Ladies and gentlemen, good day and welcome to Q4 FY2023 Earnings Conference Call of the RailTel Corporation Limited. As a reminder all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call. please signal an operator by pressing "*" then "0" on your touchtone phone. Please note that this conference is being recorded. I now hand the conference over to Mr. Vishal Periwal from IDBI Capital. Thank you and over to you Sir!
Thanks Seema Good afternoon everyone. First I would like to thank the management ofRailTel Corporation for giving us this opportunity to host their earnings call. I will introduce the management from the RailTel side. Today we have with us the CMD Sir Sanjai Kumar, Director (Finance) Shri V Rama M

anohara _Rao Ji, then we have Director (Project Operation &
Maintenance) Shri Manoj Tandon Ji and then HC Batra, ED (Finance). As usual we will have a brief overview from the company on the gone by quarter and then we will have the lines open for Q&A. Yes Sir over to you!
A very good morning to dear investors and all other stakeholders. It gives me great pleasure to interact with you on the company's performance in the backdrop of Q4 audited results of the company as well as results of FY2022-2023, which were declared by the company on 17th May 2023. The company achieved milestone of over 2000 Crores total consolidated income during FY2022-2023 all-time high in the history of the company. The company achieved consolidated operating revmue of Rs.704 Crores for Q4 as against Rs.454 Crores in Q3 of FY2022-2023 registering the growth of 55% on quarter-on-quarter basis. Year-on-year growth in operating revenue for the fourth quarter ofFY2023 has been 51% as compared to corresponding period of last year. For FY2022-2023 the company registered . the growth of 27% in operating revenue with turnover of 1964 Crores as compared to 1548 Crores in the previous financial year. The telecom segment contributed Rs.1169 Crores and project segment contn1nrted Rs.794 Crores in the company's operating turnover. The profit before tax in fourth quarter of FY2022-2023 before exceptional items is Rs.67 Crores as against previous quarter corresponding profit of Rs.43 Crores registering an increase of56% quarter-on-quarter basis.
For FY2022-2023 the company has posted total profit before exceptional items and tax ofRs.257 Crores as against Rs.231 Crores in previous financial year. Total profit after tax and exceptional items ofFY2022-2023 stand at Rs.189 Crores as against previous year's PAT ofRs.209 Crores. Earnings per share for this year stand at Rs.5.89. EBITDA for Q4 ofFY2023 is Rs.144 Crores and the EBITDA margin is 200/o. The company's EBITDA margin for FY2022-2023 has been 200/o as against previous year's margin of 27%. A fall in EBITDA margin is partly due to competitive rates in projects business having lower margins also. Your company bagged many awards and recognitions in FY2023 including prestigious SAFA that is South Asian Fed.eratioo of Accountants Certificate of Merit for integrated reporting in corporate governance disclosure 2021. Apart from Railways, RailTel is executing a number of projects in other sectors also like

258884/2023/0/0 DGM/FINANCE/CO/RCIL

coal, defence, banking, education, health, smart city, etc. We continue to grow as a key player in the digital transformation journey of the country. We are now driving the biggest public Wi-Fi moneti:zation programme also attempted in India in partnership with a reputed IT company by introducing many passenger friendly and infotainment services along with offering a canvas space for advertisers to excess masses. We now have expertise in the Aadhaar-based authentication services for impersonation control of candidates for competitive examinations including other similar opportunities and scaling up to expand this product line. We are glad to be associated with State Bank of India project which is one of the largest projects of providing last mile connectivity to banks on 4G LTE technology in India Our retail broadband service called RailWire now has grown to 52 lakh subscnbers across the country. We introduced many new value added services like bundled OIT plans, live OIT facilitating RailWire, FfP subscription on rail-based Wi-Fi network at railway station, IPTV services and so on. Though this is very highly competitive and low barrier market, we will continue to add more value added services

and get deeper in Tier-2, Tier-3 areas. We offer Wi-Fi services to many universities and recently bagged a -prestigious contract from ITPO Pragati Maidan Delhi to offer Wi-Fi services as service and broadband services for all events there. We are already implementing Delhi Safe City project and, Pondicheoy Smart City project and Video Surveillance System (VSS) project at railway stations as brought to your notice during previous interactions. RailTel also bagged prestigious order recently from C-DAC for developing IT infrastructure for Greenfield data centers at New Delhi and Bengaluru. It will facilitate C-DAC in building up its capacity for secure big data enterprise applications. Your company has also other IT/ICT project orders including one from Bangalore Metro Rail Corporation Limited for revamping their existing IT infrastructure, Government of Bihar for establishing their electronic knowledge networks among others. We are also implementing communication projects namely five tunnel radio communication projects for Indian Railways and converged communication system over 230 stations in South Western Railway zone. Cyber secmity is a new area which offers lot of opportunities. We have strategically decided to enhance our capabilities to serve this market Our expertise in implementing NIC e-Office project has earned us many fresh assignments from many Central Government and State Government departments. Your company has planned a capex investment of the order of Rs200 Crores for network upgradation, augmentation of data centre capacity, automation activities among others for current financial year to further strengthen our vital infrastructure and capability. We increased network capacity by 10 times recently. Easing of international supply chain will facilitate our implementation of projects also. We are very conscious of maintaining good standards of COipOrate governance, deep-rooted values, best practices, transparency and integrity throughout the company. We are focused on our future growth constantly keeping pace with the changing IT and telecom scenario and reorienting our strategies to meet the challenges. The management always works for creating values for its investors and customers. We are always strengthened with the trust reposed by the investor in the company. I would like to assure all the stakeholders that the company will continue to work for

the satisfaction of our valued customers and for achieving new milestones in times to come. Thank you.
Thank you. We will now begin with the question and answer session. We take our first question from the line of Ms. Divya Daga from Vijit Global securities. Please go ahead.
Hello Sir congratulations on such a great number and my first question is what is expected revenue with the deal of 3i Infotech this year and in the next two years, are you in talks for further deals and what is the revenue recognition model for that?
So this deal with the 31 Infotech is regarding Wi-Fi mon.etization as I have told already that we have provided them a canvas space for the advertisers so that advertisers keep their

advertisements. There is a minimum guarantee ofRs.14 Crores per annum and over and above. If they have revenue, they have to share 40% of their revenue with us with the minimum guarantee ofRs.14 Crores; so whichever is higher they will share. So this year maybe another three months they will be launching their services-for monetization part, but their payment period has already started. The minimum guarantees they have to sta

rt paying now. I believe you are satisfied with
the answer.
Basically I was asking that what is the expected revenue we are expecting in this financial year from3i?
Any Wi-Fi system globally has not been a profitable business. This is the first time it is happening. Because we have a very large ecosystem ofWi-Fi where 17000 APs are installed all over the country and the space will be opened to so many footfalls. so this is first time we will be doing it and we are expecting a good result but still it depends upon the execution. So we are working on to it and in another three months, we will see the result It has been finaliz.ed through open tender. I would not like to comment any number now, but yes minimnm guarantee is there. So this year, at least we may not be expecting anything big. Depending upon the success of this experiment. may be, next year onwards, we can say something about it
When the revenue will start coming, how we will recognize that it will come in other income or in the topline?
It is operating income.
My second question is; In Q2 FY2023 concall, you said that especially around 50 Crores from Data Centers, are we on it or is there any change?
We will be certainly increasing these services and numbers will be more. This year, we have done 52 Crores and present year we are expecting somewhere around 100 Crores.

Moderator:

Can you give me what services you are providing and how is the model and eveiything about data centers?
So data centers; basically there are different type of services like pure colocation services which now we are not very much keen to expand upon. Then we are providing core computing facilities so that basically we host the applications in our machines that is the virtual machines you can call them and then there are security added services, then application as a service also like we are providing e-offi.ce, hospital management information system the application as service is also there.
So as you say that it is on asset-light model what is that exactly?
Asset-light model means, I would say basically the money which we have put in this data center activity is not very high because these are applications, the customer just can come and then start using our services. Whenever demand comes, we can immediately start getting these services like Aadhaar authentication service which is service being provided out of our data center. So we are already having a system platform available with us and customers start using it immediately. There is no time taken in providing this service.
Is it like annual subscription?
No it is not annual subscription. it is based on usage, Aadhaar based authentication services are usage based. Suppose this year, we have conducted complete JEE exams, it was conducted through our Aadhaar authentication biometric services and so whenever the exam is conducted, they are using it and paying it basically for per user.
What is the revenue reoognition model?
There are different models. Aadhaar authentication for instance; but they are continuously application posted so that will be annual income coming to us; then there will be applications which are provided by us that is also depending upon the license based or how many concurrent users are there, those kind of terms and conditions are there, so there are various models and these_ models are continuously evolving, there is no single model of revenue eamia~.

We take the next question from the line of Vignesb Iyer from Sequent lnvestments. Please go ahead.
Congratulation

s Sir on strong set of numbers. So I remember in the Q2 call you have guided that for the project side ofit QI and Q2 could be slower so just to understand keeping that in mind would we see some progress Y-O-Y when it comes to project business in QI, Q2 or it would be more or less flattish?

I have been saying this again and again because we are a small company and a quarter for a company of our size is a small period, quarter-on-quarter there may not be true indications, I would say, but still we are having a good order book with us so we expect that good numbers will come in Ql, Q2 also.
Could you tell me what is the size of the order book as on March 31, 2023 and what would be the expected time of execution for the same?
I really do not remember, but right now we have 4500 plus Crores order book as on date.
Just one last question if I could squeeze; can you give me what is the ARPU for RailWire as of nowinQ4?
It is armmd Rs.550.
Thanks. I will get back in the queue Sir. Thank you.
We take the next question from the line of Pratap Maliwal from Mount Intra Finance Private Limited. Please go ahead.
Thanks for taking my question. We have had a good increase in revenue this quarter so I just wanted to ask how much of this was from the VSS order that we were supposed to collect in Q4?
It is around Rs.85 Crores.
So our total collection was supposed to be in the range of 400 Crores so are they going to be to the next year as well the VSS?
Yes this year we will be executing major chunk ofVSS.
Out of the 400 Crores order, how much have we done till now?
Till now, maybe around 150 including this previous one also.
150 Crores done and I just wanted some idea on the VSS order so we are doing the project for the railway stations; is there a separate order for VSS in coaches for next year that we may get, is that a separate order?
No, that is a separate order but that order we are not counting now because there is rethink going on in the Ministry of Railways as how to execute this surveillance system in coaches. See coaches are bodies wherein there are many devices already fitted, so we are working on nitty-

gritties of that, so that you might have seen in the news also maybe on the portal also that we have right now kept this tender on hold. Right now, we are not counting that order.
Understand, Sir. Thank you and just wanted to understand that going forward can we get some kind of idea as to what may be margin level at EBIT level we intend to keep either on an overall basis or project basis, any colour on that?
If you talk of project, we would try to keep the range of 6 to 7%.
Because, I think currently, we are at slightly lower level ofQ4 so what would drive that increase?
There are multiple factors. Number one is the selection of projects where we are going. So we generally select projects where there is an element of telecom, there is an element of data center

and then there is an element of IT applications 1111d all that. So generally we prefer projects where these two elements are also present and then these two elements help us keeping our margins higher.
I am sorry, telecom margin would be in the raQge of the usual 19 to 20%, is that right?
Yes. Telecom EBIIDA margins are already 33% for the last financial year.
Sure Sir. Thank you for taking my question.
Thank you Sir. We take the next question from the line of Sbubham Shukla from Voyager Capital. Please go ahead.
Hi good afternoon everyone. So my first question is around the margin; so on a telecom sector like, if you could give breakup of margins from project work and telecom work?
For quarter or for the year?
Both actually.
We talk of EBIIDA margins for telecom services for the quarter gone by, it was 29"/o and for project it was 4%.
Yearly?
Yearly, it was 33% for telecom and 5% for the project.

Second would be on the order book we currently have 4500 Crores worth of order book as far as I can remember we had a similar range of order book in Q2 so like we did not see any growth there?
Like, last four to five months, we have received new orders of around 1000 Crores. There has been implementa1io n that is why you have seen that Q4 result and handsome growth in project in some also. Orders have been coming and implementing and then new orders getting added so that is a continuous process.

So, this current order book; does it provide any visibility for revenues if you could say like a year or two revenue visibility?
This year, I see a project income of around 1500 Crores.
Any future guidance if you could provide for next year?
For this year you are asking?
ForFY2024.
Somewhere around 2000 to 2500.
The revenue we will be having, is it?
Should be. We are working towards that.
Thank you so much, good luck.
I am talking of2024-2025.
2400 to 2500 right?
No, I am talking of financial year 2024-2025; for FY2023-2024, it is 1500.
For FY2023-2024 is 1500, for 2024-2025 it should be somewhere around what?
2000 to 2500 for project income.
Thank you so much and good luck.
Thank you Sir. We take the next question from the line of Amit Kumar from Determined Investments. Please go ahead.

Amit Kumar:

Dhvani Shah:
Company Speaker:
Dhvani Shah:
Yes good afternoon team. Just a quick question on this, you know Wi-Fi monetization you mentioned 14 Crores minimwn guarantee amount; I was just wondering the Wi-Fi that you maintain across stations on Indian Railways, what would be the operating expense on an annual basis of sort of managing the infrastructure broadly.
If you talk of maintaining, it will be around !Oto 12 Crores.
Marginal profitability.
Actually we are pooling resources. There are people who are working on our network along the railway track which is 61000 kilometers; so there are resources and the same resources are pooled for this. So we actually do not dedicatedly provide any manpower for that, there is a small internet ban

dwidth expansion which is continuously coming down as a cost to us because of international and national scenario in this market.
Got it and Sir just one question on your RDN and content on delivery COD plans previously, any sort of update on these contracts; also when can we expect any sort of action on these fronts?
I think, during last interaction also I mentioned that RDN and COD both are being given fresh thought in the Ministry of Railways and that is why we have not included these two projects in our order book also. Now we are awaiting further instructions from Ministry; so they are not there in our radar right now.
Alright, that is it from mine.
Thank you Sir. The next question is from the line of Dhvani Shah from Investec. Please go ahead.
So first of all just needed the breakup on NLD, IPI, and ISP within the telecom if you can give it on an annual basis?
For the financial year gone by we have total IPI income of215 Crores, ISP income of380 Crores out of which RailWire is 318 Crores and NLD is 569 Crores.
Also ifl understand the project business could ramp up and of that you said the VSS was almost 85 Crores so VSS was supposed to come in at higher margins of almost 8% so have we started executing your change in strategy you all mentioned last quarter saying that coming forward project will be at a lower margin given that your focus will be more on volwne and is that also why you have called out almost being 100 Crores for the next year and that would say that essentially the run rate that you saw in Q4 will continue going forward?

Company Speaker:
Dhvani Shah:
Company Speaker:
Dhvani Shah:
Company Speaker:
Moderator:
Nitin Gandhi:
Company Speaker:
Nitin Gandhi:
Company Speaker:
Nitin Gandhi: Summariz.e your question. Rai/Tel C01poration of India Limited
May 19, 2023
I am asking that the margins that you all saw in project business were at 4.3% this time and VSS project was mentioned would be almost 8% that was almost 85 Crores of incremental revenue this time in the project business so are the other projects at lower margins?
No, actually I would say that around 4% point something last quarter, so there was some project opportunity we got with lower margin and that of course affected us in that, but now we will be slightly cautious because there are many projects-there is no dearth of projects and we will be slightly selective in bidding for projects where margins are certainly better, so that we continue to remain in 6 to 7% bracket.
I just wanted to understand the other expenses for the quarter come down to 103 million from 300 million last quarter can you just explain that difference, where there any one-oft?
Good morning. It is primarily because of ECL in the last quarter ECL provision which is not thereinQ4.
We take the next questio.o from the line of Nitin Gandhi from KIFS trade Capital. Please go ahead Sir.
So we are increasing networlc by almost 10 times and you have certain projects so can you share how is the project average execution time out of your order book of 4500 Crores and how we are spanning out because three or four times networlc capacity utilization in next one or two years?
That would be two separate questions. So project is not directly related to any networlc capacity prices??!, somewhere it may be utilized but if you talk of project business so out of this say 4500 Crores we are expecting that around 1500 Crores income we will be booking this current financial year.
That I got it, you said for two years we have expected but I am seeking average duration.
There are projects which are going up to 8 years also, one year the implementation or one-and-a half years for implementation and then one year or two yea

rs of warranty and then another five
years for maintenance also. There are projects with three years and then after three years they are getting renewed also, then five years also there are projects, but implementation is generally one, one and half year.
So out of 4500, how much is O&M related?

Company Speaker:
Nitin Gandhi:

May 19, 2023

Out of this 4500, O&M would be Rs. 500 Crores or so. We have not really worked out on this, but I guess because those are smaller amounts, generally 3 to 4% kind of numbers per annum kind of.
Right; and now regarding network, if you can share something?
Majority are basically one to two years, majority of the numbers are getting converted into revenue in each areas and remaining 15% maybe depending upon the number of years they are going so 10 to 15% or so.
Thank you Sir. We take the next question from the line of Mr. Vishal Periwal from IDBI Capital. Please go ahead Sir.
Yes Sir thanks for the opportunity. A couple of data point if I can ask what is the RailWire subscnl,er base currently with us?
It is 5 .21 lakh.
If you have this number ready for FY2022 for comparison Sir?
4.63 lacs.
Then, for maybe a full year basis project side, if you can give a breakup of revenue between railway and non-railway?
Railway, for this year gone by, it was 155 Crores and other project was 619 Crores.
Non-railway 619?
619.
Just one clarification- then if non-railway piece is increasing for us, so any reason that the margins are subdued for us?
Because there were projects_ which were given to us on nomination basis and there were healthy margins of 8-8.5% with us and outside projects. Even now in railways also we are getting orders by bid and nothing on nomination. So, then of course when you are in competition, margins are decided by the competition not by nomination. So there is an effect of competition. Certainly you are seeing that in other projects. This year we have only 13 to 14% income from railways including telecom income.

Vishal Periwal:
Company Speaker:
Vishal Periwal:
Company Speaker:
Vishal Periwal:
Company Speaker:
Vishal Periwal:

Like-to-like basis Sir between railway and non-railwa y for a particular project will it be fair to say that now given a competition in non-railway side, railway gives us better margin vis-a-vis non-railway?
Even railway is now a competition for us as we have to get the any work through competition only. _So I do not see any difference but those projects like video surveillance, it is already going on, so of course, there will be better margins. We are already executing.
Then the 1500 Crores topline that we are expecting for FY2024 the margin expectation is in the range of 5% that is what you said right Sir just a clarification?
Yes, prior to that six to seven, five of course is assured I can say.
On the telecom I think can you guide in a similar way how exactly you are seeing things for the next year on the margins and the topline front because may be parallel question to that like we mentioned we have expanded the capacity?
Telecom margins were slightly dipping you might have seen be

cause of some of our fibers were
getting older and we have not decided to replace them as we are continuing with that fibre and repairing it So there is some maintenance expenditure going on without going in for capex. This is already over, but we are continuing with the same asset so there is some increase in the apex m on optical fibre maintenance and that is how this year we see that there is slight dip in the telecom margin.
How do we see things in next year Sir in terms of margins?
Maybe more or less at the same level; this year we had EBITDA margin of 33% in comparison to

last year of35%.
Maybe I will tiy to understand in detail with you Sir Oflline and one last question from my side and then I will come in the queue. The 10 times the network expansion that has happened that is along the railway track the optic fibre which is there, which side of the business that you are saying?
Earlier, our network was based on IOG system, now it is IOOG system, so straightaway we have multiplied by I 0, so we have good amount of capacity available with us.
Sure Sir. Thanks a lot I will come back in the queue.
We take the next question from the line ofRicha Shah, individual investor. Please go ahead.

Thank you for giving this opportunity. Sir I just wanted to understand now see we have a topline of almost 2000 Crores and in that we have straight receivables of almost 1000 and 1050 Crores so I wanted to know what are the number of days of receivable and from this 1050 Crores how many are older than six months?
Older than six months?.
Yes, from 1050 Crores of trade receivable.
Just give us some more time so that you can ask new questions. In the meantime, we will get these numbers for you.
So my second question is-just wanted to know how many subscribers have been added in RailWire in Q4 and in FY2023?
If you see the number added-so there were new numbers and there was some churning out also but net subscn"bers added were around 52000 that is the net addition.
52000 for the full year?
For the full year.
For the quarter Sir for Q4?
Roughly 7000.
So just the trade receivables if you can just get back to me on that.
So less than year, the number is already there with me this is 700 Crores and remaining is more than a year, roughly around 400 Crores.
I wanted to know more than 6 months is how much.
This number I think right now is not available, we will get back to you maybe.
What are the receivable days that we currently have?
1020.
That would be the receivable numbers, I want to know receivable days, the debtor days?

So that is 191 for the year gone by, now it is 192 for the year gone by but see actually this 192 number which you are seeing since our project income has gone up so what is happening in project income where many projects we take with our partners and there is receivables as well as payables also so it actually does not affect our cash flows because we pay on

ly when our
payments are made by the customers. So these numbers are swelling because of this reason because project income has increased substantially you have seen in our account statements also so that is the major reason and there are project milestones also some project is going on for maybe 1-1/2 years so there are various milestones when these payments are due but they have to be shown as per in their standards so that is the reason.
We move on the next question from the line of Shubham Shukla from Voyager Capital. Please go ahead.
Hi once again. So if I can recall the last statement on your margin from telecom sector so you said that we are incurring some minor fibre maintenance and if these are minor maintenance then why EBITDA margins falling from 35% to 30"/o because for minor maintenance as you say it, but the drop in margin is quite significant so does that justify?
Only 2%, 33% I am saying, it is not 13.
I did not get it.
From 35% to 33% not 13%.
If you could provide revenue visibility for telecom for next two years?
So revenue visibility for this year from telecom business; we are eyeing a number of 1300 to 1400.
ForFY2024?
Yes.
ForFY2025?
For FY2025- because revenue in telecom business by capacity wise it is growing but since prices are continuously under pressure in market, you know telecom market, so the numbers are not commensurate with the services we are providing , so again I can get the number of 1600 to 1700 for the next year.
Margins on this project work would be similar to like 6-7% assuming for next two years?

6 to 7% is what we are striving to get with a minimum of somewhere close to 5%.
Thank you so much. That is it from my side.
We take the next follow up question from the line of Dhvani Shah from Investec. Please go ahead.
Thank you for giving this opportunity again. Just wanted you to get some colour on telecom business and those sectors if you can give some colour on NLD performance?
You want the numbers from these individual services from telecom?

Just some colour on how they are going forward to grow.
(Note: There was some audio disruption at this stage & hence this question Couldn't be answered)
We take the next followup question from the line of Pratap Maliwal from Mount Intra Finance. Please go ahead Sir.
Hi thanks for taking my question again. I just wanted to confirm one data point that you provided that out of our total income this year FY2024 we are expecting a total railway income to be 30 to 40% did you say or did I guess that correct?
I did not mention about this number, 13% for 2022-2023 but I did not say anything about 2023-2024.
I think you said that in the coming year that the percentage of revenue we expect from railways including our telecom income what is the data point if I can just get that?
You are asking anticipated income for 2023-2024?
From Railways what is the percentage of income that we expect from Railways?
This year also maybe 15 to 20% total income.
Thank you.
Thank you Sir. We take the next question from the line of Pranay Khandelwal from Alpha Invesco. Please go ahead with your question.

Hello Sir thank you for the opportunity and congratulations on a good set of numbers. I wanted to understand this one thing but if you look at the segmental performance that you have reported over there if we see the telecom EBIT margins is around 19 to 20% while you have been reiterating as it is 33%, Sir can you explain me why there is difference, how do we calculate the telecom margins from your side and what is the difference in segmental results?
You are talking about EBIT margins, we are talking about EBITDA margins. EBITDA margin is 33%.
So there comes a 13% difference from the depreciation itself?
Yes of course.
Thank you.
Thank you Sir. The next question is from the line of Divya Daga from Vijit Global securities. Please go ahead.
Sir my question is what is the overall order book and how much are we going to execute in this financial year?
Our order book is roughly around 4500 Crores and this year we are targeting to get 1500 Crores numbers. Does that answer your question?
Yes thank you.
Thank you. The next question is from the line of Amit Kumar from Determined Investments. Please go ahead Sir.
Yes thank you again. Just one followup. I think we mentioned a number of 200 Crores for capex for this fiscal 2023-2024 if you can just break it down into maintenance and growth capex and across both of those any sort of major element that you want to highlight or the principal areas in which that capex is divided broadly?
I also mentioned in my address also. Partly, it will go towards network upgradati on further basically enhancing the capacity, when I say enhancing the capacity-it is basically adding to the existing system; we can increase the capacity up to KOOG that is the maximum capacity we can go. So partly, it will go to that. Partly, it will go to the data center augmentation also and then we have already planned for large scale automation in our support system to increase our efficiency in productivity. So these are the major three segments we will be spending this.

Sir will it be possible to please put some numbers to each one of these and what would be the maintenance capex also I just wanted to get a sense from that?
Maintenance is never part of capex that is part of revenue expenditure.
In terms of these different pieces how does this 200 Crores roughly?
You can say that roughly around 50 Crores was data center Rs.75 Crores each towards for network up gradation and automation.
Thankyou.
Thank you Sir. We take the next question from the line ofRicha Shah. Please go ahead Madam.
Hi Sir. I just wanted to understand you were telling me that you have paybles also because you worked for third party so just wanted what are you payable days?
As I told you, suppose I have got a milestone from my customer which is due say three months from now, it depends on the payment from the customer and milestone as per the contract. You cannot say that this is the payment, so as soon as the money comes to us, we have terms and conditions with our partner that we have to immediately pay them back.
Thank you Sir.
Thank yoa Ladies and gentlemen due to time constraint that was the last question. We will conclude this conference call. Thank you for logging in for the post results earning conference call of Rai!Tel Corporation. You may disconnect your lines. On behalf of Rai!Tel Corporation of India Limited that concludes th

is conference. Thank you for joining us. You may now disconnect your lines.

Ladies and gentlemen, good day and welcome to the QI FY '24 Earnings Conference Call of RailTel Corporation. As a reminder , all participant lines will be in the listen-only mode. There will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star and then zero on your touchtone phone. Please note that this conference is being recorded. I now hand the conference over to Mr. Vishal Periwal from IDBI Capital. Thank you and over to you Mr. Periwal.
Yes, good afternoon everyone. First of all, like you know, extremely I'm sorry and apology to everyone for waiting for this call. There was a continuous rain in the NCR region and there has been a technical glitch in reaching out and giving a clear line. So please accept this apology. So as usual, we11 start this call. From the management side we have Shri Sanjai Kumar the Chairman and Managing Director, Shri V. Rama Manohar Rao, the Director Finance, Shri Manoj Tandonji, Director of Project Operation Maintenance and Shri Yashpal Singh Tomarji, Director Network Planning and Marketing. We'll have a brief from the management and then we'll open the line for Q&A. Yes, sir, over to you.
Thank you, Vishalji. A very good afternoon to all of yo

u. We are really sorry for keeping you
waiting for these 20, 25 minutes because of some actually noise is still coming, but we will try to listen carefully and answer your questions. At the outset, let me introduce my new colleague Director Shri Yashpal Singh Tomar who has recently joined as Director Network Planning and Marketing. He brings on board, rich experience of both railways as well as RailTel as he has worked already in his earlier stint as GGM Marketing.
So now, one more thing I would like to share that we have all the four functional Directors on Board after a long time. It gives me great pleasure to interact with you on the company's performance in the backdrop of Ql financial results of FY '24, which were declared by the company on July 27, 2023. The company achieved consolidated operating revenue of INR468 crores in QI of FY '24 as against INR377 crores in Ql of FY '23, registering Year-on-Year growth of 24%. The telecom segment contributed INR292 crores and project segment contributed INRJ 76 crores in company 's operating turnover.
As regards the total revenue, the Year-on-Year growth is 25% with INR483 crores in QI FY '24 as compared to INR385 crores in Ql ofFY '23. The Profit Before Tax in Ql ofFY '24 islNR51 crores as against INR35 crores in QI of FY '23, registering Year-on-Year growth of 46%. The Profit After Tax in Ql of FY '24 is INR38 crores against Rs. 26 Crore in corresponding quarter of FY '23.
Earning per share in Ql ofFY '24 stands INRI ,20 against INR0.81 ofQl ofFY '23, registering an Year-on-Year growth of 48%. EBITDA margin before exceptional item for Qi of FY '24 is 18% as against previous quarter of 15% registering a growth of 21 % Q-on-Q. I am happy to inform you that the CAG has offered nil comments on annual financial results ofFY22-23. Your company maintains strong and sustainable order book of the order of INR4,500 crores as we bagged new orders oflNR527 crores in QI itself.

In the last six months, we have bagged orders of the order of about INRI ,600 crores. Notable amongst them are INR294 crores from Tamil Nadu State Marketing Corporation limited, TASMAC , INR48 crores from Central Bank of India, INR18 crores from Commercial Tax Department Lucknow , INR21.5 crores from Indian Oil Corporation, INR75 crores fore-office implementation from various different government organizations. INR39 crores order from NICSI for providing Security Operations Center and Network Operations Center solution for IVFRT, ie Immigration, Visa, Foreigners , Registration, and Tracking Project of Ministry of Home Affairs.

These orders reaffirm our position in the domestic IT ICT space. Another feather in the cap of Rai!Tel is our partnership with ITPO as a telecom solution provider for the prestigious Pragati Maidan complex in New Delhi, which has been recently handed over to the public by Honorable Prime Minister of India; this agreement covers next eight years for all the events being organized, to be organized in the campus.

We are the exclusive telecom and cyber security solution provider also for the upcoming G20 summit in September '23 in the same complex. RailTel maintains the agility of exploring new business across new sectors like education, MSME, smart cities, and so on. We are also expanding our existing IT solutions like HMIS, eOffice, to wider net of organizations . We are happy to inform that, our Hospital Management Information System deployed in Indian Railways has achieved a unique milestone of one crores prescriptions even in last 18 months. This shows the resilience and extent of our HMIS solution. Our focus remains on establishing edge data centers across the country and also expanding our data center footprint in PPP mode, being empaneled MeitY data center. The installation of an IP-based Video Surveillance System at 5, l 02 railway stations is p

rogressing well, with work already completed at 349 stations,
including Nirbhaya-funded stations. This will be a unique project, across the world once completed , showcasing the strength of RailTel to deal with complex projects spread across geographical locations and involving wide spectrum of stakeholders. We are eyeing very closely on the signalling modernization requirement of Indian railways, the importance of which has tremendously increased post recent unfortunate accident on Indian railways. I'm also happy to inform you that, the Board of Director of RailTel in its meeting held on 9th , July, 2023 recommended a final dividend for the financial 2023 at the rate of 10.50% that is INRl.05 per share in total amounting to INR3,369.87 lakhs out of the profit of the company for the financial year '22-'23 to those equity shareholders , whose names stand in the register of members as beneficial owners in the records of NSDL/CDSL holding shares as on record as fixed by the company for the purpose of payment of final dividend for FY .'.22-'23.This is subject to the approval of the shareholders at the 23rd Annual General Meeting to be held. Transparency , integrity, and efficiency are fundamental to our functioning, and we deeply value the trust of our investors and stakeholders . We are committed to pursuing growth and diversification, creating value for our investors. Thank you, Jai Hind.

Thank you very much. The first question is from the line ofSanjesh Jain from ICICI Securities Please go

July 28, 2023
Good afternoon, sir. Thanks for taking my questions. First on the 3i Infotech deal, has the revenue recognition towards the Wi-Fi monetization where we had INR14 crores or minirnwn

of certain percentage of revenue. So what is the contribution of 3i Infotech for this quarter?
So, basically actually this is quarterly payment, so this is basically you can say INR3.5 crores for this quarter.
Okay and we have received the INR3.5 crores?
Yes.
Okay. Any further monetization? How has been the trend of advertisement on our Wi-Fi? Do you think there could be a higher payment than this INR14 crores from the monetization ofWi Fi?
If you remember my last meet with you on the same forum, we had already shared that this will take some time because they have to, this is first of its kind in the world. So it will require some time. Maybe this financial year, we may not have any additional revenue from this project, this monetization effort.
Next on the telecom services b~iness, it has grown by 6.5% Y-o-Y. The growth looks slightly muted considering that we are also implementing VSS and there is increased demand for the data center and video-based surveillance and IP services in general. Can you help us understand, why the overall revenue growth on a Y-o-Y basis in telecom services is just 6.5%?
So, yes, that is noticeable because one big project actually was got concluded last quarter and we are hopeful that, the same project will again come on board and we are also expecting some other revenues in telecom segment. So this quarter yes, I accept the fact you have noticed. But I'm not worried by this because I know the reason.
So what is the expected revenue growth for telecom services this y·ear and next year?
We will be continuing with the same trend, 10% to 12% overall telecom growth.
Okay, so 10% to 12% for the full year is still achievable is what you're telling?
Yes.
Got it. On the project side, again, the project execution this quarter versus previous quarter looks slightly muted. While our order book continues to remain very healthy. We have spoken of thousand crores plus kind of a project revenue for FY '24. With QI being

softer, do you think
any challenge for this INRl,100 crores of revenue in project for FY '24?
See, actually, if you see the trend for previous years also, QI, Q2 are slightly under pressure. They are being reasonable because these are the government funded projects. So generally in all government (projects), Q3 and Q4, there is always momentum. And QI and Q2 are slightly muted. So if we see Year-on-Year, you will find the rhythm.

Sanjesh Jain:

Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesb Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar: Correct. Year-on-year, we are very healthy at 70%.
So I'm sure that we'll be reaching INRI,400 crores to INRI,500 crores.
Okay. INRl,400 crores to INRl,500 crores for this entire year?
That is; we are more than assured.
Okay. With what margin expectation, sir?
Margin expectation will strive to keep it 5% to 6%.
Okay. It's much below what we were anticipating earlier and these projects were won earlier, while the market ....
This is the conservative figure, which I am sharing with you and maybe, because, see what is happening, because of digitalization drive throughout the country; in the IT ICT projects, (there) is a lot of competition. So sometimes, we have to decide, whether to go ahead or whether to leave. We know that this business will come to me because I have better chances of getting it delivered and the customer has more confidence , better confidence in us. So then it is our choice, whether we leave it or lose it, get it or leave it, even with the lower margin. So sometimes you have to take some aggressive calls. That's why I'm saying 5% to 6%, I'm keeping on conservative side.

Last question on the LTE rollout by the railway and project Kavach. Any further update you want to share there? Is the tower rollout tender being done and how are we participating in the Kavach project? We earlier said that, we didn't have the technology and you believe that the technology is still to mature. Where are we in this entire cycle of both the project?
To Kavach, one of the OEM is still, they are in the last phase ofI think getting approved by RDSO. And beside that OEM, we are also in fact now approaching the existing, though they are very big, but we are still trying to approach them so that they are convinced that yes, RailTel can be the best partner for them. So we are still on and we are very much hopeful of getting a good share out of this business from Railways .
And on the L TE rollout and the tower?
L TE; we have, actually on the L TE rollout, we have participated in POC for L TE for Kavach and we are expecting a center of excellence basically establishment of a center of excellence in railways. That order, we are expecting maybe. I'm not sure but we are hopeful that we'll get. Though we are continuously focusing on both L TE as well as Kavach.
What could be the ...
Because of our expertise in optical fiber-based communication network, the our strength in L TE and Kavach is certainly better than anybody else.

Fair enough sir. What could be the project size, we are expecting both from LTE and Kavach individually?
Actually, total size of the project over the next five years is around INRJ0,000 crores. And we are not sure that, how far the railways could be corning out with the tender. But I can say out of this pie, at least INR4,000 crores to INR5,000 crores of value should be with us.
Fair enough, sir. That's all from my side and best ofluck for coming quarters.
Thank you. We have the n

ext question from the line of Bala Murari Krishna from Oman
Investment Advisors. Please go ahead.
Good afternoon, sir. Regarding this Video Surveillance System, actually what is the total project order quantity and how much we have executed and still how much is in balance and timeline for execution? Could you share the numbers ..
Actually, so total size of the order is around INR750 crores and out of that, we have delivered around INR200 crores over last two years to three years and we expect that, this year, we should be booking at least INR200 crores and remaining in the corning year.
In this video surveillance system itself, actually we are anticipating some orders from the state government and state police forces like UP and Punjab. Any update on those orders, sir?
We have got an order in Gujarat for video surveillance. We have also got an order from, another two orders from Indian Oil Corporation for video surveillance . So we are obviously trying to get orders in this domain. Now having expertise in this.
And one more ...
The tender you are talking about, UP tender; now, they have not come back again. They have cancelled the last tender. Now they have not come back. So we are waiting.
Punjab also has the same thing?
Punjab was decided long back. Punjab is not there now. I think it was decided last year. '21-'22 itself, it is implemented also. It didn't come to us.
Okay, sir. And regarding Kavach, sir? Actually earlier we were anticipating around 25% of the total order project cost, sir. Now we are downgrading that projection. And one more thing, some Ashoka Buildcon has collaborated with one of the OEM and they have also bidded for this Howrah Delhi section. So do you have any plan to collaborate with this existing OEM. I think,

you have said that you are going to collaborate with OEM, which is under approval. So is there any possible with the existing OEM, sir?
See the Ashoka Buildcon, they are executing one order in Eastern region. But actually, I have downgraded it to INR4,000 crores, but still hopeful. We can always; 25% is not something big which we cannot. But I'm eyeing at least INR4,000 crores to INRS,000 crores. And as far as partnership is concerned with OEMs, I have already answered to the previous investor's question

that we are waiting for the RDSO approval for the new OEM, which is in the last stages. So we'll wait.
And regarding the existing OEMs, they will get to you for this fiber optic cable services, even they get order from railway.
Yes.
And that revenue also included in this projection?
That revenue will not come from OEMs. That is already coming from railways. See, railways is the user. OEMs has to deliver the project only.
Okay. And lastly, on the smart meter side, and we have got some orders from also from Pondicherry and AP, whether these orders are executed and what would be the scope from any other states regarding smart meters there? Sir because we have shoot up in order to various vendors to install smart meters over the entire state like Chhattisgaih or some other states. Recently we have seen so much news regarding this. So, do you have any scope in this segment again?
Smart meters, we have not done much even now. But smart city, (yes), I think you may be (referring) Puducherry (where) we are doing a smart city project, not smart meters. Smart meters, we are yet to start, we have not done much.
Okay, that's all, thank you, all the best.
Thank you.
Thank you. The next question is from the line of Rabil Shah from Crown Capital. Please go ahead.
Thank you. Hello, am I audible?
Yes please.
So, firstly so you said you have 4,500 cror

es worth of order book right now?
Yes.
Okay, so can you tell me what kind of order intake are you expecting this year further?
See, this year; we, I think I told the last interaction that we will be eyeing around 1,500 minimum this year. So, 500 we have already received new orders and down the line year; next three quarters we should be getting minimum INRI,000 crores, but we may exceed also.
Right, right and what is the pipeline like can you share the information what kind of orders?
Sorry.

Yes and also what are the orders you're expecting?
We can't say much about it.
Okay, okay. No, no, got it, got it. And other, secondly, just on, so outlook in terms ofrevenue , growth and margins, can you share for the full year? Will you be?
See, we should be talking about 2,500 for sure; and margin guidance, you could take, we will maintain the same which we were doing the last year 18% to 19% EBITDA.
18 to 19. Okay. All right sir. Thank you and all the best.
Thank you.
Thank you. The next question is from the line ofDivya Daga from Vijit Global Securities. Please go ahead.
Hello, sir. Thank you for the opportunity. My first question is, as you have mentioned in your presentation that you are expecting IO lakh subscribers from Rai!Wire . So, can I know your strategy to achieve this target or is it a conservative target or we are optimistic really about it?
See, 10 lakh subscribers we were expecting some time back, maybe last year. But the competition is so intense that it's not so easy. There's a lot of churning also and the ease of switching is also very high. So, we are not expecting very high number, but Yes, we will be continuously remaining in this sector and we will be targeting rural segment more, where there's lot of-there is more opportunity , but the momentum is slightly lesser. Urban segment, there's a lot of churning. So, that is why we are not now expecting any such high numbers. This year, maybe we may reach 6 lakhs.
you are going to have a data center in Noida?
Yes.
So, can I know the status and revenue model of a data center as well as a RAN that you have launched?
See, I think shortly we will be coming out with the EOI for PPP and revenue share and all those details we cannot share now because the EOI is likely to come out so then only it will be visible to public. But we are sure because there is lot of interest shown by the industry and the investors.
So, what will be the ...

Sorry to interrupt ma'am, we request you to please mute your line after you've asked your question while the management is answering because there's background noise coming from your line ma'am.
Okay sure, no problem. So, I want to know that what will be the revenue addition from this data center, if you can tell?

See, this is PPP model and the revenue monetization will be discovered through the open process which is called Expression of Interest. But still, we are expecting that, at least, 10% to 12% of the revenue will be shared by the PPP partner. This is our expectation.
Okay. And my last question is, can you tell me the business overview of Security Operation Center? Is it for the existing operation supporting that or we have introduced a new vertical over here?
See, cyber security operations, it is an offs

hoot of data center business and we are trying to
evolve it as a separate vertical, but the time has not come. We are talking to the industry, to the OEMs, to the top of the class, cyber security solution providers. So, we are still working on it and we are right now also providing these services, but we have not created any separate vertical.
Okay. Okay. That's all, sir. Thanks so much.
Thank you. The next question is from the line of Vishal Periwal from IDBI Capital. Please go ahead.
Yes, thanks for the opportunity. Sir, one clarification, I think you briefly mentioned on the Kavach opportunity of 30,000 crores. So L TE plus Kavach is 30 or is that different number?
Yes, both put together, both put together.
Okay. And if one has to get a breakup of it, will that be available, sir, LTE is how much and Kavach is how much?
I'm not very sure about it, so, better not to say any number. But actually there is one project. This is basically anti-collision project. So, both basically are a part of the same project.
Okay, got it, sir. And sir, can you give a break up of this telecom services that we do in NLD, ISP, IP-1 for quarter one?
Yes. So, NLD we did 146 crores, ISP 96 crores and IP-1 49 crores.
Okay, got it So, I think it looks like in NLD, I mean like year-on-year good growth rate is there, but ISP and IP-1 they are a little bit of flattish to margin decline, so that...
Yes, I told you there was one project in the last one question. This quarter, the number, yes, you have rightly noticed that the growth is not that good, but we are expecting that over a whole years basically financial year period, we have no worry and we will continue to have the same 10% to 12% of growth.

Q.~

Okay, got it sir and sir is there any one-off number of provision in our quarterly result whether NER provision or on the ECL provision if anything that is?
Nothing
Okay fine and in terms of one more data point RailWire can you provide what is the subscriber and can you give some qualitative commentary in terms ofhow the ARPUs are moving that will be helpful, sir?
ARPUs are there only 550-540 and we are continuously actually experimenting. So, we have recently come out with an experiment in Tamil Nadu and we expect a Jot good numbers there. So, actually, this is an industry which is continuously under the eye ofregulation also because OTT has also come into play. So, there are many factors and then the satellite communication, this licensing , auction of the spectrum, many factors playing in this segment and competition, of ' course, not only from the big service providers, but from smaller ones also is there. So, that is why I have downgraded my 10 Jakhs number to 6 lakhs now.
Okay and what will be this number at the end of quarter one?
This is 5.32 lakhs.

Okay, got it. And one last question from my side, in project services, can you also give breakup for the revenue between Indian Railway and others?
So, for QI, railway income was around 38 crores and non-railway was INR138 crores out of a total 176.
Okay, fine. Sure, sir, I'll come back in the queue for more. Thank you.
Thank you.
Thank you. The next question is from the line of Swechha Jain from ANS wealth. Please go ahead.
Hi sir, just a clarification, if you could again give the telecom service breakup I somehow missed that number on the NLD, ISP and IP-1?
NLD 146 crores, ISP 96 crores and IP 49 crores.
Okay, okay. Thank you sir. Sir and just one more question. How many subscribers did we add in QI? I think you did say at the end of QI we were 5.32 lakhs, but if you could just give the addition that we did in FY'24 QI FY'24?
Du

ring QI around 17,000 to 18,000
Okay, okay. And sir no update on the RDN, right? Any update on the RDN side?

I think RDN, we had already shared during our meet in May that RDN we have now discounted at least for now, till the time Ministry ofRailway takes a final decision.
Okay, thank you sir, that's it from my side, I appreciate this.
Thank you, thank you very much.
Thank you. The next question is from the line of Bala Murali Krishna from Oman Investment Advisors . Please go ahead.
Thanks for the opportunity sir, do we have any update on the COD content on demand?
COD again same. COD and RDN, we have now stopped eyeing these two projects because Ministry of Railway is yet to take any decision, any final decision on this.
Okay, thank you. ..
Thank you. The next question is from the line of Amit Kumar from Determined Investments. Please go ahead.
Thank you so much for the opportunity. Actually,just following up to the previous participant, the COD, RDN projects which we had, exactly what decision is the ministry has to take with regard to these opportunities?
So, see, actually, we are not the user organization . User organization may decide, may not decide, we cannot pursue them beyond an extent. So, that is why I can't comment further.
No, no. So, that's understood that user organization in railways, but you have been pursuing both of these opportunities for some time. What I'm just trying to understand is that what is, I mean, COD basically has to let's say decide on an OTT partner and they will provide the entertainment content to the end consumers basically on your network. So, I mean, what decision making for this is required at MOR level for this to go -to proceed basically?
See, they may or may not decide in favor of RailTel. It's their decision. We have completely discounted these two opportunities from our business spectrum. It's up to them. If they decide, we are there. But if they don't decide, we can't continue waiting.
So, the Ministry of Railways may very well decide to go with another rail PSU with respect to both these opportunities as well. Is that what you're saying?
We cannot respond on behalf of Government ofindia. This is their policy decision, they may - so I cannot go beyond my limit.
See, that's where little bit of confusion basically is there because it wasn't sort of --when we were sort of discussing these opportunities about a year, year and a halfback, it was not sort of clear that any sort of policy decision from MOR was required to be taken, because you have the

network, right? I mean the -you are sort of running the network across and you have the exclusive right to sort of run the network across railways, Indian railways essentially. And this

is just a monetization opportunity. There's not really, I mean, there is no sort of incremental capex or incremental investment which is required per se. Of course, there could always be, I mean, which is more of a commercial decision that of the ...
Mr. Amit sorry to ....
How much do we shared with Railways and all that. But it was not clear to us about a year back that any sort of policy decision in this regard and I mean, at least we thought that Rai!Tel had the right to basically call out for these contracts and give it out to third private parties, essentially?
I think we may not deliberate much on this question, but I think last two quarters I

had ...
Fair enough, Yes. I have understood your position, but where did this confusion arise from is what is not sort of clear to us?
See, government may decide on their own. They have their own agenda, their own policy decision-making system and we cannot question that. But whenever it is rolled out, certainly we have the telecom network of RailTel (which) will only be used. There is no other choice. That is what you are saying. So, that is right. So, we are waiting. Let us wait for some time if it comes at all.
All right. Understood, sir. Thank you. That's it from my end.
Thank you. The next question is from the line of Pratap Maliwal from Mount Intra Finance Private Limited. Please go ahead.
Hello, am I audible?
Yes, Yes.
Hi, sir. Thank you for taking my question. So, first, just a clarification on my side that the projects, the margin expectation we're getting 5% to 6%, that is at the EBITDA level. Is that correct?
Yes.
Okay, now just a question around the Kavach project. So, as I understand that the railways have actually initiated the project already and they've spent about 350 odd crores on the project. And I think it's been installed in a certain number of locomotives and about l,400 or l,500 route kilometers. So, what I'm just trying to understand is when does our role actually as RailTtel come into this project, the expectation that we have around 4000 crores of value should be with us for this project. So, bow do we maybe arrive at this number and when does our role come in forKavach?
No, no, we will be participating in bids which are likely to come in future. So, these which you are talking about already under rollout, we had neither participated nor had any intent to

Pratap Maliwal :
Sanjai Kumar:
Pratap Maliwal :
Moderator :
Sanjai Kumar:
participate because I told you that these are, this technology was still maturing and still I would say it is evolving. So, we are waiting and watching. We don't want to be in any panic.

So, as I understand that there's L TE plus the Kavach project. So, one is that we provide the connectivity for the project that is required, that is one role for RailTel and what is the other offering that you are providing?

There is hardware part of it. There is application part of it. All those things will also be there. Connectivity is, of course, there is one.

Okay. Okay. Thank you, sir. That's it from my side.

Thank you. As there are no further questions, we will conclude the call here. Thanks for attending 1he e31'1lings call ofRai1Tel Corporation . And you may now disconnect your lines. Thank you very much.

Ladies and gentlemen, good day and welcome to the RaiTtel Corporation of India Limited Q2 FY24 Post Result Earnings Conference Call hosted by IDBI Capital Markets and Securities Limited. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this call is being recorded.

I now hand over the conference to Mr. Vishal Periwal from IDBI Capital Markets and Securities Limited. Thank you and over to you, sir.

Yes, thanks, [Arshia]. Good afternoon, everyone. Welcome to the post-result earning call with the management of Rai!Tel Corporation. First of all. I'd like to thank the management for giving us this opportunity to host the Earnings Call. And from the management team, today we have with us Shri. Sanjai Kumar, Chairman and Managing Director, Shri. V. Rama Manohar Rao, Director of Finance, Shri. Manoj Tandon, Director of Projects, Operations and Maintenance , and Shri. H.C. Batra, GM of Finance. And as usual, we'll have a brief overview from the management and then we'll have the line open for Q&A. Yes, sir, over to you.

Namaskar . A very good afternoon to you all. It gives me great ple

asure to interact with you once
again on the company's performance in the backdrop of quarter 2 limited review financial results of the company, which were declared by the company on 26th October, 2023.

The company has declared an interim dividend of INRI per share also. The company achieved total income of INRl,096 crores during first half of financial year 2023-24. For the first time, the company surpassed the mark oflNRI,000 crores ofrevenue in HI. The company achieved total revenue of INR613 crores for Q2, as against INR483 crores in QI of FY24 and INR440 crores in Q2 of the last year, registering a growth of27% on Q-on-Q and 39% on year-on-year basis.

The operating revenue of the company in Q2 is INR599 crores, as against INR468 crores in QI ofFY24 and INR429 crores in Q2 of the last year, registering a growth of28% on Q-on-Q basis and 40% on year-on-year basis. The telecom segment contributed INR308 crores and project segment contributed INR29I crores in company's operating turnover. The profit befon: tax in Q2 of FY24 is INR90 crores, as against INR5 I crores in QI of FY24, registering a growth of 76% on Q-on-Q.

The compan) posted profit after tax in Q2 ofFY24 is INR68 crores, as against INR38 crores in Ql ofFY24. registering a growth of79% on Q-on-Q. EBITDA for Q2 ofFY24 is INR128 crores and EBITDA margin is 21% against Ql results of Q-on-Q of FY24 of INR88 crores with EBITDA margin of 18%. With the robust order book exceeding INR5 I00 plus crores, bolstered by new orders \\ orth INRI ,400 crores this year itself, we are poised for continued grov. 1h.

I am immensd~ proud to share Rai!Tel played a pivotal role as an integrated telecom and cybersecurit) solution provider for the recently held G20 Summit. It was a great success and it was applaud.:J hy the media and all government agencies and participants in the summit.

Divya Daga:
Sanjai Kumar:

Today also we are providing similar connectivity for India Mobile Congress which is again happening in ITPO campus, Pragati Maidan in Delhi. At Rai!Tel, transparency, integrity and efficiency are the cornerstones of our operations. We deeply value the trust of our investors and stakeholders.
We remain committed to pursuing growth, diversification and creating value for our esteemed investors. We are continuously making efforts to make our partnership model stronger and stronger every day. We are also exploring new opportunities wherever we see new potential. Now at the end of my small speech, I thank you for your trust, your dedication and your collective vision for the future of this company. Thank you. Jai Hind.
Thank you, sir. We will now begin the question and answer session. The first question is from the line of Ms. Divya Daga from Vijit Global. Please go ahead, ma'am.
Hello, sir. First of all, congratulations for good set of numbers. I have a few questions related to data centers. So my first question is, what is the potential revenue you are seeing from data center segment and what is the progress on triple P models related to Noida data center?
Okay. Yes. So the data center potential right now, we are growing slowly and we are getting a lot of orders from government departments for the e-governance applications. So right now we are INR50 crores to INR60 crores sort of number earning from data center.
And we anticipate that this segment, we should be closing somewhere around a growth of 30% to 40% in this sector. On PPP Noida data center project, so we are likely to come out with the RFP very shortly, maybe in 15 to 20 days. And then we see the response of the potential investors and we are hopeful that we get a good response on this.
Okay, sir. So the data center, especially the Edge one, is this just for government or are we targeting

a private organization as well?
So. it is open to all type of users, including OTT players and other private users also. Government is of course, would be there, including Rail Wire.
Okay. So do we have any other player than Government right now?
So you're talking about edge data center? Are you talking about?
Any other data center" Any data center services?
No. So we have actually partnered with the application service providers who have hosted their services in our data c.:nter and then they are also providing services to government sector. So basically we are partners with private, but mostly the customer is the government.
Okay. So I have last question. First of all, the status of Edge data center, we targeted for a hundred and what is the count right now? And in that, I have a question related to order book and broadband conn.:c:1ion. What are their numbers and what are the additions in this course?

~~

Bala Murali Krishna:
Sanjai Kumar:
Bala Murali Krishna:
Sanjai Kumar:

So Edge data center, the RFP is already floated and we are likely to close it in another maybe two months. It is already in the process and regarding the order book, as I already told you, during my address, it is around £NR5, I 00 crores as on date. Then regarding subscriber added during this quarter is around 25,000 in RailWire.
And total broadband connection at right now?
Roughly around 5.6 lakhs.
Okay. Thank you so much, sir.
Yes. Thank you.
Thank you. The next question is from the line of Mr. Bala Murali Krishna from Oman Investment Advisors. Please go ahead, sir.

Could you give an update on this Kavach part? We are supposed to tag with one OEM after getting the approval from RDSO. Is there any update on that?
So as on date, there is nothing new on that, but we have in fact spoken to a couple of Kavach OEMs and there is one more change in that. Now new Kavach applications will be implemented with L TE only, whereas the earlier one was not with L TE. So there is going to be some time before the tenders are out and we expect another three to four months before the tenders will be floated by the railways.
So this is an update. And L TE part, we are already working with the OEMs that how can it be implemented. We now are setting up a center of excellence also for Kavach with L TE, wherein we will be collaborating with the industry to work out solutions.
So, sir, by introducing this L TE, so we are anticipating around the 4.000, 5,000, so the opportunity for Rai!Tel in this Kavach wallet. So what could be the opportunity if we include LTE also?
L TE, I think I have already given an anticipation number lru.t time also that \\e should be having around 4,000 to 6,000, which you have already said. And we may optimize and bring it to even INR 10,000 crores to INR12,000 crores kind of business over next five to six years. So that we still are hopeful of getting, but the tenders have to come out And this is going to take time because this is not a matured technology . So there will be continuous evolution.
Okay, sir. And one more on the telecom side, there is some uptick in margins. So what contributed for this uptick and going forward how we can put the margin trajectory in telecom sector?
You're talking of, just a minute, can you please repeat your question?
In the telecom segment, there is some increasing improvement in the margins. So what is the reason for this improvement and going forward how we can see this telecom segment margins?
V

Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
So our EBIT is around 24% right now. And you're talking of Wi-Fi or telecom business?
Telecom.
Overall, we are maintaining around 24% and we hope that we will continue with that. There may be small aberration here or there, but we are continuously trying to basically shift higher to our own network. So that will certainly will give us some boost. Secondly, we are also now penalizing our last mile service providers with penalties on SLA accounts. So that reduces our expenses also.
Thank you. The next question is from the line of Mr. Sanjesh Jain from ICICI Securities. Please go ahead, sir.
Yes, good afternoon , sir. Thanks for taking the question. First, again on the telecom services, this quarter around the revenue growth was just 4. 7%. I think the anticipation of the revenue growth in this segment was 10% to 12%. Is there any one-off or any reason you can elaborate for the slower revenue growth in this quarter?
There's no one-off. But there is certainly price pressure on telecom side is there. Overall, even country is growing at NLD segment. Country is also growing at around 5 to 6% only. And 5G storage is also not getting backed faster as was anticipated. And it's going to take time because 5G use cases are not coming up the way expected.
But yes, in future, when the 5G story gets through, the revenue growth in telecom segments will happen. Because telcos were expected to have more number of towers co-located with us. But that kind of momentum is yet to come. We are continuously in touch with telcos who will take our tower co-location. That would have given certainly a flip to our telecom growth and margin as well.
So is it fair to assume that until the 5G pickup shows up, the revenue growth will be in a mid single digit for the telecom services?

No, I still expect that our overall telecom revenue will grow at around 10% to 12%.
Okay. But this quarter, it was significant...
This quart.:r, yes. It seems to be muted because of the tariff. There was a pressure on tariff from the customer side, coming customers.
In that case, that will continue for the full year, right, whatever the renegotiation has happened ...
So tariff decision once in a year. Generally, it happens in the beginning of the quarter. But this time, it happened in the middle of the year. But still, I see that the growth of the telecom side will happen. We are also basically finding new ways how to maintain this growth momentum of 10% to 12%. And we are sure, we are tweaking our tariffs. We are even dark fiber and tower co locations.

Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
We have revised our tariffs so that the -because of the prices in telecom industries have been lowest in the world. And after 5G coming in, the pressure of capital expenditure on telecos has increased even more. So then we have to support them with the reduced tariffs. Otherwise, they might crumble. So that is the thing. So I think it should remain there. I 0% to 12% growth guidance should continue. Overall, a period of year, annual, if we see some longer period time.
Got it. And on the margin, last year also. this Q2 was, I think, reasonably high in terms of margin. And then it tapers off. This time, you believe it is different and margin should stabilize at these levels? As you said, you have some cost-driven measure? And a related question to that, you said that you are shifting some of the traffic from off-net to on-net. But that will also involve a capex, right? Because we need to lay the fiber. We would have gone to somebody else because we don't have established fiber there. So should we look at capex in that sense?
See, capex we have been doing. But due to COVID,-the capex thing got delayed. So we had to hire some

capacities from other vendors also to provide the SLA compliance. Now, as our network has come up, so we are basically now rehiring those capacities. So that is also resulting in some efficiency.
So how much have you spent in this year and what is the plan for the full year from the capex side?
Capex side, we are contemplating around INR180 crores. Of course, not completely on the network side. We are adding to data center, laying some OFC also, and that power bank and all that. So roughly around INR 180 crores.
Now, ifl recall very properly what we spoke earlier, we said that the margins in telecom business has structurally come down because our fiber, which have now become old, have seen an increased repair and maintenance. Is there change in that commentary? I think, we have reduced our margin guidance earlier. I don't think, we have spent significantly on replacing the fiber. ..
If you recall the older numbers, our margins used to be in 30% plus. Now, that correction has already taken place and we will continue with that kind of activity. But that is not a new factor now at this point of time. That we have already taken care of.
More kind of EBIT margin should continue for the rest of the year. Will that be a fair assumption?
Sorry?
This 24% margin should sustain for the remaining six months?
I hope so. I have no doubt.
Okay, that is great. Second on the project business, what is leading to a spurt? ls it more ofVSS getting delivered or which project is driving a higher growth in the project business for us this quarter?

We have a couple of good projects where margins are also good. We are making one data center for C-DAC, for Government oflndia, through C-DAC. That is one project. And VSS, of course, is one of the projects which is also getting rolled out. So, these two projects, of course, have contributed to projects.
And what should be a realistic assumption of a project revenue for FY '24?
I think, we remain committed to what we said last time around INRl,400 crores to INRl,500 crores.
INRI,400 crores to INRl,500 crores. So, that looks achievable for this year?
That is the best which we will be striving for.
Okay. Got it. That is all from my side and thanks for answering all the questions and best ofluck for the coming quarter.
Thank you, Sanjeshji.
Thank you, sir.
Thank you. The next question is from the line of Mr. Viraj from Jupiter Financial. Please go ahead, sir.
Yes. Good afternoon, sir. And congratulations on a good set of numbers.
Thank you.
My question, sir, is that this order book which we talked about INR 5000 crores, it should be executable in how much time, would be?
See, there are various components in this. There are some projects which are even 10 years. There are some projects which are capital intensive. So, we will be spending and earning revenue in shorter term. So, that actually that composition keeps changing. It's very dynamic.
And the kind of numbers we are sharing like INRI,400 crores to INR L500 crores of project revenue this year, we have worked out from that number only. We have --though we have not split it into future years, but mostly out of this INRI,500 crores, roughly INR3,000 crores to INR3,500 crores would be kind of realizable in next two years to three years.
Okay. Sir, my next question is on Kavach only. What will be our opportunity size and what will be our margins. Could you give some color on that?
That's a difficult question now. Let us keep it pending for some more timt:.
Okay. And what is our ARPU now with the RailWire subscriber mming up? ls ARPU also moving up?
Yes. We are maintaining the same number, INR550.

Okay.

And, sir, this update on our venture with 3i lnfotech, any further updates on that? How is it progressing then?
It's progressing well. And it has started now on field also. So, maybe another three months to six months, we should start getting more numbers and more revenues from this because all other preparations which were required are almost complete.
And what will be the revenue size kicking in any?
Minimum revenue is the same, INR 12 crores. But once we get good momentum from the advertisers, which now we have started seeing because this is, first of its kind in the world, in any Wi-Fi ecosystem. Sony, it was INR14 crores, not INRl2 crores.
Okay. And sir, guidance for the year, it would be closing this year with what? What revenue and be fair to assume, sir, net margin of I 0% for the year?
Yes, should be close to I 0%.
And the revenue would be in what range, sir?
20% to 25%. That's what the guidance we are working with, 20% to 25% kind of growth guidance.
Okay. And my last question, how do you see the momentum year forward? Is the thing getting better for us? Because last time I met you, you were very optimistic about it, on cost?
Regarding?
How's the next year onwards? Things are going better for us with the change in economy and ...
Certainly. Yes. We are very much optimistic and things are happening the way, we anticipated.
That's it from my side. Good luck to you, sir.
Thank you. Thank you very much.
Thank you. The next question is from the line of Mr. Bala Murali Krishna from Oman Investment Advisors. Please go ahead, sir.
Thanks for the follow-up opportunity. Sir, regarding the Rai!Wire incremental subscribers is very low oil quarterly basis. So, is there any further future plans to improve the subscriber base?
Yes, we are actually, see, this market is very hot, \I.'.!") cutthroat, and smaller players are many times playing spoiled sports. So, we are continuous!:. in fact, getting into the granularity of the business. And we are empowering our regional teams also to act so that the decision can be taken faster at their level. We are doing every effort, at least so, in this business. It's not only growth, but sustaining the numbers is also equally importart.

October 27, 2023
So, I think that we would continue with our kind of numbers, at least this number. There would be some spike somewhere or here or there. But overall, I think we should remain in the market. And I don't see any decline. I would say, any change which is remarkable, I can say now. But yes, on an average, we'll continue with the same kind of growth, maybe a little here or there. The best part of the Rai!Wire is there is no debt. We are getting everything in advance.
Okay, I understood . Thanks for the explanation. And regarding the 3i Infotech, are we recognizing its revenue in this quarter or is it still yet to come?
We have started recognizing revenue already.
I think it's directly inside the bottom line. There is no investment in it.
Yes.
Okay, thank you. Thanks a lot.
Thank you. The next question is from the line of Ms. Dhvani Shah from Investec. Please go ahead, ma'am.
Yes, just a couple of questions. First, if you can give the breakup ofNLD, ISP, and IP revenues

in telecom?
So, the breakup is NLD is INR147 crores, ISP is INRI 11 crores, IP! is INR51 crores. Then railway projects and other projects put together is INR290 crores.
Another question was that you all have guided for

EBIT margins of 5% to 6% in the project
business for this year. And in this quarter, we've achieved around 8% EBIT. So, going forward, the margin should come off given that these new projects are coming at lower margins, is that assumption correct?
See, this is an opportunity which decision you have to take at the moment when you see that the competition is high or low. So, sometimes we get good margins, sometimes we get even lower margins. But we feel that I'll continue with the same statement that we'll average out to around 5% to 6% on an average. The guidance will remain the same.
Understood. And your employee cost has come off a bit in the quarter. Will there be certain performance related payments coming in the next half of the year?
Employee cost is almost the same. Maybe some perks here or there. Last time, it was INR52.37 . Now, it is INR51.59 . So, there may be some one-off expense. Otherwise , it is the same. There is no contributory factor which I can point out.
Okay. And just a last question on telecom. In Telecom Q2 is supposed to be seasonally stronger given you all have some invoicing . Did that stand true for this quarter? Or is there any shift in the invoicing? Because the revenues came in a little softer hut the margins were higher. So, is there any shifting or how should we see this going forward"

I told you that there was some revision on tariff with some customers. So, that may be the only reason. There is no other reason as when I was answering to questions asked by other investors also. Otherwise , and then, yes, Wi-Fi income has also contributed to this. In the North-East region, there was some chum-out also during the last quarter because of unrest in Manipur and those areas which had affected to some extent. That was also one small contributor, you can say. But otherwise, there is no perceptible contributes.
Thank you so much.
Thank you.
Thank you. The next question is from the line of Mr. Vishal from IDBI Capital Markets arid Security Limited. Please go ahead, sir.
Yes, sir. Sir, a couple of questions from my side. First, as per the footnotes, we have mentioned that the ECL provision of roughly like INRIO-odd crores, that is not required. So, the INR 10 crores reversal has happened for this quarter or it is for which period, sir?
Yes. See, we have further corrected, rather I would say a minor correction we have done. Earlier, we were taking three years for counting ECL. Now, we have corrected it to five· years on a realistic basis because most of the projects, five years were more realistic. So, that correction has taken place. But otherwise, impact is not much. We have not taken any reversal during this quarter.
Okay. So, INRI O crores is for quarter I, not for this quarter, right, sir?
INR 10 crores is from quarter 2. So, it is quarter 2, we have not reversed, right?
No, we have not.
We have not reversed anything in quarter 2.
Okay, got it, sir. And second, sir, as per ...
Vishal, the ECL was INRIO crores in quarter 2 and quarter I, it was INR16 crores. INR6 crores improvement.
Okay. So, for the first half, roughly INR26-odd crores in this particular financial year, right, sir?
Yes.

Okay. Second, sir, capex, if we look at in first half, is a little bit on higher side for in the first half. So, how do you see this full year panning and will it be possible, like, where exactly this capex spending is happening in any colour that you can provide, sir?
Again, the same, INR180 crores which \I.: were targeting. So, fortunately, we have spent now in the first half, 130. So, another INR5ll c:rores should be coming out. You want to break up?
Yes.

Vishal Periwal:
Sanjai Kumar:
No, no. So, basically, it is particularly coming only from telecom side and any particular?
Telecom and data centre. Yes. And some other sector they complete power supply, then some OFC replacement, small quantities and all that.
Okay, okay. Got it. And you clarified that, your full year guidance for doing like 20% to 25% revenue growth. But, I mean, I was just doing some bit of working that if we do like 1400 to I 500 crore revenue in project side and maybe a steady state number of 5% to 10%, then our growth number could be more than 30 odd percent at a company level. So, I mean, are we conservative in guiding or how one should see that, sir?
I won't comment much on this. But, yes. 20%-25% is what we are anticipating. Realistic.
Okay. Got it, sir. Right. Maybe one last thing from my side. I think you did just touched upon the modem train control system. So, for our set of vendors or equipment suppliers, so RDSO approval were pending. So, when do you see the timeline of getting that approval?
See, OEMs have already got it. It's not that no approvals have come and we have spoken even a couple of those OEMs whose products have been approved by RDSO. But the challenge is now the requirement is that it should happen with L TE, which was not the case in the earlier tenders which are already under implementation . So, kind of --that change will require some more time for new tenders to get floated.
So, that is why I told you initially also, earlier also, that this is a new technology and it will take some more time to mature. And that's why we are cautious. We don't want to indulge somewhere we get stuck. But we are certain that this technology is going to be there and it is going to mature. The kind of push given by Honourable Minister will certainly expedite the process. And not only that, we will be in position to export the technology as well.
Okay. So, in terms of our set of vendors, can you name like the three approvals which RDSO has given? I mean, like, who are they?
HBL, Medha and Camex. These are the three OEMs.
Okay.
HBL, Medha and Camex.
No, but these vendors, they already have tie-up with some system integrators. But for our I mean like, set of equipment side, anything that you think can get an appro, al or probably like, we can also eye for an opportunity when these tenders come?
Till now, we were not active in this segment. But we being an organization with a good number of experienced signal and telecom engineers of railways working \\ ith us, I think there cannot be any other organization which can take such projects at faster pace because of our natural connection with railways. We come from railways. So, that is wh~ that advantage certainly will accrue an upper hand vis-a-vis other system integrators.

So. once we decide and then we have already decided and we are already in discussion with these OEMs and the OEMs whose products have not been approved. And the new technology part which is LT portion is yet to come. We are sure that we should be getting a good share from this technology in railways.
Okay, sir. Maybe one last question from my side. So, any particular segment in railway capex that we are seeing a growth for us that we can capture? Maybe, RDN or earlier it was the content on demand anything that become?
Not yet, not yet We are targeting but not yet. We have not yet made it part of our bucket. We will certainly announce or do so whenever the time is right
Okay, okay. Sure, sir.
And certainly, a lot of potential.
Su

re, sir. I will come back in the queue, sir.
Thank yolL As there are no further questions. We would now like to conclude this earnings call. On behalf of IDBI Capital Markets and Security Limited, that concludes this conference. Thank you for joinmg us and you may now dis<;onnect your lines.
Thank.you.

Ladies and gentlemen , good day and welcome to the Q3 FY24 post result earning call of RailTel Corporation oflndia Conference Call.
As a reminder, all participants ' lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes . Should you need assistance during the conference call, please signal the operator by pressing'* ' then '0' on your touchtone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Vishal Periwal from IDBI Capital. Thank you. And over to you Mr. Periwal.
Thanks Tushar. Good afternoon everyone. Just to clarify, welcome all to the RailTel Corporation ofindia Limited Earnings Call.
I'd like to thank the management for giving us this opportunity to host their call. From the management side we have with us Sanjai Kumar Ji, Chairman and Managing Director, V. Rama Manohara Rao Ji, Director -Finance, Manoj Tandon Ji -Director -Project, Operations & Maintenance , Yashpal Singh Tomar Ji, Director- Network Planning & Marketing .
So as usual, we'll have "Opening Remarks" from the management and then we'll have the lines open for Q&A. Sanjai Sir, over to you.
A very good afternoon and very happy new year to all investors.
It gives me great pleasure to interact with you on the Company's performance in the backdrop of Quarter 3 Limited Review Financial Results of the Company for Financial Year 2023-2024 which were declared yesterday by the Company.

The Company achieved total revenue of Rs. 675 crores for Q3 as against Rs. 613 crores in Q2 of FY24 and Rs. 462 crores in Q3 of FY23 registering a sequential growth of I 0% quarter-on quarter and 46% on year-on-year, Y-O-Y. The operating revenue of the Company for Q3 is Rs. 668 crores as against Rs. 599 crores in Quarter 2 of FY24 and Rs. 454 crores in Q3 of FY23 registering a growth of 12% quarter-on-quarter and 47% year-on-year.
The telecom segment contributed Rs. 329 crores and project segment contributed Rs. 339 crores in Company's operating turnover. The profit before tax in Quarter 3 of FY24 is Rs. 84 crores against Rs. 43 crores in Q3 of FY23 registering the growth of 95% year-on-year.
The Company posted profit after tax of Rs. 62 crores in Quarter 3 of FY24 as against Rs. 32 crores in Quarter 3 ofFY23 registering the growth of94% year-on-year. EBITDA for the Q3 of FY24 is Rs. 125 crore and the EBITDA margin is 18.49% against Quarter 3 of FY23 of Rs. 80 crore and 17 .33% respectively thus registering a growth of 7% year-on-year in the EBITDA margin on percentage basis.

Avnish Khara:
Sanjai Kumar: Rai/Tel Corporation of India
25 January 2024
For the nine months ended on 31.12.2023, the Company achieved a total income of I 770 crores

and a total PAT of Rs. 169 crores registering a 38% and 49% year-on-year growth respectively for turnover and profit.
The Company's margins in the project segment have improved from 5% during the last year's nine months period to 7% during current year resulting in improvement in EBIT margin to 13% during current year nine months period as compared to 12% during last year. With the robust order book of around 4800+ crores bolstered by new orders worth Rs. 2000 + crores during the current year itself, we are poised for continuous growth in future.
At the end, it gives me immense pride in sharing with you all that recently Honorable Vice President of India Sri Jagdeep Dhankhar presented the Scope Eminence award to RailTel. We won the award in Institutional Excellence category of Mini Ratna I and 2 for overall outstanding performance during the year 2019-2020.
I, on behalf ofRai!Tel, wholeheartedly thank all our investors for their faith in us which inspires us to extend our limits and propel RailTel to greater heights. We deeply value the trust of our investors and stakeholders and shall remain thankful for their continued support. Jai Hind.
Thank you very much. We will now begin the question-and-answer session. The first question is from the line of Avinash Khara. He is an investor.
Hello. First of all, I think there has been a mistake. I am Avnish Khara from Investech. The first question I have is can you provide me with the breakup of your NLD, ISP and IP revenues for the quarter?
This is Rs. 145 crores from NLD, Rs. 113 crores from ISP and Rs. 68 crores from IP-I category.
My second question is on your other expenses . If I look at them as a percentage of your revenues for not just this quarter but last quarter as well, on a Y -O-Y basis, they've come down significantly. Is there any ECL provision reversal or is this what we can build in for the foreseeable future?
No, there is no reversal as far as ECL is concerned .
Can you maybe throw some color on what has led to this sudden fall in your other expenses?
So last quarter there might be some provisions, the expenses increase. I don't think there's any significant, maybe some provisions for some PRP.
What about your overall guidance for projects in telecoms? Are you sticking to that or is there going to be any change?
We are going to continue with the same guidance which we had last quarter also.

Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Maybe I can just put one last question in. I just wanted to understand the margins that you all are winning on the new projects, given they are no longer won a nomination by railway, how should we think about the project revenues and margins going forward?
Margins, if we talk of project revenue, we will remain in the same bracket, 5% to 7% kind of overall. Because there might be projects where, as I've been telling earlier also that the margin depends upon the competition, the area, the sector, geographical area, many factors are there, and we don't want to lose any opportunity where we have potential to work. So that is why the overall margin of project, I can say, that will remain in same 5% to 7%. And as far as your expenditure other expenses, I would like to again say that we haven't seen any significant change in other expenses.
The next question is from the line of Sanjesh Jain from ICICI Securities.
I got a few questions. First, what is the order book as on December 31st?
On 31st we were around 4600. And now today we stand at around 4800.
Okay, so it has increased by 200 crores. Just want to understand a little bit more on the railway rollout on 700-megahertz spectrum. Is there any development? Are they deploying 4G? Are they deploying 5G? Where are they in the process and how are we involved in that?

Railway is going ahead with L TE only as of now and the POCs are underway, and we are one of the POC conducting agencies. I believe this would answer your question.
When we say we are POC conducting agency, would that really expand our scope?
They have identified a few companies, few system integrators, you can say. And they have shortlisted one of them, we are.
So, we are among one of the shortlisted.
Yes, in South Central Railway.
What will be our scope of work in this? It is installing the radios, towers, and fiberizing the towers, all this will be the scope of the work?
Yes, almost. Actually, basically the purpose would be the conducting POC with core and of course a RAN element would be there, because otherwise L TE will come into picture only when the RAN come, radios come.
What about the tower, sir? We were also anticipating 7000 to 8000 towers, which would be a potential opportunity or a complete addressable market for this. Are we also there in the tower?

' ~

Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Yes, we are erecting a few towers. We have got an order also from railways in South Central Railway for erecting these towers for L TE purposes only. Recently only. That was posted on SEBI portal also. So, there we are, and we will certainly try to get advantage of this potential which is there for us.
So, the CAPEX will be done by railway or CAPEX will be done by Rai!Tel for this particular purpose.
This is a project; this is not IP-I business.
That is why it will be done by railway.
Yes.
How will we benefit? This will not be available for sharing with us, right?
See, we will have to work out on these modalities , maybe with Ministry of Railways for these new towers. But yet now, nothing.
My second question is on Kavach. We earlier said that the technology was in a development process, and we were watching that very keenly. Where is that right now? I think there are certain orders which have been already rolled out and I think one of the order we are there right now, right?
I think from the last quarter, we haven't seen any activity as far as railways is concerned. So, the previous orders are still under implementation by the agencies who were awarded these works. And this POC, which we are part of it will also contribute to the maturization ofKa

vach product,
of course, because it's part of the overall eco signaling system, that anti train collision system. So, this LTE POC, which I talked about is part of the same exercise.
When realistically we can expect actually the rollout of Kavach in India? Will it take another twelve months, do you think so?
As you have already said that there's one part of the Kavach which is already under rollout, but that is on the VHF radios not on L TE. So yes, optimistically we can anticipate that it should happen in the next twelve months, maybe at least starting. But I would not be the right person to comment upon this.
Just trying to pick up your thought there. My last question again pertains to the tendering of edge data center, which we have been talking now for the last few quarters. Where are we in that process of tendering the edge data center?
It is already in final stages. Bids have been received. They are under evaluation and shortly we should be finalizing.

Viraj Mithani: It will be 120, ifl remember it right.
100 locations we have identified. And we will certainly begin with a few important major locations. And then we'll proliferate it further. Our target is 100, but we'll start with a few. Maybe in this quarter we might start the journey.
One last bookkeeping question on the other income. Other income has dropped from 13 crores to 6.5 crores in this quarter. Any reason for the decline in the other income?
See, interest income is the major component in other income generally. Generally, in Q2 we have to pay dividends and all those things, and accordingly the interest income is reduced.
Has the lowest other income.
Yes.
That's the only reason, right? We utilize the cash so interest income declines for that quarter.
Nothing exceptional, yes.
The next question is from the line ofViraj Mithani from Jupiter Financial.
My question is, can you give me some sense on the trajectory coming going forward in terms of sales growth and net margins. Broadly, we are clocking at what you told last time, some 20% sales growth and 12% net margins. Is Trajectory would be the same ? And what could be the triggers for the growth going ahead?
Optimistically, _conservatively, I would say we are continuing with the same guidance, and we will certainly continue to strive to do better than ever. So that will be the efforts by our team. But certainly 25%, I can say maybe 20% to 25%. Last quarter I may be saying 20%. So now I can say 25%, conservatively, we should continue to do in future quarters and maybe we will be doing better also.
25% top line growth and the margins would be same at 10%-I 2% net margin.
Yes. Margins will also be in the same range.
And 25% conservatively will grow. So, there's a higher chance of growing more than 25%. That's what you're indicating.
Can you repeat your question please? Because I think there was some noise coming.
You said 25% will grow conservatively. It means that there is a very good chance of growing more than 25%. Is that right?

Moderator:
Manish Oswal:
Sanjai Kumar:
Manish Oswal:
Sanjai Kumar:
Manish Oswal:
Sanjai Kumar: Yes, we hope so. We will try to do that.
And what could be the trigger for the growth in the years ahead, next year?
Mostly it will be project income because project income is going to give us the maximum growth numbers and we are actually coming into new areas also. Like signaling , we have already started working and getting orders also through open tenders, railway work through open tenders, we

are

continuously getting new orders. You must have seen on orders shared with portal. So that is one. And we are expecting in value added services like Aadhaar authentication services also we are doing a good job. And these are small streams, but many smaller streams we are working upon. And those are certainly adding to our top line. And project, of course, IT, ICT project of course continue to be there. The major driving force.
And Kavach should be additional to this, if next year Kavach comes in?
Kavach in near, I don't see next one or two quarters. But yes, later on Kavach will also add on to.
The next question is from the line ofManish Oswal from Nirmal Bang Securities.
My first question on the margin in this quarter against the revenue growth of 11.6% on Q-on-Q basis, margin has slightly lower pay. So, is there any mix which impacted the margin at EBITDA level?
There is nothing specific, see, actually if you see in quarters, it is possible in the basket of projects being executed during that quarter may have a mix where number of projects with lesser margin, maybe 5% are slightly more or something like that. So, we don't see any specific trend. We are continuously working in the same range. And if you see maybe on nine months period you will find that there is consistency . So quarterly results, if we watch as these smaller numbers, you may see such trend but there is no specific reason behind it.
Secondly , in terms of currently we have order book of 4800 crores. What is the time frame to execute this order book?
This is spread over, taking from one year to up to ten years. Because there are some projects which are spreading over ten years also.
As an investor, how should look at in terms of revenue visibility from the order book from a two-year perspective, from the order book then?
If I see out of this order book, next year we might be converting into revenue around 1300 to 1400 crore. Just an idea I can share with you.

One small data point. On YTD basis, what is the order inflow growth vis-a-vis last year nine-month period.
That data maybe we may have to find out. I'll share this number.
Maybe on the call you can share, it will be great.
The next question is from the line of Sri Harsha, an individual investor.
I have a couple of questions. Can you throw some light on the opportunities available in the train avoidance collision system and your expected JVs or collaborations for the train avoidance collaboration with the manufacturer or the local manufacturers?
I'll maintain the same numbers which I have been telling earlier also. Out of this Kavach opportunity we are expecting 4000 to 5000 crores of opportunity which is spread over next five to six years. And if you talk of tie up with the OEMs, the approval by railways is still undergoing and they haven't added any new OEM, and we are continuously in touch with the newer ones. And the opportunity I would say that still we are waiting for new tenders to come. POCs, as I shared in the earlier answer that we are part of one of the POC related to Kavach only. So, we are also expecting tenders from railways and then we'll certainly participate in that.
Another question is with regard to the order inflow; can you throw some light on the order inflow expectation for financial year 2025 and 2026?
Order inflow like this year we are expecting we may be touching somewhere around 2500 crore of orders this year. So next year we will be certainly targeting to get at least 4000 to 5000 crores of new orders adding to our order book.
The next question is from the line ofVishal Periwal from IDBI Capital.
Can you give some clarity on the RailWire, where the subscribers are and how is the addition in t

his quarter?
RailWire, our subscriber numbers are roughly close to 5.67 lakhs right now and we are facing, yes, very cutthroat competition in urban areas and we are continuously trying to reach the rural areas also. And additions from rural areas are in good numbers. But still, we are finding innovative ways to continuously innovating the tariff model, the bouquet mix and all those things. We are continuousl y in touch with our partners. There are 9000+ partners on date with us and they have trust in us. We are continuously working on this and then going at. .. We want to achieve a number beyond which maybe our journey will be smooth. So maybe ten lakhs number or eight lakhs of total subscriber mass may give us that threshold.
Any internal targets that you have in which year we are having that target of eight to ten lakhs.

Parimal Mithani:
Sanjai Kumar: We will try to do this by next year.
And this 5.67 Lakh, what would be the breakup in the urban and rural, percentage wise, any number, if you can share how the split is?
Roughly around 60%-65% is from rural. I think 60% is from rural and 40% is from urban.
And then what could be the ARPU in this quarter for the 5.67 Lakh?
Rs. 529 is the correct number for this quarter.
And then this ARPU, how this wiJJ differ in urban and· rural this number.
Actually, when we are talking of ARPUs, this is more or less the same. But we have some SME customers in rural areas, Tier-3, Tier-4 towns who are big paymasters because they are taking for their even business, small and medium enterprises are also taking. So rural areas, we can say we are getting more revenue from rural areas. Maybe that's why the rural area ARPU would be more.
I think we have broadly mentioned that our growth rate will be 20% to 25% odd. But I think in this year if you look at, we have done a pretty strorig set of revenue growth in nine months, three quarters which have gone. Because if we just do that working, then probably it looks like Quarter 4 could be a flattish sort of number. So, anything that we should read more on it?
No, I would say it is ruled out. It will not be flattish. We will continue with the same momentum and the 25% I told that this is a conservative number, but that is for sure. We are certainly there for doing much-much better. We are continuously working towards improving our performance and satisfying our investors.
Okay, that's very heartening to see. I Think till this year we have done pretty weJI, and market also has been quite supportive. I'll come back in the queue for more questions. Thank you.
The next question is from the line of Parimal Mithani, from Credential Investments.
Remarks earlier participant that you expect the order inflow to be in a range of 4000 to 5000 crores next year, right?
Yes.
So that means the run rate for order inflow will be much intense compared from this year, because this year in the opening remarks you mentioned 2000 crores of orders you have got. If I'm not mistaken.
Yes.

Sanjai Kumar: What makes you confident about this order inflow? Rai/Tel Corporation of India
25 January 2024
When we see some cricket match, when a batsman is playing, when he's making runs, he aspires to then do fours and sixes. So, our confidence and our team is working very hard to make it better and better and better every day. That is the confidence I have, and the trust of our investors of course is there. So that is driving us. And that is all

I want to say.
The next question is from the line ofVishal Periwal from IDBI Capital..
Can you give some color on a couple of initiatives that we were taking in say RDN side content of demand, CoD which was there anything that is happening or attraction that we are seeing?
Vishalji, I think I have been telling in earlier calls also, we have moved much ahead of CoD and RDN. So, ifrailway gives that opportunity to us, we are there to do it. Otherwise, we have a lot of other opportunities and we are not now very keen. We are there. We have solution. Given the opportunity, we will be doing that.
In project side, sir, is it like railway or non-railway that we are seeing attraction in terms of opportunity for us?
Non-railway has always been the major share in project business. We will continue to have around 15% of the business from railways overall including services.
For this quarter, will we have this revenue breakup between Railway and others for project work services.
This quarter, railway and non-railway, I'll share this number with you. So, in nine months performance, Rs. 167 Crore goes to railway and Rs. 640 Crore goes to non-railway. This is nine months.
The next question is from the line of Viraj Mithani from Jupiter Financial.
My question is regarding the last participant. You said top line of 5000 crores order book. Do we consist of small orders or are you counting in the Kavach order inside this order book?
This is basically a projection and will certainly have ail kinds of orders including Kavach and other railway projects.
Kavach could also be a part of this when you say 5000 crores order book, right?
4000 to 5000 will be over spread basically, revenue booking will be spread over next five to six years. Because execution of these projects will take time.

But the 5000 order book will touch next year? Right now, at 2000 order book, if my understanding is correct.
4000 to 5000, we are targeting. This is a number which I can ... so kind ofopportunities available in the market. The competition, of course, all these things. So, we are targeting around 4000 to 5000 new orders next year.
You're counting Kavach also in that order book, right?
Kavach can also be part of it.
The next question is from the line ofBalasubramanian from Arihant Capital Markets Limited.
On the broadband connection side we have around 5.67 lakhs and rural and urban mix 60:40. I just want to understand which are the areas we are specifically focused on like north markets or west. And I just want to understand still the rural market is under penetrated. What are the growth

strategies we have under increasing the connection side. And I just want to understand the realization side also like whether how much the realization side are increased in this quarter.
Can you just repeat your question? Because I think your voice was somewhere not clear.
Under broadband connection side we have around 5.67 lakh and rural and urban make 60:40. I just want to understand what are the growth strategies we have to expand further. And I just want to understand the realization side also.
Realization , if you talk of RailWire , there is no issue of any realization. Most of these are prepaid, right? So, there's no issue of any realization. If we talk of strategies, I can just give you indicators but really cannot share these strategies because these are trade secrets. But yes, we are encouraging our partners, and they are basically boosting their morale because they are the ultimate connect with the customers and we are holding meetings with them even at the senior management level also. And of course, innovating , bringing new innovative products and prod

uct mix and tariff strategies also being worked out.
This urban rural mix, like what kind of mix we can expect in next two to three years.
Our focus continues to be in rural because, I think you said that rural area is under penetrated. There is a lot of scope.
On the CAPEX side, how much we have incurred in this quarter and what kind of numbers we can expect in the next two to three years on the CAPEX side.
This year we have done around 180 crores of CAPEX, and we will remain in the same range. We have not worked out capital expenditure for the next year. We'll be doing an excise within

Balasubramanian:
Sanjai Kumar:

Q4 of this financial year only, but certainly will be around the 200, 200+. That is the minimum as we see now. But it will be certainly more it.
Data center side, what kind of opportunities we have. I think we are planning for NOIDA data center projects also and what kind of opportunities and what kind of growth we have in next two to three years.
The data center market in India is already very hot and we are doing every bit to basically harness this potential. And as far as NOIDA data center, we have already come out with an RFP and now bidders must be going to a pre-bid meeting will be held and then, so we are hopeful. I cannot comment right now on the numbers, but we are very much serious about this. That much I can share with you.
As there are no further questions. With this, we will conclude the call. On behalf ofIDBI Capital, thank you for joining us and you may now disconnect your lines.

Sanjai Kumar: Ladies and gentlemen, good day and welcome to RailTel Corporation Q4 FY24 Post Results Earnings Conference Call. As a reminder, all participant lines will be in listen-only mode and there will be an opportunity for you to ask questions _after the presentation concludes. Should you need assistance during the con f'crence call, please signal an operator by pressing star then Lero on your touch-tone phone. Please note that this conference is being recorded.
I now hand the conference over to Mr. Vishal Pcriwal from IDBI Capital. Thank you and over to you, sir.
Yes, thanks Sejal. Good al\emoon everyone and welcome to RailTel's Post Results Earnings Call for Q4 and FY24. First of all, I'd like to thank the management for giving us this opportunity lo host their call and the dais, today's dais is graced by Shri Sanjai Kurnurji, who is the Chairman and Managing Director, Shri V. Rama Manohar Rauji, Director Finance, Sllri Manoj Tandonji, Director Projects O&M, and Shri Ynshpal Singh Tomarji, who is the Director of Network Planning and Marketing. So as usual, we'll have a brief overview from the management on the gone-by quarter and then we'll line open for Q&A. Yes, Sanjay sir, over to you.
Thank you Mr. Pcriwal and greetings to everyone. A very good atlernoon to all investors. It gives me great pleasure to interact with you on the company's perfo

rmance in lhe backdrop of
Q4 and yearly audited financial results of the company for FY2023-24, which were declared by the company on 2nd May 2024.
The company achieved total revenue of INR852 crores for Q4 as against INR675 crores in Q3 ofFY24 and fNR707 crores in Q4 ofFY23, registering a sequential growth of26% quartcr-on qunrtcr and 21 % year-on-year basis. The opcmting revenue of the company for Q4 is fNR833 erores as against INR668 erores in Q3 ofFY24 and fNR697 crores in Q4 ofFY23, registering a growth of 25% QoQ and 20% year-on-year basis. The telecom segment contributed INR336 crores and project segment contributed INR496 crores in company's operating turnover in Q4. The profit before tax in Q4 of FY24 is fNR I 02 crores as against INR84 crores in Q3 of FY24, registering a growth of 21 % QoQ basis. The company posted profit afler tax of INR 78 crorcs in Q4 ofFY24 as against INR62 crores in Q3 ofFY24, registering a growth of26% QoQ basis. EBITDA for Q4 ofFY24 is fNRl45 crores as against Q3 of FY24 of fNRl25 crores, thus registering a growth of 16% QoQ. For the year ended 31-03-20 24, the company achieved a total income of INR2,622 crores and a total PAT of fNR246 crores, registering a 31% growth respectively in both parameters in turnover as well as profit as compared to the last year. I would also like to share about two important events which happened recently.
One is that we have recently finalised an MOU with Quadrant Future Tech Ltd, forging an exclusive partnership for aggressivel y participating in KA VACI-I tenders, which was await eel by our investors for quite some time. Quadrant Future Tech Ltd is under the process of final approval by ROSO as an OEM for KA VACII product. Combining this with our in-house expertise, we arc committed to contribute in the journey of Indian railways for implementation of indigenous safety systems like KAVACH and will also explore to prolifernte the KAVA Cl I technology abroad as well.

Moderator:
Sanjcsh Jain:
Sanjai Kumar:
Sanjcsh Jain:
Sanjai Kumar: The second event, which is also significant, is that with the support of Indian I ligh Commission in South Africa, we have signed a tripartite MOU with lnoviTel and Tsiko Africa Energy and Infrastructure for Tsiko Group. In this collaboration, we arc exploring oppo1tunities in telecom, railways and other JT/ICT busin<!sses in South Africa and the adjoining areas. This is a leap forward for us lo take Rai!Tcl 's services beyond the border.
We express our profound gratitude for the trust bestowed upon us by our investors and stakeholders whose unwavering support propels us to our continual ascent. Jai I !ind. Thank you.
Thank you very much. We will now begin the question and answer session. The first question is from the line ofSanjesh Jain from ICICI Securities. Please go ahead.
Good afternoon, sir. Thanks for taking my question. I got a few of them. First, can you help us with the order book which we have as oa 31st March? And number two, what is the expectation of order book for our FY25, both from railway and non-railway segment? And related questions would be on the KA VACI-I now that we have signed an MOU. Can you help us understand how

does RailTel fits in this ecosystem? And what is tbe margin from that particular project? And what is the size of incremental order we are looking from that MOU which we have signed?
Thank you, Sanjesh ji. Thank you, ICICI. Thank you for being with us continuously since our listing. So our current order book size is arow1d 4700 crores. And out of this, we expect to implement and eonve1t into revenue is around 2000 odd c

rores this year. So that is the second
question. And third one is related to KA V ACH. So KA V ACII, we have been, I think, answering this question for quite some time that what we are doing in KAVACH. So l have always infonncd the respected investors that we arc on the job.
And now we have found, we have completed the first step towards it and that we have signed an MOU with a new entrant in this area. They are an old company already working in railway sector. So now they have developed this product, KA VACI-I, which is compliant not only to the existing deployment specifications, but lo the latest standards, which are 4G complied.
So the earlier KA V ACH product was not 4G complied. So this new product is 4G complied already. And the POC Testing is underway. And we have already decided to associate with them from this stage. I am not really aware, but we are expecting that in next may be two to three months, the tenders would come and we will compete in these tenders. And we expect that next three, four years, we may be doing, if we talk of KAY ACH exclusively, then may be INR4,000 crores to INRS,000 crores of deliveries.
We should get these orders to the tune of INR4,000 crorcs to INRS,000 crores kind of delivery orders. And if we Lalk of complete system like LTE and this one put together. So there I guess that we will try our best to get even better, but we hope that we'll get orders lo the tune of around INRS,000 crores to INR7,000 crorcs of orders. LTE as well us KAV /\CI I.
INRS,000 crores to TNR? ,000 crores on 5G or it is total KA V AC! I?
It is total. Both are pmi of the same system, but the OEMs would be different. Tenders are also coming separate. They arc not in one tender.

Sanjcsh Jain:
Sanjai Kumar:
Sanjcsh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjcsh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjcsh Jain:
Sanjai Kumar: So one will be for deploying 4G. the other will be for the deploying KA VACI!. And both put together, you're telling could be in lhe lune of rNR5,000 crorcs to rNR7,000 crorcs?
Yes, that will be complete system of train collision avoidance system.
Got it. That's fair and quite a good news. Just to understand a little bit more, you said it's a new entrant and it is still under the POC. Who are the competition here in the KA VACI I for us"/ It's the companies like Siemens?
No. Right now, one is Mcdha. The other one is HBL NIFE. J\.nd th..: third one is Kcrncx. And G.G. Tronics is also another new entrant whose producl is also under testing.
Okay. Got it. And the company you said is Quadrant FuturcTck. Is that name'!
Yes, Quadrant FuturcTck.
Quadrant, Okay. I've got it. And they arc quite established and capable company?
Yes. They have a good experience of working in railways sector. They are already working in this sector.
Fair enough.
Their products are different though, but Yes.
That holistically answered my question very well there. Second on the telecom service. I think we were hopeful of doing double digit 10%-12% kind of a revenue growth this year and we probably ended in a mid-single digit. What's happening on the telecom side and what arc the

challenges we arc looking al, and how should we sec this revenue in next year?
Yes. Actually, if you are aware, I think --number one, 5G could not get the kind of fanfare ii was launched. But I think telcos arc also struggling. So SG also could not make the numbers. That is one aspect of it. But tariffs arc also continuously under pressure. And demand, of course, is there. But because of falling tariffs, we are not able to s

ee that kind of growth in terms of
revenue.
But we ure finding --we are trying to find new ways so that we can make ii more feasible and possible for us to make a double digit growth, at least I 0% of growth. So we have worked out some strnlcgies in this and we arc hopeful that we will be successful in laking the growth of telecom business to I 0% kind of.
Got it. The next is on the margins in the project business. This quarter, again, the EBIT n111rgin was on the lower end. You said that the older project, which had lower margin, was completed. Any particular reason for this quarter having a margin of only 2.4%'!
See, if you sec the --like I have been telling you earlier also, so I think during -I remember I think it was half yearly meet or I think maybe subsequent one, wherein I had been informing

Sanjcsh Jain:
Sanjai Kumar:
Saojesb Jain:
Saojai Kumar:
Sanjcsh Jain:
Sanjai Kumar:
San_jesb ,Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjcsh Jain:
Sanjai Kumar:
Sanjcsh Jain: and sharing with you that sometimes we find an opportunity that the business area where we are entering, it is new area for us and we sometimes have to take aggressive calls.
So few businesses which we were lo enter, like, for example, in education, we were Lo enter the education sector in a bigger way. So we had to take some forward calls, some aggressive calls. And that is the reason that Q4. this affected our margin. Otherwise, you can take this only incidental to quarter four. And ovcmll. if you sec, we have been able to make it better number, if you see on a complete financial year.
Got it. On this project, on the KA V ACH side, what is the expected margin that we arc working with in our projection? Will you be able to do a 5%?
TI1is will not be possible for us to share because sometimes these are business secrets and because there's a lot of competitio n and people might lake advantage ofit. Bui certainly, we will do our best because it is competition. lt is not domination. Dul Yes, 8% to 10% we expect that we should be able to manage.
Got it.
But still, I don't want to really comment much upon it.
fair enough, sir. Just one last. ..
And then moreover, this all depends on the scope, the competition, because there arc many factors. You come to know in a particular tender that sometimes market intelligence you get, that so many bidders are interested, who are the parties who are participating, what kind of jobs they already have on their hands. So there arc many factors. We decide accordingly.
That's correct. On the Edge data center, where are we now in terms of... I thought we have completed the tendering, right?
Yes. So there's good news that we have onboarded a partner and the partner has already started its survey. And th.is year, we are expecting that JO to 12 Edge data centers will be operational. And next year, we'll take a good number of data centers. So by the end of this year, we should be getting the same reflected in our numbers, maybe by quarter four. Yes.
Okay. And what is the estimated revenue from that?
1 won't be able to comment it right now, because this is ultimately revenue share. But yes, this year, I won't be able lo say much about it. Maybe ...

But at a full blown, will this segment give us INRI00 crorcs of annual revenue?
Yes, in the two years run, we can expect. Not right now.
When it matures, it is big enough, we should be able to do I 00. So that at least is a target for us.
Thank you, Sanjay sir. Thanks for patiently answering our questions. And best of luck for the coming quarters.

Sanjesh Jain:
Sanjai Kumar: Thank you. The next question is from the line of Sanjesh Jain from ICICl Securities. Please go ahead.
Yes, thanks for taking my question again. Sir, can you just share the annual revenue for our sub segment, NLD. ILD. and ISP'/
So this year, let me, so let me try to give you the answer. Let me get the number. If you have a11y other questions in the meantime, I can segment them. Only qum1crly or you want annual?
FY '24.
FY '24, yes. So !Pl ifwe talk of, it is INR 238 crores.
Okay.
ISP, INR433 crorcs. And NLD was INR 591 crores.
And what was the contribution of railway and non-railway in the project?
In the project? Railway project overall is 17% of the total revenue coming from railway. But project-wise, I don't have the exact break-up. Railway project is around INR266 crores out of 1302. So roughly, Yes, roughly 15%, 17%, I think.
17%.
Yes.
So railway was quite low in the projects this year. And that should ... And this includes the VSS project? I think YSS itself ...
VSS project actually C0llid not be undertaken to the extent we expected. And that is also one reason that Q4 was afTected. Because there is some --if you see the website of the MeitY, so they have come out with new guidelines for procurement of cameras and security-related specifications have been given. So that is --wc were already following that. So that bas affected slightly our supplies. And now those things arc getting settled. So we should be able to finish this project this year. I think by end of December, we will be closing this project.
And that will be totally INR800 crores was what we were expecting, right?
Yes, it is close to 800. So some of it is already executed to the part. Some part of it is already executed. And roughly close to INR600 crorcs is remaining, which we are expecting to close this year.
Uot it, got it. I think•· and what 1s the Rail Wire i\Rl'U and subscriber?
Rail Wire ARPU this year, because of competition again, so we had to tweak our tariffs also.
And because of U1ere's a lot of churning, new ISPs are also corning with very aggressive tariffs.

Sanjesh .Jain:
Sanjai Kumar:
Sanjcsh Jain:
Sanjai Kumar:
Sanjesh .Jain:
Sanjai Kumar:
Sanjesh .Jain:
Sanjai Kumar:
Sanjcsh .Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjesh Jain:
Sanjai Kumar:
Sanjcsh .Jain: So AR.PU is slightly lower. It is 5 IO for this financial year. /\nd numbers are close to 1NR5. 75 lakhs.
5. 75 lakhs. These have not grown so much.
But there is one good news in this. We have recently got an order frorn Government of Gujarat, where it is subsidy-based model. And we have to provide broadband connectivity to I lakh households in Gujarat in next one year. So we hope that this will certainly give us boost and we can take the same model when we successfully execute this to ulhcr states also.
And so how docs this work'' Customer doesn't pay and Government pays for it.
Govenunent will pay subsidy to us on each connection. We provide to the subscribers, to their homes.
So lhe overall ARPU including the subsidy will be

equivalent to INR500 or will it be lower than that?
No, that will again, it will affect /\RPU of course because the plans will be generally targeting the rnral areas. So those plans may not be that heavy. But then consumption again would be not that much and that is another part of it. So because urban area generally consumption is more.
So what is tbe AR.PU for this 100,000 new customers we are anticipating?
ARPU should be somewhere around 200.
Okay.
Plans will be 400 kind of.
Annual.
We are yet lo launch il. We are working on the tariffs and all. But this is very recent order.So we are still working on the tariffs and we are free to fix the tariffs depending upon the target market.
Only the gap will be filled by the government?
No, not gap. There is a fixed subsidy.
Okay, it's a fixed subsidy.
Because there is one time expenditure to provide this broadband lo every home. So we all when we take a connection, we provide the modem. We have to lay some fiber and all that. So we have a partner who will be working with us and they will be doing all this activity.
So we will be laying any fiber for this because this will be more?

Sanjai Kumar:

Dhvanl Shah:
Sanjai Kumar:
Dhvani Shah:
Sanjai Kumar:
Dhvani Shah: No, not really. Sec Gujarat. 13haratNct they already have laid a lot of fiber within the state of Gujarat. So that fiber will be available for us to use. That is the actually basic tenet of this complete design, the scheme of the government. And we will be sharing a part of revenue also lo government of Gujarat.
And what is the capex expected for next year?
Capex will be in the range of somewhere around INR250 crorcs.
Okay, so INR200 crorcs lo INR250 crorcs?
TNR250 crores. Yes, INR 200 to INR 250 erorc, hut I think we will be able to make INR 250 crore.
Okay, this is fur FY25.
Yes mostly we will be spending on network expansion enhancing our and data center also.
We haven't announced any dividend this time around while we have generated a good cash now in FY24, will that be taken separately a board meeting for that or how should one think about it?
Generally , we do this exercise at the lime of AGM. So we have been doing this every year al the time of AGM, so we will do certainly. We'll take it to the board and they'll take approval of board and the11 we'll announce it.
Got ii. That's clear. Thank you, sir, again. Thanks for taking all the questions and best of luck.
Thank you. The next question is from the line of Dhvani Shah from Investec. Please go ahead.
Thank you for taking my question. I just wanted to understand how should we look at telecom margins for the next year'?
Telecom margins'?
Yes.
it will be 20% lo 22% in the range of 20 plus basically 22% and close to that to maintain the same.
And on the unallocated assets, can you help us understand why is there such a big jump since last year?
Sorry, there's a lot of noise in the background.
Can you just explain why there has been an increase in the wiallocated assets?
Come again.
Why has there been such an increase in the unallocated asscL~ versus last year'/

Sanjai Kumar:
Dhvani Shah:

Vishal Pcriwal:
Sanjai Kumar:
Vishal l'criwal:
Sanjai Kumar:
Vishal Pcriwal:
Sanjai Kumar: Unallocated assets?

Yes.
Give me some time we will answer to this. It is cash and bank balance.
Okay, because the jump if you sec in the asset segment that's given is from almost rNR25,000 lakhs to INRI, 14,000 lakh as per given in the segment-wise asset and liability statement.
Mr. Batra will be answering this question. He is GM Finance.
Primarily the cash and bank balance and certain other assets are also there.
He's talking of segmental. I think Dhwani ji he will find out the complete answer to your question. In the meantime, if you have any other questions otherwise we will answer your question.
Yes. That's it. Thank you.
The next question is from the line ofVishal Periwal from lDBI Capital. Please go ahead.
Yes, sir. Thanks for the opportunity . l think, sir, the previous participant I think the question was like there has been changes in certain -the amount has been moved from tclecom services to unallocable assets.
Even lbe project side, the line item in the segmental asset side it has seen an increase, but at a company level definitely the net working capital or what we derive it's not been major change.
So, the query was what does movement ha~ been happening between the segments. So, that was just to clarify that?
Thank you. Vishalji. Our finance team is just working on it.
Sure. And, sir, a couple of maybe like reiteration if I can ask. I think at a project segment level there has been an improvement in the margins. If you look at FY24 that is an annual year basis al a EBIT margin is 22% which was around 20% odd.
So, I think though you have clarified, but can you say that like the margin pressure or probably like the pricing pressure which you also touched upon brieny in the call. So, can we say that is mostly gone and probably things are looking better in the last second half or the fourth quarter? Can you say based on what you're seeing on the ground, sir?
No, actually, we talk of project business. So, many limes, as I told you earlier also that. ..
Sir, this was regarding tclecom. Telco, I think. There we are seeing an improvement in margins?
Telecom pricing pressure is yes. It is still there. It's going to be there. So, Indian telccom sector is certainly much different from worldwide, world over. This has been a different story and in fact, all of us know that our tel cos are always under pressure.

Vishal Periwal:
Sanjai Kumar:
Vishal Periwal:
San_jai Kumar:
Vishal Pcriwal:
Sanjai Kumar:
Vishal Pcriwal:
Sanjai Kumar:
Vishal Periwal:
Sanjai Kumar:
Vishal Periwal: In fact, Vodafone is struggling to come back. So, that pressure is going to be there. That is the story of Indian telecorn sector market that will remain.
Right. right. Okay. And then, sir, in project segment, l think the order book continues lo remain strong and you're guiding, like, you know, touching 1NR2,000-odd crorcs. So, typically, when wc gt:! this order, can you share some name with whom do wc compete to get this project's order?
It depends. Sec. we arc working on different sectors. So, many times, they arc private sectors. like L&T or Airtel or Jio, Stcrlite. They arc, like, our competitors when we are working on system integrator kind of projects. Sometimes, they are PS Us, our competitors, if the tender is mostly invited. Sometimes, mostly invited by the state govemments among the PSUs.
And even defense organizations are also inv

iting many times among the PS Us. So, this is what,
like, Tata Communications, Airtel, they arc the, from private sector side Sify, ir you talk of telecom sector. And Airtel and Jio, they are in system integration also sometimes when it is specifica lly having a sizable component oftelecom business also. So, they are our competitors.
Okay. And then, this order book, how exactly arc we seeing in any target that you have given to

the team, that the INR4,700-odd crores, how do you see this coming year? Execution will be pretty good. So, there will be depletion, but what we are targeting in terms of inflow, any color?
• On inflow of new order book, the order you arc talking ol'?
Yes.
Yes. So, we expect with the kind of tenders, including those from railways, we expect that it should be, we should strive to get orders of around TNR4,000 crores. New orders.
Okay. And this will also have an element of KAVACH also. ll will be part of it.
Y cs. Of course.
Of course. Okay. And U1en. U1is KA YACH order for the quadrant, is it already approved vendor by the railway?
They are in the process of approval. Prototype has already been approved and the proof of POC testing is underway . Field trial is underway. And now, this is not a challenge. So, once prototype is approved , then field trials, they have lo tweak their soflware and maybe some hardware kind of devices.
But now, ii is almost, so that is what we were waiting. We were in discussion with the quadrant for quite some time. And now, we have signed an MOU with them. So, mostly we will be bidding in the tenders with this product.
Okay. And in this edge data center, which you clarified, so can you share who all our clientcle are? 1 think for whom we do this work. And again, like in India, any competitors also that you

Sanjai Kumar:
Vishal Periwal:
Sanjai Kumar:
Vishal Pcriwal:
Sanjai Kumar:
Vishal Periwal: sec in this sector, in this segment, that from a sector point or view, if you can give some color, it will be helpful?
Mostly, we will be, again, eyeing government customers, mostly because of most of the, many of the customers, they arc comfortable when the data center activity, data center operations arc managed hy in-house government-owned entity, in-house team of governmen t-owned entity. And that is where wc arc. So, that is one.
And second, many ofll1e applications, like video gaming applications, there the latency is a very important parameter. And the data center, the closer it is to the user, it gives you better performance. Aad similarly, these live events, kind of IPL matches, even these OTT platforms like I lutstar, and then Nctllix an<l many more, llwy are also, they arc looking fur best experience to their users.
So, that as close as possible, they are dose to the customers, subscribers, because the number of users are also increasing. Every time they require a fatter pipe, if you are somewhere away, and that introduces latency also. So, that is, these are the kind of prospective customers.
One more thing I would like to share with the investors through your question, that recently we have won an order from Prasar Bharali, where we are developing an OT!', which is being actually based on the content provided by Doordars han. And it will be vc1y useful to the rural and remote areas. It will he popular in Tier 3, Tier 4 towns, because of their taste, and it will be kind of even targeting the linguistic areas, like statewide, tbey can target.
So, that is a very good order, which we have, and we will he, we ~re very much confident, we arc very much i:xcited about this. So, that will also be one

prospct:livc user of our Edge Data
Center.
Okay. Got it, sir. And then, this Gujarat work, you did briefly mention, the subsidy will be given. The subsidy is on the capcx, which is more like a modem router. Then the customer, usually they have to take the plan and then they have· to pay for it. ls that a business, obviously?
In a sense, let's say it is capex, but actually it is not directly capex. It is subscriber -based. So, individuals, every individual subscriber we add, we get the subsidy.
But then, on annual basis or monthly arc onboarded, there is no subsidy. On a monthly basis, they get a ...
No. There is no rccuning. There is nothing. Actually, generally, the challenge has been in laking such kind of services to the 11.1ral and remote areas, that one-time expenses are sometimes prohibitiv e. And the operators, they see commercia l angle and they don't have an early ROI.

And then, ultimately, these services arc nnt available lo tl10se folks, those masses. So, that is the idea.
Okay. So, basically, the idea is like, the Railwire wherein the subscribe r base could sec some bit or improvem ent with these kind of initiatives thal the government is taking and then RailTcl becomes a bencficiaiy. That's how one can read?

Sanjai Kumar:
Vishal Periwal:
Sanjai Kum11r:

San_jai Kumar:
Vishal Periwal:
Sanjai Kumar:
Moderator:
Sanjai Kumar:
Moderator:
Deepak Purswani:
Sanjai Kumar:
Decpak Purswani:
Sanjai Kumar: Yes. So, generally. actually, railways, RailTcl subscriber base is mostly in rural areas. 13111 then, we were also facing this challenge that who will put this money, this one-Lime expenditure Lo take these services, these broad hand services to the home, So, sometimes, there are some affluent subscrihers in those areas, some SMEs in those areas. They Lake such services. llul then. puhlic in gcncrnl, generally, was nol very keen to start such services. So, now, with this kind of support from government, it will be possible. And one more fact that the llharatncl project has also actually provided this kind of used fiber being laid in those states. And so, lhal will take us closer to the subscriber base.
Okay. Good lo hear 1hi,. And maybe one last question. Overnll, 1 think at a company level, I mean, we have been guiding 20%-25% kind of revenue growth. So, how do you sec this in l'Y25 for us? This is my last question.
You arc talking of revenue guidance, revenue growth guidance'/
Yes. I think we arc done.
With the same 30% kind ofgrowlh, we arc very much hopeful. We will continue with the same kind of growth over lite ncxl year.
Okay. Sure, sir. I'll come back in the queue for more, sir. Thank you very much.
Thank you.
Thank you. The next question is from the line of Raaj from A1jav Pa11ners. Please go ahead. Sir, please go ahead.
Yes, Mr. Raj.
Mr. Raj, may I request you to unmute your line and speak, please? The line for Mr. Raj has been dropped. The next question is from the line of Decpak Purswani from Svan lnvcstmcnl. Please go ahead.
Yes. Sir,jusl wanted to understand about the data center business. lfyou can throw some light in terms of what would be the megawatt capacity we would be looking out to add ii up and what would be the revenue model in this kind of business?
So if you're talking about edge data center, then we are actually going to have a very small edge data center at around I 00 locations and those will be somewhere around, I think if we put together complete capacity, so it will be somewhere around, I think, 20.
20 mcgawalts?
No, 20 kilo walls for euch. 20 racks and 10 kilowults each. So it i

s 20 megawalts. Roughly around
20 megawalts. A small 100, soil will be 0.2 megawatts in each location. 0.2 megawatts.

Dccpak Purswani:
Sanjai Kumar:
Dccpak Purswani:
Sanjai Kumar:
Deepak Purswani:
Sanjai Kumar:
Deepak Purswani:
Sanjai Kumar:
Moderator: Okay. And sir, how would be our revenue model in this? This would be a core location with any of the government agency or where we would be only getting the rental part or this would be a completely different model from the data center point of view?
Yes. So this is going to be a difTerent model in the sense that the investment is being done by our partner and because of our network connectivity, because of our access to the governme nt and the trust government shows in a governmen t entity that kind of marketing we have already and then their own marketing capability. So this is a kind of combined efTort we will be making and this is a unique model, I think. I don't know whether such kind of model already exists.
Okay. And any thoughts once this would be operational, what would be the revenue potential we arc looking at from this business and what would be the EBITDA margin we would be targeting for this business?
EBITDJ\ margin, if we talk of, it will be in range of I 0% or so because this is on revenue sharing basis. Investment is being done by them and we will be h,iving our own marketing and sales teams available. So I suppose this will be in the range of somewhere around 10%.
Okay. And what would be the revenue potential from this?
Revenue, I would say this 20 megawatt complete once it is rolled out, then it should give us· around maybe close to somewhere around INRI 00 crores of revenue.
Okay. Thank you. Thanks a lot, sir, for answering the question. I wish you all the best.
Thank you.
Thank you. Ladies and gentlemen, this was the last question. We would now conclude the call. On behalfof RailTel Corporation, that conclude s this conference. Thank you for joining us and you may now disconnect your line.

Ladies and gentlemen, good day, and welcome to the Post Results QI FY'26 Earnings Conference Call of Rai!Tel Corporation ofIndia Limited, hosted by Antique Stock Broking. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star-then-zero on your touchtone phone. Please note that, this conference has been recorded.
I now hand the conference over to Mr. Vishal Periwal from Antique Stock Broking. Thank you, and over to you, sir.
Yes. Thanks, Anushka, and I welcome all the participants and from investors and analyst community for the post results earnings call of Rai!Tel Corporation of India Limited. And I'd also like to thank the management for giving us this opportunity. And the management team from Rai!Tel is led by Sanjai Kumar sir, who is the Chairman and Managing Director; V Rama Manohara Rao sir, who is the Director of Finance; and Yashpal Singh Tomar sir, Director, Network Planning and Marketing. And apart from that, there are other members from the team also have joined the management.
As usual, we'll have a brief from the management on the gone by quarter, and then we'll have a Q&A session from the participants. Yes. Thank you, and over

to you, Sanjai, sir.
Thank you, Vishalji. Very good morning to all. It gives me great pleasure to interact with you on the company's performance in the backdrop of QI financial results of FY'26, which were declared by the company on 28th July 2025. The company had a strong start to our financial year 2025-'26, having achieved operating revenue ofINR744 crores in QI ofFY'26 as against INR558 crores in QI ofFY'25, registering the Y-o-Y growth of33%. The Telecom segment contributed INR335 crores and Project segment contributed to INR409 crores in the company's operating turnover.
As regards the total revenue, the year-on-year growth is 31 % with INR758 crores in QI ofFY'26 as compared to INR578 crores in QI ofFY'25. The profit before tax PBT in QI ofFY'26 is INR89 crores as against INR67 crores in QI ofFY'25, registering Y-o-Y growth of34%.
The profit after tax in QI of FY'26 is INR66 crores as against INR49 crores in Q 1 of FY'25, registering year-on-year growth of 36%. Earnings per share in QI ofFY'26 stands at INR2.06 as against INRl.52 of QI in FY'25, registering year-on-year growth of 36%.
Order booking during quarter ending 30.06.2025 was to the tune of INR 721 crores as against total order booked during QI of FY 24-25 ofINR218 crores. The company has robust order book position ofINR7,197 crores as on date, out of which close to INR500 crores are related to Kavach projects. I'm happy to inform you that CAG has offered nil comments on annual financial results of FY 24-25. We remain committed to pursuing growth and creating value for our esteemed investors. We are also exploring opportunities in order to realize our true potential.
I thank you for your trust and collective vision for the future of this company. Thank you, Jai Hind. '!or~

Sanjai Kumar: Rai/Tel Corporation of India Limited
July 29, 2025
We take the first question from the line ofVishal Periwal from Antique Stock Broking.
For the question queue assemble, I just thought to maybe like ask a few questions. First, I think, sir, we have done a pretty strong set of start for this particular year, doing a healthy 30% plus kind of revenue growth. And how exactly you are seeing things for the full year? I think we are already there like I more month in the quarter 2. So how things are and for the full year, how do you see things? Any color that can you provide, sir?
So, ifwe talk ofrevenue overall year, we would take somewhere around 25% growth ifwe take overall year. Since the base number is growing, so the overall growth, I would take around 25%.
Right, sir. And I mean, I mean usually, we have already in this past release also we have said that it will be more like a single digit for the Telecom and high double digit for the projects. So, it's the same thing is expected to continue?
Yes.
Right.
Telecom, again, Telecom market is not, I would say, in India, it has been --it has been a characteristic ofindian Telecom market. So, Telecom market growth is going to remain stunted. But the biggest advantage, which I always repeat, we being in the JCT and IT domain, Telecom market acts as a catalyst for many of our project business income.
So, I wouldn't say that it is not important. Directly, it may not be contributing --it may not be seen directly to contributing to the top line. But this being part of our portfolio certainly assists and helps us in getting many IT, JCT projects.
Got it, sir. And in terms of our order inflow, we have seen a decent set of inflow. So, any particular sector which is driving it? That is number one. And second, any green shoots or any emerging sectors that you are se

eing could drive our order inflow in times to come?
See, we see we have started gaining momentum in getting railway projects recent quarters. And so, we see that now we are getting --we started slow, but now we are getting good number of projects from railway tenders. Of course, those are not nomination. So, you must have seen that recently, we got another Kavach order also. So --and a few tunnel communication projects already there with us, some signaling, auto signaling and EI work already we are doing.
So that is one sector where we are working. And many state government projects where we have been strong since beginning, we are getting good orders even now. Some Smart City projects may come to us. Like similarly, another third front is that international business.
We have started a very small beginning, and we hope that in the years to come, our international business, which will include not only IT and ICT Telecom, but railways also, is likely to be part of that. But it will take time because we are starting and starting international business requires, I think, different kind of efforts and energy. So, we are gaining experience in that.

Karan Sanwal:
Sanjai Kumar:
Karan Sanwal:
Sanjai Kumar:
Karan Sanwal:
Sanjai Kumar:
Karan Sanwal:

Right, sir. So, the key takeaway is, I mean, what I would gather is the railway order as a sector, which was a bit muted in maybe 6 months back. So, things are kind of picking up there. And within that, Kavach in plus signaling is something which is driving the traction. That's fair to understand?
Yes. At least in the short term, I can say yes.
Got it. And in terms of pipeline on Kavach front, anything that you see here from the ministry that they want to award orders to this extent at least for next 6 months or 12 months? Anything on that front, sir?

See, this is very difficult for us as a bidder, as a service provider, it is very difficult for us. But these tenders are being floated by different zonal railways and units, and they are coming out with tenders as and when. I think now apart from tenders, there's focus on delivery also, implementation also. So, implementation also has to pick up.
The next question is from the line of Karan Sanwal from Niveshaay .
Congratulations on a good set of numbers and good start to the year. I have a couple of questions regarding Kavach, which the previous participant also touched upon. So, you said you have already highlighted that we have already won two orders for Kavach.
So, I wanted to understand, like how is the execution on that part? What are the timeline for execution? And are we starting to do the groundwork right now? Or is it would be done maybe a few quarters down the line, if you could highlight?
So, these projects are, of course, engineering intensive and you have to work along the track every kilometer. So, these will be going up to, say, 27 --2027, 2026-27, mostly the executions will happen. And some part ofit may also be there in 2027-28 as well. So, these are long-term project execution time lines, 18 to 24 months.
So you're talking about the execution of the order we have already won, right, the lNRl,100 crores.
Yes, I'm talking about that only, yes.
And have you bidded for other Kavach projects lately? Or are we expecting any bid results maybe I, 2 quarters down the line?
So, we have already --there are a few tenders where we have participated bids. And wherever these bids are coming, there's no question that we will not bid, and we'll certainly try to win.
Understood. And als

o, have we --so we have already tied up with the OEM partner. So, wanted to understand how is the conversation with those partners? Like have they received a certificate to execute Kavach orders? Or how is the timeline over there, if you could highlight something on that part?

Sanjai Kumar:
Karan Sanwal:
Sanjai Kumar:
Karan Sanwal:
Sanjai Kumar:
Karan Sanwal:
Sanjai Kumar:
Karan Sanwal:
Sanjai Kumar:
Karan Sanwal:
Sanjai Kumar:
Karan Sanwal:
Sanjai Kumar:
Karan Sanwal:
Sanjai Kumar:
Karan Sanwal:
Sanjai Kumar:
Those certifications are, of course, lengthy and very detailed because it is related to safety. And right now, we see that we are going in the right --at the right pace in the right direction. And therefore, we don't see any challenge on that front. But certification is yet to happen. It is underway.
But there's a lot of field work is required, which is going to take time, like laying off cables, say, about 1,000 kilometers of cable, many towers have to be erected, many drawings and those have to be approved with the railways. So that work is going to take time. So, this certification will not substantially going to --is not going to affect our actual progress. This will happen in parallel.
So maybe -so our scope of work may already have been started in some sort of way or I imagine, right?
Yes, we have all started on field, yes.
Okay. And also ...
That's how things have happened.
Okay. Understood. What is the approximate proportion of revenue of those projects flowing to us, maybe an approximate percentage, if you could highlight?
I told you those are close to INR500 crores. Exact figures, I don't remember both the Kavach

orders put together. So that is what --this year, we might clock some revenue, but majmity of
revenue should come next year from these projects.
Understood. One last question. So, we --from what we understand , we record the entire revenue
of Kavach, and then maybe a proportion of expenses that is subcontracted is highlighted in the
expense portion, right? Or we only record our portion of revenue?
No, no. This is total revenue.
Okay. Understood. So, we would be adding the subcontracting charges to the OEM for the
equipment that they provide is what --is what. ..
In orders it includes everything. Order includes complete supply chain.
Correct, correct.
It never excludes anything. Yes.
So, our portion would be around 60%, 70%, maybe 50%, 60% of the revenue of those orders?
No, no. Revenue is completely with us. It is going to add to our turnover only.
Okay. Understood, understood.
• Yes, yes.

Sanjai Kumar:
Vishal Periwal:
The next question is from the line ofMohit Mishra from ICICI Securities.
Yes. Sir, I had a couple of small questions. Can you -in the Telecom services, can you give the
breakup ofNLD, ISP and IP revenue for the quarter?
Yes, sure. So, ifwe talk ofNLD, it is INR151 crores. ISP is INR.108 crores, which includes
about INR84 crores from Rai!Wire and INR24 crores from IP. And remaining about INR.51
crores --sorry?
Could you rep

eat the ISP one?
INR.108 crores.
Okay, okay.
And about INR5l crores is from data center-related business and others.
Okay, sir. Got it. And secondly, sir, I'm sorry, but I missed the order book number in your
opening remarks. Could you please repeat that number?
Order book number is INR 7,197 crores.
And--what percentage of that would be railways?
It is around 30%, 31 %.
The next question is from the line ofVishal Periwal from Antique Stock Broking.
So on ECL, usually, we do provisions in our P&L. So, anything that we have done for quarter 1

of this year, sir?
There is reversal in this quarter, INR3 crores, I think.
Okay. Got it. So, there is no --any one-off --no major one-off there? It's numbers are recurring in sort of nature?
Yes.
Got it. And sir, order book, which you mentioned, what will be the share ofKavach in this, sir, the INR7,200-odd crores order book?
Exact numbers, I'll have to find out. It's close to INR500 crores. I think somewhat Jess than that.
Okay. Usually, sir, like in the previous presentation, we have given a further breakup of order book. Then they'll be ...
Your voice, can you please repeat?
Is this better now?

Sanjai Kumar:
Vishal Periwal:
Sanjai Kumar:
Vishal Periwal:
Sanjai Kumar:
V. Rama Rao:
Vishal Periwal:
Sanjai Kumar:
Vishal Periwal: Yes.
Yes. Sorry for that audio. Sir, in our previous presentation, we have given a breakup of the order book that is between railways and other sectors. So, if one has to understand from a margin profile point of view, which segment give us the highest margin and then maybe like which is kind of where the competition is pretty high, which gives a low margin. So, can you give some color on that order book profile from a margin point of view?
J can give some clue whatever J have understanding. So, railways projects generally are --they are good margin projects with us. But otherwise, in general, IT projects, margins are really very difficult to have. We are --certainly this quarter, we have slightly bettered ourselves, made our position better.
We have, J think, 5.28% margin in projects. Otherwise, generally, 4% to 5% is the margin. Ifwe talk of sector specific, it is not --it is very difficult to figure out one section --sector against the other sector. So, it is mix, J would say.
Okay. And typically, J think from a number of players who are bidding, say, in Indian Railway project and then JCT, what will be the difference, sir? How many players bid in the railway projects and how many in the JCT typical project, sir?
Again, this is plays sector-to--sector ...
And it's --if J can add, J think it's very difficult to generalize that way, Vishalji. It all depends upon the project and its --I mean, various other aspects and location in which this project is how tough it is. So, there are many other parameters on which the competition prevents.
Got it, sir. And in terms of data centers, I think one is like --I mean, like in coming months and quarter, can we have a separate line segment in our Telecom just to see how the traction? That is one. And second, I mean, can you give some color where we are right now? Any targets or plan that we have, one for our own data center and second is the Edge that is there --Edge data center, sir?
Edge, so if you talk of data centers, so data center-related income, we are certainly growing comfortably around 15% to 20%, we take overall. But there are one-offs also which might - because numbers are small, we are growing in this segment. So that is why we have not created a separate line segment now.
Once it becomes a substantial number, certainly, we will make it.

Now, if we talk of Edge data centers, so Edge data centers, we have --we should clock some numbers this year. I think last conference, I told you around INRI O crores. And so, I stay with that number if we talk of Edge data center.
Okay. Okay. And in terms of our own data centers, sir, what is the capacity right now? And how do you see this going in this year and next year? And any plan around that?

Sanjai Kumar:
Vishal Periwal:
Sanjai Kumar:
Vishal Periwal:
Sanjai Kumar:
Vishal Periwal:
Sanjai Kumar:
Vishal Periwal:
Sanjai Kumar:
Vishal Periwal:
Sanjai Kumar:
So, our own data center, which is --see, even these data centers are our own data centers. There's only --it is not --I would say that, this is not debt per se, but they are not the technology partners. The ownership of these data centers remain with us. Turnover is also coming to us. These data centers are required because those existing data centers are almost working at the close to capacity.

So that is why we require this. We are also likely to start something with third-party data centers only as far as the infra --passive infra. So that line of segment is also likely to start this financial year.

As you know that we have made some Mo Us with third-party data center infra service, only passive infra services will be taken from them. So data center, we see that this year is going to be really, I would say, we would be embarking on a new journey. And in next financial year, these results would be certainly visible.

Right, sir, right. And so if one understand, so one is the Edge data center where I mean, like we have a revenue share sort of model. And then there is another --I mean, will the model be similar to revenue share? Or how exactly it is structured?

So see, it is --it won't be appropriate to share all those models because we are flexible. Whatever suits to the benefit ofRailTel, we will have that flexibility . It may be revenue share. It may be leasing passive infra from them depending upon the circumstances and the need of the project, which we would be doing. We are not going to stick with one single line of this thing.

Got it, sir. And in terms of megawatt, any plans that we have, sir? I mean, like in terms of what megawatt.

Noida Data center, which where work has started already, Noida Data center, that is going to be ultimately to begin with, we'll have 5 megawatt in next 2 years. And then later on, we will upgrade it to 10 megawatts.

Okay. Got it, sir.

But it already started there as 5 megawatt. Yes.

Okay. And in terms of Edge data center, sir, any megawatt target?

Edge data centers will be a smaller one, say, around 0.2 kilowatt -0.2 megawatts, sorry. And this year, we might think maybe 4 or maybe 5 Edge data centers, we should be able to begin.

Okay. Got it. And maybe one last thing, sir. In terms of our capex plan, how do you see --what we have done in this quarter? And how do you see the full year? And third, maybe parallel to that, like where exactly we are doing this capex, which segment we are doing this? Yes, that's all from my side.

So this quarter, we have done around INR66 crores. And we have planned already for INR350 crores kind of capex for the whole of the year. Yes.

Sanjai Kumar:
Rakesh R

oy:
Sanjai Kumar:
Rakesh Roy: And which segment we are doing the capex, sir? Rai!Tel Corporation of India Limited
July 29, 2025
Mostly, it is going to data center and Telecom, but there would be some smaller numbers like power plants, optical fiber, maybe some software. Generally, it is data center and Telecom equipment.
Okay. And if one has to understand in terms of the maintenance and vis-a-vis where we are adding capacity, so how the split will be, sir, in the annual capex?
Maintenance will never come to capex. It is part of revenue expenditure. Maintenance is not part ofcapex.
The next question is from the line of Parimal Mithani from Credential Investments.
I just wanted to know the guidance for the year, if you can just tell us?
So it will be somewhere around 25% for the whole of the year.
Okay. And will be maintaining the same margin, sir, for the year like time?
Ifwe talk of margin range overall this thing so it will be around 11 % to 12%.
The next question is from the line ofRakesh Roy from Boring AMC?
My first question regarding your INR500 crores Kavach order, sir. Sir, this order will execute by Rai!Tel only or you have any Nor any other company to execute this order?
There is no N as such, but there are, of course, partners.
/ :-~ :i>
s.ee,'we --yes. OEM is a partner, and then there will be partners who will do the field activities \fi:ke cabling and tower erection.
Okay. Right, sir. Can you share the name of any company --so last time I was reading about the company Future Tek, they are having MoU with your company is here to execute Kavach orders. So, can you highlight on this?
They are our OEM of Kavach equipment Quadrant Future Tek. You are right. and we have an MOU with them.
Okay. And sir, lastly --just you mentioned it takes time to get certification. So, what type of certification take time and how much is general take, sir?
I think you missed it. I have already answered this question very much in detail.
Yes, I missed it, sir.

Sanjai Kumar:
Rakesh Roy:
Sanjai Kumar:

Karan Sanwal:
Sanjai Kumar:
Moderator:
Sanjai Kumar:

This certification is done by railway organization because this is a safety item. And this is being deployed for the first time. This kind of equipment is indigenously developed by Indian company. And so once it is approved, then it will not require every time. Then afterwards, it will require only inspections. So that process is going on for all companies. It is not only our partner company, but it is for all five OEMs, whose one has already got that is SPL, but four others are under approval, yes.
Okay. Right, sir. And sir, this Kavach system is developed by in-house by RailTel or how is it, sir?
No, it has been developed by Railway is a unit organization known as RDSO in collaboration with industry. So Rai!Tel has not done anything to --any contribution to this product development.
The next question is from the line of Karan Sanwal from Niveshaay .

Sir, just one query. Sir, do we have --this exclusive tie-up only with, Quadrant that you just named, or would you be open to tie up with other OEMs for execution ofKavach?
See, execution is a separate activity. As far as OEM for the supply ofKavach project, Quadrant is our exclusive partner. So, execution is being done by various other partners, yes.
As there are no further questions from the participants, thank you members of the management.
Thank you everyone for joining. On behalf of Antique Stock Broking Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.
Thank you very much.
