November 01, 2025

Moderator: Good afternoon, ladie s and gentlemen. Welcome to the Urban Company Limited Q2 & H1 FY26 Earnings Conference Call.
As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the Management 's remarks. Please note that this call is being recorded. Should you need assistance during the conference call, please signal an operator by pressing "*" then "0" on your touchtone phone.
I now hand the conference over to Ms. Garima Mishra from Kotak Securities. Thank you and over to you, ma 'am.
Garima Mishra: Thank you, Rituja. Good evening, everyone. It is indeed a great pleasure to host Urban Company 's First Earnings Call after its stellar listing.
Joining us today to discuss Earnings for the 2nd Quarter and Half Year -Ended 30th September 2025 are Mr. Abhiraj Singh Bhal – Co-Founder and CEO, and Mr. Abhay Mathur – CFO.
The Results and Investor Presentation have been uploaded to the stock exchanges and are available on the company' s investor relations website.
Before we begin, I would like to remind you that certain statements made on this call may be forward - looking in nature and should be viewed in conjunction with the risk factors disclosed in the company's filings.
With that, I now hand the call over to "Abhiraj to Share the Key Highlights of the Quarter."
Abhiraj S Bhal: Thank you very much, Garima. Good evening, everyone, and thank

you for joining us today.
Before we get into the numbers, I want to begin by expressing my gratitude to all shareholders for the trust that they have placed in Urban Company through our recently concluded IPO. We are humbled by the response from both institutional and retail investors. We see this not as a recognition of where we are today, but as a belief in the potential of what lies ahead. Thank you once again for your faith and support. We will strive every day to remain worthy of it.
Let me start by saying that Urban Company is still at the very beginning of its journey:
The opportunity before us is vast. The Indian home services market remains unorganized and fragmented, with less than 1% online penetration. Over the next decade, our ambition is to build a trusted home platform that becomes the backbone of urban living. Our goal is to deliver reliable, high-quality services, be it in daily housekeeping, beauty, plumbing, AC service, or more. IW!I Urban liai Company
Urban Company Limited
November 01, 2025

Beyond services, we want to offer end-to -end solutions that simplify life for millions of homeowners. New initiatives such as Native, where we offer water purifiers and smart electronic door locks, and Revamp, our wall decor solutions, are in line with this broader vision. The full picture may not be visible today, but we believe with these steps, over time, Urban Company will evolve into a true home platform.
Let us now get into the "Numbers in the Quarter Gone By. " Net transaction value for this quarter grew 31% year-on-year to reach Rs.1,030 crores. On a like -to-like basis, this is a 34% year-on-year growth if I exclude the impact of Saudi Arabia deconsolidation, which we did on the 1st of January 2025, moving it to a 50:50 JV.
Revenue from operations grew 37% year-on-year to reach INR380 crores. On the same like -to-like basis, this is a 44% year -on-year growth, excluding the impact of KSA deconsolidation. Core India services business remain profitable with adjusted EBITDA of INR18 crores or 2.4% of NTV.
International operations in UAE and Singapore achieved adjusted EBITDA breakeven in this quarter.
Our new business segment, Insta Help, is scaling rapidly , and in a matter of a few months from launch, it has reached 4.7 lakh orders in October, but it did incur an adjusted EBITDA loss of INR44 crores.
The overall business reported an adjusted EBITDA loss of INR35 crores for the quarter, primarily due to the loss of INR44 crores in Insta Help. Excluding Insta Help, the business delivered an adjusted EBITDA profit of INR10 crores, marking a year-on-year improvement of INR15 crores.
If I look back at this quarter, the business has delivered strong broad-based growth across all segments. Excluding Insta Help, Urban Company remain profitable at an adjusted EBITDA level.
However, on a consolidated basis, the business moved from profitability to a loss due to upfront investments in scaling InstaHelp.
We recognize that these investments impact short -term profitability, but the opportunity in InstaHelp is both significant and immediate.

The category has seen strong customer adoption, high repeat usage, and holds strategic long-term importance for Urban Company.

We remain focused on delivering exceptional customer experiences and cementing market leadership in this category . We believe, this is firmly in the best long -term interest of our shareholders.

Let me now take a few minutes to unpack the performance of each segment:

Our India Consumer Services business, excluding InstaHelp, continue to show steady momentum with 19% NTV growth year-on- year and 24% revenue growth. This growth was driven by new user acquisition, consistent retention, and healthy traction in our core service categories like cleaning, beauty, and repairs.

We also launched our new wall decor solution called Revamp,

which is seen encouraging early traction.

Our customer experience remains best -in-class with an average rating of 4.8 out of 5 across categories, a metric we are proud of. Adjusted EBITDA stood at Rs. 18 crores for this segment, with margins declining modestly from 3.1% to 2.4% year-on-year. This decline is a result of deliberate investments we have made in training, audit, customer support, new user acquisition led by brand marketing, investments towards faster fulfillment, and investments in technology and AI.

As a recap, between FY23 and FY25, our core India Services business saw margin improvement by 13 percentage points as a percentage of NTV, moving from negative 9.7% to positive 3.3% in FY25. This was a result of steady revenue growth and disciplined cost control.

As a management team, we felt that FY26 should mark a period of reinvestment. Investments we believe are essential to build a long-term compounding core.

It is our considered view that the India Consumer Services business, excluding InstaHelp, will eventually reach a steady -state adjusted EBITDA margin of 9% to 10% of net transaction value.

Coming to Native :

Our connected home solutions vertical, we saw rapid growth with NTV up 164% year-on-year to reach Rs.97 crores and revenue up 179% year-on- year to reach Rs.75 crores.

Our water purifiers and electronic door locks have received strong market response. Customers appreciate their robust design, low maintenance, and seamless integration with the Urban Company app for monitoring and servicing. While we did see some demand pull forward due to an early festive season in this quarter, Native ’s fundamentals remain strong and margin has also improved meaningfully from negative 30% of NTV same period last year to negative 9% of NTV. The business is on a clear path to profitability.

Native’s strong performance has been underpinned by good product design, strong consumer proposition, and also the dependable Urban Company service network. As the business scales, we

expect growth to remain healthy but moderate relative to prior periods, reflecting both a higher base and our emphasis on profitable growth.

In our international operations spanning UAE and Singapore, we saw robust performance with NTV up 73% year-on-year and revenue up 66% year -on-year (excluding KSA). The combined business achieved adjusted EBITDA breakeven this quarter, an important milestone. Growth was driven by improved customer retention, new user acquisition, higher repeat usage, and also better operating leverage. We continue to monitor this performance closely, but it is a strong signal that our international playbook is scaling well.

And finally, InstaHelp, our newest vertical and one that we are especially excited by. Launched earlier this year, InstaHelp offers daily housekeeping services, a high-frequency, high-engagement use case that we believe strengthens our platforms core. Just within eight months of launch, it has scaled to roughly 4.7 lakh monthly orders. This growth has come despite limited city and geographic coverage, underscoring the category’s massive potential.

While it is not a like-to -like comparison, our India consumer services business reached similar scale in approximately four and a half years since the start of its operations. The early signs are very encouraging. Retention and repeat rates are trending strongly. However, we do understand that steady state behavior will take some time to mature. We are consciously investing in building a high -quality supply base, training, onboarding, early earning support, and network densification.

All of these investments have resulted in an adjusted EBITDA loss of INR44 crores for this quarter for InstaHelp.

We see InstaHelp as a long -term investment, one, that deepens customer engagement with our app, improves the frequency of usage, and also expands our ove

rall TAM. Just as beauty and cleaning
verticals evolved into strong profit pools over time, we expect InstaHelp to follow a similar trajectory
with scale and efficiency.
Stepping back, since this is the first earnings call, I want to highlight three simple principles
which will guide our execution going forward :
1. We will always keep the customer at the center of every decision.
2. We will continue to invest in service partner enablement as we believe that happy service
partners lead to happy customers.
3. We will uphold the highest standards of governance and transparency. IW!I Urban liai Company
Urban Company Limited
November 01, 2025

Before we open to Q&A, I want to highlight one last but important point, which is our long-term
North Star metric, the one that we will truly optimize for in the long run, which is free cash flow per
share.
Thank you once again for your continued support and confidence in our journey. I will now hand
over back to the moderator to start the Q&A.
Moderator: Thank you very much. We will now begin the question-and- answer session. The first question is
from the line of Manish Adukia from Goldman Sachs. Please go ahead.
Manish Adukia: Hi, good evening. Thank you for taking my questions, Abhiraj and team. Many congratulations on
your listing. Happy Diwali to you. And I really appreciate the detailed shareholder letter with all the
additional details. I have quite a few questions. So, please feel free to cut me off whenever you want
me to go back in the queue. So, I will just start with the India consumer services business where NTV
growth right now is tracking at about 20% excluding the InstaHelp business. As you think about the next thre e to five years,
one, do you see this growth sustainable, or do you think there are more upside
or downside risks versus this number? And second, between the user growth and spend per user,
which one do you see as a bigger driver of growth? That is my question and I have a few follow -ups.
Abhiraj S Bhal : Thank you, Manish, for your question. Happy Diwali to you as well. Manish, we fundamentally
believe that the India consumer services business has a long grow th trajectory ahead of it. Online
penetration continues to remain very, very low, as I mentioned earlier, sub-1%. And that is one of
the reasons why we have stepped up investments this year to set up the business well for long-term
growth. We believe it has many years of high -quality growth ahead of it, and it has been growing
well for the last few years. Our primary goal will be to focus on user-led growth and volume -led
growth.
Manish Adukia: Thank you for clarifying. And you mentioned that FY26 will be a year of investments. So, does that
mean that margins again start expanding next year? How much do you think margins could deteriorate this year before they
start expanding again? And maybe a related question, when you say steady -state margins of 9 -10% of NTV, again, in your
definition, how far in the future is that steady-
state?
Abhiraj S Bhal : Manish, we do believe that this year is an important year of reinvestment. These reinvestments are
happening across the board in India core, whether it is in training, audits, ramping up new user
acquisition, our teams, technology, faster fulfillment, which is an important focus area for us, etc., While quarter -on-quarter,
there will be some movement in the margins, we encourage the investor
community and the analyst community to look at margins on an annual basis. We believe on an
annual ba sis margins for FY26 will be similar to FY25 . Post that, we would like to continue profitable
growth. We do not want to give a timeline yet for reaching the steady state but be rest assured that IW!I Urban liai Company
Ur ban Company Limited
November 01, 2025
we have our eyes very firmly on margin improvement and profitable growth and eventually reaching
there in the medium -term.
Manish Adukia: My

second set of questions is on InstaHelp. Can you maybe help us understand how is InstaHelp different versus some of the
other products that you had launched in the past, like, I do not know,
Cooks, etc., for example, which did not work, I know you talked about early product traction being very strong, but when I look
at the numbers disclosed by you today, the discounts are as high as the overall net transaction value. So, are you able to
share with us some data that have you seen any
evide nce of customers in the last eight months where you have pulled discounts and the demand
traction is still strong? So, if you can just maybe help us understand your expectation of the long -
term traction of InstaHelp and how does that compare with some of the other products that did not
work and the similarities or dissimilarities versus those products?
Abhiraj S Bhal: Manish, it is still an early business. It has been only about eight months since we have launched it. So, we are
also learning a lot here. I would say the early traction is very encouraging. We have looked
at micro markets where discounting is not as deep and the customer retention and repeat rates are
fairly healthy in those micro markets as well. Across the board, InstaHelp’s retention and repeat and frequency is very, very
encouraging. However, this is early data and it will take time to mature. So,
we are tracking it closely. The only thing I will say is that it is perhaps the most exciting new business
initiative that we have launched in a while and is an order of magnitude more exciting and more encouraging for us than

anything we have done in the past, which is why you can clearly see that we
are doubling down on it and are committed to it. We will continue to watch and we will continue to
learn. And at any point in time, if we feel that there are new data points that are coming up that either
require us to double down on the investments or moderate them, then we will be prudent in taking
those calls accordingly.
Manish Adukia: Very clear. Just maybe one or two last follow -up questions on InstaHelp. You mentioned that free
cash flow is a very important metric that you will optimize for in the long term. InstaHelp today, of
course, has a lower AOV compared to a core services business and a lower take rate and in the early stages is requiring
investment. Now, as we think about a long time period, let us say five years or seven years from now, do you think while
InstaHelp, of course, helps engagement of the overall app
and helps drive order volumes, do you also foresee InstaHelp is becoming meaningful or substantial to your overall India free
cash? And when I say substantial, I mean, let us say anywhere between like 15-20% or higher of your India free cash flow.
Do you think it will more be like a synergistic product which drives traffic on the core business and drives volumes, but from a
free cash flow perspective
may not be a very substantial product? So, your thoughts there, please.
Abhiraj S Bhal: It is a good question, Manish. I think it is still early to comment on the steady state unit economics
of this category. I think the P&L is rapidly evolving and it depends on a bunch of key metric s such as average order value,
partner utilization, training spends per partner, and all of these are evolving IW!I Urban liai Company

as we speak on a monthly basis, not just a quarterly basis. I think it i s very much our goal to make
sure that every dollar of spend here is well utilized and the ROI is high. Our primary goal here today
is to maximize growth and cement market leadership. That is something that we are not going to
compromise. So, I would say in this phase of building, which is the next few quarters, that remains
our goal. Needless to say, in the long term, any business vertical that we do, has to eventually reach
sustainability, has to reach a sustainable level and contribute to the o

verall core free cash flow per
share a nd InstaHelp will be no exception to that rule.
Manish Adukia: Thank you for that. Just my last question before I jump back in the queue. I think over the last decade,
you ha ve faced significant competition, especially in the early part of your j ourney. But in the recent
years, it has been fairly benign with most of your competitors almost going out of way. Now, it looks
like InstaHelp may be slightly different where competitors have raised some capital. They have been
a little aggressive. Can you maybe remind us as to why competition was not able to do well in the
past compared to your core services business? And again, if there are any similarities or
dissimilarities versus InstaHelp? And again, maybe a related question, does it at all make any sense
to do anything inorganic in InstaHelp or do you think organic is the right way to build this?
Abhiraj S Bhal: Manish, it is a good question a nd it goes back a little bit into our philosophy of building. We have
always focused on what is right for the customer and the service professional. 99% of our energy and
bandwidth goes into solving for those two constituents. We do watch competition from time -to-time
and we do learn from competition. And we have seen various cycles, not just in the early periods ,
across the last decade, we have seen various cycles of competition entering and competition intens ity
increasing. So, it is nothing new for us. We look at it and we learn from them. But we keep our eyes
focused on the customer and the service professional. Particular to InstaHelp as a category, our sense based on a few media
reports, etc ., is that we are off to a good start and we have clear market
leadership , but the category is early and evolving. We would like to continue to deliver great customer
experiences and firmly cement this market leadership just as we have in our core services business.
Manish Adukia: Great. Thank you so much for answering all my questions. I really appreciate it. I will jump back in
the queue.
Abhiraj S Bhal: Thank you, Manish.
Moderator: The next question is from the line of Gaurav Rateria from Morgan Stanley. Please go ahead.
Gaurav Rateria: Hi, thanks for taking my question a nd very good set of disclosures and detailed shareholders letters ,
thanks for that. So, my first question is on your interesting disclosure.
Moderator: I am so sorry to interrupt you, Gaurav. Can you please speak a bit louder? IW!I Urban liai Company

Gaurav Rateria: So, my first question is on the interesting disclosure that you made on the number of hours which has
been steadily going up per service professional per month. I think it is a good proxy of utilization.
But what should be the right ways to understand where are we in this journey? And also, when you
look at from a density point of view, the number of people that you have per service micro market, what is the right density to
reach to over long -term where you think this utilization metric can move
up substantially?
Abhiraj S Bhal: Yes, that is a good question, Gaurav. And as you rightly said, the monetized active hours on the
platform per service professional per month has been steadily growing from 59 hours per month in
FY22 to 83 hours in FY25. In our RHP, we had also shown that if we cut this by various cohorts of service professionals, then
the top 10% are reaching almost 135 -to-140 hours and the top 5% are

reaching 150 hours. And that is largely a function of densification. Those service partners and those cohort s represent our most dense micro markets. In H1 FY26, this number has further increased to 89. So, there is consistent improvement in utilization as a function of densification. As we densify micro markets, our service professionals spend less time waiting for jobs or traveling between jobs and more time inside consumers ' homes. We think this trend shou

ld continue for the foreseeable
future. We are still early in the utilization journey. As I mentioned, in the top 5% of micro markets, this number is almost 1.8x, 1.9x of the platform average. So, there is plenty of headroom for growth
here.

Gaurav Rateria: Got it. My second question is on Native. You alluded to exciting product roadmap ahead of us in the shareholders letter. So, if you could help us to get a peek into what could be these categories, or is it more to increase the breadth of products in the s ame categories?

Abhiraj S Bhal: Yes, it is the latter. I think we have been working on a set of innovative product launches in water purifiers and smart electronic door locks. At the right time, these products will get launched, and we will let you know. But it is within the same categories.

Gaurav Rateria: Okay. And last question is on InstaHelp segment. What would be an ideal AOV point which helps us to arrive at a breakeven situation? And would that be driven by utilization, more number of hours , would that be driven by adding more services on that or more breadth of services on that , just trying to understand the kind of a theoretical breakeven point for that ?

Abhiraj S Bhal: A t the cost of sounding slightly repetitive, I would have to say that it is still early, Gaurav. We are also learning. And definitely the AOVs have to go up higher. That is clear. The discounting has to reduce. Network densification will be also very important. And our focus will be that InstaHelp, in and of itself, needs to see improving margins, improving unit economics, and eventually, in and of itself have a path to adjusted EBITDA breakeven. But it is still very early for us to have a c lear view
on what stable state unit economics look like and stable state AOVs look like. It is also competitive. IW!I Urban liai Company

So, there is evolving picture here. But be rest assured, as and when we learn more and we know more, we will definitely disclose that to help investors make smarter decisions around this.

Gaurav Rateria: Thank you. All the best. I will fall back in queue.

Moderator: The next question is from the line of Sachin Dixit from JM Financial. Please go ahead.

Sachin Dixit: Hi, team , congratulations on the great listing. I had a few questions. To start with, my first question was on the international side , right? There was a pleasingly surprising growth, particularly over there you have highlighted in the s hareholder letter that some part of it came , thanks to the tie up with Noon. What do you think of this growth going forward, how sustainable it is? Noon is obviously more of a UAE and KSA-based entity. What is happening in Singapore , if you can put something a color to this?

Abhiraj S Bhal: Sachin, if I understood your question correctly, you said the growth in UAE and Singapore looks very robust and we have had a tie -up with Noon. How sustainable is t he growth? Noon is obviously limited to UAE. There was some disturbance in the line. So, I am hoping the question is correct.

Sachin Dixit: That was the question.

Abhiraj S Bhal: So, look, I think the Noon partnership is early a nd the contribution towards growth is limited right now. There is some contribution from the Noon partnership towards growth, but much of this growth is actually organic in UAE, driven by new user acquisition, solid repeat rates and we already operate a high-frequency cleaning service there, which is similar to InstaHelp in India. The same is true for Singapore as well. In terms of sustainability of growth, it is hard to predict the future. We would not
like to give any future guidance. As base grows, typically, growth rates can become a little more moderated. Our focus is also on profitable growth. So, I think we will wait and watch. I think the
business has just broken even on an adjusted EBITDA level. We will wait and watch and see how
thing

s evolve. But those two markets are still very much early in their journey. They have a lot of potential. Penetration rates are very, very low, similar to India. And we do believe that in the long -
term, there is a long growth runway in both UAE as well as Singapore. And also from a profitability standpoint, it has similar contribution margins to the India business , not exactly the same, but similar. And therefore, we believe that these two businesses could also get to similar levels of adjusted EBITDA in the long term .

Sachin Dixit: Right. So, that is good. Is there a seasonality in international businesses for you or it is largely still a penetration story that you are seeing it ?

Abhiraj S Bhal: No major seasonality to call out. IW!I Urban liai Company

Sachin Dixit: Understood. Sure. Moving on to Native , you have been alluding to having a product roadmap. I just wanted to understand and pick your brain here. So, when you think of a new product, are you thinking from a servicing angle , right products where servicing is a key component or you are thinking more from a user engagement angle? The reason why I ask this question is between your door locks and water purifier, I think both seem to be operating in either of these ranges, b oth are not overlapping. So, that is why we are having some color?

Abhiraj S Bhal: So, look, let me talk about both these products briefly. Water Purifiers , we firmly felt that there was a big gap in the market. Users were looking for durable, high quality, low serviceability products, which was not serviced by some of the existing brands. And that was the primary reason to get into that category. We felt st rongly that we could innovate and launch a product that is new age, that does not require much servicing or maintenance. And that is also connected back to the Urban Co mpany app. So , transparently discloses for you - filter life, water usage, etc ., juxtaposed with the opacity that the water purifier industry had operated with earlier. Smart Electronic Door Locks is a smaller growing segment, again, connected back to the Urban Company app, so allows the user to stay engaged. I think both these product s, we saw one , clear market opportunity, two, clear ability to launch a differentiated offering for the end consumer, and three, a clear ability to have a connectedness back with the Urban Company app and own the consumer journey throughout the usage lifecycle. Those three principles are what we applied to get into these two products. We believe there i s adequate headroom for growth in these two products, so we want to stay focused on these two for now.

Sachin Dixit: My third and last question is on the InstaHelp si de. So, there have been recent media reports that one of your peers has raised another round of funding and is also venturing into new categories. I know you said that you were st ill on the early stage and evaluate. Just wanted to understand if there is any sort of plan to venture outside of the pure play InstaHelp sort of a category to something similar to what the competition is doing? Asking again, because you have been highlighting that you will want to continue to be the market leader. So, will you be there where the competit ion as well?

Abhiraj S Bhal: So, our very clear priority whenever we look at any new service segment or doubling down on an existing service segment is to focus on the customer and the service professional. It is a very clear belief that we have that solving for those two constituents leads to long-term growth. To that extent, we always look at competition, we look at what they are doing, we learn from them. But our core strategy is not impacted by competitive action. It is impacted by our own first principles view on what is right for the customer and what is right for the service professional. At this point in time, we believe the opportunity in daily ho

usekeeping is very large, very deep, and we a re only getting started. Our focus is to densify our current micro markets, launch a newer micro markets, and firmly cement our market leadership. We will look at other adjacent categories at the right time as well. Nothing to announce today, but we keep doing experiments and we look at other interesting adjacent opportunities . But independently, and if they fit into our view of what is right for the consumer, the IW!I Urban liai Company

service partner, and are they long-term aligned to our strategy in InstaHelp, we will launch them at the right time.

Sachin Dixit: Thank you, Abhi raj, and all the best for going ahead.

Abhiraj S Bhal: Thank you, Sachin.

Moderator: The next question is from the line of Vishal Biraia from Bandhan AMC.

Vishal Biraia: Hi, good evening, guys. Could you explain a bit more on the increasing salaries and things pertaining to the India services business ex of InstaHelp? Because on a quarter-on-quarter basis, even year-on-year basis, there seems to be a significant increase which has led to the drop in EBITDA . Could you explain some of these heads?

Abhiraj S Bhal: Yes. I will start and maybe Abhay can add a bit more color to it. Fundamentally, Vishal, if you look at our India core services, salaries and wage bills for the last three financial years from FY23 to FY25, it has remained more or less flat on an absolute level while the business grew meaningfully in that period. We did feel that it was time to invest in certain areas such as training, audits, our internal team capabilities as well as technology and AI a nd consequently, we made these investments start ing in FY26. Broadly, those are the investments that you see in that header. We think these investments are important to set up the India core for long-term compounding and long- term growth. We believe that online penetration rates in India continue to remain very, very low, and therefore, it is important to set up the business well. Consequently, we made these investments. Anything you want to add to that, Abhay?

Abhay K Mathur: As Abhiraj mentioned, we are guiding towards 9%-10% of NTV as adjusted EBITDA for this business coming from operating l everage. So, we will look at all of our cost lines with that lens going forward as well.

Vishal Biraia: Okay. So, basically, the increase in cost that we have seen for the quarter and for the last quarter as well, this is a structural indicator , will this sustain for the next –

Abhiraj S Bhal: Sorry, Vishal, I think we lost you for a bit. But if I understood your question –

Vishal Biraia: It is nothing like a one -off sort here ? Sorry.

Abhiraj S Bhal: Okay. So, if I understood your question correctly, Vishal, you a re saying the increase in investments

that we have made, this is a structural investment and not a one -off. Is that correct?
Vishal Biraia: Yes. IW!I Urban liai Company
Urban Company Limited
November 01, 2025

Abhiraj S Bhal: So, yes, you are right. If you look at the India Consumer Services P&L, ex of Insta Help, there has been clear increase in some of the cost areas such as salaries and employee benefits, also customer marketing, also G &A, which includes our training centers compared to the same period last year, breaking the trend of flat costs over the last three financial years. This is a structural investment that we have made to set up India Consumer Services for long-term growth. Now, we believe that we should not look at these line items on a quarter-on-quarter basis, but it is definitely important to look at margins on a n annual basis. We believe this financial year, we are in investment mode, but we will still end up at similar adjusted EBITDA margins as a percentage of NTV in FY26 vi s-a-vi s FY25. Post that, we are cognizant that margin expansion has to happen in this business if we have to eventu

ally reach the 9% to 10% adjusted EBITDA guidance that we have given for the long- term. We are cognizant that these investments cannot be made perpetually and margins cannot remain flat perpetually. That is not lost on us. So, in FY26, we have made these investments to make sure that we are setting up this business for long- term success. Adjusted EBITDA margins as a percentage of NTV should remain more or less similar to FY25 levels on an annual basis. FY27 onwards, we should start seeing mar gin improvement.
Vishal Biraia: Sure. Thank you. And one last question on the amount of investments that we should see happening in InstaHelp and Native in the medium -term, in the next, say, two, three, four years?
Abhiraj S Bhal: Yes, that is a good question, Vishal. I will start with Native first. We have a slightly more clearer picture of the P&L and how it is evolving. I think Native is progressing well. I think margins are improving. And while we do not want to commit to a firm timeline of adjusted EBITDA breakeven for Native, we believe that we are moving well in that direction and peak losses are behind us. On InstaHelp, it is a little bit of the opposite. Very early, only eight months in, P&L is evolving, unit economics are evolving, focus today is growth and market leadership. We will be very, very firmly keeping one eye on costs, making sure that every dollar we invest has high ROI. And as and when the unit economics picture becomes more clear to us what is the pathway for sustainable breakeven, we will come back to the investor community with the clearer guidance on timeline as well as ca pital deployment.
Vishal Biraia: Thank you.
Moderator: The next question is from the line of Suc rit Patil from Eyesight Fintrade Private Limited. Please go ahead.
Sucrit Patil: Good evening to the team. I have a forward-looking question. As more platforms enter the home service space, what is Urban Company doing to build a strong edge, not just by adding more services, but by creating something deeper that makes the platform hard to replace? IW!I Urban liai Company
Urban Company Limited
November 01, 2025

Abhiraj S Bhal: Yes, that is a good question, Suc rit. Su crit, we are still very early in the journey of online penetration and organization of the home services industry. As I mentioned earlier, less than 1% online penetration exists today. Our view is that in the long-term, what will help us differentiate and continue to be relevant for the consumer and continue to grow the overall pie of online penetration, where other platforms will also come in and aid that journey, is one very, very firm focus on custo mer experience both in terms of service delivery, where we have to invest in extensive training of our service professionals, very, very careful selection, very careful onboarding, b) very firm focus on tooling, equipments, products used, and the SOPs in every single service. Our SOP manuals are very detailed ; they run into hundreds of pages for many categories; c), faster fulfillment rates with network densification for every category in every micro market , our availability and fulfillment improves ; and d), strong grievance redressal, customer support, and warranty programs. These four pillars together help us differentiate in terms of customer experience. Equally importantly, it is important that service professionals see us as the highest earnings platform, which is a direct function of the density in our micro markets and the utilization rates. And as you have seen from our disclosures, those utilization rates have been consistently improving. So, it is very important that we remain very competitive from an earnings standpoint for our service professionals vis -a-vis any other platform out there. And that is why we constantly transparently also disclose the high earnings on our platform , and also continue to offer non-monetary benefits for retention, such as f

ree life, accidental and health insurance, scholarship for kids, and other enablement programs, such as Project Udaan, which is a mobility p rogram for our women service partners. Three, we are a full stack platform across 60-plus services and more than 500 micro markets in our 47 cities in India. So, consumers have the opportunity to avail not one or two, but multiple services and see us as an umbrella home services platform. And that trust that we have built and the brand that we have built over the years, we do believe is a strong moat as well. So , these are the pillars on which we will continue to invest and

continue to compound. Yes, there will be other players who will also enter. And I believe that the
overall size of the pie is very large and together it will continue to grow.
Sucrit Patil: Okay, great. My final question is on margins and cost planning. As you scale and improve customer
experience, how are you making sure that the company stays efficient a nd which cost levers do you
think will help protect margins over the next few quarters?
Abhay K Mathur: Sucrit, this is Abhay. So, if you see our P&L, the main reason why we improve margin is operating
leverage in our fixed costs while improving and maintaining customer experience. So, as we drive
revenue growth, we will look to make sure that our fixed costs grow at a lower pace than revenue
while investing in the right areas on customer experience. We have done that in the past, as Abhi raj
mentioned, our margins have improved ove r the last three years, and we will endeavor to continue
doing that in the future as well.
Sucrit Patil: Okay, thank you for the guidance and I wish the entire team best of luck for Q3.

Moderator: The next question is from the line of Aditya Joshi from DSP Mutual Fund Managers. Please go ahead.
Aditya Joshi: Good evening, gentlemen. Thanks a lot for the questions and thanks for the disclosure. My first
question is with respect to the InstaHe lp. Sir, you have seen a kind of growth rates in last eight
months, around half a million kind of orders in total. So , can you please share some kind of consumer
trends, w hat kind of consumer behavior are you seeing here , and any subscription model or similar
thoughts planned here , and customer stickiness in this particular service?
Abhiraj S Bhal: Yes, Aditya , we ha ve seen very encouraging consumer behavior in a short period of time. Customer
stickiness and retention is strong. Customer repeat rates are also strong. A predominant use case is
amongst middle class households, particularly women consumers. Whenever thei r regular house s is
on leave, both planned and unplanned leave, they look at InstaHel p as a replacement use case. And
it helps that the service is instantaneous, particularly for unplanned occasions. Interestingly, we are
also seeing a smaller cohort of customers using this as a more default use case for their daily housekeeping services. These
consumer trends and consumer behavior patterns are evolving and very
early , we are also learning and tweaking our propositions to make sure that we are serving our
customers well.
Aditya Joshi: Got it. Thanks a lot for that. Next question is with respect to the international business. What is the
strategy there and how do you spot a new market? Any plans to get into new markets or you will
penetrate more in the existing ones only? And anything on the competition in this market?
Abhiraj S Bhal: Yes. So, in terms of the international business, we have a presence in UAE and Singapore through
wholly-owned subsidiaries. We have been present in the UAE for the last seven years and in
Singapore for the last six years. Both markets are large, yet underpenetrated, characterized by high
demand density, improving online penetration and sufficient availability of service professionals.
Over the last six, seven years in both t

hese markets, we have refined our operating model , while
staying focused on building a full stack business with exceptional customer experience similar to
India. We think these businesses are now maturing well and they continue to grow at a healthy clip.
Together , they have broken even, which is very, very encouraging. Of course, we will wait and watch
and we will continue to invest in profitable growth in both these markets. In the Kingdom of Saudi
Arabia, we have entered into a 50 :50 JV with SMASCO , one of their oldest and largest manpower
management companies, which is a listed company and a very reputable company, starting 1st of
January 2025 and de-consolidated that business from a revenue recognition standpoint. But we
remain excited about the potential of that market as well , again, very similar trends to UAE. We are
not planning to enter any new international market s. We aim to achieve profitable and sustainable
growth in our current international markets. And of course, management ’s time and resources will
be fully focused on growing the India business and the existing international markets for the
foreseeable future.

Aditya Joshi: Got it. Thanks a lot for that again. Lastly, from my side, what kind of steady state EBITDA margins
can we expect in Native business?
Abhiraj S Bhal: That would be still early to talk about. I think our first protocol is to get native to an adjusted EBITDA
breakeven. I would like to call out that we believe in the long-term that our margins in Native should
be better than the margins of traditional OEMs. There are specific reasons for that. One, a meaningful
percentage of the sales comes from our own channels, which is our app as well as our service network; a nd two, we are
leveraging our existing service ecosystem to serve customers. I am not
recreating a new service ecosystem. And that service ecosystem gets better utilized through Native orders. So, both of these
are structural advantages in the P&L. We also believe our products are very
well designed, very robust , and consequently, over time, just as they have in the last couple of years,
they should enjoy pricing power and all of these should translate into good long term margins for us.
As and when we have better visibility on steady state margins, we will come back and report that to all of you. Right now, the

focus is on growth and continuing to improve margins to eventually get
Native to an adjusted EBITDA breakeven.
Aditya Joshi: Got it. Thanks a lot for answering all my queries. I wish you all the best for the remaining of the years.
Moderator: The next question is from the line of Garima Mishra from Kotak Securities Ltd. Please go ahead.
Garima Mishra: T hank you for that. First question. For the core India services business, what is the seasonality you typically witness, and which quarters are the highest and lowest in terms of both NTV and margins?
Abhiraj S Bhal: Great question, Garima. W e definitely see a step up in NTV growth and revenue growth in the April - May-June quarter, driven by the summer, where a lot of our services, particularly air conditioner servicing and repair, as well as electricians and other services, take a step job. The rest of the quarters remain similar. On a quarterly level, there is not a lot of variation . There is some uptick in October month as well because of Diwali, but limited and OND is not substantially different from Jan quarter. So, from a growth perspective, the clear seasonality to call out is in the AMJ quarter. From a margin standpoint, again, I would like to iterate , we would request the investor community and the analyst community to look at our margins on an annual basis rather than a quarter-on-quarter basis, because there would be movements from a quarter-on-quarter basis , for example, to invest in the growth of the AMJ quarter, we might do market

ing in the Jan -Feb-March quarter. Our annual appraisals happen
in January, etc. , So, there are multiple moving items in the cost structure, a nd therefore, my humble submission would be to look at margins on an annual basis and look at margin expansion on an annual basis in our core India services business excellence to help.

Garima Mishra: Very clear. Thank you. Next question, what customer overlap are you witnessing between the UC app or let us say your UC core services and Insta Help consumers? And do you envisage the need for a separate app for InstaHel p?
Abhiraj S Bhal: We see reasonably good and strong customer overlap. And we think both the segments are catering to the middle class Indian consumer who is upwardly mobile living in urban cities and want high quality services at their doorstep and is pressed for time and looking for convenience and quality. So, to that extent, these are not dramatically different consumer segments that we are targeting. In fact,
it is the same household and which is why we also believe that InstaHel p will make the platform more relevant for the middle class Indian urban household.
Garima Mishra: Got it. And last question, how different is the service agent onboarding process for your core India business versus InstaHel p? And given there are many companies which are launching similar businesses, how easy or difficult are you finding to ramp up supply of agents on the InstaHel p platform?
Abhiraj S Bhal: Garima, we have a uncompromising time -tested strong operational playbook on service partner onboarding. Most of our service professionals come through referral or word of mouth. Post that, they go through a very stringent selection process, multiple rounds of screening and interviews. We want to make sure that particularly for intent and customer centricity, but also for skill, we are
onboarding the right people. Post that, service professionals go through a systematic training, which is applicable both for InstaHel p as well as our core services business. And after that, they go through a shadowing process for a few days. And then we also monitor and handhold them for the first few weeks on the platform to make sure that their ratings are at a certain threshold. On an ongoing basis as well, they are measured on ratings, on time fulfillment, and adoption and adherence to our SOPs. All of these guidelines and all of these approaches to building are consistent across InstaHel p and our core services business in India. This is an operationally intensive business where you have to build this out across hundreds of micro markets in tens of cities , and we have been fine tuning this playbook category-by-category over the last decade. That playbook is what we have implemented clearly in InstaHel p as well, which in our view has led us to rapidly scale to clear market leadership in this segment. It i s still early days. We will continue to focus on cementing that market leadership, on making sure that best service professionals are onboarded and retained on the platform, and we continue to invest in their training and their well-being.
Garima Mishra: Very clear. And maybe I will squeeze in one last one here. For the InstaHel p platform, is there any sort of investment amount you have in mind over what this number could potentially be over the next three years? Thank you.
Abhiraj S Bhal: Sorry, I think I missed answering one of your earlier questions on do we foresee a separate app for InstaHel p, not at this stage. But if we do in the future, we will let you know. Again, on the total

investment quantum, I would say it is early for us to put a number out there. We are learning , it is a young business, only eight months old, t he unit economics are evolving. And any number we put today would be premature. So, we

do not want to put a guidance that we do no t have firm confidence
on. That being said, please be rest assured that we are very, very focused on making sure that every dollar of investment that is going in here gives us high ROI. We understand that these investments are meaningful a nd have

moved us as a company from a profitable company to a loss -making
company. And that is not lost on us at all. And we are hard at work to bring back that original level
of profitability and to continue the journey profitably. But this opportunity is here and now . It is
immediate, and it is very meaningful and very strategic to us. So, in our view, it is the right thing in
the long- term interest of our shareholders. We have demonstrated in the last 10-years that we have
been good custodians of capital in our journey as a private company. For the longest time, we have
had nearly $200 million on our balance sheet and we have not spent it. So, that ethos will continue.
Even as we build Insta Help, we will make sure that every dollar goes a long way in creating long -
term shareholder value.
Garima Mishra: Noted. Thank you so much and wish you all the best.
Abhiraj S Bhal: Thank you very much.
Moderator: The next question is from the line of Aryan from Grow w Mutual Fund. Please go ahead.
Aryan : Thank you for the opportunity. So, my first question is on Insta Help. In which areas or micromarkets
are we currently operating in?
Abhiraj S Bhal: We are operating in a few cities today, Aryan, the top cities essentially Delhi, Bangalore, Bombay,
and select micro markets of Pune and Hyderabad and I think select micro markets of Kolkata as well.
Again, in these cities, we do not have complete city coverage. We are going micro market -by-
micromarket. We are learning from our core services platform where we believe that adoption will
be high in the early days and focusing on a micro market -by-micro market rollout.
Aryan : Okay. So, as we expand into more micro markets, do we anticipate the losses to go up for this
financial year at least?
Abhiraj S Bhal: We would not like to give guidance at this point in time on the loss trajectory of Insta Help. I would
reiterate that the long-term potential of this category is very meaningful. We are very cognizant that
these losses are meaningful and we will make sure that every dollar invested goes a long way in terms
of the ROI potential.
Aryan : Okay. And my second question is on the JV in KSA. When can we expect break-even there?

Abhay K Mathur: Hi, this is Abhay. So, we have been in that JV since the beginning of this year. I think it is early days
yet for the JV to break even. We are seeing strong growth, and we see a market which is 2-3x the
size of UAE. There is a strong demand for our services across cleaning and other categories. And we
are building that market in partnership with our JV partners, SM ASCO. So, with their manpower
management and training skills and our technology, we believe that we have years of growth left in
that country. So, yes, we will invest in that market for some time.
Aryan : Okay. That is it from my side. Thank you for answering the question.
Moderator: The next question is from the line of Awais from Sundaram. Please go ahead.
Awai s: So, my core question is on your India services business. It will be helpful if you talk a bit more on
the service provider onboarding and all the costs associated with that because even if I see from
Quarter 1 to Quarter 2, where large part of the Insta Help addition has happened, we have seen a
sizable chunk of providers coming in , so we just wanted to get some sense on that ? And secondly,
even from a point -to-point basis, we have seen around 3,800 kind of addition on service provider
side. So , is this a function of new cluster addition or what would be some intricate details on this ,
that will be

helpful ?
Abhiraj S Bhal: So , if I understood your question correctly, Awais, you said that in the core India services business
outside of Insta Help, how are we seeing service partner onboarding and what goes into service partner
onboarding and onboarding costs , is that correct?
Awai s: Right, right, right.
Abhiraj S Bhal: Yes. So , look, I think service partner onboarding continues to happen in core India services. We have
a structured process. Typically, most service professionals come through referral or word of mouth.
After that, they go through a systematic selection process. And then there is systematic training. In
the RHP, we did disclose for FY25 the average cost of onboarding of a single service professional in
the India core services business, which is in the line of around Rs. 65,000 to 75,000 depending upon
the category per partner onboarded a nd we continue to see similar numbers in the India core services
business in FY26 as well , nothing has meaningfully changed there. So, I think the focus will remain
on onboarding the right type of service professionals who are aligned with the platforms ethos, with the customer centricity
and investing in their training because we see long-term ROI on this. Also,
want to highlight that particularly in the India core services business, we are also seeing better
utilization of service professionals. And that is a trend that we have called out in the shareholders
letter. And consequently, the absolute count of active service professionals on a year-on-year basis may not move linearly
with NTV and revenue, because some of the growth is also addressed through
better service professional utilization.

Awai s: Just a follow up to it if I may . We have the net addition number for your service providers from ‘24

to ‘25. Would it be okay to help us with the gross additions for the same time period?
Abhiraj S Bhal: N ot at this stage, but we have made a note of your request. We will internally deliberate and if we feel it is a useful metric for the broader investor community to understand our business better, a t the right time, we will disclose it.
Awai s: Thank you for taking the questions and all the best .
Abhiraj S Bhal: Thank you, Awai s.
Moderator: T he next question is from the line of Manish Poddar from Invesco Asset Management. Please go ahead.
Manish Poddar: I just had two small ones. So, the first thing is when you a re looking at the business internally, do you look at QoQ or do you look at Y oY generally for the services part?
Abhiraj S Bhal: YoY.
Manish Poddar: Okay. And the second piece was I ha ve gone through the shareholder’s letter. Pardon me if I missed something. So, I am just trying to understand have you mentioned anywhere, let us say services per customer as a metric, just to understand how is the adoption of multiple services increasing at the household level, let us say on a quarterly basis?
Abhiraj S Bhal: That metric, Manish, has not been disclosed at this stage. If I a m getting your question correctly, you mean different service categories adopted by a single household in a time period?
Manish Poddar: Right.
Abhiraj S Bhal: Yes. We have not mentioned that metric at this stage. There was a cohort view that we had given in the RHP up until FY25 of category adoption. And at the right time, if we feel that a refresher of that cohort view is needed , we will provide that to the market.
Manish Poddar: So, effectively, when you a re also looking at the metric internally, you a re looking at absolute number of users getting added and let us say price per blended AOV when you take as blended number of services, not really the third metric let us say, service per user as a metric? I a m just trying to think because if that is a relevant metric for you internally, it would help us to better appreciate the business

we are analyzing the business , I am just trying to think from that sense. IW!I Urban liai Company

Abhiraj S Bhal: Yes. We made a note of it and we will reflect internally deliberate on it. We certainly look at category adoption as a metric It is an important input into the LTV of the user and we look at multiple other metrics, which we may not necessarily disclose. But I made a note of your point and your request, and we will internally deliberate and if needed, look at whether we want to add it or not in future disclosures.
Manish Poddar: Sure, sure. Sounds good. Thank you so much.
Abhiraj S Bhal: Thank you, Manish.
Moderator: The next question is from the line of Jaydev Chararia from Ascent Capital. Please go ahead.
Jaydev Chararia: Hi, Abhiraj , congrats on a good set of numbers. So, since you alluded to this when some other participant asked you about the spikes in terms of the core India consumer business that the company witnesses, which is either in the summer season or in the festive season, which just went by, just wanted a color on how did the India core consumer business perform in the last month, b ecause you have given quite a good color in terms of how Insta Help and Native have been g iving traction, so I want ed to get a sense of how our core business is performing ? And I have a follow up, which I will ask once you probably address this one.
Abhiraj S Bhal: Yes. Thank you for the question. Yes, you a re right. There are two spikes that we see, one in the summer, which is meaningful, and a smaller festive spike around Diwali and related festivals in India.
Let me start by first talking about the summer, because those are disclosed numbers. I think this year the summer was muted. We had unseasonal monsoons and rains. It was a relatively colder summer.
And as a result, our categories around air con, electrician, etc ., did not see the kind of uptake that we would have hoped for, which is why NTV growth in the India core services business in the first quarter of this financial year was in the 10-11% range year-on-year. That growth has bounced back. It was a one -time impact that growth has bounced back this quarter to 19%. Vis -a-vis Diwali, I will not be in a position to give details today. Certainly, when we have the Q3 results come out sometime early next year, that picture will become much more clear.
Jaydev Chararia: Sure. Just one more follow up here , in terms of the India core consumer businesses, since there are quite a few categories that we are working in. If you could just help elaborate or give some color into the subcategories in terms of their growth, et c., for us to appreciate the future potential and the nuances around each of these categories, because the India consumer business itself is quite large and that is the profit pool as I understand of the company?
Abhiraj S Bhal: Yes, another good question. Let me tell you the major categories and the subcategories within it that we are excited by and that we see potential in. Let us start with deep cleaning. It is a relatively big category for us. Here, we look at deep cleaning of bathrooms, sofas, carpets, kitchens, and the full IW!I Urban liai Company

home and various parts of the home. Consumers utilize this not very frequently. It is not a high frequency use case, but on occasions such as around festivals, around guests coming over, move -in, move-out use cases, and every once in a while when they feel that this need is there. That is a very large and growing vertical for us with several subcategories. We then look at repairs as a big vertical, which includes both handyman repairs, electricians, plumbers, and carpenters, as well as appliance repair, AC, and all other variety of appliances. It is a growing vertical essential to good living and maintenance of your home. Again, a vertical that we are quite

excited by in terms of its future potential, a vertical where faster fulfillment is an important focus area for us. The beauty vertical has historically been very important for us. This has several sub-verticals. Salon services both skin and hair for women, men's haircut and grooming services, as well as massage therapy for men and women. This is a large v ertical for us and has been seeing good traction over the last few years and continues to see that this financial year as well. The proposition is solid, which is that instead of stepping out and going outside to get the service, you can get the service within the four walls of your home. And we believe that is a long-term trend. Consumers want convenience and consumption is shifting towards your home. And that trend will continue to play out in the beauty services vertical as well. And finally, we have pai nting and revamp, where we look at wall decorative solutions, both wall painting as well as wall paneling and decorative solutions. This is a relatively smaller but growing vertical for us and also of importance strategically.

Jaydev Chararia: So, Abhiraj, is the growth and the salience of these subcategories within the India consumer business broadly in a similar ballpark or is there some skew that probably we need to factor in our numbers?

Abhiraj S Bhal: So, there are certainly certain verticals and certain sub -verticals that grow faster than the others, but all of them are growing well and in line with our expectations internally. And in our view, all of them have very, very strong headroom for growth. Even our highest penetrated sub-vertical in our most penetrated city would have adequate headroom for growth. So, directionally long -term, we are excited by all of these verticals.

Jaydev Chararia: Sure, Abhiraj, that helps. Thank you so much.

Moderator: The next question is from the line of Pallavi from Sameeksha Capital. Please go ahead.

Pallavi: Thank you for taking my question. Wanted to understand in terms of what is the number of employees we have in InstaHelp? And are they on our rolls or any of them on our rolls itself and is it a fixed cost business model?

Abhiraj S Bhal: Yes. Pallavi, InstaHelp, like our core India services business operates on a gig worker model, they are not our employees, they are gig workers, who get paid out on a per job basis and there may be some minimum guarantees and early earnings commitment tha t we do as we densify the network, but fundamentally, it is a gig model, similar to the rest of our India core services business. The IW!I Urban liai Company

specific number of active service partners in InstaHelp is a metric. At this stage, we have not disclosed. But at the right time, if that is a metric that we feel will help investors understand the business better, we will consider disclosing it.

Pallavi: Is it a part of the total service professionals right now?

Abhiraj S Bhal: Yes, very much. So, in the consolidated number that you see for active service professionals, InstaHelp is also part of it.

Pallavi: Right. And my second question was in regard to your total number of employees. What could that number be? It is around 1400, including the subsidiaries. And any of the minimum guarantees, are they included in the employee expense, I mean, the minimum guar antee for service professionals?

Abhay K Mathur: We have not disclosed the employee count specifically in these financials. We had disclosed that number in RHP. Second, to your question on minimum guarantee and its classification in our P&L, it is not included in employee cost. It actually lies above our contribution profit. So, if you see the line of the other semi-variable expenses, we have dropped a note over there that explains what is the composition of the expense line and minimum guarantee sit over there.

Pallavi: What would be the total number of employees, inclu

ding the subsidiaries, it was 1,400 in June?

Abhiraj S Bhal: Pallavi, Abhay just mentioned that we have not disclosed that number in the shareholders letter. So, we will not be in a position to disclose it today. Thank you.

Pallavi: Right. Thank you.

Abhiraj S Bhal : Thank you.

Moderator: The next question is from the line of Gaurav Rateria from Morgan Stanley. Please go ahead.

Gaurav Rateria: Hi, thanks for taking my question again. I was just curious to understand the adoption of new categories like wall decor painting, which are typically low frequency and high AOV categories. How do you compare the complexity of building this vis -a-vis othe r categories that you have? Because my understanding is that as product AOV increases, the probability of disinter medi ation also increases. And given that the frequency itself is low, measuring the repeat rate itself is challenging to unders tand if that disint ermedi ation is happening or not. Thank you.

Abhiraj S Bhal: Yes. So, Gaurav, that is a good question. You are absolutely right that the AOVs are much higher

than the platform average. And therefore, even if the consumer transacts in one of these categories
once in a five -year period, it substantially improves the lifetime value of that user. Disint ermedi ation, IW!I Urban liai Company
Urban Company Limited
November 01, 2025

in our view, is not a difficult problem to solve here, especially given that it is a one -time use case.
We track the sort of delivered percentage of these bookings that we get, how many of them are
fulfilled, and that gives us a fairly good sense of where disinter medi ation is and we have not seen it
to be a major challenge at all. The bigger challenge is exactly what you have articulated, which is the
complexity in delivering a high AOV job. And as a result, we have been sharply focused for a few years now only on walls and have not ventured outside of walls. So, we started with simple wall
painting and then we slowly and steadily went into adjacencies of your wall, whether it is seepage solutions , wall paneling, and related polishing, etc., But we have remained focused only on walls and
servicing your walls because we believe that is a very large TAM. In fact, if you look at OEMs in the product categories for your home, paint OEMs represent amongst the largest spends. And the reason
is painting is a very, very large percentage of the total home interior and home renovation TAM. So,
we want to stay focused on walls and wall improvement and continue to build depth and expertise
there to make sure we do justice to our consumer proposition.
Gaurav Rateria: Got it. And last question is on how do you think about a potential number of cities that the services would be amenable from a future perspective beyond the top 50-cities, would it be like top -150 cities
or top 100 cities? Thank you.
Abhiraj S Bhal: Yes, good question, Gaurav. So, in India today, we are in about 47 cities. I would like to highlight
that we would not have complete micro market coverage or category coverage even within these
cities. And we had shown a 2x2 of categories in micro markets in our RHP, where the theoretical
maximum was about 30,000, roughly 60 categories into 500 micro markets in the current 47 cities. And we had shown that we had only been able to populate about 10,000 to 11,000 of that 30,000. So,
there i s a long way to go even within these 47 cities, not just in terms of coverage of categories in
micro markets, but also going deeper into those micro markets. So, that will be our first and highest
priority. We will slowly and in a calibrated fashion add more cities as well over the next few years. We do not think they are relevant from an immediate growth standpoint, but from a long term
potential standpoint, we certainly think the top 100 to 200 cities have potential. Hard to say exactly, whether it is 100 or 150 or 200, but yes, we definitely see a market in the to

p 100 to 200 cities over
the long term.
Gaurav Rateria: Thank you and all the best.
Abhiraj S Bhal: Thank you, Gaurav.
Moderator: The next question is from the line of Ri na Mehta from Trident Capital Investments. Please go ahead.
Rina Mehta : Hi, good evening. Thank you for taking my question. So, I just wanted to ask that on an average,
what is the gross margin ? IW!I Urban liai Company
Urban Company Limited
November 01, 2025

Moderator: I am sorry to interrupt you, Ms. Ri na. We are unable to hear you, ma'am. Can you please speak a bit
louder?
Rina Mehta: So, thank you for taking my question. So, I wanted to ask, on an average, what is the gross margin
the co mpany is making by selling the products to the service providers?
Abhay K Mathur: Ri na, this is Abhay. So, I will call out a couple of things. One, we see the total business as one. So,
between services and products, we see the business as one because our services will not be successful
unless we supply high-quality products. So, we measure performance and profitability together.
Second, just to tell you, gross margins in this business, when we do measure them, have always been
profitable, a nd the product business separately also is profitable.
Rina Mehta: Okay. And if I want to have like metric basis on the services, like average product -type versus
service-type -?
Abhiraj S Bhal: Sorry, Ri na. This is Abhiraj. I thought I will just jump in to help you there. If you look at our
management P&L, we have given a management view internally how we look at it. We have given
revenues from products, B2B2C. And you can see that that figure for Q2 FY26 is about Rs. 54 crores.
And interestingly, we have also mentioned cost of products, B2B2C, at Rs. 39 crores. T he reason to
show this is to actually call out the gross profit per segment. So, one can actually literally look at
gross profit by services, B2B2C products, and Native . And here we have seen, depending upon the
category of product, anywhere ranging from blended average of about 25-30%. In certain private
labels, it could be higher. But that is the range, and it is computable from the management view that
we have provided.
Rina Mehta: Okay. Okay. Sure. Thank you. Another question which I want to ask is, do we have a data on the
service level metrics like average product to spend for service type? Like there are different types of services. So, if I want to have a service level metric, unit economics for the service level , so what are

the revenue for service type and the expenses and the product expenses, and custom acquisition costs? So, unit level economics based on the service category.
Abhiraj S Bhal: Yes, yes. It is a good question, Ri na. In our RHP, we have shown the walk of the unit economics at a service level from what the consumer pays, then removing GST, removing the payout to the service professional, what is the take rate of Urban Company, how much do we earn through other means such as platform fees, subscriptions, etc., a nd then we have also shown what our direct costs are, and therefore, what is the contribution in the final adjusted EBITDA at the unit level. So, that is one v iew which is evident in the RHP. It is a waterfall diagram that you can refer to. Also, we have shown for a service professional, the individual unit economics. And this is as part of something we call the partner earnings index, which we have been publishing transparently since 2021. A version of that is also there in the RHP. It talks about for the average partner, what is the gross earnings, what is the IW!I Urban liai Company

commissions fee, take rate, etc. , and therefore, what is the net earnings, and then looks at travel costs and product costs per service professional, and then finally arrives at net take home earnings.
Rina Mehta: I have definitely looked on those things, but just wanted to have a

view on the service level metrics, like different categories of services which are more profitable and where your focus is more on?
Abhiraj S Bhal: Understood, understood. So, right now, we have not given a category level breakdown of these two. We ha ve only given a blended average in the RHP for our core services business in India and made a note of your request, and we will look at it and deliberate internally , and if we feel it is a useful metric at the right time, we will disclose it.
Rina Mehta: Okay, okay, sure. Thank you. Thank you so much for taking my questions.
Abhiraj S Bhal: Thank you, Ri na.
Moderator: The next question is from the line of Ara vind Kodi paka from IME Portfolio Managers LLP. Please go ahead.
Aravind Kodipaka : H i. Thanks for the opportunity and congrats on the listing. A quick question on InstaHel p. I know it is still early days, but has there any instances of platform leakage given the high frequency nature of the service?
Abhiraj S Bhal: Aravind, at this point in time, nothing substantial to call out, particularly because for most of our consumers, this is a replacement use case, a nd often those replacements happen last minute. So, by definition, it is hard for the consumer. The proposition is strong, let me put it that way. But it is something for us to track, especially as consumer behavior evolves, as more and more consumers start defaulting to this use case , and as pricing moves towards more steady state AOVs, this is certainly something that we will be visually tracking. And in line with how we think about the core India consumer services business, our focus will be on value addition on both sides to solve for disintermediation, if any, rather than preventing disintermediation. We do not believe preventing disintermediation is sustainable. No matter how many checks and balances you put in, if service professionals and consumers want to bypass the platform, they will find innovative ways to do so.
Only sustainable way is that both customers and service professionals believe that going through the platform is more valuable. For customers, that is a function of trust, that is a functio n of immediate availability, that is a function of knowing that there is adequate grievance redressal and customer protection programs in place and also lock- in programs. And for the service professional, that is fundamentally a belief that by working on the platform, I can maximize my earnings because of the higher pricing power that the platform accords to me, and also the better utilization that the platform delivers for me vis -a-vis me being on my own. And also the platform is taking care of my non - mone tary benefits such as social security schemes, training, soft loans, etc. , In Insta Help in particular, IW!I Urban liai Company

our service professionals are very, very concerned about their safety and health, and we have invested in safety features which you can see on the app. So, all of these things and more are ways to create value for both sides of the marketplace so that they choose to go through the marketplace, and that we believe is the sustainable way forward to solve the disintermediation problem.
Aravind Kodipaka: Sure, sure, that was helpful. The second one is around the model itself. Now, when we study the home services platforms that have been around or sailed over the past decade or so, most of them have taken the pure marketplace approach. However, you have done a fantastic job in almost a hybrid services company and a marketplace sort of a thing. So, there is a high touch point with the service partner. Is that the bottleneck in terms of growth for us, given the fact that we need to onboard pa rtners and train them for a period of time, equip them and ensure that the quality is right up there , is that the biggest bottleneck in terms of our growth?
Abhiraj S Bhal: Aravind, I look at i

t slightly differently. I think our full -stack marketplace model which controls the experience end- to-end for the end consumer and also empowers service professionals deeply across training, tooling, technology, and better livelihood and better earnings, is the only sustainable long -term compounding growth model in this category. That is my individual view. It may not deliver very short- term high growth rates like an asset -light model, but it is a durable compounding model that can grow much faster than the industry over a long period of time, because it underpins on creating trust for consumers and service professionals alike, which is the bedrock of home services.

Aravind Kodipaka: Perfect, perfect. That is about it from my end. Thanks for the opportunity.

Abhiraj S Bhal: Thank you, Aravind .

Moderator: The next question is from the line of Deepak Saha from Nirmal Bang Institutional Equities. Please go ahead.

Deepak Saha : Hi! Thanks for the opportunity. I just have one question. You mentioned that during AMJ quarter, you have some dependencies on the summer relevant services. Now, if you can help us understanding your broad thoughts on diversifying your dependencies from those kind of services given the uncertainty around monsoon and all that we are seeing, what that number would be, say, this year and how we are trying to reduce our dependency from those kind of services to maintain a steady state of revenue during those quarters? This is just one question I have.

Abhiraj S Bhal: Very good question, Deepak. Deepak, over the years, we have been diversifying our service portfolio and our overall revenue pools to reduce dependency on the summer categories in the AMJ quarter.

We had disclosed in the RHP that summer categories in the AMJ quarter had contributed about 24.5% if I a m not mistaken to the overall revenue. Now, while it was a very impacted summer due to unseasonal rains and relatively cooler weather and all summer-friendly categories, particularly in

consumer durables, etc., had taken a meaningful hit. Because of our diversification across different revenue pools, different lines of businesses, not just within India consumer services, but also Native , international, etc., and now increasingly Insta Help, at the time it was not meaningful. Our overall revenue in AMJ for the consolidated business grew 31% year-on- year vis -a-vis the same period last year. And that itself is a good sign of the diversification that we have been doing. And that will continue to happen to reduce the dependency in the summer quarter on summer-friendly categories.

Deepak Saha: Thank you a nd all the best for the rest of the quarters.

Abhiraj S Bhal: Thank you, Deepak.

Moderator: Thank you. Ladies and gentlemen, that was the last question for today. With that, we would like to close the call here. Thank you, members of the management, and thank you all the participants for joining Urban Company's results call. You may now disconnect your lines.

Urban Company Limited
Q3 FY26 Earnings Conference Call Transcript
January 23, 2026

Urban Company Limited
January 23, 2026

Moderator:
Hello everyone, welcome to Urban Company Limited's Q3 FY26 Earnings Conference Call.

From Urban Company’s management team, we have with us today Mr. Abhiraj Singh Bhal, CEO and Co- Founder, joined by Mr. Abhay Mathur, Chief Financial
Officer.
An important announcement before we begin – anything said on this call which
reflects future outlook or which could be construed as a forward- looking
statement may involve risks and uncertainties. Such statements or comments are
not guarantees of future pe rformance. Actual results may differ from those
statements. Please note that this earnings call is scheduled for a duration of 60
minutes only.

Post the management’s opening remarks, we will open for an interactive Q&A
session. Interested participants can type their questions in the Q&A tab and we will pick them. When your name is announced, please unmute and introduce
yourself before asking the q uestion.

Over to Mr. Abhiraj Bhal for the opening remarks.

Abhiraj S Bhal: Thank you very much, Bhavya. Good evening, ladies and gentlemen. Welcome
to Q3 FY26 earnings call of Urban Company. I thank you all for joining us today.
Q3 FY26 was a strong quarter for Urban Company, marked by healthy, broad-
based growth and continued improvement in profitability across our core businesses in India and international markets - UAE and Singapore.
We continue to invest in our new areas of growth - InstaHelp and Native. On a
consolidated basis, net transaction value grew 36% year -on-year, excluding KSA
impact, to ■1,081 crores, and revenue from operations increased 42% year -on-
year to ■383 crore, aga in excluding the impact of KSA. Growth was broad- based
across India Consumer Services, Native, and our international markets.
If I talk about India Consumer Services, ex of InstaHelp, NTV of this business segment grew 21% year -on-year, and adjusted EBITDA margins improved to
5.6% of NTV, up from 4.4% same time last year and sequentially up from 2.4% in Q2. This performance was dr iven by strong new user addition, steady revenue
retention, healthy festive season -led demand in the core categories, and continued
operating leverage reflecting the underlying strength of our core model. Based on the first nine months’ performance, we bel ieve that the full Financial Year 26
margins for India Consumer Services, ex of InstaHelp will be slightly ahead of FY25.

In our Native business, we continue to see strong year -on-year demand with NTV
up 93% year -on-year, alongside meaningful margin improvement compared to
the same time last year. International markets in UAE and Singapore also
continued to perform well, deli vering a 79% year -on-year growth on a like -to-like
basis in NTV, and an adjusted EBITDA margin of 2% of NTV.
During this quarter, we continue to invest in InstaHelp – our high frequency
household services vertical. InstaHelp scaled rapidly to 1.61 million orders in the quarter, and ■28 crores in Net Transaction Value. Adjusted EBITDA loss for InstaHelp stood at ■ 61 crores this quarter. While the absolute losses did increase
quarter -on-quarter, we saw a reduction in the adjusted EBITDA loss per order
from ~■760 in Q2 to ~■381 in Q3. With improving average order value, service partner utilization, micro market densi fication, we expect the loss per order to
continue to reduce over time.
As a result, the consolidated adjusted EBITDA for the quarter was a loss of ■17
crores. But if I exclude the loss in InstaHelp, the business delivered an adjusted
EBITDA profit of ■44 crores, underscoring the underlying strength and profitability in our co re operations. Overall, we remain focused on scaling our
core businesses in India, UAE and Singapore profitably, while continuing to
invest thoughtfully in new growth opportunities like Native and InstaHelp.
With that, we open the floor to Q&A.
Moderator: Thanks Abhiraj. We will wait for a minute while the question queue assembles.
Please share your questions in the Q&A tab below.
Moderator: Hi Mohit. Can you please unmute yourself and ask the question?
Mohit: Hello, am I audible?
Moderator: Yes
Mohit: Hi, thank you for the opportunity. My first question is that you’ve shared that the
consolidated EBITDA will break even by Q3 FY28. Is there some sort of
conservatism taken into this, given that India Consumer Services show strong potential for margin expa nsion, so is it fair to assume that this can be achieved
earlier versus the timeline you have given?
Abhiraj S Bhal: Thanks for your question, Mohit. We see a very clear line of sight that India

Consumer Services, ex of InstaHelp, will continue to increase its year -on-year
margins as we had underscored in the previous quarterly call as well. Margins can move up and down quarter -to-quarter due to inherent seasonality, and therefore
they are best assessed year -on-year, and that explanation we have given in some
detail in this letter.
But certainly, FY26 we now expect to be slightly ahead of FY25, and FY27 onwards, we think that margins will continue to increase on a percentage basis
and also on an absolute basis. The same will largely hold true for international.
These two will be the big drivers of profitability in our business and we should
expect them to continue to move profitably ahead.
Native is still an early -stage business, but it has shown margin improvement, and
absolute losses have been coming down. Again, there will be some ups and downs
with seasonality, but it is moving in the right direction.
The big question obviously is around Instahelp. Instahelp is early and we are not
yet fully clear on the quantum of investments on a quarterly basis that will go into
Instahelp. So our view is that latest by Q3 of the financial year FY28, the overall
profi ts from the rest of the business should be sufficiently large enough to offset
the losses in Instahelp. This could happen sooner, but certainly from Q3 FY28
onwards, it should happen and should happen sustainably going forward, and it
should not be that in quarters ahead, there is again movement up and down. So
that's the stake that we've put in the ground that by that quarter, the overall profits
from every other business that we run will all be large enough to offset the losses in Instahelp. Not just for that quarter, but going ahead as well.
Mohit: So, Ins

tahelp loss per order has been coming down over the last two, three
quarters. Now, as you look forward to accelerated growth in this segment, fair to
assume that this can further inch up now and not necessarily a trend moving
downwards, fair to assu me that?
Abhiraj S Bhal: The loss per order in my view has to keep coming down. The magnitude of decline
might not be as sharp as it has been earlier, but it has to keep coming down for this business to sustainably eventually break even. So that's something that we are
committed t o. And, you know, again, there might be one or two quarters here and
there where the trajectory might be lumpy. But, you know, if you look at a secular
view, we are committed to seeing the loss per order coming down. Obviously, the business is growing fast and the orders are growing. And as a result, the absolute
losses that this business will incur, it is still early for us to give a guidance on that. But loss per order, we are committed to making sure that we see an improvement in that number coming down.
Mohit: Sure. Thank you for that.
And last question. You know, you have mentioned in your letter that, you know,
categories accounting for 30 percent of India Consumer services, NTV are already
operating at 8% adjusted EBITDA.
Can you elaborate a little bit more on this? – which are these categories, and, you
know, where are the others in the journey towards their, you know, higher margins expansion in the future? If you can elaborate on that.
Abhiraj S Bhal: Absolutely Mohit. So, Mohit, the aggregate business, India Consumer Services,
ex of InstaHelp, had an adjusted EBITDA of 5.6%.
As you might recall in the last letter and even in this letter, we've reiterated our
long term guidance that this business can reach 9 -10% of NTV.
We wanted to give comfort to the investor community on how we have visibility
of that, because about a third of our business, roughly 30%, is already operating
at 8% in this quarter. In fact, in the first nine months.
And that gives us the confidence that, you know, the overall business as it matures, as the rest of the categories mature, you know, we have line of sight of that long term guidance that we have given of nine to 10%. We will not disclose
the specific categories that constitute that 30%, but it's not just driven by one or
two categories, a good host of mature categories that are operating at that mark.
And then there are certain early stage categories as well, even within India
consumer ser vices.
So the basket put together is at 5.6%. We are fairly confident that year on year, it will continue to see a margin expansion and eventually get to that long term
guidance of 9 -10%.
Mohit: Oh, sure. Thank you for those answers. I'll get back to queue.
Abhiraj S Bhal: Thank you, Mohit.
Moderator: Deepak, can you please go next? Deepak Saha.
Deepak Saha: Yeah. Hello. Hi. Am I audible?
Abhiraj S Bhal: Yes, Deepak. We can hear you.
Deepak Saha: Okay, thanks. Thanks for the opportunity. Just on Native side, you can share some

color.
If I see last year, Q3 over Q2, we had a sequential improvement on the MTV side. There's a meaningful sequential growth, and my understanding is Q3, because of
festive season and all, we usually have a strong quarter.
Now, this year, Q3 is on a sequential slide. It's a bit softer, but you have alluded that in the shareholder's letter, because of early festive demand, early starting of festive demand, you have seen some, you know, order pulled forward. So is this the onl y reason or there's anything that you'd like to call out? Native saw softer sequential growth in Q3. Is this purely due to festive demand being pulled forward?
Abhiraj S Bhal: I think, Deepak, that's the main reason.
You know, there is seasonality in the Native business as well. Generally around monsoons, you know, people tend to get a little more worried about the quality of water they're drinking and therefor

e water purifiers see an upswing in that period.
And then obviously festivities around Diwali and the various e -commerce sales associated with that is also a big factor. This financial year, Diwali was much earlier in the OND quarter vis -a-vis the previous financial year. And as a result, the e -commerce sales actually landed in Q2.
And even in Q2, we had mentioned that the big step jump, much of it is because of the forward pulling of demand. I think that's the main factor. Obviously, competitive intensity for water purifiers is also heating up. And that's a minor factor in our view. But the major factor is owing to the festive sales being this year falling in Q2.
Deepak Saha: Got it. And second one on the margin side is meaningful improvement, especially adjusted EBITDA for Native.
Anything you'd like to highlight? Is it like going ahead, fixed cost would be more in the range of where we are and that would lead to a break even kind of a
trajectory? Or you see your take rate or anything improving meaningfully?
Because what I see in a sequential your take rate is largely flat. And, what is, where it is coming from is a meaningful improvement on the adjusted EBITDA side. So if you can share some color on the break even side and the drivers for that.
Abhiraj S Bhal: Yeah, I think Native, the focus right now, Deepak, is on scaling the business well and continuing to make year on year improvements in the margin profile.
A lot of that improvement will basically come from scale and operating leverage.
In this business, there are certain fixed costs that we incur. And the benefits of scale help us cover those fixed costs. Those fixed costs are in terms of R&D, product development, people costs, marketing and brand building, etc., etc. And with scale, you know, those costs get covered. So the operating leverage is in some sense also similar to how our core consumer services business in India shapes up.
Native obviously is early in its journey. It's been only a little over two years since launch. So the focus is not to, while one of the focuses is to improve margins, I would say the immediate near -term focus is not break even. It is to continue to scale w ell and bring it to a certain scale. And we are confident that with scale, the business will automatically break even and over time actually generate very, very healthy margins.
We recognize that this business enjoys structural advantages vis- a-vis other brands. One of those structural advantages is that a meaningful percentage of the sales comes from our own app and our own ecosystem of service professionals, which is obviously m ore or less free of cost for us. Another structural advantage is that we cross- utilize our existing service professionals for water purifiers to also service Native customers. And so we don’t have to, we don't incur the cost of building and maintaining tha t service fleet.
So those are structural advantages, which in our view, we are confident long- term will lead to a structurally better P&L for Native. Right now, the focus is growth, and we are confident that with growth over time, the business will automatically see improv ing margins.
First, it will break even and over time become reasonably profitable.
Deepak Saha: In that context, Abhiraj, this tie -up, strategic tie -up with Amber, is this the reason that all the factors that you alluded, if you can share some more light, the synergies that we're trying to build with Amber? I understand this is specifically in line w ith, in relation to Native, right? So anything that you'd like to share on that front?
Abhiraj S Bhal: Deepak, we have so far relied upon a single contract manufacturer for the making of water purifiers in India, for the assembly of those water purifiers. And we felt that we had started to hit the scale and size, that some diversification of that back -end s upply chain was helpful to reduce the risk and improve t

he quality of
products.
And therein, we decided to also partner with Amber as a second manufacturing, contract manufacturing partner.
Deepak Saha: Got it. That's helpful.
One last question. On the InstaHelp side, we have seen a lot of fundraising and subsequently competitive intensity has also gone on the higher side, as far as marketing measurements, visibility on the street is concerned, this particular segment is really gaining traction.
So now one thing is we have our own, say, idiosyncratic features to drive margins and scale. But on the competitive side, are you seeing anything, say, which was not expected and now competitive intensity can be a bit of a headwind or, you know some other thing that you'd like to highlight? From your expectation point of view, are the, you know, dynamics with competitive intensity a little bit higher than or meaningfully higher than what we had earlier expected?
Abhiraj S Bhal: Not really. I think our eyes are focused on the customer and the service professionals.
Most of our energy goes there. We believe in the long run, you know, the company that solves for the customer and the service partner ecosystem well is the company that wins in the marketplace.
Obviously, there is competitive intensity and that's expected and it's nothing new for us, we've seen various waves and cycles of increasing and declining competitive intensity over the last 10- 11 years since inception. InstaHelp is an attractive category and there will be competition and we track that competition.
We learn from them.
It helps us improve. It keeps us on our toes. But fundamentally, our focus is the customer and the service professional. And right now, there is nothing out of the ordinary that we see in the market. This is pretty much on expected lines, this level of com petitive intensity for a market as attractive as InstaHelp.
Deepak Saha: That's really helpful, Abhiraj. Thanks a lot. And I must say that your services on InstaHelp side are really commendable. I mean, even you know, with respect to what is available and offered by other players. I'll fall back on the queue for my rest of the questions. Thank you.
Abhiraj S Bhal: Thank you, thank you Deepak.
Moderator: Mr Tushar Behl from GladeBrook Capital, please go next.
Tushar: Hey, thanks for the opportunity. Abhiraj, a quick question from my side, on the competitive landscape. What are the different business model choices on the InstaHelp side that you are seeing, especially on supply- side engagement between your model versus t he competition?
Abhiraj S Bhal: Can you just maybe elaborate a little bit better, Tushar, what do you mean by supply- side choices?
Tushar: Yeah, I mean that what is the supply -side engagement model, let's say for InstaHelps, for you guys? And how is that different from - a) the broader consumer services platform that you guys run? And how is it different from what the other competition has in that? Is it all on minimum guarantees? Is it on gig? Is it on certain target -led incentives? How does that supply -side engagement model work?
Can you explain the supply -side engagement model for InstaHelp and how it differs from competitors?
Abhiraj S Bhal: Understood. Let me talk about what we are doing at InstaHelp. So our focus is on building a very, very high- quality, reliable, trained supply pool, which is available at a very small micro -market level.
We believe this business is a micro -market, heavy and dense business. In fact, the micro -market density and micro- market sizes are even smaller than our core business. And therefore, it's a densification -first and micro -market -first business for us.
We emphasize extensively on the playbooks that we have learned over the years, which is around extensive background verification, training, making sure the right type of service professionals join the platform who have the Urban Company ethos, making sure they

're well aligned to serving customers and ensuring that they have attractive earnings vis- a-vis offline opportunities or other online competitors. Our goal is to make sure that the supply pool is deeply engaged and has a long- term viable pathway to bui ld a career at Urban Company. So those, you know, learnings that we've had over the last 10 years, we are applying here as well.
We believe that leads to a sustainable long -term category creation. I cannot comment on the supply models of other competitors, but this is our, you know, this is what we are focused on.

Beyond just earnings, we also want to create other opportunities for them to have a good life and a good livelihood.
So we also offer our standard social security benefits around life and accidental insurance free of cost, health insurance free of cost. A lot of them are women partners, so our women partner -focused initiatives like Project Nidar, etc., which focus on par tners who struggle with domestic violence and so on and so forth,
apply to them. Our scholarship programs under Commander Nishant Singh scholarship program applies. So all our endeavours, in many ways, let me, let me put it this way, our supply-
first thinking and our supply- forward thinking is that a lot of those learnings we've taken from our India consumer services business and applied it here. Of course, what is di fferent is that this is a much more micro -market intensive business. The level of densification and the level of reliability that is needed is much higher.
Availability times are also much lower. So those are things that we are adapting to.
Tushar: And are you seeing any degree of cannibalization happen through Instahelp on the broader consumer services platform? Or are these completely two exclusive set of opportunities to pursue?
Abhiraj S Bhal: Nothing meaningful yet.
At the end of the day, InstaHelp caters to a more high -frequency daily/ weekly cleaning and housekeeping service. And our core consumer services business, to the extent that there is some overlap, it is in deep cleaning. But those deep cleaning services ar e used more occasionally around festivities, around move -in, move -out occasions, around having guests over.
Or generally, when you realize that a period of time has passed through and the work that your regular house help is not doing enough and you want a deeper clean. So on the fringes, there'll be a little bit of overlap, but nothing material yet.
That being said, it's still early and we are watching.
We are also not very particularly worried about cannibalization because even if it were to happen, in some sense, it's right, it’s good for the customer. It's better, you
know, that we cannibalize our own business versus somebody doing it for us.
Tushar: Absolutely, yeah. Makes sense. Thanks, Abhiraj.
I'll fall back in the queue now. Thanks so much.
Moderator: Adil Khan from ICICI Prudential Life. Please go ahead.
Adil Khan (ICICI Prudential L Hey, hi, Abhiraj. Congratulations on a great set of numbers.
Abhiraj S Bhal: Thank you
Adil Khan: So my question is that if you could just share some guidance on InstaHelp, NTV growth. See, we are at a very low base right now and q- o-q growth was phenomenal.
NTV was almost 3x. So how do we see this number going ahead in the next couple of quarters and probably for FY27 as a whole, as a whole? And also, when do we expect, you know, what kind of trajectory do we expect in InstaHelp losses, in the next year?
Abhiraj S Bhal: Great questions, Adil. I think at this point in time, we are not in a position to give a firm guidance on InstaHelp growth and loss trajectory.
But what I can tell you is that we are definitely very encouraged by the traction that we are seeing in terms of customer adoption and customer retention. I think the micro markets where we are present, we are penetrating very fast. And the level of customer usage and retention that we are seei

ng is very, very encouraging.
We also recognize that this is not at full price and the category is still some distance away from what we believe will be steady state AOV, which, as we
mentioned in our letter, might be 1.8 to 2 times higher. So we have to wait and watch how customer behaviour changes as and when the pricing slowly moves up. But we've seen enough evidence in our older micro markets that, you know, even with maturing cohorts of customers, the customer activity holds up.
And that's what gives us confidence. Beyond that, right now, the focus is on making sure that we scale the category very well. We deliver high quality experiences to customers and services.
And we cement very, very clear, unequivocal market leadership for this category.
That is our North Star. And that's what we are pursuing. And in that pursuit, it's hard to precisely pin down what will be the quarter on quarter growth rates, or what will be the level of loss that the business will incur.
I do want to assure you and the rest of the investor community that we are building this business with the right level of customer centricity and aggression. And we are also very, very mindful and thoughtful of the loss trajectory. We want to make sure tha t we are leaving no stone unturned in moving this business in the right direction that is in line with our ethos.
And therefore, the loss per order is something that in this quarter, we wanted to highlight, we are committed to seeing it come down with time.
Adil Khan: Thank you so much. That was very helpful. Just lastly, within the InstaHelp category, there might be some micro markets, you know, which might have, you

know, kind of be on the matured stage. So how is loss per order in those micro
markets? If you could gi ve us a sense.
Abhiraj S Bhal: Loss per order in the mature micro markets is lower than the average for the
platform. And that's what gives us the confidence that this category is moving in
the right direction.
Adil Khan: Understood. Thank you so much and wish you all the best.
Abhiraj S Bhal: Thank you Adil.
Moderator: Thank you. May I request Mr. Kunal Mehta from Sunidhi Securities to go next.
Kunal Mehta: Yeah, hi, very, very good evening.
My question is, what is the strategy behind InstaHelp? I mean, because I think to the total serviceable addressable market that you've mentioned in the press, 42%
is, of that is, you know, the market that InstaHelp, you know, cleaning and you
know, cooking targets. So is it a way probably to kind of cross sell other things as
well to bring customers to the app to book, let's say, people who can help them
with their daily chores and then probably also use other services? Is that the
strategy? And you know, a lso, how is the stickiness of the customer with respect
to InstaHelp? I mean, are we seeing the customer as well and also the helpers? So
are they also sticky? Are there leakages, if you can brief on that?
Abhiraj S Bhal: Right. Thank you for the question, Kunal.
Kunal, InstaHelp as a category, you rightly said is a substantial part of the overall home services TAM, total addressable market. And the category, which is, you know, largely daily house, but also, you know, cooks and other sundry services represents hig h frequency. It could be daily or multiple times a week, or at the
minimum, you know, weekly slash biweekly.
This is in some contrast to our core services business in India, which, where the
frequencies could be more monthly or quarterly in nature. So one of the
underlying advantages that InstaHelp has is that it has much higher frequency.
And therefore, your con nect with the customer, your entry into the customer's
home, and the relevance for the customer's household becomes fairly sticky and
fairly relevant service.
We're also seeing a fairly high overlap in the target consumer segment for India
core services and InstaHelp. So to that extent, this is actually helping u

s go deeper
and penetrate deeper and cement our relationship with our existing customer base,
and als o acquire newer customers, who for whatever reason, so far, we may not
have been able to acquire. We do believe over time, just given the frequency and
the relationship this will create, InstaHelp customers will also cross over to other
categories, and it will improve the overall lifetime value of the customer.
It's too early to call that trend out, but that is part of the strategic intent of moving
aggressively behind InstaHelp. In terms of the customer stickiness and the service
professional stickiness, while we're not giving specific numbers out at this stage
Kunal, what I can share is that we are very encouraged by both the trends. And
that's one of the reasons why we're doubling down on the category.
Kunal Mehta: Also, just wanted to know how many cities are we active in the InstaHelp
segment?
Abhiraj S Bhal: We keep experimenting. There is no city where we have complete coverage. We
keep experimenting and trying out in different micro markets of different cities.
But for all practical purposes, it's currently live in the major metropolitan cities,
which is Delhi NCR, Mumbai, Bangalore, Hyderabad, and parts of Pune. There
might be a couple of cities here and there where we are doing small pilots, but
these are the m ajor four or five cities. Even in these cities, we don't have complete
coverage.
We are launching micro market by micro market and densifying those micro
markets. So our first port of call will actually be to fully cover and densify these
top 5- 6 cities.
Kunal Mehta: Okay.
And currently, I think I see, you know, there are heavy discounts being given for 60 odd percent on the app and a lot of offers, bundled offers. So is it just to, you know, maybe capture the market, you know, then get as many customers to try
this as possi ble?
Abhiraj S Bhal: Yes, absolutely. So basically there is, you know, discount laddering that we have
created.
And as the customer matures, the level of discounting comes down and eventually
the customer migrates to the full price. And that laddering, you know, plays out
and we've seen it play out in our mature micro markets. The current market
dynamic is that it's also competitive.
So it's also important for us to acquire consumers at a rapid pace. And hence the level of discounting is much more elevated than what we would have normally

been comfortable with. But that's the primary reason to drive the discounting,
which is to acquire users and then create that initial stickiness and behaviour.
Kunal Mehta: Okay. Okay. Thank you so much. I'll fall back in the queue for more questions.
Moderator: I'll call back and look to you for more questions. May I request Mr. Gaurav Rateria
from Morgan Stanley to go next?
Gaurav Rateria: Hi, congrats on steady execution and thank you for the detailed shareholder letter.
I have a couple of questions.
The first one is on the Core India Services ex -Insta, the contribution margin
improved on a sequential basis. What would be the key drivers that helped that?
And for you to hit your steady state margin that you talked about, is it going to
come largely fro m the operating leverage or is there a scope of improvement in
contribution margin as well?
Abhiraj S Bhal: Yeah. So I would say Gaurav, the major reason for this jump that you're seeing,
and I would look at the jump more year -on-year rather than quarter -on-quarter,
because as we mentioned in the letter as well, there is quarterly seasonality and
movement in our margins.
Q1 and Q3 are typically better on the margin trajectory and Q2 and Q4, where we invest ahead of the summer seasonal uptake and Diwali season, as well as Q4
having our annual appraisals, sees typically more depressed margins. So one of
the things we want to call out on this call is that margins should be seen on an
annual basis. And if I compare the annual

margin trajectory, 5.6% in Q3 versus
4.4% in Q3 last year, there's been a 1.2% improvement.
This improvement is something that we feel is in line with the kind of improvement we should see going forward. Some years it might be slightly more, some years it might be slightly less, but this is the kind of improvement that we
are committed to deliver ing year after year after year, which should hopefully
over time help us get to that 9% to 10% of NTV, steady state margin guidance
that we have given. Majority of this will come from operating leverage.
There'll be some improvements that will also come from cost initiatives. There'll be some improvements that will come from semi- variable costs, such as customer
support and partner support. As and when the benefits of AI start playing out there, contributi on margins could move slightly up, but we believe the vast
majority of the gains will actually come from operating leverage and growth.
Gaurav Rateria: All right. My second question is on your supplier utilization. You have given a
very nice metric of number of hours.
And also when I look at the supplier growth is probably 9% YOY, whereas the underlying volume growth could have been north of 18% to 20%. Is this how the
gap should continue to play out going forward as well in terms of the difference
between the supplier growth, as well as the order growth or the volume growth in
the platform from a utilization point of view?
Abhiraj S Bhal: We believe so. We believe that there is a lot of headroom for utilization to improve
in India consumer services, ex of InstaHelp, to help.
In fact, later in the letter, we have also shown partner earnings. And there, if you
see, we have also shown that the top performing partners are actually doing much, you know, between 140 to 150 or more hours per month, vis -a-vis the 91 average
that we ha ve given for 9 months FY 26. There is a lot of headroom, that headroom
will not be bridged in a single year.
But every year, as we have seen for the last several years, every year, we will see
some improvement in utilization, largely driven by densification. As we densify
our micro markets, our service partner utilization improves, service partners, you
know, hav e to wait less for orders, travel distances come down, and order batching
and stacking improves. And that's what leads to improvement in the hours on the
platform that they are able to spend.
So that I think will continue. And therefore, as a trend line, the absolute service
partner count might lag the growth in the NTV and revenue. Again, there will be
seasonal fluctuations and quarterly fluctuations in this. But as a trend line year on
year, that trend should play out.
Gaurav Rateria: Last question is actually around the InstaHelp segment. Looking at the overall
breakeven target, is it fair to say that the total investment outlay in this business,
you may have increased versus what you were thinking earlier, maybe when you
started, because you're getting much better traction than what you thought. And I
know for competitive reasons, I don't know if you can share how much of the total
outlay has been increased to or what is the exact number that one should think
about? I mean, we'll be fi ne if whatever color we get there. And also a related data
point on what's our penetration in terms of micro market? You talked about 500
microservice markets, right? So what's our penetration in terms of InstaHelp right

now? And, you know, where in that j ourney? Can we also experiment subscription kind of a product in the InstaHelp? Do you think it makes sense? So these are a few questions around Insta. Thank you.
Abhiraj S Bhal: Short answer to that question, Gaurav, is I don't know. And it's important for us to acknowledge what we don't know. It's too early.
And as I mentioned, right now, the focus is on cementing our market leadership, penetrating micro markets well and serving customers and service

professionals
well. We believe we have seen enough evidence that this business at scale and at higher AOVs will get to break even levels. Those AOVs need to be much higher than where they are today, about 1.8 to 2x.
So there are some assumptions that we are making, but we believe with time as micro markets mature, densification happens, early minimum guarantee support
and earning support for service professionals subsides and discounting for customers subsides as those cohorts mature. These micro markets first will move towards profitability and eventually the whole category will move towards profitability. When that will happen and how much money will go in to making that happen is something that we are still learning and is something that we are
still, you know, when we have much more certainty around it, we certainly will be the first to come out and mention that; we don't have complete certainty around that.
That being said, what we do have certainty around now, which we didn't have certainty around in the last quarter - is that we have line of sight that burn per order will keep coming down. And that's a metric that we will showcase maybe for a quarter here a nd there, it might not see exactly a linear decline, but it should, it should come down. The other certainty we have is that the aggregate profits from the rest of our businesses put together should be able to offset the losses that InstaHelp will incur latest by Q3 FY28, which is the OND quarter of 2027.
So those are two, you know, clear certainties that we have developed as we have learned more about this business. And with time as we have a deeper understanding and we have clear a line of sight of when InstaHelp itself will break even and what will be the incremental capital outlay from that point on until it breaks even, we'll certainly come out with that clear guidance. Your second question was around, you know, the coverage that InstaHelp has vis -a-vis the core India consumer services business.
Again, you know, without getting into the specifics around how much percentage of India consumer services is covered geographically by InstaHelp, I would say it's still early. It's a limited number of cities, even within those cities. It's a limited number of micro markets and geographies.
We've obviously started with the high density micro markets and the high density, you know, customer clusters first. But over time, we will expand coverage to first all the micro markets in these cities and, you know, beyond these cities to all the places where India consumer services is present in as well. We will be calibrated in that endeavor.
Final question around, you know, today we are largely serving the replacement use case, which is that when regular house help is on leave, then people are calling
InstaHelp. But can we launch a subscription or a multi -day booking offering, which could star t eating into you know, rather than just addressing the backfill market, could you also become the primary provider of the service through a subscription offering? I think that is also something that we are exploring. Again, early to say whether it will wo rk or not, but it is certainly something that we are experimenting with and exploring.
Gaurav Rateria: Thanks, Abhiraj and all the very best.
Abhiraj S Bhal: Thank you Gaurav.
Moderator: May I request Mr. Manish Addukia from Goldman Sachs to go next.
Manish Addukia: Hi, good evening. Thank you for taking my questions.
And again, thanks. Thank you so much for that detailed shareholder letter, which was very helpful. I have a couple of questions. The first one is on the margin guidance and the FY31 EBITDA number that you just called out.
So two questions on that one. First is, if we look at Q3 FY28 as break even and F31 margins at about 1000 odd crores, assuming a certain revenue growth between then and F31, let's say of 20% would imply north of 50% incremental
margin b

etween that time per iod and F31. So wanted to, you know, just get some sense on the building blocks of that F31 number of 1000 crores and how you

arrive at that number and what are the assumptions for both, you know, the core
India business and also maybe the InstaHelp busine ss.
We just wanted to get some color around that. Thank you. That's the first question.
Abhiraj S Bhal: Yeah, great question, Manish. So Manish, currently we have assumed that almost
the entire 1000 crores of adjusted EBITDA in F31 comes from our core businesses
today, which is India Consumer Services, ex of InstaHelp, International and some
bits from Native , because we do believe that by the Native will break even and
become profitable. Those are the three major drivers.
A very, very small percentage is coming from InstaHelp, if at all, for all practical
purposes in our building blocks, we can ignore that as well. So these are the three
big drivers, India Consumer Services, obviously being the largest, followed by
internat ional and Native. To your second order question, which is, hey, if you're
only breaking even in Q3 F28, then how do you suddenly get to 1000 crores of
adjusted EBITDA by F31? The answer is, while at a consol level, we will break
even in, you know, Q3 F28, the underlying profits in the core businesses, India,
international and overtime Native as well will keep growing, Manish, and they
will actually get to a fairly large and healthy number even by Q3 F28.
InstaHelp losses is something that we don't have complete visibility on. But we
believe at some point around that period, InstaHelp losses might peak and then
start to come down. And if that assumption is to play out, then as InstaHelp losses,
the growth driver of that consol adjusted EBITDA going from sort of call it 0 to
1000 is a function of already elevated adjusted EBITDA for the core businesses,
continuing to compound and InstaHelp losses coming down and eventually breaking even and itself generating small profits.
There certainly is an assumption that InstaHelp will break even at the minimum by F31. And if it does, then the rest of the core businesses put together should be sizable enough to generate that kind of profitability.
Manish Addukia: Very helpful, Abhiraj.
And maybe just a follow on question on what you just mentioned about InstaHelp. I know it's a very nascent business, maybe less than 12 months old for you. So at
this stage of the business and at this scale where you operate in, like you said that
your ass umption is F31, it should at least be break even.
Like at current, let's say, wherever you are in terms of AOVs and where you
expect them to get to and the utilizations. Internally, does the math work? Like, I
mean, do you have enough confidence that the math at some point in time should
certainly work? O r is that still I would say, let's say, a low confidence kind of a
outcome in terms of, you know, just the economics of InstaHelp over a period of
time?
Abhiraj S Bhal: No, I think we have reasonable confidence that the underlying economics will
work at the AOVs that we have mentioned in the letter. Not at the current AOVs,
but at 1.8 to 2x AOVs with densification playing out as our micro markets densify,
as AOVs get to t hat mature level, because customer discounting subsides as
customer cohorts mature.
And one of the benefits of densification is that partner utilization improves and
consequently, the earning support that you have to give to partners that also
subsides. These are the three major areas where the burn is today. As that plays
out, we have the confidence that the business will break even.
What we don't have the confidence of is how long that will take. How long will it
take for the AOVs to get to that level? And what the competitive dynamic will
look like, which is why I'm saying, you know, outer limit F31, it should break even. Again, I wa nt to caveat, as you rightly said, less than one y

ear old.
The reality is none of us really know what's going to happen in the future. So we
can at best, looking today, draw an arc of where things are heading to. We have a
high degree of confidence, let me put it that way, on both those numbers that we
have put down, which is Q3 F28 break even on a consolidated basis and 1000 crores of adjusted EBITDA by FY31.
If this was to change because of anything different that we see, we'll be the first
to come out and let you all know.
Manish Addukia: Thank you. Just last question on the same topic.
At this point in time, again, can we say with reasonable probability that InstaHelp
will be a build rather than a build plus buy? The probability of you looking to
consolidate the market in the foreseeable future would be quite low. Would that
be fair to say?
Abhiraj S Bhal: Again, it's not something that, you know, we have a view on at this point in time,
or something that we have even thought about or considered. Right now, we are just fully sharply focused on building organically.
We have our hands full with serving our customers and service partners. It is not even a thought that has occurred in my head.

Manish Addukia: Very clear. Just one more question for me before I jump back in the queue. I think a broader question, India Consumer Services, ex of InstaHelp, which is adding about a million users a year currently and delivering about 20% growth. I mean, the ask rate to , of course, deliver 20% growth rate would mean that you probably need to incrementally keep adding more users. Or is there room to, you know, increase spend per user meaningfully over a period of time?

I'm just trying to think that, like, do you have enough visibility that this kind of a growth can sustain over a, let's say, three to five year period? Or over time, you can still keep adding as many number of users, but mathematically, the percentage grow th keeps tapering off. So, you know, just wanted to, you know, get your thoughts on that. Thank you for taking my questions.

Abhiraj S Bhal: Yeah, Manish, it's certainly our ambition. You know, we've mentioned in the letter that the market is growing at 10 -11%. And, you know, as an innovative company that is, in some sense, taking this category online, we definitely aspire to grow to x of the m arket.

So it's certainly our internal ambition to grow at north of 20% and keep pushing that boundary. There are three or four elements that go into it. One is, of course, fundamentally, your proposition has to be better than offline and other online players - faster, cheaper, better, as we've called it. You have to deliver the services faster. Value for money is important for the Indian consumer.

And with densification, you have to continue to pass on some of the benefits of your improved cost to serve to the end consumer. And the service quality has to be better in terms of investments in training, quality, AI -led, SOP compliance, technology, etc. So that's the fundamental driver.

There are, of course, two other important drivers as well for that growth to happen. One is new user acquisition and increasing the pace of new user acquisition through, you know, both performance and brand marketing, and also increasing coverage, both ser vice category coverage, as well as geography coverage. And the three together become the main drivers.

I think meaningful percentage of the growth will come from these three drivers.

There will also be growth that will come from more spends, but it won't be as meaningful as these three drivers, in my view. Net -net, we internally definitely the ambition to grow this business at at -least 2x of what the market is growing at.

Manish Addukia: Very helpful. Thank you Abhiraj, for answering my questions and all the best.

Abhiraj S Bhal: Thank you, Manish.

Moderator: May I request Ms. Garima Mishra from Kotak Bank to ask her next question.

Garima Mishra: Thank you so much for the o

pportunity. My questions also start off with the InstaHelp. Abhiraj, could you provide some color on geographic nuances that you are seeing, as well as your overall market share in this particular business? Within the geographies you are present, is there any hero geography that is emerging where metrics are just that much better or the market is maturing faster than the rest of your geographies?

Abhiraj S Bhal: Yes. Garima, I, I hear where you're coming from. I think we are still two or three quarters away from having a hero geography. Of course, there are early geographies and early micro markets in Gurgaon, Bangalore and Mumbai are obviously doing well and much ahead of the curve.

But the business is still very, very early to call out a clear hero geography. Right now, all the top five, six metros that we are operational in and the micro markets there are high priorities for us. Specifically, Gurgaon and other parts of Delhi NCR, Ba ngalore and Mumbai, I think these are very high priority markets for us.

We have to win in all of them. We don't believe we have the choice of just trying to win in one market and letting go of market share in the others. So we are heads down in execution in all of these.

Hyderabad is the fourth market, which is also priority for us. And then the fifth is Pune. So all of these markets are important.

Yes, over the next two, three quarters, I think there'll be one of these markets which will emerge as a hero market for us where the metrics, etc, are all aligning well in terms of profitability, maturity of the micro markets, our own market leadership bei ng cemented. But we're still some distance away from that.

Garima Mishra: Sure. Noted.

You also provided this insightful table, right, which talks about the benefits of densification and how it positively impacts earnings of the service agents, right?

Now, if I take the same example and apply it to InstaHelp, right? Now, InstaHelp will end u p having an AOV, which is lesser than 450 rupees, right, which this table assumes, right? So for the service agent to actually make an equivalent amount of money, they either need a lot more jobs or they basically have to settle for lower earnings. I mean, how should we view this table then in the context of unit economics for the InstaHelp business?

Abhiraj S Bhal: Understood.
So that table was an indicative table, Garima, for our handyman services in Bangalore. But let me talk a little bit around how we think of InstaHelp. So in InstaHelp, we believe that AOVs need to be about 1.8 to 2x where they are today in that range, in st eady state for this business to essentially break even.
How will that get accomplished in a micro market? First and foremost, we believe at that AOV level, with adequate partner utilization, we will be able to get to a healthy partner earnings per month. And that's what we are committed to delivering, which is a healthy partner earnings per month. So partners will be able to do an adequate number of jobs every month and every single day with densification to get to their overall earnings target.
And as a result, one of the big spend areas for us in InstaHelp is bridging that gap with earning support. That earning support will keep coming down and keep minimizing. And the burn because of that earning support will keep coming down.
Now, this is not complete rocket science. If you look at your own behavior or that of your friends, etc., then you know a typical order in InstaHelp category where you're calling for a house help worker might be one to two hours, averaging about one and a half hours or so. So an InstaHelp worker, if well utilized, can
comfortably do between three to five orders in a day.
And consequently, if you remove Urban Company commissions from that AOV
that we've indicated, you can arrive at the mathematical number of what an InstaHelp worker would make comfortably in a day if he or she was well utilized
wi

thout earning support. And if they were to do that for 20 to 25 days of a month, what would be the earnings they would be able to reach? So that's sort of in our head the mental place that that earning support has to get to. The second is obviously customer discounting, which is why the AOVs are lower than that target.
That customer discounting, you know, subsides as customers spend more time on the platform. The first one or two orders, three orders is the highest. Orders, you
know, four to six, it reduces and so on and so forth.
And eventually, as the customer cohort matures, the discounting gets removed and customers come to full price. Those are the two big areas, I would say, where much of the burn today is going. Of course, there's also a lot of, you know, a third area is today the level of acquisition on the supply side and the customer side that we're doing is elevated.
And that will also, you know, sort of subside vis -a-vis as a percentage of the total top line of the category. And all of those basically will come together in our view to help this category break even.
Garima Mishra: Very clear. Thanks for that. Just to confirm, when you say 1.8 -2.0 times the order value, you are referring to the net order value of 172 rupees of 3Q, right?
Abhiraj S Bhal: Correct. Correct.
So we don't think the GOV will necessarily, or the GTV will necessarily...
Garima Mishra: Change, yeah.
Abhiraj S Bhal: Yeah. So that's where it has to get in some sense.
Garima Mishra: Yeah. That discounts per order line has to shrink meaningfully, basically.
Abhiraj S Bhal: Yes. It may not go to zero, but it has to, you know, 80 -90% of it has to go away.
Garima Mishra: Understood. Very clear.
Last question. So on account of social security, you've made these provisions during the quarter. I presume these are towards your permanent and contractual employees.
So are these strictly one -time in nature? Also, any sense on what incremental payouts you may need to make to gig workers as and when rules are framed?
Abhay Mathur: Hi Garima, this is Abhay.
So on your first question, you know, some of the amounts are actually one -time in nature because we had to take into account the new definition of wages as well as look at, you know, leave encashment balances for employees and contract workers specificall y.
So they're largely one -time. On the gig workers, while, you know, the government has announced intent, the method of computation and the rate of contribution is still unclear. So, you know, we're still waiting to understand those exact details.
As we mentioned in the letter, we anyway incurred certain costs today on insurance and other well -being measures for the partners. So those are already in the P&L. But once the details are announced, we'll be able to comment further.
Garima Mishra: Got it. Thank you so much for taking my questions.
Moderator: Hi, all. We will be extending the call to accommodate a few more questions. May I request Mr. Sachin Dixit from JM Financial to ask his question?
Sachin Dixit: Hi, Abhiraj and team, and congratulations on a great set of results. My first

question to start with is on international, right, where we have seen a very decent growth trajectory picking up at almost like 40- 45% Y -o-Y sort of growth.
This growth, if you can break down, I know you have mentioned to some extent in the shareholder letter as well, but can you break down what is driving this
growth? Is it more customer acquisition or people using more frequently? And
how sustainable is it? Like, how do you expect it to taper down over a period of time?
Abhiraj S Bhal: Thanks, Sachin, for the question. You're absolutely right. Our international
market has seen very, very strong growth, not just in this quarter, for the last few
quarters.
In fact, you know, last year in the base, we had Saudi Arabia. And as you might
be aware, from the 1st of January, we've ent

ered into a 50- 50 JV in the Kingdom
of Saudi Arabia. And therefore, we no longer recognize the revenues. We only
recognize our share of losses. And if I remove the impact of that and look at like -
to-like growth, like -to-like growth in this quarter has been about 79%. So very
healthy.
I think, to put it most simply, these markets, UAE, where we are present in Dubai,
Abu Dhabi, and Sharjah, as well as Singapore, represent, in some sense, markets that are very, very similar to India in terms of, you know, customer behavior,
density of cus tomers, you know, migration of customers living in apartment
condos, etc., and supply- side dynamics. And there are also markets where there
is a strong do- it-for-me culture versus do -it-yourself culture. So customers are
happy to get services available, wh ether it's home cleaning, or beauty, or
massages, or other types of services, AC repair, etc.
So there is inherent similarity in the market structure in terms of, you know, high
migration index, you know, high density with which customers reside, and those
favor our business model, and also similarities in customer behavior. We were
early in these markets. We've been in the UAE for more than seven years, and in
Singapore for more than six years now.
we've been hard at work, and we've been investing in these markets, and I think
some of the fruits of that investment we're beginning to see right now. In many
ways, I see these markets as sort of, in terms of just customer behavior, a little ahead of Indi a. And therefore, a lot of learnings that we have from these markets
will also plow back into our India business. So we are very excited by these markets. It's unclear whether the growth will remain at such elevated levels or not, but, you know, we certainly believe that
there is strong long- term headroom for growth in both these markets. And given
the profitability p rofile, both markets should now grow profitably and continue to
compound profitably going forward.
Sachin Dixit: Got it. On the InstaHelp side of, I know a lot of questions have already been asked.
Quickly, if you can provide any color on any sort of cross -pollination that you are
seeing from the existing core services business, or as well as on some ordering
frequen cy metrics, right, so even if you can't give it right now because the business
is nascent, if any view you have where the steady state sort of ordering frequency
might pan out on maybe an annual basis or a monthly basis?
Abhiraj S Bhal: Yeah, so Sachin, on the first question of, you know, cross -pollination, either of
InstaHelp users into India core consumer services or vice versa, we're definitely seeing that happen.
I would not like to call out a particular percentage or number or trend line there, but we're definitely seeing it happen, and it is encouraging enough for us to
continue to invest behind InstaHelp. To your second question on ordering
frequency and usage, InstaHelp's ordering frequency is definitely an order of magnitude better than the India consumer services business. Of course, the AOVs
are a n order of magnitude lower.
It's hard to tell where steady state frequency will settle because we are right now
largely catering to the backfill market, which creates between, you know, two to
four instances in a month, but if and when the model works in the more primary market, which is still very unclear, that ordering frequency could also go up. So it's still very early days, still hard for us to tell, and there's also a lot of competitive intensity. So, you know, some of those orders are also going to our competitors.
Sachin Dixit: Just one final question on the core India services side, right? So if I simply subtract
contribution profit, so basically I subtract EBITDA from contribution profit, it looks like fixed costs have actually dipped Q -o-Q. I do understand that you
mentioned s ome seasonality, but the dip is quite sharp at almost like 12% odd on

a quarterly basis, right? What is driving this fixed cost? Or, I mean, if I am looking
from a base case scenario and building forecast, what number should I be using?
Abhiraj S Bhal: Yeah, Abhay you want to take?

Abhay Mathur: Sure, Sachin. So there is a bit of a dip in the fixed cost, but I would attribute it more to the operating rhythm of the business and seasonality.
If you see, you know, Table 4B, where we disclose the P&L for the India consumer services business, you will see a dip in the marketing expenses from 25 crores to 13 crores, you know, between contribution profit and adjusted EBITDA.
I think this is just qu arter and quarter variation, because if we took the two quarters together, we still invested more. So largely, the sequential change is just the operating rhythm of the business.
Abhiraj S Bhal: And this is one of the reasons why, Sachin, we have underscored multiple times that this business is best evaluated, in fact, our entire business is best evaluated from a margin standpoint year -on-year versus quarter -on-quarter, because there is a lot of f luctuations in, you know, the investment across quarters.
Sachin Dixit: Understood, And Y -o-Y your marketing expenses should be rising slightly in core business as well, or you see that those will more or less be flat?
Abhiraj S Bhal: They have risen, Sachin. So if you see...
Sachin Dixit: No, going ahead, sorry, I mentioned, forgot to mention it.
Abhiraj S Bhal: Yes, I mean, I think, you know, they will continue to see some increase, because we also are committed to investing behind this business and adding more new users, expanding coverage, etc. The endeavor, obviously, is that they don't grow in line with top l ine. And that's how the operating leverage plays out.
Sachin Dixit: Sounds good. Thank you, and all the best.
Abhiraj S Bhal: Thank you Sachin.
Moderator: May I request Mr. Srinath V from Bellwether Capital to ask his question?
Abhiraj S Bhal: Srinath, I think you're on mute. If you can unmute yourself?
Srinath V: Yeah. Hi, am I audible, Abhiraj?
Abhiraj S Bhal: Yes, Srinath. How are you?
Srinath V: Yeah. If the Insta help category scales in line with what Quick Commerce has done, with like over 2 crore plus users today using that service. Would we need to, you know, start looking at stepping up our acquisition funnel or, you know, customer acquisitio n pipeline, given that, you know, this service could be an interesting service for onboarding customers for the first time into the app? So just wanted to kind of get your thoughts on that, and as well as, you know, more services getting into the instant m ode outside of just Insta help. So these were the two areas, if you could share some insight, that'll be great.
Abhiraj S Bhal: Yeah, Srinath, we do believe that it's still very early days for the Insta help category and business. We think and we are hopeful that it will become a very, very large business going forward. And obviously, you know, we do look up to how well the Quick C ommerce giants have scaled up.
And I think we're definitely committed to building this business to its full potential. And be rest assured we will not leave any stone unturned. We will make rational, deliberate and logical choices of investment.
And based on everything that we see, we will keep coming out with added disclosures to help investors like yourself understand why we are making those choices, and why we believe it's in the right long term interest of our shareholders.
We will not shy bac k from investing in this category. And when we see that the potential is very meaningful, and in fact, that's been the track record as well, so far.
Right now, from where we are, we definitely think this is an extremely exciting business that is getting built, and can become very large, and can recruit a lot of new users at scale to the platform. To that extent, our acquisition funnels, our modus op era ndi of acquiring users, all of those will have to adapt to the opportunity ahead. So that's the first part.
Sorry, can you come back with your second question? What was your second question? Instant services?
Srinath V: Yeah, in the app that I see from where I am, a couple of more services have started showing up in this tab next to the main tab as instant. I wanted to, you know, understand how you're thinking through that broadly.
Abhiraj S Bhal: Yeah, so beyond InstaHelp, for our core India consumer services business, wherever applicable, we want to move all of those services to become relatively instantaneous as well.
They may not all be available in 10 minutes or 15 minutes, but certainly, our endeavor is within the hour and within half an hour, and so on and so forth. So whether it's beauty services, whether it's electricians, plumbers, carpenters, AC repair, bathroom cleaning, etc., all of those services, we are pushing hard to make them more and more instantaneous. These will also follow first in high density micro markets, those will, you know, those are the ones that are moving towards becoming more instantaneous and over time across geographies.
And densification is a fundamental driver of moving our core India services business also towards a more instantaneous service delivery model. But we're definitely committed to doing that. And a lot of good learnings from InstaHelp are getting plowed in to our core business to help it accelerate on its trajectory to becoming more instantaneous.

Srinath V: Cool. Perfect. Thanks. Very insightful. I'll get back into the question queue.
Abhiraj S Bhal: Thank you, Srinath.
Moderator: May I request Mr. Devanshu Sampath from Quantum Advisors to ask his next question?
Devanshu Sampath: Hi, good evening. Can you hear me?
Abhiraj S Bhal: Yes, Devanshu. Please go ahead.
Devanshu Sampath: So I have a few questions. So you just mentioned this right now. Actually, that was a question that I had.
So sometime back, you answered that, one of the factors that will lead us to growing at a healthy pace will be the requirement to basically service orders faster, right? So quicker, more instant unplanned kind of services that you'll have to basically cate r to. So will that require meaningful investments as well, something similar to how you've been doing it for InstaHelp? Or is this an effort right now just to sort of improve the utilization levels of the current service providers?
Abhiraj S Bhal: Yeah, Devanshu, that's a great question. Our business model in India core services already operates at scale and at certain density in micro markets.
And we don't think incremental investment as such is needed to move that towards instantaneous behavior. In fact, on the contrary, as we flip micro markets, quote unquote, towards becoming more instantaneous in nature, partner utilization actually improves . And, the business, those micro markets tend to become more profitable.
So it's a win -win for all of us, for the customer, because they're getting the orders faster, for the service professionals, because stacking of orders is better, cancellation rates are fewer and utilization is better, and therefore their earnings are bett er. And obviously for us, because that micro market is more profitable for us. It's more a function of just scale.
In InstaHelp, we are significantly accelerating the journey from zero to that densification scale in micro markets.
In our core services business, we already have a great starting point and we are not artificially doing anything out of the ordinary to make that last leap. We are organically pushing micro markets over as and when they get to that level to become more instantaneous on the margin, wherever we can accelerate faster, we're doing it, but nothing that sort of breaks the bank.
Devanshu Sampath: Sure. Sure. That's very clear.
The second question I have was just around a table that was there in your DRHP.
So there were two tables that you had shared regarding the cohort data, right? So the one I'm talking about is the customer retention basis NTV. Can you please explain what's t he reason for, you know, the smile graph basically forming? It seems to be a little bit more pronounced after COVID.
So can you just explain why this happens and why was it different prior to COVID?
Abhiraj S Bhal: Yeah, I think the smile graph largely happens on account of, you know, customers, A, getting retained well in the same category and over time, also trying out newer categories as they get confidence and trust on the platform. And consequently, customer ret ention across categories and lifetime value increases.
In fact, that table, which we had published in the DRHP and the RHP did not have the impact of InstaHelp or Native.
And as we overlay the impact of those two categories, we believe the lifetime value will only improve further. To your second point on why was the smile up more pronounced post COVID. In fact, the opposite, it was less pronounced after COVID. It was much better prior to COVID. And that's because the cohorts prior to COVID were much smaller scale. And therefore, you know, early adopters are always more forgiving of the platform.
And as cohorts get to a certain scale and maturity, the kind of, smile up that they do relative to early adopter cohorts is never the same. But on an absolute level, they were still very healthy. COVID definitely gave us that fillip, where the absolute sca le of customer acquisition moved to a different orbit.
Devanshu Sampath: Sure. And the last question I have is regarding the, you know, the purifier filters.
So how do you bifurcate them between the two businesses, you know, and with Native now here? So you know, will you be looking to segregate it in the same way? Or will it b e how will you change it going forward?
Abhay Mathur: Hi, this is Abhay, I'll try and answer that question.
So I mean, the filters which are used to replace, you know, the two year old filters within the Native purifier, those are reported under the Native segment. We have also shifted filters sold for other, other purifier machines under the Native brand to Nat ive services. So all filters today are reported under the Native segment.

Abhiraj S Bhal: Basically, Devanshu, any branded filters that we sell on our platform are also
Native brand only. So all of them get reported under the Native segment.
Devanshu Sampath: Sure. So this is not something that has happened in the last quarter or so, right?
It's been, it's been the case since you've been reporting.
Abhiraj S Bhal: Yeah.
Devanshu Sampath: Okay. Sure. Okay. Thank you. Wishing you all the very best.
Abhiraj S Bhal: Thank you Devanshu.
Moderator: May I request Mr. Darshil Javeri from Crown Capital to ask his question.
Darshil Javeri: Hello.
Good evening. And thank you so much for taking my question. A lot of my questions have already been answered.
So just one question regarding, you know, you know, when we are saying that, you know, you want to have an EBITDA of like 1000 crores by like FY31, how
will the trajectory be? Will it be more linear or non -linear in nature? Like will we
see, you know, quar terly improvements happening or, you know, like how will
like FY26, you're saying better than FY25, but FY27 will be more substantially
better. How would the, you know, graph look like if you could, you know, if we
have some kind of, you know, projections for that?
Abhiraj S Bhal: Darshil, great question. Thank you for asking that question.
Let me break down that number into its components and talk about. So the majority of the FY31 projected 1000 crores adjusted EBITDA will come from
India Consumer Services, ex of InstaHelp, which is our largest, most mature core
business. This business will see steady improvement in its adjusted EBITDA year
on year.
Even this business

will see ups and downs on a quarterly basis. But when we look
at its margin percentage and absolute adjusted EBITDA year after year, we should
see a steady improvement. I would not call it less than linear, it'll be faster than
top line growth, but it'll be steady and will steadily march higher and higher every
year, starting FY27 onwards. FY26 in the previous earnings call, we had said will be flat over FY25, but we've seen slightly better performance than we had
expected. And therefore, we've upgraded to saying FY26 will also be marginally
ahead of FY25.
FY27 onwards, we should see sustained adjusted EBITDA margin improvement
in India Consumer Services, ex of Insta. That's where we have maximum
certainty. It's also the biggest driver and contributor to that 1000 crores.
Second place where we have high certainty now is in our international business in UAE and Singapore. We've been a bit conservative in the projections there,
because their business is still early. But we believe that business is also broken
even sustainably .
And now, it'll continue on that margin expansion year on year, probably one and a half to two years behind India in its margin maturity. Those are the two areas
where we have maximum certainty. And those are the biggest drivers of that
profitability.
Almost all the profits of that 1000 crores come from these two. The remainder
will come from Native. We have much less certainty in Native because we are
much more earlier in the business.
And therefore, how soon will Native break even and what will be the total
quantum it will contribute for that 1000 crores is unclear to us. But we do believe in the foreseeable future Native will break even and it will meaningfully
contribute to that 1000 crores adjusted EBITDA. The last business where we have
very little certainty is InstaHelp.
It's less than a year old. This is where there'll be, you know, maximum lumpiness, etc. And it will be a drag oidin the overall profitability of the consolidated
business for the foreseeable future until it breaks even.
This is one of the reasons why we've said that Q3 FY28 is the latest by when business should break even because we believe by then regardless of the level of
investment we're making in InstaHelp, we have the confidence as management
that the rest of the bu sinesses put together will be able to generate sufficient
adjusted EBITDA to offset the losses in InstaHelp. I saw there was one of the
questions in, you know, from some of the panelists particularly asking, you know,
by that timeline. So that, that's the point I wanted to underscore.
Darshil Javeri: Okay, fair, fair enough. And just another question, like in terms of a user base. So
like when InstaHelp, are we, you know, seeing the traction from the users who are already using Urban Company or is it like these are new set of users that, you
know, we a re, you know, getting on board to our services.
The reason I'm asking is I just want to understand is the cross -sell already

happening or are we creating a new category where we can cross- sell further?
Abhiraj S Bhal: Yeah, Darshil, it's both. Short answer is it's both.
Darshil Javeri: Oh, okay. Fair enough. Yeah, that's it from my side. So thank you.
Abhiraj S Bhal: Thank you, Darshil.
Moderator: Thank you everyone for joining in. We will now conclude this conference call and you may now disconnect your lines.
Abhiraj S Bhal: Thank you everyone. Have a good day.

Call: May 2026

Urban

Company Limited

Q4 FY26 Earnings Call Transcript

May 8, 2026

Garima Mishra: Good evening, everyone.

Welcome to Urban Company Limited's Q4 and FY2026 earnings Conference Call. As a reminder , all participant lines

will
be
in
listen-only
mode,
and
there
will
be
an
opportunity
for
you
to
ask
questions
after
the
management's
remarks.
Please
note
that
this
call
is
being
recorded.
On
behalf
of
Kotak
Institutional

Equities, I welcome the Urban Company Management to discuss earnings for the fourth quarter , and year ended 31st March 2026.

I welcome Mr. Abhiraj Singh Bhal, co-founder and CEO, and Mr. Abhay

Mathur , CFO. The results and investor letter have been uploaded to the stock exchanges and are available on the company's Investor Relations website.

Before we begin, I'd like to remind you that certain

statements
made
on
this
call
may
be
forward-looking
in
nature
and
should
be
viewed
in
conjunction
with
the
risk
factors
disclosed
in
the
company's
filings.
With
that,
I'll
hand
the
call
over
to

Abhiraj to share the key highlights of the quarter .

Abhiraj Singh Bhal: Thank you very much, Garima. Good evening, ladies and gentlemen. And welcome to Urban Company's Q4 FY26 Earnings call. Q4

was
a
strong
close
to
what
I
believe
was
a
defining
year
for
Urban
Company
—
our
first
as
a
listed
company .

We
delivered
our
highest
consolidated
NTV
growth
in
15
quarters,

crossed 10 million orders in a single quarter for the first time, and meaningfully improved the profitability of our core businesses. Let me take you through the key highlights. On a consolidated basis, Q4 NTV grew 42% year-on-year to ■1,148 crores, and revenue grew 43% to ■426 crores. For the full year, consolidated NTV reached ■4,290 crores — up 33% year-on-year . Our transacting user base grew

24% to 8.4 million, and 83% of NTV now comes from retained users, a number that has only moved in one direction.

Four points capture where UC stands and how we are building for the future.

One — the core is accelerating, with structurally impr oving margins. India Consumer Services excluding InstaHelp grew 26% in Q4 to ■808 Cr. — our fastest in 11 quarters

— with adjusted EBITDA margin expanding to 3.3% of NTV from 1.6% a year ago. For the full year, this business delivered ■131 Cr. of adjusted EBITDA at 4.1% of NTV . To put that in context: this business was loss-making as recently as FY24.

Two — International is scaling rapidly , and now profitable. UAE and Singapore delivered 84% NTV growth in Q4 to ■211 Cr., despite some demand headwind in the UAE in March from the escalation of the Middle East conflict. For the full year, international NTV grew 75% to ■700 Cr., and the business turned adjusted

EBITDA positive — ■6 Cr. for FY26 as a whole. This business is now four times the scale it was four years ago.

Three — Native is on a clear path to

profitability . NTV grew 67% in Q4 to ■89 Cr., and ■345 crores for the full year — up 122%. The adjusted EBITDA loss narrowed from ■39 Cr. in FY25 to ■31 Cr. in

FY26, with the margin improving from (25.1)% to (8.9)% of NTV in a single year. Early cohort data is encouraging: 75% of customers whose devices have hit the first replacement cycle are renewing through UC — a strong signal of consumer stickiness that will only compound as the installed base grows.

Four — InstaHelp is our most significant investment today , and we're leaning in.

A business that didn't exist at the start of FY26 delivered 2.7 million orders and ■40 crores of NTV in Q4 — with March alone crossing 1.1 million orders. The ■119 crore adjusted

EBITDA loss reflects the cost of building a market: consumer acquisition, network density subsidies, and supply onboarding. We are investing to win, and we intend to stay ahead.

Given the competitive dynamics in

this

space,

we've

shared

everything

we're

able

to

on

InstaHelp

in

the

shareholder

letter .

We

won't

be

going

beyond

that

on

this

call,

and

I

hope

you'll

understand

why.

On

the

consolidated

P&L: adjusted EBITDA for Q4 was a loss of ■98 crores, entirely attributable to InstaHelp's ■119 crore loss. Ex-InstaHelp, the core delivered adjuted EBITDA of ■22 crores. We ended the year with ■2,021 crores in cash. The core (ex InstaHelp) generated ■106 crores of adjusted EBITDA in FY26 — we are well-positioned to fund InstaHelp's growth while maintaining a healthy balance sheet. We retain our target of consolidated adjusted EBITDA breakeven by Q3 FY28, and ■1,000 crores by FY31.

With that, I'll hand back to Garima for Q&A.

Garima Mishra: Thank you, Abhiraj.

We will now

begin

the

question

and

answer

session.

Anyone

who

wishes

to

ask

a

question

may

press

the

raise

hand

button

on

their

Zoom

screens.

Please

introduce

yourself,

and

then

proceed

with

your

questions.

First question from Manisha Addukia, please go ahead.

Manish Adukia: Hi, are you able to hear me?

Garima Mishra: Yes

Manish Adukia: Perfect, thank you.

Hi, good evening, thank you

for

taking

my

questions,

and

congratulations

on

a

great

set

of

numbers,

growth,

really ,

really

strong,

and

also

wanted

to

commend

the

team

on

the

extensive

disclosures

in

the

shareholder

letter ,

they're

really

helpful. I have a few questions, please feel free to stop me, and I'm happy to jump back in the queue.

So first one is on just the growth bits, and I know

you've
talked
about
it
in
the
shareholder
letter
in
a
fair
bit
of
detail,
as
to
what
drove
the
growth,
but
when
I
look
at
just
the
India
Consumer
Services
(ex-InstaHelp),
even
in

the
top
10
cities,
despite
no
category
expansion,
you've
delivered
25%
growth.
Now ,
one
wanted
to
understand,
have
you
seen
this
kind
of
acceleration
in
your
business
in
the
past
as
well?
What

I
mean
by
that
is
the
core
consumer
services
is
not
a
new
category
for
you.
You've
been
doing
this
for
a
long
time.
And
has
this
time's
growth
acceleration
been
different
than

in

the

past?

And

why

has

it

been

different?

Like,

what

is

driving

this

acceleration

versus

what

you

may

have

seen

in

the

pas
t?

And

how

much

a

contributor

is

the

instant

delivery

of

services

that

is

leading

to

growth,

that'll

be

just

helpful

to

understand.

And

maybe

a

follow-on

as

to…

I

know

you

talked

about

durability

will

need

to

be

tested

over

a

few

quarters,

but

any

color

on

your

sense

of

visibility

of

how

long

this

could,

you

know ,

sustain?

That's

my

first

question,

please.

Abhiraj

Singh

Bhal:

Yeah,

that's

a

great

question,

Manish.

So,

Manish,

you

know ,

just

to…

for

the

listeners

to

understand

India

Consumer

Services,

this

is

a…

It's

a

very

large

and

complex

business.

We

have

60-plus

service

categories

spread

across

47

cities,
in
hundreds
of
micro-markets.

And
across
each
and
every
service
category
and
micro-market,
one
has
to
carefully
build
supply
and
demand
density ,
while
ensuring
quality
control,
training,
consistency
of
service,
and
go

the whole nine yards. So we've been hard at work for many years now, doing that. We believe that many of our categories and micro-markets are hitting an inflection point.

From a

densification

standpoint

which

is

driving

the

simple

flywheel,

what

we've

talked

about

in

our

shareholder's

letter ,

of

faster ,

cheaper ,

better .

I'll

spend

a

minute

talking

about

this.

Now ,

once

you

cross

threshold

density

in
a
category
in
a
micro-market,
what
ends
up
happening
is
that
service
professionals
start
getting
utilized
much
better .
Consequently ,
their
earnings
go
up,
and
the
cost
to
serve
for
the
entire
business

comes
down.
Some
of
these
benefits
can
also
be
enjoyed
by
the
customer
in
terms
of
better
value.
Also,
travel
distances
come
down,
job
packing
efficiencies
move
up.
And
therefore,
service
professionals
are

spending

more

time

inside

the

consumer's

homes

delivering

orders,

and

less

time

either

waiting

for

orders

or

traveling

towards

orders.

And

therefore,

customers

also

start

to

enjoy

what

we

call

faster ,

which

is

faster fulfillment.

We have started to roll out UC Instant, where you can get the service within 30 to 60 minutes. And we're in the early innings of UC Instant getting rolled out,

and

the

goodness

of

UC

Instant

playing

across

the

marketplace.

And

then

better .

Because

service

professionals

are

more

dependent

on

the

platform,

they're

seeing

higher

earnings,

we

see

better

retention,

their

propensity

to follow UC SOPs, UC’s quality protocols, etc, all of that improves, and that translates into better service for the end consumer . And simply put, a professional who's earning more and traveling less

is

generally

more

likely

to

deliver

a

service

to

you

with

a

smile.

And

we've

always

maintained

that

happy

professionals

lead

to

happy

customers.

So

that

trifecta

of

faster ,

cheaper ,

better ,

which

is,

you

know ,

seems

like

a

simple

playbook,

but

it's

very

hard

to

execute

across

so

many

services

and

so

many

micro-markets.

When

it

starts

to

get

going,

you

know ,

that

acceleration

is

possible.

Now ,

why

do

we

not

yet

want

to

call

it

a

long-term

trend

and

want

to

observe

for

a

few

quarters?

Because

we're

just

getting

star
ted

on

this.

Yes,

NTV

growth

has

been

accelerating.

In

Q2FY26,

it

was

19%,

it

jumped

to

21%

in

Q3,

and

26%

in

Q4.

You

know ,

as

prudent

management,

we

want

to

wait

and

watch,

see

another

two,

three,

four

quarters,

and

then

see

if

we

believe

that,

you

know ,

the

acceleration,

means

that

from

a

5-year

lens,

vis-a-vis

what

we

had

imagined

earlier ,

this

business

can

be

much

larger.

Manish Adukia: Very helpful, Abhiraj, for that. One… I was just curious that… You operate in, like, multiple cities, let's say if you talk about your top 10 cities.

I'm just surprised

that all of them are seeing acceleration at the same time. I mean, I thought that some cities would be in different places on the curve, where some would have seen acceleration

years
ago,
some
may
see
two
years
later.
So
is
there,
like,
a
common
thread
as
to
why
they
are
all
seeing
acceleration
at
the
same
time,
or
have
you
seen
some
cities

already ,
let's
say,
weak
in
terms
of
growth,
and
some
that
are
accelerating
a
lot?
Like,
just
any
dynamics
that
you
can
share
there,
that'll
be
helpful.
Abhiraj
Singh
Bhal:
I
would
say

for

the

last

few

months,

we've

seen

very

broad-based

demand

acceleration,

to

the

point

where,

internally ,

we

feel

that

the

real

challenge

was

building

high-quality

supply

across

these

cities

and

categories

and

micro-markets.

And
we
know
that
we've
left
demand
on
the
table,
across
cities
and
categories.
Manish
Adukia:
Very
clear ,
thank
you.
Second
question
is
just
on
InstaHelp,
and
I
appreciate,
Abhiraj,
you
mentioned
you

wouldn't

be

able

to

share

too

much

detail,

but

still

trying

my

luck.

I

mean,

when

you

say

losses

remaining

elevated

for

the

foreseeable

future,

are

you

expecting

potential

losses

to

also

increase

from

these

levels.

And

when

you

say

elevated

for

a

prolonged

period

of

time,

are

we

talking

about,

like

four

quarters,

eight

quarters,

longer

than

that,

any

color

you

can

share,

that'll

be

helpful.
And
also,
maybe
a
related
question,
average
order
value
continues
to,
you
know ,
get
lower .
My
concern
there
is
would
it
be
that
much
more
difficult
for
you
to
recover
AOV
if

they

keep

getting

lower ,

and

thus

maybe,

you

know ,

take

you

further

away

from

whatever

your

steady-state

margin

expectations

are,

in

that

business?

Abhiraj

Singh

Bhal:

Yeah,

no,

thanks

for

that

question,

Manish.

So,

actually ,

I'll

just

take

a

little

bit

of

a

step

back,

you

know ,

one

of

our

messages

to

the

investor

community

is

that

at

this

stage

of

our

company-building

journey ,

we

believe
the
investor
community
should
hold
us
very
much
accountable
to
disciplined,
high-quality
execution,
in
our
core
India
services
business,
in
International,
and
even
in
Native,
which
means
continued
growth
and
compounding,
improving

margins
year
after
year.
Some
quarters
they'll
go
up,
some
quarters
they'll
go
down,
but
a
consistent
upward
trajectory ,
every
year,
and
cash
generation.

For
InstaHelp,
we
believe
that
right
now,
the
most

important thing, is market leadership. We believ e we have a strong balance sheet. We believe we have cash-generating core business. And we've given two clear guidelines, that we will hold as guardrails

for

ourselves,

which

is

a

consolidated

break-even

at

an

adjusted

EBITDA

level

by

Q3

FY28,

and

INR

1,000

crores

of

adjusted

EBITDA

by

FY31.

And

we're

committed

to

sticking

to

those

overall

guardrails.

Within that, the rest of it, I think the management needs the manoeuvrability . You know , it's a dynamic market.

Some quarters, AOVs will move up, some quarters they'll move down. It'll be a

combination
of,
you
know ,
tactics
and
strategy .
We're
very
much
focused
on,
you
know ,
seeing
that
this
shapes
up
well
in
the
medium
term.
We
have
our
eyes
on
all
of
those
numbers

that
you
spoke
about.

We
believe
right
now
the
most
important
thing
for
us
is
continuing
to
cement
our
market
leadership
and
staying
ahead,
of
the
game,
while
longitudinally
making
sure
that

loss per order keeps coming down, and over a period of time, losses come down. How much time it will take, etc, is something we will convene to calibrate.

Manish Adukia: Very

clear ,

just

maybe

last

question

from

me

before

I

jump

back

in

the

queue.

I

know

you

have

a,

answer

or

a

question

around

artificial

intelligence,

but

if

you

can

just

maybe

help

summarize
for
us,
both
on
the
demand
side,
and
maybe
also
on
the
cost
side,
what
are,
let's
say,
the
changes
that
we
can
expect
from
an
AI
perspective,
in
terms
of,
you

know ,

revenue

levers

or

cost

levers.

That'd

be

helpful.

Thank

you.

Abhay

Mathur:

Hi

Manish,

this

is

Abhay .

I'll

take

that

question,

and

thank

you

for

asking

it.

I

think

this

is

an

area

which

is

full

of

potential

for

us,

and,

you

know ,

we've

taken

initial

steps.

So,

to

start

with,

we've

actually

built

a

solid

layer

of

AI

on

top

of

our

core

platform,

which
is
now
embedded
in
everyday
operations.

I'll
call
out
a
few
areas
where
we've
made
progress
and,
you
know ,
where
we're
excited
about
for
the
future.
I
think
the
first
one

really

is

on

quality .

So

we

are

leveraging

AI

extensively

in

proof

of

work.

We

are

auditing

100%

of

images,

which

are

shared,

you

know ,

during

the

job.

Also,

running

diagnostics

in

some

of
our
repair
and
appliance
and
handyman
categories.

We've
made
a
fair
amount
of
progress
in
customer
and
partner
support,
where
55%
of
all
partner
support
queries
are
now
handled
effectively
through

AI,

and

this

is

helping

us

deliver

a

low

cost

as

well.

They're

also

generating

top

of

funnel

for

partners

through

AI,

by

asking

existing

partners

to

refer,

jobs

that

were

done

by

people

earlier .

We've

always

been

using

AI

for

demand

forecasting.

AI

has

only

made

our

demand

forecasting

and

trend

lines

simpler

and

more

accurate.

We've

started

deploying

it

in

a

couple

of

areas for revenue as well. So, for Native, for example, if your filter life is about to expire, you will get a call from Urban Company reminding you to refresh it. We are visualizing,

interior

spaces

for

our

Revamp,

using

AI,

which

helps

us

make

decision-making

much

simpler .

So,

you

know ,

these

early

steps

in

revenue

generation.

On

code,

I

think

this

is

the

area

where

we've

seen

the

maximum

progress,

you

know ,

conservatively ,

more

than

90%

of

our

code

is

being

shipped,

by

GenAI.

And

this

was

not

the

case

some

time

ago,

so

a

lot

of

the

basic

work

is

being

done

leveraging

AI.

And

we're

also

using

it

for

fraud

detection.

So,

I

think

we're

just

getting

started.

This

is

a

space

with

a

lot

of

potential.

We're

actually driving usage within the organization, and we'll keep updating investors as we see more progress.

Manish Adukia: Thank you so much for patiently answering all my questions. All the best.

Garima Mishra:

Thanks.
Next
question
from
Sachin
Salgaonkar .
Please
go
ahead.
Sachin
Salgaonkar:
Thanks,
Garima.

Hi,
management,
good
day.
I
have
3
sets
of
questions.
First
question
on
Native.
Your
losses
have
expanded
on
a

YOY
and
QOQ
basis.
Anything
specific
happening
out
there?
And
Abhiraj,
Abhay ,
any
specific
timelines
we
could
have
from
a
Native
break-even
point
of
view?
Abhiraj
Singh
Bhal:
Yes,
nothing
specific,
as
such,

to
call
out,
Sachin,
I
think.
The
business
trajectory
has
grown
well.
Business
has
grown
by,
67%
on
an
NTV
basis,
even
faster
on
net
revenue.
And,
the
margins
have
improved.
So,
same

time

last

year,

the

margin

trajectory

was

negative

14.7%.

of

NTV ,

and

now

it's,

negative

9.9%.

So

margins

have

improved.

We

are

fairly

confident,

I

would

say,

on

the

trajectory

from

here

on to achieve break-even. We don't want to give a timeline yet, but, you know , it should happen in the next few quarters, I would say.

Sachin Salgaonkar: Got it. And this breakeven will

happen

despite

launch

of

new

products,

in

the

Native

category?

Abhiraj

Singh

Bhal:

Yes,

we

believe

so.

It

should

happen,

despite

any

new

products

that

we

launch.

Some

of

the

elevated

losses

are
on
the
count
of
R&D
for
new
products,
so
our
core
is
actually
already
approaching
close
to
breakeven.
Sachin
Salgaonkar:
Got
it.
Second
question
is
on
InstaHelp,
and
I
completely
get
in

terms

of

management

having

the

flexibility ,

it's

a

new

business.

But

what

we

are

actually

seeing

is

both

your

competitors

raise

money .

In

pockets,

one

could

see

competition

getting

irrational.

So

any

guardrails

you

want

to

indicate

to

the

analysts

and

investor

community ,

hey,

these

are

some

of

the

things,

like,

for

example,

on

a

loss-per -order

basis,

there

is

no

intention

to

become,

you

know ,

much

higher

than

that,

because

I

understand

your

medium-term

and

longer -term

targets

in

terms

of

EBITDA

breakeven,

as

well

as,

you

know ,

where

you

want

to

have

an

EBITDA.

But,

you

know ,

I

mean,

if

on

a

quarter -to-quarter

basis

losses

are

expecting,

you

know ,

we

do

expect,

you

know ,

some

comfort

in

terms

of,

hey,

you

know ,

this

is

a

threshold

where

one

could

get

a
sense
that
competitive
intensity
is
getting
completely
irrational,
and
perhaps
it's
okay
to
let
go
a
bit
of
a
mark
et
share,
just
in
case,
because
things
are
a
bit
bad.
So

again,

wanted

to

understand

any

color

you

could

give,

and

of

course,

a

follow-up

is,

what

would…

because

this

is

a

relatively

new

business,

and

it

is

not

there

in

most

of

the

countries, across the globe, how could one think about any range for a steady-state economic, a unit economics, or EBITDA margin in the medium term?

Abhiraj Singh Bhal: Yeah, no, both fair

questions,

and,

you

know ,

appreciate

where

you're

coming

from,

Sachin.

I

think,

you

know ,

we've

been

doing

this

now

for

close

to

12

years,

11

and

a

half

years,

Sachin,

and

we've

seen

various
cycles
of
competition
and
irrationality ,
so
it's
nothing
new
to
us.
I'd
say
the
level
of
competitive
intensity
that
we're
seeing,
and
irrationality
that
we're
seeing,
right
now
is
pretty
manageable.
We

are
not
perturbed
by
it.
If
anything,
we're
very
clear
that
we're
playing
to
win.
And,
and
not
playing,
to
look
elegant.
And
sometimes,
in
the
short
run,
you
know ,
either
you
can

optimize
for
market
share,
or
you
can
optimize
for
on-paper
elegance.
And
we're
not
optimizing
for
elegance.
We're
optimizing
to
win,
we're
optimizing
for
market
share,
and
which
means
if
we
have
to

be
irrational
from
time
to
time,
we
should
be
willing
to
be
irrational
as
well.
So,
I
don't
worry
about
competition
too
much.
I
think
our
eyes
are
on
the
customer
and
the

service
professional,
and
we're
playing
to
win.

Sachin
Salgaonkar:
Got
it.
A
related
question
on
the
InstaHelp
is,
there
are
adjacencies
and
potential
new
services
also
one
could
look
to
explore.
For

example,

cooks,

drivers,

help

for

elderly ,

and

so

on

and

so

forth.

Are

these

some

of

the

areas,

or

are

there

any

adjacencies

you

guys

are

experimenting

and

looking

to

expand

into?

Abhiraj

Singh

Bhal:

We

keep

experimenting,

Sachin,

but,

you

know ,

strategically

right

now,

we

think

all

our

energy

and

resources

and

focus

should

actually

go

into

densifying

and

winning

in

the

core

segments.

We know that some of our competitors are experimenting with some of these adjacencies, but we are focused on core. We believe the player that will win the core segment in the core micro-markets,

will,

that's

essentially

the

turf

to

win.

And

that's…

that's

all

our

attention

and

focus

right

now.

And,

you

know ,

we

have

limited

resources

as

a

company ,

monetary

and

people,

and

we

want

to

focus

all

of

them

towards

winning

the

main

segment

and

the

main

micro-markets.

Sachin

Salgaonkar:

Very

clear .

And

lastly ,

Middle

East

clearly ,

you

know ,

is

now

seeing

some

signs

of

recovery .
How
is
your
business?
Are
we
back
to
square
one
in
terms
of
recovery ,
or
it's
still
a
gradual
recovery?
Abhiraj
Singh
Bhal:
No,
more
or
less
back
to
square
one.
In

fact,
the
dip
for
us
also
was
not…
I
mean,
it
was
there,
but
we
were
far…
we
were
far
more
resilient
than
most
other
businesses,
and
that's
visible
in
the
numbers
that

you

would

have

seen,

that

we

put

out

there

on

the

month-on-month

trajectory ,

so

there

was

a

dip,

but,

you

know ,

the

year-on-year

growth

continued

to

be

pretty

healthy ,

and,

the

business

now

is,

is,

you

know ,

almost

back

to

full

recovery .

Sachin

Salgaonkar:

Perfect,

all

the

best.

And

Garima,

thanks

again.

Abhiraj

Singh

Bhal:

Thank

you,

Sachin.

Garima

Mishra:

Thank

you.

Maybe

I'll

go

next.

I also had a few questions. First, on the core business, right? The acceleration in NTV growth is very encouraging.

Very near term, do you think there could be some hiccup in

this
accelerated
growth,
not
because
of
lack
of
demand,
but
because
of
lack
of
supply ,
right,
due
to
elections
and
the
resultant
temporary
workplace
displacement?

Abhay
Mathur:
Hi,
Garima,
this
is
Abhay ,
I'll

try
and
answer
that.
So,
you
know ,
in
the
last
quarter ,
we
didn't
really
see
any
disruption.
I
think
in
the
month
which
has
gone
by,
we
are
seeing,
you
know ,
some
level

of
demand
loss.
But
nothing
unusual.
I
think
we
had
seen
some
of
this
coming,
and,
you
know ,
we
had
prepped
in
advance,
and
we
had
onboarded,
you
know ,
more
and
more
professionals.

So

I

think,

you

know ,

for

a

services

business

like

ours,

this

is

a

BAU

problem,

and

there's

nothing,

you

know ,

which

we

are

really

concerned

about

here.

Garima

Mishra:

Got

it.

Okay ,

good

to

know .

Second

question

that

I

had

was

on

Native.

Now ,

you've

given

a

target

of

quadrupling

net

revenue

of

this

business.

Could

you

give

us

some

sense

of

the

pipeline

of products you are building that would enable you to achieve this target? Abhiraj Singh Bhal: For the large part, Garima, we believe this will have to come from the current two products

that
we
have
which
is
water
purifiers
and
smart
electronic
door
locks.
We've
not
put
a
timeline
to
it
deliberately ,
because
we
don't
know
how
long
it
will
take,
but
we
believe
that

those two segments should be meaningful enough over a period of time to get us there.

And a little bit of the revenue, and this is also because it's not just the revenue

from

product

sales,

as

in

water

purifiers,

the

installed

base

increases.

Garima,

the

service

revenues

also

start

to

kick

in.

And

over

time,

they

can

be

quite,

quite

meaningful,

especially

given

that

our
retention,
early
retention
signs
are
very,
very
healthy
and
a
meaningful
multiplier
of
what
the
industry
averages.

Some
of,
that,
you
know ,
number
could
also
come
from
new
products
that
we
launch,

but
for
the
large
part,
I
think
it'll
be
the
existing
categories.
Garima
Mishra:
Got
it,
very
clear .
Third
piece
of
the
question,
you
know ,
you,
on,
InstaHelp.
In
your
view ,
what
could

be

the

potential

market

structure

here,

say,

2-3

years

out?

Do

you

think

two

or

more

players

can

coexist?

And

a

related

question

here

is,

with

some

competitors

raising

money ,

in

fact,

some

of
them
very,
very
recently ,
do
you
think
they
might
want
to
diversify
into
what
is
your
core
business?

Abhiraj
Singh
Bhal:
Very
hard
to
say
how…
both
how
large
this
market

is

and

what

the

end-stage

structure

c
ould

look

like.

Generally

speaking,

I'm

of

the

view

that

in

businesses

of

trust,

It's

a

winner -take-all.

And,

you

know ,

this

is

a

business

of

trust.

So…

I

really

don't

see

any

reason

why

there

should

be

multiple

players

over

time.

And

that's

at

least

the

mindset

with

which

we

are

approaching

this

market.

In

our

Core

business,

we

have

th

lion's

share

of

the

market,

and

we'd

like

something

similar

to

play

out

here

as

well.

But

of

course,

we,

are

mindful

that

in

order

to

achieve

that,

we

have

to

deliver

a

superlative

service

to

the

end

consumer ,

win

on

execution,

and

there

are

other

funded

competitive

players

who

are

also

attacking

the

market.

So,

I

think

this

will

eventually

boil

down

to

execution

over

a

period

of

time.

Which

other

services

they

will

launch,

and

you

know ,

it's

honestly ,

beyond

a

point,

it's

not

something

that

we

worry

about,

because

our

core

business

is very, very large. We're still scratching the surface. We're probably sub 1-2% of the total market, addressable market. So, we're focused on what we have to do there.

Garima Mishra: Got

it.

And

you

raised

this

important

point

of,

you

know ,

building

a

trustworthy

service.

So

any,

you

know ,

one

or

two

points

you

want

to

highlight,

particularly

on

the

InstaHelp

business,

which

sort

of
differentiate
your
service,
you
know ,
beyond
the
availability
part,
compared
to
whatever
else
is
available
in
the
market?
Abhiraj
Singh
Bhal:
I
think
our
view
is
that
this
is
a
service
of

trust.

It's

a

service

where

the

quality

of

the

service

professional,

the

training,

the

effort

that

you

put

into

selection,

onboarding,

the

details

that

you

go

in

into

SOPs,

etc.

These

are

the

things

that

matter .

They

will

compound

slower ,

than,

you

know ,

discounts

and

instantaneous

availability

and

throwing

money

at

the

problem,

but

they

will

compound

in

the

long

run.

And

that's

what

we're

focused

on.
We
actually
do
not
dilute
our
quality
selection
and
onboarding
and
training
processes
for
this
business
vis-a-vis
our
core.
That
playbook
that
we
have
developed
on
the
core
business
over
the
last

10 years is something that we have extrapolated to Instahelp as well. We talked about average ratings in Instahelp, which, are at 4.7, very close to where the core is, and we believe

materially
better
than
the
rest
of
the
industry .
We
also
believe
our
repeat
rates
and
retention
rates
are,
to
the
best
of
our
knowledge,
industry
leading
at
this
point
in
time.
And
that's

part

of

the

reason

why

we

are

the

clear

market

leaders

today .

So,

in

our

view ,

it

will

eventually

come

down

to

quality

of

service,

quality

of

the

supply

side,

and

like

our

core, this will be a supply-first business, and, you know , whoever wins the supply side of the market will be the winner .

Garima Mishra: Very clear . Thanks for that, Abhiraj. Next question, from

Gaurav

Rateria.

Please

go

ahead.

Gaurav

Rateria:

Hi,

thank

you

for

taking

my

question.

Congrats

on

a

great

execution.

My

first

question

is

on

the

densifica
tion

that

you

talked

about.

Have

you

seen

any

impact

of

competition

in

those

micro-markets.

My

sense

is

that

the…

there'll

be

meaningful

difference

in

the

consumer

experience

because

of

the

instant

service

that

you

are

launching

versus

what

competition

would
be
doing
in
select
categories.
And
therefore,
they
will
be
years
behind
to
catch
up.
So,
there
would
have
been
some
consolidation
in
those
micro-markets?
Any
anecdotal
evidence,
if
you
can
share

on
that?
Abhiraj
Singh
Bhal:
This
is
with
reference
to
India
Core,
right?
Yes.
Gaurav
Rateria:
Yeah,
India
Core
Business.
Abhiraj
Singh
Bhal:
Yeah,
to
be
honest,
in
India
Core
we
don't
spend

a
lot
of
time
looking
at
or
tracking
competition.
Part
of
the
reason
could
be
that,
you
know ,
competition
is
very
distributed
across
categories
and
micro-markets.
I
think
much
of
this
growth
is

actually

just

driven

by

internal

factors

around,

you

know ,

what

I

refer

to

as

faster ,

cheaper ,

better .

And

as

I

mentioned,

like,

we

feel

we

left

demand

on

the

table

because

we

were

supply-constrained
for
most
of
the
quarter .

So
I
think
that's
really
where
our
effort
is.
It's
on
the
supply
side,
it's
on
making
sure
that,
quality
of
our
supply
side,
of
our

service
professionals,
training,
SOPs
are
top
notch.
And
we
continue
to
drive
densification,
and
consequently
roll
out
instant.
And
I
think
the
goodness
of
that,
in
our
view ,
those
are
strong
inputs.
If

the
service
is
available
faster ,
it's
better
value
for
the
end
consumer ,
and
the
quality
of
service
is
improving,
you
know ,
in
our
view ,
that
should
translate
into
growth.
Gaurav
Rateria:
Got
it.

Secondly ,

on

the…

is

there

a

sensitivity

to

AOV

from

demand

perspective?

I

know

that

for

a

lot

of

the

basic

categories,

the

AOVs

would

have

remained

largely

similar

across

the

last

couple

of

years.

And

if

there

is

an

inflation-related

problem,

even

if

it

is

a

transient

one,

there

could

be

some

impact

on

the

AOVs.

And

I'm

just

trying

to

understand,

based

on

your

historical
experience,
have
you
seen
any
sensitivity ,
or
it
doesn't
really
matter?
Abhiraj
Singh
Bhal:
I
would
say
in
the
core,
the
sensitivity
is
low.
In
InstaHelp,
of
course,
is
very
high.
But

in

the

core,

we

haven't…

like,

there's

always

some

sensitivity ,

but

it's…

it's

very

much

manageable.

Gaurav

Rateria:

Okay .

Last

question

on

your

outlook

on

consolidated

break-even.

Nothing

has

changed,

right?

While

external

involvement
on
Insta
category
has
changed
in
terms
of
potential
fundraising,
etc.
Is
it
coming
from
greater
confidence
in
the
core
business,
given
that
you
have
executed
or
out-executed
your
own
expectations
in

fiscal

26?

Which

gives

you

a

very

strong

confidence

that

even

if

the

investments

were

to

remain

higher

than

what

you

would

have

thought

through

in

Insta,

you

would

be

more

than

able

to
offset
that
with
better
profitability .
In
the
core
business,
so…
or
is
it
your
view
that
the
external
environment
could
change
fast?
Thank
you.
Abhiraj
Singh
Bhal:
It's
the
former .
I
think

we're…

we

feel

that

the

way

we're

executing

on

the

core

will

give

us

enough

buffer

and

cushion.

Even

if

the

external

environment,

for

instance,

were

to

deteriorate.

Yeah.

Gaurav

Rateria:

All

the

best,

thank

you.

Abhiraj

Singh

Bhal:

Thank

you,

Gaurav .

Garima

Mishra:

Next

question

is

from

the

line

of

Pranav

Kshatriya.

Please

go

ahead.

Garima

Mishra:

Please

go

ahead.

Pranav

Kshatriya:

My

question

is,

you

know ,

the

first

question

is

regarding

the…

Garima

Mishra:

your

voice

is

unclear .

Pranav

Kshatriya:

Hello,

can

you

hear

me?

Garima

Mishra:

It's

better

now.

Please

go

ahead.

Pranav

Kshatriya:

My question is regarding the volatility in the margin for the India core business. So, while the EBITDA margins have structurally sort of trended up, in this quarter , as you said, that, you

know ,

this,

you

know ,

you

were

supply

constrained,

and

hence

one

would

have

expected

the

margins

to

sort

of

go

up,

but

that

has

not

really

happened.

So,

what

exactly

led

to,

that

situation?

And

my

second

question

is

that,

you

know ,

for

InstaHelp

platform,

what

kind

of

cohort,

you

know ,

are

we

getting?

Is

it

the

same

cohort

which

was

sort

of

using

other

services

is

now

coming

to

InstaHelp,

or

there

is

a

new

set

of,

customers

who

are

coming?

And

is

there

any

rub-of f

of,

those

customers,

because

of

this

application?

Abhiraj

Singh

Bhal:

So,
thanks
for
the
question,
Pranav .
On
the
India
Consumer
Services,
adjusted
EBITDA
margin
as
a
percentage
of
NTV .

We've
mentioned
this
in
the
past,
that
the
right
way
to
think
about

this

is

year-on-year

versus

quarter

on

quarter .

And

that's

because

there

are

multiple

factors

every

quarter

around

seasonality ,

etc.

And

therefore,

you

know ,

Q1

and

Q3

in

every

year

are

structurally

better

quarters

than

Q2

and

Q4.

Why

is

that

the

case?

It's

because

…

you

know ,

Q1

and

Q3

are

seasonally

stronger

quarters.

Therefore,

a

lot

of

the

marketing,

supply

ramp-up,

etc.

for

us

happens

in
the
preceding
quarters,
which
is
Q2
and
Q4.
Q4
also
happens
to
be
the
quarter
where
we
have
our
annual
appraisals.
So,
for
a
variety
of
factors,
if
we
look
at
this

business

on

a

quarter -on-quarter

basis

from

a

margin

standpoint,

we'll

not

be

able

to

fully

understand

and

appreciate.

Now

that

we

have

8

quarters

of

trajectory ,

we

can

actually

compare

year-on-year .

And

that's

what

we've

always

told

investors,

that

don't

look

at

it

quarter

on

quarter ,

look

at

it

year-on-year .

Year

on

year,

Q4

has

gone

from

1.6%

in

Q4

FY25

to

3.3%

in

Q4

FY26,

and
also
the
entire
India
Consumer
Services
business
has
gone
from
3.3%
to
4.1%.

That
trajectory ,
we
believe,
should
continue,
and
eventually
this
business
should
get
to
about
10%
adjusted
EBITDA
as

a

percentage

of

NTV ,

over

a

longer

period

of

time.

And

every

year,

there

will

be

margin

expansion.

Some

years

it'll

be

faster ,

some

years

it'll

be

slower .

But

the

right

way

to

think
about
it
is
year-on-year ,
not
quarter .

So
that's
the
first
question.
Second
question
on
InstaHelp,
I
think
we're
see
ing
both
existing
cohorts
of
Urban
Company
consumers
adopt
it,
but
we're

also

seeing

newer

cohorts

and

newer

customers,

first

time

to

the

platform,

adopt

InstaHelp,

and

so

InstaHelp,

to

that

extent,

is

also

helping

us

expand

the

total

tap.

Pranav

Kshatriya:

Okay ,

thank

you,

that's

from

my

side.

All

the

best.

Abhiraj

Bhal:

Thank

you,

Pranav .

Garima

Mishra:

Next

question

is

from

Srinath

V.

Please

go

ahead.

Srinath

V:

Hi,

Abhiraj.

Congratulations

on

the

good

set

of

numbers.

First,

I

wanted

to

understand,

you

know ,

as

we

go

into

FY27,

how

do

we

look

at,

you

know ,

between

adding

new

micro-markets

and

deepening

our

supply

and

InstaHelp?

You

know ,

how

many

new

micro-markets

are

we

looking

to

open,

or

cities

are

we

looking

to

open?

Because,

you

know ,

for

example,

in

our

office,

more

than

50%

of

the

staff

don't

have

access

to,

you

know ,

InstaHelp.

So

how…

when

would,

you

know ,

our

top

3

cities

get

fully

covered

for

us,

you

know ,

across,

say,

Bangalore,

NCR,

and

Mumbai,

for

example?

Abhiraj

Singh Bhal: Yeah, good question, Srinath. I think… hard to give a precise timeline, but what I'd say is that our leaning is always towards densification and going deeper and penetrating existing micro-markets.

We'll continue to expand coverage in a calibrated fashion, but we do believe that the most important micro-markets have to be won, and therefore, densifying and penetrating them deeper will be priority over

proliferation.
Srinath
V:
Perfect.
Any
broad
thoughts
on
getting
full
coverage
in
the
top
cities?
Abhiraj
Singh
Bhal:
I
think
full
coverage
may
not
happen
even
for
a
long
period
of
time,
because,

in
certain
parts
of
the
city,
there
might
not
be
adequate
density
for
me
to
be
able
to
have
effective
cost
to
serve.
So,
micro-markets
that
we're
prioritizing
are
the
micro-markets
where
we

believe

that

as

we

densify ,

we

can

eventually

get

those

micro-markets

to

break

even

and

eventually

become

profitable,

even

if

in

the

interim,

they

are

loss-making.

There'll

be

some

parts

of

the

city

where just the demand density is so spread out that, at least so far, we haven't cracked the model to serve them well.

Now work on that will continue to happen, but,

you

know ,

if

you

think

about

how

demand

density ,

and

cost

to

serve

plays

out

in

InstaHelp,

it

is

actually

far

more

hyperlocal

than

quick

commerce.

And

so

to

that

extent,

you

know ,

the prioritization playbook here is, even more important. Yeah.

Srinath V: Perfect. On the strong India services growth would it be fair to assume that, some of the Instahelp flywheel is playing out?

Any

qualitative

comments

on,

how

cross-sell

is

playing

out

with

customers

who

are,

you

know ,

Instahelp

customers?

As

the

app

moves

to

the

front

page,

you

know ,

of

the

phone,

are

we

seeing
any
higher ,
you
know ,
repeat
usage
for
those
particular
cohort
of
customers
that
could
be
helping
the
strong
growth
in
India
services?
Abhiraj
Singh
Bhal:
Too
early
to,
to
form
a
view

there,

Srinath.

But

if

anything,

we

think

the

growth

is

in

and

of

its

own

merit.

Srinath

V:

Got

it.

And

the

last

question

would

be,

you

know ,

given

that

some

level

of

marketing

activity

is

also

started

for

InstaHelp,

the

losses

that

we're

posting,

not

necessarily

all

of

these

losses

are

coming

from

a

CM

level

of,

you

know ,

MG

and

consumer

subsidies.

Would

there

be
some
amount
of
spends,
you
know ,
on
performance
marketing
or
advertising,
you
know ,
in
a
way,
fixed
cost
of
InstaHelp?
Abhiraj
Singh
Bhal:
Yes,
absolutely ,
and
we've
mentioned
that
in
the
letter

as well, that this quarter saw elevated marketing to acquire new users, and build the brand, including for the Cricket World Cup. And actually all other metrics, which formed part of the loss

per
order
moved
in
the
right
direction
and
moved
positively .
It
was
only
largely
on
account
of
this
one
metric
that
the
loss
per
order
swung
in
the
reverse
direction.
But
everything
else

actually , moved in the right direction.

Srinath V: So, to be clear , contribution loss per order was actually down, but it was largely losses from fixed cost.

Abhiraj Singh Bhal: Correct.

Srinath V:

Perfect,

thanks.

Thanks

a

lot.

I'll

get

back

to

the

question

queue.

Garima

Mishra:

Thank

you.

Next

question

is

from

the

line

of

Abhishek

Pathak.

Please

go

ahead.

Abhishek

Pathak:

Yeah,

hi,

thanks,

Garima,

for

the

opportunity .

Hi

team,

congrats

on

a

great

quarter .

So

my

question

was,

kind

of,

you

know ,

a

follow-up

on,

on

the

InstaHelp,

offering.

Is

it

fair

to

assume

that,

you

know ,

as

compared

to

other

services

which

require

densification,

the

degree

of

densification

required

here

is

far

higher

because,

you

know ,

I

mean,

the

maids,

etc,

they

might

not

really

have

modes

of

transport,

and

from

that

perspective,

the

TAM

would

probably

be

even

more

constrained,

considering

it

requires

hyper

densification.

In

that

context,

considering,

you

know ,

we've

got,

let's

say,

two

to

three

players

attacking

this

particular

sort

of,

you

know ,

TAM

in

a

very

irrational

way,

how

long

or

rather ,

what

are

the

kind

of,

you

know ,

criteria

we

set

ourselves

to,

in

the

sense

that

when

does

this

market…

if

it

becomes

irrational

for

too

long,

do

we

choose

to

kind

of,

you

know ,

pare

back

sort

of

our

investments,

or…

or

do

we

double

down

here,

you

know ,

considering
InstaHelp
can
be
a
funnel
to
our
other
offerings
which
may
be
slightly ,
sort
of,
you
know ,
which
may
have
slightly
higher
TAM.
Thank
you.

Abhiraj
Singh
Bhal:
Yup.
Short
answer

to that question is… You're right, InstaHelp’ s density is far more granular compared to core, or perhaps any other consumer internet business, to the best of our knowledge. Does that constrain the TAM?

Maybe,

you

know ,

and

maybe

playbooks

can

evolve

to

serve

medium-density

micro-markets

as

well.

So,

I

think

that's

to

be

seen.

How

large

as

a

consequence

of

that,

how

large

is

the

TAM

and

the

size

of

the

prize?

We

don't

know ,

and

honestly ,

we

don't…

beyond

a

point,

like,

that's

not

the

most

important

thing

we're

worried

about

today .

Whatever

it

is,

we

want

to

win
it.
That's
how
we
think
about
it.
I
think
we
don't
have
a
choice.
We
have
to
win,
and
we
have
to
win
big.
If
it's
a
very
large
TAM,
great.
If

it's

a

medium-sized

TAM,

that's

also

good

for

us,

because

we

have

other

businesses

that

we

live

and

eat

our

bread

off,

so

this

business

only

helps

accelerate

those,

and

it

plays

a

certain
role
in
terms
of
frequency
and
engagement
on
the
app.
We
have
discussed
and
debated
this
internally ,
and
our
view
is,
you
know ,
whether
it's
a
mid-sized
TAM
or
a
very
large

TAM,
right
now,
from
our
perspective,
strategically ,
the
only
thing
that
makes
sense
is
to
attack
it,
aggressively
and
win
it.
Abhishek
Pathak:
Oh,
very
clear
Abhiraj.
Abhiraj
Singh
Bhal:
Does
that
make

sense?

But

that's

how

we

are

thinking

about

it,

like,

actually

thinking

about

it

pretty

simply ,

rather

than

trying

to

overcomplicate

it.

Whatever

the

size

of

the

TAM

is,

we

have

to

win

it.

Abhishek

Pathak:

Understood,

thank

you,

thank

you

so

much.

Garima

Mishra:

Sure,

thank

you.

Next

in

line

is

Swapnil

Potdukhe.

Please

go

ahead.

Swapnil

Potdukhe:

Hi,

thanks

for

the

opportunity .

My

first

question

is

with

respect

to,

InstaHelp

versus

International

markets.

Now ,

the

question

out

here

is,

like,

is,

winning

in

the

InstaHelp

market

in

India

more

important

than

opportunity

available

in,

let's

say,

some

of

the

other

geographies

where

your

services

are

not

available

beyond

UAE

and

Singapore

today ,

and

there

could

be

a

potential

TAM

available

there

also.

And,

with

limited

competition

compared

to

what

is
happening
in
InstaHelp
right
now.
Abhiraj
Singh
Bhal:
Yeah,
no,
good
question.
And
strategically ,
and
we
mentioned
that
in
the
past
in
a
few
shareholder
letters
as
well,
I
think
we've
strategically

chosen
to
prioritize
India.
And
the
two,
overseas
markets
that
we
have
fully
owned
subsidiaries
in,
UAE
and
Singapore,
as
well
as
KSA
through
a
JV.
We
are
clear
we're
not
launching
any

other
international
markets
I'm
sure
the
opportunity
is
good
in
some
of
these
markets,
but
from
our
strategic
prioritization
standpoint,
we
are
focused
in
India
and
these
two
markets
for
now,
and
for

the
foreseeable
future.
Swapnil
Potdukhe:
So,
will
it
be
fair
to
say
that
till
the
time
you
achieve
your
guidances,
the
medium-term
guidances,
any
incremental
international
geography
is
broadly
out
of
question?
Abhiraj

Singh
Bhal:
Yes,
absolutely .
And
we've
said
that,
in
one
of
the
past
letters
in
as
many
words
as
well.
Swapnil
Potdukhe:
Got
it.
The
second
question
is
with,
respect
to,
is
there

any,

seasonality

in

your

customer

marketing

expenses

for

the,

India,

business?

Because

it

seems

from

3Q

to

4Q

for

the

last

two

years,

these

costs

have

been,

increased

on

a,

you

know ,

quarterly

basis.

Abhay Mathur: This is Abhay and I'll answer that. Yes, there is seasonality in our marketing spend and the cadence. So, typically , as Abhiraj mentioned, you know , Q1 and Q3 are

the
quarters
where
we
see
a
lot
of
consumer
activity .
And
before
the
beginning
of
those
quarters,
you
know ,
and
to
some
extent
during
the
quarter ,
we
do
increase
our
marketing
spends
at

that
time.
Overall,
if
you've
seen,
we
have
seen
consistent
operating
leverage
in
our
marketing
spends.
Over
the
last
couple
of
years.
But
yes,
in
the
year,
there
are
spikes,
depending
on
when

the
season
is
about
to
start.

Swapnil
Potdukhe:
Got
it,
got
it.
Thank
you,
guys,
those
were
my
questions,
and
all
the
best.
Garima
Mishra:
Thank
you.
Next
in
line
is
Pranay

Jain.

Please

go

ahead.

Pranaya

Jain:

Hi,

am

I

audible?

Garima

Mishra:

Yes

Pranaya

Jain:

Okay ,

thank

you

for

the

opportunity .

So

I

have

3

questions.

My

first

question

is,

could

you

help

us
understand,
you
know ,
how
the
instant
India
consumer
business
works
operationally?
Like,
how
do
you
transition
from
a
scheduled
services
marketplace
to
an
instant
service
model.
Like,
do
you
require
excess
capacity

initially in order to, you know , do, like, ensure timely supply? That's my first question, and I'll then follow it up with the other two. Abhiraj Singh Bhal: Yeah, no, great question. And…

how
this
works,
I
won't
go
into
the
level
of
detail
here,
but,
it's
a
reasonable
change
management
that
we
do
at
the
back
end
--
Operationally ,
realigning
the
micro-markets,
in
terms
of

their

size,

realigning

partner

expectations,

calendar

management,

availability ,

et

cetera,

et

cetera,

before

we

flip

a

micro-market

in

a

category

and

make

the

instant

proposition

available

there.

We

also

have

to

ensure

that

there
is
adequate
supply
and
demand
and
density
therein.
The
interesting
point
here
is
that,
and
you've
shown
this
in
our
letter
as
well,
we're
achieving
this
with
increasing
utilization
on
the
supply

side
and
not
decreasing
utilization.
So,
conventional
wisdom
would
say
that
in
order
to
offer
instant,
you'll
have
to
keep
slack,
and
therefore
utilization
should
fall.
What
we're
experiencing
is
that
utilization
is

actually
improving.
That's
because
we're
offering
instantly
the
sweet
spot
of
30
to
60
minutes,
which
doesn't
require
us
to
break
the
back
on
capacity
and
utilization.
If
anything,
those
orders,
see
fewer

cancellation

rates

with

rescheduled

orders.

And,

you

know ,

back-to-back

packing

efficiency

is

better .

And

consequently ,

we're

actually

seeing

better

utilization,

as

a

result

of

that

instant

rollout.

So

it's

a

real

win-win,

in

our

view .

You

know ,

it

helps

improve

packing

efficiency

and

overall

utilization

for

partners,

and

consequently

improve

their

earnings.

It

helps

bring

down

time

to

serve

for

end

consumers,

and

it's

also

more

profitable

for

us.

Obviously ,

if

we

were

to

take

the

core

marketplace

also

all

the

way

to

10

minutes.

That

would

mean

what

you're

saying,

which

is…

which

is

keep

a

lot

of

excess

capacity ,

but

we

don't

think

that's

needed.

We

think

30

to

60

minutes

is

adequate

for

most

of

our

core

services.

As

long

as

we

can

deliver

that

reliably ,

consumers

are

happy

with

that

change

and

shift.

Pranaya

Jain:

Got

it.

Und
erstood.

Thank

you

for

that.

My

second

question

is,

on

the

fact

that,

you

know ,

you've

spoken

about

it

earlier

as

well,

and
even
this
shareholder
letter ,
that
there
is
deep
trust
that
is
embedded
in
the
model,
given
that
professionals
spend
significant
time
inside
the
homes
of
the
consumers,
customers.
But
at
the
same

time,
we
are
seeing
new
instant
service
platforms
also
enter ,
and
they
are
also
gaining
a
reasonable
amount
of
customer
acceptance.
So,
do
you
think
the
comfort
of
the
customer
with
allowing
service

professionals
into
their
home
is
becoming
more
standardized
over
time
across
platforms?
Abhiraj
Singh
Bhal:
I
think
at
the
end
of
the
day,
any
player
that
executes
well
on
quality ,
on
safety ,
on

trust

and

doesn't

take

the

customer's

trust

for

granted,

can

eventually

gain

acceptance.

And,

you

know ,

we

don't

make

any

tall

claims

that

we'll

be

the

only

player

who

will

enter

the

homes

of

the

customers.

We're

certainly

one

of

the

trusted

players,

in

our

view .

We

also

think

to

be

able

to

do

this

across

60-plus

categories

and

hundreds

of

micro-markets,

in

categories

in

our

core business where the complexity of the business is much higher , in terms of training, in terms of tooling, SOPs, etc, is not an easy feat. Sometimes easy to execute that in a single

category

business,

but

not

so

much

across

multiple

categories.

And

therefore,

historically ,

we've

also

seen

competition

limited

to

one

or

two

verticals,

rather

than

the

entire

horizontal

skew .

Now ,

it's

always

possible

that,

you

know ,

over

time,

players

emer ge

in

the

entire

horizontal

space,

which

is

okay .

At

the

end

of

the

day,

competition

keeps

us

honest,

you

know ,

keeps

us,

charged

up,

and

delivers

the best services to the end consumers. So, it's a very large market, as we've emphasized multiple times in the past.

The total market is more than 5 lakh crores. We're still

a

very,

very

small

percentage

of

that

market,

sub

1%,

and,

you

know ,

I

think,

if

anything,

the

focus

should

be

on

how

do

we

keep

growing

the

pie,

versus,

you

know ,

zero

sum
of
how
we
break
a
small
pie
today
between
players.
Pranaya
Jain:
Right,
makes
sense.
Last
question
is
on
the
international
business.
Could
you
elaborate
on
the
competitive
landscape
across
your
key

markets,
given
that
these
markets
are
relatively
more
organized
and
structured?
You
know ,
who
are
your
key
competitors
over
here?
Abhiraj
Singh
Bhal:
Yeah.
I
think,
in
UAE,
we
have
one
more,
competitor ,

a
major ,
I
mean,
there
are
lots
of
players,
but
there's,
there
is
a
company
called
JustLife,
who
has
been
around
in
the
market
for
as
long
as
we
have,
a
little
bit

longer than us. Pretty decent players. We do have respect for them, and we've learned a lot from them, and they've learned a lot from us. And we believe that the competition in

that
market
has
been
quite
healthy
and
both
players
are
growing
well.
And
that
market
continues
to
be
very
attractive
from
a
long-term
growth
and
margin
attractiveness
standpoint.

So,
I
think
that's
an

interesting and exciting market.

In Singapore, there are lots of smaller players, nobody meaningful to call out. Again, a very, very exciting market, growing well for us, profitably .

Both the markets,

I
think
the
headroom
for
growth
is
meaningful.
We're
growing
profitably .
Our
proposition
continues
to
improve
year
after
year.
The
same
playbook
of
faster ,
cheaper ,
better
is
playing
out
in
those
markets
as

well,

and

if

anything,

in

an

accelerated

fashion.

Because,

the

demand

density ,

you

know ,

operates

on

steroids

in

some

sense

in

both

these

markets,

so

we're

quite

excited

by

how

our

international

business
is
shaping
up
across
these
two
markets.
Saudi,
we
don't
recognize
revenue,
but
that
business
is
also
shaping
up
very
well.
We've
disclosed
the
numbers,
and
as
you
can
see,
the
growth

is
in
the
right
direction.
Margins
are
improving.
We
now
believe
we
have
a
clear
line
of
sight
towards
profitability
in
our
joint
venture
in
Saudi
Arabia
as
well,
and
we're
quite
excited

by
that.

Pranaya
Jain:
Got
it.
Thank
you
for
the
answers,
and
all
the
best
for
the
coming
quarters.
Abhiraj
Singh
Bhal:
Thank
you
Garima
Mishra:
Next
question
is
from
the
line

of

Dipak

Saha.

Please

go

ahead.

Dipak

Saha:

Hi,

thanks

for

the

opportunity ,

am

I

audible?

Garima

Mishra:

Yes

Abhiraj

Singh

Bhal:

Yes

Dipak,

please

go

ahead.

Dipak

Saha:

Yeah,

so

first

of

all,

congratulations

on

getting

great

set

of

numbers.

My,

only

question

I

have

on

the

international

side,

what

I

understood,

for

the

international

business,

you

very

beautifully

laid

out

the

fact

that

how

your,

you

know ,

the

subscription

model

has

played

out

and,

meaningfully

contributing

to

the

overall,

numbers

there.

If

you

just

can

lay

out

what

are

the

drivers

that

are

working

well

for

subscription

model
there.
And
secondly ,
how
can
we
apply
that
model
here,
if
at
all
the
dynamics
allow
us
to
do
that?
These
are
the
two
questions
I
have,
initially .
Abhiraj
Singh
Bhal:
Yeah,

Deepak,
that's
a
good
question.
So,
Deepak,
one
of
the
main
services
for
us,
a
fairly
important
service
in
both
UAE
and
Singapore
is
cleaning.
Deep
cleaning
of
the
home.
And
while
some

households

there

have

permanent

house

help

as

you

can

imagine,

a

lot

of

households

don't,

and

therefore

they

rely

on

platforms

like

us,

or

local

players,

offline

players,

and

the

larger

market

to

get,
weekly ,
bi-weekly ,
fortnightly ,
monthly ,
or
once-in-a-while
deep
cleaning
done.

We've
been
able
to
launch,
subscription
programs
and
lock
in,
essentially ,
these
households
and
users
into
more
high-frequency
deep
cleaning.
So,
for

example, in UAE, many of our users use our deep cleaning not just once in a while, but maybe on a weekly or fortnightly basis, and quite a few of them use it

multiple
times
a
week
as
well.
And
that
actually
accelerates
the
growth
of
the
business.

Similarly ,
in
Singapore,
while
the
sub-weekly
use
case
for
our
deep
cleaning
is
not
prevalent,
many
users

use
us
on
a
weekly
or
fortnightly
basis
,
and
these
users
get
locked
into
subscription
programs,
and
then,
you
know ,
it
becomes
sort
of
an
annuity-like
business.

Some
of
those
learnings

can
certainly
be
helpful
for
us
here
in
India
as
well.
We
are
toying
with
and
experimenting
with
cleaning
subscriptions.
I
believe
over
time,
we
will
experiment
with
versions
of
these
in
InstaHelp

as

well.

And

we

also

have

bundling

programs

in

India,

which

take

a

leaf

out

of

the

playbook

in

our

international

markets.

So,

many

learnings

for

us,

from

these

two

markets.

Dipak

Saha:
Got
it,
that's
helpful.
Just
in
the
same
context,
when
we
see
InstaHelp,
you
mentioned
that
for
10%
of
the
users,
you
have
8
times
monthly
orders,
and
for
1%
of
the

top
users,
you
have
21
times,
right?
So
is
there
a
scope?
I
know
it's
pretty
early
days,
but
is
there
a
scope
of
enabling
any
subscription
model
for
InstaHelp
in
India?
Abhiraj

Singh
Bhal:
I'm
sure
it's
possible.
I'm
sure
the
scope
is
there.

Dipak
Saha:
Super ,
super .
Fine.
And
last
question
on
InstaHelp's
side,
On
the
payment
side,
right,
so
the
payouts
that

we're

doing

to

our

professionals,

so

just

trying

to

understand,

because

the

volume

has

gained

meaningfully ,

say,

3

months

ago

and

currently ,

is

there

any

change

in

the

structure

of

payment,

as

far

as fixed payment is concerned, and job-specific variables are concerned? Is there any specific change which can improve the cost dynamics depending upon, successfully delivered services or jobs.

Abhiraj Singh Bhal: Yeah, we

keep…

we

keep

experimenting

and

toying

with

various

structures

tactically .

That

we

believe

are

sort

of

best

suited

to

win

different

micro-markets

and

keep

supply

engaged,

and

depending

upon

the

supply-demand

situation

in

a particular micro-market in a particular point in time, you know , we're quite nimble with some of these changes.

Dipak Saha: So, does it have any fixed component, or gradually we're moving to a lower fixed component in that context?

Abhira Singh Bhal: I mean, there's a per-hour payout, essentially , but that can vary based on the quality of the service professional and the

particular
micro-market,
time
of
the
day
and
time
of
the
week.
It's
quite
dynamic.
Dipak
Saha:
That's,
that's
really
helpful.
Thanks
a
lot.
Last
question
from
my
end,
on
the
user
side,
so,

say,

Instahelp

and

consumer

services

business,

right?

So,

are

we

seeing

incrementally ,

any

new

users

coming

solely

for

InstaHelp,

and

again,

you're

able

to

cross-utilize

it

for

consumers,

or

it's

the

other

way

around?

Abhiraj

Singh

Bhal:

It's

both.

Dipak

Saha:

Okay ,

okay ,

okay .

Any

distribution

you

would

like

to,

you

know ,

lay

out,

in

terms

of

proportion,

somewhere

more,

it's

a

core

business,

higher

proportion

leading

to

insta-help,

incrementally ,

or

it's

the

other

way?

Abhiraj

Singh

Bhal:

No,

not

right

now.

Dipak

Saha:

Okay ,

fine.

Thank

you.

That's

really

it,

and

all

the

best

wishes.

Abhiraj

Singh

Bhal:

Thank you so much. Thank you.

Garima Mishra: Thank you. That was the last question for today, and we would like to close the call here. Thank you, members of the management,

and

all

participants

for

joining

Urban

Company's

results

call.

You

may

now

disconnect

your

lines.

Thank

you.
