"RateGain Travel Technologies Limited Q2 & H 1 FY'26
Earnings Conference Call "

November 11 , 2025

MANAGEMENT : MR. BHANU CHOPRA – FOUNDER AND MANAGING
DIRECTOR , RATEGAIN TRAVEL TECHNOLOGIES LIMITED
MR. ROHAN MITTAL – CHIEF FINANCIAL OFFICER ,
RATEGAIN TRAVEL TECHNOLOGIES LIMITED
MR. DIVIK ANAND – HEAD, INVESTOR RELATIONS ,
RATEGAIN TRAVEL TECHNOLOGIES LIMITED

RateGain Travel Technologies Limited
November 11 , 2025

Moderator: Ladies and Gentlemen, Good Day and Welcome to the Q2 & H1FY26 Earnings Conference Call hosted by RateGain Travel Technologies.

As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing "*", then "0" on your touchtone phone.

I now hand the conference over to Mr. Bhanu Chopra – Founder and Chairman from RateGain. Thank you and over to you, sir.

Bhanu Chopra: Thank you and good afternoon, everyone. Thank you for joining us for RateGain Travel Technologies Limited Earnings Call for the 2nd Quarter and the First Half of FY26. It is great to reconnect with all of you and I wanted to share some key highlights from the quarter.

So, joining me on the call today are Rohan Mittal, our CFO, and Divik Anand, Head of Investor Relations.

So, we announced our Q2 FY26 results earlier today and I hope you have had the opportunity to go through Financials, the Press Release and Investor Presentation, all of which are available on our website and also the stock exchanges.

As you would all recall, at the beginning of FY24, I had laid out our medium-term vision of doubling revenue within three years from approximately INR 1,000 crores to INR 2,000 crores by FY27. So, I am delighted to share with you that we are well ahead of that goal and on track to close FY26 at a revenue run rate of INR 2,700 crores, achieving this milestone a year ahead of schedule. This outcome reflects our continued focus on product innovation, delivering value to customers, expanding our geographical footprint, and discipline in organic growth focus, which recently has enabled us to complete the acquisition of Sojern.

Sojern is a global leader in AI-led marketing for travel and hospitality. With this acquisition, we are building the world's most comprehensive AI-First travel technology platform, which will help our customers to acquire guests, retain and engage them, while driving greater share of wallet through one integrated tech stack.

Now, coming to our performance in the quarter gone by :

We have achieved an important milestone for RateGain as we delivered our highest ever quarterly revenue driven by healthy growth across our Mar Tech and DaaS verticals as we continue to deepen relationships across key customers. This growth underscores the continued trust our customers place in RateGain Travel Technologies Limited

November 11 , 2025

in us and the strength of our strategy to build a connected AI-led ecosystem that supports every stage of the traveler's journey from discovery to booking to loyalty.

The GTM expansion investments made earlier this year are now delivering visible results across regions and this is reflected in the healthy pickup in new contracts in our first half of the year. Our

expanded GT M teams in APAC and Middle East delivered their best quarter in terms of new sales, validating our decision to strengthen local presence in these regions. The growth is driven by stronger customer engagement and growing adoption of our integrated UNO platform, which unifies marketing, distribution and booking to help hotels generate and convert direct demand efficiently. We also expanded into five new markets, the Maldives, Sri Lanka, Phuket and select destinations in the Middle East and Africa, further deepening our presence in high growth travel corridors. Alongside this, we continue to see healthy traction in LATAM, where we grew at over 52% in Q2 and North America where recent investments in sales leadership and on-ground teams are translating into stronger pipelines and deeper customer relationships. Innovation continues to be the foundation of our strategy, and we continue to invest in further enrichment

enhancing our product portfolio to deliver superior value to our customers. In line with this, during the quarter, we introduced the Model Context Protocol integration for our booking engine, an industry-first that enables conversational AI systems like ChatGPT or Cloud to share real-time hotel rates and availability, allowing travelers to search and book through a single intelligent interaction. UNO VIVA continues to enhance AI-led voice engagement while Zoho helps hotels deliver personalized and targeted social media marketing. Within ADARA, we continue to invest in AI-driven tools and internal capabilities to improve media operations and deliver more effective campaign outcomes for customers.

Now, let us take a brief look at our business unit:

The MarTech segment continues to perform well this quarter, supported by healthy growth in ADARA and strong momentum for Demand Booster with increased customer engagement. ADARA delivered steady performance with healthy renewals and deeper engagement from larger enterprise clients across industries.

Our data-driven marketing and measurement capabilities continue to deliver strong value, helping brands optimize and spend and reach high-intent travelers across digital channels.

We are further centering our data partnerships and platforms to deliver better return on ad spend for clients across verticals and expanding into new mediums to enhance measurement capabilities.

RateGain Travel Technologies Limited

November 11, 2025

SoHo was rebranded and repositioned earlier this quarter to better reflect this focus on helping hotels build social presence and drive engagement across emerging channels. We expect this to translate into a stronger sales pipeline in the coming quarters.

Demand Booster saw good traction with growing adoption across Europe and the APNEA region.

As hotels diversify beyond OTAs, Demand Booster remains critical to their direct acquisition strategy, combining search and social to drive direct revenue efficiently. And now that we combine this with the scaled properties business of Sojern, the complementary AI and data-led capabilities will help us deliver smarter marketing solutions to a broader customer base across geographies.

The DaaS segment delivered healthy growth in Q2 with the organic DaaS business growing at 12%.

This continues to be a key contributor to overall performance, supported by strong delivery across our enterprise customer base.

For the OTA segment, performance remains steady with continued upsell from existing enterprise accounts and strong volume growth. OTAs remain the largest revenue driver within DaaS, supported by deeper data integration and expanded engagement models.

Navigator saw continued progress with a focus on strengthening partnerships and enhancing product capability. Our collaboration with a leading revenue analytics company is helping us strengthen our value proposition and Rate intelligence. We also announced a strategic partnership with FLYR, a leading revenue management system provider in the US, to offer Navigator to hotel customers worldwide.

In CAR, we delivered a stronger quarter with new wins from tech-forward rental operators in Europe and deeper engagement with existing enterprise partners. Expansion discussions are progressing well, positioning this vertical for sustained growth.

In AIR, we continue to add customers, including a leading national carrier in the Middle East. We also made progress in the cruise segment, now serving most major players in this segment. This quarter, we signed new partnerships with Air Astana, the flag carrier of Kazakhstan, and Sunrise Airways, a fast-growing Caribbean airline.

Our distribution business continues to progress, driven by partnerships and key platform integration.

Our focus now is on scaling and monetizing these alliances while deepening collaboration with leading technology providers

Within enterprise connectivity, we saw steady progress through new wins and expansions, building on the momentum from the previous quarter. We continue to engage with both large hotel chains and OTAs to further expand our footprint.

RateGain Travel Technologies Limited

November 11 , 2025

Our focus remains on scaling UNO, our Re vMax platform, which had its best -ever quarter in terms of new wins. We made significant inroads with key customers and have a healthy pipeline ahead. The introduction of VIVA , AI voice agent in Europe, has added further diversity. A notable win for the quarter was Royal Orchid Hotel, which adopted our UNO suite to drive guest engagement and maximize direct bookings.

Within UNO Channel Manager, our focus remains on adding more properties through partnerships with leading hotel tech platforms, helping them enhance their connectivity and distribution efficiency.

The global travel landscape remains resilient, with growth varying across regions. According to the Skift Travel Health Index of August 2025, Global Health Index stood at 101, reflecting the sector's ability to sustain momentum despite ongoing geopolitical challenges. Latin America led growth, followed by Asia -Pacific and the Middle East, while North America saw a slight dip due to software -inbound travel. Domestic and short -haul leisure demand remains strong as booking patterns evolve globally.

We further strengthened our leadership team this quarter, with Amarpreet Singh joining us as our Chief Customer Officer. He brings extensive experience from Cvent and WNS, and will focus on driving deeper customer engagement and operational excellence , helping us strengthen relationships and accelerate growth. With his expertise, we aim to build a more connected, value -driven experience for our customers across every interaction.

On the people front, RateGain continues to strengthen its culture of innovation and inclusion, earning Great Place to Work Certifications internationally in both Spain and the U.S. These recognitions underscore our commitment to build a people -first, AI -enabled organization that empowers teams to lead with purpose and creativity.

Additionally, RateGain won the CII Award for Best AI Solution Showcase for our flagship product UNO VIVA , recognizing our leadership in developing transformative AI -led solutions for the travel industry.

In terms of guidance for FY26, given the acquisition, we are increasing our revenue guidance for FY26 to now around 55 %-60% year -on-year growth for the full year over FY25.

In terms of EBITDA, we would be looking at a full -year EBITDA margin of around 16 %-17% considering Sojern's current EBITDA margin stands at 14% . The March 2026 EBITDA exit run rate will be anywhere between 16.5 %-17.5% based on Phase -I of our integration and cost synergy. The consolidated EBITDA of RateGain and Sojern's run rate at this time will be 17 %-18%, that is March 2026 on an exit basis. We will be issuing FY2027 guidance in Q4 FY26 earnings call.

RateGain Travel Technologies Limited

November 11 , 2025

With that, I will now hand it over to "Rohan to take you through the Financial Highlights for the Quarter." Thank you.

Rohan Mittal: Thank you , Bhanu and a very warm welcome to everyone on this call.

Starting with an update on the numbers for Q2 FY26 :

We have reported our highest ever quarterly revenue of INR 295.1 crores , a growth of 6.4% year -on-year with operating margins coming in at 18.2%. We continue to maintain a healthy margin with our focus on cost control while we continue to ramp up our investments in the key geographies to drive the next leg of growth. Our PAT came off marginally compared to last year and stood at INR 51 crores in this quarter.

Our Mar Tech vertical witnessed healthy growth in this quarter at 12% year -on-year growth with continued traction in ADARA . That business continues to

build momentum on the back of strong value prop delivering superior ROA s for our customers.

Our DaaS vertical which de -grew in Q1 has delivered double -digit growth 10% in Q2 at an aggregate level , while the organic DaaS business has grown at 17.5%. This has been led by a healthy volume growth across existing key customers as we continue to deliver superior value to our customers.

We continue to have a strong balance sheet with our net worth currently at INR1 ,817 crores and we had cash and cash equivalent balance at the end of the quarter at INR1 ,351.6 crores. Out of this, as on date, we have utilized approximately INR1,090 crores towards the Sojern acquisition.

Our focus now is on leading a successful integration of Sojern to deliver value for our customers and optimal outcomes for all stakeholders involved.

With that, I would like to close my remarks and happy to open the floor for questions. Thank you.

Moderator: We will now begin with the question -and-answer session. The first question is from the line of Karan from PhilipCapital. Please go ahead.

Karan: Yes, thanks for the opportunity and congratulations on a good set of numbers. Just some clarifications on the guidance which you have provided. So, 55 % to 60% YoY growth for this year. How much would be the organic growth for FY26?

Rohan Mittal : I will take that. So, out of the numbers, Karan, that we have just quoted, we are not changing our

organic growth guidance for this year. At the beginning of the year, we had given a 6 % to 8% organic
RateGain Travel Technologies Limited
November 11 , 2025

growth guidance. At this point of time, we are not changing that and we think we will comfortably meet that guidance as well.

Karan: Okay. So, just a follow up on that. So, considering five months of revenue from Sojern, it appears that 55 % to 60% is a bit of a conservative guidance. Is there some slowdown at Sojern post-acquisition ?

Rohan Mittal: There is no slowdown of any sort that has been baked in. But yes, our market guidance's will be conservative. This is something that we had mentioned at the beginning of FY26 as well. And this is in light of some of the past revisions that we had to do in FY25. So, our guidance will remain to be slightly on the conservative end of the spectrum. But I can assure you there is no slowdown expected. We are expecting to see revenue growth on the Sojern side of things as well. As far as the consolidation is concerned, Karan, we are looking at about slightly less than five months of consolidation, revenue guidance. And it has to be kept in mind that our financial year Q3, Sojern follows a CY model, not FY. Our Q3 is the slowest quarter for Sojern. So, to that extent, there is some seasonality which is baked into these numbers. Other than that, there is nothing negative in the outlook.

Karan: Okay. Thanks for that. And just on the margins front, so you mentioned 16% to 17% margins for the full year , that is on the EBITDA. But how should we think about the depreciation as well as the finance cost, given that you are also taking the debt on the balance sheet for this , how should we think about these two line items?

Rohan Mittal: So, there are two parts to it. The first part is the debt part. The debt part is pretty straightforward. There is a \$125 million loan that we have taken. As on date, the interest cost is 6.5% on that. It is SOFR plus 250 bps. So, to that extent, the interest calculation can be done. For depreciation and amortization, we will have to wait till Q3 numbers because the PPA exercise is just getting started now. We will know the split of goodwill and intangible assets as soon as the PPA exercise is over. So, we will be able to report those numbers, share some outlook around that in Q3 numbers.

Karan : Okay. Great. Just one question to Bhanu. The latest US government shutdown is causing thousands of flight ca

ncellations in the US. So, any impact on RateGain across DaaS, distribution and MarTech, if you could quantify that?

Bhanu Chopra: So, we have not seen any impact on to our business. Everything is steady. There is some impact in the distribution business, but it is also a seasonal thing. So, there is nothing material to report on.

Karan: Okay. So, no impact in Q3 you are saying ?

Bhanu Chopra : That is correct.

RateGain Travel Technologies Limited
November 11 , 2025

Karan: Okay. Great. Thanks a lot and I will come back in the queue .

Moderator: The next question is from the line of Ansh from Niveshaay. Please go ahead.

Ansh: Good afternoon, sir and congratulations for good set of numbers. So, my first question is that your annual revenue is around \$125 million.

Moderator: Sir, can you please talk a little louder? We can not hear you.

Ansh: Your annual revenue is around \$125 million and EBITDA around 18%. Sojern , on the other hand, has a revenue of \$172 million and 11% of EBITDA. So, how are you giving EBITDA guidance of 18% to 20% , can you please explain the reason behind the logic of this? And the second question is before merger, our revenue was around \$125 million and your addressing market was around \$800 billion. So, why it is so? That is the question.

Rohan Mittal: I did not catch the second question. I will answer the first question to begin with. So, your numbers on the RateGain side of things are accurate. As far as Sojern is concerned, for calendar year '25, they are expected to close the full 12 -months of 2025 at an EBITDA percentage of around 14% , not 11.5%, 14%. So, the 14%, over and above, there is a phase -I integration, which is already live right now, which should see some cost synergies getting baked in. That should take the exit run rate EBITDA percentage of Sojern in March 2026 at the 16.5% to 17.5% mark. Our EBITDA is running at the 18% to 18.5% mark. So, our blended EBITDA should remain in the 17.5% plus /minus range on an exit run rate basis because the cost and revenue synergies, these are not one -time, we will have different levers which will get executed over a period of time. So, we will continue to see some incremental ramp up as we move forward. So, I am only referring to the March '26 exit run rate. I am sorry, I did not catch the second question. If you could repeat, we will try and address that.

Ansh: Yes, sir. So, my second question is, before merger, our revenue was around \$125 million and your addressing market was around \$800 billion. So, my issue here is that if we are not growing organically, but only inorganically, if our offerings are so good, then what is stopping us from growing organically back then our growth? That is my question.

Bhanu Chopra: So, Rohan, I can take that. So, our addressable market size is about \$7 billion , I did not quite follow

where you got the number, but where we operate is in software parlance is front office software, and these areas of DaaS, Distribution and MarTech cumulatively is a \$7 billion opportunity. And as you are aware, we are a global company servicing customers over 100 countries, and as we continue to expand on our GTM motion, something that we have been investing for the last 12-months, we will continue to see a tick up in our organic growth as well. So, something that I have been saying over the last couple of quarters as well, our aspiration is to move into a decent double-digit organic growth. And I am happy to report that our sales numbers, minus if I exclude ADARA where we have already RateGain Travel Technologies Limited
November 11, 2025

consistently been doing well, but we really invested because the rest of the business was kind of slowing down. So, I am happy to report that when I look at our sales numbers, just in first half, we were over about 37% in new wins. So, that is the order book that swelled from last year.

ear. And even

in the current quarter, we are seeing some really, really great generation of pipeline and closures. So, I expect this momentum to continue to grow. And we will be looking to invest more and trying to develop a more deeper inroads into the different markets with our special focus being on APAC and Middle East.

Ansh: Okay, understood. Thank you.

Moderator: The next question is from the line of Jyoti Singh from Arihant Capital. Please go ahead.

Jyoti Singh: Thank you for the opportunity. So, I just wanted to understand on the DaaS side that posted 12% growth while MarTech saw a decline. So, what is driving this divergence and across vertical? And when do you expect MarTech to re-accelerate? And within this distribution with sub-products, example like RateGain, and seeing the strong traction, especially after the Oracle Opera Cloud integration. So, I wanted to understand both the points.

Bhanu Chopra: I will just correct you. Maybe you meant distribution when you were saying MarTech, because our MarTech business grew about 14% for the first half. And you are absolutely right, DaaS business also grew and it is really distribution that took a beating. And we have had some challenges over the last couple of quarters. So, something that I alluded to almost a year ago that we had an OTA, which was a part of a bigger OTA family that was kind of being sunset. And we had a lot of transactions, especially with the big chains on this OTA. So, that has accelerated and taken full effect. So, my good sense is that it will be really this quarter that we should see the bottom. And going forward, we should now begin to see growth in this area. I am also happy to report, if I look at the overall transactional volume year-on-year, it is almost a 5% growth in our transactional volume in our distribution business. And a lot of these new initiatives that we have that are housed under distribution, our booking engine, our direct booking stack, our VIVA, our AI voice application, and the kind of traction that we are seeing in the buildup of the pipeline and the contract wins. And there is a new initiative that I will talk about probably a couple of quarters down the line, something on smart distribution, where we are also, again, getting a lot of traction. My sense is we should be bottoming out here in this quarter or max next quarter and then begin to see some very, very good growth in the distribution business. So, net-net, it is a churn of a larger OTA that was responsible for a chunk of the distribution transactional volume that has kind of like played out completely now.

Jyoti Singh: And just like we have done some acquisitions, so, because of that, cash generation has softened. So, what is the expected cash conversion trajectory for 2026?

RateGain Travel Technologies Limited

November 11, 2025

Rohan Mittal: Actually, our cash conversion cycles have improved if you look at H1 versus H1. But for the entire year, our estimate is that we should look at a cash conversion of about 75%. We are not expecting any softening in the cash conversion cycles. We are only seeing slightly better off rather than any softening in that. And I would like to just add here that Sojern, our acquisition, is also a free cash flow positive organization, so, it should add to our internal accruals.

Jyoti Singh: Thank you so much.

Moderator: The next question is from the line of Deepak from Sundaram Mutual Funds. Please go ahead.

Deepak: Yes, thank you for the opportunity. So, my first question is on Sojern. Would it be possible to highlight the sales pick of Sojern's paid digital marketing segment by channels such as social media, paid search, CTV or meta search? And more importantly, can you also describe how profitability and competitive defensibility differs across this channel? And let us say going forward, where will we be focusing our investment

ment to drive the growth ahead in Sojern?

Rohan Mittal: So, if you look at Sojern's numbers, first and foremost, if you look at the split close to about 40%-45% of the business comes from the properties business, which is something which is exactly same as our Demand Booster program. This is the acquisition of Myhotelshop that we had done a few years ago, and the balance comes from DMOs and corporates, which is again, similar to what ADARA does. If you were to look at the media split, the two set of businesses are actually

complementary. Because on the RateGain side of things, we have been doing a lot of social, meta, CTV, etc. , as well, while on the Sojern side of things, they are predominantly focused on display, CTV, and they have been low on social and meta. So, we find the media spends to be complementary, largely speaking. I think that covers the first part of your question.

Deepak: And the second was that, how is the profitability and let us say, competitive defensibility across this channel for us? And going forward, where we will be focusing our investment, let us say, to drive the growth from this 4% to 5% what Sojern does, let us say to double digit what our aspiration is on a consolidated entity ?

Bhanu Chopra: So, from a profitability perspective, I think we already guided for 17% to 18% kind of margins in this business. And something that I have alluded to over the last couple of quarters, and even in this call, we want to continue to reinvest some of our margins into growing the business. So, theoretically, we could be actually even at higher margins, but we want to continue to deepen our global footprint, as I talked about earlier. Now, in terms of defensibility, let me state this . I think this is a huge, transformational deal for us, because having this kind of domain knowledge and doing digital marketing, really, it is a combination of number one and number two player in the industry. So, ADARA could be considered number two, whereas Sojern was considered number one. In fact, a lot of the technology players that are looking to offer this as a complimentary service, actually white label RateGain Travel Technologies Limited
November 11 , 2025

label either us or white label Sojern, so, it does position us in a very, very strong position as a domain-specific player. Yes, we will continue to compete with industry-agnostic players. But the fact that we are well integrated into this tech ecosystem of hospitality specifically, will give us an edge . And something that we have talked about all throughout is having this one integrated tech stack. So, it really positions us in a very, very compelling value proposition to the customer that you can go to RateGain, and they can do the digital marketing, bring customers to your hotel website, to your direct channel, help you convert those. And then now that we have acquired Sojern, we have also acquired a guest engagement platform. So, when you are at the property, and the guest is being engaged on WhatsApp or any other channel, we facilitate that as well. So, it is also fulfilling a part of our growth vision on the product and it does position us in a very, very compelling way because we are now the one stop shop for the hotel from our guest acquisition, guest retention and engagement and guest wallet share expansion.

Deepak: Okay. And secondly, some of the new contracts in this quarter has again showed a very strong growth at 36 %-37%. I just wanted to understand where this new contract wins are coming from, let us say, from a geography perspective -- is it right now more driven by APAC and Middle East region or is it that US and Europe has also started to contribute to this new contract win? I am asking because on the revenue front, there seems to be some slowdown in the American revenue. So, that is why I wanted to understand from new contract win perspective, like where is that maximum

um contract wins
is coming for us?

Bhanu Chopra: Yes. So, contract wins is really the leading indicator on what is going to happen to the revenue because it really just becomes a part of our order book. And as we monetize it, meaning more onboard the customers, that is when we begin to realize it. So, your question about where have we been doing well? I mean, it has been pretty uniform all across. We have on the RateGain side of business, it is fairly uniform across all the three regions. I would say that the APAC and Middle East is accelerating a little bit more, where we are almost at 100% growth year-on-year. And as I mentioned previously as well, we are continuing to invest and we will be strengthening those teams even further because we think none of our competitors reside in this region , this is our backyard and we can really dominate in this region. So, we will continue to see acceleration in APAC. I do see investments that we have made maybe of not the same magnitude in US and Europe , we will continue to see that growth as well. So, as I had pointed out earlier in the previous calls as well, at a scale of Rs,2,700 crores, the margins can be higher, but we will continue to reinvest into our GTM machinery.

Moderator: The next question is from the line of Shubham from Dexter Capital. Please go ahead.

Shubham: Hi. Thank you for the opportunity. I had three questions. My first question was, sir, we have spent some time interacting with revenue managers of brands such as Accor, Hilton, Marriott, etc. , and one common feedback that we received from them was that going forward, more hotel chains are shifting to their own software for connecting with demand partners such as OTA, right? So, I wanted to
RateGain Travel Technologies Limited
November 11 , 2025

understand how is the trend that we are seeing for our distribution business because that is the feedback that we have received from the customer ?

Bhanu Chopra: I am very surprised that you say that , because most of the big chains used to have in-house CRS s and they have all now opted for third-party CRS where third-party distribution is typically connected via RateGain. So, we are actually not seeing that , we are actually seeing the opposite of that. But like I mentioned earlier, our focus is not just on the big chains but also the mid-market that is seeking one

integrated solution that can enable both direct bookings as well as indirect bookings. And over the last couple of years, we have really grown our product capability set that we can pretty much power every booking that a hotel has, whether it is on their direct channel or their indirect channel.

Shubham: So, sir, you are mentioning that as far as RateGain is concerned, we are not seeing that at all for the hotel chains, right? And the only reason for no growth for the past four quarters in distribution is majorly because of the large OTA that was sunset earlier last year?

Bhanu Chopra: And that OTA, I do not have the number in front of me, but it was probably the biggest OTA in terms of generating volumes for us. Maybe I can ask Rohan to get back to you with that information but that really dented our numbers. But I am quite hopeful and see the distribution business to be a high growth business. And hopefully, this quarter or next quarter, we bought them out and we begin to see basis the contract that we are having and also a lot of these new initiatives that we have launched like our new product which is our voice agent that we count under our distribution business. It is basically removing call center employees and can handle any questions that a hotel guest over voice because we have all experienced this especially in Western countries. There is shortage of labor and people can not take calls and there can be missed revenue opportunity because somebody could be calling to make a new reservation or wanting an up

grade. So, our VIVA really has been like a big, big hit. It is an AI voice agent that can help in answering questions around discovery around the hotel but also enable reservations or upgrade of reservations. So, it is a revenue generator and we have a bunch of customers signed on beta but there is just tremendous amount of excitement in the market for this product. Coupled with AI capabilities that we have done on our pipe, we have launched stuff like Smart ARI which makes the update much faster, removes redundancy in the queue system, organizes the updates and prioritizes the updates that are relevant and near booking window which gives a much faster sync with the OTAs on the rates and availability which can again be incremental to the booking that the hotels get. We are the first ones to do this in the industry and it is getting a lot of traction and a lot of our big OTA customers are wanting their hotel partners to use us instead of whatever they may have. Our integrated platform UNO that powers not just the indirect channel but also the direct channel again is resonating really, really well, because what we have also done is change the commercial model and how we go to market very much in line with how the OTA is charged which is pay for performance. So, we are saying to the hotel that look for whatever direct booking we generate for you, you pay a similar percentage actually less than what they pay the OTA which is typically between 15% to 20%. So, that is resonating very well and we also like that model
RateGain Travel Technologies Limited
November 11, 2025

because that model is far more superior in terms of what ticket size we can attain with each of these ones.

Shubham: So, basically post let us say after Q3 FY26, so what is the growth that we are expecting in distribution because by then the base effect of that large OTA will be entirely diminished, so, what is the growth you are expecting in distribution?

Bhanu Chopra: So, I would not say Q3 because some of it is still playing out. I would say FY27 we should expect a double-digit growth in our distribution business, but I will be able to give you a better sense on it probably in Q4.

Shubham: All right, okay. Thank you, sir. My next question was we had lost a key client for Mar Tech earlier which nearly contributed 4% of Mar Tech's revenue rate. However, you had indicated that the parent company's Martech capabilities were not that effective and they were having active conversations with us on getting back our Mar Tech services. So, any positive outcome that we have had there?

Bhanu Chopra: No, so we are still engaging. I think it is a little bit of a political issue on the parent and newly acquired entity, but we know our customers are suffering and not achieving the similar kinds of results that they were when they were under our stewardship. So, we are hoping something positive will come about but it looks like it is taking longer than we had expected because of larger company setups and the bureaucracy that goes with it.

Shubham: Yes, I understand, but the conversation we have had up till now we are expecting a positive outcome right, whether it is like three months or six months down the line?

Bhanu Chopra: Yes, we are quite optimistic and hoping that yes, it will come in our favor, but I can not confirm that either way right now.

Moderator: The next question is from the line of Naeem Patel from Bastion Research. Please go ahead.

Naeem Patel: Hi, thank you for this opportunity and congratulations on a very good set of numbers. So, I had a couple of questions regarding our cross-selling ability like I see our numbers over the years our net revenue retention has been coming from 110 to 100. So, it has been declining and in the earlier quarters as well you have said that our cross-selling efforts have not been as optimal as we wanted. So, what changes have we made

de especially in FY26 internally in terms of our cross-selling efforts if you could highlight on that?

Bhanu Chopra: So, to address your question on NRR as you saw that our MarTech business which is the biggest

component continues to grow very , very nicely for us. In fact, 14% growth over H1 and that business unfortunately has two characteristics that dent our gross margin overall because it is a lower gross RateGain Travel Technologies Limited
November 11 , 2025

margin business and the other thing is it is a little bit more transactional in nature especially with the bigger guys where they have unused budget , they may allot those budgets to us at the end of the year. So, it is very difficult to get a normalized view in any one quarter . You have to kind of look at it on a normalized basis over the last 12 months . So, you will see some amount of fluctuation in that NRR numbers because now we are becoming more and more MarTech. I do want to say though that our GRR which is our gross retention or the churn on the local side has been consistent at 10%. So, it is really about how much upsell we are being able to do.

The second point I want to mention to you is that we especially in the small-to-mid-market because earlier on RateGain focus has been on the enterprise and we do work with a bunch of them , but in the small -to-mid-size market I think there are a number of logos that we can continue to acquire and we have been very , very focused even with our GTM investments and net new logo addition. I do believe that we have a very , very strong base. Now, given this acquisition that was happening and other initiatives , the cross -sell, upsell is something that we want to now focus on and we will be as we have added more hunters to land net new logos we will now continue to invest in adding farmers that can help us deepen our relationship with our customers and that should hopefully reflect in our NRR , but like I said it will be some time before that happens because with Sojern also now we are more MarTech -focused and there is some transactional nature to that business.

Naeem Patel: Yes, that makes sense. Secondly, I wanted to ask about one of the past acquisitions myhotelshop . So, in FY23 when we had acquired , it had like a revenue of INR 108 crores and PAT of around INR 8 to 9 crores and if I look at FY25 numbers now the revenue has grown modestly but the PAT has declined substantially to INR 3 crores , so has there been any business specific risk or any synergies that we wanted to play out have not been playing , can you just show more color on that?

Bhanu Chopra: Yes, so one of your colleagues asked in one of the previous questions about this big customer that we lost , that was an MHS customer that we had lost , so that is why the growth seems a little bit muted . I think the profitability has been a function of the investments that we are doing and all the GTM investments that we are doing are getting equally allocated to each of these product lines , and thus the profitability may seem lower given the investment in the GTM . MHS business is very well complementary to our Sojern business where each of these units focus on different channels from digital marketing which were DaaS upon earlier where Sojern is a master at display and programmatic , where MHS is more focused on meta and social . So, now the combined offering will allow us to have "One Platform One Team ." There will be cost synergies there , but more importantly from a perspective of going to market , we will have a lot more compelling solution to offer to the customer . So, I think on a combined basis as we start to report subsequent earnings we would not be looking at MHS and Sojern or ADARA separately because there is huge amount of synergy and we will be bringing platforms and teams together and reporting it as one . So, on a consolidated basis I see it to be extremely cash

generative and value -accretive.

RateGain Travel Technologies Limited
November 11 , 2025

Naeem Patel: Understood. And just one final quick bookkeeping question . What has been the PAT for Sojern in calendar year 2024?

Rohan Mittal: Sorry come again , please . The PAT for Sojern in -?

Naeem Patel: Calendar year '24

Rohan Mittal: 2024?

Naeem Patel: Yes, like we had reported Sojern has been doing 172 million revenue , it had 11% EBITDA , so what was the PAT on the same year ?

Rohan Mittal: EBITDA of Sojern in CY24 was close to about \$18.5 million , against that the PAT was somewhere in the range of \$5-6 million . There are two reasons for that . There was a loan sitting on the books of Sojern which is no longer there now , one. So, there was an interest cost associated with that and again to repeat there is that loan has been paid off here before we acquired the company and Sojern has been capitalizing assets , yes, unlike Rate Gain's accounting policy of not capitalizing assets . So, there has been depreciation , amortization charge also associated to it.

Naeem Patel: That makes it clear . Thank you . That is all from my side

Moderator: The next question is from the line of Aabhas Verma from East Green Advisors . Please go ahead .

Aabhas Verma : This question is not just for FY26 . I just want to understand in the next say two to three years in the medium term where is the growth expected to come from ? So, could you walk us through how each of our segments be it DaaS, distribution or Mar Tech or likely to contribute to this growth ? So, that is my question .

Bhanu Chopra: So, Aabhas, this is something that we would be in a better position to talk about in Q4 . As I mentioned previously we actually are just doing yearly guidances and given we had a big event happen with this

acquisition, that is why this was more of an anomaly to set up revised guidance for the rest of the year, but as we digest this acquisition and come up with like a revised plan on how we go to market because they are just tremendous opportunities and compelling value propositions that we inherit as a result of this. We would be able to give you a more educated guidance in a couple of quarters towards the end of the fiscal year.

Aabhas Verma: Understood. I am not specifically looking for any guidance per se, but also if you can qualitatively also just directionally tell where are we heading towards, which business segment, that is also fine?

RateGain Travel Technologies Limited

November 11, 2025

Bhanu Chopra: My sense is that I continue to be very, very bullish on our distribution business given all the investments and new product capabilities that we have launched, I do see significant growth coming there. Our Martech business we have now with this acquisition changed the complete landscape, right, we are now in a very commanding position with a lot of our customers and the ecosystem. So, as I mentioned earlier this is a combination of domain-specific player number one and player number two and it is a pretty lethal combination which will unveil a new set of opportunities for us. So, I do not want to speak early and underestimate the opportunity that has presented ahead of us. So, we are doing a lot of that planning and understanding on how we can leverage the data partnerships that we have, the data that we have, the combined platform that we gave an example of how Demand Booster and Sojern makes it very, very compelling in addition to our UNO, similarly on the DMOs and the corporates which are the other segments that we go after, it is extremely complementary, gives us some amount of leverage on pricing as well. And I think we will need to be more intelligent in how we can guide for it, but I do feel we are in a very, very commanding position now in the MarTech side of our business.

Aabhas Verma: All right, sir. Thank you so much

Mo

Moderator: The next question is from the line of Aditya Trivedi from Nepean Capital. Please go ahead

Aditya Trivedi: Hi. So, between Sojern's customer base of over 13,000 and RateGain's existing hotel and OTA clients, what percentage of overlap versus net new customers for RateGain?

Rohan Mittal: So, the 13,000 customers that you are referring to is largely the properties business of Sojern versus approximately 900 to 1,000 for us. We have not seen any overlap in these two segments.

Aditya Trivedi: That is it from my end. Thank you

Moderator: Due to time constraints we will take that as a last question for today. I now hand the conference over to Mr. Chopra for closing comments.

Bhanu Chopra: Thank you, everyone for your time and questions. To sum up, Q2 marked another step change for RateGain. We delivered record revenue, deepened relationships across customers and regions and advanced our AI First platform with the integration of Sojern and continued innovation across UNO, VIVA and our DaaS portfolio. We are executing ahead of our medium-term plan of INR 2,000 crores and now run rating at INR 2,700 crores and thus have raised our FY26 revenue outlook to a 55% to 60% growth over FY25 with an EBITDA margin of 16% to 17% for the whole year and we should be exiting March 2026 at a 17% to 18% on a consolidated run rate basis. Our priorities are clear, seamless Sojern integration, disciplined investments in GTM and product innovation that helps our customers acquire convert and retain travelers more efficiently. We believe this position helps us

RateGain Travel Technologies Limited

November 11, 2025

well to create durable compounding value. On behalf of the entire leadership team, thank you for your continued engagement and support. Thank you.

Moderator: On behalf of RateGain Travel Technologies Limited, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Moderator: Ladies and gentlemen, good day, and welcome to the RateGain Travel Technologies Limited Q3 and FY '26 Earnings Conference Call hosted by Strategic Growth Advisors. As a reminder, all participant lines will be in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on touchtone phone.

I now hand the conference over to Mr. Bhanu Chopra from RateGain Travel Technologies.

Thank you. And over to you, sir.

Bhanu Chopra: Thank you. And good afternoon, everyone. Thank you for joining RateGain Travel Technologies Q3 FY '26 Earnings Call. This was quite a transformative quarter for us operationally, strategically and structurally.

Let me first start by addressing the headline directly. We delivered revenue of INR540 crores, up 94% year -on-year. Our EBITDA grew 42%. The reported PAT declined year -on-year and the reasons are transparent. There was an increased amortization from acquisition accounting. There were deal -related costs, including diligence, severance and alignment expenses and finance costs related to acquisition funding. These are integration and accounting impacts, not a deterioration in the underlying business. And Rohan will cover these in detail during his commentary. PAT adjusted for onetime exceptional expenses, which are nonrecurring, grew 8% year-on-year.

Importantly, within the first 100 days of integration, we have already executed approximately \$12 million in annualized cost savings in Sojern on a base of \$24 million annual EBITDA in Sojern. These savings will be visible from Q4 FY '26 onwards, with the full impact should be visible from Q1 FY '27.

Given the cash generation profile of this business, we've already repaid approximately \$25 million of acquisition -related debt, representing 20% of gross loan amount within the first 90 days of deal closure. We aim to be net debt positive within 30 months. We continue to generate healthy operating cash flows and that gives us both balance sheet comfort and strategic flexibility as the integration progresses.

Let me now give you some strategic context where value is accruing. Travel continues to be resilient. Digital adoption is accelerating. Online bookings are expanding globally, experience like travel is increasing. In this environment, value accrues to platforms that provide an integrated tech stack, one that allows customers to acquire guests efficiently, retain and engage them meaningfully, expand guest wallet share over time. That is our vision.

We're not building disconnected tools. We are building an integrated AI powered stack across acquisitions, engagement, distribution and revenue optimization. An important shift we are

seeing is how travellers search and discover. Increasingly, travellers are using conversational AI platforms and intelligent search tools to plan trips. Hotels and destinations are asking, how do we show up effectively in that environment?

RateGain Travel Technologies Limited

February 16, 2026

Page 3 of 17

We have built integrations that allow our hotel partners to distribute structured content and availability seamlessly into these emerging discovery channels. In simple terms, as search behaviour evolves, our customers remain visible and bookable. Another structural shift helping us win is our commercial model.

Across our integrated tech stack, we are increasingly moving towards performance-linked pricing, where customers pay based on outcomes delivered. We monetize when we create measurable revenue lift. This allows incentives and reflects how modern commercial models are evolving, and it makes it very compelling for our customers.

Let me now talk about the engines of growth. Our engine number

1 in MarTech is scale,

dominance and integration. MarTech continues to be our largest growth engine with the integration of Adara and Sojern, we're now the most dominant provider in the space of destination management organization. No other provider even comes close. It's about a \$90 million business for us, and no other provider combines travel intent data at global scale, closed-loop attribution and booking measurement at that scale, deep long-standing relationships across destinations, enterprise-grade marketing execution. At our scale of data, we're uniquely positioned to capitalize on this segment, and that's what destinations care about.

Integration is progressing ahead of plan, and we have already achieved \$12 million in cost synergies within 100 days. We're working with BCG to bring the go-to-market teams of Adara and Sojern together aligning sales structures, account coverage and cross-sell motion. This is about building one unified commercial engine.

SoHo update erstwhile BCV. So SoHo, the erstwhile BCV business, this was the only acquisition in our portfolio that was not profitable since the acquisition. This quarter, SoHo achieved profitability. This was driven by a large marquee account win, improved cost alignment and sharper execution focus. It demonstrates that we can take underperforming assets and drive operational improvement. We're very encouraged, and we remain disciplined in scaling it profitably.

AI Concierge. Separately, AI Concierge part of the Sojern platform is showing very strong commercial traction. Hotels use AI Concierge are seeing up to 300% increase in ancillary revenue, 75% improvement in NPS, automation of up to 80% of guests queries. This is real ROI. This is monetization. It drives direct wallet share expansion, which is central to our integrated thesis. We are now working on integrating this in our unified platform, UNO.

Demand Booster win-back validation. Another important signal this quarter, a large customer that had exited approximately 18 months ago has returned via pilot on Demand Booster. We had moved due to industry consolidation and their exit has impacted our organic growth. After demonstrating the revenue lift, they were missing by moving away, they have reengaged. This validates our product competitiveness. It validates measurable ROI we deliver.

As we move into the upcoming quarter and achieve deeper integration, Demand Booster and Sojern's hospitality marketing offerings will be sold as 1 unified solution. This allows us to

RateGain Travel Technologies Limited

February 16, 2026

Page 4 of 17

combine performance marketing, audience intelligence and direct booking optimization into a single integrated proposition for hotels.

Similarly, Adara and Sojern offerings will be streamlined and positioned as unified products, strengthening our cross-sell motion and simplifying the customer buying journey. This is where integration begins to translate directly into commercial acceleration.

Let me talk about now our engine to the DaaS embedded intelligence. Momentum is improving. We saw volume increases across air, car and OTA customers, along with net new customer additions. Navigator, our solution for hotels has undergone a meaningful evolution. We have moved beyond dashboards and historical reporting. Navigator now delivers AI-assisted commercial clarity, translating complex demand pricing and competitive data into decision-ready actions for revenue managers. Instead of just showing data, it answers where should I price, where am I losing share, which demand segments are shifting.

Similarly, Rev-AI Clarity in cars simplifies pricing complexity into actionable insight. AirGain continues to strengthen parity intelligence and competitive pricing visibility. Singapore Airlines

extended its long-standing partnership, reinforcing trust in our pricing intelligence stack. Across DaaS, we are embedding

intelligence into workflows not adding just surface-based analytics that creates durability.

UNO VIVA, our AI voice success. We launched UNO VIVA, our AI-powered voice agent. The first key implementation has delivered very encouraging results, including measurable booking conversions. We see a big opportunity for this product in Europe and U.S., where labor shortages are a real problem. VIVA turns informed intent into direct bookings in real time as hotels focus more on direct revenue capture, voice automation becomes a powerful lever. We see this as a meaningful long-term opportunity within distribution. AI embedded across the stack.

There is broad market noise around AI. Our approach is disciplined and practical. We're embedding AI into commercial decision loops not laying superficial features. Across the platform, we now offer Demand AI for smarter audience targeting, Rev AI for pricing intelligence, smart ARI within our AI-powered channel manager for real-time rate and inventory optimization, Navigator AI for demand forecasting and decision clarity, AI Concierge for in-state revenue expansion and VIVA voice AI for direct booking capture. This intelligence spans marketing, pricing, distribution and guest engagement. That integrated stack is really our moat. Let me now talk about our organic growth and integration trajectory.

The organic year-on-year growth for this quarter was in 4% to 5% range, primarily due to some December-end revenue getting deferred to January 2026. Organic EBITDA for Q3 was 17.5%. Overall, we are confident of beating our FY 2026 RG organic revenue and EBITDA guidance which was issued at the start of the financial year.

Organically, we should end the full year at 6%-plus organic growth and between 17.5% to 18% EBITDA. Nine-month bookings have seen over 30% year-on-year growth. It's a strong lead indicator of future revenue. Our Q4 should see double-digit organic growth. Combined with pipeline strength, cross-sell traction, product adoption and the unified product motion underway,

RateGain Travel Technologies Limited

February 16, 2026

Page 5 of 17

this gives us confidence in a return to double-digit organic growth in the current quarter and going forward.

As integration synergy scale and our unified go-to-market motion matures, we expect operating leverage to improve progressively over the coming quarters, strengthening our platform and improving our long-term scalability.

Let me now talk about people and culture and how we're scaling with strength. With the addition of Sojern, we are now over 1,300 strong globally. We harmonize policies and benefits across regions to truly build one RateGain. We were recognized as a great place to work in India for the seventh consecutive year. As we scale globally, culture becomes a competitive advantage. Now I want to talk about our ET Corporate Excellence Award. This quarter, we were named Emerging Company of the Year as the ET Corporate Excellence Awards. This is one of India's most prestigious corporate recognition. The jury comprises of highly respected business leaders, industry veterans and institutional decision-makers.

To be recognized alongside some of the most iconic business leaders in the country, including this year's distinguished awardees is both humbling and validating. It reinforces the credibility of our acquisition strategy, the strength of our integrated platform thesis, the discipline of our execution and the ambition of our long-term vision. It signals that RateGain is not just growing, it's being recognized as the highest institutional level.

So in closing, Q3 was a quarter of integration and validation. We delivered 94% revenue growth, achieved \$12 million in annualized integration synergies within 90 days of deal closure, grew adjusted PAT at 8%, turned SoHo profitable, saw a strong traction in AI Concierge product, won back a key Demand B

ooster client, began unifying Demand Booster and Sojern into an integrated commercial offering, launched VIVA successfully, strengthened our DMO leadership position, advanced Navigator towards an AI-driven commercial clarity and delivered 30% bookings growth as a leading indicator of organic acceleration.

We are building an integrated AI-powered travel tech stack focused on guest acquisition, guest engagement and guest wallet share expansion, and we are doing so with measurable outcomes. With that, I will now hand it over to Rohan to walk you through the financials. Thank you.

Rohan Mittal: Thank you, Bhanu. And a very warm welcome to everyone on this call. It's a pleasure to connect with you all. Starting with the update on the numbers for quarter 3 FY '26. We have reported our highest ever quarterly revenue of INR540 crores.

This revenue includes 2 months of Sojern's revenues getting consolidated for the first time. It's important to note here that seasonally, November and December are the softest months in Sojern.

RG Organic continue to report strong numbers despite some quarter-end revenue getting deferred to Q4. RG Organic grew at 4.1% year-on-year and came in at INR290 crores. You'll all recall that we had reported our highest ever revenue in Q2 at INR295 crores. Q3 has been able to maintain that trend. RG Organic is poised to grow at double-digit growth in Q4 on the back RateGain Travel Technologies Limited
February 16, 2026

Page 6 of 17

of strong booking momentum leading to overall organic annual growth in line with the guidance issued at the start of the year.

Full year EBITDA percentage will also meet or exceed our guidance. RG Organic Q3 EBITDA stood at 17.5%. Sojern has reported full year's EBITDA percentage at about 14.4%.

Consolidated EBITDA for Q3 stood at 16.1%. We have reported PAT of INR26.5 crores in this quarter. While Bhanu has touched upon this in his commentary, I'm going to explain this in a bit more detail since I'm sure this is important to project EPS for FY '27 and beyond.

So we can basically split the bridge from EBITDA to PAT into 2 parts, one time and recurring.

The onetime nonrecurring amount which has been recognized in Q3 is INR34.6 crores. This basically largely includes M&A-related costs recorded as exceptional items as well as onetime impact of the change in labor loss. By adjusting for the onetime nonrecurring exceptional cost, the PAT stood at INR61.1 crores, representing a growth of 8% compared to same period last year. Recurring charges include net finance costs, amortization of Sojern purchase consideration, excluding goodwill.

The amortization amount can be expected to be \$2.8 to 3 million per quarter because the provisional PP exercise is now complete. A lot of you had questions around this in our earlier call, and we just thought it should -- we should clarify this number. The finance cost is right now trending at \$1.6 million per quarter. This will keep reducing as we repay the principal. Q3 numbers factor in 2-month impact of these costs.

Part of the deferred component of the overall deal, which is roughly \$30 million, will be expensed over 3 years, starting quarter 4 FY '26. This is in line with accounting standards. This expense will see true up true down in line with actuals since this payout is conditional in nature over a span of 3 years. Nothing from this bucket has been recognized in Q3 thus far. As of now, this amount can be estimated at \$2 million to \$2.5 million per quarter for 12 quarters starting Q4 FY '26.

At an overall level, EBITDA to PAT conversion will see a recurring delta of close to about \$6 million to \$6.9 million per quarter. A large part of this will get covered through the cost synergies that we have already demonstrated, which translates into about \$3 million per quarter. We are looking at additional revenue and cost synergies to make sure that the balance amount

s are also negated.

This does not factor any revenue growth on the baseline, which obviously will be there. Further, I am happy to report that Sojern integration is progressing well and on track with respect to the goals that we had set up for execution by March 2026. As Bhanu mentioned, we have managed to execute \$12 million in annualized cost savings in Phase 1, and these are permanent in nature. These cost savings have been executed on a base of \$24 million for the entire calendar year 2025 EBITDA of Sojern.

These savings will be partially visible in Q4 and fully visible in Q1 FY '27 onwards. It's important to note here, these savings only pertain to the G&A function, which was our area of focus during the first 90 days. These savings alone should allow Sojern to get to the 18.5% to RateGain Travel Technologies Limited
February 16, 2026

Page 7 of 17

19.5% EBITDA level going forward and there is further room for expansion. The cash flow generation has been quite healthy in the past quarter. The total 9 months cash flow from operations stands at approximately INR150 crores.

If we were to just look at the Q3 cash flow generation, we've done almost INR70 crores in cash flow from operations in Q3. And that was partially the reason why we decided to prepay a large chunk of the loan that we have taken. As on date, we continue to have a strong balance sheet. Our net worth currently is at INR1,860 crores. Our cash and cash equivalent balance as of 31st December was INR362 crores. Net debt as on today is down to close to about INR880 crores. As we move to FY 2027, our immediate focus remains primarily twofold: Successfully integrate Sojern and maintain the booking growth trajectory that we have registered in the 9 months of FY '26 and monetize them into revenue.

With that, I would like to close my remarks, and we are happy to open the floor for questions.

Thank you.

Moderator: Thank you very much, sir. We will now begin the question-and-answer session. The first question is from the line of Deep Shah from B&K Securities.

Deep Shah: Very useful. I'm sure it has helped a lot of people on the call. One question I still had was if you could provide some further clarity on how similar or different are the offerings of Sojern versus in our market? Is there something very different in terms of the product profile, customer profile, receivables cycle?

And the reason the context is that you guys mentioned that November, December is the weakest for Sojern. So is there something very different in terms of geographies? I think some clarity over these things should be very useful. That's just from my side?

Bhanu Chopra: So Rohan, I'll take the first part and then you can address the question on the Q3 seasonality bit. So the offerings are -- actually, this is our first acquisition where we have acquired a company with very, very similar offerings. In fact, as I mentioned in my opening remarks, we were going head on head against Sojern in the destination management space, and we were literally the top 2 providers for the DMO segment.

And with the combination now, we become a very, very dominant provider in that -- in this customer segment. So the offerings were very, very similar in nature. And as we bring the platforms together. One of the offerings was about measuring the efficacy of the digital marketing and bringing the platforms together makes the measurable attribution, a lot more effective and our measurement product will be the only product available in the marketplace to measure the efficacy of your digital marketing dollars for DMOs.

So both from a go-to-market perspective as well as combining the platform and the data that's available and it makes it very, very strong. Similarly, on the property side, they were more seasoned and mature and scaled player in digital marketing as opposed to our Demand Booster product. They were almost 7x or

8x our size.

RateGain Travel Technologies Limited
February 16, 2026

Page 8 of 17

And by bringing it together, we will be able to take advantage of the very high number of properties that they have, which is about 13,000 and be able to cross-sell and up-sell our integrated tech stack, which is UNO, where we are able to combine all the capabilities to offer the ability to do guest acquisition, guest engagement and guest wallet share expansion.

And there are a couple of other capabilities that were part of our vision that we didn't have in our stack, especially around the AI Concierge that I talked about that enables in-stay engagement with the guests and also is a great ancillary revenue generator for the customers, and we are very pleased to have that in our stack. So overall, even for the hotel property business, having this 1 integrated tech stack is very compelling and very powerful.

And we would be one of the only few companies to possess all these capabilities in one unified platform. And as I indicated, we're combining the Demand Booster and the Sojern and digital marketing capabilities into one platform within this quarter.

In fact, from a go-to-market perspective, we have now a unified solution that we're taking to the market. And similarly, on the other segments like DMOs and the big corporate customers, we are unifying our GTM teams, and we are consulting Boston Consulting Group, BCG, to enable us to unify that GTM motion as well.

Rohan Mittal: Thanks, Bhanu. I'll pick up the second part. Deep, so basically, the way to look at that is in the properties business, which is almost exactly similar to the Demand Booster program that we were running. The only difference is that Demand Booster was contributing less than 10% of our revenue pre acquisition.

And therefore, the seasonality in that business was not fully evident. Although if you typically look at our numbers, Q3 revenue is slightly lower than Q2, yes? So that's the seasonality impact. In the case of Sojern, the properties business contributes as much as 45% annually to the overall revenue pie, which means that the seasonality will have some slightly more impact than what has been evident on the RateGain side of things.

And that's the only thing that we were calling out. This is pure seasonality impact. It has no -- it's not a sustainable business impact, yes? That business recovers in Q1 -- sorry, Q4 of the next calendar year.

Moderator: The next question is from the line of Naeem Patel from Bastion Research.

Naeem Patel: Congratulations on a good set of numbers. So my first question was for Rohan on some bookkeeping data points. So how has our other older offerings such as Adara, organic offerings have grown in this quarter on a year-on-year basis as well as quarter on this quarter, which is for the MarTech segment?

And secondly, on that front as well that our -- if I see our EBITDA on a quarter-on-quarter basis, organically, it has gone down from 18.2% to 17.5% so was that due to the acquisition-related

Rohan Mittal: So the first question, the answer to that is that Adara has grown at about 19.8% year-on-year in Q3, yes? And answer to your second question, if you look at the numbers, we had given a guidance initially that our EBITDA percentage of 17% to 17.5% on an annualized basis. The primary reason was some investments that you were doing to accelerate GTM. And the ROI on that -- on those investments is evident to the fact that for the entire first 9 months, we've reported 30% -plus in booking volumes, yes, which we've never done before. So that's the only reason why you are seeing a partial dip in the numbers. It's in line with the guidance and expectations that we had set up earlier at the start

t of the year.

It's important to note here is that we don't capitalize any costs, right? Whatever costs we are incurring is getting expense straight away in the same financial year. The delta from 18.2% to 17.5% does not include any M&A -related expenses. All M&A related expenses have been called out as onetime exceptional costs, which is part of the INR34.6 crores number that you will see in the exceptional items.

Naeem Patel: Understood. And what was the growth for overall MarTech segment, excluding Sojern. You mentioned Adara, but I wanted it completely, yes?

Rohan Mittal: Sorry, come again, please.

Naeem Patel: Yes. So what was the -- like you had mentioned 19% growth on Adara, but excluding Sojern, we have other offerings in MarTech as well. So for MarTech overall, excluding Sojern, what was our Y-o-Y growth?

Rohan Mittal: Close to about 11%. 11%, 11.5%.

Naeem Patel: Understood. And my second question was for Bhanu that currently, there are many AI platforms coming in, and there is some uncertainty in the market as well. So how do you see those offerings benefit our current offerings such as DaaS Distribution? And which of them do you see come as a threat to our offerings, if that's the case at all? Some more clarity or color would be very helpful.

Bhanu Chopra: Yes, so both externally and internally, we have taken a lot of AI initiatives, and I covered some of them in my opening remarks. So we launched our VIVA product, which is an AI voice agent. So if you call a hotel, our AI agent would pick up the call and answer any questions around the hotel or even make a booking or do any upgrades. Similarly, we -- through Sojern acquisition, we acquired an in -stay AI Concierge platform.

So if you're at a hotel and you have any questions about the hotel, say, for instance, where the gym is, what time is the breakfast open, so the AI Concierge product, which is an AI would answer any questions about things at the hotel, already suggest any activities or itineraries while you are in that destination.

Then internally, we are using AI to -- from an engineering perspective, large section of what we code now is the AI generated. There are a bunch of white code projects that we have developed

RateGain Travel Technologies Limited

February 16, 2026

internally to streamline both our HR and finance functions. We're using AI from a support perspective as well.

And to your other question about how disruptive can it be for our business? So I don't see it as a disruptor. I see it as an accelerator. And I talked about a lot of those initiatives we are taking. I think the fears about AI eating up SaaS are a little overblown. I, in fact, wrote a LinkedIn post also on it. I think in our case, the fact that we have the domain context is a great advantage to us.

And just kind of fear also came around when cloud companies came about. And it was clear that the cloud companies would get into the areas of SaaS and completely disrupt them. But ultimately, what happened was SaaS grew as a result of the cloud companies. So I see a similar pattern play out here as well, where I don't see it as a disruptor, but I see it as an accelerator.

Moderator: The next question is from the line of Parth Agrawal from Bastion Research.

Parth Agrawal : I had just one question. So in FY '26, we have essentially decided to do a lot of GTM marketing and the benefit of which is also visible in our order wins in the last 2, 3 quarters. But is there any other benchmark or success rate that you have seen that this entire exercise has been fruitful for us?

Rohan Mittal: Yes. So if you look at our GTM investments, the total investment -- perfect, if you refer to our guidance which we had issued last year around similar time, we had proposed that we'll be

adding close to about \$5 million to \$6 million, which was roughly 4% of our EBITDA at that time back in building out a

GTM team is we have gone ahead and executed that strategy over the last 9 months, 9 to 12 months.

The impact, as you rightly said, is evident in the order book. That to us is the single largest ROI calculator. Obviously, that order book has to translate into revenue. That's point number one. Point number two, when a new sales team is onboarded, there is a time given for the sales team in terms of booking targets as to what can we achieve in the first 6 to 12 months, right? They cannot start performing to the 100% potential in the first 6 to 12 months, as you can imagine. So this financial year, some of those targets will also get reset, which will reflect in the FY '27 guidance that we will issue on our May call -- analyst call.

So the growth rates that we pick up in the businesses that we've invested in the GTM team, those businesses should ideally look at a much stronger organic growth rate in FY '27 and beyond on the back of successful hiring and successful execution of this whole GTM strategy. Does that answer your question?

Parth Agrawal : Yes. Sir, the GTM, the \$5 million, \$6 million that you deployed, was it more towards hiring the sales team and building the sales team or it was more something like a onetime marketing kind of an expense?

Rohan Mittal: No, no, no. It's not a one-time marketing expense. A majority of it has gone in terms of payroll for new people who have been hired in the GTM function. This would largely include sellers, RateGain Travel Technologies Limited
February 16, 2026

Page 11 of 17

but it would also include a proportionate amount of customer success managers and account managers.

In addition to that, there is a very small portion that would have been allocated to tools, GTM - enabling tools and some investment in our revenue ops team, which is basically a strong catalyst and enabler for the entire GTM team to perform. So in the direct support functions, there would have been a small investment; in tools, there would be a small investment, large part would be pure GTM payroll.

Parth Agrawal : Got it. So essentially the team that you have built this year, they will have to start performing next year for our margins to normalize to 20%, 22% kind of a level. Is that understanding, correct?

Rohan Mittal: See, this is a common dichotomy that we all face on a day in day out basis to prioritize revenue growth versus to deliver best-in-class EBITDA percentage, right? Given a choice, if we see any white space where we believe we can add more people and therefore gain market share, profitable market share, we will not hesitate to go ahead and do that going forward also.

The guidance that we've given in the -- at the start of this year is that going forward, if we are capable of delivering 20% to 20.5% EBITDA on a sustainable basis, we'd much rather invest back 1% to 2% of that EBITDA in adding strength to our GTM team and other functions ahead of the curve. So we are not going ahead and issuing guidance for FY '27 right now, but that is the philosophy that we are following here.

Moderator: The next question is from the line of Deepak Poddar from Sapphire Capital.

Deepak Poddar: Sir, just wanted to understand, this quarter, we had about consolidation of 2 months of revenue from Sojern, right? So how much was that?

Rohan Mittal: INR250 crores.

Deepak Poddar: So INR250 crores and at margins of what 14.4%, would that be right?

Rohan Mittal: Roughly, yes. Yes.

Deepak Poddar: Okay. Okay. Understood. And you also mentioned about synergies of around \$12 million we have already seen in terms of savings, cost savings in 100 days. So which kind of will help you to reach 18.5% to 19% EBITDA margin going forward. So when it will be visible? I mean, will it be visible from fourth quarter itself or it will take 2, 3 quarters for us to see that kind of margins? And these margins we are talking about on a consol basis, right?

Rohan Mittal: Yes. But the margins are applicable to Sojern, right? But they should be visible in the consol results. So if you look at Q4, you'll see part of these margins coming in because some of these initiatives have been executed in January or early February, but they're all executed as we speak today. Q1, you should see the entire impact visible in the P&L.

Deepak Poddar: Come again, sir? I missed that, just last point?

RateGain Travel Technologies Limited
February 16, 2026

Page 12 of 17

Rohan Mittal: I'm saying some of these \$12 million integration levers have been executed during January and early February as well, yes, the current month that we are speaking in. As of today, they are 99.99% executed. In Q4, therefore, you'll see a partial uptick. In Q 1, you should see a full impact of this \$12 million annualized number so \$3 million in the quarter, visible in Q1.

Deepak Poddar: Okay. Understood. So ideally, if I have to -- I mean, look, first quarter so ideally this -- if this impact is visible your 18.5% to 19% kind of margins in Sojern and your -- the base business margins stands at around 17.5% to 18% so consolidated margin should be somewhere in between, right, ideally given the revenue mix we might be having?

Rohan Mittal: You're absolutely right.

Deepak Poddar: Okay. Okay. Understood. And in terms of FY '27, you mentioned we look at much stronger organic growth, right? So any range you are looking at? I mean, given I think the fourth quarter, we are targeting, what, a double -digit kind of a growth, right, and this quarter was a little on the lower side. So how should one look at the organic growth FY '27?

Rohan Mittal: So Q4, 50% is already behind us. So I can say with reasonable confidence that you will be able to see a double -digit organic growth on the RG side of things, excluding Sojern in Q4. We will start issuing FY '27 guidance in the month of May, that's the typical trend that we've maintained. We'll stick to that. But I see no reason why if you are delivering double -digit organic growth in Q4, I see no reason why we should not be able to continue that trend on the back of the strong booking momentum that we've seen in the first 9 months of this year.

Deepak Poddar: Okay. So double -digit is quite a possibility for FY '27 as well?

Rohan Mittal: Yes. Yes. But please wait for us to issue formal guidance, yes?

Deepak Poddar: Fair point. And just the last thing on the EBITDA margin at the point that you are making to the last participant of 20%, 20.5% is what our threshold margin would be and any incremental we would like to invest back in the business. So with that philosophy, we would be working, right?

Rohan Mittal: So what I said on the -- to the last participant was that 20% is something that we can sustainably deliver. We have done 21% also, but 20%, 20.5% is something that we can sustainably deliver. Our intent would be to reinvest up to 10% of that EBITDA, which is about -- which takes you to 18%, 18.5%, right, to reinvest 10% in growth and investment cases, wherever we are satisfied with the ROI, the risk parameters are within our acceptable range and things like that. It's not a necessary investment every year. But wherever we can find those white spaces, we will actively invest ahead of the curve.

Deepak Poddar: Okay. So effectively at 18% would be a sustainable long -term margins that one might look at for this business at a consol level?

Rohan Mittal: Yes, 18%, 18.5% at Sojern consolidated is something that we can -- we are looking to deliver.

Moderator: The next question is from the line of Miten Shah , an Individual Investor .

RateGain Travel Technologies Limited

February 16, 2026

Page 13 of 17

Miten Shah: Yes. Heartiest congratulations. Bhanu, I don't know if you recollect, I asked you whether we will be able to meet the INR2,000 crore s target that you've set for FY '27. And it s

eems that we

might very well achieve this by the end of next quarter or maybe Q1 FY '27. So heartiest congratulations for that.

And I really appreciate the hard work that you've done for this and the entire team. So my next question would be having said that we have almost achieved doubling the revenue of so called INR2,000 crores well before FY '27, what would be the next target?

Bhanu Chopra: Yes. So internally, we have set a goal of \$1 billion by 2030.

Miten Shah: Okay. It's too far away?

Bhanu Chopra: Sir, it's only 4 years away.

Miten Shah: Okay. I've been almost 4 years invested as of now?

Bhanu Chopra: Yes. So we have -- I mean if you look at our history, we are now 10x the revenue. When we came into the public markets, we were about INR300 crores, and now we are running close to INR3,000 crores in 4 years. With that space, I feel quite comfortable we just need to do 3x from here.

Miten Shah: No, I'm equally excited to be going along with this company since almost last 4 years. I really love the way the company is working. So my next question would be, Bhanu, I've been seeing a lot of small companies emerging from India, digital companies offering hotel management suites. I had even asked earlier regarding a company named Guestara, I don't know if you recollect, I seen some new names like Anticipatory and all those.

Are these, by any chance, just casting a glance to these companies as to what are they doing?

And could there be a potential acquisition or a threat? Or what are you -- you may be able to foresee from these names? Are we going through these names, by any chance?

Bhanu Chopra: Yes. So we maintain a very, very active M&A machinery. We have a dedicated team. So we run

a robust corporate debt program. And we're continuously looking at all kinds of companies, and I'm sure we've gone through some of these names as well. I mean the database that we have is over 1,000 companies and we are constantly evaluating them on merit.

And wherever we see an opportunity, we progress our conversation. So I mean I can tell you right now, it's definitely must be evaluated by our teams, but it hasn't shown up on my radar. I think if there is some merit, it will show up on our radar.

Miten Shah: Yes. I know these are very small and I had to receive a response that the company is normally looking for anyone which is \$5 million northwards and these are pretty much smaller. So I can understand, but the only thing is because I see a lot of names cropping up from this sector. So that's what -- but I -- that's all you know from my side, and I've really enjoyed this ride since almost last 4 years and wish you all the best and heartiest congratulations, once again?

Bhanu Chopra: Thank you. Thank you, sir.

RateGain Travel Technologies Limited

February 16, 2026

Page 14 of 17

Moderator: The next question is from the line of Anmol Garg from DAM Capital.

Anmol Garg: A couple of things that I wanted to understand. Firstly, if I look at our total customers, that has not increased despite Sojern acquisition coming in. Does that mean that most of the customers -

- in most of the customers, there is an overlap between Sojern and RateGain?

Rohan Mittal: No. I'll take that. What we are doing is we are reevaluating the methodology through which we report our customer count, right, because there's a difference in the way we look at customers in a parent-child grouping versus how Sojern looks at it. So this quarter, we have just shown the Sojern count of customers as is. In the next quarter, you'll see a harmonized count of customers, yes? The overlap is less than 5% at an overall level.

Anmol Garg: Okay. Sir, the current customer count is basically the RateGain customer count, not the -- Sojern is not included in this number?

Rohan Mittal: Yes. The current RateGain customer count hovers at around 3,200. Sojern talks about 13,000 to 14,000 customers,

but we didn't want to just add the 2 and report it. It didn't make sense to us because the methodologies are different. So we'll report a harmonized number Q4 onwards but that's the individual customer count.

Anmol Garg: Okay. Secondly, if I look at our DaaS revenue on a sequential basis, then it's more or less a range bound however 2 months of Sojern acquisition has been taking place in this quarter. So just wanted to understand how is the classification over there?

Rohan Mittal: Sojern does not have any revenue which is getting classified in DaaS. That was only the case for the Adara business, yes? So Sojern entirely sits in the MarTech division. And excluding the Adara DaaS business, which Anmol recall, we've been sharing active commentary on this, strategically, it didn't make -- it did not make sense for us. So that business has been gradually unwinded. There's no rush to unwind it, but it's been gradually unwinding. If you were to exclude that business, our DaaS business is growing at 10% to 12% year-on-year.

Anmol Garg: Understood. And thirdly, is that -- should we expect that the initial investment cycle that we were doing for our revived GTM strategy is now largely complete or there would be some impact on that in the fourth quarter as well?

Rohan Mittal: No. So other than a few offers which might be pending for rolling out as part of the original investment plan and the sustainable accrual of the payroll expenses, there is no other expense item that's likely to hit Q4, right? So if a person has joined in, in November, the full payroll has not reflected in the Q3 numbers. To that extent, there will be true ups.

Anmol Garg: So from that perspective, we expect that on a sequential basis, basically, our margins should inch up in fourth quarter?

Rohan Mittal: Yes. Not just because of that, but a few other reasons. Expecting better than Q3 margins in Q4.

Moderator: The next question is from the line of Aditya Jhawar from AK Investments.

RateGain Travel Technologies Limited

February 16, 2026

Page 15 of 17

Aditya Jhawar: Yes. I have a few questions related to Sojern. Is Sojern reporting gross revenue or it is net revenue only?

Rohan Mittal: Gross revenue in line with what we've been reporting on MHS in Adara side of business because the businesses are almost exactly the same.

Aditya Jhawar: Okay. But RateGain, we, as a company, we generally have net revenues, right?

Rohan Mittal: No. Adara MHS, which are the comparable businesses for Sojern, we've been reporting gross revenue. So accounting policies, revenue recognition policies are absolutely consistent. No change.

Aditya Jhawar: Okay. So what is the net revenue for Sojern?

Rohan Mittal: We will avoid reporting those kind of numbers.

Aditya Jhawar: Okay. My question to Bhanu is a little broader one. So Bhanu, what are your top priority is right now going FY '27? Because you know that we have now this Sojern asset and RateGain asset, and we are building a lot of AI stuff underneath the companies, right? So what are your top priorities on top of your mind for next year or upcoming 1 or 2 years for the RateGain to build or leverage on these AI tools or stack or whatever comes to your mind?

Bhanu Chopra: Yes. So I think from a product perspective, we have a very comprehensive set of capabilities that we have built and acquired. A lot of these capabilities are at -- some of them are at the infancy stage and some of them are at a different point to scale. So really focus is now accelerating on the products that we have already built or acquired through the Sojern acquisition.

So a lot of focus on GTM and unifying team. So as I mentioned, our big effort right now is consolidating our go-to-market teams in Adara and Sojern for the DMO and the corporate customer segment that we see a massive opportunity given in DMOs we will be in a very, very dominant position and that should give

us significant pricing power as well.

And on the property side, I am very, very excited about realizing our vision of having this integrated tech stack that can pretty much do everything from a guest acquisition, guest retention, engagement and guest wallet share expansion perspective. So we have invested quite significantly, as Rohan mentioned, about \$5 million to \$6 million, and a large portion of that went into building our APAC deal.

And it's showing in our numbers from a bookings perspective, but I feel we haven't seen the full benefit of all the investments that we have made. And now that we have such a powerful and compelling value proposition, I see a massive opportunity to dominate in the APAC region as well which something that historically we haven't really focused on.

So net-net, I think key priority will be to really calibrate our go-to-market motions because I see significant opportunity and significant acceleration in our organic growth. I think we will have

RateGain Travel Technologies Limited

February 16, 2026

Page 16 of 17

some pumps, but I feel very, very confident that we are poised for a very, very good growth in the next couple of years.

Aditya Jhawar: So if I understand, basically, you are happy with the products, whatever we have, but your most focus is on go-to-market strategy because we have the right asset in the place? Is my understanding right?

Bhanu Chopra: Yes. That's absolutely right. That's the right way to sum it up.

Aditya Jhawar: Yes. And one more thing in this agentic world, right, I mean a lot of agents are coming through and are we also putting the company in the right shape that we have internal teams who are dedicatedly working on this agent and AI stack so that whatever the vision we have for \$1 billion, we have to be making sure that the internal teams are also -- I mean, as you know, right, a lot of stuffs are being written through AI. So are we focusing -- how much are we putting efforts there also?

Because I know you are happy with the product, but in order to move one step ahead and gain more margins for our business, right? So are we also putting leaders over there who are upfront on the AI side?

Bhanu Chopra: Yes. So let me reinforce like I was saying earlier, even from our perspective, whatever products we are building now half of the code that we write is AI generated. Pretty much all across these, we have large initiatives that our HR department is leading on how AI can lead to automation and productivity gains and pretty much across all our teams we have introduced by vibe coding and build AI tools to get these productivity gains, for instance, in HR, we're using an AI agent to answer any queries or questions and provide HR support.

We have an AI agent from a talent acquisition perspective. Similarly, we are using it in much faster prototyping in new ideas. What used to take us several months to build and prototype now can be done in weeks and is -- so there is a concentrated effort in continuously to promote this culture grounds up, but there is a cross functional team also that's dedicated on understanding new capabilities that are emerging and how that can be put to use.

See, AI has a huge opportunity, but it's very, very important to use it as an enabler with an end outcome insight. And so we're defining those end outcomes and bases that devoting our energies and delivering those outcomes.

Aditya Jhawar: Right, right. Okay. Great. Last question I have. Basically, I know that we are putting a lot of efforts on the product. And you also said a couple of years back that the products, whatever you are building are very high margin, this kind of thing, right? But now with the acquisition, I know that this is large. But what is the aspiration you have being a product tech company and we know

that the cost might not go up if we have the operating leverage in the business, right?

But

where do you like to see the business, I mean, margin in the -- over the long run? What is the juncture you see internally the product pipeline that can gain as a very big margin expansion. Like currently, people are afraid of the SaaS, but I think with this AI, I mean, the SaaS product

RateGain Travel Technologies Limited
February 16, 2026

Page 17 of 17

companies can gain more and more market share and be the best there, I mean, in this AI. So what is the aspiration you have, Bhanu, on this? That's my question.

Bhanu Chopra: Yes. So I think Rohan addressed this in his commentary earlier. Our goal will be to be between that 18% to 20% range and we will continue to reinvest additional margins back into the business? Because as I stated earlier, the aspiration or the next goal in our mind is to hit \$1 billion in revenue. The market is there. The opportunity is there, and we need to continue to accelerate.

So we'll continue to reinvest wherever we get the confidence that we have clear conviction that additional investments will deliver the ROI expect. So we'll continue to invest. But we are very comfortable with that 18% to 20% margin profile and reinvesting the balance to gain more growth.

Moderator: Ladies and gentlemen, that was the last -- due to time constraint that was the last question. I would now like to hand the conference over to the management for the closing comments.

Bhanu Chopra: Thank you, everyone, for your support. As I indicated, this was a transformative quarter for RateGain. We are very excited about the opportunity ahead, and we will continue to deliver on the promises that we have made. Thank you.

Moderator: Thank you, sir. On behalf of RateGain Travel Technologies Limited, that concludes this conference. Thank you for joining us. You may now disconnect your lines.
