw some light on this?
Tehmasp Printer: Just give me a moment. I can't correlate to this number , just g ive me a minute. So, you are referring
to the other financial liabilities?
Angad Katd are: Yes, as well as the other financial assets.
Eashwar Iyer: Yes, this Rs. 1,300 crores is consequent to the fructification of the liability that we have recognized
in our books, which went towards the acquisition of both the Netherlands and the Belgium entity.
So, we have recognized this liability as we restated our financials in 31st December , 2023 , as part
of the DRHP requirements. Post that , as I mentioned earlier in my call, we had a commitment in
the RHP to invest Rs. 1,300 crores of the proceeds towards acquisition of both the Netherlands
and Belgium entity. Consequent to that , the liabilities got now squared off. You will p robably see
a corresponding investment in capital reserve.
Angad Katd are: Got it. And what about the other financial assets?
Eashwar Iyer: The other financial asset , see, I think you have to see it in totality that the financial assets plus cash
and bank balance, etc., there is obviously an increase across all these lines consequent to the cash
that has got generated in the business over the last 12 months . Added to that is the fact that out of
the IPO proceeds, we still have to expand some amount towards payment of IPO expenses. To that
extent, the cash is still lying in our books to that extent.
Angad Katd are: Got it. Sir, our employee expenses is currently around 25% of total sales on a consol basis . Do you
see this number, with efficiency that you are talking about going down maybe in the future, as you

maybe let's say shift some employees to India maybe or something like that , if you could throw some light on the same on your strategy for the next two, three years. Since, you are also alluding that the margins may improve further , so that will be helpful .

Eashwar Iyer: See, there are two aspects here that we need to put in consideration. One is , obviously India will continue to invest because the bulk of the manufacturing as far as lab grown diamonds exists in India. So, we will have to ramp up our capacity and the only investment that we do in our organization is to getting people to start grading. So, to that extent, we will continue to induct

people, so long as it's required to meet customer expectations from a service standpoint . And we are on a mission mode to ensure that we improve our customer experience. So , while this is the aspect at play in India, what we need to do, since we are looking at the consolidated results, obviously we have a slowing down of revenue growth in the US and Belgium market. Obviously, we cannot ask people to go home, t hese are people who have been working with us for 15 to 20 years and come with significant experience in the grading aspects, right? So , we have to, therefore, ride the storm. And once the business stabilizes there, business comes back there, y ou will obviously see some of these percentages therefore coming back to normal levels.

Angad Katd are: Sure. S ir, another question , so some of the retailers who sell LGD s have alluded that due to the price correction in LGDs over the years , there are more inquiries for higher carat diamonds, i n the range of 5 or even 10 carat s. How do you see the pricing for certification for this higher carat s compared to the lower carat s? How much difference is there, if you can give a range or something?

Eashwar Iyer: No. So , see, again ,

we have fees which has nothing to do with the final quality of the diamond. It is based on the weight or the carat size, okay. A nd again , we have therefore a mathematical formula so to say, to just simplify it, in terms of what we charge for each carat . So, a carat, if it costs x , 2 carat s would probably be something less than 2x or probably higher than 2x, depending on the nature of the diamond. If it's natural diamond, it is very different , if it's lab grown diamond, it's a little different. S o that is the way we have tried to build this structure up.

Angad Katd are: Got it. Thank you and all the best.

Tehmasp Printer: Thank you.

Eashwar Iyer: Thank you very much.

Moderator: Thank you. L adies and gentlemen, in the interest of time, we take that as the last question. I would now like to hand the conference over to the management for closing comments.

Eashwar Iyer: Okay. So, thanks everyone. And some of these people who have spoken to us today, we have been knowing them for the last three, f our months over the period of the road show, etc. We really appreciate your support . And we are thankful for all the guidance etc . that you have provided us over the last five, six months. And we hope that we are able to repos e the faith that you have posed in IGI. So , thank you very much once again for taking the time. It’s been a pleasure to be talking to each of you all. Thank you very much.

Moderator: Thank you. On behalf of International Gem mological Institute (India) Limited , that c oncludes this conference. Thank you for joining us . And you may now disconnect your lines.

Subject: Transcript of the Earnings Call held for the quarter ended March 31, 2025

Dear Sir/ Madam,

With reference to our letter dated April 14, 2025 informing you about the Earnings Conference Call for the quarter ended March 31, 2025, of International Gemmological Institute (India) Limited, held on April 21, 2025, please find attached the transcript of the aforesaid call.

This intimation will be made available on the Company's website at www.igi.org .

This is for your information and record.

Thanking you,
Yours faithfully,
For International Gemmological Institute (India) Limited

Hardik Desai
Company Secretary and Compliance Officer

"International Gemmological Institute (India) Limited
Q1CY25 Earnings Conference Call"
April 21, 2025

MANAGEMENT : M R. TEHMASP PRINTER – MANAGING DIRECTOR AND CHIEF EXECUTIVE OFFICER – INTERNATIONAL GEMMOLOGICAL INSTITUTE (INDIA) LIMITED
M R. EASHWAR IYER – CHIEF FINANCIAL OFFICER – INTERNATIONAL GEMMOLOGICAL INSTITUTE (INDIA) LIMITED

MODERATOR : M R. SUMEET KHAITAN – MUFG INTIME

Moderator: Ladies and gentlemen, good day and welcome to the Q1CY25 Earnings Conference Call of

International Gemmological Institute (India) Li mited, hosted by MUFG Intime. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star, then zero on your touch-tone phone.
Please note that this conference is being recorded. I now hand the conference over to Mr. Sumeet Khaitan from MUFG Intime. Thank you and over to you, sir.
Sumeet Khaitan: Thank you, Alaric. Good evening, everyone. I welcome you all to the earnings conference call to discuss Q1CY25 results of In ternational Gemmological Institute (India) Limited. To discuss the results, we have from the management, Mr. Tehmasp Printer, MD and CEO, and Mr. Eashwar Iyer, CFO. They will take you through the results and the business performance, after which we will proceed for question and answer session.
Before we proceed with the call, I would like to mention that some of the statements made in today's call may be forward-looking in nature and may involve risks and uncertainties. For more details, kindly refer to the investor presentation and the other filings that can be found on the company's website.
With this, I now hand over the call to the management for their opening remarks. Thank you and over to you, sir.
Tehmasp Printer: Thank you, Sumeet. Good evening, ladies and gent lemen. I would like to welcome you all to the Q1CY25 Earnings Call. I trust that every one of y ou had a chance to review our financial results and investor presentations, which have been made available on both the stock exchanges and as well as our company website.
It's a pleasure to connect with you all and share insights into our business strategies and outlook.
To recap, we are the largest independent accreditation and certification service provider in India with over 50% of the market share.
Globally, we are the second largest player with 33% market share. In the lab-grown sector, we are the lead with 65% of these lab-grown certifi ed diamonds by IGI. We serve 9 out of 10 jewelry chains in India and we expect to continue to leverage this position to expand our global presence and establish IGI as a laboratory of choice to the large retailers and brands.
We are present across 10 countries globally and have 31 labs, 12 in-factory laboratory setups and 18 schools of gemology. We serve over 7,500 customers globally and are present across the jewelry value chain. Our multiple service delive ry formats in the form of IGI labs, in-factory labs and mobile labs strengthen our customer re lationships, driving a distinct advantage for the company.
Our schools of gemology provide us with distinct advantage as they help us drive brand awareness, expand market opportunities and new customer acquisitions. I'm happy to report that

the Company has shown strong growth momentum across all its business segments compared to the previous quarter as well as the first quarter of the last financial year. The business on a consol basis has been done exceptionally well with 15% growth in revenues and 29% growth in EBITDA compared to the previous quarter.
The growth in revenues was driven by our core segments of natural diamonds as well as lab-grown diamonds. Each recording more than 30% revenue growth in this quarter compared to the previous quarter. The jewelry segment also has registered single-digit revenue growth owing to the base effect of last quarter which witnessed a high festive demand in India.
On a year-on-year basis, the business has delivered revenue growth of 10% and EBITDA growth of 13% in

Q1 2025 as when compared to Q1 2024. Reported volumes over this period grew by 27% across our business segments, natural diamonds, lab-grown diamonds, jewelry and coloured stones. We took a one-time price correction in our LGD certification services in Q2 last year corresponding to the drop in the wholesale prices of the lab-grown diamonds.
Post that, certification prices ha ve stabilised over the last three quarters. Going forward, we are expecting robust demand to continue both across natural diamonds as well as lab-grown diamonds. Further, with demand for jewelry certification is also on the rise, we expect the jewelry segment to drive a significant propor tion of growth in th e quarters to come.
Finally, with increasing adoption of lab-grown diamond jewelry in India, we expect the revenue from this segment also to increase significantly in the future. With the industry evolving at a rapid pace and certification being a key enabler of consumer trust, IGI is focused on strengthening its leadership position by expanding its presence, embracing innovations and enhancing the overall customer experience.
As demand for both natural as well as lab-grown continues to grow, IGI is strategically positioning itself to capture the immense opportunities which lie ahead. We are rapidly ramping up our people and laboratory infrastructure to support this volume growth. In Q1 2025 itself,

India business has recruited over 130 gemologists, this virtually represents around 14% of our overall employee strength, to cate r to the exponential volume growth . This is part of our broader strategy to remain agile, responsive to the evolving needs of our partners.
The Company is also embarking on a digital transformation initiative as we seek to enhance the quality of our service as well as reduce the turnaround time of our services. Overall, we are confident of maintaining the growth momentum and delivering revenue and EBITDA growth this year in line with our historical performance.
In terms of industry outlook, we have started 2025 against a backdrop of significant dynamic global developments. On a macroeconomic front, trade policy changes including the recent imposition of tariffs by the United States are being closely watched and evaluated by the diamond and jewelry industry. The 90-day pause has provided the industry time to evaluate the impact of the potential tariffs and identify strategies in the evolving landscape.

The India-US FTA is also being closely followed and we are assessing the impact of these changes in our business. We remain committed to enabling growth for our partners and delivering long-term value to all our stakeholders.
With that, I now invite our CFO, Mr. Eashwar Iyer, to take you through the financials and operational performance for the quarter. Over to Eashwar.
Eashwar Iyer: Thank you, Tehmasp, and good evening, everyone, and thanks for joining today's conference call. We are delighted, as always, to have each of you with us. As many of you would know, our Company follows a January to December reporting cycle and we are excited to present the results for the first quarter of the calendar year 2025.
I will start my update with the performance update versus the previous quarter, which is quarter 4, 2024. I am happy to report that the group consolidated business has maintained a strong growth momentum in quarter 1, 2025. In terms of revenue, certification income for the current quarter stood at INR297 crores, growing at 20% compared to the previous quarter.
This was primarily driven by strong revenue growth across all our core segments, namely 37% growth in natural diamonds, 35% in lab-grown diamonds, 16% growth in lab-grown jewelry and 14% growth in gemstones. Total revenue from operations for the quarter stood at INR305 crores, registering a growth of 15% versus the previous quarter.

In terms of reported volumes, during the quarter we delivered 3.12 million reports compared to 2.77 million reports in quarter 4, 2024, register ing a growth of 13%. Driven by strong revenue performance, continued cost optimisation and restructuring in some of the other global offices, we have delivered a PAT of INR141 crores, mark ing a growth of 24% compared to the previous quarter. PAT margins have also expanded by 330 basis points to 46.2 for the quarter.
EBITDA stood at INR196 crores, reflecting a growth of 29% compared to the previous quarter.
EBITDA margins stood at 64.2%, which is an improvement by 680 basis points over the previous quarter. Coming to the year-on-year update on a consolidated group performance, I am happy to report that the group consolidated business has also maintained strong growth momentum in quarter 1, 2025.
During the quarter, we delivered 3.12 million re ports compared to 2.47 million reports at the same time last year, marking a robust year-on-year growth of 27%. In terms of revenue from certification business, the income stood at INR2 97 crores, growing at 11%. This was driven by strong growth across all our key segments, be it Lab-grown Diamonds growing 9%, ND Jewelry growing 21%, LGD Jewelry 87% and Gemstones growing 16%.
This revenue growth also reflects a one-time pricing correction in our Lab-grown Diamonds certification services that was affected in quarter 2, 2024, post which the certification prices have remained stable over the last three quarters.

Revenue from operations for the quarter stood at INR305 crores, registering a growth of 10% year-on-year. Driven by strong revenue performance, continued cost optimization and restructuring in some of the global offices, we have delivered a PAT of INR141 crores, marking a year-on-year growth of 12%. PAT margins have also expanded by around 80 basis points and stands at 46.2% for the quarter.
EBITDA stood at INR196 crores, reflecting a ye ar-on-year growth of 13%. EBITDA margins at 64%, representing a 180 basis points improvement over the same time last year. Looking ahead, the Company is actively ramping up infrastructure to support volume growth and we remain confident to delivering a very

strong performance for 2025.
With that, I conclude my remarks and open the floor for questions. Thank you everybody.
Moderator: Thank you sir. We will now begin with the question and answer session. The first question comes from the line of Jay Doshi from Kotak. Please go ahead.
Jay Doshi: Hi, thanks for the opportunity and thanks for reinstating segmental disclosures. Could you provide some guidance or outlook on what are revenue growth as well as EBITDA margin for CY '25 for both consolidated and stand-alone businesses?
Eashwar Iyer: Okay. Hi, Jay. This is Eashwar. As I had mentioned, our revenues on a year-on-year basis have moved from 2.47 million reports to 3.12 million reports, registering a 27% growth. Overall revenues from operations have grown 10%. And as we have discussed in the past, this is post the pricing correction that we did sometime in April-May of 2024, consequent to the correction of the lab-grown prices that we had seen from the last quarter of 2023 extending up to the quarter 1 of 2024. So from that standpoint, the Company is now cycling the price correction that happened as far as the LGD certification prices are concerned.
And again, if you were to refer to the sequential growth that was indicated during the call, the gap between the revenue growth and the volume growth should now subside as we now start cycling the pricing correction that happened last year. From that context, I think we should therefore expect to grow between 15% and 20% from a revenue standpoint in this financial year at the consolidated level. And the same performance, therefore -- Yes, sorry.
Jay Doshi: Sure. Please continu

e. Please complete.
Eashwar Iyer: So I am saying that was the view from a consolidated standpoint and I think it will more or less mirror in terms of what the India business will therefore perform. With India representing over 75% of the group's revenues, I think the performance in India will therefore mirror the consolidated group performance as well.
Jay Doshi: Sure. And could you provide some color or outlook on margin guidance, EBITDA margin, consolidated level?

Eashwar Iyer: Yes. See, I think we delivered around 57% PAT margins last year for the full year 2024. The quarter 1 performance has seen substantial improvements in margins. While the Company is continuing to invest significantly in terms of building up or rampin g up capabilities from a people and a laboratory expansion standpoint, we are confident that with the volume throughput that is coming through, we should therefore improve on whatever we delivered last year. So anything between 57 and 64 is what we think we will deliver from a PAT margin standpoint for the full year this year.
Jay Doshi: Perfect. That's helpful. A couple of associated questions. One is, if the mix of jewelry increases significantly in certification volumes going forward, does it have any implications on profitability? Because we understand that realiz ations for jewelry certification is much lower, but we are not sure how EBITDA ma rgin is for jewelry certification.
Eashwar Iyer: See, Jay, I think over the last four quarters, if I were to look at the quarter 1 of 2024, the total jewelry business as a percentage mix was around 23%-24%. That 24% is actually now moved up to around 28%. And despite all of that, you've seen the improvement from a margin standpoint. But having said that, th is trend is of importance for a ll of us to understand, because most of this increase in the revenue mix is driven by lab-grown jewelry segment.
As more and more consumers in India start participating in the lab-grown jewelry segment, I think this is a massive potential for the organization to therefore accelerate its growth in the forthcoming years. So that is the big plus that we are seeing as a trend within our organization in terms of more consumers coming into the fray as far as lab-grown jewelry is concerned. So, despite the 4%-5% mix improvement on jewelry, the margins have obviously continued to remain strong.
Jay Doshi: Understood. One final one, you mentioned that certification prices have been stable over the past three quarters. Can you give us some color on re alization for LGD -- sorry, my question is related to LGD, realizations over the past three quarters, because there are two things we often sort of hear when we talk to people in the industry. One is full certification versus minimum certification. What are the trends? And second is, stone size, average caratage, you know, whether it is going up on average per certificate for LGD. So broadly, if you can give us some color on this trend over the last three-four quarters.
Tehmasp Printer: So, where LG is concerned, right now the wholesale price of lab-grown diamonds have stabilized, and as well as our certification price is also stable. What happens is, earlier we used to certify 30-pointers. Today, we are certifying 2-carat-plus. So, the size of the diamond has obviously increased. So, whereby with the size of the diamond, we base our pricing on the unit weight of the diamond. So, that is why the realization from certifying a larger diamond is better than certifying a smaller diamond. That's one.
Having said that, with the advent of LG jewelry certification, you know, LG jewelry is also

taking -- growing up very rapidly, and all the smaller diamonds which were not certified gets cluster certification in a jewelry-mounted piece. So, again, certification of the smaller diamonds

also are being done in case of by certification of jewelry piece. So, these are the two things that we feel that will ramp up the revenues in the LG sector.
Jay Doshi: Understood. Just when you certify stones, are there two sort of different brackets where full certification and minimal certification at a stone level for loose stones?
Tehmasp Printer: No. See, what happens is we have different formats. We have a full diamond report, we have a dossier report, we have a credit card report. Th e analysis remains the same. Only the format in which it is displayed to the end consumer or to the retailer is different. It depends on their convenience. Some prefer the credit card format, some prefer the smaller diamond format, some prefer the full scale report. It depends on an indi vidual retailer preference. So, we cater to all of these demands and we certify accordingly. But however, having said that, the analysis remains the same.
Jay Doshi: Understood. So, pricing remains the same, which is linked to the carat and the size of the diamond and not the format?
Tehmasp Printer: Yes. The pricing is more linked to the size of the diamond, the weight of the diamond rather. And yes, it is like that.
Jay Doshi: Sure. Thank you so much. I'll get back in the queue.
Tehmasp Printer: Thank you.
Moderator: Thank you. The next question comes from the line of Anand Shah from Axis Capital. Please go ahead.
Anand Shah: Yes. Hi. Thanks for the opportunity. Just a few qu estions. So, firstly, I mean, while it's early days, but because of all these tariff changes, any indication you can give on any disruption you've seen or are likely to see maybe in the next three to six months? And does this China tariff angle in any way sort of benefit you?
Tehmasp Printer: See, the tariff is a big disruptor globally. There is no doubt about that. And it is something that we will have to accept and adopt. We have been given a 90-day lead period to find different innovation solutions. And 10% would probably become a norm where the tariffs are concerned. Now, from an IGI perspective, almost 50% of what we certify is for domestic consumption.
And the same thing, it's like India-to-India. So th e tariff is not a factor here. As well as China contributes 10% to the overall IGI revenues. And in China also, it is again China-to-China. So, I mean, almost 60%, you know, in the overall mix is consumed domestically. Okay, having said that, and then when you take the lab-growns, and we are the leading factors in lab-growns, a tariff of 10% and we are a service organization, we are not a product organization.
So tariff on services are correspondingly impac ting less. And the value of the lab-growns in the wholesale level is low. And prob ably the incremental cost to th e retailer, and finally to the

consumer would be I think distributed betwee n the manufacturer, the retailer, and the end consumer. So I think it will be driven through all the three, I mean, some may take, the manufacturer may take a more portion of the hit. But it will be between these three. You understand what I'm saying? And that way, we will encounter the tariff challenge that we have in the current state.
Anand Shah: Got it. Very clear. But I mean, in the near term, is there any disruption at all like my Q2 may get impacted because of uncertainties? Are you seeing any…?
Eashwar Iyer: We haven't seen anything as of now.
Tehmasp Printer: We haven't seen, in fact, our numbers are increasing.
Anand Shah: Got it. My second question was on this LGD jewelry. So this is pure play LGD jewelry growing in India, right?
Tehmasp Printer: Yeah. See, what happens is 95% of the diamonds are cut and polished in India. India is the main manufacturing hub of the world. You understand? So all that is done in India.
Anand Shah: Yes. N

o, I'm saying, I mean, we are seeing this sort of a significant growth pickup as you've been highlighting as well in the lab-grown jewelry now. So this is your lab-grown jewelry certification is all India-led lab-grown jewelry, right? This is end consumption in India?
Tehmasp Printer: You're correct to assume that.
Anand Shah: Got it. And it would be fair to say that lab-grown jewelry certification will be higher ASP than the normal studded je welry certification.

Eashwar Iyer: Again, that depends on the size of the stone.
Tehmasp Printer: Depends on the size of the carriage of the jewelry piece, you know.
Anand Shah: Okay. Got it. And one more follow-up question I had was if I look at your international numbers, right? I mean, we look at console minus stand-alone to deduce the subsidiary numbers. There again, margins consistently have improved. I mean, even this quarter, if I see now, it's gone up from 13%-14% EBITDA margin to almost 20%. So what kind of margin are you now seeing in Belgium and Nether lands entities? And where should we project? I mean, Netherlands has already gone to 25% plus. Belgium, of course, had slipped into losses and is starting to recover. So some guidance on the trajectory on where these two entities should stabilise in margins?
Eashwar Iyer: Yes. Again, Anand, I think as we have discussed in the past, there is significant strategic interventions that we have made in each of our key geographies across the globe. Okay. Early days, but, you know, the initial first quarter trends are extremely positive and gives us a lot of confidence that, this should progress in the stra tegic direction that we have set them up for.

Anand Shah: Got it. But now these kind of 15-20% EBITDA margin, both Netherland s and Belgium sort of combined, that is sort of sustainable.
Eashwar Iyer: That's right.
Anand Shah: Got it broadly. Okay. Yes, I mean, these are the broader questions for me. Thank you. And one last thing, I mean, on di sclosures, I mean, thanks for this segmental. Is it at all possible to share the CY24 numbers similarly, I mean, for th e full year, the CY24 that you reported?
Eashwar Iyer: We can consider that, Anand. We'll come back.
Anand Shah: Okay, sure. Thank you.
Moderator: Thank you. Participants, please restrict yourselves to two questions. For any more questions, you may re-join the queue. The next question comes from the line of Harit Kapoor from Investec. Please go ahead.
Harit Kapoor: Yes, hi. Good evening. So, just two questions. So , you know, historically, last few years, we've seen the natural diamond jewelry business in India not grow at a very fast pace. But, you know, you started to see a pickup there as well. So, is that just broadly indicative of the market context right now where natural diamond jewelry growth has picked up in the Indian market? Is that the way to think about it?
Tehmasp Printer: See when jewelry certification is concerned, lab-grown is gaining traction. So, when you, I mean, I'm not saying it's all due to lab-grown. Some of it is due to the natural je welry certification. And quite a lot is also due to lab-grown jewelry segment.
Harit Kapoor: Yes, I get that, Tehmasp. Just that this quarter, you've seen on the standalone business, even the natural diamond jewelry growth has been, on a year-over-year basis, actually has been quite strong. So, I just wanted to kind of get, is there a base of issue or are we just seeing now pretty good growth on the natural diamond jewelry certification side as well, which was a little bit subdued in the past? Lab-grown jewelry, obviously, is a new kind of segment for you over the last two years?
Eashwar Iyer: No, I think if you look at it, be it natural diamond or natural, which is natural diamond loose or natural diamond jewelry, the momentum in India has been continuing quarter-on-quarter. So, aga

in, and there is an orchestrated strategy at play in terms of wanting to get into the natural diamond segment at a faster scale than what we have done in the past. So, there is adequate resourcing that is going towards, therefore, making some of these growth numbers happen.
Harit Kapoor: Understood Eashwar Very clear. The second question was on just to understand seasonality in your business on the revenue side a little bit. So, obviously , last quarter was a high-base quarter where you did about INR20 crores. You've grown on that as well. So, should we assume, in general, that Q1'25 will be a higher revenue quarter in general given that you have higher growth in US and good festive, etcetera?

Is that the way to think about it or it typically should, you know, Q1 last year was very high and for this year, next four quarters , it will not be, there will not be too much seasonality. How do we kind of think about the revenue seasonality going into this year and onwards?
Eashwar Iyer: Yes, part of it, part of what you say is true, but there are a couple of other aspects that we must just keep it in mind. That if you were to look at it from a volume standpoint, and I am just talking based on the data that I have for the last four quarters, from a volume standpoint, we seem to have a flat seasonality across quarters. What is at play, obviously, is the slightly changing dynamics of mix across each of these segments because if you recollect the discussion that we had during the quarter four

call, we had mentioned that the jewelry mix was pretty high, given
the fact that it was a Diwali festive quarter, right?
And that's some of the exchange that you are seeing if you look at the growth from the previous quarter, the mix of jewelry obviously has settled down to its normal levels and the quarter one is again driven by the loose stone, both natural as well as lab-grown. So, you must just keep in mind that there could be a few tweaks on the mix across these segments as we get along to each other quarter. But from a total volume standpoint, we seem to be running a flat seasonal business across quarters.
Harit Kapoor: Right. And the last thing was, if you think about tariff and just to propose a hypothetical, if towards the end of the three-month window, is there a likelihood that industry pushes more cut-polished into US just to get away from that 10% tariff, which in turn just up-fronts your revenue a little bit. Is there a possibility that that could happen or is it too early to say?
Eashwar Iyer: See, it is too early to say because obviously we are keeping an eye on even from the India-US FTA that is being proposed. And the industry body here has a good sounding board with the ministry, etcetera. Because we must not forget that the gems and jewelry export business is a very large part of the In dia export turnover. So, I think we will just keep an eye out for it. Let's see how this pans out.
Harit Kapoor: Got it. Those are my questi ons. Thanks. All the best.
Eashwar Iyer: Thank you.
Moderator: The next question comes from the line of Sheela Rathi from Morgan Stanley. Please go ahead.
Sheela Rathi: Yes. Thanks for taking my question. Hi, Tehmasp. Hi, Eashwar.
Tehmasp Printer: Hi, Sheela.
Sheela Rathi: So, my question was actu ally a follow-up to Ha rit's question on seasonality. Just want to understand how the seasonality differs between India and when we look at the consolidated revenues. Because if you look at the natural diamond growth, revenue growth, segmental growth this quarter for India is 51%, whereas in the US it's about 1%. And likewise in LGD in India's case we are down 19%, whereas for US we are up about 88% on the jewelry side.

Just want to understand how should we think of -- Eashwar, you talked about

that last quarter in India's case was high on the jewelry side, natu ral diamond jewelry side . So, just want to understand how should we think about the first half in India on a mixed point of view, as well as the first half on a consolidated basis, how th e mix will be and vis-a-vis how the second half could be?
Eashwar Iyer: Okay. I think what we can safely assume, and again, the industry trends are evolving because the lab-grown jewelry segment is just coming into play. But I think quarter two should mirror quarter one from a mixed standpoint. Be it the consolidated business or from the India stand-alone standpoint. And, obviously, quarter four, obviously, we should therefore expect a larger chunk going into the jewelry mix.
But, again, Sheela, I think at the moment we are also looking at some of these trends and with lab-grown jewelry really starting to take off, which is, as you mentioned, close to 100% growth that has the potential to slightly skew the mix over what we have seen in the last four quarters of last year. But Q2 should basically mirror Q1.
Tehmasp Printer: And to add to what Eashwar is saying, lab-grown acceptance in the West, say US, is much more than the rest of the world. Most of the lab growns have been exported to the US and that is why you see a ramp-up in certification for lab growns in the US. And India is, like, more or less stable. But when you are saying 80%, what did you say? 88%. Yes, but that is all lab-grown jewelry.
You understand? And lab-grown jewelry acceptance is much more in the US. The US was the first continent to adopt lab growns. And, of course, IGI was the first certifying body to adopt lab growns. So that is why we have the leadership status here.
Sheela Rathi: Understood. Thank you. My second and final questi on is just on the international piece. If you could just give us more...
Tehmasp Printer: Sorry? Hello, Sheela. Are you there?
Eashwar Iyer: I think, let her get back on the queue. I think we can...
Sheela Rathi: Yes, can you hear me? Can you hear me?
Eashwar Iyer: Yes, Yes. Sheela.
Sheela Rathi: Okay. Yes, so Eashwar the question is around the international growth for us. And we understand that Netherlands, for us, is doing better than Belgium. So if you could just give more granular details around what is driving the growth in the Netherlands business?
Easwar Iyer: See, as I mentioned, we have the countries of China, Dubai, Israel, Thailand, Hong Kong, as part of the Netherlands group. And we are seeing significant traction, both in the China as well

as the Dubai business. And that is what is driving the overall business from a Netherlands
perspective.
Sheela Rathi: Okay. Understood. All right. Thank you.
Moderator: Thank you. The next question comes from the line of Gopal Nawandhar from SBI Life
Insurance. Please go ahead.
Gopal Nawandhar: Yes. Thanks a lot for the opportunity. And than ks a lot for the detailed disclosures in the
presentation, which will help us to analyze your company better. So my question was on this quarter, we are seeing
improvement in the overall average realized price quarter-on-quarter. Is
this 839 the sustainable number for this year, or it will again change based on the revenue mix?
Eashwar Iyer: Yes, Gopal, as I mentioned, there are as we said, the overall seasonality from a total volume
standpoint is consistent across quarters. But what you should probably anticipate for is a little
bit of mixed variance that can happen across each of these quarters. So 889 to just draw context versus the previous quarter,
if it is -- sorry, 889 was the performance for quarter four and, it's
950 this quarter is driven by the fact that the mix of natural diamond loose stones as well as lab
grown loose stones have actually increased versus the previous quarter.
And as I mentioned earlier, the quarter four mix on jewelry wa

s higher versus quarter one of this
year driven by the fact that it was a festive Diwa li quarter. So those aspects of seasonality within
the overall mix or the overall revenue is something that you should keep in mind.
Gopal Nawandhar: Okay. And so is this quarter, the Q1 mix, is a right representation of last calendar year? Or it
will be significan tly different in terms of mix India?
Easwar Iyer: See, these details are covered in the presentation as well, but for the interest of everybody, I'll
just read it out. In quarter one of 2024, we had close to 73% of the mix from a revenue standpoint
coming from the loose stone segment. That has moved down to 70%. So corresponding that 3%, 4% increase has happened
in jewelry driven by la b grown jewelry. So that is the trend that we
are talking about, in terms of the lab grown jewelry starting to accelerate its growth -- across both India, as well as the
consolidated performance.
Gopal Nawandhar: Okay. And sir, lastly is it a right assumption to make that India grow th will be faster than
consolidated growth?
Eashwar Iyer: Yes, at the moment we are seeing India growth to be faster than the consolidated growth, given
the fact that all of the lab grown that is grown, a majority of that is getting cut and polished here
in India. So from that context, we must expect the India performance or the India business to grow faster than the other
territories or the other geographies.
Gopal Nawandhar: And, when we say that the volume growth should mirror the revenue growth from, say -- from
next, say three quarters perspective, this you are saying largely on the LGD side, not on the
overall company side?

Eashwar Iyer: Yes, the LGD is also a big component of the overall revenue mix. And what we are saying is
because of the pricing correction that we did in quarter one and quarter two of last year, we will
start cycling that pricing come May and June of this year. Now, from that context is why we are
saying that the revenue performance should therefore match the volume performance, which for the first quarter at least is
lagging, because of the pricing that we are cycling.
Gopal Nawandhar: Sure. Thanks a lot for answering my question.
Moderator: Thank you. The next question comes from the line of Aliasgar Shakir from Motilal Oswal
Financial Services Limited. Please go ahead.
Aliasgar Shakir: Yes, thanks for the opportunity. The question is actually on the tariffs. So my understanding is
that some of the studied manufacturers have been indicating in the last fe w weeks, there is some
kind of a stalemate with the retailers in the US towards this tariff increa se. And therefore, there
is some softness in demand from the US. So just want to understand, if you are observing any
softness in business due to th e tariffs in the near term?
Eashwar Iyer: See, at the moment, at least as far as the firstly 2, 3 weeks of April goes, we haven't seen any,
indication to the contrary versus what our perform ance has been for quarter one. So again, it's
been the normal stuff that we've been running.
Aliasgar Shakir: Okay. All right. You got it. This is quite useful. The other question is, on the volumes. So given
that we have seen very good volume in Q1, the only reason why the revenue impact was because of the onetime correction in
prices that you have taken. So now that that is behind us and in the
base, should we expect this strong volume to translate into revenue growth in the coming
quarters?
Eashwar Iyer: Yes.

Aliasgar Shakir: Hello.
Eashwar Iyer: Yes. Yes. We should expect that.
Aliasgar Shakir: Got it. All right. Yes. Those are my questions. Thank you so much.
Moderator: Thank you. The next question comes from the line of Ashutosh Garud from Ambit Wealth PMS. Please go ahead.
Ashutosh Garud: I just wanted to check why did we take the - why did we get the realizatio

n at a pricing change
we did two, three quarters back, why did it ha ppen A? And second, w hy would, I mean, will there be another round of pricing cuts, let's say, a few quarters down the line. So just your thoughts on that and why did that kind of price change you had to do two, three quarters back
and why wouldn't it happen again?
Eashwar Iyer: Okay. I think from an industry context - the industry has seen a pricing correction as far as lab grown diamonds were concerned. This pricing correction started sometime in quarter 4 of 2023

and extended till quarter 1, 2024. Now, so that is the reason why we had to take the pricing correction in April, May to sink in with the market realities as far as lab grown certification prices are concerned.
Now, if you were to look at our document which is our DRHP. We had actually done a bit of industry analysis to understand what could be the potential downside as far as pricing for lab grown diamonds are concerned. And with the heavy capex and the opex model that these guys, the manufacturers operate with at the $170, $200 of wholesale prices for lab grown stones. We estimated that their ROIs is in the 8% to 10% range.
So that gives us confidence for the fact that there is not much elbow room now available for them to therefore drop prices further. And over the last three quarters, we are seeing a lot of stability on pricing as far as la b grown stones are concerned and correspondingly the certification
charges that we charge. So I think basis that I don't expect any major correction to therefore happen as far as lab grown diamonds are concerned.
Ashutosh Garud: So, it would be safe to assume that from Q3 onwards, your volume growth and revenue growth would mirror each other overall basis?
Eashwar Iyer: That’s right.
Ashutosh Garud: Okay. Thanks.
Moderator: Thank you. The next question comes from the line of Chintan Sheth from Girik Capital. Please go ahead.
Chintan Sheth: Yes. Hi. Thank you for the opportunity. You are audible?
Tehmasp Printer: Yes, you are Chintan.
Chintan Sheth: Yes. Thank you for the opportunity and great set of numbers, congrats to the management. On, on the ramp up part you mentioned about on the resource addition and the infrastructure capability improvement. If you can guide us in terms of how should one look at opex impact as well as capex impact in our balance sheet for the year or a couple of years and any update on the
ad spend because if you look at sequentially our opex has been flat.
You did mention about your international rationalization, of course, but if you can help us understand or segregate the marketing spend, how it has been incurred over this quarter and what is the accrued benefit we can expect to the rati onalization in a strategy which we are executing
currently in the international businesses?
Tehmasp Printer: Chintan, what we are seeing is rapid growth in the volume. Now, take care of the volume. We have already taken steps. Like I said, mentioned earlier I think in my commentary that we have 130 gemologist which we have recruited and we are training. So that this takes care. I mean, it's

an operational cost which we have to take and the capex is minimal. You understand? It doesn't really affect much on the opex and capex. We are just beefing up our capacities and our ability. So our expertise remains the same. Our trust fact or remains the same. And at the same time, if we are able to handle the volumes, it's the better turnaround times are given to the customer. And thereby we have given a better service to our customer and your better turnaround time means translate into money and more volume. So we are taking all that into account to see that we continue our leadership status in the lab-grown sector.
Chintan She

th: Okay. And so the cost structure right now which we have seen in Q1, on an absolute basis do you feel that there will be hardly any inflationary - apart from th e inflationary impact, there will be hardly a major increase one can expect. It will be steady state in the Q1 run rate on an absolute basis in a dollar business.

Eashwar Iyer: See, Chintan, we will continue to do what is right for the business because as we speak, recruitment on people, etcetera is continuing because the paramount importance for us as an organization is to ensure five star customer service. So, that we have to recruit people to meet our customer expectations and also to meet the volume growth and the turnaround times, etcetera. We will continue to invest in the business. So that an d as I mentioned, that is continuing as we speak.

Chintan Sheth: Got it. And on the revenue front, if I may on the volume growth, which we have seen this quarter 26% on group level. At India level, we have seen growth of 22% again. So, what we are seeing in terms of 15%, 20% growth bearing the first half impact due to the pricing, we are very confident about delivering about 20% plus growth on the volume side. That is what one can expect given the optimism we have on the volume front?

Eashwar Iyer: Yes, that continues to be the endeavor of the company to meet its strategic objectives for the next three to five years.

Chintan Sheth: Got it. I will join back the queue and thank you and all the very best.

Tehmasp Printer: Thank you.

Moderator: Thank you so much. Ladies and gentlemen, in the interest of time that would be the last question for today. I would now like to hand the conference over to the management for the closing comments.

Eashwar Iyer: Okay, so thanks everyone for the call. And obviously, we just have an hour for these calls and if any of you all have further questions, please reach out to us and we shall be happy to answer any of your questions and give your proper clarifi cations, etcetera. So, thanks for taking the time and it's been a pleasure talking to each of you all. Thank you very much.

Tehmasp Printer: Thank you, everybody.

Moderator: Thank you. On behalf of International Gemmological Institute (India) Limited that concludes this conference. Thank you for joining us and you may now disconnect your lines.

"International Gemmological Institute (India) Limited
Q2 & H1 CY25 Earnings Conference Call"
July 29, 2025

M
ANAGEMENT : MR. TEHMASP PRINTER – MANAGING DIRECTOR AND CHIEF EXECUTIVE OFFICER – INTERNATIONAL GEMMOLOGICAL INSTITUTE (INDIA) LIMITED
MR. EASHWAR IYER – CHIEF FINANCIAL OFFICER – INTERNATIONAL GEMMOLOGICAL INSTITUTE (INDIA) LIMITED

MODERATOR : MR. SUMEET KHAITAN – MUFG INTIME
Moderator: Ladies and gentlemen, good day and welcome to Q2 and H1 CY25 Earnings Conference Call of International Gemmological Institute (India) Limited, hosted by MUFG, Intime. As a reminder, all participant lines will be in the listen■only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing star then zero on your touch■tone phone.

Please note that this conference is being recorded.

I now hand the conference over to Mr. Sumeet Khaitan from MUFG Intime. Thank you and over to you, sir.

Sumeet Khaitan: Thank you, Palak. Good evening, everyone. I welcome you all to the Earnings Conference Call to discuss Q2 and H1 CY25 Results of International Gemmological Institute (India) Limited. To discuss the results, we have from the management, Mr. Tehmasp Printer, MD and CEO, and Mr. Eashwar Iyer, CFO. They will take you through the results and the business performance after which we will proceed for question and answer session.

Before we proceed with the call, I would like to mention that some of the statements made in today's call may be forward■looking in nature and may involve risk and uncertainties. For more details, kindly refer to the investor presentation and the other filings that can be found on the company's website.

With this, I now hand over the call to the management for their opening remarks. Thank you and over to you, sir.

Tehmasp Printer: Thank you, Sumeet. Good evening, ladies, and gentlemen. I would like to welcome you all to the Q2 CY25 Earnings Call. I trust that everyone has had a chance to review our financials and investor presentations, which have been made available on both the stock exchanges as well as our company website.

It's a pleasure to connect with you all and share insights into our business strategies and outlook. To recap, we are the largest independent accreditation certifying services provider in India with over 50% market share.

Globally, we are the second largest player with 33% and in lab■grown diamonds, we have over 65% of the global market share in certification. We serve 9 out of 10 retail jewelry chains in India and we expect to continue to leverage our position to expand our global presence and establish IGI as a laboratory of choice to the large retailers and brands.

We are present across 10 countries and we have 31 laboratories, 12 in■factory laboratory setups, 18 schools of gemology. We are present across the entire jewelry value chain. Our multiple service delivery formats are in the form of IGI laboratories, in■factory laboratories, mobile labs, which essentially strengthen our customer relationships and driving a distinct advantage for the Company.

Our school of gemology provides awareness, knowledge, and information to help us drive the brand awareness, market expansion opportunities, and new customer acquisitions. I'm happy to report that the Company has seen a strong growth momentum across all its business segments in Q2 of 2025 as compared to Q2 of 2024.

The business on a consolidated basis has done exceptionally well with 16% growth in revenues from operations and 37% growth in EBITDA on a year■on■year basis. The business has delivered a volume growth in Q2 of '25 with 3.03 million reports, a 21% growth over the previous year. The business has seen strong growth across its segments. Lab grown has grown by 24%. Natural diamonds have grown by 14% over the previous year.

For the first half ended in June 2025, the business has delivered revenue from operations growth of 13% and EBITDA growth of 23%. The volume over this period grew by 24% with strong performance across all our business segments, natural diamonds, lab■grown diamonds, jewelry, and color stones.

Going forward, we expect this demand to continue both across the natural diamonds as well as lab■grown diamonds. Further, with demand for jewelry certification on the rise, we expect the jewelry segment to drive a significant proportion of growth in the quarters to come.

Finally, with increasing adoption of lab■grown diamond jewelry in India, we expect the revenue from this segment also to increase significantly in the future. With the industry evolving at a rapid pace and certification becoming a key enabler of consumer trust, IGI is focusing on strengthening its leadership position by expanding its presence, embracing innovations, and enhancing the overall customer experience.

As demand for both natural as well as lab■grown diamonds continue to grow, IGI is strategically positioned to capture the immense opportunities ahead. The Company is also embarking on a digital transformation initiative as we seek to enhance the quality of our service delivery as well as reduce the turnaround time for our services.

Overall, we are confident of maintaining the growth momentum, delivering revenue and EBITDA growth this year in line with our historical performance. We remain committed to enabling growth for our partners, delivering long■term value to all our stakeholders.

With that, I now invite our CFO, Mr. Eashwar Iyer, to take you through the financials and operations performance for the quarter. Over to Eashwar.

Eashwar Iyer: Thank you, Tehmasp, and good evening, everyone. Thanks for taking the time for joining today's conference call. As Tehmasp just articulated, we are extremely delighted to have each of you with us. As many of you know, our company follows a January to December reporting cycle, and we are therefore excited to present the results for the second quarter for calendar year '25.

I will start with an update of the quarter 2 performance before providing an update for the half■year performance as well. On a consolidated group performance standpoint, I'm happy to report that the group consolidated business has maintained a very, very strong growth momentum in quarter 2 '25.

In terms of revenue, certification income for the current quarter stood at INR292 crores, which is showing a growth of 18% over the same time last year. Correspondingly, the volume growth was at 21%. This was primarily driven by strong revenue growth across all our core segments, namely 14% growth in natural diamonds, 24% growth in lab■grown diamonds. Total revenues for the quarter therefore stood at INR314 crores, registering a growth of 20%.

In terms of reported volumes during the quarter, we delivered 3.03 million reports compared to 2.5 million reports in quarter 2 '24, registering a growth of 21%. Driven by strong revenue performance, continued cost optimization in some of our global offices, we have delivered a PAT of INR127 crores, marking a growth of 63% compared to the previous quarter. PAT margins stood at 42% for this quarter. EBITDA stood at INR174 crores, reflecting a growth of 37% compared to the previous quarter. EBITDA margins stood at 58%.

Coming to the half■yearly update on a consolidated group performance standpoint, for the half year ended June 2025, we have delivered 6.16 million reports compared to 4.97 million reports in the same period last year, marking a robust year■on■year growth of 24%.

In terms of revenue, certification income stood at INR588.8 crores, growing at 14%. This was driven by strong growth across all our key segments, be it LGD which is growing 16%, Natural Diamonds 7% and LGD jewelry 35%. Total revenues, ther

efore, for the half■year stood at INR627.8 crores, registering a growth of 14% year■on■year.

Driven by strong revenue performance and continued cost optimization, the PAT delivery for the half■year stood at INR267 crores, marking a growth of 31%. PAT margins, therefore, for the first half was at 44%. EBITDA at INR369.2 crores showed a growth of 23% with a margin of 61%.

Looking ahead, the Company is actively ramping up its infrastructure to support the volume growth and we remain confident to delivering a strong performance in 2025. With that, I conclude my remarks and open the floor for your questions. Thank you very much.

Moderator: Thank you very much. We will now begin the question and answer session. The first question is from the line of Sheela Rathi from Morgan Stanley.

Sheela Rathi: Yes, thanks for taking my question . Eashwar, my question was with respect to when we look at consolidated minus standalone numbers, this particular quarter, we have seen about a 6% growth. When we look at the margin profile, the margins are low single■digit versus what we have seen in the last three quarters.

Of course, this is up year■on■year, but just that the trend is significantly lower. And then, even at ■■ below the margins, also the number seems to be much weaker. Just wanted to understand the significance of this quarter with respect to the international market.

Eashwar Iyer: Okay, I think the international markets has been as performed very well from a Netherlands business standpoint. Okay, obviously, we still are seeing some softness both in the US as well as the Belgium business, driven by obviously the factors that are affecting the US business specifically, thanks to the tariff, etcetera. But our business in Netherlands is still growing over 20%.

So there is extremely strong performance both from the Dubai as well as the China markets. And we continue to see that momentum carrying forward from quarter one. Obviously, the performance versus the previous year is still better. And we are therefore hoping that we see a turnaround probably in quarter three, quarter four as far as the US business is concerned.

Sheela Rathi: Okay. And in terms of the mix, is it is the mix very different in this quarter versus what we see in the other quarter? And I mean, just trying to understand why margins in general are lower in this quarter?

Eashwar Iyer: Versus the sequential quarter is what you're saying, Sheela?

Sheela Rathi: Yes, yes, Eashwar.
Eashwar Iyer: Okay. See, from a margin standpoint, I think we delivered at the consolidated level from 64%. Against that, I think we are now at ■■ just give me a minute. I think we reported 58%, right? That's what we reported for this quarter. And I think this is in line with what guidance we had given as part of quarter one as well. I think we had a significant ramp up of ND Jewelry in quarter one.

We've seen a slight slowing down as far as ND Jewelry is in this ■■ is concerned in this quarter. We delivered around 3.03 million reports versus 3.12. So there's been a slight slowdown in jewelry in this quarter, which is the normal trend. Normally, we have a huge ramp up in the quarter four and quarter one. So that is one of the reasons.

Additionally, I think you will also notice that we're making some significant investments to build up an AI architecture in the organization. So there is a bit of a one■off expenses that has got booked in this quarter. But again, that is very important for the Company. We're making some strategic investments as far as building AI capability within the organization. So that is the reason.

These are investments that are being done from a long■term standpoint. And that is the reason why you see a slight dip in the EBITDA margins. But we will remain with what we had foreca

st
at the beginning of the year. Between 57% to 64% EBITDA margin is what the Company will deliver this year.

Sheela Rathi: Yes, just one follow■up here, Eashwar. Again, this is to do with the console minus standalone EBITDA margin. The 3.9% number vis■a■vis June 24, 3% versus the double■digit trend we have seen in the last two quarters. Just want to understand that in June quarter, when we look at console minus standalone, is there any specific mix here which results in such lower margin, or this is just a one■off and we should see improving trend?
Eashwar Iyer: No, I think it's just a one■off. And I think from a mix standpoint, there's not been too much of change across segments. So I think we'll just see some improvement as we get along the road. Because the business in the US, hopefully we should pick up now that we are into the season as far as the US business is concerned.
Sheela Rathi: Understood. All right. Thank you.
Moderator: The next question is from the line of Harit Kapoor from Investec.
Harit Kapoor: Yes. Hi, good evening. So the first question was on the ASP margin. So if you look at it, there has been some improvement sequentially on the ASP side. It just gives you a little bit of a sense that it seems like your ASP levels are stabilizing versus Q1 where they were down by about 12%. I just wanted to get a sense on pricing. Do you look at the fact that now, barring mix, ASP levels will be ■■ have stabilized at this broad range of levels, at least for the near to medium term?
Eashwar Iyer: That's right. Harit, I think what we had discussed during our Q1 call as well. Q1, we were cycling the price effect of April■May on LGD, which we had spoken at length. The Company is cycling that. So that's the reason why you see sequentially the ASP is actually improved by some 3%■4% at the India level, which is the key driver of the global revenues as well. So I think we've seen a lot of stability in the last three■four quarters. So we don't foresee any dilution as far as ASP is concerned over the balance of this year.
Harit Kapoor: Understood. Understood. And the second part was you did touch upon in the earlier question about some tariff■related things on the Belgium subsidiary. But US as a market affects everything, including your standalone business. Just wanted to get a sense of how you are seeing the situation currently ■■ could there be in quarter, in the quarter going forward, some kind of volatility in revenue, given that there may be a stop■start situation as far as this is concerned? Or you have another kind of view on that?
Eashwar Iyer: No. See, the last two quarters, especially this quarter versus the previous year, I think the tariff discussions happened sometime in March, April. We have seen stability. We have not seen any massive disruption. But we're just hoping that, there is some progress that happens on the trade deal, because at the moment, there is an additional 10% levy, right, on the jewelry ■■ on the stones, as well as the gold that goes out.

So, hopefully, that stabilizes, it just clears out whatever little worries that the industry might therefore be facing. So, we're keeping our eyes open in terms of where that discussion is going

between the two governments. But otherwise…
Harit Kapoor: Okay.
Eashwar Iyer: Between the two quarters, there's not been anything that has actually caused any disruption as far as certification goes for our business.
Harit Kapoor: Got it. The other one was on LGD jewelry. I think Tehmasp, in his opening remarks, you mentioned that…
Tehmasp Printer: Yes.
Harit Kapoor: You're seeing a pickup in an India market. So, if you could just give a sense of what are you seeing in the India

market in terms of LGD jewelry pickup? What is the kind of pace of increase there? And your role as certifier, are you ■■ is your share almost as high in stone certification as far ■■ as well as jewelry certification in the India market? Just a little bit of sense of what's happening in the India market for you?
Tehmasp Printer: Okay. Harit, the thing is, LG jewelry is now the new growth factor that we are looking at. India has been a little slow on the acceptance of LG jewelry. But it is gaining momentum very, very fast. New York, I mean, sorry, US has been the first continent to have accepted LG. Last year, US reported over 50% of all bridles into ■■ with LG stones.
Today, what we are doing here is, now we are creating an awareness among the Indian continent to see increasing awareness creates transparency and knowledge. And that creates, like, that makes the consumer to take a buying decision. We grade diamonds and we give you the origin, whether it is lab grown or it is natural.
Certification becomes a very important factor that, if you are buying natural, you need a certification to know for sure that it is not a lab grown. And if you are buying lab grown, you need to be sure that it is not a piece of glass. So here IGI is policing the entire market and giving the consumer the value for the money that he or she is putting in. And we see this momentum growing. I think we saw some significant growth in the LG. So what is that percentage?
Eashwar Iyer: This is on a half yearly basis some 6%, 7% LG jewelry versus previous year.
Tehmasp Printer: Yes. No. No. On a ■■ but over the previous year?
Eashwar Iyer: Over the previous year, for the quarter, quarter two is up to 35%, right?
Tehmasp Printer: 35% ?
Eashwar Iyer: Yes. 35%.

Tehmasp Printer: 35%. So every quarter the awareness is increasing and the LG jewelry acceptance is also increasing and we are in the game. We are the largest.
Harit Kapoor: Okay. Got it. Got it. And one last question before I come back. Easwar, is there any one■off in the other income this quarter? It seems pretty high on a year■over■year or is this the cash balance impact?
Eashwar Iyer: Yes. I think this has basically got to do with the accumulation of cash over the last 12 months, I think. So that is the reason why you're seeing an increase in interest income for this period. I'm presuming you're looking versus previous year, right?
Harit Kapoor: I am. I am. Yes.
Eashwar Iyer: Which is obviously the case because we generate like INR300 crores every year. So that is what is giving this impact from an interest income standpoint.
Harit Kapoor: Thank you and wish you all the best
Moderator: The next question is on the line of Aaron Armstrong from Ashmore Group.
Aaron Armstrong: Hi. Good evening. Thank you very much for taking the question and congratulations on a very good set of results. Firstly, could you expand a little bit more on the tariff side of things, please? So when you serve the US market, could you talk about whether you do that from your assets in India or internationally, or do you serve that domestically within the US? And how tariffs affect you in terms of either your competitiveness or in terms of kind of revenue and pricing?
Tehmasp Printer: Oh! Aaron, everyone is holding their breath on the tariff issue. They're waiting for the announcement. And I mean, tariff is something that is here to stay. I mean, there's no two ways about it. And we're all, the entire industry is looking for innovations and ways to surmount this obstacle that is there, but the business is getting on.
Oh, having said that, what happens is India is the sole ■ center of manufacture. So and my New York offices, my offices in Europe, they are the marketing arms for us. So they provide us the inf

ormation of the market sentiments in the US or in Europe or wherever. And based on those requirements, we grade and certify the jewelry or diamonds, whether lab grown or natural in India. So while all the marketing effort is done from ■■ is driven from the Western source, the manufacturing, and the cumulative collection…

Eashwar Iyer: Polishing.
Tehmasp Printer: and invoicing is done in India. So you may see a little difference. But essentially, it is because of these global offices that we have, we are able to certify manufacture and certify in India where we are very strong.

Aaron Armstrong: Got it. And so, do you think you'd be able to pass on tariff costs? Or are you currently passing on tariff costs to your customers?
Eashwar Iyer: No.
Tehmasp Printer: No. See, the tariff cost…
Eashwar Iyer: There is no ■■ Aaron, there is no implication for IGI from a tariff standpoint.
Tehmasp Printer: Yes.
Eashwar Iyer: So that I think we have to just clarify to you. I think it's a play between the manufacturers and the retailers. So IGI per se is not affected by tariff.
Tehmasp Printer: Yes. Per se. But it will be distributed between the manufacturer, the retailer, and probably, be in the end, the consumer. So it's a game that you guys have to play. We are certifying the goods that are being exported.
Aaron Armstrong: That's great. And then a couple of other questions, if I may, please, just firstly, on the other operating income line. So I can see for this quarter, it was at 88 million versus 117 in the same quarter last year. Can you talk about that decline, please?
Eashwar Iyer: That decline is basically led by some slowdown on the sorting business that we do in Europe. So we have seen a slight slowdown there in terms of we have large retailers like...
Tehmasp Printer: We have large super brands.
Eashwar Iyer: Large brands, super brands who come to us.
Tehmasp Printer: Where we do the screening in Antwerp. We do nearly on a year■on■year basis, we do 20 million stones. But now the super luxury brands have also slowed down a little. And from that perspective, the screening for services has also got a little slow down there.
Aaron Armstrong: Okay, that's great. Thank you. And then sticking with the consolidated numbers, if we look at for Q2 of this year, the cost control has been very strong. And you've had a decreasing cost on employee benefits expense, on your depreciation expense and then on your other expenses line as well. Can you talk a little bit about where those cost savings are coming from and whether they're sustainable for the rest of the year?
Eashwar Iyer: I think the cost will be sustainable at these levels around for the balance of the year versus the previous year, we had taken a onetime charge in 2024 in this quarter of last year, consequent to a slight severance that we did in our US business. So that's the reason why you see a flat expense on employee benefit or slightly lower cost on employee benefit than previous year.
On amortization, this is more than a local gap requirement, which is about taking a charge on lease offices, etcetera. We had actually two offices in lease in the US same time last year. So

we are coming to the end of the lease in one of the offices, the other offices where we will continue to operate.
And that's the reason why you're seeing a slight decline in D&A expenses. The other expenses have remained more or less constant at the same levels as last year. And that trend should therefore continue as we get along the road.
Aaron Armstrong: That's great. Thank you. And then one point that I think you touched on that maybe some more detail would be helpful, please, just on your average realiza

tions. So the 963 number that you've posted for this quarter, down 3% Y■o■Y, is that just mixed driven? So are you making a lower average realization, say, on LGD versus ND or on Diamond versus Jewelry? Can you talk a little about that mixed effects, please?
And on a like for like basis, do you see most of your pricing is stable right now for the rest of the year?
Eashwar Iyer: I think the pricing has been extremely stable over the last two, three quarters and we expect that to continue as we get along for the next two quarters. The slight dip that you're seeing, Aaron, is we've seen a large chunk of smaller size stones for natural diamond, which has come in during this quarter. So those are dozier reports versus the full diamond report that we give to natural diamonds.
So that's the reason why, if you look at my natural diamond business has grown 14%. And that is consequent to smaller size stones coming in for certification. And that's what is causing a

slight dip in the average realization price. But the volume has more or less taken care of the slight dip as far as natural diamond is concerned.
And the overall revenue has therefore grown at around 14%. So I think that is the major reason why the ASP is actually declined by some 2%, 3% over the same time last year.
Aaron Armstrong: Great. Thank you. And one final question, if I may, please, just on the outlook for pricing, as you look towards 2026, do you think you'll be able to sustain current prices?
Eashwar Iyer: We hope to, too early in the day. But we're seeing a lot of stability in the market. So if things remain the same, I think we should therefore look at the same realizations as we get along into 2026.
Aaron Armstrong: That's great. Thanks again for the call and look forward to keeping in touch.
Tehmasp Printer: Thank you.
Moderator: Thank you, sir. The next question is from the line of Harish Advani from Axis Capital. Please go ahead.

Harish Advani: Hi, thank you for taking my question. My first question was on the India LGD business. So we have seen a pretty strong pickup sequentially. So this 24%, can you break it down into how much of this has been volume led and how much of an impact we had from the pricing because we took pricing cuts last year this time?
Eashwar Iyer: See, I think the volumes have grown more or less in sync with revenue. Both of them are growing around 24%. And that's what you see in the financials as well. And as I mentioned, we are now back to the same price levels current versus the same time last year. So the revenue growth has mirrored the volume growth during this period. So it's around the same levels 24% is the volume growth as well.
Harish Advani: Okay, perfect. Thank you. And if I were to talk about the subsidiary business, which is console minus standalone, you kind of indicated that this quarter, there was a bit of pressure. And that's why the margin has come up from 20% to about 4%. But we had a similar kind of an impact last year where the margin was about 3%. So is this more, it's kind of a seasonal thing. And if that is the case, what should we kind of build in for the rest of the year or the full year CY25 for the international business?
Eashwar Iyer: Yes, I think you must build in whatever we have seen as the first half growth. We hope that the US business will start to move the needle up. But the Netherlands business is continuing to grow over 20% as we speak. So you can build in the same levels of growth as we get along for the balance of year.
But overall, as we've mentioned earlier as well, the Company had given a forward■looking statement of a 15% to 20% growth from a revenue standpoint. And this quarter performance has been an 18% revenue growth. And that is brought this the first half growth to close to 15%. So we are confident of

delivering to what we had committed at the beginning of this year, which is a 15% to 20% revenue growth.
Harish Advani: And just one last question. So if I were to look at the console margins of last year of about 49% odd, can we say that this margin which we delivered in 58 is more or less come off a low base and ideally margin should remain in the ballpark of 57 to 64 that you mentioned? Is that a fair assessment?
Eashwar Iyer: Absolutely. I think we should look at that range. Yes.
Harish Advani: Okay, perfect. Thank you. That's all my questions.
Moderator: Thank you, sir. The next question is from the line of Angad Katdare from Sameeksha Capital. Please go ahead.
Angad Katdare: Hi, sir. Thank you for the opportunity. And congratulations on the good set of numbers. Most of my questions have been answered. My follow■up question is just on the number of

employees. What is the current count of employees currently and how many gemologists out of that?
Eashwar Iyer: So, I think at the global, 1,300. Around 1,300 people would be the total employee strength. And I think all the lab facilities will be close to 1,000. Lab, back office, everything. I think all of it would be close to between 900 to 1,000 people.
Angad Katdare: Got it. Thank you.
Moderator: The next question is from the line of Harsh Shah from Avenir Capital.
Harsh Shah: Thanks for taking my question. Just wanted to know about the demand trends in the third

quarter, like already the first month has passed.
Eashwar Iyer: We're not seeing anything very different, Harsh. Harsh, we're not seeing anything different in July versus the performance that we've seen in quarter 2. Early days for the quarter, but the business continues to be stable.
Harsh Shah: Okay. Okay. And the rest of my questions have already been answered. Thank you.
Moderator: The next question is from the line of Naitik from NV Alpha Fund. Please go ahead.
Naitik Mutha: Hi, sir. Thanks for taking my question. So I just wanted to understand our employee costs a little better while I appreciate that year■over■year it has fallen. But if I look at it sequentially, the range had been 65 per quarter roughly, which has gone to 71. So just wanted to understand where does this stabilize? And are there any runoffs in this 71?
Eashwar Iyer: Okay. See, the 71 versus 65 is consequent to two things. One is the annual increment impact. Plus, we had mentioned in the last call that we've added some 250 ■ 300 people over the course of the last few months. So that is the reason why this cost has actually gone up. We expect this cost to remain the same level for the next two quarters.
Because I think we are at the end cycle as far as recruitments are concerned. So I think we are now back in as far as meeting customer expectations from a timeline standpoint. I think we are now adequately resourced to manage the volume growth, at least for this year.
Naitik Mutha: Right. And sir, you mentioned you have done some one■time investments, which are sitting in other expenses. So just wanted to understand that also. Because even that, if I see sequentially on a similar revenue base, that has also gone up substantially. So just wanted to understand that.
Eashwar Iyer: That will probably stabilize slightly lower in the subsequent quarters. Because this is just a chart that we've taken this month for the project that we are embarking on. I think we are at around INR56 crores. I think we should probably get back to the INR50 crores level.
Naitik Mutha: Right. Got it, sir. That's it from my side. Thank you.

Moderator: The next question is from the line of Shravan Vohra from Morgan Stanley.
Shravan Vohra: Hi, sir. Thank you for the oppo

rtunity. So I had two questions. First one, you mentioned briefly about capability building to handle higher volume. So could you talk briefly about that? What kind of capabilities we are building on the AI side and the gemologist side?
Eashwar Iyer: This is basically recruitment of gemologists that we did in the first 4■5 months of this year. These are basically gemologists, graders that we have recruited. Plus, obviously, we have also built up some capability or number of people, both in our back office as well to manage the business growth requirements.
Shravan Vohra: Got it. And secondly, sir, if you could talk about your brand building initiatives that you had spoken last time also, both in India and in the US to get more retailers on board in the US. So anything, any updates on that?
Tehmasp Printer: So most importantly, you will know that the India exhibition, the largest exhibition in India, is just started today, in fact. And we are showcasing our new different services at the exhibition. And of course, we are in the routine business of creating a brand awareness where our the IGS concern and also to enhance the services that we provide.
So it's a culminative exercise that we are doing into ■■ in a holistic manner. So we are getting to the entire supply chain, right from the manufacturer to the wholesalers, to the retailers, to the consumers. And that is what we are doing currently. And more importantly, in the India market, we are trying to create more awareness and transparency regarding diamonds.
There's a lot of negative chatter going around. But we say that both LG lab grown as well as natural, both are diamonds. And it is extremely important to identify the origin. And we have the capabilities and the scalability of identifying this origin. And that is what we are depending on.
Shravan Vohra: Right. Perfect. Thanks a lot, sir.
Tehmasp Printer: Thank you.
Moderator: The next question is from the line of Sumit Sarda from Compound Everyday Capital.
Sumit Sarda: Yes. I have two questions. First is, what is the net cash on the balance sheet? And it was mentioned that generally we generate around INR3,300 crores of cash a year. So how do you plan to allocate it in, for example, growth, also returning to shareholders, if any? That is first question.
Second question is, you mentioned that you are investing in AI capabilities. A larger question is, how does AI improve accuracy, cost, etcetera, certification and what are the early trends you are looking at? Is there ■■ can it be a game changer for our business? Third would be, would you maintain that 15% to 20% volume guidance for the year? Thank you.

Eashwar Iyer: Yes. I think so. There are three questions that you've asked, Sumit. Number one, the cash balance, I think, is in excess of INR750 crores now in the company. And as we have indicated earlier as well, we will be seeking guidance from the Board as far as dividend declarations are concerned. That is actively in consideration for the management. And number three, in terms of the growth, which I had earlier articulated during the call, I think we will stick to the guidance of 15% to 20% revenue growth for this year.
Sumit Sarda: Just to follow■up on the capital allocation, how do you want to invest it in the business? Are there a lot of opportunities, for example, setting up new labs, new kinds of labs?
Eashwar Iyer: Which we are doing currently. We have opened a couple of labs in the last couple of months. But again, from a larger context, I think the Company continues to evaluate opportunities for acquisition, etcetera. I think that is always on the radar in terms of how we could therefore deploy the capital that we have for bringing in some inorganic growth. So those considerations will continue t

o be evaluated.
Sumit Sarda : The last question was on AI and its impact on our business.
Eashwar Iyer: AI, Oh yes, of course. I think I missed that, sorry. I think that is what we want to engage in that journey, just to ensure that we are aware of the development that is happening in the global environment as far as AI is concerned. And we do not miss the bus in terms of some of the opportunities that therefore exist.
So, we are commencing a project there. We will see how that goes. It is more about discovery and therefore implementing some of those automation/AI measures within the organization for effective delivery and improving effectiveness as an organization.
Tehmasp Printer: Shorting our service delivery.
Sumit Sarda : Got it. Just a final question on the effective tax rate. It was around 28%. Should we maintain that or can we lower it?
Eashwar Iyer: The same. I think just maintain. I think there is nothing that is going to happen significantly different in the balance of the year. I think we just continue to maintain at the same percentage.
Sumit Sarda : Perfect. That is all. Thank you.
Moderator: Thank you, sir. The next question is on the line of Raman from Sequent Investment. Please go ahead.
Raman: So, my question is with respect to the recent steps taken by GIA with respect to 4C grading of lab■grown diamonds. They have completely, I guess they have stopped 4C grading for lab■ grown diamonds, which is ■■ so I just wanted to understand what is the market opportunity for

someone like us with respect to this competition being one of the key competitors stopping this particular segment?
Tehmasp Printer: Raman, this is a very good question. See right now, understand one thing lab■grown is the biggest disruptor which has happened to the industry in the last 100 years. 4Cs is the analysis which has been there for the last century. Now, we at IGI are principled to be an independent certifier. We are not governed by any external influences. We are able to certify a diamond and we give the origin.
Today, we not only give the 4Cs on both natural as well as on lab■grown, because that is what the diamond is. And that is what the consumer understands. It is very important to know the origin because if you're buying a natural diamond, you want to assure yourself that there is no lab■grown in it and IGI does that. If you want to buy a lab■grown diamond, you want to be sure that there is no piece of glass and IGI certifies that.
So, our stance is that we are a neutral body. We do not want to have any preferences or biases against any gemstone or diamond. So we will continue to keep to our independent status and continue to educate and inform the consumer that a spade is a spade, period. Something like that.
Raman: So my understanding is, I just wanted to understand the total market size with respect to 4C grading for lab grown diamonds.
Tehmasp Printer: So, we have virtually 65%■70% of the lab■grown diamonds which are graded against the 4Cs today.
Raman: So, will this improve your global market share of lab grown diamonds? If I am..
Tehmasp Printer: Of course because we give what the consumer wants. We are not, yes, I mean, opinion makers. I am giving you what the consumer wants, consumer is familiar with and that is what we are

doing.
Raman: I understood, sir. Sir, my second question is with respect to the average cost of lab■grown diamond, you have said it has been stable for the past 2■3 quarters. So, I just wanted to understand the scenario whether there is a possibility of the lab■grown diamond prices going down further or the manufacturer won't be able to produce the lab■grown diamond if there is any further decline in the prices?
Eashwar Iyer: I think we have articulated this in the past as well

, Raman. I think at the current prices at which it is trading at the wholesale level, we estimate that their returns on their investment is between 8%■10%. That leaves them with very little room to further drop prices and that is why we have also seen that sort of stability in the last couple of quarters. So I think we are seeing the end, at the bottom end as far as pricing correction on lab■grown diamonds is concerned.

Raman: So, there won't be any further pricing correction and which will not necessarily mean we don't really have to take any other, like, average realized price…
Eashwar Iyer: That's what I just indicated in my call.
Raman: Thank you. Thank you, sir.
Moderator: Thank you, sir. The next question is from the line of Smith Gala from RSPN Ventures. Please go ahead.
Smith Gala: Yes, my first question is average revenue per certificate. Should we look at the number sequentially or year■on■year?
Eashwar Iyer: You can look at it both ways, Smith. The reason why we talked about the year■on■year number is because there was a pricing correction that happened last year. So there were a lot of queries in terms of the ASP performance in quarter 1 versus the previous year, where you were cycling a price reduction of quarter 2 last year.
So, you can therefore look at it from that standpoint. Also, from a sequential standpoint, we have mentioned this in the past. While the overall volumes remains more or less stable across quarters, there is obviously a mixed element that comes into play. There are quarters like the Diwali quarter where we have a spurt in jewellery certification.
There is a first quarter of every year which sees a larger LGD mix. So those impacts on the ASP will continue. But otherwise, from a pure realisation standpoint, if you were to disregard the mixed impacts, we are seeing a lot of stability as far as the price that we charge to our customers.
Smith Gala: Okay, thank you. That was helpful. That's all from my side.
Moderator: Thank you, sir. The next question is from the line of Chintan Sheth from Girik Capital. Please go ahead.
Chintan Sheth: Yes, hi. So, the question is on the follow■up on the GIA strategy to move, standardise the LGD. Do you foresee any risk on, the full■fledged certification demand to make a minimalistic brochure certification and that impact our overall realisation in the future?
Tehmasp Printer: See, Chintan, when we were the first to adopt the lab■grown certification, okay, you were to adopt first the lab■growns. GIA, in fact, didn't want to certify lab■growns initially and then they saw the market volume and they also got into lab■grown certification. Okay, and they've been also doing. But I think that they couldn't match up to the IGI standards.
See, IGI has the expertise to identify the origin and the scalability. See, to identify the origin on a scale of lab■growns is immense and we have developed that scalability. So, when they saw, I mean, suddenly they've taken a U■turn that we will stop grading. Okay, so I cannot say anything

much, but I can only use it to my advantage, which I am doing. The consumer has a right to know the choice to decide. It is not a laboratory. Laboratory is an independent entity, which gives you the analysis, period.
Chintan Sheth: How is the price differential between our full■scale certification and the GIA certification? If one has to just compare. Our price differential between full■scale certification versus those years of minimal certification, which we do internally as well.
Tehmasp Printer: See, GIA has not announced any indication of what they're going to price. All they have in announces their indication that they will henceforth do a prem

ium at a standard, you know.
See, this is essentially minimizing a category and we don't believe in that.

Chintan Sheth: No, no. I am asking, within yourself, within IGI report, there is a full certification, which also includes laser imprints and the diamond, right? Versus a minimal certification, which is more dossier driven certification, which still carries 4C certification, but doesn't provide more details than the laser imprints and the stones. What is the price differential between these two?
Tehmasp Printer: No, the price differential, Easwar will explain to you. But the thing is, the analysis is the same, whether it's whatever the format of the certificate, we do the analysis. We also do the laser inscription on both. You understand? So, it's the format, which is different, but the basic analysis is the same and the dossiers are generally used for smaller diamonds. And that is where a dossier fee is less than a full diamond report fee. So, that is the advantage that when you're doing smaller diamonds, you take a dossier.
Chintan Sheth: Eashwar, anything on the price differential if you can highlight?
Eashwar Iyer: I think we've mentioned this in the past. I think our jewelry certification realization is just under $4, which is basically dossiers. And natural diamond price would be just above $40. So, I think we've talked about it.
Chintan Sheth: Thank you and wish you all the very best.
Moderator: Thank you, sir. The next question is on the line of Harish Advani from Axis Capital. Please go ahead.
Harish Advani: Hi, thank you for the follow■up. So, my question was in continuation to the question which was asked by the earlier participants about GIA kind of withdrawing from the 4C certification of LGD. So, I just wanted to check with you in your conversations with say clients, how have they viewed this and are they now beginning to initiate conversations with you for a more complete kind of a certification? That was my question.
Tehmasp Printer: See, the thing is they have always been exposed to the 4Cs. The retailer knows the 4Cs. The consumer knows the 4Cs. And this is a new entity which GIA has introduced. And people are uncomfortable and confused. IGI, there is no confusion. We give you the standard 4Cs and we give you the origin, which is the most important.

Today, origin has become even more important than the 4Cs because the 4Cs continue to remain the same for lab■grown diamonds as well as for natural. However, origin is of paramount importance and that is where we have the expertise to differentiate.
Harish Advani: Okay, so just to sum it up, are any clients looking to switch over from GIA to IGI?
Tehmasp Printer: We are seeing that trend, though it's a very small number because we have the bulk of the certification in LG.
Harish Advani: Okay, perfect. Thank you.
Moderator: Ladies and gentlemen, due to interest of time, that was the last question. I now hand the conference over to management for closing comments.
Eashwar Iyer: Okay, thanks everyone for taking the time and I see that we still have a few questions unanswered. You are open to reach out to us on email, etc. and we will be happy to take those clarifications as well. So, thanks again as always for your active contribution and participation in these calls. Thank you very much.
Tehmasp Printer: Thank you everybody.
Moderator: Thank you, sir. On behalf of International Gemmological Institute (India) Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Subject: Transcript of the Earnings Call held for the quarter and nine month ended September 30, 2025

Dear Sir/ Madam,
Pursuant to our letter dated October 30, 2025, intimating the Earnings Conference Call of International Gemmological Institute (India) Limited for the quarter and nine month ended September 30, 2025, which was held on November 5, 2025, we hereby enclose the transcript of the said conference call.

This intimation will be made available on the Company's website at www.igi.org

This is for your information and record.
Thanking you,
Yours faithfully,
For International Gemmological Institute (India) Limited

Hardik Desai
Company Secretary and Compliance Officer

"International Gemmological Institute (India) Ltd.
Q3 & 9M CY25 Earnings Conference Call "

November 05 , 2025

MANAGEMENT : MR. TEHMASP PRINTER – MANAGING DIRECTOR & CHIEF EXECUTIVE OFFICER , INTERNATIONAL GEMMOLOGICAL INSTITUTE (INDIA) LTD.
MR. EASHWAR IYER – CHIEF FINANCIAL OFFICER , INTERNATIONAL GEMMOLOGICAL INSTITUTE (INDIA) LTD.
MODERATOR : MR. SUMEET KHAITAN – MUFG INTIME

International Gemmological Institute (India) Ltd
November 05, 2025

Moderator: Ladies and Gentlemen , Good Day and welcome to International Gem mological Institute

(India) Limited Q3 & 9M CY25 Earnings Conference Call hosted by MUFG Intime .
As a reminder, all participant line will be in listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need any assistance during the conference call, please signal an operator by pressing " *" then "0" on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Sumeet Kh aitan from MUFG Intime . Thank you and over to you sir.
Sumeet Khaitan: Good evening, everyone. I welcome you all to the Earnings Conference Call to discuss Q3 & 9M CY25 R esults of International Gem mological Institute (India) Limited.
To discuss the Results, we have from the Management , Mr. T ehmasp Printer – M.D. and CEO and Mr. Eashwar Iyer – CFO. They will take you through the " Results" and the "Business Performance " after which we will proceed for Q&A session.
Before we proceed with the call, I would like to mention that some of the statements made in the today' s call may be forward -looking in nature and may involve risks and uncertainties. For more details, kindly refer to the investor presentation and the other filings that can be found on the company' s website.
With this, now I hand over the call to the management for their opening remarks. Thank you and over to you sir.
Tehmasp Printer: Thank you Sum eet. Good evening, ladies and gentlemen. I would like to welcome you all to the Q3 9M CY25 Earnings Call.
I trust that everyone has had a chance to review our Financials and Investor Presentations which ha ve been made available on both the stock exchanges as well as on our company website.
It is a pleasure to connect with you all and " Share Insights into our Business Strategy and Outlook. "

I am happy to report that the company has seen strong growth momentum across all its business segments in the Q3 of ' 25 as compared to the Q3 of ' 24.
The business on a consol basis has done exceptionally well with a 21% growth in revenues from operations, 20% growth in EBITDA with nearly 3.5 million reports in the Q3 of '25.
The Company has delivered a strong volume growth of 26% over the previous year.
The business has shown strong revenue growth across its segments. LGD is growing at 24%, Natural Diamonds growing at 29% as per the previous year and for the nine-month ended in September 2025, the business has delivered revenue from operations growth of 15% and EBITDA growth of 22%.
Volumes over this period has grown by 25% with a strong performance across all our business segments, Natural Diamonds, Lab -Grown Diamonds, Jewelry and Colored Stones.
Over the last six months, the industry has seen various macroeconomic challenges. There has been a significant policy disruption coupled with steep increases in prices of gold and silver. Despite these headwinds, the C ompany continues to deliver strong revenue growth across all its categories.
This quarter has seen significant action on the brand building front with IGI being one of the sponsors for the Women' s World Cup Cricket Team . This has been our first attempt to leverage our brand with a global tournament and build a connect with the consumers directly. By the way, you all are aware that the World Cup Women' s Cricket has been won by India. Kudos to our India 's women team.
Our company has also participated through our CSR activities with the industry by organizing an eye c heck -up camp at the Bharat Diamond Bo urse. Within the first day, our registrations have shown 8, 000 registrations on the first day. It is proposed to be a 40- day eye camp, providing free eye check -ups to the members of the bou rse. We have received some excellent feedback during the course of this program.
Overall, we are confident of maintaining a growth momentum and delivering the revenue and the EBITDA growth this year in line with our guidance indicated at the beginning of the year.

We remain committed to enabling growth for our partners, delivering long- term value to all our stakeholders.
And with that, I now ask " Eashwar Iyer, our CFO, to take you through the Financials and Operational Performance for the Q uarter. " Eashwar , over to you.
Eashwar Iyer : Thank you, Te hmasp, and good evening, everyone, and thank you for joining today 's Conference Call.
As Te hmasp has mentioned, we are delighted to have you all. As many of you will know,

our company follows a Jan to December reporting cycle, and we are excited to present the results for the 3rd Quarter of 2025.

I will start with an update of Quarter 3 Results before providing an update of the nine -month performance. On a consolidated group performance level, I am happy to report that the group' s consolidated business has maintained strong growth momentum in Q uarter 3 2025.

In terms of revenue, certification income from the current quarter stood at INR 294 crores, which represented a 20% growth over the same time last year. Corresponding , the volume growth during this period was at 26%. This was primarily driven by some strong revenue growth momentum across all our segments, namely 29% growth in natural diamonds, 24% in lab -grown diamonds, and 26% growth in LGD jewelry. Total revenues for the quarter stood at INR 304 crores, registering a growth of 21%.

In terms of reported volumes, during the quarter, we delivered 3.45 million reports, compared to 2.73 million reports in Q uarter 3, 2024, registering a growth of 26%.

Driven by strong revenue performance, we delivered a PAT of INR 130 crores, that is growing 18% compared to the same time last year. PAT margins stood at 43% for the quarter.

EBITDA reported at INR 176 crores, reflecting a growth of 20% compared to the previous year. EBITDA margin standing at 58%.

Coming to the nine -month update on the consolidated group performance for this period.

We delivered 9.6 million reports, compared to 7.7 million reports for the nine months of 2024, which marking a robust year -on-year growth of 25%.

In terms of revenue, certification income stood at INR 883 crores, growing at 16%. This was driven by strong growth across all key segments. On a nine -month period, LGD is growing 18%, natural diamonds is growing 14%, and LGD jewelry is growing 32%.

Total revenue from operations for the nine months stood at INR 909 crores, registering a growth of 15%. Driven by strong revenue performance, we delivered a PAT of INR 397 crores, which is growing 27%.

PAT margins stood at 44%. It is up 390 basis points year -on-year.

EBITDA reported at INR 545 crores, reflecting a year -on-year growth of 22%. EBITDA margin stood at 60% for these nine months . It is up 320 basis points year -on-year.

Based on the strong momentum that we have seen over the last three quarters, we remain committed to delivering a strong full -year performance in line with the guidance, which was over 15% revenue growth and 20% EBITDA growth that we had indicated at the beginning of this year.

With this, I conclude my remarks and I open the floor for any questions. Thank you very much.

Moderator: Thank you very much. We will now begin the question- and-answer session. We have the first question from Harit Kapoor from Investec. Please go ahead.

Harit Kapoor : Hi, good evening. Firstly, congratulations on an excellent result in a fairly challenging environment. I just had two or three questions. One was on this reali zation decline of about 5%. I th

ink you mentioned in the presentation also that it was largely product -mix led. But if you look at the performance of natural diamonds and lab- grown diamonds, which have grown 29% and 24%, it is typically the jewelry segments which are slightly weaker , they grow faster, the mix deteriorates. I just wanted to understand whether there is a like -to-like pricing decline also in the quarter , and if so, how much that is , that would be my first question?

Eashwar Iyer : Okay. Harit, I think it is a very relevant question that you have asked. What we have seen during the quarter is a very high incidence of smaller carat size natural diamond and lab-grown jewelry coming in for certification. So, that is the reason why you see that despite a 29% increase in natural diamond and lab -grown diamond, you are seeing a slight decline in ASP, again, driven purely by a change in the carat size that we are currently receiving.

Harit Kapoor: So, Eashwar there is nothing … Almost entirely.. Yes

Eashwa r Iyer: So, as we have been mentioning in the last couple of calls as well, I think there has been many changes to pricing. We have seen a lot of stability in pricing over the last three, four quarters. So, this is more in terms of segment mix and driven by within the segment, the product size mix.

Harit Kapoor : Very, very clear. The second question was on the trends through the quarter. So, some of the checks that suggested that maybe pre -tariff, there would have been a very sharp pickup in growth especially of products going to the US as they wanted to kind of beat the tariff deadline and then post that, it would have been a bit slower. Just wanted your assessment of how it spanned out through this period of time. It has been fairly consistent, or it has been a bit lumpy, just wanted your thoughts on th e growth?

Eashwar Iyer : I think, Harit, our volumes over the last three quarters have been more or less consistent and I will just read out some numbers which is in public domain. Quarter 1, we did some 3.1 million reports. Quarter 2 was 3.03, and in this quarter is 3.45 million reports. So, from a volume standpoint, we have not seen any massive ups or lows as far as consistency of grading is concerned. Obviously, the tariffs kicked in during the lat ter half of the quarter, which also coincided with the Diwali period in India. So, we have seen some significant ramp up of demand driven by the Diwali quarter impact as well as far as jewelry is concerned, et c., But having said that, obviously, a s we speak, the tariffs are on. So, we continue to evaluate for any supply chain changes that may be occurring. Obviously, with IGI having its presence in l ot many geographies, it is possible that in case there is any shift from a supply chain standpoint, I think we are well positioned to leverage that in terms of ramping up capacity in some of the other locations, be it Dubai or Hong Kong or Turkey, etc., So, from that standpoint, we are keeping our eyes and ears open in case of there are any dynamic chang es, we would be obviously ensuring that we are up to the task in terms of ramping up our capacities elsewhere.

Tehmasp Printer: And just to add to what Ea shwar has said, this is Printer here. Our domestic market consumption is extremely strong and we are very predominant in the domestic sector. So, tariff has virtually no significant or no impact at all on the domestic sector. So, from that way, the domestic sector has really ramped up and especially during the Diwali season, we have done exceptionally as well, as you can see, in spite of the numerous headwinds that we have been facing and challenging conditions that we have been fa cing in the diamond industry.

Harit Kapoor: Got it. And

the last bit is, if you look at your guidance, you have hit your nine -month number is in line with your revenue kind of guidance and given that you have spoken about maintaining full year guidance, it implies that Q4 or the October to December quarter should also be reasonably okay. Is that a visibility that you have today , the early part of the quarter, which has gone by the first month, has not shown any significant difference a nd hence, broadly, you should be in line with that 15% revenue gui dance for the full calendar year?

Tehmasp Printer: Yes, Hari t. That is for sure.

Harit Kapoor: Great. I will get back in queue . Thank you very much.

Moderator: Thank you. Next question is from Harish Advani from Axis Capital. Please go ahead.

Harish Advani: Hi. Thank you for taking my question. So, my first question was on the international business. So, while we continue to see some stress out there with growth at about 6% in revenue terms, but within this, how should we look at it? How much of an impact are you seeing from tariffs in some of these geographies , and which are the markets which are doing better , and which are the markets which are seeing some stress i f you could tell me about this in the first question ?

Eashwar Iyer: Okay . I think in line with what we have discussed in the previous two quarters, the trends in the Netherlands holding which has Dubai and China under it, they are continuing to perform extremely strong. Obviously, we have had headwinds in both the European market as well as US market. So, that has not changed significantly in Q uarter 3. So, most of the performance in the subsidiaries is driven by some excellent performance in the Middle East and in the China market.

Harish Advani: Okay . Just a follow up on that. So, when you say they are doing significantly better, can you kind of quantify to a certain extent like 1.5x or 2x more than what the overall reporting is for the international?

Eashwar Iyer : No, see, the Netherlands business is growing at around 20% revenues. But we have seen softness in the Belgium and the US entity. So, that is the way it stands and it has remained more or less consistent with the earlier two quarters as well.

Harish Advani: Okay, got it. And a similar question on India as the earlier participant. So, while we knew that tariff was going to be increased from a certain date, did we see anything on the LGD part of it in terms of our customers asking for any ASP -related cuts, or that continue to be at the current pricing as the current quarter or the last quarter?

Eashwar Iyer : Yes, so in line with whatever we just mentioned to the earlier question, we are seeing stability in pricing, there has not been any significant change in this quarter.

Tehmasp Printer: Yes, I mean, this LGD in fact has helped the di amond tier to keep their factories running.

And on domestic demand is pretty evident as we have already related. And overall, the impact of tariff on certification is quite insignificant. So, we as you can see from our results, tariff really has not made any impact on our revenues. In fact, it has increased our revenues on the domestic and other markets.
Harish Advani: Okay, perfect. So, then there would be typically those seasonal -related vagaries which happen but nothing from tariff ? Okay, thank you. I will come back in the queue for follow ups. Thank you.
Moderator: Next question is from Smith Gala from RSP N Ventures. Please go ahead.
Smith Gala: Yes, so my question is realization per report have dropped more than 5% at consol level, with the mix more or less remaining the same. India, which is almost 75% of the business showed 2% increase in realization. Why has there been a significant fall in opera tions outside India and how do you see it going forward?
Eashwar Iyer : Yes, I think that is more of r

elated to a geographical mix. As I mentioned, normally, US and European markets have a higher realization a nd that ha s not been doing too well. So, the markets of Middle East, for example, is more jewel ry-driven, and China again is a large element of our revenues come from lab- grow n. So, I think it is more a geographical mix,

which is causing that sort of flux at the consol level. But as you rightly mentioned, the India ASP for the quarter has seen a 2% increase over the same time last year. So, pretty strong performance of India is what is carry ing through the group for us at the moment.
Smith Gala: Got it. And sir, you mentioned the European business and the US business are facing a bit of pricing pressure. So, how much of our international business is contributed by these two geographies?
Eashwar Iyer : See, at the moment, India contributes around 75% of the group' s revenue. And I did not say there is pricing pressure there, I a m just saying it is a geographical mix. Our realizations in Europe and US is slightly higher than the other geographies. So, that is the reason why you see the mix shift across geographies causing a slight blip at the consol level despite the fact that India ASP is up by 2%.
Smith Gala: What I was saying was that India, which is 75% of our business is up 2% , and we are down 5% at consol level. So, at least one or two geographies must be really bleeding to cause a 5% dip at a consol level. So, I am just wondering if you have mentioned Europe and US are these two geographies , so how much of our business is coming from these two geographies, which are from the outside India business?
Eashwar Iyer : The US business will contribute close to 12% of our revenues and Netherlands another 12-12.5% of our business.
Smith Gala: Got it, sir. Got it. And so just one minor data keeping question. In terms of the LGDs that we are certifying, out of 100 LGDs, how many of them are bound for export?
Tehmasp Printer: That is a difficult question. W e do not track this, no. But majority of this portion is destined to the US because US has been the first adoption of LGs in the world, a nd LG diamonds have actually more or less established itself in the US market w ith almost like last year 50% of all bridals were all LG So, I can just give you a rough estimate , but otherwise, there are no real forthcoming figures from the breakup point of view.
Smith Gala: Got it. Got it. I will join back in the queue, sir. Congratulations on a great set of numbers. Thank you.
Moderator: Next question is from Rajesh Jain from RK Capital. Go ahead, please.

Rajesh Jain: Thanks for the opportunity. So, I have a few questions. If you can just tell what has been the impact of US tariffs in your international business as in if the tariffs were not there, then how would the performance have been, to what extent it would have improved?
Tehmasp Printer: See, tariff is a reality right now. So, we have to engage with that. But as I said earlier, tariff has not really played a significant impact on the certification business. You understand? So, this is where quite a lot of our turnover is from the Indian continent. So, we are very strong on the Indian continent and tariff plays no role or no impact on the domestic market.
Rajesh Jain: Yes, but I was asking about the international market ?
Tehmasp Printer: Yes, so that is what I am saying. Tariff from the international market, like Eashwar just told you, it is 12% in the US and 12% in Europe. So, that has been a little affected, but not too much. From a certification point of view, tariff has really been quite insignificant even in the international market.
Rajesh Jain: Okay. So, you are saying th e tariff or not tariff, I mean, the US and Netherlands, maybe

only a few bp s or a few percentages here and there it would have got the impact ?
Tehmasp Printer: Yes, that is correct.

Rajesh Jain: Okay. And so I just wanted to know, as far as India is concerned, is the business coming from mainly the large chain jewelry stores, or you are also getting the business from smaller jewelry stores? Because I spoke to three, four jewelry stores, and all of them were not so keen on getting certification for the LGD diamond. But you mentioned among the largest stores, nine out of 10 chain stores are your customers. So, is there a perception difference between the larger stores and the smaller sto res?
Tehmasp Printer: Not really. See, the thing is, the chain stores have a number of stores. Okay? So, they have a cumulative effect. But the independents and the stores across the country are playing as significant or in fact their role is even more significant on an overall basis. You understand? We supply, we cater to the entire supply chain in the gem and jewelry industry right from the manufacturer, to the wholesaler, to the trader, to the manufacturing of the jeweler, to the jewelers, to the retail shops , online, offline. So, we are holistically available for all the stakeholders in the gem and jewelry sector.

Rajesh Jain: Okay . So, you are saying that the demand is equally strong from the smaller and independent one shop kind of stores ?
Tehmasp Printer: Yes, actually, there is nothing called smaller. I mean, in that locality, that guy is big. I mean, he may not be in Bombay, but if he is sitting in Raipur, he is a big guy.
Rajesh Jain: Okay. And so, considering your product mix in this quarter, which although your volume growth has been really good, but it has led to a comparatively lesser revenue growth because of the product mix. So, on a full year basis, like, what kind of blended product mix? I mean, there was supposed to be let us say 20% increase in volume on a full year basis , so can it lead to a 20% increase in revenue or the revenue is likely to be always lagging the volume growth?
Eashwar Iyer : See, it is okay. I think this we have discussed in the last two quarters. Obviously, the first quarter we were cycling a large decline of ASP last year. But in the last two quarters, our revenue growth and the revenue growth was the volume is more or less the same. Give or take a couple of percentage points here or there . I think so that way, there is a lot of stability in pricing . A little bit of mix interplay can happen, but it is not going to be very significant.
Rajesh Jain: Okay. And when can we expect your international subsidiaries to contribute meaningfully to the bottom line?
Eashwar Iyer : We need to realise t here are a couple of things that we need to keep in context that nine out of 10 stones would get manufactured and polished happens here in India. So, India is the hub as far as global supply chain is concerned as far as polished stones go. The important thing for us is the US market from a retail standpoint is the largest consumer market in the world with over 50% of the global demand going into the US. So, our operations in the US and Europe have a dual role to play. We have our own laboratories there, which does certification that comes into those labs. But the larger element for us is to ensure that these offices are engaging with the large retailers there to influence them to ask the manufacturers
here in India to seek for IGI certification rather than go to any other labso I think we have to see that in th e total context rather than you know just seeing that how can we get and
Of course, we also want to have the US business to scale up at a much faster rate, and we are making significant leadership investments and interventions there in the US. But we need to keep that in context in terms of what role the other busin

esses play, at least in
Europe and the US a part from just being certifying goods that come in, they also have this

huge sales and marketing arms that enables to influence the manufacturers here to seek for IGI certificates. I think we have to see that in totality .
Moderator: Next question is from She ela Rathi from Morgan Stanley. Please go ahead.
Sheela Rathi: Yes, thanks for taking my question. My first question was with respect to the volume growth, I mean, the volume growth for the C ompany has been in double digits throughout the year. Earlier, the expectation for the industry was that the industry volume growth for the next five years would be about 5% to 10%. I just want to get a sense on how industry growth has been, or we have been just out of the park with respect to our volume growth trends. And if we have some sense on what is the overall penetration of ce rtification now versus, say, where it was in 2023?
Eashwar Iyer : Okay. Very difficult question that you have asked, She ela, but let me attempt. Okay. See, I think for the quarter, we have delivered some 26% growth and nine months volume growth is around 25%. Obviously, there is a big element of play with LGD. But the good thing … and I am trying to correlate this with the question that you asked on a market share, is this natural diamond growth, the natural diamond for us this quarter grew 29% at the

group level, and YTD growth is 14%. So, this is a significant growth, which we have not
seen in the past. So, obviously, there is a little bit of market share gains that we are seeing
in this segment for sure. So, obviously, we need to relook at what is the penetration, etc.,
which normally is an annual exercise that we conduct. But when we were filing during the DRHP time, I think we had
estimated some 65 -70% to be penetration as far as certification
goes versus the overall market. So, how has that needle moved is something that is not
readily available to us. But from a company standpoint, I think the strong perf ormance in
Indy probably correlates to the fact that we are starting to gain some share as far as natural diamond certification is
concerned.
Sheela Rathi: And that would apply primarily for India, right?
Tehmasp Printer: Majority would be in India, but it would be across the globe.
Sheela Rathi: Okay. So, fair to say that the competitive landscape is very much stable for us. In fact, it is
in favor for us at this point of time.
Tehmasp Printer: Yes. Thank you. Yes.

Sheela Rathi: Okay. And my second and final question is, somewhere I heard in the earlier responses that
we are now having more low -carat diamonds and that was the reason why realizations are
also lower. Is it to do with natural diamonds or lab -grown diamonds where we are doing
certification ?
Eashwar Iyer : Natural diamonds .
Sheela Rathi: So, hitherto the mix was more than three carat diamonds was about 5% for us from a mix
perspective. Now, how is that mix changed now? I mean, it is more moving towards a less
than three -carat or how is it if you could just quantify that?
Tehmasp Printer: It is not on the single solitaire basis. What we are speaking about is on the jewelry. Earlier,
the jewelry piece used to carry say one and a half -carat diamonds. Now this average jewelry
piece is carrying about a carat plus. You understand? So, the size of the jewelry piece where
diamonds are concerned has somewhat been decreased, but the quantities have increased.
So, that is the mix that you are talking about. It is not a lower carata ge in the loose
diamonds. That remains more or less the same.
Sheela Rathi: Understood. Just one more question here. T ehmasp you also talked about we being a large
part of our customer base is domestic as we cater to the domestic ma

rket. So, has the profile
of our customer base changed in the last 12 months , I mean, have there been new customer
additions because, there are a lot of B 2C players getting into the LGD space , so if there is
any change we have seen?
Tehmasp Printer: No. So, what we see changes, I mean, going into the third and second and the Third -Tier
cities, so we are gaining grounds there. We are going inroads into India. And also, I mean,
the LGD jewelry space is also rapidly increasing even in India. So, these are the two aspects
that we can see where our growth is coming from.
Sheela Rathi: Understood. All right. Thank you, Eashwar . Thank you, T ehmasp.
Tehmasp Printer: Thank you, She ela.
Moderator: Next question is from Rajesh Jain from RK Capital. Go ahead, please.
Rajesh Jain: Yes, thanks. I had two more questions. So, one is that, how has been the trend so far in
October and November compared to the previous quarter?

Eashwar Iyer : I think, Rajesh, these are early days and w e would not want to give you something forward
looking, etc., specifically for the quarter. As we have indicated, we are confident of
delivering the 15% revenue growth and 20% EBITDA growth which was our guidance at
the beginning of the year. So, we are not seeing any difference in business as we speak.
Rajesh Jain: Okay. And on a long- term basis also, do you think this same 15% revenue and 20%
EBITDA is sustainable beyond this financial year?
Eashwar Iyer : See, again, the industry is obviously going through a major shift with the introduction of
lab-grown diamonds , and it has played out over the last eight, nine quarters in terms of lab-
grown actually propelling the industry forward, and again, we believe that this is just the
beginning of the trend , and this lab -grown evolution is just starting on. So, I do not think
there should be anything that should be a bottleneck over the next three to four years as far
as this industry for lab -grown is concerned. So, that long -term outlook for us is pretty
positive in terms of what we will, therefore, I think, ride the industry growth, so to say,
over the next three to four years.
Rajesh Jain: Okay. My other question is, can you give a sense of the Netherlands market? So, while
answering the previous question, you spoke of the US market and your presence and
strategy there. Can you tell something about Netherlands market and you r subsidiary

operations there?
Eashwar Iyer : In Netherlands, we have five, six businesses which roll up under the Netherlands holding company. We have markets of Hong Kong, Thailand, Middle East, China, and Turkey,
which is a part of this group. So, for example, Dubai and Middle East is more a jewelry
market , China is more lab -grown, Hong Kong and Thailand is more natural diamond
jewelry. So, each geography has its own strengths in terms of which segment they play in.
I presume I have answered your question.
Rajesh Jain: So, are you also doing any expansion in terms of your lab presence in other fast -growing
markets next to China or other countries?
Eashwar Iyer : We have two labs in China. We have a couple of labs in Dubai. We expanded with an
additional lab in Dubai this year. So, we continue to scout the market and as and when we
see that there are opportunities, nothing will prevent us from expanding in existing
geographies as well.

Rajesh Jain: Okay. Thank you.
Moderator: Next question is from Smith Gala from RSP N Ventures. Please go ahead.
Smith Gala: Thank you for the follow -up. My next question was like, we have a lot of cash reserves,
approximately INR 400 crores in the balance sheet and we are going to generate roughly
INR 500 crores of PAT. So, any plans to utilize that?
Eashwar Iyer : Okay . At the moment, I think the company is s

itting on a very strong cash position. And
as we have articulated in the past, some of this will get paid as dividends. But obviously,
we are also keeping our eyes open in terms of opportunities for acquisitions, etc. , So, we
will see how that pans out. At the moment, we have no specific information to share with
the broader group.
Smith Gala: Sure. That was all from m y sid e.
Tehmasp Printer: Thank you, Smith.
Moderator: Next question is from Rahul Picha from Multi -Act PMS. Please go ahead.
Rahul Picha: Yes, thanks for the opportunity. My question is on the guidance of 15% revenue growth
and EBITDA growth of 20%. So, when you look at nine months' number, we have
delivered 15% revenue growth and EBITDA growth of around 22% odd, and when we
look at the initial commentary on the advertisement spend that we have done in Women 's
World Cup. So, do we expect Q4 margins to be lower because of that versus our nine -
month average?
Eashwar Iyer : Rahul, I think, obviously, we are delivering much better than what it is. So, what we are
saying is there is no change to the guidance that we have given at the beginning of the year,
we are confident of meeting it, or probably surpassing it by a few percentage points.
Tehmasp Printer: And we are also living up to our brand building exercise. And this was a great opportunity. And do not forget that our women won the World Cup, which is a tremendous achievement
for the country as well as for IGI having sponsored the Women' s Cup.
Rahul Picha: Okay, thanks. That is it from m y end .

Moderator: Next question is from Sameer Ray, an investor. Please go ahead.
Sameer Ray: Thank you for the opportunity a nd congratulations to the management for nice result. I just
wanted to know, see the picture in your last quarter, how the things are going as in regards
to the tariff that has been imposed on India ? And if this tariff remains there, how do we
look into the exports from India to USA in Q uarter 1 and Quarter 2 next year?
Eashwar Iyer : Hi, Sameer, I think we have answered that question earlier on the call. We have not seen
any significant disruptions from the tariff announcements. So, we are keeping our fingers
crossed in terms of how that pans out. Obviously, there is a lot of discussion that is going
on within the two governments a nd we are hoping that things fall in place over the next
month or so. A nd as I mentioned, with our cross geographical presence, IGI is at least well
positioned to leverage on some of the benefits that may therefore accrue because certain countries that are at a lower tariff regime. We will see how that pans out. But at the moment,
we are not seeing any disruptions to our business.
Sameer Ray: Okay, thank you.
Moderator: Next question is from Angad from Sam eeksha Capital. Please go ahead.
Angad : Hi, thank you for the opportunity and congratulations for the good set of results. One small
clarification. In December, our parent company had created a pledge in the promoter entity.
Just wanted to understand, is it still there , have we - ?
Eashwar Iyer : I think that has been clarified. You can look at our latest clarification that we ha ve given
both to BSE as well as NSE. There is absolutely no pledge on IGI shares by the parent

entity.
Angad: Got it. Thank you so much.
Moderator: Next question is from Jayesh Shah from OHM Portfolio. Please go ahead.
Jayesh Shah: Hi, thanks for the opportunity. Just a clarification. This World Cup sponsor expenses, are they already in the P&L in the nine months or you would expect something to come in even in the following quarters?

Eashwar Iyer : It has been split between the two quarters actually. So, it is not significant. I do not think it is going to move the needle as far as
Tehmasp Pr

inter: This is more of a brand building exercise.
Jayesh Shah: So, there is not a jump up in the overall percentage?
Tehmasp Printer: No, not at all. In fact, we have a jump up in our branding exercise.
Jayesh Shah: Which I think I totally endorse and agree. Thank you very much. Just one broad question. Given the strong enthusiasm and FOMO for gold and silver, are you seeing any change in the pattern where jewelry is moving more towards gold and silver and less to diamonds and LGD or you think everything gains in the moment um?
Tehmasp Printer: Jayesh, I do not have a crystal ball.
Jayesh Shah: No, no. I am talking about how you are seeing the exceptions and how you are seeing it.
Tehmasp Printer: That is how it happens. I will tell you what. Whenever there is a challenge, we have an innovative solution. So, we rely on that. We rely on our expertise. We rely on our innovations. We rely on our practicality to combat any such challenges that we receive a nd we will continue to do that as you have seen in the last three quarters.
Jayesh Shah: Right. But yours is a pull product and not really a push product, right? So, it is like if there is a jewelry demand, then they need certification. But I am just saying that whether the jewelry demand, are you seeing that it is shifting more to gold and silver than on diamonds or you think the studded one is going equally strong and hence not?
Tehmasp Printer: Equally strong. We do not see any significant change in that.
Jayesh Shah: Okay. Thank you very much and best of luck.
Moderator: Next question is from Chetan Singh, an investor. Please go ahead.
Chetan Singh: I have one question regarding this D &A expense. We have got sharp increase in this quarter and the other expense also. What caused this expense to rise so much in this quarter?

Eashwar Iyer : Okay. I think as we are expanding our capacity, etc., I think there has been a lot more fixed assets that got employed in the Company. So, I think the depreciation, amortization is consequent to that. If you look at our other expenses over the last three quarters, it has more or less been stable at around INR 50-56 crores. So, I think there is nothing significantly that has changed over the last nine months as far as these two lines are concerned. I think D&A expense ha s become some INR 11 crores. I think, obviously, that is because we are expanding our operations as well. There has been some fixed assets that have got added in.
Chetan Singh: Okay. Due to that, I think there is some percentage point decrease in PAT margins, I think. So, at what level do you see this PAT margin to stabilize?
Eashwar Iyer : I think we have been delivering consistently between 40- 45%. I do not think there 's going to be any significant change there. It has been more or less stable.
Chetan Singh: Okay. Thank you.
Moderator: Thank you. Ladies and gentlemen, we will take that as our last question for the day. I now hand the conference over to management for closing comments.
Eashwar Iyer : Thank you, everybody, for taking your time. It is a pleasure as always to interact with all of you and we look forward to seeing you all when we announce our full year results in probably a couple of months ' time. Thank you very much for the call.
Tehmasp Printer: Thank you so much.
Moderator: You are welcome, sir. On behalf of International Gem mological Institute (India) Limited, that concludes this conference call. Thank you for joining us. You may now disconnect your line s.

"International Gemmological Institute India Limited
Q4 & 12 months 2025 Earnings Conference Call"
January 27, 2026

MANAGEMENT : MR. TEHMASP PRINTER – MANAGING DIRECTOR AND CHIEF EXECUTIVE OFFICER – INTERNATIONAL GEMMOLOGICAL INSTITUTE (INDIA) LIMITED
M R. EASHWAR IYER – CHIEF FINANCIAL OFFICER – INTERNATIONAL GEMMOLOGICAL INSTITUTE (INDIA) LIMITED

MODERATOR : M R. SUMEET KHAITAN – MUFG INTIME

Moderator: Ladies and gentlemen, good day and welcome to the Q4 and 12 months 2025 Earnings Conference Call of International Gemmological Institute (India) Limited hosted by MUFG Intime. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touch-tone phone.
Please note that the conference is being recorded. I now hand the conference over to Mr.

Sumeet Khaitan from MUFG Intime. Thank you and over to you, sir.
Sumeet Khaitan: Good evening, everyone. I welcome you all to the earnings conference call to discuss Q4 and 12 months 2025 results of International Gemmological Institute (India) Limited. To discuss the result, we have from the management Mr. Tehmasp Printer, MD and CEO and Mr. Eashwar Iyer, CFO. They will take you through the results and the business performance after which we will proceed for Q&A session.
Before we proceed with the call, I would like to mention that some of the statements made in today's call may be forward-looking in nature and may involve risks and uncertainties. For more details, kindly refer to investor presentation and other filings that can be found on the company's website.
With this, I now hand over the call to the management for their opening remarks. Over to you, sir.
Tehmasp Printer: Thank you, Sumeet. Good evening, ladies and gentlemen. I would like to welcome you all to the Q4 and the 12-month 2025 earnings call. I trust that everyone has had a chance to review our financial results and investor presentations, which has been made available on both the stock exchanges as well as our company website.
It's a pleasure to connect with you all and share insights into our business strategy and outlook. While the company is presenting the 12-month financial update, it may be noted that the company is moving its reporting year from the current Jan to December cycle to April to March cycle.
Accordingly, the company shall report the financial results for a 15-month period ending March 2026 in line with the regulatory requirements. The company has had an excellent 12-month Jan to December 2025. Despite some macroeconomics headwinds, the company has seen exceptional performance across all its segments, natural diamond loose stones, lab-grown diamonds loose stones, natural diamond jewellery, lab-grown jewellery.
The growth in the natural diamond segment has been led by increased penetration and market share in this segment. On the lab-grown loose segment, the robust growth of the last two years continues in 2025 as well, and the volume growth is in excess of 21%. This segment has seen stability in pricing over the last 18 months and the evolving landscape resultant of grading

principles adopted by the other players in the certification industry, IGI, is confident of further penetrating into this segment.
The underlying demand for the lab-grown diamonds continues to be strong and the large manufacturers are making significant additions to their capacity as the industry expects to double the caratage in the next three years. We remain confident of repeating the volume and revenue performance in this segment in the financial year 2026. While the momentum of natural diamond jewellery has continued over the past 12 months, we are continuing to see exponential growth in the lab-grown sector jewellery.
Over the past 12 to 15 months, we have seen many new players entering the retail space for the lab-grown jewellery with retail showrooms now over 1,000 across the country. We believe this industry is in its nascent stage and with the adoption of lab-grown je

wellery amongst the
Indian consumers, this segment is poised to accelerate growth in the near future. All the evolving changes further reinforces the need for independent third-party certification in addition to the 4 C’s of grading and the need to identify the origin assumes greater significance for the end consumer.
IGI is an independent third-party certifying body will play the lead in creating this consumer awareness as part of the strategy IGI initiated in its first reach out to the consumer program by co-sponsoring Women's World Cup and you can expect greater brand building exercises over the next 12 to 18 months. I am happy to report that the company has shown strong growth momentum across all its business segments.
In Q4 of 2025, as compared to Q4 of 2024, the business on a consol basis has done exceptionally well with a 21% growth in revenue from operations and 26% growth in EBITDA with 3.21 million reports in fourth quarter of 2025. The company has delivered a strong volume growth of 11% over the previous year. The business has seen strong revenue growth across its segments. Lab-grown sector is growing at 35% and the natural diamond is growing at 45% versus the previous year.
For the 12-month period ending December 2025, our volumes grew by an impressive 21% with a robust performance across all the business segments, natural diamonds, lab-grown diamonds, jewellery, and color stones. The revenue from the operations increased from INR1,053 crores in calendar year 2024 to INR1,229 crores in 2025, reflecting a healthy 17% growth. Equally encouraging, our EBITDA rose from INR600 crores to INR737 crores, making it

a strong increase of 23%.
With the strong fourth quarter performance, the company exceeded the guidance provided at the beginning of the year 2025. We remain committed to enabling growth for our partners, delivering long-term value to all our stakeholders.
And with that, I now invite our CFO, Mr. Eashwar Iyer, to take you through the financial and operational performance for the quarter.

Eashwar Iyer: Thank you, Tehmasp, and good evening, everybody. Thank you for taking the time for joining us on the call today. We are delighted to have you all. As many of you know, the company follows a Jan to December reporting cycle, and we are excited to present the results for quarter 4 as well as the 12-month period for 2025.
I start my conversation with an update for quarter 4 results before providing an update on the 12-month performance. On the consolidated group performance level, I'm happy to report that the group consolidated business has maintained strong growth momentum in quarter 4 '25.
In terms of revenue, certification income for the current quarter stood at INR305 crores, growing on a yearly basis at 23%, supported by strong volume growth of 11%. This was primarily driven by strong revenue growth across all segments, namely 45% growth in natural diamonds, 35% growth in lab-grown diamond loose stones.
Revenue from operations for the quarter stood at INR320 crores, registering a year-on-year growth of 21%. Driven by strong revenue performance, we delivered a PAT of INR135 crores, growing 18% compared to the previous year. PAT margins stood at 42.1% for the quarter.
EBITDA reported at INR191 crores, reflecting a growth of 26% compared to the previous year. EBITDA margin stood at 59.9%.
The India business has seen a very strong quarter 4 performance. While revenues grew 12%, certification revenues grew at 33%, driven by very strong growth in ND loose stones of 53% and LGD loose stones, which grew at 47%, which has resulted in a 19% improvement on the ASP.
Coming to the 12-month update on the consolidated group performance level, we have delivered 12.81 million reports compared to 10.57 million reports in the same period, marking a robust year-on-year growth of 21%. In t

erms of revenue, certification income stood at
INR1,188 crores, growing at 18%. This was driven by strong growth across our key segments. LGD has grown at 22%, ND at 20%, and LGD Jewelry grew at 22%.
Driven by strong revenue performance, we delivered a PAT of INR532 crores for the 12-month period, growing at 24%. PAT margins stood at 43.3%, which is up 270 basis points year-on-year.
EBITDA reported at INR737 crores, reflecting a year-on-year growth of 23%. EBITDA margin stood at 59.9%, up 300 basis points year-on-year. The company has ended the 12-month period with an extremely strong quarter 4 performance, thus delivering above the guidance provided at the beginning of the year.
With that, I conclude my remarks and open the floor for any further questions. Thank you, everybody.
Moderator: Thank you very much. We'll now begin the question-and-answer session. The first question is from the line of Sucrit D Patil from Eyesight Fintrade Private Limited. Please go ahead.

Sucrit D Patil: Good evening to the team. I have two forward questions. My first question is to Mr. Printer. With increasing complexity in global jewellery markets, including adoption of lab-grown diamonds, higher consumer focus on traceability and evolving retail requirements, how is IGI positioning its certification and value-added services to remain relevant and indispensable across the industry?
Additionally, how do you see demand evolving across natural versus lab-grown segments and what tactical priorities will shape IGI's growth and differentiation over the next coming quarters? That's my first question. I'll ask my second question after this. Thank you.
Tehmasp Printer: Thanks, Sucrit. IGI is in a very dominant position because we believe that as a third party independent certification body, which certifies diamonds, the most important factor in today's date, apart from the 4C’s, of course, is the identification of the origin. So just take it like this that if you want to buy a natural diamond, certified by IGI becomes a real factor.
Why? Because you want to know it is not a lab-grown diamond. If you want to buy a lab-grown diamond, certification becomes imperatively because you want to know that it is not a piece

of glass. So, at every stage, IGI certification is the most relevant feature in the purchase of your diamonds and diamond jewelry. We firmly believe that our certification makes lab-grown diamonds a diamond. That is what the aspiration of a customer is.
Every customer aspires to have a diamond. And today, IGI is giving that option to the buyer, which is now what I call it as a modern luxury, not even an affordable luxury. Of course, it is more viable to the pockets of the millennials and the Gen Zs. But it is a modern luxury, which everyone aspires to have a diamond. And when it is certified by IGI, giving you the four Cs of the diamond, giving you the origin, it becomes conducive for purchase.
So, all over the world, we've seen and the US has taken the lead in adopting lab-grown diamonds. IGI has taken the lead in adopting the certification of lab-grown diamonds because we believe that we certify diamonds and give you the origin. So that is the main stay of IGI, that we are a third-party independent certification body.
Sucrit D Patil: Thank you. My second question is to Mr. Iyer. As IGI continues to scale its operation amid fluctuations in diamond volumes, pricing cycles, and geographic mix, how are you thinking about margin sustainability and cost efficiency while investing in technology, capacity, and talent? Further, can you elaborate on the capital allocation philosophy and cash flow priorities as the business balances growth opportunities with financial discipline? Thank you.
Eashwar Iyer: Okay. I think you've asked too many questions at the same time. Let me just try to answer this one at a time.

On the margin side, I think what we've been articulating over the last three quarters, I think India is where majority of the cutting and polishing happens. So, from that context, because of our position in India for the last 26 years, we have established a strong connection with the

manufacturers and the retailers here, which is enabling us to therefore ride on the brand salience that IGI gets to the table.
Having said that, with strong revenue performance over the last three - four years and also ‘25, I think we also have a business model which provides great operating leverage. And you will see that consistently there has been an improvement in the EBITDA margin or the PAT margin that the company has been delivering over the last eight quarters. So, this year, we ended the year with around 60% EBITDA margin versus 57% that we delivered for the 12-month period of 2024. Again, that brings out the operating leverage that this business works at.
Speaking on the cost and the capacity, etc., that you asked about, I think that is an ongoing activity within the organization. In terms of building up capacities, and for us, capacity is basically building a good bench of graders. We did a recruitment of close to 200 people at the beginning of 2025. And as we speak, there is another round of large recruitment that is happening because we are seeing an exponential growth on the volume front as we ended the year.
So that is a continuum for the company. We continue to remain focused on providing the best customer experience driven by improved turnaround times, etc. That is one of our key metrics from a customer experience standpoint. And to that extent, as and when we need to add workforce to provide a differentiated service for our customers, we will continue to do that.
Sucrit D Patil: Thank you for the guidance and I wish the entire team best of luck for the next quarter.
Moderator: Thank you. Our next question is from the line of Harit Kapoor from Investec. Please go ahead.
Harit Kapoor: Hi, good evening. Since I have a few, the first one was, you know, if you could just explain a little bit more in detail as to in this particular quarter, and even actually even in Q3, we saw very sharp growth in natural diamond lose. 29% and now 45% India is even higher. And lab also has seen an acceleration.
So, whether it's festive, it's the US New Year, Christmas, whether its pipeline filling for Valentine's Day. If you could just give us a sense on what's happened this quarter, because 40%-50% growth in natural diamond is something we're not used to seeing.
Tehmasp Printer: Very good. See, in natural diamonds, what is happening is, there is lab grown diamonds and natural diamonds. Now people are also certifying more of natural to ensure that it is not lab grown. So, both the diamonds are actually complementary to each other. And we are sitting in the middle. We certify the origin as well as the 4Cs. So, I agree that we have seen a very good increase in the certification of natural diamonds about 45%.
And that all comes from that everybody wants to know the value of the money that they are paying. And they have to ensure that it is not a lab grown. Initially, in yesteryear's lab grown didn't exist or it not as much as in this quantum. So, people were certifying. But today,

certification of natural diamonds becomes imperatively because you want to be sure that it is
not a lab grown.
Eashwar Iyer: Add to what Mr. Printer just mentioned. I think strategic priorities for IGI is also to find ways
and means to improve its market share in natural diamond. I think over the last 12 months,
there has been a significant effort that's gone in, in terms of improving our penetration and
you know, dealing with a larger customer bas

e in terms of attracting them to IGI for
certification services. So, I think there is some of those factors at play as well, which is enabling
us to deliver very strong results from an ND standpoint as well.
Harit Kapoor: And given Eashwar that the ND shares are relatively lower compared to lab, is this, I mean, not
45%, but is this a trend that lab that natural grows in line or ahead of the overall certification
revenue, at least in the CY '26? Because why I'm asking is because it has a material impact on
the realization.
Eashwar Iyer: Of course, of course. No, see, I think it's one of the strategies that is articulated by the
organization in terms of how are we therefore going to leverage the strength of LGD in the
natural diamond segment as well.
So, from that context, the teams are committed to, providing this vertical, the necessary
impetus that is required to gain that sort of traction. I understand that from an ASP standpoint
with high realization of ND, diamond, etcetera. But yes, we continue to remain focused on all
segments. And of course, ND is an important component of our revenue mix.
Tehmasp Printer: And just to add to what Eashwar is saying, see, there are different consumers. The old age
consumers who predominantly want to buy natural diamonds, they have to be very sure that
it is a natural diamond, that is one segment. And the millennials and the Gen Zs, who now can
afford to buy diamonds instead of crystals and trinkets, they also want to, what to say, get it
certified to know that it is not a piece of glass.
So, overall, what is happening is the diamond consuming market is fast increasing because of
the millennials and the Gen Zs. Now, there will come a point in time when the Gen Zs can afford
natural, they will be going to buy natural. So, both the diamonds are complementary to each
other and IGI is sitting in the bank middle of this consumer market.
Harit Kapoor: Thanks for this. Also, on this one follow-up on this part, could you just highlight also this 45%
growth in consolidated and then looking consolidated because that is the best way to look at
it on the natural diamond side. Is there any specific country where we have seen a noticeable
market share gain?
India, we are already very strong in natural diamond market shares, but is it India market? Is it
US where we have a low share in the last two quarters? Anything you can highlight in terms of
countries where this market share gain is visible with the retailers of that region?

Eashwar Iyer: See, Harit, India has grown 53%. So, obviously, the focus of attention for us remains in India at
the moment. As we have articulated in the last call, we got a fresh leadership inducted into the
US team and that then becomes our critical strategic priority for 2026. So, yes, at the moment
most of the market share is, from the India market, but yes, our focus continues to remain on
larger geographies as well.
Harit Kapoor: Great. And just on the lab bit, so if you look at again, last three quarters, growth rates have
been fairly strong. Would you attribute, I mean, I know Tehmasp mentioned this in the opening
remarks, but are you seeing a perceivable kind of shift from your competitor who has changed
the grading structure in terms of clients from that competitor to yourself over the last, say,
three, four months, given that you do a much more detailed kind of grading still? So, I mean,
are you seeing that shift already kind of play out?
Tehmasp Printer: Yes, in a way, there is a shift. The thing is, we are an independent grading laboratory. So, we
don't carry any biases against any gemstone. We are neutral to all gemstones and diamonds.
And it is our prerogative and our philosophy to give the grading to the diamond, give
transparency to the consumer. And so, from that past aspect, we continue to grade the lab
grown diamond al

so on the 4C's method.
Having said that, because the competitor is just grading it not as 4C's, they initially to start off
with had quite a little market share, which is also now coming to us. And more-and-more
awareness is being created about lab grown and more and more companies are getting into
lab grown. And, of course, they naturally opt for a certification body, which is independent and
giving the 4C's and the origin. So, then IGI is sitting on a very good wicket.

Harit Kapoor: Thanks, Tehmasp. The other things are two more. One was, if I just look at consolidate minus standalone, which gives you a reflection of Belgium and Netherlands, there is a very sharp EBITDA growth, seems like opex is also lower this quarter. And even for the full year, calendar year to calendar year, EBITDAs have grown reasonably well, largely opex reduction driven. So, I know this is, I do not want to look at revenue because revenue can get booked in India as well. But just from an opex standpoint there, even this quarter for the full year, could you just enumerate some of the things you have done to kind of make a cost structure in Belgium and Netherlands?

Eashwar Iyer: See, again, Harit, there has been a concerted effort at least to rationalize costs in the US. Because while we are trying to cut down some of the, for lack of a better word, wasteful expenses that we incurred in the US, I think we just want to redeploy that in terms of building greater organizational capability and strength.

So, we will, that is the reason there has been a reallocation of resources. So, we are trying to cut down on some of the unnecessary spends there. And while we have not actioned in terms of fresh recruitment, etc., but there is going to be a lot of effort that goes over the next 2-3 months in terms of building up a strong sales organization in the US.

So, what you are seeing today is more about getting the cost structures right, so that we are able to then reinvest those resources for what we think is of strategic importance.

Harit Kapoor: Got it. And this one last question, if I may, was that, if you obviously this year has been an excellent year, growth rates have exceeded expectations and congratulations on that. Going into, kind of next year, any thoughts on what kind of, broad revenue run rates or EBITDA run rates we can see, you have the best view there. So, just wanted to get a broad sense from you. That is my last question?

Eashwar Iyer: Yes, I think early days for us in '26, but structurally, I think some of the key trends that we are seeing is obviously, Tehmasp has mentioned about, explosion of the retail chain as far as lab grown jewelry is concerned.

Added to that, we are also hearing significant capacity additions that is happening at the lab grower manufacturers end. So, from that standpoint, I think the tailwinds in this continue to be extremely strong, and of course, we will endeavor to repeat what we have done in '25. So, that is where I will leave it. But again, at least the tailwinds are pretty strong as we speak.

Harit Kapoor: Great. Thank you very much for your time. Wish you all the best.

Tehmasp Printer: Thank you.

Moderator: Thank you. Our next question is from the line of Arihant from Bowhead. Please go ahead.

Arihant: Yes. Hi, sir. Thanks for taking my question. I just wanted to know, like, there was a jump in debtors from year-to-year, like around 15.5% of sales in CY '24 to 19%. So, I just wanted to know what is leading to the jump in distributors.

Eashwar Iyer: Yes. Okay. Arihant, I think we have articulated this in the past as well. We have a 60-day credit period for some of the large lab growers. Obviously, with scaled-up volume, I think that is why you see a slight increase in AR. But again, they remain within the credit terms that we have placed for these organizations.

Arihant: O

kay. So then, there has been also been growth in other financial assets, which has increased from INR13 crores to INR188 crores

Eashwar Iyer: The financial assets were basically FD and bank balances, Arihant. I think if you look at the schedule, I think we will place that out. It is already there, so you can just have a look. All of that is just basically cash, which is in bank, in FD, or, yes, it is basically FDs.

Arihant: Okay. And, sir, the 1.8 crores ESOP shares which were granted, I just wanted to know when they will rest?

Eashwar Iyer: See, there is a vesting condition, which is articulated in our DRHP document as well. I think, have a look at it. It vests over 5 years, with 60% vesting after 3 years, and so on and so forth.

But there are a lot of conditions and gate conditions, which have to be met before some of these options vest. So, those details are available on the website. Have a look at it. In case you still have clarifications, please reach out to us. We will clarify it for you.

Arihant: Okay. Thank you.

Moderator: Thank you. Our next question is from the line of Smith Gala from RSPN Ventures. Please go ahead.

Smith Gala: Yes. Thank you for the opportunity and congratulations on a good set of numbers. My first question will be depending on, as you mentioned on the call earlier, that we are also doing a mass hiring. We have been able to achieve the 3.2 million volumes with the manpower, which we have right now, and we are hiring. We have started hiring. So, with the new hiring, till what volumes will the new hiring be able to take us to?

Eashwar Iyer: This is an evolving Smith. I think, basically, we have our own internal targets, etcetera basis, which we -- turnaround times…

Moderator: You are not clearly audible…

Eashwar Iyer: Smith what I was saying is -- while recruitment is -- obviously supports the volume and revenue growth. One of the other aspects which we also like to monitor and keep a tab on, is the turnaround times that we are providing to our customers. So, it is a combination of various factors which determine how many people we recruit. So, it is always in terms of optimizing both the customer experience and also supporting. So, our plans for recruitment are driven by these two factors.

Smith Gala: Okay. And for the past, leaving this quarter out, we had achieved volume growth in excess of 20%. Now, in this quarter, we have near about achieved 11%. So, for the next year, do we expect the volume growth around that 15%-20% range or you expect it to come down and the ARR, which has gone up 11% Y-o-Y to continue?

Eashwar Iyer: See, again, if you look -- if you put this in perspective, the quarter for this year is cycling a Diwali quarter of 24. That is the reason why you see a suppressed volume growth. But because of the mixed shift towards ND lab-grown loose stones, it is giving me an additional 11% ASP, culminating in a 23% certification growth at the revenue level.

I think that has to be seen in conjunction. So, the overall growth for the year has been at 21% from a volume standpoint and around 18% from a certification standpoint. And as I mentioned earlier, I think the company will endeavor to repeat this performance, considering that there are strong tailwinds in the industry.

Moderator: Our next question is from the line of Shrenik Mehta from IndoAlps Wealth.

Shrenik Mehta: So, the question I had was probably something that might have been asked in the last few minutes. We haven't seen any impact of the US tariffs on the performance of the company. I'm still wondering how that is happening, why there is no impact, because a lot of reduction in the actual exports to the US has really happened. So, if you can throw some light on what is really helping us here. Is it th

at our market share is too small or what is really ensuring that there is very little impact on the US tariffs?

Tehmasp Printer: There are two parts on the US tariff. One is most of -- quite a majority of our sales is in the domestic market. There is no impact of tariff at all. And the other aspect is people have now maneuvered how to use the tariff and continue to grow. People are looking also; I mean manufacturers are looking at different countries and all such things. So, they're looking into different markets.

So, what has happened is, overall, the certification in the market keeps on growing. When the tariffs move away, there will be new markets to cover. So, in short, it will be a good process. Everything has an upside for it. And I think tariff also has an upside for it.

Shrenik Mehta: Thank you very much

Moderator: Our next question is from the line of Rahul Jha from Bay Capital.

Rahul Jha: Thank you for the opportunity. I wanted to ask what has been the pricing trend in the lab-grown diamonds? We have been seeing some decline over the last two years. But what has been the recent experience on the demand side, as well as pricing?

Eashwar Iyer: See, Rahul, I think we've articulated this in the last two calls at least. The pricing on lab-grown has been extremely stable since May, June of 2024. So, consequent to that, I don't think there has been any structural correction as far as the certification component or the certification pricing for lab-grown is concerned. So, it has been pretty stable.

Rahul Jha: I am not asking about the certification pricing. I am asking about the actual lab-grown diamond pricing at the wholesale as well as retail levels?

Eashwar Iyer: Yes. So, I am also talking of the diamonds. I am not talking about the certification. Because of that stability in the diamond pricing, our pricing also remains stable.

Shrenik Mehta: Thank you

Moderator: Thank you. Our next question is from the line of Aaditya Agrawal from Finavenue. Please go ahead.

Aaditya Agrawal: Good evening, sir. Am I audible?

Moderator: Yes.

Tehmasp Printer: Yes. Loud and clear.

Aaditya Agrawal: Yes. Sir, I just wanted to know like I mean, from the monopoly point of view, we have the largest market share in the world. So, can any different agency be able to acquire a large portion of market share from us in near future? So, this was the first doubt that we have. And the second, just to add on this is like, do we expect that if lab-grown diamond pricing crashes really, I mean, since supply is increasing every year.
And let's say a INR20,000 carat price is there right now, if it reaches to a level of, let's say, 10,000 or 12,000 in two to three years, so will the consumer have a different mindset that do we require a lab certification? I mean, since prices are already going down. So, in the price of 10,000 -- INR500 for test INR500 or INR800. So, will it make sense? So, just two questions. Would love to know your insight about it?
Eashwar Iyer: Aaditya I think there are two aspects here. One is the pricing at the wholesale level and one is the pricing at the retail level. And as we mentioned, there's been significant stability over the last 18 months, 20 months as far as the lab-grown diamond at the wholesale level has been. And I think we've articulated this in the last couple of calls as well.
At the current pricing, the returns that the lab growers are currently making is in the 8% to 10% range is our estimate. And therefore, that provides them with no great elbow room to further drop prices. So, that is standout over the last 12 months. We can actually see the pricing trends on lab-grown diamonds.
Having said that, the retail pricing works very differently from the wholesale price. Prices at the retail level are significantly higher and it's the power of the certificate that enables the reta

iler
to sell a lab-grown at a particular price. I think Tehmasp mentioned that at the beginning of the call in terms of the certificate actually therefore providing a background to actually certify this as a diamond.
So, that's a critical component in terms of what the certification does to a piece of a rock which finally gets certified as a diamond. So, these are wider aspects that need to be considered before you get into – getting into a discussion around the need for certification, etcetera. We remain confident that the need for certification is far more relevant today than ever before.
Tehmasp Printer: Just to add to what Eashwar says the need for certification is absolutely essential and that also a third-party certification, not your self-certification. So, what happens is when you want to buy a natural, you want to know it is not a lab-grown. When you want to buy a lab-grown, you definitely want to know it is not a piece of glass. Even like you said, even if it goes to 10,000, a piece of glass is at 100 bucks, INR100. So, you see the relativeness. You have to get it IGI certified.
Aaditya Agrawal: And sir, any further agency, can it take market share from us? I mean, what is the entry barrier that stays our market position?

Tehmasp Printer: The most important factor here is trust. And trust is not something that you can acquire in a small brief time. We have 50 years of legacy plus 50 years of expertise plus 50 years of expert gemologist that we have over the last many decades. So, all in all, the entry barrier is extremely high. If you see, there are today only two labs of repute. One is IGI, the other is GIA and then there are 10,000 other laboratories. But to be authenticated by a reputed laboratory is a must and that is where IGI comes in.
Aaditya Agrawal: Okay. Thank you so much, sir. And sir, how do we plan to use the operating free cash flow that we are generating year-on-year, I mean, in the near future, either in capex or distribution to shareholders?
Eashwar Iyer: Again, in line with what we have been articulating over the last so many quarters. I think there will be a combination of dividend. And also, we are holding some money in the bank because we are also continuously evaluating M&A options. So, it will be a combination of both, either acquisition of some company or in the form of payout in form of dividends. I think that is the way the capital then get allocated over a period of time.
Aaditya Agrawal: Thank you so much, sir. Thank you.
Moderator: Thank you. Our next question is from the line of Sunil Jain from Nirmal Bang Securities Private Limited. Please go ahead.
Sunil Jain: Yes, congrats on a good set of numbers, sir. LGD revenue has grown by 34%, whereas overall volume has grown by 11%. So, a bit confusing means you said that because of the seasonality, the volume growth is lower. So, was there a substantial increase in the price also realization

specifically for LGD?
Eashwar Iyer: No, no. Sunil, see, I think the LGD price is driven by the fact that a significant mix of the business in this quarter was towards the lab-grown and natural diamond versus a large component of this in quarter 4 last year, which was towards jewellery because that was a Diwali quarter. So, that is the reason why you see a volume growth because the realization on jewellery is much lower than the realization on lab-grown and natural diamond loose stones.
So, that is why 11% volume growth is translating to a 23% overall certification growth or a 30% -odd lab-grown revenue growth. So, that is the reason why you are seeing a lower volume growth because normally the jewellery is a volume business with low realizations, whereas natural diamond loose stone jewelries, lab-grown loose stones are a higher ASP or a higher price realization, higher certificate realization components of our bu

siness.
Sunil Jain: Because jewellery has too many diamonds and that need to be there, the realization comes as a common and which is lower.
Eashwar Iyer: That’s right.
Sunil Jain: That is why we are seeing lower volume growth?

Eashwar Iyer: That’s right.
Sunil Jain: Okay, okay, fine. If we see LGD, your volume growth will be in line with what you are doing?
Eashwar Iyer: Sorry, Sunil, I did not get that.
Sunil Jain: So, LGD revenue growth is 34% and if the realizations are year-on-year up by almost around 10%, so maybe 20% plus LGD volume growth will be there.
Eashwar Iyer: That is right.
Sunil Jain: Okay. And any planning to take any price increase in LGD?
Eashwar Iyer: At the moment, there are no considerations in terms of changing the price structure.
Sunil Jain: Okay. Great, sir. Thank you very much.
Moderator: Thank you. Our next question is from the line of Pradyumna Choudhary from JM Financial Group Investments. Please go ahead.
Pradyumna Choudhary: Yes. Hi, sir. Just one question as a follow-up to previous participant. You spoke about pricing for jewellery being lower than a pricing for loose diamonds on a per report basis. So, could you please explain the same? Why is the pricing in jewellery lower compared to what we see for loose diamonds?
Tehmasp Printer: Where loose diamonds is concerned, we give you the exact grades and we take each loose diamond and put it through 14 parameters. Now, when you come to jewellery, there is a cluster of diamonds, small ones, of even colour and even clarity. And it is all mounted. So, when you pick up a piece which has, say, 100 diamonds, you are reviewing 100 diamonds at a stretch, at one shot. Also, that we give you split grades.
We don't give you exact VVS1, VVS2. We give you VVS. So, it's a split grade and the grading goes much faster. And from that perspective, the jewellery and also the value of the smaller diamonds is much less. So, taking all these into account, jewellery certification prices is lower than the loose stone prices.
Pradyumna Choudhary: All right. So, and when you talk about pricing per report, it means that you are pricing either a loose diamond or an entire jewellery. That's right, right?
Tehmasp Printer: Yes. Yes.
Pradyumna Choudhary: Understood. All right. Thank you.
Moderator: Thank you. Our next question is from the line of Angad Katdare from Sameeksha Capital. Please go ahead.

Angad Katdare: Thank you for the opportunity and congrats, sir, for the great set of numbers. Just one question from my end, sir. In India, the largest organised retailer has launched its own LGD brand. And we have found out that they are not giving the IGI certified certification. They are giving their own certification.
How do you see this as a precedent evolving over the next couple of years, where maybe as more organised retailers market share in LGD, this similar trend may or may not continue? What's your thoughts? What's your thought on this?
Tehmasp Printer: Okay. It's a very good question. See, what has happened is this is the first time that a large retailer has ventured specifically and openly into the LG market, into the LG market. Okay.
Now, initially, they are, I think, in the testing phases. And they have, they are grading the 4Cs.

They are saying that this is the quality of the diamond that we are going to sell.
And they are doing market research currently, as I believe. We are already in touch with, we are in conversation with these, with this company. And most important, what you have to understand is that a third-party independent certification is the most important aspect when you are buying a certificate.
So, I believe in the long run, in future, in very short future, we will know which way this company will go. As per

our thoughts, we are there to give you a third-party independent certification. This is communicated to the company, and we will see how it goes.
Angad Katdare: So, thank you, sir. I will get back in the queue.
Tehmasp Printer: Yes.
Moderator: Thank you. Our next question is from the line of Naitik from NV ALPHA. Please go ahead.
Naitik: Hi, sir. Thanks for taking my question and congratulations on a very good set of numbers. Sir, my first question is, you know, just wanted to understand, do our realization for certificate now stabilize around the 950 levels that we have? Or how do you see these trending over the next few years?
Eashwar Iyer: I think we maintained a consistent ASP over the last four, five quarters, Naitik. I think, as we mentioned earlier, structurally, there has been no change at the industry level as far as the pricing of natural diamond or lab-grown diamonds are concerned. And therefore, we do not anticipate any structural change to our pricing model as well.
Naitik: Got it. And, sir, in terms of revenue mix between, say, loose diamonds, both ND and LGD, versus jewellery, do you see, how do you see the contribution changing? You know, does it remain same if I look at it year-over-year basis and changes quarterly basis festives, or how is it? Are you expected to change?

Eashwar Iyer: Actually, overall, from a 12-month standpoint, I think there's been a couple of percentage point shift towards natural diamond and lab-grown. And then, yes. So, see, again, going back to what we mentioned earlier, I think the trend in terms of significant capacity additions in lab-grown, the loose stones is continuing.
So, I think that growth will continue to accelerate, coupled with the fact that lab-grown jewellery is an emerging trend within the Indian consumer space. So, I guess these two segments will continue to see robust growth. And then, strategically, I think it's important for IGI as an organization to improve its penetration and market share from a natural diamond segment as well. So, we will continue to stay focused on each of these segments for the foreseeable future.
Naitik: Sorry, I'll just repeat my question. So, what I'm trying to ask is, between loose diamonds and jewelry because we are seeing…
Eashwar Iyer: We do not anticipate to change as far as, because if you look at it from a 12-month standpoint, it's just a plus 1% or 2% movement here or there, so, that will continue. I think, because we are seeing strength across all segments, be it lab-grown jewelry or be it natural diamond loose or lab-grown jewelry. So, I don't think there's going to be a dramatic shift from that standpoint.
Naitik: Got it. So, my last question is, what is the cash on books we have as of date or as of December end?
Eashwar Iyer: I think it's around INR860 crores of cash across the group.
Naitik: Got it. That's it from my side. Thank you.
Moderator: Thank you. Our next question is from the line of Varun Singh from Alpha Accurate Advisors. Please go ahead.
Varun Singh: Yes, thank you. Am I audible?
Tehmasp Printer: Yes.
Varun Singh: Sure. So, my first question is, as you called out that the lab-grown diamond prices are stable now. So, I just wanted to understand that, do you think that the lab-grown diamond prices can go up also, if not down, given the return-on-investment constraint with the LGD manufacturers are facing? I mean, please share some insights on this part of how to understand the lab-grown diamond price trajectory in future.
Tehmasp Printer: Every seller wishes that it goes up. But what happens? I mean, be realistic. I mean, the price is stable. So, it's more important that you know, stability is in the market and then we continue to grow.

Varun Singh: So, in that case, how to assume a

bout realization that we are deriving from the lab-grown
certificates? Like how that should be growing, average realization assuming everything is
constant?
Eashwar Iyer: I think, Varun, I think we've articulated this. I think, and again, Mr. Printer just mentioned it. I
think we're seeing a lot of consistency as far as pricing on lab-grown moonstones are concerned
over the last five, six quarters. So, I think the trend will continue the way it is. And yes, so again,
we've been in the 900-950 range as far as ASP is concerned. So, I think nothing structural, we
don't foresee any structural changes here.
Varun Singh: So, technically, like for the model purpose, is it safe to assume same realization over next two,
three years? Or should we assume maybe 4%-5% decline in average realization when we are
doing some math with regards to how we wish to grow the volume in the segment?
Eashwar Iyer: Varun, see, it will be very difficult for us to comment on the model assumptions that you take.
But again, from an industry standpoint, we just, as we said earlier, structurally, we are not
seeing any significant change as far as the pricing is concerned.
Varun Singh: Okay, sure. Thank you very much. Wish you all the best sir.
Moderator: Thank you. In the interest of time that this was the last question, I now hand the conference
over to the management for their closing comments.
Eashwar Iyer: Thanks, everybody, for taking the time. I am presuming that there have been still a few people
who have not been able to place their questions during this call. Please reach out to us
individually and we can address some of these queries on a one-on-one basis. So, thanks once
again for your time. We appreciate it. Thank you once again.
Tehmasp Printer: Thank you very much.
Moderator: Thank you. On behalf of International Gemmological Institute (India) Limited, that concludes
this conference. Thank you for joining us and you may now disconnect your lines.

Subject: Transcript of the Earnings Call held for the quarter and year ended March 31, 2026

Dear Sir/ Madam,

The Company had intimated, vide its letter dated May 14, 2026, regarding the Earnings Conference Call of International Gemological Institute Limited for the quarter and year ended March 31, 2026. The conference call was held on May 20, 2026 and the transcript of the call is hereby enclosed.

This intimation will be made available on the Company's website at www.igi.org.

This is for your information and record.

Thanking you,

Yours faithfully,
For International Gemological Institute Limited

"International Gemological Institute Limited
Q4 & 15 months 2026 Earnings Conference Call "
May 20, 202 6

MANAGEMENT : MR. TEHMASP PRINTER – MANAGING DIRECTOR AND
CHIEF EXECUTIVE OFFICER – INTERNATIONAL
GEMOLOGICAL INSTITUTE LIMITED
MR. EASHWAR IYER – CHIEF FINANCIAL OFFICER –
INTERNATIONAL GEMOLOGICAL INSTITUTE LIMITED
MS. NATASHA KEDIA – HEAD, INVESTOR RELATIONS
AND PUBLIC RELATIONS – INTERNATIONAL
GEMOLOGICAL INSTITUTE LIMITED

MODERATOR : MR. SUMEE T KHAITAN – MUFG INTIME INDIA
PRIVATE LIMITED

Moderator: Ladies and gentlemen, good day , and welcome to the Q4 & 15 months 2026 Earnings Conference Call of International Gemological Institute Limited, hosted by MUFG In time. As a reminder, all participant lines will be in the listen -only mode , and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on yo ur touch -tone phone. Please note that this conference is being recorded.

I would now hand the conference over to Mr. Sumeet Khaitan from MUFG Intime . Thank you, and over to you, sir.

Sumeet Khaitan : Good evening, everyone. I welcome you all to the earnings conference call to discuss Q4 & 15 months 2026 results of International Gemological Institute Limited. To discuss the result, we have from the management Mr. Tehmasp Printer, MD and CEO; Mr. Eashwar Iyer, CFO; and Ms. Natasha Kedia, Head of Investor Relations and Public Relations. They will take you through the result s and the business performance, after which we will proceed for Q&A session.

Before we proceed with the call, I would like to mention that some of the statements made in today's call may be forward -looking in nature and may involve risk s and uncertainties. For more details, kindly refer to investor presentation and other filings that can be found on the company's website.

With this, I now hand over the call to the management for their opening remarks. Over to you, sir.

Tehmasp Printer: Thank you, Sumeet . Good evening, ladies and gentlemen. Thank you for joining us today for the 2026 earnings call. I trust everyone has had the o pportunity to review our financial results and investor presentation, both of which are available on the stock exchanges as well as on our website.

Industry landscape over the past year - IGI has delivered another period of strong growth and consistent re sults, supported by favorable structural shifts across the diamond and the jewelry ecosystem.

At the heart of industry is trust. Whether natural or lab -grown diamonds, a diamond derives its value from independent certification of the 4Cs ; that's cut, color, clarity, and carat , while increasingly also addressing transparency, traceability, and the origin assurance.

Certification is what gives consumers, retailers, manufacturers , confidence in the product they are buying and selling. As the industry sca les up with the advent of lab -grown diamonds, the need for certification today is more relevant than ever before.

In fact, we believe the diamond industry today is witnessing a structural increase in certification intensity across all categories. Consumer s are more informed, retail networks are expanding rapidly, and purchase decisions are increasingly driven by transparency and trust. This trend

directly strengthens the long -term opportunity for globally recognized independent certification players like I GI, like us.

Importantly, we are uniquely positioned within this evolving landscape as one of the few scaled global players with a strong leadership across both natural and lab -grown diamonds, as well as jewelry and color stones.

One of the most important developments shaping the industry continues to be the rapid expansion of lab -grown diamond ecosystem.

Over the past several quarters, we have witnessed significant manufacturing capacity additions, accelerated retail adoptions, and increasing consumer ac ceptance. India , in particular, remains at a relatively early stage of penetration, which gives us confidence that the runway for growth in this category remains substantial.

While pricing volatility within the lab -grown diamonds has been widely discussed , we believe this is o

ften misunderstood from a certification perspective. As supply expands and accessibility improves, the relevance of independent certification only increases. Consumers still want assurance regarding the quality, authenticity, and valu e, irrespective of whether the diamond is natural or lab -grown.

In many ways, the scaling up of the lab -grown ecosystem is expanding the addressable market for certification globally. We continue to see this reflected clearly in our operating performance.

For Jan to March 2026 quarter, lab -grown diamond certification revenue grew by 35% year -on-year, while lab -grown jewelry certification grew by 29%. For the 15 -month period, growth stood at 25% for LGD and 23% for LGD jewelry respectively. We have also see n encouraging traction from the increased capacities and retail expansion initiatives that are expected to contribute meaningfully over the coming quarters.

At the same time, the natural diamond segment continues to demonstrate strength. Despite near-term volatility in gold prices and macroeconomic uncertainty across certain markets, consumer demand for natural diamonds, particularly in the bridal and the high -value purchases, remain intact. For the 15 -month period, our natural diamond certificati on business grew 18%, while quarterly growth remained a healthy 10% year -on-year.

Natural diamond jewelry has witnessed some softness in this quarter, driven by high volatile pricing in gold and silver. Another important strategic milestone during this yea r was the acquisition of AGL, that's American Gemological Laboratories , in Jan 2026. This acquisition significantly strengthens our positioning within the global color stone certification market, expanding the total addressable market and opens a new long -term growth avenue beyond diamonds.

AGL brings deep expertise, a strong reputation in gemstone certification and a strategic access to the US market. We see meaningful opportunities for cross -selling, geographical expansion, portfolio diversification, and deeper engagement across the jewelry value chain.

On the back of the success in the US geography, we plan to expand AGL to other markets for color stones to enhance brand presence and garner higher market share.

IGI has initiated focused investments in brand building and consumer awareness during the year through a series of high -impact consumer engagement initiatives and strategic media associations. This included partnerships around marquee sporting properties, including the ICC Women's World Cup broadcast and partnering with Gujarat Titans in the largest league of the world, IPL. Our campaign, 'Heera Ki Asli Pehchan ', was to build this connect as an independent third -party certifying agency to bring greater transparency and trust to the consumer.

We are also working towards integrating AI and ML into our operations to further enhance service qualities, improve customer turnaround times, increase operational efficiencies, and reduce redundancies.

Against this background, IGI delivered ano ther strong set of financial results for Jan to March 2026 quarter. Consolidated revenue from operations and EBITDA both have grown by 21% year-on-year, while report volumes increased to 16% to 3.64 million reports.

For the 15 -month period ended March 2026 , revenue grew 18%, EBITDA grew 22% and total report volume increased 20%, reflecting broad -based momentum across natural diamonds, lab -grown diamonds, jewelry certification, and color stones. Despite the changing landscape, the long-term growth trajectory of the industry remains intact and our performance is evidence of that.

Between year 2022 and 2025, IGI delivered revenue, EBITDA, and PAT of 36%, 29%, and 30%, respectively, while continuing to maintain strong profitability and cash generation.

Looking a head, we remain optimistic about the long -

term outlook of the industry and for IGI.

The global jewelry market continues to be robust, lab -grown diamonds are expanding the consumer base through rapid retail expansion. Across all sectors, consumers increasingly want transparency, authenticity, and confidence combined with trust in what they purchase. All of these trends structurally reinforce the importance of independent certification. With our strong global footprint, diversified segment presence, trusted brand and expanding capabilities, we believe IGI is exceptionally well -positioned to capitalize on these opportunities and continue delivering sustainable long -term growth and value creation.

With that, I would now like to invite our CFO, Mr. Eash war Iyer, to take you through the financial performance for the quarter and the year gone by. Thank you.

Eashwar Iyer: Thank you, Tehmasp, and thanks everyone for taking the time.

I'll just start by giving a context in terms of the company having transiti oned its financial reporting structure from a calendar year to a financial year. These have been announced to the stock exchanges as well sometime earlier. So accordingly, the current reporting period comprises the 15 -month ended March 31st, 2026, while th e previous reported period was for a 12 -month period ended December 2025. As a result, the two periods are not directly comparable. To aid compatibility, we have also shared a corresponding 15 -month financial performance in our

investor presentation so tha t you are able to have a proper comparative of the 15 -month performance over the last two years.

I would like to start with an update for the quarter. From a consolidated group standpoint, in terms of consolidated revenue, certification income for the qua rter stood at INR 3,587 million , which is grown at 21%, supported by strong volume growth of 16%. This was primarily driven by strong revenue growth across all our core segments, be it the lab -grown diamonds which is grown 35%, lab -grown jewelry which is g rown 29%.

Total revenues for the quarter stood at INR 3,686 million and registering a growth of 21%. Reported volumes stood at 3.64 million reports compared to 3.12 million reports for Jan to March 2025 period, registering a growth of 16%.

During the quarter, the significant revenue growth in LGD stones was on account of new customer acquisitions and an increase in capacity as some of the primary growers.

Correspondingly, LGD jewelry grew 29%. While ND loose stones grew 10%, ND jewelry saw a 19% declin e due to a slowdown in the India ND jewelry business caused by steep increase in prices of gold and silver.

The resultant mix shift towards the higher ASP categories, namely LGD and ND loose stones, has led to a 4% improvement in ASP. EBITDA reported at INR 2,360 million , reflecting a growth of 21% compared to the previous year. EBITDA margins stood at 64%, which is more or less the same levels as the previous year. PAT reported at INR 1,796 million , growing 28%. PAT margins at 48.7% for the quarter.

Coming to the AGL acquisition that Tehmasp spoke about, we acquired this company on 30th of January 2026. Subsequently, there has been a lot of work in terms of integration , etc that is currently going on. The quarter therefore represents the first quarter of consolidation with AGL financials. AGL is a subsidiary of the IGI US entity and hence its financial statements are not disclosed separately.

AGL being in the business of certifying gemstones, the AGL revenue is subsumed in the gemstone revenue line. In line with maintaining transparency, there is two months of revenue for this period which is now got consolidated and the corresponding expenses and EBITDA has also got consolidated. In the absence of the corresponding numbers for the previous year, this has contributed to an additional 2% growth on revenue

and 3% growth in EBITDA for the
quarter.

Coming to the consolidated group performance from a 15 -month standpoint. For the 15 -month ended March 2026, we delivered 16.45 million reports compared to 13.7 m illion reports in the same period last year, marking a robust year -on-year growth of 20%. In terms of consolidated revenue, certification income stood at INR 15,465 million , growing at 19%.

This was driven obviously because we had significant and substanti al improvements or growths in LGD at 25%, LGD jewelry at 23%, ND at 18%, and ND jewelry by around 2%. Total revenue from operations for the 15 -month was at INR 15,976 million , growing at 18%. EBITDA reported at INR 9,728 million , a 22% growth. EBITDA margins at 60.9%, representing a 230 bps year -

on-year improvement. The company delivered a PAT of INR 7,112 million , growing 25%. PAT margins at 44.5% is up 270 basis points on a year -on-year basis.

I'm just going to touch upon the India standalone performance for the quarter. For that period, the revenue from operations in India stood at INR 2,963 million , growing at 27%, supported by a strong volume growth of 18%. This was primarily driven by strong revenue growth across our core s egments.

Lab-grown diamonds has grown 46% for the quarter, LGD jewelry at 19%, and ND at 9%. Total revenues for the quarter stood at INR 3,124 million , registering a growth of 28%. EBITDA reported at INR 2,198 million , reflecting a growth of 21% compared t o the previous year. EBITDA margins at 74.2%. There is a slight reduction in the EBITDA margin is attributable to a higher commission payout to our subsidiaries in US and Dubai on account of new customer acquisition there for which services are rendered in India . And we had a one -time consulting and professional expense of around INR 25 million . PAT reported at INR 1,742 million , growing 25% compared to the previous period. PAT margins at 58.8% for the quarter.

So overall, the company has ended the 15 -month with an exceptional performance, thus delivering ahead of the guidance provided at the beginning of last year. We remain confident to deliver the 15% revenue growth and 20% EBITDA growth for the financial year 2026-27. With that, I conclude my remarks and open the floor for any questions.

Moderator: The first question is from the line of Umang Mehta from Kotak Securities. Please go ahead.

Umang Mehta: Hi, thanks for the opportunity. My first question is on yo ur outlook for FY27 on both growth and margins. I hear you mentioned 15% revenue growth and 20% EBITDA growth. Possible to share any color in terms of segment -wise how are you thinking about the year? And in terms of margins, any tailwinds from INR depreci ation that we have kind of factored in?

Eashwar Iyer: Hi, Umang. Yes, thanks for this question. Yes, I think over the last two years, the company has been intending to deliver around 15% of revenue growth and 20% of EBITDA growth. So that trend is what we expect to continue for this financial year as well. Again, the quarter performance obviously has been driven exceptionally by the growth in LGD and as well as natural diamonds as well as, yes, lab-grown jewelry. We've had a little soft quarter on natural diamond jewelry. We expect the major chunk of the growth to come through increased capacity build -up that's happening in LGD and our increased penetration in natural diamonds. So I think those two strategic priorities which have been on record for the last two years continues to be our core focus areas and we expect to, you know, build on whatever strength we have at the current moment.

From a margin standpoint, I think our focus has been in terms of ensuring that we make the right investments for the busin ess. While margins are important, but that is not the sole driver of the decisions that we take within th

e organization. There are significant interventions , etc that we are working on. Tehmasp mentioned about AI, ML, that work, that project is going on. There is a big focus on building the brand in terms of various brand initiatives , etc. So from that standpoint, I think these are critical investments for the long haul. We don't expect any erosion

of the margins, so we will ensure our guidance for the year should be to maintain margins at the same levels as what we have seen in the last year.

Umang Mehta: Got it. Thank you. And the second question was on your performance of subsidiaries. Possible to share any color on how both of them have done for the full period?

Eashwar Iyer: See, I think just to set this in context, we have businesses which roll up to the holding company in Belgium, which has the Belgium and the US business under it, and we have the other businesses rolling up under Netherlands. Importantly, we need to understand that the Belgium and the US office, they play a very critical role in engaging with the retail considering that these are the largest markets from a consumer standpoint. With the strength and leverage that IG I has in India, working closely with the growers and where, you know, we work very closely with the growers and manufacturers here, our teams in the US and Europe are therefore expected to engage with the retailers so that they partner with IGI as their ce rtifier of choice.

I think from that context, the business has been doing pretty well. The subsidiary business delivered around 14% revenue growth for this quarter and EBITDA growth of over 25%. EBITDA margins have also slightly improved, 100 basis points in the subsidiary business for this quarter. Obviously, we are also making significant investments from a leadership recruitment standpoint in the US , etc. which, you know, ties in with our strategy to build greater focus and scale up the business in the US.

That combined with the AGL acquisition, you know, these are important steps that the organization is taking to ensure that the synergies of the brand that AGL gets with the operating size that IGI has, we are able to therefore scale up some of the oth er businesses in conjunction with the gemstone certification opportunity that AGL presents to us. So, I think the quarter has been good, not only in India but also the subsidiaries, and we hope that this trend continues into the future as well.

Umang Mehta : Sure, Eashwar. Thank you so much and all the best.

Eashwar Iyer: Thank you.

Moderator: Thank you. The next question is from the line of Harit Kapoor from Investec. Please go ahead.

Harit Kapoor: Yes, hi, good evening. So just had two or three questions. First was on the, you know, strong realization growth. You mentioned mix is the key driver here. Just wanted to get your sense, Eshwar, that is pricing per segment, has that continued to be stable like it has been in the last two quarters? Is that a correc t assumption?

Eashwar Iyer: Hi, Harit. Yes, we haven't had any structural changes to the pricing during this quarter, Harit , that continues to stay okay.

Harit Kapoor: Okay. And any broad outlook you have on that for, you know, the near to medium term? Do you think that it should broadly remain , pricing should broadly remain in the same range and then whatever happens to mix happens depending on the growth? Is that the right way to think about it?

Eashwar Iyer: Yes, that's the right way to look at it, Harit . I think mix finally is a derivative , is just an outcome, yes, just an outcome. But yes, our focus remains on ensuring that each of our core business segments continue to perform well.

Harit Kapoor: Great, fantastic. The second thing was on natural diamon d jewelry bit. So, you've seen two quarters of value growth coming down here. Do you look at this only as domestic jewelry market, you know, shifting more towards gold, that near -term impact that's there which is affecting the segment overall? Is that the right way to think about it and should that normalize? And within natural diamond jewelry, if you could just give a little bit of color on, you know, how your US initiative in terms of the leadership change that you alluded to, how that is fructifying, any key account wins, or anything which you can kind of, you know, give any color to?

Eashwar Iyer: Yes, so I'll take the second question first, Harit. I think we're building up a leadership in the US. We have had a new recruit who's been in this , now in , our organization for three, four months. We are also helping to fortify the sales organization there. So, there is going to be a little bit of work that has to happen in terms of building an organization to meet the requirements of, you know, sustaining a growth business in the US.

So that is work in progress currently. And coming to your first question, yes, thanks to the increased prices of gold coupled with the volatility, I think that is what is causing a little bit of distress is what we understand f rom the market. We'll see how that pans out. Hopefully, things settle down over the next quarter or two and hopefully this comes back on track.

Harit Kapoor: Great. My final question was on the comment that you made that, you know, there has been capacity additions in the Indian market from the grower perspective. Could you give a little bit more color on this, you know, in terms of -- given that prices have not really kind of gone up at their wholesale level, you know, what's driving capacity addition? Is it just the kind of volume off-take that they are seeing in the global market, Indian market that is driving this? Some sense on this?

Eashwar Iyer: Yes, we alluded to this last time as well, Harit, in terms of the expectation that the industry is having , is probably , to double from wherever they are today over the next three years. I think that has been one of the key considerations because there is still a lot of demand that's still coming in and that's the reason why people are adding a little bit more c apacity.

So, I think, again, these are initial days for the lab -grown is what we believe because the Indian consumer has also come into the fray, right, hopefully in the near future. We see some of those trends in the way lab -grown jewelry business is mov ing as far as IGI is concerned. I guess these are just starting points for this segment.

Harit Kapoor: Absolutely. And last is bookkeeping on other expenses. You mentioned there's a n INR 25 million additional in the standalone to the subsidiary, right, whi ch obviously gets netted off at a consolidated level.

Eashwar Iyer: No, this -- see, there are two elements there. There is a commission payout that happens, that gets eliminated. This 25 million is just an expense. There's no elimination there. So that's the

reason you see a slight impact in the India EBITDA margin, but at the group consolidated level, the EBITDA margin has remained at the same levels.

Harit Kapoor: And the INR 25 million, if you could just repeat as to why -- as to what was it regarding? Sorry, I missed that part.

Eashwar Iyer: We have had some expenses regarding the entire acquisition process for AGL etc.

Harit Kapoor: Got it, got it. Oh, okay, got it. Perfect, perfect. Wish you all the best. Thank you.

Eashwar Iyer: Thank you.

Moderator: Thank you. The next question is from the line of Smit Gala from RSPN Ventures. Please go ahead.

Smit Gala: Yes, thank you for the opportunity and congratulations on a good set of numbers. So, my first question was, in the last quarter earnings c all, we alluded that we are increasing our capacity in terms of gemologists , number of gemologists. So, in this quarter, we have not seen the reflection in the employee expenses, which is also after the acquisition of AGL. So when does the employee expenses see an increase given that we are hiring -- we are giving a massive hiring project?

Eashwar Iyer: See, I think, Smit , thanks for this question. I think if you would look at from a quarter standpoint, I think our employee benefit expense is up . So I think if you look at it from a quarter -to-quarter standpoint, the employee expense is up 16%. That's obviously because there has been additions not only in India but also in other geographies. And versus the previous quarter, I think the previous quart er already had soaked in some of those expenses.

If I look at the numbers, INR 71 crores was the employee benefit in Q3 of CY25, which then became INR 73 crores in Q4 CY25, and this is Q1 CY26 is around another INR 74 crores. So slowly that is getting buil t up for some of the investments that we have made on people and capability within the organization. Smit, you there?

Smit Gala: Yes, yes. I'm here. Yes, thank you. That was helpful. My second question will be, like, we have given that 16% to 17% volume g rowth, but while I tried to analyze the India export numbers for gems and jewelry, they have seen a decline continuously. So how is our company able to deliver the growth where export data as a whole is not showing promise?

Eashwar Iyer: Smit, I think this export data is in rupees or dollar million. I think you have to also look at it from a carat standpoint. Because what has happened is there is an increasing mix shift towards lab-grown stones which is getting exported, and while the carats have probably doubled, I think, from whatever I saw last time, obviously because of the way the pricing has evolved over the last two to two and a half years, I think there is a , the rupee component has probably remained the same. I think we have to look at it from a volume standpoint and not just value.

Smit Gala: Okay, that was helpful. Thank you. I'll join back the queue.

Eashwar Iyer: Thanks.

Moderator: Thank you. The next question is from the line of Pallavi from Sameeksha Capital. Please go ahead.

Palla vi: Yes, thank you for taking my question. This was again continuing on this previous comments on the marketing side, right? I just wanted to understand what's the team size there now in the US and, you know, to what size do we want to take it to?

Eashwa r Iyer : Sorry, Pallavi, we are not very clear. Can you just repeat the question?

Pallavi: Yes, sir. So my question was on regard to what you mentioned earlier about the marketing team in the US, you know, and the ramp -up. So, you know, what's the size no w and if we can have a sense of where we want to go in, you know, how long will that take?

Tehmasp Printer: See, our US offices actually operate as a marketing office where they are in touch with the retailers in the US and they get exact requirements of what the retailer wants in the US market. And that is translated to us and we certify accordingly. We are at the manufacturing end, so US is the marketing end for us and they give us all the relevant information what a US consumer and the US retailer wants . So, from that perspective, this information is translated to us and to the manufacturing units in India and we certify accordingly. So that is how we are ramping up the US marketing effort.

Pallavi: Right, I understand the marketing. So I just wanted to know the number of people we have for that on the street there.

Eashwar Iyer: No, I think our staff strength in US is not very large, but I think what the point that we are trying to make is we are trying to build some capability in the sales organization to capture the market there because it's such a

large country, right? So we have to slowly build that capability. I think that's what we were alluding to in terms of building that capability for the long term.

Pallavi: Right. And natural diam ond, which share we had gained in third quarter, does that continue for the US in particular?

Eashwar Iyer : Sorry, come again?

Pallavi: The natural diamonds on that side we had gained some market share in third quarter in the US is what you had alluded to. Is that continuing and how's that?

Eashwar Iyer: Yes, in quarter one (CY) we've grown 10% on natural diamond in what has been a very tough market. So I think our efforts continue in the same direction in terms of trying to, you know, build gre ater credence into that segment. Yes.

Pallavi: Right, okay. And my last question would be on this, you know, the export data that you mentioned about the value and, you know, LGD. So that would also in terms of volume what would have been India's growth i n that? Would that number be available for LGD volume, carat - wise? Yes.

Eashwar Iyer: See, we have some information but again, it's not available in the public domain. These are just guestimates that we have basis what we speak to a lot of people in the i ndustry. But our

understanding is , and it's logical actually because given the fact that the volumes have continuously been pretty robust and given the fact that prices corrected in the last two years, I think that corroborates with what people in the indu stry also talk. So I think from that standpoint, I think the volume data is something that we need to look at.

Pallavi: Right. But the US is fairly mature on the natural diamond side. So I was just trying to understand,

you know, what is -- sorry, not nat ural, on the LGD side I believe it's like for engagement it's more than 50%.
Moderator: Sorry to interrupt, but Pallavi, can you please re -join the queue for the follow -up question please?
Eashwar Iyer: No, I'll just take that question. I think, Pallavi, just to wrap this up, I think while the estimates are over 50% adoption for lab -grown diamonds , but what we understand is there is still over 40% still left, right? So I think that aspect is what is givin g this sort of momentum as far as manufacturing capacity ramp -up in India is happening.
Pallavi: Right. So that's happening for the US market you're saying but right now but earlier you alluded to it's India. It's just the same, you know, it's the same th ing.
Eashwar Iyer: No, I didn't get that question, Pallavi. I'm sorry.
Pallavi: No, I'm just -- earlier we said that, you know, this growth in Indian capacity is to serve the India market, but right now you're alluding to... ?
Eashwar Iyer: No, I'll just clarify. I understand. I 'll just clarify. What we mentioned is , the US has been the first adopter of lab -grown and they are the largest player as far as consumption of lab -grown diamonds is concerned. What we are alluding to is the fact that the Indian co nsumer will also come into this mix going forward.
And some of the lab -grown jewelry growth that you are seeing is because of the retail explosion that is happening in India as far as selling of lab -grown jewelry is concerned. So while the US has been the place where lab -grown has taken off the first, we expect that trend to be emerging in India as well.
Pallavi: Right, got it. Thank you so much.
Eashwar Iyer: Thank you.
Moderator: Thank you. The next question is from the line of Shravan Vora from Morgan Stanley. Please go ahead.
Shravan Vora: Hi, good evening to the management. Many congratulations on a good set of numbers. I actually wanted -- and I know you touched upon that when we were talking -- when you were guiding for the 15% top -line growth for the coming year, the two important segments you spoke about was continuing growth in LGD

and natural diamonds. Could you briefly just talk about the drivers a little bit on those two for us?

Eashwar Iyer: Hi, Shravan. Good evening. I think obviously the key drivers for us from a natural diamond standpoint is getting more customers into our bouquet of -- who come and work with us. I think we have obviously created a separate vertical to focus on natural diamond. We have a business leader with tremendous experience in this field.
So, I think the focus on natural diamond continues to be in terms of getting more customers into our basket, number one. And lab -grown, as we talked about, I think the capacity additions that has happened is what could be the -- and we haven't seen the full impact of all of the capacity that's getting added because these happen over a few months , etc, for the capacity to ramp up. So, we expect that to also kick in as we get along the road during this course of this year .
Tehmasp Printer: Just to add to what Eashwar said , see you have to understand that the manufacturing is all done in India, whether it is natural or lab -grown. And we are at the manufacturing end and our offices globally are at the retail end.
So, when we receive all the information of what the retailer or the consumer wants in that geography, we transfer that information to the manufacturers in India, whether it is lab -grown as well as natural. And that is our unique advantage where we merge th e two geographies together and settle all their requirements. And that has given us the strength to vector up in our endeavor.
Shravan Vora: Right, got that. And just the second question from me, sir, is that ASPs in the last two quarters have actually don e quite well. How should we look at ASPs for the coming year? And just attached to that, you mentioned that you would continue to make investments and EBITDA growth of 20% is what you guided for ?
So, if you could just highlight some of the investments othe r than the marketing investments that you're making both in the US and India. So just those two , one is on ASP and the other what kind of investments we are making.
Eashwar Iyer: I think, Shravan, two important strategic pillars. One is the brand salience piece in terms of investments in building up th e brand awareness etc, especially in line with getting the consumers to know the need and the importance for a third -party independent certification. I think that is the context in which we want to bu ild that sort of communication directly with the consumers. I think that is an important strategic pillar for us.
Number two is building capability in the US in terms of a structured sales organization , because there is significant potential in the US, cou pled with the fact that we have also acquired AGL.

So, I think all of those things -- so our strategic -- so these are the two large strategic pillars in which the organization is working.

Coming to the ASP question, I think we have discussed this in the p ast. There is a lot of discussion that happens on ASP. We believe that this is just a derivative. So long as we are able to deliver a 20% volume growth with a 15% to 16% revenue growth with a corresponding EBITDA growth, I think that should be what we shou ld be focusing on.

Because there are quarters in which the jewelry mix will go up and correspondingly the ASP drops. You know, so those things have been discussed over the last five, six quarters. I think we'll see how that goes. Normally the first quarter of the year, effectively , which is effectively the end of the year because of the change in the financial year .

But this quarter Jan to March normally we see a ramp -up of lab -grown mix in the business, which slowly tapers down as we get along the year bec ause then we have the quart

er three and the quarter four on Christmas and Diwali and etc, etc. So, I think we should just expect the same trend to continue. But again, from a management standpoint, our focus is in terms of volume, revenue, and EBITDA growt h rather than too much of focus on ASP.

Shravan Vora: Got that, sir. Thanks a lot for that and all the best.

Eashwar Iyer: Thank you.

Moderator: Thank you. The next question is from the line of Umang Shah from Banyan Tree Advisors PMS. Please go ahead.

Uma ng Shah: Hi, sir, good evening. Thank you for the opportunity. Sir, first question was, in the previous quarter's presentation, we had given our market shares and in those natural diamonds loose, our market share was almost 55% to 65%. Sir, our understanding was that we are the second largest player in natural diamonds, not the largest ones in terms of certification. Can you just clarify this?

Eashwar Iyer: No, you're right actually, Umang. We are the second largest player as far as natural diamo nd is concerned from a global standpoint. India, I think we command a decent position in India. I think we must be close to leadership here in India.

But again, we measure ourselves in terms of the global share because obviously the largest player in this segment is still the US. So, I think our endeavor therefore is to find ways and means to improve that market share from a global standpoint.

Umang Shah: Would you be okay calling out our global market share in natural diamonds?

Eashwar Iyer: See, these are again estimates for us, Umang. There is -- so we expect -- we think that our market share in India probably is in surplus of 50%. Globally, I think we must be around the 20% to 25% range.

Umang Shah: Sure. And sir, one more data point from that presentati on was that almost 30% to 35% diamonds, both natural and loose, are uncertified. What could be the reasons for the same?

Tehmasp Printer: These are more for the smaller sizes and less relevant from the commercial value. All the high - end diamonds and larger sizes are generally certified and that is where the game is.

Umang Shah: Got it, got it. And sir, in studded jewelry also you've mentioned that almost 60% to 70% is uncertified. Do we see that as an addressable market for us or not really?

Eashwar Iyer: No, where are you seeing this 60% to 70%? Yes, I don't recollect this actually.

Umang Shah: This was in the previous quarter. Ye s, this was in the previous quarter's presentation, Slide number 30. This year not put in this year's -- this quarter's presentation. This was in the last quarter's presentation.

Eshwar Iyer: I think probably okay, I think this probably must be Tier 2, Tier 3 towns where probably certification is not as people are not as aware.

Tehmasp Printer: So, we are even taking action to also go into the second and the third -Tier cities.

Umang Shah: Sure, sure. That is useful. And just final question...

Eashwar Iyer: No, one second. I think that from a natural diamond jewelry certification, I think our share in this segment would be around 60% to 70%. You are basically saying 70% is going uncertified, is it?

Umang Shah: Yes, yes.

Eashwar Iyer: On LG. On LG, is it .

Umang Shah: On LG, LG studded jewelry ?

Eashwar Iyer: Studded jewelry , okay. Okay. Probably I think these are, as to Tehmasp's point, I think these are small size stones which finally end up in jewelry and there is no probably a commercial proposition to have this certified at the loose stone level.

Umang Shah: Okay. And on e more question was that this year we see that the subsidiaries are profitable, both the subsidiaries, and full year margins are around 8% net margins. We have India margins which are exceptionally high. Two, three years down the line, where do we see the EBITDA margins or net margins of the Belgium

and the Netherlands entities?

Eashwar Iyer: See, Umang, I think we have to look at this business in its totality. I think to Tehmasp's -- what Tehmasp also mentioned, I think while India is the manufacturing hub or the back -office hub of the world as far as cutting and polishing is concerned, the markets are still in the US from a retail standpoint. So, there is an important strategic play for what the teams in the US and Europe actually bring to us.

So, from tha t standpoint, I think that is the reason we talk of a "One IGI" concept. We leverage the strength of the retail markets in other parts of the globe with the manufacturing strength in India. So, most of the certification happens here in India .

And to the po int that was discussed during the financials, there is obviously a large commission payout that has happened to Dubai and US. So that's the way it pans out because customers get identified by our local teams who then end up in India for certification. So, I think let's look at it from a totality standpoint. Yes.

Umang Shah: Fair point, sir. Thank you so much.

Eashwar Iyer: Take care, Umang.

Moderator: Thank you. The next question is from the line of Bharat from MC Research. Please go ahead.

Bharat: Yes, sir. Thank you for the opportunity. Sir, my question is on the margin side. So, in your FY27 guidance, you've indicated revenue growth of 15% and EBITDA growth is slightly high at 20%. Just wanted to understand the levers for the same. That is my first que stion.

Eashwar Iyer: Again, Bharat, I think this is more of operating leverage. Our business model is pretty straightforward. Some of these incremental revenues actually flow into the bottom line , and that's the reason why we are guiding for a faster EBITD A growth versus revenue growth. So structurally the business gives us that sort of leverage.

Bharat: Fair enough. And sir, you guided for 15% revenue growth. Just wanted to understand the key reasons for it, I mean the key levers for that. So, do you fores ee an increased market share both in LGD and natural diamond, or is it more to do with increased geographical penetration? So, what would be the important driver for that level?

Eashwar Iyer: No, Bharat, I think the focus for us is all the four large segme nts and the fifth segment that's got added now is gemstones thanks to the AGL acquisition. So, each of these have to kick in and that's what the management's endeavor is.

Whether it's 15%, 17% volume growth, we don't know, but these are just broad guidelines in terms of what we see is happening within this business. So, I think, ye s, last year we obviously over-delivered to whatever was the guidance. Let's see how this year pans out. It's just the first quarter.

Bharat: Okay. And last question from my side is that LGD -- you talked about increased capacity in the LGD business. So, in which geography you're seeing increased capacity addition? Is it more on the US side or the Indian side, or do you see any other market, increasingly adopting the LGD? So that would be my last question.

Tehmasp Printer: Bharat, the manufacturing capacity is in India, in Surat. The marketing requirement is different, but the increase in capacity is all done generally in Surat in India.

Bharat: Okay, understood. Thanks, and all the best.

Moderator: Thank you. The next question is from the line of Shwet ha from ithought PMS . Please go ahead.

Shwetha: Hi, sir. I just had one question regarding the LGD loose certifications. I just wanted to see if we're seeing any change in the format of the certificates that take place in the near to mid -term.

Tehmasp Printer: Shweta, we are committed to identify ing a gemstone or a diamond along with the 4Cs. Ours is an independent certifying body and we will not deviate from the traditional 4Cs certification. So, we are co

mmitted to keep our certification on lab -grown as well as on natural diamond according to the 4Cs that has been there for nearly a century.

Shwetha: Okay. But sir, is there no pressure from retailers for a change in this or something like that?

Tehmasp Printer: In fact, the retailers enjoy this because everyone is so conversant with the 4Cs that any new nomenclature which doesn't really support the 4Cs is confusing.
Shwetha: Okay, understood, sir. And one more question is, d o we have any long -term contracts with any retailers or is it like an order basis?
Tehmasp Printer: No, we have contracts with the manufacturers, you know. So those are ongoing, yes, those are ongoing.
Shwetha: Okay. And these are volume -based, sir?
Tehmas p Printer: These are -- yes, these can be scaled on the volume, yes. You're right.
Shwetha: Okay. So, these are long -term contracts?
Tehmasp Printer: Yes.
Shwetha: Okay, sir. That's it. Thank you so much and all the best.
Moderator: Thank you. As that was the last question for today, I would now hand the conference over to the management for closing comments. Over to you, sir.
Eashwar Iyer: Okay, I think thanks everyone. This has been quite participative. And in case for a shortage of time, we've been u nable to address any of your queries, please reach out to us and we shall be happy to clarify on any other doubts , etc, that you may have. Thanks once again for everyone. We look forward to seeing you next quarter. Thank s.
Tehmasp Printer: Thank you very m uch for everyone.
Moderator: Thank you. On behalf of International Gemological Institute Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines. Thank you.

Subject: Transcript of the Earnings Call held for the quarter and year ended June 30, 2026

Dear Sir/Madam,

The Company had intimated, vide its letter dated July 20 , 2026, regarding the Earnings Conference Call of International Gemological Institute Limited for the quarter ended June 30 , 2026 . The conference call was held on July 23 , 2026 and the transcript of the call is hereby enclosed.
This intimation will be made available on th e Company's website at www.igi.org .

This is for your information and record.

Thanking you,
Yours faithfully,
For International Gemological Institute Limited

Nitika Dalmia

"International Gemological Institute Limited
Q1 FY27 Earnings Conference Call "
July 23, 2026

MANAGEMENT : MR. TEHMASP PRINTER – MANAGING DIRECTOR AND
CHIEF EXECUTIVE OFFICER – INTERNATIONAL
GEMOLOGICAL INSTITUTE LIMITED
MR. EASHWAR IYER – CHIEF FINANCIAL OFFICER –
INTERNATIONAL GEMOLOGICAL INSTITUTE LIMITED
MS. NATASHA KEDIA -- HEAD OF INVESTOR
RELATIONS AND PUBLIC RELATIONS –
INTERNATIONAL GEMOLOGICAL INSTITUT E LIMITED

MODERATOR : MR. SUMEE T KHAITAN – MUFG INTIME

Moderator: Ladies and gentlemen, good day and welcome to the Q1 , FY27 earnings conference call of International Gemological Inst itute Limited, hosted by MUFG Intime . As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please si gnal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.

I now hand the conferenc e over to Mr. Sumeet Kh aitan from MUFG Intime . Thank you and over to you, sir.

Sumeet Khaitan: Yes, good evening everyone. I welcome you all to the earnings conference call to discuss Q1 FY27 re sults of International Gemological Institute Limited. To discuss the results, we have from the management, Mr. Tehmasp Printer, MD and CEO, Mr. Eashwar Iyer, CFO, and Ms. Natasha Kedia, Head of Investor Relations and Public Relations.

They will take you through the results and business performance, post which we'll proceed for Q&A session. Before we proceed with the call, I would like to mention that some of the statements made in the today's call may be forward -looking in nature and may involve risk and uncertainties. For more details, kindly refer to investor presentation and other filings that can be found on the company's website.

With this, I now hand over the call to the management for their opening remarks. Over to you, sir.

Tehmasp Printer: Thank you, Sumeet . Good evening, ladies and gentlemen, and thank you for joining us today for the IGI's first quarter FY27 earnings call. I trust you have had the opportunity to review our financial results and investor presentations, both which are available on the stock exchanges as well as our website. We have begun FY27 on a strong note, delivering Q1 revenue growth at 23% and an EBI TDA growth of 29% year -on-year.

This performance reflects the enduring strength of our core franchise and the disciplined execution of our growth strategy. Our momentum this quarter was broad- based, led by LGD Loose Stones, LGD J ewel ery, and increasingly our by C oloured Stone G emstones and other certification. Demand for LGD certifications remain healthy, supported by increm ental growth capacity coming online.

This structural expansion in supply, coupled with the rising consumer acceptance, continues to widen the addressable market for independent certification. At the same time, natural diamonds remain our strategic priority . We are working to gain market share in natural diamond loose stones, winning new customers and growing our share of wallet with existing ones. Consumer preference is ever evolving rapidly. Consumers today are increasingly guided by contemporary design, e veryday utility, self -expression and transparency, trends that are reshaping the jewel ery industry globally.

As we have consistently maintained, the rise of the lab- grown diamonds does not dilute the case of certification. In fact, it reinforces it in the larger markets where more participants' trust and commercial confidence becomes more valuable and not less. We firmly believe that an IGI

certificate that makes a lab -grown diamond a diamond. At its core, IGI's value proposition rests on two enduring pill ars. The first one is trust, which is very important. As an independent third party, we verify a stone's origin, its defining characteristics, that is the 4Cs, cut, colou r, clarity and carat, and increasingly its traceability, provenance, etcetera.

As consumer and trade place increasing importance on transparency and authenticity, independent certification becomes ever more critical. The second value is commercial value. Independent certification establishes a s

tandardized objective assessment of a stone's quality, enabling efficient price discovery, facilitating trade across the entire value chain, giving manufacturers, retailers and consumers al ike the confidence to transact.

As you know, earlier this year, we acquired American Gemological Laboratories , AG L, a leader in gemstone certification in the US. The consolidation of AGL is now beginning to contribute to our performance and reinforces our position as one of the few scaled global certification players spanning natural and lab- grown diamonds, jewel ery and now colo ured stone gemstones.

Colo ured stones expand our total addressable market and opens a new avenue of growth beyond diamonds, with meaningful opportunity to cross -sell and to extend AGL's presence into new geographies.

Alongside the core busines s, we continue to invest in building the IGI brand and deepening consumer awareness and embedding artificial intelligence and machine learning across our operations to enhance service qualities, improve turnaround times and drive greater efficiency.

I'm al so pleased to share that we have been strengthening our leadership bench with the addition of senior le aders across various functions.

Most recently, we have Mr. Manu Sharma joining us as the Chief Operating Officer, who brings over 20 years of leadership experience in retail luxury and brand management and business growth. He has served the group as a Group Vice President at Reliance Brands Limited, where he led a premium portfolio of global brands, drove strategic partnerships and headed major expansion i nitiatives.

In conclusion, we believe IGI is exceptionally well -positioned to capitalize on these opportunities and continue delivering sustainable long-term growth given our strong global footprint, diversified segment

presence, trusted brands and expanding capabilit ies. With that, I
now like to invite our CFO, Mr. Eashwar Iyer, to take you through the financial performance for
the quarter and the year gone by. Thank you.
Eashwar Iyer: Thank you, Tehmasp, and thanks everyone for taking the time. It's a pleasure to have you guys
again on board for our quarterly investor call. As mentioned in the last con-call, I would like to
highlight that the company has transitioned its financial reporting structure from a calendar year to a financial year ending
March. I will start with an update for the quarter. I'm talking of the
consolidated group performance for the quarter.
Certification revenue for the quarter stood at INR 3,598 million, growing at 23% year -on-year,
supported by strong volume growth of 17% on a year -on-year bas is. This was primarily driven
by strong revenue growth across all our core segments, namely LG D, which has grown at 25%,

LGD J ewel lery, which clocked 44%, and G emstones and other certification growing over 200%,
the latter reflecting the consolidation of A GL. Total revenue from operations for the quarter
stood at 3,708 million, registering a growth of 23%.
During the quarter, ND Loose S tones grew 6% year -on-year and ND J ewel ery saw a growth of
2% year -on-year. The audience will appreciate that the natural diamond vertical is a key strategic
pillar and we continue to put efforts to gain market share in t he ND L oose segment through new
customer acquisitions and increased share of the wallet from existing customers. Work is
underway to leverage the strength th at IGI has in India, in the Indian domestic market.
While we continue to focus on this vertical, we remain confident of the full -year trajectory with
LGD segment continuing to provide the volume impetus. This quarter has also seen a strong
performance from our subsidiaries. The investments in the US organizations are starting to see
some traction. We also commenced operations in Italy through our Belgium subsidiary as we
continue to explo

re geographical expansion. This combined with strong growth in the
subsidiaries under the Netherlands holding company has enabled to deliver growth mirroring the
growth in India.
The AGL acquisition led to an incremental 3% revenue growth, with the base business delivering 20% revenue growth for this
quarter. Reported volume s stood at 3.56 million reports, compared
to 3.03 million reports for quarter one ‘26, growing 17%. ASP for the quarter reported at 1,010
or INR1,010, registering a 5% improvement versus previous year, with AGL consolidation
giving 3 % gains and the base business ASP growing 2%.
EBITDA reported at INR 2,238 million, reflecting a growth of 29% compared to the previous
year. The AGL acquisition also contributed an incremental 2% growth to the EBITDA. EBITDA
margins for the quarter stood a t 60.4%, an improvement of 270 basis points year -on-year. The
sequential decline on EBITDA was largely due to the seasonally strong fourth quarter resulting
in improved oper ating leverage in that quarter.
Therefore, the current quarter's margin is a more r epresentative indicator of the sustainable run
rate of the business. With the planned investments in brand building, marketing and
organizational capabilities, the company remains confident of sustaining EBITDA margins for
financial year 27, with operating leverage expected to support margins as volumes scale. The
DNA setup , step up is reflective of the incremental capex consistent with volume and business
scale-up, with finance cost increasing as a result of increased rental payouts on additional office spaces that have been taken
to sup port the business requirements.
The company continues to be debt -free. Consequently, PAT reported at INR 1,657 million,
growing 31% compared to previous year. PAT margins were at 44.7 %, an improvement of 260
basis points ove r the previous year. Coming to the India standalone results for the quarter, in
terms of revenue, certification income for the period stood at INR 2,792 million, growing at
22%, supported by strong volume growth of 21%. This was primarily driven by strong revenue growth across our core
segments, be it LGD growing at 30%, LGD J ewel lery at 38%, and
Gemstones which grew at 135%.

Total revenue from operations for the quarter stood at INR 2,862 million, registering a growth
of 22%. ASP for the quarter rep orted at 870 versus 861 for the previous year quarter, as pricing
continues to be stable. EBITDA reported at INR 1,970 million, reflecting a growth of 15%
compared to the previous year. EBITDA margins stood at 68.8%. While the EBITDA margins
are lower vers us previous year, the group EBITDA as stated ear lier improved 270 basis points.
The audience will appreciate that as our geographies scale up on retail engagement and influence

markets to push for IGI certified stones in India, there is a commission payout that is made from
the India organization to other geographies, which is reflected in the increase in other expenses.
Additionally, the quarter saw the impact of discretionary brand and marketing spends resultant of the IPL sponsorship, which is largely fr ont-loaded , and investments on headcount.
As the discretionary spends moderate, we expect the EBITDA margins to stabilize in the 70%
range. Consequently, the strength of one IGI, where the manufacturing of -- manufacturing
strength of India combined with t he retail engagements in the other geographies, has enabled the
group EBITDA margins to expand versus previous year. Consequently, PAT reported at INR
1,546 million, growing 12% compared to the previous year. PAT margins stood at 54% for the
quarter.
Again, the India standalone margins need to be seen in conjunction with the consolidated results in line with the narrative on the EBITDA.
Overall, we have started 2027 with a very strong first quarter performance.

We remain confident
to deliver the 15% r evenue growth and 20% EBITDA growth guidance that we had provided
earlier. With that, I conclude my remarks and open the floor for any further questions. Thank
you, everybody.
Moderator: Thank you very much. We will now begin the question-and -answer sessio n. We take the first
question from the line of Harish Advani from Axis Capital. Please proceed.
Harish Advani: Hi, thank you for the opportunity and congrat s on a great set of results. My firs t question was on
the comment on the LGD production capacity expanding. So as more growers come in, more
jewel lery retailers come in, how do we see the pricing per report shaping up over the years to
come? Is there a pressure that with higher volume we may need to forgo some pricing? That
would be my first question.
Tehmasp Printer: See the -- what happens is the LGD J ewel ery as well as LGD S tones is gaining wide increase in
the consumer demand. So growers look at this growing demand and that is basically because of the affordability. The affordability of LGD satisfies the desires of all the different consumers
who couldn't afford natural, so now they are into the diamond segment and the increase in the
consumer base of LGD is fast increasing. And that is the reason why growers are increasingly increasing their growing c apacity and polishing capacity.
So understand one thing, certification becomes central to LGD stone -- certification, stones,
diamonds. IGI certificate for lab -grown diamonds makes a lab -grown diamond a diamond.
Otherwise, without certification, it can be considered just as a piece of glass. So this is the most
central importance point of IGI certification. So here what we look at is the consumer demand

which is fast expanding and we increase our capabilities in certifying h uge quantities, larger
quantities, increasing quantities, and that is where our strength remains.
So what we have to do is keep pace with the demand and keep on increasingly certify the LG
stones, diamonds, which come into play. And this is for the confide nce building for the
consumers. So it is basically, certification is an essential part. Whatever is the price, the price
determines the expansion of the consumer market. But we as a certifying independent certifying
body, we specify the origin of the diamond and the 4Cs, and that gives consumer confidence. So
we are in the business of giving consumer confidence and trust to buy a diamond. Harish?
Moderator: Hello? It seems like Harish's line has been disconnected. We'll just move further with the next
quest ion. We take the next question from the line of Hari t Kapoor from Investec. Please proceed.
Hari t Kapoor: Yes hi, good evening. This is Hari t here. So just a few things from my end. One was, you know,
on AGL, if you could just give us slightly medium to long- term thought process on this business
given the fact that it's been largely a US business and what are the opportunities here to expand,
you know, geographically the business from a revenue standpoint, given the fact that it's also,
you know, very high seems like a very high realization business as well, fairly accretive to the
international business. So just some colou r on this would be gre at. That's my first question.
Tehmasp Printer: So Hari t, our acquisition of AGL is a strategic move towards expanding into the gemstone
industry. You know, we have always been in the diamond industry, but we are also now making
inroads into the colo ured st one segment. Okay? So AGL is very well recognized and appreciated
in the US, which is the main buyers for colou red stones. And with the acquisition of AGL, we
acquired the colo ured stone expertise and AGL gets a global platform to go to.
We are ex panded globally, so we will take AGL globally. At the same time, we will increase
our expertise in colo

ured gemstones, which we need, and we need something other than
diamonds also. So today we have a plethora of gemstones within our reach and we have the expertise and we plan to expand into the colou red stone segment.

Hari t Kapoor: Tehmasp, is there a is there a kind of geographical expansion outside the US thought process also, like large markets of gemstones which are not kind of tapped by you yet?
Tehmasp Printe r: Of course. See what happens is the gemstones is a very regional aspect where, you know, gemstones come from Colombia, from Tanzania, from various other places. But the main consumer is in the US for the very high-end gemstones. So what we plan to do is extend the AGL capabilities as a collection window as well as mobile laboratories functioning, say to start with, we would start in Jaipur, you know, and then extend it to other geograp hies wherever the relevance is.
So we want to bring AGL to the to the g lobal market and expand its expertise across the globe. And that is the main intention of our acquisition because we didn't have the colo ured stone expertise, now we do have the colou red stone expertise and we also have the global reach. So we will extend AGL to the global reach.

Hari t Kapoor: Got it. Got it. The second question was on the ND loose bit, you know, in the international or the international numbers, which is like a consolida ted minus standalone, you do see ND loose growth for the last three quarters actually now being in double digits at 20%, 17% and 12%. I'm just trying to understand, you know, with all these initiatives that we are seeing that you guys are doing on the ND l oose side that you spoke about, the US business is al so doing well.
Do we see a further acceleration possible in ND loose here, given that it has the multiple impact of even on realization? So just some -- because in India you're already strong, so just outside this wanted to get a sense on that.
Tehmasp Printer: So Hari t, definitely that is our main strategic point that, you know, we want to increase our shareholding, share market share in the natural diamonds. India we are already well very well covered and we have the highest market share in India. And globally we are fast increasing. All the increase that you see is from the global side. In the sense what happens is with the certification of lab -grown diamonds, and these are the new consumers who are com ing into the market, these consumers are getting more and more exposed to IGI certification internationally, especially in the US.
So the consumption of natural diamonds certified by IGI is also on the uptick. You understand?
So actually lab -grown diamonds is giving a full new consumer base which is fast increasing and this consumer base also like to upgrade themselves and then get into natural diamonds and they are already exposed to IGI certification. So naturally they will be exposed to, I mean they will prefer to have an IGI certified natural diamond.
Hari t Kapoor: Got it. Last couple of questions. One was, you know, Eashwar , this 15% growth that you are expecting, you know, sorry, your guidance for is that 15% plus, is that including the AGL, you know, acquisition? And the second question was within that was also could you just explain this commission payout in standalone to subsidiaries? I didn't get that exactly.
Eashwar Iyer: So this -- the AGL piece, I think from a guidance standpoint, yes, we can expect an additional couple of percentage points contribution coming in from AGL. We're talking of a 15% on the base business. So we can probably expect some additional flow through because of the AGL acquisition, Harit.
Harit Kapoor: And the c ommission payout. Yes.
Eashwar Iyer: And to the second point. Yes.
Tehmasp Printer: See Hari t, the thing is we have our geographical locations in various in all over the glo

be. While the main certification happens at the manufacturing end, which is India, the demand comes from across the globe. Now take for instance our office in US, in New York. They have a dual function. One is that they have a full -fledged certification -- I mean laboratory, which can certify all the diamonds or gemstones when it comes f rom the US territory.
However, the retailer and the chain stores in the US, they have specific demands. So my US office works as a marketing office. So they are in touch with the retailer abroad or in for that

matter in Europe or in the Middle East wherever, and they give us the information of the requirements of that particular chain store. And we certify diamonds according to their needs.
So obviously the leads have come from these countries and then we while we do all the work here, we also give them a commission for bringing these customers to us. So that is the reason why we give the commissions to the geographies which have given us information and given us leads to certify in India.
Hari t Kapoor: Got it. Got it. That's all for me. Thank you. Wish you all the best. Thank you.

Tehmasp Printer: Thank you.
Moderator: Thank you. We take the next question fr om the line of Pallavi from Sameeksha. Please proceed.
Pallavi: Thank you for taking my question. Am I audible?
Tehmasp Printer: Yes, Pallavi.
Pallavi: Right. So just wanted to understand in terms of you mentioned about the marketing spend for IPL. So and that been that being front -loaded. So, you know, how much would that be if you could quantify that? And my second question would be in terms of the number of employees, you know, I think there's reference to an addition in that number. So what was the addition to the number of employees?
Tehmasp Printer: See, we are now getting into our marketing aspects to the consumer. So IPL has been our first major endorsement or sponsorship where we have got a lot of viewership. And we actually tied up with Gujarat Titan s, who was a radical horse, they came up to the finals. But fine, I mean, you know, they played a beautiful game and they also promoted IGI o n their on their apparel. So we gain a lot of traction from them. And we're continuing to do such modest marketing activity to the consumer.
Most of our activities in the past have been B2B from business -to-business, you know, but now we are also looking i nto the consumer sector. The employee increase, see what happens is, you know, with the expanding number of certification that we need to do, we need to hire skilled or technical personnel in our evaluation model and of course in the process department. So what happens is we cannot increase the turnaround time. We have to shorten the turnaround time. We have to give a good service.
And that is the reason why we had to increase we have to increase the staff strength, plus we are also making inroads into AI a nd machine learning. You know, so all our data is also being fed into an AI model and machine learning is happening. So we're trying to optimize the workforce that we have today into giving a better service to our customers.
Pallavi: Right, sir. Would it b e possible to quantify like how much is this marketing spend? Is it done?
Tehmasp Printer: Eashwar , can you please give her the details?

Eashwar Iyer: Yes, I think in I think we would have spent around just under 5 crores for the quarter in terms of the marketing spends around the sponsorship events etc etera. And obviously to what Tehmasp mentioned and referencing to whatever he mentioned during the call, we've also making significant investments from leadership capability across the organization. So a comb ination of those two have obviously had the impact in this quarter. But again, as Tehmasp

mentioned, these are all for the long haul as we build greater credibility for the IGI brand through our engagements with the consumers etcetera.
Pallavi: Right, sir. I agree completely on this, you know, the long-term investment aspect of this. Thank you so much. I'll get back in the queue.
Moderator: Thank you. We take the next question from the line of Shravan Vohra from Morgan Stanley. Please proceed.
Shravan Vohra : Yep, hi. Good evening. Thanks for the opportunity. I just wanted to check first on the average realization per report. We've seen fourth consecutive quarter of improvement. How should we look at this number for the full year, like how would mix play a factor into the realization? Could you just elaborate a bit on that?
Eashwar Iyer: Hi, Shravan, good to hear from you. I think see, we've been maintaining this narrative over the last couple of years in terms of stability on pricing and that continues to h old on as we speak. We also talked about a few percentage points improvement. I think out of the 5% improvement that you're seeing, a 2 % or 3% improvement is thanks to the AGL acquisition.
The balance 2% is the base business improvement. So it's more driven by the mix shift for the quarter. Underlying pricing has remained, you know, consistent or constant since the last time we did a correction, which was April -May of 2024 on natural pricing on LGD. Otherwise, things have been stable for us.
Shravan Vo hra: Got it. Thanks for that, Eashwar . Just touching on the EBITDA margin bit, while you touched on it while making your opening comments , we've seen a like a deceleration this quarter Y -o-Y, but for the full year, did you speak about maintaining it at aro und 70%? Just correct me if I got it wrong.
Eashwar Iyer: Yes, that 70% was for the India business. At the consolidation at a consolidated group results, we are at around 60 , 64 right? 64 -- 60% this quarter , after delivering a 61% for the full year last year. So we should be able to probably hold or probably improve because with the 15% revenue growth, we expect EBITDA to grow faster at the group level, which actually happened during this quarter. That trend should continue over the next three quarters. So hopefully with the operating leverage that we get on this business, EBITDA margin should probably improve by

100 basis points at least by the end of the year.
Shravan Vohra: Right. Got that. And just one final question on the international bit. While you spoke about how the US business has improved and your Italy and all your initiatives in international markets, but even the EBITDA margin has seen a very sharp improvement in that business. So could you just talk about what's driving the improvement in EBI TDA?

Eashwar Iyer: Yes, I think see, that's the point that Tehmasp was making in terms of, you know, a lot of customer leads now coming in from these geographies, consequent to which, you know, there's a commission payout that's happening to some of these geographies. I think as the business scales up there and again, it's again contingent on the capability that we built in the US business, the capability that we built in Dubai and China etc etera, which is enabling us to therefore reach out to large many mo re retailers out in those markets.
And with the brand salience that IGI has created over the last few years, I think a combination of all these factors is enabling us to therefore see, you know, get into these territories at a much quicker rate than what w e are actually expected at the beginning of this year. So all of those have come into play in this quarter. We hope that momentum continues for the balance of the year as well. And again, it's very simple it's very simple, Shravan. I think the operating le verage that is relevant for India also applies for the other geographies. You know, so if

you're able to gain traction there, it just flows down into the bottom line.
Shravan Vohra: Yes, perfect. Thanks a lot, Eashwar .
Moderator: Thank you. We take the next question from the line of Aliasgar Shakir from Motilal Oswal Mutual Fund. Please proceed.
Aliasgar Shakir : Yes, hi. Yes , hi, Tehmasp and Eashwar . Fantastic set of results. Am I audible?
Tehmasp Printer: Yes, Ali asgar .
Aliasgar Shakir: Okay. So, you kn ow, just a -- first follow -up on this realization that the previous participant was also asking. Just wanted to understand this bit a little better. Now, you know, you have said in the past that when there is any kind of scale volume that you get from vendors, you know, there are, you know, some price negotiation that they do. But honestly, in the last three quarters, you know, we have seen very steady improvement in realization. So can you explain how much mix is playing a role in this and, you know, given the fact of how the mix changes, how much of the blended realization benefit you see because of, you know, the mix situation?
Eashwar Iyer: See, Ali, I think there was a couple of percentage points that from a mix standpoint that we saw improvement in LGD , obviously consequent to what Tehmasp also mentioned in terms of expansion of capacity at the grower ends. So I think at the consol level, obviously it remained more or less constant at 58% this quarter versus the previous quarter. On a standalone basis, again, we've seen a couple of percentage point s improvement from LGD segment.
I think that's driven, you know, the realization improvement for the for the group. We'll let's see how that pans out for the balance of the year because we also are expecting th is natural diamond jewel ery to, you know, start showing some traction. We had a decline in quarter four and we're seeing some growth, I think a it' s a very small 2% growth in ND j ewel ery. I think as the mix pans out and again, we get into the Diwali quarters etc etera., I think that mix play we are aware of, you know, last two years we've seen that it's impacting the -- the realization.
But I think the broader point here is, Ali, that the volumes continue to be strong. The growers are expanding capacity and with the with the brand salience that IGI has, I think we'll have to

therefore ride the bandwagon on the volume to ensure that we are able to deliver strong revenue growths as well, together with, you know, EBITDA margins or EBITDA growth and EBITDA margin improvement.
I think that is the overarching strategic imperative or the navigation that the organization therefore has to do over the as volume scales up and building that capability again from an organization standpoint in terms of people c ount etc etera. So all of that work is going on. So the good news is obviously volumes have been extremely strong and we hope to see that for the future for the immediate quarters as well.
Aliasgar Shakir: Got it. So just to understand this, you know, clear ly, your average blended certification price, okay, compared to that, I mean, the LGD and natural diamond certification price is higher than the blended price? Is that understanding correct?
Eashwar Iyer: Sorry, come again, Ali?

Aliasgar Shakir: I'm saying that within the four -five category of certification that you do, the natural diamond and the LGD certificate price is higher than the blended price? I mean, I'm assuming the jewel lery would be making lower for you, so I mean, what drives the realization? I was just trying to understand that.
Eashwar Iyer: Again, see, natural diamonds obviously the realization will be higher than LGD for sure. Again, see, the -- you also have to keep in mind that natural diamond the stones that come to us are the lower carat weight stones. So the realization obviously is also dependent on the carat size. It's not ju

st, you know, and obviously LGD obviously comes with higher cara tage because, you know, that's the way the business has obviously evolved. So the effective realiz ation for both the natural diamond and lab -grown diamond will effectively be the same because of the change because of the carats per -- the carats per report.
Aliasgar Shakir: Got it. So the realization is getting driven by not the mix, you're saying?
Eashwar Iyer: The mix, see, if there is a significant increase in the jewel ery mix, in that quarter we have seen in the past, right, Ali, we have a small dip in realization.
Aliasgar Shakir: Exactly. And then this quarter if I see your LGD mix and your, you know, has increased, but still actually the realization is improving. That's the reason why I was persisting on this point.
Eashwar Iyer: Yes, it again mix depends on the carat that come into the -- into our reports. So on an average basis, I think probably there's a slight improvement in the carat age as well. So that's probably driving this improvement.
Aliasgar Shakir: Understood. Got it. So basically the concern that this pricing could be, you know, weak realization per report, now that, you know, despite whatever the pricing being, this can be stable. We don't worry the pricing coming down, right?
Eashwar Iyer: Yes, Ali, see, again, from a wholesale standpoint, this pricing has remained stable in the last two years between the 80 to 120 range, right, per carat. I think that that financial -- or that commercial

model has probably been settled and these guys are anyway adding significant more capacity which obviously.
Aliasgar Shakir: See, I think, s orry to interrupt, but Eashwar , I think you're talking in terms of price per carat, but actually what you report is realization per report.
Eashwar Iyer: I'm talking when I'm talking price per r eport only, I'm saying the cara tage that comes in per report, that can probably move a little bit here or there. But we always report on a per report basis, but I'm -- the underlying the underlying realization is driven by the carat weight i s the point I was making, Ali.
Aliasgar Shakir: Got it.
Tehmasp Printer: Ali, what happens is in the natural diamonds, we do a certification of more pointers, that is below a carat. And while in the lab -grown, we do certification of more than a carat and actually more than two carats. So the size makes the difference. That is what Eashwar was trying to convey.
Aliasgar Shakir: Got it. Got it. Got it. So concluding point is that therefore realization should benefit because of the higher carat age of the LGD pricing. Got it. Okay.
Tehmasp Printer: Yes. That is correct.
Aliasgar Shakir: Understood. And just last question is on the guidance. So you have a guidance of 15% revenue growth, 20% EBITDA growth, but, you know, last three -four quarters, you know, you have done much better. So with this quarter, I mean, this year star ting with a, you know, 23 %, 24% growth in revenue, you know, I mean, if you're guiding 15% growth, then is that conservative or that means there is scope for this, you know, upgrade of numbers because obviously you're s tarting with a much higher base?
Eashwar Iyer: Yes, of course, Ali, we all hope for the best and obviously we remain confident looking at how the how this is panning out. But yes, early days, it's just the first quarter, so we'll continue to hold our guidance at 15% revenue and 20% EBITDA for the moment.
Aliasgar Shakir: Understood. Okay. Very clear. Thank you. Thank you so much for the explanation.
Moderator: Thank you. We take the next question from the line of Mansi Zaveri from Old Bridge AMC. Please proceed.
Mansi Zaveri: Hi, am I audi ble?
Tehmasp Printer: Mansi, can't hear you.
Eashwar Iyer: Not too clear.
Mansi Zaveri: Hello? How about now?
Tehmasp Printer:

No, it's very low.

Mansi Zaveri: Just give me a second.
Moderator: Mansi, I would request you I would request you to please re -join the queue. We'll just proceed with the next question till then. We take the next question from the line of Pallavi from Sameeksha. Please proceed.
Pallavi: I just wanted to understand turnaround time. My checks on the ground was showing an elongated time. And so what is the, you know, by when can we have this turnaround time fixed and what would it be in India right now?
Tehmasp Printer: Pallavi, what was your actual question? The TAT you're talking about? Turnaround time of our -- so that depends on t he volumes. That depends on the volumes. So we've increased our capacity in technical side as well as on a process side, plus we use AI to keep the turnaround time as minimal as is possible. So does that answer your question? I didn't quite get.
Pallavi: I mean, so what do we target in terms of the turnaround time, right? So let's say it's in India only…
Tehmasp Printer: No, so turnaround time, a decent turnaround time of two to three days is acceptable. And that is what we strive to do. Did you hear that, Pallavi?
Moderator: Sir, do you want me to unmute her?
Management : Yes, I don't know. I mean, we answered the question, so you can go to the next person.
Moderator: Okay, sir. No problem. We take the next question from the line of Shrenik Mehta from IndoAlps Wealth . Please proceed.
Shrenik Mehta: Hi, congratulations for a great set of numbers. Two quick questions. One, you're saying the ROI for these LGD manufacturers is down to 6 to 10%. At what stage do you think this would become a point of negotiation for the services that you're providing to them? It's already below the cost of their capital, so are they not going to push you hard for a lower cost, lower price?
Eashwar Iyer: Shrenik, our reading of that margin structure is in the 10-12% range, which is what we've been articulating over the last five -six quarters. I think the concept of negotiation is never -ending, but I think the more relevant point for us is to understand where the underlying price is actually moving. And that has remained stable in the 80-120 range over the last couple of years. So, yes, so I you know, so our reading is a little different from what you're telling us and that's remained stable for like two years now.
Shrenik Mehta: Okay. That's good to hear. But the 6 to 10% ROCE for the growers is something that is there in your presentation. The second question was about the additional other cost that you mentioned in the beginning of the call. What if you remove that other cost, which is the commission that you paid to the subsidiaries for the performance, then what would be the actual EBITDA and the PAT growth for the Indian subsidiary?
Eashwar Iyer: See, I think, Shrenik, and this is som ething that we have been articulating in the past, the manufacturing strength of India provides us with an EBITDA margin of whatever 70-74% over

the last couple of years. That cannot be seen in isolation because we are still dependent on the retailer in th e other geographies to push IGI into the international markets.
I think the strength of one we call it the one IGI model within our organization, the strength of India's manufacturing capability or certifying capability coupled with the retail strength of the other markets is what makes IGI strong. So I will request that everybody looks at the consolidated EBITDA margins and not see this business in isolation because they are interdependencies there which provides us the leverage or the strength as a group as a total. So eliminating, you know, these are just mathematical exercises, but we need to understand the business model and that's

what Tehmasp mentioned in the earlier in terms of, you know, what is at play. And that is our focus because the capability that we're talking of building in the US or in Belgium etcetera. is driven by that singular purpose of having a larger retail outreach so that, you know, people are actually coming to IGI.
Shrenik Mehta: All right. So what we should really look at is the i ncremental EBITDA that you could generate on a consolidated basis ?
Eashwar Iyer: At the consol level, absolutely.
Shrenik Mehta: Okay. Thank you so much.
Tehmasp Printer: At the consol level, yes.
Moderator: Thank you. We take the next question from the li ne of Anand Shah from Axis Capital. Please proceed.
Anand Shah: Yes, hi, team. Just one question. You've been indicating this incremental capacity additions that are happening on the lab-grown diamond side for manufacturing. I mean, any numbers you can share on what is the current capacity or capacity addition plans for growers? I mean, any numbers so we can get that color as to what capacity growth is sort of happening?
Eashwar Iyer: Yes, hi, Anand. Good to hear you. Yes , Anand, again, I think we've discus sed this in the past, I

think the previous call as well. I think when you speak to the growers, they're talking of doubling
their capacity over the next three, sorry, capacity is the wrong word, doubling their business over
the next three years.
I think it 's in from that context that people are starting to add capacity. We do obviously track
the number of machines etcetera , but at a very, very macro level, these guys are talking of
doubling their business in three years. And consequent to that is why you see volume propelling
thanks to the capacity additions that's been happening there.
Anand Shah: Got it. So it's basically the number of machines effectively sort of doubling. Got it. And as
markets, I mean, India is assuming is still nascent and growing well, but is China also emerging
as a big market for lab -grown diamonds now?
Tehmasp Printer: Yes, China is also a market for lab -grown diamonds and that certification happens from our
Shanghai and Shenzhen office. So yes , it plays a significant role even in the China market.

Anand Shah: Got it. But I mean, just last part, I mean, just trying to get a sense that this doubling of capacity
from growers, you of course would be communicating with them. So where is their optimism
coming from? Is it still more US -led or it is a wider adoption across geographies or is India -
China which is exploding? You know, just some geographic sense on the LGD adoption.
Tehmasp Printer: Mainly it is US -led, but increasingly from India also. You know, so what is happening is apart
from the loose stone certification, we are increasing in our lab -grown jewelry business. So that
is increasing very, very fast. And this is taking place even in the Indian continent.
Anand Shah: Okay. Okay. Okay. No, got it. That's all I wanted to know. Thanks a lot.
Tehmasp Printer: Thank you.
Moderator: Thank you. We take the next question from the line of Yog Rajani from Omega Portfolio
Advisors. Please proceed.
Yog Rajani : Hi, thank you for taking my question. My first question was in terms of the manufacturing side
of it. So how concentrated is our client base when it comes to manufacturers of lab -grown
diamonds?
Tehmasp Printer: Most -- 95% of all diamonds polished, cut, grown is from India. India has the biggest pool of
polishers of the world. So you can grow your diamond -- especially a lab -grown diamond
anywhere in the world, but you have to send it to India for polishing because we have the largest
capacity of polishers globally. So that's why it's a known fact that 95% of all diamonds cut and
polished are from India.
Yog Rajani : My reason for the question is I wanted to understand how concentrated is ou

r customer base, if
you could highlight any points regarding that ?
Eashwar Iyer: Yes. Okay. I think obviously, yes , see, there are obviously large players in the lab- grown
segment. We have close to around 12 people or 14 people today at last count in terms of doing probably 80% of the total
stones that get grown in India as far as lab-grown is concerned. So
obviously from that context , these 8 -10 guys probably will contribute close to 40%, 50% of our
revenues.
Yog Rajani : Okay. That's great. Second question is, so I this is my understanding, India manufacturing is
largely CVD -based, whereas China would be majorly HPHT -based. So given t hat India is
growing as a market, like in terms of manufacturing, do we see an increase in caratage over time
for the lab -grown diamonds that we will be certifying?
Tehmasp Printer: Of course. See what happens is HPHT is a earlier technology, CVD is the latest technology and
India has taken lead in the CVD factor. We see CVD growers making larger diamonds than ever
before. You know, last year we certified a diamond of 75 carats, one single stone, which is a
huge diamond. So you know, I mean, these guys are increasing the sizes and increasing their quality also because, you
know, they are in the higher end of the spectrum of the 4Cs. And yes,
this is the way the market is growing.

Yog Rajani : Okay. So that's great. So I believe that would increase our average realizations over time as well.
And on top of that, I also wanted to understand because the what to say customer base is so
concentrated, what is the negotiating power that they have that we might have to adjust to?
Tehmasp Printer: See what happens is it is concentrated within say 10-12 large growers where lab -grown is
concerned. Okay. But they all have to be reliant on IGI certification. See because without IGI certification, the lab -grown
diamond is a piece of glass, let me put it this way, you know, be cause
it needs some authenticity and IGI gives the authenticity to a lab- grown diamond.

Yog Rajani : Okay. Fair. And with the increase in manufacturing, is there actually a...
Moderator: Sorry to interrupt, Mr Yog. I would request you to join back the queue as there are several participants waiting for their turn.
Yog Rajani : All right. Thank you.
Moderator: Thank you so much. We take the next question from the line of Nitin Jain from Fair Value Equity Advisors. Please proceed.
Nitin Jain: Yes, thank you for the opportunity and congratulations on a very good quarter. So my first question is how exactly are we leveraging AI in our business? I mean, how does it help us? Is it revenue growth or operational efficiency? Where exactly are we leveraging AI?
Tehmasp Printer: See, we leverage AI in efficiency. Turnaround time is the biggest factor which everyone looks at. So we do AI and ML to decrease our processing time and give a shorter TAT to our customers.
So that is the main reason why we use AI.
Nitin Jain: Right. And does that does the shorter turnaround time help us improve our realizations or how does it help actually? Or do more volume?
Tehmasp Printer: No, it's all about volume, right? So it's all about customer experience. We feel that all of this translat es into a better realization, better experience working with IGI and therefore better business. I think obviously this is all this is all cyclical.
Nitin Jain: Right, sir. Thank you. That's clear. And my second question is on one of the slides in the presentation, the you have mentioned the CAGR for the number of reports you have done in the last three years and the revenue. So there is a decent amount of 6 -7% gap in terms of the report
CAGR as well as the revenue CAGR. So if you could elaborate what i s leading to this gap of 6 - 7%?
Eashwar Iyer: Yes, I think this is obviously dated back to 24- 25 when we took the

pricing correction on on
LGD, right? So we had a 25% price drop on LGD realization in April, May, June of 2024. And consequent to that pricing correction in quarter one and quarter two, I okay, Jan to March quarter
and April to June quarters of 25, we were obviously striking a higher realization.
And if you were to look at those numbers at that point in time, the revenue growth was around 20% an d -- the volume growth was 20% and the revenue growth was around 10%. So that is the context in which you are you have to read this CAGR. And post that, obviously the pricing has

remained stable and the last four -five quarters, you know, has been the reven ue growth is mirroring the volume growth as well.
Nitin Jain: Okay. That's very helpful. Thank you so much.
Tehmasp Printer: Thank you.
Moderator: We take the next question from the line of Rohan Picha from Dexter Capital. Please proceed.
Rohan Picha : Yes, hi. So I just wanted to ask, can we get the carats graded in each category and the certifications in each category?
Eashwar Iyer: You need to be a little louder, please.
Tehmasp Printer: Rohan, we couldn't hear you properly.
Rohan Picha : Can you hear me now? Hello?
Tehmasp Printer: It's a little low, but we can try.
Rohan Picha : So I was asking, can we get the carats graded and the certifications done in each category?
Eashwar Iyer : I didn't understand this question. Sorry.
Rohan Picha : So the amount of carats graded in each category, that is ND, ND loose...
Eashwar Iyer: Oh, I think again, see, we don't provide this information for obviously competitive reasons. We are the only company listed in this space and these are important to -- for obviously competitive reasons. So I don't think we'll be able to provide that that sort of detailing.
Rohan Picha : Okay. Okay. Thank you.
Moderator: Thank you. Ladies and gentlemen, we take that as the last question for the day and woul d now like to hand the conference over to the management for closing comments. Over to you, sir.
Eashwar Iyer: Okay. Thanks everyone for taking the time. We really appreciate the time that you give us. Obviously, we've had a few more people wanting to ask certain questions, but we are obviously available at any time for you to seek questions and for us to provide you with some updates. So please reach out to us. Sorry for having to cut out, but we are running out of time. Thanks everyone for the time.
Moderator: Thank you. On behalf of International Gemological Institute Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.
