Sub. : Transcript of the earnings conference call
Dear Sir/Madam,
Pursuant to Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed the transcript of the earnings conference call held on Friday, August 8, 2025 at 12.00 Noon. (IST), for your information and records.
The above communication is also available on the website of the Company at www.aegisvopak.com .
The above is for your information.
Thanking you.
Yours faithfully,
For AEGIS VOPAK TERMINALS LIMITED

Priyanka Vaidya
Company Secretary and Compliance Officer
M. No. A64156

Encl: as above

"Aegis Vopak Terminals Limited
Q1 FY '26 Earnings Conference Call"
August 08, 2025

MANAGEMENT : MR. RAJ CHANDARIA – CHAIRMAN AND MANAGING DIRECTOR – AEGIS VOPAK TERMINALS LIMITED
M R. MURAD MOLEDINA –NON-EXECUTIVE DIRECTOR- AEGIS VOPAK TERMINALS LIMITED

MODERATOR : MS. PAYAL DAVE–MUFG

Moderator: Ladies and gentlemen, good day and welcome to the Aegis Vopak Terminals Limited Q1 FY 2026 Earnings Conference Call. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need an assistance during this conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded. This call may contain some forward-looking statements which are completely based upon our beliefs and expectations as of today. The statements are not the guarantees of future performance and involve unforeseen risks and uncertainties.

With this, I would now like to hand the conference over to Mr. Raj Chandaria for his opening remarks. Over to you, sir.

Raj Chandaria: Thank you very much. Good afternoon, everybody. I would like to extend a very warm welcome to all the participants to this Q1 FY 2026 financial results discussion.

My name is Raj Chandaria, Chairman and Managing Director of Aegis Vopak Terminals Limited or AVTL. On this call today, I have with me, Mr. Murad Moledina and Ms. Payal Dave from MUFG Corporate Markets and Mr. Murad Moledina from AVTL. So I hope everyone has had an opportunity to go through our investor deck that was uploaded on the exchanges and the company's website.

And I am grateful to everybody in the capital markets, especially our shareholders for warmly welcoming our IPO. Your strong faith in our company's business model, management and industry is deeply appreciated and we are committed to achieving significant growth in the years ahead, while staying true to our mission of delivering sustained value to all our stakeholders over the long-term.

As you are well informed, this is AVTL's maiden earnings call – conference call subsequent to our IPO. It is helpful perhaps to take some time to explore the company's story and to give a clear overview and I trust this will be helpful to all the participants. Now, AVTL is India's largest third-party owner and operator of Tank Storage Terminals for LPG and liquid products based on storage capacity.

Our terminals are strategically located across six major ports on both the east and west coasts of India, offering strong connectivity through roads, railways and pipelines. We benefit from the strong support of our parent companies, Aegis Logistics, which is an Indian market leader with deep experience and strong customer ties in India, and Royal Vopak, a global leader in storage and with 400 years of expertise.

Aegis Logistics launched a strategic initiative which we coined as GATI, Gateway Access to India, which also means speed in the Sanskrit language. And this strategy outlined an ambitious plan to rapidly expand our footprint across the key port locations along India's coastline, aiming to secure a dominant market share in the product that we handle at these ports.

As part of the strategy, Aegis Logistics realized that the growth journey will meet a strong partner and AVTL was therefore created as a joint venture between Aegis Logistics and Royal

Vopak. And AVTL, in summary, AVTL invests in, owns and operates strategic storage infrastructure developed by its parents that support India's evolving energy needs.

Now, over the past few years, we have built a well-diversified and agile business model anchored in a straightforward growth-oriented and risk-averse approach. With 22 operational sites across various ports, we manage a wide range of products ensuring complete diversification.

And our model is designed for flexibility, unbound by any single trade mode, product category or client, allowing us to adapt quickly to market dynamics. The main object of our IPO was to repay or reduce debt, strengthen our balance sheet to support future growth and ensure that the pace of Project GATI remains unaffected.

As highlighted as an objective of the issue, we utilized these funds -- the funds raised through our IPO to entirely repay the bank borrowings of approximately INR2,016 crores. Significantly reducing our debt post the IPO will save interest costs, which is typically around 30 percent of EBITDA for any infrastructure company. And this higher EBITDA will be converted into profit after tax, further improving our earnings per share. An important highlight is that all current CAPEX has been accounted for with the current debt paid out.

Now let me brief you on the progress that we have made since our listing. The key highlight for the last quarter and since our listing is that we have successfully added two cryogenic LPG storage terminals, one at New Mangalore Port with 82,000 metric tons of static capacity and another one at Pipavav Port with 48,000 metric tons of static capacity.

With these additions, our total LPG storage capacity has grown from 70,800 metric tons to 200,800 metric tons. These two terminals were added in the last month and the revenue from both these terminals will start accruing from Q2 of FY 2026.

Now let me take you through port by port, updates on every port.

In the JNPA port , during the past year we have added a terminal with a total storage capacity of approximately 102,000 kilometers for liquid products. We have been allotted an additional 30 acres of land at this port and our board -- the AVTL board has approved on this additional land a capital expenditure of INR1,675 crores towards setting up terminals for liquids, LPG as well as an LPG bottling plant.

In Kandla Port , the existing facilities at Kandla is -- are operating with an improved utilization -- capacity utilization. This asset will see a jump in the volumes with the operationalization of the KGPL and JLPL pipelines which is expected in Q2 of this financial year to which we are, as you may know, well connected. However, another positive initiative at this port is that in a couple of months, VLGC -- very large gas carriers will now start berthing at Kandla Port which will also benefit AVTL's operations at the port as we will be able to unload larger cargo sizes.
We have also acquired an additional plot of land which we name as CRL-4 in Kandla where we shall be setting up a further liquid terminal with a capacity of 94,148 cubic meters and the same will be operationalized in the next year.

Expanding our footprint into ammonia terminaling, in addition to the ammonia terminal at Pipavav, we have signed, I think this is really important, we have signed a non-binding memorandum of understanding with L&T, Larsen & Toubro to set up ammonia terminals at Kandla for their upcoming green ammonia manufacturing facilities.
At Kochi Port , our liquid capacity is operating at a higher utilization. We intend to add further capacity at this port in the near future and we have already been allotted additional land here.
At Pipavav Port , as mentioned earlier, we have added LPG capacity at this port with 48,000 metric tons static capacity of a cryogenic LPG terminal and with this expansion, the LPG terminal now stands at 70,800 metric tons. And here at our LPG terminals at this port will benefit immensely, mainly because of the throughput volumes through the commissioning of the Kandla-Gorakhpur Pipeline, the increased LPG throughput through rail and the jetty being enabled to work VLGC. So our liquid terminals at Pipavav are progressing well with higher utilization.
We cater to western India through this port and we are planning in the near future to set up a rail gantry in addition to our LPG gantry, a rail gantry for evacuation of liquid products from Pipavav. Now, as far as ammonia is concerned, we, you know, ammonia terminaling spac

e is
concerned, the company is in the process to set up India's first independent ammonia terminal at Pipavav with a static capacity of 36,000 metric tons.
This project is expected to be completed before Q1 of the next fiscal year and this ammonia terminal has a take or pay contract for 15 years to service Hindustan Zinc's up-and-coming diammonium phosphate plant, fertilizer plant in that area.
And ammonia enjoys, also enjoys domestic demand from other local fertilizer and chemical companies and with a stronger demand expected, outlook expected on the back of the government's national green hydrogen mission. And we aim to address this market.
In Mangalore Port , as mentioned earlier, we have successfully commissioned, added the cryogenic LPG storage terminal with 82,000 metric tons static capacity last month.
The maiden shipment, the maiden LPG vessel was ceremoniously welcomed in the last month with the inauguration of our LPG loading arm, which made its first pilot discharge without a hitch. And besides the recent announcement, the companies in the previous fiscal year had also added 75,000 kiloliters of capacity in the liquid space and this expanded capacity has been revenue accretive from the start of the current fiscal year. And we intend to continue adding further capacity at this port in the Liquids business in the near future. We've already secured the additional land at this port.
At the Haldia Port , our liquid capacity is operating at a higher utilization. We have participated in various tenders to get further land at Haldia, and we look forward to smooth operations and expanded operations at this important port.
In addition to these existing ports, we are looking to expand our presence to the seventh port once we are allotted land and set up additional capacities in liquids at this new port in the future.

As soon as we have some information on this, we will be sharing this obviously, the name of the port and so on with our shareholders.
With all these expansions, we have already reached the capital expenditure of $1.2 billion by next year and we are targeting to reach a $5 billion aggregate capital expenditure by 2030, which would be funded by a mix of equity, internal accruals and utilization of -- prudent utilization of debt with a debt gearing ratio of 0.6 times capped to a 3.5 times of EBITDA.
For achieving the above, the company will continue to explore and pursue new products, new ports and associated infrastructure. We are also, of course, exploring inorganic growth

opportunities, acquisitions, and we would like to invest in other related infrastructure that will help us improve our efficiency and effectiveness and make our business model more resilient. So with that strategic overview, I am now going to hand over to Mr. Murad Moledina to discuss the financial performance for the quarter. Murad?

Murad Moledina: Thank you, Mr. Raj. Hello, everyone. So, Q1 FY 2026 revenue from operations increased by 4.5% sequentially to reach INR164 crores. Revenue from Liquid Terminaling was INR96.9 crores increasing by 4.8% sequentially. This increase in revenue was driven by higher volumes on account of capacity additions and also on account of better product mix.

Revenue from Gas Terminaling division reached INR67.1 crores, that's an increase of 4.1% sequentially. With significant static capacities, which have been recently operationalized, the revenue contribution from Gas division is poised to grow going forward, in fact a step up growth.

Operating EBITDA increased by 3.1% sequentially to reach INR119.9 crores. As highlighted by in the opening remark, we saw substantial reduction in interest cost driven by repayment of borrowings with interest cost decreasing by 37% sequentially. We had interest saving only for the month of June because our IPO closed on 2nd of June.

We will see full quarter im

pact of debt repayment and interest saving from Q2 FY 2026, the profit growth of 85.1% year-on-year and 15.4% sequentially to INR47.7 crores. Our balance sheet also has been strengthened following full bank debt repayment.

Thank you. I'll now request the moderator to open the floor for question-and-answer session.

Moderator: Thank you very much. We will now begin the question-and-answer session. The first question is from the line of Mayur Patel from 360 One AMC. Please proceed.

Mayur Patel: Hi. Thanks for the opportunity. Murad, just one question, like, in the introductory remarks, it was mentioned that the two new capacities are now onstream and should deliver revenues this quarter onwards. If you can just give us a quick update on the connectivity side, and how things are now commercially operations are on, and how sequentially EBITDA can improve over next few quarters.

Murad Moledina: Yes. So, Mayur, we do not give guidance on what, kind of, throughputs and business are going to come going forward. But what I can tell you is that Pipavav terminal cryogenic once it has

started we'll definitely see a growth. As you are aware that this cryogenic has been built to take advantage of the Kandla-Gorakhpur pipeline connection, and Kandla-Gorakhpur pipeline connection is expected to be operational sometime later this year.

However, on account of increased rail evacuation and it's amazing that we are seeing utilization from day one, increasing at Pipavav port, even Mangalore port, we are seeing good traffic and we are pleased with both the commissioning of cryogenic terminal, one at Pipavav and one at Mangalore. Definitely once the hookup into Kandla-Gorakhpur pipeline starts operating, as well as in Kandla the JLPL Pipeline and KGPL Pipeline hookup starts getting operational, we will see a lot of upside. H2 will be very interesting. Thank you.

Mayur Patel: Okay. Thanks.

Moderator: Thank you. The next question is from the line of Aniket Nikumb from ABN Capital. Please proceed.

Aniket Nikumb: Yes, thank you for the opportunity sir and congratulations on a successful IPO. Sir, you've mentioned in the presentation that we are targeting INR1.2 billion of cumulative capex for next year. Now, if my math is right, I think we have around INR4,700 odd crores of equity capital with the IPO. So, would it be fair to say that we will not need to dilute or raise further equity capital to achieve this capex ambition and you will be able to fund this via debt?

Murad Moledina: Well, Aniket, you see, we are going to do with a mix of equity internal accruals and debt. So, we have just completed phase one of our equity dilution, which was 13% dilution. We are mandated by law-to-dilute up to 25% within three years of our IPO.

The second dilution will happen sometime from now, until three years. So, that is one mode of funding that is going to come in. Another is, of course, internal accrual and then, as you are aware that as the bank borrowings have become zero, we again have the ability to fund by debt also, which can again, by Phase 2 equity infusion, be again repaid.

So, the funding for all of that is already in place. We have already announced three projects. One is 1675 crores project at JNPA site. The other one is, which was announced in the last board meeting was 525 crores Pipavav ammonia project. And then there was another liquid project at Kandla in NDDB plot, which was, I think, if I remember correctly, 165 crores.

So, 2,500 crores is already underway. We already are, I think, sitting on a capex of 5,000 crores plus. So, we expect to reach our 1.2 billion by next year capex on an aggregate basis, funded by equity internal accrual and also debt.

Aniket Nikumb: Perfect, sir. No, that's very helpful. My second question, sir, was, typically, as you think of project timelines and so on, would you be able to tell us, just as a

rule of thumb, how long does
a project take to get commissioned? And then how long does it take for things to ramp up to what you might call a steady state utilization? Obviously, things will differ, but just as a rule of thumb, as you do your capex and processes.

Murad Moledina: So, yes. So, liquid terminals take lesser time than gas terminals. Gas terminals are more complex and cryogenic in nature. So, liquid terminals typically, depending on, what kind of configuration, what kind of size, what location, etc.
So, assuming everything is average, it would typically take 12 to 15 months to complete a liquid storage terminal. That is a thumb rule. It is not exact. And gas terminal would take anywhere between 18 to 24 months, depending on what kind of size, which location and what kind of infrastructure you are trying to build. So, that is typical.
Utilization, we have always said in the past that we follow demand. In case of liquid, because of the extensive flexibility that we have, we achieve full utilization very fast once we commission. As far as gas infrastructure is concerned, we build gas infrastructure to last for some time. So, you do not become 100% utilized on day one. You create a capacity to last your customers for five-seven years. So, you gradually scale up in utilization. You start somewhere between 25% to 30% utilization and then every year you scale up. And then in five-seven years, you reach full utilization. Mind you, the life of both the assets, are 40 years.
Aniket Nikumb: Got it, sir. No, very helpful, sir. Thanks so much.
Moderator: Thank you. The next question is from the line of Vishal Mehta from IIFL Capital. Please proceed.
Vishal Mehta: Yeah. Thanks for the opportunity. Sir, my first question is on our liquids numbers for this quarter. If I kind of derive the average realization in liquids, one would probably have expected the realization to kind of go up as we've added these new capacities of JNPT and Mangalore in liquid, which were supposedly to come at a better realization or better product mix. So, what happened there, if you could throw some light?
Murad Moledina: Yes. So, Vishal, it's all about product mix. And June 1, if you look at historically, if you would have tracked our parent, it is usually done. And you will see the realization improve from Q2 onwards. And I think the reason is only the mix of product. We have just commissioned in March JNPA and Mangalore. And we start with a lower basket of type that we store. But gradually, you will see more as we change the type of mix, you will see the realization improve. I think H2 would be the right time to look at the realization for CBM in liquid, you will see the complete change.
Vishal Mehta: Sure. Thanks. That's helpful. Second question, sir. Probably, I know that you don't give guidance on throughputs, etc. But post your addition in LPG side at Mangalore and Pipavav, how are the volumes currently trending, if you can give some directional sense, how the last month have been compared to monthly volumes in the previous quarter that would help us?
Murad Moledina: So, we have commissioned two cryogenic additional facilities. And like I said, we are pleased with the way we have started. And the big push is yet to come. And that will come when those pipeline connections start showing the impact on our throughput. So, it's been better than our expectations, the way both determinants have started.

Vishal Mehta: Sure. Okay. Last question, if I may, when are we expecting Ammonia Pipavav to commission by and what sort of volumes are expected to flow from Hindustan Zinc here, if you can share?
Murad Moledina: Yeah. So, we have already said in our opening remark that we expect Q1 of next year, this particular facility to be commissioned, it is actually getting commissi

oned before time. So, we
are very pleased with the progress of the development of Ammonia terminal at Pipavav. We have already signed a takeover pay for around 8,000 to 10,000 tons of the capacity of 36,000 with Hindustan Zinc.
So, that gives a clear cut start. And then we also expect other industrial customers to utilize the Ammonia terminal. They, I would rather put it like they are starved. There is no independent Ammonia terminal operating for their use. So, excited. Yeah. We await the commissioning Q1 next year.
Vishal Mehta: Thank you.. That's very clear and all the best. Thanks.

Moderator: Thank you. The next question is from the line of Koundinya from Jefferies. Please proceed.
Koundinya: Yeah. Hi, sir. Thanks for the opportunity. Sir, starting with a couple of bookkeeping questions. So, what is the throughput in LPG in this quarter and also the utilized capacity in liquid, if you can, and also the EBITDA margins in both the segments, if you can provide some color on those, please?
Murad Moledina: Oh, we have it in our presentation, the throughput for the quarter, which is 522,000 metric tons that we did from Kandla and Pipavav. And as far as occupancy of liquid is concerned, it generally ranges around 80%, but occupancy actually does not rule the revenue, as we have been saying several times in the past. EBITDA margins, sorry, I don't have it on hand, but you can very well actually, it's arithmetic, so you can see it. Yeah.
Koundinya: Okay. Thanks, sir. And so, secondly, in the press release, you spoke about bottling as well at JNPA. So, can you provide some color on the economics of this? How does it work and who takes the pricing risk? Maybe a little bit more.
Murad Moledina: Yeah, yeah, yeah. So we have terminals which have attached bottling plants, which help in our throughput. So what it means is that the customer gets a huge benefit by saving primary transportation cost. So if let's say the bottling plant is not there, then they would have to take the refrigerated cargo of LPG to a bottling plant and incur primary transportation cost.
Now, here they can pack it at the storage site itself eliminating the unnecessary primary transportation cost. So it's an enabler, enabler for us to do more throughput, just like you fill in trucks, just like you put it in pipeline grid, just like you fill rail baggage, you also fill in packed cylinders for the customers to take it there on.
So it's one more evacuation mode and it helps in throughputing, which is our primary objective, more and more usage of our terminal. The revenue and the EBITDA are really not something to be -- of any great significance, but what is important is that it increases the throughput and utilization of your storage terminal.

Koundinya: Understood, sir. Sir, just to be clear, we are not taking any kind of pricing risk here, right?
Murad Moledina: No, no, no, absolutely not. We are a service provider. We do not hold title. We do not purchase sales. We do not hold inventory, nothing.
Koundinya: Okay, sure, sir. Thank you very much. I'll fall back in the queue for more questions.
Murad Moledina: Thanks.
Moderator: Thank you. The next question is from the line of Nidhi Shah from ICICI Securities. Please proceed.
Nidhi Shah: Thank you so much for taking my question. So firstly, you mentioned that you are looking for acquisitions in, say, related infrastructures, parallel infrastructures. So what is the plan out here? What are we aiming for? And what are the kind of assets that we are looking at?
Murad Moledina: So it's organic as well as inorganic. If you look at my presentation and you would see the strategy, the strategy of growth. So it's expanding at current locations, getting into new locations, getting into new energy products and also inorganic growth of acquisitions.
So we call that flight to quality. So what is happening

is that there are lots of installations in our business sector where I would rather, I'm sorry to use that word, but there are inefficient operators who have set up the infrastructure and they are feeling the heat now with law having been more stricter and environment being a sensitive issue. So we are seeing a lot of opportunity to acquire assets, which we say that there is a flight from inefficient players to quality players, flight to quality.
That is surely going to happen going forward. And these opportunities, if they fit into our plan and our returns IRR that we have our benchmark, then we would surely look and take up those opportunities. We have done that.
We have done three acquisitions in the past three years. We bought 0.5 million liquid from a friend's group in Kandla. We bought from Ruchi in Kochi, their terminal. We bought a terminal at Mangalore from Nadella. So, we have already done three acquisitions and we will continue doing so as and when those opportunities come within the framework of our IRR, et cetera, which we have set for ourselves.
Nidhi Shah: So, on the interest question, now that the debt has been zeroed out from the company and….
Murad Moledina: Sorry…Sorry
Nidhi Shah: Yes. So on the interest question, now that the debt has been zeroed out from the company, we have seen a reduction, a significant reduction in interest cost this quarter. Are we expecting further reduction? And I understand that you might need some, bridge loan, short-term debt. So, given all of that, what could we expect the interest level for, the rest of the year to be?
Murad Moledina: Yes. So, you take it this way that we have paid off INR2,000 crores loans. So, 8% on INR2,000 crores is INR160 crores.

We have done that for, it will apply for 10 months because that's happened from June 2nd. So, that is the kind of impact you will have vis-a-vis the previous year, the reduction. That's what you should count on.
Fresh debt for fresh capex would normally get capitalized till it is commissioned. So, we expect the commissioning in next year. So, we don't see much revenue hit on account of interest in the current year unless there are some acquisitions or, other things which are not there on the table as of today.
Nidhi Shah: Got it. My last question would be on the realizations of the gas terminal. So, for the gas terminal, by my calculation, I am getting a realization of INR1,500 per ton for FY 2025 and this quarter I am seeing INR1,300. What has caused the drop in realization?
Murad Moledina: So, that is also dependent on, which port. Because we also had some take or pay revenue as far as gas was concerned. In effect, we always say that you need to take an average rate in case of AVTL gas terminal as INR1,300. So, what has happened in this quarter is right. If the realizations are higher, it could be on account of take or pay kind of revenue which we get off and on.
Nidhi Shah: So, the last year, the take or pay that you got, which terminal was this at?
Murad Moledina: Oh, that was at Kandla. I think partly Kandla, partly Pipavav also.
Nidhi Shah: All right. All right. Thank you so much.
Murad Moledina: Thank you.
Moderator: Thank you. The next question is from the line of Neelotpal Sahu from JM Financial. Please proceed.
Neelotpal Sahu: Hi, sir. Congratulations on the IPO and thank you for taking my question. Firstly, can you give us a split of the operating EBITDA between liquids and LPG?
Murad Moledina: I think it's there in the segment, right? The EBIT is there.
Neelotpal Sahu: Yeah, that is the EBIT if you can give us.
Murad Moledina: I can get you. Operating EBITDA, of course, is 119.9 for both the segments put together. I'm sorry, but I don't have it here. Maybe from next quarter, we will start putting it in the presentation itself.
Neelotpal Sahu: Sure. Secondly, just to have a clear understa

nding, Mangalore is already connected to the pipelines, right? So, once volumes start, they will start going to the pipelines immediately from the next quarter?
Murad Moledina: No. So, Neelotpal, what happens is that Mangalore, as well as any gas terminal you start with, so Mangalore has started with road tankers. So, we are constructing a rail LPG gantry over there, which is expected to become operational in six to nine months from now.

And then we are also in a process to get connected into Mangalore-Hassan-Chirapuri pipeline. So, that will take some more time. So, you start with road evacuation, then you go to rail, and then finally to pipeline. So, it takes normally after commissioning 15 to 18 months to have all the three modes of evacuation operational, and then you see a step-up jump in your utilization.
Neelotpal Sahu: Understood, sir. Thank you. And lastly, would you like to give any outlook for the LPG throughput volumes for the current year?
Murad Moledina: No, sorry. We don't give any outlook on throughput.
Neelotpal Sahu: All right, sir. Thank you for taking my question.
Murad Moledina: Thank you.
Moderator: Thank you. The next question is on the line of Jainis Chheda from Kemfin Family Office. Please proceed.
Jainis Chheda: Yeah. So, sir, my question is with regard to the capex that you have announced for the next five years, which is $5 billion by the end of 2030, can you give us a split in terms of how much will it be towards liquids, gas, and ammonia?
Murad Moledina: No. So, this is infrastructure which will have a huge canvas. So, it will be not just liquid, not just LPG, not just ammonia, but several other new energy products, new ports, even associated infrastructure, new and backward and forward infrastructure also.
So, this is our target that this is what we expect with whatever opportunities that we see. So, you will see several new energy products like we have just entered into ammonia. Likewise, you will see several more products that we will go and get into, several new ports that we will go and put up our facilities and also, other types of, in addition to simple port-based storage terminals, we would

have even maybe industrial terminals, et cetera.
So, it is going to be a mix of lots and lots of types of infrastructure that we are going to put up.
It is still not, what has already been crystallized is what is going to happen in this year, and that we have already announced INR2,500 crores and the balance INR2,500 crores I think will follow soon in this year, because those are where we know what is going to come where.
Jainis Chheda: Understood. I completely understand. Secondly, the current year capex which you have given, can we expect that over the next three years, we will be able to utilize it to the peak level or it can be a longer period?
Murad Moledina: I again repeat, liquid starts with full utilization, but the types of products that you store are lower end ones once you start and then you graduate to more complex products and more realization in liquid. As far as LPG is concerned, it takes time 5-7 years and gradually there is an increase in utilization. You generally start with a 25% - 30% utilization when you commence and then every year there is an increase of 20% - 25% over the previous year's utilization. So you scale up and by 5 years - 7 years you become 100% utilized as far as gas.

Jainis Chheda: Understood, sir. And one last question, if I may, it is more to a short-term risk related to tariffs. Will that affect our liquids business by any sense in the near term? I understand it's uncertain right now, but do we see it as a risk?
Murad Moledina: No, no, that is what is unique about our business model is that we are very, very flexible. So the product dependency, customer dependency or trade depend

ency is also not there. We can handle import, export, even coastal movement, we can handle petroleum, petrochemicals, chemicals, veg oil, we can change product fast.
So that makes it really interesting. We have not seen effect so far on our business on account of so many global events that are happening, the tariffs, the wars, that there are so many things going on last 2 years - 3 years. Fortunately for us, the business model is very robust, very strong and very flexible to absorb so that we remain unaffected by these things.
Jainis Chheda: So in terms of risk, what are the risks that you foresee as a business, from the business perspective?
Murad Moledina: Sorry? What kind of risk that we see, business point of view?
Jainis Chheda: From the business perspective?
Murad Moledina: No. So again, like I said, this is a very closed system that we operate in, the whole infrastructure has, we have always said, has long life and because we construct, so the ability of the group to construct the asset quickly and cheapest, we get back our money very fast and therefore the risk is mitigated to that extent. You will see we have 22 working sites, so we are spread. We are into so many classes of products, liquid, LPG, now getting into ammonia and more energy products that we are getting into.
So we are all the time trying to mitigate risks that come our way and we see, we are on the ground, we see it first. So the risk averse character that we have makes it so very unique that we have already mitigated the risk before it hits us. So that character of being risk averse helps. And the experience and efficiency and the ability that we have had over the last 50 years that we have operated is a big advantage. The parent lineage helps. We have very, two very strong parents who have loads and loads of experience in this business and that really helps us.
Raj Chandaria: I would just add to that the general economic risk in terms of the Indian economy and so on is something that obviously affects everybody. We would be no exception. But we see India growing at 6%. If by any stretch of the imagination India's economic growth were to decline to say 5%, we would probably see some of our customers reducing their throughputs and so on. But on the other hand, it could also go the other way that if India's economic growth went to 7% instead of 6%, we would see a significant upswing. So I think the general and one I would just add that by having little or no leverage, we really insulate ourselves from any downswing in the business that might occur for a year or two when the economy slows down.

But I would say that by as Murad said, that they're having a very wide range of products, wide range of customers, wide range of assets. We really have de-risked the business model here at AVTL.
Jainis Chheda: Thank you, sir. I joined the queue. Thanks for the detailed answer.
Moderator: Thank you. The next question is from the line of Chirag Vekaria from Budhrani Finance. Please proceed.

Chirag Vekaria: Yes, I wanted to get a sense of the economics of an ammonia terminal in terms of say a capex, EBITDA per ton, what is the payback, if you can throw some light on it?
Murad Moledina: No, so I can only tell you this, that ammonia terminal is the revenue realizations are three times of almost three times of LPG. Because the – however, the turnaround, which can happen from an ammonia terminal is almost one-third than what can happen in LPG terminal. So it almost equates itself. So you can consider that as almost equal to LPG. However, capex cost is slightly lower, 10% to 20% lower than LPG capex.
Chirag Vekaria: Broadly, sir, what is the payback?
Murad Moledina: Payback, we always follow an IRR of 15% post-tax. So you can accordingly see that the payback would be.
Chirag Vekaria: Okay, sir. Thank you.
Moderator: Thank you. The next questio

n is from the line of Harsh Shah from Dalal & Broacha. Please proceed.
Harsh Shah: Yeah, yeah. Thanks for the opportunity. A few questions from outside. Just firstly, if you give some color on the other comprehensive income, which is kind of around INR217 odd crores for this quarter, what has led to this?
Murad Moledina: Yes, so we follow consolidation in our parent, Aegis Logistics Limited. So we have to take the asset first on the cost and then revaluate to the amount that we have paid. So that is the margin that is earned by our parent who develops the infrastructure. So as you are aware, we have commissioned a INR1000 crores Mangalore LPG project. So that's what it is. It will go to the fixed asset through other comprehensive income in the P&L.
Harsh Shah: So then basically that INR217 odd crores on INR1000 crores, which is close to what 21%, 22% odd percent is the margin which the holding company will have earned?
Murad Moledina: Yes, that is the gap between the cost of material which is used in the capex and the rate at which it is charged. So yes, that is the gap.
Harsh Shah: But then it will not be then reflected this amount in the holding company books of account, right?

Murad Moledina: No, it gets eliminated, because on consolidation, you can't earn from your subsidiary. So it gets eliminated.
Harsh Shah: Got it. Secondly, just a clarification. So on the L&T part, which you said the non-binding agreement. So is that a case wherein you will build and operate or is it build and transfer the ammonia terminal to L&T?
Murad Moledina: No, no, build and operate. L&T, I can't build and transfer. So it is L&T Energy, who is trying to, I mean, they have already started building green ammonia manufacturing facility at Kandla. So it is around, I think 20 kilometers from the jetty.
We are right there bank at the jetty. So we have entered into an understanding, which of course is non-binding at this stage, to build for them the port infrastructure of holding the ammonia. Because it will get manufactured on a daily basis. They can pump it into our storage terminal. Then the ship comes when the size is of some, let's say 10,000 tons or 7,000 tons or 20,000 tons, whatever. And then it is loaded and exported.
Harsh Shah: Yeah. Got it. And lastly, any plans or maybe the $5 billion capex you have kind of announced by FY '30, any plans of maybe getting into L&T terminaling or something of that sort?
Murad Moledina: Never say no, but it has to fit into our economics and our framework like we have always maintained. We follow demand, no flag planting. So as and when we will see the opportunity and that fits into our framework, then we would, why not build? Yes, possible. I'm saying possible, yet not decided.
Harsh Shah: Got it. Thank you. That's it from my side.
Moderator: Thank you. The next question is from the line of Shashi Ranjan from Anandam Hospital. Please proceed.
Shashi Ranjan: Thank you for the opportunity. Hello.
Murad Moledina: Yes, go ahead.
Shashi Ranjan: I have two questions as I am still able to understand the business that you are into. Which segment gives better margin, gas versus liquid? And the time taken to switch from, switching the product mix that is in the liquid segment.
Murad Moledina: So liquid segment depends on what kind of product. Generally, if it's, you know, same kind of product, it takes 48 hours to change. So liquid, there is a lot of flexibility. As far as gas infrastructure is concerned, it's when we build for LPG, we build it propylene rated. So we can store one at a time, but we can store propylene, ammonia, LPG with some twigs if there is a need.
Shashi Ranjan: Okay. And just coming to the Mangalore plant, as you say that the ready-made line is yet to be

laid, and using the truck. So, any plan of utilizing the large composites to then for L

PG or LPG
transportation?

Raj Chandaria: Right now, the Mangalore is serviced by road tankers. And we expect to have a railway gantry built in about the next nine to 12 months.
Murad Moledina: Correct. And a bottling plant also.
Raj Chandaria: And a bottling plant.
Murad Moledina: And also…
Shashi Ranjan My point,…
Murad Moledina: Yeah.
Shashi Ranjan My point, my question was different. It is being moved by truck. I understand that. But there are large composite cylinders, which are light in weight. And that carries a lot of gas through it. And that reduces the operational cost. So my question was, okay, road transportation or tankers are there, but are we thinking of using composite materials for transportation? So that is …
Murad Moledina: This is the purview of the customer. We do it for the customers. The customers bring the cylinders, whether they bring metal cylinder or composite cylinder is up to them. So I think this question would be proper to be directed to the customer who own and use cylinders. We are just service providers. We will fill up, whatever the customer brings.
Shashi Ranjan Okay. Thank you. Thank you. That helps a lot. I'll get back in queue. Thank you for he answer.
Moderator: Thank you. The next question is on the line of Amit Vora from the Homeopathic Clinic. Please proceed.
Amit Vora Good afternoon, everyone. My question was regarding the five billion capex that you said. Sir, what kind of ROC are you looking at?
Murad Moledina: Oh, we have already said that our benchmark RR is 15% for post-tax. So that's what we'll be. And now the return on equity or capital employed will depend on the mix of equity and debt that eventually happens.
Amit Vora Okay. Thank you so much sir, most of the questions for my answer. Thank you.
Murad Moledina: Thank you.
Moderator: Thank you. Ladies and gentlemen, that was the last question for the day. I now hand the conference over to the management, for the closing comments. Over to you, sir.
Raj Chandaria: Thank you. Well, thanks, everybody, for that initial earnings call. I look forward to sharing some good news when we next meet in November. And it should be a very interesting next few years for this company. Thank you. Bye-bye.
Moderator: Thank you. On behalf of Aegis Vopak Terminals Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Call: Nov 2025

Sub. : Transcript of the earnings conference call
Dear Sir/Madam,
Pursuant to Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed the transcript of the earnings conference call held on Friday, November 07, 2025 at 04:30 p. m (IST), for your information and records.
The above communication is also available on the website of the Company at www.aegisvopak.com .
The above is for your information.
Thanking you.
Yours faithfully,
For AEGIS VOPAK TERMINALS LIMITED

Priyanka Vaidya
Company Secretary and Compliance Officer

“Aegis Vopak Terminals Limited Q2 FY '26 Earnings Conference Call”

November 07, 2025

MANAGEMENT : MR. RAJ CHANDARIA – CHAIRMAN & MANAGING DIRECTOR, AEGIS VOPAK TERMINALS LIMITED
MR. MURAD MOLEDINA – NON-EXECUTIVE DIRECTOR, AEGIS VOPAK TERMINALS LIMITED
MODERATOR : MS. PAYAL DAVE – MUFG CORPORATE MARKETS

Moderator: Ladies and gentlemen, good day and welcome to the Earnings Conference Call of Aegis Vopak Terminals Limited Q2 FY '26 Earnings Conference Call.
As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing '*', then '0' on your touchtone phone. Please note that this conference is being recorded.
Before we begin the call, I would like to give a short disclaimer. This call may contain forward-looking statements which are completely based upon our beliefs, expectations as of today. The statements are not guarantees of future performance and involve unforeseen risks and uncertainties.
With this, I would now like to hand the conference over to Mr. Raj Chandaria for his opening remarks. Thank you and over to you, sir.
Raj Chandaria: Thank you very much. Good afternoon, everybody, to all the participants in this Q2 FY '26 Financial Results Presentation. I am also joined by Mr. Murad Moledina and Ms. Payal Dave from MUFG Corporate Markets.
So, I hope everyone has had the opportunity to view our investor presentation uploaded on the Stock Exchange and our company website. It gives me great satisfaction to address you again this quarter following our successful listing and the first earnings call earlier this year. I want to thank all our investors and stakeholders for the continued trust and confidence you have placed in our long-term vision, our management team, and our strong operational foundation.
As you know, AVTL or Aegis Vopak Terminals Limited, is India's largest independent owner and operator of Tank Storage Terminals for LPG and liquid products, with assets located across 6 major ports on both coasts of India, offering multi-modal connectivity through pipelines, road, and rail. Our joint venture, parentage, brings together the deep local expertise of Aegis Logistics and the global operating excellence of Royal Vopak. And this unique partnership underpins our ability to deliver world-class safety, sustainability and efficiency standards in India's rapidly expanding energy logistics ecosystem.
During the first half of this fiscal year, we continue to make excellent progress in executing our long-term strategy under project GATI, Gateway Access to India, which focuses on expanding our storage footprint, enhancing throughput efficiency, and diversifying into new products and regions. I am pleased to report that the new LPG terminals commissioned last quarter at Pipavav and Mangalore are fully operational and contributing to revenues from this quarter onwards. These additions have already started driving incremental volumes and strengthening our leadership in the LPG infrastructure segment.

Now, in line with our strategic expansion plans, we are happy to announce the proposed acquisition of 75% stake in Hindustan Aegis LPG Limited, which the acronym is HALPG, from Aegis Gas LPG Private Limited and Vopak India B.V., subject to shareholder approval. Upon completion, HALPG will become a subsidiary of AVTL, and the transaction will consolidate a further 25,000 metric tons of LPG capacity, currently at Haldia, into AVTL and mark our strategic entry into the East Coast market. HALPG operates a leading LPG terminal with an attached bottling plant and an exclusive terminalling agreement with HPCL, which is valid until 2038. I think this is a significant long-term asset that aligns well with our growth ambitions.
Let me just take you through the key project and port-wise developments:
So, at Haldia Port, our liquid capacity of 226,900 cubic meters is operating at a high utilization level, and after integration with Hindustan Aegis HALPG, AVTL will have a pan-India

network
of 4 LPG terminals, Pipavav, Kandla, Mangalore, and Haldia, and with a combined static capacity of 225,800 metric tons. We have also been allotted an additional 3-acre plot of land at Haldia to facilitate future expansion and ensure smooth operations at this strategic location.
At JNPA Port, we continue to make steady progress on our large-scale expansion program. Our existing liquid capacity of 101,900 cubic meters is operating well, and construction is well underway for an additional 318,100 cubic meters of liquid capacity and 77,286 metric tons of LPG storage, along with a 35,000 metric ton per annum LPG bottling plant. This entire project involves a capital expenditure of Rs. 1,675 crores, which was approved by the board. Part of the new liquid terminal is expected to be commissioned before the end of this financial year, and we have also started evaluating the addition of further 36,000 metric ton cryogenic gas tank at this site to further strengthen our gas infrastructure.
At Kandla Port, our existing facilities continue to operate at improved utilization levels. We expect a significant volume boost at both the KGPL and JLPL pipelines become operational.

The KGPL connection has already received PNGRB approval and JLPL connectivity is expected to be operational by the 3rd quarter of FY '26, so that is probably by December 2025. We are also gearing up for the commencement of VLGC berthing at Kandla in the 3rd quarter, which will allow us to handle larger cargoes efficiently.

As far as expansion is concerned, we have acquired some new land at a TRL4 plot, where a new liquid terminal with storage capacity of 94,148 cubic meters is under development, which is scheduled for commissioning next year. In addition, we had announced the signing of a non-binding memorandum of understanding with Larsen & Toubro to set up Ammonia Terminals to support their upcoming green Ammonia facilities at Kandla, which would increase our participation in India's emerging green energy value chain. At this point, this is still a non-binding MoU, but discussions are underway to form it out.

At Kochi Port, our 82,000 cubic meter liquid terminal is operating at a high capacity utilization. We have been allotted additional land at this site and plan to add another 60,000 cubic meters of

capacity on the newly allotted land, which will help us to serve growing demand in Southern India and further strengthen our network on the West coast as well.

At Pipavav Port, following the commissioning of the 48,000 metric ton cryogenic LPG terminal in June 2025, the total LPG capacity at this port now stands at 70,800 metric tons. And this terminal is expected to see a substantial boost once the Kandla-Gorakhpur pipeline KGPL becomes operational by Q4 of FY '26. So, we are looking at the end of March there. The port is now VLGC enabled and supports increased rail evacuation of LPG. Our liquid terminal at Pipavav continue to operate at very high utilization, catering to Western India. And we are also developing, in a very significant development, a Rail Gantry for liquids as well and this will be an important initiative.

A further important development is the construction of India's first independent Ammonia Terminal at this port, which we announced last time, with a static capacity of 36,000 metric tons, and which is expected to be completed before Q1 of the next fiscal year. This terminal will operate under 15-year take-or-pay agreement to serve Hindustan Zinc's upcoming Diammonium Phosphate plant, and is positioned to benefit from rising domestic demand for Ammonia, which is also driven by India's green hydrogen mission.

At Mangalore Port, our 82,000 metric ton cryogenic LPG terminal was successfully commissioned in June, and the maiden LPG vessel was received last quarter, marking the inauguration of the LPG unloading arm. In addition to t

his, the 75,000 cubic meter liquid
capacity added last year is now fully generating revenue. We have been allotted some additional land at this location as well, and plan to add another 60,000 cubic meters of liquid capacity to support further growth and deepen our presence in the region.

In the previous earnings call, we had shared with you our intention to expand our presence to the 7th port, for which land allotment was expected shortly. I am now pleased to announce that we have signed a non-binding memorandum of understanding to invest in the Vadhavan Port, which some of you may have heard about, for around Rs. 20,000 crores. We now have intentions to expand our presence to two new ports, and additional liquid or gas capacity will be developed once land is allotted in these ports. And this will further diversify our geographic presence and product mix, strengthening our position as India's most comprehensive energy infrastructure platform.

From a financial and strategic standpoint, we continue to maintain a disciplined approach to capital deployment. We remain on track to reach a cumulative capital expenditure of USD 1.2 billion by next year and aim to achieve an aggregate CAPEX of around USD 5 billion by 2030. This growth will be funded through a balanced mix of equity, internal cash generation, and prudent use of debt, with a target gearing ratio of 0.6x currently, and a maximum cap of 3.5x EBITDA. And financial discipline, alongside with operational excellence and strategic clarity, positions AVTL for sustainable value creation over the long term.

So, I would also like to take this opportunity to thank all our employees, partners, and stakeholders for their continued support and dedication as we execute on our strategic roadmap. With a strong balance sheet and expanding asset base, and growing demand for LPG, Ammonia, and Liquids, we are well placed to deliver a consistent growth and strengthen our leadership in India's energy logistics sector.

So, with that, I can now hand over to Mr. Murad Moledina to take you through the detailed financial performance for the quarter. Murad.

Murad Moledina: Thank you, Mr. Raj. Hello, everyone. So, Q2 FY '26, revenue from operations increased by 26.2% year-on-year to reach INR 187.6 crores. Revenue from liquid terminalling was INR 106 crore, increasing by 28.3% year-on-year. This increase in revenue was driven by higher volumes on account of capacity additions and also on account of better product mix. Revenue from gas terminalling division reached INR 81.5 crore. That is an increase of 23.7% year-on-year. Gas report for the quarter was INR 0.68 million metric tons as against INR 0.52 million the previous quarter.

With significant static capacities which have been recently operationalized, the revenue contribution from gas division is poised to grow going forward, in fact, a step-up growth after operationalization of pipeline connectivity. Operating EBITDA increased by 25.8% year-on-year to reach INR 137.4 crores. As highlighted in the previous earnings call, we saw a full quarter impact of debt repayment and interest saving, witnessing a substantial reduction in interest costs driven by repayment of bank borrowings, with interest costs decreasing 61% year-on-year. The profit growth was 141.8% year-on-year clocked at Rs. 53.9 crores.

Coming on to our H1 FY '26 performance:

H1 FY '26 revenue from operations increased by 16.2% year-on-year to reach INR 351.6 crores. Revenue from liquid terminalling was INR 202.9 crore, increasing by 21.3% year-on-year. Revenue from gas terminalling division reached INR 148.7 crore, an increase of 9.8% year-on-year. Cumulative gas throughput for H1 FY '26 was 1.2 million tons. Operating EBITDA increased by 15.5% for H1, reaching INR 257.4 crores. The profit growth was 111.4% year-on-year for H1, which clocked at INR 101.6 crores. A strong op

erational EBITDA was further supported by 49% decrease in finance costs for H1 FY '26. The financial position of the company remains robust with low debt, strong cash flow and a solid balance sheet.

Thank you. I will now request the moderator to open the floor for question-and-answer session.

Moderator: Thank you very much. We will now begin the question-and-answer session. The next question is from the line of Jainis Chheda from Kemfin Family Office. Please go ahead.

Jainis Chheda: I just wanted to understand, can you share the volume numbers for FY '25 and H1 FY '26? That is possible, both in liquids as well as in LPG?

Murad Moledina: No, we do not give for liquid as it is not relevant. But what you can see is that the last year, we had 1.5 million CBM liquid space as against the current year where we are now operating 1.7 million CBM. So, this is the liquid capacity. We have already given throughput capacity in our presentation where in the first quarter it was 0.52 million metric tons and in the current quarter, it has risen to 0.68 million metric tons. For H1, it is 1.2 million metric tons.

Jainis Chheda: And what will be for FY '25 that is handy?

Murad Moledina: We will have to look at, please refer our presentation. I do not have it offhand.

Jainis Chheda: No issues. Thank you. I will join back with you.

Moderator: Thank you. The next question is from the line of Neeloptal Sahu from JM Financials. Please go ahead.

Neeloptal Sahu: Hi, sir. Good evening. Sir, can you give us a split of EBITDA between liquids and gases?

Murad Moledina: Neeloptal, we give it always at the year end. But what I can guide you is that the gas EBITDA per ton remains just a shade under 1100. Now, this is because the new cryogenic terminals have just come on stream. So, going ahead, we will come back to our realization of EBITDA of 1200 that we talk about. But in this quarter, it is just a shade under 1100. And then you can calculate the liquid EBITDA accordingly. The liquid realization, if you look at the revenue, we have improved to 2500 now, as against around 2250 the previous quarter as well as the last year. And the EBITDA in liquid also has remained, the realization of EBITDA is almost the same per CBM. However, with JNPA product mix improving, you will see from next quarter again a jump in the EBITDA per CBM as far as liquid is concerned. As of now, this is all that I can help you with.

Neeloptal Sahu: Sure. That is helpful. Secondly, the depreciation number seems to have risen quite a bit. Is this now like the normalized run rate we should consider for the rest of the year?

Murad Moledina: You please note that the depreciation number has not just increased on account of the asset addition, but also on account of JNPA coming on stream. So, JNPA carries a little higher lease rent with under INDAS 116 is non-cash, but it comes under depreciation as well as interest. So, a little part of that increase is INDAS 116. But yes, I think you can take this run rate because this index is not going to go away in any case. But it is not actually depreciation.

Neeloptal Sahu: Understood. Also, sir, you have talked about KGPL and JLPL getting connected to AVTL's Kandla Terminal. How much capacity is allocated to the AVTL terminal for these two pipelines together?

Murad Moledina: There is no capacity allocation. Now, let me tell you one thing. JLPL is 3.5 million and KGPL is 8.25 million of which 1 million is Dahej, 1.5 million is Pipavav. So, what is left is 5.75 million and 3.5 million JLPL. JLPL is being upgraded to 6.5 million. So, eventually, there will be a pipeline evacuation of around 12 million going forward. Three terminals are hooked into which is IOC Kandla, Adani Mundra, both LPG terminal and Aegis Terminal. I suspect that all three of us going forward w

ill not be able to keep up with 12 million and we will have to expand. But of course, that may happen in 28-29. Building a tank will not take much time. It will be possible very quickly. But we need to get to that point. Also, distribution is a very important element from Kandla. So, in addition to this 12 million going forward, of course, JLPL upgradation will still take some time. But with the distribution growing at the pace at which it is growing, we will need a lot of capacities going forward. But in short term, I think we have a good sight on the ramp up that is going to happen. I suspect very fast.

Neeloptal Sahu: Understood. And last question from my side. Can you help us understand the nature of the other comprehensive income, seems to be a large number?

Murad Moledina: Yes, so most of it is interest, which was there. So, that is there. Other income in AVTL is Rs. 1 crore 45 lakhs, right?

Neeloptal Sahu: No, other comprehensive income?

Murad Moledina: Yes, other comprehensive income is the margin which the parent is charging on the Pipavav Terminal that has commissioned. So, this is a net of tax. So, you like what we have been always saying 20%-25%. So, if you look at this, how much is it? Rs. 88 crores, right? Yes, Rs. 86.68 crore, you will need to divide by 0.75. And if you equate it on the Rs. 600 crores Pipavav Terminal that we just commissioned, you will understand that it is a shade about 20% margin for the infrastructure development that we do. So, you have to bring it under consolidation, you have to bring it back. So, you have to first take the actual cost of construction and then through this comprehensive income, you have to take it to the amount that you have paid for. So, this is the way in which your asset goes and is slated in your fixed asset schedule at the amount at which you have paid.

Neeloptal Sahu: Those are my questions.

Moderator: Thank you. The next question is from the line of Koundinya from Jeffries. Please go ahead.

Koundinya: Yes. Hi, sir. Thanks for the opportunity. Firstly, a bookkeeping question. The gas realizations look a tagged lower at 1200. You partly explained that the new ones have lower realizations at the moment. So, how low those can be, that is one. And two, even on the throughput turns, even if it is just for the months of operation look lower. So, how should we read that number? How should we look forward to maybe from 3Q onwards, these two numbers?

Murad Moledina: Yes. So, for throughput turnarounds, we have explained there are 5 very important things happening in near term. And those have to happen for the turns to come at the levels at which we always talk about our terminals being capable to handle. Number one, JLPL connection,

which is right now today under getting hooked up. The work is going on. We expect it to be operational next quarter. So, that is JLPL Kandla. So, that we have already explained the 3.5 million ton pipeline and is presently being upgraded by GAIL probably that will take some more time. But anyway, so JLPL will start operating next quarter. Then from Kandla-Gorakhpur pipeline, we have just received PNGRB permission, which was awaited and of course, Kandla-Gorakhpur itself is getting commissioned. We expect that to happen and get completed, sometime in Q4. So, that also will start giving, not only in Kandla, but also in Pipavav, where in our own premises, a manifold for the hookup of Kandla-Gorakhpur is being constructed by IHB. So, that is the third one. The fourth one is Kandla was only able to handle medium gas carriers up till now. But we have prevailed upon the port and we are now under the process of starting to operate to unload very large gas carriers. That means the load which comes in doubles from 22,000 metric tons to 45,000 metric tons. So, the load which comes in is a larger load. So, it will help in the turnaround th

at you can do with the VLGC jetty enabling. Fifth one is Mangalore. We have just started construction of LPG Rail Gantry in Mangalore, as well as constructing LPG Bottling Plant in Mangalore. Further, JNPA work is in full swing for setting up 77,000 tons of LPG cryogenic storage terminal, as well as the 35,000 metric tons of bottling plant. There also we have a window to connect into Uran-Chakan pipeline. So, all of these are going to be the enablers for a higher turnaround. Now we await, especially JLPL, KGPL to begin with, and then Mangalore also we have an opportunity to hook up into Mangalore-Hassan-Cherlapally pipeline. All of these pipelines which I have just talked about, in addition to the upgradation of JLPL in

terms of capacity, they are also extending the reach. So, that also is a work going on. So, it is a very exciting time going ahead. It is just the timing which we have to wait for the connections and operations.
Koundinya: Sure, sir. Actually, my question was specific to the quarter only, because it looks like I implied throughput anyway close to 14-15 tons. So, the question is how quickly can they go back to that 25-30 tons at least? Can it happen in the next quarter itself or is it like at least 6 months?
Murad Moledina: You will see that from Q4 onwards.
Koundinya: Q4 onwards. So, Q3 will also be a bit subdued and Q4 onwards it will be?
Murad Moledina: Yes, because then JLPL and a bit of KGPL will come into play as well as VLGC in Kandla.
Koundinya: Understood. So, my second question is on the CAPEX plan. You did speak about 1.2 billion USD next year and also 5 billion by 2030. Is it possible to do some kind of breakup between different projects and project wise possible, the kind of CAPEX that is planned out?
Murad Moledina: What I can tell you is that the number of ports where we are present will increase. We are already in 6 ports. Two additional ports. Vadhavan port, we have already signed a non-binding MoU, of course. But we are very much wanting to start work as soon as we get the land, etc. at Vadhavan. Then there is one more port which I think in the coming quarters you will hear more. Now, this is 6-8, 8-12 ports we could go by 2030. So, that is number one is increasing presence in number

of ports. Second is increasing liquid capacity. We were at 1.5 million CBM. We are at 1.7 with JNPA, Haldia, Mangalore, Kandla expansion. We would be jumping to 2.5 million and then probably by December 26, maybe 3 million odd. And then this 3 million going further at the same rate till 2030. So, that is increasing liquid CBM till 2030. Also, we have said that LPG, we are building in JNPA, 77,000 MT. We are also looking at another 36,000. Now that is gas, whether LPG, propane or ammonia, we need to still zero in on. Plus, on top of that, I just said that Kandla, we may have short capacity. So, we may need to put up more tanks in Kandla. So, that is LPG. Ammonia, already we have said. We have started first Ammonia Terminal development. We have signed a non-binding MoU for Kandla and we definitely are looking at Kandla as the second port. We probably would have around 8-10 terminals by 2030 as far as Ammonia is concerned. Then there are some more gases where we could start having presence, whether it is natural gas, ethane, there are lots and lots. Plus, on top of that, industrial terminals. We are really talking for getting a presence in industrial terminals, which are customer-centric and, of course, getting into jetties. So, there is so much to do. I think 5 billion is quite, we would be there.
Koundinya: I was trying to understand it on the project level. At least the 1.2 billion, is it possible to identify where is it being spent for different projects or it is difficult at this point in time?
Murad Moledina: 1.2 billion is Rs. 10,000 crores. We are already at Rs. 6,000 crores. We have just annou

nced Rs.
1,675 crores in JNPA, Rs. 525 crores in Pipava Ammonia. We have announced Rs. 165 crore for Kandla. And now, like I said, Hindustan Aegis acquisition. And plus on top of that, I just said there is a new port, which you will hear in a quarter or so. And then Haldia, Mangalore, Kandla and Kochi, surplus land, which we are planning to develop. So, all of this put together will take us to Rs. 10,000 crores very easily which is 1.2 billion by December 26 or March 27. We should be there.
Koundinya: Understood, sir. Just one small request. If you can, I know you said that you will share the numbers on an annual basis. But it will be helpful if you can share the EBITDA numbers on a quarterly basis. Because as you add new plants, your depreciation shoots up and EBIT is a moving number. So, it becomes really difficult for us to track the company. But a small request from our end, sir. Thank you and all the best.
Murad Moledina: Noted. Thank you.
Moderator: Thank you. The next question is from the line of Vishal Mehta from IIFL Capital. Please go ahead.
Vishal Mehta: Good evening. So, thanks for the opportunity again. My question was this expansion of liquid in Mangalore and Kochi, 60K CBM each. By when do we expect the commissioning by?
Murad Moledina: It will be done quickly. So, it should be by December 26, all done and finished. Maybe much before that, but definitely by December 26.

Vishal Mehta: So, sir, just reconciling the numbers here, we are 1.7 right now on liquid. We have plans for additional 0.6 odd million. So, we are saying that we will reach probably 3 million by December 26. So, where is that additional 0.6 going to come from?
Murad Moledina: I told you there are two more land parcels, which we are at the stage of finalization, a new port.

So, once those come in, probably we should be very close to that number.
Vishal Mehta: And once those come in, probably by December 26, we should quickly have those up and running?
Murad Moledina: Yes. We are very quick in as far as liquid terminals, which generally if everything goes well, we can finish in between 9-12 months, yes, even if we start in January 26, we should be able to finish it off.
Vishal Mehta: And I am sorry, I probably got disconnected at the time when you were giving EBITDA per ton numbers for liquid and gas. If you could provide that again, it would be helpful?
Murad Moledina: So, like I said, we have improved the realization as far as revenue is concerned in case of liquid from 2,200 odd to 2,500. And as far as EBITDA is concerned, of course, it remains almost the same, 1,700. That will change quickly once JNPA mix, which has changed and will contribute more. So, you will see an upside probably from next quarter onward. We have already improved on the revenue rate per CBM on liquid. As far as LPG is concerned, because these two terminals have come up and remember, Mangalore terminal is again 1,175, not like Pipavav. So, now Kandla and Mangalore are 1,175. So, you will see a revenue rate, a shade over 1,200 and EBITDA rate just a little shade under 1,100. But this again is going to improve once the throughput and the turnaround increases on account of multimodal evacuations. The five of them, which are 5 or 6 of them, which are just listed and which are expected in near term to happen.
Vishal Mehta: So, on sustainable basis right now, we should probably, at a blended level, build in a LPG realization of around 1,200 odd, a shade about 1,200?
Murad Moledina: Yes, a shade above 1,200 and EBITDA a shade over 1,100. This is where we will be operating at.
Vishal Mehta: Thanks and all the best. Thank you.
Murad Moledina: Thank you.
Moderator: Ladies and gentlemen, in the interest of time, that was the last question. I would now like to hand the conference over to Mr. Raj for closing comments.

Raj Chandaria: Thank you very much for those interesting questions. I just like to summarize by saying that AVTL is really on track. We are very clear strategically what we have to do. And I look forward to interacting with all of you next quarter to continue the rollout of our network. Thank you very much.
Murad Moledina: Thank you.
Moderator: On behalf of Aegis Vopak Terminals, that concludes this conference. Thank you for joining us and you may now disconnect your lines. Thank you.

Sub. : Transcript of the earnings conference call
Dear Sir/Madam,
Pursuant to Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed the transcript of the earnings conference call held on Friday, January 30, 2026 at 03:00 p. m (IST), for your information and records.
The above communication is also available on the website of the Company at www.aegisvopak.com .
The above is for your information.
Thanking you.
Yours faithfully,
For AEGIS VOPAK TERMINALS LIMITED

Priyanka Vaidya
Company Secretary and Compliance Officer

"Aegis Vopak Terminals Limited
Q3 & 9 Months FY26 Earnings Conference Call"
January 30, 2026

MANAGEMENT : MR. RAJ CHANDARIA – CHAIRMAN AND MANAGING D IRECTOR – AEGIS VOPAK TERMINALS LIMITED
M R. MURAD MOLEDINA – DIRECTOR – AEGIS VOPAK TERMINALS LIMITED

Moderator: Ladies and gentlemen, good day and welcome to the Aegis Vopak Terminals Limited Q3 and 9 Months FY26 Earnings Conference call. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star, then zero on your touchtone phone. Please note that this conference is being recorded.

Before we begin the call, I would like to give a short disclaimer. This call may contain some forward-looking statements which are completely based on our beliefs and expectations as of today. The statements are not to guarantee a future performance and involve risk and uncertainties. With this, I would now like to hand over the conference to Mr. Raj Chandaria for his opening remarks. Thank you and over to you, sir.

Raj Chandaria: Okay, thank you very much. Good afternoon, everybody. I extend a warm welcome to all the participants in the Q3 FY26 Financial Results discussion. My name is Raj Chandaria. I'm the Chairman and Managing Director of Aegis Vopak Terminals Limited and I'm joined today by Mr. Murad Moledina the Director of the company and Miss Payal Dave of MUFG Corporate markets.

I hope everyone has a chance to review our investor presentation, which was uploaded on the exchanges and our company website. And it gives me satisfaction to address all of you again this quarter following our successful listing in this year. And I'd like to thank our investors and stakeholders for their continued trust and confidence that you've placed in our long-term vision, our management team and in our strong operational partnership.

So Aegis Vopak Terminals Limited is today India's largest independent operator and owner and operator of tank storage terminals for LPG and liquid products. With strategically located assets across six major ports on the coastline of India and seamless multimodal connectivity through pipelines, road and rail, we are uniquely positioned at the heart of India's energy and chemical logistics ecosystem.

Our joint venture heritage, which combines the deep local expertise of Aegis Logistics Limited with the global operating excellence of Vopak, continues to be a powerful differentiator. Now, this partnership enables us to deliver world-class standards of safety, sustainability and efficiency even as India's energy demand accelerates at a good pace.

And I'm pleased to report that we are making excellent progress on our long-term growth strategy, which is being executed under Project GATI, Gateway Access to India, GATI. And this initiative is driving the expansion of our storage footprint through -- it's improving our throughput efficiency and diversifying our portfolio into new products. These efforts are not only strengthening our leadership position in the market, but laying the foundation for sustainable, profitable growth in the years ahead.

Now, I'm pleased to report that the new LPG terminals, which were commissioned last year at Pipavav and Mangalore are now fully operational and contributing to revenues from this quarter onwards. And these additions have already started driving incremental volumes and therefore

profitability. Before moving to the port-wise business update, I'd just like to highlight one major strategic development from last year -- the last quarter, sorry.

AVTL has now completed the acquisition of 75% stake in Hindustan Aegis LPG Limited, HALPG, which was acquired from our parent -- one of the shareholders, Aegis Gas Private Limited and Vopak India, resulting in Hindustan Aegis LPG becoming a subsidiary of AVTL. Now, this acquisition brings 25,000 metric -- an additional 25,000 metric tons of LPG storage capacity at Haldia,

marking AVTL's entry into the East Coast market.

HALPG operates a leading terminal along with an attached bottling plant and maintains an exclusive terminalling agreement with HPCL, which is valid until 2038. And this strengthens the long-term revenue visibility and expands AVTL's footprint in a high-potential region. Now, with that -- with those introductory comments, can I -- I'll take you through the port-by-port developments.

As stated, Haldia Port has a liquid storage capacity of 226,890 cubic meters, with operations -- all operations running at a high capacity utilization level, which is driven in turn by steady demand. To facilitate future growth in this area, we acquired an additional 3 acres of land and for expanding our liquid activities there.

With the integration of Hindustan Aegis LPG, AVTL has established a nationwide footprint of four LPG terminals located at Pipavav, Kandla, Mangalore, and Haldia together offering a combined static capacity of 225,800 metric tons.

Coming to JNPT Port, the current operational liquid capacity is 1,06,900 cubic meters, with improved average realizations driven by a strong product line. Work is underway to add an additional 318,100 cubic meters of liquid capacity and 77,236 metric tons of LPG capacity, marking a significant expansion.

Alongside this, construction of an -- there is construction of an LPG bottling plant with an annual capacity of 35,000 metric tons, so that's also in progress. The overall project, which involves a capital expenditure of INR1,675 crores, is advancing well, with the first phase of the new liquid capacity scheduled to come online in Q1 of FY27.

And in addition to this, the company is assessing the development of a 36,000 metric ton cryogenic gas tank to further enhance its gas infrastructure on the West Coast. Turning to Kandla Port, the Jamnagar Loni LPG Pipeline is nearing completion and is expected to be operational within the next month, while the Kandla Gorakhpur LPG Pipeline is scheduled to be connected by June 2026. This is our latest information.

The VLGC at the Kandla Port began operations in the third quarter -- a very significant development by the way and on the final day of the year, December 31st, the first ever VLGC docked at Kandla Port are now making it a VLGC-compliant facility. And as a result of this, we anticipate a sharp increase in the volumes at Kandla and followed by a further increase once the KGPL and JLPL pipelines are commissioned.

And alongside these developments, construction of a new CRL4 liquid terminal with a 94,148 cubic meters capacity is progressing and is slated for commissioning next year. In further developments, we have entered into a non-binding memorandum of understanding with Larsen & Toubro to jointly develop ammonia terminals at Kandla.

Now, this collaboration is designed to support L&T's upcoming green ammonia facilities and further strengthen AVTL's role in India's evolving green energy ecosystem. At this moment, the MOU remains non-binding, but discussions are progressing to finalize the framework agreement. At Kochi Port, our liquid capacity stands at 82,545 cubic meters, which again is operating at a high capacity utilization rate.

And in our earlier call, we had outlined plans to develop an additional 60,000 cubic meters of liquid capacity on newly allotted land and I'm pleased to say that this development is now actually underway. This expansion will not only expand capacity to meet future demand, but will also support the growing requirements of the whole of southern India and further reinforce AVTL's presence along the West Coast.

Turning to Pipavav Port, the cryogenic LPG terminal with a capacity of 48,000 metric tons was commissioned in June 2025, taking the port's total LPG capacity to 70,800 metric tons. The port has also undergone an infrastructure upgrade t

o the existing jetties, making it VLGC enabled
and capable of handling larger cargoes, while enhancing rail-based evacuation of LPG.

On top of that, in addition to that, sorry, work on a new VLGC-compliant jetties is underway by the port and is expected to be completed in this calendar year. And at the end of that period, the port will have world-class infrastructure to handle LPG through VLGCs. It will have cryogenic storage tanks. It will have bottling plants, an LPG rail gantry and 16 truck-loading bays for efficient evacuation, and it will have the pipeline to Central India.

So a big development at Pipavav. The liquid terminal at Pipavav continues to operate at a high utilization level and we are under -- in the process of developing further infrastructure in the liquids business there to cater to the -- to other large Indian and global corporate customers. We've -- in a very significant development, I'm very proud to announce that we have entered into a 15-year long-term take-or-pay agreement with a large conglomerate, whose name we're not disclosing at this moment, for handling their petroleum products at Pipavav.

At this -- under this arrangement, AVTL will manage over half a million metric tons annually, starting at the end of this calendar year, providing strong volume visibility and reinforcing our position as a reliable logistic partner for one of India's largest energy players. This agreement not only secures a stable revenue stream, but also strengthens our position on the West Coast. And we will provide more details once this arrangement begins operations.

In addition to that, construction of India's first independent ammonia terminal with a static capacity of 36,000 metric tons is progressing well, and is expected to be completed before the first quarter of the next fiscal year. The project is backed by a 15-year take-or-pay agreement with Hindustan Zinc to support its upcoming diammonium phosphate plant.

Now, this positions AVTL to meet the growing domestic demand for ammonia, and aligns also with India's broader green hydrogen ambitions. And we are currently in talks to introduce a strategic partner into this asset to help us upscale this segment of the business to the next level.
At Mangalore Port, the cryogenic LPG terminal with a capacity of 82,000 metric tons was commissioned in June, and the port has successfully received its first LPG vessel last quarter. In addition, 75,000 cubic meters of liquid capacity that was added last year is also revenue accretive, contributing to stronger performance.
With additional land recently allotted at that site, we anticipate -- we are developing another 60,000 cubic meters of liquid capacity. And this upcoming expansion will further enhance the company's capabilities and reinforce its presence in that port.
Now, Aegis Vopak Terminals has also entered into a non-binding memorandum of understanding to invest in the proposed Vadhavan Port with a potential outlay -- project outlay of approximately INR 20,000 crores. This move is part of a wider plan to establish operations at two new port sites.
Now, following the receipt of the necessary approvals and allocation of land, construction of fresh liquid and gas handling facilities will begin, which will add quite significant scale to the company's network. And the development -- this development will broaden both the geographic coverage and service offering, while strengthening AVTL's standing as India's leading integrated energy provider.
Now, by next year, our aggregate capital expenditure is projected to reach $1.2 billion. And in line with our long-term vision, we have charted a capex roadmap of approximately $5 billion to be achieved by 2030. Now, these achievements will be financed through a carefully balanced approach, which will leverage internal accruals alongside with a disciplined use of debt.

Our financial strategy remains firmly anchored in prudence, with a commitment to maintain the debt gearing ratio of 0.6 times, and ensuring that overall leverage does not exceed 3.5 times EBITDA.
Now, I'll just take this opportunity to thank all our employees and partners and stakeholders for their continued support as we execute this roadmap. And with a strong balance sheet, an expanding asset base, and a growing demand for LPG, ammonia, and other liquid products, we are really well-placed to develop consistent growth and strengthen our leadership in India's energy logistic sector.
So with that, I'm going to hand over to Mr. Murad Moledina to take you through the financial performance for this particular quarter. Murad?
Murad Moledina: Thank you, Mr. Raj. Hello, everyone. Starting with our nine-month performance, revenue from operations for FY26 increased by 18.3% year-on-year, totaling to INR549.1 crores. Revenue from liquid terminalling was INR319.4 crores, up 26.6% year-on-year, while revenue from gas terminalling division reached INR229.7 crores, an increase of 8.4% year-on-year.

Cumulative gas throughput as of nine-month FY26 crossed last year's throughput of 1.89 million metric tons. Operating EBITDA for the nine months rose by 18.1% year-on-year to INR403.2 crores. And profit growth was particularly strong, up by 90% year-on-year to INR163.2 crores.
Moving to the third quarter of FY26, revenue from operations rose by 22.3% year-on-year, reaching INR197.5 crores. Revenue from liquid terminalling segments stood at INR116.5 crores, reflecting a year-on-year increase of 37%. This growth was primarily driven by higher volume supported by capacity additions and improved product mix.
Revenue from gas terminalling division came at INR81 crores, with an increase of 6%, and gas throughput was 0.67 million metric tons. Operating EBITDA for Q3 FY26 grew by 23% year-on-year, reaching INR145.9 crores, while profit surged by 62.7% year-on-year to INR61.5 crores.
Overall, the company's financial position remains solid, underpinned by low debt, strong cash flow, and a resilient balance sheet, which has been confirmed by the rating agency, upgrading our group credit rating of AA to positive outlook from stable outlook. Thank you. I will request the moderator to put the floor for question-and-answer session. Thank you.
Moderator: The first question is from the line of Yash Nandwani from IIFL Capital.
Yash Nandwani: So, my first question is on the liquid terminal realization. So, we have seen a significant improvement in the blended realization in the liquid segment. Just wanted to understand, is it all related to product mix improvement or also a function of improved turnaround, or is there any take or pay in that? And would it be reasonable to assume same realization going forward?
Murad Moledina: Yes, Yash. This is not on account of any take or pay. This is on account of better product mix and increased realization rate, especially so from our JNPA terminal, which has now stabilized operations, and we are in a position to improve the product mix and increase the realization, which has taken the overall average realization up. This is expected to stay and further improve

going forward.
Yash Nandwani: Sure, sir. And secondly, sir, same on the liquid side. We are currently expanding at JNPA and Kandla, and we also have lands at Kochi, Mangalore, and Haldia. So, when do expansions start there, and what should we expect the liquid capacity to hit by, let's say, FY27 end?
Murad Moledina: So, you know that we are expanding at Kandla around 100,000, and then we are also expanding at Mangalore, as well as Kochi, as well as Haldia, which is 60-60-50, that is around 200,000 further. And we are also doing 318,000 at JNPA. We are at 1.7 million. So, I think we should be around 2.5 million plus by FY27 end.
Moderator: The next questi

on is from the line of Siddharth Chauhan from B&K Securities.
Siddharth Chauhan: So, firstly, on the 15-year take-or-pay agreement, which you signed it before, I just wanted to understand, is it with an existing customer or it's a new customer which we have scouted?

Murad Moledina: Now, we have already said the details we will share with the investors when the operations on this account starts. So, you will get the details in this calendar year. It is expected to start somewhere around October 2026.
Siddharth Chauhan: Okay. All right. And secondly, you know, any reason for the weakness in LPG volume and the LPG EBIT? What particularly happened in this quarter?
Murad Moledina: Yes. So, usually across the Board, quarter one is the least, quarter two, quarter three are always similar, and quarter four is the surge. So, that is how this is happening. This is almost similar to Q2 in terms of volumes handled. As far as EBIT is concerned, as you know, the revenues have reduced by INR1 crores, depreciation has increased by INR1 crores.
And therefore, the EBIT to that extent is affected and there are some costs. So, as the maturity of utilization will happen from Q4 onwards, you will see a sudden change, a step up. In fact, I think the takeoff happens Q4 onwards as far as gas volumes and gas EBIT and gas revenues are concerned. You will start seeing step up changes in all volumes, revenue, EBIT and EBITDA from Q4 of FY26.
Siddharth Chauhan: Understood. And, you know, lastly, can you share your capex plans for the next year? Do we have a roadmap on that?
Murad Moledina: So, we were, after the IPO, we were sitting on an assets commissioned, if you strip out the ROUs, which is, you know, right-of-use fees in the fixed assets. We are sitting on INR5,000 crores. We have already bought Haldia assets at INR1,000 crores. We are executing INR1,675 crores at JNPA.
We intend to spend around another INR500 crores on the liquid assets at Kandla, Mangalore, Kochi, in fact more. So you see, we are well geared to reach a capex of INR10,000 crores by the time we end FY27. We'll double the capex.
Siddharth Chauhan: Understood. And so, thanks a lot and all the best for the future.
Murad Moledina: Thank you.
Moderator: Thank you. The next question is from the line of Neelotpal Sahu from JM Financial. Please go ahead.
Neelotpal Sahu: Hi, sir. Good evening. Thank you for the opportunity. First question is, would you like to provide some outlook on the volumes for FY '26, given that Haldia will be added for the fourth quarter?
Murad Moledina: Sorry, Neelotpal, I did not get your question correctly.
Neelotpal Sahu: Can you help us with the volume outlook for FY '26, with Haldia being added, like, for the fourth quarter?
Murad Moledina: You are saying about Q4?
Neelotpal Sahu: Yes, for Q4.

Murad Moledina: So, Q4, typically, Haldia is at the utilization of 65% of throughput capacity. So, accordingly, the volumes of Haldia will be added, that's number one, to the volumes which already we did in Q3.
Second, VLGC jetty at Kandla has started operating.
In fact, in January, there were five VLGCs which came and unloaded cargoes. Of course, January was a little bit affected by some incidents, but that was not really major in the Middle East. But we expect a volume increase, quite a volume increase at Kandla also for Q4.
So, yes, we expect to do well in Q4 in terms of volume, should definitely cross a million and more. We'll have to see where we end, but we are very positive on the volume growth as far as Q4 is concerned.
Neelotpal Sahu: Sure, sir. Sir, secondly, you have talked about an exclusive agreement with HPCL at the Haldia

terminal. Can you help us with the annual volume run rate for the Haldia LPG terminal? And
what is the quantum of this agreement with HPCL?
Mu

rad Moledina: So, HPCL agreement is not a take-or-pay agreement. It is an exclusive agreement. So, HPCL has to bring the cargo on the East Coast at our Haldia terminal. The terminal has been constructed for their use. However, you know, as their market share grows, so when we started, their volumes were 0.4 million. Now, it has reached more than 1.5 million from the time we started, and it continues to grow.
In addition, they are also laying a pipeline from this Haldia LPG terminal all the way to their Panagar bottling plant. So that, as and when it gets commissioned, you will see again a step up. Now, we are very close. We are getting very close to the capacity of throughput that we can do there. We have already crossed 1.5 million.
The capacity most we can do is 2.5 million. I think there will come a time very soon when we should get saturated at Haldia. That would open doors for us to look into expansion possibilities at that particular point of time.
Neelotpal Sahu: Thank you, sir. And one last question from me. Can you help us with an update on KGPL and JLPL pipeline connections to Kandla and Pipavav?
Murad Moledina: Yes, surely. Mr. Raj already spoke that we expect JLPL. So now, the full swing work is on Jamnagar-Loni Pipeline from our side. So everything is in place. We are doing the construction. Construction in the sense, the last few meters that are left to be connected, we expect by February end to be able to commission.
As far as Kandla-Gorakhpur is concerned, I think the worst case scenario is June '26. It should happen before, but I think by June, we expect it to be operationalized, both at Kandla as well as at Pipavav. Pipavav might be a little earlier because the manifold is right there in our premises.
Neelotpal Sahu: That's all from me. Thank you, sir.
Moderator: Thank you. The next question is from the line of Dr. Amit Vora from the Homeopathic Clinic. Please go ahead.

Amit Vora: Yes. Good afternoon, everyone.
Murad Moledina: Good afternoon.
Amit Vora: Sir, my question is regarding the recent EU signing agreement with India. Will that benefit anyways to our company?
Murad Moledina: Sorry, your voice is a little muffled. Can you repeat the question?
Amit Vora: EU?
Murad Moledina: Yes, the EU agreement, yes. I mean, in that sense, we are a storage terminal keeper. So these agreements do not affect us directly. But whatever benefits the customer will derive, for example, I think specialty chemicals export now being the duty being reduced probably to zero. As and when it is implemented, it's still some time away. The agreements are not yet in operation. They may take 6, 9 months. But I think it will help because there will be more exports of specialty chemicals to Europe. And port terminals would definitely be required for that rush.
Amit Vora: Okay. And one more question, sir, about the rail gantry at Mangalore. Is it operational?
Murad Moledina: Rail gantry work has started. It will take 9 months. So probably by September '26, it will be operational.
Amit Vora: Okay. That's it, sir, from my side. Thank you so much.
Murad Moledina: Thank you.
Moderator: Thank you. The next question is from the line of Keshav from Modifi Investment. Please go ahead.
Keshav: Yes. So my first question would be a bookkeeping one. So just to check on the realization of the liquid, can you please give me the capacity which we were having for liquid in Q3 FY '26 and what was the utilization level of that capacity?
Murad Moledina: Yes. So it's 1.7 million. So what you do is the Q3 number run rate, if you want to see, you multiply by four and you divide by 1.7 million. So you'll get a yearly average rate realization. Occupancy has got no relevance here because we also sometimes hire out capacity without any relevance to the volume.
But if you want to technically understand what is the occupancy, then it is 77%

physical
occupancy, not revenue generating occupancy. Revenue generating occupancy is always close to 100%. So that is what it stands.
Keshav: Okay. understood. So the second question would be on gas realization. So if I just look at the Q1, Q2 and Q3 numbers, in Q1 we had approximately 1,290 per metric ton. It reduced to 1,200. Now it is at 1,210. So, sir, what can be the ballpark number for the gas realization which we can

model in our projections?

Murad Moledina: Yes, that's around 1,250. Yes.
Keshav: 1,250. And sir, lastly, on the throughput side. So we are expecting Kandla-Gorakhpur to come live in the next 6 months. Like the worst case scenario which you have mentioned is June. Currently, we are doing approximately 10 to 12 times of our asset turn. I mean the throughput turn. So what can be the number for that? The throughput can, how can it improve? Like it can go up to 20-25 times or it can go more above that also?
Murad Moledina: Yes, so look, the capacity of Kandla-Gorakhpur pipeline is 8.25 million tons. Okay. There are three points of input in the Kandla-Gorakhpur pipeline. One is Kandla port where 5.75 million tons are marked, earmarked. 1.5 million from Pipavav and 1 million from Dahej. So, you know, you can do the math.
And then this all will not happen all at once. So it will take probably 2-3 years' time to reach the full utilization of the pipeline. There are 23 bottling plants currently operational which are connected to use the LPG pump from these three source points. And yes, so it's a significant number.
What will be our share? Pipavav, we are exclusively, only us. In Kandla, we share the port with IOC and Dahej, we are not there. So you can then see, I mean, let's see how much share we are able to gather from the throughput that takes place.
Mind you, the throughput is going to be done by the national oil companies, HPC, BPC, IOC.
And if you look at Jamnagar-Loni Pipeline, Jamnagar-Loni Pipeline I think currently has a capacity of 3.25 million tons, which has now been approved to be upgraded to double. But that is of course going to take 2-3 years' time.
Currently this 3.25 million ton also we would pack as our customers would use our terminal to pump into Jamnagar-Loni from Kandla. So yes, let's see. But it's going to be quite significant uptick in the throughput that we do at these source points as far as Jamnagar-Loni connection and Kandla-Gorakhpur connection that we are able to do at both Kandla and Pipavav. So it's going to be definitely of significance.
Keshav: Completely understood, but do you want to give any number to it? Like currently we are doing 0.67 million. So if we analyze it, it's coming to 2.4 on a capacity of 200, which is basically 12 times. So, like, what can be the ballpark figure for this to rise? Can it go up?
Murad Moledina: We do not give projections of throughput because it depends on our customers. But like I said, it will be quite significant in the sense in what we have been doing and what will these two connections lead to.
Keshav: Understood. And we should see an uptick starting from Q4. Like Q4 would be the first?
Murad Moledina: You will see Q4 uptick on account of the VLGC Jetty compliance that happened at Kandla as well as partly on account of JLPL connection probably by February end. You will see some profit flowing into Q4.

Keshav: Okay. Thank you. Thank you so much, sir.
Moderator: Thank you. The next question is from the line of Siddharth Chauhan from B&K Securities. Please go ahead.
Siddharth Chauhan: Hi, Muradji. Thank you again for the opportunity. On the JNPA terminal, I believe Uran-Chakan is the one which is connected. Is it correct or there are other pipelines as well connected to the terminal?
Murad Moledina: The pipeline is Uran-Chakan. You are correct

. But our LPG terminal is under construction. So we would be able to tap that once it commissions. But yes, you are right. From JNPA, we can hook into Uran-Chakan pipeline. Please remember that we are already connected and hooked into Mumbai Chakan pipeline, Mumbai Uran-Chakan pipeline from our Mumbai terminal.
Now, in addition to that, which is of course in our parent company, Aegis Logistics Limited. But in addition to that, here for our upcoming terminal, we would also hook into Uran-Chakan pipeline from JNPA.
Siddharth Chauhan: But then what is the capacity utilization of that pipeline? Because I understand it's currently running at its optimum capacity.
Murad Moledina: Again, I repeat, the customers are going to be the same. Even if it is utilized at an optimal capacity, the customers using that pipeline would start storing at our place also if we are

connected. Are you getting my point? So instead of terminal A, they would move to terminal AVTL. So there is no need for volumes to increase in Uran-Chakan pipeline. What we need is the customer to start storing at our place who is already using. But they will start using the Uran-Chakan pipeline from our connection rather than someone else's connection.
Siddharth Chauhan: Okay. Because I was reading that the pipeline capacity is, I think, close to one million tons per annum. And we already have the Mumbai terminal. And now we are putting up a JNPT terminal with a capacity of, I think, 70,000 tons.
Murad Moledina: Yes. So Mumbai terminal, it's around 350,000 tons out of that one million, which is being pumped from Mumbai.
Siddharth Chauhan: Right. And then we are putting this 70,000 metric tons. And I'm sure our throughput will be much more than this.
Murad Moledina: Yes. Absolutely.
Siddharth Chauhan: So how will we be able to evacuate the remaining capacity? I just want to understand that.
Murad Moledina: By rail, by road, and by this pipeline connection. All three. By road, I can evacuate 3.5 million tons in a year. Okay. In case of pipeline, whatever we can do, let's say half a million or whatever. And rail is again 1.5 to 2 million that you can evacuate.

Siddharth Chauhan So you are in a position to evacuate 6 million with a combination of multimodal evacuation.
Siddharth Chauhan: Okay. Understood. And, you know, and lastly, when you discuss about having a non-binding MOU at Vadhavan port and about investing INR20,000 crores, so what are the projects you are envisaging in this figure? What types of projects are you discussing in this INR20,000 crores investment?
Murad Moledina: There's no limit. Whatever the port, whatever makes commercial sense at that port, because that's going to be also a distribution model kind of a port in and out. We would have liquid, gas, and many other products, terminals, even jetties. So there's a lot to do out there. It's going to be one of the largest ports in India, probably three times the size of JNPA and located at West Coast at the border of Maharashtra, Gujarat. It's going to be an amazing opportunity.
Siddharth Chauhan: No, absolutely, as you mentioned. But, you know, if I look at investments in liquid terminal or in your gas terminals, which is your forte, the ticket size is very small versus this INR20,000 crores amount. So I just want to understand what are the other projects which we might actually venture into?
Murad Moledina: There are so many gases or products like LNG, ammonia, LPG, ethane. There are many, many products for which terminals will make sense in a port like Vadhavan. And they are really a big amount. One LNG terminal would cost you maybe INR8,000 crores.
Siddharth Chauhan: Oh, that's right. Oh, that's right.
Murad Moledina: So INR20,000 crores is really quite short, don't worry. If at all we get the land and the permits to do that, there is a lot to do.
Siddharth Chauhan: Absolutely. And a

gain, thanks a lot for taking my question.
Moderator: The next question is on the line of S. Ramesh, an Individual Investor. Please go ahead.
S. Ramesh: Thank you very much for the call. So just to understand your business model and what are the kind of growth you can deliver on revenue and EBITDA from the existing capitalized assets?. What is the headroom you have in terms of additional volume, any incremental upside in pricing?
Murad Moledina: Yes. So in case of LPG, if you look at, let's say I have 15.6 million and now we are added 2.5 million at Haldia. So we have around 18 million tons of throughput capacity. Okay. For nine months, we have done 1.89. So that's how far we can go. And how fast we go is the key. That is possible through multi-modal evacuation of world-class LPG infrastructure and bottling plants, etc., etc., etc. So all our effort goes into doing things which will quicken the utilization and the EBITDA that it throws is crazy. So that is how LPG business is concerned.
As far as liquid is concerned, we follow demand. We don't let demand follow us. So when you go and put up a liquid terminal, it's there, fully utilized. What is the upside thereafter in addition to the capacity that we keep adding is, that you keep changing the product mix. You get into more complex, more high-value products that you store.

You get higher realization even with the same capacity. Or you find products that move and move out fast. So your rate is per month rate. Whereas if the product evacuates sooner than the 30-day period, then you can get another set of products. So both of these are the levers which

provide you upside as far as liquid business is concerned in addition to the capacity additions
that you can do day in, day out.
Mind you, these terminals, a range of products are stored. Petroleum, petrochemicals, chemicals,
veg oil. So there is flexibility of storing products. There is flexibility of handling trade, imports,
exports, coastal movement. So you have a huge flexibility and therefore it provides you an
opportunity to keep changing and keep increasing the realization.
S. Ramesh: So in the gas terminals, what is the gas you are handling now and what will be the nature of gas
you are handling now and what will be the gases you will be handling in the future?
Murad Moledina: So we have cryogenic storage terminals to handle LPG. So these terminals are propylene rated.
So I can handle a range of products there also. Propylene, ammonia, LPG with some tweaks.
But we are currently only focused on LPG. We are vertically integrated as a group in LPG
business. So that gives us a very good lever to get the best out of this product.
So currently it's only LPG that we are focused on, on all the cryogenic terminals that we own
and operate along the coastline of India.
S. Ramesh: Okay. So one last thought in terms of your realization. How much of that, what percentage of
that is based on a tolling arrangement and what percentage of that gives you some kind of pricing
power in terms of trading margins or stocking the product? How does it work?
Murad Moledina: We do not take title of products as far as liquid cargo is concerned. We only store for others. So
there is no question of storing and earning margins as far as liquid product is concerned. In case
of Aegis Vopak, even in gas, we only store LPG. We do not do any trading. It's Aegis Logistics
parent, which does distribution of LPG. There also, it's not any other liquid product. So we are
only a service provider, infrastructure provider. And it's only tolling fees sort of what you say.
But it's called throughput. It's based on the volume in and out of my terminal.
S. Ramesh: So the way in which you fix prices, is it based on a percentage of the value of the product or is
based on your ROCE objective? How do you work out the storage?
Murad Moledina: These are industr

y benchmark. So we follow the industry benchmark and charge the same.
Because as my parent is the infrastructure developer, we have a unique advantage of getting the
infrastructure in quickest time and cheapest. So being an infrastructure business, we are much
more at an advantage than anyone else because it is our in-house infrastructure development,
which gives us this benefit.
So that is where we score. So the ROCEs are really huge. And mind you, these are very long life
assets, 40 years of life.
S. Ramesh: Yes, appreciate it. Thanks a lot and wish you all the best.

Murad Moledina: Thank you.
Moderator: Thank you. Due to time constraints, that was the last question for today. I now hand the
conference over to the management for closing comments. Over to you, sir.
Raj Chandaria: Well, thank you very much. I think it's been a really busy nine months, including acquisitions
and new projects and so on. We look forward to continue to inform all of you about the progress
that the company is making. And we will speak again, I guess, in the month of May, when we'll
have our final year-end results. Thank you so much.
Moderator: Thank you. On behalf of Aegis Vopak Terminals Limited, that concludes this conference. Thank
you for joining us and you may now disconnect your lines. Thank you.
