Sub: Transcript of Earnings Conference Call for Financial Performance for the 4th Quarter and Financial Year ended 31 March 2025 held on Tuesday, 29 April 2025

Dear Sir/ Madam,

Further to our letters dated 24 April 2025, 26 April 2025 and 29 April 2025 and pursuant to Regulation 30 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 ("SEBI Listing Regulations") read with Schedule III of the SEBI Listing Regulations and other applicable provisions of the SEBI Listing Regulations, we are enclosing herewith the transcript of earnings conference call for Financial Performance for the 4th Quarter and financial year ended 31 March 2025 held on Tuesday, 29 April 2025 at 4:00 p.m. (IST).

The above information will be made available on the Company's website at www.himadri.com

You are requested to take the same on record.

Thanking you,

Yours faithfully,

For Himadri Speciality Chemical Ltd

(Company Secretary &
Compliance Officer)

ACS: 29322

Moderator: Ladies and gentlemen, good day, and welcome to the Q4 and FY '25 Earnings Conference Call of Himadri Specialty Chemical Limited hosted by MUFG Intime. As a reminder, all participant lines will be in listen -only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Bhavya Shah from MUFG Intime. Thank you, and over to you, sir.

Bhavya Shah : Thank you. Welcome to the Q4 and FY '25 Earnings Conference Call. Today on the call, we have with us Mr. Anurag Choudhary, CMD and CEO; Mr. Somesh, EVP, Tyre and Strategy; and Mr. Kamlesh Agarwal, CFO. This conference call may contain forward -looking statements about the company, which are based on beliefs, opinion and expectation as of today. Actual results may differ materially.

These statements are not the guarantees of future performance and involve risks and uncertainties that are difficult to predict. Our detailed Safe Harbor statement is given on Page 2 of investor presentation of the company, which has been uploaded on the stock exchange and company website.

With this, I now hand over the call to Mr. Anurag Choudhary. Over to you, sir.

Anurag Choudhary: Thank you, Bhavya. Good evening, ladies and gentlemen. I would like to welcome you all to the Q4 and FY '25 Earning Call of Himadri Specialty Chemical Limited. It's a pleasure to

connect with you and share insights into our business strategy and outlook. More importantly, it's a moment of significance for us to reconnect and share the incredible journey we have been on. A journey marked by transformation and a deep-rooted purpose.

It started over three decades ago with a single-minded vision to create impact through innovation. What started as a small coal tar distillation unit in 1990 has today evolved into a global leader in specialty chemicals and new energy materials. At the heart of this evolution is our relentless focus on research and development, our belief in sustainable growth, and an unwavering commitment to deliver quality and value across everything we do.

We have, through relentless efforts, research and development and innovation over the last 35 years, developed a very strong, sustainable and growing business model. Today, we supply high-quality tailor-made coal package to our customers at most economical cost globally. This provides a strong value proposition and significant cost advantage for our customers.

Our commitment to delivering the highest standards of quality results in sustainable economic savings for our customers, thereby strengthening our collaboration and reinforcing our relationship. Through incremental improvements in operational efficiency and yields, we have successfully reduced cost and generated substantial long-term margins.

Himadri Speciality Chemical Limited
April 29, 2025

Page 3 of 17

By optimizing energy consumption and leveraging artificial intelligence capabilities across our operations, we have streamlined our processes. Over the years, we have built an integrated business model that spans across carbon value chain, right from coal tar pitch, specialty carbon black and new energy materials to high-value-added derivatives like naphthalene, SNF, PCE. Our pioneering work in specialty features for defense application such as long-range missiles has demonstrated not only our R&D capability but also our ability to innovate for greater good. Similarly, our developments in areas of lithium-ion phosphate, cathode active material, anode materials, circular economy products, treated blacks, co

nductive blacks, and zero impurity pitch

are testament to our innovative mindset and drive.

What differentiates Himadri today is the depth of our integration, the scale of our capabilities, and the strategic move we have and are making, each one thoroughly placed to address emerging industry trends and needs. Our products are today available in almost 56 countries, serving multiple critical industries, including lithium-ion batteries, EV, aluminum, graphite, tyre, inks, construction, plastics, paints, and many more.

During this financial year, Himadri was conferred with Company of the Year among the listed companies at India Chem 2024, which was organized by Ministry of Chemicals and Petrochemicals in partnership with FICCI and EY. Moreover, we were also awarded with the DET Hurun Award for outstanding contribution to India's manufacturing economy at India Manufacturing Excellence Award 2025.

This journey of growth has not been just about scale. It's about transformation. We have embraced the future through automation, AI-led analytics, and processing standardization and optimization. We have transitioned into a truly data-driven enterprise and our commitment to sustainability has been recognized globally from being awarded with EcoVadis Platinum medal, which places us in top 1% globally for sustainability practices to earning a commendable B rating in our very first CDP assessment for 2024, which is indicative of company that is taking coordinated action on addressing environmental issues. From a social lens, our efforts are recognized with Himadri bagging the prestigious Golden Peacock Award for Excellence 2024 at IOD 19th International Conference.

In terms of execution, we continue to deliver on scale and strategy. At Singur, our work on brownfield expansion of specialty carbon black line from 60,000 metric ton per annum to 130,000 metric ton per annum is progressing as planned and is expected to be operational by Q3 FY '26.

This will take our overall carbon black capacity from 180,000 metric ton per annum to 250,000 metric ton per annum, which will make this the single largest site for specialty carbon black facility in the world. This expansion will cater to the rapidly growing demand in specialty fiber blacks, conductive black, inks, plastics, coatings and battery segments, further strengthening our position as a global leader in this high-value-added segment.

Himadri Speciality Chemical Limited
April 29, 2025

Page 4 of 17

To enhance our value-added specialty product portfolio, we are once again forward integrating to set up capacity to manufacture anthraquinone and carbazole from our existing oils, a testament to our prudent strategy and innovative mindset. These products are essential ingredients for dyes, pigments, pharmaceuticals, and electronic industries and will add significant value across our value chain. These products are currently largely imported in India, and our objective is clear: To substitute imports with world-class domestic manufacturing and offer competitive global solutions. The high value-added specialty product line is scheduled to go live in Q2 FY'27. On the logistics and export front, the commissioning of our dedicated Liquid Coal Tar Pitch terminal at Haldia has opened new doors for global markets. In fact, our first export shipment was successfully dispatched in October 2024, a defining moment that paves the way for large-scale international liquid pitch supply. We have also made significant progress post our acquisition of Birla Tyres as a strategic partner along with resolution applicant, Dalmia Bharat Refractories Limited. This strategic entry into tyre manufacturing industry may look just like another example of forward indication for Himadri owing to our rich legacy of working with carbon blacks. However, it is important to note that

Himadri will not be selling any carbon black to Birla Tyres.

Birla Tyres will be able to source carbon black at much more economical rates from other suppliers. And Himadri will continue to tap into significant value-added market it has carved for its offerings in carbon black segment. Modernization and revamping efforts are well underway with operations set to begin in phases starting end of Q1 FY'26. We will focus on building a comprehensive product portfolio of specialty tyres to serve off-highway tyre segment. Simultaneously, we are working on installation of our passenger car radial tyre unit, which will take some time. This unit will have a strong focus on producing PCR tyres catered to meet the needs of EVs, SUV segment vehicles. We intend to lead the global e-mobility revolution by innovating next-generation tyres that can meet the evolving demands of a sustainable future, catering to domestic as well as global demands.

Our most transformational journey is now unfolding in field of lithium-ion battery components, a space critical to energy transition. The global lithium-ion battery market has experienced significant growth, reaching an estimated USD 97.88 billion in calendar year 2024 and is projected to grow at a CAGR of 14.58% over the next 5 years.

India's lithium-ion battery market too is experiencing rapid expansion and projections estimated growth from USD 4.47 billion in '24 to USD 16.09 billion in 2030, reflecting a CAGR of 23%. Moreover, the global EV market experienced significant growth, attaining a market size of USD 396.4 billion in 2024.

This expansion has been fueled by multiple key factors, including increasing environmental awareness, advancement in battery technology, government initiatives supporting EV adoption. Battery demand in India is expected to rise to 260-gigawatt hour by 2030, driven by escalating adoption of EV and renewable energy storage systems.

Himadri Speciality Chemical Limited

April 29, 2025

Page 5 of 17

India registered 8% penetration rate of EV in 2024, which was 6.5% in 2023. This traction is becoming more and more prominent with domestic producers. Tata announcing launch of premium yet affordable EV in this year and 2 giants, Tesla and BYD actively pursuing the EV car production plan in India. We are well on our way to EV30@30, which aims to see about 80 million EVs on road by 2030.

Indian government is also shaping the energy storage policy and regulatory framework to boost energy storage in the country. Apart from incentives to battery and carmakers, Government of India has been proactively taking progressive steps such as exemption of customs duty on imports of machinery and equipment, GST reduction, waiver of road tax that are aimed at making the EV growth smooth and their proposition economically attractive to the masses. Across major use cases, lithium-ion battery technology has established itself as the dominant technology owing to their marquee edge over other battery chemistries such as sodium-ion in terms of critical parameters such as energy density, cycle life, charging time, reliability, and portability.

Recognizing that cathode materials account for over half the cost of lithium-ion battery, we are positioning Himadri at the heart of global clean energy movement. By 2030, global demand for lithium-ion cathode material is expected to exceed 9 million tons annually. Lithium-ion phosphate batteries have emerged as a dominant battery technology in China's EV market according to over 60% of EV battery installation.

In 2024 alone, the share of LFP battery technology in the cumulative battery installation of China

was around 75%, up from 51.5% from the previous years. The potential growth of electric vehicles and grid scale energy storage system has propelled lithium-ion phosphate batteries to the forefront of global demand with over 70% of the automakers around the world

and now exploring

LFP chemistry for the next-generation models. And to meet this growing demand, we are establishing first commercial plant of LFP cathode active material globally outside China. Our vision is to build a capacity of 200,000 metric ton per annum of electric cathode active material plant sufficient to power 100 gigawatt per hour of lithium-ion batteries with the first phase of 40,000 metric ton per annum expected to be operational by Q3 FY '27. For us, this is more than a business opportunity.

It's a national building effort aligned with India's Atmanirbhar Bharat vision and its decarbonization goals. While cathode takes a center stage, our research and development team are also making remarkable strides in working on anode chemistry from natural, synthetic and hybrid anode material to next-generation silicon carbon for anodes.

We are exploring every viable chemistry to improve battery performance, density and charging time. In line with this, our collaboration with Sicona driven by shared vision and synergies has enabled us to accelerate the development cycle for silicon carbon anodes in a very short span of time. Our belief is simple. Battery breakthroughs won't just come from one component, but from a holistic mastery of the ecosystem.

Himadri Speciality Chemical Limited

April 29, 2025

Page 6 of 17

And as we innovate, we are also thinking ahead. The proliferation of lithium-ion batteries in the coming decade brings with it a new challenge, safe disposal and material recovery. I'm pleased to say that our teams are already exploring solution in these domains and showing Himadri is not just in creation, but also in circularity. At the same time, we are also working on developing technology to recycle different types of waste materials such as end-of-life tyres, used engine oil, lubricating oil, cooking oil to produce value-added products to build a circular economy. Beyond batteries, our ambition extends into leveraging nano technology, an area we believe will be a true game changer across multiple industries, leveraging our collaboration with Invati. Himadri team is working day and night to undertake development of disruptive solutions in domain of battery materials and technology. At the same time, we are also working on exploring niche use of this technology for crafting solutions in domain of agriculture, human and animal health.

At the core of everything we do believe is that the future will be shaped by those who can align industrial ambition with environmental responsibility. At Himadri, we are anchoring our growth in this philosophy, whether it's expanding into new markets, investing in technology, or building new capabilities, our actions are rooted in our desire to create long-term value responsibly and purposefully.

Every decision we have made, whether it is forward integrating into value-added chemicals, entering the tyre industry, or building the new energy material platform has been shaped by dual mandate to elevate India's industrial capabilities and to lead global chain in sustainable manufacturing.

By combining our deep value chain and expertise with frontier innovation, Himadri is not just responding to the needs and demands of a changing world. We are helping to shape it. We are doing so with the confidence that we are building an organization that will deliver sustained value to all our stakeholders, shareholders, customers, communities, and the planet. My humble request is for you to kindly go through our investor presentation in details as it covers all the aspects of our business.

With that, I would like to hand over the proceedings to our CFO, Mr. Kamlesh Agarwal, to walk you through the financial performance in details.

Kamlesh Agarwal: Thank you, Anurag ji. Good evening, everyone, and thank you for joining us today. I trust that everyone has had a chance to review our financial results and the

latest investor presentation,

which have been made available on both the stock exchanges and our company's website.

Over the last 5 years, we have demonstrated a consistent and robust financial performance, reflecting the strength of our strategic focus and execution. Since FY 2021, our revenues have grown at an impressive CAGR of 29%. More significantly, our EBITDA has expanded at a CAGR of 60%, and our PAT, profit after tax has grown at an exceptional 86% CAGR. These results are underpinned by enhanced focus on high-value specialty products and by a steady rise in our sales volumes, which has increased by 13% year-on-year during this period.

Himadri Speciality Chemical Limited

April 29, 2025

Now turning to the stand-alone financial highlights for the full year FY '25. We closed the year with a strong performance across all key metrics. Our sales volumes grew by 16% to 552,206 metric ton, up from 475,582 metric ton in the previous year. This volume growth translated into a solid top line with total revenue reaching INR4,596 crores, marking a 10% increase over FY '24.

Our focus on operational efficiencies and cost optimization helped drive EBITDA higher by 33%, which stood at INR844 crores compared to INR632 crores in the last year. Our EBITDA per ton reached INR15,276 per ton, a 15% increase over FY '24. At the bottom line, profit after tax rose by 36% to INR558 crores as against INR411 crores in FY '24. These results reinforce our ability to deliver consistent and profitable growth even amidst a dynamic market environment.

In terms of financial health, we continue to maintain a resilient balance sheet. As of 31st March 2025, we hold a net positive cash balance of INR371 crores, which gives us ample flexibilities to pursue growth opportunities while maintaining a prudent approach to capital allocation. Our return on capital employed has also shown a steady upward trajectory, reaching 34% in FY '25, a testament to our sharp focus on value creation and capital efficiencies. [Inaudible 0:20:35] share of INR1 each, which represents 60% of the face value for the financial year 2024-'25. This is subject to the approval of our shareholders.

With these results, we believe we are well-positioned to continue our upward trajectory, building on a foundation of financial strength, operational excellence, and strategic foresight.

That's all from our side. We will now open the lines for question and answer.

Moderator: The first question is from the line of Sanjesh Jain from ICICI Securities.

Sanjesh Jain: I got a few questions. First, on the volume growth for this quarter, particularly last 2 quarters, it has been declining. Any particular reason there is a sudden pressure on the volume, which has stopped growing?

Anurag Choudhary: No, nothing like that. See, what is happening, we are focusing more on value-added products. So, when you focus on value-added products, the production volume comes down, but the value addition is more. That is one of the reasons. Other reason is that at the end of the financial year, there was a shipment which was supposed to go, which got deferred to next year. That was the main reason for little decline in the volume, nothing else.

Sanjesh Jain: Got it. When we say that we are focusing more on value-added product, the production is 50% almost is pitch, right? Which is liquid pitch we generally sell for -- sell to the aluminum smelters. Apart from that, we got the oils and other thing. When we say we are focusing on value addition products, how should we see?

Himadri Speciality Chemical Limited

April 29, 2025

Anurag Choudhary: So value-added products are naphthalene of high purity that we are making. That is one of the very critical products for us. And other than that, specialty carbon black. So, when you convert from commodity to different grades of specialty, the

the volume comes down. So suppose a commodity product you are producing 100 tons, the specialty will be only 70 tons.

So that is one of the things. And it depends on which grade of specialty you are doing, which -- so that also the productivity changes. So, since we are going into value-added items, that is the reason. But overall volume will again be normal in current year.

Sanjesh Jain: So, in FY '26, now that in last 2, 3 years has been a super normal growth in terms of volume for us, do we expect the volume trajectory to hold on in FY '26 as well?

Anurag Choudhary: Yes, definitely, we expect the volume trajectory to hold on and grow further.

Sanjesh Jain: What's the expectation for the growth in FY '26 in terms of volume for us?

Anurag Choudhary: So total, if you look at our numbers, last year, we did a PAT of INR411 crores. This year, we did a PAT of on a stand-alone basis INR558 crores. So, by FY '27, we expect a PAT of INR800-plus crores.

Sanjesh Jain: 800 crores plus crores of PAT in FY '27?

Anurag Choudhary: Yes, yes.

Sanjesh Jain: Got it. Got it. The follow-up question is on the pitch. You did mention that we are looking for an export and we did a maiden shipment. How should we see the export opportunity in pitch?

Anurag Choudhary: The export opportunity is very bright in pitch. We are supplying material to different geographies. And in the current year, we expect the volumes to ramp up.

Sanjesh Jain: And this will be in what geography?

Anurag Choudhary: It will be in all the geographies, Middle East, Southeast.

Sanjesh Jain: Okay. Southeast and Middle East largely.

Anurag Choudhary: Yes. Largely.

Sanjesh Jain: Now changing to the carbon black. One of your peers did mention announced the result. We have seen some amount of pressure on the spreads on the carbon black. Are we seeing any pressure on the carbon black for us or its specialty, so we are largely protected?

Anurag Choudhary: We are largely protected. Our very minimum volume goes to tyre industry. So, we are largely protected. From our side, we don't see any pressure.

Sanjesh Jain: So sir, what is the large application?

Anurag Choudhary: So fiber black, conductive black, plastics, inks and coatings.

Himadri Speciality Chemical Limited

April 29, 2025

Page 9 of 17

Sanjesh Jain: Got it. And on the tyre business, can you help us understand where are we in the business commissioning? When should we see revenue coming up? Any thought process on our tyre business?

Anurag Choudhary: Yes, yes. So, we have been revamping the asset for last one year, and the process is on. So, we have already produced sample tyres and have given for BIS approval and expecting the approval in the next 25 to 30 days. Post that, we will commence production in phases. First phase will be 10, 20 tons, then we will gradually ramp up the production on a quarter-on-quarter basis.

Sanjesh Jain: Got it. Got it. So we should see some material revenue coming in from second half of this financial year. Will that be a fair assumption?

Anurag Choudhary: Yes. For second half of this financial year, you'll see some revenue coming in. But I think major revenue will start coming from the next year.

Sanjesh Jain: Next year. Got it. Got it. And any particular region we are focusing East India because we are closely placed there, or it will be more like a pan-India launch?

Anurag Choudhary: No, it will be not a pan-India launch because the volume we will be producing in the first phase will be very small to launch in a pan-India basis. We have selected 5, 6 states in which we'll start launching the product. Post that, once the production ramps up, we will be introducing new states.

Sanjesh Jain: Any particular state you want to highlight, 4, 5 states, which is our priority as of now?

Anurag Choudhary: That once we are going to launch, I will indicate.

Sanjesh Jain: Got it. My

last question is on the specialty value-added product, which we have announced a capex of INR120 crore. What is the potential asset turn we are looking in that?

Anurag Choudhary: Actually, INR220 crores.

Sanjesh Jain: Sorry?

Anurag Choudhary: What you are saying for the specialty carbon, specialty products.

Sanjesh Jain: No, no, specialty products, INR120 crores of capex.

Anurag Choudhary: It is 1.8 or 2:1.

Sanjesh Jain: So almost 2x of the -- so INR240 crores is the potential revenue... selling the less oil, right? So volume-wise, it will not change. There will be more realization gain, which will happen to us.

That is the base.

Anurag Choudhary: Right, right, right. So today, we are selling oil at suppose 40,000.

Sanjesh Jain: Correct.

Himadri Speciality Chemical Limited

April 29, 2025

Page 10 of 17

Anurag Choudhary: This product will be very high value-added product. So that will be the extra margin we'll be deriving from this chemical.

Sanjesh Jain: Got it. Volume remaining the same, we will benefit from higher realization, higher EBITDA per ton.

Anurag Choudhary: Actually, that is what we are doing.

Sanjesh Jain: No, that's also visible. Now that we are on probably one of the highest EBITDA per kg, we have hit what INR23 EBITDA per kg. Do you think there is more scope to improve from here or we should stabilize here? How should one see this?

Anurag Choudhary: We are on the full annual basis, we are INR15,276 EBITDA per ton. On a Q4 basis, it is INR17,008...

Sanjesh Jain: Correct. Sorry, my bad. INR17.1.

Anurag Choudhary: Yes, for metric ton EBITDA. And we are confident of maintaining this and strengthening it further.

Sanjesh Jain: Got it. Got it. There is no seasonality, right? It is also...

Anurag Choudhary: No, our business is not a seasonal business.

Sanjesh Jain: There's no seasonality in it, correct. Great, sir. So what is the capex number expected for FY '26 cash capex ?

Anurag Choudhary: Cash capex will be around INR600 crores to INR700 crores.

Sanjesh Jain: FY '26?

Anurag Choudhary: FY '26 through internal accrual.

Sanjesh Jain: All internal accrual.

Anurag Choudhary: Yes.

Sanjesh Jain: Thanks for taking all those questions so patiently and best of luck for the coming quarters.

Anurag Choudhary: Thank you so much.

Moderator: The next question is from the line of Aditya Ketan from SMIFS Institutional Securities. Please go ahead.

Aditya Ketan : Yes. Thank you for the opportunity. Sir, my first question is, sir, our total carbon black capacity stands at 180,000 tons. Out of this, 60,000 tons is the specialty carbon black. So the remaining 1.2 lakh ton capacity, now you have mentioned to an earlier participant that we are not very concentrated on the tyre sector. So this 1.2 lakh ton is basically the commoditized grade of carbon black, if I'm not wrong. So where are we selling this apart from the tyre sector?

Himadri Specialty Chemical Limited

April 29, 2025

Page 11 of 17

Anurag Choudhary: We are selling on non -tyre sector. There are different applications, which goes into -- in commodity also for plastics, for other applications, there we are selling.

Aditya Ketan: For plastics and this application, so specialty carbon black is used but the commodity goes through...

Anurag Choudhary: They are different grades of carbon black which goes in same application in different grades are there. So some grades are commodities, some grades are specialty. So like for MRG we are selling, for profiles we are selling, for hoses we are selling, for this conveyor belt, we are selling.

Aditya Ketan: Okay. Sir, any particular number if you can share, how much end user concentration is to the tyre sector, like 10%, 20%, 30%, -- any sort of figure?

Anurag Choudhary: So tyres in our case is less than 25%.

Aditya Ketan: Less than 25%. Okay. Sir, on to your new capex of the specialty

carbon black, which you are

planning to add 70,000 tons at a capex of INR220 crore. Sir, I believe the replacement cost looks very lower in case when we look at our competitor, so they are setting up a similar specialty carbon black line with a capex per ton of roughly around INR90,000. We are setting it up at a cost of around INR30,000 per ton. Sir, why there is so stark difference in our competitors' capex and our capex on a similar project like a specialty carbon black? Any thoughts on this?

Anurag Choudhary: That is the strength of Himadri. In fact, this question you should ask to the peer. That is the strength of Himadri to converting a low capex and a high ROCE. That's why our ROCE is 34%.

Aditya Ketan: Okay. Any sort of a technological difference, sir, can you highlight...

Anurag Choudhary: Technological difference is there. That's why we are setting up such a big unit, and we'll be the largest single -site specialty carbon black plant in the world. It's basically integration.

Aditya Ketan: Okay. And sir, any number if you can put like what sort of spreads -- can we make on the specialty carbon black? And what are we making on our existing specialty carbon black line of 60,000 tons?

Anurag Choudhary: We don't give product -wise margin. But to give you a broad number, specialty carbon black margin differs from 20,000 to 50,000, depending on what grade you are producing, what application you are selling to.

Aditya Ketan: Correct. And sir, where are we in this chain, like from 20 to 50, any sort of a number if you can share?

Anurag Choudhary: So number we don't share specifically for product -wise, but we are in this journey. We have started this journey 5 years back, and I think there is a long way to go.

Aditya Ketan: Sir, any idea on what the outlook for carbon black is, like for the next 2 to 3 years, like considering because we are not much dependent on tyre, where we are witnessing material weakness. So, other sectors, how are they expected to perform?

Himadri Specialty Chemical Limited

April 29, 2025

Page 12 of 17

Anurag Choudhary: With our order book and our contractual agreements, we are placed in a very good situation for next 2 to 3 years, clearly.

Aditya Ketan: Sir, just one last question. You had mentioned in your presentation that the Birla Tyres, the requirement of carbon black, will not be sourced from our facility. It would be from a third -party

player. Why is it so sir? Any sort -- like we are producing some higher grades, and we want to get some better realization as compared to like what Birla Tyre would be making a tyre. Any thoughts like why are we not focused on the integration part here?

Anurag Choudhary: See, for us, every business has its own P&L. We don't club P&L. So if Birla Tyre can get raw material at a better competitive rate and Himadri is able to sell its carbon black at a premium rate and getting more value, there's no point selling to Birla Tyres. So every business has its own vertical and look after their own P&L.

Aditya Ketan: Sir, if I may ask further on this. So, compared to like what you said, we might get raw material at better prices. So what would be the difference in realization of our versus the competitor, if any, which we can source the raw material for Birla Tyre?

Anurag Choudhary: So it's not a fixed difference. It changes on negotiation to negotiation. So till now, we are able to get a very good price compared to what we are selling in the market. And that is the reason we don't want to sell to Birla Tyre.

Moderator: The next question is from the line of Nischint Agarwal from Kohinoor Investment.

Nishant Agarwal: This is Nishant Agarwal here. Sir, I would like to know one is the PLI scheme. Have you applied for the PLI scheme?

Anurag Choudhary: So, Nishant, for us, there is no PLI scheme as on date. The PLI scheme is for advanced cell manufacturing. So t

he companies who are setting up a cell facility, they have applied and have been allocated by the government. In that there is a condition that you have to localize your procurement, and that percentage will increase year-on-year. And that is how the benefit will pass to component manufacturers like Himadri.

Nishant Agarwal: So in the future, are we going in for battery manufacturing as well?

Anurag Choudhary: No, no, no way. We want to focus on components. That is our business. That is where we have done all the efforts, R&D, innovation, and cell manufacturing is not our core, and will not go for cell manufacturing.

Nishant Agarwal: And next, sir, is the tyre division -- as we can see, all other companies' EBITDA margin or profit margins are in the range of 10% to 12%. So we'll be competing with them. And our margins are supposed to be in those range? Or are we going to be a little better than those companies?

Anurag Choudhary: See, I think it's too preliminary to predict the margins now. Let 1 or 2 quarters go. Let's see how we perform. And then I'll be able to give right numbers.

Nishant Agarwal: So our total capacity for the tyre division, if in case next year, we are running full-fledged, what would be the revenue, sir, from that?

Himadri Speciality Chemical Limited

April 29, 2025

Page 13 of 17

Anurag Choudhary: I don't think we'll be running full-fledged next year. So total capacity as on date is 400 TPD.

Nishant Agarwal: 400.

Anurag Choudhary: Different types of tyres. And we expect to ramp this up in the next 3 to 4 years' time.

Moderator: The next question is from the line of Shreya from Oaklane Capital Management LLP.

Shreya: Sir, I'm new to the company. So just wanted to understand, you said our volume in your prior comment you said the volumes have come down because we are moving towards the value-added products. However, if I do a simple math of the total revenue divided by the volumes, my per unit price realization is coming down. So, can you just help me how to look at this number?

Anurag Choudhary: So the raw material prices have also come down. So the selling price is a derivative of raw material prices. So that is the reason the prices have come down. Second, what is happening that when we go for value-added products, it is not significant in terms of volume. But in terms of profitability, it is very significant.

So it adds more to the bottom line rather than the contribution to top line. And the commodity material quantity reduces. That is the reason. And plus, in this year, our one shipment was deferred in the end of the March, which resulted in some reduction in volume compared to quarter-on-quarter. But if you see on a whole year basis, there has been significant improvement of 13%.

Shreya: Yes, yes. The volume has increased year-on-year. So that's where my question was coming from. So any sense on how much is the raw material prices, they have cooled off, how much?

Anurag Choudhary: So if you look at FY '24, the cost of goods sold were INR63,820. And this year, it is INR57,080. So it has come down by 10%.

Moderator: The next question is from the line of Prit from Wealth Finvisor.

Prit: Yes. So sir, my question is more regarding the macro aspect of Russia. I mean I believe that the reason the carbon black market has done very well is because the sanction on Russia came in and a lot of material started getting exported to Europe, which allowed even domestic market to do well. In the eventuality, whether if that changes, how will that impact our company? Could you please shed some light on that?

Anurag Choudhary: Yes, very good question. Actually, that is the differentiating factor. So our business model and

business that we have built is not based on opportunities. So unlike other companies, a lot of companies being impacted with what China is doing. And you will be pleased to know that there is no

impact of China on Himadri business model. We supply like -- just for example, we supply coal tar pitch to our customers in liquid form at a temperature of 260 degrees centigrade. And we are supplying to our customers at a price which is more or less ex China or less than China price. And even then, we are earning good profit. That is the integration. That is operational efficiency. That is really what Himadri has developed. Same for carbon black. So Himadri Speciality Chemical Limited
April 29, 2025

Page 14 of 17

carbon black, the focus why we have not kept on opportunistic market of commodity black is because the opportunity will come today, and it will be just time bound. But our reason is to have a sustainable long-term business, and that is where specialty comes into play. So we are not supplying to any opportunistic customers where -- this delta is there. That is the biggest strength of the company.

Prit: You have other peers who are supplying to that opportunity. So...

Anurag Choudhary: Our volumes are hardly anything. We are 180,000 tons. I don't have 1 million ton or 800,000 tons to sell. So I can very well see whom to sell and have selected customers who value for quality and long-term relationship.

Prit: Understood. So you're basically pretty confident of sustaining the current numbers and improving them as per your plan, as you explained over the next 2 years for the INR800 crore profitability that you are targeting today.

Anurag Choudhary: 100%.

Moderator: The next question is from the line of Darshan Shah from BS Investments .

Darshan Shah: So my questions are largely around the LFP business. First of all, have we signed any offtake agreement or MOU with OEMs or battery manufacturers for our LFP output?

Anurag Choudhary: No, not yet, but the samples have been approved. So what is the stage? Second, we have to sell -- send the samples to them from demo plant. And once that is approved, then the commercial plant, there will not be much time required for approving from commercial plant. So post that, only the MOU will be signed. So good thing is that we have got very favorable reply from the OEMs when we have sent the first few samples, the results have been very encouraging.

Darshan Shah: Okay. That is nice to hear. So then on the similar ground near post commercialization, how much revenue do you expect this segment to contribute in its first full year of operations?

Anurag Choudhary: So in first full year of operations, it will have a top line of around INR2,200 crores to INR2,400 crores at full capacity utilization. This is basis of today's market price.

Darshan Shah: Okay. And what is the target capacity of LFP by the year-end FY '26?

Anurag Choudhary: No, no. FY '26, there is no capacity. FY '27 Q3, we will have 40,000 metric tons up and running.

Darshan Shah: Okay. Okay. Got it. And your presentation mentioned it is for both domestic as well as exports. So then your focus would be towards what initially towards more of domestic or more of exports?

Anurag Choudhary: More of exports. Domestic, whatever material will be there, requirement will be there, we'll be meeting that. We'll be the only commercial manufacturer. And then we'll be growing our capacity depending on the domestic and international market, which will be huge.

Himadri Speciality Chemical Limited

April 29, 2025

Page 15 of 17

Darshan Shah: Okay. So in Phase 1 you mentioned somewhere around 1100...

Anurag Choudhary: Himadri is the only company -- will be first manufacturing plant in the world other than China for electric commissioning.

Darshan Shah: And finally, sir, since you did mention that it will be in FY '27, it will be up and running. The presentation mentioned INR1,130 crores of CapEx. How much can we expect it to -- to be booked for FY '26 and how much beyond FY '26 of the INR1,130 crores?

Anurag Choudhary: I think IN

R300 crores will be in FY '26 and balance, most of it will be in FY '27.

Moderator: The last question is from the line of Rudransh Kalra from MB Investments.

Rudransh Kalra : My question is precisely around Birla Tyres. So what are the segments that initially you want to get into the tyre segment? Is it off-highway first or is it passenger vehicle? Or is that going to be happening simultaneously? And also, are you also going to get into the mainstream 1000x 20 [inaudible 0:47:11] tyres?

And the other question along those -- along the tyre industry is what sort of business model are

you going to be -- what sort of like dealer network or distributor network are you planning? So as you just mentioned earlier, you were saying that initially you have like you're going to have a limited capacity.

So would you want to go in bigger cities? Or would you want to go in places where the business is more? So how will you strategize it if you could tell me the product and the distribution or the dealer network? That would be really great.

Anurag Choudhary: Sure, sure. So initially, the target will be to sell agri tyres and mining tyres, along with that bias tyres for the commercial vehicle. And next phase will be passenger car radial tyres and EV tyres, third phase. Plus in addition to that, we'll be moving on to specialized tyres over the years.

So it is going to be a journey of next 3 to 5 years, where the entire tyre transformation will happen starting from bias for commercial to EV, PCR and OHT tyres. Regarding dealer network and all that once we launch our product, we will come up with a full report on that and that is time, I'll be love to share that.

Rudransh Kalra: Just a follow-up question. So just in case you decide to get into the not -- particular dealer and specialized dealer distributorship, so what is -- do you want to grow slow once you hit the -- once the production starts and once you have the capacity to dispose them in the market. So do you want to just get into -- just appoint 1 distributor and then dealers? Or is it going to be regional dealers? And then, how is it going to be like at least strategy, you must have thought something about it?

Anurag Choudhary: We have our strategy fully aligned and made and that is very much in place. So at the right point of time, I'll disclose the strategy, not now.

Moderator: The next question is from the line of Anubhav from MC Research .

Himadri Speciality Chemical Limited

April 29, 2025

Page 16 of 17

Anubhav: So I wanted to understand what is the export share for our carbon black business, maybe in terms of volumes or sales? And at the industry level, if you could also share what is the net export level in the industry.

Anurag Choudhary: So in the overall top line for FY '25, our export sales was 27% in terms of total sales.

Anubhav: Okay. So but specific to carbon black, could you share what could be the exposure to exports?

Anurag Choudhary: Exposure to export for carbon black would be around 35% to 40%.

Anubhav: 35% to 40%. And for the industry level, would you have any data like approx how much would be the Indian carbon black industry would have an export exposure?

Anurag Choudhary: Much less. Okay.

Anubhav: And my last question was regarding a specialty product, which we are eyeing for carbazole. If you could illustrate a couple of applications, I mean, how -- for example, for pharma, electronics, I mean, what are the end users?

Anurag Choudhary: Carbazole is used for making violet in the pigment industry. That's the only way of making violet. So currently, it is being imported, and they are very niche producers of carbazole. So Himadri will be one of the first companies to do that.

Anubhav: Okay. And sir, for the pharma industry. [Inaudible]

Anurag Choudhary: Specific application.

Moderator: In the interest of time, that was the last question for today. I now hand the conference over to

the management for closing comment.

Anurag Choudhary: Just one second. If you have more questions, you can take -- people who are having more questions, we are okay with it. You can take, please.

Moderator: The next question is from the line of Yash who an Individual Investor is .

Yash: Congratulations, first of all, for amazing set of numbers. I just wanted to know majority of my questions have already been covered. I just wanted to confirm what is the vision that we have, let's say, down the line, 3 years, 4 years from here in terms of market share, in terms of revenue and profitability?

And the second question is, I saw one slide where we have mentioned the uses in electronic items and some pharma and some, I think, missiles applications also. Can you please elaborate on that part? Like what are we doing exactly on those segments?

Anurag Choudhary: See, we have given a clear guidance that FY '27, our PAT will be INR800 plus so that clearly lays down the road map for growth, and it will be coming from all around business from our existing business and the new businesses that we are entering and the capacities which are setting up.

Himadri Speciality Chemical Limited

April 29, 2025

Page 17 of 17

Right from specialty chemicals like anthraquinone, carbazole from higher revenues in terms of exports, for coal tar pitch from the capacity expansion of specialty carbon black and there is much, much more to come.

If you go to next year, FY '28, then that will be a year where your LFP will be in full production, your other products, which we are also in pipeline, they will also start. So every year, you will see very strong numbers coming up. We make a very specialized pitch, which goes into DRDO for using long range missiles. Beyond this, I cannot disclose. It's an NDA.

Yash: Okay. That's amazing, sir. That's amazing to hear that we have long-term visibility and sustainability in terms of number and profitability and revenue share. Also, how do you see this as an opportunity in terms of this DRDO tie-up and defense, given that the whole Europe thing is now revamping their own defense capacities as you guys focus more on the export part. Do we see any more addressable market over there?

Anurag Choudhary: It's a very niche market and definitely growing at a good pace. Does that answer your question?

Yash: Actually, I cannot hear you. The voice was not audible in between.

Anurag Choudhary: Coal tar pitch for defense application we are selling is very niche application, and it is growing year-on-year.

Yash: So like currently, like how much percentage is that sizable amount as of now? Or will it be sizable amount in terms of percentage going ahead, maybe FY '28 and way forward from there?

Anurag Choudhary: It's sizable amount, but we don't want to give a number to that.

Moderator: Ladies and gentlemen, that was the last question for today. I now hand the conference over to the management for closing comments.

Anurag Choudhary: So thank you, everyone. Thank you for your support, and thank you for your trust in Himadri. Thank you Bhavya.

Moderator: Thank you on behalf of MUFG Intime that concludes this conference. Thank you for joining us, and you may now disconnect your line.

Sub: Transcript of Earnings Conference Call for Financial Performance for the 1st Quarter ended 30 June 2025 held on Friday, 18 July 2025 Dear Sir/ Madam,
Further to our letters dated 15 July 2025 and 18 July 2025 and pursuant to Regulation 30 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 ("SEBI Listing Regulations") read with Schedule III of the SEBI Listing Regulations and other applicable provisions of the SEBI Listing Regulations, we are enclosing herewith the transcript of earnings conference call for Financial Performance for the 1st Quarter ended 30 June 2025 held on Friday, 18 July 2025 at 03:30 p.m. (IST),

The above information will be made available on the Company's website at www.himadri.com

You are requested to take the same on record.
Thanking you,

Yours faithfully,
For Himadri Speciality Chemical Ltd

Moderator: Ladies and gentlemen, good day and welcome to Q1 FY '26 Earnings Conference Call of Himadri Speciality Chemical Ltd, hosted by MUFG Intime.

As a reminder, all participant s' lines will be in the listen -only mode . And there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during this conference call, please signal an operator by pressing “*”, then “0” on your touch -tone phone.

Please note that this conference is being recorded. I now hand the conference over to Mr. Bhavya Shah from MUFG Intime. Thank you and over to you , sir.

Bhavya Shah: Thank you. Welcome to the Q1 FY '26 Earnings Conference Call.

Today, on the call, we have with us Mr. Anurag Choudhary – CMD & CEO, Mr. Somesh – EVP (Tyre & Strategy), and Mr. Kamlesh Agarwal – CFO.

This conference call may contain forward -looking statements about the company, which are based on beliefs, opinions , and expectations as of today. Actual results may differ materially. These statements are not the guarantees of future performance and involve risks and uncertainties that are difficult to predict. A detailed Safe Harbor statement is given on Page 2 of the investor presentation of the company, which has been uploaded on the stock exchange and company website.

With this, I now hand over the call to Mr. Anurag Choudhary . Over to you , sir.

Anurag Choudhary : Thank you, Bhavya. Good afternoon, ladies and gentlemen. On behalf of Himadri Speciality Chemical Ltd, I am pleased to welcome you all to our Q1 FY '26 Earnings Call . We deeply value your continued support and engagement.

We are delighted to share that Q1 marks a strong and focused start to the new financial year. It reflects the strategic direction we have undertaken , one rooted in capacity expansion, technology -driven product development, and deeper global integration. These initiatives are aligned with our commitment to build a future -ready, diversified, and sustainable organization. This quarter was particularly significant as it reflects the core spirit of “Himadri Reloaded, The Next Chapter ”. This Phase is more than just a theme, it captures the mindset driving us forward, reimagining what's possible through innovation, resilience, and sharp execution.

From a financial standpoint, we are pleased to report our highest -ever EBITDA and PAT, underscoring the strength and stability of our operations. EBITDA stood at Rs. 234 crores, while PAT came at Rs. 183 crores on a standalone basis . This performance was led by an increase in sales of high -value added products, better operational efficiencies, improvement in yield, and

Himadri Speciality Chemical Ltd
July 18, 2025

Page 3 of 23

strong waste heat recovery systems. While the revenue growth was marginally impacted due to correction in raw material prices, our profitability trajectory remains on a firm, sustainable upward path.

At the core of our business lies a deep commitment to developing innovative solutions that drive customer satisfaction, powered by our robust in -house research and development. Much like our highly -integrated manufacturing capabilities, this enables us to effectively cater to the evolving demand of the sunrise sectors.

We deliver high -performance products across diverse segments including lithium -ion batteries, paints, plastics, tyres, technical rubber goods, aluminum , graphite electrodes , agro -chem, defense and construction chemicals . Our sharp focus on quality, process control, and innovation continues to keep us ahead in a rapidly evolving global landscape.

Post the successful acquisition of Birla Tyres Limited by Himadri Speciality Chemical Ltd strategic partner, along with resolution applicant - Dalmia Bharat Refractories Limited in October 2023, significant efforts have been directed towards mo

dermizing and revamping the
Birla Tyres plant at Balasore.

During the quarter, tangible steps have been continued to be taken to advance the transformation agenda. With operations now having commenced at Birla Tyres, making a pivotal milestone in the journey to establish the high -performance, future -ready, speciality tyre brand. A refreshed brand identity was introduced, featuring a modernized logo and our redesigned corporate website

to reflect this strategic shift.

We are pleased to inform you there has been a huge brand recall we have seen from the market. The focus is on building a comprehensive product portfolio of speciality tyres, catering to off-highway tyres, commercial vehicles, agriculture, industrial and electric vehicles. Progress on commissioning the passenger car radial tyres remains on track. This unit is designed to meet the specific requirements of EV and SUV segments, supporting expansion in both domestic and export markets. Additionally, a targeted multi-platform marketing campaign is being developed to enhance brand recall and engage effectively with contemporary customers.

In parallel, we have made significant progress in building our clean tech and new energy material vertical, a pillar that will define Himadri's next growth wave. We entered into an exclusive technology licensing agreement with SiCona, an Australian innovator in silicon carbon and anode material. Their SiC_x technology, proven to enhance energy density by 20%, and charging speed by 40% gives a strong edge in the evolving EV and storage market. With this agreement, we have taken strong steps towards localizing this technology and bringing it to scale in India. In addition to that, we invested in International Battery Company, IBC, a US-headquartered technology developer and manufacturer of chemistry agnostic prismatic lithium-ion cells,

Himadri Speciality Chemical Ltd
July 18, 2025

Page 4 of 23

acquiring 16.24% equity stake. IBC has an established manufacturing facility in South Korea which began operation in 2023 and is coming up with a gigafactory in Bengaluru through its joint venture with Mahanagar Gas Limited subsidiary. This gigafactory is expected to be operational by Q4 FY '26.

Our advanced materials jointly tested with IBC have demonstrated outstanding results, fulfilling their stringent requirements for high-performance battery manufacturing. This is a significant milestone for the company as it marks the start of commercial deployment of Himadri LFP cathode active and anode material with IBC presently developing its LFP-based Prabal 2000 using Himadri's battery materials. This partnership also opens doors to IBC's global customer base across US, India, and East Asia.

While this initiative shapes our future, we continue to strengthen our core. With an established high-temperature liquid coal tar pitch terminal already operational at Halodia, we have now commissioned a new terminal at Mangalore. This expansion significantly enhances our logistic capabilities and export competitiveness. In parallel, we are setting up a unique facility, the first of its kind in India, to extract high-value added chemicals like anthraquinone and carbazole from our existing coal-tar distillates, which is expected to be commissioned in Q2 FY '27. This will help us to reduce India's dependence on import and unlock greater value from our integrated operations.

We are also entering the consumer segment with the launch of Durofresh™, our high-purity naphthalene balls retail brand. Backed by 99.5% purity and stain-free performance, Durofresh™ sets new benchmarks in vapor strength and long-lasting freshness, reinforcing our technical leadership in refined naphthalene market. Meanwhile, our brownfield expansion of 70,000 metric tonnes per annum in speciality carbon black is progressing well and is on track to be commissioned by Q3 FY '26. With

this, our speciality carbon black capacity will more than double to 1,30,000 metric tonnes, making it the single largest speciality carbon black site in the world, and places amongst the top five speciality carbon black producers globally. As part of Himadri's vision to become a global frontrunner in production of lithium-ion phosphate cathode active material powering 100 gigawatts of lithium-ion battery capacity, we are making steady progress on Phase 1 of this journey. This Phase involves setting up the world's first commercial LFP manufacturing plant outside of China with a planned capacity of 40,000 metric tonnes per annum. The project is progressing as scheduled and is expected to be operational by Q3 FY '27, with full-scale operations commencing in FY '28. This facility marks a significant milestone not only for Himadri but also as a step towards a new era. As we look forward, we are entering a new Phase, one that is bold, transformative and purpose-driven. With a robust pipeline of technologies, disciplined execution and clear roadmap, we are confident of delivering sustainable and profitable growth. The next three years will be defining years for Himadri's new age materials, deepen our global presence and capture opportunities

Himadri Speciality Chemical Ltd
July 18, 2025

Page 5 of 23

across energy transition, speciality chemicals and downstream value chain. We thank you for your continued trust and support as we script this new chapter of growth, Himadri Reloaded.

With that, I would like to hand over the proceedings to our CFO – Mr. Kamlesh Agarwal, to walk you through the financial performance in detail .

Kamlesh Agarwal: Thank you, Anurag ji . Good evening , everyone . And thank you for joining us today. Hope everyone has had a chance to review our financial results and the latest investor presentation which have been made available on both the stock exchanges and our company's website.

We have commenced the financial year with a clear focus on execution, operational excellence and disciplined financial prudence. Let me begin with the key financial highlights of the quarter. Sales volume has increased to 1,40,090 metric tonnes as compared to 1,39,175 metric tonnes a year ago. Consolidated revenue for the quarter stood at Rs. 1,118 crores as compared to Rs. 1,200 crores a year ago. The revenue was marginally impacted majorly because of correction in raw material prices which led to the reduction in the finished goods prices.

Our EBITDA stood at Rs. 235 crores as compared to Rs. 188 crores a year ago with a growth rate of 25%. Our PAT has significantly increased to Rs. 179 crores from Rs. 123 crores a year ago, with a growth rate of 46%.

On a standalone basis, the revenue for the quarter stood at Rs. 1,100 crores as compared to Rs. 1,200 crores a year ago. Our EBITDA stood at Rs. 234 crores as compared to Rs. 188 crores a year ago , with a growth rate of 25%. Our PAT has significantly increased to Rs. 183 crores from Rs. 123 crores a year ago with a growth rate of 48%.

Our company's net debt was Rs. 107 crores for Q1 FY '26 while ROCE was 32% , excluding investment and capital work in progress as of 30th June , 2025. We remain committed to delivering strong value through our strategic priorities and operational rigor.

That's all from our side. We will now open the lines for questions and answers.

Moderator: Thank you very much. We will now begin the question -and-answer session. The first question is in the line of Sanjesh Jain from ICICI Securities. Please go ahead.

Sanjesh Jain: Thank you. Thanks for this opportunity. I have a few questions. First on the graphite, today there was a news article telling that US has put some 93.5% EDD or has proposed to put 93.5% EDD on Chinese graphite and we intend to be in the anode active material , how do we see this as an opportunity ? Because we have generally s

poken about cathode, not so much on the anode , are we looking to harness this opportunity as well?

Himadri Speciality Chemical Ltd
July 18, 2025

Page 6 of 23

Anurag Choudhary : Yes. Good afternoon, Sanjesh. So, the effective duty will be 165%. Already there is a duty on Chinese anode with this additional duty coming in. This is a great opportunity for us to supply material to US.

Sanjesh Jain: What exactly are we looking to export ? Because in anode we have not spoken much about and we have not announced any CAPEX , can you give more color on the anode side of the business?

Anurag Choudhary : So, anode, we have been doing a lot of research and development . And our work is progressing very strongly. And at the right point of time we will announce the CAPEX . Now we are working on the engineering part of it. Once the engineering is completed, we will announce the CAPEX and time frame with capital investment.

Sanjesh Jain: But right now we have not announced anything on anode ?

Anurag Choudhary : No, nothing. But we are making a lot of groundwork for that in terms of customers ' approvals, sending samples across geographies to OEMs. All those things are already moving very fast.

Sanjesh Jain: Got it. My second question is on the volume growth. Last year we had a very healthy volume growth , upwards of 15 %, 16%. Now that volume growth looks to be tapering down . How are we planning to see that we sustain the volume growth at least 8 %, 10%?

Anurag Choudhary : Definitely we are looking forward. From Q4 onwards you will see a strong volume growth once the carbon black capacity will come in place in Q3. So , from Q4 you will see that capacity coming up. In addition to that , we are debottlenecking some coal tar pitch capacity also , that will also come into play. So , from Q3 -Q4 you will see volume growth also coming up.

Sanjesh Jain: How much debottlenecking and coal tar distillation are we looking at right now?

Anurag Choudhary : So currently we are at 5 ,00,000 metric tonnes . We are looking at debottlenecking another 1,00,000 metric tonnes .

Sanjesh Jain: So from 5 ,00,000 we will go to 6 ,00,000 metric tonnes ?

Anurag Choudhary : Right.

Sanjesh Jain: And this should be commissioned by?

Anurag Choudhary : By Q3. So this is not commissioning. This is just debottlenecking, so there is no commissioning at one go. You will see quarter -on-quarter improvement in the numbers from next quarter onwards.

Himadri Speciality Chemical Ltd
July 18, 2025

Sanjesh Jain: And this volume constraint what we are seeing is purely because of the capacity utilization and not that we have seen any softening in demand?

Anurag Choudhary : No, no. Like carbon black we are running at 99% We are at very high capacity utilization. So this is because of the capacity constraint not because of demand issues. So , basically if you look at the turnover also , the top line compared to the previous corresponding quarter last year came down by Rs. 100 crores , whereas the volumes are more or less same. The reason is the raw material price has considerably corrected and because of that the finished price has also come down.

Sanjesh Jain: That we appreciate. That I got when you initially made that remark. But purely on the carbon black we have seen Ori on Carbon Black announcing a planned shutdown in Europe region. Is it more of a speciality or it is more of a rubber carbon black? The question is that do we see that as an opportunity as well for Himadri?

Anurag Choudhary : Yes definitely. Since we are strong in Europe , we definitely look forward to that as a great opportunity.

Sanjesh Jain: So how much of our carbon black today is sold in Europe?

Anurag Choudhary : So, you can say currently we are exporting around 15 %-18% of our carbon black to European market.

Sanjesh Jain: Okay. So, the export contribution of Europe in carbon

black is almost 15 %-20%?

Anurag Choudhary : Yes.

Sanjesh Jain: Got it. And the last one is on the gross profit per kg , that looks like improving secularly. Now we are 15% Y-o-Y growth or 16% Y-o-Y growth , what is this driving a consistent steady increase in the gross profit per kg? That's number one.

Number two sir, when you say that you have seen favorable product mix, when you say favorable product mix can you elaborate which product has grown faster where the margins are higher , and which product we are curtailing where margins are lower? Some color on the mix would help us appreciate this improvement in the gross profit and EBITDA per kg.

Anurag Choudhary : Sure. So , the product mix has changed. Like we were doing more percentage of crude naphthalene , now the percentage of refined naphthalene has significantly improved. Second, in terms of speciality carbon black, we are moving up in the ladder of speciality carbon black. With that, the per metric tonne margin keeps on improving. And regarding the gross margin, we have been able to improve on the gross margin basically because of operational efficiencies, improvement in yield and reduction in wastage.

Himadri Speciality Chemical Ltd

July 18, 2025

So, we have also installed waste heat recovery system which helps us to recover all the high temperature gases can be used and used in the heating back in the process. So , all this together has been helping us to improve on our gross margin and plus high value-added products like I told refined naphthalene, very high grade of refined naphthalene that has higher value addition, high grades of speciality carbon black, specialized patches going into defense. All these things are helping us to improve on the margins. And these are sustainable.

Sanjesh Jain: And how much more can we grow from here on EBITDA per kg? We are already at Rs. 17 EBITDA per kg , how do you see this number going in say FY '26 and FY '27?

Anurag Choudhary : We are confident of this number being maintained , and gradually you will see upward movement in these numbers. I do not want to give specific numbers but yes, for sure you will see upward movements.

Sanjesh Jain: Very clear , sir. Some questions from the tyre business , now that we have started branding and all. Have you started the production and sales as well or right now we are focusing on the softer side of the market?

Anurag Choudhary : No, we never did any softer side, nothing went free. From day one we have been dealing with consideration. So , for June quarter we did sales of Rs. 18 crores, sorry Rs. 5 crores from tyre business and it just started on the 29th of May. So now in the current quarter you will see slight ramp up and quarter -on-quarter you will see improvement. But one thing is there, when we are going to the market we have already appointed 20 distributors and below these distributors there are many dealers , like every distributor has ranging from 8 to 20 dealers. So , we are getting very strong brand recall from the market. So, people are highly appreciating our brands like BT112, Ultra Mileage, Kalapatthar. All these are very well appreciated in the market. And when we are going to the customers, when they are saying Birla Tyres is back, we are getting very, very good response.

Sanjesh Jain: So we have appointed the distributor, dealers , and this is what, mainly into the east region?

Anurag Choudhary : No, no, like already we have appointed in 11 states and every quarter this will be increasing.

With our increase in production, like every quarter you will see increase in production and higher capacity utilization. So with that you will see more and more states being captured.

Sanjesh Jain: Got it, got it. Just one last bookkeeping question, we have this first-time purchase of stock of Rs. 57 million or Rs. 5.7 crores, what is this?

Anurag Choudhary : What?

Sanjesh J

ain: Purchase of stock in our cost of goods sold, there is Rs. 5.7 crores of purchase of stock which we have sold, what is this?

Himadri Speciality Chemical Ltd
July 18, 2025

Page 9 of 23

Anurag Choudhary : So, actually we have as a 100% subsidiary of Himadri Clean. So that is buying from DBRL, the tyre they are making and selling. So, it is the marketing arm of Himadri, that is what the stock purchase is for.

Sanjesh Jain: Okay. But in consol level that should get knocked off, right, but this I am seeing in consolidated.

Anurag Choudhary : Consol it will come because we are buying from the outside entity, we are buying from DBRL. That's why it is coming in the consol as a separate entity, separate line item.

Sanjesh Jain: When is this entity expected to come within the Himadri? Because I thought that manufacturing --

Anurag Choudhary : No, there is no intention as such now as of date of its coming into Himadri.

Sanjesh Jain: Okay, I will take this offline for more clarity, but this is very clear. Thank you very much sir and best of luck for the coming quarters. Thank you.

Moderator: Thank you, sir. The next question is from the line of Rehan Syed from Trinetra Asset Managers. Please go ahead.

Rehan Syed: Good afternoon, team. And thank you for giving me the opportunity. So, sir, I have a couple of questions regarding this. So, sir, first of all, can you please elaborate on how Invati product integration and revenue synergy panned out in Q1? And any visible contribution or pipeline build out from this acquisition for going forward?

Anurag Choudhary : So, Invati has developed nanotechnology for battery material and this is in development stage. So, looking forward, once it materializes and the technology matures, then we will have very big difference in terms of what we will be able to produce in terms of raw material component for lithium ion battery. Currently, they are selling some products in terms of animals and agriculture products out of which the top line this quarter was Rs. 3 crores and Rs. 1 crores of PAT.

Rehan Syed: Okay sir. Sir, my next question is towards your B2C brand DurofreshTM, how is it performing in Q1 in terms of distribution, revenue or contribution? How are any early customer feedback you get? Or for going forward, are you targeting this segment aggressively in FY '26 and FY '27?

Anurag Choudhary : You please speak clearly, which company you are asking for?

Rehan Syed: Sir, I am from Trinetra Asset Manager. Sir, now I am clear?

Anurag Choudhary : No, no, no.

Himadri Speciality Chemical Ltd
July 18, 2025

Page 10 of 23

Rehan Syed: Sir, I am talking about B2C brand DurofreshTM.

Anurag Choudhary : Okay, okay. So, DurofreshTM, we are the largest manufacturers of naphthalene in India with 68% market share. So, historically, we have been selling crude naphthalene and now we are selling refined naphthalene in a big way. So, the next step is mothball. So, mothball is a significant value addition to the refined naphthalene. So, this is the first time Himadri is going to B2C segment. So, we are launching this brand DurofreshTM. And looking forward, we look for a very strong demand from the entire country and from export market.

Rehan Syed: Okay. Okay sir, last one question, sir, any future guidance regarding EBITDA margin or revenue growth you are targeting for two to three years down the line?

Anurag Choudhary : So, as we have already told in our last call also, we expect our net profit to double from FY '24 to FY '27.

Rehan Syed: And for EBITDA margin, sir?

Anurag Choudhary : EBITDA, we do not look at EBITDA margin, we look at more EBITDA per metric tonne. Because the raw material prices and finished product prices fluctuating, the margins can always fluctuate. Like today it is 21%, last quarter it was 17%. So, this can fluctuate. So, our EBITDA per metric tonne margin is around R

s. 16,500 now.

Rehan Syed: Sure, sir. Thank you for your answer . And thank you for your question.

Moderator: Thank you, sir. The next question is from the line of Pruthi Shah from SAS Capital. Please go ahead.

Pruthi Shah: Hello, thank you for this opportunity. I have a question. Sir, my first question is that how are you positioned against global competitors in the high margin speciality carbon and battery material segment?

Anurag Choudhary : See, Himadri has an inherent strength that for speciality carbon black we have our own raw material. So, when we do coal tar distillation, we produce oil which is very clean oil and very consistent in terms of quality. Our sulphur content is 0.002%. Plus, there is hardly any impurities in the oil. This gives Himadri an inherent edge in terms of speciality carbon black compared to any of the peers globally.

And regarding lithium ion battery component materials, we have developed technology for LFP in-house. And a pilot scale product we have supplied to many customers and have got very good response from them. And one clear evidence is from IBC. We have supplied samples to IBC for LFP and anode. So, after doing a diligence test of one year, we were inspired by the quality of Himadri LFP and anode that they themselves came forward for our collaboration.

Himadri Speciality Chemical Ltd
July 18, 2025

Page 11 of 23

And Himadri being the only company outside China who is coming out with the first plan t for lithium ion phosphate, it's a big advantage, first mover's advantage. Same in anode also. Anode, we have done a lot of groundwork. Now, only thing is that at the right point of time we will announce the capacities also and CAPEX with the timelines once the engineering and everything is completed.

Pruthi Shah: Okay, okay. My second question is, what percentage of your revenue now comes from export ? And how are global carbon black and advanced material marketing behaving?

Anurag Choudhary : So, 34% of our revenue is coming from export. And there is huge opportunity in the global market . With the current geopolitical situation India is at a much -preferred stage compared to any of the countr ies we are competing with.

Pruthi Shah: Okay. Thank you.

Moderator: Thank you, ma'am. The next question is from the line of Vikas Gupta from RG Capital. Please go ahead.

Vikas Gupta: Yes, thanks for taking my question. S ir my first question is, can you shed some light on the LFP based Prabal 2000 , what stage is it currentl y at? And what kind of demand outlook do you foresee for this product in the near to medium term?

Anurag Choudhary : See, IBC has already launched one prismatic cell with the branding Prabal 1000. So, Prabal 1000, the chemistry is NMC. So, now they are goin g to launch in next one -year time Prabal 2000, which will be with LFP chemistry. And this LFP chemistry and anode material is being built around Himadri raw material. And the market for this is huge. You know the market for lithium ion cell is very large. And LFP now being used in both the segment, BSS and EV has huge market potential.

Vikas Gupta: Understood, sir. S ir my next question is that there was a noticeable increase in the other income in the profit and loss statement this quarter , could you please provide the clarity on the key components or sources of this increase?

Anurag Choudhary : So, other income has increased basically because of we have taken loans, we have issued commercial papers and deposited as fixed deposit in bank. So the delta between that has helped us to improve on our other income. In addition to that, the investment what we have made, some change has happened in the fair value of that, minor changes, which has also helped to increase the other income.

Vikas Gupta: Okay, all right . Understood, sir. And s ir my last question is that , with your recent foray into the refined naphthalene ball segment

under the brand Durofresh™, could you elaborate on the

Himadri Speciality Chemical Ltd
July 18, 2025

Page 12 of 23

pricing strategy and what differentiates this product from existing offering in the market that would drive consumer preferences?

Anurag Choudhary : So, one thing which will really drive this is the purity of the naphthalene. We produce the highest purity grade of naphthalene in India and I can rather say one of the highest in the world. We are supplying already, we are the largest supplier to mothball market in US. There is a company called Billet who are the market leaders in mothball in US and they buy more than 70% of their requirement from Himadri. Only because the reason being that our quality and our purity levels

are very high. So, with this, and Himadri being backward integrated, being the largest player in naphthalene, so we have a natural edge compared to anyone else who is buying naphthalene and then purifying it and then selling as mothball.

Vikas Gupta: Understood, sir. Thank you. That's all from my side, sir.

Anurag Choudhary : Thank you.

Moderator: Thank you, sir. The next question is from the line of Prathamesh Dhiwar from Tiger Assets. Please go ahead.

Prathamesh Dhiwar: Yes, most of my questions are answered, sir just one thing. I think we mentioned we are going to double our PAT by FY '27, so around Rs. 1,000 crores to Rs. 1,100 crores of PAT we are targeting by FY '27, is it right?

Anurag Choudhary : No, I told we are doubling from FY '24.

Prathamesh Dhiwar: Okay. Got it. Got it, sir.

Anurag Choudhary : Thank you, sir.

Moderator: Thank you, sir. The next question is from the line of Vivek Gupta from Star Investment. Please go ahead.

Vivek Gupta: So, in your presentation, you have indicated that additional CAPEX is planned for the Birla tyre segment beyond the Rs. 300 crores already outlined. Could you please share an estimate for the incremental CAPEX involved and the expected revenue contribution from this additional investment?

Anurag Choudhary : See, we are doing it in Phases, so it will be done over a period of next three years. So, in total, we are yet to come out with a total number. But ballpark figure as of now during the current year will be around Rs. 250 crores to Rs. 300 crores additional CAPEX compared to what we have invested.

Himadri Speciality Chemical Ltd
July 18, 2025

Page 13 of 23

And this will continue for next two years since we will be ramping up the capacity and modernizing. And idea is to convert the existing bias capacity into OHT and OTR and to modernize and restart PCR. So, I think for next year, three years, this capital deployment will continue in this manner only.

Vivek Gupta: Okay. Sir, regarding the upcoming LFP cathode plant, which is scheduled to commence operation in third quarter of FY '27, will the initial production primarily cater to domestic demand or exports? Also, could you provide a ballpark pricing expectation for the LFP product?

Anurag Choudhary : See, LFP product pricing keeps on varying depending on the raw material prices where the lithium prices goes. But on a ballpark figure, it will be between Rs. 6 lakh to Rs. 7 lakh per tonne as of what it looks today. And we will be basically targeting export market with some domestic because not much capacities are coming up in India by Q3 FY '27. So, the capacities which are coming up definitely will supply to them. But in addition to that, whatever capacity will be there, we will be supplying to the global market, particularly Europe and US.

Vivek Gupta: Okay. Thank you.

Moderator: Thank you, sir. The next question is from the line of Anubhav Sahu from MCPro Research. Please go ahead.

Anubhav Sahu: Hello. Yes, thanks for this. My question is regarding competitive landscape within the domestic end market for the carbon black. I mean, we have been doing quite good on the export

side, but

how is it in the domestic side given that there's a bit of a muted auto end market scenario?

Secondly, we have been in the flow of dumping of carbon black from Russia, so any comments on that, please?

Anurag Choudhary : See, the advantage Himadri has, we do not have huge volumes to sell. Like, we have only 1,80,000 tonnes and we will go to 2,50,000 tonnes. So, with our limited volume, we choose our customers very prudently. And we only look at customers who value quality and who value the delivery, quality, consistency, statistical process control system is very strong. All those parameters which we focus that those customers.

Over the years, because of this focus, we have developed a very niche basket of customers. And these basket of customers are not import agnostic, means they do not depend on import, they do not look on imports. So, that gives us a big advantage. Even being a carbon black player within the group, we do not supply to Birla Tyres even.

Anubhav Sahu: Yes, I got it from last call. In fact, Birla Tyres carbon black actually comes from other players, it's probably because of the cost advantage you mentioned.

Anurag Choudhary : Yes.

Himadri Speciality Chemical Ltd
July 18, 2025

Anubhav Sahu: Secondly, how do you see the volume growth for fiscal year 26, given that we would have a bit of a constraint on the carbon black in Q3? Would it be fair to assume that the last part of the volume growth for this fiscal year would actually come from Birla Tyres and their initiative on the naphthalene business?

Anurag Choudhary : Yes, the last part of volume growth will come from three segments , one is Birla Tyres , second is speciality carbon black from Q4, Q3 it will commence production , Q4 you will see the peer cut volume growth. And existing coal tar pitch business where we are going to de -bottle and that additional capacity will come also from Q3, Q4.

Anubhav Sahu: Got it. And sir, lastly, would it possible for you to share revenue contribution or volume contribution in India from naphthalene business?

Anurag Choudhary : We do not give product -wise contribution or cost , everything comes in the carbon chemicals. So, we do not do product -wise accounting.

Anubhav Sahu: Understood, thanks for that.

Moderator: Thank you , sir. The next question is from the line of Bharat Shah from ASK Investments Mangers Limited. Please go ahead.

Bharat Shah: Hi, Anurag. First of all, hearty congratulations. Very significant journey has been evolved over a period of time. From kind of a commodity product portfolio to evolved and speciality portfolio , it has been many, many years of hard work. So , many congratulations to Himadri, yourself and the entire team.

Two questions. One, while many of the acquisitions fit in well with your strategy of speciality and moving up on the value chain , so that is quite an understandable one. I was just wondering whether Birla Tyre s acquisition, is it going to be more of an advantage or it is going to be a distraction? Because at the end of the day, you may use a lot of your material in tyres , but tyre is a very different business than the speciality chemicals business that you are in.

Anurag Choudhary : Thank you so much. One thing, for us, Birla Tyre s for Himadri is not a customer. Himadri is not supplying any carbon black till date to Birla Tyres. Because Himadri is able to sell its carbon black for a niche application at a much higher price than what Birla Tyre s can get from outside. Birla Tyre s is a standalone business.

See, 15 years back I ventured into carbon black. That time I was knowing nothing about carbon black, I was supplying oil to carbon black. And then the big question was , whether I will be able to get the technology right, whether I will be able to make it a product. And the day we started, we were bang on on the product , the first

day itself. And now we are far ahead in terms of

Himadri Speciality Chemical Ltd
July 18, 2025

speciality carbon black, which many of the companies in the world have not been able to do after so many years.

Same thing with Birla Tyres. We have been supplying carbon black to the tyre companies for last 15 years now. So , we know the industry in and out very well. We know the people, we know the people who are doing, who are great in this business. So, it's much easier for me to make my team. And I am telling you, the kind of team within a short span of time we have been able to build is unreal.

And when we started Birla Tyre s, our rejection rate is minimum with old machinery even. We are ramping up very fast. And the entire business from bias tyres will be converted into OTR and OHT tyres. And we will again be launching passenger car radial and EV.

And the ROC that Himadri will be delivering in this business will be unimaginable. Basically , our investment has been only Rs. 300 crores for an asset worth Rs. 3,400 crores. So , we have got at less than 10% asset. So, after the CAPEX we are proposing, the ROC will be significantly higher than any of the peers. And with our relationship in the industry for last 15 years and the way we have been able to build up the team , and I still continue to build up, I am 100% confident of amazing results from Birla Tyre s.

Bharat Shah: Which I deeply appreciate. My only limited point was, it's a speciality chemicals company starting from supplying to carbon black industry to becoming a full -fledged carbon black player to becoming a speciality carbon black player and now many other offshoots from that into a speciality chemical journey. But all of that is a B2B kind of a business. Tyres is a B2C kind of an activity.

Even if it is in speciality area like off the road and commercial vehicle and agri and other applications that you narrated , it still remains kind of a B2C business , sales organization, overall organizational mindset, all that needs to be different for a tyre business than what a speciality chemical operations is. So , it was just from that point of view whether this is a risk of causing distraction in the strategic footprint of the company or strategic management bandwidth of the firm?

Anurag Choudhary : One thing, what has happened, what really we did over the last few years ? What we did , from being a chemical company, now I started focusing on building management bandwidth. So that is what I did. I started building last six, seven years I was only focusing on building management bandwidth and strengthening each vertical with a business head. So , today if you look at me, I am hardly engaged in any operations.

So, Birla tyre s is like that also. It is a separate vertical with business head s looking into it with complete independence but strong reporting systems and processes clearly defined. So , with the increased bandwidth that I am able to develop over the last few years, that is the reason today.

Himadri Speciality Chemical Ltd
July 18, 2025

Page 16 of 23

If you look at our annual report also, we have given the theme Himadri Reloaded, The Next Chapter. Why? Because we have done the groundwork for the future and now we are ready to take on many assignments at the same time and with 100% confidence to deliver value to our stakeholders.

Bharat Shah: Got it. Really appreciate. That does require material change in the mindset.

Anurag Choudhary : Sir, one more thing I just wanted to tell. See, I do not want to remain only a product specific company for life that I have been making a coal tar distillate product so I end up doing that only.

With my years of experience, we have expertise in processes. Over the 35 years, we have expertise and acumen in doing business. So now to increase our foothold, we cannot get a better launching pad than Birla tyre

s.

See, today or tomorrow I have to go into B2C. From what I want for future of the company, I do not want to be only B2B business. I want to look at several B2C businesses also. For that, if I have to restart and make a brand, it will take 20 years minimum to build up a brand. And by God's grace, we have got Birla Tyres brand with 40 years of legacy and what a recall. So that is the game changer. Today , with Birla Tyres brand with you, the B2C business looks like a cakewalk.

Bharat Shah: Sure. And I am sure one last point on this particular thing before I move to the second part. I am sure you would have analyzed the reasons for a 40 year old well -known brand to fall into the kind of state of disrepair that it fell into , which is why you acquired a business like that for one -tenth of the underlying assets value. So , what in your opinion went wrong and what are lessons which have been built into the acquisition footprint in order to ensure that Himadri does not suffer so many consequences?

Anurag Choudhary : We did thorough study before taking over the unit. I got in touch personally with most of the CEOs, ex -CEOs of Birla Tyres , and I did a deep dive. I talked to the lowest level people who were working there and mid -management and top management. And then we did a thorough analysis of what really went wrong. Because of some constraints I am not able to explain that online at a conference call what really went wrong because it's not right on my part to tell something negative about some other management or something which I do not feel like doing. But we did a deep dive and clearly articulated our strategy. And we made 10 guiding principles for this business , learning s from the failure of Birla Tyre s we call it. And those are our founding pillars for success. This is going to be our founding pillars for success. We have clearly identified what was the loophole, what went wrong and everything. I am giving you a very small example. Like when we took over this unit , 13 unions were there. Now we have no union. I do not want to go into details , but from that you can understand our capability matrix.

Himadri Speciality Chemical Ltd
July 18, 2025

Page 17 of 23

Bharat Shah: Sure. All the very best on a very major step , not in terms of the CAPEX amount involved but in terms of the direction of the firm and the business. Coming to the second part. If you look at the five year period that is financial year 2021 up to last year '24-'25, we have made a remarkable progress. Our volumes have gone up about 1.5 times , our top line has gone up about 3 times , our operating profits have gone up 6 times , and profit after tax has gone up about 12 times. You have also narrated that from '24-'27 the bottom line is likely to double. So , what is the picture to be expected from after '27 to say further three year period ? Or from '25 to the next five year period till fiscal '30?

Anurag Choudhary : So, actually I will tell you. If you ask me on a scale of 1 to 10 , according to me where we are ranked now , I will rank it little less than 1. I think that is what we have achieved till now. The real story will unfold in next five years. And I am very confident of it. And I will request you to kindly go through our annual report very carefully , you will find there a page called Future Growth Drivers. You go through that and read carefully each item and you will have the answer.

And every quarter or six months when we come up with new things , you will see the things unfolding. But I can tell you that things are going to be very different from what it is today. I do not want to put a number to it.

Bharat Shah: Sure. Now I have read about various initiatives and various plans which are there , in this quarterly also you have laid out some of them. And the various clearly hunger for strategic initiatives has gone up in Himadri than ever before , give

n the success and the strength of the

balance sheet. But like you mentioned or as I mentioned in 2021 to 2024 -'25, we have had a very strong journey on volume, top line, profits and the bottom line. '24 to '27 also you mentioned about roughly doubling our bottom line. So , I was just wondering from '27 to '30 if we take the next three year block , what do you think will be the key initiatives which will play out? And what kind of an outcome , possibly not in terms of numbers but qualitatively what kind of picture can be envisaged?

Anurag Choudhary : See, you look at the broader picture , today we are into coal tar pitch which we are expanding , the business is expanding , speciality Carbon Black is expanding , naphthalene is expanding. Then tyre you will see the story unfolding in next four to five years completely with full capacity, full margins coming into play , that will give a big top line to the company and big bottom line to the company.

Then you have raw material components from lithium -ion battery. You know I have been talking about lithium -ion components for last 12 -13 years. It's not that today everyone is talking so I have started talking. You remember , you have been associated with the company for last 20 -plus years , you have been an investor. So, in early years we had full confidence when no one used to look at lithium -ion that this is going to be a game changer in future. And that has really happened today. And Himadri is doing wonders in terms of how we are going to position ourselves.

Himadri Speciality Chemical Ltd

July 18, 2025

Page 18 of 23

Then you talk of anode. There are three types of anode ; natural, synthetic and silicon carbon , and that makes a hybrid anode. If you look at my reports and everything, I am working on all three of them. Only company which is working on all three of them. As a customer you see, you come to Himadri, you have a host or you have a full product basket. Where else will you go? Where will you get silicon carbon? Where will you get natural at the same time? This hybrid material will change the entire chemistry.

Suppose you are getting a capacity, I am going a little technical, at 350. With little Silicon you will go to 370. The game changes. So that is something which will come into play. Lithium -ion phosphate, first company in the world outside China to have a commercial plant we are setting up. We have a huge expansion in that capacity. I have clearly outlined 100 gigawatts capacity in next five to six years. Other than that, if you look at our presentation, we are going into backward also. We are going for lithium carbonate in future on which research and development is going on in full scale now.

So, currently lithium carbonate is made through a lynching process. Today lithium is extracted from rock through a lynching process using acid. We are going to do it through carbon dioxide which is game changer in the world. It will be a green lithium. This itself will make a revolution in the world.

So, like this every product, like we are working on, I have also outlined from waste to energy.

So, there we are working on lot of waste products which we will be converting into finished product and energy in future. So, if you look at my current portfolio, current oil, anthracene oil or the carbon black oil, we are just using to make carbon black. Now we are setting up plant for anthraquinone , carbazole. Anthraquinone , carbazole, the selling price is 7x of the oil with hardly any processing cost.

So, all these are game changers to outline a few of them. Other than this , there are many things which are happening. So, I am confident that looking forward things will unfold in a big way in Himadri.

Bharat Shah: Sir, if I am just allowed to put one last point on this. We have seen a journey which has been multi -fold over '20 to '25, you have already outlined from '24 to '27 another

Phase of that

journey. Will you say that from '27 onwards the third Phase of the journey will be equivalent or better or similar to the Phase 1 and Phase 2, Phase 1 that is over and Phase 2 that we are experiencing ? Will you say Phase 3 will be superior, equal or lower than the Phase 2 that we talked about , both in quantitative or qualitative terms ?

Anurag Choudhary : I will put it other way round. Phase 3, with Phase 3 I believe the real journey will start.

Bharat Shah: Which is why you said in a scale of 1 to 10 you are just at 1 ?

Page 19 of 23

Anurag Choudhary : Right, so with Phase 3, after '27 the real Himadri journey will start. And time will only tell what we will achieve. I do not want to put any word or number to it.

Bharat Shah: Appreciate. Thank you , Anurag . And real best wishes to you and Himadri and the Himadri team.

Anurag Choudhary : Thank you, thank you so much.

Moderator: Thank you sir. The next question is from the line of Vignesh from KFima Wealth. Please go ahead.

Vignesh : Hi there. I just want to understand what is the revenue potential of the Phase 1 of the LFP ? Just an approximation, just to understand how was the potential for LFP.

Anurag Choudhary : Between Rs. 2,500 crores to Rs. 2,700 crores.

Vignesh: Okay . And another one is regarding the anode development which you spoke of , any timelines when we are planning to put a CAPEX or announcement regarding the anode materials?

Anurag Choudhary : I do not want to announce now. Means I do not want to disclose now.

Vignesh: Okay, thank you . That's it from my side.

Anurag Choudhary : We are ahead of a schedule. Means two and half years, three years before only I announced that it will happen. This time I will not give so much time. That only I can say.

Vignesh: Okay, okay. And regarding are we planning to go into a mining kind of thing sir for backwardation?

Anurag Choudhary : Yes. We are looking at some mining thing and already made some investments. So, yes.

Vignesh: And this will be mostly for backward integration of the LFP?

Anurag Choudhary : It will be in various aspects. We will do some minerals and then we will see how things unfold.

Vignesh: Okay, thank you. That's it from my side.

Moderator: Thank you, sir. Ladies and gentlemen, due to interest of time, that was the last question.

Anurag Choudhary : Bhavya, we can have more questions , no problem.

Moderator: Okay, sir. The next question is from the line of Preeti Agarwal from SK Associates. Please go ahead.

Page 20 of 23

Preeti Agarwal : Thank you so much for the opportunity. Sir, my question is that we have seen a margin uptick , so how much of this is attributable to value added product contribution? And any structural change in product mix underway?

Anurag Choudhary : So, everything is attributed to value added products only , nothing changes structurally.

Preeti Agarwal : Okay. And any product mix underway?

Anurag Choudhary : Same, it's a blended product mix.

Preeti Agarwal : Okay. And my second question is, what gives Himadri a technological or R&D edge in advanced carbon material versus peers ?

Anurag Choudhary : See, we have been in this field for last 12 -plus years. So, we have done a lot of investment in research and development, building our teams and capabilities from ground zero , so we know the product in and out. You can never say that I know everything. But we have done our homework quite well. And we have a very strong team who knows the subject. And that is the kind of development we have done over the years.

And if you look at any other company, they are talking of this over last two, three years or one year only. And if you open my 10 years back annual report, you will find lithium ion battery.

So, we know the subject very well. And being in China, li

ke China is the leader in this space and

we have our manufacturing facility in China since last 15 years. So, I have seen very closely the development of this industry , very closely. So, that gives a unique positioning to Himadri and an edge compared to anyone else globally.

Preeti Agarwal: Okay, understood. Thank you so much , sir. And all the best.

Moderator: Thank you, ma'am. The next question is from the line of Ashit Koti, an individual investor. Please go ahead.

Ashit Koti: Thank you, sir. Thanks for the opportunity . And congratulations on the numbers. Just two things.

One is with regards to the current quarter numbers, where we do not see much of a volume growth as well as revenue growth , but our profitability is increasing. So, is the same trend would continue or you see volume as well as top line and bottom line growth also along with a higher margin?

Anurag Choudhary : See, I clearly explained , the top line has not grown and has come down basically because of raw material prices. And looking forward, as I told from Q3, actually from Q4 you will see the speciality carbon black new capacity coming in place. You will see debottle capacity of carbon, especially coal tar pitch. And you will see ramping up capacity of Birla Tyres . So, all this will

help to increase the top line and bottom line at the same time.

Himadri Speciality Chemical Ltd
July 18, 2025

Page 21 of 23

Ashit Koti: Okay. Sir, with regards to the lithium ion batteries, I mean, do we consider that Birla Tyres is your first step towards B2C as what Bharat bhai was asking? And from there on you would want to move on to within battery systems and all related products in B2C manner?

Anurag Choudhary : No, no. We have clearly outlined our growth plan and where we want to play in this segment. We do not want to be a cell manufacturer. B2C, we are launching with Birla Tyres and we will strengthen our position in three years in B2C. And then we will see what product to launch. We have a product portfolio for B2C which we are preparing. And at the right point of time we will disclose and launch. But yes, cell is not in our portfolio. We want to be a component manufacturer for lithium ion cell, not a cell manufacturer.

Ashit Koti: Okay, sir. And something on this graphite, I mean, what is our exposure and what are our plans on that? Something which was mentioned in the presentation.

Anurag Choudhary : No, this is about anode material. So, I have clearly told, I have told in the conference call about what we are doing in anode material, what is our plan, everything I have told already .

Ashit Koti: No, no , I am talking about graphite electrodes.

Anurag Choudhary : No, no , I have to do nothing with graphite electrodes. We are supplying coal tar pitch to graphite electrode. That is the only relationship.

Ashit Koti: So, further value addition or moving on those lines is not the case right now ?

Anurag Choudhary : Not at all. Not at all.

Ashit Koti: Right, sir. Thanks a lot. Thanks a lot.

Moderator: Thank you, sir. The next question is from the line of Jaiprakash Kumar from Korman Capital. Please go ahead.

Jaiprakash Kumar : Sir, my question on the depreciation , sir, from last 10 years I am looking at depreciation . So, 10 years back also it was Rs. 57 crores , now also it is Rs. 57 crores only , and the gross block is Rs. 2,500 crores. So, I am not sure what kind of plant and machinery, what is the plant life and all that. But depreciation looks very low , and from last 10 years it has broadly remained at the same level.

Anurag Choudhary : No, no. I think you are mistaken with the figures. It has come up over the years. If you look at 10 years back , because we have not done much CAPEX in the last seven, eight years. But whatever CAPEX we have done, corresponding to that depreciation, has definitely gone up. And it is on written -down value , SLP, straight

line.

Himadri Speciality Chemical Ltd
July 18, 2025

Page 22 of 23

Jaiprakash Kumar : It is a straight line, right , not written -down value ?

Anurag Choudhary : It is a straight line.

Jaiprakash Kumar: And on this Rs. 2,500 crores, this is just Rs. 50 crores of depreciation, so it is just not even, I think it is very small percentage. So, can you highlight like why the depreciation is so low on such a high gross block ?

Anurag Choudhary : This is directly correlated with the life of the plant. So, depending on what is the lifespan of the plant, the depreciation rate item wise has been calculated. And that is what it is.

Jaiprakash Kumar: Okay. And depreciation will include the maintenance expenses also?

Anurag Choudhary : Maintenance CAPEX , we do not put in CAPEX , we take it through P&L only.

Jaiprakash Kumar: Through P&L only and it is part of depreciation , right?

Anurag Choudhary : No, no. It is not part of depreciation, it is part of P&L , maintenance CAPEX .

Jaiprakash Kumar: Okay, understood. And you are saying the life of the plant and machinery is very high, like maybe 30 , 40 years , that is why the depreciation is low?

Anurag Choudhary : So, we have got a detailed study done and basis that we have identified life of each and every equipment and basis that we have charged depreciation. And you will get in the audit report in details.

Jaiprakash Kumar: Okay. Thank you.

Moderator: Thank you, sir. The next question is from the line of Anand, an individual investor. Please go ahead.

Anand : Yes, I just wanted one question on Birla Tyres. How do you expect to maintain pricing power in such a competitive industry?

Anurag Choudhary : How do you expect to maintain pricing power?

Anand: Yes, in such a competitive industry?

Anurag Choudhary : Yes, in such the industry is competitive, we know . EBITDA margin ranges from, in normal

case, tyres from 10% to 15% ; and for OHT , OTR, it is (+25%). So, we are playing within this. And Birla Tyre s has a good brand recall , so as a brand, even being a re -entry after three years, we do not have to give any special discount or something like that for positioning Birla Tyres.

Himadri Speciality Chemical Ltd
July 18, 2025

Page 23 of 23

Anand: Okay. Very good. Thank you very much, sir.

Moderator: Thank you, sir. As there are no further questions from the participants, I now hand the conference over to the management for closing comments.

Anurag Choudhary : Thank you. Thank you so much. I would like to thank everyone for taking out time and joining us on the confere nce call today. I hope we have been able to respond to your queries adequately.

Your continued interest and feedback play s a vital role in our journey forward. This quarter marks the beginning of what we believe will be a transformative phase for Himadri. With a clear strategy, strong execution, and an unwavering focus on innovation and sustainability, we are confident in the road ahead. We remain committed to delivering long -term value and are pleased to have your support as we scale new frontiers and shap e the next chapter of Himadri 's growth story. Should you have any further questions, please feel free to reach out to our investors' relation partner, MUFG Intime IR. Thank you once again for joining the call today. Good day.

Moderator: On behalf of Himadri Speciality Chemical Ltd, that concludes this conference. Thank you for joining us and you may now disconnect your lines.

Sub: Transcript of Earnings Conference Call for Financial Performance for the 2nd Quarter and Half Year ended 30 September 2025 held on Friday, 24 October 2025 Dear Sir/ Madam,
Further to our letters dated 17 October 2025 and 24 October 2025 and pursuant to Regulation 30 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 ("SEBI Listing Regulations") read with Schedule III of the SEBI Listing Regulations and other applicable provisions of the SEBI Listing Regulations, we are enclosing herewith the transcript of earnings conference call for Financial Performance for the 2nd Quarter and half year ended 30 September 2025 held on Friday, 24 October 2025 at 04:30 p.m. (IST).
The above information will be made available on the Company's website at www.himadri.com

You are requested to take the same on record.
Thanking you,

Yours faithfully,
For Himadri Speciality Chemical Ltd

(Company Secretary &
Compliance Officer)

Q2 & H1 FY-26 Earnings Conference Call
October 24, 2025

MANAGEMENT : MR. ANURAG CHOUDHARY – CHAIRMAN AND

MANAGING DIRECTOR & CHIEF EXECUTIVE OFFICER
MR. SOMESH SATNALIKA – EXECUTIVE VICE
PRESIDENT , TYRE & STRATEGY
MR. KAMLESH AGARWAL – CHIEF FINANCIAL
OFFICER
MODERATOR : MS. POOJA SWAMI – MUFG INTIME

October 24, 2025 Himadri Speciality Chemical Ltd

Page 2 of 18

Moderator : Ladies and gentlemen, good day and welcome to Himadri Speciality Chemical Ltd Q2 and H1 FY26 Conference Call hosted by MUFG Intime.

As a reminder all participant lines will be in the list n-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need any assistance during the conference call, please signal an operator by pressing '*' then '0' on your touchtone phone.

Please note that this conference is being recorded.

I now hand the conference over to Ms. Pooja Swami from MUFG Intime. Thank you and over to you ma'am.

Pooja Swami: Thank you, Shravani. Good evening, everyone and welcome to the Q2 and H1 FY26 Earnings Conference Call of Himadri Speciality Chemical Ltd.

Today on the call, we have with us Mr. Anurag Choudhary – CMD & CEO, Mr. Somesh Satnalika – EVP, Tyre and Strategy and Mr. Kamlesh Agarwal – CFO.

Before we proceed with the call, I would like to give a disclaimer that this conference call may contain forward-looking statements about the company which are based on beliefs, opinions and expectations as of today. Actual results may differ materially. These statements are not the guarantees of future performance and involve risks and uncertainties that are difficult to predict.

A detailed safe harbor statement is given on Page #2 of the investor presentation of the company which has been uploaded on the stock exchange and company website.

With this, I now hand over the call to Mr. Anurag Choudhary. Over to you, sir.

Anurag Choudhary: Thank you, Pooja. Good evening, everyone and thank you for joining us today on Q2 FY26 earnings call of Himadri Speciality Chemical Ltd. It is always a pleasure to connect with you all and share our progress.

This quarter has been another milestone for Himadri, a period where our strategy, execution and innovation have come together to deliver record results. I am pleased to say that in Q2 FY26, we have achieved our highest ever quarterly EBITDA and PAT. Reflecting the strength and resilience of our business model, our EBITDA stood at Rs. 243 crores, up 21% year-on-year, and PAT came at Rs. 187 crores, a 39% growth compared to last year. For the half year, we delivered Rs. 477 crores in EBITDA and Rs. 369 crores in PAT, both our highest ever levels. Strategic emphasis on high-value speciality and advanced materials drove strong margin performance this quarter, delivering year-on-year improvement in both EBITDA and PAT. The impact of softer raw material prices was marginal and with a large export order scheduled to recognition in Q3, we are poised for continued growth.

Over the past few months, we have made steady progress across multiple initiatives, from advancing our pipeline of new product developments and pilot trials to executing capacity expansions, deepening global collaborations and strengthening sustainability frameworks. At the October 24, 2025 Himadri Speciality Chemical Ltd

Page 3 of 18

heart of this progress lies our in-house R&D and technological capability, with continuous drive to innovation, integration and value creation across business.

We have continued to extend our international engagement, showcasing our capabilities at major global platforms. These events not only helped strengthen Himadri's brand visibility but also deepened partnership with global leaders in Speciality Chemicals and new energy materials.

We were proud to partner with Asia's premier cricket tournament as the official tyre partner of Asia Cup 2025. Just as the champions on the field pushed boundaries and overcame every challenge, Birla Tyre continues to stand for performance, reliability and an unwavering spirit on the road and in life. Through our campaign, 'Rolling with Champions', we celebrated the passion

of the game, the unity of billions of fans and our commitment to delivering strength and trust in every mile. This association marked a proud chapter in the brand's journey.

Before I move to other updates, I want to highlight an initiative that fully embodies our culture at Himadri. Vihaan. This platform brings Himadrians from across levels and functions together to engage, learn and exchange ideas in a collaborative environment. Vihaan fosters a culture of continuous learning by facilitating meaningful interaction between young talents, passionate

professionals and senior leadership. Through this initiative, emerging talents gain exposure to real business challenges, receive valuable mentorship and benefit from the collective vision of our experienced leaders, helping save the future leaders of Himadri. Vihaan is a powerful catalyst for innovation, fresh thinking and leadership development that drives long-term value for our organization.

Building on the robust performance and strategic executions we have demonstrated so far, Himadri is accelerating its journey towards a long-term financial milestone. Our focus on high-valued segments and operational excellence has positioned us well ahead of schedule to achieve our ambitious target. We have earlier guided that our ambition was to double our PAT from FY24, which was Rs. 411 crores by FY27. Today, with our progress in just 2 years, we are already nearing this milestone, well ahead of plan. This momentum not only strengthens our belief that FY27 will far exceed our original expectations but also sets the stage for Himadri to establish industry-defining benchmarks and shape the next era of growth.

On our strategic roadmap, we are moving steadily towards FY28, guided by a clear ambition to build a diversified and future-ready portfolio anchored in high-value growth. Over the next 3 years, we expect meaningful contributions from our specialty carbon black expansion, the ramp-up of Birla Tyres, the forward integration into Specialty Chemicals and the commercialization of our lithium-ion battery material business.

Having shared a snapshot of our strong quarterly performance, I would now like to walk you through the detailed progress and exciting developments across our core business segments and strategic initiatives.

October 24, 2025 Himadri Specialty Chemical Ltd

Page 4 of 18

Let me begin with our core specialty value chain, where we continue to see robust growth and on-track expansion. Our coal tar pitch business remains a trusted supplier to global aluminium and electrode consumers. While we are actively expanding our footprints in liquid pitch exports with newly commissioned terminals at Mangalore port. In specialty carbon black, the brown field expansion project is progressing well, set to more than double our capacity to 130,000 MT per annum by the end of Q3 FY26, Positioning Himadri as the world's largest single-site producer of specialty carbon black, this expansion will take our total carbon black capacity to 250,000 MT per annum. With over 60 new grades launched, we are strengthening our leadership and product diversity in this critical segment.

In parallel, our new specialty chemical segment is gaining momentum with the upcoming facility of anthraquinone and carbazole production that is expected to be commissioned by Q2 FY27. This forward integration from existing coal tar distillates will not only reduce import dependency but also enhance value addition across the dye, pigment, pharmaceutical and agro-chem industries. Moreover, the introduction of Duro fresh naphthalene with its industry-leading purity of 99.5% represents a new chapter where Himadri's decades of technical expertise translate directly into a consumer-facing product. It's not just a diversification, but it's about capturing

value within our existing value chain while enhancing our brand presence in a fast-growing retail market.

One of the most transformative areas for us is lithium-ion battery material, where we are making strides to establish India's first commercial manufacturing footprint. As India rapidly emerges as a key player in the global clean energy value chain, Himadri is proudly contributing to the Atma nirbhar Bharat vision by investing to become the world's first commercial-scale manufacturer of LFP cathode active material outside China. Targeting a phase capacity of 200,000 MT per annum, the initial 40,000 MT per annum plant is already under development and on track to commence operations by Q3 FY27. Concurrently, we are advancing research across anode technologies, including both natural and synthetic graphite, to build a comprehensive self-planned battery material portfolio that drives long-term growth, innovation and energy independence of India.

Our partnership with SiCona Battery Technologies in Australia gives us exclusive rights to commercialize this advanced silicon carbon anode technology in India, a technology that offers over 20% higher energy density and reduces charging time by nearly 40%. Alongside this, our strategic investment in SiCona 17.6%, International Battery Company 16.2% and InVati Creations 40% give us access to cutting-edge technologies, R&D capabilities and a presence across the entire LIB value chain for anode and cathode materials to cell manufacturing.

Another important development this quarter has been of Birla Tyres. The business is on course of revival, and we are building a comprehensive product portfolio catering to off-highway tyres, commercial vehicles, agri and industrial segments. For the passenger car radial unit designed for EVs and SUVs, the installation of plant and machinery is scheduled to commence within the next 12 months. Today, Birla Tyres operates through 29 distributors and over 350 dealers across

October 24, 2025 Himadri Specialty Chemical Ltd

India and global markets, including Asia, Africa and the Middle East. The new brand identity and digital presence reflect a strong modern and consumer -driven direction for this iconic brand. Sustainability remains deeply embedded in our strategy, with several important milestones, recognitions and forward -looking commitments reinforcing our responsible manufacturing philosophy. Sustainability is at the core of everything we do. This quarter, Himadri achieved the ISCC -Plus certification for our Mahistikry plant, reaffirming our dedication to responsible manufacturing and circular economy principles. We earned an 'A' rating in CDP's Suppliers Engagement Assessment, reflecting strong supplier collaboration on environmental performance. It's also worth highlighting that we have previously received the prestigious Platinum rating from EcoVadis, which placed us among the top 1% of companies globally for sustainability performance. Our net zero ambition for 2050 is backed by measurable science -based targets across Scope 1, 2 and 3 emissions. All our manufacturing sites operate as zero-liquid discharge facilities, and we utilize in-house clean power for 100% of our electrical energy needs. For Himadri, sustainability is not merely a compliance, it's in the core business philosophy that fuels innovation, drives efficiency and builds long-term trust with our stakeholders. With our strong balances, robust cash generation and disciplined capital allocation, Himadri is well positioned to deliver sustainable value to all stakeholders.

Before I conclude, I want to thank our team members, partners and our investors for their continued trust and support. With that, I would like to hand over the proceedings to our CFO, Mr. Kamlesh Agarwal, to walk you through the financial performance in details.

Kamlesh Agarwal

I: Thank you Anuragji and good evening, everyone. Now, let me take you through the key financial highlights for the quarter and half year ended 30th September 2025.

On a standalone basis, our revenue from operations for Q2 FY26 stood at Rs. 1,070 crores compared to Rs. 1,135 crores in Q2 FY25, primarily impacted by the correction in raw material prices, increased focus towards high value-added products and deferment of sales recognition for export shipment to Q3.

Driven by our strategic emphasis on value-added offerings and operational efficiency, profitability continued to strengthen even as top line remained soft. EBITDA for the quarter came in at Rs. 243 crores, a growth of 21% year-on-year, over Rs. 201 crores in Q2 FY25. PAT stood at Rs. 187 crores, reflecting a 39% increase year-on-year compared to Rs. 134 crores in the same quarter last year.

For the first half year of FY26, revenue stood at Rs. 2,171 crores, while EBITDA reached Rs. 477 crores, up 23% year-on-year from Rs. 389 crores in first half of FY25. Profit after tax for the half year stood at Rs. 369 crores, up 43% year-on-year, over Rs. 258 crores reported in H1 FY25.

October 24, 2025 Himadri Speciality Chemical Ltd

On a consolidated basis, revenue for Q2 FY26 stood at Rs. 1,071 crores versus Rs. 1,137 crores of same period last year. EBITDA for Q2 FY26 stood at Rs. 238 crores, recording a growth of 17% year-on-year and PAT at Rs. 176 crores with a growth of 30% year-on-year. Our half-yearly revenue stood at Rs. 2,189 crores, EBITDA at Rs. 473 crores, PAT at Rs. 356 crores, reflecting strong performance across all the business segments.

We continue to maintain a healthy liquidity position with a comfortable leverage profile. Our debt-to-equity ratio remains low despite ongoing capital expenditure.

In summary, Q2 FY26 was another strong quarter with record profitability, robust margins and a healthy balance sheet laying the foundation for sustainable growth in the upcoming quarter.

That is all from our side. We will now open the line for question and answers. Thank you.

Moderator: Thank you very much. We will now begin the question-and-answer session. The first question is from the line of Sanjesh Jain from ICICI Securities. Please go ahead.

Sanjesh Jain: Thank you. Good evening, sir. A couple of questions from my side. First, on the volume growth, if I look at the volume growth for last, since Q4 FY24, we are stuck between 1,35,000 to 1,40,000 MT. It's because we do not have capacity or the demand remains soft? What is leading that the volume has been in that range of 1,35,000 to 1,40,000 MT for almost seven-eight quarters now?

Anurag Choudhary: The volumes are at the same level basically because we are more or less at peak capacity utilizations. With the new capacity being added in next quarter for speciality carbon black and de-bottling neck for the coal tar pitch also happening, then we can see volume growth from Q4 onwards.

Sanjesh Jain: Basically, we are capped by the capacity constraint. You do not see issue on the demand side of it?

Anurag Choudhary: No, not at all.

Sanjesh Jain: Got it. How much are we adding or de-bottling the coal tar pitch distillation capacity?

Anurag Choudhary: Our current capacity is 500,000 MT. We are going to become 600,000 MT.

Sanjesh Jain: How should we think this utilization?

Anurag Choudhary: This utilization from Q4, it will start. Q3 will have some impact and Q4 and then from Q1 next year. So, from Q3, you will start seeing the impact.

Sanjesh Jain: But from a demand perspective, aluminum capacity in India is not going up. So, 40% of this incremental 1 lakh need demand from the aluminum and the remaining will go as a raw material into carbon black manufacturing. How should we think the capacity which can come as the sales out of this a

dition we are doing?

October 24, 20 25 Himadri Speciality Chemical Ltd

Page 7 of 18

Anurag Choudhary: For coal tar pitch, as we highlighted previously also, we have started export of liquid pitch. And we have recently started Mangalore terminal also. And this November, we are expecting our first shipment from Mangalore terminal. So, with this, now we will be supplying to the global market. The new capacity will basically cater to the global market.

Sanjesh Jain: Why can't we export it from our Kolkata port and why we need to come to Mangalore port?

Anurag Choudhary: We have one unit in Visakhapatnam also. For that, we are using Mangalore port, from Kolkata, we are using Haldia port.

Sanjesh Jain: Do we have the visibility for this incremental 40,000 MT of coal tar pitch demand from the export market?

Anurag Choudhary: Yes, we have very clear visibility.

Sanjesh Jain: Got it. Second from the carbon black and sorry, just to complete that, which geography are we seeing this incremental demand coming in for the coal tar pitch?

Anurag Choudhary: Middle East.

Sanjesh Jain: Largely Middle East?

Anurag Choudhary: Largely Middle East. Because lot of smelters are there in Middle East, significant capacities and all of them are importing coal tar pitch.

Sanjesh Jain: And we are approved there?

Anurag Choudhary: Yes, we are approved.

Sanjesh Jain: So just we need to manufacture and supply, that's it.

Anurag Choudhary: Right, right.

Sanjesh Jain: Got it. Second on the carbon black side, if I look at carbon black, we got two pieces, one is rubber grade, the other one is the speciality grade. Now, if I look at your peers' number globally and India, they are seeing a significant stress in the overall spread, both speciality and the tyre grade. While if I look at our number, it shows a very different trajectory here. Though we do not get product-wise, but we have increased in last one year, the EBITDA per kg from Rs. 15 rupees to Rs. 17. Now, how are we able to buck this trend, how are we able to improve the spread while globally and the peers are showing a decline?

Anurag Choudhary: So, to answer your question, the biggest difference between any other carbon black player and Himadri is that we have always focused on our speciality portfolio. And in commodity also, we focus on very niche applications, where quality marks a very significant requirement. So, in difficult times, you know what happens when during testing times, actually the business model

October 24, 20 25 Himadri Speciality Chemical Ltd

Page 8 of 18

of Himadri is put to test. And there is where we prove that the strategy we implemented over the years is yielding results. Like market demand and prices are in constraint globally for carbon black, but Himadri has very limited volume of carbon black to sell compared to any of its peers who have significant volume. So, they have to compromise on different aspects. But we select our customers on the long-term basis, reliable customers who support us in difficult times, given our loyalty in terms of delivery schedule, clarity in terms of pricing formulas, in terms of quality, consistency and that is how Himadri differentiates itself from its peers.

Sanjesh Jain: That I appreciate. We do not have such a low capacity. We are sitting at about 1,50,000 MT of capacity.

Anurag Choudhary: We are at 1,80,000.

Sanjesh Jain: Sellable capacity of 1,50,000 MT assuming 80% utilization. So, it is not small. We are fairly decent sized. And why would in a commodity anybody pay premium, anybody and everybody is selling the carbon black. We got players like Cabot or Orion; everybody is reporting stress. Now, I can understand we are smaller than them, but we still have very decent capacity. Is it sustainable? We had some contract which has flowed through, or

you see this as a sustainable number?

Anurag Choudhary: We definitely see this as a sustainable number. And if you look at any of the players, the volume of tyre is significant compared to Himadri. So, in Himadri, the volume of tyre is significantly less compared to our peers. That makes the difference.

Sanjesh Jain: That mix has always been there, I am saying. If I look at Orion who reports both speciality and rubber separately in terms of gross profit per kg, we can see clearly stress in both the segments.

Anurag Choudhary: When you compare us with companies in the western world, they have different cost economics. Their costs, their raw material costs, their overheads are totally different from ours. And Himadri, over the years, through its operational efficiency, improvement in yield, better waste heat recovery systems have made so much progress that that has always helped us to improve on the margin.

Sanjesh Jain: Fair enough. Does this backward integration helping us having our own carbon black oil, is that a difference?

Anurag Choudhary: Definitely, that is our USP. So, when we make product from our own carbon black oil, the quality consistency is very much there. Because like we also use petroleum-based oil, but in petroleum-based oil, what happens, consignment to consignment, there is a variation in the quality of the raw material. In our case, since it is our by-product, there is absolute consistency in the raw material, which gives a big advantage. And our raw material is a very clean material that adds to the other advantage for speciality carbon black.

Sanjesh Jain: Got it.

October 24, 2025 Himadri Speciality Chemical Ltd

Page 9 of 18

Anurag Choudhary: And this also, our raw material gives better yield also. So, all these factors taken together takes us in a different league altogether.

Sanjesh Jain: But that difference was there a year back also, when we were reporting a Rs. 15 a kg, or there is a change in the yield over last 1 year for us?

Anurag Choudhary: Yes, consistently there is change, in terms of improvement. If you see our quarter-on-quarter commentary also, we have been saying that the yield improvement is there, operational efficiency is there, waste heat recovery systems are improving. So, we work on a consistent improvement program on operational efficiencies, which also yield results on quarter-on-quarter basis.

Sanjesh Jain: Got it. Very clear. Now, next on the tyre side, if I look at consol minus standalone, which I believe largely will be tyre, there the number appears to be sharply declined. Last quarter, we reported a revenue of Rs. 18 crores. This quarter, it is just 60 lakh. What am I missing here or if you can just give us, what was the tyre sales this quarter and last quarter?

Anurag Choudhary: So, tyre sales this quarter was Rs. 26 crores and last quarter, it was Rs. 5 crores.

Sanjesh Jain: So, then what explains this consol?

Anurag Choudhary: So, revenue if you look at it, the revenue has come down in Q2 compared to corresponding quarter last year because of the fall in raw material prices. The average raw material prices at that point of time was around 45,000. Now, it is at around 39,500. So, because of this...

Sanjesh Jain: I am looking at consolidated revenue minus standalone revenue. I am not looking at cost. I am just looking at the revenue line. So, our tyre is on the subsidiary company, right?

Anurag Choudhary: Right.

Sanjesh Jain: So, if I subtract the consol minus standalone, that sales largely should reflect the tyre company sales?

Anurag Choudhary: Tyres and one small company Invati also. That is a small number.

Sanjesh Jain: But if I look at consol minus standalone, that number appears to have sharply declined. Last quarter, consolidated revenue minus standalone revenue was Rs. 18 crores. This quarter, it is only showing

Rs. 60 Lacs / 6 million.

Anurag Choudhary: So, what happened during this quarter, we have opened a subsidiary overseas and the sales to that has been knocked off since the sales has not affected from the subsidiary. In the standalone, that has been considered as the sales. But on a consolidated basis, that has been knocked off. Because of tax during the last cut-off, it has been knocked off.

October 24, 2025 Himadri Speciality Chemical Ltd

Page 10 of 18

Sanjesh Jain: I understood what happened. Thanks for that clarification. So, this quarter, we have sold Rs. 26 crores worth of material in the tyre business.

Anurag Choudhary: Right.

Sanjesh Jain: Got it. And when we say 29 distributors, if I just want to benchmark the supply chain of the competition, where are we in our region, as in the eastern region, which we started initially under central India? What is the penetration right now for us?

Anurag Choudhary: So, penetration other than south India and parts of west India , we are present now in pan -India basis. And these numbers are going to substantially increase quarter -on-quarter.

Sanjesh Jain: When you say this number, you are talking of revenues, right?

Anurag Choudhary: No, I am talking about distributors and dealers . Particularly dealers because our model is to have distributors and below distributors have dealers. So, suppose one dealer is having say 10 to 12 dealers now, it will go up to 30 to 40 dealers per distributor. So, that will also increase significantly.

Sanjesh Jain: So, we are saying right now we have 29 dealers.

Anurag Choudhary: Distributors.

Sanjesh Jain: Distributors, then we can easily go up to 900 retailers or the dealers. yes.

Anurag Choudhary: Yes, plus we will have more distributors also.

Sanjesh Jain: So, next year assuming when we will have a full year number in the tyre, what is the revenue number we are expecting there?

Anurag Choudhary: So, this year is like a start-up. To be very frank, we are not considering this as any revenue. But next year, we will be ramping up the capacities. So, currently suppose we are running at 10% capacity utilization , next year we expect at least 30 % to 40% capacity utilization.

Sanjesh Jain: And when should we commission the PCR plant?

Anurag Choudhary: So, we will start the installation of the machineries. We have the machineries in place. We are getting the machinery tested and checked. After that, we will start the installation in next 12 months' time and after that, I can give you commissioning date.

Sanjesh Jain: So, next year it will all be the BIAS side only.

Anurag Choudhary: BIAS and OTR/OHT both.

October 24, 20 25 Himadri Speciality Chemical Ltd

Page 11 of 18

Sanjesh Jain: Last question on the battery side of it, sir. Where are we in the LFP supply chain? Have we started the pilot plant or it is still under the construction phase?

Anurag Choudhary: The pilot plant is still in the construction phase. It will start in next quarter.

Sanjesh Jain: And 40,000 MT we said will start in Q3 FY27.

Anurag Choudhary: Right

Sanjesh Jain: Any initial samples which we have sent and any reviews you can share from the customer side?

Anurag Choudhary: Definitely, the reviews have been very good from our demo scale plant. So, we have got very encouraging results. And IBC is a clear example. So, IBC is coming out with a cell Prabal 2000 with LFP cathode material. For which we sent them the sample, and they tested the material. And they were so pleased to see the quality of the material that we had detailed discussion, and interaction s. And then we collaborated also. So, IBC has a already launched Prabal 1000 which is a NMC based cathode material cell. Now they will be launching Prabal 2000 which will be LFP based. In which Hima dri's LFP will be used.

Sanjesh Jain: One mo

re question on the anode side. We first time spoke about anode natural and synthetic.

And also, silicon that we want to integrate there. We have not announced any CAPEX. So, where are we in that anode development and when can we expect any CAPEX announcement on anode side?

Anurag Choudhary: So, we have done lot of investment in terms of research and development in technology for all the three types of anodes. We have made significant investment in this. And we are very happy to say that the results have been very encouraging. So, once we are in a position to commercialize the technology which will take another few quarters. Then we will announce the CAPEX program.

Sanjesh Jain: That is very clear. Thanks, Anuragji for patiently answering all those questions and best of luck for the coming quarters.

Anurag Choudhary: Thank you.

Moderator: The next question is from the line of Yash Gupta from Harshit Kotecha Family Office .

Yash Gupta: Sir, can you throw some light on the earlier participant question on the tyre business. Which segment we are focusing on in the tyre part icularly once you say the South India and the Central India. And how big is the opportunity in next 2 -3 years in terms of EBITDA ? It could be like Rs. 10-20 crores of quarterly EBITDA or like Rs. 50 crores of quarterly EBITDA.

Anurag Choudhary: Our focus o n tyre will be on O HT and OTR segment. Along with that EV segment and passenger car radial segment. So, this will be the focus area. We are starting with BIAS and will continue with some capacity of BIAS in our portfolio. So, there is a huge potential in t his tyre market.

October 24, 20 25 Himadri Speciality Chemical Ltd

Page 12 of 18

And in next 3 -4 years, I see huge opportunity for Himadri in terms of top line and bottom line both and the numbers will be significantly higher than what you told.

Yash Gupta: Sir, have we done any tie-up with any EV company? I think EV we have not launched as of now.

Anurag Choudhary: No. So, what happened. So, we are in the process like I told. In next 12 months, we will start the installation of our PCR plant. And after that we will do commissioning. Post that we will have the tie-up. Now it is in development stage.

Yash Gupta: And we will look for OEMs not for the retail.

Anurag Choudhary: Definitely, we will look for retail and OEMs both. In retail, margins are much better than OEMs.

Yash Gupta: Second question is on EBITDA margin. In the last six-seven quarters, EBITDA margin is going up despite the volume almost at the same level. So, which raw material prices have gone down in last four-five quarters and what is the reason for the decline and whether we expect this decline to be sustainable?

Anurag Choudhary: See, the margins have not improved because of decline in the price of raw material. So, in our case, any increase or decrease in the price of raw material is passed on to the customers. So, no improvement has taken place because of any movement of fluctuation in the price of raw material. The margins what we have achieved are clearly sustainable margins which the company has been able to achieve through lot of operational efficiency project we are driving in our company, starting from yield improvement, energy saving, waste heat recovery system and host of other initiatives. We have different initiatives which we take and basis that we have been able to improve on our margins. Plus, in addition to that, the company is moving towards high value-added products. So, this transformation from normal products to high value-added products is giving higher margins with the same volumes.

Yash Gupta: So, we are expecting this margin to be sustainable?

Anurag Choudhary: Definitely. These are sustainable margins.

Yash Gupta: Last question on this speciality carbon black forward integration part. Q3 FY26 is intact, we are on time?

Anurag Choudhary: Yes, I have already announced in my commentary that end of Q3 FY26 we will see the commencement of our new speciality facility.

Yash Gupta: So, maybe for Q4 there will be some impact but moreover the full impact will come in the next year only?

Anurag Choudhary: Yes, Q4 you will see some impact and Q1 you will see the full impact.

Yash Gupta: Okay, sure. Thank you, sir.

October 24, 2025 Himadri Speciality Chemical Ltd

Page 13 of 18

Anurag Choudhary: Thank you.

Moderator: Thank you. The next question comes from the line of Rhea Jain from SDA Finance. Please go ahead.

Rhea Jain: Thank you for the opportunity. So, my first question is given the revenue decline and the inventory receivables movement, what is the current working capital cycle and how do you see it evolving in the next two-three quarters?

Anurag Choudhary: See, current working capital is 31% of the top line and we expect this to remain in the same levels.

Rhea Jain: For the next three quarters, right?

Anurag Choudhary: Yes.

Rhea Jain: Got it. Also, looking at the short-term borrowings, we observe an increase of Rs. 300 crores to Rs. 800 crores on a consolidated basis. So, could you please help us understand the rationale behind this rise and what is the target debt-to-equity ratio or leverage level the company is comfortable maintaining?

Anurag Choudhary: So, actually these are commercial papers we have issued against which we have done deposits with banks. So, there is no leveraging we are doing. All the future expansion of the company will be funded through internal accruals only. So, currently if you look at net debt, it is only Rs. 113 crores. And we expect to be cash positive in March in terms of our debt.

Rhea Jain: So, you will be net debt positive in March?

Anurag Choudhary: Yes, definitely.

Rhea Jain: Also, the company achieved ISCC-Plus certification and emphasized sustainability credentials. So, congratulations for that firstly. And could you elaborate on how sustainability initiatives are translating into business advantage like pricing, premium, market access, cost savings and so on?

Anurag Choudhary: Definitely. See, sustainability has been our motto since last more than 15 years when people were not that much focusing on ESG practices. So, IFC Washington, World Bank invested in Himadri in 2009 and after a detailed due-diligence of 14 months, they invested in terms of environmental practices. And we have private equities in our company for last 15 years. So, who are no longer there. But those corporate governance best practices, sustainability practices are embedded in the core of the company now. We have been following these practices over last 14 to 15 years. And the result of this is what you see like over this platinum rating. It is a very

prestigious ranking which only 1% of the manufacturing companies globally have. So, Himadri has a unique positioning among those 1%. Now, regarding when we work so much on sustainability in terms of best environmental practices, in terms of governance practices, in terms of October 24, 2025 Himadri Speciality Chemical Ltd

Page 14 of 18

of social goals. So, when we interact with our customers, these customers also want these practices to be very strong in their suppliers. Because on their scope to reduction, they have also highlighted about these things. So, that they get an advantage dealing with Himadri. So, following these practices, we get a pricing premium from compared to our peers. That is also one advantage Himadri is having.

Rhea Jain: Right, sir. Thank you so much for taking my questions.

Anurag Choudhary: Thank you.

Moderator: Thank you. The next question is from the line of Raj from Asit Kotecha Family Office. Please go ahead, sir.

Raj: My first question was on the Durofresh brand that we have

launched. So, how are we navigating

the naphthalene ball B2C market with our brand Durofresh? What is our strategy there to grow and gain market share from the existing players? And how big is the market and how much revenue do we expect to make from this market from this business segment in FY27?

Anurag Choudhary: See, we have been selling to this market, not directly, but to others. Like we have been suppliers to Willert, which is the largest mothball player in US for years. 80% of their requirement was met by Himadri. Like that with other players. So, now we did a forward integration by introducing our own mothball. So, the quality of the product has been very well appreciated by the market. We started with a very small capacity to test the market and the results have been very encouraging. So, now we are setting up a larger capacity for which in next 3 to 4 months, equipment will be installed. And then we will see the ramping up in production and sales of Durofresh mothballs. So, next year we expect, in terms of revenue, we will not find significant change, but in terms of profitability because whatever addition will be there, that will directly go to the bottom line.

Raj: And my second question was, we still expect the battery chemical business to contribute Rs. 2,500 crores to Rs. 2,700 crores in revenues in FY28. And have you signed any contract with OEM or a bigger player which would help us to achieve this revenue?

Anurag Choudhary: So, what happened, we have at 100% capacity utilization, we will achieve Rs. 2,500 to Rs. 2,700 crores top line. But whether it will be 28 or 29, we have not made any announcements or commitment on that.

Raj: So just wanted to understand, is the product being accepted or how is the quality of product or some feedback?

Anurag Choudhary: The feedback has been very encouraging and that is the reason we are going ahead with the CAPEX program.

Raj: Okay, got it. Those were my questions. Thank you.

October 24, 2025 Himadri Speciality Chemical Ltd

Page 15 of 18

Anurag Choudhary: Thank you.

Moderator: The next question is from the line of Darshan Shah from M&S Associates. Please go ahead, sir.

Darshan Shah: I have a couple of questions more on the macro front specific to the industry and demand. First was, are you witnessing any demand recovery in Europe and East Asia after there has been recent history of slowdown in demand. So, how is now the demand shaping up there?

Anurag Choudhary: See, for us, demand has been strong only. Reason being that our volumes of carbon black are fully sold. So, we do not see any significant positivity or negativity in the demand side earlier also and even today. For us, the demand remains strong only as before.

Darshan Shah: The natural extension to the question is that the demand remains strong. How do you see the competitive intensity in coal tar pitch and carbon black with new entrants coming in, possibility of new supply and pricing pressures?

Anurag Choudhary: Coal tar pitch, there is no new entrants who are coming in. Because coal tar pitch, for to establish a product also it takes 2 years' time. So, coal tar pitch, I do not see any new players coming in. And if someone comes also, then it will take 2 years first to establish their quality. For carbon black, the existing players are only expanding their capacity. I do not see any new player coming in.

Darshan Shah: So, you see that there is still enough comfortable demand, no problems of larger supply, pricing pressures that you will have to deal with in the market in terms of your clients and customers.

Anurag Choudhary: No, nothing like that.

Darshan Shah: The competitiveness of Indian carbon speciality versus Chinese and Korean producers in the

export market. So, any thoughts on our competitiveness versus the other peers, Chinese and Korean peers?
Anurag

Choudhary: China basically produces carbon black using coal tar oil. And the cost of coal tar oil is higher in China because the cost of coal tar is higher in China compared to India. So, we do not see any competition from China as such in the international market.

Darshan Shah: And Korea?

Anurag Choudhary: Koreans are not that focused on speciality. They are more on the commodity side.

Darshan Shah: Finally, do you expect double-digit growth resumption in FY27 once capacity addition starts contributing?

Anurag Choudhary: Yes. Definitely, we see double-digit growth.

Darshan Shah: Great. That was very helpful, sir. Thank you.

October 24, 2025 Himadri Speciality Chemical Ltd

Page 16 of 18

Moderator: Thank you. The next question is from the line of Preeti from SK Associate. Please go ahead, ma'am.

Preeti: Thank you so much for the opportunity. I would like to know that the revenue for Q2 declined to Rs. 1,071 crores despite strong margins and profit growth. So, among your major product segments like coal tar pitch, carbon black, advanced materials, which saw the largest pressure and is this temporary or structural?

Anurag Choudhary: No, there was no pressure. In fact, if you see the decline, as we clearly mentioned, it was basically because of two factors. Number one, corresponding quarter last year, the average raw material price was 13% higher than current prices, 13% to 15%. So, when the prices came down, the realization also came down. That resulted in lower turnover. In addition to that, there was a significant export volume, which was not considered in this quarter because of cut-off date. It went to the next quarter. So, the volume and the turnover went to next quarter. That was the result. It is nothing to do with any pressure or anything.

Preeti: Understood. And a portion of the revenue was also impacted due to the export orders that were executed during the quarter but will be recognized in Q3.

Anurag Choudhary: —Yes, will be recognized in Q3.

Preeti: So, given your presence in the +50 countries, could you share insight on the overseas demand trends observed in Q2 and highlight the key geographies you expect to drive growth in the second half of the year?

Anurag Choudhary: See, the momentum has been strong and looking forward also, we feel that the demand is going to remain strong only. We are supplying to various geographies like 54 countries globally, we are supplying our materials.

Preeti: Understood. And the crude oil and coal tar derivatives remaining volatile, how effective is your pricing pass-through mechanism in both domestic and export markets?

Anurag Choudhary: 100%. Whether price goes up or down, what difference it will make is only in terms of percentage of margin and in terms of top line. Not in terms of absolute margin.

Preeti: Understood. Alright. Thank you so much, sir.

Moderator: Thank you. The next question is from the line of Santosh Kesari from SK HUF. Please go ahead, sir.

Santosh Kesari: I have just one query and that is about the impact of US tariffs on our exports. So, is that impacting us too much? Who is bearing the duties? Is it the buyer or we are bearing the duties?

How is it happening? If you can also give a detail of demand scenario there.

Anurag Choudhary: See, this is already reflected in our Q2 Results. You can see there is no impact.

October 24, 2025 Himadri Speciality Chemical Ltd

Page 17 of 18

Santosh Kesari: Yes, that is what I am surprised that other players have really, their exports of plateaued and their profits are not as much. But in our case, it is not happening. So, is it the buyers, are the buyers bearing the duties? How is it happening?

Anurag Choudhary: It is because of our non-dependence on a single geography. So, if there is a challenge, we move our product to some other

geography. And the material we supply to said challenged geography

also, that is also of very high quality where the impact is not that much, since the customers want the material. So, that is why we are not getting impacted.

Santosh Kesari: So we are saying that our demand is so huge and we have so much diversity in supplies that we can supply to any geography we can choose.

Anurag Choudhary: Yes, and the volumes are low.

Santosh Kesari: Just need your confirmation, sir.

Anurag Choudhary: Thank you.

Moderator: Thank you. The next question is from the line of Dheeraj Shah from RK Investments. Please go ahead, sir.

Dheeraj Shah: Thank you for the opportunity. I have a couple of questions. So, while the revenue has fallen, margins have improved significantly and PAT margins are also up strongly. Could you break down how much of the margin improvement is due to the product mixture versus the cost control or raw material deal?

Anurag Choudhary: See, because of the raw material prices, there is no impact because that is passed on to the customers, any increase or decrease. But yes, there has been significant improvement in terms of operational efficiency, yield improvement and energy efficiency, waste heat gas treatment and recoveries, which has led to improvement. And in addition to that, what you call high value - added products. So, high value -added products contributed around 65 %-70% and 30% was in account of operational efficiency.

Dheeraj Shah: Understood. Also, secondly, given the stagnation in revenue but improvement in margin, what is your guidance for FY26 growth, perhaps volume or revenue and any margin targets that maybe we could look up to?

Anurag Choudhary: Two quarters is already there. So, you can see, we are already at a PAT of Rs. 369 crores. A year back, we projected to double our profitability from FY24 to FY27 from Rs. 411 crores to Rs. +800 crores in next 3 years. But if you look at the actual performance, we are already on that track in 2 years. So, we are going to deliver what we promised in 3 years and around that in 2 years and third year will be even better.

Dheeraj S hah: And lastly, given the emerging EV ecosystem in India, where do you see Himadri's strategic fit? Would it be as a raw material supplier or as an integrated advanced material player?

October 24, 20 25 Himadri Speciality Chemical Ltd

Page 18 of 18

Anurag Choudhary: Definitely, Himadri is going to play a key role in t he EV and ESS storage entire technology ecosystem which is going to play out in India. Because Himadri is going to be the key supplier for raw material components for making lithium -ion batteries. And it is going to play a predominant role in this field in the years to come. We have been investing in this for last over 12-13 years. And it is not that today everyone is talking about lithium -ion that Himadri has started discussing and talking about lithium -ion batteries. You go back to our 10 -12 years back report also, that time also we have been talking and now the fruits of all those investments will results.

Dheeraj Shah: Thank you very much for the opportunity and all the best for the quarter s ahead. Thank you.

Moderator: Thank you. As there are no further questions from the participants, this concludes this conference. On behalf of Himadri Speciality Chemical Ltd, that concludes this conference.

Thank you for joining us and you may now disconnect your lines.

Sub: Transcript of Earnings Conference Call for Financial Performance for the 3rd Quarter and Nine Months ended 31 December 2025 held on Wednesday, 21 January 2026
Dear Sir/ Madam,

Further to our letters dated 17 January 2026 and 21 January 2026 and pursuant to Regulation 30 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 ("SEBI Listing Regulations") read with Schedule III of the SEBI Listing Regulations and other applicable provisions of the SEBI Listing Regulations, we are enclosing herewith the transcript of earnings conference call for Financial Performance for the 3rd Quarter and Nine Months ended 31 December 2025 held on Wednesday, 21 January 2026 at 04:30 p.m. (IST),

The above information will be made available on the Company's website at www.himadri.com

You are requested to take the same on record.
Thanking you,

Yours faithfully,
For Himadri Speciality Chemical Ltd

(Company Secretary &
Compliance Officer)

"Himadri Speciality Chemical Ltd
Q3 & 9M FY '26 Earnings Conference Call"
January 21, 2026

MANAGEMENT : MR. ANURAG CHOUDHARY – CHAIRMAN , MANAGING
DIRECTOR AND CHIEF EXECUTIVE OFFICER –
HIMADRI SPECIALITY CHEMICAL LTD
M R. SOMESH SATNALIKA – EXECUTIVE VICE
PRESIDENT , TYRE AND STRATEGY – HIMADRI
SPECIALITY CHEMICAL LTD
M R. KAMLESH AGARWAL – CHIEF FINANCIAL
OFFICER – HIMADRI SPECIALITY CHEMICAL LTD

MODERATOR : MR. CHIRAG BHATIYA – MUFG INTIME

Moderator: Ladies and gentlemen, good day, and welcome to Himadri Speciality Chemical Ltd Q3 and 9M FY '26 conference call hosted by MUFG. As a reminder, all participant line will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone.

I now hand the conference over to Mr. Chirag Bhatiya from MUFG. Thank you, and over to you, sir.

Chirag Bhatiya: Good evening, everyone, and welcome to Q3 and 9M FY '26 Earnings Conference Call of Himadri Speciality Chemical Ltd. Today on the call, we have with us Mr. Anurag Choudhary, CMD and CEO; Mr. Somesh Satnalika, EVP, Tyre & Strategy; and Mr. Kamlesh Agarwal, CFO.

Before we proceed with the call, I would like to give you a disclaimer that this conference call may contain forward-looking statements about the company, which are based on the beliefs, opinions and expectations as of today. Actual results may differ materially. The statements are not the guarantees of the future performance and involve the risks and uncertainties that are difficult to predict. A detailed Safe Harbor statement is being given on Page 2 of the investor presentation of the company, which are being uploaded on the stock exchange and the company website.

With this, I now hand over the call to Mr. Anurag Choudhary. Over to you, sir.

Anurag Choudhary: Thank you, Chirag. Good evening, ladies and gentlemen. Thank you for joining us today to discuss the performance of Himadri Speciality Chemical Ltd for the third quarter and 9 months ended 31st December 2025. We sincerely appreciate the continued interest, trust and engagement with the company.

I am pleased to share that we have started trial production of speciality carbon black expansion project, a landmark achievement for Himadri. With this, Himadri has the world's largest single-site speciality carbon black plant with a total capacity of 130,000 metric tons per annum. This milestone underscores our continued focus on high value-added solutions and marks the beginning of next phase of growth in our speciality carbon black journey.

In coal tar pitch, we achieved a key milestone with the commissioning of a Mangalore port terminal, successfully delivering 3,600 metric tons of liquid coal tar pitch to the Middle East. This establishes our second export corridor along with Haldia, significantly enhancing our logistics flexibility and opening up access to new global markets. We are well positioned to cater to rising international demand while offering best-in-class quality and global most competitive prices. Supported by operational excellence, continued improvements in yield and waste heat recovery systems, we continue to drive sustainable profitability.

Our commitment to sustainability was once again reaffirmed as EcoVadis awarded Himadri the platinum medal for a second consecutive year, placing us amongst the top 1% of over 150,000 companies globally assessed on ESG parameters. This recognition reflects our deeply embedded approach to sustainability, anchored in a strong governance, climate conscious, operations, ethical business practices and responsible supply chain management.

January 21, 2026 Himadri Speciality Chemical Ltd

At the heart of Himadri's performance are our people. We are honored to be certified as a Great Place to Work, a testament to the strong and inclusive culture we have consciously nurtured over the years.

The year-to-date has been marked by steady execution and meaningful progress. We have remained firmly anchored on operational discipline, deepening customer relationships and strengthening institutional capabilities to support long-term growth. This consistency of approach continues to deliver results

reflected in our robust financial performance, with PAT growing 41% year-on-year, with 9 months FY '26 PAT exceeding PAT of FY '25.

As we look ahead, we do so with the confidence. What we set out to achieve in FY26 has been realised, and preparations for future projects are already progressing well, laying a strong foundation for sustained and profitable growth.

We have also been actively investing in our rubber plastic and coating laboratories to enhance product performance across critical parameters, such as ease of dispersion, reduced filter press values and improved conductivity lower loading. With the commencement of tyre production and especially the carbon black expansion project, we have significantly strengthened our ability to serve the growing demand of customized and application, especially carbon black grade. This places us in a strong position to address the global requirement for performing enhancing

speciality carbon black used in premium and high-value applications across plastics, inks, high-performance coatings, batteries, paints, wires and cables, fibers, rubber, EV tyres and several other niche applications.

In parallel, our recently launched branded naphthalene ball brand, Durofresh, has received an encouraging response in the retail market, adding further depth to our diversified portfolio.

The first of its kind commercial anthraquinone and carbazole facility in India remains firmly on schedule for Q2 FY '27. This project reinforces our commitment to innovation and import substitution. While aligning closely with government of India's vision of Atmanirbhar Bharat aimed to strengthening domestic manufacturing capabilities.

Over the past 2 years, volume and topline were largely constrained by operating at peak capacity utilization and dynamic raw material prices. With the start of trial production at the speciality carbon black expansion project, along with debottlenecking of our old coal-tar pitch distillation capacity, we are -- now have the necessary headroom to reignite growth in coming quarters and further consolidate our leadership position.

Birla Tyres continues to strengthen its footprint across India and key international markets, including Asia, the Middle East and Africa, supported by a robust and expanding distribution network of 36 distributors and over 640 dealers. Its diversified portfolio now comprises more than 80 products across flagship names such as KalaPatthar, Loader Max, Ultra Grip, Farm Haul, Platina, Shaan+, XPL LG, Roadmiler, Zeta+, BT339, Ultra Trac and many others. Engineered to deliver superior great mileage, durability across varied customer applications.

The team at Birla Tyres continues to scale in both capability and size, with modernization initiative progressing well to enhance offering across of the highway tyres, commercial vehicles, January 21, 2026 Himadri Speciality Chemical Ltd

Page 4 of 18

agriculture, industrial segments for passenger car radial unit designed specifically for EV and SUV installation of plant and machinery is being planned. This will position Birla Tyres to participate meaningfully in fast mobility segment while complementing Himadri's broader strategic ambitions.

The most transformational chapter in Himadri's journey is our entry into battery materials.

Lithium-ion batteries represent a structural shift in global energy consumption. And anode and cathode materials together constitute for 65% of the total battery cell cost, making materials innovation center to long-term value creation.

On the cathode side, we are focused on lithium-ion phosphate, a chemistry gaining rapid global acceptance, global safety, longevity and cost efficiency. Our long-term vision is to build 200,000 metric ton of LFP Cathode Active Material capacity in phases, catering to approximately 100 gigawatt hour of battery energy demand. The first commercial phase of 40,000 metric tons per annum remains on t

rack for Q3 FY '27, positioning Himadri at the heart of e-mobility ecosystem as the first commercial LFP Active Material plant globally outside China, serving both domestic and international markets across mobility and energy storage applications.

On the anode side, our strong legacy and deep expertise in carbon chemistry provide a clear strategic advantage. We are one of the only company to have backward integration in terms of raw material availability. Intensive research and testing are underway as we progress steadily towards development of comprehensive spectrum of anode solution, including synthetic natural hybrid and silicon carbon-based technologies, thereby strengthening our capabilities in this high growth and strategically critical domain.

As Himadri writes the new chapter in the Himadri reloaded phase, we continue to expand across multiple high-value categories. While speciality carbon black, coal tar pitch, speciality oil and naphthalene remain at our core, we are actively expanding our product portfolio and making sustained investment in research and development to support future growth. At Himadri, R&D is not a department. It's embedded in our DNA. It shapes how we think, operate and deliver value. Over the years, we have built a global R&D ecosystem, bringing together exceptional talent, including PhDs and subject matter experts from U.S.A., Japan, South Korea, China, South America, Australia and Europe. This rich techno-cultural diversity fuels innovation, agility and a forward-looking mindset, enabling us to lead in new technologies and product developments for emerging and sunrise industries.

Our commitment to innovation is further strengthened through strategic investments in Sicona, IBC and Invati, which have enhanced our technological depth, accelerated our innovation pipeline. With the strong synergies between our innovation and research team, we are not only collaborating on new developments and emerging technologies, but have also been leveraging shared expertise to adopt best practices and strengthen our processes across our core verticals. Together, we are developing a sustainable growth engine that is paving the way for our portfolio of innovative products built on cutting-edge technologies. These collaborations have enabled us

to establish a strong joint product development map that leverages our collective expertise across cell chemistry, battery science, material technology and operational excellence. Our shared focus
January 21, 2026 Himadri Speciality Chemical Ltd

Page 5 of 18

is on developing solutions grounded in principles of sustainability and circularity for sunrise sector, such as high performance and high value-added defense applications, drones, AI data center, mobility and many more.

Today, R&D at Himadri goes far beyond product development. It is about advancing technologies, transforming processes and unlocking new possibilities to keep us ahead in a rapidly evolving global landscape. In parallel, we continue to actively leverage artificial intelligence and digital tools across workstreams, procurement, logistics, inventory, material management, quality management, sales and marketing and manufacturing to sharpen execution, improve predictability and build a more agile, data-driven operating model for the future.

This year marks a defining chapter in Himadri's journey, characterized by progress, resilience and purposeful execution. The path we envisioned is unfolding with clarity, and we continue to build on that momentum with confidence. As we look ahead, the horizon is bright, filled with opportunities that will take us to greater heights and unlock new possibilities. Together, we are saving a future of sustained growth and innovation.

Before concluding, I would like to express my sincere gratitude to our colleagues, partners and investors for their continued trust and support. With this, I hand over to our

CFO, Mr. Kamlesh

Agarwal, who will take you through the financial performance in detail. Thank you. Kamlesh, please?

Kamlesh Agarwal: Thank you, Anuragji, and good evening, everyone....

Moderator: I'm sorry to interrupt you, sir, but your voice is breaking.

Kamlesh Agarwal: Now it's okay?

Moderator: Yes. Please go ahead, sir.

Kamlesh Agarwal: Thank you, Anuragji, and good evening, everyone. I trust you have had the opportunity to review our financial results, the latest investor presentation and press release, all of which have been made available on the stock exchanges and on our company's website.

Let me now take you through the financials for the third quarter and nine months ended 31st December 2025.

On a stand-alone basis, we are pleased to share that we have already surpassed our full year FY '25 PAT within the first nine months of FY '26. This outcome clearly reflects the...

Moderator: I'm sorry to interrupt you, sir, but again, your voice is breaking.

Kamlesh Agarwal: Hello? Now it's clear?

Moderator: Yes, sir.

Kamlesh Agarwal: This outcome clearly reflects the effectiveness of our strategic focus on value-added products, which continues to be the key driver of profitability and margin expansion.

January 21, 2026 Himadri Speciality Chemical Ltd

Page 6 of 18

From a quarterly perspective, in Q3 FY '26, stand-alone revenue stood at INR1,133 crores. EBITDA was INR249 crores, registering a 12% year-on-year growth, while profit after tax came in at INR195 crores, reflecting a strong growth of 37% year-on-year increase. These results underscore the consistency of our execution despite a dynamic operating environment.

Looking at the cumulative performance for nine months FY '26 on a stand-alone basis, revenue stood at approximately INR3,304 crores. EBITDA increased to INR726 crores, representing a ~19% year-on-year growth compared to INR611 crores in nine-month FY '25. Profit after tax stood at INR564 crores, marking a 41% year-on-year growth over approximately ~INR400 crores in the corresponding period last year.

Now turning to our consolidated performance in Q3 FY '26. Revenue stood at INR1,184 crores, with EBITDA at ~INR253 crores compared to ~INR225 crores in Q3 FY '25, reflecting a 12% growth...

Moderator: Sorry, but -- I'm sorry to interrupt you, sir. Again, voice is breaking.

Kamlesh Agarwal: Yes...

Moderator: Sir, again, it's breaking.

Kamlesh Agarwal: Hello. Am I audible now? Now my voice is clear?

Moderator: Yes, yes. It's clear now.

Kamlesh Agarwal: Profit after tax came in INR192 crores, registering a growth of 36% against INR141 crores in Q3 FY '25.

For nine months FY '26 on a consolidated basis, revenue stood at approximately ~INR3,373 crores. EBITDA was ~INR726 crores, reflecting a growth of around 18%, while profit after tax stood at ~INR548 crores, a 37% increase over nine months FY '25. This performance highlights the strength and resilience across all our business segments.

From an operational perspective, our sales volume for nine months FY '26 stood at 428,572 metric tons as compared to...

Moderator: I'm sorry to interrupt you, sir, but again, your voice is breaking. No, no. We can't hear you properly, sir.

Anurag Choudhary: So, let me take it over. Anurag here. Kamlesh, let me take it over. Am I audible?

Moderator: Yes. It's loud and clear from your end.

Anurag Choudhary: From an operational perspective, our sales volume for the nine-month FY '26 stood at 4,28,572 metric tons as compared to 4,15,679 metric tons in the previous year, reflecting a growth of 3%.

EBITDA per metric ton stood at INR 16,934 in 9 months FY '26 compared to INR 14,707 in nine months FY '25, representing a 15% improvement, driven by product mix that remains increasingly focused on high value-added offerings.

January 21, 2026 Himadri Speciality Chemical Ltd

Page 7 of 18

I'm also pleased to share that during the quarter, the promoters have further strengt

hened their

stake in Himadri to conversion of one crore warrants into equity. The warrant are acquired at a total price of INR316 per warrant. Promoter shareholding now stands at 52.5%. This development underscores the promoter's continued confidence and long-term commitment to Himadri's growth journey.

Strengthening promoters' stake not only enhances the company's capital structure, but also demonstrate the immense faith in our business as we embark on the next phase of expansion and value creation for all our stakeholders. Overall, these results reinforces our confidence that Himadri is well positioned to continue its upward journey and trajectory, supported by a strong financial foundation, disciplined execution and a clear strategic direction.

So now Chirag, we can open the session for question-and-answer session.

Moderator: Thank you so much, sir. Ladies and gentlemen, we will now begin with the question-and-answer session. Our first question comes from the line of Divyansh Thakur from Finterest Capital.

Please go ahead.

Divyansh Thakur: Sir, congratulations on the great set of numbers. So we have mentioned the roadmap to grow and accelerate towards 2028. So how do we vision that? How do we scale it up? We start our operations for the Phase 1 cathode in quarter 3. We have also Birla Tyres gradually ramping up. So how do we see the coming years? And how do we -- can shape the development for the company going ahead?

Anurag Choudhary: Thank you, Divyansh. So, if you look at the profitability achievements for FY '24, we achieved a PAT of INR 411 crores. And in FY '25, we gave a guidance that in next 3 years, that is by FY '27, we'll double the PAT, effectively INR 800 crores plus. But if you look in FY '26, we are already nearing to the target.

So now, FY '25, we had a PAT of around INR 558 crores. With all these projects coming in, with new capacities coming in, value-added products coming in, we are confident that the profit will again double from FY '25 to FY '28, so in 2 years from now.

Divyansh Thakur: So sir, what you are saying is that the PAT level of FY '25, when we'll see the PAT level of FY '27, it will double. Am I right?

Anurag Choudhary: FY '28.

Divyansh Thakur: Okay. Okay. Okay. FY '28. But also the...

Anurag Choudhary: So we are giving the guidance what we gave 1 year back. We are giving the same guidance which we gave 1 year back. When we articulated that PAT will double in 3 years, same thing we are saying again now 1 year fast forward, the PAT will double again in 3 years from FY '25 to FY '28. Only one disclaimer is that last time when we told it will be done, it was done in 2 years instead of 3 years.

January 21, 2026 Himadri Speciality Chemical Ltd

Page 8 of 18

Divyansh Thakur: That's great, sir. Sir, also, I wanted to get a look out on how the cathode active material or the operations that are coming, I think this is the first one in India to come up. And also there, I saw some headlines that you are in talks with some large players. So if you can give some more information on that?

Anurag Choudhary: Sure, definitely. So in terms of cathode, our demo plant is under construction and expected to

commence in the fourth quarter. And post that, we will be sending sample 'B' to our customers. There are a series of samples will need to be approved by the customers. So next stage of sampling will start.

Divyansh Thakur: Sir, can you name some customers?

Anurag Choudhary: Hello?

Divyansh Thakur: Hello. Am I audible?

Anurag Choudhary: Yes, yes. You are audible. Please.

Divyansh Thakur: Sir, can you name some customers?

Anurag Choudhary: No, we cannot name some customers. They are global customers, plus India customers, we have NDAs. So we cannot disclose the names here on public forum. And regarding the capacities for lithium-ion phosphate, so we expect FY '29 to be the full year of operation for lithium-ion phosphate.

Divyansh Thakur: Okay, t

hat's great, sir. That's all from mine and all the best for the coming quarter.

Anurag Choudhary: Thank you.

Moderator: Thank you. Our next question comes from the line of Dhruvin Kadakia from SKP Securities.

Please go ahead.

Dhruvin Kadakia: Hello, sir. Congratulations on a great set of numbers. Sir, I just wanted to begin with 3 small questions on our quarterly results, and then I'll join the queue. My first question is, sir, with regards to our EBITDA per ton, sir. So in this particular quarter, when I did my calculations for EBITDA per ton, I have noticed that we've seen a decline on a sequential basis despite our revenues, etc., which has seen a growth, so I wanted to understand the reason behind it.

Second, I wanted to understand the sporadic increase in the total income -- in the other income, sorry. Other income has almost grown by 290% on a year-on-year basis. And last question would be with respect to what are the tyre sales that we've made for this particular quarter? That's all.

Anurag Choudhary: So regarding EBITDA per ton, if you look at it, it is more or less in line because depending on quarter-to-quarter, the number changes, but it's very minimum. So that is the level where it is more or less stabilized now. For other income, so we have made investment in IBC, in which we have made -- got this investment at a comparatively much lower cost.

January 21, 2026 Himadri Speciality Chemical Ltd

Page 9 of 18

So some of the valuation has been done as per the accounting standard. Because of which, there has been some increase in the other income other than the investments that we have made. So if you look at -- we have borrowed a significant amount of money. At the same time, we have invested in banks. So that interest is also there.

Dhruvin Kadakia: Okay, sir. And last was regarding tyre sales for this particular quarter, like where do we stand currently? And how much do we expect to end the year in terms of our Birla Tyres revenue-wise?

Anurag Choudhary: So revenue-wise, we have -- the current quarter, we have already achieved INR60-plus crores of revenue. And looking forward, we expect the momentum to strengthen further. And this -- from the next year, you will see capacity ramp-up taking place in Birla Tyres.

Dhruvin Kadakia: All right, sir. Thank you so much. I'll join the queue. Thank you.

Moderator: Thank you. Our next question comes from the line of Smaran from Money Stories Asset management. Please go ahead.

Smaran: Hello. Good evening, team. So my question was regarding the cathode capacity that we are targeting. So since we are targeting about -- to cater about 100 gigawatts worth of cathode, so is it that we expect a huge market share in India and globally? Or is it that we are trying to capture a huge size of market share?

Anurag Choudhary: Your question is not clear. Can you repeat it, please?

Smaran: Okay. So I was asking about the cathode capacity which we are targeting, which is about 100 gigawatts worth of -- gigawatt per hour, which we are targeting, right? So is it that we are expecting a huge market? Or is it that we are trying to capture a huge market share? So I wanted to understand which one is it.

Anurag Choudhary: So it's not that we are going to capture a huge market share. FY '30, the global lithium-ion cell capacity will be 8,000 plus. And by that time, we are only targeting 100, which is absolutely nothing in terms of global demand. So actually, first time Himadri is going to be in a product where demand will not be a constraint. So growth will depend upon our ability to expand. So this will be a unique positioning for the company.

Smaran: Okay. Got it. And how do you place ourselves in terms of cost competitiveness within India or else comparatively to China as well?

Anurag Choudhary: We'll be very much cost competitive to any geography in the world.

Smaran: Okay. Just one last question was that were you -- how are you planning

on your sourcing of raw materials for the new lithium-ion phosphate?
Anurag Choudhary: How much?
Smaran: How are you planning on sourcing our raw materials for the cathode part of it?
January 21, 2026 Himadri Speciality Chemical Ltd

Page 10 of 18

Anurag Choudhary: So, we'll be sourcing from the global market, including Latin America, Australia, China. So where we will get the best, we'll take the raw materials.
Moderator: Our next question comes from the line of Pratik Shah from Investing Alpha.
Pratik Shah: Sir, my first question is on the post recent warrant conversion, how does management view equity dilution going forward? Like will future growth be primarily debt funded or accrual driven?
Anurag Choudhary: So, the entire growth which is going to come for the next 3, 4 years are from internal accruals. So, there is going to be no dilution as far as Himadri is concerned. So if you look at shareholding also in the last 3 years, we have increased our stake by 10%. So, we won't see any dilution coming forward. And there will be no debt, which will be taken. It will be internal accruals.
Pratik Shah: Great. Great. Okay. And sir, my second question is, what are the key execution risk during the ramp-up phase at Mahistikry? And how is management ensuring that quality consistent is maintained by scaling volumes?
Anurag Choudhary: We have a very strong SOP for the projects and for operations. So, which ensures that under no circumstances, there is any impact or contamination from the ongoing projects. It ensures there is no problem as far as the quality or consistency is concerned.
Pratik Shah: Okay. Got it. And sir, one last question. Historically, how long has it taken for Himadri to ramp up speciality capacity to optimal utilization? And should we expect a similar or shorter curve for the new facility as well?
Anurag Choudhary: Yes, definitely. To ramp up to the capacity, it will take around 3 to 6 months.
Moderator: Our next question comes from the line of Ishani Jain from MAS Capital.
Ishani Jain: My question to you is like with energy being a significant input, so what proportion of power is sourced internally or like through long-term agreement? And how does this influence margin?
Anurag Choudhary: So, we source 100% of power through our waste heat gas capturing plant, where we convert gas into power. So Himadri is using clean power for all its operations.
Ishani Jain: Okay. Sir, got it. Also, like at what stage does management gain confidence to commit capex and energy materials? But it means post customer qualifications or post binding offtake agreements?
Anurag Choudhary: We don't wait for binding offtake agreement. We have full confidence in our quality and our customer relationship. So, with the quality reason, we start setting up that capacity. So, qualification process, in the same time, we are setting up the capacity. Because unless you have the full non-commercial plants, you will never get approvals.
Ishani Jain: Okay, sir. Also, my last question will be like in speciality carbon black, how much of the recent sizing has been formula-linked versus like negotiated contracts?
January 21, 2026 Himadri Speciality Chemical Ltd

Page 11 of 18

Anurag Choudhary: So, it depends on customers to customer. I cannot disclose the pricing policy. But yes -- but I can tell you, speciality carbon black has a much better margin than commodity black, and Himadri specializes in this segment.
Moderator: Our next question comes from the line of Viraj Sanghvi from Asit Koticha Family Office.
Viraj Sanghvi: So, we have seen some fall in EBITDA per ton on quarter-on-quarter basis. So is this to do with some change in product mix because we have also expanded the coal tar distribution capacity by 1 lakh metric tons. So is that the reason there is some fall in EBITDA per kg?
Anurag Choudhary: Viraj, if you see there is hardly -- it was ~17,900, it has come to 16,000 something. So there has not been much difference. So you will find this kind of variation on a positive or negative side on a quarter-on-quarter basis, but. This doesn't have any significant importance or significance.
Viraj Sanghvi: Okay. Got it. And this coal tar facility that we have expanded by 1 lakh metric ton, what is the utilization for that in this quarter?
Anurag Choudhary: No. This we have just started. So over the next 2 to 3 quarters, you will see the ramp up happening. So it will take like Q1 FY '27, you will see the ramp up happening.
Viraj Sanghvi: Okay. And what about the speciality black capacity that we were to expand from 60,000 to...
Anurag Choudhary: Yes, you will see the ramp up happening from the next financial year. Q4, there will be some ramp-up happening, but you will see the results -- full results coming from in the next financial year.

Viraj Sanghvi: Got it. And from the Birla Tyres business, what sort of EBITDA margin are you making on the INR60 crores revenues for the quarter?

Anurag Choudhary: So currently, in our -- since we are selling -- so we have a partnership with Dalmia Refractory Bharat Limited in Birla Tyres. So in Himadri, in Himadri Clean Energy, we are buying from Dalmia Refractory and selling the Birla Tyres. So we don't have any positive or negative impact as such as of now. But looking forward, the things will change.

Moderator: Our next question comes from the line of Animesh Jain from Dalal & Broacha.

Animesh Jain: I just wanted to understand that with the fluctuations that are expected in lithium prices going forward, how do we see that affect our margins? Will we be absorbing those? Or will we see that it has a pass-through for us?

Anurag Choudhary: See, the kind of fluctuation, which is there in lithium, it can never be absorbed. So all the customers will be having a pass-through model in which the pricing, up and down, will be transferred to the customer. Same business model we follow with our existing products also like for coal tar pitch or carbon black. So same will follow for lithium also.

Animesh Jain: Okay. Sir, that would be a full pass-through, right?

Anurag Choudhary: Yes, it's a full pass through.

January 21, 2026 Himadri Speciality Chemical Ltd

Page 12 of 18

Animesh Jain: Okay. And sir, my next question would be on our cathode facility, how would we see a ramp -- how would we see utilization going forward for the next 1 or 2 years?

Anurag Choudhary: So next 1 or 2 years, there will not be significant ramp -- utilization. I see utilization coming in -- some utilization will be there in FY '28. But yes, big utilization will come in FY '29.

Animesh Jain: Okay. And sir, in '29, what kind of...

Anurag Choudhary: If you ask me FY '29, I see full capacity utilization.

Animesh Jain: Okay. Got it. So sir, what kind of asset turn would we be looking at a full capacity utilization?

Anurag Choudhary: 2 plus.

Moderator: Our next question comes from the line of Dhruvin Kadakia from SKP Securities.

Dhruvin Kadakia: Sir, my question was regarding our traditional -- the coal tar pitch business. So just wanted to understand from an industry perspective or from a business perspective, how do you expect them going forward? Like is it becoming structurally declining? Or do you still see it like a very significant growth driver for your cash flow generation?

Anurag Choudhary: That model has really matured over the last 5 years. And we expect the business to have sustainable profitability because we have done a lot of work in terms of operational efficiencies.

Waste heat recovery system, improvement of yield and these are giving us long-term sustainable profitability.

Dhruvin Kadakia: Okay, sir. So my last question would be regarding to our recent speciality carbon black expansion that we have done. Just wanted to understand like on a year-on-year basis, how -- what is the trend of this capacity utilization like on a year-on-year

basis, how do we expect this

capacity utilization to increase, if you could give like a 1 year to 3-year breakup, if possible?

Anurag Choudhary: So for the next year, you can look at around 85% capacity utilization for speciality carbon.

Dhruvin Kadakia: Okay. And post that we are on like almost 95% 100 % types?

Anurag Choudhary: Yes.

Dhruvin Kadakia: All right, sir. That will be all. Thank you so much.

Moderator: Thank you. Our next question comes from the line of Priti Agarwal from SKS Associates.

Priti Agarwal: Yes. Thank you so much for the opportunity and also congratulations on the new Mangalore port. I wanted to know that is this new port going to focus on Middle East itself or can we expect more geography diversions such as Africa?

Anurag Choudhary: So this will be mainly focused on Middle East only because of the proximity to Middle East.

And for other geographies, we already have Haldia port to cater to that.

January 21, 2026 Himadri Speciality Chemical Ltd

Page 13 of 18

Priti Agarwal: Understood. And the research and development investments remain elevated. So how should investors assess returns on the spend, like other defined KPIs or commercialization time lines that are being targeted?

Anurag Choudhary: R&D has been the core of the company for years now. So, we are one of the companies in India who spend a lot of money on research and development and innovation. This is -- and this has only brought us to a place where we are in terms of not only product, process and technology, but it goes much beyond that.

So for Himadri, currently also, we are working on many new products. And in the next 1 year

to 2 years, we'll see a lot of new announcements for commercialization coming in for high value-added products. In our case, R&D is not only an academic thing with no KPI -- in our R&D, we have defined the performance metrics in a very articulate manner, which means within a given time frame, you have to achieve a particular result.

And it cannot be ever-ending project and that is the biggest strength of the company. All our technologies in Himadri have been developed in-house. That's the beauty of the company. We have not bought any technology from any technology supplier for any of our products. So looking forward also, you will come across a lot of new products coming in the next 2 to 3 years.

Priti Agarwal: And also, can you give an update on the new tyre launch on Birla Tyres segment like are we diversifying from the passenger car radical and also what is your long-term plan for this?

Anurag Choudhary: See Birla tyre currently is not into passenger car tyres. Birla Tyre is basically -- was into TBB segment, bias segment and a little bit in agriculture and has good -- some position in mining tyres. So what we are doing, we are strengthening and expanding our OTR and OHT segment. So the idea is that over the next 3 to 5 years, we will have significant presence from Birla Tyres in these two segments. And that is how we are revamping, modernizing, making automation, getting new machineries, getting the right people, all the resources in place in Birla Tyres. In addition to that, in future, we will be launching passenger car tyres, which will be focused on SUV and EV.

Priti Agarwal: Understood. Yes that's it from my side. Thank you so much.

Moderator: Thank you. Our next question comes from the line of Rohan Baranwal from Arihant Capital.

Please go ahead.

Rohan Baranwal: Hello. Sir, as you've shared the details on the demand of cathode...

Anurag Choudhary: Actually my line got disconnected. My line got disconnected. I was not able to listen to your question. Can you please repeat it?

Rohan Baranwal: Sure, sir. My question was on the side of cathode, sir. So -- the demand of globally and domestically. So what is the demand scenario on the anode side, sir? Like on the global, [inaudible 0:46:21] like what is the expectation domestically [in

audible 0:46:25]?

Anurag Choudhary: Your question is on cathode or anode?

January 21, 2026 Himadri Speciality Chemical Ltd

Page 14 of 18

Rohan Baranwal: Sir, like what is the demand expectation for anode domestically, sir?

Anurag Choudhary: Anode, not cathode?

Rohan Baranwal: Yes, sir, anode.

Anurag Choudhary: So, see, Himadri is going -- is positioning itself in our new age industry. For the first time, we are going to be in a business where demand will not be a constraint. See, till now, we have been in the industry where demand has always been the deciding factor of our expansion, and that's a limiting factor.

When it comes to lithium-ion cell industry, so the growth is exponential. And in the next 3 years, there has been significant growth in terms of cell manufacturing capacity. And first time in our entire history that we are going to address a market where demand will not be a constraint for either anode or cathode.

Anode consumption will be higher than cathode only because of lithium, LFP, I'm talking particularly. In terms of absolute volume, LFP cathode is 2x of anode. But anode is used in all the chemistries unlike cathode. Cathode has different chemistries, right? A CLA for electronics, NMC is part of the chemistry, then LFP is there.

So each chemistry has their own market share. LFP market is increasing every day. But anode remains constant throughout this chemistry, whichever chemistry is being used. So, anode demand is very strong in India and globally.

Rohan Baranwal: Okay, sir. And sir, my second question was on coal tar pitch, sir. So, you've done your first shipment to Middle East. So, we can see the demand from Middle East side to be strong. What is the scenario in the other parts of the world, like Europe, sir? As we see, European region has faced energy cost crisis. And because the [inaudible 0:48:37] the peer companies like was [inaudible 0:48:40]. So, how do you -- how you are able to benefit from that [inaudible 0:48:49]?

Anurag Choudhary: See, we are not at all focused on European market. We have clear focus on Middle East market because after China, Middle East is the single largest manufacturing base for aluminium industry. And Himadri is well-positioned to cater to meet their requirement. So, our focus is clear. We don't want to go to Europe as far as coal-tar pitch is concerned.

Rohan Baranwal: Got it, sir. Thank you.

Moderator: Thank you. Our next question comes from the line of Disha from Sapphire Capital. Please go ahead.

Disha: Hello?

Moderator: Yes, yes, Disha, please.

Disha: Am I audible?

Moderator: Yes, you are.

January 21, 2026 Himadri Speciality Chemical Ltd

Page 15 of 18

Disha: Yes. So sir, for this battery expansion that we are planning, what sort of EBITDA margins do we see here? And how does that differ from our regular business?

Anurag Choudhary: See, for looking at Himadri, I'll give you a very basic thumb rule, what we look at in our company at Board level that we have -- what is the return on capital employed. If you look at my existing business, the return on capital employed is 34%.

So, capital allocation is very, very critical and important metrics for us in Himadri. So we do not allocate capital to any business where ROCE is less than 30%. That is the main object. And basis that principle, all our investment is guided.

Disha: Okay, all right. And for this Phase 1, I think, is coming by Q3 FY '27, right?

Anurag Choudhary: Yes, yes, yes. But don't expect any ramp-up or capacity utilization in the next 1.5 years.

Disha: Okay. So, then I think from beginning FY '29?

Anurag Choudhary: Yes, that's what I gave a clear guidance. FY '29 will be the year for LFP.

Disha: And how much are we owed in the capex that we are spending for Phase 1?

Anurag Choudhary: INR1,125 crores.

Disha: INR1,125 crores. And asset turn of around, I think you said 2 -- more than 2x, right?

Anurag Choudhary: 2, 2 plus, 2 plus.

Disha: Okay. Okay. That's it from my side. Thank you.

Anurag Choudhary: Thank you.

Moderator: Thank you. Our next question comes from the line of Yashwanth Gottipati from KR Choksey Securities. Please go ahead.

Yashwanth Gottipati: Hello. Am I audible?

Moderator: Yes, sir, you are.

Yashwanth Gottipati: Yes. So good evening, sir. My question is regarding anode materials. So, if you can give us the numbers for the capex that we are going to undergo for this anode material development, what is the capacity? And what is the premium which we'll be charging over products such as performance-driven anode materials? So, if you can show some light over that whole anode project.

Anurag Choudhary: I was not able to listen to your question, my line got disconnected. Can you please repeat it?

Yashwanth Gottipati: Okay. So, my question was regarding the anode materials project. So, if you can give us some numbers regarding the capex for that anode material development, the capacity, which would

January 21, 2026 Himadri Speciality Chemical Ltd

Page 16 of 18

come live, as well as the premium which we would be charging a rough estimate for anode material over the normal synthetic composite graphic.

Anurag Choudhary: See, first of all, we have not announced any capex as of today on anode material. So, we are in the process of finalization. Once we finalize, we'll come up with the capacity number and the capex numbers.

Yashwanth Gottipati: Okay. Okay. Understood. And roughly, sir, I mean the premiumization, how much percentage would be a ballpark number for carbon silicon composites, which we would be catering to performance-driven applications over the cost-driven applications?

Anurag Choudhary: So, there is no point discussing the premium. As I told you, because knowing the premium will not be able to calculate anything unless you know the capacity. So, you can Google it and you will get the selling price of silicon carbon compared to synthetic carbon, anode...

Yashwanth Gottipati: Okay, okay. Understood, sir. Yes, that would be all from my side. Thank you.

Anurag Choudhary: Thank you.

Moderator: Thank you. Our next question comes from the line of Devanshi Shah from HUF Capital. Please go ahead.

Devanshi Shah: Hi. Thank you for the opportunity. So, I wanted to understand how does Himadri's cost structure and technology road map compared with established Chinese players in LFP and anode? And where does the management see its competitive moat?

Anurag Choudhary: See, in China, if you look at LFP chemistry, it has really evolved over the last 5 years. The work has been going over the last 15, 18 years, but the ramp-up of volume has taken -- really placed in the last 4 years. And the advantage of Himadri is that we have been in this industry for the last 17 to 18 years. If you go back and look over at our annual reports, we have been talking about lithium-ion batteries from the day when no one where they've been knowing about lithium-ion batteries, not much people were knowing.

So that time, we had the vision that lithium-ion battery is something which is going to be a game changer for future. There were many chemistries. The best thing is there were -- still, there are many chemistries. But at that point of time, 18 years back to point out that, yes, this chemistry is going to be the game changer is a big thing. Today, everyone can say, but 18 years back to tell this thing was a big thing, so that is what we did.

And I have been personally engaged, and very closely monitoring the development of raw material component of this industry over the last many, many years. So, I have very strong relationship and very strong team, which is working on it, and we are absolutely confident. We'll be very strong in terms of our quality of the product, specific cases to meet the requirement of the customers and very much competitive. Plus, we have the India advantage compared to our peers in the ot

her geography.

January 21, 2026 Himadri Speciality Chemical Ltd

Page 17 of 18

Devanshi Shah: Right. Sir, got it. That was helpful. Also, could you share insights on demand trends across key export geographies, such as Europe, US, Asia, particularly in the context of global industrial slowdown and inventory normalization?

Anurag Choudhary: By the time our product launches, all the inventory normalization, in fact, in LFP has already happened. If you see the correction of lithium-ion prices, has corrected by 75% over the last 2.5 years -- 3 years by 75%. So, all inventory, write-off, collection, all those things has already happened. There's nothing left to be collected. So now there will be fair competition, which is going to be there.

And global demand is -- global capacity of lithium-ion battery cells is going to be on 7,500-to-8,000-gigawatt hour from current 2,500. This gives huge -- possibility for huge ramping up of capacities and huge demand for cathode and anode material. And company will be producing the best in quality, meeting all the global standards, will outline others. That is coming out very clear because the single factor for meeting the requirement of this huge growth which is coming will be the raw material component.

So everyone is selling capacity, but raw material is limited. So that will be a single critical factor which will be the game changer. And Himadri has through -- what makes Himadri different?

And in terms of lithium ion capacities also capabilities also. If you look at our R&D setup, we have joined hands with Sicona, having facility in Australia.

Our team is working hand-in-hand with the Sicona team for new developments. We have taken a stake in International Battery Company headquartered in California, having a state-of-art AI-based research and development center in California and a manufacturing facility in South Korea for cell manufacturing, and they are working on Himadri components for making cells.

So, they have already launched Prabal 1,000 prismatic safe cell using NMC and anode material.

Now they are going to launch Prabal 2,000, which is -- using Himadri anode material and Himadri's lithium-ion phosphate. So, this gives Himadri a unique positioning compared to any of the peers globally where we don't have only the laboratory capabilities. We have the full-fledged cell manufacturing facility available in South Korea, where you can practically see the cell being manufactured. So, it's no longer a laboratory-type thing we are talking.

In addition to that Prabal 3,000 will be launched, which will be using silicon carbon made by Himadri. So this gives Himadri a unique positioning. And the first mover's advantage in this industry, being in this industry for so many years, it's not that today, everyone is talking about lithium-ion battery, so we have started lithium-ion batteries.

Devanshi Shah: Got it, sir. Understood. Thank you very much and all the best.

Moderator: Thank you. Ladies and gentlemen, that was the last question for today. I would like to hand the conference over to Mr. Anurag Choudhary for closing comments. Thank you, and over to you, sir.

Anurag Choudhary: Thank you, Chirag. Thank you, everyone, for joining the Q3 FY'26, 9-month conference call of Himadri Speciality Chemical Ltd. We appreciate your time, continued interest and engagement, January 21, 2026 Himadri Speciality Chemical Ltd

Page 18 of 18

and hope we have addressed your queries satisfactory. At Himadri, our focus remains firmly on creating sustainable, long-term value for all our stakeholders.

We are deeply committed to our transformational journey, driven by high-quality products, disciplined execution and an unwavering emphasis on innovation, environmental responsibility and health and safety. We are confident that the strategic direction outlined today will continue to support resilient growth and deliver enduring value.

Before

we conclude, I would like to once again thank our team members, partners, investors, for their trust and continued support. Could you require any further information, please feel free to reach out to our Investor Relations adviser, MUFG Intime IR. Thank you. Have a good day.

Moderator: Thank you sir. Ladies and gentlemen, on behalf of Himadri Speciality Chemical Ltd, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Call: May 2026

Sub: Transcript of Earnings Conference Call for Financial Performance for the 4
th Quarter and

Financial Year ended 31 March 2026 held on Monday, 27 April 2026

Dear Sir/ Madam,

Further to our letters dated 21 April 2026 and 27 April 2026 and pursuant to Regulation 30 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 ("SEBI Listing Regulations") read with Schedule III of the SEBI Listing Regulations and other applicable provisions of the SEBI Listing Regulations, we are enclosing herewith the transcript of earnings conference call for Financial Performance for the 4

th Quarter and Year ended 31 March 2026 held on Monday, 27 April 2026 at 04:00 p.m. (IST).

The above information will be made available on the Company's website at www.himadri.com

You are requested to take the same on record.

Thanking you,

Yours faithfully,
For Himadri Speciality Chemical Ltd

Monika Saraswat
Company Secretary & Compliance Officer
ACS: 29322

"Himadri Speciality Chemical Ltd
Q4 and FY '26 Earnings Conference Call "
April 27, 2026

MANAGEMENT : MR. ANURAG CHOUDHARY – CHAIRMAN , MANAGING
DIRECTOR AND CHIEF EXECUTIVE OFFICER –
HIMADRI SPECIALITY CHEMICAL LTD
MR. KAMLESH AGARWAL – CHIEF FINANCIAL
OFFICER – HIMADRI SPECIALITY CHEMICAL LTD

April 27, 2026

Page 2 of 17

Moderator: Ladies and gentlemen, good day and welcome to the Himadri Speciality Chemicals Limited Q4 and FY '26 Conference Call hosted by MUFG. As a reminder, all participant line will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone. Please note that this conference is being recorded.

I now hand the conference over to Mr. Chirag Bhatiya from MUFG. Thank you, and over to you, sir.

Chirag Bhatiya: Good evening, everyone, and welcome to Q4 FY '26 Earnings Conference Call of Himadri Speciality Chemicals Limited. On the call, we have with us Mr. Anurag Choudhary, CMD and CEO; and Mr. Kamlesh Agarwal, CFO. Before we proceed with the call, I would like to give you a disclaimer that this conference call may contain forward-looking statements about the company, which are based on belief, opinion and expectation as of today. Actual results may differ materially.

The statements are not guarantee of the future performance and involve risks and uncertainty that are difficult to predict. A detailed safe harbor statement is being given on Page 2 of investor presentation of the company, which are being uploaded on the stock exchange and on the company website.

With this, I now hand over the call to Mr. Anurag Choudhary. Over to you, sir.

Anurag Choudhary: Thank you, Chirag. Good evening, ladies and gentlemen, and thank you for joining us today to discuss Himadri Speciality Chemical Limited's performance for Q4 and FY'26. I sincerely appreciate your continued trust and engagement, and it is a pleasure to connect with you once again.

At Himadri, research and development is not merely an enabler. It is foundational to who we are and how we have evolved over the years. It is not a standalone function, but deeply embedded in our business strategy and culture. It is part of Himadri's DNA. Our growth into high-value speciality chemicals and advanced materials has been driven by deep and sustainable commitment to in-house innovation, supported by a robust and constantly evolving research and development ecosystem.

Today, we operate one of the India's most comprehensive speciality solutions, research and development platforms with a team of over 180 scientists, technologists and subject matter experts, including 28 PhDs in different streams of chemistry and international specialists drawn from Japan, South Korea, Australia, United States, Europe and China.

This global exposure, combined with a strong process engineering and scale-up capabilities has enabled us to consistently translate ideas from laboratory into commercially viable, scalable solutions across carbon value chain, speciality chemicals and increasingly advanced material chemistry.

April 27, 2026

Page 3 of 17

Importantly, it is this same research and development engine that continues to drive the development of several new breakthrough solutions that are currently in our pipeline, many of which have reached advanced stages of development are progressing towards commercialization.

During the current year, we spent INR120 crores in research and development. It is this long-standing R&D capability built patiently over more than a decade of focused work in lithium-ion chemistry that has culminated into the most defining milestone for Himadri this year. On 23rd April 2026, we successfully commissioned operation at our first anode material manufacturing facility in Mahistikry, West Bengal with an initial capacity of 200 metric tons per annum, marking a pivotal step in our entry into lithium-ion battery materials value chain.

What makes this achievement particularly significant is that the entire technology platform from raw material processing to f

inished anode active material has been developed fully in-house without reliance on external or licensed technologies.

At the core of this capability, is a specially engineered high-purity coal tar pitch produced entirely in-house by Himadri, which serves as a primary raw material precursor and enabler for superior quality, consistency and performance. This degree of backward integration supported by proprietary process know-how gives Himadri a fully integrated and self-reliant

manufacturing ecosystem while maintaining the flexibility to process alternative raw materials as market evolves.

As we engage with OEMs at various sampling stages, our differentiated approach built on innovation, cost efficiency and sustainability positions us strongly for validation and scale -up in this high -growth segment.

Building on this, our broader lithium -ion battery material strategy continues to progress in a calibrated and disciplined manner, underpinned by strong focus on prudent capital deployment to drive sustainable returns and maintain a robust ROCE profile. Execution of Phase 1 of our lithium -ion phosphate cathode active material project, which envisages a total capacity of 40,000 metric tons per annum is on track. As part of this phased execution, the first milestone capacity of 2,000 metric tons is targeted for commissioning by Q3 FY27. The balance Phase 1 capacity will be progressively brought onstream over the subsequent 12 months, closely aligned with customer approvals and demand visibility, with FY29 envisaged as the year for full Phase 1 operations.

Beyond Phase 1, our long -term desire is to build our scaled globally relevant LFP platform, with the capability to produce 200,000 metric tons of LFP cathode active material catering to the approximately 100 GWh of lithium -ion battery capacity, executed in a phased manner and demand -led manner. Importantly, this positions Himadri as first company globally to establish commercial -scale LFP cathode -active material manufacturing facility outside China, serving both domestic and international markets and representing a significant step towards Atmanirbhar Bharat.

April 27, 2026

Page 4 of 17

Customer engagements have intensified significantly with leading Indian as well as global cell manufacturers, and the response has been strongly encouraging. This reinforces our conviction in LFP as a chemistry of choice across electric mobility and ESS globally and underpins our confidence in long -term relevance of this platform.

In parallel, our collaboration with Sicona Battery Technologies has progressed meaningfully over the year, marking a truly transformative phase in the development of next -generation anode materials. Through an exclusive technology licensing agreement, Himadri has secured right to access, localize, commercialize Sicona's proprietary silicon -carbon anode technology - SiCx® in India for the world.

During the year, Sicona has achieved important milestones at pilot scale level, with further capacity expansion currently underway and targeted for completion by Q2 FY27, supporting intensified engagement with global cell manufacturers across multiple stages of sample approvals. Performance -wise, Sicona's Gen3 SiCx® material have demonstrated superior energy density and improved electrochemical characteristics, while Gen4 SiCx® has shown high-capacity retention over extended cycle life, aligning with the stringent requirement of leading global OEMs.

Further advancing our strategic roadmap, we have made a strategic investment in IBC, International Battery Company, a U.S. headquarter developer and manufacturer of chemistry -agnostic prismatic lithium -ion cells.

This collaboration represents an important milestone for Himadri as it enables real -world validation and early commercial deployment of our lithium -ion battery materials, including LFP cathode active material and anode solutions.

Leveraging IBC's operational lithium -ion cell manufacturing facility in South Korea, we are actively engaged in product validation, scale -up and customer engagement, thereby accelerating our readiness for commercial adoption. From a market perspective, IBC operates across a diversified set of end -use applications, including B2B fleet customers, two and three -wheeler, OEMs, and global battery exports for energy storage and mobility solutions.

Importantly, IBC's forward looking product roadmap also addresses high -performance and high-value applications such as defence, drones, and AI-driven data center infrastructure, aligning well with Himadri's ambition to be an innovation -led and differentiated participant across the evolving global battery ecosystem.

Alongside this, our collaboration with Invati Creations continues to progress steadily, with focused research efforts underway across advanced lithium -ion electrode materials. Invati brings strong capabilities in molecular engineering, research and intellectual property development, which complement Himadri's ambition to build innovative, high-performance battery material platforms.

Taken together, these initiatives and decisions and strategic investments and partnerships are enabling Himadri to build a future -facing, integrated product and technology platform across the

lithium-ion battery value chain. By combining advanced materials innovation, real-world validation and deep research capabilities, we are creating a collaborative ecosystem that is well positioned to serve emerging sunrise industries spanning electric mobility, ESS defence, drones and next-generation digital infrastructure.

This approach strengthens our ability to develop differentiated solutions, shorten commercialization cycle and remain relevant as new applications, chemistry and use-cases continues to evolve globally.

Turning to the operating environment, recent geopolitical developments in West Asia have introduced volatility in energy prices and logistics. However, our business remains structurally insulated as we are not dependent on that region for our core feedstock or operations. Our raw material platform diversified end-use portfolio and strong customer relationships continue to provide stability and resilience.

I'm pleased to report that FY26 has been a year of strong execution and delivery. During the year, we successfully commissioned an additional 70,000 metric ton speciality carbon black facility at Mahistikry, taking our total speciality carbon black capacity to 130,000 metric tons per annum and our overall carbon black capacity to 250,000 metric ton per annum. This positions the Mahistikry facility as the world's single largest location for speciality carbon black plant and places Himadri among the top 5 players globally in this segment.

Alongside this our coal-tar pitch and associated products business is also well-positioned for the next phase of growth. With the successful de-bottling of our coal-tar pitch distillation capacity, taking it to 600,000 metric tons per annum. And the commissioning of liquid coal-tar pitch export terminals at Haldia and Mangalore, we are now in a position to leverage our operational headroom and logistics capability to support growth in the coming quarters and further consolidate our leadership position in coal-tar pitch segment.

Financially, we delivered our strongest performance to date. On a consolidated basis, EBITDA stood at INR 1,006 crores, PBT at INR1,001 crores and Profit after Tax at INR 755 crores, reflecting the strength of our value-added portfolio, operational discipline and consistent focus on in-house innovation.

Beyond this, our growth continues to be supported by a well-diversified portfolio spanning across graphite, aluminium, lithium-ion batteries, spe

ciality chemicals and advanced materials.

Turning to our next strategic growth pillar, Birla Tyres. FY26 marked the first half year of operations of Birla Tyres. This year, we have been able to revive the brand and steady progress and rebuilding both market presence and the operating foundation have been encouraging. We have approached this revival in a calibrated manner, prioritising product-market fit, channel strength and brand repositioning before pursuing volume-led growth.

Our brand portfolio anchored by proven products such as Ka laPatthar, Shaan+, BT339, Ultra Trac continues to be well received across key segments, particularly in agriculture and commercial vehicles. In the fourth quarter, we strengthened our agri portfolio with launch of

new SKUs AgriPlus and AgriWin tractor tyre series, both of which are already witnessing encouraging market traction.

From a distributor standpoint, we have established a strong and expanding network of 43 distributors and over 1,000 dealers giving us a solid platform for scale. More importantly, brand acceptance continues to rise as we consistently deliver on quality, reliability and performance - key drivers in this category.

Looking ahead, our focus is clearly on disciplined scale up. We are now entering the next phase of revival, where production ramp-up will be aligned closely with demand visibility and channel expansion. Over the next 12 to 24 months, we will be progressively enhance our capacity utilization, supported by robust pipeline of new product launches across agriculture, mining and commercial vehicle segments.

In parallel, we are strengthening our manufacturing processes and supply chain to ensure consistent quality and volume scales. Our objective is not merely to regain presence, but to build a competitive and differentiated tyre business that can sustainably participate in both domestic and select international markets.

Birla Tyres is still early in its journey, but the direction is clear, a measured and disciplined revival built on product strength, market relevance and execution excellence. We are confident this business will evolve into a meaningful contributor to Himadri's overall growth in the coming

years.

Beyond this, our consumer foray into Durofresh™ continues to gain encouraging traction, adding further depth to our diversified portfolio.

Looking ahead, our anthraquinone and carbazole project is progressing as planned and expected to commission in Q2 FY27, helping address a significant import dependency in India.

At Himadri, research & development is not a function - it is a core capability embedded in how we operate. Our global R&D ecosystem continues to drive innovation across all business verticals, enabling us to develop differentiated, high value-added solutions for emerging industries.

Sustainability remains integrated to our core strategy, guiding our approach to responsible manufacturing, efficient resource utilization and long-term value and creation. Himadri for the second year has been awarded with Platinum rating by EcoVadis. In among the 1% company among 150,000 rated by EcoVadis globally.

As I conclude FY26 marks an important milestone in Himadri's transformation journey. When we stood before you twelve months ago, we made clear commitments, and I am pleased to say that we delivered on all of them and in several areas, gone beyond. We committed to expanding our speciality carbon black capacity, and we delivered.

April 27, 2026

Page 7 of 17

We spoke about deepening focus on value-added products, which is reflected in our consumer foray with Durofresh™. We debottlenecked our coal tar distillation capacity from 500,000 to 600,000 metric tons and revival of Birla Tyres importantly. This execution has been underpinned by strong operating performance, as we set new benchmark

s across key financial and operational

metrics during the year. As we look ahead, we are entering the next phase of growth with strong foundation, clear strategic direction and disciplined execution.

With our expanding presence in advanced materials, particularly within the lithium-ion battery ecosystem and the steady development of Birla Tyres, we are confident of creating sustainable, long-term value for all our stakeholders.

Thank you, and I now invite our CFO, Kamlesh Agarwal, to take you through the financial performance in details. Thank you, Kamlesh.

Kamlesh Agarwal: Thank you, Anurag ji. Good evening, everyone, and thank you for joining us today. I trust that everyone has had a chance to review our financial results and the latest investor presentation, which have been made available on both the stock exchanges and our company's website.

This quarter and year marked an important milestone in our transformation journey. On a consolidated basis, we are pleased to share that we have achieved highest EBITDA and PAT on both quarterly and full year basis, which was down to our focus on high value-added solutions, operational efficiency and cost optimization.

From a quarterly perspective, in Q4 FY26, our consolidated revenue stood at INR ~1,288 crores as compared to INR ~1,135 crores an increase of 14%. EBITDA came in at INR ~280 crores, registering a growth of 21% year-on-year, while PAT stood at INR ~208 crores, delivering a strong growth of ~34% year-on-year.

Looking at the cumulative performance for full year basis, our consolidated revenue stood at INR ~4,661 crores. EBITDA reached INR ~1,006 crores, up around ~19% year-on-year from INR ~847 crores in FY25. Profit after tax stood at INR 755 crores, reflecting a growth of ~36% year-on-year over INR ~555 crores reported in FY25. This performance highlights the strength and resilience across all the business segments.

Coming on standalone basis performance in Q4 FY26, revenue stood at INR 1,101 crores, with EBITDA at INR ~252 crores, while PAT came INR ~186 crores, registering a growth of 17% against INR ~158 crores of EBITDA in Q4 FY '25.

For FY26 on a standalone basis, revenue stood at INR 4,405 crores. EBITDA was INR ~978 crores, reflecting a growth of around ~16% when compared with INR ~844 crores in FY25, while profit after tax stood at INR ~750 crores, a jump of 34% as compared to INR 558 crores in FY25.

Over the last 5 years, on consolidated basis, we have demonstrated a consistent and robust financial performance, reflecting the strength of our strategic focus and execution. Since FY22, our revenues have grown at an impressive CAGR of 14%. More significantly, our EBITDA has

April 27, 2026

Page 8 of 17

expanded at a CAGR of 58%, and our profit after tax has grown at an exceptional 110% CAGR.

In terms of financial health, we continue to maintain a resilient balance sheet. As of 31st March 2026, we hold a net positive cash balance of INR 121 crores, which gives us ample flexibilities to pursue growth opportunities while maintaining a prudent approach to capital allocation. Our return on capital employed has also shown a steady upward trajectory, reaching 32% in FY26, a testament to our sharp focus on value creation and capital efficiencies.

With these results, we believe we are well-positioned to continue our upward trajectory, building on a foundation of financial strength, operational excellence, and strategic foresight. Thank you.

Anurag Choudhary: Operator, we can start the question-and-answer session.

Moderator: Thank you so much. We will now begin with the question-and-answer session. The first question is from the line of Sanjesh Jain from ICICI Securities.

Sanjesh Jain: First question on the anode business, like you have mentioned the growth path for your cathode where you want to start with, say, 2,000 metric ton and scale it

to 40,000 in FY '27 and eventually

to be 200,000. Can you share us the thought process of the growth trajectory for anode?

Anurag Choudhary: So for the anode business, we are still working on it. And in due course of time, we'll come up with the figures and the investment required and the time frame.

Sanjesh Jain: Got it, sir. But what will be the market size for anode today? And what is the economics between cathode and anode? And how do you see the pitch-based cathode anode demand versus silicon-based carbon, which we are developing parallelly? How do you see the portfolio playing out for us?

Anurag Choudhary: See, cathode and anode together constitute an integral and important raw material for lithium-ion batteries. In terms of cost, it is 65% of the cell, lithium-ion cell cathode anode together. And in the ratio suppose for lithium-ion cell, anode and cathode is used in the ratio of 1:2. So suppose 100 is the requirement of anode. So 200 will be the requirement of cathode.

So basically, in whichever cathode chemistry you are working, but anode requirement remains stable. So, whether it's NMC, CLO, LFP, whichever the chemistry is, but you need anode. And anodes, there are different types of anodes, natural synthetic, synthetic they are petroleum-based and coal tar pitch based. So, we have the unique positioning of both.

And regarding silicon carbon anode material, it is added to synthetic or natural anode to increase the capacity of the battery, increase the density and reduce the charging time. So, silicon is an add-on, it makes to make hybrid anode. So, it's not actually that you can use either this or that, the silicon has to be added to this material.

Sanjesh Jain: Got it. Got it. But today, we don't add it, right? This is something which will happen...

Anurag Choudhary: Today we are adding. Already started in some percent, very small percent globally. But since the capacity material availability is very limited, so that supply is not much.

April 27, 2026

Page 9 of 17

Sanjesh Jain: Got it. My second question Anurag, on the Middle East issue. We were planning to export coal tar pitch in the Middle East and obviously, South Africa and other geographies. But Middle East is something where we have already started.

With this situation, what's happening in the Middle East, do you see there will be some shift in the focus for coal tar pitch from Middle East to other geography and which will be those geographies?

Anurag Choudhary: See, this is a temporary phenomenon, we feel. And so some shipments were planned for Middle East, but that's not going to have any material impact because we are diverting those material to other geographies. So there is absolutely no issues with that.

Sanjesh Jain: So which are the geographies we are trapping apart from Middle East?

Anurag Choudhary: We are looking at different geographies like Southeast Asia, Africa remains intact. So, these are the one

Sanjesh Jain: Got it. But Southeast Asia, we would see competition higher from China, right, geographically?

Anurag Choudhary: China competition is not there because the quality we supply is very high and plus the China cost is higher than India. So even in India, we supply coal tar pitch at a price lower than China.

So that dynamics doesn't work for our business. China dynamic is not at all valid for our business.

Sanjesh Jain: Got it. Got it. For the Carbon Black business, we started this new plant. How has been the ramp-up in that? That's one. Number two, the situation in Carbon Black should be positive for us, right? Because carbon black realization has gone up. Globally, there is a large capacity which uses crude-based feedstock while we use coal tar-based feedstock. Now that coal tar prices, my sense is would not have gone as sharply as crude. So this shift in the Carbon Black business from the higher input cost should positively reflect

for Himadri?

Anurag Choudhary: So see, what we have developed is a long-term sustainable business model, and we don't look at

quarter-on-quarter ups and downs. But one thing is there, the model what we have built up, we can transfer the increase in price to our customers. So whether it is crude-oil-based or coal tar-based, whatever increase in price is there, we transfer to our customers. So that has helped us to build up a resilient business model.

Sanjesh Jain: No. But in a situation where one carbon black feedstock is expensive, we can use more of our own oil to produce carbon black that economics is much better right now?

Anurag Choudhary: Yes, definitely. That economics is better, but coal tar prices has also gone up. So I don't think that is the delta on which Himadri has built up its business model also. And that is not something which we, eye also. We work on sustainable profit and which is probably assured.

Moderator: The next question is from Rahil S from Sapphire Capital.

April 27, 2026

Page 10 of 17

Rahil S: Yes, yes. Firstly, coming back to this anode capacity, specifically the 200 metric tons, right?

Can you tell us what will be the peak revenue potential from there, and how will the utilizations look like in FY '27?

Anurag Choudhary: This capacity is basically to commercialize our R&D efforts and to showcase that what we have worked on R&D is workable in a commercial plant. This is the beginning of the journey. And next step, we will be announcing capex for the large-scale commercial capacity where meaningful revenue will start coming in.

Rahil S: Okay. As of now, nothing is expected from these 200 metric tons in terms of numbers?

Anurag Choudhary: In terms of numbers, these are not significantly materialistic based on volumes.

Rahil S: In FY27, this will not be contributing to our revenue in any sort?

Anurag Choudhary: This will be contributing, but not materialistic.

Rahil S: Not materially. Okay. Secondly, coming to the Birla Tyres segment which you've restarted, how much did you contribute in FY26 in terms of revenue, and how will it scale up now going ahead?

Anurag Choudhary: Birla Tyres top line contribution for this year was INR 187 crore s, and we expect to be around INR 3,000 crore s of top line from this business in next 4 years.

Rahil S: Do you have any indication as to what will it be in FY27 particularly?

Anurag Choudhary: We don't give year-on-year guidance.

Rahil S: Okay. So what about overall in consolidated levels, any guidance there for revenue and our EBITDA margins for FY27?

Anurag Choudhary: See, again, coming to that, I have given a guidance that FY25 we had a PAT of INR 555 crore s. We have committed to double this PAT in next three years in FY28 to INR 1,100 plus crore s.

The right way to look at Himadri is not at EBITDA, but at PAT levels. If you consider, look at Himadri's PAT as a percentage of top line, it is 16 %-plus. Because there is no interest and no additional cost, the right way to look at Himadri is the consolidated top line and PAT rather than EBITDA.

Rahil S: Okay. Just last thing then, if I observe, your top line has, I think, in FY25 it grew at 10%, and FY26 it largely has been flat, correct? With these new additions of the Birla Tyres and the added carbon black capacity, will your top line also grow? And at what rate, if so -- yes. Any indication there?

Anurag Choudhary: Sure, sure. Up till now, last 3, 4 years, we have not been able to see any growth in the top line practically. Maybe few percent but now the real top line growth starts. FY27, you will see a top line growth also and bottom line growth also.

Rahil S: Okay. You don't have any sort of growth number to attach?

April 27, 2026

Page 11 of 17

Anurag Choudhary: I don't want to give any growth numbers.

Moderator: The next question is from the line of Akshay from AK Investment.

Akshay: Congratulations for the great set of numbers. My first question is, we have generated the highest ever gross profit margin this quarter. Do we see this trend will be continuing going forward for the next 2 to 3 years? Also, do we able to continue the 20% EBITDA margin going forward?

Anurag Choudhary: Yes, we are confident of achieving this on a sustainable basis. And we are looking forward also, you'll see growth in the numbers.

Akshay: Okay. Sure, sir. Got it. Sir, secondly, on the U.S.-Iran war and geopolitical situation, due to the commodity prices and inflation and all over the world, how do we see impacting our types of business and whether we will face any pressure going forward due to this war?

Anurag Choudhary: See, as I told in my opening commentary also, we are resilient to any shock in any movement or dislocation, supply chain logistics in West Asia because of the ongoing geopolitical situation,

given our nil dependence on this geography.

Definitely with energy prices going up, the material prices going up, this will have impact, but good thing is that we'll be able to pass on this to our customers. As such, we don't have impact on our P&L because of this geopolitical situation.

Moderator: The next question is from the line of Nitin Shakhder from Green Capital Single Family Office.

Nitin Shakhder: This is Nitin Shakhder from the Green Capital Single Family Office. My question is more from an investor's point of view rather than an analyst type of a question is that for this annual year and in terms of approximate margin guidance for the 3 businesses, which is, let's say, advanced battery materials, the turnaround of the acquired assets on Birla Tyres, and obviously the main core business, which is the speciality carbon black.

Are you able to give any sort of an indication margin guidance growth rate for the year? I do understand that geopolitically your raw material costs will be up and down, but just as an indication. Thank you.

Anurag Choudhary: For the current year, we don't prefer to give any specific number guideline, but on a macro basis, I can give you guideline that at current year we will see both top line and bottom-line growth. Up till now, we were not able to give any top line growth basically because we are going for value added within the same product profile.

What was happening, we were adding value to our existing products, so the margins were increasing, but the top line was not increasing in a big way. But now with new capacities coming up, you will see top line growth plus margin expansion. Both of which you will see in the year to come.

Moderator: The next question is from the line of Animesh Jain from Dalal & Broacha.

April 27, 2026

Page 12 of 17

Animesh Jain: I want to ask, what is the current utilization level that we have, newly commissioned 70,000 metric ton of speciality carbon black? And what is the steady-state utilization level and its EBITDA per ton?

Anurag Choudhary: We expect to have around 85% -90% capacity utilization for our newly announced capacities for FY27. And EBITDA in terms of if you look at our EBITDA per metric ton, it was around INR17,000 per metric ton on an average on the entire basket of portfolio. With this being a speciality, it will be significantly higher than this average 17,000 plus.

Animesh Jain: And I want to also ask about that we have set up new subsidiary in China that we have mentioned. Why we have set up that subsidiary and what is the...

Anurag Choudhary: We will be importing some raw materials and equipment from China. For that, we have set up our subsidiary to take some local tax benefits.

Moderator: The next question is from the line of Dhruvin Kadakia from SKP Securities.

Dhruvin Kadakia: Hello, sir, and congratulations on this robust set of numbers. My only request would be that in terms of sales volume, will it be possible for you to provide me with a break-up as to what was

the volume generated between your legacy business, carbon black and tyres in this particular year?

Anurag Choudhary: Tyres till now, we have not consolidated. Once we consolidate, then we can discuss this. Now it's a part of sales only, which is coming into Himadri. As such number, the detailed numbers we don't disclose.

Dhruvin Kadakia: Okay, sir. Not a problem. Any new updates with regard to the capex plan than what we already know? Like, is there something on the block?

Anurag Choudhary: No. As of now, we have already announced all the capex. Yes, anode capex we'll be announcing soon. Once that is finalized, the volume, the capacity and the capex, that will come up with a new disclosure.

Moderator: The next question is from the line of Sagar Jethwani from PhillipCapital PMS.

Sagar Jethwani: This significant jump in the other expenses is because of the forex loss. Is that correct?

Anurag Choudhary: Yes. Yes.

Sagar Jethwani: What is our hedging policy in that case? Can we see some curtailment of this impact from the forex volatility?

Anurag Choudhary: Yes. As you know, there was sharp depreciation in rupees which impacted us on the import side. And export side also, we hedged something, but generally we keep our position open. Because of this huge volatility, we hedged. Because of the hedging, we had to incur losses this time.

April 27, 2026

Page 13 of 17

It was the other way around. Looking forward, we are very vigilant on this and maybe we are

confident that after Q1, there may be some hit, but after that there will be a very strong position in terms of any open position of capex.

Sagar Jethwani: Actually, my question is not quarter-on-quarter. It is more of a structural in nature. Can we reduce the volatility swing from these forex losses in long term?

Anurag Choudhary: Definitely, since we have exports and imports more or less are in parity, so leaving the position open leaves us with very less chance of any FX volatility. That -- this time we hedged the position, thinking it was going to be volatile, and that's why we had the FX loss. Our standing policy was to keep the position open being import and export being more or less in parity with each other. We'll continue with our existing principles only.

Sagar Jethwani: Understood. You're saying that beyond Q1, the impact would reduce?

Anurag Choudhary: I don't think there will be any impact before or after Q1.

Sagar Jethwani: Okay. Secondly, how many new clients that we have added in last two years? Geography-wise, any new countries that we are planning to enter or scale up where you might be witnessing some kind of a significant opportunity, given China Plus One? There's you know, cost escalation in Europe as well. Some color on that would be helpful.

Anurag Choudhary: Definitely. In last year, our exposure was 56 countries, we were selling our product. This year it is 61 countries. We've added 5 more countries, particularly Europe is doing good and U.S. is doing good. For us, in Europe also, more and more countries are being added.

Because of this, as you correctly said, because of the cost structure in Europe and U.S., this is giving us a lot of advantage, and China Plus One policy is also working out well for our supplies to the global market.

Sagar Jethwani: Lastly, any color on margin, can you give until FY28? I'm not talking about FY27 again, not the one-year guidance. Typically, just structurally long term, how do you see the margins? Because we are adding some new capacities also, considering that fact?

Anurag Choudhary: With the new capacities coming on, we are confident of strengthening our existing margins further.

Sagar Jethwani: From here on?

Anurag Choudhary: From here on.

Moderator: The next question is from the line of Suhani Singh from Seja Capital.

Suhani Singh: I wanted to ask

if the passenger car radial commissioning, so what is the targeted PCR capacity, the capex and commissioning timeline? PCR is a notoriously crowded segment in India, so what is the differentiation strategy for that as well?

April 27, 2026

Page 14 of 17

Anurag Choudhary: PCR, we target to commission in next 24 months. Differentiating strategy will be, we'll be focusing more on EV. That is the segment we will be focusing on, and a specialized tyre for electric vehicles.

Given the Himadri's strength in carbon black chemistry, that gives us a unique advantage of building a value-added tyre with more strength, resilience and this gives us a unique positioning in the business, the understanding of key raw material.

Suhani Singh: I also wanted to understand, the standalone other income jumped from INR 51 crores, INR 176 crores. Could you break down the composition of it means treasury, dividends from subsidiaries, government incentives or one-offs?

Anurag Choudhary: Basically, this is because of FDR interest in investments that we have put in mutual fund gains. NCDs that we have deployed in for operation of Birla Tyres, that fair value calculation. Based on our investment, different investment, their fair value calculation. It's a combination of all these.

Suhani Singh: Lastly, with Haldia and Mangalore liquid coal tar pitch terminals commission, what is the targeted FY26 export value? What proportion of standalone CTP revenue do you expect from exports by FY28?

Anurag Choudhary: See, by FY28, we expect the new commissioning capacity of 100,000 tons, which gives us 50,000 tons of coal tar pitch that will be completely exported to the global market.

Moderator: The next question is from the line of Rohit Nagraj from 360 ONE Capital.

Rohit Nagraj: Congrats on good set of numbers. First question is on the anode material facility that we have commissioned. Here in terms of the commercial validation of materials, how much time will it take? And which and all are the customers where we will be targeting to send the material? Is it domestic, exports? How are we looking at it? And once the validation is done, how much time will it take for us to put up a new commercial scale plant?

Anurag Choudhary: The idea to commercialize and start this plant was to expedite the timeframe required for validity of material. That is the idea behind commercializing this plant. We are engaged with all the customers in India and who's who in the industry globally. We have already sent them sample A, which has got a very good response from our customers in terms of quality validation.

Now we are to send them sample B, C, D. That will start now. Once it is done, then we'll come up with the roadmap for our future capacity expansion. That will happen very soon. It will not take a significantly long time now.

Rohit Nagraj: Sure. Just one allied question in terms of the anode material pricing, how has it changed over the last 5 years? What was the price about 5 years back, and given that new technologies have come, commercial operations, capacity, how the price are being currently in terms of INR per kg or dollar per kg or how you prefer it?

April 27, 2026

Page 15 of 17

Anurag Choudhary: Sir, I don't want to comment on price per metric ton, but to give you a broader idea, all the cell component prices have come down between 50% -60% over the last 4 to 5 years, whether it is cathode or anode.

The grade in anode also, depending on what quality you make, what grade you make, what application is this, so prices significantly vary. It will be not right on my part to comment on per metric ton price.

Rohit Nagraj: Sure, sure. That's also. The second question is, in terms of our gross margins which have expanded, so just to get a perspective, could be pricing of finished goods, work in progress and raw materials would have been at a higher level given that there have

been increase during the

month of March. Is there any element of inventory gains that we have observed during this quarter? And if so, what could be the quantum on the same?

Anurag Choudhary: See, the margins expansion that you are seeing is not one-off thing. It's a sustainable long-term margin improvement that, because of our all efforts in terms of improvement in yield, operational efficiencies, waste recovery systems we have been able to do, and these are sustainable on a long-term basis, and will strengthen further only.

Rohit Nagraj: I was just concerned more on the gross margins front. Because of revaluation or better valuation of the inventories, is there any benefit of inventory gains which we have observed?

Anurag Choudhary: No, no, not really.

Moderator: The next question is from the line of Dhruvin Kadakia from SKP Securities.

Dhruvin Kadakia: I just wanted to confirm that in the segmental breakup of revenues that we've given, we've included a new category called others, which includes mining and other businesses. Could you shed a little light on what the other businesses are? Like, is it tyres combined?

Anurag Choudhary: Yes, it's tyre combined. Right.

Dhruvin Kadakia: You mentioned a figure for tyre sales this year. What was it? Could you please repeat that?

Anurag Choudhary: INR 187 crore s.

Dhruvin Kadakia: INR 187 crore s. Would you be comfortable in sharing what was the realization per ton on this that you've gotten for this year?

Anurag Choudhary: We don't give per metric ton realization like that.

Moderator: The next question is from the line of Vignesh S.B.K., from Ksema Wealth.

Vignesh S.B.K.: I just want to understand about upcoming cathode segment business. What would be the typical asset turn for the project or for this segment?

Anurag Choudhary: 2x.

April 27, 2026

Page 16 of 17

Vignesh S.B.K.: Sir, just want to understand the asset turn for the upcoming cathode segment, sir?

Anurag Choudhary: Just 2x. It will be 2x of the asset investments. Turnover to assets.

Vignesh S.B.K.: Okay, sir. One more thing, for the first phase, we said around 2,000 tons would be commissioned. Through this Phase 1, how much would be the total tons in the Phase 1?

Anurag Choudhary: What is? Can you speak louder? You are not audible.

Vignesh S.B.K.: Hello. Is it better now, sir?

Anurag Choudhary: Yes. It's better.

Vignesh S.B.K.: We said initial will be 2,000 MTPA. What would be the total Phase 1 capacity?

Anurag Choudhary: 40,000.

Vignesh S.B.K.: 40,000 would be commissioned by FY '29. Is that clear?

Anurag Choudhary: Yes, yes. Well, before FY '29. So, FY29, you will see the full year of operation of the entire 40,000 ton capacity. The reason, logic, capital allocation has been done, but we are very careful in terms of deployment of capital because we are focused on ROCE.

I don't want to. As a company policy, we don't want to deploy capital ahead of requirement. We can very well set up the facility and start the commissioning and deploy capital for 40,000 metric tons. But since the approval period itself takes longer time, it makes sense to get 2,000, get it

approved, and in the same time, 38,000 will continue, and it will commission. That there is full realization and proper return on capital employed.

Vignesh S.B.K. : Got it, sir . Helpful. What will be the total capex incurred for this 40,000?

Anurag Choudhary: INR 1125 crore s.

Vignesh S.B.K. : Okay, thank you. In this cathode facility, usually it is energy heavy or how are we planning to any plan for the energy side as such, renewable or something like that?

Anurag Choudhary: For cathode?

Vignesh S.B.K. : Yes, cathode plant.

Anurag Choudhary: We have renewable plans to consume renewable energies.

Vignesh S.B.K. : Those can be fund ...

Anurag Choudhary: No, there you buy or enter into a long-term contract. We don't plan to invest on our own

Moderator: The next question is from the line of Yash Mehta from Archean Capital .

April 27, 2026

Page 17 of 17

Yash Mehta: I want to ask, are there any binding LOIs, MOUs or offtake signed with Indian or global cell manufacturer s for LFP supply? What proportion of Phase 1 capacity is contracted?

Anurag Choudhary: What's the?

Yash Mehta: What proportion of Phase 1 capacity is contracted?

Anurag Choudhary: See, any MOUs or LOIs which we have signed, we have NDA. We cannot disclose this now. At the right point of time, it will be disclosed. For our Phase 1, the capacity, depending on the product approval, these LOIs will be affected.

Yash Mehta: Okay. Got it, sir. My next question is, as we can see, the net cash declined from INR 392 crores to INR 122 crores despite record PAT. The standalone current borrowings also rose from INR 306 crores, INR 719 crores. Could you please walk me through the FY26 sources and uses? Moreover, can you tell me about the steady -state debt level that you will be comfortable carrying forward?

Anurag Choudhary: See, the increase in borrowing is basically we have significant bank limits. We need to utilize this limit to keep our limits intact. We take at a lower rate and provide back to the bank at a higher rate. That gives a delta also, which is part of our income. For our future expansion, our plan is to use internal accrual only for all the expansion. In any case, if we take debt also, that will be very significantly low portion and will be just timing gap , not much. We don't want to be heavy on debt.

Moderator: Due to time constraints, I now hand the conference over to Mr. Anurag Choudhary for closing comments.

Anurag Choudhary: Thank you once again for taking the time to join us on today's conference call. We hope we have been able to address your queries adequately.

This year has been truly transformational , as we set new performance records, achieved world -class capacity additions, earned landmark recognition s, and made decisive progress on our future growth engines. Yet, we firmly believe the best chapters of Himadri's story are still ahead of us. We remain committed to delivering long -term value and are grateful for your trust, confidence and engagement as we scale new capacities and capabilities and scale new frontiers and shape the next phase of our growth.

Should you have any further questions, please feel free to reach out to our investor relations partner, MUFG Intime I R. Thank you once again for joining the conference call today, and we look forward to your continued support. Thank you.

Moderator: On behalf of Himadri Speciality Chemical Limited, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.

Sub: Transcript of Earnings Conference Call for Financial Performance for the 1st Quarter ended 30 June 2026 held on Thursday, 16 July 2026

Dear Sir/ Madam,

Further to our letters dated 13 July 2026 and 16 July 2026 and pursuant to Regulation 30 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 ("SEBI Listing Regulations") read with Schedule III of the SEBI Listing Regulations and other applicable provisions of the SEBI Listing Regulations, we are enclosing herewith the transcript of earnings conference call for Financial Performance for the 1st Quarter ended 30 June 2026 held on Thursday, 16 July 2026 at 04:00 p.m. (IST).
The above information will be made available on the Company's website at www.himadri.com

You are requested to take the same on record.
Thanking you,

Yours faithfully,
For Himadri Speciality Chemical Ltd

Monika Saraswat
Company Secretary & Compliance Officer

"Himadri Speciality Chemical Limited
Q1FY27 Earnings Conference Call "
July 16, 2026

MANAGEMENT : MR. ANURAG CHOUDHARY – CHAIRMAN , MANAGING
DIRECTOR AND CHIEF EXECUTIVE OFFICER –
HIMADRI SPECIALITY CHEMICAL LIMITED
MR. SOMESH SATNALIKA – EXECUTIVE VICE
PRESIDENT , TYRE AND STRATEGY – HIMADRI
SPECIALITY CHEMICAL LIMITED
MR. KAMLESH AGARWAL – CHIEF FINANCIAL
OFFICER – HIMADRI SPECIALITY CHEMICAL LIMITED

MODERATOR : MR. CHIRAG BHATI YA – MUFG INTIME

Moderator: Ladies and gentlemen, good day, and welcome to the Himadri Speciality Chemical Limited Q1FY27 Conference Call hosted by MUFG. As a reminder, all participant line will be in the listen-only mode and there will be an opportunity for you to ask questions after the presentation concludes. Should you need assistance during the conference call, please signal an operator by pressing star then zero on your touchtone phone.

I now hand the conference over to Mr. Chirag Bhatia from MUFG. Thank you, and over to you, sir.

Chirag Bhatia: Thank you, Nishya. Good evening, everyone, and welcome to Q1 FY27 Earnings Conference Call of Himadri Speciality Chemical Limited. Today on the call, we have with us Mr. Anurag Choudhary, CMD and CEO; Mr. Somesh Satnalika, EVP, Treasury and Strategy; and Mr. Kamlesh Agarwal, CFO.

Before we proceed with the call, I would like to give you a disclaimer that this conference call may contain forward-looking statements about the company, which are based on beliefs, opinions and expectations as of today. Actual results may differ materially.

The statements are not the guarantee of the future performance and involve the risks and uncertainties that are difficult to predict. A detailed safe harbor statement is being given on Page 2 of the investor's presentation of the company, which have been uploaded on stock exchange and on the company website.

With this, I now hand over the call to Mr. Anurag Choudhary. Over to you, Sir.

Anurag Choudhary: Thank you, Chirag. Good evening, everyone, and a very warm welcome to the Q1 FY27 Earnings Conference Call of Himadri Speciality Chemicals Limited. Thank you for joining us today. We look forward to taking you through our performance for the quarter ended June 30, 2026, the progress across our strategic priorities and how we see the road ahead.

Those who have followed our journey over the past few years will recognize that Himadri today has transformed into a different company from where it started.

We began as a coal tar derivative company and today, we operate as a global advanced materials and application-driven solution organization. We are positioned at the intersection of material science, energy transition and high-performance applications.

At the core of this transformation lies a simple belief, the companies that will lead the future are those that can continuously reload themselves, execute, reinvest, scale and repeat the cycle with discipline. This philosophy guides everything that we do.

Over 3 decades, we have laid foundation and today, we are building a future-facing growth platform for the energy transition economy, focusing on capturing a global opportunity backed with innovation-led growth.

Now let me briefly touch upon the financial picture for the quarter. On a consolidated basis, revenue stood at INR 1,432 Crores. EBITDA was at INR313 Crores with a margin of 22% and

profit after tax was INR228 Crores, reflecting a PAT margin of 16%. This performance reflects both strong operational discipline and the continued shift in our product mix towards higher value segments.

Yesterday, we announced two important initiatives that further strengthen our innovation-led growth trajectory.

First, we successfully developed indigenous Carbon Nanotube (CNT) technology through our relentless, in-house innovation and research and development, marking another milestone in our innovation journey. Backed by a planned capex of approximately INR70 Crores, our upcoming 200 MTPA CNT manufacturing facility targeted for commissioning in Q4 FY27, is expected to position Himadri among a select group of few global manufacturers serving this high-growth market.

CNT is a next-generation material with application spanning across lithium-ion batteries, semiconductors, electronics, sensors, polymers, coatings, aerospace, etcetera. With demand accelerating across these industries, we believe CNT represents a significant long-term growth opportunity for the company.

The second initiative is our entry into Super Specialty Carbon Black. This is a structurally different, high-purity segment designed for high performance in highly specialized markets like lithium-ion batteries, engineered plastics, fabrics, fibers, coating, conductive black and other niche applications, delivering premium realizations. We are converting 6,000 MTPA of existing capacity with a capex of INR170 Crores. This is a classic example of our compounding philosophy, leveraging the same integrated feedstock base and new infrastructure to produce significantly high value-added products. This enhances margins, deepens application reach and strengthens our positioning in global specialty markets.

Let me now turn to what will define the next phase of Himadri's journey, new energy materials. Global lithium-ion battery demand is projected to rise from around 1.6 terawatt hours in 2025 to nearly 6.8 terawatt hours by 2035. We are positioning ourselves for this opportunity with a fully integrated complex.

On the anode side, we have commissioned our 200 MTPA anode material facility at Mahistikry in April 2026. This capability is built entirely on overall decade of in-house research. The facility has been specifically designed with feedstock flexibility, enabling the use of in-house developed special engineered pitch. This backward integration gives us scalability, cost efficiency and resilience within a self-reliant value chain.

On the cathode side, we are building capabilities in lithium-ion phosphate (LFP) cathode chemistry, which is fast emerging as the preferred solution for mass market EVs and energy storage. Our initial 2,000 MTPA capacity is expected to be commissioned in Q3FY27, representing the first milestone under Phase 1 of our 40,000 MTPA expansion plan, which forms part of our broader long-term vision to scale capacity to 200,000 MTPA.

What differentiates us is our integration. From feedstock to materials, we are working towards building a self-reliant, scalable platform, aligned with both global demand and national priorities.

July 16, 2026 Himadri Speciality Chemical Limited

Page 4 of 21

We continue to strengthen our strategic investments in battery material ecosystem. Sicona, in which Himadri is a strategic investor, secured AUD45 million funding to accelerate its next-generation silicon carbon anode technology commercialization. Additionally, we have increased our stake in International Battery Company (IBC), reaffirming our confidence across battery value chain; from materials to validation and deployment.

Now coming to Birla Tyres, Birla Tyres turnaround continues to make steady progress. Since commencing commercial operation on 29th of May 2025, the focus has been on rebuilding the business on a strong operational and technological foundation. Alongside recommissioning the plant, significant efforts are underway to modernize manufacturing infrastructure, upgrade equipment and incorporate state-of-the-art automation across operations, thereby bringing the facility in line with contemporary industry standards and enhancing efficiency, consistency and product quality.

In parallel, a strategic transformation of the manufacturing footprint is being undertaken by progressively converting the existing Truck and Bus Bias (TBB) tyre capacity towards Off-the-Road (OTR) tyre production in a phased manner. That is in line with evolving market demand dynamics. This transition, along with modernization initiatives, will be supported by additional capital expenditure and expected to be executed over the next 3 years, creating a stronger platform for long-term growth and profitability.

As of today, the distribution network spans 49 distributors and over 1,000 dealers. Birla Tyres has been strengthening its portfolio across agriculture, mining and commercial segments with the launch of SKUs across 3 new agriculture products lines during the quarter - AGRWIN, AGRIPUS and AGRILEAP T40.

This momentum is supported by a strong product development pipeline, with over 400 new SKUs under development across segments. Birla Tyres' next strategic milestone is the commissioning of Passenger Car Radial (PCR) facility by FY28, paving the way for its planned entry into EV and SUV tyre segments.

In speciality carbon black, we continue to build on our technology advantage. With 250,000 metric ton capacity, including 130,000 tons of speciality carbon black capacity, we operate across a product portfolio of more than 70 speciality grades.

Our integration from feedstock to final formulation gives us control over quality, cost and consistency. Our approach remains lab-first, plant-later, and shows that capacity expansion is always backed by validated applications. Our Coal Tar Pitch business continues to anchor the company. We operate the world's largest single location fully integrated carbon complex, with 600,000 MTPA of coal tar distillation capacity. Our domestic market share continues to be over 65% and the commissioning of liquid Coal Tar Pitch terminal at Haldia and Mangalore has strengthened our ability to serve global markets. Our forward integration into anthraquinone and carbazole with a total capacity of 5,300 MTPA is progressing well with full commissioning targeted by FY28. Initial phase capacity of 2,600 MTPA is set to commission in Q2 FY27 and balance capacity of 2,700 MTPA is to be

July 16, 2026 Himadri Speciality Chemical Limited

Page 5 of 21

added in Q2FY28. This facility will be India's first commercial plant of its kind, reducing import

dependence and unlocking the export-led growth, a right move towards Atmanirbhar Bharat. Let me now briefly explain how we are structuring our existing business. Our model has been 3 clear layers.

At the core lies our coal tar derivatives, carbon black naphthalene, an oil of various grades, providing scale and feedstock security.

Secondly, our speciality offering consists of products, speciality carbon black, super speciality carbon black, CNT, niche engineered grades of coal tar pitch, SNF /PCE, speciality chemicals such as anthraquinone and carbazole, which provide us customer stickiness and greater value realization.

And the third is new energy materials, anode and electric cathode active material and silicon carbon technology, placing us at the very heart of global energy transition value chain.

What this structure allows us is to grow on earnings faster than revenue as we focus on value-accretive businesses.

Across all business initiatives, our capital allocation remains disciplined. The capex program is thoughtfully structured to balance scale with efficiency. It is entirely self-funded and deliberately calibrated between brownfield expansions, which enhance asset productivity and greenfield investments, where we are building new capabilities from the ground up. This approach allows us to pursue growth while maintaining balance sheet strength and capital discipline.

Sustainability remains deeply embedded in our business model and operational philosophy. All our plants operate on a zero-liquid discharge basis, reflecting our commitment to responsible manufacturing, resource efficiency and environmental stewardship. These efforts continue to gain recognition. The reaffirmation of our EcoVadis Platinum rating continues to place Himadri among the top 1% of the companies globally assessed by Ec

oVadis. Increasingly, such

credentials are not merely accolades, but important commercial prerequisites in global value chain.

Our commitment to sustainable and responsible growth was further recognized during the quarter through several prestigious awards that belongs to entire Himadri family.

Our approach is very clear. We are diversifying to build resilience. We are shifting our product portfolio mix to drive profitability, and we are executing things while maintaining balance sheet discipline. We are building a strong foundation that allows us to scale transformational growth, while preserving financial discipline and transparency. I am confident that this combination of scale, integration, innovation, discipline will continue to deliver substantial value for all our stakeholders.

With that, let me hand over to our Chief Financial Officer, Mr. Kamlesh Agarwal, who will now take you through the financial performance for the quarter in greater detail. Thank you very much.

July 16, 2026 Himadri Speciality Chemical Limited

Page 6 of 21

Kamlesh Agarwal : Thank you, Anurag ji. Good evening, everyone, and thank you for joining us today. I trust that everyone has had a chance to review our financial results and the latest investor presentation, which have been made available on both the stock exchanges and our company's website.

Let me begin with the key financial highlights of the quarter.

Our consolidated revenue for the quarter stood at INR1,432 Crores as compared to INR1,118 Crores a year ago, an increase of 28%. Our EBITDA stood at INR313 Crores as compared to INR235 Crores a year ago with an increase of 33% and margin of 22%. Our profit after tax has significantly increased to INR228 Crores from INR179 Crores a year ago, a jump of 27% with a margin of 16%.

Our stand-alone revenue for the quarter stood at INR1,274 Crores as compared to INR1,100 Crores a year ago, an increase of 16%. Our EBITDA stood at INR301 Crores as compared to INR234 Crores a year ago with a growth rate of 29% and margin of 24%. Profit after tax has significantly increased to INR223 Crores from INR183 Crores a year ago, a jump of 22% with margin of 18%.

We remain committed to delivering strong value through our strategic priorities and operational rigor. Thank you once again for your continued support and engagement. Thank you.

Anurag Choudhary : Yes, now you can open the floor for the question-and-answer session.

Moderator: Thank you very much. We will now begin the question-and-answer session. The first question is from the line of Sanjesh Jain: from ICICI Securities.

Sanjesh Jain: I've got a couple of questions. First, a numerical question, let me finish that. On the other segment, the EBIT has fallen from INR25 Crores last quarter to around INR1 Crores this quarter. What has changed? Because revenue number hasn't changed much. Why there is such a sharp swing in the EBIT margin for the other segment?

Anurag Choudhary : So other segment last time consists of mining profit, which this quarter didn't took place. That was the reason of fall.

Sanjesh Jain: So what explains less change in revenue in that? So what is compensated...

Anurag Choudhary : So this quarter, we did not operate the mines. We're waiting for some licensing to happen. Post that, the mining operation will start. That was the reason.

Sanjesh Jain: Okay. But it is not showing up in revenue. That means something else has picked up ...

Anurag Choudhary : Revenue , because the Birla Tyres revenue has gone up. Last quarter, if you see the Birla quarter revenue, revenue was significantly low. And with the ramping up of capacity in Birla Tyres, the revenue is going up. So that's the reason you don't find change in revenue, but you find change in the profitability.

Sanjesh Jain: Clear, clear. Now coming to the new capex that we have announced,

which is the carbon

nanotube and the super-speciality carbon black. In nanotube, what is an approach? This will

July 16, 2026 Himadri Speciality Chemical Limited

Page 7 of 21

address India market, global market? What is the key application? You did said energy and semiconductor, but whom are we competing here? And how have we benchmarked the product? Now that we are commercializing it, we would have done all that, right? So how should we see this segment? And what is the differential in the realization versus a speciality carbon black and the carbon nanotube? That's one.

Number two, we got the super speciality carbon black. What really is this because carbon nanotube, I can still understand. But when we say super speciality carbon black, what really are we trying to do here? So these are the two on these questions .

Anurag Choudhary : Thank you, Sanjesh. So first of all, coming to carbon nanotube. Carbon nanotube is a unique product where graphene is rolled into seamless cylinder that forms carbon nanotube. So it's nothing but graphene, which we have developed through relentless R&D efforts of many, many years. If you look at the entire value chain -- entire supply chain platform globally, there are only a few companies in the world who are doing this. And we are the first in India.

And if you look at the product, to make it very simple, it is 100x the strength of steel with the conductivity of the copper. That's the game changer. Strength of steel and conductivity of copper and very light material. So this opens the entire huge arena of applications, right, from lithium-ion batteries to semiconductors to conductive film sensors to industrial coatings, to lightweight high-strength material for aerospace and automotive, means every day, the usage is improving and increasing.

So that places Himadri in a unique position because the in-house technology we have developed and now we are putting it into scale. So this is the first step with 200 metric tons. We'll stabilize the product, set up the facility, get customers in place globally. So today, the market is very less in India. It's a global play. So we'll be supplying to the global players. And this is a very high value-added product and with significant value over the existing products.

Now coming to super speciality carbon black. So I have been talking about value-added products, the journey, and it's a journey. Every time you keep on working on it, you keep on developing and you go one step up the ladder. So we started with very low end of speciality carbon black, just marginal in terms of speciality carbon black. Then we are moving ahead. We are going up the ladder with the new speciality carbon black line coming up, we have moved up the ladder.

Now the aspiration, so I've been always talking about high-value niche market for speciality carbon black, which is a very -- not a very, very huge market, but it's a very, very prime and tailor-made super speciality market, where the value addition is multi-fold of the existing speciality. So in terms of value addition, you cannot compare the two products.

That's why you are seeing at only 6,000 metric tons, but the value addition will be very, very high. So this is the product we are targeting now. And we have given FY28 as when we'll start the capacity. And this will be a very big game changer for the company going into a very, very niche market, high value-added market with a very strong ROCE.

July 16, 2026 Himadri Speciality Chemical Limited

Page 8 of 21

Sanjesh Jain: No, my question is that we just started a speciality plant. Why did we do that? We could have straight went into manufacturing the same, which is we are converting the old plant, right?

Anurag Choudhary : No, no, we are not converting the speciality plant. We are converting the

commodity...

Sanjesh Jain: The rubber side of the...

Anurag Choudhary : Right, right. And speciality why we went -- see, you cannot leave one market and focus on one market. See, these players buy speciality, they buy super speciality. So you have to have the entire portfolio in your basket. It's not that I'll sell you only the best product, high-margin

product, others you buy from others. That never works. So for that, you have to have the entire portfolio with us.

Speciality is the stepping stone to go towards super speciality. That's why we have to strengthen our position, make us very strong in speciality, that gives the confidence to the customers that they have the ability. So if you're not doing a speciality or super speciality, first question is, first you do speciality, then talk about super speciality. That's it.

Sanjesh Jain: No, no. But I just want to understand like conductive grade, it helps in improving the conductivity in the material. What property does this super speciality add in, say, engineering plastic and EV, what really characteristic is this adding there?

Anurag Choudhary: See, because of competitive nature, I don't want to disclose all these technical details on a call. So we have clearly articulated which application is this, and I don't want to go into technical details of the subject.

Sanjesh Jain: Got it. No, no, no, that's fair. That's fair enough. Second, what is the market size of, say, carbon nanotube globally and the super speciality?

Anurag Choudhary: So if you look at the carbon nanotube, it's evolving market. Today, it is around 30,000 metric tons, which is growing every year. And a lot of -- what is happening, this product is getting more and more applications and user industry. So it's a new product, new technology, which is working now.

And over the years, you will find the uses multiplying, the growth will be phenomenal. So this is a growing industry, new age industry, advanced material industry. Coming to super speciality, the market is around 300,000 metric tons.

Sanjesh Jain: Okay. No, no, no. Super speciality is 300,000 metric tons? I thought speciality is even...

Anurag Choudhary: Speciality is very high. Speciality runs into 1 million, so more than 1 million. That's our normal market.

Sanjesh Jain: Okay. Got it, got it. Now coming to battery materials. So we are getting into anode LFP right now and then silicon probably soon. Now I want to understand LFP market, what is the size of the market today in China? How many players are there in this segment? And how are we approaching this segment?

July 16, 2026 Himadri Speciality Chemical Limited

Page 9 of 21

Anurag Choudhary: So if you look at the LFP market, today, 100% global capacity of LFP rests in China and is mainly dominated by top 5 to 6 players in China. They are the leaders with 75% to 80% of the capacity. Globally, there is no other company manufacturing LFP as of now on a commercial basis. So entire capacity rests with China. And market, if you look at today, we are at 1.5 TWH, 1.6 TWH. And in that, you can say probably 50% is LFP.

And if you look at 50% LFP, that brings you to 800 gigawatt hour. 800 gigawatt hour, that will consume around 1.6 million ton of LFP as of now. But with a growing market, it is supposed to grow to 6-plus terawatt hour by 2035 and majority, 70% of the growth is coming in LFP. So looking forward, the demand for this product is going to be big.

Sanjesh Jain: Got it, got it. And what we are adding or aspiring to add 200,000, that's like we are talking of having a 10% market share of today's market, correct? That's how we are approaching it?

Anurag Choudhary: That's not the right way of looking at it because 200,000, we are projecting in next 5 to 6 years. So by that time, the market will definitely change from what it is today. So actually, we

are

targeting at 2% to 3%, which is hardly anything.

Sanjesh Jain: Got it. Got it. Now if I want to look at the same economics in anode because I think there are some other players in India also who have announced anode capacity. How are we different?

Again, what is the demand in the world? What is the contribution of China?

Anurag Choudhary: So if you look at the anode chemistry, so unlike LFP, every lithium ion cell needs anode. In cathode material, there are different chemistries. There is NMC, CLO, LFP, various chemistries.

But for anode, everyone needs anode.

So on a macro basis, 1,600 gigawatts need 1.6 million tons of anode. So anodes are different types, synthetic anode and natural graphite anode. So if you look at 70% of the market is synthetic because of high capacity, stability, quality, sustainability, this product is there.

What makes Himadri unique is that -- see, it's not that everyone is talking about lithium ion, so Himadri has also started talking about lithium ion. This has been our vision since last more than 10, 12 years. We have worked very hard on this to make it happen.

Extensive amount has been invested in terms of research and development capabilities and innovation. We have spent -- if you look at the last year's balance sheet only INR125-plus Crores we have spent, 2.6% of our top line. Current year also, we are spending in the same fashion.

Over the years, we have spent this money on R&D in different products. And we know the chemistry in and out. We have worked on it for years. We are the first company in the world to supply the precursor from pitch to the who's who of anode in China, like I don't want to name, any top 5 players in China before China could make coal tar-based precursors, we made it and

we supplied to them.

So we are very seasoned in this industry and strongly positioned and only company who is talking of anode material backward integrated. So we have our own raw material. In addition to July 16, 2026 Himadri Speciality Chemical Limited

Page 10 of 21

that, we have flexibility of using other raw materials. So this brings Himadri in a unique platform.

Other than that, we are working on natural graphite. We will also set up capacity for that. We will set up capacity of silicon carbon. This again brings Himadri into a unique position where we will meet the aspiring and need of our customers, not only through synthetic, but through natural silicon carbon. So I was talking about the strength and USP of Himadri we are into – going to set a plant for synthetic natural and silicon carbon that puts Himadri into unique positioning where we can supply hybrid material to our customers depending on their requirement. Sanjesh, I hope this answers your question.

Sanjesh Jain: Hello.

Anurag Choudhary: Yes Sanjesh.

Sanjesh Jain: Yes Sir. Can you hear me?

Anurag Choudhary: Yes I can hear you please.

Sanjesh Jain: I think they mute me because they were trying to connect you, but now you can hear me. Thank you. That's perfectly clear. So now we have started 200 metric ton of pilot plant in last one quarter, what has been the response? How many samples we have with us and what is the discussion with the client we are having? If you can give us some color, that will be really helpful?

Anurag Choudhary : Definitely. So what happens, from the pilot plant, we were allowed to give sample A. There are four stages, sample A, B, C and D. So now we have supplied sample B to many customers globally and in India, to all the customers in India and many customers, OEMs and manufacturers globally. So once we have the response for sample B, then we go for sample C.

Sanjesh Jain : I'm trying to understand how long this approval process goes?

Anurag Choudhary : This process takes 1.5 years to 2 years.

Sanjesh Jain : So this entire process for us will take almost 1.5 to 2 years.

ars. So for us to get into?

Anurag Choudhary : No, we have already advanced the process. So for us, it will take comparative -- by the time we have our plant in operation, we'll have the approvals in place.

Sanjesh Jain : When are we looking that, what would be the potential time line? I know you haven't disclosed that?

Anurag Choudhary : Yes, that's the reason I cannot disclose.

Sanjesh Jain : No, that's fine. We will wait for it. But you're telling generally, it's a very long drawn process in terms of taking approval, correct?

July 16, 2026 Himadri Speciality Chemical Limited

Page 11 of 21

Anurag Choudhary : That's the reason we have started sampling from our commercial gate 200 metric ton plant. So that brings us in the front foot for getting approvals.

Moderator: Sorry to interrupt you, sir. You may rejoin the queue for a follow-up question. The next question is from the line of Deepak Poddar from Sapphire Capital.

Deepak Poddar : Am I audible, Sir?

Anurag Choudhary : Yes, you are audible.

Deepak Poddar : Yes. Just wanted to understand on the anode side, what's the capex amount?

Anurag Choudhary : So we have already spent INR120 Crores .

Deepak Poddar : And how much more to spend here?

Anurag Choudhary : How much?

Deepak Poddar : I mean how much more? I mean this INR120 Crores is the total amount for this...

Anurag Choudhary : There's no more capex we have announced now. Once we formulate our plan for a bigger capacity, we'll come up with public disclosure for the investment.

Deepak Poddar : Okay. Okay. Got it. And LFP Phase 1, what's the timeline for commissioning?

Anurag Choudhary : Q3FY '27.

Deepak Poddar : So that's only 2,000 metric tons, right? So I was talking about Phase 1, 40,000, yes.

Anurag Choudhary : That will be operational in FY '28.

Deepak Poddar : So that will come in FY '28?

Anurag Choudhary : Right.

Deepak Poddar : And for this INR40,000, we are spending around INR1,125 Crores , right?

Anurag Choudhary : Right, right.

Deepak Poddar : And on this 5 capex that we are doing in CNT, SSCB, anode, LFP, cathode and carbazole and

anthraquinone. So do we have any kind of understanding so what can be the revenue potential from each of the segment at optimum utilization? So that gives us some picture, I mean, in terms of the overall revenue potential of your new age capex that we are doing, yes?

Anurag Choudhary : See, 40,000 tons as per the today's value will give you -- will give you a INR3,000 Crores top line. For anthraquinone, carbazole, depending on the value, it can give you anything between INR250 Crores to INR300 Crores of top line. Then super speciality carbon black depending on, again, which segment we are targeting, this will be also 3x of our investment -- capital investment, 3x asset ratio.

July 16, 2026 Himadri Speciality Chemical Limited

Page 12 of 21

Deepak Poddar : 3x asset ratio, that effectively means around INR500 Crores , right? I mean?

Anurag Choudhary : INR500 Crores . Right.

Deepak Poddar : Okay. And what about CNT?

Anurag Choudhary : CNT is a small capacity, 200 metric tons. So it will not be substantial. So in the next phase, when we scale up, then the real revenue will come.

Deepak Poddar : Small in the sense what, I mean, INR50 Crores , INR100 Crores ?

Anurag Choudhary : Yes, in that kind of, not INR100 Crores , less than INR100 Crores .

Deepak Poddar : Okay, INR50 Crores to INR70 Crores around about. And the last thing is, anode, yes.

Anurag Choudhary : So anode, we have not announced any capital investment in terms of bigger capacity. So this is a plan t for approvals.

Deepak Poddar : Okay. But this 200 metric tons , so what is the revenue potential of this 200 metric tons? So this gives us some understanding, I mean, yes.

Anurag Choudhary : So revenue potential for 200 metric tons will be I

NR120 Crores , INR130 Crores ...

Deepak Poddar : INR120 Crores , INR130 Crores . Okay. Okay. I got it. I got it. And in terms of -- are we also in future, have any strategy or planning towards going towards the cell manufacturing or something on those lines, the battery cell manufacturing. So do we have that plan as well or anything on both.

Anurag Choudhary : Not at all. We are a raw material component company, focused on this for the last many, many years. We want to continue in this direction. For cell manufacturing, we have invested in IBC.

Idea is not to go for cell manufacturing. idea is to have a commerci al play in terms of our product being displayed commercially by using -- by the cell manufacturing company, IBC. So today, Himadri product is no longer a laboratory product. It's a product which is commercially used in cells manufactured by IBC.

Deepak Poddar : Understood. And this INR1,100 Crores bottom line by FY '28 remains intact that I think we have earlier mentioned, right?

Anurag Choudhary : Definitely.

Deepak Poddar : And anything on FY '27, I mean, any outlook, I think you have not shared anything.

Anurag Choudhary : We don't give quarter and year guidelines, never.

Moderator: The next question is from the line of Ranvir Singh from Nuvama Wealth.

Ranvir Singh : I think two of my questions have already been answered. Just to elaborate a little bit on cathode material plan. So 40,000 metric tons by FY '28 and 2 lakh metric ton is our ultimate target in the
July 16, 2026 Himadri Speciality Chemical Limited

Page 13 of 21

next 5 years. So I think by FY '30, '31, we are planning this 2 lakh metric ton would be rolled out?

Anurag Choudhary : Right, right in 5 years from now. Right.

Ranvir Singh : And normally, what kind of capex is required to float this kind of capacity?

Anurag Choudhary : So we have already announced for 200,000 tons, INR4,800 Crores of capex.

Ranvir Singh : Okay. And when we talk 2 lakh metric tons, what would be the market share at that time if you have any kind of analysis would be helpful in terms of?

Anurag Choudhary : Global market share for LFP.

Ranvir Singh : Sorry?

Anurag Choudhary : 2% to 3% of the global LFP market.

Ranvir Singh : 2% to 3%. Okay. Okay. Fine. And here in the base business, in coal tar business, what is the capacity utilization of the existing capacity? And plus what we have expanded, I think 70,000 metric tons. So what will be the capacity utilization currently in both the segments?

Anurag Choudhary : 80% capacity utilization. Looking forward during the year, we will be at 90% plus.

Ranvir Singh : Taking it together or separately, you're talking for new capacity...

Anurag Choudhary : Together, together.

Moderator: The next question is from the line of Sagar Jethwani from PhillipCapital PMS.

Sagar Jethwani : Congratulations on a good show. Is my voice audible?

Anurag Choudhary : Yes. Thank you

Sagar Jethwani : Yes. So in terms of the LFP cathode again, how are we competing with the Chinese players?

Can you give some confidence there and also insights on the price differentiation with the

Chinese player? That is my first question. Yes.

Anurag Choudhary : So in terms of technology, we have developed our in-house technology towards for LFP through years of research and development. And all these products, whether it's anode or cathode is always moving ahead. So we started with Gen 1, Gen 2, Gen 3. So it keeps on moving.

So we have to work hand-in-hand with the customers and keep on developing new qualities depending on their requirement. That is something which is a strength of Himadri. In terms of pricing, we are trying to price our product as same as China. But base is that, we are trying to develop and set up the business.

Sagar Jethwani : Yes. But how does the economics work there? Because we are making considerable margins as well. And at

a similar time, we are also competing with Chinese players, which have a

July 16, 2026 Himadri Speciality Chemical Limited

Page 14 of 21

humongous capacity and we are priced at almost like at par. So how does the economics work?

Just tryin g to scratch my head over there?

Anurag Choudhary : So see, economics works, basically, we are not dependent on China for anything in this. We are not dependent on raw material. We are not dependent on anything. So our raw material source is different. Our production base is India. So we have cost advantage compared to China in many particular aspects. And given the technology that we are using, have some cost advantage altogether. So that will put us in an advantag eous position compared to Chinese players.

Sagar Jethwani : Okay. And also, is there any client commitment regarding the supplies of LFP cathode once the capacity becomes live from Q3FY '27 and also once we are completed 40,000 of capacity. So what gives you that visibility? Is there any client commitment? Can you share some thoughts?

Anurag Choudhary : Yes. Definitely, see , the clients are very encouraged by our samples. And that is one of the reasons. The best example for all of that is the IBC. We supplied our LFP sample to IBC, and they were so encouraged by seeing the quality of the LFP we supplied that they came to us and we formed a strategic partnership because this will put IBC in a unique position where technology is developed outside China with supply chain positioned outside China.

So this is one of the such example. Other than this, we are having very strong relationship and the sample A has been approved. Now sample B trial will start from -- once we have 2,000 metric ton capacity in place, then sample C will go sample D. So that's the reason instead of setting up 40,000 in the beginning, we have set up 2,000 so that the capex is deferred. A nd we don't have to wait for the orders for the plant to commission. So by the time we have 40,000 metric ton plant, we have all the approvals because the commercial grade plant is operational and then 40,000 plant is up and running in full st ream.

Sagar Jethwani : Yes. Just a small follow -up on that. So, okay. Okay. So now actually, I had a different question on CNT also. So what kind of potential revenue in your INR30,000 Crores of revenue guidance that you gave in next 5 to 6 years, are you baking in that? Or is it excluding that? And what is the margin profile? What rate market is growing? Some insights on those lines?

Anurag Choudhary : See, CNT, 30,000, we gave for lithium -ion component, so which includes 100 gigawatt of capacity for anode, cathode and part of it silicon carbon. For CNT, the market is evolving. We start with 200 tons. We see the market, we evaluate the market, very high potential product with very high growth. And depending on how it goes, we will announce our next capex plan for that. These are high value -added margin products.

Moderator: The next question is from the line of Parth Sodha from Trinetra Asset Managers.

Parth Sodha : Am I audible?

Anurag Choudhary : Yes, please.

Parth Sodha : You have guided towards INR1,100 Crores PAT by 2028. So after Q1, are there any assumptions underlying that road map that have changed either positively or negatively?

July 16, 2026 Himadri Speciality Chemical Limited

Page 15 of 21

Anurag Choudhary : See, there is nothing negative. By God's grace, things are moving in the right direction and things are positive only. I don't want to comment or change my projections. So I'll remain at INR1,100 Crores for next year and let the quarter speak of itself what happens. We are very positive and optimistic about the business.

Moderator: The next question is from the line of Harsh Motika from SKP Securities Limited.

Harsh Motika : Congratulations on a great

set of numbers for the quarter. Sir, given the West Asia situation that we had in April and May predominantly, how did that affect our realizations per ton and profitability in our core businesses?

Anurag Choudhary : So the best thing is to see the resilience in supply chain, which Himadri has built over the years, which is clearly depicted by the numbers we came up with even going through a deep crisis globally, geopolitical situation, we have been able to post strong numbers. This itself shows there is no dependence on West Asia for our functioning and working.

In addition to that, what is something special about Himadri, even though being a chemical company, but we are not dependent at all on China for any of our products that what happens with China, what happens with the pricing, their dumping, no dumping. So that is something we have built over the years.

Harsh Motika : Sir, also staying on the same point, we do notice that there has been a decline in sales volume for the quarter, but revenue as a total has gone up. How much of that can be attributed to a change in our sales mix towards higher value products? And how much is on the account of passing over the raw material costs?

Anurag Choudhary : So see, the raw material has gone up because of which the finished product prices has gone up. That is definitely one of the part . But it's a journey in which we are transforming our product into higher value added product. So that is, at the same time, we are continuing. Every quarter, you see we are improving in terms of bottom line, but with not similar improvement in terms of top line.

The reason being we are more focused on our bottom line rather than top line. The intermediate products are used in in-house and converted into finished products and value added products. So you see the value addition coming. This quarter, you have seen top line growth. Again, next quarter coming, you'll see top line growth from both volume and value.

Harsh Motika : Sir, from the other expenses for the quarter, so if we remove the forex loss that we have booked, the other expenses stand at similar to INR148 Crores , while the same number, excluding forex losses in Q4 was about INR172 Crores . Can you please shed some light on what has led to this decline in other expenses?

Anurag Choudhary : So freight outbound is part of other expenses, which has come down, which has helped us to reduce this cost. Plus we are working on a cost optimization on all the expenses, which is helping us to reduce the cost.

July 16, 2026 Himadri Speciality Chemical Limited

Page 16 of 21

Harsh Motika : And Sir, just one last question on the new businesses that you've announced during the quarter. You've already given us a ballpark idea of what the revenues would look like. Can you also give us an idea of what the margins would be from this business, whether it be CNT or SSCB?

Anurag Choudhary : I don't want to disclose the margins at this point of time. So at the right point of time, the numbers will speak.

Moderator: The next question is from the line of Rohit Sinha from Sunidhi Securities.

Rohit Sinha : Congratulations for a good set of numbers. So most of my questions are already answered. Just one or a couple from my side. One is on the IBC side, we have increased our stake recently to around 19% something. So going forward, is there any target we have internal to take up our stake in this business?

Anurag Choudhary : No, no, no. It's a strategic investment. It's not a financial investment. So we will remain at where we are. And this is -- IBC has developed prismatic cell lithium ion cell technology out of China in their AI based R&D center in California, and they have their manufacturing facility in Seoul in South Korea for 50 megawatts, which is a full commercial plant operating. So now with this integration with IBC, the Himadri produc

t can be seen commercially used in cell. So they have already come up with a new cell like Prabal 2,000, Prabal 3,000 where Himadri LFP anode will be used, Prabal 3000 where Himadri silicon carbon and anode material will be used, hybrid material will be used. Plus they are setting up facility through their technology in India for 7 gigawatt. The work is in progress and expected to commence operation by Q4FY '27. So where IBC is giving the technology to set up the plant in which Himadri raw material will be used.

Rohit Sinha : Got it. But in future also, would be looking to raise our stake, if at all required?

Anurag Choudhary : No. We are not looking to raise.

Rohit Sinha : Okay. And secondly, sir, just on the mining side, as you have highlighted that this quarter, there was no such revenue from mining. So how the licensing progress we have and from coming quarter, any kind of number we can get on the mining side?

Anurag Choudhary : No, we have applied for environmental clearance. It takes time. So we don't have the visibility.

Rohit Sinha : Okay. That will take time.

Anurag Choudhary : It will take time.

Rohit Sinha : Got it.

Anurag Choudhary : It can take 3 months, it can take 6 months.

Isha Agarwal : My first question is regarding the big swing that we had seen in forex change from a profit to a loss this quarter. So what's driving it? Is there any change in the hedging policy?

Anurag Choudhary : No, there is no change in the hedging policy because of the huge volatility in the currency, this happened. And this is done with. If you see last quarter also, there was a loss. This quarter, again, there's a loss. From next quarter, there will not be any impact on account of FX negative impact. So this is the last quarter for this because of so much of volatility in the currency, this happened. But looking forward, it's not going to happen.

Isha Agarwal : Okay. Sir, second question related to this. So last year, we had seen good foreign gains, which led to higher other income component. So sir, this quarter, we are again seeing a higher rise in the other income portion. So what is driving that? What component led to such growth if FX was a loss this quarter?

Anurag Choudhary : So this quarter, if you see 2, 3 factors. One, we have deployed a lot of fund in terms of interest in FDs. We have borrowed from bank and CPs and deployed in FDs, so which gives us a delta. So that helps to have interest earning on our investments. Plus, we have made investment in mutual funds. So that is part of it. Other than this, we have made investment in IBC, Sicon, NCDs of Birla Tyres. So mark-to-market of that is also helping us to -- that was the reason for other income.

Isha Agarwal : So Sir, this is the usual run rate that we should assume from now onwards when it comes to other income?

Anurag Choudhary : This will vary 30% to 40% quarter-on-quarter.

Isha Agarwal : Okay. And Sir, last question, the new capex that you have announced. So are we planning to take any incremental debt or in FY '27, the free cash flow will cover that?

Anurag Choudhary : Yes, definitely, the free cash flow will cover that. There is no question of any incremental debt. Moderator: The next question is from the line of Bhavin Chheda from Enam Holdings.

Bhavin Chheda : Congratulations on excellent number and very exciting projects over the next 5 years. What would be the year-wise capex, if you can guide for next 2 or 3 years? Total consolidated.

Anurag Choudhary : Yes, total capex we have announced is around INR2,000 Crores, INR1,125 Crores for LFP, INR368 Crores announced yesterday. So that brings to around INR1,500 Crores of capex, plus INR500 Crores of capex this year in Birla Tyres. So total INR2

,000 Crores. Out of this, we

expect around INR1,000 Crores of capex happening this year and INR1,000 Crores next year.

Bhavin Chheda : INR2,000 Crores. And coal tar pitch, you are at 6 lakh tons. So there, no capex is happening?

Anurag Choudhary : There is no capex is happening. Right.

Bhavin Chheda : Distillation and no capex. So INR1,000 Crores this year, then INR1,000 Crores next year?

Anurag Choudhary : Right.

July 16, 2026 Himadri Speciality Chemical Limited

Bhavin Chheda : Right. And Birla Tyres, I think I heard on your CNBC interview, your quarterly sales was INR127 Crores?

Anurag Choudhary : Right, right.

Bhavin Chheda : Okay. And that's EBITDA positive?

Anurag Choudhary : Not yet. So now Birla Tyres is reflected on Dalmia Refractory balance sheet. So once it becomes part of Himadri, then the numbers will come. So it is through a subsidiary that we are selling. Tyres, that revenue is recognized in Himadri.

Bhavin Chheda : So the difference between consolidated sales and stand-alone sales is largely Birla Tyres?

Anurag Choudhary : It's largely -- largely Birla Tyres, yes.

Bhavin Chheda : Okay. And in case of the core business, coal tar and carbon black, these margins are sustainable?

Anurag Choudhary : Definitely, the way we have built up the business over the years is on sustainable value margins. So if you look at coal tar pitch, which we supply material to our customers at the lowest price globally. Did you hear me answer.

Bhavin Chheda: Yes, I think you said INR1,000 Crores this year, next year margins are sustainable. And sir last question on the tyre ramp up, if any guidance there?

Anurag Choudhary: So we are ramping up quarter-on-quarter if you see compared to the last quarter this quarter is higher in terms of volumes, in terms of sales. We will continue this trajectory and in next 4 years to 5 years the target is to reach INR3,000 Crores of top line in Birla tyres.

Bhavin Chheda : And what is the EBITDA breakeven level for the turnover?

Anurag Choudhary : We reach EBITDA breakeven in this financial year only. We will be cash positive.

Bhavin Chheda: This financial year?

Anurag Choudhary: Yes, will be cash positive.

Bhavin Choudhary: Okay. Thank you, sir.

Moderator: Thank you. The next question is from the line of Tanvi Warekar from Anand Rathi Institutional Equities.

Tanvi Warekar : Just a follow -up on the LFP cathode pricing, where you said that your pricing is competitive versus China. Just wanted to know from our workings, we arrived that we won't be making any money like we are arriving at a gross -- negative gross spread on this if we compare the China pricing versus the input cost calculation. So just wanted to know like where are we sourcing the lithium carbonate because that is like a major driver for the spreads on LFP. Do we have any advantage over there?

July 16, 2026 Himadri Speciality Chemical Limited

Page 19 of 21

Anurag Choudhary : See, I'll suggest that it is not possible for you to calculate my cost on Excel sheet and come to a conclusion. It took a long time for us to come to a conclusion and see how to make profit. And on Excel sheet by seeing at few prices, you cannot determine what is the margin. But we are confident we'll work on it, and I cannot disclose my sources. That is confidential.

Moderator: The next question is from the line of Bhavika from Niveshaay.

Bhavika: Am I audible?

Anurag Choudhary : Yes, please.

Bhavika: Yes. So basically, most of my questions have been answered. I need to know as we continue to emphasize that we are shifting our product mix and that will lead to a higher profitability. So can you like tell us like what's the product margin mix from the current capex which we are doing, if you can broadly explain or in terms of pricing difference, if you can

explain that, if not possible, with the margin?

Anurag Choudhary : Pricing difference as we move up the ladder, we go for the niche product, all the capex we have announced yesterday has significant high margins and significantly differently priced altogether.

So there will be no comparison between what we are doing, what pricing we are doing, what margins we are having today and what margin will these products bring.

Bhavika: So how do you expect our blended EBITDA margin to go over the next 2 to 3 years?

Anurag Choudhary : So you calculate on the basis of what we are performing.

Bhavika: Sorry, I didn't get it.

Anurag Choudhary : You calculate on the basis of our results, what we are performing.

Bhavika: Okay. And also -- okay, got it. Also, sir, like as we are talking about the anode side, the pilot plant which we have, as per my understanding, we are doing with meso coke technology, which is different than other players in the market. And when we look at the other players, they have been doing the pilot plant since like years. So how confident we are that we will be able to onboard customers for our anode like pilot plant? How -- like are we seeing the traction from the customer that they are getting the confidence on our product as compared to...

Anurag Choudhary : First of all, no one is doing this product before Himadri. Himadri is a pioneer in this. So there's no other plant in India who has pilot plant before Himadri. So Himadri has set up 200 ton plant now, but pilot plant is there for last many, many years. And we have done -- and we are doing it on different types of raw material. So our raw material is one of it, other raw materials.

So we have all the varieties of finished product available with us, depending on the appetite requirement and specific uses of the user industry, we will produce the anode material and supply to them. Depending on what price they give, depending on what quality they want, we will do it.

Bhavika: So are we currently seeing any traction from the customer that they are?

July 16, 2026 Himadri Speciality Chemical Limited

Page 20 of 21

Anurag Choudhary : Definitely. There's a huge traction from the customer traction. Because of the quality of what we are producing, there is great interest from customers in India and globally.

Bhavika: Got it. So what's the timeline we can expect them getting converted on the full -fledged commercialization at a large scale, if you can guide on that?

Anurag Choudhary : See, I have not made any public disclosure on that. So on a call, I don't want to make any public disclosure. So once we come up, we will come up with -- we'll come up with the announcement, formal announcement for the capacity.

Bhavika: Okay. And Sir, just last one clarity on the super speciality carbon where you have mentioned.

Can you explain like how this is different from the speciality carbon, like you have already explained a bit. But I want to know in terms of application, like how it differs in terms of application? And what -- like how big the market TAM is for the particular super speciality carbon black we are talking about.

Anurag Choudhary : Yes. I told the market is not very big, very specialized 300,000 ton market and very niche

application, very high value -added applications. I don't want to go into details of application as such. But if you look at margins, the margins are significantly higher than speciality carbon black. So there is no comparison between speciality margins and super speciality margins. These are significantly higher.

Bhavika: Okay. And sir, in the previous answer, you once mentioned that you are also focusing on the natural anode like synthetic anode you were talking about -- natural anodes you were talking about. As we are already in synthetic anode like materials, then why we are going for the natural, like I want to understand

from where we are seeing the traction in the market in the industry, if you can?

Anurag Choudhary : So some customers need low -value anodes. Some need medium value, some need high value. So depending on customer appetite, we should have all the products available with us. Some need blend anodes, natural synthetic silicon. So as an anode producer, we will showcase a unique proposition to our customers, having all types of anode material.

Bhavika: So like what's our plan in the natural side, if you can -- like do we have current...

Anurag Choudhary : Natural also -- already we are producing natural anodes. Synthetic we are producing. Silicon carbon, our partner is producing. So all will be integrated in Himadri over a period of time.

Bhavika: Okay. Got it. That's all, sir. Thank you so much.

Anurag Choudhary: Thank you so much.

Moderator: Thank you. Due to time constraints, we take that as the last question of the day. And now I hand the conference over to Mr. Anurag Choudhary for closing comments.

Anurag Choudhary : Thank you. Thank you so much. Let me close by thanking each of you for joining us today and for your continued interest and for thoughtful engagement we continue to receive around
July 16, 2026 Himadri Speciality Chemical Limited

Page 21 of 21

Himadri. I hope our discussion has given you a clear sense not just of where we stand today, but of the direction in which we are building the business.

As I mentioned at the outset, we are pursuing our ambition with discipline, funding it from our own balance sheet and building it on firm foundations of safety, sustainability and trust. I remain confident that the decisions we are taking today will compound into meaningful and lasting value over the years ahead.

We would like to thank all our stakeholders and partners for their continued trust and to the entire Himadri family. Thank you for your dedication and commitment that makes all this possible. Our Investor Relations team remains available for any further questions and would look forward to staying engaged in quarters ahead. Thank you once again and I wish you all a very good evening. Thank you.

Moderator: On behalf of Himadri Speciality Chemicals Limited, that concludes this conference. Thank you for joining us, and you may now disconnect your lines.
