"Aditya Infotech Limited
Q1 FY 2026 Earnings Conference Call "
August 20, 2025

"E&OE - This transcript is edited for factual errors. In case of discrepancy, the audio recordings uploaded on the stock exchange on 20th August 2025 will prevail."

MANAGEMENT : MR. ADITYA KHEMKA – MANAGING DIRECTOR ,
MR. ANUP NAIR – PRESIDENT , STRATEGY AND
BUSINESS DEVELOPMENT
MR. YOGESH SHARMA – CHIEF FINANCIAL OFFICER

MODERATOR : MR. ANIRUDDHA JOSHI – ICICI SECURITIES LIMITED

Aditya Infotech Limited
August 20, 2025

Page 2 of 17

Moderator: Ladies and gentlemen, good day, and welcome to the Aditya Infotech Q1 FY '26 Conference Call, hosted by ICICI Securities Limited.

As a reminder, all participant s' lines will be in the listen -only mode . And there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing “*”, then “0” on your touch -tone phone.

I now hand the conference over to Mr. Aniruddha Joshi from ICICI Securities Limited. Thank you, and over to you, sir.

Aniruddha Joshi: Yes. Thanks, Zico. On behalf of ICICI Securities, we welcome you all to Q1 FY '26 results conference call of Aditya Infotech Limited.

We have with us today Senior Management represented by Mr. Aditya Khemka – Managing Director , Mr. Anup Nair – President (Strategy and Business Development), and Mr. Yogesh Sharma – Chief Financial Officer.

Now , I hand over the call to the Management for their initial comments on the quarterly performance, and then we will open the floor for question -and-answer session. Thanks and over to you, Aditya sir.

Aditya Khemka: Yes, thank you, Aniruddha . And good evening, everyone. First of all, thank you for joining us today for this maiden Earnings Call. We have uploaded the Investor Presentation on the Stock Exchanges , and I hope everybody had an opportunity to go through the same.

2025 has been a milestone year for Aditya Infotech. We got listed on both NSE and BSE on 5 th August this month, marking a new chapter in our growth journey. And I would like to take this opportunity to thank the entire Aditya Infotech team, our bankers, advisors, and most importantly, all our investors for the trust you have placed in us.

Since this is our maiden earnings call, I would like to begin with a brief overview of the company, and the strategic direction ahead before moving to the quarter's performance.

Aditya Infotech Limited was incorporated in 1995, with the vision of bringing futuristic technology products to the Indian market much ahead of time. In our earlier years, we operated primarily as a distributor of leading global IT brands before moving into the security and surveillance segment in 2007 when CP PLUS brand was born. Over the years, Aditya Infotech has undergone a remarkable transformation from a distribution company to a consumer brand driven, innovation -focused manufacturer.

Today, we stand amongst the largest provider of video security and surveillance products, solutions and services in India, commanding a 20.8% market share in FY '25 and ranking as Aditya Infotech Limited

August 20, 2025

Page 3 of 17

third largest manufacturer of surveillance products globally in terms of units manufactured ; with over 4,100 employees reflecting a sustained leadership, skill, and deep rooted presence across the industry.

In 2017, we took a significant step focusing on the Make -in-India journey by forming a 50 :50 joint venture with Dixon Technologies (India) Limited , namely AIL Dixon Technologies Private Limited , to establish a domestic manufacturing for CCTV products including cameras, recorders, and all allied security products. Last year in September 2024, we then acquired Dixon's 50% stake in the JV, making AIL Dixon a wholly owned subsidiary . And Dixon in turn retained 6. 6% stake in Aditya Infotech , underscoring their long -term confidence in our growth journey.

Today, we operate a state -of-the-art manufacturing facility in Kadapa, Andhra Pradesh , with an installed capacity of 1.5 million units per month, spread over more than 3.5 lakh square feet.

This is India's largest single location surveillance manufacturing facility, and the third largest worldwide. Our manufacturing capabilities are backed by strong research and development initiatives, and we have a dedicated R&D facilit

y with highly experienced engineers in Noida

who play a pivotal role in designing and developing new products, incorporating customer feedback, and enhancing existing technologies. We have also recently just opened a second R&D center in Ahmedabad, and are in the process of setting up an R&D center in Taiwan very soon .

Let me now take you through our products portfolio under our brand CP PLUS .

CP PLUS has emerged as one of the largest and most trusted brands in the security and surveillance segment in India, and are offering a span of wide range tailored to meet the needs of all Customer Vertical segments from government to businesses to homes. We offer all kinds of CCTV cameras from analog HD to IP network cameras, to Wi -Fi, to 4G, to thermal, explosion proof, AI cameras and so on ; backed by all kinds of recording devices like DVR and VR, and supporting products for providing complete bill of material under the CP PLUS brand to our customers.

In our professional range, we have AI network cameras with features like facial recognition, low-light capabilities, and real -time video analytics. Our NVRs deliver high -resolution

recording with remote access and scalable storage. We have products like automatic number plate recognition cameras for traffic, and GPS-enabled mobile NVRs for trains, buses, to law enforcement cameras for body-worn, which we have body-worn cameras for police, and interactive displays for monitoring and collaboration in the control rooms. We also do a lot of products in the consumer home IoT space, where ezyKam smart Wi-Fi cameras for home use, or 4G-enabled cameras for locations without wired internet, and CarKam dashcams for on-road recording, provide safety for the consumer segment. Supporting these solutions, we also do a lot of cabling solutions, power solutions, and all the accessories, finishing the complete BOM.

Aditya Infotech Limited
August 20, 2025

Page 4 of 17

Finally, our services and solutions include CP PLUS Cloud Storage for redundancy backup and mobile-accessible video storage; CP PLUS AI, which delivers video analytics and process automation capabilities; and OnVigil, which is our AI IoT platform for monitoring services. We segment our market into four key segments: Government, Enterprise, Small-medium businesses, and Home, and CP PLUS customer base is well-balanced in all of these segments. Our largest pie comes from the SMB space, which constitutes 60% of our revenue, and we continue to see strong adoption of solutions in the small-medium businesses. With our expansion of our exclusive Galaxy stores, which are partner-owned franchisee stores, this further enhances customers' touch and feel to our products. Large enterprise and government projects contribute about 30% of our revenues, driven by increasing participation in critical infrastructure and public safety deployments. We are continuously investing additional manpower focused on verticals, consultants, and larger sites to further strengthen our share in the space, and are already seeing good traction in key ventures. The last pie of 10% comes from the consumer home segment, wherein the strong brand recall of CP PLUS is a big USP. This segment is catered via the online marketplaces, as well as the offline channel.

In almost every vertical segment in the country, we have tons of wins and successful case studies, be it BFSI, retail, hospitality, smart city, manufacturing, education, law enforcement, and so on. Our competitive edge is anchored in scale, brand leadership, innovation and customer engagement. We are the largest manufacturer of surveillance products outside China, and the first player to create a true consumer brand in India's security and surveillance industry. CP PLUS has the largest distribution network, comprising over 1,000 plus distributors and 2,000 plus system integrators across more than 500 cities, supported by

48 branch offices, and another

13 RMA service centers, building trust and driving growth. Our marketing initiatives, ranging from celebrity endorsements and high impact campaigns to only channel below the line marketing and promotions reinforce our tagline, "Uparwala Sab Dekh Raha Hai", and strengthen our leadership in the security and surveillance sector.

CP PLUS is also deeply committed to skill development and capacity building in partnership with the Ministry of Skill Development and Entrepreneurship. And have successfully engaged over 50,000 participants until now under our Mission Tech and other training programs, strengthening the talent pool and fostering industry wide growth.

To give you a flavor of the industry. Overall, this industry in India is undergoing a period of strong expansion driven by rapid urbanization, rising security consciousness and significant government-led infrastructure spending. According to Frost & Sullivan report, the Indian video surveillance market is experiencing a surge with market value estimated at Rs. 106 billion during fiscal 2025. The growth is expected to continue at a CAGR of 16.5% annually until FY '30. And
Aditya Infotech Limited
August 20, 2025

Page 5 of 17

number of video surveillance units sold is also poised for significant growth from Rs. 39.7 million now in 2025 to go to almost Rs. 75 million by FY '30.

This growth can be attributed to several factors, including rising awareness, and prioritization of security by both individuals as well as businesses, along with government initiatives promoting advanced security infrastructure in the Safe and Smart City projects. Additionally, technological advancements in security and surveillance technology and advanced video analytics like GenAI further make these products and solutions increasingly appealing.

One important point that resets the industry now, which I would like to highlight is the new norm of STQC certifications under the PPO and CRO set by the Government of India. The Standardization Testing & Quality Certification Directorate under the Ministry of Electronics and Information Technology plays a vital role in ensuring the quality and competitiveness of India's IT and electronics industry.

MeITY has mandated that from April 9, 2025, all network CCTV cameras sold in India must be STQC certified. This regulation aims to ensure that devices are trustworthy, of good quality, and protect user privacy, addressing all cybersecurity risks posed by low-cost, uncertified imports lacking even basic security features. The STQC mandate creates a competitive advantage for Indian OEMs who are developing and manufacturing CCTV products locally, as their offerings are more readily compliant.

For a certified domestic brand like ours, with clear differentiators including largest portfolio of STQC certified product lines, consumer brand that is literally synonymous with the category, largest manufacturing backed with deep R&D investments, and an unparalleled distribution reach, means that we are best placed to gain maximum market share, and beat the industry growth rate to achieve our goal of over 25% growth this year.

Now coming to the business highlights, which we have done over the last quarter .

CP PLUS has currently the largest portfolio of STQC and BIS certified products under the new norm. In line with our planned investments into R&D and localization, we have opened new R&D centers in Ahmedabad, and shortly opening one in Taiwan. We are also working on complete backward integration of components, be it enclosures, housings, cable connectors, power electronics, and also CCTV lenses.

We had a few key appointments , Upendra Shukla joined as President Manufacturing, and Rajiv Manchanda joined as GM Credit. We re-initiated our consumer marketing campaign, especially on the out-of-home advertising at all the major airports across the nation, emphasizing on the

STQC certified product range backed with CP PLUS Trust Core technology.

I also would like to highlight that there is always a seasonality in our business, and Q1 is generally 18% to 20% of our annual business, which has been the trend over the last many years.

Aditya Infotech Limited

August 20, 2025

Page 6 of 17

This quarter, we have been able to still achieve the growth, even with the limited supplies of STQC certified products, which came in the end of June, and also the channel stock of non-STQC was getting consumed.

Let me now invite our CFO – Yogesh Sharma, to walk you through the highlights of our IPO and the financial performance. Thank you.

Yogesh Sharma: Thank you, Aditya ji. Good evening, everyone. This is Yogesh Sharma. I warmly welcome everyone to our Earnings Call for Quarter 1 FY '26.

Over the years, our business has delivered strong, consistent growth on both revenue and profits. Building on this momentum, our strong performance has continued into the 1st Quarter of FY '26 also, reflecting both the resilience of our business model and the growing opportunities in our industry.

On a consolidated basis, our revenue from operations grew by 16.4%, Y-o-Y to Rs. 740 crores in Q1 FY '26. EBITDA stood at Rs. 64.9 crores, reflecting a growth of 47.5% Y-o-Y. EBITDA margin stood at 8.7% in Q1 FY '26, as against 6.9% in Q1 FY '25, which reflects an increase in 180 basis points. Our PAT stood at Rs. 32.9 crores, reflecting a growth of 46.1% Y-o-Y. PAT margin stood at 4.4%, compared to 3.5% in the same quarter last year, which reflects an increase of 90 basis points.

In August 2025, our IPO successfully raised Rs. 1,300 crores through a combination of fresh issue and offer for sale. From the Rs. 500 crores fresh issue, we allocated Rs. 375 crores towards repayment of borrowings. As of 31 May 2025, our total borrowings stood at Rs. 423 crores. This repayment has reduced our gross debt by 89%, bringing it down to just Rs. 48 crores.

This substantial de-leveraging will significantly reduce our finance costs, enhance profitability, and freeing up internal resources to fund strategic growth initiatives, capacity expansion and innovation programs. The remaining proceeds from the IPO will be deployed towards general corporate purposes, further strengthening our liquidity position and providing financial flexibility. By achieving this debt reduction, we have reinforced our balance sheet, improved our debt liquidity profile, and created a strong platform to pursue long-term value creation towards stakeholders.

Now, handing over to Aditya ji to throw some light on the full-year guidance. Thank you.

Aditya Khemka: Thank you, Yogesh. So, building on to this strong start of the year, we are confident of delivering robust growth for the Full Year FY '26.

On the revenue front, we expect to close in the range of Rs. 3,900 to Rs. 4,100 crores, delivering over 25% annual growth, beating the industry growth of 16.5% CAGR, thereby leading to further market share gains. The STQC guidelines have taken effect in the market, and we envisage

Aditya Infotech Limited

August 20, 2025

Page 7 of 17

higher growth both in terms of units as well as value in the IP camera segment , and also the higher -end products used in projects.

The EBITDA margin is expected to be in the range of 10% to 11%, and the PAT margins are expected to close in the range of 6% to 7%, which is driven by a brand mix improvement, margin expansion in the CP PLUS business, cost savings from the debt repayment post -IPO, full consolidation of AIL Dixon manufacturing entity, and scaled efficiencies from overall plant operations, which will further, hopefully, enhance margins.

Q1 FY '26 has set a strong foundation for the year ahead. With a robust balance sheet, supportive industry tailwinds, and a clear roadmap, we are well -poised to deliver growth ahead of the market, supported b

y structural margin levers, cost efficiency, and financial discipline. We remain committed to deliver profitable growth and creating long -term value for our shareholders. I would like to once again thank everyone for joining the call today. And we can open the Q&A session, please.

Moderator: Thank you very much. We will now begin the question -and-answer session. Our first question comes from Rajesh Kothari with AlfAccurate Advisors. Please go ahead.

Rajesh Kothari: Good afternoon, sir. Congratulations for a good set of numbers. I have two questions. My first question is with reference to this new norms, STQC, which came into force very recently, how do you see the early trends ? And how do you see the overall industry environment to change , because that means effectively the competition, particularly from Hikvision basically will reduce ?

And number two, in long -term, what are the levers which can help us to improve the margins, EBITDA levels from current levels?

Aditya Khemka: Yes, so thank you. So I will take the first one on the STQC, what's happening in the market. So this went live on the 9th of April. And most of the brands actually finished their inventories last stocks in the market prior to that. So those inventories are now getting consumed. And post -STQC, like I mentioned, this is more like a reset of the industry. So , the neighboring country brands, because of the trusted supply chain and the various clauses which are there in the whole policy, and the s emicon and the critical components cannot be from those countries or those brands. Those will generate a vacuum in the market which is the opportunity for domestic brands or maybe global brands to capture.

As we speak today, only a few Indian brands have few models certified where CP PLUS has the largest certified range . The global brands are still in the process . And the Asian, especially the brands from our neighboring countries are in a scaling down mode, looking at newer product categories. This quarter we see this transition to creep in because the non -STQC inventory will

Aditya Infotech Limited

August 20, 2025

Page 8 of 17

dry up. We are already seeing signs of that. So , I think we will start seeing the shift towards resetting of the market share as we progress month by month.

And the second question you said was the margin levers, right? So several margin levers, Anup, you want to take that?

Anup Nair: Yes, hi, Rajesh. So like we were explaining on the presentation, there are multiple levers that we see for the margin expansion , one is the product mix itself. So as we grow our own brand more aggressively, the share of revenues within the company will be over almost 90% of our own brand. So that will also lead to margin expansion, plus the margin realizations of CP PLUS itself is in creasing post -STQC.

The other point is, like Yogesh was mentioning, we have retired debt in the company , so this will also lead to significant financial cost savings. And third is we are now fully integrating AIL Dixon, which was our manufacturing JV, which is now 100% subsidiary. So this is also leading to efficiencies of scale that are coming in manufacturin g. And we are also increasing the localization content in our product line , this is also increasing the margin levers in the company.

Rajesh Kothari: Would you like to quantify in terms of over next two, three years, how do you see all these four factors leading to what kind of target EBITDA level margins you are expecting before interest and before depreciation?

Anup Nair: So Rajesh, like Aditya ji was mentioning, this is a transitional year. The next few quarters is when things will settle down and we will get to a steady state. So in terms of guidance, at least for the year, we gave you a guidance that in EBITDA levels we will be somewhere around 10% to 11%, and PAT would be at about 6% to 7%. I think it's a bit too early

to give you individually

how much each of this will contribute because the norms have just come in. And like we said, our own STQC product lin es just started flowing in from June end. So , I think it will take a couple of quarters to see how the market settles and what kind of market share gains also we can do. So possibly we could answer this query maybe in two quarters down the line.

Rajesh Kothari: Great. Thank you, sir.

Anup Nair: Thank you.

Moderator: Thank you. Our next question comes from Dhruv Jain with Ambit Institutional Equities. Please go ahead.

Dhruv Jain: Thank you so much for this opportunity, sir. My first question is on the channel inventory. So post-STQC implementation what we understood was there was a lot of pre-buying in the market. So, just want to understand where is the market right now in terms of channel inventory? And incrementally, how are you looking at that sort of getting eased out through the year? That's my first question.

Aditya Infotech Limited

August 20, 2025

Page 9 of 17

Aditya Khemka: Yes. So, Dhruv, I think, as I just mentioned, the inventories are seeing signs of drying up, so I do not think they will last beyond this quarter. Even in this quarter, many models like there is a wide range of products, many SKUs have dried up. Certain parts of the country have already started shifting to the new norms and the new range because they are adopting faster. We are seeing good traction in South and West India already on STQC. And things are already shifting. So, we believe within this quarter the whole old inventory will literally dry up completely, and the whole market has to be fully shifted towards the STQC norms.

Dhruv Jain: Sure. My second question is on, in this quarter you have seen a very sharp growth, right? So, just want to understand, firstly, what was the mix between volume and value growth? And incrementally, what is the price differential between a non-STQC model or say an IP camera versus the other camera, because we have also seen a very sharp improvement in your gross margins?

Anup Nair: So Dhruv, the revenue growth for last quarter was only about 16%, which is more or less in line with the industry. So, it's not been the sharp growth, especially when we are guiding for 25% plus growth in the whole year. So, I think it's just been normal growth. And like we mentioned, our STQC supplies came in only towards the end of June. So, the price rise was only in the STQC IP stocks. So, whatever revenue growth that you have seen is purely mainly driven by the quantity because the value increase in terms of the ASP increase has not really kicked in. That impact you will see in this quarter when we will be selling majorly STQC IP stocks.

Dhruv Jain: So, broadly, what's the pricing differential between STQC and non-STQC models? Like, what's going to be the price hike that will come through in the market?

Aditya Khemka: Yes. So, I can explain it in the ASP. We segment the IP cameras into entry, mid, high; three buckets. In the higher-end, the differential will be like smaller, 5%, 7% only, because those products were already made on a very high-end SoC with a lot of memory and security already. In the mid-range, it will be probably 10% to 15%. In the low-end, entry-level, now you cannot make products on those cheaper SoCs, you need to double up the memory, put in a lot of fortifying technology inside the product to make it fully secure. There, the differential will be over 20% on the cost.

Dhruv Jain: I get the point. And sir, if I may, just one question. So, you also, if I am not wrong, had a Dahua business, right, in terms of distribution? So, if my understanding is correct, that business will completely phase out, and you will start sort of pushing a lot more CP PLUS products. So, that's how we should think the margins, right? And if you could spell out what's the difference between the

margin for that Dahua distribution and your own margin? So, that will help us in terms of understanding how this margin expansion will come through.

Aditya Khemka: So, I think the differential is almost 3x because that's a pure distribution business, like a distribution trading business. It has been a one and a half decade relationship. But now with the new norms, most of these brands from the neighboring country are getting disqualified. So, we

Aditya Infotech Limited

August 20, 2025

Page 10 of 17

see a sharp decline in terms of revenue with respect to those distribution pie. And as I mentioned, the domestic brands will scale up with CP PLUS being the largest player, we see a larger pie coming to us. So, I think that shift will happen, and the differential is 3x the margin.

Dhruv Jain: Great. Thank you so much and all the best.

Aditya Khemka: Thank you.

Anup Nair: Thank you.

Moderator: Thank you. Our next question comes from Gokul Maheshwari with Awriga Capital Advisors LLP. Please go ahead.

Gokul Maheshwari: Yes. Hi. Thank you for the opportunity. My first question is that how much of your business will be coming from tender businesses, and what would be the terms of the trade different than your normal other B2C business?

Aditya Khemka: So, Gokul, we first of all do not participate in tenders as a company directly. So, our sales and go-to-market is threefold. One is our dealer distribution and channel network, which is the distributors over 500 cities. Second is system integrators, which could be PSUs, large -scale PSUs, or large -scale system integrators, or regional system integrators. And third is the online marketplace or the LFR market segment.

As a brand and a company, we provide products, technology, solutions, service, support, handholding, everything, but we do not bid to the end -user, or do not do direct end -user business.

With respect to the trade terms, it's in the distribution and SI pretty much similar, if there is a large scale case we also try to work on secured terms because the exposures are larger . And generally , these are sometimes large organizations picking up those large cases.

Gokul Maheshwari: Okay, great. And my second question is on the Dahua brand, this brand is going to decline this year, so in your overall guidance what is the growth rate which you are assuming for the core CP PLUS brand, and the sort of decline which you are budgeting for the Dahua brand?

Anup Nair: Hi, Gokul . Anup here. So yes, you rightfully pointed out that Dahua will slowly start declining because as the non -STQC IP stocks of Dahua as we have, that's the only IP stock that is going to sell. And if you see the overall industry growth rate also when we are saying that the industry is growing by 16%, 17%, it will be IP portfolio which is growing almost 25% plus where these players cannot participate. So just to give you an indication, I think this year also in Dahua in terms of revenue we would possibly see a decline of more than 25% , 30% in the Dahua revenues year-on-year. And you already have the guidance of the company revenue, so all that would be coming from CP PLUS.

Gokul Maheshwari: Great, great. Thank you so much and all the best.

Aditya Infotech Limited

August 20, 2025

Page 11 of 17

Aditya Khemka: Sure. Thanks Gokul.

Moderator: Thank you. Our next question comes from Ram Modi from Prabhudas Lilladher. Please go ahead.

Ram Modi: Hi, sir. Thanks for the opportunity. So just, in terms of you alluded for the guidance for this year, I just wanted to look at it for a three year to five year perspective, what kind of consistent CAGR growth we can achieve in the market, and what can be the TAM as well as how fast is the market growing? If I am looking at it for a three to five year perspective.

Anup Nair: Hi Ram. So when we quoted the Frost report, so in terms of units, this market is about 4.5 crores units of c

amera this year . And Frost is estimating that this will become almost more than double by 2030. And so, in terms of the industry growth rate, this industry is growing at both value as well as quantity terms about 16%, 17% for the next five years at least. Now our guidance is that even in the past, if you take a three or five year period, we have always been beating the industry growth rate. And with this opportunity of STQC and with all the major modes that we spoke about in terms of R&D, manufacturing, distribution, reach and brand, we will consistently easily beat the industry growth rate. But slightly difficult at this point in to say what would be the CAGR over a five year period. But at least in the internal perspective, we always try to see this between 20% to 25% CAGR. And that's what our past has also been in, from the last five year period also the CAGR has been about 20%.

Ram Modi: And for this kind of CAGR growth if we achieve , what kind of CAPEX we would be needing to do for this kind of growth?

Aditya Khemka: So I think we have already budgeted our CAPEX for the next two years for factory expansion and few other needs. So it's probably about Rs. 200 odd crores at the moment, unless we look at more JVs or more acquisitions which are possible in the future . But for this kind of growth I think in the next two years this kind of CAPEX will be there. I believe we should be able to fund it with the net free cash flows.

Ram Modi: Okay . And last question from my side, any adjacencies for growth which are looking at or you will be concentrating on the security systems itself?

Anup Nair: Yes. Ram, so there are a few adjacencies we are looking at in terms of associated product lines, and we are possibly looking at inorganic opportunities also here. We will come back to you as an when we are sort of shortlisted on that. As of now the growth in the core CCTV category itself is so strong, and we are at the moment putting all our energies and focus over the next few quarters to ensure that this market share gains happens, and we encash this opportunity of the STQC regulation. But yes , it's in our mind, and it's on our table plans in order to grow the categories . And we should get back to you soon on this.

Ram Modi: Okay. Thanks for this. Thank you.

Aditya Infotech Limited

August 20, 2025

Page 12 of 17

Moderator: Thank you. Our next question comes from Priyank Chheda with Vallum Capital. Please go ahead.

Priyank Chheda: Yes, hi sir. Thank you for the opportunity. Sir, what would be the volumes that we would have sold in this quarter on the total level and would it be possible to divide these volumes in IP and analog cameras?

Anup Nair: Anuj, I think it's slightly difficult to go into those details on this call. We can possibly get back to you on those details.

Anup Nair: So from an indication perspective, I think what will give you an idea is probably in this quarter we will sell 3x the quantities of IP cameras that we sold in the last quarter. So, last quarter is really not a benchmark, but we can get back to you with the quantity breakups.

Priyank Chheda: Sure. And one last question on this STQC implementation which has happened, have you seen the final cameras that were getting imported? I believe on a full year India used to import somewhere around Rs. 5,000 crores worth of cameras from the neighboring countries mainly, have you seen that going down, with the implementation of this STQC?

Aditya Khemka: Sorry, what is the figure you said?

Priyank Chheda: From the HSN code which I could gather, it was roughly around Rs. 5,000 crores.

Aditya Khemka: Which is imports of which, overall from or what is this? This figure is imports of?

Priyank Chheda: Of the total CCTV cameras.

Aditya Khemka: Yes. So, basically, that has already stopped. Finished product import is literally very low now. So only analog some might be doing,

but that's a flat market. In the IP camera space, unless you are qualified, because see what has happened is, BIS has taken off all the old R-numbers of all the brands that were registered who are not STQC qualified. So this also happened in April, end of April. And to obtain the new BIS, it has to go model wise. We had to get the certification done and then get the R-number from BIS. So it's a process which is being followed, and without that you cannot sell. So I do not know if some people doing that without the R-number, it's a different story, that's a grey market, which might be miniscule. But largely, we see a great reduction on that.

Priyank Chheda: Got it. And in terms of our capacity, I suppose we had a capacity of 1.5 million cameras per month, roughly around 18 million units that we have. Would it be possible to follow the timeline?

And then we are looking at the expansion, right, on nearing doubling of the capacity, so what would be the timeline by when the capacity expansion would come online?

Aditya Infotech Limited

August 20, 2025

Page 13 of 17

Aditya Khemka: So it's already in action. So last quarter we did not utilize our full capacity also because of the certification process and the old stocks in the market. This quarter, we are trying to scale up our capacity to almost 90%, 100% level. And by next quarter, we will already be at, almost 30% higher capacity build up, and we plan to scale up to 2.3 million, 2.4 million by Q1 of next financial year.

Priyank Chheda: Okay. Got it. Thank you.

Moderator: Thank you. Our next question comes from Anuj Kashyap with A3 Capital. Please go ahead.

Anuj Kashyap: Yes. Congratulations on your debut. Sir, I just wanted to know in percentage terms, how much of our supply chain is import dependent, still import dependent, in percentage terms?

Aditya Khemka: So, see, I exactly cannot define percentage. But all these semicon, because we do not have fabs in India are coming from abroad. Semicon means semiconductor, SOC, memory, DRAM these things, and the passive electronic components are also coming from abroad because those ecosystems still do not have either quantity capacity or the quality or the cost capacity in India, and it's coming up, the government is pushing it. But until it comes we are dependent on import, which is almost 60% of the BOM. The balance 40% we are already in motion to localize, which is all the enclosures. We have already invested in most of the housings, moulds, cable connectors, all those designs and everything, and it's already localized with third-party manufacturers. And the company has plans to set up own in-house manufacturing also, in the near future. So we use both in-house and third-party. Same with cables, connectors, we are doing some work on that also in-house and outside. We started the lens manufacturing also in India, and that will go into the volume in the coming quarter. So those things are in motion. So, right now it might be maybe more than 70%, but it will come down to 60%, until the component electronic ecosystem comes in India, and that is true for almost every electronic.

Anuj Kashyap: But sir, is it country specific like imports, like do we have diversification like Taiwan or China, or we are only dependent on single country?

Aditya Khemka: No, no, no. See in the new STQC norm, first of all you cannot use a Chinese SOC or a critical component. So almost out of that 60%, 35% of the BOM which is the core and the heart and the brain cannot be from China. So, that has all moved to Taiwan fabs, and Taiwanese or American companies, and we have already aligned with all of them. Over the last two years the R&D and the teams have been working on that. The passive electronics we continue to do some from

Taiwan, some from China or Singapore, these are small passive electronics.

Anuj Kashyap: And sir, one more question sir, like sir in

the near future, like one to two years, the ecosystem

gets developed and we have our own line -ups, so are you considering export even for the CP PLUS brands? Are we taking into consideration that stuff, the export stuff?

Aditya Infotech Limited

August 20, 2025

Page 14 of 17

Aditya Khemka: Yes. So see, in past we have sold products globally in many countries, and products have been successfully deployed and used. We could not sustain some challenges from the Chinese in the past years, but now the whole world is changing, the geopolitics is changing, and we have a great China Plus One opportunity. I think CP PLUS is best poised for that China Plus One strategy.

So, while we have too much on our plate right now to do within the domestic market, which we of course the focus will be to solidify further the home turf and gain more market shares. On the parallel, on the other side, we will start taking baby steps on the exports opportunity and the China Plus One strategy. So in the next coming years, for sure, that's on the cards.

Anuj Kashyap: And for the add-on, export will be margin accretive for us, that's right proposition?

Yogesh Sharma: Margin accretive.

Aditya Khemka: Yes, yes. So early to say, but yes, it should be.

Anuj Kashyap: It should be, right? Basic logic, sir, it should be like that. Congratulations for the future, and we hope we get to see more. Okay. Thank you.

Aditya Khemka: Thank you so much. Thank you.

Moderator: Thank you. Our next question comes from Raman KV with Sequent Investments. Please go ahead.

Raman KV: Sir, I just want to understand what's our production capacity of this CCTV cameras annually?

Aditya Khemka: Like we mentioned, it's about 1.5 million monthly, so about 18 million annually. And we are increasing it to 1.9 million from next quarter, going up to 2.3 million by April. That's the plan.

So next quarter, investments and factory expansion is already in place.

Raman KV: And, sir, I just want to understand the unit economics. So how much, like on an average, what's your selling realization of CCTV camera?

Aditya Khemka: See, it depends again, because this is the capacity for all cameras, recorders, which is put together. Analog cameras realization is let's say Rs. 1,000. The IP cameras can be 3x of that value, so it depends. The consumer home cameras could be Rs. 1,000 to Rs. 2,000. So that's the ASP we generally do. Of course, there are project products and all like PDVs and all which go Rs. 30,000 and Rs. 40,000 also, which are in large projects and all. So it depends. So we generally do not look at unit economics. It's very diverse.

Raman KV: Okay. And sir, you said we do not have in-house manufacturing, right? We outsource the manufacturing part of the remaining 30% of the entire ecosystem. Is my understanding right?

Aditya Khemka: No, no, no. I think everything is in-house. Nothing is outsourced from outside.

Aditya Infotech Limited

August 20, 2025

Page 15 of 17

Raman KV: Earlier you mentioned that you have a third-party manufacturing for molds and cable connectors?

Anup Nair: No, no, Raman, it was a 50%-50% JV, which was almost set up almost six years back. As of last September, we acquired the remaining 50%, so it's a 100% subsidiary. And this first 50:50 JV with Dixon, now it's a 100% subsidiary. The name is AIL Dixon. So the whole capacity is in the 100% subsidiary, and it's completely in-house.

Raman KV: Okay, and I just want to understand how much CAPEX will be required to set up a manufacturing unit? Let's say about, 1 million pieces per month.

Aditya Khemka: So, see, we do not see it that way, there are other processes also. I think in terms of the further, we spoke about the capacity increase that is going to happen. And in terms of our CAPEX over the next two years, we will be about Rs. 200 crores. So that includes the capacity expansion as well as the backw

ard integration and the more localization that is there.

Raman KV: And from this Rs. 200 crores of CAPEX, which you are planning to incur over the period of two years, how much incremental revenue can we add?

Anup Nair: So, Raman, we are not forecasting for the year beyond. But in terms of capacities, we can say that we will increase the capacities to almost 2.5 million. So maybe 60% further revenues growth can happen. But at the moment, we have not guided for the next year.

Raman KV: I just wanted to understand over the period, like you said that Rs. 200 crores CAPEX will be taking over the period of three years, next three years --

Anup Nair: Two years, Raman.

Raman KV: So I just wanted to understand how much will be the peak revenue from this CAPEX .

Anup Nair : So the CAPEX that we said will be over the next two years and that should help us grow our revenues of possibly 60% over the next two years.

Raman KV: Okay. And sir my final question is with respect to the recently acquired Dixon JV. How much did you pay to get the 50% of the remaining Dixon? And does Dixon still hold any minority shares?

Aditya Khemka: Yes. So all that information was there in the DRHP. So this deal happened as of September of last year. But that was based on I think the financials of the year before. And the deal was at about Rs. 4,000 crores, but it was not a cash deal. Because Dixon is a strategic partner and wanted to be part of this journey. So there was a share swap that happened, and they owned about 6.5% in the parent company. And that deal valuation at that point in time was Rs. 4,000

Aditya Infotech Limited

August 20, 2025

Page 16 of 17

crores. But it's more of a strategic deal because they have been a partner for almost six plus years. And it was, there are other parameters.

Raman KV: So they still own 6.5% in the manufacturing JV, right?

Aditya Khemka: Yes, almost, based on whatever dilution has happened in the IPO.

Raman KV: Okay, thank you sir.

Moderator: Thank you. The last question for today comes from Mulesh Savla from Shah & Savla LLP. Please go ahead.

Mulesh Savla: Thanks for taking my question, and heartiest congratulations on bumper listing, and good set of numbers. And also thanks for a very detailed and in -depth commentary on the company's business model. Most of my questions have been answered, but sir, I just wanted to have one clarification on local content in our products. You said about 40% we will reach. So this 40% of local content will be 100% manufactured by India, or I mean by the company or we will be sourcing it locally?

Aditya Khemka: So, I think the starting journey will be mixed bag. So like I said things like housing, cable connectors, lenses, we will do in -house also and third -party also. At the moment difficult to say whether we will stop the third -party because there are so many models, so many wide diverse product range, and it will be new for us also. So I do not know whether we will shift all in -house, possibly we will keep both, and then we see the efficiencies and the optimizations, what works better for us, and take a call as we progress in the coming two, three years, whether it's all third -party, all in -house or a mixed bag.

Mulesh Savla: Okay. One last question from my side. We have a good expectation of 20% -25% CAGR for another three to five years. I just want to know as per management's thought what can be the challenge or negative which can restrict our growth to this level?

Aditya Khemka: So you see, if you look at last five to six years, we have been delivering 20% plus CAGR in the adverse situations where we were challenged by the onslaughts of some of the Chinese giants, and some of them were government owned companies also, by the Communist Party of China. So I think we have fairly done well to reach to this position.

Moving forward, we feel we are in an even better position with

the tailwinds provided by the

government to have cyber security norms and other things in place, and the further actions that the company is doing on literally every front, be it R&D, manufacturing, localization or the go -to-market different strategies in different verticals.

Aditya Infotech Limited

August 20, 2025

Page 17 of 17

So I think we should be able to do that. Now whether we scale X or a Y, well, I think all depend on how well we execute it. So I think we are all day in day out working on our people, our strengths, and our execution to see that we are able to deliver what we are talking.

Mulesh Savla: Good. So, even EBITDA margin also in the range of about 10% to 12% and PAT about 6% to 10%.

Aditya Khemka: So our next year guidance has been 10% to 11% EBITDA and 6% to 7% PAT. Further beyond that, let's see how it goes. I think as Anup mentioned let the new norms stabilize the market and stabilize the new product range. Thereafter we will have a better visibility.

Mulesh Savla: Great, great. Thank you so much and wish you all the very best.

Aditya Khemka: Thank you so much. Thank you everyone.

Moderator: Thank you. Ladies and gentlemen, as there are no further questions from the participants, I now hand the conference over to the management for closing comments.

Anup Nair : So thanks to ICICI for organizing this call and thanks to SGA for coordinating this, and this is our first earnings call, so, and we take all the wishes from everyone, and hope to see you soon on the next earnings call.

Moderator: Thank you. On behalf of ICICI Securities Limited, that concludes this conference. Thank you for joining us. And you may now disconnect your lines. Thank you.

Page 2 of 17

Moderator: Ladies and gentlemen, good day and welcome to Aditya Infotech Q2 FY '26 Earnings Conference Call hosted by ICICI Securities. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing star then zero on your touch-tone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Aniruddha Joshi from ICICI Securities. Thank you and over to you, sir.

Aniruddha Joshi: Yes. Thanks, Neerav. On behalf of ICICI Securities, we welcome you all to Q2 FY '26 results conference call of Aditya Infotech Limited. We have with us today senior management represented by Mr. Aditya Khemka, Managing Director; Mr. Anup Nair, President, Strategy & Business Development; and Mr. Yogesh Sharma, Chief Financial Officer.

Now, I will hand over the call to the management for their initial comments on the quarterly performance and then we will begin the question-and-answer session. I also heartily congratulate the management team for hosting a stellar set of numbers in Q2 FY '26.

Thanks, and over to you, Aditya, sir.

Aditya Khemka: Yes. Hi. Thank you, Aniruddha and good afternoon, everyone. Thank you for joining us today. Aditya Infotech has delivered another quarter of strong performance in Q2 FY 26, building on the momentum from the previous quarter.

Our results reflect our aggressive growth strategies, continued market share gains and an integrated approach combining strong brand recall, industry-leading manufacturing capacity,

extensive distribution reach and sustained investments in R&D and strategic collaborations. The implementation of STQC norms in April 2025 marked a significant regulatory shift for the industry. While the first quarter was a period of adjustment characterized by temporary supply-chain disruptions as well as certification backlogs, the second quarter witnessed a return to normalized growth. This recovery has been led by CP PLUS, which now offers the most extensive STQC certified portfolio in the market, underscoring our agility, regulatory readiness and commitment to maintaining market leadership.

With respect to manufacturing capacity expansion to fulfill the growing demand, we continue to invest significantly and have increased capacity to 1.8 million units per month in this quarter and growing further to 2 million units in the coming Q4 2026. Most of this has been funded entirely through internal accruals.

Our housing and moulding plant was kicked off this week and the same is expected to be operational by middle of next year, further supporting in-house backward integration.

Aditya Infotech Limited

November 13, 2025

Page 3 of 17

On the R&D side, we continue to expand our investments, adding more engineers on a constant basis and aligning with critical components and semiconductor companies to deliver cyber-secured CCTV products. We opened a new R&D center in Ahmedabad and are on track to open a subsidiary in Taiwan for R&D purposes.

This quarter, we also announced a definitive agreement with L&T Semiconductor Technologies to manufacture 9 million IP cameras over the next three years as soon as the chip gets ready. Together, we are co-designing India's first IPC SoC with Vision AI technology, enhancing energy efficiency, data security and AI-driven surveillance. This collaboration further strengthens CP PLUS position as a global brand, proudly building in India for the world.

Let me walk you through briefly now on our financial performance for Q2 2026. Q2 FY '26 revenue stood at INR919.6 crores, growing 37.5% year-on-year, driven by robust traction in CP PLUS-branded IP cameras and record shipments of certified model

s.

EBITDA stood at INR111.1 crores, up 157% with margin expanding to 12%, supported by favorable brand and product mix, increased localization and operating leverage. PAT rose 239% to close to INR70 crores.

If we look at for the first half of FY26, revenue has touched close to INR1,660 crores and growth has been about 27% year-on-year. On the EBITDA side, we have increased over

102% and standing at INR176 crores and H1 EBITDA Margin looks like 10.6%. On the PAT side, we have also grown at 138% year-on-year, crossing INR103 crores in the H1.

We have also made significant progress in strengthening our balance sheet. The use of the IPO proceeds for debt repayment has resulted in a meaningful reduction in the net debt and finance costs, thereby, enhancing profitability and providing financial flexibility for future growth. Also, our consolidation of the subsidiary AIL Dixon is showing gains in H1 FY26.

CP PLUS is gaining market share across all segments, reinforcing our leadership in the Indian video surveillance market. As per an independent source, our market share stood at 31.4% in Q1 of FY26 and has further consolidated in Q2 FY26, report yet to come out. CP PLUS brand

share in A IL's overall revenue has grown to 86% in quarter two and is expected to grow further in the second half of this year. Also, the share of IP products in overall CP PLUS portfolio has grown significantly to almost 70% in the last quarter.

We now plan to launch a multi-brand strategy to maximize our market shares, serve diverse customer needs and reach into the roots of Bharat. At IFSEC 2025 next month, we will unveil two new brands, Eyra and Nexiview. Eyra will offer an alternative to partners currently serving Chinese brands, while Nexiview targets the Indian interiors market, and aims to organize the unstructured segment. The impact of these brand launch will be seen in the last quarter of this financial year.

Aditya Infotech Limited

November 13, 2025

Page 4 of 17

In CP PLUS brand, we are also focusing on multiple series to capture the value on SMB market, as well as launching soon the Pro Series next quarter to target global brands, which will go live in the coming quarter.

The market in India is undergoing a complete reset, driven by strong sector growth and a clear preference for Indian brands. And CP PLUS holds a distinct advantage in this transition. We have secured key customer acquisitions in private enterprise as well as government sector, and continue to increase our feet-on-street presence to strengthen engagement with consultants, architects and system integrators.

Globally, we are witnessing a shortage in chipsets, sensors and storage, largely driven due to the DDR and Flash prices going up, as well as the supply constraints. While this may sound disruptive for smaller players, it also will lead to supply consolidation, which will further benefit CP PLUS, consolidate its market share. We also expect price rise across various categories in the coming quarter.

All these developments, combined with operational efficiencies, position us well to sustain growth and create long-term value for our shareholders. Looking ahead, we remain confident

of meeting our FY26 guidance of 25% to 30% revenue growth, EBITDA at 10% to 11% and PAT margins of 6% to 7%. The organization will continue working to meet or beat this guidance in the coming half year.

Thank you once again for your continued support, and we now can open the floor for questions. Thank you.

Moderator: Thank you very much. We'll now begin with the question-and-answer session. First question is from the line of Dhruv Jain from Ambit Capital. Please go ahead.

Dhruv Jain: Thanks for the opportunity and congratulations on great results. My first question is if you could just split what has been the volume and the value growth in this quarter for the entire revenue?

Aditya Khemka: I think it's pretty much at par v

olume and value. Basically, the analog market is more or less going flat and the major growth is coming from IP cameras. So, if the market in India is growing 15-17%, IP is growing almost 2x because earlier market was literally half-half, 40-60. And we being the largest certified portfolio and the largest Indian brand are actually growing much faster. Some of the brands are still grappling in the process of certification. So our growth of IP camera is very high and on the value side also it's at par more or less.

Anup Nair : We haven't taken any price rises at the moment. Like Aditya was saying, we are expecting price rises from next quarter onwards. So essentially this revenue growth has come from volume growth and by market share increases.

Aditya Infotech Limited

November 13, 2025

Page 5 of 17

Dhruv Jain: And if you could just quantify what kind of price increases do you envisage in the coming quarters?

Aditya Khemka: So, I think the teams are working on that. We are trying to see how much minimum we can sustain and pass to the Indian consumer. We probably would announce it in the first week of January.

Dhruv Jain: And my second question is, in your presentation, you mentioned that you are going to start Lens and PTZ module manufacturing from the 4th quarter onwards. So just want to understand what kind of margin impact would it have in terms of improvement for the next year?

Aditya Khemka: So I think initially I don't see major margin impact because there will be a sustenance period of learning curve. And we will first localize it and try to get more and more localization done on the Lens and PTZ module side. But yes, in the mid to long run there will be few basis points per camera cost as we gain efficiencies and scale. So, hard to say right now. But yes,

I think maybe in the coming quarters, we will have a better visibility on that question.

Dhruv Jain: Thank you. Those were my questions and all the best.

Aditya Khemka: Thank you.

Moderator: Thank you. Next question is from the line of Manish Poddar from Invesco India. Please go ahead.

Manish Poddar: Hello.

Aditya Khemka: Hi Manish.

Manish Poddar: Hi. Just one question. So, can you help me understand, do you guys have the distribution infra for this new products which you'll be launching or planning to launch? And how should one look at it from a margin perspective when one is trying to think of this new opportunity? Thank you.

Aditya Khemka: Yes, I think great question, Manish. So I think margin side we are very cognizant. We will keep it at par with our own brand. What we are trying to do is create different products, different SOCs, working with every semiconductor company. So we are having foot in the game across the board and positioning these brands in a different strategy.

So, there is a set of channels which has been serving the Chinese brands which has created a vacuum. Of course a large chunk of that is coming to CP Plus, but there is a chunk which is still scouting other areas. So we thought we will launch a second brand alternative because these guys work largely on a depth model rather than a breadth model where CP Plus

Aditya Infotech Limited

November 13, 2025

Page 6 of 17

functions. So that model we are going with the Eyra brand.

On the Nexiview side is a product more let's say for rural market, more mass market, the unorganized sector. Those kind of players to attack that segment and have an answer to that price point. May not be exactly that price point, but slightly higher for the market. So that's there. Margin side we are keeping it more or less at par with our own brand CP Plus. And we have the distribution infra because most of them were connected. And in the past if I can tell you we were doing a two brand strategy. So that one brand is already a vacuum. So that channel is still there with us. Some has come to CP; some will go to Eyra. And

then we will

look at the newer category of channels with Nexiview.

Manish Poddar: Okay. And can you also talk about let's say from a capacity perspective.

Moderator: Manish, sorry, can you speak louder please.

Manish Poddar: Sorry. Also can you talk about let's say from capacity perspective. I understand you all are increasing capacity in the plant. But can you also talk about let's say backward integration in any components as such which will be critical let's say from a thought process let's say in the next 12-18 months. How are you looking at those areas? Thank you so much. And congrats on the result.

Aditya Khemka: Thank you. So, on the capacity side we are expanding quarter-on-quarter. And we are preparing ourselves for next year's market demand, keeping some market share in our mind.

With respect to components, like I said even in my earlier calls. Whatever is locally possible in India as of today, we have already kick started that work either third party or in-house.

And as you know things like housing, power, cable, we are going in-house more or less, things like lenses we are going in-house. But stuff like a semiconductor or very basic passive electronics, we are right now not putting our foot in the component ecosystem because that's a different business model.

I mean I can't set up a component ecosystem for only serving myself. So, for that we are partnering or collaborating with the global giants. Some of them are setting shops in India so we will look at localizing. Those who are not we will look at Taiwan, Korea or US, whichever countries.

The passive maybe we may continue buying from Taiwan and China. So that's what we are doing. So I think a sizable chunk will be localized. The goal is that at least half or more than half in the next 12-24 months we are able to do majority of products locally.

Manish Poddar: Got it. Thanks.

Moderator: Thank you. Next question is from the line of Krishnam Saraf from Samridhi Finserve. Please go ahead.

Aditya Infotech Limited

November 13, 2025

Page 7 of 17

Krishnam Saraf: Hi. My first question is on the inventory and the debtors level. While we are increasing our top line they seem to be inching up as well. So just wanted to understand is this something we expect going forward as well due to say the nature of the industry or do we have something in mind to sort of stabilize at these levels?

Anup Nair: Hi. This is Anup here. So the debtors and inventory it's actually stabilized now. And if you see it's actually improved. From a cash conversion cycle perspective there has been

improvements this quarter. I think our net working capital possibly is looking up because we retired debt. I think we are working on improving efficiencies on this level. And I think you should see the efficiencies quarter -on-quarter.

Krishnam Saraf : Got it. Got it. And the second question is on the supply side gap. So while in the previous quarters we were seeing a supply gap at the ground level but now do we still see that persisting going into say, October, November as well or up?

Anup Nair : So it's difficult to say how many more brands are getting certified. But on the ground we are still seeing sort of status quo. And like we were mentioning, we have gained significant market shares in IP and we expect this to improve. There are a lot of players who have applied for certifications and they are underway. But difficult for us to predict how much of them will get certified in the next two quarters.

Aditya Khemka : And more so how much of them will have scale to catch -up soon with the pent -up demand. So, I think from that perspective CP PLUS has a clear distinct advantage.

Krishnam Saraf : Got it. And the last question was on the margins, the gross profit margins. So there is a 9.4% year-on-year expansion. Out of this is the margin due to consolidation roughly like 4% to 5%?

Anup Nair : No. So , the major driver

has been the change of the mix within the company. CP PLUS revenue in the quarter has risen to almost 86%. This was standing at around 70% last year. So, this has risen to almost 86%. And we see that possibly in H2 this can even rise further to possibly 90 percentage levels.

And within the CP PLUS portfolio, the share of IP cameras. That's also improved significantly. And in Q2 it was closer to about 65% and we foresee this being at this level. So, these have been the major margin drivers. And then of course the finance cost saving and the consolidation benefits. And the localization benefits. But the major drivers have been the CP PLUS mix and the mix within CP PLUS.

Krishnam Saraf : Got it. Okay. Thank you so much. All the best.

Moderator: Thank you. Next question is from the line of Nikhil Kale from Invesco. Please go ahead.

Nikhil Kale : Yes. Thank you for taking my questions. Congrats on a stellar set of numbers. So just want to kind of double dive deeper into the gross margin expansion. So, you mentioned that it's

Aditya Infotech Limited

November 13, 2025

Page 8 of 17

largely been driven by the product mix. Now, whatever localization kind of efforts that you're taking. First, we just wanted to understand what kind of, what percentage of BOM are you kind of trying to localize over a period of time in India? And then what kind of cost benefits do you see coming in because of that?

Aditya Khemka: Yes. So, I think I just answered that, the previous one. So basically, as I mentioned, stuff like , all kinds of mechanicals, power, cable, all these things are getting localized, either in -house or third -party. And in the mid -to-long run, mostly in-house only. Some of that work has already started. And in any case, we have localized all of it, whether it's third -party or in-house. Then the lens is starting in the coming quarter.

But the only thing which will still be dependent on global brands will be the semiconductor , memory flash , DDR which is SOC , sensor , memory flash and basic passive components, capacitors, transistor , diodes , these kinds of things , which we will continue to buy from global brands or Taiwan, China, depending on the passive components. So I believe in the next 12 to 24 months, gradually we'll see more than half localized and half import in terms of the value of the BOM.

Nikhil Kale : Okay, understood. And this mixed benefit that you're talking about, so that will kind of continue. And you're also talking about possibly pricing, price increases kind of coming through the next few quarters or starting the next quarter. So from that perspective, would it be fair to assume that your gross margin should ideally inch upwards from the current limits?

Aditya Khemka: Yes, we hope to achieve that, yes.

Nikhil Kale : Okay, understood. And secondly, just on the other expenses, right? So, I think other expenses have been a pretty sharp increase, 60% Y oY increase there. Just any bunching up or any one - offs to kind of call out there?

Anup Nair: There's no one -offs, Nikhil. I think there are investments going into manpower, into R&D and more or less all in the line of business. There must be IPO expenses. Other than that, there are no one -offs, INR25 crores of IPO expenses.

Nikhil Kale: Okay, understood. Thank you. What were the IPO expenses? We could just quantify that.

Anup Nair: It's about INR25 crores, but I think it's netted off within the share pr emium account.

Nikhil Kale: Okay, understood. Thank you.

Moderator: Thank you. Next question is from Mitul Shah from Pa rth Pinnacle. Please go ahead.

Mitul Shah: Hello, sir. Congratulations for the very good set of numbers. Sir, I have two questions. First question is, there is a notification yesterday came from the government of India that they want to increase surveillance for all the critical places.

And they want to have a surveillance mechanism like of China and

every other country has.

Aditya Infotech Limited

November 13, 2025

Page 9 of 17

India doesn't have right now the Surveillance Mechanism. So how much order book you are expecting from the government that and second, there are two part of it.

One is software part and one is hardware part. Hardware part, yes, we can cater to it. But software part is the surveillance for AI-based surveillance. So how much we are prepared for that and how much demand you are expecting from the government?

Aditya Khemka: See, government in India has a long gestation period. We have seen cases which are going on sometimes for years. Sometimes they close very fast. So it's very hard to predict government business. It's still about 15% of our revenue. We feel there are certain sectors of the government which will propel demand in this.

One being railways where it's quite hot and a lot of work is going on. And probably one of the biggest ever supply of CCTV will happen in railways in the next one-two years. And we

stand as a major contender being the largest Indian player all made in India here.

On the public safety side, pockets here and there, smart city, safe city, critical places. These things are decentralized, very difficult to predict each project. But yes, what I can say is we

are one of the largest contenders at this moment even in the government space. And we are well prepared with respect to hardware or even a lot of AI solutions also.

Mitul Shah: And from the Software side, how much we have for surveillance system, how much we are prepared for the surveillance system?

Aditya Khemka: So, as I said, for AI solutions, we are quite prepared and a lot of work is further going on. So we will soon have some more information once we go live on those, probably in the coming quarter.

Mitul Shah: And sir, I want to understand one thing. We have almost, this product is made by us. So why are operating margins at 10% and EBITDA

(wrongly said, kindly read it as PAT Margins) at 5%,

6%-7%? So what is the reason for that? Even though you have all the channels partnered with you, everything is there of your own side. And this product is also being developed by you.

So why it is like that? Why do we have only 6%-7% PAT level?

Aditya Khemka: So, I think we have to understand that we were the only company fighting the might of global brands and especially global giants of China, which actually in many electronics eroded local brands. We have come out stronger. And now with thanks to the global leaders, right, from

US, UK, now India, Australia, where they have given backlash to critical sectors -- to Chinese companies in critical sectors like telecom, drones and CCTV.

So, I think now we have a great opportunity to improve the margins. Like you have already seen a 12% EBITDA last quarter, 7.5% PAT already. And as I answered just before in this question, we see improvement hopefully in the coming future from this side.

Mitul Shah: And I have done the channel check, sir. Almost all of the brands don't have any portfolio for

Aditya Infotech Limited

November 13, 2025

Page 10 of 17

the STQC completed. Even the biggest of the player has only like one indoor and one outdoor unit has come. So for another three months, there is no major player. So how much market share you are going to gain in that case? Will it be continued like last three months? This

three months will also we see that you'll have a tremendous market share gaining from the other players.

Aditya Khemka: So, that's what the organization is working on. It's a solid platform we have and the readiness also. Plus, we already are sitting on a large market share of almost over 30%. We feel our market shares are further consolidated. And even in my guidance speech, which I gave, a lot of factors I mentioned, I ended stating that we are at

the best position to further consolidate our market shares.

Even the chip shortages are going to probably help companies like us to further consolidate because past experiences, the big get bigger and the small, medium, unorganized face some challenges when there are shortages or price rises. So we are preparing ourselves for a sharp increase in market share in the coming H2 of this year. And we believe the readiness of others, we can't comment, but we believe they will all take time.

Mitul Shah: Yes. That's what they are saying. So that's why I'm saying that for the next three months, they are all of them, maybe they come in the after Jan or March. They are expecting approximate around March. I've talked to each and every player. So that is the feedback I've got. And another feedback that I've got that only yours have the promotional event going on this time, but Tesla event due to that a lot of people have bought a lot of camera. So do you see it for the next three months? The sale coming down because they have advanced booking they have done to just get to qualify for the events, promotional event that you have done.

Anup Nair: So, Mitul good, I think you have done a lot of channel checks. So the scheme that you were

mentioning was for last quarter and it's already closed. And these are ongoing schemes which we do for every quarter. So there's a new scheme already announced for this quarter and for H2 as well. So these are periodical schemes. There is nothing exceptional here.

These are incentive schemes that we run for the channel quarterly. Mithul, there are others waiting in the queue as well. So I think we have taken quite a few questions. So if you could just join the queue again, if you want any more questions.

Mitul Shah: Yes. Sorry. Thank you.

Moderator: Thank you. Next question is from Saumil Mehta from Kotak Mutual Fund. Please go ahead.

Saumil Mehta: Yes. Thank you. Two bookkeeping questions from my side. Most have been answered. In terms of, now I see a sustained improvement in the gross margins. You've also highlighted that the contribution of CP plus is only going up. So ideally, that 23%, 24% gross margins have started to move up.

And obviously, as quarters go by, we will see a much higher level than what we saw in the

Aditya Infotech Limited

November 13, 2025

Page 11 of 17

past quarters. In that context, how should we look at EBITDA margins on a sustainable basis?

Should early teens once the new plant stabilizes and operating leverage comes in, should early teens something which is a possibility given the for traction and several business tailwinds what we have today?

Aditya Khemka: Yes, Saumil, I think you're absolutely on the right track. We are also working on those that early teens would be a good position to be in for the EBITDA moving forward. We are working strongly to look at that in the H2 of this year only.

Saumil Mehta: Okay. And in terms of the second question, should one -- I mean, can you just quantify, are there any price hikes already taken in the last four, five months? Because our channel check suggests that there is already INR 300 to INR 400 on a blended basis in various products already price hikes, which have been there in the market. So I mean, are these already being taken or.

Aditya Khemka: Let me explain. So price rise, we are planning from next quarter. So this is a product change.

So, what happened was pre-STQC, there were products made on a different SoC. Industry was using Chinese semicon and making products. Some of them, as per the Indian government, new norms might be vulnerable for backdoor surveillance or something like that, which they believe. We have not come across any such case in the last 18 years of our history, but people believe.

So, then the government came out with stringent norms to basically elbow out the neighboring country brands on this critical sector like they did in the P

ress Note 3 or other

things in other sectors and very strong cybersecurity check, cybersecurity norms, which is what the STQC test labs is. Now when you develop products for certifying those, you can't develop first on a Chinese SoC because that is not allowed. You have to look at Taiwan, Korea, Japan or U.S. which where, of course, the costs are a little higher because of the meat which puts in the SoC.

The memories on those SoC are required much higher, which jacks up the further input cost of the product. And so are the certain other components. Only then you can put in the right algorithm, the software, the code to certify the product. So that there is no back door, nothing possible from anywhere as long as people don't know your password. So that is a change of product.

It's like you're comparing an apple to an orange. Now, a fruit is a fruit. The fruit is a camera.

But the apple used to be sold earlier and now it's not allowed to sell it. You have to sell mangoes. So, the cost of making mangoes was INR 200-INR 300 or so, which was passed on to the market. No price was raised.

Moving on, there will be a price rise, which is evident because of the component shortage, the foreign exchange, a few other things, we will pass it on to the market. We are working on that, what is the percentage to pass on to the market from January. So it's a reset of the market. Still the market absorbed that old inventory, which was lying in the market at old prices in

Aditya Infotech Limited

November 13, 2025

Page 12 of 17

H1.

Saumil Mehta: Sure. And continuation to this, between market share and pricing, will market share be a clear priority, maintaining margins at healthy levels, maybe about 9-10%?

Aditya Khemka: I think you can say so. But yes, we'll have to strike a right balance on this. But at this moment, I think for us, of course, market share will be a priority because it's a great opportunity to sit at a very high market share opportunity in the coming quarters.

Saumil Mehta: Got it. Thank you so much, Aditya, and wish you all the best for subsequent quarters.

Aditya Khemka: Thank you.

Moderator: Next question is from Anuj Kashyap from A3 Capital. Please go ahead.

Anuj Kashyap: Hello, I'm audible?

Moderator : Yes, sir.

Aditya Khemka: It may be a little louder, Anuj.

Anuj Kashyap: Yes. Congratulations for the good set of numbers. Sir, last time we discussed...

Moderator: Anuj, sorry to interrupt you, but your voice is becoming a little muffled.

Anuj Kashyap: Okay. Hello. Sir, in the last conference, we discussed about what is the traction in the exports of the surveillance systems. So are we seeing anything on that front?

Aditya Khemka: So, I think last call, people had asked me about it. Like I said right now, there's so much handling happening here in the domestic front. We want to first consolidate our position here, our market share here. So, we stand by that. While on the parallel, we have started our work, but I think we will look at it with more seriousness and focused approach sometime later.

Right now, I think too much is happening here.

There is multi -brand, multi -series strategy, backward integration, localization, capacity expansion, R&D expansion. So much of work and, market share expansion. So, I think we'll first focus in the coming few quarters in the domestic front, while we will, on the parallel side, prepare ourselves for the export market. But I think that will be probably a few quarters down the line.

Anuj Kashyap: So, you're right. So, there's too much on the plate right now.

Aditya Khemka: Yes, too many fronts.

Anuj Kashyap: So, thank you, sir. That's all.

Aditya Khemka: Thank you.

Aditya Infotech Limited

November 13, 2025

Page 13 of 17

Moderator: Thank you. Participants you may press star and one to ask the question. Next question is from the line of Mulesh from Shah & Savla. Please, go ahead.

d.

Mulesh: Thanks for taking my question. And, really, heartiest congratulations on excellent numbers.

Sir, can you please help us understand a little more about our JV with L&T Technologies for chips and all those things? What will be the scope of work we will be doing or what will L&T be doing? And what kind of revenue generation can we expect out of that? That's my first question.

Aditya Khemka: Sure. So, let me take that. So, first of all, there is no JV with L&T, it's a MOU with L&T. It's a definitive agreement. So, there is no joint venture. So, L&T has invested into semicon development. And they came to us probably a year or two ago to co -develop IP camera chips and we being the anchor customer to work.

So, our R&Ds and them have been working closely to define the right DOQ, right chip, right semicon, right parameters, what is going to be the solution, what kind of cost, and then start developing. The development is being done by their engineers. Our team s are supporting that.

Mulesh: Okay.

Aditya Khemka: We have then signed that we will buy 9 million chips in the three years once the development happens and use it in CP PLUS products and develop products on those chips, which even

the Indian government, Ministry of Electronics, the ministry is wanting that India should export chips and Indian chips should be used. And of course, these are time -taking activities.

The development of a chip is a two -year process. So, we already passed one year. Hopefully, in the coming year end, we should be able to roll out something. And then the product will be developed on that. So, that is the arrangement. So, that is the arrangement with L&T. And I believe they are doing similar such things in other categories of semicon also.

Mulesh: Okay. So, basically, we will be sourcing chips from them rather than importing it or buying it from other vendors?

Aditya Khemka: A part of our requirement. We can't shift everything to a new chip. We will look at it once the chip has passed our stringent quality test and our product development. A part of our requirement, we will use the locally -made chip. And we will have, of course, preferential pricing, preferential benefits, preferential lock -in at the initial year. Those kind of things are there.

Mulesh: Great. And, sir, how do we still see the competition from our competitors like Matrix and other China brands are , now with these S TQC norms, other China brands are no more sold in India or what is the status, sir?

Aditya Khemka: So, most of the Chinese brands are not qualifying because the norms are not allowing those

Aditya Infotech Limited

November 13, 2025

Page 14 of 17

Chinese brands to be playing the IP camera field because of trusted supply chain and the cyber security norms. So, they are not active in this field. You mentioned Matrix. Matrix is having some products qualified, but we don't see them in the retail distribution space, which

is our largest place.

We see them in certain cases somewhere in enterprise and government. But I think it's more of a regional player based out of West and few places here and there. So, off and on we have them but not, something which crosses our boardroom thoughts.

Mulesh: Right. So, basically, we are the market leaders so far as local production is concerned?

Aditya Khemka: You can say so at the moment, yes.

Mulesh: Great, great. And just if I can squeeze in one, our -- Dixon is our equity holders and one of the subsidiaries where they were also joint partners, have become now the shareholders of our main company. So, what kind of involvement or role they play in manufacturing activities and do we look at something more also to be produced locally and sold in collaboration with Dixon?

Aditya Khemka: So, Dixon has been a great partner over the last 7-8 years of relationship as a joint venture, and then we bought over the stake and b

ecame a subsidiary, and it was our share swap given

to them. Therefore, they are a shareholder. The managing director of Dixon is a director on the board. So, they play an active role on strategy side with us and very valuable insights.

With respect to manufacturing, we have a service agreement in continuation with them. So, for running the plant, while we have already put in our own teams and our teams are driving it but they are always there for any kind of support should we need any due to the agreement we have and the relationship we have.

With respect to other products, if any, I think if we take a call to look at another product category and if Dixon is the right bet, then we will look at that or otherwise, I think it's hard to say today about whether Dixon will be the right bet or not for that product category. It all depends in the future, which product and who is the right EMS or if we do it in our own plant, we will take a call.

Mulesh: Great. Great sir. That's very helpful and thank you so much and all the very best. Thank you.

Aditya Khemka: Thank you.

Moderator: Thank you. A reminder to all the participants, you may press star and one to ask a question.

Next question is from Aniruddha Joshi from ICICI Securities. Please go ahead.

Aniruddha Joshi: Yes. Sir, if you look at the large player from China was extremely active in Southern markets as well as Mumbai city, and now with that player getting out of the market, what are the strategies we are implementing to gain more market share in Southern markets as well as the Aditya Infotech Limited

November 13, 2025

Page 15 of 17

Mumbai markets? I mean, sir, if you can elaborate in terms of what are the new initiatives we would have implemented to gain market share? That is question number one.

Secondly, in terms of we keep hearing that a lot of schools are likely to CBSE and IC SE, both have been made it mandatory. Even Maharashtra also, I guess some of the schools have been asked to implement CCTV cameras and I guess in UP, there are school buses are asked to implement CCTV cameras. So, what are our initiatives on this side and how do you see the market progressing on this front as well? Yes. Two questions.

Aditya Khemka: Thank you. So, I think you pointed out well the west and south were stronghold of some of the global brands and the Chinese brands. We also are strongly present but market share relatively was smaller. We have seen great traction in the last quarter itself from some of these markets and what we have been doing over the last few quarters is investing heavily in street -on-street in all the west and south regions and we have fairly gotten a lot of trade manpower, experienced manpower right from government to enterprise to private sector or to distribution space to cover maximum of this market share.

On the other side, we are also in plans to have a south-centric extensive 360 degree marketing campaign. So far if you see, our brand has been a very strong brand. Recall in the Hindi - speaking belt with our tagline Uparwala Saab Dekh Raha Hai and then the brand ambassadors and stuff like that.

We have now planned a very strong south-centric campaign picking up brand ambassadors from all the south three states and looking at a very comprehensive strategy so that it becomes a household name known to every person right till the village in the south of India also.

I think that will help us a lot along with the product portfolio and the offering the feet -on-street and the maximum investment going in those regions. A part of that we could see in the last quarter and we believe in this quarter moving forward we will keep seeing our market share growing in the west and south of India.

Regarding the second question of schools, government of India came out that all the schools should have cameras. We are seeing results here and there

from most parts and our teams are

working with all the private sector or the government schools to ensure that maximum of the

coverage and the pie comes to us. And so on and so forth in almost every sector.

So manpower expansion, touch points expansion, marketing expansion specifically dedicated to pockets where we need more is all coming and it's all on the cards. So, the teams are working on that here.

Aniruddha Joshi: Okay, sure sir. One more question. What is the strategy of the global players like Bosch or even Honeywell which are non-China based players. So logically they may get, they may be successful eventually in getting the certifications across the product range. So but eventually I guess, they are still not in the channels or the retail markets so it's difficult to understand the strategy from retail perspective. So how do we see these players in a way changing the

Aditya Infotech Limited

November 13, 2025

Page 16 of 17

stance and what is our strategy again to counter these brands also.

Aditya Khemka: Yes, so the global brands, most of the DNA has been enterprise and government in the past, two decades or more. I believe they will still remain there. One or two brands may try to enter the distribution space, but will take a lot of time and I don't think they can cover up the mass scale distribution with the scale, size, the DNA and other things.

So some brands like, I believe Honeywell has some certification already there but we don't see any products out. So, I don't see that as a major market share play from any of them because first of all those who can do that are not having their own products. They only source from others.

Those who have their own products only play in the large scale, you know, the very, very higher end of the market globally.

So, I think it's hard to comment if somebody like, for

example, Apple users would come down to a Vivo or even below that price point in a mobile market, So I think we'll have to see. At the moment, I don't see anything like that happening or any major traction from most of these brands.

Aniruddha Joshi: Okay. So sir last question. We also do some of the contract manufacturing for some of the brands like Qubo, etc. So are we going to continue on these lines or we to use the excess capacity or we would be completely using the capacity only for the CP PLUS products now?

Aditya Khemka: So I think without naming anyone, I would say we have, we will continue, OEM, ODM, EMS work for anyone who we feel is strategically okay and not too much of competing. It only strengthens the manufacturing facility and we'll continue to expand the capacity to keep

feeding that also, of course, without compromising any of our own brand or brand's capacity utilization needs. So first and foremost will be our own brands and then whatever excess is there, we are okay to manufacture for others whether Indian brands or global brands.

Aniruddha Joshi: Okay. Sure, sir. This is very, very helpful and congrats to you and entire team for posting such a stellar performance. Thanks from my side.

Aditya Khemka: Thank you.

Moderator: Sure, sir. Next question is from Nikhil Kale from Invesco Mutual Fund. Please go ahead.

Nikhil Kale: Yes, thank you for the follow-up question. So you talked about metrics, concepts. So I think on the STQC side, we see a lot of certification for say Prama as well. So just wanted to understand your views on how are they kind of scaling up in the market. And from your perspective also, I mean, what is now the entire product portfolio that you had now kind of STQC certified? How are you placed there?

Aditya Khemka: So I think Prama has got certain certifications, which we are seeing on the website. They have also launched certain products in the last quarter. Supplies were a bit limited. So far, midway of this quarter is very similar stage. We hope to see some more supplies coming from Aditya Inf

otech Limited

November 13, 2025

Page 17 of 17

them in the coming future. But I think that's good enough for the gap fulfillment in the market.

So they will have their own space. And I think that's fairly okay for us.

Nikhil Kale: Understood. And just your product portfolio, is it now completely, I mean, all the kind of STQC or different...

Aditya Khemka: No, we are still on the way. But a larger chunk is there and every fortnight new certifications keep coming in. So it's an ongoing process. And I don't think this will ever finish. It will keep going on and then new models again will launch and new certifications will come on. So it's become a full-on department now in the organization to keep doing this.

Nikhil Kale: Understood. And just I think there was a lot of inventory that had kind of come in before the certification kind of set in. At the industry level. So how are we placed there at the industry level? I mean, now do you think now it is kind of normalized?

Aditya Khemka: I think it's more or less dried up now. I think it's all consumed more or less. Now if there are some leftovers here and there on certain pockets, you know, 1- 2 lakh, 3 lakh cameras across India, that might be there, I believe. But I'm not sure if any major chunk is lying with anyone. I think it's more or less dried up.

Nikhil Kale: Got it. And just last one....

Aditya Khemka: Last quarter a lot of that got consumed. Last quarter.

Nikhil Kale: Understood. Just one last bookkeeping question from myself. What was the Iden sales promotion spent in this quarter?

Aditya Khemka: INR29 crores marketing spends for the last quarter

Nikhil Kale: Okay. Thank you. Thank you so much.

Aditya Khemka: Thank you.

Moderator: Thank you very much. And I'll hand the conference over to the management for closing comments.

Anup Nair : Thank you. I'd like to thank everyone for taking out time and joining this call. And thanks everyone for all the support and looking forward to hosting you on the next conference call in the next quarter. Thank you.

Moderator: Thank you very much. On behalf of ICICI Securities that concludes this conference, thank you for joining us and you may now disconnect your lines.

Aditya Khemka: Thank you.

Moderator: Ladies and gentlemen, good day and welcome to Aditya Infotech Limited Q3 FY '26 Earnings

Conference Call hosted by Axis Capital . As a reminder, all participant lines will remain in the listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone . Please note that this conference is being recorded.

I will now hand the conference over to Mr. Nikhil Kandoi from Axis Capital for opening remarks. Thank you and over to you, Nikhil.

Nikhil Kandoi : Thanks, Ryan. On behalf of Axis Capital, we welcome you all to Q3 FY '26 earnings conference call of Aditya Infotech Limited. We have with us today senior management represented by Mr.

Aditya Khemka, Managing Director; Mr. Anup Nair, President, Strategy & Business Development; and Mr. Yogesh Sharma, CFO .

Now, I'll hand over the floor to Mr. Aditya Khemka for his initial comments , and then we'll open the floor for Q&A. Thank you and over to you, sir.

Aditya Khemka : Hi. Thank you, Nikhil, and good afternoon, everyone. Thank you for joining us today. In the third quarter of 2026, Aditya Infotech limited continued its profitable growth, operational discipline, and robust execution. Favourable industry tailwinds, largest portfolio of CP PLUS trusted -core cyber -secured products, large -scale domestic manufacturing, deep R&D skillsets, comprehensive distribution network and sustained investments in technology and strategic partnerships helped sustain our continued market share growth trajectory.

Before I take you through the financials, let me briefly outline the broader industry environment in which we operate. The CCTV market demonstrates a robust long -term growth trajectory , rapid urbanization with more emphasis on safety, improving spending power, and sustained government investments under smart and safe city initiatives are propelling strong and sustainable demand.

Market projections suggest a consistent high double -digit growth over the medium to long -term. We are also witnessing a decisive shift from HD analog products to network IP -based solutions, along with AI -enabled surveillance systems. Advanced video analytics, edge computing, and integrated command -control platforms are becoming central to both government and private enterprise deployments, expanding the role of surveillance far beyond just security.

From a policy standpoint, the Union Budget '26-'27 has significantly bolstered India's technology and manufacturing ecosystem. The launch of the India Semiconductor Mission 2.0 seeks to expedite domestic capabilities throughout the semiconductor value chain in the country. These advancements strengthen the technology foundation that supports advanced CCTV and connected systems. They also enhance India's competitiveness in high -growth sectors such as artificial intelligence, Internet of Things, data centres, and sensor -based technologies, which are

Aditya Infotech Limited

February 13, 2026

Page 3 of 15

increasingly integral to future video surveillance solutions.

The market landscape has also undergone a significant transformation, with notable shift towards cyber -security certified , domestic Indian brands and some MNC global brands. CP PLUS stands out as the single largest player in this evolving landscape with its constant effort in R&D, manufacturing, and localization.

This shift has permeated all stages of the value chain, encompassing distributors, system integrators, and even the end -users, which includes mid -market, small and medium enterprises, large corporations, and government sectors. This has accelerated market share gains for CP PLUS and our market share rose to almost more than 39% during the second quarter of FY '26. The

market share gain is expected to continue for Q3 as well.

In Q3, the CP PLUS brand continued its strong growth, contributing 87% of our overall AIL company revenue. IP products made up to 75% of CP PLUS portfolio, underscoring the sustained shift towards high -value IT solutions. Let me walk you now through the financial results. On the quarterly performance, revenue grew 37.3% year -on-year to INR1 ,139.1 crores, driven by strong demand from our expanding portfolio of CP PLUS CTC Technology products across all segments from retail to projects and government.

EBITDA increased 98.7% year -on-year to INR144.6 crores, with margin improving by 391 basis points to 12.6%, primarily due to favorable product and brand mix, higher localization, and strong operating leverage. Adjusted PAT stood at INR96 crores, up 138.8% year-on-year after accounting for INR7.7 crores of one -time provisioning related to the new labor codes.

On a nine -month cumulative performance, revenue grew 31.1% to INR2 ,798.8 crores and EBITDA increased 100.5% year -on-year to INR320.6 crores with margin expanding by 395 basis points to 11.4%. Our adjusted PAT rose to INR198.9 crores, reflecting 138.6% year -on-year growth over the nine -month period.

On the manufacturing expansion, we are actively expanding our manufacturing infrastructure and capabilities. Our installed capacity for Q3 was 1.9 million units per month, which represents already a 20% increase from our previous peak. We are on track to achieve a capacity of 2.1

million units by Q4 of FY26.

During the quarter, we also commenced construction of our enclosures and housing plant in Kadapa, Andhra Pradesh, expected to be operational by mid -2026. This initiative will deepen backward integration, improve cost competitiveness, and enhance supply -chain resilience. The project is fully funded through internal accruals.

We have also successfully commissioned the CCTV camera lens assembly line and commercial production will begin from Q1 of FY27. Once operational, this line will deliver a production capacity of up to 3 lakh lenses per month, to be further scaled up to 10 lakh per month by the end of next year, enabling us to meet future volume demands more efficiently.

Aditya Infotech Limited

February 13, 2026

Page 4 of 15

I'll talk on the R&D and global technology expansion now. Our investments in R&D continue to grow. We are adding highly experienced engineers on a regular basis and strengthening collaborations with semiconductors and critical component manufacturers to deliver world -class advanced cyber -secured CCTV solutions to our customers.

We have also incorporated Aditya Infotech Taiwan Company Limited, a wholly -owned subsidiary dedicated to global R&D for security and surveillance technologies. Taiwan is a global hub for semiconductor manufacturing and hardware innovation with world -class foundries, IC design houses, and a mature electronic supply chain.

This enables us to access high -caliber engineering talent for the following work much ahead of time, including SoC architecture, embedded systems and firmware, hardware -software integration, AIoT, and edge computing. This aligns tightly with our long -term innovation and technology roadmap.

This quarter, we announced two significant collaborations. We entered in a strategic partnership with Qualcomm Technologies to build AI -enabled insight -driven video security solutions for industrial, enterprise, and public safety applications. These next -generation offerings, powered by Qualcomm's edge AI hardware and CP PLUS extensive market reach and product ecosystem, are expected to be commercially available in the H1 of coming year.

This marks a pivotal shift from hardware -led surveillance to AI analytics -driven solutions, enhancing both revenue mix and margins. The vision is that while we have successfully made cameras available to the nook and corner of India

and there is something for all kinds of

customers, next for us is to make it more intelligent to derive even business outcomes and also to provide action -oriented security, to make AI as part of lives for all our customers in the coming years.

We have also advanced our backward integration agenda by signing an M oU with Orient Cables for the manufacturing of coaxial and network cables, primarily for CP PLUS captive consumption. This collaboration will strengthen supply assurance, enhance cost efficiencies, and support for our long -term growth ambitions. This JV will also be making camera cables for complete backward integration and localization.

A bit on the brand strategy and consumer engagement now. As part of our multi -brand strategy, we have launched two new brands, EYRA & NEXIVUE , at IFSEC in December 2025, primarily targeted at mass market and unorganized segments. NEXIVUE brand is set to hit the market in Q4 FY 2026 and EYRA brand is planned to be launched in the first quarter of next financial year.

Our consumer engagement also gained significant momentum with our new brand campaign featuring T amil Nadu superstar Vijay Sethupathi, deepening our connect with the audiences in Tamil Nadu. We also enhanced visibility through our largest ever presence at IFSEC India exhibition, title sponsorship of PAC C 2026, a high -impact visibility across Indian cricket series, and outdoor campaign across major airports in India.

Aditya Infotech Limited

February 13, 2026

Page 5 of 15

We have also announced a price hike of 6 % to 8% in the month of January 2026, which is already passed to the market, and a further price hike is expected in the coming quarters in FY 2026-2027 in line with the input cost rise from the memory gaps which is emerging in the market.

Supply Chain Visibility

We'll talk a little bit on the supply chain visibility now. The global supply challenges persist across SoC, memory including DDR and Flash, and sensors. We have implemented several mitigation plans and are relatively better positioned and adequately covered for the next coming quarters.

Our multi -SoC product development strategy involves product ranges across various SoC manufacturers; including Realtek, Innofusion, Novatek, Ambarella, and Qualcomm, thereby diversifying our chipset sourcing base. For procurement, we are mapping the entire supply chain

and directly engaging with all the chip manufacturers and their authorized distributors and also intermediaries so as to ensure we have maximum availability at all times for the chipsets, especially in these crazy times.

We are placing forward orders up to even three quarters in advance and in some cases even doing pre-payments to lock the chipsets, thereby securing supplies and maintaining market share growth trajectory.

Outlook

Given strong execution, a favourable external environment, and a robust product and manufacturing and localization pipeline, we up our guidance for FY 2026. On the revenue growth side, year-on-year the range will be INR3,900 crores to INR4,100 crores with the expectation closer to the higher slab. The EBITDA margins we increase to 11 % to 12% and PAT from 6 % to 7% now to 7 % to 7.5 % in this year. To establish the tone for the upcoming financial year, we anticipate sustained robust growth and bullish sentiment.

Consequently, our initial guidance for FY 2027 would be revenue between INR5,350 crores to INR5,550 crores, which is almost 30% to 35% growth over this coming year. The EBITDA margins a further raise to 12 % to 13% and the PAT from 7.5 % to 8.5%. Thank you everyone.

We are now open to take questions from you.

Moderator : Thank you. Ladies and gentlemen, we will now begin the question-and-answer session. We take the first question from the line of Renu Baid from IIFL Capital. Please go ahead.

Renu Baid : Yes. Hi. Good morning team and congratulations for the strong performance

. So, first question,

while you have elaborated quite a bit on the supply chain concerns and inflationary impact and price hikes, could you share a bit more detail in terms of to what extent you're seeing the shortages impacting you ?

Aditya Infotech Limited

February 13, 2026

Page 6 of 15

And you think while you're placing forward orders, near-term execution may be slightly softer when we look at fourth quarter? And in terms of inflationary impact, what would be the exact cost increase that you've seen ? And in addition to the 6 % to 8% price hike for Jan, would it be possible going to quantify what is the quantum of price hike planned for fourth quarter and subsequently for first quarter of '27? That's the first question?

Aditya Khemka : Okay. Thank you, Renu. So, you see, generally what I have seen in the past couple of decades also in a situation like this where there is a component shortage or something, it's actually for the big players an opportunity to scale bigger. The challenge comes to the long tail of the small players, who are unable to secure supplies, because the supply is that much only.

So, what we have done is, we've locked in. First we've done a multi-SoC supply chain, so in all our products we have an option A, B, or C available, so that something or the other will be available for the same set of customers to be provided. Second, we have ensured enough supplies and lock-ins with all the chipset owners across the board.

So, all these 4-5 main chipset owners and the Flash guys, that we keep securing. And the only major change which will be there is the Flash, where the prices are beyond control. So that is the thing, but the supply we are ensuring. So, our focus will be to provide the supply even though the cost may be a little higher on the DDR and the Flash side.

Supply side we are ensuring that we don't fall short and our production keeps scaling up and our market share keeps scaling up. So, we are taking it as an opportunity to scale up further.

Now our guidance for next year and your second part of the question, that how much impact there will be on the price, it will be double-digit.

Now what level of double-digit hike further, we are quantifying and seeing. What we are trying to do is that, it doesn't impact our margins, because we are the largest supplier, almost 40% of the market, and we are aiming to scale it up further in the coming future. And, on the other side of the supply, there is a shortage which is there for the balance 60%.

So, we don't see a challenge with respect to achieving our revenue targets as long as we are able to maintain supply. So, whatever the input cost rise due to this, we are passing on without affecting our margin. And I think that's how it is. But it'll be double-digit because at the moment, the next 6-8 months rather, the memory and DDR are going over the roof. So, it could be 10, 15, 20 or 25, it'd just quantifying what best we can do to balance out the supply. So, it depends, every month's price or two months price we may have to alter.

Renu Baid : Correct. Got it. Secondly, in line with some of the strategic initiatives that you've planned along with Orient Cables as well as with Qualcomm, how do we see the capex numbers for FY26 closure and for fiscal '27, along with the backward integration plan?

Aditya Khemka : This year capex, we've primarily funded from our own with respect to capacity expansion and a little bit was done on the corporate office, which we intend to finish in the Q1 of next year and move in there, which is the R&D center, where we have a huge R&D set up labs, and everything.

Aditya Infotech Limited

February 13, 2026

And next year, the Orient Cable capex will soon be out, but it's not much; we'll most likely be funding through internal accruals.

Anup Nair : It's a 50 -50 JV, so both partners will be providing for the capex

and it's not too significant or material.

And for the Qualcomm it is more of a collaboration, so there's no investment. They are using our market reach and knowledge of CCTV and they are bringing in the cloud and IoT knowledge. So, there is no capex in that. It's more of a cost and revenue share. So, once the product is ready, there's a revenue share model, so there's no capex in the Qualcomm model.

Renu Baid : Got it. So broadly on an annualized basis, we should be within the INR100-150 crores of guided capex range?

Anup Nair : Absolutely, yes. The same that we guided for. It will be within that.

Aditya Khemka : Unless there is an inorganic thing where we will see separately, but more or less for our current plans that should be okay with it.

Renu Baid : Got it. And lastly, in terms of slightly long -dated capacity expansion, where are we for fiscal '27 in capacity targets?

Aditya Khemka : So, we are going to raise it to 2.4 million, as we mentioned, Renu, so 2.4 - 2.5 million with the current Kadapa plant. So that should suffice our FY '27 or even a part of FY '28. And 30 million enclosures also, which will be the housing and enclosure plant and 1 million of lenses per month apart from the rest being imported. But post that, maybe in the next year, we'll explore a second manufacturing facility. We are working on that, yet to decide at the moment.

Renu Baid : Got it, got it. Thanks, and best wishes team. Thank you.

Aditya Khemka : Thank you, Renu.

Moderator : Thank you. We take the next question from the line of Aniruddha Joshi from ICICI Securities. Please go ahead.

Aniruddha Joshi : Yes, thanks for the opportunity and congrats entire team at Aditya Infotech for posting such great set of numbers. Two questions from my side. In terms of Nexiv ue and EYRA brands, if you can share more details. Means now almost 3 odd months are over. So, are they well distributed across the regions?

And how do you see the distribution upside, point one. Secondly, is there any revenue target for these brands, let's say, 1 year down the line or 3 years down the line? Anything on that? That is question one. And then second question is in terms of CCTV camera issue. So at least whatever we have spoken with peers, we understand compared to Aditya, the preparation level at peers might be slightly lower. So, is there a potential to gain material market share as the issue progresses over the next 6 months? And will it result in higher working capital also?

Aditya Infotech Limited

February 13, 2026

Aditya Khemka : Yes. Thank you, Aniruddha. I think I'll take the first question on the Eyra and Nexiv ue. See, the logic of launching these brands was because we wanted to evolve with a substantial market share as a company. CP PLUS is already close to 40%, and we believe we will strive to further scale this up.

Now, we being the largest player in the market in trading and distribution across India, there are a set of customers who believe in a depth distribution model. So, we launched the Nexiv ue brand to cater to those customers. Like a guy maybe in Surat will say, I want exclusivity in Surat. A guy in Ahmedabad will want in Ahmedabad for exclusivity. So, it's like a city -based exclusive kind-of-a model with the Nexiv ue brand, and this takes care of them. Had we not done that, these guys would have probably given some ray of light to small private other Indian brands. And these are long -term partners who have been working with us on one of our brands. So Nexiv ue takes care of that story.

The product will go live, if all goes well, by end of this month or the first week of March in terms of feeding the market, the products will start flowing in the market. We're just awaiting the final BIS. The S TQC is all done. So, any day it will come and then we'll start shipping. The Eyra brand will go to the next quarter and that will be where we have

an option of playing price

cards against the private Indian brands, the long tail of unorganized, small things.

So there, we are not playing very big, but more just keeping something under our belly. And between these two brands, we believe over the years, 7%, 8% or 10% of our revenue may come into this, but we are yet to take the final call because the product is still yet to hit the field. So, I think in another quarter down the line, we'll have a fair visibility of what revenues we will plan.

We have some plans, but it's too early to make a solid comment out of that.

The second question is with respect to the market share than the readiness of the competitors.

Yes, we believe we are right now the only player who has the solid readiness with respect to all facets of business, be it the market reach coverage, be it brand power, be it distribution, be it the

manufacturing, localization, certification, all those things. So, we are putting all our guns on fire. And we feel that in the next 6 to 12 months, our market share will continue to rise. Now to what percentage is early to say, but we are trying to hit the halfway mark. Let's see how it goes.

Aniruddha Joshi : Sure sir. And just lastly, the working capital, do you see any increase in working capital?

Aditya Khemka : Not really. I think we should be in the similar lines in the coming year also, because you see when there is a supply tightness, also from across the board, extensive use of working capital will probably not be required. So, I think more broad-basing and more faster turnarounds will be the situation. So, we are improving on that side. So, I don't see even if in the high growth some slip-up here and there, but still the faster turnaround will balance it out and we should not have an excess requirement of working capital. We are not factoring in any either.

Aniruddha Joshi : Sure sir. That's very helpful. Last thing, as the inventory and as the supply chain situation remains tight, I guess the inventory in the trade may also reduce and while the demand for product may remain, but the trade inventory goes down. So, it's a very ideal situation for price

Aditya Infotech Limited

February 13, 2026

Page 9 of 15

hikes. So, you see possibility of a very strong price hike at the earliest or it will be more of a staggered manner?

Aditya Khemka : So, I think a double-digit hike is just across the line, I think from the coming quarter. And let's see after that in a staggered way how we can do, because the impact is sizeable with respect to the flash and all. And with such impact, you see the smaller players will never take a stance. So, they will play safe; there will be further gaps which we foresee. That's what we are anticipating.

Aniruddha Joshi : Okay. Sure sir. So, this is very helpful and many congrats to the team. Thanks.

Aditya Khemka : Thank you, Aniruddha. Thank you.

Moderator : Thank you. We take the next question from the line of Dhruv Jain from Ambit Capital. Please go ahead.

Dhruv Jain : Thank you for the opportunity, sir. So, my first question is on market growth, right? So, you spoke about double-digit market growth in the coming year. So, if you could just speak about some of the sectors that in your view are doing well in terms of growth? And incrementally, over the next two or three years, what are the two or three subsectors you expect to drive this growth consistently ahead?

Aditya Khemka : So, Dhruv, market, you know, India is actually still underpenetrated with these technologies.

The general consensus is 16-18% market growth should happen year-on-year. We feel last year was a little muted growth because of the transition to the new certification norms. And there is an expectation of a pent-up demand growth in this year.

Lately, due to the supply chain challenges and the cost rise, we have internally mitigated that maybe the pent-up will not happen and it'll

just remain at the 15-20% slab and that kind of growth will happen. Now, with respect to sectors, I mean this, coming two years we see huge growth.

When we talk about government, we see huge growth from railways, National Highway Authority where they are removing all the toll nakas, railway coaches; railway itself will be a INR2,000 to INR3,000 crores worth of supplies in the coming two years. And, we are one of the most solid contenders on that front.

And many other government sectors will be there. Private sector enterprise also is growing, wherever there is new establishments they are deploying it as part of their establishment now.

And so is in the small businesses and home. So, I can't define a specific sector barring if you talk about a high ticket four-digit revenue where there's NHAI and railway which we can see. But across all, manufacturing is scaling up like crazy in every sector.

They all need surveillance also. So, all these sectors are deploying technologies. And more interestingly now there's a lot of talk on AI. And our partnership with Qualcomm is just apt and at the right time. So, we feel in the coming few years, we intend to make it mass for everyone

Aditya Infotech Limited

February 13, 2026

Page 10 of 15

to use at least in the enterprise and government, trickling down to the SME sector.

Dhruv Jain : Sure sir. And sir, second question linked to the comment that you made right with respect to AI and generally the share of IP going up. So, for the next year you've guided for a very strong growth. So, if you could just talk about what kind of premiumization-driven growth that we'll see in the next year? So, one is price hike, second is volume growth, but if we have to break down the growth guidance for the next year that'll be very helpful?

Aditya Khemka : So, you see if you look at the front-end camera devices, there are three categories we bucketize the product. 1. Analog HD, 2. IP camera, and 3. Wi-Fi 4G home cameras, where we call it the plug-and-play devices. Now, what is going to happen is, HD is going to go flat. HD will not grow. And HD ASPs are somewhat 30% of an IP camera.

So, suppose in one hall we require four cameras. So, only four cameras will be installed, its up

to you, whether you put IP or an analog or Wi-Fi, because that will most likely cover the whole room. So, what we see is, the whole growth is going to be on the IP cameras maximum and some growth in Wi-Fi. IP is three or three-and-a-half times cost of an analog camera. And that is because of the scalability, because of the flexibility, control of the product, because of AI usage in the future. So that is what is going to drive.

So, if you talk about per unit ASP of all cameras put together, that will grow up because HD is not growing and IP is growing in terms of total units. And I think the price rise and the cost rise will also play an impact. We haven't, to be honest, factored too much on that in our guidance at the moment. We are still yet to do that because we haven't passed it all on. So, we have some leeway there although.

Dhruv Jain : Fair enough sir. And sir, if you could just spell out the contribution of Dahua revenue for the nine months in this quarter and what is the kind of revenue you expect to generate from that vertical in FY '27?

Aditya Khemka : So, I think Dahua, first I'll take the second part of the question. Dahua Next year would be not even INR100 - 150 crores of our revenue. So, it'll be just like a feeder thing, so it's negligible. It doesn't cross our mind also in our planning. And so, this year also whatever inventories we had, we cleared out. Now the revenue is about INR10 -15 crores a month kind of a thing only. It's not much this year also.

Anup Nair: So, Dhruv, CP revenue as we have said is almost at 87 percentage, so we see this almost touching 90 plus going forward.

D

Dhruv Jain : Okay. And thank you so much and all the best.

Aditya Khemka : Thank you.

Moderator : Thank you. We take the next question from the line of Naushad Chaudhary from Aditya Birla Mutual Fund. Please go ahead.

Aditya Infotech Limited

February 13, 2026

Page 11 of 15

Naushad Chaudhary : Yes hi, thanks for the opportunity and congrats on very good set of numbers, sir. First on the price hike sir, just wanted to understand because historically this category would have been a largely deflationary category and this is the way the channel and users mindset would have been. How you think the price hike would be absorbed and should not impact anything on the demand side at least for short-term because nobody in the channel would have even, you know, experienced this kind of a thing from this category?

Aditya Khemka : Yes hi, Naushad, thank you. So, I think Naushad, you are absolutely right, people are not used to these kinds of things. But what is happening this time is it's across the board. It's not just security and surveillance today. You talk about a NVIDIA GPU, you talk about a Seagate hard disk, you talk about a basic laptop.

I was told INR45,000 laptops are now INR65,000, INR70,000 in the market. Already. So, it's already 30%, 40%, 50%. So, what is happening is the price hike in the very high-end products will not be that much, because those chips are not going too high. There it might be just a single digit.

In the medium range it will be probably early double-digit. But the low-end one, the entry-level one, is where the maximum impact is, because the DDR3 is reduced completely, it's now going to DDR4. Then most of the manufacturers have stopped making 8 and 16GB, the entry-level has gone to 32GB.

So that entry-level product which the low-end developing countries were using is under challenge. And when you add a medium-range SoC or DDR to make that product, the cost goes to a mid-level product. So that's where the impact is. We believe the channel is mentally ready, the dealer distributors are mentally ready because for last 2-3 months they are seeing this in the market.

And one of the products we trade is the Micro SD card with our Wi-Fi camera. The cost has gone up 3x already, and whatever we are getting people just buy. We are quite confident that at that absorption will happen. And like I said, the pent-up demand we were expecting will happen this year, whether it'll happen or not is yet to be seen, but the normal growth of the market will happen, in terms of 15-20%, we believe that should happen. May not have the pent-up demand, so that is the mitigation we've done. But more than that will be covered up by the revenue growth itself, in terms of the price resetting.

Naushad Chaudhary : So, 15%-20% volume growth should not be a challenge and balance you will cover on the price hike?

Aditya Khemka : So, you can say we will target closer to 20% unit growth and the balance from price hike. And then this unit growth will largely happen on IP camera, not on the analog HD. So that's where the ASP is much higher.

Naushad Chaudhary : Right. And second on the growth levers beyond FY 2028, if I understand it correctly, your core categories would hit a substantial market share by then. And post that how should we, you know,

Aditya Infotech Limited

February 13, 2026

Page 12 of 15

look at Aditya Infotech beyond FY 2028, between 2028 to 2030-2031 how the growth journey would be? What are the levers we have in place?

Aditya Khemka : So Naushad, that's far -drawn question but I can give you some sense of what we are thinking.

So, we are preparing ourselves to be a global company. We are, preparing ourselves on all fronts.

The Taiwan R&D setup, some more we are expanding , which will come in the future, some inorganic plans are going on.

So, we're looking at being one of the large players from India moving into the

world market

and having bases in multiple countries and probably expand some product categories without diluting the focus of highest possible market share as a single largest highest market share in India in this product category.

So that's where we are working and then the last point is to enter into the cloud and the cloud data center and the AI services. So, these are the vision. So work is going on and on. How much & how far we will be successful is early times, but that's the direction we are taking the company into.

Naushad Chaudhary : Sure sir. Thank you so much. All the best.

Aditya Khemka : Thank you. Thank you Naushad.

Moderator : Thank you. We take the next question from the line of Prateek Chaudhary from Saamarthya Capital . Please go ahead.

Prateek Chaudhary : Sir, if we look at the number of players which are getting into this market, what would be the current number presently in terms of players having both ER and STQC? And also , we presume that there are many in the pipeline. So , what is your current perspective on this and how do you see that shaping up industry dynamics over the next one to two years?

Aditya Khemka : So Prateek, before the ER, if you had studied the earlier presentations, the market was segmented almost one -third into Chinese, one -third into Indian brands and balance one -third was unorganized and some, global brands. So right now , the ER certification, I don't know the exact number but I think, 5-6 Indian brands have gotten some models and about 5-7 global brands have got, so over a dozen brands have qualified. Now I don't know how much portfolio is qualified for all. CP PLUS of course is the largest one at the moment. And most of them, barring the Chinese who don't qualify any further, they do not have proper manufacturing, localization or any of the proper setup in India. They are just few people doing here and there, one or two offices, that kind of thing.

So, they are all scaling up their infra step by step. Some are, some are not, some are living with that. So right now the global brands doesn't cross our mind , as their pie is less than 10% of the overall market which is another 5-6 brands who have qualified and largely in the enterprise sector here and there, very selective in the government and nowhere in the SM B and the home market which is almost 60% of the Indian market.

Aditya Infotech Limited

February 13, 2026

Page 13 of 15

The other Indian players, most of them who have qualified barring one or two who were there in the retail distribution, the most of them were again in the enterprise and government. So , enterprise , government, yes, some brands have qualified. Retail distribution still there's not much competition.

I don't see with this supply tightness of the semicon and the memory , that new entrants will come so fast. So , any new entrant maybe from another industry would want to try this may have to take a year or two delay because first they will be grappling with their own product supplies , because the shortage is not just in CCTV, it's all across all electronics.

So let's say , another electronics company has to come, they need to first focus on their home turf for whatever products they are doing. Post that they'll work on getting this and in this whether they will get the supply is another question at the moment in terms of the semicon. So , we feel we have a good year headway at least and this supply shortage will play to our favor even more before we see more competition. And those people will , of course , take few years to even challenge , because it's a lot of solution selling.

Prateek Chaudhary : Great . And Chinese players are completely out, right? Not a single one of them would remain post April 1st, 2026?

Aditya Khemka : As per the policy , the government has smartly done a trusted supply chain clause and those kind of things, so they don't qualify into these.

Prateek

Prateek Chaudhary : Okay. And how many of our models, our camera models have been have already been ER or STQC certified?

Aditya Khemka : So, we have a full set of products needed to cover most of the market 90% plus, already qualified. We are developing parallel , as I mentioned multiple SoCs. Some of them are also

qualified as a fallback option and some more are in the process. So, we're fairly in a good position.

Prateek Chaudhary : Okay. Thank you, sir. I'll get back in the queue.

Aditya Khemka : Thank you.

Moderator : Thank you. We take the next question from the line of Anuj Kashyap from A3 Capital. Please go ahead.

Anuj Kashyap : Sir, I just want to know do you have any data in terms of percentage penetration, like in India if we compare the Indian population size vis-à-vis to China, what is the penetration right now of the products of the camera products as compared to the cost structure?

Aditya Khemka : So Anuj, I think it's there in the Frost report and I think there must be couple of other reports from Counterpoint as well. We'll have somebody try and see if he can get out some of the data.

Anuj Kashyap : Okay. And sir, the one more sir, like you have mentioned your tie up with the Qualcomm. Like Aditya Infotech Limited

February 13, 2026

Page 14 of 15

at present Aditya Infotech is basically a hardware company, right? And now, are we envisaging let us turn into a service company plus hardware plus software -as-a-service company?

Anup Nair : So yes, that's the direction, Anuj. So even in the cameras we sell now, there is base level of analytics that are there. But what we are talking about is actually exploding the market and trying to take AI and analytics to the mass market with Qualcomm. And yes, that will be part of our journey to start selling services and AI to each and every customer that we are selling the IP camera range to. So that's part of our mandate for the long-term.

Anuj Kashyap : And sir, do you have any -- like in your mind any revenue break up like, let's say, if just for imagine like 90% is hardware and 10% is software? Do you have some such type of data in your mind?

Anup Nair : So, it's too early. The Qualcomm relationship also, it's currently in the PoC stage and we're looking at anchor customers. And the whole AI market is also nascent. So it's too early to put a percentage to that. We would have some internal benchmarks into what percentage of our revenue should be from services, but that's too way too early at this point in time.

Anuj Kashyap : Thank you, sir. Best of luck for your future endeavors.

Anup Nair : Thank you.

Moderator : Thank you. We take the next question from the line of Aniruddha Joshi from ICICI Securities. Please go ahead.

Aniruddha Joshi : Yes. Thanks for the follow-up question. Just one question. There have been lot of news flows regarding railways installing the cameras, even CBSE, ICSE schools also installing the cameras in the classroom, so any further update on that? And in which stage these initiatives from the government would be? Means either planning stage or execution and where does Aditya Infotech stand as of now on that? Yes, thank you.

Anup Nair : So, Aniruddha, railway orders have started flowing in. The orders are closed, the orders already locked in the system. So, the materials are being procured, so you should see some billing in this quarter and majority of the billing will flow into the H1 of next year. And we will have our share of the business. So, it's still ongoing; there are tenders happening left, right, and center. And as the largest player we would take our market share.

Aniruddha Joshi : Yes. Thanks. And in terms of schools, etcetera, any update on that?

Anup Nair : So yes, the government has mandated for the schools to update, but it's a slow process

Aniruddha : It's not as if it's a definite mandate where everybody has to comply overnight. So, we are

getting wins there, but it's not something -- it's not a large tender or a large state-driven thing. It's more school-wise, district-wise and that falls into our mid-market strategy and we are winning those cases.

We mentioned in our speech that, we can see CP PLUS brand permeating all through the layers.

Aditya Infotech Limited

February 13, 2026

Page 15 of 15

So, it's not just the market share happening at the distribution, this has actually now become the de facto brand even at the end-consumption level, be it the retail customer, the mid-enterprise, or the large corporate or government. So that's the positive signs that we are seeing and any new greenfield projects of that are coming in, by default it's on CP PLUS.

Aniruddha Joshi : Okay. Sure, sure, very helpful. Many thanks.

Aditya Khemka : Thank you, Aniruddha. I think that's the last question we take.

Moderator : Yes, sir. Ladies and gentlemen, with that we conclude the question-and-answer session. I now hand the conference over to the management, for their closing comments.

Anup Nair : Thank you guys for joining this call. We will host further calls as well and we hope to stay on this growth trajectory and stay as per or even over-deliver on our guidance. Thank you, guys.

Moderator : Thank you very much. On behalf of Axis Capital, that concludes this conference call. Thank you for joining us. And you may now disconnect your lines.

Moderator: Ladies and gentlemen, good day and welcome to the Aditya Infotech Q4 FY26 Conference Call, hosted by ICICI Securities. As a reminder, all participant lines will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing star then zero on your touch-tone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Aniruddha Joshi from ICICI Securities. Thank you and over to you, sir.

Aniruddha Joshi: Yes, thanks, Elerick. ICICI Securities is pleased to invite you all to Q4 FY26 and Full Year FY26 results conference call of Aditya Infotech Limited. We have with us today senior management represented by Mr. Aditya Khemka, Managing Director; Mr. Anup Nair, President - Strategy and Business Development; Mr. Yogesh Sharma, Chief Financial Officer; and Ms. Dipika Dubey, Head of Investor Relations. I congratulate the management for posting stellar set of numbers and solid increase in guidance amid such steep volatility in

the business environment and markets.

Now I hand over the call to Aditya for his initial comments on the quarterly and annual performance. Thanks, and over to you, sir.

Aditya Khemka: Thank you, everyone and good afternoon to all. Thank you for joining us today for our Q4 and full year FY 2026 earnings call. Financial year 2026 has been a defining year for Aditya Infotech and the Indian video surveillance industry, marked by regulatory transformation, market consolidation, accelerated localization, and the emergence of AI-led surveillance ecosystems.

Amidst these industry shifts, we strengthened our market leadership, expanded our manufacturing footprint, enhanced our technology capabilities, and laid a strong foundation for the next phase of long-term growth. At the outset of this journey, we held approximately 30% market share in the Indian video surveillance market, with almost 25% in our own brand CP PLUS.

At the time of our IPO, we projected that our own brand market share could expand to nearly 36% post-STQC implementation, assuming a meaningful consolidation of the Chinese players' market share among the Indian manufacturers.

The industry transition unfolded more favorably than anticipated. Our preparedness, robust localization strategy, manufacturing scale, and one of the industry's largest STQC-certified product portfolios enabled us to significantly exceed expectations. As of Q3 FY 2026, our market share reached approximately 45.4%, establishing us as the clear market leader in India's organized surveillance industry.

Aditya Infotech Limited

May 28, 2026

Page 3 of 20

The global semiconductor and memory industry continues to face significant disruption due to ongoing supply-demand imbalances, geopolitical uncertainties, and manufacturing constraints. Critical components such as SoC, DDR, flash, and sensors remain under severe supply pressure, resulting in extended lead times and rising procurement challenges across industries. Furthermore, the US dollar continues to remain at historically high levels, increasing the landed cost of imported parts of electronic components and the raw materials. The ongoing geopolitical tensions and conflict in the Middle East have also led to a sharp rise in global insurance premiums and freight costs, adding further pressure to the overall supply chain and operating environment. To mitigate these risks, we have proactively adopted a multi-SoC product strategy, along with a diversified multi-supply chain procurement strategy to strengthen flexibility, reduce dependency risk, and ensure business continuity.

We are also focusing on forward procurement and long-term planning to secure component availability well in advance and minimize

future disruptions. Nevertheless, given the sustained pressure on the global electronics ecosystem, the price escalation remains inevitable.

Industry trends indicate that costs are likely to continue rising until 2027. Despite these challenges, we remain committed to managing the impact responsibly by implementing price increase in a phased and gradual manner, ensuring long-term sustainability while continuing to support our customers and partners effectively.

Let me now take you through our FY 2026 strategic alliances and partnerships that are key to securing our supply chain and integrating advanced technologies into our products.

We have strategically partnered with Qualcomm Technologies to develop AI-enabled insight-driven video security solutions for industrial, enterprise, and public safety applications.

This partnership represents a significant transition from traditional hardware-led surveillance towards AI-powered analytics and intelligent edge computing ecosystems. The platform is currently in advanced trial and testing phases, and we expect commercial rollout in a phased manner going forward.

We have partnered also with L&T Semiconductor Technologies to focus on the supply of 9 million next-generation CCTV IP cameras over the next three years, powered with LTSC's indigenously designed vision system-on-chip technology. This represents a major step towards building India's indigenous semiconductor and intelligent surveillance ecosystem. As part of our backward integration strategy, we entered into a joint venture agreement with Orient Cables for LAN and CCTV cable manufacturing.

We plan to set up a manufacturing facility in Rajasthan which will span approximately 1 lakh square feet, with commercial operations expected to commence between Quarter 2 and

Aditya Infotech Limited

May 28, 2026

Page 4 of 20

Quarter 3 FY 2027.

The SoC partnerships : We have built strong partnerships with six leading non-Chinese SoC companies, including Ambarella, Qualcomm, Augentix, Innofusion, Novatek, and Realtek. The diversified strategy has strengthened our supply chain, reduced dependency risks, and improved our ability to deliver products consistently despite the global semiconductor challenges. Strong alignment with the top three sensor players, namely SmartSens, Sony, and SOI, has also ensured technology and supply continuity.

Our R&D capabilities continue to strengthen with our DSIR-certified in-house labs and a rapidly expanding innovation ecosystem. We are making strong progress in AI-powered video analytics, unified platforms, mobile applications, and multi-brand product development under the CP PLUS portfolio.

Alongside strengthening our presence in Noida and Ahmedabad, we are also expanding with an upcoming Bangalore centre and have successfully kick-started our Taiwan office and R&D operations. To support this growth, we are rapidly scaling our R&D teams and bringing in experienced global talent with over 20 years of expertise, further enhancing our technology leadership and innovation capabilities.

On manufacturing side, we have steadily advanced our localization and manufacturing initiatives to strengthen supply chain independence and operational efficiency. Significant progress has been made in localizing coaxial Cat6 camera and recorder cables, while our housing manufacturing capabilities, supported by an in-house plant with 50 machines along with strong partner ecosystems. We also plan to kick-start CCTV lens production very soon in our Kadapa facility.

Our manufacturing capacity has now reached 2.5 million units, marking a significant milestone in our operational growth. While manpower and supply chain challenges continue to evolve, we are actively improving efficiencies and strengthening execution across the ecosystems.

We are targeting 90% to 100% capacity

utilization to maximize productivity and meet growing market demand. In line with our expansion strategy, HD analog job work is being planned to be moved to EMS players for further enhancing scalability and operational flexibility, with a proposed capacity of half a million units per month and scalable further subject to future growth requirements. In parallel, we are also evaluating further land acquisition opportunities in the North of India to enable our long-term growth strategy. In Q4 and full year, the CP PLUS brand continued its strong trajectory, contributing 86% of overall AIL revenue. IP products made up 73% of CP PLUS portfolio, underscoring the sustained shift towards higher value IP solutions.

Let me now briefly walk you through our financial performance for the quarter and the full year FY 2026. On the quarterly side, revenue grew 45.5% year-on-year to INR1,422 crores, Aditya Infotech Limited

May 28, 2026

Page 5 of 20

driven by strong demand from our expanding portfolio of CP PLUS CTC technology products across all segments from retail to project and government.

EBITDA increased 162% year-on-year to INR258.3 crores with margins improving by 800 basis points to 18%, primarily due to favorable product mix, product and brand mix, higher localization, and better operational efficiencies.

Adjusted PAT stood at INR169.1 crores, up 207.7% year-on-year, attributed to lowering of finance cost by 38% and better cost efficiencies.

On the full year performance, revenue grew 35.6% year-on-year to INR4,220.8 crores, driven by market share gains across geographies.

EBITDA increased 124.1% to INR579 crores, with margins expanding by 540 basis points to 13.7%.

Adjusted PAT rose to INR368 crores, reflecting 166.1% year-on-year growth, aided by disciplined cost management and a 27.8% reduction in finance cost following debt repayment from IPO proceeds.

On FY 2026 growth and expansion timeline, we continue to make strong progress on our capacity expansion roadmap. The housing plant development is progressing as planned, with Phase -1 expected to become operational by Quarter 2 FY27 and Phase -2 by Quarter 4 FY27. With the housing plant, we have targeted to achieve a production capacity of 30 million housing and enclosures per year. We are also commissioning a new lens assembly line with an initial capacity of 5 lakh lenses per month, scalable up to 1 million lenses monthly to support future growth.

At Kadapa, we propose to acquire additional land parcel and added another shed of 50,000 square feet of manufacturing space to further strengthening the manufacturing infrastructure. In Noida, we have proposed to secure a 3 lakh square feet facility in Sector 68, expected to be operational by Q4 FY 2027.

Looking ahead to FY28, our vision is to expand overall production capacity to 2x of the

existing capacity, achieve complete backward integration across key components and establish a fully functional global R&D presence, including our Taiwan operations, in order to drive innovation and long-term growth.

Our brand building initiatives have strengthened our presence across India through celebrity partnerships, sports sponsorships, and high-visibility campaigns. Consumer engagement strengthened significantly with the launch of new brand campaigns featuring South superstars Vijay Sethupathi and Prithviraj Sukumaran, deepening our audience across South India.

Title sponsorship of Punjab Kings in the Indian Premier League, along with major airport campaigns and our largest ever presence in IFSEC India 2025 and title sponsorship of PACC

Aditya Infotech Limited

May 28, 2026

Page 6 of 20

2025, has further strengthened our market presence and brand leadership across the country.

Currently, we have 141 Brand Galaxy stores across Pan-India operational. These are exclusive CP PLUS stores dedicated to sell and promote our cameras and security

equipment

portfolio, operating under a co-funded business model to strengthen market reach and customer engagement.

On the profitability front, given an uncertain geopolitical environment coupled with persistent inflationary pressures, which have resulted in elevated raw material costs, the benefit of company's earlier low-cost inventory has now been exhausted, and replacement inventory is being procured at a higher cost.

While the company is passing on these increased costs to customers, there is an inherent time lag in the transmission of such price revisions. Therefore, profitability growth may not mirror the pace of the revenue growth. Nevertheless, the company remains focused on improving operational efficiencies, maintaining cost discipline, and sustaining its long-term objective of enhancing profitability performance.

We announced a price hike of 6% to 8% in January 2026, and further price rise is expected to keep continuing in this financial year. On the utilization of cash, the company continues to follow a prudent and value-oriented capital allocation approach.

Our key priority is to deploy available funds through capex and selective inorganic growth opportunities that align with our long-term strategic objective and have the potential to be EPS accretive. We are exploring opportunities that can further strengthen our technological expertise, broaden our product offerings, and enhance our positioning in fast-growing markets.

In particular, the company intends to focus on investments that bolster our research and development capabilities, as we believe continuous innovation and product enhancements are essential to sustaining long-term growth, improving differentiations, and reinforcing our competitive advantage in the industry. We have announced a dividend of INR1.6 per equity share on equity shares of face value of INR1 each.

The CCTV market is expected to show robust growth in terms of units in the range of 15% to 16%. We intend to surpass the industry growth rate and aim to grow in the range of 25% to 30% in the coming year. With the continued price rise in the market ASP and the shift in the product mix, the average per unit camera recovery is expected to rise by 20% to 25%. Looking at the current market and the stability of the CCTV industry post-STQC mandate, we would like to set the tone for the upcoming financial year by upping our initial guidance for FY 2027, on the revenue side to INR6,000 crores to INR6,500 crores, which is almost 50% growth over the last year; EBITDA margin to 14% to 15%; and PAT around 8.5% to 9.5%. We remain confident, optimistic, and committed to building a stronger, more innovative, and future-ready organization.

Aditya Infotech Limited

May 28, 2026

Page 7 of 20

I would like to thank all our employees, partners, customers, investors, and stakeholders for their continued trust and support throughout this journey. Thank you and we are now open for Q&A.

Moderator: Thank you. We will now begin the question-and-answer session. The first question comes from the line of Ankur Sharma with HDFC Life. Please go ahead.

Ankur Sharma: Yes. Hi, sir, good morning. Congratulations on a great set of numbers. I had a couple of questions. One on the gross margins, you know, for Q4 where we've seen a very sharp almost a 900 basis point increase in the gross margins to almost 31.8%. So just trying to understand, is this primarily driven by better mix, more share of IP Cameras? Or is there also an element of maybe low-cost inventory there, which also would have helped you expand margins?

And then maybe -- Yes, so was it also an element of low-cost inventory which was utilized and maybe we don't get that benefit as we start procuring inventory, obviously especially the memory side, at much higher prices? Just trying to understand what led to this big surge in

gross margins and where do you really see

the kind of settling down? Thanks.

Anup Nair : Hi Ankur. Thanks for the question. This is Anup here.

So, you're right. It's been a combination of stuff. Like you said, we took a price rise in Q4 and we had of course low-cost inventory that was lying with us. And like we had mentioned in our earlier calls also, the projects SKUs, got ST QC certified in H2.

So, the more high-end SKUs started coming in the Q3 and Q4. So, it's been a combination of all the factors that you said: low-cost inventory which was there with us, price rise in Q4, as well as the SKU mix that has happened.

The second part of your question in terms of the margin sustainability, I think we already called that out in the call saying that, we have almost exhausted all, our low-cost inventory and there is price increases in our raw material.

But in this year also, starting Q1, there is price rise which is already happening and this is a tapered price rise happening across the months. There might be a time lag in terms of how it is happening, but we thought it's our responsibility as market leaders to ensure that there is no sudden price rise and there is a gradual price rise which is happening into the market and there is acceptability on this.

So, we think the margins are sustainable, but if you see our guidance, we have factored for that, our guidance for the whole year is higher than our last year guidance but slightly lower than the Q4. So, we have factored for that. And we are fairly confident of delivering the same.

Ankur Sharma: And just on the price hike, on the last call you did say about 6% to 8% was taken in January.

So how much -- so I'm assuming you need another 25% odd, is that correct? I'm just trying to understand, how much of price hikes have already been taken and how much more,

Aditya Infotech Limited

May 28, 2026

Page 8 of 20

assuming a status quo right now on the RM and the forex front, how much more ...

Aditya Khemka: So, Ankur, what we have decided is we're doing it on a monthly scale instead of a abrupt price rise. And we've been, securing semiconductors and memories much ahead of competition at a, better cost optimizations.

So, we continue doing that. There are two things we are focusing: supply continuity as well as cost optimization and much ahead of the competition to source the semiconductor from different chipset makers as far as possible.

So, we're doing monthly price rise of few basis points every month. So, this is helping us & the market is not getting a sudden shock and each month in this quarter also and maybe in the coming quarter we will see a price rise happening.

So, people are able to pass it on gradually. And there is no shock given to the customers in a very big way. So, it will be a single-digit price rise every month sort of a thing. Again, it depends on product category-to-product category depending upon the input cost rise.

Anup Nair : And Ankur, we have actually flagged it as an ASP increase, so that will also be contributed by SKU mix further enhancing, as further projects come into and also as the CP PLUS portfolio continues to expand. So, it's not 100% driven by only price rises, it's also been driven by a brand mix and also by the SKU mix within the brand.

Ankur Sharma: Understand, perfect. Okay. And just on the memory side specifically, given the global shortages and a lot of that memory being diverted away to AI data centers, how well-placed are you, in terms of memory, SoC, when you look at say the next 6-9 months?

Or is it because we are the largest player we actually have a competitive advantage over some of the smaller players and we can actually increase our share gains given the smaller guys would typically struggle to get that?

Aditya Khemka: So, see what has happened is memory DDR, there are 6-7 large global manufacturers. I'm talking about outside China. And half of them have stopped making

DDR3 because of these

major AI demand leading them to shift all their capacities to DDR5 and above. So that is where the gap of memory is coming up.

But any situation where there is a demand-supply imbalance, I have seen and we are seeing in our industry even now that, the big get bigger and the smaller tail is the largely affected one.

And that's what is happening here also. We are actually with the strong purchasing power that we have, the volume we have, and the relationships we have with all these guys, are securing our supplies much ahead of, as I said, competition.

So we are, securing it from multiple supply chains, direct from the fab makers, the fab guys and the chipset guys, their distributors, open market, all kinds of places, so ensuring that we

Aditya Infotech Limited

May 28, 2026

Page 9 of 20

have enough supplies at the right cost to provide in the market. And I think that will be probably one of our advantage in this year because of the sheer market size and the volume that we have.

Ankur Sharma: Perfect. And just one last one if I may, on market share itself. So, you said you're close to 46% market share, which I think is brilliant given where we started off maybe a couple of quarters back.

One, how much more do you think, have a target in mind where you can go? And who are the other sizable players? Just trying to understand, except you who are the other Indian large players? Obviously Chinese share has come down significantly, but something on that, yes.

Aditya Khemka: So see, there are about 30 brands across as per the current certified list. A dozen of the global brands are certified, but their share overall is about 10% of the market, which is all the big names of the global brands. And then there are about one and a half dozen domestic brands. But nobody out of that plays in all the vertical market segments of home, consumer, small - medium businesses, enterprise, government, all the sectors. So, in every sector we have different competition and most of them are probably one tenth of our size at the moment or even lower.

So, they are all evolving, they're all scaling up, but I think it will take their own time to scale up on all fronts of R&D, manufacturing, localization, organization. Supply chain is again now a big deterrent in the current demand -supply situation because of the semiconductor and the memory. So I think, if you ask me a single large number two, I can't peg a one single large number two across the sectors.

Anup Nair: And just to add, we are not targeting any specific market share, but like we called out, we plan to outgrow the industry growth rate. So of course, there will be a market share gains.

Ankur Sharma: Yes.

Anup Nair: But that will happen naturally and we are focused on more building our capacities and ensuring supply, but we are not targeting any specific numbers in terms of market share, but that will happen automatically.

Ankur Sharma: Perfect, got it. Great, that's very helpful, and all the best.

Aditya Khemka: Thank you.

Moderator: The next question comes from the line of Dhruv Jain with Ambit Capital. Please go ahead.

Dhruv Jain: Thanks a lot for the opportunity and congratulations to the team for great numbers. So, my first question is on margin side, right? So, with respect to backward integration, whatever initiatives that you're doing, my guess is that most of the -- I mean the full year annualized benefits would come in FY 2028.

Aditya Infotech Limited

May 28, 2026

Page 10 of 20

So just wanted to understand what kind of benefits, in terms of margins we'll see in FY 2028 with respect to the housing plant and, various other initiatives that you're doing.

Aditya Khemka: So, Dhruv, I think valid point. We are right now, investing heavily. So, in terms of housing enclosures right now is third -party supply chain. With our own plant coming in, of course there

will be, some addition to the bottom line. I can't peg exact overall basis points, but I'm sure there will be enough contribution on the housing cost itself.

So does the cable, because same we are right now sourcing third -party or importing. Once we make in -house, and the two things or rather three things we achieve, when we do this localization in -house: one is quality consistency, second is supply consistency, third is contribution to the EBITDA basis points.

So, all these things and then the lens, so these three things will definitely contribute in FY 2028. Marginally impact may come in later part of this year, but early times to say what level of, contribution will come. But yes, I can say yes, there will be contribution.

Dhruv Jain: Sure, okay. And so, my second question is on market demand, right? So, in your presentation you mentioned that, you expect market volumes to grow by 15% to 17%. Now in categories like say mobile phones, laptops, we've seen that, the demand has fallen off because the ASP hikes have really hurt the end market demand.

So just wanted to your sense in terms of what is the level of confidence or what are the factors that you still see that, despite the sharp inflation, we will see that kind of demand growth in the market.

Aditya Khemka: So again, very good question, Dhruv. So, I think, see we were expecting a high pent -up demand in this year post the transition last year because we believe last year the growth wasn't that great in terms of market.

We as company grew our market share, but the overall market consumption was muted because of the transition which happened from the pre -STQC to the post -STQC era. This year we were expecting a much higher market growth, because of the shift of the last year's pent-up demand coming in this year.

We again brought it to a muted level of 15% in our, planning and guidance, factoring the

ASP cost rise on the products. And here again, you see what is going to happen is the ASP cost rise on medium -to-higher end on the percentage side is not that high .

So, in enterprise project sector is not going to be that bad. There will be rise but not that bad, but the entry -level market in the network cameras and recorders are higher. So , I think it will be a mix. Some places there will be some reduction in consumption, shifting to maybe some analog cameras where the cost rise is much lesser compared to the entry -level IP.

So, we did all that simulation and then figured out that overall quantity of 15% may grow,
Aditya Infotech Limited

May 28, 2026

Page 11 of 20

which earlier we were expecting more than 20% with using the, keeping the pent -up demand in mind. So , we have factored that a little bit in our planning.

Anup Nair : And also, if you're talking about mobiles and all, you're talking about generally the entry -level consumer spends. In our category, the consumer purchases are still less than 10% of the overall business.

This is still essentially a B2B led businesses where like Aditya was mentioning there is pent -up demand from last year and there is still, supplies which have not been done. So we believe that will still be strong on the commercial sides with the new projects coming up and what we see the vacuum, the consumption will still be there.

And, our growth is factored in it almost 25% -30% kind of unit growth and rest is due to the ASP rise. And we believe the industry will still grow in units in about 15%-16%, which like we just mentioned should have been higher considering the pent -up growth over if you consider the last year and this year.

Dhruv Jain: So in that context, if I'm not wrong, there should also be, value growth which also helps your margins because I'm guessing there will be some bit of migration that happens from IP level cameras to premium -end cameras because the, ASP hikes if I'm not wrong in the premium -end would be lower.

Anup Nair : Yes.

So, the whole when we are saying that the ASP would be higher by about 25%, it's not coming all from price rise, it's coming from what you just mentioned, it's coming from the portfolio mix as well and the overall IP percentage of the portfolio constantly going up.

Dhruv Jain: Got it. And sir, if you could just last question, if you could just call out the capex numbers for FY27 -'28.

Aditya Khemka: We had planned for INR200 crores odd plus minus few numbers, but I think as we are upping the guidance, we feel we might require a little more. Plans are being worked upon compared to the new expansions that we have planning, but I think it will fall in that range of INR 200 to 300 crores kind of thing and we will largely be funding it from internal accruals or some debt maybe say , for the plant and machinery.

Dhruv Jain: All right. Thanks a lot sir and all the best.

Aditya Khemka: Thank you.

Moderator: The next question comes from the line of Nikhil Kale with Invesco Mutual Fund. Please go ahead.

Nikhil Kale: Yes. Thank you for taking my question. Firstly, hearty congratulations on a very strong set of numbers and the upping the guidance. So , my question was more on the cash flow generation. So obviously we have had a stellar year and with the significant growth that we've seen, we've also seen increase in working capital which has impacted our cash flow

Aditya Infotech Limited

May 28, 2026

Page 12 of 20

generation.

So going forward, how should we think about it, especially you alluded to the fact that you might be procuring components in advance, so probably inventory days might inch up, you might also need to pay creditors more -- I mean you might need to pay your suppliers more quickly, so the payables might also kind of get impacted.

So, considering these two aspects, how should we think about cash flow generation for the next year ? And then will that be enough to kind of fund our capex plans and also the land acquisition that you're thinking about?

Anup Nair : Yes. So, Nikhil you're right . We have been razor -focused on our operational efficiencies and we have improved on our inventory levels and the debtors have also improved gradually . But yes, the cash conversion cycle has slightly increased and like you rightly pointed out, that has mainly got to do with us, having to procure the chips and memory, some of it, we are blocking and we are having to make some possibly advance payments.

So, the cash conversion cycle is essentially slightly gone up due to the creditors coming down because of what we are doing in terms of, securing our supplies. This at least in the shorter term we see this going , because our first priority is ensuring supplies and we, on the supply side we are consistent and we are secured.

So, this will sort of continue, but we have factored that in our working capital s, working for this year. And we have already called out your capex numbers . And yes, we have upped our guidance in terms of revenue. So yes, there will be a working capital needs, but at the moment I think it's sort of pretty okay.

We will see if there are further growth possibilities and if there are further capex requirements, how to fund it, at the moment we are looking at funding it with mostly from internal accruals and some debt and we are pretty comfortable.

Nikhil Kale: Got it. That answers my question. Thank you.

Moderator: Thank you. The next question comes from the line of Neel with Equirus Securities. Please go ahead.

Neel : Yes. Hi sir. Congratulations for solid set of numbers. Sir, I have a couple of questions. So sir first is related to the chipset that we have almost now six suppliers on board. How are our agreements placed? It's a more of a volume-bound agreements or a time-bound agreements and if the prices of chipset let's say increase, how much time it takes to pass into the customers?

Aditya Khemka: Hi Neel, in the

agreement you normally have supply agreements only and it's right now the situation is most of the agreements if you talk about across the industry are going haywire because the supply-demand is totally going haywire, the cost is rising on every fortnight, Aditya Infotech Limited

May 28, 2026

Page 13 of 20

weekly basis.

So, it's a question of even if you pay advances sometimes the contract gets invalidated sometimes because of the very sort of a force majeure kind of a situation. So, this is very unprecedented times, I have not seen these kind of things in the last two-three decades of my business career.

But we are mitigating it. And we're mitigating it I think so far so well touch wood. And we hope that we can be, with this multi-supply chain, multi-sourcing strategy, multi-product R&D, we will be able to mitigate this risk.

The price rise is a decision we are doing on a gradual phase. So again, we are averaging our sourcing and averaging the price rise and like I said we are passing it on a monthly basis, every month raising it.

So over the quarter I think the price rise can be easily passed to the market, but what we are more conscious of right now is that we don't want a shock in the market and the consumption or the flow of material and the sales out, cash flow, all that get affected too much. So, I think we are more bothering that and the market share and then managing the cost optimization and passing of the price.

Neel : Okay. And sir, last question is let's say in total FY26 numbers, if we were to bifurcate the volume-led growth and value-led growth, what would that be ratio?

Anup Nair : You're talking about FY26?

Neel : Right sir.

Anup Nair : Yes. So, we think the volume growth would be about roughly 18% -20% and rest would be the ASP growth. But that is again majorly driven by the mix. The price rise was essentially only in Q4.

In the other three quarters, the post-STQC materials were at a higher price and the mix of CP PLUS to internally that mix has changed and IP-to-HD the mix has changed. So, if there's a 33% growth, almost 18% to 20% would be volume growth and rest would be the ASP growth.

Neel : Okay sir. And in FY27, I know sir it's very difficult to say but any kind of ballpark number you would like to put what kind of grossly price hikes we can see in FY27?

Anup Nair : So, we have called out that the ASP growth will be roughly about 25%.

Anup Nair : And the volume growth will be roughly between 25% and 30%. But it's difficult to do it category-wise, so that's why we've just called out the general ASP growth and the quantity growth.

Neel: Perfect sir. Thank you so much, and congratulations, again, for a solid set of numbers.

Aditya Infotech Limited

May 28, 2026

Page 14 of 20

Aditya Khemka: Thank you.

Moderator: Thank you. The next question comes from the line of Naushad Chaudhary with Aditya Birla Mutual Fund. Please go ahead.

Naushad Chaudhary: Yes. Hi. Thank you and congrats on a very good set of numbers. Just one clarification on the margin side, sir, till last quarter we had a view of this business is expected to do 12% to 13% kind of margins for us and within a quarter it has moved up to 14% -15% expectation.

So, in last one year just wanted to understand last one-two quarter what has changed which is leading to this kind of expectation and this 14% -15% is a new normal for your business or

could FY 2028 be different? ...

Aditya Khemka: So, I would say Naushad, this should be the new normal for this business. And you see, we were working on this only. We didn't want to speak early ahead of the situation. You know, many things of localization, cost optimization, the shift towards medium to higher -end products, enterprise business, premiumization, all that gradually was contributing and inching us towards this direction. So Q4 was a little higher than this, but that was a one -of

f.

But I think 14% -15% should be the new normal FY27, FY28 as we move forward.

Naushad Chaudhary: Perfect. And last, so initially on the export side we had a view that we are -- our hands are full and tight for the domestic demand, so we may think after two -three years we may think of export opportunity. Any thoughts and development that side, and how it could look like in next 3-4 years?

Aditya Khemka: So, I think we will start some action hopefully in this year. At the moment with so much happening, Naushad, in capacity, R&D, localization, inorganic options that we are working on, and in the supply chain disruptions, I think the energies are all moving here to ensure that we first feed the demand, which is in the domestic market.

But export will be the focus. The timing is something you know, we had thought of doing it in the coming year, but let's see if we can kick -off some actions in the coming year. Some thoughts are on underway, but how much will materialize is early time to make a statement.

Naushad Chaudhary: Sure, Aditya. Thank you. All the best for the future.

Aditya Khemka: Thank you.

Moderator: Thank you. The next question comes from the line of Anuj Kashyap with A3 Capital. Please go ahead.

Anuj Kashyap: Hello. Am I audible?

Aditya Khemka: Yes, Anuj. Hi. You're audible.

Anuj Kashyap: Let me start with a congratulations for your good set of numbers. Sir, just my question is with Aditya Infotech Limited

May 28, 2026

Page 15 of 20

a caveat like it's a forward -looking in nature, sir. Just I wanted to know your head -- I mean like what do you think -- what is the thought process regarding like the cameras have become from omnipresent to omniscient, like the pure integration with the Qualcomm or your partnership with the Qualcomm is about AI or the cameras becoming the active decision makers down the line. So as in for organization, so how do you look at it? Just I want to know your thought process.

Aditya Khemka: So, I did not understand the entire question, Anuj.

Anup Nair: You're asking about the AI cameras, AI going into cameras is it?

Anuj Kashyap: Yes sir. Just as they were omnipresent before, cameras are everywhere now. Cameras have become decision makers also sir in some ways like due to the data processing by them.

Aditya Khemka: So Anuj, let me explain. See basically the industry started as just a viewing, then it went into recording, then it went into intelligence a little bit of video analytics, which is already part of our current systems that we offer.

Moving forward, you know, more and more video analytics and AI will come in. And let's say, whether you are in a hospital or an educational institute or a building, now in that the guys need a report, what immediate triggers, action -- call to actions. And camera is the sensing device which can capture the metadata, the AI on the other device can trigger the process, the data, trigger an action. And similarly call to actions can happen or a report can be generated.

So, you can say, they are the eyes, ears, and sound now because the camera can have audio out, you can talk from the camera, you can hear the sound also, you can view. So, in a way, it has become the eyes, ears, and tongue. Now the brain has to be the AI, which is the edge boxes and the recorders and the processing of that, and then take the action with your arms and legs. So that's how the whole system will prevail. But cameras will be the integral part of the whole AI ecosystem as we progress.

Anuj Kashyap: Sir, you have exactly, means, you gave exactly the answer I was hoping for. Sir, I wanted -- I mean, I wanted to ask, sir, for an organization like ours, regarding our service component - specifically, given that today we are solely a hardware company, so will there be some revenue that we can hope so that it can also be derived from our service sector -- that is, from

the service component?

Aditya Khemka: So, we are working on two things. We already announced cloud for our home market. So just as you currently record on -premises, if someone were to simply take away your recorder, all your data would be lost.

So, one is a redundancy backup on the cloud, like just as you handle your SAP and ERP systems, you will handle video surveillance in the same manner. So, we are optimizing it to

become a mass -market product. We are optimizing our platform to make it more and more

Aditya Infotech Limited

May 28, 2026

Page 16 of 20

cost-effective and affordable before we go mass scale to offer that as a redundancy backup.

Post that, AI as a security and service model, SaaS model, is once you have that data you can start working and giving AI intelligence with edge devices on -premise and cloud AI on the back. So , we are also working on this SaaS model , which is where the Qualcomm partnership is working on , and as I mentioned the platform is under trials and development and hopefully , this year we might go to market very soon.

Anuj Kashyap: And sir, just add on to it, sir will that be margin accretive? That , of course , it will be margin accretive , do you have the numbers in your mind , how much margin accretive that component can be?

Aditya Khemka: Too early, it's a new market creation, so it's too early to.

Anuj Kashyap: But sir, that market is going to boom .

Aditya Khemka: Absolutely it's going to boom, so we are investing on that cloud also and the AI SaaS model also. But if I look at 5 years , hence, yes, that is an investment we are doing today, it will pay off in the near future.

Anuj Kashyap: Okay. And sir, just one more question. Sir , like out of the total revenue, what percentage do you have the breakup like what is the B2C or what is the like government business we are getting? Is there some breakup we can get?

Aditya Khemka: I think maybe later on the IR team can pass you some information on that, they will share you.

Anuj Kashyap: Okay sir . Thank you , sir. So , best of luck for the future.

Aditya Khemka: Thank you .

Anup Nair : Thank you.

Moderator: The next question comes from the line of Vedanta Bhadania with Canara Bank Securities.

Please go ahead.

Vedanta Bhadania: Hello sir. Sir, first of all congratulations for great set of numbers.

Management : Thank you.

Vedanta Bhadania: And I have two questions. First question is regarding the two other brands which we launched. So , what is the status on that and whether we have received the STQC certification on those brands or not?

Aditya Khemka: So, we announced two brands, Nexiv ue and Eyra. Nexiv ue is already certified for the first set of products and more are underway. We've already started shipping those products in the

Aditya Infotech Limited

May 28, 2026

Page 17 of 20

markets from last month, April. This is end of April we started shipping post certification and this month more products are getting produced and launched.

And as we now progress month -on-month, more certifications will happen and more, you know, volume will keep growing. Eyra, due to the supply chain disruption, some reworking in the R&D had to happen. So hopefully , we'll get certified in another two months and next quarter that may go to market.

Vedanta Bhadania: Understood sir. And the second question is regarding what kind of demand we are seeing from government -backed projects?

Aditya Khemka: So, it's very difficult to say . Suddenly things happen, suddenly things go slow. But I think the market is 15% -20% government. So , we plan in our business also similar, nothing no rockstar situation on the government side. So , 15%-20% of our revenue come through govt or large government projects or through tenders via the System Integrators or PSUs. I think that should be the situation this year also.

Vedanta Bhadania: Okay. Thank you , sir.

Aditya Kh

emka: Thank you.

Moderator: The next question comes from the line of Udit Gajiwala with Motilal Oswal. Please go ahead.

Udit Gajiwala: Yes. Hi sir. Good afternoon . Congratulations on a great set of numbers. Just one question in terms of, you know, competition. I believe that, you'll are way ahead of the curve, but just wanted to understand the certification process , which was going on very slow around October -November , that seems to have picked up for even some of your peers who have been pointing it out. So do you see any, you know, threat or any such thing maybe not this year but, you know, from 2028 onwards or something like that?

Aditya Khemka: Udit, I think we are preparing ourselves for any eventual competition. This year seems slow because one is, you know, people are slowly getting certified, they have to scale up as I said , on various fronts. We are far ahead than most of them, be it localization or capacity or R&D or product range or supply chain.

Second is the supply chain itself this year is a big deterrent for anybody to compete really. I

think they were unable to feed their own demand at the moment. So, I think that's another one. And I believe this will continue till the next year. So, we have a good, you know, head start with respect to our preparedness.

We are further consolidating on all fronts. We are further expanding on all fronts, multi-brand strategy is further augmenting market share growth and their position at different positions of, you know price positions so as to take on any possible threat, competition which comes on any level.

So, I think we are fairly poised and we are quite cognizant of possible competition coming

Aditya Infotech Limited

May 28, 2026

Page 18 of 20

in. We have some head start of information, thanks to our connects with all the SoC guys of who's preparing products or not. So, I think we are fairly poised with respect to competition and all.

Udit Gajiwala: Fair enough, sir. Yes. That's it, sir. Thank you and all the best.

Aditya Khemka: Thank you.

Moderator: The next question comes from the line of Vivek Gautam with GS Investment. Please go ahead.

Vivek Gautam: Congratulations, sir, on excellent set of numbers. Big wealth creation for the lucky investor who got the allotment in the IPO, so I just wanted to know about the opportunity size for us and the expected growth rate and the differentiator for our company, especially dash cams and other being made compulsory a sort of for preferred not compulsory at least but preference-wise also sir?

Aditya Khemka: Vivek, yes. So, the industry, like we said, you know, has been growing at generally about 15%-16% CAGR and we as an organization, if you see before 2025, we have been growing at a CAGR of almost 21%-22%. So, we have almost beat the industry growth rate consistently.

As per all predictions, this industry should continue to grow at 15%-16% in quantity terms easily. I think last year was slightly muted essentially due to the transitions to STQC and supply side issues. So, most of the market research agencies were factoring that, you know, this year and next few years should be higher than 20% in terms of quantity growth.

But, you know, the supply side constraints still continue. But we don't see any challenge in terms of, you know, the industry sustaining growth rates, because these growth rates, I don't think, has factored in the upgrade markets from HD to IP, and also the penetration still there is a long way to go. And we believe that we will always beat the industry.

And in line with that for this year, we have factored in a 25%-30% quantity growth. So, I think this should continue, we should beat the industry growth rate as well as us beating the industry should continue.

Vivek Gautam: And what about the differentiator for us, sir, differentiating factor for us?

Aditya Khemka: So again, there are a lot of

factors, but mainly, I would say, first and foremost is the brand.

You know, even if in this segment if you still go out and check, I think now we have become sort of synonymous with the brand CP PLUS. Earlier also it was, but now with our advertising campaigns on the airports, on IPL, and the film stars, I think this would possibly be the only brand, which is there right at the end consumption level.

And even in the other segments, which is the consultants, large customers, and SIs, there also we have been doing lot of work, doing B2B shows. So clearly the brand's recall and presence

Aditya Infotech Limited

May 28, 2026

Page 19 of 20

is a big differentiator. And of course, then the other moats that we spoke about the manufacturing, I don't think anybody has such a large scale integrated manufacturing setups.

Product range across all segments, you know. The market is a mixture of SMB, large enterprises, government, consumer, and again when you map out the competition, you will not see anybody relevant across all these segments. So that's again a big factor for us, we are possibly one of the only brands which are across all the segments.

Then, we have been in business almost two decades and most of the teams have been with us for a long time. So experienced teams who are ground connected, R&D, I don't think anybody is invested such deep into R&D whether it's in India or offshore. So, it's a multiplicity of factors: our distribution reach, relationship with partners. So, all that is playing out.

Vivek Gautam: Thank you, sir. Keep up the good work.

Aditya Khemka: Thank you.

Moderator: The next question comes from the line of Darshil Jhaveri with Crown Capital. Please go ahead.

Darshil Jhaveri: Yes. Hi. Thank you so much for taking my question. Firstly, congratulations on a great set of results. Lot of my questions have already been answered. Just wanted to get your view, like

we think we are doubling our capacity by FY28, so by when will we, you know, be at full utilization?

Because if you are saying industry is growing at 20%, but if we are doubling it by next year only, so are we expecting like a higher volume growth than the --much higher growth than the 15% -20% that's happening , because that will only help us utilize our capacities better. So , what are your views, sir?

Aditya Khemka: So see , we are building the capacity in next 2 years, FY 2028, not FY 2028 but 2028 and to double. So , right now we are in 2026, so 2028 we plan to double. So , looking at a 3-year horizon, we will see how much growth we will do in our quantity. But should we continue to grow at 25% -30%, we will see what capacity utilization will come.

And we are building it should tomorrow our export market comes up or ODM -OEM market comes up, you know, people have been approaching us to make products for them. Right now we are saying , we are utilizing the semicon s for our own needs rather than making it for them , because of the shortage. So , I think we are just building that capacity , keeping that in mind , we will see by when the whole thing will get into full utilization.

Darshil Jhaveri: And sir, you're targeting over the next two years and like the amount of money that you're investing in this, so ?

Aditya Khemka: Yes. So, we mentioned the INR200 crore s to INR300 crore s this year. The next year ones are still the plans are underway. But the strategy is what I shared what we are doing. We feel that

Aditya Infotech Limited

May 28, 2026

Page 20 of 20

the capex plans should be good enough to and the growth plans should be good enough to fund from our internal accruals , and largely the company is at a very minimal debt -equity ratio. So even if some requirement is there, we could look at some debt and fund it on a temporary basis.

Darshil Jhaveri: Okay, okay. Yes, yes. That's it from my side. Thank you so much, sir.

Aditya Khemka: Thank yo

u.

Moderator: Thank you . Ladies and gentlemen, that was the last question for today. I would now like to hand the conference over to the management for their closing remarks.

Anup Nair : Just want to thank everyone for joining the call , and hope you have, sort of, you know, met up to the expectations , and we look forward to joining all of you guys joining in the next call.

Thank you.

Moderator: Thank you, sir. Ladies and gentlemen, on behalf of ICICI Securities, that concludes this conference call. Thank you for joining us and you may now disconnect your lines.
