OIL INDIA LIMITED
INVESTORS’ AND ANALYSTS’ MEETING
HELD ON 02ND JUNE, 2023 AT ST. REGIS, LOWER PAREL, MUMBAI

Name of the
Speaker Description
Mr. Trisonku
Kotoky,
DGM-F&A, OIL : Ladies & Gentlemen , distinguished guests and the
valued investors & analysts fraternity. A very good
afternoon and a warm welcome to this highly
anticipated Annual investors and analysts meet,2023
of Oil India Limited. I would like to extend my
heartfelt gratitude to each one of you for joining us
today. We understand that your time is valuable, and
we greatly appreciate your presence here. Its indeed
an immense pleasure for us today as we gather here to
discuss our company’s performance, progress,
achievements and future endeavours. Your presence
here reflects your commitment towards our shared
vision and the trust you have placed in our company.
At the outset, I am happy to announce that today we

have with us the Members of the Board of Directors of the company led by our Chairman and Managing Director - Dr. Ranjit Rath, our Resident Chief Executive and other Senior Executives of the company. This gathering marks a significant milestone in our journey and we will be excited to

share with you the latest updates on our company 's performance, growth and strategic initiatives. I would like to convey our thanks to M/s. Antique Stock Broking for coordinating this event.

Dear Friends, being Investors and Analysts, you have been an integral part of our success story. Your unwavering support, financial backing and guidance have helped us not only to sustain and grow, but also to create values for our stakeholders. It is needless to mention that together we have overcome challenges, embraced opportunities and consistently strived for excellence. In the past 2 – 3 years our team has demonstrated resilience and agility in overcoming the unprecedented challenges including the global pandemic. Despite the hurdles, we could achieve significant milestones, sustain our operations and solidify our position. During today's interactions we will provide you with a comprehensive update on our operating and financial performance, key business initiatives, our strategic partnership across the energy value chain, the initiatives being taken by the Company towards our commitment to environmental sustainability and our corporate social responsibility in

itiatives. We firmly believe that businesses have a responsibility not only to generate profit but also contribute positively to the Society and the

environment. This investor meet serves as an invaluable platform for us to engage in meaningful dialogue, exchange ideas and address any concerns or queries you may have. We value your insights, feedback and perspectives as they contribute to our continuous improvement and long-term success.

Once again, I express my deepest gratitude for your presence and continued support. With this now I request Prof. Ravisundar Muthukrishnan from Antique Stock Broking for his welcome address to the audience. Thank you.

Prof.
Ravisundar
Muthukrishnan,
Antique Stock
Broking : Good Afternoon Ladies & Gentlemen, I want to keep this welcome address very very short. I think you need you need all the time with the Management here. My name is Ravisundar Muthukrishnan. I am the Mentor at Antique Stock Broking. I on behalf of myself, myself, my colleague – Vardarajan Shiv Shankaran, Mr. Kishan Mundhra and Team Antique welcome you all to this investor meet with the top management of Oil India. The team as you know is represented by the CMD Mr. Dr. Ranjit Rath, Director Finance – Mr. Harish Madhav, Director Operations – Mr. Pankaj Kumar Goswami, Director Exploration and

Development – Dr. Manas Kumar Sharma and Director – HR – Mr. Ashok Das. So Without taking too much of your time, I would request the

Management to share their brief comments , followed by Q&A. Thank you very much and welcome you all to this meet today.

Mr. Trisonku
Kotoky
DGM-F&A, OIL

1 : Thnak you Prof. Muthukrishnan for your address. I now request our Chairman and Managing Director, Dr. Ranjit Rath Sir to kindly give his inaugural address to the audience.

Dr. Ranjit Rath ,
CMD, OIL : Good Afternoon,

Infact, we are very very thankful to each one of you and we understand evinced interest of everyone present here and considering that you have keen interest in the business portfolio of Oil India Limited, We offer our heartfelt gratitude to each of you and every investor who has reposed faith in Oil India Limited. As a part of the proceedings we would have a brief address and thereafter, we will have a presentation which will outline the growth story of Oil India Limited and then we will take up the Q & ASession. As part of the opening remarks I would welcome all the analysts and investors to this meet and thank all of you for being here for a discussion with the Management of the Company. While most of you are fully aware about our company, our areas of operation, the policy environment concerning the upstream oil sector in the country. Adding to what you already know would help us in communicating the

message about the Company's recent achie vements and growth story. As you all know it was formed in 1959 as a joint venture company between Burma Oil Company & the Government of India and Oil India Limited became a public sector undertaking in 1981 with the Government of India taking over complete ownership of the Company. The Company has been performing its mandate as a national oil company over the last six decades. With an IPO in 2009, OFS in 2013 and few subsequent share transfers to CPSEs through ETF the present shareholding of Government of India in Oil India Limited stands at 56.66%. Today, we are the second largest and also the oldest national upstream oil and gas company in India. Having briefly covered the history and heritage of the Company, now let me have a narrative of how did we travel since mid 90s. As you all know since mid 90s our operations are primarily concentrated in North East India and in blocks allocated to us under nomination regime. Under the category 1 basin the Assam Shelf basin where Oil India Limited operates is considered to be one of the prolif

ic hydrocarbon bearing formation and we are operating out of the Assam shelf and we since then have not only harnessed our expertise in the sector in Assam or upper part of Assam, we have also now extended our portfolio across the country. As you all know, we have operating blocks in Rajasthan, then we had a new exploration licensing policy and considering our participation in new exploration licensing policy blocks we have six blocks and four as operator. 2016 – 2017 witnessed a very heart-breaking reform which enabled the Government of India through its process to choose the exploration acreages under open acreage licensing policy. Under OALP so far we have acquired 29 blocks as operator and presently in totality we are operating in 68 upstream acreages including 27 nomination blocks and 3 discovered small fields spread in different geographies across the country. The presentation would actually cover the entire spread. We also have under the overseas oil equity initiative ten such projects in seven countries. As part of 29 blocks today we have a total acreage of about 53000 square kms for which we have already completed the seismic data acquisition and as we all know as part of the upstream activity after the seismic data acquisition is done we undertake processing, interpretation to identity prospective location for which next stage of exploratory drilling happens. Our present crude oil production comes mostly from our fields in North East India and majority of natural gas production also comes from this area. About 10% of our natural gas

production is contributed by producing areas in Rajasthan as well. Inspite of the fact that most of our fields are old and matured and let me share with you all that the Naharkatiafield which was post independence first oil discovery happened in 1953 and the moran field which was discovered in 1956 are still producing and that is where Oil India Limited takes credit in operating those mature fields. Infact, we have been able to contain the decline of the pressure and improve our crude oil and natural gas production through successful improved oil recovery or enhanced oil recovery techniques. The year just concluded 31.03.2023 witnessed about 5.48% of crude oil production in terms of %age growth to 3.18 million metric tonne and the Company has also achieved highestever natural gas production of 3.18 BCM in the year 2022 – 23 increase of 4.43% over last year. During the last year the Company has also added one more discovery to its kitty which is known as Sasabil area in Assam shelf Basin which is producing currently 83 cubic meters per day of oil. Besides crude oil and natural gas production we also operate as you all know 1157 km of crude oil pipeline which is primarily supplying crude oil of ONGC and Oil India fields to all the North East refineries and we also supply product of Numaligarh through a 600 km

pipeline to the Siliguri marketing terminal from which it goes to the mainland of India and as we speak the product pipeline is under capacity expansion to be a able to evacuate the enhanced product portfolio that is foreseen possibly because of the Numaligad

Refinery expansion project. The current year 2022 – 23 witnessed the highest ever PAT for Oil India Limited on a standalone basis the number stands at 6810 Crores which is 75% higher than the last year's PAT. The turnover also witnessed a significant growth and which stands at 23272 Crores which is also the highest ever. A turnover during last year was 14530 Crores. As we all know the Company has three main operating segments – crude oil, natural gas and pipeline transportation of crude oil and petroleum products. All these segments have shown excellent results during the recently concluded annual results declared for financial year 2022 – 23. The Numaligarh Refinery, our material subsidiary ha

s

also achieved the highest ever crude oil throughput beyond the nameplate capacity and that works out to be 3.091 million metric tonne for the year ended 31.03.2023 since its inception and the gross refinery margin reported as 19.86 dollars per barrel for the year 2022 – 23. At the group level oil also reported highest ever turnover of Rs. 41038 Crores for the year

2022 – 23 and that's an increase of about 37%. At a group level the PAT was also highest ever of 9,854 Crores. The Company has declared a final dividend of Rs 5.50 per share and with this the total dividend is Rs. 20 per share or 200% of face value of our shares. We are currently as we speak preparing the strategic road map for 2040 in coordination with an internationally acclaimed strategy consultant. The plan is being worked out through one active engagement across the stakeholders and the main stakeholders of Oil India Limited, the employees of Oil India Limited and the focus – a) to enhance the production, enhance our footprint in other areas of operation pursuing the exploration efforts both through organic and inorganic growth and also to have diversification initiatives through forward integration and create an alternative energy portfolio. Our company as we would have noticed is being led by a very experienced management team. You can repose faith on it. We are best of the both worlds with independent and an autonomous management and the benefit of Government of India linkages which adds to our capabilities of engaging with overseas counterparts which helps us being a national oil company through a G2G linkage in oil and gas sector. With this I would request my colleague to take

forward today's presentation and then after that I would like to invite all of you to participate in a very constructive Q & A session. Thank you very much.

Mr. Debojeet
Hazarika,
DGM-F&A, OIL : Dear Friends,

From the Investors & Analysts fraternity – Chairman Sir, Board members of OIL in the dias, Professor sir from Antique, Senior Colleagues from Oil India Limited, Ladies and Gentlemen, a very good afternoon to you all and at the very outset, I would like to convey our special thanks to the Investors &

Analysts friends for sparing their time today afternoon and really really encouraging the Oil India Limited team. We are very thankful for that and thankful for your active participation and presence. In today's presentation we are trying to give a company overview, the oil strategic strengths and overview of Oil India Limited's assets, the Company's operating and financial performance, performance of oil'S material subsidiary Numaligarh Refinery, our growth plans and we would also like to highlight the ESG initiatives taken by Oil India Limited.

Starting with our journey so far for last 64 years we are very old company. We feel proud of that. OILwas formed in the year 1959 and in 1981 Oil India Limited got nationalized. We got for our consistent

performance and growth the coveted Navratna Status in 2010. In continuing with its growth stride and the opportunities available Oil India Limited started to look for increasing its footsteps into the overseas fields and also under its diversification initiatives we entered into renewable energy space. In 2012 we commissioned the first renewable energy plant with Wind Energy and solar energy plant in Rajasthan. We got international first credit rating from Mody's and Fitch ratings in 2014. The Company published its initial public offer, the IPO in 2009 which was a resounding success. As a major acquisition for the overseas front Oil India Limited acquired in 2014 its 4% stake of Rovuma Block in Mozambique. Then in 2016 we acquired with an investment of around a billion in two prolific assets in Russia Venkorneft and Taas Both the assets are dividend paying assets. OILunder its d

iversification strategy has entered into the CGD business in 2018 participating with HPCL and forming HP Oil which was engaged in two business areas and currently Oil India Limited is having partnership associated through the different partnerships and working in seven business areas - geographical areas for CGD. A major integration move was initiated in 2021 and OIL acquired majority stake in Numaligarh Refinery with this acquisition Oil

India Limited is holding 69.6 3% in Numaliga rh Refinery being its material subsidiary and with this acquisition the Company has become a truly integrated energy company. Our continuous stride in the alternate energy space also was with a focused approach. The Company was first in the country to capitalize a pilot green hydrogen plant. A brief introduction of the Management team of Oil India Limited. Our Management is led by Dr. Ranjit Rath Sir, Chairman and Managing Director. Sir took over the charge in August 2022, an alumni of IIT Mumbai and IIT Kharagpur, sir is a prolific geoscientist, wide experience in strategy formation, business development, upstream asset management, application of geosciences and exploration geology. The other members in Oil India Limited functional directors team includes Shri Harish Madhav, Director

– Finance, Shri Pankaj Goswami, Director Operations, Dr. Manas Kumar Sharma, Director – Exploration and Development, Shri Ashok Das, Director – Human Resources. All of them are having wide experience of more than 30 years + in Oil & Gas sector in their respective fields. Oil India Limited board also have a Nominee Government Director Shri Vinod Seshan, Director MOP&NG. Shri Seshan is an IAS Officer of the 2008 batch who has rich experience

in different fields in various Government Departments. He contributes immensely in the functioning of Oil India Limited's Board. The Board also have three independent Directors – Smt. Pooja Suri, Shri Raju Revanakar and Shri Samik Bhattacharya. All of them are from diversified fields with wide experience and contribute in the Oil India Limited's Boards functioning. As you all are aware that the financial year 2022 – 23 has been a resounding year for OIL group. We achieved highest PAT of Rs. 6,810 Crores a growth of 75% over the previous financial year. We achieved highest ever turnover of Rs. 23,000 Crores an increase by around 60%. Our EPS increased from Rs. 35.85 per share to Rs. 62.80 per share in the fiscal year. On the performance side there was growth in crude oil production as well as natural gas production with more than 5.48% in crude oil, production for 2022 – 23 was 3.18 mmt and we achieved highest ever natural gas production of 3.18 BCM a growth of more than 4% over the previous year. With this performance on the production side the Pipeline Throughput achieved during the year was also highest. Our material subsidiary Numaligarh Refinery they achieved the highest capacity utilization of more than 100%. In fact their capacity utilization was 103% last year which is

in any standard excellent. The dividend per share , OIL has declared a dividend per share of Rs. 20/- per share. On the strategic strength side Oil India Limited is a diversified energy conglomerate with significant presence across the energy value chain. We have on the upstream side 68 E&P blocks with around 68,000 square kms of acreage. To handle its acreage and crude oil and natural gas production the organization is having sufficient infrastructure. In the international scene we have presence in seven countries and in ten blocks witha reserve significant 2P reserve of Oil 230 Mmbbl and Gas 126 Mmboe. We have received continuous dividends from our overseas investments cumulatively works out to around 800 Mn USD from the Russian assets. On the transportation side, we have our own infrastructure of over 1000

km crude
Pipeline spreading from Assam up to Barauni with facilities for both forward pumping as well as reverse pumping and with a capacity of around 6 MMT. We also have Pipeline facilities to evacuate products from Numaligarh Refinery, around 660 kms of product Pipeline with a capacity of 1.72 MMT. This pipeline capacity is currently under expansion to meet the additional requirement that will be coming from

capitalization of the expansion project of Numaligarh Refinery. The capacity expansion is up to 5.5 MMTPA

for this product Pipeline. O IL also has presence in natural gas transportation having 49% stake in Duliajan Numaligarh Pipeline which helps in evacuation OIL's gas to Numaligarh Refinery and also is having 40% stake at the group level in Indradhanush Gas Grid Limited which is formed for connecting the North Eastern states to the country's gas hub. In the down stream side as we have already highlighted, we have our Numaligarh Refinery which is 69.63% stake and Oil India Limited also has 5% stake in Indian Oil. On the petrochemicals side with diversification initiatives by the Company we have got 20% stake in BCPL in Assam, Brahmaputra Crackers Polymers Limited and we have got 48.79% stake in Assam Petrochemicals Limited. In the CGD front currently OIL is having presence in seven geographical areas with 50% stake in HP Oil, with 26% stake in PBGPL and with 49% stake in Assam AGCL-OIL JVC. HP Oil is operating in two GAs, PBGPL in another two GAs and AGCL-OIL JVC will be taking care of three geographical areas which Oil India Limited owned the consortium under the eleven CGD bid. In the renewal space we have a total capacity of 188 mw with 174 MW energy in Rajasthan, Gujarat and MP and another 14 MW in Rajasthan. As we have already mentioned OIL is the first in the country to

commission a pilot plant for green energy production green hydrogen production at its Pipeline facility in Jorhat, Assam.

Oil India Limited has sufficient infrastructure to cater to the need of the E&P Operations of the organization. We have got our own in-house as well as chartered hired facilities to cater to the need of Seismic surveys, drilling, wireline logging, field development, field reservoir, IOR / EOR as well as transportation requirements.

This slide will show you our presence across the energy value chain in the industry. We have got 69.63% stake in Numaligarh Refinery. This Refinery is having 3 MMTPA at present and is undergoing expansion upto 9 MMT. Also a Pipeline being constructed – 1640 kms Pipeline which will cater to the additional crude requirements of the refinery. The total project cost being Rs. 28,000 Crores. Numaligarh Refinery is also undergoing another project for production of 2G Ethanol via ABRPL with a project cost of Rs. 4,000 Crores. Basically, for Production of Ethanol from Bamboo. Another 360 KTPA Polypropylene plant is with a project cost of around Rs. 7,000 Crores. The Refinery has recently

commissioned a Pipeline from India to Bangladesh. I t is called India – Bangladesh Friendship Pipeline and this Pipeline will definitely help Numaligarh Refinery in captivating its product and marketing of Refinery.

In the Petrochemicals space Oil India Limited as a group has 20% stake in BCPL. BCPL is operating since 2016 having its petrochemical complex at Lepetkata and also 48.79% stake in Assam Petrochemicals Limited that is in upper Assam districts in Namrup Assam. Assam Petrochemicals Limited has recently commissioned in April 2023 500 TPD Methanol Plant and the project is under stabilization at this moment. In the Gas Transportation and CGD front we have 40% stake alongwith NRL in IGGL. IGGL is being given the responsibility of constructing Pipeline connectivity with all the North East State capitals which will under the Government's hydrocarbon region for North Ea

st 2030 will connect North East Capitals to the Gas Hub of the country. The other partners in IGGL are ONGC, GAIL and IOCL. We also have 49% stake in Duliajan and Numaligarh Pipeline Limited. Other two CGD initiatives from Oil India Limited side with 26% stake in PBGPL which is having a CGD network in two geographic areas in Assam and HP Oil with 50% holding by Oil India

Limited and 50% by HPCL which is operating in Maharashtra and Haryana.

OIL has a strong credit rating with highest domestic rating of long term AAA stable and short term A1+ by both CRISIL and Care Edge and we also have international national ratings from MOODY's and Fitch, both investment grade ratings and which is at par with the sovereign rating of the country. OIL's 56.66% holding is by Government of India and rest by institutional investors and public.

An overview on the domestic assets the acreageof the Company. As our Chairman was telling we have got 63000 square kms of areas with 63 blocks which are operating and also another 5 non operating blocks with around 5000 square kms. This is spread across the country with of course most concentration on the North Eastern Side of the country where we have got a prolific presence. We would like to highlight here that the blocks that we have received under OALP out of that 72% of the blocks are in Category 1 Basin which represents that commercial operations are already in place in these Basins. Our presence in overseas assets we have got presence in 7 countries, 10 projects and out of that with a total acreage of 44300 square kms.

Few highlights of the major 3 assets in Russia we have got in 2016 acquired TASS, Yuryakh and Vankorneft, with an investment of 393 million for Tass and 598 million for Vankorneft. The cumulative dividend that the Company has received from Tass as on date is 389 million so it is almost 100% of the original investment and for Vankorneft we have received a cumulative dividend of 424 million which stands out to around 70% of the total investment. OIL also have 4% stake in area 1 Rovuma, Mozambique which was acquired in 2014 with an investment of 1450 million as on date. The project is currently under Force Majeure since April 2021 for law and order situation in the country. However, with the developing stories it is expected that the project will resume by mid July 2023.

A glimpse of Operating and Financial Performance of the Company:
OIL has been a driver of exploration in India. This slide you can see that we have a cumulative 2D lkm of around 500 in the year 2013 – 14 and from that by 2023 we have increased to 20,526 an increase of almost 40 times. For 3D similarly 745 was number for 2013 – 14 and which has increased to 7,240 in financial year 2022 – 23 an increase of almost ten times. Similarly, on the drilling front combined

development and exploratory wells our numbers in 2013 – 14 was 35 and this has increased to 417 in financial year 2022 – 23 an increase of almost 12 times. So, with this aggressive exploration and drilling initiatives the Company has been able to achieve a resource base of almost 500 million barrel of crude oil and 870 million barrel oil equivalent of natural gas in the 2P reserve category. Oil India Limited has been able to main its reserve replacement ratio always more than 1. For 2022 – 23 the reserve replacement ratio is 1.01. On the acreage side we would like to highlight that in last five years our acreage has increased by almost seven times. In financial year 2017 – 18 our acreage was 9,300 square kms which has increased to 63,000 Square kms by the end of financial year 2022 – 23. The Company is also on the lookout for assessment of ultra deep and shallow water currently being carried out.

On the Reserve Base of the Company as we have mentioned we have got a domestic 2P Reserve of 500 million oil equivalent

and 870 million barrel of gas
with combined domestic and overseas the oil reserve is 732 million barrel oil equivalent and 1004 million barrel oil equivalent of natural gas. On the 2P Reserve

type our %age of reserve represents natural gas 63 % and crude oil – 37%.

A glimpse of the financial performance of the Company for last three years: We would like to highlight here that OIL's crude oil production in financial year 2021 was 2.96 which has increased to 3.18 in financial year 2022 – 23. A growth of almost 7% and on the gas front in 2021 it was 2.64 BCM which has increased to 3.18 BCM an increase of around 20%. Similarly, there has been consistent performance by Numaligarh Refinery also with current years Throughput being at 3.09 MMT. With this increased production on crude oil and on the natural gas side the Company has been able to receive highest ever Pipeline Throughput of 8.19 MMT in previous financial year. At a consolidated level our total income is 41,758 Crores and profit after tax is Rs.

9,854 Crores. Net worth of the Company is almost Rs. 40,000 Crores at the group with an EPS of Rs.80 per share. On the price realization front last financial year has been really good with a gross realization increase upto $95.47 per barrel, but due to the levy of special additional excise duty the net realization remained almost at the same level with the previous financial year. However, on the natural gas front you can see

that for financial year 2021 – 22 our average realization was 2.35 which has increased to 7.34 in financial year 2022 – 23. The Government has come up with a new natural gas policy in April last year and under that policy there has been fixed slab for natural gas price with a minimum price @ $4 per mmbtu and maximum slab of $6.5 which is linked to 10% of the Indian basket price and with a provision for increase in future. This definitely stabilities the gas pricing scenario and is an encouragement to the E&P Sector.

On the Financial Performance side our revenue has increased in the financial year 2022 – 23 upto almost 25,000 Crores. Profit after tax – Rs. 6,810 Crores. EBITDA there has been increased from Rs. 7,266 to Rs. 11,000 crore and EBITDA margin also has marginally increased to 45%. With this the earnings per share has increased from Rs. 35.85 per share to Rs. 62.80 per share. With this improved performance both on the financial side as well as on the operating side the Company has paid increased dividend to the extent of around Rs. 600 Crores with a current year dividend declaration being Rs. 2,169 crores. A Rs. 20 per share dividend against Rs. 1545 Crores last year. The net worth of the Company has increased to Rs. 31,600 Crores and book value has also significantly

increased to Rs. 316.90 per share. On the debt front Oil India Limited is having a healthy leverage. At the standalone basis our debt is Rs. 11,000 Crores as on 31.03.2023 and at the group level our debt is around Rs. 18,000 Crores. There is additional debt at Numaligad Refinery to the tune of around Rs. 3,000 Crores + we have a 500 million debt at Singapore level. So debt works out to around Rs. 18,000 Crores at the consolidated level. There has been increased improvement in the debt equity %age. As on 31.03.2023 the debt equity ratio works out to around 35%. We have been able to liquidate our loan the entire domestic loan that we had taken for NRL acquisition. Outstanding last year was Rs. 1,500 Crores and that was completely repaid in 2022-23. As on date the debts standing in the books is for acquisition of Mozambique project.

A glimpse of the contribution to exchequer by Oil India Limited. Total contribution for financial year 2022-23 in Central Exchequer is Rs. 7,856 Crores and under State Exchequer is Rs. 4,478 Crores. Combined with OIL and NRL the total contribution to Exchequer works out to around Rs. 17,350 Crores with OIL and NRL being the major contributor to the State

Exchequer of Assam. Both OIL and NRL contributes around Rs. 5,000 Crores to the State Exchequer.

Few Performance Highlights of our material subsidiary Numaligarh Refinery – Numaligarh Refinery currently is having a capacity of 3 mmt. Oil India Limited's stake is 69.63%. Refinery is undergoing major expansion from 3 MMTto 9 MMT and with a Pipeline which is coming up 1600 kms from Paradeep to Numaligarh Refinery basically to cater to additional crude requirement once the expansion is commissioned. Also, the Refinery is taking a project for Ethanol Production, Bio-Refinery for 2G Ethanol Production and another Poly Propylene Unit with 360 KTPA is envisaged. The Refinery as we have already mentioned has commissioned a India Bangladesh Product Pipeline in March 2023. For the financial year 2022 – 23 the Refinery's crude throughput is 3.091 mmt which is 103% of its capacity. Its distillate yield works out to 87.69%. Income from operations – Rs. 29785 Crores, EBITDA Rs. 5,319 Crores, PAT Rs. 3,703 Crores and a very healthy Gross Refinery Margin of $19.86 / bbl.

Oil India Limited's Growth Plan:

We would like to categorise the growth plan under upstream, midstream, downstream and in the alternate energy space. Under the upstream segment the Company has mission 4+ which the Company envisages to increase its crude oil production to 4 MMTPA and natural gas production to 5 BCMPA. The Company is already aggressively into the OALP regime for drilling. To increase its global presence, Oil India Limited is in pursuance for overseas international assets. The Company is having strong thrust on enhancement of its gas portfolio considering Government of India's strategy in this regard and also an enhanced portfolio increase from a single asset to a multi asset PAN India presence. In the mid-stream segment OIL already has its stake in IGGL which is basically implementing the project Pipeline networking under the CGD business. Oil India Limited is also envisaging increased Pipeline connectivity for the product Pipeline for Numaligarh Refinery and under this project from 1.72 to current capacity the Pipeline expansion plan is upto 5.2 mmt. Also through its participation in DNPL for gas transportation there has been expansion plan in that region under the Gas transportation as well. Under the downstream segment with its presence Numaligarh Refinery there is already an aggressive

push for NRL capacity / expansion. There is concerted efforts towards development of the CGD network in Assam, Haryana and Maharashtra. Also, the Company is envisaging its presence in the petrochemical industries as we have explained in our earlier slides. In the alternative space we are into diversification towards a green hydrogen initiative.

OIL has already commissioned its first pilot plan and its under review and formulations studies are going on so that use of the green hydrogen in business are being explored. The Company is also looking into opportunities in CBG and additional Bio-Ethanol Plant business. Focus on all renewal energies resources including Geothermal. Coal Gasification and also participation in EV revolution for Indian mobility.

Regarding the Mission 4+ which is the primary growth plan for the Company under the upstream segment: The Company has elaborate plan and is also in the lookout for collaboration with international oil companies. Its looking for production enhancement contracts and technology sharing models with international companies. The well drilling plan is 77 number of wells to be drilled in 2023-24 and 76 numbers of wells to be drilled in 2024-25. Oil India

Limited is also acquiring technologies for extended reach and deep drilling for EOCENE plays. Under the mission 4+ the Comp

any has identified five fields and aggressive drilling plans are being formulated in all these five fields. The Company, as you are aware is mainly operating in Assam area and its maturing asset so with its adoption of advanced technologies and IOR and EOR initiatives, Oil India Limited has been able to maintain a sustained production and not only sustaining its production but also increasing the production from the asset. Oil India Limited has been a pioneer in different IOR / EOR initiatives and would like to highlight few of the initiatives like Low Sanity Water Injection, Polymer Flooding, CO2 Injection, Hydro-frac initiatives for 20 wells, CSS for heavy oil field in Rajasthan. With all these initiatives, the Company is looking for achieving by the end of financial year 2023 – 24 a crude oil production of 3.4 mmt and natural gas production of 3,330 mmcsm.

To support this growth plan, we have got a large capex outlay. The actual capex incurred for financial year 2022-23 is Rs. 5,500 Crores and the BE for 2023 – 24 works out to Rs. 4,900 Crores. At the consolidated level both OIL and NRL combined our capex for

2022-23 is Rs. 12,400 Crores and for 2023 -24 is Rs. 14,000 Crores.

OIL is well positioned for its planned investments and to achieve its goal for growth. It has got a strong cash and margin fundamentals with a very strong EBITDA and strong operating cash flows. The consolidated cash flows for the Company for financial year 2021-22 was Rs. 9,310 Crores and for financial year 2022-23 is Rs. 11,000 Crore plus. Its Numaligarh Refinery is having a consistently healthy Refinery margin and OIL also enjoys a very competitive cost structure. On the Borrowing Side we have entirely repaid the Rs. 6,300 Crores that we had taken for NRL acquisition. The current funding is only for Mozambique project and all other capex and investments the Company has made from its internal accruals. At a consolidated level the debt equity ratio for 2022-23 is 44%. The Company has a significantly high interest coverage ratio with EBITDA / Interest for financial year 2022-2023 at a consolidated level is 18 times which gives a strong liquidity and propensity for additional debt raising for the Company.

Few highlights under ESG initiatives of the Company: Both OIL and NRL is working towards with the

Government's in line with the Government's target with a Net Zero target by 2040. The initiatives taken by Oil India Limited under environmental risks and mitigating measures includes towards Carbon transition, Physical climate risks, water management, pollution and waste management as well as maintenance of natural capital.

OIL being a socially responsible corporate citizen is also taking all the measures required for improving its customer relation, human capital, demographic and social trends, health and safety as well as responsible production. Oil India Limited is known for its CSR initiatives. It has been taking initiatives in all the fields of CSR like promotion of art, culture and heritage, women empowerment, environment, augmentation of rural infrastructure, education, sports, skill development, healthcare.

To Summarise we would like to say that Oil India Limited is the 2nd largest Public Sector E&P Company with strong credit metrics, having its presence of over six decades with E&P expertise, having a steady and sustained output growth with strong financials and with aggressive exploration and drilling activities and with a focused on the category 1 basins that has been

allotted to the Company under the O ALP Regime and also for acquisition of discovered and additional producing assets in overseas front alongwith diversification initiatives across the energy value chain.

We would like to share contact person's details for Investors Contacts. For Institutional Investors & Analysts –

Shri S. Maharana, Chief General Manager – F&A and for Retail Investors – Shri A. K. Sahoo, Company Secretary their emails are also presented.

Thank you.

Mr. Trisonku Kotoky, DGM-F&A, OIL : Dear Friends,
With the completion of the presentation our house is now open for questions and answers, but we have a request to the participants please kindly mention your name as well as the name of your organisation before raising your queries. Thank you very much.

Mr. Sharad

Chandra,
Investment
Advisor : Thank you very much for the exhaustic presentation. My query was a biggest problem of India is that we are oil dependent on the global market and the prices keep varying like anything depending on global factors. So my question is as far as India's oil dependency is concerned, what steps are being taken by Oil India and ONGC and if you can share the capex

plan for the next few years , and how much is going towards the downstream / upstream because being a diversified in all kinds of areas like there are numerous gas pipelines and city gas distribution is a good initiative, but finally our focus should be on oil exploration and making India less dependent on the world as far as oil or crude is concerned. Thank you very much.

Dr. Ranjit Rath ,
CMD, OIL : So, a very valid point . Yes, India from a consumption point of view is heavily dependent on crude oil import which stands at about 85% and the demand is ever increasing. There are two strong strategy which is adopted. One is to enhance the exploration efforts and also from a consumption point of view how do you displace through the blending mechanism. So broadly, one is we are evaluating the possibility of 2G Ethanol being blended in Petrol. Methanol is being planned to be blended in diesel so that the mobility component of the consumption is addressed. Similarly, to use EV to have solar or renewable energy. Now that is the consumption part. From a supply side there are two - three things is happening. One is to ensure overseas equity second is to create strategic petroleum reserves so that you meet your interim requirements and third and which is very important and Oil India is actually pursuing sincerely all its

efforts is the exploration front. Both production from the existing fields so that the domestic production would increase. That's through improved oil recovery and enhanced oil recovery that's one piece and further upstream is the exploration. If you would see the presentation, the current portfolio from an exploration acreage is hovering around 60,000 Square kms and the hydrocarbon value chain as all of you would appreciate is starts with the upstream segment where we do seismic acquisition processing and interpretation. As we speak, the open acreage licensing policy reform has been actually a boon where we have chosen the areas which are prospective and you would all have also taken note that majority of our OLP blocks about 76% falls under the category 1 basin which is the most prolific and where commercial discovery has happened. Having taken note of that, we have 60,000 Square kms of OALP area acreage under exploration, seismic API both 2D and 3D is mostly done. We have also identified prospective locations and as we speak, we have couple of blocks in upper Assam, North Bank of Brahmaputra, under exploration we have couple of blocks five of them 15,000 Square kms in Mahanadi basin, we have about 13,000 – 14,000 Square kms in the Bikaner, Nagor Basin in the western plank of the

country. All, as we speak, we have also identified prospective locations and in Mahanadi basin and in the upper regions of Assam OALP drilling campaign has already initiated. This besides Oil India has also taken a leap of faith in having offshore acreages. So, we have two blocks – Andaman Nicobar basin east and Andaman Nicobar basin west, where

we also
having done seismic we have identified prospective locations and we are actually in the process of going to the market to seek drilling service providers. This is category 2 basin. Simultaneously, we have also picked up one category 3 basin in Kerala, Konkan which is also another offshore asset for which seismic is done and we have identified one prospective location and we are going to do the drilling exploration there. So that's the kind of portfolio where concerted thrust is on exploration because our objective is to maintain the reservoir replacement ratio always above 1. So, we are intending to enhance our production and also adding new resources / new reserves to be very specific to the pool so that the RRR ratio is always 1. I think that suffices. Thank you.

Mr. Probal Sen,
ICICI Securities
Ltd. : Good Evening Sir,
This is Probal from ICICI Securities

Dr. Ranjit Rath ,
CMD, OIL : Can you pass the mike to this person who has raised hands. That's okay? All right. Please continue. As long as he is fine, we are okay.

Mr. Probal Sen,
ICICI Securities
Ltd. : Thank You Sir.
A couple of questions with respect to the 4 million tonne oil and the 5 BCM gas target. I apologies if I missed this, but what kind of timeline have we put internally to achieve this. No. 1.
The second question was with respect to the NRL expansion if you can refresh us please with the timelines now with the additional petrochemical expansion or the petrochemical plant along with the bio fuel plants. All of these combined what kind of timelines are we looking at in terms of commissioning and the third question was with respect to the pilot hydrogen plant. I don't know if it is possible but can you just share some economics in terms of our initial results with respect to the cost per kg that we are actually able to achieve. What sort of economics are we seeing with our pilot project and the tests results that we have done. Those are the three questions. Thank you.

Dr. Ranjit Rath ,
CMD, OIL : Is it working now? Okay. All right. First of all very good questions in terms of time lines. We are looking under mission 4 we all understand that this production of mission 4 - 4 million tonne of crude oil

and 5 BCM of natural gas production would primarily come from the main producing areas of Oil India Limited and we have picked up couple of EOR activities in terms of hydro fracture, in terms of low salinity water injection, in terms of CO2 injection also and we are looking at actually 24-25 as a target. I would actually also highlight that while we intend to meet the four million tonne, the EOR is also being aggressively supported or supplemented by workover efforts to counter the current decline and effort is also on to have more discoveries in the main producing area. That's regarding the Mission 4+. As far as Numaligah Refinery is concerned, there are three components to it - one is the cross-country Pipeline from Paradeep to Numaligah – 1640 kms. The target completion date is December 2024 and the Numaligah Refinery expansion plan from 3 million to 9 million tonne is also coinciding with December 2024. The 2G Ethanol Plant which is under construction right now our every effort is there to complete it by December 2023. The significant component of physical progress has already happened. As far as the Pilot hydrogen is concerned, I will be very glad to share with you that it has been an R&D effort which is based on 500 kw solar photo voltaic source where electricity is generated. We have

got a 10 kg per shift, 30 kg per day possibility on R&D effort with about 5 Crore rupees. Now, it will not be prudent to calculate per kg cost out of it because it is not an industrial scale, but just to share with you, the current national green hydrogen mission has actually opened up the vista and we have already

taken the
first move or advantage and you all would know that Hon'ble Prime Minister flagged off the start-up initiative of Oil India Limited where we run a hydrogen fuel cell bus in Bengaluru this year during early February under India Energy Week. Having said that with the possibilities of National Hydrogen Mission – Green Hydrogen Mission now there is a concept of hydrogen valley is under discussion under the department of Science and Technology and as part of that hydrogen valley a research organisation would take the lead supported by the industry partners. I am very glad to share that we have evinced our expression of interest to DST that the North East hydrogen valley will be led by IIT, Guwahati where Oil India Limited and NRL are actually supporting the initiative as part of the industry partner. This besides 18 mw of hydrogen generation by NRL is also under construction or just placed the LOA. That would primarily look at the consumption requirement of Numaligarh Refinery. In addition to that, we are also

having several discussions for the purpose of O IL's participation in other possible hydrogen valleys which is primarily coastal driven. Thank you.

Mr. Ramesh
Bhojwani,

Mehta Vakil &
Co. Pvt. Ltd. : Sir, Ramesh Bhojwani from Mehta & Vakil . First and foremost, it is a great delight that you are an alumni of IIT, Mumbai. The atmosphere and the vibrancy at IIT, Mumbai is simply unbelievable. Giving us only entrepreneurs or heads of big corporates as you are placed. That was a one part. My colleague has asked a lot of questions which were in my mind, but in the presentation, there was a reference that our debt today is around USD 500 million which we have invested in Mozambique and Mozambique one slide showed us 50 – 75 TCF of gas reserves. Now, would like to have your insightful observations on that because energy security is on the prime agenda.
Dr. Ranjit Rath,
CMD, OIL : I am so glad you asked that question. First of all thank you very much for that appreciation, its all about the cause of energy security of the country. Mozambique has been a very strategic decision and Mozambique investment is actually an India Inc. investment where we have Oil India Limited, BPRL and OVL together we have invested. Unfortunately, what has happened there was a change in the operatorship from Anadarko and then finally it is with TOTAL. The best part is the force majeure, which was in place, it is all

likely that we are going to have very soon the force majeure getting lifted. That’s No. 1. No. 2 we have already got the respective approvals in place and till now we were honoring the cash calls of the operator to start the construction process and as we speak, we had discussions with the operator – as a together as India Inc. and discussions are on in terms of resuming the operations of the both offshore field development and then the LNG Trains. In all probability the way we have reassessed the situation – although there will be an escalation of investment and I must share this the project is going to get onstream by 2027. The best part of Mozambique which also under discussion is the eastern coast of Africa is in the closest possible proximity to the Western Coast of India, which has got maximum LNG Terminals to receive natural gas. Serious discussion is also being undertaken at a G2G level and at a sectoral level to lift the natural gas, the LNG gasified and re-gasified here on the western coast. In all probability, we are going to resume the work and we will have now by virtue of the discussion that we had will now have more active engagement of the stakeholders as India Inc. in the project that would also be a learning curve for us because at this point of time that will be one of the largest offshore field development in terms of gas field development.

We will be able to create

a capability development for replicating such learnings in the Indian waters. We are all positive about the Mozambique investment.
Mr. Ramesh
Bhojwani,
Mehta Vakil &
Co. Pvt. Ltd. : Thank you and all the best.
Dr. Ranjit Rath ,

CMD, OIL : Thank you.
Mr. Vipul Shah
Individual
Investor : My name of Vipul Shah. My first question is what is the cumulative expense we have done till date on NRL from 3 million to 9 million tonnes and all the debt is on the NRL's balance sheet or it is on the Oil India's balance sheet. What is the coupon rate for debt which we have incurred.
Dr. Ranjit Rath,
CMD, OIL : I would request DF Shri Harish Madhav ji to take this question.
Mr. Harish
Madhav,
DF, OIL : About the first question of the total investment rate so far as on 31.03.2023, total investment is about Rs. 8,000 – 8,500 crores. That is the cash investment which has happened, and commitments are about Rs. 15,000 – 16,000 Crores contract commitment has been completed. The second question was whether the debt is on Oil India's books or on it is entirely on NRL book. The debt is entirely on NRL's book. There is no corporate guarantee even given by Oil India

Limited. It is completely standalone NRL books and as far as the interest rates are concerned, I think these are all commercial transactions which possibly we being owner of the Company we don't have very very detailed information about those rates and we will not like to share those rates.
Mr. Vipul Shah
Individual
Investor : What will be the big debt for NRL?
Mr. Harish
Madhav,
DF, OIL : Big debt for NRL will be about Rs. 18,900 Crores total
Mr. Vipul Shah
Individual
Investor : Rs. 18,000 Crores and marketing rights for expansion 3 million to 9 million tonne will be with BPCL only.
Dr. Ranjit Rath,
CMD, OIL : Ok, let me take that question. This is Numaligarh Refinery gives us an advantageous position which is very well aligned to the Look East Policy. As you would have noticed, the India Bangladesh Friendship Pipeline is on. There is an activity discussion is going with the Bangladesh Government in terms of power supply of diesel and any additional product. That's about Bangladesh. We are also looking at further growth in the consumption in North East and as we speak the product Pipeline is getting expanded / capacity expansion for reaching out through the

Siluguri Marketing Terminal and further possibility of going to Barauni and it is not exclusively to BPCL, all the three oil marketing companies will have and as we speak discussions are underway to have marketing rights for NRL products because I would actually agree with you from three to nine we have already started working for it. Once the Refinery is in place by then we have a structure where all the three oil marketing companies will have access to the products

and NRL will also contribute under the Look East
Policy.
Mr. Vipul Shah
Individual
Investor : Sir, lastly, will there be any equity contribution over
Mozambique in the next few years?
Dr. Ranjit Rath ,
CMD, OIL : Its like this – since the project was under force
majeure – the operator is in negotiation with all the
large EPC contractors and in case there is a
component or a cost escalation, the process of
approval will be there and with the current approvals
we have, we have enough to honor the cash calls till
2024. The project will kickstart once the force
majeure is lifted and which is very likely very soon
rather and once we are arrive at a revised cost
estimate, a firm number at that we will possibly need
to enhance our composition or our equity

contribution, but we will have more clarity on that as
we speak may be Q3 or Q4.
Mr. Vipul Shah
Individual
Investor : Can you quantify Sir?
Dr. Ranjit Rath,
CMD, OIL : No. It not right now. Not now. We don’t have that
number. The operator is working on it ri

ght now.
Mr. Sabri
Hazarika
M. K. Global : Good Afternoon Sir,
This Sabri Hazarika from M. K. Global. I have got
three questions – the first one is relating to the GST
on royalty on crude oil and natural gas. I think ONGC
has taken a write off in their books. You also have got
around 2500 or 3000 Crores of contingent liabilities
regarding this. Post this ONGC’s write off what is your
assessment and you being from the mining sector how
do you think the other mining companies are placed
in this entire issue. This is the first question. Second
question is on NRL. I think the rights issues are
happening for NRL. Your stake has already gone upto
75%, so is there any risk, not risk actually, is there any
chance of your stake actually going up with Assam
Government not like participating in the rights issue
or do you think you will maintain 69.6% and also how
the valuation is being done for this rights issue
pricing. That is the second question. The third
question is on net zero. Is it a firm target or it is a

tentative target and whether it includes scope 1 +
scope 2 both or its just general.
Dr. Ranjit Rath,
CMD, OIL : Let me take the last question first. It is for scope 1 and
scope 2 and it is a firm target 2040. It is actually at a
group level where both Oil India and NRL team is
working together under the ESG mandate. As far as
the NRL’s stake is concerned, no such discussion right
now is there. For any dilution any other stakeholders
equity or enhancing Oil’s equity. As far as the GST on
royalty. It’s a subject which is under judicial review
and we have submitted our Petition on that and I

would request Director finance to further give his
views on it.
Mr. Harish
Madhav
DF, OIL : See, both Oil India and ONGC the matter is similar and we are following a similar policies as far as the accounting or treatment of this liability in the books of accounts is concerned and for us we don't find any trigger as of now or any change in the matter before the Court. We have history on the payment of demands we have beyond a particular point of time. For last one – one and half year even the cash deposits are not happening. So, the matter is under litigation. This is a new development with ONGC has taken, what call they have taken we don't know we cannot comment on that. But as far as my company is concerned, there is a litigation going on. I think we are

in full favour of continuing with that, but this is a new development now. We will have to take further interaction with our Legal Counsels who are dealing with this case in the Guwahati High Court and the Rajasthan High Court and if something is required, we will take appropriate action, but at this point I don't think any change in the policy or treatment of this liability by Oil India is warranted or we are going to commit.
Mr. Sabri
Hazarika
M. K. Global : Just a follow up, the Guwahati High Court basically put a stay on this entire thing. I think the last Order came out in November 2021 since then has there been any hearing or has there been any updates from the High Court side. I know Supreme Court bench is also looking into that.
Mr. Harish
Madhav
DF, OIL : There is no hearing on the merits in the case so far.
Mr. Sabri
Hazarika
M. K. Global : Okay. Are you expecting something soon or it would be taken up by Supreme Court only.
Mr. Harish
Madhav
DF, OIL : No. The matter is pending in the Guwahati High Court so it will be taken up by the High Court only.
Mr. Sabri
Hazarika : Okay sir. Thank you so much and all the best.

M. K. Global
Mr. S. Ramesh,
Nirmal Bang
Equities : Thank you and good evening. My name is S. Ramesh. I am from Nirman Bang Equities. In Numaligarh Refinery is it possible to share what is the extent of the reduction of special additional excise duty in your gross refining margins because the Delta we have seen

in financial year 2023 for Numaligarh Refinery it seems to be much less than for the other Refineries so you can shed some light on that, that will be great.
Mr. Harish
Madhav

DF, OIL : I don't think it will be possible for us to give you that number how much is the impact of the special additional excise duty on the refining margins. The reason is this additional excise duty or the windfall tax it has been factored into the Refinery transfer prices and that particular thing we finally transfer price is realised on the products it goes into the GRM calculation. So going beyond those calculations beyond the Refinery transfer prices it is not possible right now.
Mr. S. Ramesh,
Nirmal Bang
Equities : Sure. So now if you go back to the discussion on Mozambique gas I know there could be some escalation so we may not have the know about the final project cost. So what is the current cost estimate for the entire project for the upstream as well as the LNG and so and in terms of the heads of agreements / sales agreements is there any firm agreement for

placing the LNG and placing the gas from the gas development project can we get some details on the contracts.
Dr. Ranjit Rath ,
CMD, OIL : Its like this. The people who are going to place this order the discussion is just initiating. Because TOTAL as an operator identifies or acknowledges that it is India Inc. which is an investor in that particular project and considering the fact that TOTAL itself having a terminal in the western coast and we have Petronet LNG, we have GAIL, Dabhol. The discussions are actually now just fructifying or about to kind of get to that particular stage where Oil India is not involved. Therefore, this is at an operator level because all those discussions will happen actually at the operator level and not Oil India's involvement. As and when that materials probably we all of us will come to know about it.
Mr. S. Ramesh,
Nirmal Bang
Equities : My final question is if you are looking at the capex you are undertaking in NRL, the polypropylene project and 2G Ethanol Project what is the sense in terms of the viability of this project because refining at the end of the day there is no hang of the fuel demand coming down globally because of the electric vehicles and the project cost is fairly high if you look at the cost and secondly similarly the 2G Ethanol project cost seems to be very substantial and the polypropylene project is

another Rs. 7,000 Cr ores which is pretty much and is putting Pipeline Throughput a polypropylene project if you see the history. So what is the kind of IRR you are working with for these projects and when do you expect the positive cash flows from these three projects if you can give us some sense on the timeline.
Dr. Ranjit Rath,
CMD, OIL : There are two parts to it. One is the necessity of meeting the 20% Ethanol blending in MS. That happens through the 2G Ethanol route and as we know that there is also a concern of food versus fuel. Now this 2G Ethanol of NRL which is under

implementation right now is from bamboo – hydrolysis of bamboo. This was for the first time this was attempted and in fact to share with you we are now looking at putting up another unit so a free feasibility study as we speak is being assigned to take up another unit also. That's the kind of bamboo that is available in North East and from an India story the Oil and Gas is here to stay. We are going to have a transition but this transition is over a period of time, and since the demand is increasing multiple two and half times, the quantum might reduce. The %age of oil and gas in the energy mix might reduce but the quantity terms it is bound to increase. In fact, as we speak, the demand for diesel and petrol is going to increase multiple times. Considering that the 2G

Ethanol will have a major role to play and we are o

nly
looking at currently we have done 10% and we are supposed to do 20%. Now the moment we have this on-streaming of ethanol plant we will definitely have market for it. One step further is we are also looking at Ethanol blending in diesel. That's also another area where Oil India is working through its JV of Assam Petrochemical. That's part of the Ethanol story. The petrochemical as we speak now standalone Refineries would make more sense if we have the petrochemical derivative, because the growth trajectory of petrochemical is 35% and in North Eastern party of the country as you would know we have only one petrochemical unit that is Brahmaputra Cracker and Polymer which is primarily having naphtha feedstock and gas feedstock which we are supplying naphtha is being fed by NRL. Having a PFCC Unit as part of the Refinery expansion project, we see lot of opportunity for petrochemicals and that petrochemical would actually find itself as a market not only in North East but again that Look East Policy, so we are also looking at Bangladesh as a market. The eastern part of the country is actually requiring more petrochemical and therefore, we see value in it. we are very soon going to kind of announce that also.

Mr. S. Ramesh,
Nirmal Bang
Equities : In terms of timeline , when you will see positive cash flows from these projects.

Dr. Ranjit Rath ,
CMD, OIL : Once we announce because this is kind of on a drawing board right now. We will have a decision that's for sure and once we start the project we will have a timeline and the best part of this petrochemical investment is that lot of things would have common utilities from the Refinery expansion program. We want to actually take up this investment decision on a very soon basis and that will not coincide with the Refinery expansion it will go beyond but lot of common utilities will give us benefit - both in terms of cash flow and early completion.

Mr. S. Ramesh,
Nirmal Bang
Equities : Thank you very much and all the best to you.

Dr. Ranjit Rath ,
CMD, OIL : Thank you.
Mr. Kirtan
Mehta,
BOB Capital
Markets : Good Afternoon Sir,
This Kirtan Mehta, BOB Capital Markets. Couple of questions from my side. One on the natural gas side we have set a target from increasing from 3.3 BCM to 5 BCM and we mentioned that many of this will come through IOR or EOR activities. Would it also be possible to specify the fields where we expect this

increases to come thro ugh and on the similar side, where do we see this additional consumption developing in North East Area. That's the first question. The second question is about the exploration where is that we are targeting 75 to 80 wells in the next two years. Would you be able to highlight top five wells where we expect higher probability of addition of resources would you be able to highlight them and one more question if at all from my side is in terms of the cost economics for 2G Ethanol you gave a some perspective, would it be possible to share the feasibility stage cost economics with us in terms of the cost per unit of 2G Ethanol?
Dr. Ranjit Rath,
CMD, OIL : It is like we have the potential to produce and as we speak, we know that the Indra Dhanu Gas Grid Limited which is part of the hydrocarbon infrastructure vision of 2030 for North East is actually as we speak is being implemented and it is being implemented on schedule. There is a phase 1 that will happen by December 2023. There are phase 2, phase 3 and phase 4 already lined up. The intent of sharing IGGL where we have at a group level 40% stake has got very significant bearing and we are looking forward to that commissioning of the Pipeline on the gas both supply side and consumption side. That's No. 1., No. 2 we all know that we have our significant

presence in terms of about seven geographical areas . All these Pipelines are actually g

oing to cater to the geographical areas for the purpose of CGD both in terms of CNG and PNG. That's the second piece of demand. The third is the moment we are going for the Numaligarh Refinery expansion currently we are supplying about one million standard cubic meter per day that would go to two and two and half. Plus the fertilizer plant of BBFCL that Namrup 4 is also on the cards. Plus, in case there is a thought process of BCPL going for expansion, so these are those consumption patterns that we are looking forward to. In addition to that there is a Pipeline crossing which is being implemented as we speak, by GAIL which will actually connect to IGGL and both National Gas Grid will be connected to the North East Gas Grid. So then, gas availability in terms of supply and demand will not be a constraint. That's the gas story which is evolving as we speak. As far as the exploration effort is concerned, there is a mix of exploration drilling wells that is being attempted. One is the exploratory well as part of our commitment for the OALP NELP and as part of our effort to discover more hydrocarbon at deeper depth in the main producing area within our mining lease. As we speak, we have planned even to have wells as deep as 6000 meters plus. Plus, we are also looking at

extended reach drilling below the Brahmaputra river and also, utilizing a single land plinth area and have multiple radial wells. Plus, we are also looking at the already discovered fields where we have identified multiple pay zones and we would do development wells. The 70 well plus 70 well that you are looking at as part of our rolling plan for next two years is primarily including these deeper wells and shallow wells. In addition to this, also includes additional wells to be drilled in Rajasthan basin where we are implementing very very successfully and one of its kind the cyclic steam stimulation where we are actually injecting steam to a depth of 1000 meters and making the heavy think viscous oil to flow to the surface. This is the exploration part. As far as the 2G Ethanol is concerned, currently the effort is to complete that project go for the commissioning because this will be a first of its kind on the bamboo based so having he has rightly picked up having established the cost numbers will derive, but this is a mandate as a National Oil Company we would offer as part of our 20% blending, but I can give you an assurance that the ROI of the project is still protected.

Mr. Kirtan Mehta, : Thank you sir for very detailed answers. One follow up on the exploration would you be able to share the

BOB Capital Markets exploration budget for drilling separately for next two years? Surveying and drilling separately basically.

Dr. Ranjit Rath, CMD, OIL : Survey and drilling separately that would be about say 30 to 40% of it.

Mr. Harish Madhav, DF, OIL : Yes. Survey and exploratory drilling if you call that is the exploration it is about 40% of the total capex.

Mr. Kirtan Mehta, BOB Capital Markets : Thank you.

Dr. Ranjit Rath, CMD, OIL : Yes please.

Mr. Vardarajan, Antique Stock Broking : I am Vardarajan from Antique. On this net zero targets, what I observe is that for the next two years there is no major capex but the following five years broadly what kind of a proportion of capex will be dedicated to renewables or any of these net zero related projects and what could potentially be the hurdle rate you would consider would it be similar to your exploration or core business hurdle rate or is it going to be any different.

Dr. Ranjit Rath ,

CMD, OIL : The effort for net zero is actually a mix pack and you have rightly picked up this current year I will not say that there is no capex. There is certain component of

capex. I will just tell you a couple of initiatives. We are as part of net zero initiative, we are also

looking at our sustainable business model where the formation water which is being derived as part of our production is being pumped back as part of our efforts for recycle. That's one two of the projects are on schedule and we have completed those projects on time also. This apart we are also looking at those stranded natural gas which is a either being flared under constrain, b. we are unable to produce the intent is capture them through modulus skids and ship it under or truck it to the CGD network that we have. That's the second part for which we have already gone to the market. We have got couple of initiatives. Third, we have also changed or in the pros one piece we have already implemented a 3 x 10 mw gas based engine that is already implemented and similar such initiatives are also being planned. Next the thought process is also there how do we harness the geothermal energy – a. how do we harness the carbon sequestration possibility. Because as an oil and gas company in the space of upstream, we understand the subsurface formations more than anyone else. We are actually as we speak we have already gone to the market to understand the possibility of carbon capture and we have a collaborative framework with BCPL,

Brahmaputra Cracker and Polymer , where we are getting 99% pure CO_2. That is getting captured from lipid kata and it is being brought to one of our field – a. to attempt EOR in similar manner we are also evaluating couple of our abandoned wells about 1000 to 1200 meters because the moment it goes beyond 1200 meters, the cost economics fails. We have picked up couple of abandoned wells and started looking at it the possibility of sequestration of CO_2. All these studies would actually find its dates and the numbers in a year and two and then you are right we will have a capex for all of them and by then we expect that there will be policies for this and all the thermal power plants will also come on board and we will have collaborations.

Mr. Vardarajan, Antique Stock Broking : Thank you Sir.

Dr. Ranjit Rath , CMD, OIL : Thank you.

Mr. Trisonku Kotoky, DGM-F&A, OIL : If there is no further question we want to close the question and answer session right now. I request Rajiv Pandey to please come forward and give the vote of thanks.

Mr. Rajiv

Kumar Pandey,
CM-F&A, OIL : Good Afternoon Everyone,
As we have now come to concluding session of the event, on behalf of Oil India Limited, I would like to extend our heartfelt gratitude to CMD Sir, Members of the Board of Directors of Oil India Limited and Senior Officials of Oil India Limited for being present on this occasion and providing their insights and thoughts about the Company's achievements. I would also like to extend to all the analysts, investors and experts for being present in this event for raising their valuable points, suggestions and in helping us making the event a grand success. We also solicit similar support and cooperation from the investors and analysts' fraternity in the days and year to come. I must also take on record our sincere appreciation to M/s. Antique Stock Broking for coordinating this event for Oil India Limited. I also extend my thanks to the organizing team for organizing the event so beautifully. The high tea is ready sir and now I request everyone to please join us for the high tea. Thank you. [Applause]

Annual Investors and Analysts Meet 2024 of Oil India Limited
■ Presenter:
■ Hello. Good evening, ladies and gentlemen. Now I request everybody outside to kindly come inside the hall and take their seat because we are going to commence the meeting very soon. First of all, I request Chairman and Managing Director, Oil India Limited and other board members to kindly come onto the dais and take their seat. I also request MD, NRL and Director Finance, NRL to kindly come onto the dais. I also request Mr. Swarnendu Bhushan - Head of Institutional Research, Prabhudas Lilladher to kindly come onto the dais and take his seat. Thank you, sir.
■ Ladies and gentlemen, the distinguished analysts and investors’ fraternity, the members of the Board of Directors of Oil India Limited and NRL and other senior officials of OIL, and my dear colleagues, a very good afternoon and a warm welcome to this much awaited Annual Investors and Analysts Meet 2024 of Oil India Limited. I would like to extend our heartfelt thanks to each one of you for joining us today. It is indeed an immense pleasure for us, as we gather here, to discuss our company's performance, progress, achievements, and future endeavours with you. Your overwhelming presence here reflects your commitment to our shared vision and the trust you have placed in our company.
■ At the outset, I would like to mention that today we have with us the members of the Board of Directors of the company, led by our Chairman and Managing Director-Dr. Ranjit Rath, the Managing Director and Director of Finance of our material subsidiary, Numaligarh Refinery Limited, our Resident Chief Executive and other

senior executives of Oil India Limited. I would like to convey our sincere thanks to
M/s Prabhudas Lilladher Private Limited for coordinating today's event for all.

■ Dear friends, being investors and analysts, you have been an integral part of our success story. Your unwavering support, financial backing and guidance have helped us not only to sustain and grow, but also to create values for our stakeholders. It is needless to mention that together we have overcome challenges, we have embraced opportunities and consistently strived for excellence. During today's interaction, we will provide you with a comprehensive update on our operating and financial performance, the key business initiatives, our strategic partnership across the energy value chain, the initiatives being t

aken by the company towards our commitment to environmental sustainability and our corporate social responsibility initiatives. We firmly believe that businesses have a responsibility not only to generate profit, but also to contribute positively to the society as well as the environment. This Investor Meet serves as an invaluable platform for us to engage in meaningful dialogue, exchange ideas and address any concerns or queries that you may have. We will be extremely delighted to take your thoughts, feedback, insights and perspectives as they contribute to our continuous improvement and long term success. Once again, I express our deepest gratitude for your presence and continued support.

■ With this, now I request Mr. Swarnendu Bhushan – Head of Institutional Research, Prabhudas Lilladher Private Limited, for his welcome add to the audience. Over to you, sir.

■ Mr. Swarnendu Bhushan - Co-Head of Research, Institutional Research, Prabhudas Lilladher Private Limited:

■ Thank you, sir. Dear Ladies and Gentlemen, welcome to the Annual Investors and Analysts Meet of Oil India. My name is Swarnendu. I’m Co-Head of Research with PL Capital. From the management, we have with us:

■ Dr. Ranjit Rath - Chairman and Managing Director, Oil India.
■ Mr. Harish Madhav - Director, Finance.
■ Mr. Pankaj Kumar Goswami - Director, Operations.
■ Dr. Manas Kumar Sharma - Director, Exploration and Development.
■ Mr. Ashok Das - Director, HR.
■ Mr. Bhaskar Jyoti Phukan - Managing Director, NRL.
■ Mr. Sanjay Choudhuri - Director, Finance, NRL.

■ On behalf of the management, we once again welcome all the participants to this Annual Investors Meet. I would now like to invite Dr. Rath to make the opening remarks. This would be followed up with the presentation and then the Q&A. Over to you, sir.

■ Dr. Ranjit Rath - Chairman and Managing Director, Oil India Limited:

■ Good afternoon. It is very, very heartening to see that the hall is full. And believe me, I am indebted with your display of solidarity with Oil India Limited. Last time also we had a good interaction and in this edition of Investor Meet, we would also look forward to… Before I formally welcome all of you, once again, thank you very much on behalf of Oil India Limited, from the entire board of Oil India Limited, for expressing solidarity, finding it convenient to attend and accede to our request to join us to share your thoughts, to share your insights, to offer your feedback. But before that, let me take this opportunity to narrate what has been the year that has been passed by for Oil India Limited, your beloved company. I welcome all the analysts and investors to this meet, and thank all of you for being here for a discussion with the management of the company.

■ While most of you are fully aware about our company, our areas of operation, the policy environment concerning the upstream oil sector in the country, adding to what you already know, it would help us in communicating the message about the company's recent achievements, our growth story and future plan. While we have a detailed presentation on company's ongoing activities and plans, let me briefly touch upon the current operations, future prospects of your company.

■ Presently, we are operating out of 58 exploration and production blocks, that is, primarily exploration acreages, including 26 nomination blocks in which the PML is available where we are having our production, 3 discovered small field blocks spread in different geographies pan India. We also have presence in 10 projects in 7 countries including Russia, Mozambique, etc., as part of our oil equity initiative.

■ We also would like to share, as you are aware, NRL has been a material subsidiary of Oil India Limited which is operating a 3 million metric ton per annum refinery. And I must share with you, the refinery is also carrying out a capacity expansion program for taking the refinery t

o 9 million metric ton per annum, with additional infrastructure, including a cross country pipeline from Paradip to Numaligarh. We have been able to manage, and I must share this with great humility and our efforts towards managing mature oil fields, the natural decline in our old and mature fields through highly successful implementation of improved oil recovery and enhanced oil recovery techniques, and improve our combined oil and gas production to the highest ever (and I am repeating this for your benefit), to the highest ever production to 6.54 million metric ton oil equivalent during the last financial year that is FY23-24.

- Numaligarh refinery has also been performing well with excellence in all operating parameters. In FY22-23 the refinery operated at more than 100 percent capacity, but in the last financial year the refinery witnessed an annual maintenance campaign followed by a minor fire incident. However, the refinery, despite not being able to run during the Quarter 1, recaptured the growth story in Quarter 4, while we could compensate, out of 3 months, 1 month, despite all those impediments.
- Oil India also reported highest ever EBITDA during financial year 23-24; 4.18% higher than the last financial year. The company also reported highest ever quarterly PAT in the Q4 of over Rs. 2,000 crore, and NRL refinery reported a GRM of USD 13.17 dollar per barrel. At a group level the company witnessed a turnover of Rs. 36,304 crore.
- The company has declared a final dividend of Rs. 3.75 per share and it is pre-bonus. As all of you know the board has already approved, and we are in the process of getting the formal approval for the bonus issue for the financial year 23-24. And with this, the total dividend for FY23-24 is Rs.15.75 per share.
- We are focusing aggressively on our exploration and development activities aligned to the import substitution and Atmanirbhar Bharat in terms of energy sufficiency. In the 27 blocks acquired under open acreage licensing policy bidding rounds, we have expedited our exploration activities and production activities as well. The company has completed all the committed seismic acquisition in 24 exploration acreages, and are proceeding with further explorations. We have drilled 61 exploratory and development well last year, which is also the highest ever since inception of the company.
- Now I must share with you some very, very excellent news. As you all are aware, during the last financial year in August 2023, Oil India was accorded the highest ever crown called Maharatna status in terms of CPSE's. That is basis our strong performance over the past years, and there are several such other criteria which we met. And the Government of India was gracious enough in according this status. And, as we have been given that status, we continue to play a pivotal role in securing the nation's energy needs.
- Considering the evolving energy landscape with a strong focus on cleaner and sustainable energy sources, OIL has recently also adopted the vision and strategy 2040 in collaboration with internationally acclaimed consultants. We aim to

transform the company into an integrated energy player having NRL as the downstream part of Oil India Limited at the group level. And that gives us the entire spectrum or value chain of oil and gas, so from E&P to downstream, including a portfolio having alternate energy.

- OIL's vision to become an integrated energy player is backed by aggressive growth plans aiming to double its revenue by 2040. The growth plans are underpinned by substantial Capex investments, spanning exploration, production, downstream and alternative energy ventures.
- In line with our commitment to become a net-zero, we have also carved out a strategy to ensure our net zero by 2040, and that would also call for additional Capex.
- Our ambitious revenue targets are backed by significant operational milestones. We will fo

cus on enhancing our exploration coverage, maximize our production and expanding our gas portfolio, which is going to be the, or rather is, the bridge fuel for the energy transition.

- Simultaneously, we are also aiming to become a key market player in the alternate energy sector covering biofuels, green hydrogen, renewable energy, compressed biogas etc. And for which we have already taken a decision of creating a subsidiary called Oil India Green Energy Subsidiary, which is in the approval stage.
- In the downstream sector, we are also enhancing our portfolio primarily focused on gas infrastructure. We are committed to deliver a sustainable growth and generating

long term value. In the process we will endeavour to invest in our people, technology and infrastructure to maintain our competitive edge and seize new opportunities.

■ With this, I would request my colleague to take forward today's presentation and discussion but again thank you very much.

■ Presenter:

■ Thank you CMD sir for your valuable insights on the company. Now I request my colleague Mr. Debojeet Hazarika to kindly come for a presentation to the audience.

■ Mr. Debojeet Hazarika – GM Finance, Oil India Limited:

■ Friends from the investors and analyst community, dignitaries in the dias, my senior colleagues from Oil India Limited, ladies and gentlemen, a very warm good afternoon to you all, and I would like to welcome you all and also thank our friends for sparing their time and spending this evening with us. It really is a big boosting to the OIL team to see your keen interest in our organization.

■ Friends, financial year 23-24 will be a milestone year for us, as CMD sir was highlighting in his opening remarks. We got the elevated Maharatna, prestigious Maharatna category, and it really gives us immense confidence and also increases our commitment to continuously grow further, work harder and add value to all the stakeholders. We really take pride in this stride and we will move forward with equal zeal.

■ Year 23-24 has also been a tremendous year for us from the performance, operating performance as well as from financial performance. We got the highest EBITDA of 11,643 crores in the financial year 23-24. We got oil and oil equivalent production of 6.54 MMTOE, which is highest for the year. There has been an increase in crude oil production to the tune of around 6% from 3.176 MMT last year to 3.359 MMT in the current year. With this positive note, I am starting my presentation.

■ In today's presentation I am covering an overview of the company, OIL's strategic strengths, its assets' overview, operational and financial performance of Oil India, performance of our material subsidiary Numaligarh Refinery, the group's growth plans, as well as, some key highlights on the ESG space.

■ OIL's journey started in the year 1889 where oil was found for the first time in India. There were prolific discoveries in 1953, during the period 1950-1956, and Oil India Limited was incorporated in 1959 as a private limited to manage these oil discoveries. Going forward in 1981, Oil India Limited was nationalized. OIL went for its initial public offer in 2009, which was a resounding success, and we got due to our consistent performance, the elevated Navratna status in 2010. We ventured into the international acquisition space during the period 2013-14, and also as a diversification strategy, to the renewable space in 2012-13. Our International credit rating in 2013 we got from Moody's and Fitch, and we raised a 1 billion, the first offshore foreign currency borrowing, and acquired an asset in Mozambique, which is one of the major assets OIL has bought overseas.

■ Going forward in 2016 with investment of another 1 billion, we acquired two prolific assets in Russia, TAAS and Vankor. On the diversification strategy we ventured into the CGD space in 2018, and currently the organization is having presence in 9 GAs. In our

strife for being a wholly integrated oil and gas company, we acquired stake of 69.63% in Numaligarh Refinery in 2021. With this, the organization has become a truly integrated organization with its presence in the entire value chain of oil and gas.

■ On the green part, we were the pilot in creating a pilot plant of hydrogen in our setup in Jorhat pipeline, and lot of initiatives are going on for diversification to move forward in the renewable space. And in 2023 we were awarded the Maharatna status.

■ A view of our management team. The team is led by Dr. Ranjit Rath, our Chairman and Managing Director, an alumni of IIT-Mumbai and IIT-Kharagpur. Sir has a rich portfolio of diverse roles starting from his experience in strategy formulation, business development, upstream asset management, application of geosciences and exploration geology, including a critical role in development of strategic reserves by the Government of India.

■ Our board comprises of Shri. Harish Madhav - Director of Finance, Pankaj Goswami - Director of Operations, Dr. Manoj Kumar Sharma - Director of Exploration and Development, Shri. Ashok Das - Director of Human Resource, all with more than 3 decades of experience in the oil and gas industry. We have currently two government nominee directors in the board, Shri. Rohit Mathur - Joint Secretary, MoP&NG and Shri. George Thomas – Deputy Secretary, MoP&NG, IFS of 2015 cadre.

Both are bringing in rich experience and values to the functioning of oil board. We have two independent directors presently, Ms. Pooja Suri and Mr. Raju Revanakar. Both are from diverse fields and add values in the decision-making process of OIL's board.

■ A glimpse of OIL's value creation in terms of the share price. We tried to plot OIL's share value vis-a-vis the NIFTY Oil & Gas Index, NIFTY 50 and S&P Global Oil Index. It may be an interesting slide to the investor friends. If we look into the period of January ‘22 to the current period, against the performance of the other benchmark index, OIL's share has outperformed by almost three times. Our share price, the 52 weeks latest share price high was 675.50 and with a market capitalisation of over 71,000 crores. As we were mentioning in our initial part, the significant milestones which contributed, we believe, towards this excellent performance of the share price, is our elevation of Maharatna status in August 2023, the company receiving highest production of oil and gas. We have drilled the highest number of wells, 61 wells, with no significant increase in fleet size in the year 2023-2024. For the first time, OIL participated in a global partner vendor road show at Abu Dhabi to showcase its future strategy, its presence, its size, as well as its hunger for the oil and gas and the way that we would like to improve and grow. It makes a lot of sense for the oil industry and for Oil India, as such, to make a showcase in a global forum.

■ As a contribution towards the green energy portfolio, Oil India has committed a 25,000 crore extensive Capex plan towards alternative energy, which will be aligned with our vision of achieving net-zero by 2040.

■ A glimpse of the shareholding structure. Government of India is holding 56.66% shares in OIL, LIC 7.61%, three of the oil majors are having around 10% of the stake.

■ We have got international credit ratings from Moody's and Fitch, which is best investment grade credit rating, aligned with the sovereign rating, and also on the domestic front from CRISIL and CareEdge, we have the highest rating of AAA stable.

■ Few key performance highlights for financial year 2024. Oil India achieved highest ever EBITDA of 11,643 in financial year 2023-2024, an increase of 4.18% since last year. The profit after tax for the year was Rs. 5,552, with a highest ever PAT in Q4 FY24 of Rs. 2,000 crores plus. The profit was marginally affected because of the lower price realisation and also

due to some arrear tax provision to the tune of around Rs. 3,000 crores.

■ We have declared interim dividend of Rs.12 per share, and a final dividend the board has recommended in the last board meeting of Rs. 3.75. So, total Rs. 15.75 per share dividend the company has declared in financial year 2023-2024.

■ We have achieved highest ever combined oil and oil equivalent production of 6.54 MMTOE. Our crude oil production has increased by almost 6%, 3.359 MMT for the year 2023-2024, and natural gas production also was marginally higher, 3.182 BCM, and in Q4 we have received an increase of 3.21% on a quarter-to-quarter basis. The natural gas production was slightly impacted because of some offtake issues in the first quarter of the year, but which was compensated in the subsequent period. And finally, the position was almost in line with last year's natural gas production.

■ The company's strategic strength… on the upstream part we have got 63 E&P blocks with almost around 64,000 sq. km. of acreage. To handle the E&P requirements, we have got crude installations of around 48 major installations and around 29 natural gas installations. We have got international presence as on date in 10 projects in 7 countries, and with a mixed profile of 4 exploration blocks, 2 development blocks and 4 production blocks.

■ In the transportation vertical, Oil India Ltd has crude oil pipeline of around 1,157 km with a capacity of around 6 million metric ton. Another the crude oil pipeline of Numaligarh Refinery, the group is constructing. It is around 1,640 km pipeline from Paradip to Assam, to cater to the extended capacity for Numaligarh Refinery. On the product pipeline front, we have got 660 km pipeline mainly used currently to evacuate the products of Numaligarh Refinery. The current capacity is 1.72 million metric ton, and this is currently under capacity expansion, and the target is to increase it to 5.5 MMTPA.

■ On the natural gas transportation, we have 49% stake in DNPL, which is having a 192 km pipeline connecting from Duliajan, our main producing area, to Numaligarh Refinery, and it is also currently having a project to extend further and increase the existing capacity, so that it matches the increased requirement of Numaligarh Refinery.

■ We have got 40% stake as a group in IGGL which is catering to the connectivity of the grids of the capital of all the north east states to the main grid of the country. So this

is a major development that is going on in line with the gas hydrocarbon vision of Government of India.
■ On the downstream part, we have stake of almost 69.63% in Numaligarh Refinery and additional 5% stake in Indian Oil.
- On the Petrochemical side, we have got 48.79% stake in Assam Petrochemicals Limited, 20% stake in BCPL and another 360 KTPA Polypropylene project is under project mode in Numaligarh Refinery.

- In the City Gas Distribution, we have got presence in nine geographical areas. We have slides further coming up, upcoming slides, to explain our presence in these different sectors.

- On the Renewable front, we have got 188 Megawatt of capacity in Rajasthan, Gujarat and Madya Pradesh and also as a pilot plant we have established a Green Hydrogen plant of 100 Kilowatt in Assam.

- We have a strong E&P capabilities inhouse with assets for all the E&P operations and to support that we have got strong infrastructure to support the E&P activities of the company.

- As a significant player across the Oil & Gas value chain, as we have been explaining our presence in the refining and marketing segment. With NRL we are having 69.63% stake. The refinery is currently in the capacity of 3 Million Metric Ton and is in an
8
expansion mode to increase it to 9 Million Metric Ton with an integrated pipeline of 1640 kilometers. The project cost is around 28,000 crores.

- Towards our green initiative Numaligarh Refinery has also almost in t

he stage of
completing a 2G Ethanol via a JV with ABRPL. The project cost is ■4200 crores and refinery is also doing a Polypropylene plant with a project cost of ■7200 crores. We have got 20% stake in Petrochemical Complex in BCPL in Dibrugarh and 48.79% stake in Assam Petrochemicals Limited, which is a 600 TPD Methanol and 200 TPD Formaldehyde Project. On the Gas Transportation and CGD Space, we have got 40% stake in IGGL, 49% stake in DNPL, 50% stake in HP Oil, 26% stake in PBGPL, another 49% stake in any NEGDCL and 50% stake in Oil-BPCL JV. Through HP Oil, PBGPL, NEGDCL and Oil-BPCL JV, we have got presence in nine GAs in the CGD space with presence in the state of Maharashtra, Haryana, Nagaland, Assam, Tripura and Arunachal Pradesh.

- An overview of OIL’s acreage and assets. So, we have got a PAN India presence with large presence in the Northeastern side with a total operated block of 58; an acreage of 58,000 square kilometer and additional 5 non-operated blocks with acreage of around 5400 square kilometer. Out of the OALP 27 blocks, we'd like to stress that almost 70% of the blocks, around 19 blocks, are in the Category-1 having established hydrocarbon.

- Our overseas presence, we have got presence in 7 countries and in 10 projects with an investment of almost 3 billion USD and with a committed investment of around 4 billion. It is a mixed profile of Exploratory assets, Development assets and Producing assets. Few of our major overseas investments. We have invested in Tass Yuryakh, Russia and Vankorneft in Russia with an overall investment of around 1 billion. For Taas Yuryakh, the investment was 436 million against which we have already received dividend of around 395 million; almost 90% dividend we have received, investment we have received back. And for Vankorneft, the investment was 598 million and the cumulative dividend is around 444 million. So, almost 80% plus of our investment in these two assets we have already recovered in the form of dividend. Another prolific investment is Mozambique with a resource of around 65 TCF of recoverable resources. Oil has so far invested 1.5 billion in Mozambique project. The project has already tied up with funding with a secured debt drawdown commitment of USD 15.4 billion. Currently due to law and order situation, the project is under Force Majeure but with the recent positive developments in Mozambique, we are hopeful that the project will restart somewhere in the later part of ‘2024.

- A glimpse of the operating and financial performance of the company. We have received the highest ever production in ‘23-‘24. 6.54 MMToE, a consistent performance in terms of crude oil production as well as in terms of gas production. For ‘23-‘24, the crude production was 3.36 MMToE and natural gas production was 3.18 MMToE. Oil has been a driver of exploration activities in the country. There has been almost 40 times increase in 2D seismic surveys. If we see the horizon of last 10 years, in ‘2013-14, there was a cumulative 2D seismic survey quantity of around 500 line kilometer which has increased to almost 21,000 line kilometers in ’23-‘24. Similarly, in terms of 3D seismic, the growth/the increase is around 10 times from

around 750 square kilometer to around 7500 square kilometers in ’23-‘24. Similarly, on the drilling part as well, the growth is almost 13 times if we look into the numbers from ‘2013-‘14 to ‘2023-‘24. These initiatives on the exploration front as well as on the drilling front has resulted in increase in resource for the company. As on 31st March, 2024 our 2P reserve stands at 496 million barrel oil equivalent of crude oil and 876 million barrel oil equivalent of natural gas.

- If we look into the operating acreage increase in last five years, it is almost 6 times increase from FY17-18 to FY23-24. And with a large number of acreage, we have bided in the OALP regimes.

- Our Reserves base. All India's domestic 1P

resource is 563 MMBOE of natural gas and
214 MMBOE of crude oil. And 2P, 876 MMBOE of natural gas and 496 MMBOE of crude oil. In terms of production, this tends to, for 1P it stands to around 9 years of production for crude oil and for gas around 25 years. And in terms of 2P, for crude oil it is 22 years plus and for gas it is almost 40 years.

- The company has been able to maintain a sustained operating and financial performance. At the group level, our consolidated income for FY23-24 is ■37,646 crores and Profit After Tax is ■6,980 crores. Consolidated Net Worth is ■44,436 crores and consolidated Earnings Per Share is ■58.42 crores. On the production front, as we have already explained in the slides, crude production there has been steady increase, natural gas also we have been able to maintain. On the NRL crude throughput, definitely due to the first quarter shutdown and some minor fire accident there has been a slight dip in the crude throughput for the refinery.

- On a standalone basis, OIL realized a healthy price of $83 per barrel in FY23-24. Our price is benchmarked to international crude price and net of statutory levies we have realized almost $50 per barrel. For natural gas, as per the new pricing policy we have realized 6.5 mmbtu per U.S. dollar. And in the next year going forward there will be an increase of 0.25 USD per mmbtu year-on-year.

- Our financial performance, standalone financial performance. Revenue for the FY23-24 is ■24,514 crores, EBITDA is ■11,643 crores and EBITDA margin is 48%. Profit After Tax is ■5,552 crores and Earnings Per Share is ■51.20. Our standalone Net worth as on 31st March, 2024 is ■35,449 crores, book value per share is ■406.88. We have declared a dividend of ■1,708 crores in FY23-24 with a dividend payout ratio of 31%.

- Oil India have a healthy leverage with its standalone depth standing at ■11,341 crores and a Debt/Equity Ratio of 25.7%. At the consolidated level, the debt is ■23,640 crores with annualized debt in the range of around 8,000. And for Oil India International Pte. Limited, our subsidiary in Singapore, there is a 500 million loan outstanding. So, it stands to around 4,300 crores. At the consolidated level, our Debt/Equity ratio stands at 45%.

- Contribution to exchequer. OIL has contributed to the Central Exchequer corporate tax amounting to ■2,154 crores, ■3,862 crores of Cess and SAED and dividend and others ■1,191 crores in the FY23-24. Our contribution to the State Exchequer -

Royalty ■2,924 crores we have paid in FY23-24 and VAT and other state levies ■1,288 crores.

- We are trying to show the value growth per share in terms of market price and dividend in this slide. Friends, if you see, the per value share of Oil in ‘2009 during the IPO was around ■1050. If we add the cumulative dividend that we have paid over the years and considering the bonus issues made by the company, the per value share as on date stands at around ■4000 plus. So, this gives a value enhancement of more than four times to the shareholders. And this has been possible through consistent dividend payment year on year. We have so far made four bonus issues FY11-12, FY16-17, FY17-18 and in the current year also the Board has recommended a bonus issue of 1 share for every 2 shares held. We have twice done buyback of shares in FY2016-17 and in FY2018-19.

- Performance glimpse of our material subsidiary Numaligarh Refinery. Numaligarh Refinery is a 3 million metric tonne refinery operating in the state of Assam with OIL's equity holding of 69.63%. It's a modern refinery within Nelson Complexity index of 9.2 with very high distillate yields and high GRMs. It deals in products of MS, HSD, SKO, LPG, ATF, Naptha, Wax, Sulphur, CPC, RPC, etc. Numaligarh Refinery has commissioned a product pipeline of 130 kilometre from India to Bangladesh, which gives additional space to the refinery to evacuate its products in the Bangladesh market as

well.

- On the infrastructure side, the refinery is having product terminals at Numaligarh and Siliguri and the OIL group has a pipeline capacity through which the products are evacuated from the refinery. It is having the highest domestic rating of AAA from CRISIL. The refineries are having few major expansion plans. It is increasing its capacity from 3 Million Metric Ton to 9 Million Metric Ton And also there is an integrated pipeline of 1600 kilometers from Paradeep to Numaligarh crude pipeline and with a project cost of around ■28,000 crores. The refinery is also almost in the stage of completing a Biorefinery for 2G Ethanol production and it is taking up a project of Polypropylene with 360 KTPA design capacity in Numaligarh with a project cost of around ■7000 crores.

- A glimpse of a few financials and performance of the refinery. The Crude Throughput for FY23-24 was 2,510 thousand Metric ton with a Distillate yield of 86.54%. Income from operation is ■23,730 crores with an EBITDA of ■3,396 crores. Profit After Tax ■2,160 crores and Gross Refinery Margin 13.17 dollar per barrel.

- OIL’s growth plan. Friends, we have the strategy of growing in the different streams in the Oil & Gas value chain as well as on the alternate energy space.

■ In the upstream side, Oil is carrying out a Mission 4+ which aims to achieve 4 million of crude oil and 5 BCM of gas. Also, we have got an aggressive acreage under the OALP regimes. And with our exploration initiatives as well as with newer faster technology evolution, we are very hopeful of expanding our presence PAN India. And also, OIL has the intention of continuing its overseas acquisitions by increasing its Oil equity through assets acquisition. And keeping in
11
line with the vision of Government of India, the company is giving strong thrust on its gas resources as well as gas transportation and development.

■ In the midstream, through our presence in the IGGL segment, we have been trying to develop the gas connectivity which will definitely give an impetus to the gas production of the company as we will be linked to the main grid of the country through this IGGL and DNPL expansion projects. We are also upgrading our crude oil as well as product pipeline to sync with the increased capacity of Numaligarh Refinery. When the refinery will go for commissioning towards the end of ‘2025 from current capacity of 3 million metric ton to 9 million metric ton.

■ Again on the downstream side, Numaligarh Refinery is trying to achieve its major Capex targets. And also through our presence in the CGD space, we are expanding in the diversification process and also we have got strong presence in the PETCHEM portfolios.

■ On the alternate energy space, we are looking for the options in Green Hydrogen. We are already trying to build up CBG plans and also the Bio Ethanol plant through Numaligarh Refinery. We have got a focused approach towards CCUS and Coal Gasification and also we are intending to participate in the field of EV evolution for the Indian mobility.

- For the Mission 4+ targets, Oil India has been a pioneer in taking out IOR and EOR initiatives. Few of the initiatives that the organization has taken are like Low Sanity

Water Injection, Polymer Flooding, Hydro-fac initiatives, CSS for heavy oil field in Rajasthan. We are in the lookout for collaboration with international oil companies which will increase and help our production initiatives. We have identified five fields under this Mission 4+ with a target of 78 wells. Out of the 78 wells, we have already completed drilling 48 wells. The drilling target for FY24-25 is a very aggressive plan of 78 numbers and for FY25-26 it is 81 numbers of wells.

- Our Capex for FY23-24 is ■5,900 crores and in the current year FY24-25 we have a Capex target of ■6,900 crores. Almost 70% of the Capex is being allocated to E&P side of the business.

- With its strong liquidity

, a healthy leverage ratio and sound debt servicing capacity,
OIL is well positioned for the planned investments in the upcoming years. Our strong EBITDA and cashflow with a healthy operating cashflow of almost ■10,000 crores plus in the consolidated Balance Sheet and also with a very competitive cost structure and with a Debt/Equity ratio of standalone 26% and consolidated 45%, we have got leverage to increase our further debts. Would like to highlight that Oil India Limited has done almost all its Capex from its internal accruals. Debts is being taken only for acquisition of the overseas assets. Two assets mainly, Mozambique as well as in the Russia asset where we have taken a 500 million debt at the wholly-owned subsidiary level in Singapore and for NRL capacity expansion, which by this time is totally repaid. We also have a significantly high Interest Coverage Ratio with EBITDA to Interest at the consolidated level almost 15 times.

12
- Key highlights of our ESG initiatives. Considering Government of India's target of 2070 to achieve Net Zero, OIL Group has taken a very aggressive target of achieving Net Zero by 2040. We are continuously striving to increase our space in the alternative energy portfolio. We have set goal to increase share of gas in our portfolio and contribute to the country's vision of becoming a gas based economy by increasing share of gas in energy mix from current 6% to 15% by 2030. By our presence in the renewable energy space, by our presence in the PETCHEM industries, our initiatives of establishing Ethanol blender plant in Numaligarh refinery, we are committed towards 20% Ethanol blending in petrol through Numaligarh as well as 15% Methanol blending through Assam Petrochemicals Limited. We are adopting cleaner energy sources and we are increasing our investment in renewable energy portfolio with a commitment of 25,000 crores up to 2030.

- We have been continuously targeting to mitigate our environmental risks and have been continuously taking measures in the field of Carbon Transition, Physical Climate Risk, Water Management, Pollution and Waste Management as well as Natural Capital.

- On the Social and Governance front, OIL is a people's company. We have got stakeholder interactions at every front and we take all the initiatives to further enhance the human capital element within the organization.

- Our CSR initiatives are in display over the years and consistently we have been incurring CSR expenditure more than the required amount statutorily. Our CSR expenditure for FY23-24 is ■123 crores, which is 2.21% of Profit After Tax.

- Friends, to summarize the position, so Oil India Limited is the second largest public sector oil company with its experience of over six decades and a steady performance with a state-of-the-art refinery which is expanding its capacity from 3 MMTPA to 9 MMTPA. With strong financials, with our aggressive exploration plans and with the larger share of Category 1 basins that we have in the OALP acreage and also with the diversification initiatives the company has taken we are confident that we will continue to grow, to perform and to add value to all our stakeholders. OIL's officials, for investors, contact details – Mr. S. Maharana, Chief General Manager – F&A, for Institutional and Investors and Analyst. And for retail investors, Shri. A.K. Sahoo, Company Secretary.

- Thank you very much.

(Audience applauds)

- Presenter:

- Thank you, Debojeet, for such a beautiful presentation covering the entire portfolio business of Oil India and its group companies.

13
- Ladies and gentlemen, now the floor is open for Question & Answer session. But before we start, I request you to kindly mention the name of your firm and your name before raising the queries to the management. Thank you very much.

- Mr. Hardik Solanki - ICICI Securities:

- Hello. Yeah, Hardik Solanki from ICICI Securities. So, Sir,

can you just help us to
understand when NRL's expanded capacity will come onstream? And how the utilization will take on from there on? Thanks.

- Dr. Ranjit Rath - Chairman & Managing Director, Oil India Ltd.:

- Thank you very much. We are looking at December'2025 as part of the refinery expansion program and before that we will have the Paradeep-Numaligarh pipeline expansion by September'2025. And once the refinery expansion is done, by then the Petrochemical Complex, the 360 KTPA PETCHEM would have kick started this year. So, that would take about three years. So, by then that would also come to the fag end of its completion.

- Mr. Hardik Solanki - ICICI Securities:

- Yeah. And also what would be the product slate, you know, broadly? The HSD, ATF?

- Dr. Ranjit Rath - Chairman & Managing Director, Oil India Ltd.:

- See, primarily, Numaligarh has been focused on HSD and MS. So, that focus would continue because we would cater to the mobility segment. But given the fact that ATF has picked up in the recent times with the Aviation sector, primarily in Civil Aviation, with the thrust on Udaan scheme and the northeast connectivity. So, ATF would also find a significant place there. We'll do LPG but LPG will also be used as part of our petrochemical input. So, the order of slate will be remaining the same more or less.

- Mr. Hardik Solanki - ICICI Securities:

- So, if you just give us the what's the current slate exactly?

- Dr. Ranjit Rath - Chairman & Managing Director, Oil India Ltd.:

- It will be the same mix- MS HSD. Bhaskar ji, you want to add something?

- Mr. Bhaskar Jyoti Phukan – Managing Director, NRL:

-
14
- Yeah. If you see our slate, today almost 70% is MS and HSD and ATF if you add it almost touches 77%. So, more or less the kitty will be like that. Since we will venture into PETCHEM and we also have more plans which is queued towards MS maximization, so within that 77% MS share will marginally go up and diesel share will marginally come down.

- Mr. Hardik Solanki - ICICI Securities:

- Thank you.

- Mr. Bharat Rajan - Antique Stock Broking:

- Yeah. Sir, Bharat Rajan from Antique Stock Broking. You have a target of more than

50% growth in the gas production and also there is a natural decline which is involved. So, the net production over the next three years, which will be new production from new wells, could be in the range of 60%-70%. Of what proportion of this gas you will be eligible for that 20% premium pricing on the gas front?

- Dr. Ranjit Rath - Chairman & Managing Director, Oil India Ltd.:

- It's an excellent question actually. So, the notification says that the new gas which would be on top of the decline…Now, we know an order of magnitude decline but interestingly considering the fact that we are having IGGL being commissioned and additional NRL expansion is also coming and DNPL is also going for a capacity expansion, so we would have an avenue to enhance our gas production. So, we have gas fields but because of lack of evacuation facility we are unable to produce. So, all those gas will also find its meaning in terms of delta increase plus the enhanced oil recovery which we would do and there will be a lot of associated gas. So, we are also looking at capturing those gasses in addition to which was earlier as a stranded gas we have not been able to produce. So, we are going for about 16 odd number of compressor stations. Because, please, understand we have got now 9 geographical areas allocated to us including the North Bank, Tripura, Guwahati and Arunachal Pradesh, Nagaland. So, all those will actually require gas. So, we will be able to pump gas there by virtue of the IGGL connectivity. So, we are looking forward to that 20% delta.

- Mr. Bharat Rajan - Antique Stock Broking:

- So, of that provision, can I assume like the entire gas which is coming in will be eligible for that 20% pr

emium pricing?

- Dr. Ranjit Rath - Chairman & Managing Director, Oil India Ltd.:

- Yes.

- Mr. Bharat Rajan - Antique Stock Broking:

- Thanks, Sir.

- Dr. Ranjit Rath - Chairman & Managing Director, Oil India Ltd.:

- What percentage I will not able to tell you now but, yes,

- Mr. Bharat Rajan - Antique Stock Broking:

- Fair enough, Sir. Thanks.

- Mr. Anuj – ICICI Prulife:

- Hi, Sir. Anuj this site from ICICI Prulife. So, my first question is on the lines of what's the thought process behind putting money into PETCHEM given that it is so volatile? While I understand that we have some feed stock for that, so if we can start with that and then probably I can come to the numbers on that.

- Dr. Ranjit Rath - Chairman & Managing Director, Oil India Ltd.:

- I'll first…Look, the future is PETCHEM. From an intensity point of view, currently NRL does not have any petrochemical intensity available to us, but given the market size that is available and going forward, we would have some component of MS available while HSD will not drop. So, that would find its utilization from a feed stock point of view, but it is not about feed stock, it's about the market. You would have noticed we have already got a POL line to Bangladesh, and we are now also looking at extending that reach further into the Bangladesh, and with the look at policy we are looking at not only the northeastern part of the country, Bangladesh will also be a market and the mainland India, the eastern part will also be a market. So, petrochemical we will go big way, and the first step is that 360 KTP.

- Mr. Anuj – ICICI Prulife:

- What are the EBITDA estimates per ton or spreads that we are looking at just for

from a modeling perspective?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- Bhaskar ji, you want to take that call?
- Mr. Bhaskar Jyoti Phukan – Managing Director, NRL:
- See, if you produce pet chem in a refinery since you have started by saying that availability of feed stock, see typically diesel would be what - diesel will fetch you around ■70 per KG if you terms, but any pet chem molecule will fetch you ■90 per
16
KG. So, that CapEx which goes into that 7,000 odd crores will have a return of that magnitude, so 80,000 molecules will become 90,000 at least. So, as you have said that today the pet chem prices are quite depressed, but as you also have said it is only the cyclical. Sometimes it suffers from the overcapacity and then, and there is a upcycle again. So, if you ever is out, generally people will expect a molecule price of around ■100 per ton. So, that delta is good enough to pay up your investment. So, that way you can see that margins and the GRM which is currently you have seen 13.7, and actually we should - we on an average, very long-term average if you see NRL is around $10 per barrel refinery, it will easily go up to $15 per barrel refinery. So, that is the kind of margin that we are looking for.
- Mr. Anuj – ICICI Prulife:
- Got it, Sir. Very helpful. My second question is on the DGH estimates of your Assam-Arakan Basin, it says that about the resource estimated are 3,200 million ton and that is about 3X of what we have in our KG Basin estimates. So, are we actively looking at exploring that area or what's the status there?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- The beauty of Assam self is that it's a huge stack of sedimentary formation sand, clean sand, which is hosting these hydrocarbons. So, as you would see Oil India has been pioneering not only to maintain the mature fields, we are also drilling deeper and deeper, so earlier while we were drilling about 2000-2500 meters, then we looked at 3000-3500 meters. As we speak, we have already gone to the older formations and as part of our strategy we are going to go deeper both in terms of vertical, and also through an extended re

ach drilling campaign, look at the horizontal
formations. So, the potential is there and we are target of Mission 4+ is primarily going to happen from Assam self.
- Mr. Yusuf Rangwala – Analyst:
- Very good afternoon, Sir. My name is Yusuf Rangwala. I'm the speaker plus analyst. So, I'm very happy with our performance as you declared a bonus. So, this is how our company is growing up seeing your presentation and very happy and very proud to be shareholder of this company Sir. Thank you very much. My best wishes for our future, Sir. Thank you very much.
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- Thank you. Thank you very much.
- Ms. Pranita -- Morgan Stanley:
- Good evening Sir, I'm Pranita from Morgan Stanley. I just wanted to check what is the update? Any updates on Indradhanush pipeline commissioning? And once it's completed, what is the gasket that can be sold like in volume terms, MMSCMD.
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
17
- I'm sorry, which pipeline you said?
- Ms. Pranita -- Morgan Stanley:
- IGGL
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- IGGL, okay. Look IGGL is actually the genesis of IGGL is primarily the hydrocarbon vision for Northeast. The idea is it would connect to all the capital cities and the gas sources from Guwahati. So, till Guwahati, the pipeline GAIL is bringing and Indradhanush Gas grid, which is a JV company of five oil majors is creating that connectivity, and there is a feeder line which is also being laid on the North Bank of Brahmaputra while the Duliajan-Numaligarh pipeline is on the South Bank of Brahmaputra. So, we are looking at, currently, let's say we are contributing about 1 million standard cubic meters per day for Numaligarh. Going forward, when Numaligarh will have expanded capacity of 9 million ton, we would require to give about 2.5 million standard cubic meters per day. So, we will use these pipelines both DNPL capacity expansion after and IGGL. So, it's about today we are doing about 7½ to 8 million standard cubic meters per day and going forward we are looking at a capacity of about 11 million standard cubic meters per day. So, these pipeline networks will actually carry these molecules to the consumers. So, the capacity

would be available and it would also help us should there be a delta available, we can push the gas to the mainland. So, that connectivity would also create a gas market for us, which was earlier being used in Northeastern part of the country would also be available in the mainland.
- Mr. Kirtan Mehta -- BOB Capital Markets:
- Hello Sir. This is Kirtan Mehta from BOB Capital Markets. One more question on this gas expansion in through IGGL, we are looking to expand from 3 BCM to 5 BCM. So, who could be the target? What is the sort of the currently existing demand which we can cater with this pipeline? And could you also share about the profile where gas demand would develop, so some sort of customer mix that we are targeting?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- Pankaj ji, you want to take this?
- Mr. Pankaj Kumar Goswami – Director Operations, Oil India Limited:
- Actually, in the last question MD Sir has very nicely explained that mostly we will be targeting with the capacity expansion of Numaligarh refinery. There is immediate expansion of gas business also because from 1 million will be going to 2.5. So, that is one. Then with the IGGL connectivity up to Guwahati and the GAIL pipeline up to Guwahati that will give an opportunity to push our guests to the mainland that is through the any part of the country, and at the same time, we are also considering one pipeline through the north Bank of River Brahmaputra, which will be connecting the customers available in the North bank including the owner cell produce. So, that will be another opportunity for

us. So, these are the mix of customers. There are

lots of tea gardens available in the North bank, which are still not having any gas connectivity. All those areas will be getting connected, and at the same time we are also looking at the new CGD business in the states like Nagaland, then Tripura, then Arunachal Pradesh, all those areas. So, the connectivity will give us opportunity to push gas to all those customers in various states.
- Mr. Kirtan Mehta -- BOB Capital Markets:
- Right. One more follow-up in this regard. Will this gas be marketed by ourselves or will we be involving GAIL and when do we expect the customer contracts to be in place with customers for these additional volumes?
- Mr. Pankaj Kumar Goswami – Director Operations, Oil India Limited:
- As and when the customer demands comes in, we take up that one and some of the things will be done through Assam Gas Company Limited as we are now doing. Some areas will be connecting through IGGL and in some areas definitely GAIL will be involved.
- Mr. Kirtan Mehta -- BOB Capital Markets:
- Thank you, Sir.
- Mr. Sabri Hazarika -- MK Global:
- Yeah. Hi. This is Sabri Hazarika from MK Global. I have two questions. The first one is currently what is the capacity of DNPL and the expansion that you are talking about, when Did get commissioned? And it just involves putting compressor station or is there any pipeline replacement also involved there?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- Pankaj ji, you want to take it?
- Mr. Pankaj Kumar Goswami – Director Operations, Oil India Limited:
- It's a part of pipeline replacement job that we are taking up. So, we have just started this job, it will take another one year to complete.
- Mr. Sabri Hazarika -- MK Global:
- The capacity is currently around 1.2 MMSCM. So, this will go to what level 2.5?
- Mr. Pankaj Kumar Goswami – Director Operations, Oil India Limited:
- 2.5 level.
- Mr. Sabri Hazarika -- MK Global:
- 2.5 in one year. Okay. And second question is on this bio refinery. So, we have heard that it is like close to commissioning. So, when exactly is it expected to

commission and against this CapEx of 4,200 crore what kind of like volumes and profitability you are expecting?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- I'll request MD NRL to take this. In fact, July 2024 we are commissioning it, but let's listen MD, NRL.
- Mr. Bhaskar Jyoti Phukan – Managing Director, NRL:
- The major part is inside only. So, economics fortunately, though we call it is the ethanol refinery, it is also a chemical plant actually, it is a biochemical plant. In many

forums we have spoken and we have published also. Apart from ethanol, it will also produce furfural, which is one of the major revenue scheme. Then, we have acetic acid. We also have our own power because the lignin will be burned in the captive power plant and it will give both electricity and steam. 5 MW of electricity can also be exported at 100% capacity and also, we are trying to convert the bamboo dust which is otherwise a waste material to activated carbon. In the first stage, it will be biochar then eventually to activated carbon. So, that is another revenue stream that we are adding. With all this revenue stream coming, we are getting an IRR of around 11.5% to 12%, in spite of this 4,200 CapEx.
- Mr. Sabri Hazarika -- MK Global:
- Right and that's the project IRR?
- Mr. Bhaskar Jyoti Phukan – Managing Director, NRL:
- Yeah project IRR, yes.
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- But I must add one thing I mean for every one of you. North East is hugely endowed with bamboo as a feedstock and this project is going to change the agrarian economy landscape of the area.
- Mr. Sabri Hazarika -- MK Global:
- Thank you so much.
- Mr. Ramesh Bhojwani – Mehta and Wakil:
- Ramesh Bhojwani from

Mehta and Wakil. Your Vision 4 highlights 4 million metric tons per annum of crude oil and 5 billion cubic for gas. Is this Vision 4 target achievable in the ongoing financial year or it is spread over 2-3 years?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- No, this mission, actually this is mission 4, - Mission 4+ rather, and the effort is to try and attempt to do it in the current year or max next year.
20
- Mr. Ramesh Bhojwani – Mehta and Wakil:
- Wonderful. Because we had the at 6.54.
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- No, that's actually total oil and gas. This is from 6.54, we are looking at 9.
- Mr. Ramesh Bhojwani – Mehta and Wakil:
- Yeah.
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- 5 + 4, but I can assure you at a split level, crude oil we are doing about 3.3. So, we will take it to 3.8 this year and then 4+ year after, and similarly, gas also we will ramp up. Now, there are two things I must share with all of you. Last year we drilled 45 wells, which is primarily a mix of exploratory well and development wells. This year we drilled 61 wells, so which includes 17 exploratory well and 44 development wells. Current year, we have already planned to drill 78 wells, so 30% growth in terms of drilling and we expect that these drilling of these development wells with the prolific hydrocarbon basin that we are operating in will give us that number.
- Mr. Ramesh Bhojwani – Mehta and Wakil:
- That means we – and Sir can you also give us some insightful view or thought process as far as Mozambique now coming back into the mainstream after that political turmoil, getting over there, will not be touch 4 million metric ton per annum further up?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- No. The mission that we have outlined for ourselves is from domestic production only. This doesn't include anything from Mozambique.
- Mr. Ramesh Bhojwani – Mehta and Wakil:
- If that comes, we can hit a target of 10 combined.
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- So, we have not factored in that. The mission 4+ is primarily from domestic production, 5 BCM gas is primarily from domestic production. We have not factored in Mozambique.
- Mr. Ramesh Bhojwani – Mehta and Wakil:
- Because Mozambique is a huge
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
21
- I know, I know. We are eagerly waiting for the operator to announce invocation of the force measure and it will take some time and with our oil equity abroad, so that's a parallel production that's not factored in this 4+ mission of ours. 4+ mission is primarily in our main producing area and the Jaisalmer Basin where we are doing enhanced oil recovery, so we are ramping up that also.

- Mr. Ramesh Bhojwani – Mehta and Wakil:
- Wonderful, excellent.
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- Thank you.
- Mr. Ramesh Bhojwani – Mehta and Wakil:
- And your renewable energy, what I feel is, next year when we come for the presentation, you will indicate to us doubling of the production which you have shown because you have underplayed that a part of the presentation.
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- Okay. So, we have not underplayed though we have - you have observed it, right. The renewable energy is just picking up. So, we thought we will come back to you with a better number when the things are shaping up actually. So, that's the purpose.
- Mr. Ramesh Bhojwani – Mehta and Wakil:
- Thank you and all the best.
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- Thank you. Thank you.
- Mr. Vikas Jain – CLSA:
- Hi, Sir. This is Vikas Jain from CLSA. So, a few questions on your new production itself. Firstly, if you can clarify the windfall tax formula which was announced almost two years ago now. That windfall tax is only applicable to production at the level of FY22. So, everything that is incremental is free price, is that how it still works in terms of because I think your production in FY22 was closer to 3 million ton or so, so everything that you get over and above that for oil will be free market price without the windfall tax?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- No. Small correction. Windfall tax is pegged at a defined value of or the price of the crude oil. It has got nothing to do with production. The production component is there and that 20% premium on the gas point. So, in windfall tax, which is a special additional excise duty, SAED to be precise is primarily if the oil price globally goes up

22

over a certain threshold, then there is a defined amount which is taxed. So, production we can do anything, it has got nothing to do with it.
- Mr. Vikas Jain – CLSA:
- Okay. So, I mean that per barrel tax, whichever is reset every fortnight is applicable on every barrel that you produce?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- Yes, if there is a price delta we get.
- Mr. Vikas Jain – CLSA:
- Okay and for gas, if you can remind us that 20% premium that you're talking about now your competitor has an opinion that there is no cap applicable on that. Is that an opinion that you also hold which means simply the extra gas that you produce will be sold at a 12% slope instead of a 10% slope?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- Yes.
- Mr. Vikas Jain – CLSA:
- Okay, and now on Numaligarh, a few questions on OpEx. So, right now, I mean with all these pipelines which are coming, firstly, what is the current per barrel OpEx, that is pre-EBITDA OpEx and how would that really change and decline with all of these pipelines that you're adding?
- Mr. Bhaskar Jyoti Phukan – Managing Director, NRL:
- Since, you can realize, 3 million ton is a pretty small refinery to have and the OpEx does not proportionally go down with the capacity. So, that was one of the prime reasons for which we have embarked on to the refinery expansion project. Going forward, we wanted to bring down the per barrel cost. So, if you see our, that OpEx, you will see it will hover around $4.5 per barrel, which is pretty high in any standard. So, we expect that to come to below 3 level, and particularly the manpower expenses will not have their proportionately high manpower that you can assume, and also we spent a lot of money in rail transportation and with the advent of these pipelines and from day one we will have 5.5 million ton pipeline carrying that product to Siliguri, and the real distance from Numaligarh to Siliguri is around 600 kilometers. So, you have that 600-kilometer lead already negated for freight calculation, and going forward, maybe we may think of extending that pipeline beyond Siliguri to places like Durgapur and Muzaffarpur like that, so that is on the drawing board, it is premature to talk about it, but the thinking process is already on.

So, to answer your question, we are a 4.5 currently, we will definitely go down below 3 at 9 million level with all these initiatives.
- Mr. Vikas Jain – CLSA:
23
- Okay and just to kind of maybe recap, you did mention this partly, the phase of starting the refinery, one of the pipelines will be ready by September 25. Then, you said the project will be, I mean most of the facilities will be ready by December 25 and by when would the polypropylene expansion be ready please?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- No, polypropylene we are going to start.
- Mr. Vikas Jain – CLSA:
- You're going to start.
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- We are going to start now say July, August, the CapEx will start.

- Mr. Vikas Jain – CLSA:
- And it's going to take three years from now?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- It's going to take about three years, 36 months.
- Mr. Vikas Jain – CLSA:
- So, most likely end of 27 is what
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- End of 27, yes.
- Mr. Vikas Jain – CLSA:
- Okay. And the other upgrader units of the refinery they should slowly ramp up in the early part of 26, right?
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- Yes. Thank you.
- Mr. Sharad Chandra – Investment Advisor:
- Hello Sir, this is Sharad Chandra, Investment Advisor. What you just responded about the, you know, windfall tax, the question which comes to a public shareholder is that if the price of crude goes to 100 then we don't make additional money, but if the price of crude goes to 50 then it's - so, government obviously has a responsibility towards the public, but as a public shareholder, I think this will be our first question which should come to the mind to our retail investor? The second question is if government makes this policy more fairer and you make more money, if crude goes
24
to 100, then that surplus money which you will get that will go into investments of greater amount of you know exploration or probably renewable energy etc., so does the country want to be energy independent or you know, they want to divert money from oil and gas into all welfare activities, probably, you know, government has a role to answer in this, but your thoughts to a question to a retail investor? Thank you very much.
- Dr. Ranjit Rath – Chairman and Managing Director, Oil India Limited:
- The point is very well taken, but I can assure you that with the current reforms place in the play, we have got unlocked the exclusive economic zone of India both in the West Coast and in the East Coast, including Andaman and Nicobar, the deep and ultradeep water is now available for exploration. These are category two basins where there is nil royalty to be paid, and there is an extensive interaction through investor meets, possibilities of collaborations, tractions, outreach campaign is underway to seek the IOCs and National Oil Companies of the world to come and collaborate for an exploration effort. So, this narrative is good enough to display that both the Government of India, Ministry of Petroleum and Natural Gas, and the National Oil Companies including the other ENP companies are all focused on exploration. In terms of SAED, this is a government policy and whenever there is a delta increase in terms of responses to the vulnerability of the oil supply chain, we respond to it, which is a price peg that based on certain calculations, but I can assure you that as an ENP company, we will continue to focus and carry out exploration not only PAN India in onshore perspective, but also offshore, and as we speak, we have already got lined up our exploration efforts in the Andaman Nicobar Basin both East Coast and West Coast of Andaman Nicobar as part of our OLP exploration campaign.
- Presenter:
- If question answer is over, then I now request our Executive Director, Finance and Accounts, Rupam Baruah Sir to kindly come forward for a vote of thanks to the audience.
- Mr. Rupam Baruah -- Executive Director, Finance and Accounts, Oil India Limited:

- Good evening everyone. On behalf of Oil India Limited, I'd like to extend our heartfelt thanks and gratitude to our Chairman and Managing Director, Members of the Board of Oil India Limited, and the MD NRL, DF NRL for being present on this occasion and providing their valuable insight and thoughts about our company. I would also like to extend my thanks to all the analysts and investors for being present here and raising their valuable points, and helping us making this event a grand success. We also solicit similar support and cooperatio

n from the investor and
the analyst in days to come. In case any further information is required, please feel free to contact us. I must also take on record our sincere appreciation to Mr. Swarnendu from Prabhudas Lilladher Private Limited for volunteering this event for the company. I also to extend my thanks to our team for organizing the event in the most dignified manner. With this, now, I request everyone to join for high tea. Thank you.
25
- Presenter:
- Thank you very much.

“Oil India Limited
Q1 FY '2 5 Earnings Conference Call ”
August 09, 202 4

MANAGEMENT : MR. ASHOK DAS -- DIRECTOR , HR & ADDITIONAL
CHARGE OF DIRECTOR (FINANCE)– OIL INDIA
LIMITED
MR. PANKAJ KUMAR GOSWAMI – DIRECTOR ,
OPERATIONS – OIL INDIA LIMITED
MR. SALOMA YOMDO – DIRECTOR E&D – OIL INDIA
LIMITED
MR. RUPAM BARUA – EXECUTIVE DIRECTOR F&A &
CHIEF FINANCIAL OFFICER – OIL INDIA LIMITED
MR. SACHIDANANDA MAHARANA – CHIEF GENERAL
MANAGER , FINANCE & ACCOUNTS – OIL INDIA
LIMITED

MODERATOR : MR. VARATHARAJAN SIVASANKARAN --ANTIQUE
STOCKBROKING

Moderator: Ladies and gentlemen, good day, and welcome to Oil India Limited Q1 FY '25 Results Conference Call hosted by Antique Stockbroking. As a reminder, all participant lines will be in the listen -only mode, and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Varatharajan Sivasankaran from Antique Stockbroking. Thank you, and over to you, sir.
V. Sivasankaran: Thank you, Riya. Good morning, everyone. I'd like to welcome all the participants to the First Quarter Oil India Results Call. We have senior management of Oil India represented by Shri Ashok Das, Director, HR and also holding additional charge as Director Finance; Shri Pankaj Kumar Goswami, Director Operations; Shri Saloma Yomdo, Director E&D; Shri Rupam Barua, ED F&A and CF O, Shri Sachidananda Maharana, CGM F&A and of course our Trison ku Kotoky .
I'd like to hand over the call to Shri Ashok Das for his initial remarks, and then we can move on to Q&A.
Ashok Das: Thank you. A very warm good morning, ladies and gentlemen. At the outset, we would like to thank Antique Stockbroking for organizing this call for discussing the first quarter FY '25 results with the management of the company.
The company's financial results for the quarter ended 30 June 2024 were approved by the Board of Directors on 8th August, that is yesterday and have been published. The company has achieved significant milestones in terms of growth in production numbers of both crude oil and natural gas. The significant financial and operating achievements will be brief by our CGM F&A, which can be followed by a Q&A session.
Thank you. So over to our CGM , F&A.
Sachidananda Maharana: Good morning, dear friends. At the outset, I would like to thank Antique Stockbroking Limited for organizing today's analyst call. I am Sachidananda Maharana, CGM Finance of the company.
The company's financial results of Q1 FY '25 were published on 8th Au gust 2024. I will briefly give some highlights about the performance of the company in both physical and financial terms.
Now coming to the standalone results and beginning with the production front. The company has continued to improve its crude oil production, which is higher by 6.22% in quarter ended 30th June 2024 at 0.871 MMT, vis-à-vis, 0.820 MMT in the quarter ended 30th June 202 3.
Natural gas production during Q1 FY '25 is at 0.818 BCM increased by 9.8% over production in Q1 FY '24, which was at 0.745 BCM. On the financial side, average crude oil price realization for Q1 FY '25 is USD 84.89 per barrel, vis -a-vis, USD 76.85 per barrel for Q1 of FY '24, increased by 10.46%.

Average natural gas price for Q1 FY '25 has remained unchanged at USD 6.5 per MMBtu. The turnover for Q1 FY '25 has increased by 25.73% to INR5,840 crore compared to INR4,645 crores in Q1 FY '24, which is mainly due to higher crude oil price realization in Q1 FY '25 compared to Q1 FY '24 and higher production numbers.
EBITDA margin for Q1 FY '25 is 43.79%, vis -a-vis, 53.49% for Q1 FY '24. The reduction in EBITDA margin is mainly due to the increase in SAED from USD 2.59 per barrel in Q1 FY '24 to USD 10.27 per barrel in Q1 FY '25 and provision made towards service tax GST on royalty during Q1 FY '25 amounting to INR204 crores, vis -a-vis, nil for Q1 FY '24.
Profit after tax for Q1 FY '25 is INR1,467 crores, vis -a-vis, INR1,613 crores for Q1 FY '24. The decline in PAT is mainly on account of increase in SAED and other statutory levies on account of increase in price realization and provision for GST on royalt

y.
The earnings per share for Q1 FY '25 is INR9.02 per share, vis -a-vis INR9.92 for Q1 FY '24.
Coming to financial performance of Numaligarh Refinery Limited, Oil India's material subsidiar y, Profit after tax of Numaligarh Refinery Limited during Q1 FY '25 is INR430 crores, vis-a-vis, loss of INR77 crores during Q1 FY '24. NRL's gross refining margin during Q1 FY '25 is USD 6.43 per barrel, vis -a-vis negative margin of USD 15.59 per barrel during Q1 FY '24. NRL's EBITDA for the Q1 FY '25 is INR734 crores, vis -a-vis negative EBITDA of INR5 crores for the Q1 FY '24.
Now coming to consolidated results of the group company. Oil group turnover for the quarter ended 30th June 2024 is INR9,351 crores visa -vis INR6,409 crores for the quarter ended 30th June 202 3 and consolidated profit after tax for Q1 FY '25 is INR2,016 crores vis -a-vis INR1,400

crores for Q1 FY '24.
With this, my opening remarks on the performance is over and now we are open to Q&A session.
Thank you.
Moderator: The first question is from the line of Probal Sen from ICICI Securities.
Probal Sen: Couple of questions. Firstly, with the performance in the last few quarter's after the announcement was made essentially of the aggressive growth targets that we have put in place for oil and gas. Would you say that the performance of the wells and develop ment of whatever new assets we are developing keeps us on track to achieve the targets that have been shared, which I believe was getting to around 4 million plus in terms of oil and even higher 5 BCM for gas within the next 2 to 3 years? Just wanted your sense on where the update stands on that front.
Pankaj Goswami: I'm P.K. Goswami, Director Operations. So it's a very valid question from your side. And as you can see that the crude oil production from the -- compared to last quarter, it's increasing by 6%, more than 6%, and then the natural gas production is almost 1 0% increase. So with that you can be very much -- actually we can very much assure you that the trajectory we have projected in the last year is, in fact, and we have been moving in that trajectory only.
In fact, the crude oil production and the natural gas production, both the teams are getting a little bit affected because of non performance of some of the gas subsidiaries and gas offtakers. And

because of the cyclic demand of gas, we are not being able to produce the gas to the extent we can produce.
So that is extremely affecting. But otherwise, from our side, the wells are ready. And once we - - and North East Gas Grid is in place, which we are expecting by end of this year, there will be no interruption in gas production, and we'll be able to increase our gas production to the 5 BCM level that we are planning in the next 2 years. Could I answer your question or you need something more?
Probal Sen: Yes. I was just saying, sir, just as a follow -up, is it possible to give a slightly more granular guidance on what exact rate do you expect for FY '26 for both oil and gas and for '27? If that is available.
Pankaj Goswami: Yes. In fact, the growth part, if you can say, the number of wells we have drilled in the last 2, 3 years, if you can compare the -- every year, we have been increasing the number of new wells drill in our areas. So this year, we were plan -- we are planni ng 78 wells. And if I talk about the next year, then we are planning 100 wells.
So if you can talk about '26, '27, we are planning 100 drilling -- new drilling to be completed.
And similarly, for the old well workover also, we are expecting a growth of around 20%. So that way the -- our plan for the next 2, 3 years are also in the track , I can say that.
Probal Sen: Fair enough. Sir, one more question I had with respect to NRL, if you can kindly let us know the status of the expansion project, what is the investment committed, what is the i

nvestment
completed? And what is the first year where we can expect the full ca pacity to be online for the expansion?
Sachidananda Maharana: As you know, this cost for this NRL is -- this is INR28,000 crores. Currently, the physical progress is 65%. And we are expecting that the completion will be by end 2025, that is December 2025.
Probal Sen: And sir, what has been the -- I mean, what is the equity contribution Oil India has made so far in the project?
Pankaj Goswami: Actually, depending on the progress and the financial requirement, the current year, we have -- total equity contribution will be around INR5,500 crores for this project. Out of that 69% will be oil india there.
Probal Sen: Understood, sir. My question is more around how much have we already invested rather than the planned amount, sir?
Pankaj Goswami: Roughly about INR19,000 crores has already invested.
Probal Sen: In the project, INR19,000 crores is already been invested?
Pankaj Goswami: Yes, yes.
Moderator: The next question will be from the line of Rajesh Gajra from Informist Media Pvt Ltd.

Rajesh Gajra: Can you please share just 3 numbers from the previous quarter, the March quarter, January to March quarter, crude oil price realization figure and the sales figure for crude oil and natural gas. That's all from me.

Management: Crude oil sales for Q1 '24, '25 was at INR4,198 crores.
Rajesh Gajra: In terms of volume, not in terms of revenue.
Management: So if you see crude oil production as already explained, the quarter -on-quarter increase is 6.22%. Q1 '24, '25 production was at 0.871 MMT as compared to Q1 '23, '24 production of 0.820 MMT.
Rajesh Gajra: And the sales number?
Management: And the gas numbers are Q1 '24, '25 0.818 MMT . Q1 '23, '24 sales number of 0.747 MMT.
Rajesh Gajra: And in the March quarter, January to March?
Management: So Fourth quarter -- the fourth quarter the total crude oil production was 0.848 MMT.
Rajesh Gajra: And sales?
Management: it was, 0.840 MMT.
Rajesh Gajra: And natural gas, sir?
Management: Natural gas production is 0.805 BCM and sales is 0.618.
Rajesh Gajra: Sorry, I didn't get that, point?
Management: Total sales, yes, it was 0.618 for the Q4. .
Moderator: The next question will be from the line of Kirtan Mehta from BOB Capital Markets.
Kirtan Mehta: I had couple of questions. One is, basically, is there any particular update on the APM gas price upside that modality DTS has been working? Do we have additional inputs in terms of when will it get finalized and how the movement is being likely to be?
Pankaj Goswami: At present, there is not much clarity on that. But as you know, we'll be entitled to $0. 25 cents increase from April '25 onwards.
Kirtan Mehta: What increase did you speak of? Could you repeat it, please?
Management: Sorry, come again.
Kirtan Mehta: I didn't understand the question, what would be there from April '25?
Pankaj Goswami: There is a $0.25 increase MMBtu. Right now, it is 6.5 MMBtu. That is what we are realizing, and as per the guidelines that will be increasing by $0.25 from first April '25.

Kirtan Mehta: Right. I was actually referring to the -- basically the additional well for additional production that we can derive from the...
Management: So you were talking about the -- gas that is what you are talking about?
Kirtan Mehta: Yes.
Management: Right now, there is no clarity on that because we are also waiting for that.
Kirtan Mehta: Sure. In terms of the recent judgment by the 9 -judge bench, what would be the implication for the royalty - sales tax on royalty that you've paid in protest. Does this sort of judgement specializes that liability?
Pankaj Goswami: Actually, the GST on royalty, which we have been paying on a protest til l may

be some time back, and presently on hold in Assam and Arunachal Pradesh due to some Guwahati High Court interim stay order. This entire amount we have already provided for in their accounts in the last year itself and this year, whatever additional amo unt is there that has also been provided this time.

So total amount, we have already provided is roughly about INR3,300 crores till now. But accordingly, any decision of the Supreme Court, although it may go against us, it will not have any impact on the bottom line of the company, first of all. Secondly, the decision which has already been given by the 9 -judge bench, there, our matter is not there because we have already disclosed in our notes to accounts also which you may go ahead. So actually, this amount, although this particular case, we try to get back with the 9 -judge bench matter. But finally, it got detained in the month of March itself .

So ultimately, what will happen that in our case, there will be a separate decision from the Supreme Court or because our case is lying under oils and regulation and development and particularly this decision which has been pronounced at the Supreme Court recently, this refers to the MMDR Act . So accordingly, there is some constitutional distinction between these 2 cases.
Kirtan Mehta: Understood, sir. So basically, we will need a separate judgment from the supreme court to finalize anything.
Pankaj Goswami: Yes, yes. Yes.
Kirtan Mehta: And last question was about the visibility completion of the Indradhanush Grid and accordingly sort of increase in the gas offtakers. So how do we sort of see the gas sales volume ramp -up coming through, any incremental update on that, in terms of tying up of the customers or visibility on the volumes that we can deliver?
Pankaj Goswami: Would you like to take this call sir, this question?
Management: Yes. The visibility in terms of, I think you're talking about the consumers. So first of all, we are looking for increase in gas consumption in the NREP, Numaligarh Refinery Expansion Project.

So once this project is completed, there will be an additional gas requirement for that. Then there

are some additional requirements coming up from Assam Power Generation Company Limited, then another gas demand is coming up from DCPL and some gas demand is also from the NEEPCO side.
So there are internal -- within the area itself, North East itself, there are some customers which are coming up. Then we are also into CCP for Guwahati, so Guwahati metro area, so CCP Purba Bharati Gas Limited is working there. So there will be customers in Guwahati, then another customer base is being created in the north bank of the river Brahmaputra, that is North East Gas Distribution Company Limited for Lakhimpur and other areas.
And once the Indradhanush Gas Grid is completed in the entire North East. So we have now some GAs in Nagaland and Arunachal Pradesh. So these 2 areas will also be catered for gas by this Indradhanush Gas Grid pipeline. So all these new GAs are coming up, entire North East various GAs are coming up.
So Tripura is another GA, so with that there will be definitely customers for end gas production. And at the same time, once the Urja Ganga pipeline is connected to IGGL then the gas produce in North East can be bumped to the Mainland India. So that's the main opportunity we're looking for an increase d gas production.
Kirtan Mehta: Thank you for the color of the customer, is it also possible to indicate quantum of volume that can be offtaken by these classes of consumers?
Pankaj Goswami: Exactly at this point of time, I do not have the exact number.
Kirtan Mehta: Broad indication also in terms of sort of -- would it be half MMSCMD or more sort of -- what could go in the -- within the area, what could be basically we get within exclusively Guwahati and then what woul

d be the additional volumes so when we are able to approach the Arunachal Pradesh and with other area. Some indication broad?
Pankaj Goswami: Some broad indication, if I have to say that as of now, I can say that from 3 BCM to 3.5 BCM can be within the area and rate, whatever we produce, we can dispose it to the mainland India.
Moderator: The next question will be from the line of Somaiah V from Avendus Spark.
Somaiah V: So the first question, you did mention the number of wells that's planned to be drilled for this year is 78 and 100 next couple of years. So what could this be in the last 2, 3 years?
Pankaj Goswami: Please repeat your last part of the question?
Somaiah V: So number of wells that we have drilled in the last 2, 3 years, sir?
Pankaj Goswami: Okay, you can respond.
Management: Yes, I think in -- let's see, let's look at the last 5 years, actually. The 2019 -'20, we drilled 36 wells; 2020 -'21, we drilled 36 wells; 2021 -'22, we drilled 38 wells; 2022 - '23 we drilled 45 wells; and last year, '23 -'24, we drilled 61 wells. So these 61 wells, which we have did last year is actually the highest we have ever drilled so far.

And this has given us the confidence that we can still achieve higher numbers. And that's for the target for the current year is for the wells. And accordingly, we are trying to increase our number of drilling fleet rigs to cater to the additional requirements.
Somaiah V: Sir, and also this number of wells that we plan to drill, can we give some details around the fields where this predominantly will be drilled?
Pankaj Goswami: Well, predominantly, we will be drilling in the North East, in our main division areas and of course, in our OALP block which are now maturing from exploration in the sense of seismic operation processing and interpretation, so whatever leads and prospects have been generated will be targeted in the whole period.
And in the immediate future, some of the wells, we've also be driven by block, as we speak, we are already drilling in Rajasthan and Mahanadi. And from July onwards, we are also going to be drilling in India for the DSF well. And from October, and we're going to start our exploration campaign in Andaman. We are going to drill there 3 on the Andaman as well.
Somaiah V: Sir, and also, you did mention that the opportunity once NRL expansion comes online in terms of gas consumption. Any broad number in terms of what would be the demand that could come from NRL on the gas side?
Sachidananda Maharana : For NRL, it will be close to, once the expansion is received and the production would be 2 MMSCMD for expanded capability.
Somaiah V: So once this 9 million tonne comes online fully, then the demand would be around 2 MMSCMD.

Pankaj Goswami: Yes.
Somaiah V: So one bookkeeping question. So what would be the -- in terms of a debt breakup, what is the total consolidate? And how much is NRL? How much is it stand -alone and then the international assets. And also if you could give your Cap ex plans for this year and next year?
Pankaj Goswami: On stand -alone, as you know -- on a stand -alone basis, the debt is INR11,330 crores, which is primarily, that is debt the company has taken for Mozambique project and NRL as of 30th June is INR9,522 crores.
Somaiah V: So this INR9,000 -odd crores is entirely for that INR19,000 -odd crores of Cap ex that you have spent so far, so.
Pankaj Goswami: Yes.
Moderator: The next question will be from the line of Mr. Nitin Tiwari from PhilipCapital.
Nitin Tiwari: Just wanted to stay on the topic of Indradhanush Gas Pipeline Network. So if you can help me understand 2 things. What is the commissioning time line as we stand today for the pipeline network? One is that. And secondly, when you speak about north bank con nections, so what is the point of connection from where to where are we gett

ing connected in terms of location when you talk about north bank connection.

Pankaj Goswami: Yes. This pipeline, we are expecting the first sales by December this year. So this is one time line that I can tell you. But for the north bank, actually, the pipeline is coming from the other bank from Guwahati to Jorhat, there is a crossing of the river Brahmaputra. So in that line, after crossing Brahmaputra, it's in the north bank only. That way it is connected to north bank near Tezpur area.
Nitin Tiwari: Sorry. So basically, the connection would be...
Pankaj Goswami: Yes, there is one more plan as the next phase of the Indradhanush Gas Grid pipeline, we're seeing a growth now. So that pipeline, we connect this from near Duliajan up to the north bank, other end of the Indradhanush Gas Grid, so that will make the entire connectivity in the North grid easier. But as of now, the north bank is connected near Tezpur.
Nitin Tiwari: So as of now, the connection is there near Tezpur, it is being undertaken or it is already connected near Tezpur?
Pankaj Goswami: The SDD -- the micro tunneling job has been completed. So the connection is done. But the line is to be completed till now. So the remaining part of the job is going on.
Nitin Tiwari: So basically, then Phase 2 commissioning for IGGL would be, what?
Pankaj Goswami: Phase 2 IGGL actually, various phases, in fact, IGGL will connect all the North East states. So there are various phases. But the first phase is to connect the Assam, upto Guwahati area. So that connection first phase is now undergoing.
Nitin Tiwari: So the reason I asked this question about north bank connectivity is because when we look at the map for Indradhanush Gas pipeline, so the Phase I actually looks to be running on north of Brahmaputra only. So I couldn't understand what is the north bank co nnection. So are we connecting the south part of Northeast with the IGGL is Phase 1. Is that what we're talking about?
Pankaj Goswami: Yes, yes. Exactly when I'm talking about Assam, north side and south side, the river Brahmaputra is the dividing thing. So north of river Brahmaputra the pipeline is coming from Guwahati area to north of river Brahmaputra. And from there, it is crossing ne ar Majuli to Jorhat. So this is the connectivity as of now we are making.
You can see the first phase we met, the connection is through north bank. And coming to south bank, near Majuli and is connected to Jorhat to Numaligarh and all those areas. The present pipeline is like that. So we are talking about one more pipeline, whic h will still be connected from Duliajan it will start and it will cross the river Brahmaputra near Sadiya or some area, and it will come across the north bank through the north bank connection of the -- present north bank connection of the IGGL phase I.
Nitin Tiwari: This is a DNP pipeline, what this one is DNP?
Pankaj Goswami: DNP pipeline is in the south bank. DNP pipeline is in the south bank, it is cross the river Brahmaputra, so it was from Duliajan to Numaligarh directly.

Nitin Tiwari: Okay. So this is a completely new section we are talking about, which is crossing from near Duliajan to north. Okay. Got it. So apparently, there is some delay in Phase 1 commissioning because I think the earlier time line was July, August. So now you're s aying it time revised to

December.
Pankaj Goswami: Yes, yes. There is some delay, yes.
Nitin Tiwari: And secondly, sir, I just wanted one clarification on the earlier numbers that you gave. So the equity contribution you mentioned in Numaligarh crude is INR10,500 crores total equity contribution?
Management: INR8,500 crore will be total equity part because INR18,000 crores has been -- as borrowings.
Nitin Tiwari: So how much have we already invested out of

this INR8,500 crores?
Management: No. See, we are -- as you know, we have already acquired the 70% stake in -- when I came in March '21.
So subsequent to that, there was one right issue where we had made some this infusion . But thereafter, actually, the refinery expansion is going on with debt as well as equity contribution out of internal accruals of Numaligarh Refinery itself.
Nitin Tiwari: So as of now, we have not allocated any equity to the INR8,500?
Management : So apparently, we have not allocated any equity sold til l date, til l now. But subsequently, depending on the progress of the project and the requirement of funds, we will see because maximum contribution even if anything goes that will not exceed INR3,000 crores in terms of equity, yes.
Moderator: The next question will be from the line of Avishek Datta from Anand Rathi Shares and Stock Brokers Ltd.
Avishek Datta: So just wanted to know like once the Numaligarh expansion is commissioned in December '25, when do you expect a full ramp -up of the same?
Sachidananda Maharana : As you are aware, once this new capacity is installed. In the first year, it will be around 50% to 60%. And then slowly, it will ramp up to a 100%. By say, second year to third year.
Avishek Datta: So in FY '27, we can expect only 50% to 60%?
Sachidananda Maharana : Yes, '25, '26, yes, '26, '27, let's say, that it will be reaching near to 100%, '25, '26 because it will be completing in December. So it is for only for 3 months, it will be there for '25, '26.
Avishek Datta: And will you be eligible for excise benefits on exports, any exports you're making from the expanded capacity?
Pankaj Goswami: No, there is no excise benefit on exports. But yes, whatever production is there, it is whatever still in the domestic front, that will be definitely eligible for the excise benefit.

Avishek Datta: And in the expanded capacity, what volumes you're targeting to export?
Management : Here, we'll come back to you separately because that data we don't have readily available at this time.
Moderator: The next question will be from the line of Anuj Sharma from M3 Investments.
Anuj Sharma: In terms of number of wells being drilled, what is the success factors -- success factors in a sense, success rate of drilling of wells. So let's say, 5 years ago versus now, how many wells we assume or we estimate for a success rate?
Saloma Yomdo : Well, as you know, there are 2 categories of well that we generally drill. One is exploration, one his exploratory and the other is development. So the development or the appraisal wells or the field wells, there relatively you have a good control. So for a company that existing fields. So as far as our record goes, in terms of development wells, our success ratio is almost 100% because we know that we are certainly going to encounter that particular hydrocarbons zone.
Now in case of exploration, especially in wealthy areas or where we have not -- we have not drilled even in Assam where we are drilling, when we are going to the flanks or going to the thrust -fold belt area. Those are relatively unknowns. So in terms of ex ploratory wells, our success rate over the years have been hovering in the range of 50% to 60%. So that number still holds actually. So 5 0% to 6 0% is still the exploration success ratio, which is not bad.
If you have -- universally, look, people will be talking about 30% is a very good number. But yes, and development wells, we are almost 100% success ratio is there. Because we go through a very robust system of releasing the wells to be drilled. So we have a comprehensive exploration and development portfolio management board, which reviews all the proposed wells which are proposed or identified for drilling, whether it is exploration or developments. And then only a call is taking to finally release the w e

ll for drilling.
Anuj Sharma: And our target is to maintain this level of 60% or our aspiration is...
Pankaj Goswami: Yes, our aspiration would be close to 2 -ish close to 80%. 90%, actually, that's what should be our target.
Anuj Sharma: Okay. Second is in the PPT, we have mentioned that we've have drilled 61, which is the highest wells with the same amount of rigs. So is it right to assume that the cost of drilling a well is

going down? Or is it offset due to the inflationary increase in the cost of equipment or cost of the expenses for drilling a well, some light on that?
Management: Yes. So the number of wells that were drilled last year, I'm telling the same fleet, like I mentioned in my earlier answer, when we are going to announce our drilling campaign or the numbers of wells to be drilled. We will be announcing our fleet as well. But the question you asked is that we reached this number without enhancing our fleets. And there are a couple of things involved in that. One is, of course, improving the drilling efficiency, engaging newer and modern technology in our existin g fleets, that is one.

And the second thing that we did was that when you drill a rig and complete the well, we still used to use the same rig for initial testing of the well itself. So what happens is when you're engaging the rig for testing also upon completion to produce from that well, you loo se another month's time about roughly on an average per rig. So what we have taken a decision was that, we will build a combo pad, a larger pad area.
So that once the drilling part is completed, once the hermeticity testing of the final casing is completed. We will move away the rig to drill to another location and bring back a workover, smaller rig which is used for servicing / for testing the well. So this is the reason why we have been able to engage the drilling rigs for more drilling activities and use the smaller workover rigs for testing the well. And that's why we have saved a lot of rig time and improved on the drilling p erformance.
Anuj Sharma: And my last question is on the expenses related to upstream. What is the trend there? How much inflation do you expect in expenses relating to upstream over the next 3 years?
Management: With increased crude prices, definitely there will be impact on the research cost as well, so we can expect a normal increase over the current prices but like right now, the crude price is hovering around $80 per barrel. So we expect that the prices, whate ver increase will be say, 5% to 6% ...
Management: Another positive side, which we foresee is that in case say, our main products, crude oil and natural gas are brought in within GST, then what will happen is we may be able to make substantial saving in terms of ITC, the input tax credit, which is presently being charged above. So that will be a good setting for us because already talks are on that these products are also likely to be included in the form of GST.
Management: [inaudible 0:42:48].
Anuj Sharma: All right. Thanks. There was lot of echo, but thank you for the answer.
Moderator: The next question will be from the line of Harsh Maru from Emkay Global.
Harsh Maru: My question is relating to the unrest that is happening in Bangladesh. So in terms of NRL offtake and export of products to Bangladesh, do we foresee any impact on the current as well as the expanded capacity of NRL?
Management : Actually, it is too early to comment on this. But anyway, we'll just take the data from NRL, and we can come back on that.
Harsh Maru: Sure. And just one bookkeeping, what's the CapEx for '25, 26?
Management : CapEx for?
Harsh Maru: '25, '26 for Oil India and NRL, both.
Management : For Oil India, it is -- '24, '25, it is INR6,880 crores. That is the Cap ex. The NRL '24, '25 is available, INR9,650 crores.

Moderator: The next question will be from the line of Gagan Dixit from Elara Securities.
Gagan Dixit: If I like your -- this result trend and production trend of the past 8 years, it looks like on the 1P side, we almost added 25 BCM of the gas reserves in the past few year, I can see, while you produced almost 24 BCM. So if I add back, it means you are alm ost adding the results at the double rate of the production in terms of gas. While in case of oil, it's almost flat 1P reserve. So I can safely assume that this -- your Assam basis is more prolific towards the gas side. I mean, in the future u pside potential is more towards the gas in future?
Management: No, that's not a correct way of making a one -to-one correlation. So the only thing is that, in the recent past, we have been making more gas discoveries than the oil. But that can change the immediately tomorrow. So next year, you might encounter more oil prospects rather than gas and then the questions changes completely. So I would not say it is a fair judgment to say that we have more gas than oil.

Gagan Dixit: So you mean success of -- I mean, you also had the -- I see potential of the oil side also in the Assam. Okay. So -- and also, whatever the gas reserve addition is all driven by the exploratory factors that I assume, not from the gas price increase, that I c an strictly assume, right?
Management: Well, there are 2 things that you have to understand here in terms of gas reserves. So oil, what happens is whatever oil you produce, it's immediately sal eble, right? You can have a worldwide market for it and that's why in terms of oil, whatever you discover can immediately be classified as reserves, as far as the definition of the society of petroleum engineers, that's a Petroleum Reserves and Management S ystem definition of 2017, which is widely accepted. Where any oil reserves, which is comm ercially viable is a reserve.
Now in terms of gas, yes, also has to be commercial viable that is one. But the for the gas part what happens is, you have to have a gas sale agreement. So you may have a gas reserves, which can last to 100 years. But then you have a gas sale agreement wit h an entity, say, you have a gas sale agreement with NRL. Where for the next 20 years, you will have the agreement and you can only sell 20 million out of the 100 in the next 20 years.
So your reserves will be 20 for gas.. Little technically producible gas would be say 100, since you're governed by the gas sale agreements, the gas results will only be linked to that particular period. It's another thing that after 20 years, we will have sale agreement. A nd then you are reserves then again will get upgraded further. Gas, in terms of gas.
Gagan Dixit: So it's more the addition of the customer, that is the upgradation of the contingent to the reserve status.
Management: Yes, yes. So it can be both. I mean you can have additional discovery also. Otherwise, the gas reserves again will get upgraded, once you have a longer period of gas sale agreements.
Gagan Dixit: And sir, my final question is, what is the capacity of the gas pipeline that you are connecting from North Assam to the south of Assam?

Pankaj Goswami: The line is not yet that the GFR, et cetera, is going on. So as of now, the figure is not available but it will be to cater for the gas production of the -- our gas production in our North East places. So it will be around, say, 3BCM will consider that pip eline because another pipeline is there for the DNPL, which is connecting in the south bank of the river.
Gagan Dixit: So 3 BCM additional, I can assume you are trying something capacity for the northern side of the fields?
Pankaj Goswami: Yes.
Moderator: The next question will be from the line of Vikash Jain from CLSA.
Vikash Jain: I have just two small qu

estions. Firstly, on this provision for royalty. I just wanted to double confirm that these provisions are part of other expenditure, not part of royalty, right, when you report them?
Pankaj Goswami: This is part of other expenditure only .
Vikash Jain: And the one other thing was, can you give me the number for seismic for this quarter, please?
Pankaj Goswami: INR168 crores.
Vikash Jain: 168?
Pankaj Goswami: Yes.
Moderator: The next question will be from the line of Nitin Tiwari from PhillipCapital.
Nitin Tiwari: Just wanted to have the metric around how many wells are we operating at the moment? So whatever production that we are having in terms of crude oil and natural gas, how many wells is that coming from? And are all wells like having both the productions or like there are stand -alone wells as well for crude oil and natural gas? So that will be one.
Pankaj Goswami: Well, currently, as of today, we have a fleet of 20 drilling wells. And these 20 drilling wells are actually, 10 of them are owned by Oil India itself and 10 are outsourced.
Nitin Tiwari: I was referring to how many wells we are operating, not the rigs in the total number of the production that we have, how many wells are you operating?
Saloma Yomdo : DO, sir, you have the exact numbers? I have a rough estimate.
Management: Yes. This is also rough estimate, exact number varies from day -to-day or month -to-month, we can't say. Your question was what I could understand that whether these wells are standalone gas well or oil well and what is the total number of well, I think that is the question. So total number of wells varies from 150 to 200. And some of the wells -- majority of the wells are producing oil and gas, both. Associated well, we call it because it produce oil and gas, both. But there are some totally gas wells, 100% gas well, which are called non -associated gas well, but the number is very less. Most of the wells are associated wells.

Nitin Tiwari: I mean it's then safe to assume that as your gas production is ramped up when the new gas sales agreements are signed, your crude production would accordingly also go up because you would have both the productions going up simultaneously, right?
Pankaj Goswami: Yes, yes.
Nitin Tiwari: And secondly, I also wanted to confirm what percentage of the area in Assam basin is already sort of explored and what percentage is remaining in terms of exploration?
Pankaj Goswami: DED, you can take the question, I think?
Management: Well, in Assam if you consider Assam mainly the shelf belt part of the basin. So rather than talking about the space in terms of geography, we generally talk -- when we talk about exploration for oil and gas, we talk in terms of the prospectivity in terms of the sediments.
So it's very difficult to say whether geographically this much has been explored or do you think from the point of view of the sediment, it has been explored. But if you look at the numbers that we have, as of now, we are actually exploring in the main she lf belt part of the Assam basin where we have extensive exploration done, and oil and gas as well as ONGC.
So in the shelf belt part of the basin, it's roughly about 5,000 square kilometers where we operate.
And the other area, which is a thrust -fold belt area, which is bordering states of like Mizoram and Nagaland, they are relatively unexplored. So for exampl e, in Mizoram we have explored and we have drilled 4 wells already and we have done a thorough basinal study, but the hydrocarbon prospectivity doesn't seemed to be there. Similarly Nagaland is relatively unexplored in the North East. Meghalaya is going f or exploration now, we are going to take 2 blocks. Part of this Assam is, you would say, the most well -explored as of now.
Nitin Tiwari: Right. Sir, the reason I asked this question, I was trying to understan

d that what percentage of
prospectivity have you already sort of come across or explored and what percentage remains as far as Assam basin is concerned, because you spoke about...
Management: If you look at the Assam and Assam -Arakan Basin. And you will have this number in the DGH website as well. So what is the number that you'll find is that about 5.5 billion tonnes of oil equivalent are there, you have to find resources. 5.5 billion tonnes o f oil equivalents.
Nitin Tiwari: 5.5 billion tonnes.
Management: 5.5 billion tonnes of oil equivalent. Out of which only about 2 billion tonnes of oil equivalent have been established. Oil India and ONGC primarily. So you can say that 3.5% this year to be discovered or established so that's taking your percentage to abo ut close to 70%, right?
Nitin Tiwari: Right. This is very helpful, sir. This is a very good metric that you put to us. So thank you for that. That's all from my end.
Moderator: Ladies and gentlemen, that was the last question for today. I would now like to hand the conference over to the management for closing comments.

Ashok Das : Thank you so much. So maybe we think all the persons who have raised questions, I'm sure you have got the answers to some session. I want to thank Antique Stockbroking Limited once again and the -- our official s of Oil India Limited for participating in this call. Thank you. Have a nice day.
Moderator: Thank you. I would now like to turn the conference over to Mr. Varatharajan sir, for his remarks.
V. Sivasankaran: Thank you. On behalf of Antique Stockbroking, we would like to thank all the participants as well as the management for taking time to participate in the call. We'd also like to thank the management for giving us this opportunity to hold this call. Thanks, everyone, and have a nice day.
Moderator: Thank you for joining us, and you may now disconnect your lines.

Call: Nov 2024

INDIA LIMITED

MODERATOR : MR. SABRI HAZARIKA – EMKAY GLOBAL FINANCIAL

Moderator: Ladies and gentlemen, good day, and welcome to the Oil India Limited 3Q FY '25 Earnings Conference Call hosted by Emkay Global Financial Services Limited. As a reminder, all participants' lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touch-down phone. Please note that this conference is being recorded.

I now hand the conference over to Sabri Hazarika from Emkay Global Financial Services Limited. Thank you, and over to you, sir.

Sabri Hazarika: Yes. Thanks. Good morning, everyone. On behalf of Emkay Global Financial Services, I welcome you all to the Q3 FY '25 Earnings Conference Call of Oil India Limited. We have with us the senior management of the company, led by Mr. Abhijit Majumder , who has recently taken over as Director Finance.

We also have Trailukya Borgohain, who's Director (Operations) and we have Mr. Rupam Barua, Executive Director, Finance and Accounts; Mr. Ranjan Goswami, Executive Director of Business Development; and Mr. Dharam Singh Manral, Chief General Manager, Exploration and Development.

So today's session would be a brief on the results by the management, and that will be followed by the question-and -answer round. So without any further delay, now I will request Oil India management for their opening remarks. Over to you, sir.

Abhijit Majumder: Good morning, all the participants who have joined us for this investor and analyst con-call. So I am Abhijit Majumder , Director Finance, Oil India Limited. With me, I have my team represented by the senior executives from the operations department , from business development, from finance. So may I now request our ED Finance to make the opening remarks.

Rupam Barua: Good morning, dear friends. At the outset, I would like to thank Emkay Global Financial Services Limited for organizing today's analyst call. I am Rupam Barua, ED Finance and Accounts of Oil India. The company's financial results of Q3 financial year '25 were published on February 7, 2025. I'll briefly give some highlights about the performance of the company in both fiscal and financial terms.

Now coming to the standalone results and the beginning with the production f ront, the company has continued to improve its crude oil production, which is higher by 1.4 percentage in quarter ended 31st December 2024 as 0.868 MMT vis -a-vis 0.856 MMT in quarter ended 31st December 2023. Crude oil production has increased by 4.1% in 9 months ended 31st December 2024 at 2.614 MMT vis-a-vis 2.511 MMT in the 9 months ended 31st December 2023.

Natural gas production during 9 months ended 31st December 2024 is at 2.446 BCM, increased by 2.90 percentage over production during 9 months ended 31st December 2023, which was

2.377 BCM. Natural gas production for quarter ended 31st December 2024 is marginally higher by 0.85 percentage at 0.829 BCM vis -a-vis 0.822 BCM for quarter ended 31st December 2023.

On the financial side, average crude oil price valuation for Q3 financial year 2025 is $ 73.82 / barrel vis -a-vis $84.14 per barrel for financial year '24, which decreased by 12.27% for 9 months ended 31st December 2024. Average crude oil realization is $ 79.35 per barrel vis -a-vis $82.89 per barrel for 9 months ended 31st December 2023, which has decreased by 4.27%.

Average natural gas price for Q3 financial year 2025 has remained unchanged at $ 6.5 per MMB TU. The turnover for 9 months ended 31st December 2024 has increased by 1.38 % to INR16,598.28 crores compared to INR 16,673.06 crores for 9 months ended 31st December 2023, which is mainly due to higher crude oil and natural gas sales in 9 months of

financial year
2025 compared to 9 months of financial year 2024.

EBITDA margin for Q3 financial year 2025 has increased to 4 2.76% vis -a-vis 41.34% for Q3 of Financial Year 2024.

Profit after tax for Q3 financial year 2025 is INR 1,221.80 crores vis -a-vis INR1,584.28 crores for Q3 of financial year 2024. The profit after tax for 9 months ended 31st December 2024 has increased by 28.38% to INR 4,522.71 crores vis -a-vis INR3,523.02 crores for 9 months ended

31st December 2023.
The earnings per share for 9 months ended 31st December 2024 is INR 27.80 per share vis -a-vis INR21.66 per share for 9 months ended 31st December 2023.
I'm just giving you the financial performance of Numaligarh Refinery also. Profit after tax of NRL during quarter 3 of financial year 2025 is INR 385.36 crores vis -a-vis INR858.72 crores during Q3 of Financial year 2024.
And profit after tax for 9 months ended 31st December 2024 is INR 990.94 Crore compared to INR 1,516.66 crores for the corresponding period of last year. NRL's gross refining margin during the quarter 3 of financial year '25 is $ 2.10 per barrel vis -a-vis $12.72 per barrel during quarter 3 financial year 24, and gross refining margin for the 9 months ended 31st December '24 is $3.61 per barrel vis -a-vis $13.12 per barrel for the corresponding period last year.
NRL's EBITDA for the quarter 3 financial year '25 is INR 656.70 crores vis -a-vis INR1,218.19 crores for the Q3 financial year '24, while EBITDA for the 9 months ended 31st December '24 is INR1,789.21 crores vis -a-vis INR2,297.57 crores for the 9 months ended 31st December 2023.
Our consolidated results, the Oil group's turnover for the 9 months ended 31st December 2024 is INR26,575.93 crores vis -a-vis INR26,137.84 crores for 9 months ended 31st December 2023.
And consolidated profit after tax for the 9 months ended 31st December 2024 is INR5,542.66 crores vis -a-vis INR4,647.51 crores for the 9 months ended 31st December 2023. The Board of Directors of the company has recommended an interim dividend of INR 7 per fully paid equity share. With this total, interim dividend declared by the company till third quarter is INR 10 per

equity share . With this, my opening remarks on the performance is over, and we are now open to question -and-answer session.
Moderator: The first question is from the line of Probal Sen from ICICI Securities.
Probal Sen: The first question was actually on NRL. We have seen in other performance over the last couple of quarters actually being a little bit more subdued than what we used to. How much of this can be attributed to the ongoing expansion of capacity activities or stabilization related to that? Or would you say that it's your operational issues or the fact that Singapore margins have fallen in Asia, that is to account for this sharp fall in GRM?
How should we look at it? And how should we look at it going forward, sir? That was my first question.
Rupam Barua: Regarding the physical progress of the expansion plan, it has already progressed up to about 70% -- 73% until 31st December '24.
Probal Sen: How much percent, sir, sorry?
Rupam Barua: 73%.
Probal Sen: 73%, okay, that's physical completion, right?
Rupam Barua: Yes, physical completion I'm talking about. And as regards the capex incurred is already about INR23,000 crores until December, out of which about INR 12,000 crores by way of debt financing.
Probal Sen: Okay. So is this something that we should look at as a reason for the drop in operating performance in the last couple of quarters, these expansion activities going on and so on because the GRMs now will have fallen very, very sharply?
Management : Yes, GRM has falling compared to last 9 months -- last 9 months, GRM was about $ 13.12 /bbl, whereas this end, the GRM is $ 3.61/bbl , okay? So there are several reasons a

ctually in which
you -- even if you look at pan-India GRM, the GRMs not as impressive as the corresponding period last year for pan -India also. That is the first thing. Second thing is, there are some inventory exemptions, which takes place while calculating the GRM.
Now if you knock out on inventory adjustments, then the ideal GRM would have been at $5.10/bbl with excise duty benefits and whereas the excise duty benefit is roughly around $ 18 per barrel. If you take into account, this $18 per barrel plus another $6/bbl for GRM value without taking into account this inventory adjustment, then the GRM is roughly about $24/bbl .
Probal Sen: Just to try, if I can, for my clarity, so the inventory adjustment for 9 months was about $2 a barrel and about $18 a barrel is the additional excise benefit that we are getting for the 9 -month period, right, sir?
Management : Right, right.

Probal Sen: Okay, got it. That's one. The second part was just the other income seems to have fallen quite

sharply in this quarter. Is it that some of the dividend payout we received was front ended for
the second quarter?
Management : No, absolutely. Actually, this year till 31st of December, we could receive dividends of about INR690 crores only, out of which INR180 crores is from NRL, another roughly INR 310 crores
is from IOCL. So previously what happened, last year, we had some impressive dividend receipt
of which about INR 400 we had received from our Singapore subsidiary. So t hat one was a major
dividend received last year, which is not present this time.
That is one thing. Another thing is that the dividend, which we had received from NRL last year
was around INR 154 crores. Apart from this, some dividends we also received, although not very
significant from BCPL and the DNPL also, which are not present this year corresponding period.
And NRL dividend last year was around INR 164 crores.
So that is why roughly about INR 1,100 crores to INR 1,200 crores is the total dividend receipt
that we had last year, which this year is about only INR 700 crores. So there is a fall in the
dividend received, so which has reduced Other income this time compared to last time.
Probal Sen: Very clear. Sir, last question if I may squeeze in ?
Abhijit Majumder: Addressing your query on the drop in GRM, if I can just step in, what has happened is, across the board, you would see that GRMs have fallen. According to my understanding, except for
NRL, none of the other companies are ahead of NRL so far as GRM is concerned. So that also
has to be taken into account while you look at the bigger picture. That much I just wanted to underline.
Probal Sen: One last question, if my squeeze in. Can we get an updated number, if at all, of the production guidance for both oil and gas for FY '26, if you have any update?
Management : The production actually is expected to be finally around 3.48 with respect to -- this thing, for
2025. Although we targeted 3.6 around, but because of a number of reasons, we had some of the
areas where -- this is Director (operation) by the way [Inaudible 17:04]. So we are expecting
around 3.5. We will be trying very hard to reach 3.5.
Probal Sen: This is for oil, sir?
Abhijit Majumder: That is the outlook for oil.
Probal Sen: And for gas, sir?
Abhijit Majumder: 3,300 for gas. That is our target now.
Probal Sen: That is for this financial year, sir, right, FY '25?
Abhijit Majumder: Yes, yes.
Probal Sen: I was actually asking for FY '26, if there is a target as of now?

Management: Our target is to become a 4 million ton crude oil and a 5 BCM company, so that's our target. So
we are inching towards that. This year possibly, even though the target is 3.5, we may still reach
that target. I'm not writing off that possibility. Howe

ver, as you have seen that there are huge
challenges. Our fields are all depleting fields.
Still -- I mean most of the peer companies, they are suffering a decline, while we're still
maintaining. And this year also, our production has gone up by 4.1%. So we are quite hopeful
that possibly in the days ahead, we'll again be achieving a bigger target. W e will reach that 4
million ton target by the year '27.
Management : So '26, you can expect that we'll maintain it. And most probably, we are going to drill in some of the high potential areas this year, like Barekuri. So we are targeting those areas. Once we
enter there, I think our production will pick up. And maybe we'll be reaching at least 3.6, 3.7 --
3.65.
Management: Just for your information, we have already crossed the Brahmaputra and gone to the northern
bank of the river, where also we have observed -- we have identified traces of hydrocarbon there.
Dharam Singh Manral I am exploration and development CGM . When we talk about the production and the production profile and what is going to happen until the end of this fiscal year and what is going to happen
onwards, I would just like to tell you that Oil India Limited has been aggressively acquiring
exploration acreages under the open acreage licensing policy bid round. And so was the case
that you know that we are producing primarily from our main producing area in the south bank
of the river Brahmaputra.
When I say south bank of the river Brahmaputra, I essentially mean that the river Brahmaputra
that flows from the mountains down to the alluvial plains, it divides our operational area into
north bank and south bank. So this is the context we need to understand first. So our primary
production from the Assam and Assam -Arunachal Pradesh or Assam and Assam shelf basin is
coming from the main producing areas. So post acquisition of these aggregates, we have
aggressively carried out exploration activities.
And I would like to tell you that after 3 decades of perseverance in the north bank of river
Brahmaputra, it is for the first time that we have tested crude oil, in the sense that we have

established a working petroleum system over there. There have been several companies who have worked over there in the past, including us, but our perseverance has led us to establish a hydrocarbon system over there in place.

So what we are doing down, in order to further monetize this discovery, we are planning extensive supplementary seismic and geophysical investigation, so that this can be brought on to production because this has opened plethora of area for us and new frontiers in north bank of river Brahmaputra.

This is one. Another thing that we are doing in order to increase and enhance our production from our main producing area or from a Rajasthan district in the west is that we are carrying out extensive G&G studies and petroleum system modeling studies, both in- house and through the hiring of international consultants.

Why so because the oil and gas, it lies in the minds of the geologists, geophysicists and the reservoir engineers, so think about it. So perceptions, opinions can bring about new insights .

And let me tell you that even in south bank of river Brahmaputra, what we have been able to do is, we have built the deepest onshore oil well in India, which is to the depth of 5,779 meters, which is not a rare f leet.

And the most important icing on the cake is, that in one of the wells, we are -- from these deeper horizons, we are producing crude oil at the rate of around 40 kiloliters per day. So with the appraisal and the development of these discoveries, it is going to certainly aid in development of hydrocarbon resources.

Moderator: The next question is from the line of Vivekanand S from Ambit Capital.

Vivekanand S: Sir my first question is on NRL. You had spoken ab

out getting additional approvals for petrochemical as well. What is the status of the total capex that is envisaged for NRL? And if
you could give us an update on the time lines for that to come onstream? And simultaneously, how is the progress of the DNPL debottlenecking that you are doing? That's question one. I have one more on Oil India. Maybe we'll talk about that after NRL's answer.

Management : As far as petrochemical project is concerned, that is a project of about INR 7,200 crores of capex . And until now the company has -- NRL has already spent about -- almost INR950 crores to INR990 crores on this project. And the expected completion is maybe after 3 years by December 2028.

Vivekanand S: Okay. Could you also give us an update on the 3 to 9 MMTPA capacity expansion and the DNPL debottlenecking that you were planning simultaneously?

Management : 3 to 9 MMTPA capacity expansion of the NRL is concerned, that has already achieved about 70% -- more than 70% complete and physical progress has been made. And already around INR23,000 crores of capex has already been spent on this project till now.

Management: Out of which around INR 12,000 is debt funding, so that's the status. And it is likely to be commissioned by the end of this year.

Management : And as far as DNPL is, the upgradation is going actually. This is an older line, so now new capacity expansion is going on. So it will expand to 2.75.

Management: Actually sir , DNPL line, this was an exclusive line used by Oil India Limited and NRL for evacuating the OIL's natural gas specifically to Numaligarh Refinery Limited. So this was a dedicated pipeline, which was constructed with 1 MMTPA capacity. But as on date, as Numaligarh Refinery is under expansion, so they will require more appetite for natural gas.

So on date, although they are taking 0.9 to 1 BCM of gas from us -- through this pipeline, but they will be requiring additional gas up to around 2.5 to 2.75 BCM after completion of their expansion in December, which is targeted in December '25. So this DNPL line is under augmentation and expansion for that reason.

So the project is progressing, which is being undertaken under two phases. First phase is of about 53 kilometers to 58 kilometers, and the next phase is 53 kilometers to another 190 kilometers.

So that particular project is undergoing under DNPL own window. And it is having a capex of about INR433 crores.

And the first phase is expected to be completed by March 31, 25. And second phase is expected to be completed by March 2026, so that it gets matched with the completion of our refinery expansion.

Vivekanand S: Understood. As far as your consumers are concerned for gas, could you give us a broad split of the key consumers o f your natural gas output, the current 3.3 BCM that you are generating,

where is it being sold to? Could you give us a rough sense of that?
Management: It is not 3.3, sir.
Vivekanand S: I meant annual, sir.
Management: Sir, actually, our major customers are basically some fertilizer companies, some power companies.
Management: We have NEEPCO is there, we have AP GCL, tea gardens.
Trailukya Borgohain: So out of that, the major customers, to name a few, one is Assam power generation company is there, which is called AP GCL. Then there is NEEPCO. The AP GCL is taking our gas for two of their plants, one is Namrup Thermal Power plant and Lakwa Thermal Power plant. Then it goes to BVFCL. And as far as fertilizer is concerned, it goes BVFCL and APL. So then tea gardens, some of them go es to the tea gardens and some small power plants.
Management: But our expectation is that once the IGGL is commissioned, we'll scale up our production. We have plenty of gas there. The current situation doesn't quite prompt us to scale up our production, the moment the IGGL happens and the CGD -

- I mean, blocks that have already been awarded
and those companies are all doing their back -end work, so this integration of their network will help us to send gas to all parts of the country and all major parts of Assam.
Trailukya Borgohain: And already recently, one thing has developed for tea gardens. Generally, the tea gardens in upper Assam take the gas. The tea gardens in the middle part of Assam and lower part, they were not taking. Now there is the discussion going on to supply the gas to them also, for these networks.
Vivekanand S: Sir, how big are tea gardens?
Trailukya Borgohain: Another part of the answer is mentioned the previous question.
Vivekanand S: Sir, how big are these customers, sir, could you explain in terms of, let's say, scalability of your supply there?
Management: What exactly is your query -- question?

Vivekanand S: My question is how big can it be from scalability and supply perspective?
Management: As far as tea gardens are concerned, most of our tea gardens are supplied through our Assam Gas Company Limited, which is a CG D player and gas transportation company in the area. So currently, they have close to 650 tea customers, mostly in the upper Assam region and G olaghat.
And this same company is also expanding its own network, downstream network, in few other districts in their upper Assam area.
Now what Director Operations was mentioning, with the IGGL network coming in and connecting to Oil India's own upstream network, this gas will now become available even to the tea gardens, tea gardens on the north bank of Assam, specifically Sonitpur , Biswanath Charali , Lakhimpur, all those areas, so which will currently give us a leap to doubling the number of tea gardens that we are servicing currently.
Management: I think his question was how big are the customers?
Management: So in terms of the bulk consumers of gas, industrial consumers, we have BCPL, which is taking around 1.35 MMSCMD of gas. NRL is taking around 1 million metric standard cubic meter of gas. And there is APL, which is 0.5. MMSCMD, BVFCL is taking 1.1 MMSCMD of gas, NEEPCO is taking 1.4 MMSCMD of gas. APDCL has 2 power plants at Namrup and Lakwa, they are taking 1.16 million metric standard cubic meters per day of gas.
Assam Oil Division, AOD refinery is taking 0.3 MMSCMD. Tea gardens is around 0.723 MMSCMD. So that's largely the big customers. There are other various small customers like GAIL and small industry units that take around 0.1 to 0.2, depending on their requirement.
Management : Once the CGD happens, then you will have a lot of industries coming up in Assam, which are now using other sources of oil. They would also be buying gas from us because gas is -- the country's objective is to transform to a gas -based economy and then targeting the tea gardens in the northern part of the river, all of that will help us to develop a real gas market in the northeastern part of the country.
Management: If I may add, sir, there is a development coming up where a new fertilizer plant has been planned in Namrup. So that also may probably become a source of gas consumption, which would be -- currently, they are consuming around 1.1 MMSCMD, which might go up to 2.3 MMSCMD.
Vivekanand S: That's very helpful, sir. Thanks so much for the detailed explanation. Just one small second question, which is related to the new well gas. So ONGC, we heard them say that 10% of their production, the DGH has reviewed and classified as new well gas where we are getting higher realization, 12% of the last month crude basket. When do you expect some of your production efforts, the hard work getting rewarded with higher realization, sir?
Management: Very interesting question. And we have already built up sufficient volumes of this new well and the new intervention gas. And with our expansion plans

as Director Operations mentioned, we
expect this new well gas to multiply even further and become a large portfolio of our total gas production in the next 2 years to come.

For the volumes, which we have already -- under these guidelines, we have already submitted to DGH, which has been assigned the nodal responsibility of identifying and validating this gas. And very recently, D GH has vetted the quantities of gas, which might be qualifying for this premium pricing.

So we are now – since you would understand this requires an allocation from the ministry, from our side, Oil India has already given some numbers. Once those numbers are vetted by the ministry, and we are expecting it to come through and it would -- and we expect it to coincide with the DNPL augmentation and NRL refining capacity coming up, those 2 events should ideally coincide.

Moderator: Sorry to interrupt. May I request Mr. Vivekanand to please re join the queue. We have participants waiting for their turn . The next question is from the line of Gagan Dixit from Elara Securities.

Gagan Dixit: Sir, when you say that you are waiting for the Indradhanush Gas Grid to get completed, then you have access for the rest of India. So if I am understanding correct that you are waiting its connectivity till Numaligarh, I think, because after that, then GAIL Guwahati - Barauni pipeline, you will get it. So how much is the kilometer of the section that is left by the IG GL to be connected with your major field? I think it is in the Assam or Arunachal, I think?

Management: So there are 2 propositions. One proposition is the DNPL pipeline, which is already getting augmented. And there is a proposal for interconnecting at NRL, at Numaligarh with the Northeast gas grid. There is another proposal wherein northeast gas grid, IGGL has applied -- has been given authorization from the ministry under Section 42 to lay a line up to Oil India's facility in Duliajan, which is the central hub of all gas processing for Assam and Arunachal fields.

So this pipeline will directly get from oil and gas fields to the northeast gas fields through a bigger pipeline. This pipeline will have a capacity of 3.3 MMSCMD. I hope that answers your question.

Gagan Dixit: Okay. And sir, if my understanding is correct, most likely it should be the Duliajan to the Kharsang somewhere, that's where you are waiting for the connectivity for the Indradhanush Gas Grid.

Trailukya Borgohain: Regarding that, I'd like to answer you is that Kharsang is a little bit different because we are connecting -- with Kumchai already we have connected, some 81 kilometers of pipeline has already been connected, and the Kumchai gas is coming. So by that way, we have reduced the flaring in Kumchai also, and we have increased our production also in Arunachal.

So Kharsang, there is a proposal that Kharsang will also connect to this -- this come from Arunachal actually, southern part of Arunachal eastern districts of this -- Changlang district, that is Kumchai . So it is an 81 kilometer pipeline. So it crosses many rivers. And it was a very downstream one, and our people have completed it.

So I think if Kharsang any more gas comes up because that will be another JV. So their gas can be connected to this particular line by another hook up line.

Gagan Dixit: Sir, final question is, when it is expected to be completed?

Trailukya Borgohain: Actually, Kumchai line is completed.

Gagan Dixit: Okay. So Indradhanush Gas Grid, that's the portion that you are expecting. So I think as you said that when it's come, then your production, you were able to sell outside. So that's why I asked. I just want to understand it.

Management: So Indradhanush Gas Grid has been given authorization by MOP &NG. Now the prop

osal is with
PNGRB. Once the PNGRB authorization comes, it's an 18 -month project.

Moderator: The next question is from the line of Kartik Kohli from CLSA.

Kartik Kohli: I just have a bookkeeping one. Could you please give out the seismic costs for the quarter and for the 9 months...

Moderator: Sorry to interrupt you, Mr. Kohli, but we cannot hear you that clearly. Your voice is sounding muffled, sir.

Trailukya Borgohain: Could you please repeat the question?

Kartik Kohli: Could you let me know the seismic costs for the quarter?

Rupam Barua: It is about INR 535 crores for the 9 months, I'm talking about the 9 months. And for the quarter, it is about INR 200 crores -- INR210 crores.
Kartik Kohli: And what was this in 3Q FY '24?
Rupam Barua: FY '24, it was INR 388 crores, INR 390 crores for the 9 months and INR125 crore for the quarter 3.
Kartik Kohli: I just wanted to clarify. You said IGGL will take 18 months or the overall process will take 18 months?
Management: Yes, project completion is 18 months.
Kartik Kohli: 18 months from now?
Management: From the PNGRB authorization.
Moderator: The next question is from the line of Nitin Tiwari from PhillipCapital.
Nitin Tiwari: Sir, just to get clarity on the questions which were asked earlier as well. If you can just lay out the road map for reaching the 4 MMT and 5 BCM that you spoke about. So I'm lot very clear on your FY '26 production guidance. So one, if you can help with that first? And then what is the time line we are looking at for 4 MMT and 5 BCM?

Secondly, what are the infrastructure requirements that are pending for ramping up of our gas production because there were a couple of pipelines mentioned when you gave out the details. So I'm not very clear on which pipelines are like under construction and which are pending authorization.
You mentioned a PNGRB authorization pending for one pipeline. So if you can just make put the entire picture clearly in front of us, that would be very helpful. That would be my first question.
Trailukya Borgohain: Yes, the 4 MMT is the target. Initially, we had the plan for -- specific five areas we targeted to give maximum impetus on drilling, new drill. So these were like, I don't know the names of the areas. This time, we have added 2 more areas, so 7 areas we had taken up. So one of the areas, there was a little bit of supply, a little bit of production as expected, but all other areas, like we have added this time the Barekuri, specifically we have added Barekuri and also Sesabil, two more areas.
So these are new -- Sesabil is a new discovery, and we are planning to drill a number of wells. Specifically, in Barekuri, we are going to d rill around 15 more wells in coming days. And in Sesabil, we are planning for another 3, 4 wells. So the production will ramp up from these areas. And at the same time, we are working on the other five areas.
So like Kumchai , we are planning to put -- I think most probably, we'll be able to put 2 rigs together at the same time, so that Kumchai production will also ramp up. So these are some of the activities we are picking up. And with this, we are hopeful that we'll be able to reach 4 MMT.
And what is happening Rajasthan, we are planning from 700 now...
Nitin Tiwari: Sir, time line for 4 MMT? When are we going to see the 4 MMT production? '27?
Trailukya Borgohain: As of now, it will be '27 -- '26, '27.
Management: We are almost at 3.6. So it won't take us much to reach that level. These are some of the medium term activities that we have taken up. Apart from that, the announcement of the ninth round of OALP bidding, we were holding around 55% of exploration acreages. After the announcement, we are yet to receive the letter of award from DGH. Our acreage will go up to more than 1 lakh square kilometers. So this shows our intent t

o scale up our production and go even beyond 4 MMT. 4 MMT is the target for...
Trailukya Borgohain: So what is happening is that this time, we are targeting areas outside of Northeast also. So some prospective area, we have already earmarked and most probably we are -- if we get those areas. We may not go for seismic because seismic is already available in those areas. And we'll directly go for drilling in some high prospective areas. So this is one action we are taking up.
Management: Just for the sake of an opportunity, I would just like to summarize it. That in order to augment our oil and gas production, what all initiatives we have been taking. Apart from the fundamental target of 4 million metric tons that we want to receive by the next fiscal year or next to next fiscal year, which our Director Operations commented. See what happens is that we are primarily an upstream company with, of course, our presence in midstream, downstream .

And even in alternative and in renewable energies, and even going into the mineral resources as well now. But to fuel all these initiatives, we need to have our bottom line fixed. So what we have been doing over the past is, over the past 4, 5 years, we have increased our exploration acreage by six to sevenfold. So what does this essentially mean? This essentially means that if we don't explore, we don't identify.

If we don't identify, we don't harness -- evaluate. If we want to evaluate, we don't exploit or harness hydrocarbons. And we do not develop them. So exploration is our forte. We'll keep on exploring, exploring and exploring because this is only what is going to lead to reserve accretion.

And as I already mentioned in one of the previous questions that this is bound to lead to reserve accretion and more results for us in the future .

Which will translate into better production of oil and gas. And then what I mean to say is that, what happened is that the Government of India has decided to release around 1 million square kilometers of area in the no -go zone areas in the east and western offshore of the Indian subcontinent. These are very promising areas, which for the last 10 to 15 years, the government did not – we have certain statutory problems, defense installations that these were not in place.

But since the release of this no -go zone areas, Oil India Limited has taken a very aggressive and very calculated step in acquiring around 40,000 square kilometers of acreage just as an operator, which is yet to be notified by the Government of India, but we know that we are the lead bidder, and these basins are Mahanadi, KG. And the most important thing is that we have, for the first time, put our foot on to the land of Gujarat in Cambay where we were nowhere present. So this is another milestone that we h ave acquired and locked, which is prospective.

Apart from this, we have also extended our collaboration and outreach because you know that exploration is an inherent uncertainties in terms of exploring, exploiting of hydrocarbon resources, which we have tied up with national and international oil companies for collaborating and have got 3 blocks in the Indian subcontinent to forward our exploration, development and production targets.

Management: For the gas, we are doing some of the areas where like in terms of allocation of gas, we have already applied to the government that we need to allocate the increase amount of gas that needs to be given to the customers because allocation is not done by us. So that is one part because that already we have applied. From our side, we have applied that this much of gas we are going to give it to the customers.

So that application has already gone to the ministry and ministry is looking at it. The other point I would like to raise here or tell you here is that sometimes because of the seasonal fluctua

tion and many other reasons , the gas wells needs to be shut down. So what we are doing this time is that when we shut down the gas, we lose the associated oil that comes up or condensate whatever that comes up, it is a loss to us.

This time, what we have done is that, we are looking at underground gas storage. When we produce the gas, this underground gas will be stored in the reservoir, while we take the liquid at the same time. So my liquid production doesn't go down. So this is what is already we are doing.

And in one area, in a well called Naharkatia-257, we have already started putting the gas at the storage.

So if there is any demand/supply issue, then we can immediately put it in the – dry gas into the reservoir. But at the same time, we can produce the oil. These are some of the steps we have taken.

Nitin Tiwari: That's very helpful. On the pipeline bid, just wanted to understand that, which pipeline has a pending authorization from PNGRB because I suppose you were talking about 2 pipelines here, one was I GGL, of course, and the other was the expansion of DNPL. And then you also spoke about the connection to Duliajan. So which pipeline is where the authorization is still pending?

Management: Just one minute, I'll explain one more area also. Sometimes what happens is that we have a pipeline some -- because of one area in the northern sector, Bherjan. So what happened, there also because of low offtake from other customers, there is an issue that we have to shut down the well, and we lose a lot of gas.

So what we are doing now is that we are bypassing it with another pipeline. So we are bringing 20 kilometers of pipeline. We are planning that. So this will also help us. These are local pipeline, of course. This should help us in mitigating the risk of losing the gas in the process. But regarding the other pipeline, I'm requesting my colleague to reply.

Management: The DNPL pipeline, there is a capacity augmentation, which is already underway from 1 MMSCMD to 2.5 MMSCMD. The other pipeline we are referring to is the IGGL pipeline, which has been serviced by or ordered by MOP &NG -- directed from MOP &NG to PNGRB for authorization. And once that authorization comes, it is an 18 -month project.

Third pipeline, which he was referring to, is the pipeline which connects our Arunachal Pradesh fields to our central gas gathering station in Duliajan. So this pipeline has unlocked that Arunachal Pradesh field, which was long disconnected from the gas network and the gas has been monetized.

Now this pipeline is in place now, that Kumcahi -Arunachal Pradesh field can be developed
further and it has a capacity of another 1 million standard cubic meter per day.
Moderator: Sorry to interrupt, may I request the participant to please rejoin the queue. We have the
participants waiting for the turn. The next question is from the line of Nitin Tiwari: from
PhillipCapital.
Nitin Tiwari: Basically, the pipeline that we are talking about is connecting Arunachal to Duliajan, that's what the pipeline
you're talking about, where authorization is pending.
Management: No. That pipeline is already operational. We have constructed that pipeline. Arunachal to Duliajan pipeline is
already operational. The one pending is the north bank.
Nitin Tiwari: Pending is north bank, understood, sir. Second question, sir, is like as you mentioned that you've
acquired a number of acreages.

Moderator: Sorry to interrupt you, Mr. Tiwari. May I request you please rejoin the queue?
Nitin Tiwari: Two questions are allowed, right? So this is the second question I'm asking. Sir, as you
mentioned that you have acquired quite bit of acreage in the recent licensing. So like when you
see you entered into a technical collaboration with a

global major, are you also evaluati ng
something like that? Can we expect some announcements on that end, sir? That is the second question from my side.
Management : Yes, of course. We have been extending our outreach to various international oil and gas
companies, both, not just in terms of physical coexistence or physical collaborations. But what
we are looking is at technology, knowledge partnership and even PI, means participating interest.
So let me tell you that we have signed a technical service agreement with TotalEnergies France for helping us in our
exploration and development and understanding deep and ultra -deep
offshore waters, so that we can leverage their expertise and knowledge.
So it's prima facie expertise and knowledge. And thereafter, later if we find them to be
prospective together, we can mutually decide upon areas of potential interest where we can farm
in or do other types of exploration activities. But as far as other collaborations are there, we are
already in touch with various international oil companies, which I'm not going to mention right
now because we have not been able to freeze on to them, but they are in advanced stages .
And the evaluations on the prospectivity, perception and the exploration endeavors that will go
into these acreages is already in place and in advanced stages.
Moderator: The next question is from the line of Pranita from Morgan Stanley.
Mayank: Mayank from Morgan Stanley. Just two questions. First, in terms of, sir, you talked about flaring.
Now in terms of percentage flaring because of lack of pipeline because of the other issues in
terms of demand, would you give us an idea of what percentage of your gas is right now getting
flared? Or if I were to kind of put the question another way, what would be your total production
capacity today if you did not have the supply or the demand constraints on the pipeline side?
Management: So flaring, the primary reason was not only due to pipeline. It was due to remote facilities, remote
installation where there were associated gas where oil was being produced, and that there was
not sufficient capacity to put it into gas pipelines. Now what we have done is, we have
progressively reduced the flares over the last 1 year -- over the last 2 years to a level of 0.2
MMSCMD.
But at the same time, we have planned at 11 sites new compressor facilities, which are remote
facilities, where compressors will be installed to put the low -pressured gas, which is being flared
into our gas distribution network. Now the compressors have already started getting dispatched
and delivered to our site. And the first of these compressors will get installed in March 2025. So we expect to reach a level of
zero normal flare in the course of next year.
Management: See, in percentage term, it has come down from 8% to 4%. The preceding 9 months, that is FY '23, our flaring
percentage was 8. Now in the current 9 months ended 31st December, this has
come down to 4.

Mayank: And does it go to zero after the compressors?
Trailukya Borgohain: Yes. After implementation of all the 11 compressors we are bringing, I think it will further go
down, maybe close to 1.5.
Management: Not just monetizing the gas. This is also our green effort that there shouldn't be any escape of
emissions into the environment. So it is a double kind of whammy for us. It will help us generate
more revenue and at the same time, solving the environmental cause.
Mayank: And sir, the second question was more in terms of NRL. Can you share us the progress on the

NRL project? How much is complete, what the time lines are, and the capex , etcetera?
Trailukya Borgohain: More than 72%, 73% completion and physical progress -- 78%, sorry, 78% physical progress has been done. And the project cost already spent is about INR 23,000 crores, and it is still
exp

ected to be completed by December '25.
Mayank: So all the major equipment and everything is all in place and I suppose the last pipeline was going on so you can start mechanical completion in December '25?
Trailukya Borgohain: Majority of the units have already been physically completed by about more than 90%.
Mayank: Okay. Sir, when do you start the commercial operations? Like is it somewhere March '26 or...
Management : It means that as soon as the new refinery with new capacity gets completed, it is not that overnight it will pick up to 100%. It will gradually pick up to 100%. Maybe the first year, it will run at about 50% to 60%, then going forward to say 75%, then 75% to 100% will be equipped in the third year, expected.
Management : What we are basically doing is that because refinery expansion is a progressive thing. It will happen over a period of time. However, at the other end, once it picks up so that the associated facilities are all in place, so what we are doing is we are almost at the completion stage of the Numaligarh -Siliguri pipeline. That also is being augmented so that this capacity will go up from 1.7 MTA to 5 MTA. So things are happening simultaneously.
Trailukya Borgohain: This is what Director Finance telling is that it's a product pipeline. Like once we bring the crude, at the same time, we need to have the product going out. So if we cannot deliver the product, so in this case, our product pipeline is around 90% we are complete. And by April it will -- by April of this year, 2025, it will complete -- before completion of the Paradip-Numaligarh crude oil pipeline. That is this outlook.
Mayank: So sir, is it fair to say that everything will be ready by December '25 or whatever logistical requirements are there and then you can kind of ramp up from December '25 or you ramp up from April -- March '26?
Management : We are completing -- mechanical completion will be by December 2025. There will be some commissioning exercise that will be there, so it will take some time. After that, it started like what he already said is that accordingly, this will start produce -- like the production will be getting augmented. It will be a step by step process.

Mayank: And sir, for mechanical completion, you don't need any shutdowns or anything of that of the existing refinery units, correct? That should be all normal...
Management : Existing, we will be commissioning. Exercise will be done, then accordingly, this will be getting augmented.
Moderator: The next question is from the line of V. Sivasankaran from Antique Limited.
V. Sivasankaran: Two questions. One on the Andaman program. How is it going and what are the milestones you should look forward to?
Management : The Andaman -- see, Oil India has operated in the Andaman and the Northeast Coast of India in the past. But recently, we have again started our exploration activities in Andaman shallow offshore blocks. There are 2 blocks over there. The total number of locations have already been identified. One well has been spotted, and it has reached a target of 2,805 meters.
The drilling operations are on and the targets for Oligocene reservoirs, which are expected at a depth of around 3,500 meters plus, so we are expecting and hopeful for making a discovery over there. Things are going on as we had planned as of now. So following this well, we'll be drilling another 3 wells in the Andaman offshore block.
V. Sivasankaran: On the Numaligarh front, one, about the crude pipeline progress? And secondly, on the petrochemical, what is the position currently? And is an approval still pending from the Board? Or is it more like approval is done and ordering is pending?
Management: As far as approval, environmental clearance, etcetera, is concerned, these have already been received, already around 900...
V. Sivasankaran: I a

m talking about the petrochemical side of the story, sir.
Management: That is what I'm saying, petrochemical. As far as petrochemical plant is concerned, so all environmental clearance, etcetera , has already been obtained. And we have already spent about INR800 crores to INR 900 crores on this project until now. But since refinery expansion is also going ahead on a war footing, so that is why these plants would not be taken up so aggressively. And because we have got target completion within next 3 years' time.
So by December '28, we are expecting this plant also to be completed, to be in place. The total project cost is about INR 7,200 crores.
V. Sivasankaran: And the progress on the crude pipeline, percentage completion as of now?
Management: Crude pipeline is on track.

V. Sivasankaran: So completion by what day?
Management: Yes, yes. It is expected to be completed along with the refinery expansion completion target of December '25.

Moderator: The next question is from the line of Sabri Hazarika from Emkay Global.
Sabri Hazarika: This will be the last question. So I just wanted to clarify a few things you mentioned. You mentioned about the oil guidance, but what is the gas production guidance for FY '25 and '26, and 5 BCM when it is expected to be hit?
Management: 5 BCM is targeted in the year '27, '28.
Sabri Hazarika: And what will be the production for FY '26? How much are we planning?
Management: It will be close to 3.8 BCM, 4 BCM.
Sabri Hazarika: And regarding the Arunachal pipeline that you said, this pipeline is commissioned, right?
Management: Yes. Arunachal pipeline is commissioned. The gas is already -- coming to the FDGS.
Sabri Hazarika: So sir, this pipeline will basically monetize around 1 MMSCMD potential gas from the Arunachal field, right, including Kharsang, right?
Management: Yes, you are right. kharsang not included.
Sabri Hazarika: So this is different, right? And last question is, you mentioned 2 more areas being added to that mission 4. I did not get the names properly. Sesabil or what was it?
Management: You want to be specific. So these are Barekuri and Sesabil.
Sabri Hazarika: Sesabil and Barekuri, right?
Management: Yes.
Sabri Hazarika: Okay. Fair enough. And last question, this north bank pipeline, IGGL, the new one, which will connect Numaligarh with Duliajan directly, so you said PNGRB approval is expected in 1 month, then it will take another 1.5 years to commission that pipeline. Is that right?
Management: We have said that MOP &NG has given its directive to PNGRB for authorization. Followed by that IGGL has already applied for authorization and the authorization is expected any time soon. And 18 months is the project duration for the completion of the project.
Sabri Hazarika: Authorization will come in 1, 2 months, right?
Management: It is expected any time soon.
Management: We can't be that specific. However, we are expecting that it will come.
Sabri Hazarika: Okay. Fair enough. And is there any major NRL shutdown, which is expected because of the commissioning of the expanded capacity?
Management: Nothing as of now.

Management: Sabri, actually shutdown may not be required because as you know, both these units are independent. So the other biggest unit – the whole unit can run independently of the new unit. So that is why shutdown of the old unit may not be required when this new unit will be commissioned.
Sabri Hazarika: Got it, sir. Thank you so much for this conference call, and I hope it is quite informative and insightful for participants. Sir, we will end the call. And before doing so, any closing comments from your side?
Abhijit Majumder: So it's a pleasure having you all with us for this interactive session con-call. So I extend my sincere thanks to all those who participated in the con-call, and wish you all the very best.
Moderator: On behalf of Emkay Global Financial Services Limited, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Call: Jun 2025

OIL India Ltd.'s Annual Investors and Analysts Meet 2025

– Compere:
– Ladies and gentlemen, distinguished guests, and all our esteemed investors and analysts present on the occasion, a very warm welcome and good evening to all. First of all, I would like to invite CM D, OIL India Ltd. and other board members to kindly come on to the dais and take their position. I also request M D, NRL and DF , NRL to come on to the dais and take their seat. I also request CEO Emkay Global Financial Services Ltd. Mr. Nirav Sheth to come on to the dais and take his seat. Thank you, sir.
– Ladies and gentlemen, it is indeed a real pleasure to welcome you all to OIL India Ltd.'s Annual Investors and Analysts Meet 2025. First and foremost, I would like to extend my heartfelt gratitude to all our esteemed investors, analysts, and stakeholders for your unwavering trust and support. We deeply appreciate your time and interest in our company. Today, it's indeed an immense pleasure for us as we gather here to discuss our company's performance, progress, achievements, and future endeavours. Ladies and gentlemen, your belief in our mission fuels our drive to push boundaries and create a lasting impact.
– At the outset, I am happy to announce that today we have with us the members of
~~~

the Board of Directors of the company, led by our Chairman and Managing Director, Dr. Ranjit Rath, and other senior executives of the company. We are also honoured to have the Managing Director and Director of Finance of NRL among us. I would like to convey our special thanks to Emkay Global Financial Services Ltd. for coordinating this event.
– Dear friends, being investors and analysts, you have been an integral part of our success story. Your unwavering support, financial backing, and guidance have helped us not only to sustain and grow, but also to create values for our stakeholders. It's needless to mention that together we have overcome challenges, embraced opportunities, and consistently strived for excellence. Over the past, we have witnessed various milestones, embraced challenges, and seized opportunities that have strengthened our position as an important partner in nation building. As we look ahead, we remain committed to sustainable growth, new technology induction

,
and delivering value to our stakeholders.
– During today's interactions, we will provide you with a comprehensive update on our operating and financial performance, key business initiatives, our strategic partnership across the energy value chain, the initiatives being taken by the company towards our commitment to environmental sustainability, and our corporate social responsibility initiatives. This Investor Meet serves as an invaluable platform for us to engage in meaningful dialogue, exchange ideas, and address any concerns or queries which you may have. We value your insights, feedback, and perspectives as they contribute to our continuous improvement and long -term success. Once again, we thank you for your presence and partnership. We look forward to a productive and inspiring session.
2
– Without further ado , now I would like to invite Mr. Nirav S heth, CEO, Institutional Business, Emkay Global Financial Services Limited, for an address to our esteemed audience.
– Nirav Sheth – CEO, Institutional Business, Emkay Global Financial Services Limited:
– A very good afternoon and a very warm welcome. I really appreciate , because the audience has take n you know, you've been brave enough to face the rains that you've seen today, and you've been on time. I also deeply thank the management of OIL India for making Emkay as a partner for hosting this Analyst ’s M eet.
– Very quickly, a big thank you for Dr. Ranjit Rath, the CMD of OIL India . He doesn't need any introduction, but let me tell you that since morning, he has hosted almost about four meetings, non -stop, not even taking a lunch break. So that tells you that the company is in very safe hands.
– Mr. Abhijit Majumder - Director Finance, Mr. Trailukya Borgohain - Director Operations, Dr. Ankur Barua h - Director HR. We also have representation from NRL, led by Mr. Bhaskar Jyoti Phukan, who is the MD, and Mr. Sachidananda Maharana - Director Finance.
– I will not take too much of time. OIL India is a very well -known company, doesn't need any introduction. You guys are all specialists and domain experts. Dr. Ranjit, I want to call you over here for making the opening remarks. Thank you.
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– Good afternoon. First of all, heartfelt gratitude to everyone present in this room. While I would like to address you as distinguished shareholders and distinguished analysts, but more than that, it was actually a rainy day, so we were not very hopeful . But we are so thankful to each one of you that you braved the inclement weather and made it a point to participate in this discussion, where we would like to share our growth story, and we would also honour your feedback.
– Now, as far as the morning engagements, let me clarify , that's my job . And together, we are here to look for possibly , one of the biggest discoveries , being an oil and gas company more in the upstream sector. That's what is the minimum ask of all of us on the dais here. As OIL India , we are looking forward to a biggest discovery, and that's what country needs . And that is where your unwavering contribution and support to OIL India Limited is very hugely acknowledged . And may I request to have one round of applause for all of you in the hall.
– (applause)
– Now, in the next few couple of minutes, I will summarize our fiscal 2025 results. We would also like to share a thou ght process, what is the outlook that we are all interested to look at, and what has been our ambition as far as 2030 is concerned.
– So during FY 2025, we maintained a consistent revenue and profit regime, with a revenue of about ■37,830 crore, that's 0.5% higher than FY 2024 . The EBITDA witnessed ■12,824 crore, and the PAT is ■7,039 crore consolidated. As far as

standalone is concerned, we did about ■6,111 crore, which is about 10% of last year, and we achieved a 6% higher revenue in the

4th Quarter, that is ■9,970 crore, and 3%
higher PAT of ■1,497 crore, that's the Q4. These results were achieved against a volatile, which we are all aware of, commodity backdrop without stretching the balance sheet.
– One thing I would like to share with you, that while we all know that volatility of the commodity price is part of our ecosystem, it's part of our business portfolio, so we are aware of it. But what we do not know is the degree of volatility. So what we do, whenever there is a drop or depletion or an outlook, we immediately kick -start our strategy of optimising our operations in terms of cost efficiency, and that's what we have already initiated . So that's a comfort or assurance that I would like to give to each one of you here.
– Solid free cash flow enabled the board to have recommended about final dividend of ■1.50 per share, bringing a full year payout of ■11.5 per share, that is 115% on face value, while still funding the largest capital programme of OIL India Limited during this period, that's about ■8,600 crore.
– So what assurance we would like to give to each one of you, that we will continue to be a dividend paying , and meet through internal accrual our E&P investments, because we strongly believe that th ese E&P investments will not only help us to reach o ur target of 4 million metric ton ambition and 5 BCM of natural gas, we would necessarily do this for enhancing our discovery possibilities in the Indian ecosystem. The healthy financial position leaves us well placed to seize India's policy tailwinds, and I would like to add a bit on that particular thing, plus the rising energy demand that aligns closely with our focus and our portfolio.
– The national oil and gas, just to give you a perspective, by 2040 we are looking at refining capacity from a demand point of view, about 440 million metric ton s. And if I take 88% of current import, and we take the clarion call of the H on'ble Prime Ministers, advise that we must attempt 10% import reduction while several other initiatives are on, we need about 90 million metric ton s, 2040 domestic production. And today we are hovering around 30 million metric ton s. That's the opportunity that we are talking about . And we strongly believe that the Indian ecosystem or the geology of India, or Indian subcontinent, offers that kind of possibilities.
– With the demand, and how the policy tailwind is supporting, let's look at the no -go zone area getting unlocked for the purpose of exploration, which we have already witnessed in the O ALP-IX round . And I must be very happy to share with you , we secured about 40,000 sq.km. of area as part of our petroleum exploration licence. So that gives us a total number of, together along with our partners, 1,12,000 sq.km. of exploration acreage per se. And on top of it, we have access to 4,800 sq.km. of petroleum mining lease that is with us under nomination acreage. And there is a three -pronged strategy on which we are working, and the current amendment which has happened, Oil Field Regulation and Development Act amendment, is actually enabling us to seek collaboration with international oil companies and national oil companies to undertake these deep and ultra -deepwater exploration that we are foreseeing .
4
– I will share a bit more about it. In terms of the category 2 and category 3 basin where these exploration acreages are there, we are talking about seismic to be captured first, identify prospects and undertake drilling. That's the potential which is policy tailwind is offering today to the E &P company. In addition to that, to maintain the production, because while this is a two -year to five -year timeline, to maintain the production for all of you in terms of Q1, Q2 analysis, or Year 1, Year 2 analysis, we undertake near -field exploration within our mining lease. And that is what has resulted in the growth story that OIL India

is scripting since last three years to share.
In addition to that, for Q1, Q2 modifications or observations or financial reporting, we undertake development drilling within the existing fields. So this is the three - pronged strategy which OIL India Limited has adopted.
– Now in addition to this, there is a negotiation which we do, having the mature fields that we do, or we negate or we negotiate in terms of the field or the formations. So a decline rate of about 10% is seen, and we however script a growth of 3% to 5%. That means , we not only negate the production decline by virtue of our active near - field exploration and development well drilling, we also script 3% to 5%. And going forward, we will do the same strategy for year -on-year. And that is reflected on the

numbers that you would have seen, that earlier we used to drill about 30 to 35 number of wells. Today we are drilling 60 plus wells, and as we speak, this year we plan to do about 75 to 80 wells. And we will have a mix of exploratory wells for our long -term strategy, and development wells in the near -field exploration and in the field of production for our short -term strategy.

– In terms of performance, in the upstream segment, the total hydrocarbon production rose to 6.7 million ton of oil and oil equivalent. The average crude realization this year witnessed about $78.09 per barrel from last year's $83.03. And despite the drop, because of the growth that we have seen in terms of our physical performance, we could maintain the revenue and script a 10% growth on the PAT.

– We will continue to do our exploration portfolio that I have shared in terms of our OALP-IX round, and as we speak, we have also drilled the first well in Andaman Nicobar. The second well drilling is undergoing right now, and we are already ready with the Letter of Award given for the jack-up rig , which will be used for our Kerala Konkan offshore project.

– At the downstream part, since now we are a Maharatna and an integrated energy company, Numaligarh Refinery gave us 3.06 million tons of crude processing ; that's more than 100% capacity utilization. The gross refining margin, and I must tell you that this is by far one of the best numbers in the current depleted crude oil price outlook and drop spread, is $5.14 per barrel i.e. GRM, and the spread that we encountered in the last year is $7.9 per barrel as far as MS or petrol is concerned, and about $11 plus barrel for HSD. And in terms of distillate yield, we achieved at NRL level about 87%. So we maximized diesel production vis -a-vis the petrol production, aligning ourselves with the spread that is available.

– Our pipeline network enabled seamless movement of crude, natural gas, and product with highest reliability. In new and alternate energy sector, I am very happy to say that we have got a collaborative framework with the Government of Assam for 600 plus megawatt of solar photovoltaic project , out of which 25 has already

kick-started . And recently we have signed a collaborative framework with the Government of Rajasthan for about 1,000 megawatt of solar photovoltaic. And as all of you would know, the Assam bio -refinery project, or we call it as Assam bio -ethanol project, is on track, it's a JV of NRL . And as we speak the pre -commissioning process is in the final stage.

– Now one more thing which I would like to share from an outlook perspective, the brownfield expansion of Numaligarh R efinery from 3 million ton to 9 million ton is on track, and we are extremely confident of commissioning by December 2025. And that's what would also kind of give us an outlook for year ‘26, some kind of a trickling revenue, because the refinery, new refinery will take some time for stabilisation And so FY27 we are very hopeful to have stream of revenue from the capacity -expanded Numaligarh Refinery.

– Two more positives. We have one captive pipeline, which is Duliajan -Numali

garh
pipeline, which currently is a captive use. We are supplying natural gas, 1 million standard cubic metre per day to Numaligarh . Pursuant to expansion, we have also undertaken capacity expansion , of upgradation rather, of the DNPL line, that would be 2.5 million standard cubic metre . And in order to connect the major gas source of OIL India Limited to the IGGL, that is Ind radhanush Gas Grid, which is a north -east gas grid, the Dul iajan feeder line is in the approval process advanced stage. There was a rerouting which h as to be done, which we will cover in the presentation. That will take about two years to complete, and that will add an opportunity for OIL India Limited to evacuate the gas pool that we are having.

– In addition to that, as far as our overseas assets are concerned, we will cover it in the presentation, but by and large, our Russian assets has been dividend yielding. The Taas asset has already given us 100% plus dividends, so all the money is recovered. The Vankorneft asset has already given us about 88% dividend.

– One of our major stakes in terms of overseas investment is the Mozambique asset, that's a n LNG project . All of you know Total is the operator, along with OVL, BPRL and OIL India , we have got 30% stake there. As we speak, though I'm not a spokesperson of the operator, but we are hopeful by this mid -July, we should have the project again restarting, which was on hold because of some security concern there.

– Let's now talk about a kind of strategic roadmap. By the end of this decade, we aim to increase our upstream production from 6.7 to 8 with near -field exploration, and with additional discoveries, it would be about 10 to 12 million tons of oil and oil equivalent. We will be able to triple our refining capacit y; by then the refinery will be

fully stabilised operating to its health. We will by then also be able to complete the polypropylene unit, another 7,000 crore downstream of the refining capacity, which is an integrated one, because the upfront investment is already there . And this will also take the petrochemical intensity index of the refinery to 4%. By then , we will have our interest in biofuel, which will be a blending requirement for our petroleum … MS production, that will be up and running. By then , we will have about 10 odd compressed biogas plants up and running ; that's one thing which we have covered in the presentation . and we will have a big pool of renewables in Assam and in Rajasthan. So we will continue to have our focus more on upstream, that's an E &P
6
player, then the downstream, that's NRL, the pipeline part, that's the midstream part.

– One more thing which I will share, with 9 million ton refinery, the product evacuation we have already created that narrative . The existing product evacuation pipeline, which is Numaligarh -Siliguri -NSPL pipeline, currently operating at 1.7 million metric ton, has been upgraded to 5.5 as we speak. The mechanical completion is over . So in another three months' time that would also be ready well before the refinery is commissioned. We have an Indo -Bangladesh Friendship Pipeline, 1 million metric ton capacity . That's also in place, and as we speak, without any disturbances, 0.4 million metric ton is moving. We have got a collaboration with Assam's Inland Water Transport so that we can utilise the IWT for moving our cargo. We are looking at L ook East policy basis markets. We have already got a collaboration , which is a public knowledge , with BPCL to help NRL in sourcing our crude, because more we produce in the domestic field, we would kind of upset the import requirement, nevertheless that would hover around 5.5 to 6 million metric ton going forward, which will happen at BPCL level, giving us a leverage in price point. In terms of upstream, we are looking at a 20% boost in next five years through our near field exploration campaign and evacua

tion infrastructure scale -up.

– In fact, one more interesting thing which I would like to share, you would have noticed our flaring has reduced substantially. So two things what we have done, we have got additional compressor stations in our stranded fields which is actually helping us to evacuate those natural gas, and there is a field called Kumchai in Arunachal Pradesh. We have already built a pipeline and we are evacuating 1 million standard cubic metre of gas per day, which was getting flared. So by virtue of that pipeline , we are evacuating So a) we are reducing our carbon footprint towards our 20-40 carbon neutrality approach, but also we are monetising it.

– And all of you would know , that it gels well with the kind of geographical area we have access to. We have our solid presence in North -East , and Tripura we have got six districts. The entire Nagaland and Arunachal provinces are with OIL India in collaboration with HPCL and BPCL respectively . We foresee that these are those sunrise sectors where the consumption and the growth opportunities will come.

– So just to summarise, we are looking at six key enablers. I can assure you that the technological capabilities of OIL India Limited is par excellence when we compare it with global standards. A skilled talent pool that we have . We are looking at strategic partnerships . Two I can share which is in the public domain, otherwise we are bound by the Confidentiality Agreement. We have got a collaboration with Petrobras Brazil, which are actually pioneers in deep water and ultra -deepwater drilling. So we are having discussions for a possible collaboration, not only to collaborate for the O ALP-IX possible drilling locations, but also OALP -X. We have got a technological service agreement with Total Energy, who are going to support us in selection of our locations for drilling, which is the best thing that can happen to any E &P process, but also to help us design the well, which is about the most complex thing when you are looking at a water depth of about 2,000m and a depth of drilling of about 7,000m.

– In terms of capital allocation, this year we did about 8,600 crore , and together with NRL, we are looking at about 15,000 to 16,000 crore investment . And one thing is an
7
assurance from all of us on my behalf, behalf of Board of OIL India Limited and NRL, we remain committed to maintain the conservative leverage that we have today. At OIL India level it is 25%, at NRL level consolidated it is about 55%.

– Before I close, with the outlook that we have, I am sure all of you would have that particular thought, with the current outlook of crude price point, we have already initiated … I will not say cost cutting per se, we have already initiated an efficient mechanism of doing business in terms of our efficiency in doing more drilling within the timeline of 365 days, creating more prospects in terms of doing G & G and then creating drillable locations , and more importantly , identifying better pools which

would give us a higher production.
– So with this, once again, thank you very much for joining us today as part of this Analyst and Investor Meet. Since morning I had excellent interactions and feedback from couple of our friends from analysts , and we will look forward to having a very, very constructive and open feedback. Thank you very much.
– Compere:
– Thank you CMD sir for such a detailed and valuable speech to the audience. Now I request Mr. Debojeet Hazarika - GM Finance, OIL India Limited , to deliver the presentation to the audience. Thank you.
– Mr. Debojeet Hazarika - GM Finance, OIL India Ltd:
– Thank you . Very good evening to esteemed friends from the investors and analysts ' community , dignitaries on the dais, off the dais, ladies and gentlemen. It’s indeed heartening to see a full house today on a rainy evening, and it gives a much needed fillip to the oil team

to work hard and take our esteemed organisation to newer heights and conquer newer horizons.
– Yes, indeed, the theme of today's presentation is conquering newer horizons. It reflects our commitment to strategic transformation, building on a legacy of operational excellence while embracing the future of energy. Today, we'll walk you through an overview of the company, our performance in Financial Year 25, our operational performance, OIL India 's 2030 strategic priorities, and a roadmap aimed at delivering sustainable value for all stakeholders.
– Let me take a minute to walk you through today's agenda. We'll begin with an overview of who we are, what defines OIL India today, our skill, our integrated presence, and the core differentiators that make us resilient and investment worthy. From there, we'll dive into our financial highlights, which reflect not just strong top line and bottom line delivery, but simply in capital deployment and long -term value creation. And finally, we'll walk you through our strategic and operational performance, looking at upstream, midstream, downstream, and new energy in detail.
– A glimpse of OIL's six decades of journey. We started our journey linked to the first oil discovery in Asia, that's in Digboi in the northeastern state of Assam. We have our origin in that place from 1889. We got formally incorporated as OIL India in 1959. The company got nationalized as a central CPSC in 1981. Going ahead, 2009 -10 was
8
the year when we were elevated to Navratna status, and that was the year when we did our first IPO. The next decade was the story of international acquisitions, our diversification initiatives into renewable, into the CGD space. In 2021, we acquired Numaligarh Refinery , the majority stake of 69.63%, and that makes OIL India truly integrated, both in the upstream and downstream. From landmark global partnerships to India's first green hydrogen plant and our recent offshore expansion in the Andaman, the last few years have marked a significant phase of transportation and strategic growth.
– OIL India is a fully integrated energy platform, spanning upstream, midstream, downstream, and new energy built through discipline, expansion, and strategic partnerships. Today, we operate across 62 E&P blocks with 93,000 sq.km. of acreage. We have overseas presence in seven countries, in 10 projects, with a mixed portfolio of producing, developing, and exploration assets. We manage a 3,700 kms. plus pipeline network comprising of crude oil, product, and gas distribution network. Our refinery, Numaligarh Refinery , is going through a major capacity expansion from 3 million to 9 million metric ton. We also have presence in Pet chem through our holdings in BCPL and Assam Petrochemicals Limited. Numaligarh Refinery is coming up with a 360 KTPA Petchem unit. We have 188 megawatt installed capacity of renewable energy, and already in collaboration with Government of Rajasthan and Assam, aims to set up additional 1.8 gigawatt solar plants. Numaligarh is coming up with a 2.4 KTPA green hydrogen plant. We also aim to set up 25 CB G plants pan India. The company has entered also into the critical mineral space by winning one graphite and vanadium block in Arunachal Pradesh. This entire integration enables full cycle value capture, cost efficiency, and structural resilience across commodity and transition cycles.
– This slide gives an overview of oil's accuracy both , in-country and international. Strategic wins under O ALP and DSF have given us about 93,000 sq.km. of operated acreage across 62 blocks, spanning pan India, covering every major Indian basin and ensuring a rich inventory of drilling opportunities. Our international portfolio spans across 10 assets in 7 countries, with a 2P reserve of 41 million metric ton of oil equivalent. The investments in the two Russian assets are giving regular dividends to

the company, again

st a total investment of USD 1 billion. We have recovered till date USD 942 million against two investments, that's in TYN GD and Vankorneft . We have already recovered 100% of our investments against the project TYN GD, and against Vankorneft we have recovered around 84 to 85% of the investment.

– Our growth is underpinned by a well -structured portfolio of strategic joint ventures and subsidiaries across the energy value chain. In particular, we have established ourselves as a key energy player in the Northeast through our portfolio. To exclusively manage the company's green initiatives, we have formed a whole new subsidiary this year in January ‘25, naming O IL Green Energy Limited, and we have also formed another JV with APGCL O IL Green Power Limited to set up 650 megawatt solar plants across the state of Assam. Internationally, we operate in 7 countries across 10 upstream assets through a mix of wholly owned subsidiaries and equity partnerships. This structure offers diversification and risk balance exposure to global opportunities.

9

– OIL Board comprises of five functional directors led by our esteemed chairman, Dr. Ranjit Rath. A high -calib re leadership team with deep industry, technical and policy expertise together is steering the company's performance and strategic direction. OIL Board currently has one government -nominated director and four independent directors. All come with rich experience in diverse fields and immensely contribut e with their invaluable inputs to steer the company to excellence, at the same time ensuring strong corporate governance.

– OIL is rated domestically by CRISIL and CARE. We have got the highest domestic rating. We are rated by Moody's and Fit ch as an international agency. We have got investment -grade ratings, which is at par with the sovereign rating of the country. The Government of India holds majority stake in the company with 56.66% shareholding.

– With over 65 years of heritage and now elevated to Ma haratna status, OIL India stands as a strategic pillar in India's energy ecosystem and a consistent value creator for shareholders. Our growth momentum is fuelled by strong upstream engine, gas - led production, high quality reserves. We have maintained a 3% production CAGR with gas now comprising more than 50% of the output and a high margin future aligned growth driver. We have a fully integrated oil and gas portfolio spanning across the E&P, pipelines, refining and petrochemical, enabling us to capture and control margin across the energy value chain. The NRL expansion and polypropylene plant will further strengthen this integration. We are building a de -risked, future - ready energy business. Over 20,000 crore s has been committed towards our target of achieving net zero by 2040. All of this is translating into consistently outperforming shareholders' returns , backed by disciplined financial performance. We have delivered a 38% plus three -year TSR outperforming PSU peers , with an EBITDA of around 34% margins. In essence, OIL India is a high growth focused enterprise with integrated operations and diversified portfolio that enable a high margin, de -risked, sustainability -oriented play that drives superior shareholder value creation for investors.

– OIL India 's focused execution and disciplined strategy have translated into outstanding shareholder value with a 2.7 times share price growth over the last three years and a market cap of 69,000 crore as of May 2025. Our fundamentals remain strong. We have received 3.46 MMT of crude, 3.25 MMTO E equivalent gas production and a steady 31 -32% dividend payout. Financial Year 2025 delivered ■7,039 crore in P AT and ■8,467 crore in C apEx commitments, reinforcing both operational strength and financial resilience.

– Now we'll move into the second section of financial highlights. FY25 has been a strong year for OIL India , reflecting both operationa l resi

lience and disciplined execution. We delivered standalone revenue of ■23,987 crore, EBITDA of ■10,636 crore and a 10% growth in profit after tax on a standalone basis , with an achievement of ■6,114 crores. Our dividend payout for the year totals 115 % per share, fuelled by robust earning per share of ■37.59 per share and market capitalization of ■69,000 crores. It is a true reflection of the value that we continue to deliver to our esteemed shareholders.

10

– A glimpse of the standalone financial performan ce of the company. Standalone revenue has remained steady at around ■24,000 crore over the last three years, even as crude price and gas price moderated from financial year 2023 peaks.

Importantly, we have protected profitability with FY25 EBITDA at ■10,83 6 crore and a PAT at ■6,114 crore. Key financial ratios remain strong. Operating margin are stable at 31% , net profit margin at 27.6 % and return on capital employed at a healthy 15 %. Net worth has grown steadily, reaching ■39,531 crore in FY25, reflecting both earnings momentum and a balance sheet strength.

– On the price relation front, though there has been a decline in crude price gross realisation , but thanks to the withdrawal of the SA ED from December 2024, we could realize and maintain our net relation at around $50 per barrel. On the gas price, the outlook is quite positive. Last year, the gross relation was $6.5 per MMBTU. This time, going ahead by government's policy, the gas price now is $6.75 per MMBTU . And also, in view of the government's policy regarding the 20 % premium that will be applicable on new well gas production, we have a quite positive view on the gas pricing scenario going forward. Despite the normalizing in pricing, our margins have remained resilient, reflecting cost control and portfolio balance.

– At the consolidated level, revenue reached ■37,830 crore, largely stable versus FY24, with an EBITDA of ■12,823 crore. Profit after tax grew to ■7,039 crore, up from ■6,980 crore last year, and the net worth grew by 10 % to ■48,955 crore.

– We now move to the strategic initiatives and operational per formance of the company. O IL's strategic focus is aligned with India's evolving energy priorities , by targeting high -growth, high -impact energy sectors. India's upstream story is robust, with consistent increase in oil and rapid growth driven by gas in-market demand for refined output petrochemicals , further driven by strong policy impetus . Given the global energy transition, new energy will dominate India's energy capacity additions over the next two decades.

– Let us now delve deeper into the vast area of opportunities within India's upstream sector. India's demand for crude oil and natural gas is projected to almost double by 2040, with gas consumption growing faster than oil. To achieve 10% points reduction in import dependence, domestic output have to increase to around 90 million tons of crude oil and 11 million tons of gas by 2040. Meeting these targets will require sharper exploration, quicker project sanctions and seamless midstream connectivity, areas in which OIL India already delivers consistently.

– The country's national 2P reserves are drifting lower, with oil moving from 450 to 434 million metric tons and gas from 655 to 643 BCM between FY22 and FY24. The reserve replacement ratio has slipped to 0.5 for oil and 1 for gas, and the reserves to production life of both fuels continues to shorten. These trends underline the need for more aggressive exploration, faster development drilling and advanced recovery methods to underpin the demand outlook.

– Key policy reforms from the government side continue to drive exploration and strengthen upstream sector attractiveness. Benchmark -led crude pricing reforms now align domestic prices with global markets, introducing netback pricing and offering incentives for mature and marginal fields, making exploration economi

cs

more attractive. The Par ikh Gas Pricing Framework links pricing to the Indian crude basket and grants a premium for new oil gas, significantly improving gas field returns. The draft Oilfield Regulatory and Development Bill's recent amendments provide stable lease tenures, a single license covering all hydrocarbons, shared infrastructure provisions and rationalized penalties, thus creating a predictable operating environment. Opening previously restricted offshore no-go zones has already freed about 1 lakh sq.km. for bidding, with 54,000 sq.km. awarded under OALP and more than 8 lakh square kilometre yet to be opened, unlocking substantial future exploration potential in the country.

– OIL's 2030 strategy is built primarily on four core pillars reinforced by critical enablers. Our 2030 vision is anchored by three engine drives towards integrated oil and gas scale -up.

• First one is the upstream scale -up of expected 10 to 12 MM TPA through expansion via strategic bidding in O ALP and DS F blocks and selective equity partnerships in high potential clusters.

• On the downstream side, we aim to expand our capacity to 9 million metric ton with the commissioning of N umaligarh R efiner y’s expanded capacity, a 360 KTPA polypropylene Petchem and 500 plus CNG stations across the country.

• On the midstream, we target to scale up to 18 plus MM TPA of crude oil pipelines, 2.6 MM TPA plus gas transportation pipelines and 5.5 MM TPA plus product pipeline capacity.

• On the new energy front with a 20 crore committed CapEx, we aim to invest continuously into solar, wind, green hydrogen, CB G and other new energy

spaces.
– To support these four core pillars, we have identified six key enablers.
– All India's upstream business has demonstrated consistent delivery over the years. In the last five years, we have maintained over 3% production CAGR supported by targeted interventions and disciplined execution on the ground. Across our asset base, we have deployed a wide range of advanced recovery techniques to improve productivity , while keeping our lifting costs firmly in the lower quartile. Our domestic footprint now includes 62 operated blocks covering approximately 93,000 sq.km. , securing primarily through successive O ALP and DSF rounds. This has been complemented by substantial subsurface insights with over 17,000 LKM of 2D and 5,300 sq.km. of 3D seismic acquired over the last five years. Looking ahead, our aspiration is clear , to reach 10 to 12 MM TOE of production annually by 2030, and we believe we are well positioned to achieve this, given focus on three areas :
• Scaling up of exploration. Our exploration activity has significantly scaled up with over 230 wells drilled in recent years, backed by new rig deployments, integrated contracts and strengthened gas infrastructure.
• Secondly, strategic partnerships. We are leveraging partnerships with international oil companies , with performance -based production enhancement

contracts and through deepwater collaborations, including our engagement with Total Energies.
• Thirdly, it is the t ech-lead efficiency, and we continue to embed technology across the value chain, from integrated seismic and drilling , to digital reservoir mode lling and advanced development planning.
- Combined with our international upstream portfolio, we believe we have both the operational foundation and strategic levers to deliver this vision with confidence.
– Over the first past five years, our upstream production has climbed from 5.6 to 6.7 MM TOE, delivering highest output in our history. Gas volumes have consistently contributed almost half of our total barrel equivalent mix, enhancing margins and lower carbon intensity.
– Our resource base remains strong and balanced, holding sizable, proofed, probable and possible reserves in both oil and gas across domestic and internal assets. Domestic 2P oil reserve is 69 milli

on metric ton and gas reserve is 121 MM TOE. In
FY25, we achieved a reserve replacement ratio of 0.94. On a 2P basis, the reserves to production life stands at about 31 years, giving us a long runway to support growth while we pursue additional discoveries.
– The government's latest licensing rounds present a sizable opportunity to expand our exploration portfolio. OALP Round X offers 25 blocks, spanning 13 basins and about 1.9 lakh s q.km. , distributed across onshore, shallow water and deeper offshore settings. In parallel, we are screening the Discover Small Fields (DSF) Round IV, which bundles 55 pre -discovered accumulations across 9 contract areas. These brownfield assets can be fast -tracked through simplified development plans and carry lower subsurface risk. By combining selective bidding in O ALP with quick -cycle DSF opportunities, we aim to secure a robust pipeline of future projects that will sustain our upstream growth strategy and support the national goal of higher domestic output.
– OIL India 's midstream network is one of the most reliable in the country and central to our integrated model. We operate over 1,247 k ms. of fully automated crude pipeline, one of Asia's oldest and most trusted. In addition, we manage 192 k ms. of gas and 654 k ms. of product pipeline. This network connects key hubs across the eastern frontier, including D uliajan, Numal igarh, Digboi, Siliguri B ongai gaon, Guwahati and Bar auni, ensuring seamless supply and high utilization. We are modernizing this infrastructure through a 30 -year life extension project. Pump stations and terminals are being upgraded with next -generation systems for better reliability and throughput.
– By 2030, we aim to double capacity, reaching over 18 million metric ton per annum for crude, 2.6 million metric ton per annum of gas transportation and 5.5 million metric ton per annum for product transportation. This will be driven by three levers :
• First, integrated growth planning with new projects like the 9 MM TPA Paradip - Numaliga rh crude line, the 5.5 MM TPA NSPL product pipeline and a 4.5 MM SCMD of IGGL gas grid. Several key projects are already underway.

• Secondly, execution strength proven through complex builds like the Ganga HDD coursing and macro tunneling in challenging terrain. This demonstrates our strength of execution of all these projects.

• Third, digital operations enabled by a centralized integrated management system, inline inspection tools, AI -driven SCADA and predictive leak detection.
All this gives us a midstream platform that is scalable, future -ready and aligned with both energy security and clean energy integration.

– To underpin our growth expansion and market reach, we are building out the next wave of pipelines. The 9 million metric ton Paradi -Numaligarh crude link will feed imported crude from Paradip port to the refinery , and is scheduled for commissioning in October 2025. Product evacuation capacity is being lifted through the Numaliga rh-Siligri pipeline where a 5.5 MM TPA augmentation will be completed by July 2025 to further open northern markets. On the gas side, we are replacing and upgrading the D uliajan -Numaliga rh line from the current capacity of 1 MM SCMD of gas to 2.5 MM SCMD, scheduled to be commissioned by October 2025, ensuring stable natural gas feed for the refinery. Finally, our participation in the 4.5 MM SCMD Indrad hanush Gas Grid will connect the northeast to the national network in three phases, starting July 2025, enabling pan -India customer access and unlocking new gas opportunities. The phase -3 of IGGL is scheduled to be completed by March 2027.

– In the downstream platform led by Numaliga rh Refinery, we have delivered robust performance year after year. In FY25, we recorded 102% capacity utilization and 87% distill ate yield and GRMs of 5.14 per barrel, outperforming the Singapore benchmark with a further upside from e

xcise duty concession that is available to the refinery.
We are now scaling this platform. Capacity is being tripled from 3 to 9 million metric ton, targeted for completion by end of 2025, with the Paradi p-Numaliga rh pipeline securing imported crude supply. In parallel, a 360 KTPA polypropylene unit is being developed to serve regional and export markets. On the diversification front, we are progressing high margin derivative projects through BCPL and APL, including a 40 KTPA DME (dimethyl ether) plant in collaboration with Korean partner Biofriends.
We are also expanding reach and integration through C GD with over 500 CNG stations planned across 9 geographical areas and 25 CBG plants to support fuel availability and circularity. This integrated downstream approach positions are strongly, not just for volume growth, but for sustained margin leadership and future ready product diversification.

– Diving deeper into Numaliga rh R efinery , in FY25, the plant ran at 102% utilization, delivering a dist illate yield of 87 at a gross refining margin of 5.14 per barrel. The facility's Nelson complexity is 9.5, supported by a AAA credit profile, which ensures competitive conversion and financing strength for the refinery. Expansion from 3 to 9 million tons per year is underway, backed by 50% excise benefits for Northeast refineries , and pipeline evacuation to move substantial portion of the products to market at the low unit cost. Off take is secured through marketing tie -ups with BPCL, HPCL and IOCL, while direct sales to industrial customers such as ONGC, NALCO, HINDALCO and G AIL provide additional resilience. High -speed diesel and motor spread account for 88% of sales for the refinery, complemented by other products like LPG, ATF, solvents and a growing slate of value -added wax and petrochemical

grades. Together, these attributes make Numaliga rh a cornerstone of our integrated value chain as a major earnings lever as the capacity triple s by 2025.

– Despite a normalizing margin environment, Numaliga rh R efinery continued to post resilient operating metrics. The capacity utilization rebounded to 102% FY25 from 84% in the turnaround year, and distillate yield held firm at 87%. Revenue rose to ■25,147 crore, up 6% over FY24, even though benchmark cracks softened and the GRM compressed to 5.14 per barrel. EBITDA margin settled at about 12%, still comfortably above peers, thanks to the high purity feedstock, pipeline evacuation and excise concessi ons that continue to product returns while we walk towards the 9 million metric ton capacity expansion for the refinery.

– OIL has built strong in -house capabilities across the full E&P value chain with in - house seismic crews, full house logging units over a set of walkover rigs, drilling rigs, with in -house seismic crews enabling cost -efficient and reliable execution that is required in the upstream segment. Over the years, FY21 to FY25, we spent 700 crore in research and development. We also hold 18 patents and incubate 15 plus startups driving innovation. Additionally, we continue to invest heavily in key technologies such as enhanced oil recovery for mature fields, low -pressure compressor units to cut flaring, and H2 fuel cell and battery. Our GNG studies have resulted in 90 plus new prospective locations.

– We have established a robust network of strategic partnerships, including joint exploration initiatives with leading international and national oil companies. Our collaboration with Total Energies focuses on stratigraphic well design for deepwater assets and innovative methane emission detection. Additionally, we maintain strong research alliances with premier academic institutions such as IIT -Kharagpur, IIT -Lucknow, to name a few, driving innovations across OIL India's value chain.

– OIL India's CapEx for our financial year 2025 was ■8,467 crore. It reflects a clear focus towards upstream and high

margin downstream investments, with growing
allocation to new energy. Around 80% of the CapEx was allocated to upstream, while the remaining went into midstream and downstream. The planned C apEx profile for FY26 remains broadly similar, maintaining strong emphasis on exploration, development drilling, and strategic downstream growth. Additionally, a planned CapEx of ■9,133 crore has been earmarked for N umaligarh Refinery in FY26, including ■5,648 crore for refinery expansion and another ■2,300 crore for the petrochemical project. Our funding strategy remains conservative, with borrowings limited to select international projects. All other investments are made through internal accruals, maintai ning a strong debt -to-equity ratio of 27% on a standalone basis and an interest coverage of more than 12 times.

– OIL has a robust risk management approach to mitigate salient risk. We follow a structured, forward -looking risk management framework that addresses operational, financial, strategic, and transition -related risks through diversification, technology, and disciplined execution. For example, to mitigate business continuity risks from external shocks, such as geopolitical conflict or trade disruptions, we have built geographic diversification into both our asset base and supply routes. On strategic and transition risks, we have proactively diversified beyond core upstream to downstream expansion and new energy, ensuring we are not overexposed to any

15

single transition path. And operationally, we are investing in evacuation infrastructure like DNPL and I GGL alongside robust HS E systems and technology -led upgrades to improve field reliability and reduce downtime.

– OIL has a strong ESG commitment and has been driving responsible, inclusive, and sustainable growth via several key initiatives. We'd like to highlight that OIL's efforts have been recognized by several global agencies, and with an upgraded CDP Climate Rating of C, water security rating of B -, and S&P Global ESG score has been doubled from 22 in the p revious year , to 44.

– OIL is committed towards national building with a cumulative spend of around 620 crore on CSI initiatives in the last five years across healthcare, education, skill development, community development, environmental sustainability, and other initiatives.

– As we close, dear friends, let me leave you with a clear view of why O IL India is a high conviction investment opportunity.

• We are driving accelerated future production growth , led by gas -focused developments and enhanced recovery initiatives.

• Our exploration -driven upside is encoded in a strong domestic ac reage base with nearly 90% from O ALP and strategic global assets that support long -term resource visibility.

• We operate a diversified, de -risked, and resilient portfolio integrated across the oil and gas value chain and are active in key global markets.

• We benefit from integrated value chain synergies, which drive margin resilience, operational deficiencies, and control over cash flows.

• Our model remains high -margin and capital -disciplined, underpinned by gas -weighted production and strong refining economics.

• Our energy transition play is focused and future -proof, with early leadership in green hydrogen and CCUS , alongside select, scalable renewables.

• And lastly, all of this is backed by proven leadership, operational depth, and a clear strategic roadmap.

– We have got dedicated Investors' Management team, with Chief Investor Relations Officer - Shri Abhijit Das and Company Secretary – Shri A. K. Sah oo. For any investment -related, any shareholder -related issues, we have got dedicated teams to take care of your requirements. Thank you. Thank you all.

– Compere:

– Thank you, De bojeet Hazarika, for such a detailed and insightful presentation to our esteemed investors and analysts.

– Question & Answer Session:

16

– So

dear ladies and gentlemen, now the floor is open for questions and answers. So you can kindly raise your queries after mentioning your name and name of your firm. Thank you.

– Mr. Siddharth – BNK Securities:

– Hi, sir. Ranjit sir. This is Siddharth here from BNK Securities. So my question is, in case the DNPL expansion takes place, but there is a delay in NRL commissioning, can we still increase our production by 1.5 MMSC MD?

– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:

– We will take a couple of questions and then … So I am taking note, we will answer.

– Mr. Siddharth – BNK Securities:

– Sure. And...

– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:

– But to give you a comfort, yes. I will explain how, but yes, please.

– Mr. Siddharth – BNK Securities:

– And the second question is, so ONGC has mentioned that 20% of their APM production is now new well gas. So what is the status at our end? And will this incremental 1.5 MMSC MD be completely classified as new well gas? I think these are my two questions. Thank you.

– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:

– Okay. First is, yes, 1.5. Now, how does that work? The IGGL phase -1 is already, as we speak, getting commissioned. The hook -up between DNPL pipeline and IGGL phase -1 would happen within the premises of Numaligarh. So it's a three -month time phase. Then the gas can flow from Assam to mainland India. So that's yes.

– As far as new well gas is concerned, there is a two -stage approach here. One is identification of the gas component. Second is allocation for the price point. Identification is a continuous process, it's simple. If you register a growth over 7.5% decline, it is identified. Second , if it is a new well gas, new well per se, then it is identified. Now that is easy. The allocation is under a construct where all of you would know that we have a priority allocation of CGD where CNG, PNG comes first. Then if I remember correctly, it is fertilizer, petrochemicals, then power and refinery ; in that order, I suppose.

– Now in northeast, the growth opportunity of CGD exists, but as we speak, it is at a very nascent stage. Only recently the CNG pump stations are getting inaugurated in Guwahati where we have a stake. One of them, probably day before yesterday, has been inaugurated in North Bank where we have a stake. Now unless it grows, the allocation cannot happen there. Therefore , our dependency on mainland CGD will also be there. So once we have this connectivity and when gas will flow to the mainland, then we will have allocations. So the allocation process is happening as we

speak in the Government of India level, in the Ministry level. But new well gas has already been identified , and that's a continuous process.

– Mr. Siddharth – BNK Securities:

– Thank you.

– Participant Question:

– Yes. NRL, Numaligarh, if you can share some thoughts on what is likely to be the total CapEx by the time we are up and running ? Expected utilizations for next one or two years before it stabilizes ? And excise duty benefits i.e. 50%. If you can share some quantitative numbers, some colours , how you are likely to get and for how long ? Thank you.

– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:

– Okay. So first, the CapEx would be hovering around 30,000 crore expanded capacity, 9 million metric ton. Stabilization, you are right. We are looking at commissioning of refinery by December 2025. While I was speaking, I did say that the product evacuation pipeline will be commissioned much before, but the import pipeline, which is from Parad ip to Numaligarh, 1 ,640, one of the longest crude oil pipeline s, would also get commissioned by December 2025.

– As far as northeast excise duty benefit is concerned, it is not only available to NRL, it is available to all the other entities or refineries in nort

heast and it will continue to happen. One assurance which I can give you, the GRM that has been indicated of $5.14 per barrel , is not counting the excise duty exemptions.

– Participant Question:

– Is there any sunset c lause.

– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:

– It continues. There is no sunset clause, absolutely.

– Mr. Varadarajan – Antique Stock Broking:

– Sir, Varadarajan from Antique. I have three questions. Firstly, you had the earlier

goal of 4 million tons of oil production and 5 BCM of gas production. So does it still stand , and do we look at that number being achieved in FY28? Is that the right expectation?
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– The target that we have given to ourselves or a mission mode on which we are working, 4 million metric ton of crude oil and 5 BCM of natural gas, stays. There is no change. The enhanced exploration efforts and enhanced production efforts will continue with the additional more drilling wells, more depot /deeper wells or more production interventions will continue. And with the gas evacuation infrastructure in the line of sight, we are very hopeful that there will not be a capacity constraint to
18
produce , because we are actually sitting on one of the best basins within the seven category -1 basin of the country or sedimentary basin of the country. So the target stays, our efforts will continue.
– Mr. Varadarajan – Antique Stock Broking:
– In that context, the new pipeline which is supposed to have been approved and then you were indicating it will take 18 to 24 months to complete, that becomes critical in terms of achieving the 5 BCM kind of a gas production. So what is the status of the pipeline , and what is your expectation as to the completion , and hence our 5 BCM target as well?
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– I am very glad that you have asked this question. Why I am so confident about it, the earlier the pipeline connecting Dul iajan to the NEGG feeder line, that's called Duliajan Feeder Line, was already approved. So it was actually going through the North Bank, crossing Brahmaputra river near Bogib eel bridge , that is Dibrugarh, and then landing at Dul iajan. When we did the study, we realized that crossing Brahmaputra river is time dependent on the working window that is available, a). b) it will be one of the longest crossing. So, we found that it was not a very good idea , and if we do it, what we did right now, we reroute the pipeline . And I am very glad to share that by rerouting, we are saving ■780 crore s in terms of the crossing , and we are saving one year straight , even ruling out the uncertainty that goes with the working window.
– So what has been done, the approval process is in a very advanced stage. The entire pipeline has been split into two parts. One is an extension of 8 -inch line in the North Bank up to Dhemaji, which will actually look after the North Bank tea gardens and the Arunachal GA that Oil India and BPCL is having. The South Bank pipeline will connect to Dul iajan and all other producers in the south part of the Brahmaputra and connecting to Numaligarh, precisely not Numaligarh, at the nearby sectional SB station. So this way, we do not foresee any major problem per se in terms of pipeline ROU allocation or construction. That's why we are more assured right now.
– But yes, you are right, with this pipeline, the evacuation constraint will cease to exist . And 5 BCM is a given.
– Mr. Varadarajan – Antique Stock Broking:
– And in terms of dates, we are looking at that 18 to 24 months?
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– 18 months, 2027. But I must add one more thing. We are continuously supplying gas to Brahmaputra Cracker and Polymer where the rich gas is supplied, the C2 C3 fraction is retained and C1 lean gas i

s given back. That construct is well known. Now considering that we need to produce more rich gas , because it gives us value in terms of gross calorific valuation that we get, we have identified … I mean that is the gas pool which you would have observed in the 2P reserve of gas. The gas pool that we are sitting, we have identified certain wells, to be precise 15 number of wells to
19
be drilled , where we are looking at rich gas availability. So that's the level of detailing on which the plan is placed.
– Mr. Varadarajan – Antique Stock Broking:
– My last question is on the project cost across, of course, N umaligarh Refinery , as well as the petrochemical plant which is just started implementation . Do we see a risk of escalation in the cost?
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– The refinery expansion, to share with you, we have already awarded to the extent of… 99% ? 95% is already awarded, only 5% residual is left. So we do not foresee any further cost escalation that would hover around 33,000 crore s. As far as the polypropylene unit is concerned, 360 KTPA , we have identified a cost number of about 7,200 crore s. With the detailing or the basic design that is already done, with

the process licensing in place, we do not foresee any major problem there.
– Mr. Ramesh Bhojwani – Mehta Vakil & Co.
– Sir, Ramesh Bhoj wani from Mehta, Vakil &Co. F irst and foremost , you have made an all-encompassing presentation laying out the roadmap and the blueprint for a five - year strategy i.e. going forward up to 2030 . Virtually each and every aspect of your enterprise, both in OIL India and Refinery, has been very well encapsulated . And also, a target of 2 GW of solar renewable energy is something which is a genuine CSR and ESG initiative, rather than the other small, small ones which were shown.
– But the thought which came to me , that 2030, OIL India itself will show a top line of 1 lakh crore and so will Numali garh R efinery . That must be your hidden blueprint target in your boardroom. I would like to have your comments on that.
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– Certain things are best left to your imagination, but I am glad that you are right there. That is the number we are carrying within ourselves. Last quarter we touched … our balance sheet became 1 lakh crore, you would have noticed. This yea r, by a whisker, our net worth missed the 50,000 crore mark . But we are seized of the fact that that is the number we are carrying within ourselves, not only within the boardroom. I can assure you every O IL India and NRL team member aspires to that reach. Thank you. Very nice, you have picked up the number.
– Mr. Ramesh Bhojwani – Mehta Vakil & Co.
– Thank you and all the best.
– Mr. Pranita – Morgan Stanley:
– Good evening sir. Thank you for the presentation sir, I am Pra nita from Morgan Stanley. Sir, in the last quarter you had mentioned that 11 compressors are being installed to get the flaring reduced. So the benefit what you had mentioned today , is that all 11 compressors are installed and that is true , or is there more to come next year?

– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– This year the plan was 11 basis the identified potentials where we are flaring. So going forward , should there be more such gas fields that we will establish? I t is a continuous process. Because earlier , and I must share with you, earlier we were flaring natural gas and now that is considered as a big no. Because with the gas price of $6.5 ++ , we do not want to miss a molecule, that is one.
– Second, I must tell you , again on the compressor story, earlier , the associated gas was also getting flared. So we were actually unable to capitalize on the possibilities of enhanced production of crude oil. So we have started a construct called storage of na

tural gas of the associated gas. So that would require a bit of compression also. So that way , we are preserving the value of natural gas , and keeping the enhancement of production on place. So compression and gas monetization and leading to zero flaring will be a continuous affair.
– Mr. Pranita – Morgan Stanley:
– Thank you , sir. Actually , I just wanted to check on the question that was asked earlier. On the new well gas, do you have any percentage in mind what would be the gas molecules which will be getting a higher premium next year onwards?
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– I would not be able to tell you since it is in the process of getting allocation. But the percentage would hover around 20 to 25 %.
– Mr. Somaiah – Avendus Spark:
– Thanks for the opportunity, sir. Soma iah from Avend us Sp ark. Sir, in terms of NRL, excise duty benefit. So for the exports also do we get excise duty benefit, that's one. So I think you did mention currently it's around 0.4 million ton, that's what we are exporting. So do we get export benefits for that, I mean ED benefits for that? And second, in terms of the expanded capacity, where will we be in terms of exports versus what w e'll be selling in the domestic market?
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– On the export, we better claim a premium . Bhaskarji, is that correct?
– Mr. Bhaskar Jyoti Phukan – Managing Director, NRL:
– Exports, we don't get the excise benefit, you rightly said. But we export to say Bangladesh. So there is a savings on account of transportation. Also , we get a premium. So that offsets a large portion of the excise benefit , otherwise , we would have realised through the domestic sale. Because our products are flowing to far - flung areas, because entire product cannot get consumed in and around Siliguri. So therefore , we have a certain element of cost on account of transportation . That gets reduced if we export through the pipeline that we have to Bangladesh. Second, we

also enjoy a premium on that export. So therefore , it is largely offset . But as you have rightly said, our focus is always to saturate the domestic demand first, and what is left out is only export.

– So in expansion scenario also, a limited export is only kept, it is not a very large quantity. Maybe out of entire 9 million ton whatever production that it will give, roundabout 7.5 or 8 million ton product of MS and HSD, around 0.7 to 0.8 million product only will get exported. That is the quantum.
– Mr. Somaiah – Avendus Spark:
– Helpful, sir. Sir, also the expansion, this 1.7 to 5.5 million ton , the pipeline to Siliguri , from there could you just explain how the off -take would be ? Who will be the off -takers there ? And also I think one of the earlier participants did ask about the ramp -up on utilisation in NRL for the next couple of years. So if you could just touch upon that? Thanks.
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– The current off -take … See normally NRL has got collaborations with the oil marketing companies because we are not into the marketing of the product. So that's already in place, which is working well . And as we speak, both the evacuation mode, whether it is r ig and the pipeline which will be in effect, and once it comes to Siliguri , then the opportunities of moving multiple directions and road and railway takes place.
– As far as the 9 million metric ton is concerned, the discussions are on with the oil marketing companies and we see potential collaborations. So we do not see any concern per se from an evacuation point of view or an off -take agreement point of view.
– Mr. Somaiah – Avendus Spark:
– One last question, sir. This medium term plan of taking gas to 5 BCM and oil, would you like to break it up somewhere for FY26 ? How do you see ? And also in terms of levers, ob

viously DNPL pipeline is one that gives you an opportunity . And this flaring what you mentioned, the full benefits are there in last year number of 1 MMSC MD, or only partly it is there and the rest we will see ? Any levers that will drive us there ? Thank you.
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– I will not be able to share the exact split of it as part of the balance sheet as we speak now . But a) the flaring has substantially reduced and this year we will have much control led flaring. Much much controlled flaring. One number that I can share which I spoke during the speech is 1 million standard cubic metre which was getting flared in Kumchai, Arunachal Pradesh , is now getting piped . That is a major chunk.
– As far as the break -up you are looking at from 5 BCM, 5 BCM is a target which is actually contingent on the evacuation facilities. Now in E &P sector , it does n't happen that you would be able to untap immediately. So it is a preparation in the process. We have identified gas wells, we are drilling certain wells . But the difficulty is , you cannot drill a well and keep it shut for a longer period of time if it is a gas well. Therefore , we are strategically drilling that . And considering that the DNPL gets commissioned and gets hooked up, the H2 will give us a leverage in terms of better

evacuation facility. H1 of next year we will have leverage of NRL expansion and allocation for the mainland. Therefore, while the IGGL or the Duliajan feeder line will have a 18 months ' time, at least we will see a substantial increase in terms of evacuation in this.
– Another outlook which I must share, I ha d not covered it in my speech . Recently Government of India has approved a fertiliser plant in Namrup which is about 12 lakh ton per annum urea, where it is about 10,000 crore investment , and O IL India has got a stake of 18%. There is an existing pipeline which needs to be upgraded, that also is being part of that particular program me. A nd by virtue of the expansion of the fertiliser plant … not expansion, the new plant which is being built, we would require a gas requirement of about 2.3 million standard cubic metre per day. So that also will add to this. So currently when we are doing about 7 to 8 million standard cubic metre per day, we can ramp up to 13 million standard cubic metre per day, once we have all these customers and infrastructure in place. So the gas outlook for OIL India is in very good shape.
– Mr. Yusuf Rangwala – Investor:
– Good evening sir, my name is Yusuf Rangwala . I am very happy with your presentation and I am thanking you from my side and all the team , and also for calling for the Analyst Meet. And as you explained, I am very happy with our plan for

2025 . My best wish is for that . And also , any supply with Pakistan, Sri Lanka, I would like to know; these two countries . Any supply with these two countries?
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– No, we don't foresee anything of that sort right now.
– Mr. Yusuf Rangwala – Investor:
– Nothing is there?
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– No, nothing.
– Mr. Yusuf Rangwala – Investor:
– And my best wish is for a competitive 2025 and also a good result. Thank you sir. Have a good day sir.
– Mr. Kunal – KNI Wealth:
– Good evening, this is Kunal here from KNI W ealth. I have two questions. So in Q4, as was also the case in Q3, the console PAT was lower than the standalone PAT, and I assume that it might be because of maybe some of the overseas exploration entities. But what I would suggest is , in terms of the quarterly presentations, it would be good to have a n EBITDA bridge essentially reconciling the contribution of various overseas subsidiaries , or for that matter , domestic subsidiaries . Because as you showed us in the presentation right now, there a

re a lot of entities which have

stepped down, be it subsidiaries or associates. So that would be something which would help.
– And the other question is with regard to the petrochemical complex, the 7 ,200 odd crore CapEx . So, what's the kind of payback period or let's say return on capital which you are foreseeing , because this is something which hasn't been kind of delivering for some of the other companies as well , and everyone is sceptical. So if you can throw some light on this.
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– Okay. So part of it I'll answer and then part of it I'll request MD -NRL to answer. First is, point is well taken . We will reflect this in our quarterly interactions.
– The second is about petrochemical. Now the issue is , if you have a standalone petrochemical complex, there is a challenge. Second the price point in terms of feedstock input cost and the price point in terms of outputs because of the dumping or the cheaper products that is available, it's a concern. But when it is integrated to a refinery, you have a golden opportunity, that's one.
– Second, if it is a gas -based petrochemical complex, it is very challenging because otherwise globally , the gas -based petrochemical complexes are primarily driven by a very less cost gas or feedstock cost available elsewhere in the globe, let’s say in the Middle East or in USA. That’s not the case , that's not the case. When we convert gas through RLNG route . The precise numbers, as far as our 7,200 crore investment is concerned, I would like MD , NRL to answer.
– Mr. Bhaskar Jyoti Phukan – Managing Director, NRL:
– In terms of IRR, it was showing an IRR of almost 14. 5%, because for us, for a refinery, it is LPG versus polypropylene. So, you can imagine the delta that we'll enjoy. So, for others, it is LNG versus same molecule. So, we get a very impressive number there actually.
– Mr. Avinash – Investor:
– Good afternoon, sir. My name is Avinash, and I have been a shareholder for the last few years. And thank you to the team, because it's been a very rewarding experience in the last few years. If I get it right, sir, you mentioned that you are drilling currently at the rate of 60 oil wells in the year. And if my memory serves me right, you had mentioned that the target for this year was 78, if I recall in August. So, am I correct in ascertaining that we are falling short of the target in terms of drilling? And if it is true, this drilling shortfall, is it in the development wells or the exploratory wells, sir?
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– You are very right. I appreciate the numbers that you have given me. There are two things which happen. One is , when we drill wells, we drill wells with a purpose of not meeting the numbers of the wells that needs to be drilled, but wells which will be fruitful or producible for us. So, we would always carry a mix of three verticals as far as the drilling well is concerned. One will be rank exploration. One will be near -field

exploration , within the mining list . And o ne is the development exploration. So, we have to do a balancing. The year passed by, we, I think, drilled about 10 or 11 wells for the exploration purpose. The rest was a mix of near -field and the development wells.

– Three things happened. Despite carrying the same resources, we spotted 70 number of wells , that's considering 11 months of operation . You must all appreciate , during the last July, we had a monsoon which literally had taken away 30 days of submergence in the area. It came on the way. That's number one. Number two, the testing protocols that one needs to follow once you establish sand formations , takes time. If you just look at the numbers of drilling, it is easy to meet 78. That's what you plan for. But then when we had to encounter and establish effort to establish hydrocarbon, the

drilling wreaks takes longer time. The third and most important,
despite all this, the meterage per se, if you would appreciate, the met erage per se, we have actually surpassed of last year's meterage . But I will not stop my answer with that. I'll give you some more positives.
– Two things happened. Though we have not declared it as a discovery, because to declare something as a discovery, there is a process ; you have to follow that protocol and all that. But basis are efforts towards exploration , we have established for the first time , presence of hydrocarbon in the North Bank of Brahmaputra, which was not the case before. By virtue of that, we are now carrying out supplementary seismic and identifying two more additional locations. So, these are those additional benefits which happen despite a drop in the number.
– But just to give you an actual break up, we spotted 70 number of locations. We drilled and completed well testing 59. We completed drilling of wells 62, which is more than 61 of last year. And 10 wells were actually at various stages of drilling. And just to top it all, had we got those 30 days , I think we were on track for 78. And had we drilled 78, with full confidence I can share with you , our number should have been much better. So, I'm glad that you are reminding us, and we will continue to be vigil.
– Mr. Avinash – Investor:
– Thank you, sir. A couple of other questions too, sir. The other thing I notice is that the borrowings have increased at probably among the high est rates that we've seen in the last recent years. So, also as a ratio of...
– CD:
– I'm sorry, I could not get that.
– Mr. Avinash – Investor:
– If I'm correct, the borrowings for the company have increased at a rate that we haven't seen in the last, I think, 6-7 years. Also, the ratio of EBITDA that your presentation mentioned , it’s up 10%. So, I mean, if you could just elaborate why that is happening. And if we see this trajectory actually , is it either picking up or … also how it's going to be in the next two years in terms of borrowings ?
25
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– A small clarification. In fact, I would also like to seek from you, and then … If you see our debt -to-equity ratio, it's hovering around 0.25, 0.26, slightly increase. And that's standalone. At NRL case, when we take consolidated, it is 0.5 because of the CapEx that we are incurring for the capital expenses we are incurring for the expansion plan. So, therefore, we do not foresee any major borrowings as far as standalone is concerned.
– Let me tell you where that 0.25 comes from . We have got two major borrowings in terms of overseas assets, which is dollar denominated. One is the Mozambique one, which is about $1.8 billion investment and about 1 billion for the two assets in Russia. So, while you must have taken note, one asset, Taas -Yuryakh , has already given us back 100 plus dividend in terms of the entire investment. The Vankor , we have got about 88%. And since these are all dollar -denominated borrowings, the approvals that we have got from Cabinet while we undertook these investment , is that the internal accrual cannot be used for serving those borrowings. So, let's say the money that we are accruing in Russian assets , will actually be used for the purpose of Mozambique . So, that's the limited borrowing level we have as far as standalone. Otherwise, all our exploration efforts are through internal accruals.
– Mr. Avinash – Investor:
– Got it, sir. Thank you. And just one last questio n, sir. If you could just let us know what is the current cost structure, all in cost for the production of oil , crude oil as well as for natural gas. And if you could include the levies and duties in the cost.
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– I think, I think in one of the slides, if I remember correctly, it's abou

t $2 per MMB TU;
it's for natural gas. And if I remember correctly, it is $49 per barrel for crude oil. And

net realization is about $78 per barrel.
– Mr. Avinash – Investor:
– That's right. Thank you. Thank you very much, sir.
– Participant Question:
– Good afternoon, sir. This was regarding your 2030 vision presentation. In that, it is mentioned that in 2040, you'll be having 5 gigawatt plus of renewable energy. Will it be just be domestic, or will be international also, like West Asia or Africa ? Thank you.
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– To be very honest, we have not worked on that, whether we will have overseas renewable assets going forward. Currently, as we speak, we have got a subsidiary, only one subsidiary already. Approval is already all in place. The strategy for that O IL India Green Energy Limited is under work in progress. Right now, our focus will be domestic renewables. And going forward, we will see. But I do not have an upfront answer. We are not thought about it, to be very honest.
26
– Participant Question:
– And any funds you'll be allocating to this particular … any benchmark or ballpark figure?
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– See, we will continue to focus on our core in terms of E &P. And the f und allocation , we don't foresee any major issue. So, once the strategy roadmap, which is being worked out is given , certain f und allocation is already done in terms of our renewable energy portfolio. Let's say , the 25 megawatt, which is already kickstarted in Assam as part of 640 . The work is just on the drawing board for the 1 ,000 megawatt in Rajasthan. The CBG plant, we have allocated a cost number of about 3,000 crore. And I must share with you , two locations we have already awarded the EPC and O&M contract . One in Bhubaneswar, one in Tinsukia. And three locations, the tender is already floated. That's 3 ,000 crore over all. Along with NRL, we have this Assam bioethanol. That's one. Once it is getting commission ed, we would also evaluate future expansions. So, we don't see any problem per se on that.
– Participant Question:
– Thank you, sir.
– Dr. Ranjit Rath - Chairman & Managing Director, OIL India Ltd:
– I think any more … if there are no more questions, can we call it a day ? Or, any other feedback , always welcome. Okay. Thank you very much.
– Compere:
– Now I request our ED(F&A) to kindly come and give a board of thanks to the audience.
– Management:
– Good evening, everyone. On behalf of OIL India Limited , I would like to extend our heartfelt thanks and greetings to our CMD sir and other members of the Board of OIL India Limited, and the MD and DF of NRL for being present on this occasion and providing their valuable insight and thoughts about our company. I would also like to extend my thanks to all the analysts , investors, experts for being present here and raising their valuable points , and helping us mak e this event a grand success. We also solicit similar support, cooperation from the investors and the analyst s’ fraternity in the days to come. I must also take on record our sincere appreciation to Emkay Global Financial Service s Limited for nicely volunteering this event for the company. I also extend my thanks to the organizing team for beautifully organizing this event in most dignified manner. Now I request everyone to join us for high tea . Thank you.

"Oil India Limited
Q1 Q1 FY26 Earnings Conference Call"
August 13, 2025

MANAGEMENT : MR. SALOMA YOMDO – DIRECTOR (EXPLORATION
AND DEVELOPMENT) – OIL INDIA LIMITED
MR. ABHIJIT MAJUMDER – DIRECTOR FINANCE – OIL
INDIA LIMITED
MR. AJAYA KUMAR SAHOO – EXECUTIVE DIRECTOR
(COMPANY SECRETARY) – OIL INDIA LIMITED
MR. ABHIJIT DAS – CHIEF GENERAL MANAGER (F &
A) – OIL INDIA LIMITED

MODERATOR : MR. VARATHARAJAN – ANTIQUE STOCK BROKING

Oil India Limited
August 13, 2025

Moderator: Ladies and gentlemen, good day, and welcome to the Oil India Limited Q1 FY '26 Earnings Conference Call hosted by Antique Stockbroking Limited. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Varatharajan from Antique Stock Broking. Thank you, and over to you, sir.
Varatharajan: Thank you, Manav. A very good morning to everyone. I'd like to extend a very warm welcome to all the participants as well as the management of Oil India Limited. We have with us the senior management of Oil India, represented by Mr. Abhijit Majumder, Director of Finance; Mr. Saloma Yomdo, Director, Exploration and Development; Mr. Trailukya Borgohain Director Operations; Mr. Bhaskar Jyoti Phukan, MD – NRL; Mr. Ranjan Goswami – ED Business Development; Mr. Anup Kumar, ED; Mr. Ajaya Kumar Sahoo, Company Secretary; Mr. Abhijit Das, Chief General Manager (F & A)
I hand over the call to Mr. Abhijit Majumder for their opening remarks, and then we can move on to the Q&A. The floor is yours, sir.
Abhijit Majumder: Thank you, Mr. Varatharajan. Good morning, ladies and gentlemen. A warm welcome to all the participants joining us for Oil India Limited's Investor and Analyst Conference Call for the first quarter of financial year '25-'26. I'm Abhijit Majumder, Director of Finance at Oil India Limited. I'm joined today by my esteemed colleagues from both Oil India and our material subsidiary, Numaligarh Refinery Limited. I would now like to invite our Chief General Manager, Corporate Finance to present the opening remarks.
Abhijit Das: Thank you, sir. Good morning, ladies and gentlemen, all who have joined in this con call. At the outset, I would like to thank Antique Stockbroking Limited for hosting today's analyst and investors call for Oil India Limited. Myself is Abhijit Das, the Chief General Manager, Oil India Limited, hosted in a corporate office in Noida.
Along with me, our senior management team has joined along with the other colleagues. Mr. Abhijit Majumder, our Director of Finance; Mr. Saloma Yomdo, Director, Exploration and Development; Mr. Ajaya Kumar Sahoo, Executive Director, Company Secretary and Mr. Saket Garodia of NRL Finance team. Along with this team from our headquarters and corporate office in Noida, Mr. Goswami has joined from our field headquarter. He is ED Production.
On behalf of the management, I welcome you all in our first quarter earnings call for the quarter ended 30th June 2025. The final results of this quarter has been approved by our Board of Directors in its 570th meeting, which was held on 12th of August 2025 and has been duly published as per the requirement of the statute.
Just a quick overview of our strategic steps which we have taken. Oil India continued its steady transition into the integrated energy company. On upstream front, we have been maintaining

consistent growth in both oil and gas production on a quarter-to-quarter basis. Our midstream pipeline expansion is progressing well and has been targeted.
The downstream side expansion of Numaligarh Refinery is gathering momentum and going to get commissioned as planned in the phased manner. We are expecting to get it commissioned in the month of December 2025. A few operational highlights, which has been taken place in this quarter, I'd just like to bring to the knowledge of this entire audience gathering here.
In production front, we are continuing in growth story during the quarter, OIL has pursued its efforts towards ensuring national energy secur

ity by sustaining oil and gas production from its
mature fields in Northeast at 1.680 million metric ton oil and gas equivalent for the current quarter as compared to 1.689 million metric ton of oil equivalent in the previous quarter of '25.
We sustained momentum in our upstream operation. The crude oil production for the quarter stood 0.85 million metric tons. There has been a marginal decrease of 2% on year-to-year, but we have been achieving 1.07% on quarter-to-quarter basis increase in production of crude oil.
The natural gas production for the quarter has reached 0.83 bcm. On quarter-to-quarter, it has increased by 2.61%, and on a year-to-year, it is 1.1%.
We have a good news during the quarter that during the quarter, OIL has discovered a hydrocarbon discovery in Namrup-Borhat OALP block, which is in Upper Assam. And we have also commenced natural gas production from our Bakhritibba Discovered Small Field in Rajasthan in the district of Jaisalmer. This growth reflects our continued focus in well

intervention and field development activities.
I would like to bring some glimpse of our financial highlights during the quarter. The average crude oil realization, there was a slight decline during the quarter, which has decreased around 22% as compared to year-to-year basis. In the current quarter, we had a realization of $66.2 per barrel as compared to $84.89 per barrel.
The natural gas price stood at 6.72 MMBTU, aligned with the regulatory benchmark has been guided by the Government of India. Our stand-alone revenue has -- we have registered a stand-alone revenue during the quarter of INR5,012 crores as compared to INR5,839 crores in the previous year. We have a marginal other income, but our total income during the year was INR5,188 crores as compared to INR6,001 crores in the previous year of the first quarter.
Our PBT for the current quarter is INR1,097 crores as compared to INR1,974 crores in the previous quarter -- in the previous year, and our PAT has gone down because of the sharp decline in the price of crude oil. We have registered the bottom line of INR813 crores as compared to INR1,467 crores in the previous year.
We had a substantial other comprehensive income because of our strategic investment in Indian Oil Corporation. The share price has increased around INR1,400 crores or we are having 7.284 million equity shares of INR10 each but we have a very strong other comprehensive income, and it has increased as compared to the previous year. Because of low PAT, our earnings per share has gone down by INR4. We have earnings per share of INR5 in the current quarter.

The EBITDA margin has gone down from 43% to 34% in the quarter because of lower revenue and small increase in our operating expenses for providing provisions against our well assets. Two major things which has happened in the current year is that we have provided of INR307 crores in our two Bangladesh block, which we have decided to increase in this quarter. Another provision, which is having made of our another overseas joint venture is Gabon block, which is we have provided of INR207 crores because of nonperforming as per the plan.
Our performance from our material subsidiary, we have Mr. Garodia here with us to answer all your questions. But the revenue of our material subsidiary is INR6,208 crores during this quarter. The refinery has been operating at a capacity of 106%. We had a crude throughput of 799 TMT as compared to 764 TMT in the previous financial year. The EBITDA of our material subsidiary is INR786 crores and the PAT is INR488 crores.
The consolidated performance of the company -- the company has sustained a consolidated PAT of around INR2,047 crores in spite of dip in PAT in the stand-alone profit. The major reason of increase in the group performance is contribution from our material subsidiary, which -- and our performance

from our foreign subsidiary for our Russian investment. They have contributed INR544 crores and INR780 crores, respectively, where they registered a better group performance for the quarter.
Our EPS per share in the group has also increased marginally from INR11.59 per share to INR11.66 per share. With this, I'd like to share my closing thoughts with you before I hand over to the gathering to pick up the question-and-answer session. Oil India has delivered resilient and disciplined performance in the first quarter of the current financial year, supported by its operational stability and prudent financial execution.
As we look ahead, our focus remains on execution, excellence, production growth, long-term value creation across portfolio of our company. With this, I like to conclude my remarks and welcome you all in the questionnaire session. But our request is that kindly put up two queries per participant to allow time for all. Thank you, sir.
Moderator: Thank you very much, sir. We will now begin the question and answer session. We have our first question from the line of Vivekanand from Ambit Capital.
Vivekanand: My first question is on the production outlook and guidance for FY '26 and '27. Could you refresh us on that? And that's my first question. The second question is on the capex that you have been guiding for FY '26 and '27, if you can give us the number as well as the split across key projects like contribution to NRL and also the upstream operations and other areas like CBG?
Abhijit Majumder: ED Production, are you there?
Dilip Goswami: Yes, sir.
Abhijit Majumder: Can you take the first question?
Dilip Goswami: Yes, sir. Regarding first question, our incremental oil and gas columns were largely driven by a few high-performing domestic fields like Baghjan. Baghjan field is continuing delivering strong

volumes supported by expanded gas infrastructure. Barekuri has emerged as a key contributor. We are planning 15 wells to drill in this area, which will give that Mission 4 plus production ramp-up. Kumchai, we developed that network delivery line and Kumchai also taking a step up for this -- after pipeline connectivity, Kumchai production is also ramping up.
Vivekanand: Would you be able to help us with some quantitative guidance on FY '26 and '27? I think -- I believe the last time you had highlighted 3.5 MMT of oil and 3.5 -- sorry, 3.7 for oil and 3.5 for gas, if I'm not mistaken?
Abhijit Majumder: So our actual achievement for '24, '25 has been 3.458 for oil and 3.341 for gas -- 3.252 for gas. Now for '25-'26, we have set a target of 3.70 MMT for oil and 3.40 for gas. I mean 3.65 for gas. Does that answer your query or you want data for '26, '27 as well?
Vivekanand: Yes, yes. The latter would be helpful, '27 also would be great?
Abhijit Majumder: '27 is 3.95, that's crude oil, MMT. And natural gas would be 4.31.
Vivekanand: All right, sir. This is very helpful. If you could just address my second question, that would be great.
Abhijit Majumder: Can you repeat the second question, please?
Vivekanand: The capex for FY '26 and '27, along with some details of the area?
Abhijit Majumder: CGM Corporate Finance is taking that question. He's replying.
Abhijit Das: In the previous year, as you have all known that there was an increase in our capex expenditure by about 123% as planned. For '25-'26, we have planned INR6,995 crores or you can say INR7,000 crores.
Abhijit Majumder: That is at the standalone level, right? Oil as an upstream entity. Yes, please continue, sir.
Abhijit Das: And during this quarter ended, what we have achieved for our capex expenditure. For exploration and development, we have already spent around INR1,100 crores. For our capital equipment and facilities, it is around INR900 crores. For our survey expenditure, it is INR250 crores. If we take this expenditure for our E&D activities, it i

s around INR2,300 crores.
After considering this, if we think of some overseas investment, also we have spend around INR300 crores majorly in G&P activity and drilling. Other than that, we have also contributed around INR550 crores for our investment in NRL, the final call amount which we have been due for payment. So for this quarter, if you can sum up, you can find it is INR3,350 crores for the current financial year as targeted around INR7,000 crores.
Abhijit Majumder: So would you like to -- Saket, another part of the capex?
Saket Garodia: With regard to Numaligarh Refinery, the capital expenditure target for the current year is around INR9,133 crores, which is largely on account of the expenditure to be made in its current refinery expansion plan and the petrochemical unit that will be coming up. So current year, we are

planning a capex of INR9,100-odd crores. And in the next year, the capex will be around INR7,300-odd crores.
Moderator: We have a next question from the line of Probal Sen from ICICI Securities.
Probal Sen: Yes. Sir, just about this Russian investment that was mentioned that it has actually contributed to the console numbers. Just wanted to understand where does the -- I mean, how is the payment mechanism actually working at this point of time? And what sort of dividend can we actually expect for the rest of the year? Are there any issues with respect to sanctions or anything else with respect to repatriating our share of dividend from Russia at this point of time?
Abhijit Majumder: Do you have any other question or that's all?
Probal Sen: The second question, sir, was with respect to capex. I did not get the audio completely. I just wanted to clarify that the FY '26 guidance mentioned was INR6,995 crores. Just wanted a clarity on that. Is that the correct number?
Abhijit Majumder: Yes, that's the right number. Yes, correct.
Probal Sen: Okay. All right. So then the Russia part was the main question that I had?
Management: See, as far as the dividend from two of our investments in Russia are concerned, that is TYNGD and Vankorneft. We have almost recovered close to 95% of our investment combined in these two assets. 111% of investment has been recovered through dividends for the Taas-Yuryakh asset and close to 83% plus dividend -- sorry, investment has been recovered through dividend in Vankorneft asset.
As far as the outlook for the current year is concerned, this will be dependent on the performance. We do not have any guidance available as of now how much of dividend will come. But in the current quarter, we have received around USD 11 million of equivalent of dividend from Taas-Yuryakh project.
And to just update on the performance of these assets and an assurance that dividend flow will continue. For your information, the Taas-Yuryakh asset is still producing at the peak level of 5-

plus MMT equivalent of oil, and that is still picking. So there is no downside to the dividend
inflow that we see from this asset. As far as Vankorneft is concerned, this is in the declining
trend, but all the necessary infrastructure logistics have been upgraded to arrest those declines.
So there will be continuous flow of dividend in that asset also. And as I told you, 95% of
investment has been recovered. We are at least sure that during the current year, 100% of
investment for both the assets will be recovered by OIL. And then it will continue also further
in the coming years.
Probal Sen: Got it, sir. One last question, if I can squeeze in on NRL, you already mentioned the capex plan.
Can we also get a sense of the operational progress of the expansion in terms of physical
progress, time line for the completion?

Management: With regard to the physical performance, the company has achieved almost 106% utilization in
the capacity utilization in

the first quarter with nearly 799 TMT of throughput. And for the rest
of the year, we expect to overshoot the capacity utilization of 100% again this year. So we'll be
-- we are targeting for crude throughput of more than 3 MMT in this year.
And with regard to refinery expansion, our -- as has been informed, so the commissioning of the
project will start in phased manner from December '25 itself. And slowly, the productions will
also get ramped up as and when the unit starts coming up and start getting commissioned in the
next financial year.
Moderator: We have a next question from the line of Karen Kwan from Pine Bridge.
Karen Kwan: I have a couple of questions. The first question is, as we're upstream operator, it seems like we
won't have too much direct impact from the U.S. tariff. But from the indirect impact front, we
could. Can you comment on what sort of impact do we see from the U.S. tariff? And also, what
sort of oil price expectations do you have for the next 12 months?
And secondly, sorry, I could not hear the fiscal year '26, '27 sort of capex number. Was it 7,300
for the fiscal year-end '27 March? And also lastly, can you give us any updates in terms of --
previously, we were looking into doing some trial runs for the hydrogen cell e-buses and the
solar project collaboration with HPPCL. Just some updates on the ESG fund for renewable
energy and any new sort of renewable energy capacity that will be online for the next 2 to 3
years?
Abhijit Majumder: As far as the impact of U.S. tariffs on oil's operations, I mean, the upstream operations are
concerned, let me clarify that there would be no impact at all because ours is all internally
consumed. We are not -- we don't export anything anywhere. So we are a hydrocarbon deficient
country. Hence, everything will be internally consumed. So we don't have any apprehension as
far as U.S. tariff is concerned. So with respect to capex for '26, '27, that's what you wanted to
know?
Karen Kwan: Yes, because I heard for the first one, FY '25, '26 is INR9,133 crores from the previous question.
And then I heard INR7,300 crores for fiscal year '26, '27. Is that INR7,300 crores number
correct? If not, what's the number?
Abhijit Majumder: No, your numbers are correct. However, we have a material subsidiary who would be investing
about INR9,100 crores for '25-'26. And OIL as parent would be investing INR6,995 crores.
These are all investment numbers for '25-'26. As far as '26-'27 is concerned -- sorry?
Karen Kwan: Please go ahead.
Abhijit Majumder: Okay. So as far as '26-'27 is concerned, OIL would be investing INR7,585 crores, covering the
various heads under which the investments will be made, and NRL...
Abhijit Das: INR7,300 crores.

Abhijit Majumder: And NRL investment would be INR7,300 crores. So total would be INR14,000-plus crores for
'26-'27.
Karen Kwan: And can you just quickly comment on the ESG side?
Abhijit Majumder: See, yes, we have earmarked a sum of INR25,000 crores to kind of achieve our net zero target
by the year 2040. So investments will be made in different segments, starting from solar, wind
energy. We are also into CBG, which is the compressed biogas produced from -- I mean, mostly
municipal solid waste. So these are some of the projects. We are in the process of setting up
about 25 CBG plants across different states in India.
We have already tied up with a few states, already the MOUs and other agreements have already
been signed. Additionally, we are going to set up nearly 1.9 gigawatt of solar energy, mostly in

two states, one of which is in the Northeast, Assam, and the other one is Rajasthan. In these two states, we will be setting up solar -- I mean, solar energy plants, and this will actually be done by our wholly owned subsidiary, Oil Green Energy Limited.
Dilip Goswami: And one more, sir, 150-megawatt solar plant at Himachal Pradesh.
Karen K

wan: So for the 1.9 gigawatt solar in the North Eastern Rajasthan, what is the rough time line we expect it can be up and running? And lastly, we're not doing the hydrogen cell e-buses anymore, right?
Dilip Goswami: March '26 target.
Karen Kwan: March '26, very fast. Okay.
Abhijit Das: March '26. Regarding the solar projects, as already -- sir has already told, so we are aiming 645 megawatts in Assam, and 1 gigawatt in state of Rajasthan and 200 megawatts green energy projects in Rajasthan. And as far as Himachal Pradesh is concerned, we are already establishing a 1-megawatt capacity of green hydrogen plant in a place called Baddi in Himachal Pradesh. EPC contract has been awarded and the work is in progress right now. And as far as the 150-megawatt solar project is concerned, we are discussing with the Himachal Pradesh government team. These discussions are going on. Hopefully, this will come up.
Abhijit Majumder: Yes. Just before we close, there's a bioethanol plant coming up in the Northeast. So that is going to be commissioned very soon. The date actually has already been finalized. That is going to be coming, I mean, inaugurated on 8th of September. That's a bioethanol plant, which is meant for mixing of bioethanol with HS and MSD.
Moderator: We have our next question from the line of Somaiah V from Avendus Spark.
Somaiah V: Sir, my first question is on the NRL projects. So if you could just help us with status of completion. So for instance, the refinery in terms of completion, it's 90%, 95% and also in terms of pipeline length from Paradeep to Numaligarh, the total length, and so far, the completion achieved? Similarly, on the other side, the pipeline to Siliguri. If you could just help us with some details in terms of extent of completion in all these projects would be helpful?

Management: Yes. So with regard to our refinery expansion project, the overall physical progress of around 80% has been achieved by the end of the quarter 1. And in case of our CNPCL, that is the crude oil pipeline, we have achieved around 84% of physical progress. And with regard to the refinery expansion part, it is around 76%. So we are -- the pipeline -- crude oil pipeline is expected to get commissioned in the early Q4 of '25, '26.
And just to inform that we have -- out of 1,635 kilometers, we have already opened RoU for nearly above 1,500 kilometers. And the phase commissioning of the project is set to begin from December '25 and wherein each unit in phased manner will start getting tested and commissioned and production will be ramped up slowly.
Somaiah V: Understood, sir. Sir, in terms of utilization of this expanded capacity, let's say, 6 months from commissioning, ballpark, where should we be able to reach to?
Management: So we are expecting that in the second half of financial year '26, '27, actually additional output from the NREP will start coming in. However, in the initial stage, the production levels will be around 40% additional. And then going forward, we are expecting that in the financial year '27, '28, we will have an output of nearly 80% from the new refinery.
Somaiah V: That's helpful, sir. So second half of FY '27, roughly 40% kind of utilization of the expanded capacity?
Management: Yes. That's right.
Somaiah V: Got it. Sir, also on the upstream part, in the quarter gone by, were there any shutdown by customers that impacted our production? And also for this quarter, are we seeing any shutdown-related impact to production?
Dilip Goswami: Yes, sir. This shutdown of non-upliftment of gas is affecting our production. We are setting our wells frequently. So once it is that connection, IGGL connectivity is -- build up and DNPL also get that permission, and it will be -- that production will ramp up.
Somaiah V: Yes, sir. I was just trying to understand whether the last quarter, whether any fertilizer or any other ind

ustry, there was a shutdown that led to marginal decline. So just want to understand that?
Dilip Goswami: Yes, sir, that shutdown is one is that BPCL -- VCPL, they have shut down for more than 20 days. Then BVFCL also have shut down. Numaligarh also, some amount they have taken less. So all these are APL, they are taking maintenance up. So these are affecting our production, sir. Now these are now started taking gas.
Abhijit Das: I think the LPG plant was suppose to shut down for a month before.

Dilip Goswami: LPG plant also shut down for a month, yes, sir.
Somaiah V: Got it, sir. Sir, one last question on the other expense. This run rate has been higher. So for instance, this quarter, it's around INR1,700 crores. So one is this INR300 crores provision related

to the Bangladesh asset. But I think in the opening remarks, you also mentioned another INR200 crores provision.
So total INR500 crores of provision is within this INR1,700 crores. That's the first part. And second, in general, this run rate has been going up last two, three quarters. If you can just help us with some final details as to...
Abhijit Majumder: I didn't get the last part of your question. One is the normal on provision and what is the other part?
Somaiah V: Other part is your other expense, if you -- the breakup that you give as part of the...
Abhijit Majumder: Everything is [inaudible 0:0:34:57] only. However, what exactly -- see, Bangladesh was actually -- it is flowing from the previous year. Bangladesh, we had our performance bank guarantee invoked by Petrobangla, which is the equivalent of DGH in Bangladesh. So with respect to some MWP, our BG was invoked. However, both the companies, as you know that we are in partnership with OVL.
So both of us decided to quit from that particular project. So this INR285 crores roughly, which the amount was invoked in the previous year, and this was charged as expenses in the current year. This has got nothing to do with the current year as such. It is just flowing from the previous year.
And there were a few other wells, which is a regular kind of a thing in an E&P business. We have full provisions with respect to a few wells. There were basically two wells. One is Mechaki and the other is Bhojo. These are the two wells in respect of which we made provisions.
However, studies are going on. And if we get to see some better results in the days ahead, possibly we might take a different call and reverse it. That decision is yet to be taken. These are broadly the provisions that we have taken in our books in the current quarter.
Somaiah V: Got it, sir. Sir, I was just looking at this -- the total other expense breakup of the INR1,700 crores, so where you have your contract cost expiration...
Abhijit Majumder: On average, we take about INR400 crores of provision annually. But this time, because of Bangladesh, which by itself took away INR285 crores, that -- apart from that, others are regular provisions. There are nothing -- I mean, these are not operational hiccups. These are normal provisions, which any E&P company would take, and we have also taken.
Moderator: We have our next question from the line of Achal Shah from Ambit Capital.
Achal Shah: Can you throw some light on the inventory losses at NRL, like out of the reported GRM, how much was impacted due to inventory losses? That is my first question. And second on -- sir, what is your near-term and long-term crude price outlook like for F '26 and then onwards?
Management: I will take the first question. With regard to the impact on GRM of NRL. So NRL reported a GRM of $5.02 per barrel in the -- for the period of April to June '25, '26. And we had to take a hit of $2.93 for this particular quarter on account of loss of the value of the inventory, which was

largely on account of fall i

n the crude prices compared to 31st March and closing at 30th of June.
So for the second part of the question.
Abhijit Majumder: I mean it's a very difficult question. See, crude price, nobody can predict. And as conservative entities, we also cannot make a real prediction about a major increase in the crude oil price in the days ahead. So our outlook would be at best, maybe 65 to 70. We are currently hovering at around 66, 67. So we don't expect a major increase in the crude oil price in the days ahead. If that happens, that will be very good for us because the result that you have seen this time is largely because of a 22% drop in crude oil price vis-à-vis quarter 1 of '24, '25.
Achal Shah: Understood, sir. Sir, any update on the time line for invoicing the gas as new well gas?
Abhijit Majumder: See, as far as new well gas is concerned, the notification says that it has to be supplied to the city gas distribution, which is on top of the list. There are other sectors as well, but CGDs have to be provided -- have to get the preference first. Since CGDs are yet to come up in the Northeast, we are facing that problem.
However, we have made a request to the ministry to let us allow the gas to be lifted by NRL, give us that marketing freedom so that -- see, we are sitting on a reserve of roughly 140 bcm of gas. So as far as supplying gas is concerned, we are ready. But then we have to have the network

there and also the sector to which the gas can be supplied.
Now if CGDs have to be supplied, then we'll have to wait because CGDs will come up -- it will take some time. Maybe not before '28. But in the immediate term, if we are permitted to supply gas to NRL or other producers, then we are okay. We have made a request to the ministry. If that is granted, maybe we will be able to fetch the premium that the notification provides for.
Moderator: We have our next question from the line of Vaibhav Badjatya from Honesty and. Integrity Investment.
Vaibhav Badjatya: I have two questions on the Northeast gas pipeline network. So first is the gas flow that can happen from Numaligarh to Barauni, whenever we ramp up our production, I think that connection is still not fully ready as per my knowledge because there is some compressor -- Guwahati station has to install some compressor station, which has not yet started.
So I just wanted to understand what is the status on that compressor station and when that can be commissioned so that full gas flow can be established. Second is before Numaligarh, for gas to flow still Numaligarh we also need DNPL pipeline, which has to be declared as common carrier. So I'm also at lost what is the status of DNPL being declared as common carrier for that to happen? So if you can just provide a status update on these two things, that would be helpful?
Abhijit Majumder: See, presently, the infrastructure is like this. DNPL is already there, which is supplying roughly 1 MMSCMD of gas to Numaligarh. And that capacity is now being enhanced. It would be able to supply roughly 2 to 2.5 MMSCMD of gas. Now that is independent of whether DNPL is designated as a common carrier or not because this is happening already.

Now second part of the -- we are yet to get clearance from the Ministry for the feeder line, feeder line, which will run parallel to the existing DNPL line. So that would actually supply gas to Numaligarh and beyond because that will be part of the IGGL network that is being commissioned. So IGGL would certainly be the common carrier in this case.
Whereas DNPL will play a limited role to the extent that it would supply gas to the customers, various customers in the Northeast to whom they are already supplying. Beyond these -- if the gas has to flow beyond Numaligarh to other parts of the country, you need the IGGL network, which is the first phase. And that first phase is already commissioned.
The

re's no compression issue, nothing is there. But because the lower end is not connected yet or the upper end -- I'm wrong, upper end. Upper end is not connected yet, we are unable to kind of inject gas into the system so that it can flow to Numaligarh and beyond.
Vaibhav Badjatya: Right. Yes. Sir, my question was on that -- onward flow from -- onward flow itself. So on the Phase 1 itself. So I think if gas has to flow from Assam towards Barauni, I think at Guwahati, we need compressor station, right? Otherwise, the gas will not be able to flow freely till Barauni.
I think that compressor station commissioning is still pending, if I'm not wrong?
Dilip Goswami: That compressor station already commissioned at Baihata near Guwahati.
Vaibhav Badjatya: Okay. That has been commissioned. Okay. So the only hurdle is basically our upstream connection?
Management: Upstream connection, yes.
Vaibhav Badjatya: And there is no proposal as such to use DNPL itself to supply to other customers apart from Numaligarh and local gas consumers. There is no proposal as such to declare DNPL as a common carrier?
Abhijit Majumder: No, nothing as such. DNPL is essentially a supplier within the Northeast, largely in the state of Assam only.
Moderator: We have our next question from the line of Nitin Tiwari from PhillipCapital India.
Nitin Tiwari: I'm slightly confused about the status of pipeline and capacity because there are several phases, several pipelines involved. So when you mentioned that the expansion that we are talking about in case of DNPL is from 1 to 2, 2.5. So that's the expansion of the existing pipeline and the feeder pipeline is in addition to this pipeline or the feeder pipeline coming in along with the pipeline would lead to the expansion? That is one.
Secondly, like as you mentioned that the Phase 1 of IGGL is completed and is commissioned.
So now I mean, the connection that you referred to, what is that connection that is required? And where are we in terms of our road map to increase our gas production from here to about 5 Bcf that we've been targeting? I mean what are the road blocks to that ramp-up? So if you can just comment on that, then I'll ask my second question?

Abhijit Majumder: It was a very long one, and I couldn't hear you properly. Anyway, whatever I have understood of the question. See, we are presently -- our production is 3.2, and we are supplying the entire gas to the various customers located in the Northeast. So additional to -- make it 5, which is basically DNPL alone. DNPL is now being -- capacity is now being enhanced from 1 to 2. So that would, in any case, make it 4 plus.

So whatever we are saying that 4 bcm of gas would be supplied to customers in the Northeast, for which I do not really think that the feeder line has to come immediately. Feeder line would make it -- would make the capacity rise to maybe 7 plus because feeder line is a parallel line, and that would kind of evacuate much larger quantity of gas than the 5.

For 5, we need some network within the fields between the various wells which is OIL's own network -- which would be OIL's own network, plus the DNPL line would make it comfortably 5 plus for which we don't need a feeder line. However, feeder line, the objective is to finally achieve our target of supplying roughly 8 to 9 MMSCMD of gas in the whole of Northeast. And the surplus, if any, that would be supplied through the IGGL network to Mainline India.

Nitin Tiwari: So that's what I was referring to. So the expanded capacity of DNPL is what is pending for common carrier approval. So you're expanding the DNPL from 1 to 2.5 MMSCMD 2, 2.5 and the expanded capacity is pending for common carrier approval. Is that the right understanding?

Dilip Goswami: Presently, DNPL line is transporting 1 million gas and they have revamped that line and that capacity will ramp up to 2.5 million. And

this can be connected to IGGL if they got the PNGRB clearance, common carrier clearance.

Nitin Tiwari: Understood. So the -- I mean, you also mentioned that there's a parallel line which you are planning along with DNPL, right?

Dilip Goswami: Yes. That is the IGGL feeder line up to Duliajan.

Nitin Tiwari: So this will be in addition to the 2.5 MMSCMD that you...

Management: Yes.

Nitin Tiwari: This is still in plan. This is not like incremented as of yet?

Dilip Goswami: Already, this is projected to MOPNG. Once that approved, that line will be laid. Our target is March '27.

Nitin Tiwari: March '27, okay. And in case of IGGL, the upper end connection that you mentioned, so what is that connection that is still pending for IGGL?

Dilip Goswami: Once it can -- laid the line, get the permission, then only that upper end connectivity will be there.

Nitin Tiwari: No, sir, this upper end connectivity is where? Where is it connecting?

Dilip Goswami: Oilfield at Duliajan.

Nitin Tiwari: Oilfields connectivity is pending. But the pipeline is ready and...

Dilip Goswami: Pipeline is ready up to Numaligarh. To Numaligarh to this oilfield Duliajan, it is around 165-plus kilometers. Once that permission is given by Ministry, then that Duliajan oil field will be connected, Oil India field will be connected.

Nitin Tiwari: Understood. And sir, my second question is with respect to the gas pricing, which was -- I mean, a caller also raised earlier in the call. So we are not able to build the gas as per NWG. So I just wanted to understand that is this gas not eligible for gas swapping? I mean, because -- I mean, can not the swapping of gas make this gas eligible for NWG prices? By swapping, I mean...

Abhijit Majumder: Repeat your question. What exactly you mean by swapping?

Nitin Tiwari: Yes, sir, I'll elaborate on my question, sir. So if like suppose HPHT or any other gas is being used anywhere else in the country, I mean, gas molecule is gas molecule. I mean, can it not be like virtually swapped in terms of pricing only for Oil India to get a better pricing for its gas? I mean city gas companies in rest of India, I mean, are using HPHT and other -- gas from other sources and paying a higher price for that.

And Oil India is not able to evacuate its gas from Northeast. But in terms of at least pricing, maybe Oil India can get NWG pricing and the city gas companies can accordingly pay NWG price in the rest of the country instead of like waiting for city gas to develop in Northeast and then NWG billing can start. So is that not a possibility, sir?

Abhijit Majumder: I'm just trying to answer your question according to my understanding of the question. So now I am saying that there are already CGDs coming up in the Northeast. So for us to sell gas to other CGDs in other parts of the country would arise only after we meet the entire requirement of the CGDs located in the Northeast.

So swapping, whether it will happen or not, that would depend entirely on the surplus that I'm generating after meeting the requirements of the customers in the Northeast, including the CGDs. Now once the Northeast gets connected to the Mainland India, then gas can flow anywhere, and CGDs are buying gas on IGX, that is the exchange at which the gas is traded, that

price is a different price.
And for that quantity of the gas, which the CGDs would offtake, I would certainly get a different price. That is not dependent on the nomination price or on the premium gas, et cetera, because CGDs are buying gas based on individual agreements they're entering into with the CGD -- I mean, the buyers -- the CGD buyers are entering into with the suppliers.
Nitin Tiwari: So sir, let me expand the point I was trying to make a little bit more. So you are already supplying gas to, say, NRL in Northeast, right? So NRL as per priority order is not eligible for a lower-priced gas, co

rrect?
Abhijit Majumder: Is eligible. However, it is lower down in the list.
Nitin Tiwari: In the priority order?

Abhijit Majumder: Yes.
Nitin Tiwari: I mean in terms of priority order, city gas gets to the first priority, right? So what I was trying to say is that suppose like right now, we are limited by our evacuation capacity to rest of the country, right, because of the pipeline connectivity. Now I mean, is there a possibility that city gas companies in rest of the country because they are buying gas from exchange for HPHT, whether it's HPHT or any other gas for their consumption.
So is there a possibility that a virtual swap can be done? I mean, in terms of like swapping only the differential pricing is what needs to be charged. And so -- I hope I'm able to make my point, I mean, that NWG pricing -- at NWG pricing, certain volume can be offered from Oil India to these companies and basically exchange, in lieu of that NRL could be charged the higher prices could be, like say, HPHT price.
I mean because at the end of the day, city gas gets a higher priority in terms of gas allocation of whatever domestic APM gas is there, APM and NWG gas is there. So that's what I'm trying to get at because I mean, because our problem is that until and unless city gas develops within Northeast until then you won't be able to bill on NWG, right, unless until that happens?
Abhijit Majumder: See, we have made a request to the ministry to let us sell gas to NRL because NRL is a steady customer, not just a customer, there are material ssubsidiary. Now the capacity is being enhanced from 3 to 9. Obviously, their offtake of gas would also go up. So we are -- what we are saying is supposing every gas that I'm producing from the nomination area, the pricing is already fixed. It is fixed by the government notification.
Only with respect to the gas produced from wells, through new well intervention or some work over operations, that would fetch the premium. But otherwise, the nomination gas price itself is fixed. What we are saying, as you have mentioned, that if you are unable to supply gas to CGDs, who would you supply it to?
I can always supply it to other customers. My only limitation is that I will not be able to get the premium. Apart from that, anything -- any gas that I am producing, I can sell it to customers, not just within Northeast, I can sell it to customers elsewhere also. Now when it goes to customers located in other parts of the country, who is the -- who will help me fix the price? It is only IGX. So whatever IGX, the price at which gas will be traded at the exchange, I will get that price, irrespective of whether it is produced from nomination, like suppose I'm saying, I have a few pre nelp exploration development fields in the Northeast itself, where the price is different because that's not a nomination area. That price because your PNGRB notifies two prices. One is the nomination price, other is the -- other than nomination price. Even within Northeast, as we speak, I'm getting a different price for gas produced, say, from my Dirok field. So wherever there are DSF -- I am having DSF fields in the Northeast and some of the fields will soon be monetized.
Once those fields are monetized, the pricing is not dependent on whatever is there in the notification. I mean, there is a notification, but that's a different price. That's a higher price. So

the point that is trying to make is that through well interventions, if you are increasing your production, you will get the premium only if you supply it to CGD first. Maybe after that, there are other companies, maybe third or fourth in the order is the refinery.
Refinery is already there. Now our point is that since refinery -- for the refinery to finally get commissioned and finally operate at its full pote

ntial, it will take some time, till such time, let
us -- I mean, till CGDs would -- for the CGDs to come up, it will take some time. Refinery is going to be commissioned by end of this year.

So let us allow -- let us be permitted to supply gas to the refinery at the premium. We are not kind of compromising on the premium. If the gas is produced through OIL intervention or through work over operations, the premium that we are entitled to, we must get even from the refinery. But now the refinery is over in the least, we are requesting the government to let us allow supply to the refinery till the CGDs come up. Does that -- I mean...

Moderator: We have our next question from the line of Hardik Solanki from ICICI Securities.

Hardik Solanki: So if you look at the consolidated numbers, your profit from the associates and JV have jumped sharply to INR724 crores if you look at year-on-year and quarter on. So can you just break down among the subsidiaries or the JVs where these properties flowing from?

Management: You have seen that our PAT in the stand-alone is INR813 crores and the consolidated is INR2,046 crores. We have subsidiaries, associates and joint ventures, both domestic as well as foreign. The major amount which has been contributed by our material subsidiary for increasing the group PAT is INR544 crores from NRL as compared to INR450 crores in the previous year. The major profit -- share of profit, which has came from our Russian investment, as I already mentioned in my opening remarks, is that in previous year, we had INR150 crores of and the current year, it is INR780 crores. This makes the major difference between our group performance as compared to the previous year. This is INR540 crores and INR780 crores from these two companies. One is our Russian investment of INR780 crores and INR544 crores from our major subsidiary.

Moderator: We have a follow-up question from the line of Somaiah V from Avendus Spark.

Somaiah V: Sir, in terms of this Russian assets dividend payment, from Taas, this is an annual payment that we have received for the previous calendar year. That is one. And with respect to last year, this number being lower, is it more to do with the payment ratio or is it to do with the performance in the previous year? That is with respect to Taas. And Vankorneft, in general, what is the dividend that we can expect in a year, so based on last 1 or 2 years, what we have seen as a precedence?

Management: See, as far as the Taas-Yuryakh project is concerned, I'll give a rough number received in the last 2 years. In 2023, we received an amount of USD 51.5 million equivalent of dividend inflow that is corresponding to the share of Oil India stake in that project. That number went up to USD 70 million in '24. And in '25, as of now, we have received around USD 17 million of dividend.

And we expect that the amount of dividend that we have received last year will almost receive that -- to that extent, we will receive a similar dividend is expected. However, it is conditional upon the geopolitical situation and how the price is moving going forward. So this is about us and as far as the Vankor is concerned.

Vankor asset has given us a dividend of USD 37 million in '23 and that has gone up to USD 39.6 million or USD 40 million -- close to USD 40 million approximately in 2024. During the current year of 2025, we have received so far USD 11.2 million from the Vankor asset, and we expect the trend to continue for the current year also.

Somaiah V: Quite helpful. Sir, if you could just help us with the net debt numbers at NRL and the excise duty hike that was taken last quarter, so we have that benefit in NRL?

Management: Yes. So with regard to excise duty, on 7th of April, the excise duty rates increased by INR2, which has benefited by INR1 in our -- INR1 per liter for both MS and HSD for NRL. In the first quarter,

our Northeast -- the impact of the increase in excise duty has been INR118 crores in our profit amount.

Moderator: We have our next question from the line of Vivekanand from Ambit Capital.

Vivekanand: My question is on the gas output. You mentioned that there were certain constraints you faced in stepping up gas output because of maintenance of NRL and also some shutdowns of the fertilizer and power plants. Was this unusual or was it similar to the shutdowns that happened last year? And on a related note is that now when you have given a guidance for the rest of the fiscal year, which implies a healthy growth in gas output. What gives you the confidence of getting that output?

Dilip Goswami: This is not unusual. This is usual. This is the manual maintenance or breakdown maintenance work they are doing. So this is natural. And regarding your question that once the DNPL line is completed, then this type of problem will be resolved and they got the connectivity with IGGL.

Moderator: As there are no further questions from the participants, I now hand the conference over to Mr. Varatharajan from Antique Stock Broking for closing remarks. Over to you, sir.

Varatharajan: Thank you, Manav. Sir, if you have any closing remarks, please go ahead.

Abhijit Majumder: I would like to thank all the participants for their -- I mean, for very insightful questions. And I hope that we have had a nice interaction with the participants. And thank you so much. Thank you, AMBIT, for organizing this. for organizing this -- Antique for organizing this.

Varatharajan: Thanks all the participants, and thank the management for patiently answering all these questions. Have a nice day.

Moderator: Thank you, sir. On behalf of Antique Stock Broking and Oil India Limited, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Call: Nov 2025

MODERATOR : MR. VARATHARAJAN – ANTIQUE STOCK BROKING
LIMITED

Moderator: Ladies and gentlemen, good day, and welcome to Oil India Limited Q2 FY '26 Earnings Conference Call, hosted by Antique Stock Broking Limited. As a reminder, all participant lines will be in listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need any assistance during the conference call, please signal an operator by pressing star then zero on your touch-tone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Varatharajan. Thank you, and over to you, sir.

Varatharajan: Thank you, Shravani. Very good morning to everyone. I would like to extend a very warm welcome to all the participants and the top management of Oil India Limited. We have with us today the top management of Oil India represented by; Mr. Abhijit Majumder, Director of Finance; Mr. Saloma Yomdo, Director, Exploration and Development; Mr. Trailukya Borgohain, Director Operations; Mr. Bhaskar Jyoti Phukan, MD; NRL; Mr. Ranjan Goswami, ED Business Development; Mr. Ajaya Kumar Sahoo, ED Company Secretary and Mr. Abhijit Das, CGM, (F&A).

Without much further ado, I would like to hand over the call to Mr. Abhijit Majumder. The floor is yours.

Abhijit Majumder: Good morning, ladies and gentlemen. At the outset, I would like to thank Antique Stock Broking Limited for hosting today's analyst and investor call for Oil India Limited. I'm Abhijit Majumder, Director of Finance; I'm joined today by my colleagues from Oil India, Mr. Trailukya Borgohain, Director Operations; Mr. Bhaskar Jyoti Phukan, MD NRL, which is our material subsidiary; Mr. Ranjan Goswami, Executive Director, Business Development, Oil; Mr. Ajaya Kumar Sahoo, Executive Director, Company Secretary, Oil; Mr. Abhijit Das, CGM (F&A) Oil; Mr. Dharam Singh Manral, CGM Exploration and Development, Oil; Mr. Saket Garodia from NRL Finance team.

On behalf of the management, I welcome you to our quarter 2 FY '25-'26 earnings call, covering the period first of July '25 to 30th of September 2025. The financial results were approved by the Board and duly published on 14th of November '25, based on statutory requirements.

Now I would like to hand over to our Chief Investor Relations Officer Mr. Abhijit Das, who will provide an overview of the performance of the current quarter and half year ended 30th September 2025. Mr. Das please.

Abhijit Das: Thank you, sir, for the introduction. Good morning to all who have joined this earnings call of Oil India Limited. A brief strategic overview of our performance during the quarter and the half year ended for FY '25-'26. Oil India continues in a steady transition into an integrated energy company.

On upstream point front, we have continued to strengthen our resource base through the acreages expansion, focused exploration in the new prospective area achieving drilling targets as planned and at par production.

The midstream pipeline expansion is progressing well, and we are glad to announce you that the mechanical completion of our Numaligarh Siliguri pipeline was commissioned on 12th of October 2025. On the downstream side, expansion of Numaligarh Refinery is gathering momentum with commissioning of select units on track, and we are well planned to get commissioned in December 2025.

A brief operational highlights for this half year ended. I will now provide the highlights of our company's operation and financial performance for the current quarter. We experienced a minor dip in our upstream operations this quarter.

The combined oil and gas production for Q2 FY '26 is 1.652 million metric ton of oil equivalent and for HY FY, it is 3.332 MMTOE. The crude oil production for the quarter stood at 0.848 million metric tons, a minor decrease of 0.6% on quarter-to-quarter. And 3% -- ra

ther 2.58% on
year-to-year.
The natural gas production for the quarter stood at 0.804 bcm at marginal decrease of minus 2.8% on quarter-to-quarter, an increase in 0.6% on a year-to-year basis. The key rationale of our production dip was driven by a temporary production slowdown owing to the external factors in the Northeast region of the country. However, the operations have now normalized and daily production is again on its normal pace.
On the exploration and the development front, progress has remained strong. Oil India has drilled 18 new wells in Q2 FY 2026, achieving 100% of our target drilling and drilled 32 wells in HY 2026, an increase of 28% on year-to-year. Additionally, our offshore exploration campaign in Andaman Basin has achieved a key milestone with gas occurrence in East Andaman.
A brief on our international fund, Oil India holds 4% in Area 1 in Mozambique through its joint venture entity, BREML. In April 2021, degradation of the security situation in Cabo Delgado province in Mozambique necessitated to Area 1 concessionaries to declare force majeure and suspended the development activities. We have a good news here that the force majeure has been withdrawn from November 2025.
The Honorable Prime Minister inaugurated the Assam bioethanol plant, a joint venture of our material subsidiary, NRL in Golaghat District of Assam on September 14, 2025. This is India's first 2G biothanol plant that uses bamboo as feedstock. Our 200 TPD formalin plant is commissioned in Boitamari in Bongaigaon of M/s Assam Petrochemicals Ltd our joint venture company in the Northeast.
A brief financial highlights of our company during the quarter FY '26 and half year FY '26. Here, the average crude oil price realization during Q2 was $68.19 per barrel versus USD79.33 barrel in the previous quarter of the previous year. In FY '26 half year, the crude oil price realization was USD67.22 per barrel versus USD82.09 per barrel.
There is a decrease of 18.11% in the crude oil price realization. This was the major impact on our revenue because of reduction in crude oil price by 18%, our revenue has gone down at nearly about 44% as compared to the previous year.

The natural price gas price is almost steady as compared to the previous year. It was $6.78 per MMBTU versus $6.70 per MMBTU. Gas was performed almost in line with the previous year. The price of crude oil has been regulated by the benchmark aligned by the Government of India during the half year.
The standalone revenue for Q2 FY 2026 was INR5,456 crores, which has grown on quarter-to-quarter around 9%, which is mainly due -- quarter-to-quarter around 9%. And FY '26, it was INR10,469 crores. Because of reduction in revenue and well write-offs, our EBITDA margin has also gone down to 34% as compared to 47% in the previous quarter.
The PAT for Q2 FY 2026 was INR1,044 crores, reflecting 28.8% growth on quarter-to-quarter. For half year, the profit stood at INR1,857 crores as compared to INR3,300 crores in the previous year, which is primarily because of lower price realization and higher provisioning of our E&P activities.
Because of lower profit, the EPS has also come down to around INR6.42 per share. However, it is reflecting 28% growth on quarter-to-quarter. A brief performance of our material subsidiary, NRL, our Material subsidiary -- the revenue of our material subsidiary NRL during this quarter was INR6,442 crores, which is up by around 2.5% on quarter-to-quarter and almost 24% on a year-to-year basis.
The refinery achieved a capacity utilization of 100% plus and the distillate yield stood at 86% for Q2 of FY 2026. The gross refinery margin was USD10.56 per barrel for Q2 FY '26. And up by 110% from the previous quarter and $7.73 per barrel for FY 2026 for the half year. The EBITDA was INR989 crores for the quarter with PAT landing to INR725 crores. And for FY

'26 HY EBITDA was INR1,774 crores and PAT was INR1,213 crores.
And a brief consolidated view of our company on the consolidated basis, reported a turnover of INR9,175 crores and PAT of INR1,640 crores for Q2 FY '26. We are pleased to inform you that the Board has declared a dividend and the dividend amount is INR3.50 per share during this quarter.
This is the first interim dividend declared by the company. Oil India has delivered a resilient and disciplined performance in the quarter -- disciplined performance in the second quarter of FY '26, supported by the operational stability and prudent financial execution.
As we look ahead, our focus remains on the execution excellence, production growth and long-term value creation across the portfolio.
With that, I conclude my remarks. We now welcome your questions and look forward to an engaging discussion. Kindly limit your queries to two per participants to allow time for all.

Thank you.
Moderatot: Thank you. We will now begin the question and answer session. The first question is from the line of Gaurav Jain from ICICI Prudential Mutual Fund. Please go ahead.

Gaurav Jain: Sir, first question on other expenses, if we will see, it has come out on the higher side, around INR6,094 crores, this is way higher than the steady state run rate that we have been seeing. So if you can help us understand what all are the one-off items here, sir?
Abhijit Majumder: That's a good question. I think CGM (F & A) would be an -- can take this question.
Abhijit Das: Thank you, sir. During the quarter, as we have witnessed that there was some higher other expenses as compared to the previous year. There is only 1 minor reason of having higher expenses because and during the first quarter, what we have done, we have provided for our 2 blocks.
One is in for Bangladesh and a one is for Gabon. Both these blocks we have already provided in our financial statement during the first quarter. It was amounting to around INR700 crores. And one well we have drilled during the quarter in our Andaman basin in Vijayapuram-2. We have also provided for that in around INR723 crores. This is the only reason which we are having higher other expenses during the quarter as compared to the previous year.
Gaurav Jain: On this Bangladesh and Gabon write-off, how should we be thinking about it going forward because it is now appearing in quite a few quarters?
Abhijit Majumder: So see, Gabon, as far as Gabon is concerned, we have thought of exiting from that area. So whatever expenses we have incurred maybe a little more expenses would arise based on the closure efforts that are going on. So apart from that, Bangladesh is also a closed chapter as far as the entire JV is concerned. We are in partnership with ONGC there. Both of us have decided to exit from that particular block. So we don't anticipate any further major increase in expenditure in each of these two areas. .
Gaurav Jain: Got it. On the employee expenses side also this quarter is on the higher side, sir, anything to call out there?
Abhijit Majumder: Sorry, could you come again, please?
Gaurav Jain: Sir, employee expenses, if you will see at INR526 crores, that is also higher than the run rate that we have been seeing a little on the higher side?
Abhijit Majumder: CGM (F&A) would like to answer.
Abhijit Das: For employee expenses, what we have seen, you have witnessed that there is around INR60 crores of more expenses as compared to the previous half year. So during the our pay revision government has mandated that once your DA percentage will increase up to -- across 50%, then your gratuity amount will increase from INR20 lakhs to INR25 lakhs.
So, during this quarter, we have witnessed that our DA has crossed 50%. It is 51.29% during the quarter. So as the gratuity liability of the company has already increased, we have carried out the act

uarial valuation considering the liability of the employee strenghth from INR20 lakhs to INR25 lakhs.

So the actuarial deficit, which has been accounted during this quarter is around INR60 crores. That is the only reason, which the employee benefit has gone up as compared to the previous half year. Rest, normal -- marginal increase of our employee costs relating to increase your normal salary and some medical benefits. But the major amount because increase in employee benefit is for the increase in actuarial valuation of gratuity expenses, which is INR60 crores.
Gaurav Jain: Got it, sir. That was helpful. Next, sir, on the production side at 1.65 metric million ton of oil equivalent, when we say that we are now back to like Q2, there were some one-offs which impacted the production. And in Q3, we are now back to steady state production, will it be possible for us to guide as to how should we think about production into Q3 and what is the steady state that we are back to now?
Abhijit Majumder: Okay. I think director operations can take this question? If you'd like to answer.
Trailukya Borgohain: Yes, can you hear?
Gaurav Jain: Yes, sir, you are audible. Yes.
Trailukya Borgohain: So there are a few factors actually that affected Q1 and Q2 both Q1 mostly, what happened is that we had a little bit extra loss due to LPGs shut down, that was unwanted and we never planned it. So because of that, we had some more loss in the first quarter. And also in the second quarter what happened is that I'd like to correct one line that the production impact dropped from 9,720

metric tons.
We achieved 9,720 metric tons per day at the end of the year also in the month of September -- September '16 -- we achieved -- September '15, we achieved 9,722 metric tons per day, which goes to -- which pro rata which goes to about 3.52, 3.53 something like that. So what happened is that -- and we were on a track where we were going to be around 10,000 metric ton per day this time.
But what happened is that there are a few ethnic groups here, six ethnic groups. And one of the ethnic groups in the Eastern part and they -- because they want the SC Status because of -- they did the economic block, not against Oil India, but it is to the government. But in the process, what happened is that we have to close down well because people cannot move for work inside and outside the facilities, oil facilities.
Because of that, the production dropped to 8,100 metric ton per day. Now we are hovering, we have brought it back to 9600 -- close to 9600. So we are because what happens when our natural flow is disturbed in some of the wells around 10, 11 wells, which didn't come. But we tried -- we have tried with other wells and also from new drilling, we have added to this amount. And the decline which we thought that it will create, but it didn't create that much, but we are again on right track. And it is -- if no such blockade happens, then we are expecting that we'll be around 3.5 plus this time, this is beyond our hand actually. Did I answer it properly means you got it.
Gaurav Jain: Yes, sir. Thank you for the elaborate answer. That was helpful. Last question, sir, on DNPL capacity augmentation, we have mentioned in presentation that 15th November is when we were

expecting mechanical completion from 1 MMSCMD to 2.5. What is the status on mechanical completion, sir, is that achieved?
Trailukya Borgohain: The DNPL pipeline.
Gaurav Jain: Yes.
Abhijit Majumder: I think Tuhin will take this question.
Management: Thank you so much, sir. Good morning everyone. So, yes the DNPL pipeline mechanically, we have completed all the works. And now the next step would be to obtain PESO and PNGR PESO approvals and PNGRB authorization for the expanded capacity. And also, there is one critical step in terms of

hooking it up with the existing pipeline. For that, we would need 7 days of disruption in the pipeline. So we are planning it as we proceed with PNGRB authorization.
Gaurav Jain: Got it. So we continue to expect that what we mentioned by April' '26, all of this will be done, we continue to expect the same?
Management: Absolutely. We will be up and running before April '26.
Gaurav Jain: Last question, if I may squeeze in a last question on NRL, the throughput at 0.75 metric million tons was also on the lower side, if we look at quarter-on-quarter, we operated at 100% utilization. Was there any maintenance shutdown and if that is complete now?
Abhijit Das: MD NRL, if you would like to answer this question?
Bhaskar Jyoti Phukan: Yes. See. We did not take any shutdown. There was -- as we are dependent on the crude supply from Oil India and there was a very marginal dip on the availability that also affected us. But we are still more than 100% and this quarter, we have accumulated crude and then we are getting some imported parcel as well.
So this quarter will be above 100% again, actually. So there was no maintenance related shutdown in Q2 and Q3, there was a small shutdown that we had to take on safety related thing in our primary unit, but we are out of that shutdown. So hopefully, in Q3 also, we will exceed 100%. So, we will maintain more than 100% for the entire year.
Gaurav Jain: Thank you so much, sir. That was helpful. All the best.
Moderator: Thank you. The next question is from the line of Probal Sen from ICICI Securities.
Probal Sen: Thank you for the opportunity. Very good morning. Firstly, on the Andaman write-offs, just wanted to understand what were the results of the drilling campaign so far and what has led to the write-off of the wells plus how many more wells are we planning at this point of time in terms of our drilling campaign in the region?
Abhijit Majumder: That's a good question. We have with us ED exploration. I request ED to respond to this.

DS Manral: So very good morning to all of you. So Andaman exploration has been quite a success for us in the sense that we had ventured into Andaman way back in 1980s when we drill seven or eight

well. So thereafter, after a long time we had again been into offshore waters because this is the thing, which is happening all around the world where the discoveries are being made.
So right now, we have completed 2 number of wells, One was the number one well was Vijayapuram 1 and the second well was Vijayapuram 2, where we could see the occurrence of hydrocarbons, and the gas was even flared Now what we are exactly doing is that we moved to the third well and we are currently drilling it.
But our plans have to appraise the Vijayapuram 2 occurrence of gas for which we are planning supplementary 3D seismic which is going to give us tighter control of the subsurface to plan future well and define the new strategy for exploring and exploiting hydrocarbon resources from there. And as far as the total number of wells goes.
So we have in line of site 3 plus 1 well as of now, which includes the two number of wells, which have already been drilled, the third well, which is on the drilling and there is one well in the in Andaman West, but depending upon the success and the appraisal, the exploration strategy will be charted out and we will go ahead with the momentum of discovering these hydrocarbon resources and the number of wells may increase in due course of time.
Probal Sen: Just to understand, sir, thank you for the detailed answer. The write-off basically happens anyways as a matter of course, even if there is a reasonable -- even if there has been a successful discovery of hydrocarbons. Is my understanding correct?
Abhijit Majumder: I think that's correct because write-off is independent of discovery or occurrence of hydrocarbon because write-off is basically an a

ccounting treatment, which is done based on the assessment of the situation there. It has got nothing to do with the discovery or the future prospects. So, I believe that answers your query.
Probal Sen: Got it, sir. And any sort of timelines you can put on when we can get an estimate, even a contingent resource kind of a number from this region? Any assessment that your exploration team or seismic team has done at this point of time?
Abhijit Majumder: Yes. ED exploration.
DS Manral: As I told you in my -- as I told you that a very thorough appraisal of the occurrence of gas is required irrespective of the well, which is being drilled because each of the wells will be taken into account accordingly. So, we are planning a supplementary 3D seismic, which gives you a better image and tighter control of the subsurface. Once that is available with us, which we are planning very shortly, I think within another 3 to 4 months, we'll be carrying out the supplemental seismic in Andaman. So, this will give us those numbers which are much awaited by us as well.
Probal Sen: So basically, sir, end of next financial year is when we can expect to hear more concrete updates as far as numbers are concerned? Is that the best way to look at it?

DS Manral There are more number of wells as we complete our seismic exploration, as we image as we integrate, as we integrate them, we'll have numbers in our hand.
Probal Sen: The second question was with respect to the NRL numbers. Is it possible to share if there was any significant inventory component in the $10.6 GRMs for this quarter?
Abhijit Majumder: So MD NRL, would you like to take that question?
Bhaskar Jyoti Phukan: Yes. I would pass this question to Saket. I don't think there was any significant contribution of inventory but let Saket answer this question. Over to Saket if you are there.
Management: MD sir, if Saket is not there, I'll just give a response.
Bhaskar Jyoti Phukan: Yes. You have the number -- you have the numbers. You can share the numbers. Yes.
Management: Mr. Sen, actually, this 10.56has an impact of only $0.44. So this is very minimal.
Bhaskar Jyoti Phukan: So therefore, the inventory was not the factor here. Actually, we enjoyed a very good margin in the second quarter. And the good news is that, that kind of margin still continues in the quarter 3. So basically, the quarter 2 margins, which were available has resulted in this GRM that you have seen.
Probal Sen: Got it. Sir.
Abhijit Majumder: More to do with the spread.
Probal Sen: Understood sir. So, one final question about the expansion. If you can kindly just once again refresh to what's the latest timeline for physical completion and commissioning of the expanded capacity?
Bhaskar Jyoti Phukan: We have already done around 95% in one of the plant called DHDT. So that is ready for pre-commissioning, in fact, pre-commissioning is underway. The primary unit CDU VDU scheduled pre-commissioning is underway. So, we are hopeful that by end of December, we should be in a position to commission our primary unit and gradually other units will come. But since it is a very, very complex refinery, you will understand that. I mean you have seen other refineries. So, it takes while maybe 2 quarters to stabilize. So, you can look forward for some production in the

Q3 or Q4 of -- I mean, in the Q2 of next year, Q2 of next year.
Moderator: The next question is from the line of Kirtan Meta from Baroda BNP Paribas Mutual Fund.
Kirtan Mehta: First question was about the exploration write-offs. You mentioned that this is independent of the occurrence of discovery or prospects. So in what scenario do we capitalize the exploration well expenses?
Abhijit Das: This is CGM F&A who is answering. But could you please repeat your question?

Kirtan Mehta: On the Andaman exp

loration well be explained that we have written it off despite there has been a hydrocarbon discovery and we were planned to appraise. So, I just wanted to understand the accounting policy in terms of when do you actually capitalize the exploration expenses for well?
Abhijit Majumder: First of all, it's not a discovery. What we have basically informed the community is that we have observed traces of hydrocarbon in that particular area. So, for it to be declared a discovery, it needs further studies and maybe ED exploration can take it up to further explain once a discovery is established, then we certainly capitalize.
However, before the discovery can be declared before discovery can be declared, lots of studies need to be carried out, which we are in the process of carrying out – so ED exploration, I think that answers your query you need further clarification.
Kirtan Mehta: So basically, even the third well expense that we are drilling as well as the appraisal well could also get capitalized because -- will also get written-off in that sense -- is that the right understanding?
Abhijit Majumder: Yes, yes. That's the right understanding. And capitalization would depend on so many other factors. But everything begins with the traces of finding out discovery -- hydrocarbon. So that is the first phase, which we have basically just crossed.
Kirtan Mehta: And could you also sort of highlight on the exploration well capex that has been planned for this year as well as next year? And how much of them is likely to be return off under this policy. -- till we have actually a discovery.
Abhijit Majumder: The write-off is not a policy-driven thing. Write-off is a decision which is taken based on the studies carried out based on various other factors. So once a decision to write it off is taken, then only it is taken. For us to write-off, we would be awaiting the results of various studies are both in-house and outside. So that is how it happens. Now capex I request CGM, F&A to please answer.
Abhijit Das: During the current year, we had budget about around INR7,000 crores of our total capex. The total capex has been distributed between your E&P activity as well as your normal PPE. So out of that E&P activity, we have around INR1,927 crores of budget of development drilling around INR1,700 crores. And our seismic is around INR650 crores. If you add up these -- all these three figures, it will be around 60% of our budgeted figure of INR7,000 crores.
And normal PPE, what we have budgeted for this current financial year is INR2,284 crores. As of now, till date what we have been able to achieve is around INR5,561 crores has already been spent on account of our capex expenses. This INR5,561 crores also includes a contribution towards equity to our material subsidiary of around INR550 crores. So our achievement to a large extent is around 70% to 75% within this last 7 months, we are expecting to be beyond our budgeted figure.
Abhijit Majumder: Just to add on to what CGM F&A has just said, our capex year-on-year has been rising over the last few years. If I can just quote the numbers for '24-'25 against a budget of INR6,880 crores,

INR6,880 crores, our spending has been INR8,000 crores. So basically. Going by our track record, we exceed the budget provision. So, the same is likely to happen this year, too.
Kirtan Mehta: In terms of the FY '26 production, could you also sort of -- would there be any implication of softer production on the FY '26 targets?
Abhijit Majumder: No. DO, would you like to take this question?

Trailukya Borgohain: Now can you repeat the question?
Abhijit Majumder: Kirtan, if you could repeat the question.
Kirtan Mehta: Sure, sir. I was asking, we had sort of a softer production in the Q2 than our own expectation. Will this have any implication on the FY '26 target? Or would we be able to compe

nsate it during
the second half.
Trailukya Borgohain : Definitely because if it was a small hiccup, we will not have been bothered. But this is -- this really impacted a little bit on our production because for around 2020 now -- if you look at in September '16, now today is November – November 17. Almost 2 months -- out of this 2 months, if we're out of these 2 months, almost 1 month, our production went below close to 9,000, which we were producing at 9,720.
Now we are bringing it up. But we are trying our level best, because we have changed our strategies also. Now I am here in field headquarters looking at both production and some other aspects also so that we can bring the production up. I'm already here last some 20 days in the field headquarters only so that we can bring the production to that level. And maybe we'll bring it to the level, but I don't say that we'll be able to go to a very -- the expected level.
But we -- we are trying our level best to bring it to the level if it is not below -- not up to the expected level, but quite close to expected level. That is what our attempt is are doing optimization. Every day, we are trying to bring in new wells. Every day, I'm going well by well with the teams so that I can bring the production to the level which we have expected. Yes.
Abhijit Majumder: So, I think DO is cautiously optimistic there, but I'm quite hopeful that they will be able to kind of face the challenges -- and we are slowly coming back to our earlier level of production. I hope that possibly, if we might be able to surpass the target that we have set for ourselves, but I'll otherwise go with DO, whatever he has said.
Kirtan Mehta: One last question from my side. We have been working to sort of have the international partner for our deepwater exploration? Could you update the progress that we have made during the quarter on this, sir?
Abhijit Das: E D Exploration, if you can.
DS Manral: So reaching out to international oil and gas majors has been at the core of our building momentum to getting into deep and ultra-deep offshore waters. And in this context, let me tell

you that we have a service agreement with Total Energies, which is an oil and gas major, which has enormous amount of experience when it comes to deep and ultra-deepwater exploration.
And through this service level agreement, what we have done in the past is that we have leveraged their expertise in terms of well design, planning and other engineering strategies so that our exploration activities can come to fruition. And we are further trying to even work upon with them, engage with them to expand our scope of services. And I'm not going to declare it right now because we are still working on it over and above what we already have.
Apart from this, we have been reaching out to many other national and international oil and gas majors. One of them is Woodside Energy, where we are hopeful that we'll be able to have some sort of engagement with them so that we can partner together more than the financial part, what our objective is that the technical knowledge base and expertise is what builds upon success in any exploration activity per se.
So, this is a forte and this is what we are looking for so that together, we can synergize together and lead to some good discoveries in the offshore frontiers of Indian sedimentary basins. So, outreach is at the core of Oil India's activities.
Trailukya Borgohain: Actually, I would like to add that we are in advanced discussion with Total Energies regarding this thing. Especially whatever exploration is going to happen in terms of strategraphic tire like is in ED (Exploration) has told these discussions are at a very high level, and it is going on. So, we are engaged with them. And in all future exploration especially in deepwater, there will be our kind of technical partners at least. But th

at is there.
The next thing, I didn't tell the number actually. So, what we are expecting is that the number in terms of production will be around more than 3.5 to more than 3.5 actually. So 3.5 will be, but we are asking for 3.55. There is a target. Like you asked me for a number, so I say that 3.5 to 3.55 will be my target for the production.
Moderator: The next question is from the line of Sarthak Tita from DSP Asset Management Private Limited.
Sarthak Tita: Sir just coming back on the production target. Last quarter, we had highlighted that we have 3.7 million ton of oil and 3.65 bcm of gas production target for this year. And subsequently, for FY '27, 3.95 million ton for oil and 4.31 for gas. Just wanted the four numbers, updated numbers post the weak production that we had in Q2?
Abhijit Majumder: So, what exactly is your query. You want some numbers from us or you want a clarification or what exactly are you looking for?
Sarthak Tita: I want updated FY '26 and FY '27 production guidance for oil as well as gas?
Abhijit Majumder : So the updated production outlook is like this, FY '26, 3.776 million metric tons. However, going by the disruption that has happened in our producing area, we may have to scale it down to 3.55.
We are still trying to achieve that target, but we are keeping our fingers crossed. As far as FY

'27 goes, our number would be 3.798, you can take it as 3.75 on a conservative side. And FY '28

would be 3.98 or you may take it as 4. If I'm a little more optimistic, then it can take it as 4. So by FY '28, we'll be touching 4.

As far as gas is concerned, this year, we expect to achieve a production of 3.6 bcm, FY '27, 3.8 bcm, FY '28, 4.6 bcm. That's the overall outlook for the next three years.

Sarthak Tita: Got it. This was very helpful. Just one more thing. On FY '27, you mentioned in gas, 3.8 bcm right? That is significantly lower than the Q1 guidance that we had in for gas for FY '27. Considering DNPL to come up by April, which Tuhin mentioned, any other reason that we see that the weakness on the gas production outlook?

Abhijit Majumder: Would you like to take it?

Management: Yes. So in terms of gas production capacity, we are very well prepared to ramp up gas production to much higher levels. But the numbers that were reflected here are as per the ramp-up plan of the NRL new refinery. So the NRL new refinery consumption won't start in day one. So it would stepwise, increase in steps, and that's how the number are right at here.

Sarthak Tita: Got it. Thank you so much. It was very helpful.

Moderator: Thank you. The next question is from the line of Sabri from Emkay Global Financial. Please go ahead.

Sabri: So I've got two questions. Firstly, on the production side. So on the gas side, I think your numbers you mentioned is 3.6 bcm for FY '26, but the first half number is something like 3.25 bcm. So somehow it doesn't add up because in order to do 3.6 bcm average for the year, you'll have to do 4 bcm for the second half. So possibly, I think it could get adjusted, right? Probably this year, it could be more like 3.3 bcm, 3.4 bcm, then we got 3.7 bcm, 3.8 bcm. Is that the right understanding?

Abhijit Majumder : DO, would you like to take this question?

Trailukya Borgohain: Yes, yes, yes, yes. You see when there is a disruption, so it affects both oil and gas actually. So because of that, we will have a little bit less with respect to 3.65 bcm is our target, for the gas.

Sabri Hazarika: That is full year or that is second half of this year?

Trailukya Borgohain: Yes.

Sabri Hazarika: Is that for the full year FY '26 or second half of ' 26, 3.65 bcm.

Trailukya Borgohain: This is for the whole year, for the whole year -- we don't target the half year, we don't target actually. We target for the whole year. And we are trying to cope up and we are -- we will be having more production with respe

ct to last year, that is for sure. Because in gas, we can ramp up actually. So we can ramp up. Only thing is that the gas -- in case of gas, what happens is that the demand is the most important part.

Now is the time for the tea gardens, they take less gas in this month. So even if I have the capacity, we cannot increase the gas production by that much. You understand my point. So because tea gardens this is not a plucking time. This is the lean time for the tea gardens. So other industries, when they take, we are ready to give. And hopefully, if NRL increases and if somehow, we can bring it forward, this DNPL index, then maybe we can increase further. That's all. And I think we will be having the same production or a little bit higher production with aspect to the last year, not less.

Sabri: Yes, sir. And second is DNPL, I think possibly that is the main pipeline for you to raise production. So this pipeline, April 2026, it will get fully commissioned and from -- and NRL volumes will also get expanded by that same time. Is that right? And then if not others, then at least we will supply to NRL around 2, 2.5 MSMD. Is that the right understanding?

Trailukya Borgohain: Yes.

Sabri: Okay, sir. So second question is on your capex. So you have mentioned that you have done INR5,500 crores for H1 and INR5,000 crores is basically the core capex, if we remove the NRL rights subscription, then -- but your cash flow capex is something like INR1,600 crores, INR1,700 crores. So is this because of that write-off getting adjusted in the P&L -- is that the adjustment why there is a mismatch between cash flow statement capex and what you have stated in your presentation?

Abhijit Das: No. Is not like that. See, INR5,561 crores is our total capex utilization till date. But if we run through the figures, this is the capital equipment, which we have budgeted for INR2,284 crores, we have already spent INR1,280 crores. So, for exploration and development drilling is

concerned, it was budgeted as around INR3,500 crores, INR3,600 crores. Out of that, we have already spent INR2,200 crores.
For survey, which we have planned for INR629 crores, we have already spent INR572. For our overseas, what we have thought of around INR100 crores or INR120 crores, we have already spent around INR385 crores. For subsidiaries and joint ventures, which we planned around INR350 crores in the beginning of the year, because of the add-on of the NRL investment, it is now standing at INR1,117 crores.
So, the cash investment activity, which has been shown in the cash flow, that may not be the exact figure with what we have already been achieved through the capex because it is a mix of investment as well as the financing activities also.
Sabri: Got it. And regarding your Andaman, I think Bangladesh and Gabon, I think we had done with the write-off? Or is there anything more pending.
Abhijit Das: We want to make it clear that based on our accounting policies, the principle which we follow as per Ind AS 106. We only write off our wells when it is fully out of question. Now is that we have provided for our Gabon, we have provided for our Bangladesh asset also in our books of accounts.

But final write-off will only be taken when we will fully decide that all the activities for the particular blocks have been closed, and we have to wind up them from the fleet. We have provided in our books of accounts, but the final write-off may positively or indicatively maytake this by end of this year. And lastly, we been taken here in the first quarter itself.
Sabri: Got it. And the last question is this INR700 crores. So this is Vijaya Puram-1, only 1, right, not 2.
Abhijit Das: It's Vijaya Puram-2, not Vijaya Puram-1.
Sabri: Okay. Vijaya Puram-2, which has been completely provided for INR720 crores. So Vij

aya
Puram 1 will be, again, tested now. And based on that, you will take a call. And then the third well and fourth well will come. Is that right?
Abhijit Das: Yes. Yes. The ED exploration and development has already explained to you the details. What is the plan for the Vijaya Puram-1 and Vijaya Puram-3. So subsequently, it will come out.
Sabri: And INR720 crores was for H1 or it just Q2?
Abhijit Das: See what happened during H1, we have provided for two of our blocks -- the major expenditure. Providing for our well assets is a normal course of our business. Whenever we see that a well has not been able to achieve what we have planned for, we automatically, based on our accounting principles, we provide .
Sabri: It is INR350 crores, INR360 crores for the two quarters? Or it is just one time Q2 itself INR720 crores? Just wanted to know.
Abhijit Majumder: No, it is INR723 crores for this quarter itself.
Sabri: Okay. This quarter itself, it is INR723 crores. Okay, sir. Thank you. That's all from my side.
Moderator: Thank you. The next question is from the line of Pranitha from Morgan Stanley. Please go ahead.
Pranitha: Thank you for this opportunity. I just wanted to understand, is there any planned shutdown for NRL for next three to six months, especially with all the mechanical completion that is planned?
Abhijit Das: MD sir, would you take up this question, please?
Bhaskar Jyoti Phukan: It was regarding what?
Abhijit Das: They are asking whether there is any plan for shutdown of the refinery?
Bhaskar Jyoti Phukan: No, no. There is no plan for shutdown. Shutdown will come in FY '27 only.
Pranitha: Sir, when are you expecting the first crew to take an expanded capacity?
Bhaskar Jyoti Phukan: In December this year. In the primary unit because we have to gradually commission the refinery one unit after the other. So first the crude intake is likely to happen in December itself.

Pranitha: And the ramp-up after the second quarter will be -- how much are you targeting?
Bhaskar Jyoti Phukan: Actually Ramp-up will be gradual. Any very serious volume will come in the Q2 of next FY. So that means starting from, say, June onwards, July onwards, you will see a rapid ramp-up of the capacity. So, prior to that, we will have the commissioning activity going on. It's a very complex refinery that we are going to commission that you must understand, yes.
Pranitha: Right, sir. And what is the net debt level right now in NRL.
Bhaskar Jyoti Phukan: Pardon.
Pranitha: Debt level?

Bhaskar Jyoti Phukan: Debt level, Trisonku, if you can give debt level, I think debt to equity ratio you can tell Trisonku it is with you.
Abhijit Das: If you see that the leveraging ratio for NRL as of now for Q2, what we have, it is INR17,799 crores of total debt has been already been taken by NRL.
Pranitha: Thank you.
Moderator: Thank you. The next question is from the line of Bineet Banka from Nomura Services. Please go ahead.
Bineet Banka: Thank you for the opportunity. So can you please update on the USD 300 million dividend, I think which you have stuck in Russia?
Abhijit Das:: I'll pass on to my DGM Finance
Management: Yes, I have rightly pointed out that some amount is lying in Russia with the counter measure imposed by the Federation of Russia against the corporates, which have been incorporated in unfriendly jurisdiction. And the investment by Indian Consortium, IOCL and BPRL has been routed through two entities in Singapore. One is Vankor India Pte Limited and one is Taas India Pte Limited.
Since these two entities are incorporated in Singapore and unfriendly jurisdiction of Russia, funds are not allowed to be repatriated out of Russia at this point. But we are evaluating various options, and we are hopeful that we'll be able to give you some positive news in this respect by the early part of next financial year.
Bineet Banka: Sir, can you remi

nd what is the annual run rate of dividends from Russia?
Management: What's the question?
Bineet Banka: An annual run rate of -- what is the annual dividend that you get from Russia in U.S. dollars?
Management: If you look at that, out of our investment in TYNGD, more than 100 -- around 109% has been paid back by this particular asset, and that is within a period of eight years of investment.

And the total dividend paid back is USD474 million. And the investment was USD436 million. So this is basically the run rate you can derive out of that. And regarding the other investment in Vankorneft, out of the investment of 598 million, 498 million has been paid back by this particular investment.
Bineet Banka: Sir, second question is on the completion of this Paradip-Numaligarh Crude Pipeline. So, after the completion, are you also looking to import crude from Russia since you already have, I think, participating interest in those couple of assets?
Bhaskar Jyoti Phukan: Let me take this question. See, we have already identified more than 100 varieties of crude, and it actually depends upon which gives the base economics. So we will import accordingly. And provided there is no sanctions against a particular country. So, we have to abide by whatever rules are there at that point of time.
Because we have Russian crude, and we may not be able to import if there is a sanction ongoing actually. So that would be my take at this point of time. But at the time of import, we will take a call. Did I answer your question?
Bineet Banka: Yes, sure. Sir, just last question on the Andaman write-off, just following up on that. So if the discovery is established, will these well items be reversed and capitalized?
Abhijit Das: See, as I have told before, the provisioning of the wells and write-off of the wells is 2 different activities, 2 different independent activities. We have provided for well number 2 for INR723 crores. This well has been considered as no presence of hydrocarbon. So accordingly, this well is -- can consider as abandoned and has been provided in the books of the accounts. So far other wells are concerned, the progress of the drilling is still going on, study is on. Until and unless we finally fix up that there is no presence of hydrocarbon then…
Management: It is occurrence of hydrocarbon.
Abhijit Das: Occurrence of hydrocarbon, till then we'll not capitalize it. So as of now, for well number 2, you can -- we can conclude that we have provided, and this cannot be capitalized in the future.
Trailukya Borgohain: I'd like to answer this question because this is related to exploration and production. So since if you discover in an exploratory area, exploration well, you cannot capitalize in immediate context. You will have to ascertain the total volume. You will have to ascertain if -- whether the economics works out or not and for that, you have to have appraisal well, you have to have development well.
And the exploratory well in the first place is not monetized directly. This is one reason, because you are not thinking about the completion, you are not thinking about the complete well head set up, everything. That is why, generally, the exploration wells are written off. That is the way it is done generally. That is to answer you because this question came twice. That is why I thought. Did I…?
Bineet Banka: Yes, sir. So sir, just last question. So on the NRL refinery, once the expansion is complete, what

is the maximum gas volume that we'll be taking in? Because I think there will be some priority

sector commitment as well. So I think current run rate is around 0.5 MMSCMD, if I'm not wrong. So what is the maximum you can take it up to?

Management: So the current run rate in NRL refinery is around 0.9 to 1 MMSCMD, higher than 0.5. And after full expansion

and 100% capacity utilization, it will go up to 3 MMSCMD.

Moderator: The next question is from the line of Gagan Dixit from Elara Securities.

Gagan Dixit: I have sir some technical questions related to the Andaman discovery. So earlier news says that the gross feet pay, I mean the hydrocarbon where you find is between the, I think, 20 to 12 to 20 to 50 meters. So it is like 100 feet pay.

So based on your understanding, what is the, I think, the minimum threshold of the gross feet pay that gives you confidence that yes, it is a discovery? That is my first question, sir. And second thing is that when you try to drill the two more wells, appraisal wells, I think, looks like based on the first discovery. So how far in the distance you are thinking to drill? I mean, that gives some idea about the area of the discovery.

DS Manral: So I am coming to your first question, okay, when you said that we are talking about ascertaining the volume. See, this is an exploratory well. Number one, we should understand that this is a pure exploratory well in the area, number one. And what we have established is the occurrence of gas. This is number two.

And number three, as I told earlier, is that we are trying to conduct a supplementary 3D seismic in order to have tighter control of the subsurface in ascertaining the extent, the literal extent of the potent sand bodies where hydrocarbons could be trapped, okay? So this will come only, as our Director of Operations also explained that this is the exploratory phase. This will be followed by an appraisal phase, followed by a development phase thereafter.

So what happens essentially during an exploration phase, moreover in the case of offshore is that you do not monetize the discovery from the first well itself because you take up an exploration well with the minimum amount of infrastructure to establish it because there is a high cost of a well that goes into exploration if you build upon a development facility for it. And it is not even prune or prudent to do it in that manner.

So, this question should be nubbed off this way. Number two, you were telling me that you are drilling an appraisal well, the next well that we are talking about, third well. It is not an exploration -- it is not an appraisal well. It is a pure exploratory well, the third well that we are drilling right now. So what we will essentially do is we'll drill this well if we establish hydrocarbons over there.

It will also go through the appraisal phase. So each and every occurrence of hydrocarbon or establishment of hydrocarbon goes through an appraisal phase necessary where you conduct much more geoscientific analysis through seismic data acquisition, processing, interpretation, integration of the data that you have acquired through these wells and then take it to the process of discovery. And then is when you ascertain the volumes and decide upon your appraisal and field development program. Thank you.

Gagan Dixit: Yes, and sir, it's a deep water discovery. I think it's around 300 meters deep in the water. So do we have the -- so in case of the gas, do we have the -- do you know the capabilities available to get the gas? Because I'd call earlier the ONGC has the problem to get the UD1 discovery because it's the ultra-deep water gas discovery. So is there any risk for managing the gas, I mean, to take out, to sell?

DS Manral: First of all, let me correct you. These are not deep water discoveries…

Trailukya Borgohain : Actually, I'd like to correct you that this is not deep water actually. This is not deep water. This belongs to still shallow water you can say?

DS Manral: And let me complete it just for the sake of clarity, because Andaman is coming time and again. I'm pleased to answer Andaman because it has been a milestone for Oil India Limited in terms of establishing the occurrence of hydrocarbons over the last th

ree decades. So it has been a real achievement this way, and we are definitely getting motivated by the number of questions being asked. So this is not deep and ultra-deep waters. It is shallow waters. The water bathymetry is 300 meters. So the definition of shallow, deep, ultra-deep, it follows with water bathymetry, not

with the column that you have drilled, say 2,620 meters that we are talking about. Thank you.
Gagan Dixit: Okay. Sir, and my final question is what is particularly the rig rate that is being charged here? I mean, the rigs that you are hiring for this drilling of this Andaman block?
DS Manral: I think the ODR rate is around -- you were talking about the daily operational rate?
Gagan Dixit: Yes, yes, yes. Because rig cost is typically higher [inaudible 1:09:24] on the fee side.
DS Manral: I think it is around INR2 crores ODR.
Moderator: Ladies and gentlemen, that was the last question for today. We have reached the end of the question-and-answer session. I now hand the conference over to Mr. Varatharajan sir from Antique Stock Broking Limited for closing comments.
Varatharajan S.: Thanks, Shravani. There are a few more in the question queue, please take it up with the management or with us subsequently based on your convenience. I request the management with their closing remarks please.
Abhijit Das: Thank you very much for all those who have joined this con-call, and all the questions were very helpful and effective for us. So your participation in Oil India's earnings call, it's a big thank you to Antique Stock Broking for helping us to organize today's session smoothly.
We hope that we will be able to address all the queries and provide the clarification you were looking for on our quarterly performance and ongoing initiatives. Should you require any part of information or clarification, please feel free to reach out to our Investors Relations cell. The contact details are available in our website.
Once again, thank you for your time, participation and continued trust in Oil India Limited. We value your engagement and look forward in interacting with you on the ongoing basis. Thank you and have a great day ahead.

Varatharajan S.: Thank you, sir. I wish to thank all the participants and the management for giving us this opportunity. Have a nice day.
Abhijit Das: Thank you so much, everyone.
Moderator: On behalf of Oil India Limited and Antique Stock Broking Limited, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Call: Feb 2026

Sub: Conference Call for Q3-2025-26 Financial Results – Transcript

Ref: Regulation 30 of the SEBI (LODR) Regulations, 2015

Sir/Madam,

We write further to our letter of even no. dated 05.02.2026 & 11.02.2026 regarding Conference Call [Con Call] for Financial Results of the Company for Q3 (FY 2025-26) and inform that the Transcript of the said Con Call [dated 11.02.2026] has been uploaded on our website as detailed hereunder:

www.oil-india.com Investors Investor Services Analysts / Investors Meet Transcript of the Analysts' and Investors' Call on 11th February 2026

Weblink:
https://www.oil-india.com/files/investor_services_documents/Transcript_of_the_Analysts_and_Investors_Call_on_11th_February_2026.pdf

This is for your information & records please.

Thanking you,

Yours faithfully,
For Oil India Limited

A.K. Sahoo
Company Secretary &
Compliance Officer

"Oil India Limited
Q3 FY26 Earnings Conference Call"
February 11, 2026

MANAGEMENT : DR. RANJIT RATH – CHAIRMAN AND MANAGING DIRECTOR – OIL INDIA LIMITED
M R. ABHIJIT MAJUMDER – DIRECTOR FINANCE – OIL INDIA LIMITED
MR. BHASKAR JYOTI PHUKAN – MANAGING

DIRECTOR – NUMALIGARH REFINERY LIMITED
MR. AJAYA KUMAR SAHOO – EXECUTIVE DIRECTOR,
COMPANY SECRETARY – OIL INDIA LIMITED
MR. ABHIJIT DAS – CHIEF GENERAL MANAGER (F &
A) – OIL INDIA LIMITED
MR. RAGHUNATH MISHRA – CHIEF GENERAL
MANAGER- BUSINESS DEVELOPMENT – OIL INDIA
LIMITED

MODERATOR : MR. VARATHARAJAN – ANTIQUE STOCK BROKING

Moderator: Good morning, ladies and gentlemen, and welcome to the Oil India Limited Q3 FY '26 Earnings Conference Call hosted by Antique Stock Broking Limited. As a reminder all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference

call please signal an operator by pressing star then zero on your touchstone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Varatharajan from Antique Stock Broking Limited. Thank you, and over to you, sir.

Varatharajan: Thank you, Swapnali. Good morning, everyone. I'd like to extend a very warm welcome to all the participants and the management of Oil India Limited to this call. We have with us Dr. Ranjit Rath, Chairman and Managing Director; Mr. Abhijit Majumder, Director (Finance); Mr. Saloma Yomdo, Director (Exploration and Development); Mr. Trailukya Borgohain, Director (Operations); Mr. Bhaskar Jyoti Phukan, MD NRL; Mr. Ajaya Kumar Sahoo, ED, Company Secretary; Mr. Abhijit Das, CGM F&A; and Mr. Raghunath Mishra, CGM Business Development.

Once again, I would like to welcome -- a special welcome to Dr. Ranjit Rath for the first time I think he is on the call. I'll hand over the call to him for his initial remarks. The floor is yours, sir.

Abhijit Majumder: Good morning, ladies and gentlemen. At the outset, I would like to thank Antique Stock Broking for hosting today's analyst and investor call for Oil India Limited. I'm Abhijit Majumder, Director, Finance. I am joined today by Dr. Ranjit Rath, Chairman and Managing Director, Oil India Limited; and my colleagues from Oil India Limited; Mr. Saloma Yomdo, who is traveling today.

So, in his place, Mr. D.S. Manral will be representing the Exploration and Development Department; Mr. Trailukya Borgohain, who will be joining soon; Mr. Bhaskar Jyoti Phukan MD, NRL; Mr. Ajaya Kumar Sahoo, Executive Director, Company Secretary, Oil India Limited; Mr. Abhijit Das, CGM F&A OIL; Mr. Raghunath Mishra, CGM Business Development OIL

On behalf of the management, I welcome you to our Quarter 3 FY '25-'26 earnings call covering the period 1st of October '25 to 31st of December '25. The financial results were approved by the Board and duly published on 10th February 2026 based on statutory requirements. Prior to diving deeper into the current quarter performance, I would firstly like to call upon our CMD, sir, Dr. Ranjit Rath, to share his perspective on Oil's current strategy. Sir, over to you.

Ranjit Rath: Good morning, everyone, and I thank all of you -- for joining us on this call. Please bear with me because of my sore throat; I will try to adjust and we'll be able to join the discussion.

Let me begin by welcoming our shareholders and the analyst fraternity and by thanking you for your confidence that you have reposed on Oil India Limited. Your continued engagement and the perspective that you share helps us stay anchored on execution, accountability and long-term value creation.

As you all know, recent macro environment has once again underscored how dynamic the energy landscape can be shaped by geopolitics, supply discipline and the transition. Yet one

really remains unchanged and India's energy demand will continue to grow while ensuring reliable, affordable and progressively cleaner energy remaining a national priority.
For Oil India, this creates both responsibility and opportunity. Responsibility to strengthen India's energy security and opportunity to deliver durable value across the entire value chain.
As you all know, Oil India continues to traverse its path as an integrated energy company with operations spanning upstream exploration and production, midstream transportation, refining and downstream value capture and a growing footprint across renewable energy initiatives.
Upstream remains our focus and foundation. First, to build a stronger prospect and secure pipeline through our targeted exploration, seismic and subsurface analysis. Second, accelerating development and near-field opportunities to shorten the cycle time from discovery to produ

ction, that is early monetization. Third, improving recovery in mature assets through reservoir management, interventions and efficiency program. Alongside the upstream growth, our midstream readiness is critical.
Let me share some few milestones on this also. The Numaligarh-Siliguri product pipeline expansion from 1.72 million metric ton per annum to 5.5 million metric ton per annum has already achieved mechanical completion, and we are in the process of completing the commissioning process. The Duliajan-Numaligarh pipeline expansion from 1 million to 2.5 million has already achieved mechanical completion on 15 November, and we expect to commission the expanded pipeline by April 2026. In parallel, we expect to complete the common carrier licensing process with PNGRB by April 2026 to initiate the hookup of the DNPL and IGGL line.
On the downstream front, our priority is steady execution and value capture through reliability, efficiency and disciplined project delivery. At Numaligarh Refinery level, all of you know that the 3 million metric ton per annum to 9 million metric ton per annum is progressing well with the commissioning commenced for CDU/VDU, the mother units along with select utility packages towards the end of December 2025. Stabilization for these units is expected by end of Q4 of FY 2026.
Concurrently, the Paradip-Numaligarh crude oil pipeline, which will supply imported crude to NRL has also achieved about 90% physical progress and will be ready for commissioning by Q1 of FY 2027.
The last few months continue to remind us that crude prices and realizations can fluctuate meaningfully in short time spans, driven as much by global events and sentiments as also by the fundamentals. Over the first 9 months of FY '25-'26, our performance reflects this approach, a steady operational execution, continued progress on drilling and development activity and financial discipline. On the financial front of 9 months, our consolidated revenue stood at INR27,036.78 crores, EBITDA at INR9,298.62 crores and a PAT of INR5,126.21 crores.

On the operational side, our combined oil and gas production for 9 months stands at 4.991 MMTOE. This performance keeps us aligned with our annual operating priorities and trajectories we have laid out towards our production objectives. Our emphasis is straightforward, strong technical execution, rigorous project discipline and prudent capital allocation.
Thank you once again for your continued support. I'll now hand over to our Chief Investment Officer -- Investor Relations Officer, Mr. Abhijit Das, who will provide an overview of the third quarter performance.
Abhijit Das: Thank you, sir. Good morning, ladies and gentlemen. I take this opportunity to share our company Oil India Limited, the operational and the financial highlights and the performance of our material subsidiary, NRL.
The key operational performance of our company for the quarter and the period ended on 31st of December '25 is : - The combined oil and gas production for Q3, it is 1.659 million metric ton. And for the 9 months ended, it is 4.991 MMT.
The crude oil production for the quarter is 0.858 MMT, which is increased by 1.18% on quarter-to-quarter. The crude oil daily production has ramped up to 9,861 metric ton on 31st of December 2025, which is the highest in the last decade. The natural gas production for the quarter is 0.801 bcm, which is almost at par with the previous quarter.
The gas sales have experienced minimum de-growth driven by reduced offtake from major customers such as Namrup Power Plant, BVFCL, which has resulted in the temporary shutdown of their units. These shutdowns have now been lifted and the gas production and sales are well beyond recovery during the quarter of '25-'26.
On the exploration and development front, progress has remained strong. Our company has

drilled 19 new wells dur

ing the quarter. Cumulatively, for the 9-month period, 51 wells have
been drilled, which we have achieved 65% of our annual target. The key financial highlights for this quarter as per the period of the 9 months ended 31st of December 2025 are the average price realization for Q3 FY '26 was $62.84 per barrel vis a vis$73.8 per barrel in Q3 of FY '25. For the 9 months ended 31st of December 2025, the average crude oil price realization was $65.73 per barrel vis-a-vis $79.35 per barrel in the previous 9 months. 17.16% decline in the crude oil price realization is the major driver in decline of our operating revenues during the period of the quarter as well as the 9 months.
The natural gas price stood at $6.65 per MMBtu in Q3 of FY '26 vis-a-vis $6.56 per MMBtu in Q3 of FY '25. The stand-alone operating revenue for Q3 FY '26 is INR4,916 crores and for the 9 months, it is INR15,385 crores. The EBITDA margin for the Q3 of FY '26 is 33.96% as compared to 34.82% of Q2 of the current year. The profit after tax for Q3 is INR808.31 crores during the quarter. Our EPS stood at INR16.39 per share for the 9 months ended of FY '26.

I take this opportunity to share the performance of our material subsidiary, Numaligarh Refinery. The operating revenue is INR6,526 crores for Q3 FY '26, which is at par of the previous year. Further during the 9 months, the operating income is INR19,249 crores, which is 5.67% higher as compared to the previous year.
The capacity utilization of our refinery is 100.31% in quarter 3 of FY '26 and the distillate yield for the quarter was 86.8%. The gross refinery margin, excluding excise duty is $16.27 per barrel, which is up by 54% vis-a-vis Q2 of the current year. The EBITDA is INR1,302 crores for Q3 of FY '26 vis-a-vis INR637 crores in Q3 of FY '25. The PAT is INR867 crores for Q3 of FY '26 vis-a-vis INR385 crores of Q3 FY '25.
I'd like to present the consolidated financial results of our company. Our company has reported the consolidated operating revenue of INR9,111 crores and registered a PAT of INR1,436 crores during Q3 of '26. Both the consolidated operating revenue and PAT are in line with Q3 of FY '25.
We are pleased to inform you that the company has declared a dividend of INR7 per fully paid equity shares during our period closing of 31st of December 2025. Our company has delivered a resilient and disciplined performance in the third quarter of FY '26, supported by our operational stability and prudent financial execution. As we look ahead, our focus remains on execution excellence, production growth and long-term value creation across portfolio.
With this, I conclude my remarks. We will now like to welcome your questions and look forward for an engaging discussion. Thank you very much.
Moderator: Thank you very much. The first question from the line of Probal Sen from ICICI Securities.
Probal Sen: Sir, a couple of questions. Firstly, on NRL on the expansion front, as was mentioned that the mother units, the CDU and the VDU should be -- have already commenced commissioning and should stabilize by Q4. So, for FY '27 there, sir, what kind of throughput should we be looking at for NRL?
Bhaskar Jyoti Phukan: Yes, I'm MD NRL. So, during the last quarter, actually, we expect to have a serious run of the whole refinery complex. So, we will not have any major throughput this year. But towards the Q4, we will try to run the refinery at least at 50% of the rated capacity of 9 million. So, we can translate that. Maybe we will be able to process around 1 million more than our capacity -- current capacity of 3 million. Maybe we will end the year FY '27 with a 4 million capacity throughput.
Ranjit Rath: Just to add and then since we are answering this question, just to add, these units are commissioned in a batch process. That's number one. And all the units need to be commissioned for stabilization al

so. However, we are also working on an intermittent process
so that we can start the production portfolio with an enhanced capacity. So that thought process has also kicked in. So, we will try to achieve 4 million metric ton by the last quarter of FY 2027.

Probal Sen: Understood, sir. Understood. The next -- the second question was with respect to the volume growth. You did mention that the 9-month oil and gas output of close to 5 million tons is in line with the medium-term objectives. Now where are we with respect to the targets for

basically reaching 4 million tons of oil and 5 bcm of gas, which I believe was the earlier target to reach by around FY '27-'28? Any colour you can throw on that?
Ranjit Rath: Okay. I'll answer this question in a manner which is -- I'll take a bit of time to explain also.
Look, the production from mature fields are done with a two-pronged strategy. Number one, you do workover operations and that contributes additional production while we arrest the decline of pressure or performance by 8% to 10%. All of you know that.
Second strategy is we enhance our drilling effort and the new drilling -- new development well drilling gives us an additional component, and that is how the production is maintained. You would be happy to note that till now as per the Q3, we have been able to maintain the production. And Q4, we expect that we will have an uptick in the production, having maintained it so far based on 2 aspects.
One, in comparison to last to last year and last year when we drilled 61 and 57 or 59 wells. This year, by this time, we have already completed 62 wells. Of course, this has got a mix of exploratory and development wells, but we are going to close the year by a number which will be the highest ever in the history of Oil India Limited, that will be 75-plus wells with additional possibly highest ever or near highest ever workover operations.
So, we are looking at surpassing the last year's highest ever 6.71. So how much, I do not wish to speculate, but having arrested the decline, we are definitely looking at touching those numbers. In addition to this, I would supplement as we speak, our current Daily production is hovering over 10,000 metric ton per day. That calculates about 77,000-plus barrels. And this is also supplemented by another achievement, which our Rajasthan field has actually started producing very well.
And all of you know earlier, we were doing about 100 to 200 to 400 barrels; today, we are doing 1,000 barrels per day from our Rajasthan field. And we have also recently completed one of the fastest well drilling in Rajasthan, just 23 days. So, these optimization efforts and operational efficiency gives us the confidence that we are on a right path to cross the last year's highest ever production outlook. I hope I have been able to substantiate my response.
Probal Sen: That was extremely useful and detailed answer. One small follow-up, if I may. Earlier, I think it was mentioned that there are some pipeline connectivity timelines, which will basically drive the gas production increase because monetization can only happen with connectivity. You did mention about the pipeline connectivity for Numaligarh. If you can also give us some updates on where we are on the gas monetization pipelines and where we are in terms of those timelines?
Ranjit Rath: Okay. I'll answer this. As far as the gas monetization effort is concerned, while we have identified gas wells, which will enhance our commitment to enhance production of natural gas,

there are 2 things which has happened. We are now looking at laying additional infield lines to enhance or to handle the bottlenecks from a process point of view within the main producing area. That is one.
Second, as all of you would know, the feeder line needs authorization of the government. That process is underway. Once we have those notifications, I would prefer to apprise you, but I can tell you this is in an advanced stage. And after the PNGRB approval is done, it takes 18 months' time, and we have already planned our drilling program in a manner that we will be able to evacuate.
As far as the Duliajan-Numaligarh dedicated pipeline is concerned, current capacity is 1 million and we -- the planned capacity expansion is about 2.5 and the commissioning process is underway right now. We are hopeful that by April of 2026, that pipeline will also get commissioned. This will actually help us to supply more natural gas to Numaligarh Refinery.
And with the hookup of IGGL line from Baihata, that is North Bank of Guwahati with Numaligarh pump station at Jorhat, should there be any further requirement once the DNPL is declared as a common carrier, we can push more gas as well.
Moderator: We will take the next question from the line of Vivekanand S. from AMBIT Capital.
Vivekanand S.: My first question is on the increase in contract cost. Is this increase only due to the GST change? Or is there any other factor here which has led to increase in contract cost to INR892 crores from, say, last year, INR500 crores and last quarter, INR520 crores? That is question one.
Secondly, thank you for the colour, Dr. Ranjit, on the exploration efforts as well as development wells. I wanted to understand from an exploration standpoint; Oil India has expanded its acreage very meaningfully as has the rest of the E&P industry in the last 2-3 years. And this has resulted in the company exploring many new areas like Andaman Basin. Is there any colour you can provide on new discoveries that one can look forward to?

Any time lines that you believe this project is yielding? And how much more effort will it need for you to come up with any new discoveries, which might be critical for your longer-term targets beyond the mission forward? Thank you very much.

Ranjit Rath: First of all, let me thank you for asking these questions because through your questions, we get an opportunity to share our thoughts and insights of our E&P effort. And even if it is asked by one organization or entity, I'm sure the response is heard by others. So, this is what you have reaffirmed through your response also.

Now let me ask -- let me take the question on increase in contract cost. As part of our exploration effort, while we do rank exploration that I will cover in the second part, we undertake near-field exploration, which is primarily the exploratory wells drilled in the mining lease area and which supports the development drilling. So, the near-field exploration and development drilling, which happens to enhance our production has got a contribution to the

reserve replacement ratio, which needs to be maintained plus or minus 1 and more than 1 is always better.

As part of our efforts in this near-field exploration and development drilling, you would appreciate today, we are having technology supported deeper horizon seismic imaging. Earlier, while we were drilling about 4,000 meters per well depth, today, our target ranges from 5,500-plus meters. And we are establishing presence of hydrocarbon and in monetization. So, one part of the contract cost increase is the drilling of deeper wells.

Second, we have enhanced our drilling portfolio and our workover portfolio. When I say workover portfolio, that means we deploy more workover rigs and drilling portfolio, we deploy more drilling rigs. This adds to the contract cost.

Third, while we need to work on all this, we also need to supplement these release of locations by additional studies and extensive seismic data acquisition processing and interpretation. So, this also adds to additional cost. This is part of our production enhancement efforts.

In addition to that, now I wil

l supplement my response to your second question. Today, Oil India has got an acreage of 1 lakh square kilometre out of which 50,000 square kilometre pertains to shallow water, deepwater and ultra-deepwater acreages. And as you know, we are currently drilling the third exploratory well in Andaman Nicobar.

And as we speak, the depth range is about 3,500 to 3,600-meter. We are going to go down to 4,200-meter. As far as our exploration in Kerala-Konkan Basin is concerned, we intend to drill up to 6,000-meter to trace presence of hydrocarbon in the cretaceous permissions. Now these additional efforts leads to the additional contract cost.

I must share with you another interesting development. In the month of May 2025, we got the deepwater blocks 40,000 square kilometre in 4 blocks Mahanadi and KG basin. As part of our exploration effort, we have already completed 4,200-line kilometres of 2D seismic and 50% of 3D seismic that is 5,300 square kilometre. This also adds to contract cost.

But most importantly, these data helps us to strategize our further exploration program, and this will also help us to strategize our efforts for securing more acreages in the OALP 10th bidding round, which is now extended till 29th of May 2026. I hope I have been able to substantiate with my response. Should you require, please let me know.

Vivekanand S.: No, sir. This is very helpful. Just on the financial front, given the increased efforts on the exploration side, is this the new baseline in terms of contractual costs that one should assume for modelling?

Ranjit Rath: Okay. Very good question, and this is -- I would also love to answer. Look, it's like this. As of today, we are deploying semi submersible rigs and jack-up rigs, which are primarily shallow water depth but deeper horizon. But this also includes a substantial component from our onshore drilling effort. Simultaneously, we are enhancing our efforts for undertaking exploration and drilling in the newly acquired Cambay Basin blocks and in Meghalaya.

Cambay Basin block is a Category 1 basin. Meghalaya is a category 2 basin. We are also looking at additional expenses; I would call it as investment for substantively more drilling in our Rajasthan block. Now this gives a kind of broad outlook as far as onshore exploration and development drilling is concerned.

Next year, by now, we should have excellent clarity in terms of our deepwater drilling commitment. And the best part is while we would definitely be undertaking at least 3 to 4

deepwater drilling commitments, which will entail mobilization of drill ships, which will definitely be at a higher cost since we have not discovered the price, it will be premature for me to speculate any number.
But to give you a comfort, we have a collaboration with TotalEnergies, which is in the public domain to support our exploration effort. As part of that, the entire design basin adjunctions for seismic data acquisition and processing and interpretation will have the oversight of Total, which is an international oil company with adequately and extensive exposure in deep and ultra-deepwater drilling and exploration.
As part of the collaborative framework, there is a right of first refusal, which is available to TotalEnergies. Should there be any prospect identified out of the seismic API that we are doing right now for our deepwater block, TotalEnergies will also like to share the cost and share the risk. Therefore, we are currently not anticipating any specific issue as far as cash flow or additional contract cost is concerned.
Similarly, we are also reaching out to other international oil companies and national oil companies with exposure and expertise in deepwater and ultra-deepwater to secure derisk mechanism so that we not only look after the OALP 9 blocks that we already have acquired, we will also follow a similar approach for our

OALP 10 bidding strategy. I hope I have been able to substantiate my response.
Moderator: We will take the next question from the line of Sarthak Tita from DSP Asset Management.
Sarthak Tita: So just sir, I had a couple of questions on -- and I would like to hear your views on that. So, first of all, like we had an understanding with BPCL on their new investments in the Andhra Pradesh refinery, right? So just wanted to get some viewpoint as to the reason behind us getting into that as a strategic investment? And what will be the percentage or what will be the collaboration that we are working on?
And secondly, sir, on our stand-alone operations of E&P, I just would like to know more about the production guidance for FY '26, '27 and '28 for both crude and gas, if you could provide some colour on that?
Ranjit Rath: Okay. As far as our planned investment participation in the AP refinery, which is being steered by BPCL, we foresee that this will be a high-end refinery petrochemical complex, wherein we are looking at a 12 million metric ton and the refinery will have about 35% petrochemical intensity index.

Now DFR for the same is currently being worked out, not only in terms of cost, but also the crude slate. So that we maximize the petrochemical component as well. Therefore, the cost estimates are still work in progress. As far as our interest -- evinced interest to BPCL is concerned, currently, it is in the range of 10% with a likely possibility, should there be any interest, we can enhance it.
But as of today, once we have clarity on the DFR and clarity on the overall cost, an appropriate decision will be taken. This is primarily to have an extension or an oversight in terms of our strategic diversification. Our main stay will continue to remain E&P for that matter.
As far as stand-alone E&P production is concerned, as I have already said, our target for 4 million metric ton and 5 bcm are contingent upon 2 things. One, the main producing area will provide us opportunities to drill more wells and do more workover. I would share with you that while this year, we are going to achieve 75 wells, the next year target is 100 wells as part of our strategy for both exploration and development wells. Now that gives me an outline of the number that we are looking at.
The number that we are looking at is this year, we will achieve to surpass last year's production, '24-'25 production. Year after, we are looking at a number, so I don't want to generally don't speculate. This is our internal estimate of likely prospects that we would target and bring it to the surface will be hovering around -- total production will be hovering around 7.5 MMTOE. And going forward, it will be 8 MMTOE.
We will be actually having one guidance. The crude oil production, 4 million metric ton would happen. However, natural gas production, though we have potential to produce from the current 8 million standard cubic meter per day to 13 million standard cubic meter per day. That will be actually contingent on the feeder line that we are all waiting for. And the DNPL line will provide an opportunity to evacuate also. So going forward, we are looking at something like 7.5 MMTOE. And should there be the evacuation in place, we would aspire to achieve 8.5 MMTOE FY 2028.
Moderator: We will take the next question from the line of Bineet Banka from Nomura Wealth.
Bineet Banka: I have a couple of questions on the NRL refinery part. So firstly, how much of the refinery current crude intake is coming from the local sourcing? And what is the cost difference if you

procure the crude locally versus importing?
Bhaskar Jyoti Phukan: We are getting almost 100% crude from local field of Eastern Assam, but a very small quantity is also coming through Haldia through import route, and we are transporting from Haldia to Numaligarh by rake. That constitutes

around 50 KTPA, whereas all the rest, 3,000 KTPA crude is coming from the Upper Assam oil field. And actually, we are benchmarked to international prices. And the prices which was indicated initially in the presentation is the price that we are actually giving to Oil India. So, it fluctuates with international prices.
Bineet Banka: So, there is a differential logistic cost logistic cost will be higher if you are importing and using pipeline to transport. So, what could be that differential?

Bhaskar Jyoti Phukan: See, pipeline transportation cost typically is INR0.50 per ton per kilometre. And you also have the luxury of importing crude, which are cheaper than what we are getting today because our refinery, we have configured in such a manner that cheap crude can also be processed. So, delta typically can range from $2 to $4 if you can actually appropriately source crude, which you can process but are cheaper in the market. So that leverage will always be with you. And actually, you will end up in the same sort of product because you have a very complex process in place as far as new refinery is concerned.
So therefore, whatever additional logistic cost that we will incur in terms of getting crude into our refinery will be compensated by the lower crude cost of procurement. So, did I answer your question?
Bineet Banka: Yes, sir. Just another question on the same NRL refinery, sir. So, what was the reason you had like very high refinery GRM $16 in this quarter? This is much higher than what the other OMCs have reported?
Bhaskar Jyoti Phukan: See, actually...
Ranjit Rath: Are you not happy?
Bhaskar Jyoti Phukan: We are very happy. I would like to explain. See, we are mostly -- the current refinery is mostly a diesel refinery. And diesel refinery diesel margin was very, very high. Actually, at times, it went to as high as $24, you may have seen in the third quarter. So therefore, our almost 65% to 70% product is diesel. So therefore, we have a head start vis-a-vis our peers as far as refining margins are concerned only when the diesel margins are higher. So that is the simple answer that I could have given.
Ranjit Rath: But that is a modest answer. Let me supplement this. The refinery is running 100% plus capacity and the best yield in percentage term also. So, these 2 things have also added to the performance -- physical performance of the refinery. So, one is the crude oil price, which is subdued to the spread that one gets in HSD. And most important is the performance of the refinery.
Bineet Banka: Okay, sir. Got it. Just last one on the NRL only. So, what is the total debt on NRL balance sheet? And what will be the debt when all the capex is done, I think over the next 1 or 2 years, including the petchem plant?
Bhaskar Jyoti Phukan: I think the...
Ranjit Rath: About INR16,000 crores.
Bhaskar Jyoti Phukan: Yes. It is around INR16,000 crores. And by the time we end all the projects, including petchem, it should be around INR25,000 crores to INR26,000 crores.
Moderator: We will take the next question from the line of Nitin Tiwari from PhillipCapital India.

Nitin Tiwari: Sir, staying on the question of contractual cost, the explanation that you gave is a rather structural one where like your incremental exploration and development effort is leading to perhaps a higher cost. But I'm interested in knowing what specifically happened in this quarter because in this quarter, your contractual costs were higher by about 70% to 71% on both Y-o-Y as well as Q-on-Q basis. And as the earlier participant also asked that is this the baseline that we should consider going ahead?
Ranjit Rath: Okay. I'll give you a bit more elaboration. This month, we have already drilled the equivalent number of drilling that we had done last year. And this is just 62. We are going t

o drill another
12 to 15 wells. So, this is the additional cost which is coming on the way because these are all monthly payments. So, this will accrue. That is how the higher contract cost is concerned.

Second, I will reiterate, we are now drilling deeper. So, when you drill deeper, it is not a linear complexity. The drilling rigs come with an operational day rate, but the complexity increases, the geological complexity increases. Therefore, that also add to a prolonged drilling duration. Third, when we deal with mature fields, the workover duration also increases. So, these are those contract costs which has actually come in, in the Q3.

As far as specific response, if you are looking at a benchmarking, I would suggest that's what I had given an elaborate answer that this could continue to be the benchmark with the onshore and the current offshore -- shallow offshore drilling that we are doing. There will be a slight uptick in terms of benchmarking year after when we will undertake the deepwater drilling, but that would also be hedged with international collaboration. So, from a safe assumption point of view, the current numbers could be benchmarked.

Nitin Tiwari: So, sir, if I understood this right, because your working hours have increased. So, have you deployed more rigs in this quarter, which has perhaps added to your higher working hours and also higher contractual cost?

Ranjit Rath: Okay. I'll now -- let me take some credit here. This activity, please understand, Oil India was drilling only 30 to 35 wells -- 2 to 3 years ago. The same manpower, we are delivering more drilling because of 2 - 3 things. One, our operational efficiency has gone up substantially. Two, we are drilling more wells and more deeper wells by standardizing an SOP where the drilling rigs and then the interlocation movement is seamlessly practised. Third, the waiting on period of the bundling services for testing is also planned in a very meticulous manner. Fourth, the plinth which is created for carrying these drilling activities, whether it is a 2,000-horsepower rig, 1,400 horsepower rig or a 3,000-horsepower rig are standardized. Fifth, the movement between the workover rig coming in or the testing protocol that we need to do for early monetization has also been improved. So, all these actually giving us an opportunity of cost optimization and operational efficiency.

Nitin Tiwari: Okay. Fair enough. Sir, secondly, again, a clarificatory question on the production guidance that you gave. You mentioned 7.5 million tons and 8.5 million tons equivalent in '27 and '28. So, if we look at like the crude production in '26 is going at a run rate of about 3.4 million tons

annually. So, if we can get to specifics in terms of what you are targeting for '27 and '28 in terms of crude production? Gas, I understand you said it's contingent on connectivity and other aspects?

Ranjit Rath: Crude production -- if we are able to drill 100, and I can assure you we are going to drill 100 wells, we would aspire to touch 4 million next year. But...

Nitin Tiwari: In '27?

Ranjit Rath: In '27. But on a conservative side, we are planning or we have indicated that we would do 3.8 in 2027 and 2028, we'll achieve 4. That also will have risen because when the drilling happens, the buildup towards production comes in the last quarter. So, there could be a situation that we would sleep over beyond the FY 2027. Therefore, the outlook that we have given to ourselves is in the order of 3.8 and 4.0.

But in case we are able to drill 100 plus or 100 wells and year after another 100 with the number of drilling rigs that we have planned, number one. Number two, we will have more 3,000-horsepower rig in our fleet. Number three, we will have a couple of new rigs joining the fleet. Therefore, we are planning that 100 numbers to be drilled and to be able to produce.

Moderator:

We will take the next question from the line of Vikas Jain from CLSA.

Vikas Jain: So the scenario that you're painting is, of course, there is a lot of excitement in terms of activity, which you most likely will possibly end up drilling 3x the number of wells and you've been able to get some efficiency without much increase in manpower and some of these other costs. But in that scenario, what I want to understand is that would obviously mean more costs, but these costs will be largely what seismic-related costs which would show up in terms of other expenditure for this period. And obviously, these are costs that we -- that might show up today, but it will lead to higher production later. That's the kind of thought process that how we should be thinking about, right? Is that the right understanding?

Ranjit Rath: Excellent. I think you were bang on. I'm so glad that you have summarized your assessment so rightly.

Vikas Jain: Okay. Sir, so in that context, could you just give me what has been the seismic cost for, say, 3Q and 2Q as well and the 9 months that we have because that's part of the other expenditure, right?

Ranjit Rath: Okay. I'll just dig out because I'll have to dig out exact number, what is the seismic cost. Where is that? Okay. The seismic cost number towards seismic data acquisition is about INR580 crores that I'm given to understand, and 9 months is INR1,151 crores.

Vikas Jain: And the 2Q was?
Abhijit Majumder: Excuse me, what is the other question?
Vikas Jain: 2Q.

Abhijit Majumder: So, the quarter 3 number is INR579 crores, and quarter 2 number is INR321 crores.
Vikas Jain: Okay. Understood.
Abhijit Majumder: These are ultimately variable parameters, the more you drill, the more deep you go, your cost would naturally go -- it will increase.
Vikas Jain: Obviously. And sir, so in terms of this activity that we are talking about, there will, of course, be development wells, which will be largely capitalized till production come in, but a lot of it will also be even exploratory wells. These would show up other than seismic, where would this be? Would this be broadly bunched up? These would also come up in terms of higher exploration write-offs in terms of dry well write-offs. Is that the reason why your 9-month number is almost getting closer to INR2,000 crores?
Abhijit Majumder: Yes. I mean, see, exploration appears under the exploration and evaluation costs. So, there is a separate line item under which it would appear. And once you -- it becomes a development asset, then it would move from E&E to development, which you will finally capitalize. Till such time, it will remain there as E&E asset because this is an ongoing activity. And till the time you really turn it into a producing asset, it will remain there as E&E.
Vikas Jain: Sure. So, I think these will be the 2 elements? Or is there something else that I'm missing other than seismic and...
Abhijit Majumder: Other than this, it'll be G&G, which is my seismic, survey expenses, et cetera.
Vikas Jain: Yes. So, the seismic and survey expenses are the numbers that you gave us, INR1,150 crores, right? That's the one that you gave us.
Abhijit Majumder: Yes, that's correct.
Ranjit Rath: Yes. Gentlemen, I'm sorry. I had to step out. See, the -- when we look at these numbers, my suggestion to all of you would be the activities in the field are weather window driven. When we talk about seismic data acquisition, during the monsoon, the work comes to a standstill. So, you would appreciate when we look Q1, Q2 and Q3, the expenses incurred as part of our contract cost would never be equal or even equivalent. Therefore, in fact, when we discuss this, and I must share with you these numbers within the ambit of our Board, we take cognization of the fact that considering the Northeast region that we operate in, considering the necessity of a fair we

ather window in which we do the seismic API, these numbers would also reflect in the respective quarter.
However, when we look at these numbers on an annualized basis, that gives us a clear picture, both in terms of our enhanced effort, enhanced deployment of resources and a number which is annualized. So Q1, Q2, Q3 comparison as far as these activities are concerned are based not update. So, I hope I have given a kind of a clarity on the concept.

Vikas Jain: Sure, absolutely. Obviously, I mean, so Q3 and Q4 might have more fair-weather window, so that might have more activity over there, obviously?
Ranjit Rath: Exactly.
Vikas Jain: So just to kind of -- for comparison's sake, like last FY '25 from what I can see, your total seismic cost was about INR750 crores and your total E&P dry well write-off was about INR650 crores or so. So those numbers?
Ranjit Rath: One second, I'll take down your number first. What you said, I'm glad that you are doing this granularity. Seismic, you are saying how much?
Vikas Jain: Sir, this is from what you had reported, I think, INR750 crores?
Ranjit Rath: No problem. I will take it from you. I accept it because that helps me to crystallize my thoughts. Please go ahead.
Vikas Jain: Sir, INR750 crores and INR650 crores, roughly, I'm rounding it off, INR750 crores is?
Ranjit Rath: No problem.
Vikas Jain: And INR650 crores is dry well write-off. So, these number, what -- how should we think of FY '26 and '27 in terms of where these will go up to? Like FY -- 9 months has already become nearly INR2,000 crores for dry well write-off. This should continue in a similar 3Q kind of number run rate for 4Q as well and seismic also a similar kind of number like 3Q?
Ranjit Rath: Can I get your name, please?

Vikas Jain: Vikas, sir. Vikas.
Ranjit Rath: Vikas, I'm so glad that you are asking these questions in so granularity because this gives me an opportunity to share my thoughts. In an E&P operation, while we undertake efforts for enhanced exploration, we also are prepared to write-off wells as part of the Ind AS guidelines, okay? That's one.

Second, when we look at exploration activities, I would share with you, normally, exploration activities are never linear. It is having some kind of an overlap. The process is, first, you do a bit of seismic, then you do drilling, basis your drilling, you do post-drill analysis, you do a tie-in study, then you bring in a supplementary seismic, then you decide a couple of more drilling to be done.

In between, you do a back analysis of your data, run your dynamic modelling, then you bring in infill wells to enhance your production and also enhance your recovery rate. With these kind of continuous process of optimizing your drilling cost basis the exploration efforts and then the studies, it is extremely difficult to give you a number what exactly will be my dry well cost at the year-end before doing the calculations, number one.

Number two, you would appreciate that the work in progress as part of development well and in case of exploratory wells, where we anticipate that there is certain horizons which could possibly be tested are caved as work in progress. One example, the first well that we have drilled in Andaman Nicobar, we have drilled up to 3,600 meters.

And we have -- we are carrying that well as a work in progress because we intend to do testing in certain horizons that we have established as part of our geophysical logging that we have carried out. Only after obtaining the test results, we will take a call to write-off.

But one thing for sure, as part of the Ind AS mechanism and in the governance criteria, the incidents are reported instant basis within the same quarter. You do not have the opportunity to defer should an incident happen in that quarter. So, while it will b

e difficult for me to indicate
a number of dry well costs that we might report, you will have to bear with me with this clarity that I'm trying to offer.

Vikas Jain: Sure. No, I fully appreciate that. I mean, finally, exploration, there is an element of chance and predictability can be difficult. But I mean, my motive of asking that question is to get a sense that activity levels would be similar to where they are today for all of FY '26 and FY '27. That's the right way I should be thinking about it.

Ranjit Rath: Okay. I will give you an answer -- supplementary answer to this. I'm so glad that you are asking these questions because through you, I have been able to share my insights. As an E&P company, we would like to have enhanced activity. When I mean enhanced activity, that means our exploratory efforts, both near-field exploration and development well drilling has -- is resulting or giving us more as we call our sand horizons or target horizons.

If we get more target horizons, it gives us more activity, gives us more perforation, gives us more workover and leading to more production. So, we are happy with more activities. We are very unhappy when the well goes without any activity.

Vikas Jain: Sure. Sir, just shifting gears a little bit and one last thing before I know I've taken a lot of time, but hopefully, we've been [inaudible 1:04:20] important?

Ranjit Rath: Please do.

Vikas Jain: Is on Numaligarh, we did -- I mean, it was mentioned that we will hopefully get to 50% utilization of the CDU and VDU. But typically, the bigger gains for refineries would come when the upgrader units operate and that's when distillate yields increase and that's when refining margins increase. So how should we think about operating at higher, at fuller -- the right utilization levels for the overall refinery?

Number one. And when will the Petrochem expansion start kicking in, you could go by quarter-by-quarter, say, 1Q, 2Q of next year? I mean, when should we start seeing the right refining margins ex of petco, petchem start kicking in with all upgrader units operating?

Bhaskar Jyoti Phukan: See initially, I told that we will be operating our refinery, the whole complex by end of next year, last quarter of next year. And we hope to achieve 50% capacity utilization on a daily basis during that quarter. Going forward, next quarter, obviously, our effort will be to go up on that 50% utilization to say, around 75% then gradually going up to 100%. So, you will see a gradual uptick in the capacity utilization of the new complex that we have built up starting

from Q4 of FY '27 and continuously going up to, say, Q2 of next financial year thereafter, that is FY '28.
And during FY '28 towards the last part, we should also be commissioning our petchem project. Petchem is a single unit. So, once it is commissioned, that means it is commissioned and gradually, the product will start tickling in. Maybe at the first quarter, we will not be able to achieve 100% of capacity run. But gradually, it will ramp-up in 2 to 3 quarters, we will be able to go to 100% capacity utilization.
So, to summarize, in Q4 of FY '27, we will be at 50% daily capacity utilization and going up to 100% by Q2 of FY '28 and petchem will start by close of FY '28 and we will be achieving its full capacity by, say, Q2 of FY '29. So that is the outlook that I would like to give you at this moment.
Moderator: We'll take our next question from the line of Gaurav Jain from ICICI Prudential Mutual Fund.
Gaurav Jain: Just one question from my side. If you can share, sir, region-wise split of the 60 wells that we would have drilled till now, how many of them are in, say, Northeast? How many are in other geographies, etcetera? That will be helpful.
Ranjit Rath: Give me 1 minute. I'll tell you -- I'll give you a construct. See, you all know that the main producing area for Oi

l India Limited is in Arunachal Pradesh and in Assam, okay? And by 9-
month of FY 2026 in Assam and Arunachal Pradesh, we have already drilled 38 wells. And in Rajasthan, we have drilled 10 wells.
That is the next producing field. By end of this year, we would attempt to drill 65 wells in Assam and Arunachal Pradesh. Rajasthan possibly would give us another 2 or 3 wells. But overall, since we have got exploratory wells being drilled in Mahanadi, exploratory well being drilled in Kerala-Konkan, exploratory well being drilled in Andaman, the DSF block in Tripura and in Rajasthan would also have a couple of drillings. So, we are looking at a total of 75.
Gaurav Jain: Just a follow-up on this, sir. What we understand is, sir, we have evacuation challenge on the gas side because of connectivity issues. But then the crude growth is also, sir, lackluster than what we have been expecting. And then if we are drilling more wells and those fields or those wells are more of associated fields where both gas and crude would be there and then the evaluation of gas will be a challenge?
So if you can help us understand that dynamic, sir, that how comfortable are we to expect that crude will grow, whereas gas will grow with a lag because of connectivity issue and these

wells that we are drilling has to be then crude only maybe so that we can take out the crude? Where are we wrong in understanding this, sir?
Ranjit Rath: Okay. I'm so glad you are asking the granular questions. Let me give you a perspective. When we drill, we really look at hydrocarbon because the signatures tell us presence of hydrocarbon. After the testing is done, we establish the sand horizons and then we establish whether it is a crude oil with associated gas or dry gas, okay?
Now the question is, in earlier cases, we were actually flaring those associated gas. Today, by virtue of having additional compressors alongside those fields, we are monetizing those earlier being flared gas and maintaining the crude production. So, this has been our strategy, and this will continue to be the strategy for us so that the crude oil production is not getting impediment because of the necessity of flaring. That is one piece.
The second is we have recently, and all of you know, have built a pipeline from Kumchai in Arunachal Pradesh to Kusijan in Duliajan that is nearby, which is helping us to evacuate the natural gas, which was getting flared from Arunachal field, and that is also giving us a boost in the crude oil production.
The third piece that we have done is we have already established a possibility of gas storage in one of our fields by converting a compressor as an injection pump. So, in case we are getting associated gas and there is an evacuation constraint, we are actually -- we have injected the gas back to the system, which can be withdrawn once the pipeline connectivity is done.
The fourth is recently in one of our westernmost fields that is in Lakwa gaon, we have converted a crude line to a gas line. And that way also, we are kind of planning to evacuate natural gas or associated gas, helping us to maintain the crude oil production. The best part of crude oil, you have appreciated, evacuation is easy. Therefore, we are confident that we will be able to maintain the outlook that we have aspired to.
Moderator: Next question is from the line of Sabri Hazarika from Emkay Global Financial Service.
Sabri Hazarika: Two questions. Firstly, on this capex front, what we have noticed is that I think 9 months stand-alone capex is somewhere around INR8,500 crores, so which is in line with the full year guidance. So, for this year, would we be overshooting the guidance?

Ranjit Rath: The more we do the activity, the more the capex that you would appreciate. We would -- we had planned a certain amount of capex, and we would actually surpass that number this year. That is act

ually to supplement our efforts for production. So, the number that we have indicated for '25-'26 is INR8,800 crores, but given the numbers that we have seen yesterday as part of our Q3, it would be increasing.
Sabri Hazarika: Okay. And next year also would be like similar, or higher than the INR8,500 crores, INR8,600 crores that you have given?

Ranjit Rath: It will be in that order because it would actually help us, but I would actually have a caveat here that since next year, we'll have more drilling rigs, we'll drill more wells, the capex would definitely have an upswing. So, we will readjust our RE once we have a line of sight after Q1 of 2027.
Sabri Hazarika: Okay, sure. And NRL, how much has been the financial progress? How much capex has been done?
Bhaskar Jyoti Phukan: This year, capex outgo so far has been around INR6,000 crores, and we will end the year with INR8,000 crores. And our capex -- total capex, both the refinery and petchem put together is INR45,000 crores. And there are smaller projects also included there actually.
Sabri Hazarika: Right, sir. And second question is on this Andaman field. So, we have done -- we have drilled 2 wells, and we have taken some write-off also. So right now, are we done with -- I mean, have we written off whatever is required in Andaman field? Or is there something pending? And what is the next drilling plan? You said third well. So, when is it expected to be done? And how many more wells in the near-term you have made plans about?
Ranjit Rath: I'm so glad. Okay. So, Andaman, I'll give you a perspective. Andaman are the OALP blocks. We have 2 blocks, 9,000 -- I think 10,000 square kilometre, 1 block on the east side, 1 block on the west side. We had initially planned to drill 4 wells in Andaman shallow water. The first well was drilled up to 3,600 meters.
We are carrying that well as work in progress from a finance point of view because we intend to carry out some testing activity. The second well, we drilled up to 2,600 meters, and we undertook a site track. And then we tested the well in the site track that is called A Well and the site track well established presence of hydrocarbon.
As far as Ind AS is concerned, even if you are doing site tracking, the mother well have to be written off. And following that principle, we have written off the component of the second well. The third well, we are actually under drilling right now, which is currently at around 3,300, 3,400 meter. We are going to drill the fourth well on the northwest side of Andaman block, but the story doesn't get over here.
Having established the presence of natural gas in the second well at a depth of 2,200 meter, we have already initiated the appraisal process. The appraisal process entails reprocessing of the 2D seismic data that has already been completed. Next, followed by 600 square kilometre of 3D seismic in that same area to establish the structure and then the extent of the structure. Third, that activity, we have already initiated. The mobilization will commence. After the 3D seismic of additional 600 square kilometre, we intend to drill an appraisal well. So that will be the fifth well in Andaman Nicobar. So that's the Andaman story.
Sabri Hazarika: And just last one small question. You mentioned that currently, the crude oil production run rate is around 10,000 metric tons per day. Is that right?

Ranjit Rath: Yes.
Sabri Hazarika: And what would be the equivalent gas production current in MMSCMD?
Ranjit Rath: Give me 1 minute. I'll just take out my daily production report. I'll tell you as of today. Okay. As of today, we have done how much? 8.597 million standard cubic meter per day.
Sabri Hazarika: That's natural gas. And crude oil as of today?
Ranjit Rath: Crude oil, as of today, we have done 7,288 barrel. That works o

ut to 10,029 metric ton.
Moderator: Next question is from the line of Somaiah V. from Avendus Spark.
Somaiah V.: So, first question is on the Paradip-NRL pipeline. So how much kilometre is still left? And what is our expectation by when this will get completed?
Ranjit Rath: I'm sorry, I could not get your question. What is that kilometre...

Moderator: Sorry to interrupt. Somaiah, can you use your handset, please? Your audio is not clear.
Somaiah V.: Yes. I hope I'm audible now.
Ranjit Rath: Yes. You are.
Somaiah V.: So, my question was how much kilometre is still left in that Paradip-NRL pipeline?
Ranjit Rath: Okay. Very good. So PNCPL is about -- not about, 1,635 kilometre. The ROU so far have already opened is 1,600 kilometre. The balance ROU that we intend to open, which is spread across states is about 40 kilometre. And you would appreciate about we are going to travel 5 states, Odissa, West Bengal, Jharkhand, Bihar and Assam. So, in some -- in all the states, the small, small ROUs are left. Otherwise, we are on track as far as our production or the ROU opened is about 98%. The lowering is about 92% that is completed.
Somaiah V.: Okay. Sir, so we don't see this as any impact. For instance, we want to ramp-up the utilization on the refinery -- expanded refinery front. So why then, we expect this to be fully completed? So, we don't see any risk of this getting delayed. So, I just want to have a confirmation?
Ranjit Rath: No, we don't see any bottleneck as of the pipeline is concerned. We have got excellent interaction with the state government for these remaining ROUs, and we do not foresee any constraint.
Somaiah V.: Got it, sir. Second question, sir, is on the capex front on NRL. So, of the INR45,000 crores that we mentioned for the project, so far, what have we spent? And the remaining amount, what is the profile -- the spend profile in next couple of years?

Ranjit Rath: See, the project, you would have heard already, we are looking at completing the project and taking complete 100% capacity utilization by Q2 of FY '28, but the mechanical completion would necessarily happen before Q4 of FY 2027, okay?
Now as far as the capex is concerned in terms of NRL, so far, we have done a debt of about INR16,000 crores, if my numbers are correct. That has been already drawn. And as far as the overall capex is concerned, we are looking at INR34,000 crores as far as NREP is concerned. And how much is the equity, let me -- other total is INR45,000 crores as a ballpark number.
Somaiah V.: Sir, I was just looking for next couple of years, what will be the capex that NRL would be incurring to complete the project?
Ranjit Rath: Actually, after next year, we don't foresee any major capex. The capex that will spread over beyond next year is the polypropylene unit, which would actually be at the peak. And polypropylene unit is about INR7,200 crores. So that's the spread.
Somaiah V.: Okay, sir. Sir, a couple of questions. One on net debt at consol level. So, what would be the net debt? You gave NRL number also on the stand-alone as well as the international ops. And also, if you could give some colour on international...
Ranjit Rath: I'm sorry. What is that you are asking? What is that?
Somaiah V.: Consol net debt number, sir. Consol net debt?
Ranjit Rath: Net debt, I'm sorry, INR34,000 crores.
Somaiah V.: So, this is the consol level, including INR16,000 crores at NRL?
Ranjit Rath: Yes. Let me give you a breakup. It is INR16,000 crores at NRL level. It is INR16,000 crores at Oil India level. The INR16,000 crores in Oil India level is primarily the external commercial borrowings for our overseas assets.
Somaiah V.: Sir, last question on the overseas assets. If you could just give some colour on the performance and dividend status.
Ranjit Rath: Dividend, you all have already taken note of the announcement that we have done. In term

s of
our dividend declaration, the Board took a very considered view that we must protect the interest of our shareholders. Therefore, we having got a balanced number as far as the consolidated that where we have maintained the PAT that you would have already reported. We have maintained the same dividend in terms of our announcement. First, it was INR3.5 per share. Yesterday, we have announced INR7. That brings it to INR10.5 per fully paid authorized share. So that is the dividend declaration, which I have to offer right now.
Somaiah V.: Sir, my question was on the dividends that we need to receive from the international, the Russian assets. So, any update on that?

Ranjit Rath: Okay. Okay. So as far as Russian asset is concerned, we have got 2 assets. One is Taas-Yuryakh and one is Vankor. Now when I say Taas-Yuryakh and Vankor, both our exposure is about USD 1 billion. As far as Taas-Yuryakh is concerned, we have got 100-plus percentage

dividend backed. As far as Vankor is concerned, it's about 90%.
Somaiah V.: Any dividend that is still there, which are yet to receive or so far, we've got -- whatever that's been declared, so far, we have received it?
Ranjit Rath: The dividends are in safe account of Oil India Limited and the account lies with CIBL branch that is SBI branch in Moscow. So, it is in our account. The range, the order of magnitude of retained money in Moscow branch is about $300 million.
Moderator: Next question is from the line of Moksh Ranka from Aurum Capital.
Moksh Ranka: I wanted to ask -- could you please provide some colour regarding the Northeast gas pipeline connectivity? Could you provide some colour on that?
Ranjit Rath: Okay. I'll share that. The thought process is the main line, which goes from Urja Ganga led by GAIL, the line has already reached Baihata, that is the north bank of Guwahati and the pipeline is crossing Brahmaputra River to go to Guwahati. That is one.
Second, the Northeast grid -- Northeast gas grid, which is supposed to connect to the gas sources and then the capital of Northeast, first phase is from Baihata to Numaligarh, where the river crossing of Brahmaputra at Majuli in Jorhat and then it goes to Numaligarh. That line is fully completed.
Then the segment lines of connecting it to the respective capital are work in progress. You would appreciate the terrain is so difficult that NEGG is taking some time. But what is more important is the evacuation possibility from the main producing field that is the Duliajan or the main producing area of Oil India and ONGC and other small gas field operators.
We have got a dedicated pipeline called Duliajan-Numaligarh pipeline. The capacity upgradation of that pipeline is underway. We are looking at 1 million standard cubic meter per day of today to 2.5 and the mechanical completion is already over. The commissioning work is under progress. We should be able to have the pipeline commissioned by April 2026. Utilizing this pipeline, Oil India gas can reach and cater to the enhanced gas requirement of NRL that is one.
Moksh Ranka: Okay. And is this Duliajan hub going to integrate with the IGGL? And by when can we expect that also?
Ranjit Rath: I think there is some disturbance. The Duliajan feeder line is just waiting to be approved by the government once the authorization is communicated to IGGL, that is Indradhanush Gas Grid Limited. It will take about 18 months because it does not entail any major river crossing. So that would actually give us an opportunity of evacuating 3.5 million standard cubic meters of gas per day.

Moderator: We'll take our next question from the line of Keshav Soni from Kotak Securities.
Keshav Soni: Can you please share the stand-alone capex guidance for FY '26, '27 and '28?
Ranjit Rath: Stand-alone capex for this year for Oil India?
Kes

hav Soni: This year and '27, '28, yes, for Oil India?
Ranjit Rath: Yes, it is INR8,800 crores. Going forward, it will hover around the same number or it will catch base about INR9,200 crores plus.
Moderator: As there are no further questions, I now hand the conference over to management for closing comments. Over to you, sir.
Ranjit Rath: First of all, thank you very much for this opportunity to interact with our colleagues, with our friends and our investor community, our shareholders, our analysts. It's always good and great to interact because this gives us an opportunity to reach out to the people who matter as part of our insight sharing, as part of our strategy sharing, as part of our growth story sharing. So, I hope we have been able to answer or respond your queries or questions or feedbacks reasonably well. And we are open to any further interactions at any point of time. Please feel free to reach out to us.
Thank you very much once again. While you have continued your trust in Oil India Limited, we will look forward to having such reposed faith and trust in Oil India's performance for days to come and years to come. Have an absolute and excellent day ahead. Thank you very much.
Moderator: Thank you, members of the management team. On behalf of Antique Stock Broking Limited, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.
Ranjit Rath: Thank you.

Call: May 2026
